The illuminated letter "B" at the beginning of the Psalms in Extracts from Gregory the Great shows King David playing his harp and the young David killing Goliath. N. France, 12th century. Douai, Bibliothèque Municipale, ms. 315A, vol. 1, fol. 5.

BLU–BZ

BLUESTONE, JOSEPH ISAAC (1860–1934), medical doctor and leading Zionist. Bluestone immigrated to the United States from Kalvarija, Lithuania, at the age of 19. He was a descendant of Rabbi Yom Tov Lipmann *Heller of Prague and Cracow, best known for his medieval commentary on the Mishnah (*Tosefot Yom Tov*). Bluestone's basic Jewish education was classically Lithuanian/talmudic.

Bluestone failed in his only attempt at business and so enrolled in medical school at New York University. He earned his degree in 1890 and opened his private medical practice on Manhattan's Lower East Side. He was affiliated with Beth Israel Hospital and served on its staff.

An ardent Zionist, and an American patriot, Bluestone supported settlement in Palestine and as early as 1882 urged the establishment of a Zionist society in New York. Within a year he was vice president of Hebra Hovovei Zion, urging economic, political, financial, and physical support of the Yi-

shuv. In 1889, Bluestone became the editor of the first Zionist journal published in America, *Schulamit*.

When the Federation of American Zionists was established in 1897, Bluestone joined its ranks, but was disillusioned when the organization ignored the Orthodox members of Hovevei Zion. To fill the needs of religious Zionists, he and Rabbi Philip Hillel *Klein established the Federation of Zionist Organizations in the United States, an umbrella for Hovevei Zion groups. In 1901, he established the United Zionists of America, which essentially competed with the established community's Federation of American Zionists. The Federation served the West European, assimilated Jewish community, while Bluestone's group was occupied mostly with Yiddish-speaking East Europeans. It was only after Judah *Magnes took over the leadership of the American Zionists that Bluestone agreed to support their work.

One of Bluestone's major roles was to serve as a delegate to several international Zionist Congresses, where he met with Theodore *Herzl, Max *Nordau, Shmarya *Levin, and Rabbi Jacob Isaac *Reines. When the Mizrahi Organization of America was founded in 1912, Bluestone was one of its key leaders and served on the executive committee for many years. He edited its Hebrew-language newsletter *Mizaracha*, was a Hebrew poet in his own right, published in *Ha-Maggid*, *Ha-Ivri*, and *Ha-Pisgah*, and translated works from English and Yiddish into Hebrew. He was a friend of *Shalom Aleichem, *Imber, and *Goldfaden, all outstanding cultural figures from the Lower East Side.

Bluestone was survived by four sons (all doctors) and three daughters. His self-written epitaph reads: "Here lies one who found a refuge at last – a Hebrew."

[Jeanette Friedman (2nd ed.)]

BLUHDORN, CHARLES G. (1926–1983), U.S. empire builder. Born in Vienna, Bluhdorn emigrated to the United States in 1942. After service in the Army Air Force, he studied at the City College of New York and at Columbia University, but did not earn a degree. He began his career in a New York cotton-brokerage house, earning \$15 a week. In 1949 he formed an import-export business that he operated until, at the age of 30 and already a millionaire, he bought into a Grand Rapids, Michigan, auto-parts company. In 1958, after a merger with a Houston automotive-parts distributor, Gulf and Western Industries was formed. In its first year as G&W, it reported a net loss of \$730 on sales of \$8.4 million. A quarter-century later, after a spectacular chain of acquisitions and growth during the late 1960s and early 1970s, the multibillion-dollar conglomerate reported sales in 1982 of \$5.3 billion and earnings of \$199 million. In 1982 the company employed more than 100,000 people, primarily in the United States and in the Dominican Republic, where it had vast sugar holdings. Its corporate headquarters became a prominent feature of the New York skyline, a 42-story office tower at Columbus Circle, off Central Park. Among its hundreds of subsidiaries were Paramount Pictures, the Madison Square Garden Corporation, and Simon & Schuster, the publisher. Bluhdorn, the company's founder, chairman, and chief executive, owned slightly more than 5 percent of G&W's common stock.

Bluhdorn was known among his employees as a remote, aloof executive, quick to criticize and hot-tempered. After Bluhdorn's death, Gulf and Western sold off many of Bluhdorn's unrelated businesses, acquisitions, and investments, including sugar operations in the Dominican Republic. The company had been involved in the Dominican Republic since

1967. In 1979 the Securities and Exchange sued the company, charging that Bluhdorn had made a secret agreement with high officials of the Dominican government to speculate in sugar. In 1981 the charges were withdrawn as part of a settlement agreement.

Among the people Bluhdorn hired to run his various entertainment divisions were Barry *Diller, Michael *Eisner and Robert *Evans. Bluhdorn served as a trustee of Texas Wesleyan College and the Trinity Episcopal Schools Corporation in New York and was active in a number of civic organizations. In 1977 Bluhdorn announced that G&W would buy the New York Cultural Center on Columbus Circle and give it to New York City, which it did in 1980.

[Stewart Kampel (2nd ed.)]

BLUM, AMRAM BEN ISAAC JACOB (1834–1907), Hungarian rabbi. He served as rabbi of the important communities of Samson, Almas, Mád, Huszt, and Berettyoujfalu, where he died. He studied under his father, who was head of the *bet din* in Nagykaroly, and later in the seminaries of Nagykaroly, and of Abraham Samuel Benjamin Sofer, rabbi of Pressburg. His sons relate that throughout his life he longed to stand at the threshold of the gates of Zion and Jerusalem. He decided to do so once he had married off his sons and daughters. However, he was never able to fulfill this desire. His work *Beit She'arim* (*Orah Hayyim*, 1909; *Yoreh De'ah*, 1941) is well-known in rabbinic circles and still of importance as a basic work of *halakhah*. The author formulated his own particular method of research, a method which went to the heart of each problem and explained it with clear reasoning. Blum founded a yeshivah which attracted many students. Blum had five sons and four sons-in-law, almost all of whom were noted scholars and served as rabbis of various communities in Hungary and Transylvania. Prominent among his sons were ISAAC JACOB (1858–1938) who succeeded his father; BEN-ZION (1885–1945), rabbi of Szarvas, who published his father's book on the Passover *Haggadah – Arvei Pesahim* (1927); JUDAH ZEVI (1867–1917), who served as rabbi of Tapolc-Hanusfalva; and MOSES NAHUM, who held the position of *dayyan* of Nagyvarad. He met his death in Auschwitz in 1944. Moses Nahum arranged the publication of the second volume of his father's *Beit She'arim*.

[Naphtali Ben-Menahem]

BLUM, ELIEZER (pseudonym **B. Alkvit**; 1896–1963), Yiddish poet and short story writer. After living in various European cities, Blum went to New York in 1914. In 1920 he joined the introspective movement launched by the poets J. Glatstein, A. *Glanz-Leyeles and N.B. Minkoff, and coedited its organ *In-Zikh*. He worked in a factory and was later associ-

ated with the Yiddish daily *Jewish Morning Journal*, in which he published lyrics, mostly in blank verse. His collection of short stories *Oyfn Veg tsum Peretz Skver* (1958; *Revolt of the Apprentices and Other Stories*, 1969), in common with his lyrics, combines realism and mysticism, an astonishing integration of the people and landscapes of his native Chelm and those of New York. The title story is itself the mystical contemplation of how a small square, bearing the name of Peretz, has somehow strayed into tumultuous New York. His collected poetry was published posthumously.

BIBLIOGRAPHY: LNYL, s.v.; J. Glatstein, *In Tokh Genumen* (1956), 443–7; A. Glanz-Leyeles, *Velt un Vort* (1958), 162–5.

[Melech Ravitch]

BLUM, JEROME (1913–), U.S. historian. Born in Baltimore, Maryland, Blum was associated with Princeton University from 1947, becoming professor of history in 1961. His main research was into agrarian structures and society in central and Eastern Europe. His *Lord and Peasant in Russia, from the Ninth to the Nineteenth Century* (1961) became the standard English work on the subject. Other books by Blum include *Noble Landowners and Agriculture in Austria: 1815–1848* (1948), *The Emergence of the European World* (1966), *The European World since 1815: Triumph and Transition* (1970), *The End of the Old Order in Rural Europe* (1978), *Our Forgotten Past: Seven Centuries of Life on the Land* (1982), and *In the Beginning: The Advent of the Modern Age: Europe in the 1840s* (1994).

[Ruth Beloff (2nd ed.)]

BLUM, JULIUS (Blum Pasha; 1843–1919), Austro-Hungarian banker and Egyptian statesman. Blum, who was born in Budapest, worked for the Austrian *Creditanstalt fuer Handel und Gewerbe*, first in its Trieste branch, and, later, in its affiliate in Egypt. After the bank's liquidation in Egypt, Blum served as undersecretary of finance (1877–90), and was instrumental in the rehabilitation of the country's economy, following the 1875 financial collapse and the British occupation in 1882. In 1890 he resigned his Egyptian post, with high honors, and re-joined the management of the *Creditanstalt* in Vienna where his knowledge of international finance contributed to making the bank a leading institution in Europe. From 1913 Blum was president of the *Creditanstalt*.

BIBLIOGRAPHY: J.O. Ronall, in: *Tradition: Zeitschrift fuer Firmengeschichte und Unternehmer-Biographie*, no. 2 (1968), 57–80.

[Joachim O. Ronall]

BLUM, LÉON (1872–1950), statesman; the first Jew and the first socialist to become premier of France. Son of a wealthy Alsatian merchant, Blum graduated with the highest honors in law at the Sorbonne. At the age of 22, he was recognized as a poet and writer. His publications included *En lisant: réflexions critiques* (1906), *Au Théâtre*, 4 vols. (1905–11), and a book about Stendhal (1914). His *Du Mariage* (1907; *Marriage*, 1937) created a sensation because of its advocacy of trial marriage

and was quoted against him years later when he was premier. Blum was also a brilliant literary and drama critic. Blum was appointed to the Conseil d'État, a body whose functions included the settlement of conflicts between administrative and judicial authorities. He rose to the high rank of "Master of Requests," one of the principal offices in the Conseil d'État.

Always conscious of his Jewish origin, Blum was brought into active politics as a result of the *Dreyfus Affair. His close association with Jean Jaurès, whom he greatly admired, led to his joining the Socialist Party in 1899. Blum was first elected to the Chamber of Deputies in 1919. When the party split in December 1920, and the Communist section won a majority, securing the party machine, funds, and press, Blum helped to reconstruct the Socialist Party so successfully that he is considered one of the founders of the modern French Socialist Party.

Blum led the opposition to the government of Millerand and Poincaré and supported Herriot's *Cartel de gauche* in 1924. In the 1928 elections, the Socialist Party won 104 seats but Blum himself was defeated. A year later, however, he was elected for Narbonne, and was reelected for this department in 1932 and 1936. The 1934 Paris riots resulting from the disclosures of the Stavisky financial scandal were an early portent of the danger of fascism, and Blum began to work for the left-wing alliance that became the Front Populaire. In 1936 the Front won a large majority and Blum, its chief architect, became premier (on June 4). His government introduced the 40-hour week, nationalized the Bank of France and the war industries, and carried out a far-reaching program of social reforms. The most difficult problem was that of national defense in the face of the growing power of the Rome-Berlin axis. However, in the face of the challenge of the Spanish Civil War, Blum, confronted with the negative attitude of the British Conservative government to the Republican Forces, decided on a policy of "nonintervention" which was described by his critics as appeasement of the Axis powers. At the same time his social reforms aroused the bitterness of industrialists who openly refused to cooperate with the government. The right wing, which showed pro-German tendencies, conducted a violent campaign of personal vilification against Blum tinged with antisemitic undertones. In 1937, on June 21, Blum resigned, after parliament had refused to grant him emergency powers to deal with the country's financial problems. He served as vice premier in modified Popular Front governments and as premier again, for less than a month, in 1938, during the Nazi invasion of Austria. After the French collapse in 1940, he was indicted by the Vichy government on charges of war guilt and was brought to trial. His brilliant defense confounded the Germans as well as the "men of Vichy" and the former ordered the suspension of the trial. Blum was returned to prison and was freed from a German concentration camp by U.S. forces in May 1945. He was given an enthusiastic welcome both in France and in international labor circles.

After the liberation of France, he emerged as an elder statesman and negotiated the vast U.S. credit to France. In 1946

he formed an all-Socialist “caretaker” government, whose vigorous policy left a deep impression even though it only survived for a month. Blum then retired from public life, except for a brief period as vice premier in a 1948 government. He is considered one of the great figures in the French Labor movement and an architect of the Socialist International between the two world wars.

Sympathetic to Zionist aspirations, Léon Blum, together with Emile Vandervelde, Arthur Henderson, and Eduard Bernstein, was one of the founders of the “Socialist Pro-Palestine Committee” in 1928. He readily accepted Weizmann’s invitation to join the enlarged Jewish Agency and addressed its first meeting in Zurich in 1929. Blum took a leading part in influencing the French government’s pro-Jewish vote on the UN decision on Palestine in 1947. He was also instrumental in preventing British diplomatic pressure from stopping the flow of Jewish “illegal” immigration from Central Europe through France to Palestine.

His son ROBERT LÉON (1902–1975) was an engineer and industrialist. Born in Paris, he studied engineering at the École Supérieure Polytechnique. In 1926 he joined Hispano-Suiza, manufacturers of automobiles and aircraft engines. In 1968 he retired as president of the company. Robert Léon also served as president of Bugatti, another automobile manufacturing firm. He was president of the Union Syndicale des Industries Aeronautiques et Spatiales in 1967–68, president of the French Association of Aeronautics and Space Engineers from 1963 to 1972, and chairman of the French Aeronautics and Astronautics Federation in 1972–73.

[Moshe Rosetti]

BLUM, LUDWIG (1891–1974), Israel painter. Born in Moravia, Blum studied art at the Royal Academy in Vienna at 1910 and later on joined the Austrian army during World War I. In 1919–1920 he was at the Academy of Prague and then went on to advanced studies in Amsterdam, Paris, London and Madrid (1920–23). He immigrated to Palestine in 1923 and settled in Jerusalem. He lost his son in 1946 during a Palmah action. In 1949 he was one of the founders of the first Artists’ House in Jerusalem. Blum’s work has four distinct periods: the first focused on the search for a decisive style; the second began with his arrival in Jerusalem and includes portraits, landscapes, and still lifes that are executed in a dry and naturalistic manner; the third began after his son fell and depicts fighting men during the War of Independence; the fourth began after the establishment of the state and includes views from all over the country. In 1968 he received the honorary reward of “Yakir Yerushalayim” for his artistic tribute to the

city. His works are found in museums and private collections all around the world.

[Shaked Gilboa (2nd ed.)]

BLUM, RENÉ (1878–1944), French ballet impresario. A brother of the statesman Léon *Blum, René Blum began his career as a writer and was general secretary of the periodical *Gil Blas*, but gave up writing for art and ballet. When Diaghilev died (1929), Blum was chosen to succeed him as director of the Ballet de l’Opéra de Monte Carlo, and he held the post until the Nazi invasion of France in 1940. He was also associated for four years, from 1932, with Colonel de Basil’s Ballet. In 1936 he founded the René Blum Ballets Russes and two years later, joined by Léonide Massine and other members of the de Basil company, he formed the Ballets Russes de Monte Carlo. After the German occupation of Paris, Blum refused to leave for the free zone of France, and at the end of 1941 was interned with nearly a thousand French-Jewish intellectuals in the camp of Compiègne. From there he was sent to Auschwitz, where he died in September 1944. The manuscript of his memoirs, which was in the hands of a Paris publisher in 1940, was not recovered after the liberation.

BIBLIOGRAPHY: I. Guest, *The Dancer’s Heritage* (1960), 93ff.; S. Lifar, *Histoire du Ballet Russe* (1950), 245, 249.

BLUM, WALTER (“Mousy”; 1934–), racing jockey; the only Jewish rider to have earned a spot in the Racing Hall of Fame in Saratoga Springs, N.Y. Born in Brooklyn, New York, to a newspaper delivery man, Blum took to riding early, shining shoes in order to afford trips to the horse stables. He dropped out of high school to go work for trainer Hirsch Jacobs at age 16 as a horse walker. At 18, he rode his first mount, Ricey, on May 4, 1953, and his first winner, Tuscania, on his 14th ride at Saratoga, N.Y., on July 29, 1953. Over a 22-year career from 1953 to 1975 spent mostly in New York and later in Florida, Blum rode in 28,673 races and won 4,382, for a winning percentage of 15.3 percent. Among his more famous horses were Royal Beacon, his first \$100,000 stakes victory in the 1957 Atlantic City Handicap; Pass Catcher, with whom he dashed the Triple Crown hopes of Canonero II by winning the 103rd Belmont in 2:30.6 on June 5, 1971; Summer Scandal; Boldnesian; Gun Bow; Mr. Prospector; the filly Priceless Gem, with whom he beat Horse of the Year Buckpasser in the Aqueduct Futurity in 1965; Lady Pitt; and Affectionately, whom he considered his best mount. Blum’s best day was June 19, 1961, when he won six of eight races at Monmouth Park. He was national riding champion in 1963 with 360 wins in 1,704 races, and again in 1964 with 324 wins. One of his most exciting races was a photo finish with Gun Bow over Kelso in the 1964 Woodward Stakes. In 1974 Blum became the sixth jockey to ride 4,000 winners, and upon his retirement only four other jockeys – Bill Shoemaker, John Longden, Eddie Arcaro, and Steve Brooks – had won more races. Blum later worked as a racing official, and also served as president of the Jockeys’ Guild in the early 1970s.

Blum won the George Woolf Memorial Award in 1965, presented to the jockey whose career had brought credit to his profession, and was inducted into the National Horse Racing Hall of Fame in 1987.

[Elli Wohlgelernter (2nd ed.)]

BLUMBERG, BARUCH SAMUEL (1925–), U.S. physician and Nobel laureate. Blumberg was born in New York City and received his elementary schooling at the Flatbush Yeshiva. After high school he joined the U.S. Navy in 1943 and finished college (B.Sc. in physics from Union College) while enlisted. He received his M.D. from Columbia University in 1951. From 1951 to 1953 he was an intern and resident at Bellevue Hospital in New York City; the next two years were spent as a clinical fellow in medicine at the Columbia Presbyterian Medical Center's Arthritis Division. From 1955 to 1957 he was a graduate student at the Department of Biochemistry at Oxford University, England, and a member of Balliol College, where he received his Ph.D. in biochemistry in 1957. That year he joined the National Institutes of Health, where he remained until 1964, when he joined the Fox Chase Cancer Center, serving as assistant director of Clinical Research. At the same time he was appointed professor of medicine and anthropology at the University of Pennsylvania, where, in 1970, he was appointed professor of medicine and medical genetics. In 1989 he became master of Balliol College at Oxford while maintaining a position at Fox Chase Cancer Center. He stayed at Oxford until 1994. From 1999 until 2002 he was director of the NASA Astrobiology Institute at Ames Research Center, Moffett Field, California. In 2000–01 he was senior advisor to the administrator of NASA in Washington, D.C.

Blumberg was awarded the 1976 Nobel Prize in medicine and physiology for "discoveries concerning new mechanisms for the origin and dissemination of infectious diseases." The award was based mainly on Blumberg's 1963 discovery of an antigen that detected the presence of hepatitis B and his subsequent research, with microbiologist Irving Millman, which led to a test for hepatitis viruses in donated blood and to an experimental vaccine against the disease. The two were elected to the National Inventors Hall of Fame in 1993.

Blumberg's far-ranging research interests include epidemiology, virology, genetics, and anthropology. From 1959 to 1963 he was assistant editor of the periodical *Arthritis and Rheumatism* and in 1963 became editor of *Progress in Rheumatology*.

[Ruth Rossing (2nd ed.)]

BLUME, PETER (1906–1992), U.S. painter and sculptor. The Russian-born Blume immigrated to Brooklyn, New York, in 1911 with his family. He studied art in several institutions, most notably beginning his art training at the age of 13 at the Educational Alliance. There his classmates included Moses *Soyer and Chaim *Gross. Blume's early work was shown at the Daniel Gallery, one of the most progressive venues in New York. The imagery from this period, mostly landscapes and still lifes,

was influenced by Precisionism, an American art movement defined by a sharply delineated technique.

His highly stylized work combined fantasy elements with depictions of modern life. In *South of Scranton* (1931), precise, miniature, 15th-century technique was employed to create a 20th-century image of German soldiers exercising on the deck of a ship at the quaint town of Charleston, South Carolina. His largest picture to date, the painting won first prize at the 1934 Carnegie International Exhibition, making Blume the youngest painter to have earned that distinction.

After spending 1932 in Italy on a Guggenheim grant, he worked for three years on *The Eternal City* (1934–37), now owned by the Museum of Modern Art in New York. Amid the ruins of Rome, Blume portrays Mussolini as an enormous green jack-in-the-box in the Roman Forum. This large, crisply rendered canvas garnered mixed reviews because of its controversial, propagandistic subject. During the late 1930s he produced three murals of the American scene under the auspices of the Federal Art Project of the Works Progress Administration. *Barns* (1937), *Vineyard* (1942), and *Two Rivers* (1942) were painted for post offices in Cannonsburg, Pennsylvania, Geneva, New York, and Rome, Georgia, respectively. His work showed widely during the Great Depression, including at the Museum of Modern Art in New York and at an exhibition sponsored by the World Alliance or Yiddish Culture (YKUF).

While uninterested in subjects of a religious Jewish nature, Blume did paint Christian imagery. After a 1949 trip to Mexico, Blume painted *The Shrine* (1950), *Crucifixion* (1951), and *Man of Sorrows* (1951), the latter of which is in the Whitney Museum of American Art.

In 1972, Blume briefly changed mediums and produced a sculpture series, *Bronzes About Venus*. Comprised of 17 sculptures on the theme of the goddess of beauty and pleasure, 10 large and 17 smaller pieces were initially modeled in wax and then cast in bronze.

[Samantha Baskind (2nd ed.)]

BLUMEL, ANDRÉ (1893–1973), French Zionist leader. Blumel's original name was Blum, but he changed it on his appointment as chef de cabinet in the government of his namesake, Léon *Blum (1936–37). Born in Paris, he studied law and literature at the Sorbonne. He was active from his youth in the Socialist movement, where he was influenced by Léon Blum and formed a close relationship with him, but he took no interest in Jewish affairs until after World War II. During the war he was arrested by the Vichy government, but succeeded in escaping and making his way to Spain.

After the liberation of France, under the influence of Joseph (Fisher) Ariel, Blumel became interested in Zionism and was appointed president of the Keren Kayemet in France. As a result of his many connections with the Ministry of the Interior, he was able to be of great help in the *Berihah and

“illegal” immigration of Jews via France. His friend Edouard Dépreux, whom he served as chef de cabinet when the latter was minister of the interior, nominated him as his personal representative in Marseilles when the immigrant boat *Exodus* anchored at Port de Bouc, and it was due to his efforts that the French Government refused to disembark the passengers by force, despite pressure by the Foreign Ministry. Together with Marc *Jarblum, he acted as liaison between Chaim *Weizmann and Léon Blum in the struggle for the emergence of the State.

Blumel became secretary general and subsequently president of the French Zionist Federation in the 1950s, but differences of opinion developed between him and the Zionist parties as a result of his leftist tendencies in the internal politics of the country. He remained in close contact with the communists even when they adopted an extreme anti-Zionist policy, in the belief that he would persuade them to adopt a more favorable attitude to Zionism and Israel. Lacking a Jewish background, and out of tune with the Jewish masses, he regarded the relationship between Zionists and Jewish communists as comparable to those between political parties in France, and believed that reconciliation and cooperation was possible between them. Widespread criticism of his articles in the Jewish communist press caused him to resign from the Zionist Federation.

Blumel was president of the U.S.S.R.-France Friendship League and paid a number of visits to Moscow and other communist countries at their invitation. Although he tried to intervene with their governments, especially that of the U.S.S.R., on the Jewish question, he was easily convinced by them, and his many statements to the effect that there was no anti-Jewish discrimination in the U.S.S.R. and that Jews had no need for Jewish education roused the anger of Jewish leaders in France. Despite the fact that none of the promises made to him by the Soviet authorities were implemented, he continued to believe in their goodwill.

Apart from serving as legal adviser to the Israel Embassy and the Jewish Agency in France, Blumel took no further active part in Jewish life, and after the Six-Day War published articles vehemently attacking the policy of the Israel government. Although out of line in Jewish communal life, the important part that he played in the *Exodus* affair and the fact that he was the first to attract the old French Jews to Zionism are to his credit.

[Jacob Tsur]

BLUMENBERG, LEOPOLD (1827–1876), U.S. businessman and soldier. Born in Brandenburg, Prussia, Blumenberg served as a lieutenant in the fighting in Denmark in 1848. He emigrated to the United States in 1854 and developed a successful business in Baltimore. At the beginning of the American Civil War, he helped organize a Unionist Maryland Volunteer regiment, fought with it in the Peninsula Campaign, and was severely wounded while commanding the unit in the Battle of Antietam (1862). Incapacitated by his wounds,

he was appointed provost marshal of the third Maryland district and later attained the rank of brevet brigadier general of U.S. Volunteers.

[Stanley L. Falk]

BLUMENFELD, EMANUEL (1801–1878), leader of the Haskalah in Galicia and the first Jew to practice law in Lemberg. Blumenfeld was instrumental in establishing the Reform Temple in Lemberg. He was a member of an unsuccessful delegation sent to the Austrian emperor in 1840 to ask for abolition of the *candle tax and for alleviation of the restriction on Jewish occupations. In 1842 the authorities, wishing to encourage the spread of Haskalah, appointed a community council without holding elections, which Blumenfeld headed. He subsequently reorganized the communal administration and inaugurated wide-ranging educational projects. A secular coeducational Jewish school on the model of the Perl school in Tarnopol was opened in Lemberg in 1844, and supported by the community. In 1847 Blumenfeld convened an assembly of representatives of the communities of Galicia to discuss alleviation of taxation and the general situation. He was one of the eight Jews elected to the city council for the first time in 1848, and helped to formulate the municipal statute of Lemberg in 1850.

[Moshe Landau]

BLUMENFELD, FELIX MIKHAYLOVICH (1863–1931), conductor, pianist, teacher, and composer. Born in Kovalovka, Kherson, Blumenfeld studied at the St. Petersburg Conservatory with Stein (piano) and Rimsky-Korsakov (composition). After his graduation in 1885 he taught piano and was appointed professor in 1897. Blumenfeld conducted at the Imperial Opera, 1898–1912, gave the first performance of Rimsky-Korsakov's *Servilia* (1902) and of *The Legend of the Invisible City of Kitezh* (1907), and conducted the Russian seasons in Paris in 1908 (including Mussorgsky's *Boris Godunov*). After the Revolution, he became director of the Kiev Conservatory, and in 1922 joined the Moscow Conservatory as a piano teacher. He composed piano music, chamber music, and songs.

[Marina Rizarev (2nd ed.)]

BLUMENFELD, HERMANN FADEEVICH (1861–1920), Russian civil lawyer. He was the son of Rabbi Feitel Blumenfeld of Kherson (1826–1896), who helped to develop the Jewish agricultural colonies in Kherson and Bessarabia. Blumenfeld won a gold medal at the University of Odessa for a thesis on the law of real property. Being a Jew, however, he was

not allowed to be called to the bar and remained formally an articulated clerk until 1905 (the formal title in Russian was “assistant lawyer”). In the trials of 1906 following the Kishinev pogroms, the memorandum of the bar association submitted to the minister of justice was based on a report drafted by Blumenfeld. In the regime of Alexander Kerensky following the February revolution of 1917, Blumenfeld was made a member of the supreme court. His writings include two books on forms of land ownership in ancient Russia (1884), and on inheritance and authors’ rights (1892), and articles on Jewish subjects, including “Economic Activity of the Jews in Southern Russia,” in *Voskhod* (no. 9, (1881), 175–219), and “Jewish Colonies in the Kherson Government,” in *Razsvet* (1880 and 1881).

[David Bar-Rav-Hay]

BLUMENFELD, KURT YEHUDAH (1884–1963), German Zionist leader. Blumenfeld, who was born in Treuberg, East Prussia, studied law at the universities of Berlin, Freiburg, and Königsberg. He joined the Zionist movement in 1904 while still a student and became a student leader of the movement. From 1910 to 1914 he directed the department of information of the World Zionist executive, whose seat was then in Berlin, visiting many countries in the course of his work. In 1913–14 he was the editor of *Die Welt*, and in 1920 was among the founders of Keren Hayesod. He was president of the German Zionist Federation from 1923 to 1933. Blumenfeld settled in Jerusalem in 1933 and became a member of the Keren Hayesod directorate. He was a delegate to every Zionist Congress from the ninth (1909) on, and was a member of the Zionist General Council from 1920.

During World War II Blumenfeld stayed in the U.S., where he was occupied with Zionist politics. In 1946 he moved back to Jerusalem. His influence on West European personalities, including Albert Einstein, derived primarily from his intellectualism and his specific “post-assimilation” Zionism, i.e., the Zionist ideology he evolved to appeal to Jews who were already assimilated. Blumenfeld was in many ways a representative of the “post-assimilation” generation. His memoirs, *Erlebte Judenfrage; ein Vierteljahrhundert deutscher Zionismus* (1962), have been translated into Hebrew.

[Alexander Bein / Noam Zadoff (2nd ed.)]

BLUMENFELD, RALPH DAVID (1864–1948), British journalist. Blumenfeld was born in Wisconsin, the son of a newspaperman. He became a reporter on the *Chicago Herald* and later on the *New York Herald*. In New York, he entered the typesetting business, sold linotype machines in England, and made a considerable fortune. At the age of 36 he reentered journalism as news editor of the London *Daily Mail* and transferred to *The Daily Express* as foreign editor in 1902. After

becoming a British subject in 1907, he was editor, 1904–1932, editor in chief from 1924, and chairman of the London Express Newspaper Company, 1915–1948. Blumenfeld edited *The Daily Express* for mass appeal, used large type in forceful style, stressed the “human angle” wherever possible, ran the paper as a pro-Conservative, pro-tariff reform daily, and raised the paper’s circulation to two million a day. After his retirement in 1932, he visited Palestine, became a supporter of Zionism, and was active against antisemitism. Among the books he published were *R.D.B.’s Diary 1887–1914* (1930), *All in a Lifetime* (1931), *The Press in My Time* (1933), and *R.D.B.’s Procession* (1935).

BLUMENFELD, WALTER (1882–1967), German psychologist. Born in Neuruppin, Silesia, Blumenfeld became professor at the Technische Hochschule in Dresden. Leaving Germany in 1936, he was appointed professor at the University of San Marcos, Lima, Peru, and director of the Institute of Psychopedagogy. He became known for the “Blumenfeld alleys,” an apparatus he invented to measure the perceptual relationship between size and distance.

BLUMENFIELD, SAMUEL (1901–1972), U.S. Jewish educator. Born in Letichev, Russia, Blumenfeld was superintendent of the Chicago Board of Jewish Education until 1954, and also headed Chicago’s College of Jewish Studies as dean, and later as president. From 1954 until his retirement in 1968, he served as director of the Department of Education and Culture of the Jewish Agency (American Section). Blumenfeld is author of *Master of Troyes – A Study of Rashi the Educator* (1946), “Towards a Study of Maimonides the Educator” (*HUCA*, 23 (1950–51), 555–91), and *Hevrah ve-Hinnukh be-Yahadut Amerikah* (1965). He was president of Avukah (an American student Zionist organization) and the National Council of Jewish Education.

[Leon H. Spotts]

BLUMENKRANZ, BERNHARD (1913–1989), historian. Blumenkranz headed a research unit at the National Center for Scientific Research (Paris), and lectured on the social history of the Jews at the École Pratique des Hautes Études in Paris. He was president of the French Commission of Jewish Archives, and director of the bimonthly publication of the Jewish Archives. His works deal principally with the Jewish and Christian relations in the Middle Ages and the history of the Jews in medieval France. Among his books are *Juifs et Chrétiens dans le monde occidental* (1960), *Les auteurs chrétiens latins du Moyen-Age sur les Juifs et le judaïsme* (1963), and *Le Juif médiéval au miroir de l’art chrétien* (1966). Blumenkranz was a departmental editor of the *Encyclopaedia Judaica* (first edition) for the Church and the Jews and the history of the Jews in Medieval France.

[Colette Sirat]

BLUMENTHAL, AARON H. (1908–1982), U.S. Conservative rabbi. Blumenthal was born in Montreal, Canada, and received his ordination at the Jewish Theological Seminary in 1932. He served as a chaplain during World War II, eventually becoming head of the Chaplaincy Commission of the Jewish Welfare Board. Most of Blumenthal's rabbinic career (1946–73) was spent as spiritual leader of Congregation Emanuel, Mount Vernon, N.Y., where he was an outspoken advocate of civil rights and busing. For more than three decades (1948–82), Blumenthal was a leading member of the Committee on Jewish Law and Standards of the Rabbinical Assembly, writing many halakhic responsa for the Conservative movement. He was also known for his minority opinions, which early on favored equality for women in being called to the Torah (*ali-yot*), counted towards a *minyan*, and ordained as rabbis. Blumenthal was elected president of the Rabbinical Assembly in 1956. He wrote two books: *If I Am Not for Myself: The Story of Hillel* (1973) and *And Bring Them Closer to Torah* (published posthumously in 1986) edited by his son DAVID (1938–), also a Conservative rabbi and a distinguished scholar at Emory University, who has written on post-Holocaust theology and ethics in such works as *Facing the Abusing God* (1993) and *The Banality of Good and Evil: Moral Lessons from the Shoah and Jewish Tradition* (1999).

[Bezalel Gordon (2nd ed.)]

BLUMENTHAL, GEORGE (1858–1941), U.S. banker, philanthropist, and patron of the arts. He was born in Frankfurt and worked there in the banking house of Speyer. After moving to the United States in 1882, he became senior partner of Lazard Frères and director of various banks and insurance companies. In 1898 he joined other bankers in raising a fund of \$50 million to stop the flow of gold from the United States, and after World War I, played an important part in stabilizing the franc.

Blumenthal was director and president of the Mount Sinai Hospital, the largest Jewish hospital in New York. He donated one million dollars to the hospital and a new wing was erected as a memorial to his son. He was active in support of the arts, giving a million dollars to the Metropolitan Museum of Art in New York, of which he became president in 1934. In 1937 he presented a collection of first editions of important French writers to the New York Public Library.

BLUMENTHAL, JOSEPH (1834–1901), U.S. businessman and a founder of the Jewish Theological Seminary. Blumenthal, who was born in Munich, was taken to the U.S. at the age of five. He was a member of the Committee of Seventy which was responsible for the downfall of the notorious Tweed Ring. He served as New York State assemblyman and as commissioner of taxes and assessments in New York City. Blumenthal served in Jewish communal affairs as president of Shearith

Israel Synagogue, president of the Young Men's Hebrew Association, and a leader of B'nai B'rith. He was the first president of the Board of Trustees of the Jewish Theological Seminary, a position he held from its inception in 1886 until his death.

[Jack Reimer]

BLUMENTHAL, JOSEPH (1897–1990), U.S. printer and type designer. Born in New York, Blumenthal founded the Spiral Press in New York City in 1926. For more than 50 years it was acknowledged as producing the finest in American printing, setting standards for dedication to detail and design.

Blumenthal designed his own typeface, Emerson, which was available for hand and machine setting for commercial book composition. At the modern, well-equipped but small Spiral Press, Blumenthal designed and produced books and exhibition catalogs for such institutions as the Metropolitan Museum of Art, the Museum of Modern Art, the Pierpont Morgan Library, the Grolier Club, and the American Academy of Arts and Letters, as well as limited editions such as Ben *Shahn's *Alphabet of Creation* for general book publishers. He also designed and printed the books of such luminaries as Robert Frost, W.H. Auden, Pablo Neruda, William Carlos Williams, Robinson Jeffers, and Franklin Delano Roosevelt.

In 1952 Blumenthal was awarded a medal by the American Institute of Graphic Arts. In his later years he prepared a series of exhibitions on fine printing in America and Europe. He also wrote and taught, sharing his lifelong passion for the book, which he regarded as the vehicle for cultural heritage.

In his illustrated autobiography, *Typographic Years: A Printer's Journey Through a Half Century 1925–1975*, written in 1982, Blumenthal presents a vivid account of his life in the realm of fine printing from a personal, professional, and historical perspective. Other books by Blumenthal include *The Spiral Press through Four Decades, an Exhibition of Books and Ephemera* (1966), *The Printed Book in America* (1977), *Art of the Printed Book, 1455–1955: Masterpieces of Typography through Five Centuries from the Collections of the Pierpont Morgan Library, New York* (1974), *Robert Frost and His Printers* (1985), and *Bruce Rogers: A Life in Letters, 1870–1957* (1989).

[Israel Soifer / Ruth Beloff (2nd ed.)]

BLUMENTHAL, NISSAN (1805–1903), Russian cantor. Blumenthal was born in Berdichev, Ukraine, where he became cantor at the age of 21. He later served in Yekaterinoslav (Dnepropetrovsk), and from 1841 until his death held the position of chief cantor at the Brody Synagogue in Odessa. His main contribution to the music of the synagogue was the founding of a choir school in Odessa, where he developed choral singing in four voices, an innovation at that time. Contrary to the wishes of the traditionalists, he introduced into the lit-

urgy melodies from German classical music. He was nevertheless a lover of tradition and succeeded in effecting a synthesis of old and new. Few of his melodies appeared in print, but they were preserved by other cantors and some are still sung.

[Joshua Leib Ne'eman]

BLUMENTHAL, OSKAR (1852–1917), German playwright and literary critic. Born in Berlin to an Orthodox family, he finished his studies in philology and literary history in 1875. He started his career as a journalist and achieved early notoriety as “Bloody Oskar” for his satirical articles as theater critic of the *Berliner Tageblatt*. From 1876 he started writing comedies. In 1888 he helped to found the Lessing Theater in Berlin and directed many of its productions until 1897. Blumenthal's plays attacking social foibles were popular for about three decades and in the 1910 season several of his plays were widely performed. The witty comedy *Der Probepeil* (1884) was often performed in America from 1892 onward as *The Test Case*. His greatest success was *Im Weissen Roessl* (1898), which he wrote in collaboration with Gustav Kadelburg. Transformed into a musical comedy, *White Horse Inn* (1907), it became an international triumph of the mid-1930s.

ADD. BIBLIOGRAPHY: J. Wilcke, *Das Lessingtheater unter O.B. 1881–98* (1958).

[Sol Liptzin / Noam Zadoff (2nd ed.)]

BLUMENTHAL, WERNER MICHAEL (1926–), U.S. economist, industrialist, and ambassador. Born in Oranienburg, Germany, Blumenthal left Germany in the 1930s, spent some years in Shanghai where he was interned by the Japanese, and finally went to the United States in 1947. He taught at Princeton from 1954 to 1957, leaving to assume the post of vice president of Crown Cork International. In 1961 Blumenthal became United States representative to the UN Commission on International Commodity Trade, serving simultaneously as deputy assistant secretary of state for economic affairs. In 1963, as President Johnson's deputy special representative for trade negotiations, he was posted to Geneva as ambassador and chairman of the United States delegation to the Kennedy Round of tariff negotiations. After these were completed in 1967, Blumenthal resigned from government service to become president of international operations at Bendix Corporation. Blumenthal became chairman of the Bendix Corporation in 1972. He served as secretary of the treasury in the Carter Administration from 1977 until July 1979.

Blumenthal was a member of the American Economic Association and the Council on Foreign Relations.

In 1997 he became president and chief executive of the Berlin Jewish Museum. In 2002 Blumenthal, as director-general of the Jewish Museum in Berlin, was honored with the Goethe Institute's Goethe Medal, which is recognized as an of-

ficial order by the Federal Republic of Germany. It is awarded to foreign citizens who have rendered outstanding service to the aims of the institute.

[Ellen Friedman / Ruth Beloff (2nd ed)]

B'NAI B'RITH, international Jewish organization committed to the security and continuity of the Jewish people and the State of Israel; defending human rights; combating anti-semitism, bigotry, and ignorance; and providing services to the community on the broadest principles of humanity. Its mission is to unite persons of the Jewish faith and to enhance Jewish identity through strengthening Jewish family life and the education and training of youth; broad-based services for the benefit of senior citizens; and advocacy and action on behalf of Jews throughout the world.

Although the organization's historic roots are in a system of fraternal lodges and units (chapters), in the late 20th century, as fraternal organizations were in decline throughout the U.S., the organization began evolving into a dual system of the traditional payment of dues, with an expectation of active participation, and the pattern more common to other contemporary organizations – affiliation by contribution. In 2004, the organization reported a membership of more than 215,000, with members in 51 countries and a U.S. budget of \$20,000,000. Approximately 85 percent of the membership is in the United States. Although membership was historically limited to men, in 1988 a resolution admitting women to membership passed overwhelmingly and the organization – although still predominately male – includes men and women (see below).

B'nai B'rith was founded in Aaron Sinsheimer's café on New York's Lower East Side on October 13, 1843, by a group of 12 recent German Jewish immigrants led by Henry Jones. The new organization represented an attempt to organize Jews on the basis of their ethnicity, not their religion, and to confront what Isaac Rosenbourg, one of the founders, called “the deplorable condition of Jews in this, our newly adopted country.”

True to their German heritage, the founders originally named the organization *Bundes Bruder* (Sons of the Covenant) to reflect their goal of a fraternal order that could provide comfort to the entire spectrum of Jewish Americans. Although early meetings were conducted in German, after a short time English emerged as the language of choice and the name was changed to B'nai B'rith. In the late 20th century, the translation was changed to the more contemporary and inclusive Children of the Covenant.

The organization's activities during the 19th and 20th centuries were dominated by mutual aid, social service, and philanthropy. In keeping with their concerns for protecting their families, the first concrete action of the organization was the establishment of an insurance policy awarding the widow of a deceased members \$30 toward funeral expenses and a stipend of one dollar a week for the rest of her life. To aid her

children, each child would also receive a stipend and, for a male child, the assurance he would be taught a trade.

Many of the earliest achievements are believed to represent firsts within the Jewish community: In 1851, Covenant Hall was erected in New York as the first Jewish community center in the U.S.; one year later, B'nai B'rith established the Maimonides Library, also in New York, the first Jewish public library in the U.S.; immediately following the Civil War – when Jews on both sides were left homeless – B'nai B'rith founded the 200-bed Cleveland Jewish Orphan Home, said to have been the most modern orphanage of its time. Over the next several years, the organization would establish numerous hospitals, orphanages, and homes for the aged.

The organization lays claim to the distinction of being the oldest service organization founded in the United States. In 1868, when a devastating flood crippled Baltimore, B'nai B'rith responded with a disaster relief campaign. This act preceded the founding of the American Red Cross by 13 years and was to be the first of many domestic relief programs. That same year, the organization sponsored its first overseas philanthropic project, raising \$4,522 to aid the victims of a cholera epidemic in what was then Palestine.

In 1875, a lodge was established in Toronto, followed soon after by another in Montreal and, in 1882, by a lodge in Berlin. This is believed to be the first instance of a Jewish organization founded on American soil being carried back to the lands from which its founders had migrated. Membership outside the U.S. grew rapidly. Soon, lodges were formed in Cairo (1887) and in Jerusalem (1888 – nine years before Herzl convened the First Zionist Congress in Basel); the latter became the first public organization to hold all of its meetings in Hebrew.

After 1881, when mass immigration from Eastern Europe poured into the United States, B'nai B'rith sponsored Americanization classes, trade schools, and relief programs. This began a period of rapid membership growth, a change in the system of representation, questioning of the secret rituals common to fraternal organizations, and the beginning of a nearly century-long debate on full membership for women. In 1897, when the organization's U.S. membership numbered slightly more than 18,000, B'nai B'rith formed a ladies' auxiliary chapter in San Francisco. This was to become B'nai B'rith Women and, when B'nai B'rith gave full membership rights to women in 1988, to break away as an independent organization, Jewish Women International (see below).

In response to the *Kishinev pogrom in 1903 President Theodore Roosevelt and Secretary of State John Hay met with B'nai B'rith's executive committee in Washington. B'nai B'rith President Simon Wolf presented the draft of a petition to be sent to the Russian government protesting the lack of opposition to the massacre. Roosevelt readily agreed to transmit it and B'nai B'rith lodges began gathering signatures around the country.

In the first two decades of the 20th century B'nai B'rith launched three of today's major Jewish organizations: the

*Anti-Defamation League (ADL), Hillel, and the B'nai B'rith Youth Organization (BBYO). Later they would take on a life of their own and varying degrees of autonomy.

In 1913, when it was apparent that antisemitism was not to be limited to the European continent, B'nai B'rith established the Anti-Defamation League of B'nai B'rith (ADL). The immediate impetus was the false arrest, unfair trial (reflecting the most profound of antisemitic sentiments on the part of the jury), conviction and lynching of Leo *Frank, president of the Gate City, Georgia, B'nai B'rith lodge.

The ADL has become one of the preeminent forces for strengthening interreligious understanding and cooperation, improving relationships between the races, and protecting the rights and status of Jews.

In a pattern that was to be followed by other members of the B'nai B'rith "family," ADL has evolved into an autonomous organization which, though formally a part of B'nai B'rith and strongly embraced by the organization, is virtually independent and is self-sustaining today.

The 1920s saw a growing concern with preserving Jewish values as immigration slowed and a native Jewish population of East European ancestry came to maturity. In 1923, Rabbi Benjamin Frankel, of Illinois, established an organization on the campus of the University of Illinois to provide both Reform and Orthodox Sabbath services, classes in Judaism, and social events for Jewish college students. Two years later, he approached B'nai B'rith about adopting this new campus organization. B'nai B'rith sponsorship of the Hillel Foundations enabled it to grow into a network that today has more than 500 campus student organizations in the United States and other countries.

From the early 1970s onward, funding for Hillel was increasingly coming from Federations and with funding a request for greater control and accountability. Although B'nai B'rith continued to support Hillel, in the mid-1990s it became a new independent organization, Hillel: The Foundation for Jewish Campus Youth.

At virtually the same time as Hillel was being established, Sam Beber of Omaha, Nebraska, presented B'nai B'rith with a plan in 1924 for a fraternity for young Jewish men in high school. The new organization was to be called Aleph Zadik Aleph in imitation of the Greek-letter fraternities from which Jewish youth were excluded. In 1925, AZA became the junior auxiliary of B'nai B'rith.

In 1940, B'nai B'rith Women adopted its own junior auxiliary for young women, B'nai B'rith Girls, and, in 1944 the two organizations became the B'nai B'rith Youth Organization (BBYO).

BBYO provides informal Jewish educational and social programs in the United States and Israel designed to provide opportunities for youth from all branches of Judaism to develop their own Jewish identity, leadership skills, and personal development.

At the beginning of the 21st century, BBYO growth required expanded outside funding. Following the pattern of

Hillel, B'BYO secured independent, philanthropic funding and with it came the requisite shift of control to the funders. B'nai B'rith remains the largest single institutional contributor to the new organization, B'BYO, Inc.

B'nai B'rith has also been involved in Jewish camping for more than half a century. In 1953, B'nai B'rith acquired a 300-acre camp in Pennsylvania's Pocono Mountains. Originally named Camp B'nai B'rith, the facility would later be named B'nai B'rith Perlman Camp in honor of the early B'BYO leader Anita Perlman and her husband, Louis. In 1976, a second camp was added near Madison, Wisconsin. Named after the founder of AZA, the camp became known as B'nai B'rith Beber Camp. Both camps function in dual capacities as Jewish children's camps and as leadership training facilities, primarily for B'BYO.

In 1938, in response to rampant employment discrimination against Jews, B'nai B'rith established the Vocational Service Bureau to guide young people into careers. This evolved into the B'nai B'rith Career and Counseling Service, an agency that provided vocational testing and counseling, and published career guides. In the mid-1980s, the program was dissolved or merged into other community agencies.

To cope with a shift of American Jewry to the suburbs and a corresponding sense of assimilated comfort, in 1948 B'nai B'rith established a department of Adult Jewish Education (AJE). It would later become the B'nai B'rith Center for Jewish Identity. AJE launched a series of Judaic study weekends (called Institutes of Judaism) held in retreat settings and supplemented by informal neighborhood study programs. It also began an aggressive program of Jewish book publishing; a quarterly literary magazine, *Jewish Heritage*; and a lecture bureau booking noted Jewish scholars and performers for synagogues and other institutions. All but the lecture bureau were largely phased out in the 1990s, and the organization today focuses on program guides for local Jewish education programs and annual sponsorship of "Unto Every Person There is a Name" community recitations of the names of Holocaust victims, usually on Yom ha-sho'ah, Holocaust Remembrance Day.

B'nai B'rith publishes *B'nai B'rith Magazine*, a full-color quarterly – the oldest continuously published Jewish periodical in the United States (since 1886) – and regional newspapers reporting on organizational activities, *B'nai B'rith Today*. In the late 1990s and the early 21st century, the organization ventured into new technologies with the launch of a website, www.bnaibrith.org; an online 24-hour Jewish music service, www.bnaibrithradio.org; the first Jewish magazine to be broadcast on satellite radio, *B'nai B'rith World Service*; and the *Virtual Jewish Museum*, www.jmuseum.org, a resource for educators, students, and others seeking international Jewish art resources.

From its earliest days, a hallmark of the organization's local efforts was service to the communities in which members reside. In 1852, that meant raising money for the first Jewish hospital in Philadelphia. In the 21st century, these community

service efforts range from delivering Jewish holiday packages of meals and clothing to the elderly and infirm to distributing food and medicine to the Jewish community of Cuba.

In 1973, the organization turned what had formerly been an exhibit hall at its Washington, D.C., headquarters into the B'nai B'rith Klutznick National Jewish Museum. The museum includes an extensive collection of Jewish ceremonial objects and art and features the 1790 correspondence between President George Washington and Moses Seixas, sexton of the Touro Synagogue in Newport, Rhode Island. In 2002, the collection moved with the organization to new headquarters in Washington.

With the aging of the American Jewish population, service to seniors became a major focus with the first of what was to become a network of 40 senior residences in more than 25 communities across the United States and more internationally – making B'nai B'rith the largest national Jewish sponsor of housing for seniors. The U.S. facilities – built in partnership with the Department of Housing and Urban Development (HUD) – provide quality housing to more than 6,000 men and women of limited income, age 62 and over, of all races and religions. Residents pay a federally mandated rent based upon income.

In 2001 B'nai B'rith opened its first venture in what is anticipated to be a broader range of housing options for seniors. Covenant at South Hills (near Pittsburgh) is a life-care community offering a range of services at market rate enabling residents to live independently for as long as possible and receive additional health care and supportive services on site should the need arise.

The beginning of the 21st century also saw the senior service program expand and become a Center for Senior Services, providing advocacy, publications, and other services to address financial, legal, health, religious, social, and family concerns for those over 50.

B'nai B'rith involvement in international affairs dates to the 1870s when antisemitism, accompanied by a rash of pogroms, reached new heights in Romania. Through the influence of B'nai B'rith, the American government was induced to establish a U.S. consulate, and a former B'nai B'rith president, Benjamin Peixotto, was appointed the first consul. B'nai B'rith funded much of the mission. Although he could not totally solve it, Peixotto's work was credited with mitigating the problem.

By the 1920s, B'nai B'rith membership in Europe had grown to 17,500 – nearly half of the U.S. membership – and by the next decade, the formation of a lodge in Shanghai represented the organization's entry into the Far East. This international expansion was to come to a close with the rise of Nazism. At the beginning of the Nazi era, there were six B'nai B'rith districts in Europe. Eventually, the Nazis seized nearly all B'nai B'rith property in Europe.

B'nai B'rith Europe was re-founded in 1948; members and representatives from lodges that had survived the Holocaust attended the inaugural meeting. In 2000, the new European

B'nai B'rith district merged with the United Kingdom district to become a consolidated B'nai B'rith Europe with active involvement in all institutions of the European Union. In 2005 B'nai B'rith Europe comprised lodges in more than 20 countries, including formerly Communist Eastern Europe.

In response to what later become known as the Holocaust, in 1943 B'nai B'rith President Henry Monsky convened a conference in Pittsburgh of all major Jewish organizations to "find a common platform for the presentation of our case before the civilized nations of the world." During the four years which followed, the conference established the machinery that saved untold numbers of lives, assisted in the postwar reconstruction of European Jewish life, and helped spur public opinion to support the 1947 partition decision granting Jews a share of what was then Palestine.

Just prior to the creation of the State of Israel, President Truman – angry at pressure being placed upon him from Jewish organizations – closed the White House doors to Jewish leaders. B'nai B'rith President Frank Goldman convinced fellow B'nai B'rith member Eddie Jacobson, long-time friend and business partner of the president, to appeal to him for a favor. Jacobson convinced Truman to meet secretly with Chaim Weizmann in a meeting said to have resulted in turning White House support back in favor of partition, and ultimately to recognition of the statehood of Israel.

B'nai B'rith was present at the founding of the United Nations in San Francisco and has taken an active role in the world body ever since. In 1947, the organization was granted non-governmental organizational status and, for many years, was the only Jewish organization with full-time representation at the UN. It is credited with a leading role in the UN reversal of its 1975 resolution equating Zionism with racism.

B'nai B'rith's NGO role is not limited to the UN and its agencies. With members in more than 20 Latin American countries, the organization was the first Jewish group to be accorded NGO status at the Organization of American States (OAS) and has been at the forefront advocating on behalf of the cause of democracy and human rights throughout the region. B'nai B'rith's role in Latin America dates back to the turn of the 20th century and grew considerably with the influx of Jewish refugees from Nazi Europe.

In 1999, when one of the last living Nazi commandants, Dinko Sakic, was arrested in Argentina, B'nai B'rith was a leader in efforts to extradite him to Croatia to stand trial for commanding the infamous Jasenovac concentration camp in Croatia.

In addition to its advocacy efforts, B'nai B'rith maintains an extensive program of community service throughout Latin America. In 2002, this took the form of responding to the economic disaster that struck much of Latin America by distributing – in cooperation with the Brother's Brother Foundation – over \$31 million of critically needed medicine, books, and supplies to Argentina, Uruguay, Paraguay, and Venezuela.

In addition to founding Jerusalem Lodge in 1888, life in Israel has been a prime focus for the organization. Among B'nai B'rith's most noted contributions were the city's first free public library, Midrash Abarbanel, which became the nucleus of the Jewish National and University Library; the first Hebrew kindergarten in Jerusalem; and the purchase of land for a home for new immigrants, the village of Moza near Jerusalem. When, in 1935, B'nai B'rith donated \$100,000 to the Jewish National Fund to buy 1,000 acres, the act signaled to the world that America's oldest and largest Jewish organization was concretely supporting a continuing Jewish presence in what was then Palestine. In 1956, B'nai B'rith became the first major American Jewish organization to hold a convention in Israel.

B'nai B'rith is one of the few major Jewish organizations headquartered in Washington, D.C., not New York. That became a fateful horror on March 9, 1977, when, in what was, at the time one of the worst terror attacks in America, seven members of the Hanafi Muslim sect took over the B'nai B'rith Headquarters, the Islamic Center, and Washington, D.C.'s city hall. For 39 hours, 123 hostages were held on the top floor of the B'nai B'rith building. The building was ransacked, its ground floor museum stripped, personnel shot and beaten – some severely, some who never recovered from the psychological shock.

The Hanafi terrorists had targeted the three Washington buildings in revenge for the slaying of their leader's family members by Philadelphia Black Muslims. B'nai B'rith was targeted because the judge in Philadelphia was Jewish. The takeover was ended after the intervention of the ambassadors from three Muslim countries – Pakistan, Egypt, and Iran – convinced the terrorists to surrender to police.

The symbolism of B'nai B'rith as synonymous with anything Jewish was an ironic tribute to the organization's reputation – a synonym found in jokes of comedians, on TV game shows, and in the world of politics. In 1981 on the floor of the U.S. Senate, Senator Ernest Hollings derisively referred to then-Senator Howard Metzenbaum (who is Jewish) as "the senator from B'nai B'rith." For many years, when the biennial B'nai B'rith Convention was held during presidential election years, it became a presidential forum as Republican and Democratic candidates vied for Jewish support.

Although B'nai B'rith remained the most widely recognized name in the Jewish community, from the late 1970s B'nai B'rith saw its membership in lodges and units declining as young people in suburbia felt less of a need to meet with other Jews in a non-religious setting.

B'nai B'rith responded on two fronts. Drawing upon its widely recognized name and respect within the community, the organization turned to direct mail fundraising. At much the same time, confronting the reality that Jewish fraternal groups in the U.S. were unlikely to grow, yet unable to ignore the role lodges and units still played in many communities, the leadership transformed the program to meet contemporary needs. The most far-reaching changes came in 1996,

under the leadership of President Tommy Baer, when traditional U.S. districts were eliminated in favor of smaller, locally oriented regions focusing on community-based programs.

Because the sociological changes taking place in the U.S. were not evident in Europe, Israel, and Latin America, the existing structure of fraternal lodges was left intact and, particularly in Latin America, the most influential members of the Jewish community are members of B'nai B'rith.

The restructuring was completed in 2004 with a new approach to governance adopted under the direction of President Joel S. Kaplan and past president Seymour D. Reich. Under this plan, a number of leadership structures were drastically revised to enable the organization to operate more efficiently. The outmoded international convention, which focused on organizational business, was eliminated in favor of new, program-oriented meetings featuring briefings, cultural events, etc. and designed to appeal to a broader spectrum of the membership.

[Harvey Berk (2nd ed.)]

B'nai B'rith Women

B'nai B'rith Women began with an auxiliary woman's chapter in 1897; the first permanent chapter was founded in San Francisco in 1909. As more women's auxiliaries to B'nai B'rith formed, the women pressed for official recognition but were refused. Only two non-voting female representatives were allowed at Grand Lodge meetings. During World War I, the auxiliaries' activities expanded into cultural activities, philanthropy, and community service. B'nai B'rith women served in hospitals, settlement houses, offices, and factories, and drove ambulances. The women also started their own fund for the relief of Jews in Europe. By the beginning of WWII, BBW's membership had jumped to over 40,000 members, and it produced its first monthly publication, *B'nai B'rith Women*. In 1940, a Women's Supreme Council was formed to coordinate districts and chapters from national headquarters and Judge Lenore Underwood Mills of San Francisco was elected the first national president. The Council helped organize early girls' chapters of B'nai B'rith into B'nai B'rith Girls (BBG), appointing Anita Perlman as chair. During WWII, BBW chapters were again involved in volunteer and philanthropic work, as well as assisting military servicewomen, and providing aid to refugees and orphans. After the war, BBW's efforts turned to projects in the developing State of Israel, educational programs dedicated to combating prejudice, and supporting Hillel foundations on university campuses.

In 1953, women delegates were allowed to vote for the first time at the B'nai B'rith Supreme Lodge convention, and in 1957 the women, who numbered 132,000 in North America, and had 41 chapters abroad, formally changed their name to B'nai B'rith Women. The feminist movement of the 1960s and 1970s influenced BBW to advocate for women's healthcare, abortion rights, and the image of women in the media. BBW endorsed the Equal Rights Amendment in 1971 and participated as an NGO in the first UN World Conference for Women in 1975.

In the late 1980s, BBW engaged in a power struggle with B'nai B'rith International (BBI) over its status as an autonomous organization. In 1988, BBI finally admitted women as full members, but BBW passed a resolution to remain distinct. BBW declared full independence in 1995 and changed its name to Jewish Women International while retaining a relationship with B'nai B'rith and its "family members": BBYO, Hillel, and the Anti-Defamation League. In the early 21st century JWI, with a membership of approximately 75,000, defines its mission as championing self-sufficiency for women and girls through education, advocacy, and action with a special focus on preventing violence, children's well-being, and reduction of prejudice. JWI publishes *Jewish Woman* magazine in print and online.

B'nai B'rith Canada

B'nai B'rith Canada prides itself on being the largest Jewish voluntary organization and the largest individual Jewish membership organization in Canada. As such it bills itself as the "independent voice of the Jewish community, representing its interests nationwide to government, NGO's, and the wider Canadian public."

The history of B'nai B'rith Canada reflects both the changing patterns of growth, development, and sophistication of the Canadian Jewish population, on the one hand, and the global issues facing Jews throughout the world, on the other. The first B'nai B'rith Lodge in Canada was chartered in Toronto in 1875. Originally an offshoot of American B'nai B'rith founded in New York in 1843, the Toronto Lodge folded in 1894. As the largely immigrant Jewish population in Canada exploded from about 16,000 in 1901 to more than 156,000 in 1930, B'nai B'rith in Canada was revitalized as it helped immigrant Jews in Canada retain communal relationships outside of the synagogue while easing their integration into Canadian society. First rechartered as a branch of a U.S. district in 1919, in 1964 it became an autonomous Canadian district, District 22.

Now the largest secular Jewish membership organization in Canada, B'nai B'rith at first focused its efforts on expanding its network of lodges beyond Montreal and Toronto to smaller centers across Canada. In 2005 there were 45 established lodges in seven provinces. (B'nai B'rith in British Columbia still remains aligned to the West Coast U.S. district.) B'nai B'rith Canada continues to provide its members a robust social environment together with programs of mutual aid, social service, and philanthropy. In 1923 B'nai B'rith organized the first Canadian branch of Hillel, the Jewish university student organization, and shortly after, opened its first summer camp for Jewish children. These initiatives were followed over the years with a wide variety of community service initiatives, including the establishment of seniors' residences, the distribution of holiday baskets, organized visitations to the ill, and general fundraising for Jewish and community causes.

While B'nai B'rith Canada never lost a voluntary community focus that combines direct member services, community

social service, support for youth, fundraising, and sports, after gaining its independent district status under B'nai B'rith International, B'nai B'rith Canada began to assert itself as a representative organization of the Jewish community. Whether, as in the past, partnering with the Canadian Jewish Congress and other Jewish organizations on various community relations and Israel-related initiatives, or, as more recently, striking out on its own, B'nai B'rith has been an active presence in defense of Jewish and human rights. Beginning with its human rights arm, the League for Human Rights (originally affiliated with the American B'nai B'rith's Anti-Defamation League), and more recently through a second body, the Institute for International Affairs, B'nai B'rith Canada maintains a wide-ranging program of Jewish advocacy, including public education campaigns, political lobbying, liaising with government, and monitoring of anti-Jewish and anti-Israel propaganda and organizations in Canada and internationally.

Through its League for Human Rights, B'nai B'rith Canada continues to focus on exposing and combating antisemitic activity in Canada. In the past this has included intervention in the courts and at human rights tribunals on a variety of matters relating to antisemitic hate groups and individuals. The League was significantly involved in supporting the hate propaganda prosecutions of Holocaust denier Ernst Zundel and Alberta teacher James Keegstra in the 1980s. Following the lead of its American sister organization, in 1983, the League also initiated an annual "audit" of antisemitic incidents taking place across the country. Recently, in order to both assist victims as well as improve the tracking of such behavior, the organization established a 24/7 "anti-hate hotline." The 2003 Audit reported 584 incidents, a 27.2% increase over the previous year.

A further aspect of the League for Human Rights' work has been to promote the study of the Holocaust in Canada. This work has been hallmarked since 1986 by the organization's Holocaust and Hope Educator's Program through which a select group of teachers from across Canada take part in a multifaceted program of lectures, visits to the sites of the Holocaust, and personal contact with survivors.

The Institute for International Affairs monitors and responds to issues relating to Jewish communities around the world. An important aspect of this work is to inform and educate the broader Canadian community on issues relating to Israel. Through fact-finding missions, public education, attendance at international conferences, and outreach to other groups, the Institute both advocates in support of Israel and works to inform Canadians on Israel-related matters. Included in this task is a program of political action, informing political leaders at all levels of government and the media of the significance of these issues from the perspective of the Canadian Jewish community.

BNEI AKIVA (Heb. בְּנֵי־עֲקִיבָא, "Sons of Akiva"), the youth movement of *Ha-Po'el ha-Mizrachi, named after the *tanna* R. *Akiva. It was founded in Jerusalem in 1929. Chief Rabbi Avraham Yizḥak *Kook served as the spiritual leader of the movement.

From the outset "Torah va-Avodah" ("Torah and Labor"), religion and pioneering – represented by the yeshivah and the kibbutz – were the two major guidelines of Bnei Akiva's educational work and directed its activities. As early as 1931, two years after the establishment of the movement, the first attempt was made to found a Bnei Akiva *kevuḏah* at Kefar Avraham (next to Petaḥ Tikvah). The *kevuḏah* became the center of the young movement, but it was a focal point without a circumference, as the movement was still weak organizationally and educationally. After three years of economic and social difficulties, the *kevuḏah* was disbanded. Following the failure of the first experiment, efforts were made to establish a training farm for members of Bnei Akiva. The cornerstone of a permanent settlement was laid in 1938, with the establishment of a pioneers' nucleus for training at Kefar Gideon. In 1940 the members of this group moved to *Tirat Zevi and *Sedeh Eliyahu, for further training. After another year, this group, together with another from a work camp at Nes Ziyonah, established the *kevuḏah* *Alummot near Netanyah as the first Bnei Akiva settlement of its kind. Two years later the group moved to Herzliyyah, and in 1947 it established its permanent home, Kibbutz Sa'ad, in the northern Negev. By 1970, the movement had succeeded in establishing six *kevuḏot*, three moshavim, four *Naḥal settlements, and 64 settlement groups throughout Israel.

In the sphere of religious education, the movement established a yeshivah in 1940 at *Kefar ha-Ro'eh. It served as the basis for a network of Bnei Akiva yeshivot (high schools with intensive Torah studies programs in addition to general education) and later also for the ulpanot (girls' high schools). Today there are 15 yeshivot Bnei Akiva and 9 ulpanot. These institutions introduced a new approach to the study of the Torah by the young generation, which aroused widespread interest in circles hitherto uninterested in religious education. Yeshivot Hesder, integrating Israel army service with periods of yeshiva learning, are also under the auspices of Yeshivot Bnei Akiva. By 1995, the movement had 300 branches, a large number of which were in new settlements, with a total of over 50,000 members, increasing to 75,000 by 2004. The basic characteristics of a youth movement are found in Bnei Akiva. Scouting is cultivated, and each summer large camps are operated. The Passover school vacation is dedicated to hikes throughout the country. The movement also publishes literary material and

educational literature. Since 1936 the quarterly *Zera'im* has been published. After the Six-Day *War (1967), Bnei Akiva established Yeshivat ha-Kotel near the Western Wall, and members of the movement were the first to resettle within the walls of the Old City of Jerusalem. It also had two frameworks aimed at immigrant youth from Ethiopia and the former Soviet Union and a project for young leadership in development towns.

Bnei Akiva sponsors a variety of activities in the Diaspora through the dispatch of emissaries, the training of Diaspora leaders through seminars in Israel, and the establishment of branches in various countries. In 1954 the world framework of Bnei Akiva was established. In 1995 it had about 45,000 members in close to 100 cities in the Diaspora. Hundreds of its graduates settled in Israel annually; hundreds of others go for a year's training on settlements, and many join settlement groups of *Ha-Kibbutz ha-Dati.

[Itzhak Goldshlag]

BOARD OF DELEGATES OF AMERICAN ISRAELITES, organization representing the first successful attempt at organizing American Jewry in furtherance of the civil and political rights of Jews, at home and abroad. The experiment lasted 20 years, after which it was merged into the *Union of American Hebrew Congregations (then the Seminary Association of America) as the Board of Delegates of Civil and Religious Rights. It was finally dissolved 66 years after its creation.

The Board of Delegates was officially formed on in 1859 as a Jewish civil rights organization headquartered in New York City. Its establishment was partly in response to the 1858 case of Edgardo *Mortara, an Italian Jewish boy who had been kidnapped by papal authorities after his family's maid had forcibly converted him; the Vatican would not return a baptized Catholic to his non-Catholic parents. Among its founders were New York City businessman Henry Hart, financier Isaac Seligman, and philanthropist Samuel Myer Isaacs (see *Isaacs family), who served as secretary of the Board of Delegates until its absorption into the UAHC (whereupon he became president of the organization). The officers of the Board of Delegates included both civic and religious leaders: one of two elected vice presidents was Rabbi Isaac *Leeser of Philadelphia.

The five primary objectives set forth in the Board of Delegates' constitution were (1) to gather statistical information regarding the Jews of the United States; (2) to be the arbiter of disputes between congregations, individuals, or public bodies, in lieu of their resorting to the courts; (3) to promote religious education; (4) "to keep a watchful eye on occurrences at home and abroad, and see that the civil and religious rights of Israelites are not encroached on, and call attention of the proper authorities to the fact, should any such violation occur"; and (5) to establish and maintain communication with other like-minded Jewish organizations throughout the world, and especially to establish a "thorough union among all the Israelites of the United States."

Accordingly, the Board of Delegates, whose members comprised individuals, organizations, and congregations, acted in a twofold capacity: as a central umbrella organization for American Jews and as a relief agency for Jews abroad.

In the U.S., the Board was instrumental in arranging the appointment of the first Jewish military chaplain – in 1862, to the Union Army during the Civil War – and was the first body to collect and record information about the history and size of American synagogues. It also encouraged congregational schools and established two institutions of higher learning – the Educational Alliance and Hebrew Technical Institute in New York and Maimonides College in Philadelphia – to train Jewish teachers.

In addition, the Board of Delegates functioned as a sort of "anti-defamation league." It denounced General Ulysses S. Grant's 1862 Order No. 11 expelling Jews from Tennessee, as well as Major General Benjamin Franklin Butler's accusations that Jews were looters and liars. Grant's order was rescinded, and Butler issued a public apology for his comments. In 1872, the Board of Delegates was also successful – after protesting to the U.S. Commissioner of Education – in forcing the City College of New York to rescind its policy of scheduling examinations on Saturdays, the Jewish Sabbath.

Internationally, in 1860, the Board of Delegates joined the *Alliance Israélite Universelle, which had been formed that year as a central clearinghouse of information and action based in Paris to monitor the plight of Jews worldwide and advance their civil rights. Together with its counterpart councils in England, France, Austria, and Romania, the Board of Delegates assisted Jews throughout the Americas, Europe (particularly Romania), North Africa, and the Middle East (where Jerusalem and other cities in the Holy Land were under the governance of Ottoman Palestine).

Although the Board of Delegates enjoyed some success in the United States, factional and ideological conflict weakened its effectiveness domestically, especially when it came to sponsoring initiatives in the realm of education. (Indeed, some organizations had opposed the creation of the Board of Delegates in the first place.) The major focus of the Board's activity, therefore, became the human rights and emancipation of Jews in countries like Morocco, Turkey, Romania, and Palestine.

One of the Board of Delegates' lobbying triumphs resulted in the appointment of Benjamin F. *Peixotto as United States Consul to Romania, in an effort to alleviate official persecution of Romanian Jewry. Peixotto's well-publicized tenure in Bucharest (1870–76) contributed to the lessening of antisemitic legislation and pogroms. In 1872, the Board of Delegates sent representatives to attend its first international conference on an issue concerning the Jewish people: a meeting in Brussels to discuss the predicament of Romanian Jews.

The plight of Romania's Jews also presented the Board of Delegates with the difficult problem of how to handle the question of Jewish immigration to the United States. In this case, the Board pressed for increased immigration; at other times,

however, it argued for restricting immigration only to persons possessing certain qualifications. In 1873, the Board, via the Alliance, provided the Russian government with statistical and employment information on various aspects of Jewish life in America, particularly the integration of Jewish citizens.

The Board of Delegates also supported Jewish causes in the Holy Land; it contributed funds to such enterprises as the Mikveh Israel Agricultural School in Jaffa and the Jewish Hospital in Jerusalem and urged the U.S. government to intercede with Palestine's Ottoman Turkish rulers in defense of the rights of the Jewish minority.

[Bezalel Gordon (2nd ed.)]

BOARD OF DEPUTIES OF BRITISH JEWS, representative organization of British Jewry. The institution dates from 1760, when the Sephardi committee of *deputados* presented a "loyal address" to George III and were reproached by the Ashkenazi community for acting independently. Both communities then agreed to consult together on matters of mutual interest. Thereafter meetings were intermittent until in 1835 a constitution was adopted. At this time the Board's representative status was recognized by the government. In 1838, Sir Moses *Montefiore became president and, apart from a brief interval, held office until 1874. He opposed representation for the Reform community, which was only achieved in 1886, a year after his death. Membership was based on synagogues, London and provincial, and it was not until the present century that representatives of other communal organizations were added.

In the 19th century, the Board was active in the struggle for political emancipation; in protecting persecuted Jewish communities overseas, to which end the good offices of the British government were enlisted; in ensuring that Jews were absolved from the effects of economic legislation designed to prevent Sunday work; in safeguarding Jewish interests with regard to marriage, divorce, and religious practice generally. It also appointed synagogal marriage secretaries which legalized weddings and, after 1881, was active in projects to integrate the Russo-Polish immigrants.

In 1878, the Board and the Anglo-Jewish Association formed a Conjoint Foreign Committee, which operated successfully until discredited by its anti-Zionist line in 1917, when it disbanded. Reconstituted in 1918 as the Joint Foreign Committee, it continued until the Board was "captured" by a well-organized Zionist caucus and Selig *Brodetsky became president in 1943. With this coup the domination by the Anglo-Jewish "aristocracy" came to an end.

The Board has been prominent for many decades in protecting and defending the rights of the Jews of the United Kingdom; in monitoring and countering antisemitism; in assisting Jews in all parts of the world; and in promoting Israel's right to live in peace and security with her neighbors. The Board's role as the representative voice of the Jewish community in the United Kingdom is acknowledged by government

and the media. The Board is guided on religious matters by its ecclesiastical authorities (namely the chief rabbi and the communal rabbi of the Spanish and Portuguese Jews Congregation) and is obliged by its constitution to consult with the religious leaders of other groupings which do not recognize these ecclesiastical authorities.

The Board today consists of about 350 members representing synagogue and other communal organizations in the United Kingdom. The Deputies are elected by the individual constituencies every three years, and they in turn elect from among themselves a president, three vice presidents, and a treasurer who may hold office for two terms.

The Board works through elected committees – Law, Parliamentary and General Purposes; Israel; Foreign Affairs; Education, Youth and Information; Defense and Group Relations; Public Relations; and Finance – which meet regularly and submit reports for discussion at the monthly plenary meetings of the Deputies. Administrative matters are attended to by the chief executive and a professional staff of about 30.

For many years its offices were at Woburn House in Upper Woburn Place, London, but its offices are currently located nearby in Bloomsbury Square. While the Board of Deputies has been criticized on a variety of grounds, it is still almost always regarded by official bodies and the media as representing the official Jewish viewpoint on public issues.

[Vivian David Lipman]

BOAS, Dutch banking family, prominent in The Hague in the 18th century. The founder of the family, HYMAN (or Abraham; 1662–1747) was settled in The Hague by 1701. In 1743 he sold his business in jewelry, gold, and textiles for the sum of 80,200 florins to his son TOBIAS (1696–1782), who became one of the most important bankers in the Netherlands. He loaned huge sums to the Dutch government and to other European rulers. His children married into the families of the *Court Jews *Gompertz, *Wertheimer, *Oppenheimer, and Kann, with whom he had business relations. Tobias was strictly Orthodox, supported Jewish scholars, and sponsored the publishing of their works. On several occasions he acted as *shtadlan*, representing Jewish interests, in which he was facilitated by his connections with European royalty. As such he took an active part in organizing Dutch and British diplomatic intervention to prevent the expulsion of the Jews from *Prague (1744–45). His sons ABRAHAM and SIMON continued his banking activities. Under the economic stress of the

American War of Independence and the French Revolution, however, the firm went bankrupt in 1792. Its failure seriously affected the prosperity of the Jewish community, which was determined by the family during the entire 18th century, since there was always one individual from the family among the official leaders. For many years Tobias financed the employment of the rabbi of the community, Saul Halevi. The family is frequently mentioned in Jewish and non-Jewish memoirs of the period, from the travel diary of H.J.D. *Azulai to the autobiography of Casanova.

[Jozeph Michman (Melkman) /Stefan Litt (2nd ed.)]

BOAS, ABRAHAM TOBIAS (1842–1923), Australian rabbi. Boas, the son of a rabbi, was born in Amsterdam and graduated there at the theological seminary. He lived in England before immigrating to Adelaide, South Australia, as minister of the Hebrew Congregation in 1870, retiring in 1918. While his main interest was education, Boas was also active in civic affairs. He obtained recognition of the Jewish community as a denomination entitled to representation at official functions. He introduced the triennial reading of the Law but later reverted to traditional usage.

His son ISAAC HERBERT (1878–1955) was an Australian timber technologist of international repute. Born in Adelaide and educated there and in Perth, Western Australia, Boas was an academic and industrial chemist before joining the government's scientific sector. He perfected a method for utilizing the vast eucalyptus reserves for industry. From 1928 to 1944 he was chief of the division of forest products, the Council for Scientific and Industrial Research Organization (CSIRO), located in Melbourne. During this period his laboratory earned worldwide recognition. Boas served as president of the Royal Australian Chemical Institute. After his death the timber technology research station at Ilanot, Israel, was named for him. Boas was active in the Jewish community, serving as president of the Jewish Welfare Society and the St. Kilda Hebrew Congregation in Melbourne.

Another son, HAROLD BOAS (1883–1980), was a distinguished architect and town planner in Perth, Western Australia. In the period immediately after World War II, he was one of the main leaders in last-ditch efforts by acculturated sectors of the Australian Jewish community to oppose the creation of the State of Israel.

Rubinstein, "The Australian Jewish Outlook and the Last Phase of Opposition to 'Political Zionism' in Australia, 1947–1948," in: W.D. Rubinstein (ed.), *Jews in the Sixth Continent* (1987); H.L. Rubinstein, *Australia I*, 305–6, index.

[Israel Porush / William D. Rubinstein (2nd ed.)]

BOAS, FRANZ (1858–1942), U.S. anthropologist who established anthropology as an academic discipline in the U.S.A. Born in Minden, Germany, he taught geography at the University of Berlin, which led to his Arctic expedition to Baffin Island in 1883–84. Gradually his interest in anthropology overtook his interest in cultural geography and in 1885 he became assistant in Bastian's Museum fuer Voelkerkunde in Berlin. Boas developed a major interest in North Pacific culture, which in 1886 took him to British Columbia where he began the study of the Kwakiutl Indians, a subject in which he retained a lifelong interest. In 1887 he settled in New York City, and worked as an assistant editor of *Science* primarily in geography. After some teaching he became affiliated with the American Museum of Natural History, where he served as curator of ethnology 1901–05. In 1899 he was appointed professor of anthropology at Columbia University.

After his monograph on the Central Eskimo (1888) he planned and participated in the Jesup North Pacific expedition. He developed into an authority on the Northwest Pacific coast, the Eskimo and Kwakiutl cultures, American Indian languages, and Mexican archaeology where he was among the first to apply stratigraphic excavations.

In effect he restructured anthropology into a modern science committed to rigorous empirical method and the fundamental idea of the relative autonomy of the phenomena of culture.

In Boas' view, neither race nor geographical setting have the primary role in forming human beings. Culture is the behavioral environment which forms the patterns of thought, feeling, and behavior, producing habits which are an internalization of traditional group patterns.

In the field of linguistics his studies of American Indian languages and his contributions to modern linguistic techniques in both phonetics and morphology virtually defined American linguistic anthropology.

Boas' studies of race and environmental factors, employing innovative biometric techniques, moved physical anthropology from static taxonomy to a dynamic biosocial perspective. Proceeding to refine the concept of race based on the notion of a permanent stability of bodily forms, he stressed the influence of environmental factors of human cultural life in modifying anatomy and physiology. In this labor his early training in physics and mathematics was of great use to him in his important investigations of changes in cranial and other measurements in children of immigrants. Thus his *Changes in Bodily Form of Descendants of Immigrants* (1912), which measured some 18,000 individuals, comparing European immigrant parents and their children in New York City, demonstrated significant changes in cephalic measurements. He also carried forward pioneer longitudinal studies in human growth and biometrical genetics.

After a lifetime in scientific endeavor and public teaching regarding the dangers of racism, he participated in various efforts on behalf of intellectuals persecuted by the Nazi regime

and personally made it possible for many refugees to escape to freedom, while emigration was still possible.

His major works include: *Anthropology and Modern Life* (1932²); *Race, Language and Culture* (1940); *Race and Democratic Society* (1945); *Primitive Art* (1951); *The Mind of Primitive Man* (1965³); *The Central Eskimo* (U.S. Bureau of American Ethnology, *Sixth Annual Report 1884–85* (1888), 399–669; issued in paperback, 1964); and *Ethnology of the Kwakiutl* (35th Annual Report 1913–14 (1921), 41–1481).

[Ephraim Fischhoff]

BOAS, FREDERICK SAMUEL (1862–1957), literary scholar. Boas was professor of English at Queen's College, Belfast University (1901–05) and specialized in Shakespearean and Elizabethan studies. His works include *Christopher Marlowe* (1940) and introductions to Tudor and Stuart drama. Boas was a well-known Shakespearean scholar who first applied the term “problem plays” to Shakespeare's later comedies. His son, Guy Boas, was a prominent contributor to *Punch*.

[William D. Rubinstein (2nd ed.)]

BOAS, GEORGE (1891–1980), U.S. philosopher, a major figure in the history of ideas movement in America. From 1924 to 1957 he was professor of philosophy at Johns Hopkins University, Baltimore. He also served as chairman of the philosophy department. His major studies were in the areas of aesthetics, the history of thought, and French philosophy. He also translated several works from French. Boas was on the board of editors of the *Journal of the History of Ideas*, from its inception in 1945 until his death. In 1953, at the height of the McCarthy period, Boas helped edit *Lattimore the Scholar*, in defense of Owen Lattimore, who was under attack.

His major writings include *The Happy Beast in French Thought of the 17th Century* (1933), *A Primer for Critics* (1947), *Essays on Primitivism* (1948), *Wingless Pegasus* (1950), *The Mind's Road to God: Bonaventura* (1953), *Dominant Themes of Modern Philosophy* (1957), *The Inquiring Mind* (1959), *Rationalism in Greek Philosophy* (1961), *The Heaven of Invention* (1962), *The Challenge of Science* (1965), *The Cult of Childhood* (1966), *The Limits of Reason* (1968), *The History of Ideas: An Introduction* (1969), and *Vox Populi: Essays in the History of an Idea* (1969). A collection of Boas' essays, entitled *Primitivism & Related Ideas in the Middle Ages*, was published in 1997.

[Richard H. Popkin / Ruth Beloff (2nd ed.)]

BOAS, HENRIETTE (1911–2001), Dutch classical scholar and journalist. Boas was born in Amsterdam, the eldest daughter of Dr. Marcus Boas (1879–1940), a learned private teacher of

classics. She studied Ancient History, Greek and Latin and wrote her Ph.D. dissertation on *Aeneas' Arrival in Latium* (1938) at the University of Amsterdam. From February to May 1940 she was in Paris doing research, and from there she managed to get to London, where she worked in the Dutch section of the BBC. From 1947 till 1951 she lived in Palestine/Israel and wrote for various newspapers. After her return to the Netherlands she worked as a correspondent for the Israeli newspapers *Haaretz* and the *Jerusalem Post* and the English weekly *Jewish Chronicle*.

Between 1959 and 1981 she taught Greek and Latin at various schools in Holland. She continued to write for the above newspapers and in Dutch she contributed to *Aleh*, the quarterly of Dutch immigrants in Israel, and to Jewish periodicals in the Netherlands. She wrote on Dutch topics in the first edition and Year Books of the *Encyclopaedia Judaica* as well as for the *American Jewish Yearbook* (1987–99). She also participated in symposia and lectured on Dutch Jewish literary and historical topics.

The Dr. Henriette Boas Stichting (Amsterdam) established the Dr. Henriette Boas Prize for journalists and other popular writers who make outstanding achievements in the field of Dutch Jewish history and culture. Shaul Kesslassi and Daphne Meijer made a documentary film about her life called *Ik lees de krant met een schaar* (NIK-Media, Hilversum, December 2004).

[F.J. Hoogewoud (2nd ed.)]

BOAZ (Heb. בּוֹאֵז), the son of Salmah, great-grandfather of King David. Boaz was descended from Nahshon, the son of Amminadab (Ruth 4:20–22; 1 Chron. 2:10–15), prince of the tribe of Judah in the generation of the wilderness (Num. 1:7). He lived in Beth-Lehem in the time of the Judges and is described as a “man of substance,” that is, a wealthy landowner employing many young men and women on his estate (Ruth 2:1). *Ruth, the Moabite daughter-in-law of Naomi, came to glean in his fields, and Boaz expressed his appreciation for her kindness and devotion to the widowed Naomi. Being a kinsman of Elimelech, Ruth's late father-in-law, Boaz undertook to redeem the latter's inheritance. He then married Ruth (*ibid.*, 2:11–12; 3:12; 4:1–15).

[Nahum M. Sarna]

In the *Aggadah*

Boaz was a prince of Israel (Ruth R. 5:15) and the head of the *bet din* of Beth-Lehem. He is, therefore, sometimes identified with the judge Ibzan of Beth-Lehem (Judg. 12:8) who lost his sixty children during his lifetime (BB 91a). Ruth and Naomi arrived in Beth-Lehem on the day on which Boaz' wife was buried (*ibid.*). He had a vision that Ruth would be the ancestress of David (Shab. 113b). When Ruth told him that as a Moabite she was excluded from marrying him (Deut. 23:4), Boaz responded that this prohibition applied only to the males of Moab and not to the females (Ruth R. 4:1). Although a prince, Boaz himself supervised the threshing of the grain and slept in the barn in order to prevent profligacy (Ruth R. 5:15).

When awakened by Ruth, he believed her to be a devil, and only after touching her hair was he convinced to the contrary since devils are bald (Ruth R. 6:1). The six measures of barley which he gave her were a symbol of her destiny to become the ancestress of six pious men, among them David and the Messiah (Sanh. 93a–b). Boaz was 80 years old and Ruth 40 when they married (Ruth R. 6:2), and although he died the day after the wedding (Mid. Ruth, Zuta 4:13), their union was blessed with a child, Obed, David's grandfather. In recognition of his merits, certain customs that Boaz originated were retained and received heavenly approval – the use of the Divine name in greeting one's fellow man (Ruth 2:4; Ber. 9:5) and the ceremony of pronouncing benedictions on a bridal couple in the presence of ten men (Ket. 7a).

BOBE-MAYSE, Yiddish expression for a fantastic or incredible tale. The term is based on the title of the Yiddish chivalric romance that Elijah *Levita adapted from the Tuscan *Buovo d'Antona* (based on the original 14th-century Anglo-Norman *Boeuve de Haumton*). This work, popular among Ashkenazi Jews, originally appeared as *Bovo D'Antona* and was subsequently printed as *Bove-Bukh; in later *chapbook editions it was titled *Bove-Mayse* (*mayse*, “tale”). The similarity of *Bove* to *Bobe* (Yid. “grandmother”) led to the substitution of *Bobe-Mayse* for *Bove-Mayse*, and to the use of the former expression for any “grandmother's tale” (i.e., incredible story), with no connection to the original romance.

[Sol Liptzin / Jean Baumgarten (2nd ed.)]

BOBER, ROBERT (1931–), French writer and director of documentary films. Bober was born in Berlin in 1931, but the family fled with the rise of the Nazi regime in 1933 and settled in working-class neighborhoods of Paris. Bober left school early, just after completing the “Certificat d'Etudes Primaires” (end of primary school), and worked successively as a tailor, a potter, and an assistant for film director Francois Truffaut. Since being hired by French public television as a film director in 1967, he directed over 100 documentary films covering a variety of domains, some of them with renowned journalist and producer Pierre Dumayet, including portraits of 19th- and 20th-century French writers (Balzac, Flaubert, Proust, Valery, Dubillard, Queneau) or artists (Van Gogh, Alechinsky). A more intimate side of his work is connected to his own story as a Jewish refugee of Polish descent, born in Germany, who managed to live through the Holocaust: *Refugie provenant*

d'Allemagne, d'origine polonaise (1975–76) exemplifies this search for his roots, which Bober traces back to Radom, in Poland. Several of Bober's films deal with Ashkenazi Jewish culture and *yiddishkeit* (*Sholem Aleikhem*, 1967; *Martin Buber*), or with the permanence of memory and remembrance (*The Generation After*, 1970–71). Photography was thus important to him, as a witness to a vanished or vanishing past. Bober was awarded a grand prize for lifetime achievement by the Societé Civile des Auteurs Multimedia in 1991. Subsequently he published two outstanding and deeply autobiographical novels, *Quoi de neuf sur la guerre?* (1993), and *Berg et Beck* (1999), the first one set in a Jewish-owned clothing factory, the second in a Jewish educational facility, both of them in the immediate aftermath of World War II and both dealing in a very sensitive and low-key manner, yet powerfully, with Holocaust memories and the difficult way back to normal life for ordinary working people whose lives had been shattered. Both novels have been successfully adapted for stage.

Bober shared with writer George *Perec a similar personal history (Perec dealt with the Holocaust in the novel *W ou le souvenir d'enfance*), as well as with a childhood in the same eastern neighborhoods of Paris (the *rue Vilin*, which was the setting of an unfinished work-in-progress by Perec, mixing photography and text, became the subject of Bober's *En remontant la rue Vilin*, a tribute to Perec which won the silver prize at the FIPA contest in 1993). Together they worked on a documentary film, *Recits d'Ellis Island* (1986), where, though not directly confronting the Holocaust, they dealt with stories of wandering and exile echoing their own stories.

[Dror Franck Sullaper (2nd ed.)]

BOBOV, ḥasidic group that began with Solomon *Halberstam (1847–1905), who lived in the Galcian town of Bobowa. Solomon was the grandson of Rabbi Ḥayyim of Sanz, founder of the Sanzer ḥasidim. Solomon enjoyed great popularity among the young people in his area, whom flocked to hear his Torah and to seek his counsel. He is credited with starting the first yeshivah in Poland. He was succeeded by his son Ben Zion Halberstam (1874–1941). Ben Zion continued his father's work in education. By the beginning of World War II, he had established 60 satellite yeshivot, with the yeshivah in Bobov as the center. Ben Zion, along with two of his sons, two sons-in-law, and his daughters perished at the hands of the Nazis in the Holocaust. His son Solomon (1908–2000) managed to escape the Nazis by fleeing to Italy. Immediately after the war, Solomon made his way to New York City. He settled first in Manhattan, then moved to Crown Heights in Brooklyn, and finally to Boro Park in Brooklyn, where he remained. Boro Park continued to be the world center of the Bobover ḥasidim and the home of the *rebbe*. At the end of World War II, only 300 Bobover ḥasidim remained. Solomon managed to obtain visas for them as well as for hundreds of orphans who were in the Italian transfer camps to join him in America. These orphans were among the very first students enrolled in the new

Bobover schools in America. One of the first educational institutions started by Solomon was a trade school in Manhattan. The purpose was to teach ḥasidic refugees marketable skills so they could earn a living. These schools were the beginning of a network of Bobov schools and yeshivot that currently stretches from Brooklyn to Toronto, Canada, to London, to Antwerp, and to Israel. They are the hallmark of a remarkable rebuilding of Bobov ḥasidism from a few hundred to well over 20,000 ḥasidim around the world. Some estimate that there were as many as 100,000 Bobov ḥasidim at the turn of the century. There were approximately 7,000 men and women in Bobover schools in America. In Israel, there was a Bobov community just outside Bat Yam, as well as large yeshivot in Jerusalem and Bene-Berak. The Israeli branch pursues a non-confrontational but non-Zionist stance vis-à-vis the Israeli government. Their sons do not serve in the IDF.

Throughout his tenure as *rebbe*, Solomon steered clear of the disputes that have marred the relationships between other ḥasidic groups. He was also very actively involved in the lives of his ḥasidim, attending innumerable bar mitzvahs, weddings, and circumcisions. At the time of his death in 2000, Bobov was one of the three largest ḥasidic groups (with Lubavitch and Satmar). Solomon was succeeded by his son Naftali (1931–2005), who, during his last years, was constantly ill. He did not leave a son to succeed him; thus a dispute broke out on the day of his funeral as to who would be the next *rebbe*, his younger half-brother, Benzion, or his son-in-law, Mordechai Unger. Benzion gained the upper hand; however, it remained to be seen if there would be a split in the Bobov ḥasidic group.

Solomon Halberstam, the first American Bobover *rebbe*, published a two-volume compilation of his father's comments on the Pentateuch and the holidays, titled *Sefer Kedushat Zion* (1994). His own comments on the high holy days were published posthumously, entitled *Si'ah Shelomo* (2002). Over the years, Bobov published numerous small monographs (*kuntresim*) on a wide variety of topics, including all of the holidays and various books of the Bible. They also published a number of biographies of their *rebbes*, especially the first two, who lived in Europe (see bibliography). At one point, they also published a Bobov telephone book, listing their numerous institutions around the world.

[David Derovan (2nd ed.)]

BOBROVY KUT, Jewish agricultural settlement in Nikolayev district, Ukraine. It was established in 1807 with private funds and settled by families from Mogilev, Belorussia. The settlement numbered 406 Jews in 1810, and 165 families in 1815 (416 men and 327 women). Additional families were transferred there in 1825, 1837, and 1841, and the settlement numbered 1,184 in 1849, 1,248 in 1897, and over 2,000 in 1926, but dropped to 600 (136 families) in 1936. Under the Soviet government, Bobrov Kut was incorporated in the autonomous Jewish district of Kalinindorf and like the other Jewish agricultural settlements traversed many vicissitudes. It suffered years of hunger, was changed into a kolkhoz, and underwent “internationalization” (i.e., admission of non-Jews). The Jewish settlers were often accused of being “petit-bourgeois,” nationalists, or Zionists. Many of the younger settlers were arrested and deported, while most of the older ones left. A Yiddish school was in operation in the 1930s. Bobrov Kut was occupied by the Germans on August 27, 1941. They soon murdered 850 Jews from the village and its environs, and in September 300 from the surrounding kolkhozes. Bobrov Kut was the birthplace of the poet S. *Frug.

[Shmuel Spector (2nd ed.)]

BOBRUISK, capital of Bobruisk district, Belarus; became part of Russia after the second partition of Poland in 1793. Jewish settlement there is first mentioned at the end of the 17th century. The *kehillah* of Bobruisk was included in the jurisdiction of the township of Smilovichi (see *Councils of the Lands). Three hundred and fifty-nine Jewish poll taxpayers are recorded in Bobruisk in 1766. The community increased appreciably after Bobruisk's accession to Russia. The supply of provisions to the garrison of the large fortress built there at the beginning of the 19th century became a major source of Jewish employment. Toward the middle of the 19th century, Jews also took part in lumbering activities, since Bobruisk became an important lumber center, where timber from the adjacent forests was rafted or entrained to southern Russia or the Baltic ports. The Jewish population numbered 4,702 in 1847; 8,861 in 1861; 20,760 in 1897 (60% of the total); and 25,876 (61%) in 1914. It dropped to 21,558 Jews (42%) in 1926 and rose again to 26,703 (total 84,078) in 1939.

There were numerous yeshivot in Bobruisk. Distinguished rabbis who officiated there included leaders of *Ḥabad Ḥasidim (Mordecai Baruch Ettinger, Hillel of Paritch, Shemariah Noah Schneerson) as well as *mitnaggedim* (Jacob David Willowski (Ridbaz), and Raphael Shapiro, afterward head of the Volozhin yeshivah). The Hebrew author M. Rabinson served as “government-appointed” rabbi from 1911. Toward the end of the 19th century, Bobruisk became a center of cultural and political activity for Belorussian Jewry in which both the Zionist and radical wings were prominent. The publishing

house of Jacob Cohen Ginsburg became celebrated throughout Russia. The “model” *heder*, established in 1900, provided comprehensive Hebrew instruction and did much to raise the standard of Hebrew education. A popular Jewish library was also opened there. After its founding, Bobruisk became one of the main bases of the *Bund; in 1898 its clandestine printing press was seized in Bobruisk by the police.

After World War I, the Jewish population suffered from the frequent changes of government during the civil war and the Soviet-Polish war (1918–21). Subsequently, Jewish activities ceased. J. Ginsburg and other publishers continued to print prayer books and other religious publications in Bobruisk until 1928; the last work of Jewish religious literature to be published in the Soviet Union, *Yagdil Torah*, was printed in Bobruisk. A network of 12 Jewish schools giving instruction in Yiddish was established in Bobruisk after the 1917 Revolution, enrolling 3,000 pupils in 1936 and functioning until 1939. Bobruisk was occupied by the Germans on June 28, 1941. Seven thousand succeeded in fleeing but 3,500 Jews were murdered at the beginning of July and 800 men on August 5 after supposedly being taken to a labor camp. A ghetto was established in an open field near the airport. On November 7, 1941, 20,000 Jews were sent from there to their deaths. Another 5,281 Jews were later executed after they refused to wear the yellow badge and report for forced labor. Small groups fled to the forests, where they joined Soviet partisan units. The Jewish population increased after the war, and was estimated at 30,000 in the 1970s and 10,000 in 1989. There was no synagogue under the Soviets, the last one having been closed in 1959, but there were said to be underground *minyanim*. There was a separate Jewish cemetery. Most of the Jews emigrated in the 1990s as the Jewish population of Belarus dropped by over 75%, but Jewish life began to revive with a synagogue, day school, and Sunday school in operation. Bobruisk was the birthplace of Pauline *Wengeroff, I. *Nissenbaum, Berl *Katznelson, David *Shimoni, Yizhak *Tabenkin, Kadish *Luz, and Y. *Tunkel.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

BOBTELSKY, MORDEKHAI (Max; 1890–1965), Israel inorganic chemist and pioneer of heterometry, born in Vladislavov (Naumiestis), Lithuania. Bobtelsky taught at Orel and Vitebsk (1916–1922). He worked with Fritz *Haber in Berlin, and then in a large inorganic chemicals factory in Aussig (Usti nad Labem), Czechoslovakia. He went to Palestine in 1925 as chief chemist of Palestine Potash Ltd. and joined Hebrew University, Jerusalem (1927), becoming professor of inorganic and analytical chemistry in 1937. Many of his writings were devoted to heterometry.

°BOCCACCIO, GIOVANNI (1313–1375), Italian author, whose greatest work, *Il Decamerone*, contains a number of Jewish elements. The son of a Florentine merchant, Boccaccio was apprenticed in his youth to a merchant in Naples and

may have come into contact with some of the Jews who were flourishing in Neapolitan commerce at that time. He later introduced Jews into two of the early tales of the *Decameron* (the second and third story of the “First Day” of the cycle). Boccaccio summarized the second story as follows: “Abraham, a Jew, at the instance of Jehannot de Chevigny, goes to the court of Rome, and having marked the evil life of the clergy, returns to Paris and becomes a Christian” (because God would tolerate such conduct only in followers of the true faith). His summary of the third story is “Melchisedech, a Jew, by a story of three rings, averts a great danger with which he was menaced by Saladin.” He uses the character of Abraham to criticize the contemporary ecclesiastical establishment and the corruption of the clergy, and that of Melchisedech to praise human wisdom. Both tales are based on medieval literature, Christian as well as Jewish. A story of three rings or three precious stones, representing the debate as to the relative excellence of the three monotheistic religions, is used by early English, French, and Italian writers. The theme also appears in Jewish literature in the *Shevet Yehudah* (ch. 32) of Solomon *Ibn Verga (ed. Y.F. Baer (1947), 78–80). Although this was not published until 1550, the author was undoubtedly quoting a story which was well-known long before he wrote his book. Debates between representatives of Judaism, Christianity, and Islam are often to be found in medieval Hebrew literature.

Boccaccio’s choice of Jews as heroes would appear to result from the great emphasis he placed on wisdom and tolerance, both of which he regarded as Jewish characteristics. In his very earliest stories he stressed the keen intelligence of the Jew, his freedom from blind ideology, and his adaptability. Regarding the Jewish character as essentially realistic and individualistic, he also used his two heroes to mock any regimented approach to life. Boccaccio had an important and formative influence on European literature. The strongest echo of his Melchisedech story occurs in *Nathan the Wise* (1779), a play on the theme of religious tolerance by the German dramatist Gotthold Ephraim *Lessing. Some reflection of the “three rings” story has also been detected in the casket scene in *Shakespeare’s *Merchant of Venice*.

[Isaac Garti]

BOCHNIA (from 1939 to 1945 called **Salzberg**), town in Cracow province, Poland, noted for its rock-salt deposits. In 1555 the Jews of Bochnia, who engaged in marketing and contracting for the salt impost, were granted a general privilege by King Sigismund Augustus. Jews there were accused of stealing the Host in 1605 and a Jewish miner, allegedly the instigator, died under torture. Subsequently the Jews were expel-

led from Bochnia, and the city received the privilege *de non tolerandis Judaeis*. This exclusion of the Jews remained in force until 1860, but Jews were allowed to resettle in the town only in 1862. They numbered 1,911 in 1900 and 2,459 in 1921.

Holocaust Period

An estimated 3,500 Jews (20% of the total population) lived in Bochnia in 1939. The German Army entered the town on Sept. 3, 1939, and immediately subjected the Jewish population to persecution and terror. In May 1940 a huge "Kontribution" of 3,000,000 zloty (\$600,000) was imposed by the Nazis upon the Jewish population. In March 1942 a ghetto was established to which the entire Jewish population from all the surrounding towns and villages was brought. In August 1942 a massive *Aktion* was conducted by police units from Cracow. About 600 Jews were killed on the spot and another 2,000 deported to Belzec death camp. On Nov. 2, 1942, a second deportation took place during which about 70 people were killed and more than 500 deported to Belzec. In September 1943 the entire ghetto was liquidated. No Jewish community was reestablished in Bochnia after the war.

BOCHUM, city in northern Rhine-Westphalia, Germany. The presence of Jews there is mentioned in 1349. A synagogue, erected in 1594, is mentioned again in 1652. In 1800 there were 27 Jewish residents (1.6% of the total population), mainly cattle merchants and butchers. The number increased to 1,002 by 1900 (0.27%) and to 1,152 in 1933. It maintained two synagogues (one established by the Orthodox Polish community), a *heder*, a Hebrew school, a Jewish elementary school, eight benevolent societies, and cultural organizations. M. David served as rabbi from 1901 to 1936.

On October 28, 1938, some 250 Polish or stateless Jews were expelled from Bochum, and on November 10 – Kristallnacht – the main synagogue was set on fire and Jewish shops and homes were looted. Jewish males were arrested and temporarily interned in Sachsenhausen. By June 17, 1939, only 355 Jews remained in the city. During World War II they were deported to *Riga, *Zamosc, *Auschwitz, and *Theresienstadt in five transports embarking from Dortmund between January 1942 and March 1943. In 1943 and 1944 three forced labor camps were established in the city. In March 1945 about 2,000 of the workers were sent to Buchenwald; most were probably murdered. After the war about 40 Jews returned to Bochum. In 1953 the Jewish inhabitants of the neighboring towns of Bochum, Herne, and *Recklinghausen united to establish a community, with the center in Recklinghausen, where a synagogue was consecrated in 1955. There were 66 Jews in the three towns in 1989. Since then, the number of Jewish inhabitants has increased greatly as a result of the immigration of Jews from the former Soviet Union. Consequently, the Jews of Bochum,

Herne, and Hattingen formed an independent community in 1999, numbering 1,091 members in 2003.

BOCK, JERRY (1928–), U.S. composer. One of the most successful Broadway theater composers of the 1960s (*Fiddler on the Roof*, *Fiorello!*, *She Loves Me*), Jerrold Lewis Bock was born in New Haven, Conn., and grew up in Queens, N.Y. He took up the piano and composition as a boy. He wrote his first musical in public school, wrote another in high school, which was produced at the school, and wrote the show *Big as Life*, which was staged in 1948 at the University of Wisconsin, where he was a student. Beginning after his graduation, he teamed with Larry Holofcener to write special musical material for television. In 1956 he composed his first complete Broadway score for *Mr. Wonderful*, starring Sammy *Davis Jr. and two years later began his successful collaboration with Sheldon *Harnick. Their first production, *The Body Beautiful*, was a flop, but they enjoyed working together and a year later produced *Fiorello!*, based on the life of the New York mayor, Fiorello H. *LaGuardia. The show won a Pulitzer Prize. Another New York-inspired musical, *Tenderloin*, followed in 1960. Perhaps the best Bock-Harnick score was produced for the 1963 musical *She Loves Me*, based on the 1940 Ernst *Lubitsch film *The Shop Around the Corner*. The story, involving two bickering workers in a Budapest parfumerie who fall in love through an exchange of letters, contained such long-lasting songs as "Vanilla Ice Cream," "Will He Like Me," and "A Trip to the Library."

In 1964 the Bock-Harnick collaboration provided the score for *Fiddler on the Roof*, which contained the classics "Matchmaker, Matchmaker," "If I Were a Rich Man," and "Sunrise, Sunset." The show, with Zero *Mostel portraying Sholom *Aleichem's Teyve the milkman, became the most popular musical and longest-running show in the history of Broadway and spawned productions worldwide in dozens of languages. It won nine Tony Awards, including Best Musical, and was revived a number of times on Broadway. A 1971 film version, with song and story about *shtetl* life, starred the Israeli actor Chaim *Topol and was hugely successful. The family's story, of living in poverty, of Jews facing religious discrimination and pogroms, of the difficulties of raising a family in changing times, contained universal messages, and audiences around the world were quick to relate to them.

The team went on to write *Baker Street*, built around the character of Sherlock Holmes, and *The Apple Tree*, adapted from the work of Mark Twain, but these did not achieve the success of their previous work. The last Bock-Harnick project was *The Rothschilds*, an original musical based on the history of the banking family. It had its Broadway debut in 1970 and ran for more than a year.

[Stewart Kampel (2nd ed.)]

BODANSKY, OSCAR (1901–1977), U.S. biochemist. Born in Russia, Bodansky was taken to U.S. in 1907. He taught at the universities of California and Texas, and at New York University. He served as director of medical research, U.S. Army Medical Corps during World War II. He joined the Cornell Medical College faculty (1946), becoming professor of biochemistry in 1951, and worked at Sloan-Kettering Institute for Cancer Research from 1948, becoming vice president in 1966. He and his brother MEYER (1896–1941) wrote *Biochemistry of Diseases* (1940, 1952).

BODANZKY, ARTHUR (1877–1939), conductor. Born in Vienna, Bodanzky made his debut in 1900 conducting Jones' *The Geisha* with the 18-man orchestra in České Budějovice. In 1903 he became assistant to Gustav *Mahler at the Vienna Opera and subsequently conducted operas in Berlin, Prague, and Mannheim. In 1915 he was engaged by the Metropolitan Opera, New York, as conductor of their German repertory and held this position until his death. His repertory included Gluck, Richard Strauss, Tchaikovsky, Meyerbeer, Suppé and the American premieres of Weinberger's *Švanda the Bagpiper* and Krenek's *Jonny spielt auf*. He excelled in conducting Wagner but was also a symphony conductor. He was music director of the Society of Friends of Music in New York from 1916 until 1931.

BODEK, JACOB (1819–1855), Galician Hebraist. Bodek was born in Lemberg. He and his brother-in-law, A.M. *Mohr, were two of the *maskilim* in Lemberg who published a journal entitled *Ha-Ro'eh u-Mevakker Sifrei Meḥabberei Zemannenu* ("Criticism of the works of Contemporary Authors," 1838–39), criticizing the works of S.J. Rapoport, S.D. Luzzatto, and I.S. Reggio. He and Mohr later edited a periodical called *Yerushalayim* (1844–45) to which many Galician *maskilim* contributed. Bodek published biblical commentaries and translations of poetry in the periodical *Kokhevei Yizḥak*. His letters, which contain valuable material on the historical and cultural background of the early 19th century, were printed after his death in *Ha-Boker Or*, *Ha-Shaḥar*, and other journals.

BODENHEIM, MAXWELL (1893–1954), U.S. poet and novelist. Born in Mississippi, Bodenheim was raised in poverty. He moved to New York, where he first attracted attention with his book of verses *Minna and Myself* (1918). He continued his experiments in free verse with five other volumes. The suppression of his first novel, *Replenishing Jessica* (1925), on the grounds that it was immoral brought him temporary notoriety. His novels of New York's seamy side, such as *Naked on Roller Skates* (1931) and *New York Madness* (1933), endeared him to radical circles. Bodenheim never shunned unpopular causes

and continued to pioneer the treatment of unconventional themes. His anguished "Poem to the Gentiles" (1944) cast doubt on the sincerity of many non-Jewish protests against Nazi barbarism. Bodenheim's last days were again spent in poverty. He was murdered by a psychopathic ex-convict.

BODENHEIMER, FREDERICK SIMON (1897–1959), Israel zoologist. The son of Max Isidor *Bodenheimer, he was born in Cologne, and completed his studies in biology at Bonn in 1921. In 1922 he was appointed entomologist in the new agricultural experimental station of the Jewish Agency in Tel Aviv, where he worked until 1928. In 1927 Bodenheimer carried out an expedition to the Sinai Peninsula. Important among the results of this expedition was his identification of the biblical manna as the honeydew excretion of scale-insects on tamarisk. In 1928 he was appointed research fellow and in 1931 professor of zoology at the Hebrew University of Jerusalem. From 1938 to 1941 he was visiting professor at Ankara and consultant to the Turkish Ministry of Agriculture. In 1943 he was invited to Iraq to serve as entomological adviser on locust control. In addition to his specialty of agricultural entomology, Bodenheimer's broader biological interests were animal ecology, population dynamics, and the history of science. He was the author of many articles and numerous books, including *Die Schaedlingsfauna Palaestinas* (1930); *Materialien zur Geschichte der Entomologie bis Linné* (2 vols., 1928–29); *Animal Life in Palestine* (1935); *Problems of Animal Ecology* (1938); *Animal and Man in Bible Lands* (1960); *Citrus Entomology in the Middle East...* (1951); *The History of Biology: an Introduction* (1958); and *Animal Ecology Today* (1958). His last book, *A Biologist in Israel* (1959), is an autobiography.

[Mordecai L. Gabriel]

BODENHEIMER, MAX ISIDOR (1865–1940), one of *Herzl's first assistants, a founder of the World Zionist Organization, and one of the first directors of the *Jewish National Fund. Bodenheimer was born in Stuttgart and began to practice law in Cologne in 1890. Despite an assimilationist education, he joined the *Ḥibbat Zion movement in his youth. In 1891 he published a pamphlet, *Wohin mit den russischen Juden?* in which he suggested settling Russian Jews in Erez Israel. In 1893 he and David *Wolffsohn founded in Cologne a Ḥibbat Zion society which was the nucleus of the future Zionist Federation in Germany. When Herzl announced his Zionist plans, Bodenheimer joined him immediately. At the First Zionist Congress in 1897 he presented the organizational program of the Zionist movement, and was a member of the committee which prepared the text of the *Basle Program. From 1897 to 1921 and from 1931 to 1933 Bodenheimer was a member of the Zionist General Council. In 1898 he was a member of the Zionist delegation which accompanied Herzl to Erez Israel for an audience with Kaiser William II on his visit there. Boden-

heimer put the statutes of the Jewish National Fund into final form and served as its director from 1907 to 1914. The land on which Kinneret, Deganyah, and Merḥavyah were built was among that acquired during his administration; and assistance was also given for urban and rural settlement, including a loan to help found Tel Aviv. During World War I Bodenheimer together with Franz *Oppenheimer and Adolph *Friedemann founded the Va'ad le-Ma'an ha-Mizrah ("Committee for the East"), which aimed at serving as a liaison between East European Jewry and the German occupation authorities. He joined the *Revisionist Movement (1931–34) but left when it seceded from the World Zionist Organization. In 1935 Bodenheimer settled in Jerusalem. He published many pamphlets and articles on Zionist matters, and wrote a drama on the life of Jesus (1933). His memoirs appeared posthumously in Hebrew (1952), German (1958), and in English under the title *Prelude to Israel* (1963). His daughter, Hannah, published his correspondence with Hermann Shapira, *Toledot Tokhnit Basel* ("The History of the Basle Program," 1947), and that between him and Herzl in Hebrew and German, under the title *Be-Reshit ha-Tenu'ah* ("At the Beginning of the Movement," 1965). A selection of his writings, *Bi-Mesillat Rishonim*, was published in 1951.

[Alexander Bein]

°BODENSCHATZ, JOHANN CHRISTOPH GEORG (1717–1797), German Protestant theologian. Born in Hof, Bavaria, Bodenschatz received his early education at Gera, where through his teacher Schleusner he became interested in biblical and Oriental subjects, later studying Oriental languages at the University of Jena. He entered the church, became vicar at Uttenreuth, and in 1780 superintendent at Baiersdorf. In his writings Bodenschatz described contemporary Jewish customs in Germany faithfully and without prejudice. His *Kirchliche Verfassung der heutigen Juden, sonderlich derer in Deutschland* (4 vols., Erlangen and Coburg, 1748–49), is an important historical source for Jewish life in Germany in the mid-18th century. A second edition of the book was published in Frankfurt in 1756 under the title *Aufrichtig teutsch redender Hebraeer*. Both editions are rich in engravings depicting subjects drawn from contemporary Jewish life in Germany. Some of these engravings were taken from B. Picart's *Cérémonies et coutumes religieuses de tous les peuples* (1723–37). Bodenschatz is said to have made elaborate models of Noah's Ark and the Tabernacle.

BIBLIOGRAPHY: ADB, 3 (1876), 7; I. Abrahams, *By-Paths in Hebraic Bookland* (1920), 160–5.

BODIAN, DAVID (1910–2002), U.S. anatomist. Born in St. Louis, Bodian received his Ph.D. in anatomy in 1934 and his M.D. in 1937 from the University of Chicago. He came to the

Johns Hopkins University School of Medicine in 1939 as a research fellow in anatomy. The following year, Bodian was an assistant professor of anatomy at Western Reserve University School of Medicine. He returned to Johns Hopkins in 1942 as a lecturer in anatomy in the school of medicine and assistant professor of epidemiology in the school of public health. In 1957, Bodian became professor of anatomy and the director of the anatomy department in the school of medicine. Along with his colleagues, Howard Howe and Isabelle Mountain Morgan, Bodian helped lay the groundwork for the *Salk and *Sabin polio vaccines through their research into the neuropathology of poliomyelitis. Bodian's team demonstrated that the polio virus that was transmitted through the mouth and digestive tract was in fact three distinct types of virus, and they showed that antibodies to the virus were carried through the bloodstream, demonstrating that for a vaccine to be effective it must include antibodies recognizing all three types of virus. Bodian's group also developed early poliomyelitis vaccines – first a formalin-treated vaccine that successfully immunized monkeys, and then another that significantly elevated the levels of antibodies in children. In addition, Bodian developed a technique to stain nerve fibers and nerve endings (named the Bodian stain) and made major contributions to the knowledge of the basic structure of nerve cells. Bodian was elected to the U.S. National Academy of Sciences in 1958. In his memory, the International Post-Polio Task Force presents the David Bodian Memorial Award every year to persons whose activities benefit polio survivors.

[Ruth Rossing (2nd ed.)]

°BODIN, JEAN (1529 or 1530–1596), French historian, economist, and jurist. Bodin took an interest in Judaism in his main works *De Republica* (1576) and *Methodus ad facilem historiarum cognitionem* (1566), but chiefly in a work which he had completed in 1593 but did not publish, *Colloquium Heptaplomeres de rerum sublimium arcanis abditis* (excerpts first printed in 1841; complete edition 1857). Thanks to the help of three "royal readers" of Hebrew at the College of France in Paris, Cinqarbres, Jean *Mercier, and Paradis, Bodin not only acquired some knowledge of Hebrew and Aramaic but also had translations made of many passages from Hebrew literature, which he used in his works. He referred to the Targum, talmudic authorities, kabbalistic literature, and many medieval writers. The *Heptaplomeres* contains six conversations between seven friends who represented as many religions or attitudes of belief. Toralba, the representative of natural religion, and Solomon Barcassius, the representative of Judaism, are both to some degree the spokesmen of Bodin himself. To Bodin, the Jews were not only the most ancient people but also the most faithful chroniclers of the earliest history of humanity. Bodin inserted into his dialogues a series of Jewish objections to Christianity which he reinforced with his own dialectical skill. Through the interpellations of Solomon he attacked the dogma of the virgin birth. Everything profitable in the writings of the apostles was borrowed from Judaism. The Christians

violated the precepts of the Decalogue, which was nevertheless the natural law *par excellence*. Critics accused Bodin of having lost the faith of a real Christian through his dealings with the Jews (although he does not appear to have had any), and called him a half-Jew or secret Jew. This was presumably the source of the baseless supposition that his mother was of Jewish origin.

[Bernhard Blumenkranz]

BODKY, ERWIN (1896–1958), harpsichordist. Born in Germany, from 1922 to 1933 Bodky was lecturer at various Berlin music institutions. In 1933 he emigrated to Amsterdam, and in 1938 settled in the United States, where he became a lecturer at the Long School of Music, Cambridge, Massachusetts. In 1949 he was appointed professor at Brandeis University, Waltham, Massachusetts. He helped to revive interest in harpsichord playing and the performance of baroque keyboard music.

BODLEIAN LIBRARY, the official library of the University of Oxford, named after Sir Thomas *Bodley who refounded it. It is one of the world's greatest libraries, and second in importance in England only to the British Museum.

There were Hebrew books and manuscripts in Bodley's original collection, supplemented gradually by gift and purchase in the course of the next two centuries: especially memorable were those from the collections of Archbishop William Laud (1641), John Selden (1654, 1659), Edward Pockocke (1691), Robert Huntingdon (1693). In 1829, the University of Oxford purchased for the Bodleian the whole of the fine collection that had formerly belonged to David *Oppenheim, and the library immediately rose to first rank among the Hebrew collections of the world. Later, there were added also the collection of the Hamburg bibliophile Heimann Joseph Michael in 1848, many manuscripts from the collection of Isaac Samuel Reggio in 1853, and in due course large numbers of fragments from the Cairo *Genizah*. The Library now comprises about 3,100 Hebrew and Samaritan manuscripts – still perhaps qualitatively the most important in the world – as well as a remarkably full collection of early printed works. The manuscripts have been described fully in the catalog (vol. I, ed. by A. Neubauer, 1886; vol. II, ed. by A. Cowley, 1906). In 1994 a "Supplement of Addenda and Corrigenda" to the catalog was printed. The printed books formed the material for M. Steinschneider's fundamental work of Hebrew bibliography (*Catalogus Librorum Hebraeorum in Bibliotheca Bodleiana*, 1852–60) – not, however, restricted to books – and of the more succinct recent catalog edited by A. Cowley (1929).

***BODLEY, SIR THOMAS** (1544/45–1613), English diplomat and bibliophile. Born in Exeter, England, his education began in the Geneva of Calvin and Beza (Bèze) as a Protestant refugee from the Marian persecution. There he learned Hebrew from Chevalier, later continuing his study under Drusius at Oxford. He acquired sufficient competence both to teach Hebrew and to decipher a medieval Anglo-Jewish *shetar*. Bodley traveled widely on the continent, largely on diplomatic missions, and was Elizabeth's permanent resident at The Hague from 1589 to 1596. His quite considerable Hebrew expertise is reflected in the elegy which he contributed to the memorial volume for Bishop John Jewell of Salisbury (*Ioannis Iuelli... Episcopi Sarisbuniensis vita et mors* (London, 1573)), in which there occur post-biblical Hebrew terms as applied in Italy and elsewhere to the Catholic hierarchy (*afifyor*, "pope"; *hashmannim*, "cardinals"; *hegmon*, "bishop"; etc.). Bodley's fame rests upon his munificent restoration of Oxford's public (i.e., university) library, thereafter called the *Bodleian.

[Raphael Loewe]

BODMER, SIR WALTER (1936–), British geneticist. Bodmer was born in Frankfurt am Main and emigrated to Manchester with his family because of Nazi persecution. He was educated at Manchester Grammar School and read mathematics at Cambridge University before gaining his Ph.D. in statistics under R.F. Fisher. He was a member of the university's genetics department and a fellow of Clare College before moving to Stanford University, Calif., to work with Joshua *Lederberg, where he became professor of genetics (1968). He returned to the U.K. as professor of genetics at Oxford University (1970–79) before his appointment as director of research followed by appointment as director general of the Imperial Cancer Research Fund in London (ICRF) (1979–96). In 1996 he returned to Oxford as head of the ICRF Cancer and Immunogenetics Laboratory at the Oxford Institute of Molecular Medicine and principal of Hertford College. He was chancellor of Salford University from 1995. Sir Walter's initial research on theoretical genetics moved to biological issues and especially to disease susceptibility. He and his wife, JULIA (1934–), made major contributions to understanding the human system of tissue markers known as the HLA system. He was an early advocate of applying DNA technology to detecting disease susceptibility. Subsequently he used gene mutations to detect those at risk from bowel cancer. He continued to work on biological aspects of population genetics. Sir Walter made vital contributions to international collaboration in studying genetics and to the human genome project, aims furthered by his term as president of the Human Genome Organization (HUGO) (1990–92). His book *The Book of Man* (1995) made modern genetics and its implications generally accessible. His

many honors include election to the Royal Society (1994) and a knighthood (1986). He was a foreign associate of the U.S. National Academy of Science. Sir Walter was a strong supporter of Israeli science and scientific institutions.

[Michael Denman (2nd ed.)]

BODO (ninth century), French churchman who became a proselyte to Judaism. The scion of a noble family, Bodo entered the church and became deacon of the palace to Louis the Pious. In 838 he left the court with a numerous suite ostensibly to go on pilgrimage to Rome. He instead went to Spain with his nephew and on his way adopted Judaism under the name Eleazar. After spending some time in Saragossa he went on to Córdoba, where he is said to have attempted to persuade the caliph to compel his Christian subjects to abandon their faith in favor of either Judaism or Islam. The details of his career are known mainly through the interchange of correspondence between him and a learned Christian layman of Córdoba, Paolo Alvaro. Alvaro wrote him four polemical letters, printed in various ecclesiastical collections, attempting to convince him of the error of his ways. Bodo-Eleazar's rejoinders and arguments were deliberately destroyed, being taken out of the codex in which they were copied, but B. Blumenkranz has reconstructed them from the quotations in Alvaro's letters.

[Cecil Roth]

BODROGKERESZTÚR, town in Borsod (in 1944 Zemplén) county, northeastern Hungary. The census of 1723–24 records seven Jewish families who settled there from Poland. The Jewish population ranged from 58 in 1746 and 336 in 1880 to 535 in 1930. According to the census of 1941, the last before the Holocaust, the town had a Jewish population of 455, representing 20.2% of the total of 2,248. The Jews were mainly merchants, tradesmen, innkeepers, and freight carters. Located in the Tokay district, the town also boasted a number of Jewish vintners. The community was organized toward the end of the 18th century, when it also organized a *hevra kaddisha* and a Jewish cemetery. The first synagogue was built in 1767; it was replaced by a new one after a fire in 1906. The congregation identified itself as Orthodox in 1868–69. In 1885, the Jewish community of Bodrogkeresztur was joined by the neighboring smaller communities, including those of Bodrogkiszfalud and Bodrogszegi. Many of the Jews were hasidic and had their own synagogue. A Jewish elementary school was established in 1784, but after a few years was replaced by a *heder* and *talmud torah*. Among the rabbis who served the Jewish community were Lazar London (1780–96), Izrael Wahrman, Abraham Tannenbaum, Levi Hirsch Glanc (1826), grandson of Moses *Teitelbaum, whose influence in the community made it a

stronghold of Hasidism. His grave is still a place of pilgrimage. Also serving the community were Rabbi Moses Elias, Rabbi Mozes Schlesinger, and Shaye Steiner (d. 1925). The latter, generally known as Reb Shayele, was revered as a miracle-working rabbi. The last rabbi was Chaim Schlesinger, Mozes's son, who perished during the Holocaust. The last secular head of the community was József Seidenfeld, a merchant.

During World War II, the Jews were subjected to draconic anti-Jewish measures; they were deprived of their livelihood and many among the males were recruited for forced labor. After the German occupation of Hungary (March 19, 1944), the Jews were rounded up (April 16–17). They were first concentrated in a local ghetto consisting of the synagogue and the adjacent community buildings, where they were deprived of their last possessions. After a few days they were transferred to the ghetto of Sátoraljaújhely, from where they were deported to Auschwitz on May 25.

After the war the community consisted of 37 survivors. Their number grew to 63 by 1949, but all of them relocated to larger communities or emigrated a few years later.

[Laszlo Harsanyi / Randolph Braham (2nd ed.)]

BODY AND SOUL. Judaism's view of man as the crown of a "very good" creation entails a positive attitude towards the body, which is to be guided by the soul so as to sanctify the physical. The Bible appreciates physical prowess and beauty, while regulating sexual behavior and forbidding physical mutilation. Its laws of purity and impurity govern relations between the sexes and impose a sequestered posture on women periodically. Partially for this reason, the female body in rabbinic eyes came to be viewed negatively, its beauty having to be kept hidden in public.

Jewish theology has no clearly elaborated views on the relationship between body and soul, nor on the nature of the soul itself. Apart from Jewish philosophical and kabbalistic literature on the subject (see *Soul), the major traditional sources for any normative doctrines are the various texts in talmudic and midrashic literature. These latter are not systematic, nor is their interpretation generally agreed on. The talmudic rabbis, as opposed to certain Jewish philosophers of the medieval period, never considered views on such a purely theoretical subject as important. Their interest was focused on the connected, but more practically orientated beliefs, such as in the resurrection of the body and God's future judgment. For the talmudic rabbis the soul is, in some sense, clearly separable from the body: God breathed the soul into the body of Adam (Gen. 2:7; Ta'an. 22b). During sleep the soul departs and draws spiritual refreshment from on high (Gen. R. 14:9). At death it leaves the body only to be united with it again at the resurrection (Sanh. 90b–91a). As a prayer of the morning liturgy, uttered on awakening, expresses it: "O my God, the

soul which thou gavest me is pure; thou didst create it, thou didst form it, thou didst breathe it into me. Thou preservest it within me, and thou wilt take it from me, but wilt restore it unto me hereafter” (Hertz, Prayer, 19).

Whether the soul is capable of living an independent, fully conscious existence away from the body after death is unclear from rabbinic sources. The Midrash puts it somewhat vaguely – that the body cannot survive without the soul – nor the soul without the body (cf. Tanḥ. Va-Yikra 11). Although a view is found maintaining that the soul after death is in a quiescent state (Shab. 152b), the predominant view seems to be that the soul is capable of having a fully conscious life of its own when disembodied (see, for instance, Ket. 77b; Ber. 18b–19a). It is even maintained that the soul pre-exists the body (Ḥag. 12b); but how this predominant view is to be interpreted is problematic. Since the various anecdotes and descriptions about the soul in its disembodied state are given in terms of physical imagery, it might be assumed that an ethereal body was ascribed to the soul, enabling it to parallel the most important functions of its embodied state when disembodied. This assumption is unwarranted, however, since the rabbis do not seek conceptual coherence in their theological speculation. Imagery has a homiletic, rather than a speculative, function.

The elliptical and practically oriented aspect of rabbinic teaching is brought out further in the view that the soul is a guest in the body here on earth (Lev. R. 34:3), for this means that the body must be respected and well treated for the sake of its honored guest. The Gnostic idea of the body as a prison of the soul is absent from rabbinic literature; body and soul form a harmonious unity. Just as God fills the world, sees but is not seen, so the soul fills the body, sees but is not seen (Ber. 10a). On the eve of the Sabbath God gives each man an extra soul, which He takes back at its termination (Bez. 16a). This is the rabbinic way of emphasizing the spirituality of the soul, its closeness in nature to God, and the extra spirituality with which it is imbued on the Sabbath. The soul is pure as God is pure; its introduction into the human embryo is God’s part in the ever-renewed creation of human life (Nid. 31a). Because God originally gave man his soul, it is for God to take it away and not man himself. Thus *suicide, *euthanasia, and anything which would hasten death is forbidden (Job 1:21; Av. Zar. 18a and Tos.; Sh. Ar. YD 345). If man safeguards the purity of his soul by walking in the ways of the Torah, all will be well, but if not God will take his soul from him (Nid. 31a). For his sins, which contaminate the soul, man will be judged; indeed his soul will be his accuser. Nor can the body plead that it was the soul which sinned, nor the soul blame the body, for at the resurrection God will return soul to body and judge them as one.

Theological considerations aside, the rabbis of the Talmud prescribed regimens of cleanliness, moderation, and medical care for the body. It was viewed primarily as a religious instrument: “One should wash his face, hands, and feet every day out of respect for His maker” (Shab. 50b).

Medieval Jewish philosophers studied the body with the aid of Aristotle and Galen primarily, and appreciated its role in ethical behavior and in the sensory stages of learning. Ultimate human perfection, however, lay in the cultivation of one’s intellect, often loosely called “soul.” The relative devaluation of the body, in comparison with the soul, in rabbinic and philosophical circles was countered by a strong assertion of corporeal images and actions among Jewish mystics. In modern times, Labor Zionism was known for its celebration of the body’s ability to perform physical labor.

[Alfred L. Ivry (2nd ed.)]

BOEHM, ADOLF (1873–1941), Zionist and historian of the Zionist movement. When he was still a child Boehm’s family moved from his birthplace in Teplitz-Schonau (Teplice), Bohemia, to Vienna where he received his early education. Boehm entered his father’s textile factory, which he directed until 1938. His association with the Zionist movement began only after Herzl’s death in 1904. Following his visit to Erez Israel in 1907, he became a leader of the “practical” Zionists, whose interest lay primarily in the economic problems connected with Jewish settlement in Palestine. As a result he was particularly active on behalf of the Jewish National Fund. He served for ten years on its board of directors and wrote a book on its activities. During 1910–12, and again during 1927–38 Boehm edited the monthly *Palaestina*. His major effort, however, was *Die Zionistische Bewegung* (1922, enlarged two-volume edition 1935–37) which remains the most exhaustive history of the Zionist movement. In the second edition he brought the history up to 1925. Boehm collected extensive material for a third volume which, however, was never published. Boehm strongly objected to the excessive factionalism within the Zionist movement. At the same time he stressed the importance of the connection between Jewish national and universal human values in a series of articles in *Juedische Rundschau* (1934, nos. 43, 65, 67). Shortly after Hitler’s occupation of Austria Boehm fell victim to a mental disorder. He is believed to have died in a Nazi extermination center in Poland.

BIBLIOGRAPHY: *Be’anakh ha-Binyan le-Zekher A. Boehm* (1952).

BOEHM, YOHANAN (1914–1986), Israel composer, horn-player, and music critic. Born in Breslau, Germany, Boehm immigrated to Palestine in 1936. He taught at the Jerusalem Music Academy and was music program editor and tone master at the Israel Broadcasting Service and the World Zionist Organization Broadcasting Service for the Diaspora (*Kol Ziyyon la-Golah*). He composed songs, chamber music, and symphonies in a late romantic style, wrote articles on music, was a con-

tributor to the *Encyclopaedia Judaica*, and served as the music critic for the *Jerusalem Post*. Boehm founded the Jerusalem Youth Orchestra in 1959 and directed it for 20 years. He was music advisor to the Jerusalem municipality and was a jury member of the International Harp Contest in Israel.

[Ury Eppstein (2nd ed.)]

BOERNE, LUDWIG (1786–1837), German political essayist and champion of Jewish emancipation. Born Loeb Baruch, into a prominent Frankfurt banking family, he was raised in the Frankfurt ghetto. Since medicine was one of the few professions then open to Jews, he was sent to Berlin in 1802 to study under Markus *Herz. After his master's death in 1803 he abandoned medicine and went to study political science at Halle and Heidelberg. He received his doctorate from Giesesen University in 1808. In 1811 Boerne became an official in the Frankfurt police department; but when the anti-Jewish restrictions of the pre-Napoleonic era were reimposed after Bonaparte's defeat in 1815, he was dismissed. In the following years of political restoration, Boerne became an ardent advocate of the idea of political freedom. His thought developed from classical early liberal ideas to somewhat "neo-Jacobin" notions of freedom.

In 1818 Boerne converted to Lutheranism, not out of religious conviction but to open the door to wider public activity, and adopted the name by which he was known thereafter. In the same year he founded the periodical *Die Waage*. This journal was ostensibly devoted to art, literature, and social gossip and Boerne earned a reputation with his witty theatrical criticism. But, as a master of innuendo, he managed to inject subversive political allusions into the most harmless subjects. In his *feuilletons*, of which he was a pioneer, he scoured the bureaucracy of Frankfurt and ridiculed the whole pompous political structure of Central Europe. He soon ran into difficulties with the political authorities, and in 1821 gave up the editorship of *Die Waage*.

In 1830 constant police interference compelled Boerne to transfer his activities to Paris, where he was generally regarded as the leader of the political émigrés. His *Briefe aus Paris* (1830–1833), described by Heine as "paperbound sunbeams," were literary bullets fired across the German border with the aim of drawing public attention to glaring injustices. Boerne's influence reached its zenith in 1832, when he participated in the Hambach Festival, a gathering of 30,000 liberals from German-speaking states. He allied himself for a time with the influential but conservative Stuttgart editor Wolfgang Menzel, in the struggle against the idealization of Goethe by the Romantics. But when Menzel espoused antisemitism and induced the German Federal Diet in 1835 to ban the works of Young Germany (a group of writers holding liberal views on politics and society), Boerne published his vitriolic diatribe, *Menzel der Franzosenfresser* (1838), a masterpiece of wit and irony.

Sensitive to the Jewish problem, Boerne wanted to be thought of as an individual apart from his Jewishness, and was

chagrined when his utterances were attributed to his heredity. The idea that the freedom of mankind as a whole is inextricably bound up with freedom for the Jews recurs constantly in his writings, and he refused to acknowledge the existence of a Jewish problem distinct from the general issue of emancipation. Boerne held that the Jewish mission had been to teach the world cosmopolitanism and that the Jewish nation had disappeared in the most enviable manner; it had merged with mankind as a whole and had given birth to Christian idealism. On Boerne's death, Heine published an uncomplimentary study entitled *Ueber Ludwig Boerne* (1840), in which he expressed resentment against his erstwhile fellow liberal. This provoked Karl Gutzkow's defense of Boerne as a maligned German patriot and led to an extended controversy. Many years later, the old Frankfurt *Judengasse* where he had lived was renamed "Boernestrasse" in his honor and, throughout the 19th century, Boerne and Heine were regarded as the major Jewish influences in German literature. Boerne's *Saemtliche Schriften* (letters and writings) were edited in 1964–68.

[Sol Liptzin / Marcus Pyka (2nd ed.)]

BOESCHENSTEIN, JOHANN (1472–1540), German Hebraist. He was born in Esslingen, and many scholars (such as Wolf, Joecher, Steinschneider, Perles) believed him to be of Jewish parentage, although Boeschenstein himself denied this. With Reuchlin, Boeschenstein was a pioneer of Hebraic studies among Christians in Germany. He himself was a Hebrew teacher in several German cities (Ingolstadt, Augsburg, Regensburg) until invited (1518) by Melanchthon to become professor of Hebrew at the University of Wittenberg. Later he moved to Heidelberg and then to Augsburg, Antwerp, Zurich, Augsburg, and Nuremberg (1525). He died in great poverty at Noerdlingen. Among his students were the noted theologians Johann Eck, and Ulrich Zwingli. Boeschenstein published works on Hebrew grammar: *Elementale introductorium in hebreas litteras teutonice et hebraice legendas* (1514, rev. ed. 1518, 1520, 1530) and *Hebraicae Grammaticae Institutiones* (Wittenberg, 1518). He also edited a Latin edition of Moses Kimhi's *Mahalakh Shevilei ha-Da'at* entitled *Rudimenta Hebraica* (1520) and German translations of general Jewish prayers (c. 1523) and of Grace after Meals (c. 1536).

[Chaim M. Rabin / Giulio Busi (2nd ed.)]

BOESKY, IVAN FREDERICK (1937–), U.S. entrepreneur, philanthropist. Born in Detroit, the son of immigrants from Czarist Russia, Boesky rose to become one of the most successful arbitrageurs in the 1980s among private, professional Wall Street traders, only to run afoul of securities laws, for which he paid a \$100 million fine and served 22 months in prison after agreeing to become a government informant, particularly against Michael *Milken. Boesky amassed a fortune by betting on corporate takeovers. Investigated by the Securities and Exchange Commission for receiving tips from corporate insiders, and then making investments accordingly, Boesky made brazen purchases, sometimes two or three days before the company announced it would be acquired. Insider trading of this type was illegal but rarely enforced. As part of his guilty plea, he agreed not to trade again. Boesky gave extensively to charities, particularly Jewish causes, and for two years ending in 1985 he was general chairman of United Jewish Appeal-Federation of Jewish Philanthropies.

In Detroit, Boesky's father, William, owned a chain of bars called the Brass Rail. Ivan attended a prestigious prep school outside Detroit, Cranbrook. He moved to New York in 1966 and worked at a series of brokerages. By 1972, convinced that arbitrage was the road to great wealth, he joined Edwards & Hanley, an old Wall Street firm, which asked him to create an arbitrage department. It soon became the company's largest profit center. Arbitrage, which involves buying a company's stock when it becomes a takeover target, is highly risky, and Boesky took the firm to the edge. In 1975 it declared bankruptcy.

That year Boesky opened Ivan F. Boesky & Company with \$700,000 in capital, most of it thought to have come from his wife's family, and three years later he reorganized as the Ivan F. Boesky Corporation, whose assets in 1984 totaled more than \$500 million. He advertised for investors in the *Wall Street Journal* and allocated just 55 percent of the operation's profits to the investors, keeping 45 percent for himself. He assigned investors 95 percent of any losses. As the man reputed to be the richest and most powerful arbitrageur of modern times, according to the *New York Times*, Boesky was universally feared on Wall Street. In 1986 Boesky wrote *Merger Mania – Arbitrage: Wall Street's Best-Kept Money-Making Secret*.

Boesky became a close associate of Michael Milken. Milken, working for the investment bank Drexel Burnham Lambert, became known as the junk-bond king; he pioneered the financing of companies with high-yield, or junk, debt. Milken believed that precisely because such bonds were shunned they offered exceptional value. Milken found buyers and his investors made handsome returns. Not all those profits were made ethically or legally, as insiders swapped privileged information and others favors freely. Boesky's excesses and take-no-prisoners attitude were epitomized in a phrase he delivered in a speech in 1986: "Greed is good," he said. The financial crimes of the 1980s inspired Oliver *Stone's movie *Wall Street* the following year. Its high-powered arbi-

trageur, Gordon Gekko, portrayed by Michael *Douglas, repeats Boesky's phrase.

For Boesky, who lived lavishly on a 188-acre estate in upstate New York purchased from John *Revson of the Revlon cosmetics family, things started to unravel on Nov. 14, 1986. That day federal prosecutors disclosed that Boesky had pleaded guilty to charges of insider trading and had agreed to pay a fine of \$100 million. He had also agreed to cooperate in the ongoing government investigations. Nov. 14 came to be known on Wall Street as Boesky Day.

In addition to his market activities, Boesky was known for his philanthropies. He became a member of the chairman's council after giving \$25,000 to the Metropolitan Museum of Art in New York, and he gave to the American Ballet Theater, hoping it would mount a ballet with a Holocaust theme. At the Jewish Theological Seminary, Boesky often spoke to the chief librarian about rare Jewish books, which he eagerly collected. He eventually lent the library several of his finest manuscripts, and gave the seminary \$2 million to help construct a new library building. It was named for him and his wife, but as his troubles mounted he asked or was asked to withdraw his name. Shortly before his sentencing, Boesky enrolled in classes at the Jewish Theological Seminary in Hebrew and an introduction to Mishnah, Midrash, and Talmud.

[Stewart Kampel (2nd ed.)]

BOETHUSIANS, a religious and political sect which existed during the century preceding the destruction of the Second Temple. According to rabbinic tradition the Boethusians and the Sadducees were named after two disciples of *Antigonus of Sokho, Zadok and Boethus. They misinterpreted the maxim of their teacher, "Be not like servants who serve their master in order to receive a reward" as meaning that there was no reward for good works, and thus they denied the doctrine of resurrection and the world to come. They thereupon established the two sects named after them (ARN¹ 13b).

Modern scholars however consider this account to be legendary and they ascribe the origin of the Boethusians to the high priest Simeon b. Boethus who was appointed high priest by Herod the Great in 24 B.C.E. (Jos., Ant., 15:320), in succession to Joshua b. Phabi, in order to afford him a suitable status, as he desired to marry Herod's daughter, Mariamne II. Although in their theological views they closely resembled the Sadducees, some scholars regard them merely as a branch of them (see *Sadducees), and are always mentioned together with them, they did not share their aristocratic background, and whereas the Sadducees supported the Hasmonean dynasty, the Boethusians were loyal to the Herodians. It is they who are apparently referred to in the New Testament as Herodians (Mark 3:16; 12:13). The Boethusians were regarded by the Talmud as cynical and materialistic priests. They hired false witnesses to delude the Pharisees about the new moon (RH 22b; TJ, RH 57d; Tosef., RH 1:15). They maintained that the Omer (Men. 10:3) was to be offered on the first Sunday after Passover, and not on the morrow of the first day and, as

a result, differed as to the date of Shavuot which according to them must always fall on a Sunday (Hog. 24). They held special views on the preparation of incense on the Day of Atonement (TJ, Yoma 1:39a; Tosef., Yoma 1:8). In terms of the Sabbath ritual, they were not even considered as Jews (Eruv. 68b). The high priestly "House of Boethus" is criticized in the Talmud for its oppression, "Woe is me because of the House of Boethus, woe is me because of their staves" (with which they beat the people – Pes. 57a; cf. Tosef., Men. 13:21).

Other Boethusian high priests included Joezer and Eleazar b. Boethus (Jos., Ant., 17:164, 339), Simeon Cantheras (*ibid.*, 19:297), Elionaesus b. Cantheras (*ibid.*, 19:342), and *Joshua b. Gamala.

BIBLIOGRAPHY: L. Finkelstein, *Pharisees*, 2 (1950³), 762–79; Klausner, *Bayit Sheni*, 4 (1950²), 43; Schuerer, *Gesch*, 2 (1907⁴), 478 n. 16.

BOGALE, YONA (1908–1987), Ethiopian Jewish (*Beta Israel) personality. Bogale was born in 1908 (some sources say 1910 or 1911) in the village of Wolleqa northeast of the important Ethiopian city of Gondar. His father was a weaver, who also worked as a tenant farmer for a local Christian nobleman. In 1921 Jacques *Faitlovitch visited Ethiopia for the fourth time and spent several months in Walleqa. At the end of his stay he took Yona Bogale with him to study in Europe. Bogale studied two years at the Mizrahi Tahkemoni School in Jerusalem before continuing his education in Frankfurt, Switzerland, and France. By the time he returned to Ethiopia he had learned to speak over half a dozen languages. Until the Italian conquest of Ethiopia in 1935/6 Bogale worked as a teacher in the "Falasha" school which had been established by Faitlovitch and Taamrat Emmanuel in Addis Ababa in 1923. Following the end of the Fascist occupation in 1941 Yona worked for the Ethiopian Ministry of Education. He resigned in 1953 to devote himself to the Beta Israel community, and played a crucial role in the establishment and operation of the Jewish Agency's schools in Ethiopia. Following the closure of these schools Yona continued to work among his people and served as the major mediator for contact between Ethiopian and world Jewry. Perhaps the clearest reflection of his attempts to create a bridge between the two communities were his writings, *A "Falasha" Book of Jewish Festivals*, an Amharic translation of portions of *Pirke Avot*, and a Hebrew-Amharic dictionary. Although generally treated by outsiders as the "leader" of the Beta Israel, within the community his position was ambiguous and he often came into conflict with other important community members. In 1979, Yona immigrated to Israel where he continued his activities on behalf of the Beta Israel.

[Steven Kaplan (2nd ed.)]

BOGDAN, CORNELIU (1921–1990), Romanian diplomat. During World War II, he was unable to continue his studies in Romania because he was a Jew and eventually went to study at the Sorbonne in Paris where he joined the Communist Party. Returning to Romania after the end of World War II, he be-

came a Romanian diplomat and, under the Ceausescu regime, served as Romanian ambassador to the U.S. (1967–70), Canada (1968–70), and Costa Rica (1970–71), subsequently heading the West European desk in the Romanian Foreign Ministry. He and the foreign minister, Corneliu Manescu, also a long-time Communist, shared the same sophisticated intellectual background, with less nationalistic tendencies, and both came to differ with Ceausescu, and – as a result – in due course they lost their official jobs. For most of the 1980s, Bogdan earned his living as a translator and was under virtual house arrest. In 1988, he was allowed to move to the U.S. where he had been awarded a fellowship. He remained there until the new regime established after the execution of Ceausescu recalled him and appointed him foreign minister, hoping that his expertise would help in forging new ties with the West. However, he died a few days after his appointment.

BOGDANOR, VERNON (1943–), British professor of government. One of the best-known and most visible commentators on constitutional and political affairs in the British press and media, Bogdanor was professor of politics and government at Oxford University and vice principal of Brasenose College, Oxford. He is the author of *The Monarchy and the Constitution* (1995) and of *The British Constitution in the Twentieth Century* (2004). He is especially well known for his expert opinion on the role of the British monarchy in the contemporary British constitution. He has also written *Devolution in the United Kingdom* (1999), *The People and the Party System* (1981), and many other works.

[William D. Rubinstein (2nd ed.)]

BOGDANOVICH, PETER (1939–), U.S. film director. Bogdanovich was born in Kingston, N.Y., to Jewish immigrants who had fled the Nazis. His father, Borislav Bogdanovich, was a Serbian artist and his mother, Herma (née Robinson), came from a wealthy Austrian family. Herma was pregnant with Peter in Europe, but gave birth to him in America. He attended the Collegiate School and the Stella Adler Theatre Studio, and began his career as a summer stock and television actor in the 1950s. In the 1960s, he worked as editor of *Showbill* and film programmer at the Museum of Modern Art in New York City and wrote film articles for *Esquire* magazine. Bogdanovich turned to directing with the Roger Corman-produced *Targets* (1968). Bogdanovich's *The Last Picture Show* (1971) received eight Academy Award nominations, including best director, and won two for supporting actor and actress. Bogdanovich fell in love with the film's star, 19-year-old Cybill Shepherd, and divorced his wife and collaborator, Polly Platt, whom he had married in 1962 and with whom he had two children. Bogdanovich's next film was the comedy *What's Up, Doc?* (1972), starring Barbra Streisand and Ryan O'Neal. He was hailed for *Paper Moon* (1973), a Depression era Oscar-winning comedy. Films starring Shepherd, *Daisy Miller* (1974), based on the Henry James novella, and the Cole Porter musical *At Long Last Love* (1975), failed as did *Nickelodeon* (1976).

Shepherd and Bogdanovich ended their relationship in 1978. Bogdanovich returned with *Saint Jack* (1979) based on Paul Theroux's novel. During the filming of *They All Laughed*, Bogdanovich fell in love with 1980 Playboy Playmate and co-star Dorothy Stratten whose attempt to leave her husband, Paul Snider, ended in a murder-suicide (and was the basis for the movie *Star 80*). Bogdanovich bought the rights to *They All Laughed* after distributors passed on it due to the Stratten murder, but the limited release left Bogdanovich bankrupt. Bogdanovich wrote a paean to Stratten, *The Killing of the Unicorn: Dorothy Stratten, 1960–1980* (1984). Over the next few years, he directed the Cher drama *Mask* (1985); *Illegally Yours* (1988); *Texasville* (1990), the sequel to *The Last Picture Show*; *Noises Off* (1992); and *The Thing Called Love* (1993). In 1992, drawing on taped interviews and his in-depth knowledge of the director, he published *This Is Orson Welles*. He followed with a book of interviews with directors: *Who the Devil Made It: On Directing Pictures* (1997) and *Peter Bogdanovich's Movie of the Week: 52 Classic Forms for One Full Year* (1999). In 2000, Bogdanovich returned to acting in the HBO Mafia drama hit *The Sopranos*, playing Dr. Elliot Kupferberg. In 2001, Bogdanovich divorced Louise Hoogstraten, Dorothy Stratten's younger sister, whom he had married in 1986. While Bogdanovich had not directed a big-screen film since *The Cat's Meow* (2001), he continued to direct made-for-television features, including the documentary *The Mystery of Natalie Wood* (2004) and the Pete Rose biopic *Hustle* (2004).

[Adam Wills (2nd ed.)]

BOGEN, ALEXANDER (1916–), Israel artist. Bogen was born in Poland and during his youth studied painting and sculpture at the Faculty of Art in the University of Vilna. Bogen fled to Russia as the Nazis advanced in 1941. Captured near Minsk, he was taken back to the Vilna ghetto, escaped, but returned to organize resistance. He was a commander of a partisan group in a forest in Belarus and helped some 300 young Jews escape and join the partisans. During the war he made drawings of the partisans, now displayed at the Ghetto Fighters' House Museum and Yad Vashem Museum. After the war, he returned to Vilna, and was appointed art professor in Lodz and Warsaw. In 1951, he immigrated to Israel and established an art school in Tel Aviv. He recovered some of the drawings he had made in the ghetto and the forests. His late works were in many ways reminiscent of his war paintings.

[Shaked Gilboa (2nd ed.)]

BOGEN, BORIS DAVID (1869–1929), U.S. social worker. Bogen, born in Moscow, emigrated to the United States in the early 1890s. He studied at the New York University School of Pedagogy in 1897. While working toward his degree, Bogen taught English in the Baron de Hirsch Trade School, and in 1896 accepted a teaching appointment at the Hebrew Technical Institute, the Educational Alliance. Objecting to the school's "pure Americanism" emphasis, Bogen left and became prin-

cipal of the Baron de Hirsch Agricultural School in Woodbine, New Jersey (1900). He believed he had discovered his mission: "the feet of Jewish youth were to be turned toward a new destiny, leaving behind the peddler's packs and the sweatshops and the slums of their fathers," he wrote in his autobiography. However, the students at the school did not aspire to the status of a rural peasantry; they turned instead to the administrative and scientific aspects of agriculture, and Bogen vehemently dissented from the directors' efforts to reduce the length of study from three years to one and eliminate the scientific component, in order to produce a "contented Jewry working in the fields." Resigning in 1904, he became superintendent of the United Jewish Charities, Cincinnati, and also directed the work of the Jewish Settlement in Cincinnati. In 1913 he became field secretary of the Conference of Jewish Charities. Bogen maintained that the distinctive function of Jewish welfare was to intensify Jewish group consciousness and identity. Following the outbreak of World War I, he turned to problems of international relief, working in Holland, Poland, and Russia for the *American Jewish Joint Distribution Committee from 1917 to 1924. His autobiography, *Born a Jew* (1930), deals mostly with his relief efforts in Eastern Europe. Bogen's philosophy of sectarian social work is summarized in his *Jewish Philanthropy* (1917).

[Roy Lubove]

BOGER (Bograshov), ḤAYYIM (1876–1963), educator and *yishuv* leader in Erez Israel. Boger was born in Chernigovka, Crimea. He first received a religious education, and later acquired enough secular education to enable him to receive a degree and teaching diploma from the University of Berne, Switzerland. Boger, an active opponent of the *Uganda Scheme, was a leader of the *Ziyyonei Zion* movement in Russia, and helped organize its conference in Freiburg (1905). In 1906 he settled in Erez Israel, where he was a founder of the Hebrew Gymnasium Society in Tel Aviv. Deported in 1915 by the Turkish authorities, Boger founded a Hebrew school in Alexandria, Egypt. He returned to Palestine in 1919 and became joint headmaster of the Herzlia Gymnasium, with Benzion *Mossinson. A leading figure in the affairs of Tel Aviv and the *yishuv*, he represented the General Zionists and served as a member of the Tel Aviv municipality, as delegate to the Asefat ha-Nivḥarim ("Elected Assembly"), and later as member of the Second Knesset, whose opening session in 1952 he chaired as its oldest member. He wrote *Ba-Arazot Reḥokot* ("In Distant Lands," 1930), and *Tiyyul bi-Yhudah* ("Journey in Judea," 1930). In 1921 he helped found the Nordiah district in Tel Aviv for Jews from Jaffa made homeless by the Arab riots of that year. The district's main street is named Bograshov Street in his honor.

[Abraham Aharoni]

BOGHEN, FELICE (1869–1945), writer, composer, and pianist. Boghen taught theory at the Istituto Reale Luigi Cherubini in Florence in 1910 and was the pianist of the Trio Fiorentino. He wrote an opera *Alcestis*, and piano works, and edited old Italian music. His written works include *Appunti ed esempi per l'uso dei pedali del Pianoforte* (1915), and *L'Arte di Pasquini* (1931).

BOGORAD, LAWRENCE (1921–2004), U.S. biologist. Bogorad was born in Tashkent, Russia, but was taken to the United States as an infant. He became a naturalized U.S. citizen in 1935. Bogorad studied at the University of Chicago, where he received a B.S. in botany (1942) and a Ph.D. in plant physiology (1949). From 1951 to 1953 he was a fellow at the Rockefeller Institute working in the laboratory of Prof. Sam Granick. In 1953 he returned to the University of Chicago, joining the faculty of the Department of Botany and became a professor of botany in 1961. Bogorad became professor of biology at Harvard University in 1967, and was chairman of the Department of Biological Sciences (1974–76), and director of the Maria Moors Cabot Foundation in 1976. He was named the Maria Moors Cabot Professor of Biology in 1980. He retired from Harvard in 1991 as professor emeritus in molecular and cellular biology and continued his research in Harvard's Biological Laboratories. Colleagues and former students held the Lawrence Bogorad Symposium in his honor every few years, the last in 2001 at Cambridge. Bogorad's research concentrated on chlorophyll synthesis, particularly the investigation of the effects of light in the induction of the complex greening process through which pale, etiolated leaves of plants grown in the dark become green and active in photosynthesis. Early work on the enzymes involved in chlorophyll synthesis with algae furthered our understanding of the biosynthesis of hemes and bile pigment. Beginning in the mid-1960s, Bogorad's research dealt with the biogenesis of chloroplasts, the nature of the organelle of DNA, and its function in the synthesis of chloroplast proteins as well as other phytomolecular biological processes. He is best known for his work on the biosynthesis of porphyrins and for sequencing and identification of the first chloroplast genes. Bogorad was a fellow of the American Academy of Arts and Sciences, a member of the National Academy of Sciences, and a foreign member of the Royal Danish Academy of Sciences and Letters. He was president of the Society for Developmental Biology (1983) and of the American Society of Plant Physiologists (1968–69). Bogorad was on a number of editorial boards and served on national committees as well as on the Council and Executive Committee of the American Society of Cell Biology. In 1987 he was elected president of the American Association for the Advancement of Science, which has close to 300 national and regional scientific societies and academies as formal affiliates and 130,000 individual members.

[Ruth Rossing (2nd ed.)]

BOGORAZ, VLADIMIR GERMANOVICH (Mendelvich, Nathan; pseud. N.A. Tan, V.G. Tan; 1865–1936), Russian ethnographer, revolutionary, and man of letters. Born in Ovruch, Volhynia, he was expelled from St. Petersburg University for revolutionary activities. He continued his political work under his assumed name of Vladimir Bogoraz, and at the age of 20 converted to Christianity. In 1886 he was arrested in Moscow, imprisoned for two years, and then exiled to Siberia. There he met Vladimir *Jochelson, who became his lifelong friend and collaborator. It was during his years of imprisonment and exile that Bogoraz began the studies that were to make him an ethnographic authority on the Chukchee and Yakutsk natives of Siberia and on the Paleo-Asiatic peoples generally.

Released in 1889, Bogoraz joined the Jesup North Pacific exploration organized by the American Museum of Natural History in New York City and directed by Franz *Boas, who was to exert a significant influence on his life and achievements. On this expedition, Bogoraz was responsible for investigations of the Chukchee and the Siberian Eskimo. Jochelson was also a member of the expedition, as well as a third Jewish revolutionary, Lev Sternberg. All three men produced reports of precise and reliable scholarship. Bogoraz' included *The Chukchee* (vol. 7 of the Jesup North Pacific Expedition Publications) and *Chukchee Mythology* (vol. 8 pt. 1, of the same series).

Bogoraz went back to Siberia to continue his ethnological studies, and made several visits to the United States. He returned to Russia and again involved himself with subversive organizations. For his part in the 1905 revolution he served another term of imprisonment. After the revolution of 1917 he was appointed professor at Leningrad University and curator of the Museum of Anthropology and Ethnography. He also founded and directed various official institutions, such as the Museum of the History of Religion and Atheism – actually a museum of comparative religions – in the former Kazan Cathedral in Leningrad. As director of the Northern Peoples Institute in Leningrad he was able to do much to assist the cultural and political development of the peoples of Siberia. Despite their service to the revolutionary regime, Bogoraz and Sternberg were attacked for their views, which were regarded as going beyond the narrow Marxism of their period.

In addition to his academic publications, Bogoraz also produced some creative writing under the nom de plume N.A. Tan, some of it on Jewish themes. He published a pioneering Chukchee-Russian dictionary which appeared in 1937. His literary works include revolutionary poems (1900); *Chukotskiya razskazy* ("Chukchee Tales," 1899); and the novel *Vosem plemiyen* ("Eight Tribes," 1902).

BOGROV (Beharav), DMITRI (1888–1911), Russian terrorist and revolutionary, who was executed for shooting the czarist prime minister Stolypin. Bogrov was the grandson of

a well-known rabbi and the son of a lawyer. While a law student, he joined an anarchist group but later entered the service of the Russian secret police (*Ochrana*), claiming that he did so in the interest of the revolutionary movement. Before he killed Stolypin, Bogrov asked the Social Revolutionary Party to give its approval to his action, but they refused to do so. His true motive was never discovered, but some people believed he sought to dispel the suspicions aroused by his connection with the secret police.

[Simha Katz]

BOGROV (Beharav), GRIGORI ISAAKOVICH (1825–1885), author and journalist. The son of a Poltava rabbi, Bogrov was an extreme assimilationist: his Orthodox upbringing and the life of Russian Jewry in the 1830s–1840s were reflected negatively in *Zapiski yevreya* (1871–73; *Memoiren eines Juden*, 1880). He was the effective editor of *Russkiy yevrey*, later working on *Razsvet* and *Voskhod*, and wrote several works of socio-historical interest on Russo-Jewish life, such as the novel *Yevreyskiy manuskript* (1876; Heb. tr., *Ketav-Yad Ivri*, 1900), on the *Chmielnicki massacres of 1648–49. Bogrov converted to Christianity shortly before his death.

BOGUSLAV, city in Kiev district, Ukraine, that passed to Russia from Poland in 1793. Jews resided in Boguslav from the beginning of the 17th century and an imposing synagogue was built there soon after the community was founded. In 1620 they were restricted in leasing property because the burghers complained that Jews had taken over most of the houses and stores in the marketplace and were competing with the local traders. The Jews in Boguslav suffered during the *Haidamak revolts in the area. During the uprising of 1768 they fled from the city; their homes were destroyed and their property looted. Although 574 Jewish poll-tax payers in Boguslav are recorded in 1765, only 251 remained after 1768. The community developed after Boguslav became part of Russia in 1793. A Hebrew printing press was established there in 1820–21, and Jewish-owned enterprises included textile and tanning factories. Jews also engaged in handicrafts and dealt in grain and fruit. The Jewish population numbered 5,294 in 1847 and 7,445 in 1897 (65% of the total).

After World War I, the Jews in Boguslav suffered severely in the civil war. On May 13, 1919, they were attacked by gangs of marauding peasants that killed 20 Jews, and on August 27 *Denikin's "white" army, which occupied the city, pillaged all the houses there, and massacred about 40 Jews. Subsequently, a Jewish self-defense force was formed in Boguslav (under the auspices of the Soviet government) which comprised the entire male population of about 1,000 citizens. It fought off the gangs and also took part in punitive actions in neighboring villages. Boguslav then became an asylum for thousands of Jewish refugees from the towns and villages of the surrounding areas. The self-defense force was disbanded in 1923. The

Jewish population numbered 6,432 in 1926 (53% of the total) and dropped to 2,230 in 1939. In the 1930s the Jews were a majority in the local trade unions, and many were employed as factory workers and clerks in local industry. The Germans occupied Boguslav on July 26, 1941, murdering most of the Jews by the end of the year. Artisans required for work remained alive until they too were executed in July 1943.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

BOHEMIA (Cz. *Čecny, Česko, Tschechien*; Ger. *Bohmen*; Heb. *בוהמ, כנען, פיהם, פעהם*), independent kingdom in Central Europe, until the beginning of the 14th century, affiliated later in the Middle Ages with the Holy Roman Empire. In 1526 it became part of the hereditary *Hapsburg dominions and in 1620 lost its independence completely. From 1918 it was part of modern *Czechoslovakia (in 1939–45 part of the Nazi protectorate of Bohemia-Moravia), subsequently the Czech Republic.

Early and Medieval Periods

The beginnings of Jewish settlement in Bohemia are much disputed, and evidence has to rely on traditions that Jews had settled there before recorded Bohemian history. Trade contacts between the Roman Empire and southern Bohemia certainly brought Jews to the region, and some could have settled there. Presumably, the Jewish traders mentioned in the Raffelstaetten Tax Ordinance (906) were also active in Bohemia. In the second half of the 10th century Jews engaged in the slave trade in Bohemia are mentioned by *Ibrahim ibn Yakub. The Bohemian dukes of the 11th century probably employed Jewish moneyers. The first Bohemian chronicler, Cosmas of Prague, mentions Jews there in 1090. In 1096 many Jews in Bohemia were massacred by the Crusaders and others were forcibly converted. Those who reverted to Judaism and attempted to leave were robbed on their departure (1098). According to Cosmas Vicedominus *Jacobus Apella, a high court official reverted to Judaism in 1124. Apparently, the communities of *Cheb (Eger) and *Litoměřice (Leitmeritz) were well organized by the end of the 12th century. The places of Jewish settlement and activity in Bohemia are documented from the 13th century onward. The customs dues payable by Jews were regulated in 1222. The plethora of scholars living in Bohemia in this century, including *Isaac b. Jacob ha-Lavan of Prague, *Isaac b. Mordecai (Ribam), Eliezer b. Jacob, *Abraham b. Azriel of Bohemia, and *Isaac b. Moses of Vienna (Or Zaru'a), attests that Jewish culture was already deeply rooted and widespread among the communities there. From here *Pethahiah of Regensburg set out on his travels. The use of Slavic-Bohemian terms in the writings of some of these scholars to explain Hebrew terms indicates the linguistic and cultural ties existing between the Jews and local society. In 1241 the Jewish communities of Bohemia suffered with the rest of

Jewish communities in Bohemia.

the population from the devastations of the Tatar invasion. In 1254 *Přemysl Otakar II granted a charter to the Jews based on the charter of the Austrian duke *Frederick II (1244), appending to it the bull issued by Pope *Innocent IV combating the *blood libel. He reconfirmed it in 1268. The wave of new settlers who went to Bohemia after the havoc wreaked by the Tatars included a number of Jews. These settled in the cities mainly as moneylenders, encouraged by the grant of charters and the status conferred on them as **servi camerae regis*, according them standing and protection at least not inferior to that in their countries of origin. The Altneu synagogue in *Prague was completed around 1270. At the time of the *Rindfleisch massacres in 1298 King Wenceslaus II extorted large sums from Bohemian Jewry for protection. In 1336 King John of Luxemburg ordered the arrest of all the Jews in Bohemia to extort a ransom. There was a wave of massacres in this period in Čáslav and *Jindřichův Hradec (Neuhaus) in 1337, and also after a Host desecration libel in Kouřim in 1338. The entire Cheb community was butchered in 1350. The atrocities of the 14th century reached a peak with the massacre of the Jews in Prague in 1389. During this period Charles IV confirmed a number of privileges formerly issued to the Jews and in some

cases afforded them protection, strictly enforcing their status as serfs of the chamber. Wenceslaus IV protected the Jews from oppression by the local nobility, but on several occasions canceled the debts owed to the Jews, as in 1411. The Jews suffered during the *Hussite uprising in 1419–37. The *Chomutov (Komotau) community was annihilated by the Hussites, while the Jews were expelled from Cheb and Jihlava (Iglau) on the charge of supporting them. In Jewish sources of the late 15th century evidence is found of strong sympathy for the religious reformer John Huss and the Hussites, and in particular for the Taborites, who are regarded as Judaizers and fighting a just national war.

16th and 17th Centuries

With changes in the religious and social outlook of the burghers, the growing interest in finance and the increasing availability of money, moneylending ceased to be a Jewish monopoly. The competition of Christian moneylenders, abetted by the hypocrisy that forbade Jews to do what they themselves were engaged in, gradually eroded the central position held by Jews in this field. In addition, the weakening of central royal power threatened the existence of the Jews living in

the crown cities. Despite a decision of the Diet to tolerate the Jews (1501) and its confirmation by Ladislav II in 1510, they were eventually expelled from Pilsen in 1504, and also from Prague, where some individuals were expressly permitted to remain. Their expulsion from the crown cities was formally proclaimed in 1541. Efforts made by Joseph (Joselmann) b. Gershom of Rosheim to intercede were unsuccessful. The publication of the decree was followed by massacres of the Jews in Litoměřice, Nymburk, Roudnice nad Labem (Raudnitz), and Žatec (Saaz). Later a number of Jews returned. The decree of expulsion was renewed in 1557, and the Jews vacated all the crown cities except Prague where a few families remained. Many Jews left for Poland and Turkey.

By the end of the 16th century half of Bohemian Jewry was living in Prague. The rest were scattered throughout the countryside in the villages and small towns under the protection of the local nobility. Jews continued to reside in four towns, Kolín, Roudnice, Bumska (*Mladá Boleslav), and Náchod (known in Jewish sources by their initials קרנ"ץ). Until the siege of Vienna by the Turks in 1683 the attitude of the authorities toward the Jews was influenced by the fear that they might support the Turks. In 1551 Ferdinand I enforced the ordinance compelling the Jews to wear the yellow badge. Four hundred and thirteen Jewish taxpayers are recorded in Bohemia (except Prague) in 1570, and over 4,000 Jews at the beginning of the 17th century. Until the development of a mercantilistic policy under Charles VI, the Jews were almost the only traders in the rural areas. Their function was regarded by the local lords as *versilbern*, i.e., the conversion of the surplus produce of their domains (mainly wool, hides, feathers, and cheese) into money, and the supply of luxuries for their sumptuous households. Despite their frequently small numbers in many localities where they lived, the Jews of Bohemia developed an independent rural way of life and maintained Jewish traditions. Antagonism developed between the Prague community and the rest of Bohemian Jewry, the "Draussige" or "Huzim" ("outsiders"). The latter became organized in the Landesjudenschaft.

Conditions improved under Rudolf II (1576–1612). Subsequently, the Prague community increased in size, attaining an importance in the Jewish world far beyond the boundaries of the country. Bohemian Jews gained a reputation as goldsmiths. Hebrew printing flourished in Prague. Mordecai Meisel achieved influence as a court banker. Among the prominent scholars of the period were R. Judah Loew b. Bezalel (Maharal) and the chronicler and astronomer David Gans. Jacob Bassevi of Trevenberg was the first Jew to be granted a coat of arms. There was marked reciprocal influence between Bohemian society, in particular the sectarians, and Jews in the social and cultural spheres. Jewish sources express a local Bohemian patriotism. Gans states in his chronicle *Zemah David* (Prague, 1595) that parts of his "General History" are written "to the glory [לכבוד] of this land in which I live." He gives a detailed description of Bohemia, its natural resources and its emblem, the lion, declaring "this land is full of God's bless-

ings." He indignantly repudiates an anti-Czech song popular with the German-speaking population: "Ye should know that this song is entirely lies." He refers to the antiquity and beauty of Prague (*Zemah David*, 2, fols. 7a, 46b, 49a, 97a).

Jewish life in Bohemia was disrupted by the Thirty Years' War (1618–48). In 1629 Ferdinand II renewed and extended the privileges accorded to the Jews. However, in 1630 he ordered them to attend the conversionist sermons of the Jesuits. There were 14,000 Jewish taxpayers in Bohemia in 1635. The community absorbed many refugees from the Chmielnicki massacres in Poland in 1648. In 1650 the Diet decided to curtail the number of Jews permitted to reside in Bohemia and limit their residence to the places where Jews had been living in 1618. This was the beginning of the "Jew-hatred of the authorities," in contrast to the attitude of the nobility who were interested in the income they derived from the Jews. Irksome restrictions were introduced and there were increasing demands for higher taxes. For Prague, a special committee, the *Judenreduktionskommission* ("Commission to Reduce the Number of the Jewish Population") was appointed. The number of the Jews outside Prague was estimated to be 30,000 in 1724. They lived in 168 towns and small market towns and 672 villages.

Familiant Laws

The curtailment culminated in the Familiant Laws under Charles VI (1726) which only allowed 8,541 families to reside in Bohemia. Jews were segregated in special quarters. Bohemia was divided into 12 district rabbinates (*Kreisrabbinat*). The Jews were expelled from Prague by Maria Theresa in 1744, but the decree of expulsion was remitted in 1748 and most of the Jews returned. A decree for the whole of Bohemia (1745) was not carried out. There were 29,091 Jews living in Bohemia in 1754, of whom one-third lived in Prague. (See table "Jewish Population of Bohemia.") In the second half of the 18th century some Jews in Bohemia were attracted to the Frankists. Bohemian Jews took an active part in the industrialization of the country and the development of its trade, among them the Hoenigsberg family, Simon and Leopold von Laemel, and the Popper family.

Toleranzpatent

The Toleranzpatent of Joseph II for Bohemian Jewry was issued on February 13, 1782. As an outcome, Jewish judicial autonomy was suspended, Jewish schools with teaching in German were opened, and the use of German was made compulsory for business records. Jews were permitted to attend general high schools and universities, and were subject to compulsory military service. These measures were supported by adherents of the Haskalah movement in Prague, including members of the Jeiteles family, the Gesellschaft der jungen Hebraeer, Peter Beer, Naphtali Herz Homberg, and Raphael Joel, among others. They were resisted by the majority of the Jews, led by the rabbis Ezekiel Landau, Eleazar Fleckeles, Samuel Kauder, and Bezalel Ronsburg. The legal position of the Jews of Bohemia was summarized in the *Judensystemal-*

patent issued in 1797. Bohemian Jews were entitled to reside in places where they had been domiciled in 1725. They were permitted to pursue their regular occupations, with some exceptions, being prohibited from obtaining new licenses for the open sale of alcoholic beverages or from leasing flour mills. New synagogues could only be built by special permission. Rabbis were obliged to have studied philosophy at a university within the empire. Only Jews who had completed a German elementary school could obtain a marriage license or be admitted to talmudic education. The *censorship of Hebrew books was upheld.

19th and 20th Centuries

The increasing adaptation of individual Jews to the general culture, and their rising economic importance, furthered Jewish assimilation into the ruling German sector. During this period Jews such as Moses and Leopold Porges-Portheim, Aaron and Solomon Pribram, Moses, Solomon, and Leopold Jerusalem developed the Bohemian textile industry, introducing modern machinery. The discrepancy between the rise in economic and cultural standards and the restrictions imposed on the Jews by their humiliating legal status led to frequent circumvention of the existing legislation.

The budding Czech national renaissance at first attracted the Jewish intelligentsia, enraptured with the new learning, among them Siegfried *Kapper, Ludwig August *Frankl, and David *Kuh, supported by Václav Bolemir Nebeský. However, the inimical attitude of Czech leaders such as Karel Havlíček-Borovský, and the outlook of the majority of the Jews molded by an essentially German education, soon brought them into the German liberal camp, in which Moritz *Hartmann and Ignaz *Kuranda distinguished themselves in the revolutionary tumult of 1848.

In general, however, especially in the small communities, Jewish society continued the traditional way of life and mores despite the persistent trend toward assimilation and the changes introduced by such communities as *Teplice. Legislation introduced in the 1840s brought some relief of the humiliating restrictions. In 1841 the prohibition on Jews owning land was waived. The *oath *more iudaico* and the Jewish tax (collected by a much hated consortium of Jewish notables, the “Juedische Steuerdirection”) were annulled in 1846. The Jewish orphanage in Prague was built from its surplus funds. The 1848 revolution proved disappointing to the Jews as it was accompanied by anti-Jewish riots in many localities, principally in Prague. The Jews of Bohemia, however, benefited by the abolition in *Austria of marriage restrictions and by the granting of freedom of residence. There began a “Landflucht,” movement from the small rural communities to the commercial centers in the big towns, in which many of the former communities disintegrated in the process. This was speeded up later by the growing antisemitism among Czechs and Germans alike (see below). There were 347 communities in Bohemia in 1850, nine with more than 100 families and 22 with over 50. By 1880 almost half of Bohemian Jewry was living in

towns with over 5,000 inhabitants, mostly in the German-speaking area. There were 197 communities in 1890. In 1921 only 14.55% of Bohemian Jewry lived in localities of less than 2,000 inhabitants, and were 0.27% of the population in these localities. Sixty-nine percent lived in towns of over 10,000. In 1930, 46.4% of all Bohemian Jews lived in Prague and the number of Jews in the countryside had decreased by 40% since 1921. During this period many Jews moved to Vienna or immigrated to the United States. Until 1848 the vast majority of Bohemian Jewry had belonged to the poorest sectors of the population. Subsequently, most of them, as a result of their economic activities, moved up to the prosperous and wealthy strata even though their occupations remained essentially in the same sphere as before 1848.

In the second half of the 19th century Bohemian Jewry became increasingly involved in the bitter conflict between the Czech and German national groups. While the elder generation generally preferred assimilation with German culture, and supported the German-oriented liberal political parties, the Czecho-Jewish movement (Svaz *Čečožídů), initiated and supported by Filip *Bondý, Siegfried Kapper, Bohumil *Bondý, and others, achieved some success in promoting Czech assimilation. By 1900, 55% of Bohemian Jewry declared their mother tongue as Czech and 45% as German. Some Jewish leaders, notably Joseph Samuel *Bloch, advised Bohemian Jews not to become involved in the conflict of the nationalities, but they continued to take sides on this issue until Zionism enabled at least its adherents to remain neutral.

The Jewish Population of Bohemia, 1754–1930

Year	Numbers
1754	29,094
1764	31,937
1774	31,929
1780	39,693
1790	45,906
1800	47,865
1810	50,629
1820	59,607
1830	67,338
1840	64,780
1850	75,459
1869	89,933
1890	94,529
1900	92,797
1910	85,927
1921	97,777
1930	76,301

As a result of emigration and a steady decline in the birth and marriage rates among Jews in Bohemia, the percentage of the aged rose, and the total population of the community decreased. The vast majority of Jews became indifferent to religion and inclined toward total assimilation: the *Yahrzeit, the Day of Atonement, and a subscription to the *Prager Tagblatt*,

the German-liberal daily, were considered by many Jews their only links with Judaism. There was an increase in mixed marriages from 0.15% in 1881 to 1.75% in 1910, and 27.56% in 1930, and many dropped their Jewish affiliation. The percentage of Jewish mixed marriages was 0.15% in 1881, 1.75% in 1910, and 27.65% in 1930.

Of all persons in Bohemia considered Jewish according to the Nazi standards introduced in 1939, 11.1% were not of the Jewish faith. Antisemitism became strong in Bohemia at the end of the 19th century. The German population of the Sudetenland, the “Rand-Orls,” was the stronghold of the *Schoenerer brand of racial antisemitism in the Hapsburg Empire (see also *antisemitic political parties and organizations). Czechs saw the Jews as the instruments and partisans of Germanization and the allies of Hapsburg patriotism. The economic anti-Jewish *boycott movement in Bohemia, “Svůj k svému” (“Each to his own kind”), was among the first of its sort to emerge in Europe and in particular hit Jewish shopkeepers in the villages. Finally a wave of blood libels, instigated by the Austrian *Christian Social Party, swept Bohemia. These occurred in Kolín and Náchod, among other places, and culminated in the *Hilsner Case. At this time the internal division in Jewry between the parties supporting Czech or German assimilation became increasingly pronounced. Jews joined the liberal and radical parties of both sides. At the end of the 19th century the Czecho-Jewish movement achieved the closure of Jewish schools where teaching was in German. During World War I Bohemia absorbed thousands of refugees from Eastern Europe. Many settled there permanently and contributed to the revival of Jewish religious and cultural life in the communities. The establishment of independent *Czechoslovakia in 1918 linked Bohemian Jewry with the Jews living in the other parts of the new state. Bohemia attracted many Jews from Carpathian Russia (see *Subcarpathian Ruthenia) and Eastern Slovakia, and the Jews of Bohemia were active in organizing relief for Jews in these impoverished areas. After 1918 there were three federations of communities, one for those of Great Prague and *České *Budejovice and *Pilsen, one of Czech-speaking communities, and one of German-speaking communities. From 1926 they were represented, together with the federations of communities in Moravia and Silesia, by the “Nejvyšší rada svazu náboženských obcí židovských v Čechách, na Moravě a ve Slezsku” (Supreme Council of the Federations of Jewish Religious Communities in Bohemia, Moravia, and Silesia). In 1930, 46.4% of Bohemian Jewry declared their nationality as Czech, 31% German, and 20.5% Jewish. (See table “Jewish Population of Bohemia.”) In 1937 there were 150 communities. In 1938 with the Sudeten crisis 29% of Bohemian Jewry living in the Sudeten area became refugees.

The Jewish State Museum in Prague now has synagogue equipment and archivalia from more than 100 Bohemian communities, most of them brought there in 1942 by Nazi orders when the communities were deported.

For Holocaust and contemporary period, see *Czechoslovakia.

[Jan Herman / Meir Lamed]

°BOHL (Bohlius), SAMUEL (1611–1639), Lutheran Hebraist. Born in Greifenberg (Gryfice), Pomerania, Bohl taught at the University of Rostock, where he wrote an exposition of rabbinic commentaries on Malachi (1637) and a Hebrew grammar (1638). Other publications include an exposition of chapters seven to twelve of Isaiah, a commentary on Proverbs, and a treatise on the masoretic accents as the key to the verse-allocation of the Decalogue. Some of Bohl’s works were published by G. Menthen in *Thesaurus theologico-philologicus* (vol. 1, Amsterdam, 1701).

[Raphael Loewe]

BOHM, DAVID (1917–1994), U.S. physicist. Bohm was born in Wilkes-Barre, Pennsylvania, and received his B.Sc. from Pennsylvania State University (1939) and Ph.D. in physics (1943), supervised by J. Robert *Oppenheimer initially at the California Institute of Technology and then at the University of California at Berkeley. He was assistant professor at Princeton University (1947–51) but was forced to leave after being blacklisted in the McCarthy era Communist witch hunt. Cited for contempt of Congress for refusing to name names, he left the United States and served as professor of physics at the University of Sao Paulo, Brazil (1951–55), lecturer at the Haifa Technion (1955–57), and research fellow at the University of Bristol, U.K. (1957–61). He became professor of theoretical physics at Birkbeck College, University of London, until retirement in 1987 but continued to work there until his death. Bohm’s first discovery in conventional physics was that elec-

trons stripped from atoms behave in an organized manner. His early ideas on theoretical physics were set out in his book *Quantum Theory* (1951), which impressed Albert *Einstein and led to their working association. His collaborative work with Yakir *Aharanov (1959) produced the still controversial claim that electrons sense a nearby magnetic field even when its strength is zero. Bohm's later work, although founded on his experimental observations and interpretation of quantum mechanics, became increasingly philosophical and was influenced by his dialogue with the Indian spiritual master J. Krishnamurti. He was especially concerned with discerning patterns of cosmological order which transcend mechanistic descriptions of physics. He was a controversial figure with strong admirers and detractors. His ideas are intellectually accessible to non-specialists in his own books and F. David Peat's biography, *Infinite Potential* (1996).

[Michael Denman (2nd ed.)]

BÖHM, HENRIK (1867–1936), Hungarian architect. His work includes thermal bath buildings (Szolnok in Hungary and Piestany in Slovakia), hotels, and the Török Bank house (1906), a Secessionist landmark in Budapest.

[Eva Kondor]

BOHNEN, ELI AARON (1909–1992), U.S. Conservative rabbi. Bohnen was born in Toronto, Canada, and immigrated to the United States following his graduation from the University of Toronto in 1931. He was ordained at the Jewish Theological Seminary in 1935 and earned a Doctor of Hebrew Letters there in 1953. Bohnen served congregations as rabbi in Philadelphia (1935–39) and Buffalo, New York (1939–48) but left his pulpit to serve as a chaplain with the U.S. Army in Europe during World War II. He was with the 42nd (Rainbow) Infantry Division during the liberation of Dachau on April 29, 1945, an experience that moved him to work as an advisor to the U.S. military regarding *displaced persons. He also wrote the *Rainbow Haggadah* for soldiers celebrating Passover on the battlefield. Returning to the United States, Bohnen moved to Providence to become rabbi of Temple Emanu-El (1948) and eventually president of the Rhode Island Board of Rabbis. As a member of the Rabbinical Assembly's Committee on Jewish Law and Standards, Bohnen wrote responsa for the Conservative movement reflecting his view that for some Jews *halakhah* had become an idol to be worshipped and that contemporary values should be considered in interpreting Jewish law. He served as president of the *Rabbinical Assembly (1966–68) during the tumultuous times of the Vietnam War and urban race riots. He decried tensions within the American Jewish community and called for greater interdenominational cooperation, insisting that the breach with Orthodoxy was "of their making, not ours." Upon his retirement in 1973, Bohnen served as rabbi emeritus of Temple Emanu-El.

[Bezalel Gordon (2nd ed.)]

BOHR, NIELS HENRIK DAVID (1885–1962), Danish physicist and Nobel laureate. He was born in Copenhagen. His father was non-Jewish, a professor of physiology at the University of Copenhagen, and his mother, née Ella Adler, belonged to a prominent Jewish banking family. He obtained his doctorate at Copenhagen in 1911 with a thesis on "Investigations of Metals." In 1912, he worked with J.J. Thomson (the discoverer of the electron) at Cambridge, and then in Manchester with Ernest Rutherford, the discoverer of the atomic nucleus. In 1913, Bohr produced the first of his series of papers which revolutionized conceptions of the structure of the atom. In 1916, Bohr became professor of chemical physics at the University of Copenhagen, and in 1920 head of the university's new Institute of Theoretical Physics. He participated in other important advances, such as the "Correspondence Principle" and the "Principle of Complementarity." In 1922, he was awarded the Nobel Prize, the youngest laureate up to that time. He helped to lead science through the most fundamental change of attitude it has made since Galileo and Newton. In September 1943 he and his family escaped the Nazis by going to Sweden in a fishing boat. In October he was taken to England in the bomb rack of an unarmed Mosquito plane. Bohr was "consultant" to Tube Alloys, the code name for the atomic bomb project. He had determined that the uranium atom which had been split by Hahn and Strassman in 1938 was the rare isotope U-235, a fact of major importance to the project. However, Bohr saw the atom bomb as a threat to mankind. He was given the first Atoms-for-Peace prize of the Ford Foundation in 1956 and was chairman of the Danish Atomic Energy Commission. In the last fifteen years of his life, he was tireless in his work for peace.

He took an active interest in the physics program of the Weizmann Institute of Science at Rehovot which he visited on several occasions.

[Samuel Aaron Miller]

BOJAN, village in Ukraine, in the province of Bukovina; it belonged to Austria from 1774 to 1918 and to Romania from 1918 to 1940. In 1807 there were only three Jewish families in Bojan, employed in agriculture. Its situation near the Russian and Romanian borders contributed to the growth of the community, which numbered 781 in 1880 (14.9% of the total population). It was first affiliated with the community of *Sadgora. An independent community was established in 1860. Bojan became a ḥasidic center when the *zaddik* R. Isaac Fridman, a grandson of R. Israel of *Ruzhin, settled there in 1886. As a consequence of the influx of the Ḥasidim who settled near the *zaddik's* home, Bojan developed into an urban settlement. In 1913 the community numbered 2,573. It had a synagogue and four prayer houses. When the Russians occupied Bojan during World War I, the Jewish quarter, in-

cluding the residence of the *zaddik*, was destroyed and most of the Jews there fled. R. Isaac Fridman fled to Vienna where he died. In 1930 there remained only 118 Jews. They were deported to Transnistria in 1941.

[Eliyahu Feldman]

BOJANOWO, small town in Poznan province, western Poland, founded in 1638. Jews were among its early settlers, and traded in textiles and hides. Jewish artisans were employed there by Christians, despite protests from the guilds. For a long time the community was affiliated to that of *Leszno (Lissa). The first synagogue was erected in 1793; a new one was built in 1859. The Jewish population numbered 151 in 1793, 311 in 1840, and 66 in 1905 (out of a total of 2,106). The talmudic scholar Julius *Theodor served as rabbi of Bojanowo. The community ceased to exist after World War I.

BOKANOWSKI, MAURICE (1879–1928), French politician. Born in Le Havre into a family of Russian immigrants, Bokanowski studied law in Paris. In 1914 he was elected to the Chamber of Deputies and on the outbreak of World War I joined the French infantry. After the war he was reelected to the Chamber and became a member of the trade and finance commissions. He was appointed minister for the navy in 1924 and from 1926 to 1927 was minister of commerce and industry, signing France's first commercial treaty with Germany after World War I. He was killed in an airplane accident in 1928 and was given a state funeral.

[Shulamith Catane]

BOKROS-BIRMAN, DEZSÖ (Desiderius; 1889–1965), Hungarian sculptor and graphic artist. Bokros-Birman was noted for his realistic portraiture and his ability to portray character. He was born in Ujpest and studied in Budapest and Paris. He exhibited first with the KÉVE (Association of Hungarian Creative and Industrial Artists) in 1918. Later he moved to Berlin, where he produced a series of lithographs entitled *Job* (1922). Bokros-Birman then returned to Budapest. During World War II he was a member of the anti-Fascist independence movement and later executed a relief entitled *Independent Hungary*.

Some of Bokros-Birman's better known works are *The 20-Year-Old Ady*, *Ujvári Péter*, and *The Iron-worker*.

BIBLIOGRAPHY: *The Statues of D. Bokros-Birman* (1928), introd. by F. Karinthy; *Bokros-Birman* (Hung., 1949), introd. by E. Mihályi.

[Jeno Zsoldos]

BOKSER, BARUCH M. (1945–1990), U.S. scholar of rabbinics in the formative period, the first seven centuries C.E.; son of Conservative rabbi and scholar Ben Zion *Bokser. Baruch Bokser was educated at the University of Pennsylvania (B.A., 1966), Jewish Theological Seminary of America (M.H.L./Rabbi, 1971), and Brown University (Ph.D., Religious Studies/History of Judaism, 1974). He taught at Brown University, the University of California at Berkeley, Dropsie College, and the Jewish Theological Seminary of America. He devoted his oeuvre to explaining the development of Judaism, identifying the shifts in the way ideas and institutions are presented and assessing the significance that these transformations had for the history of Judaism and the society of the Jews. His books include *Samuel's Commentary on the Mishnah: Its Nature, Form, and Content. Part One. Mishnayot in the Order of Zeraim* (1975), showing how Babylonian rabbis related to the Mishnah, which won Brown University's Salo Baron Dissertation Prize in 1974; *Post-Mishnaic Judaism in Transition: Samuel on Berakhot and the Beginnings of Gemara* (1980), tracing the effort to move beyond Mishnah-commentary, linking Samuel's activities to their historical contexts; and *The Origins of the Seder: The Passover Rite and Early Rabbinic Judaism* (1984), in which literary analysis leads to historical interpretation of the ritual of Passover. Here he demonstrates how literary analysis leads to a historical interpretation of the development of an important ritual in Judaism. In addition, he edited *History of Judaism: The Next Ten Years* (1980); and he translated Tractate Pesahim of the Palestinian Talmud into English, published posthumously as vol. 13 of *The Talmud of the Land of Israel: A Preliminary Translation and Explanation*, completed and edited by Lawrence H. Schiffman (1994). The Bokser-Schiffman translation of Pesahim became the standard by which renditions of rabbinic texts into English are assessed. He was a master of the scholarly literature on every topic he addressed, and his "Annotated Bibliographical Guide to the Study of the Palestinian Talmud" (1970, reprinted in 1981 in J. Neusner, ed., *The Study of Ancient Judaism 2:1–119*) is the standard bibliography on that subject to 1970. Among his many articles and reviews, some of the more memorable are "The Wall Separating God and Israel" (*Jewish Quarterly Review*, 778 (1983), 349–74), "Rabbinic Responses to Catastrophe: From Continuity to Discontinuity" (*Proceedings of the American Academy for Jewish Research*, 50 (1983), 37–61), and "Approaching Sacred Space" (*Harvard Theological Review* (1984)), which as a sequence assess how rabbis overcame the destruction of the Temple and yet preserved the memory of the lost center. His "Ma'al and Blessings over Food: Rabbinic Transformation of Cultic Terminology and Alternative Modes of Piety" (*Journal of Biblical Literature* 1981 100:557–74) treats justifications used to support a system of blessings to be recited on eating food. "Hanina ben Dosa and the Lizard: The Treatment of Charismatic Figures in Rabbinic Literature" (*Proceedings of the Eighth World Congress of Jewish Studies* 1982 C:1–6 1982) and "Wonder-Working and the Rabbinic Tradition" (*Journal for the Study of Judaism in the Persian, Hellenistic, and Roman Period* 1985 16:2–13) show

that different portrayals of religious leaders are tied to different self-images of rabbis on the degree to which a leader is to stand out from the community or serve as a model for emulation. His oeuvre joined erudition and disciplined imagination to produce an enduring legacy of systematic learning. By the time of his early death, he had attained standing as one of the exemplary and influential scholars of ancient Judaism.

[Jacob Neusner (2nd ed.)]

BOKSER, BEN ZION (1907–1984), U.S. Conservative rabbi and scholar. Bokser, born in Luboml, Poland, was raised in the United States. From 1933 he served as rabbi of the Forest Hills Jewish Center, one of the largest Conservative congregations in New York City, a massive synagogue structure complete with a physical education complex, the veritable “shul with a pool” that was popular in the immediate post-World War II years. Aside from a brief stint as an Army chaplain during World War II, he remained at the Forest Hills Jewish Center for half a century. His influence extended far beyond his congregation. He was a passionate supporter of liberal causes and took the courageous and deeply unpopular stance of supporting a housing project for lower income residents amidst the solidly middle class Jewish neighborhood of Forest Hills.

He was also associate professor of homiletics at the Jewish Theological Seminary, and for many years editor of its *Eternal Light* radio program. He served on the Rabbinic Assembly Committee on Jewish Law and Standards and dissented from the RA ruling that permitted Jews to ride to synagogue on the Sabbath. He also wrote the unanimous ruling prohibiting circumcision on days other than the eighth except on medically or halakhically acceptable grounds.

Bokser's books, both popular and scholarly, include *Pharisaic Judaism in Transition* (1935), a biography of R. Eliezer b. Hyrcanus; *The Legacy of Maimonides* (1950); *From the World of the Cabalah* (1954, a study of the life and thought of R. Loew b. Bezalel (the Maharal) of Prague); *Judaism: Profile of a Faith* (1963); and *Judaism and the Christian Predicament* (1967), a study of the relationship between Judaism and Christianity. His study and translation of some of Rabbi Abraham Isaac Kook's writings into English gave an American audience access to the revered mystic's thought. Published by Paulist Press, it gave a hearing to Kook's work among Christian scholars of mysticism. Bokser also wrote *The Jewish Mystical Tradition* (1981), a survey of Jewish mystical thought from the Bible to Rav Kook. He translated and edited two prayer books, the first for weekday, Sabbath, and festivals (1957) and the second for the High Holidays (1959), which were first used by his congregation and then elsewhere in the Conservative movement. His *siddur* was complete, unlike the Silberman prayer book that contained the Sabbath liturgy alone and was intended by the Hebrew Publishing Company to serve as the Conservative version of the Birnbaum Siddur used by Orthodox Jews in mid-century America. He also taught political science and religion

at Queens College and was co-founder of its Center for Ethics and Public Policy. His son, Baruch *Bokser (1945–1990), was a scholar of rabbinics.

[Jack Reimer / Michael Berenbaum (2nd ed.)]

BOLAFFI, MICHELE (or **Michaele**; 1768–1842), Italian musician and composer. In 1793 he composed the music for the religious drama *Simhat Mitzvah* by Daniel *Terni, written for performance at the inauguration of the synagogue in Florence: the music has not been found. Later, Bolaffi was active at the Leghorn synagogue, where his works continued to be performed until the early years of the 20th century. His works are included in the 19th-century music manuscripts of other Italian communities, notably that of Casale Monferrato. His setting to Psalm 121 is still sung in the Florence synagogue at festivals. Bolaffi also had a career as a secular musician. He went to England, where in 1809 he was employed as “Musical Director to the Duke of Cambridge.” He toured Germany in 1816 with the singer Angelica Catalani, and occupied for a short period the post of *Koeniglicher Kapellmeister* at Hanover. Between 1815 and 1818 he was in the service of Louis XVIII as singer with the title “Musicien de S.M. le Roi de France.” His compositions include an opera *Saul, a Miserere* for three voices and orchestra (1802), a “sonetto” on the death of Haydn (1809), settings for psalms, and other vocal compositions. He also wrote poems, an Italian adaptation of Solomon ibn *Gabirol's *Keter Malkhut* under the title *Teodia* (1809), and Italian translations of Jacques de Lille (1813) and Voltaire (1816).

BIBLIOGRAPHY: C. Roth, in: JHSET, 16 (1945–51), 223–4; H. Schirmann, in: *Tazlil*, 4 (1964), 32f.; Adler, *Prat Mus*, 125–8.

[Israel Adler]

BOLAFFIO, LEONE (1848–1940), Italian jurist. Born in Padua, Bolaffio was educated at the Padua talmudical college, and at the University of Padua. He practiced law in Venice for 15 years before becoming a lecturer at the universities of Parma and Bologna. Bolaffio helped revive the study of commercial law in Italy and was a member of the Royal Commission for the Reform of the Commercial Code. His works on commercial law include *Esegesi dell'articolo 58 del Codice di Commercio italiano* (1897) and *Diritto Commerciale* (1918) which became standard textbooks. He also edited the *Commentario al Codice di Commercio* with Cesare *Vivante and founded the law review, *La Temi Veneta*.

Bolaffio established the Italian Society for the Study of Stenography and advocated the introduction of the famous Gabelsberger shorthand system into the public schools of Italy. He himself wrote a manual for this system.

BOLEKHOV (Pol. **Bolechów**), city in W. Ukraine; from 1945 to 1991 in the Ukrainian S.S.R. (formerly in *Galicia; from 1772 to 1919 within Austria, subsequently in Poland). Municipal sta-

tus was granted to Bolekhov in 1612 by the lord of the town, and the Jews living there were accorded the right to participate in municipal elections for the mayor and council. In 1780 the Austrian government founded a Jewish agricultural settlement near Bolekhov named New Babylon; although the Jews were shortly afterward superseded by Germans, the name was retained. Jewish occupations in Bolekhov in the 18th century included trade in Hungarian wines, cattle, horses, and salt from the local mines. Later they extended to other trades and crafts. Industrial undertakings established by Jews included timber and other mills, tanneries, and furniture, soap, and candle factories. The oil industry founded in Bolekhov after World War I, and its position as a summer resort, also provided sources of Jewish incomes. Bolekhov was a cradle of the Jewish Enlightenment movement (*Haskalah) in eastern Galicia, the Jews there taking an interest in Polish and other foreign languages even in the 18th century. Prominent among its leaders were Dov Ber *Birkenthal, author of a famous autobiography, and Solomon *Rubin, principal of the modern Jewish school, where both Hebrew and German were taught.

The Jews formed a considerable majority of the population until World War II. In 1900 there were 3,323 Jewish inhabitants (78% of the total); in 1925, 2,435. In elections for the Austrian parliament (1867 through 1906), Bolekhov formed part of a constituency with largely Jewish voters. In 1931 there were 2,986 Jews.

[Nathan Michael Gelber]

Holocaust Period

When World War II broke out, Bolekhov came under Soviet occupation until July 2, 1941, when the town was occupied by Slovak and Ukrainian units under German command. The German commander established a Judenrat, headed by Dr. Reifeisen, who shortly afterward committed suicide. The Jews were segregated in a ghetto established in the autumn of 1941 and the intolerable living conditions there were aggravated by the arrival of refugees from the villages in the district. Relief was organized with great difficulty, and by the spring of 1942 most of them had died of starvation. Some Jews were employed in the local tanneries. Later, Jews were employed in lumber work at a special labor camp. In late October 1941, the German police seized over 1,850 Jews. After being tortured for 24 hours, some succumbed and the rest were brought to a mass grave in the Tanjawa forest and shot. The second mass liquidation took place in early August 1942 when a manhunt was conducted jointly by the Ukrainian and Jewish police for three days. The victims were herded into the courtyard of the city hall, where some 500 persons were murdered by the Ukrainians and some 2,000 dispatched by freight trains to *Belzec death camp where they perished. By 1943 only 1,000 Jews remained in the ghetto, in the work camp, and a few in the Jewish police. These were gradually murdered and only a few managed to escape to the neighboring forests. Some joined the partisans, while others perished there during the first few weeks. By the time of the Soviet conquest (spring of 1944) only a handful of Jews remained alive. In the district of Bolekhov,

there was a group of Jewish partisan fighters who operated under the command of a Ukrainian communist.

°**BOLESLAV V** (“**The Pious**”; 1221–1279), Polish prince, son of Ladislas Odonic of the Piast dynasty. Boleslav was prince of Great Poland from 1239, for the first ten years in conjunction with his brother. In 1257, after many vicissitudes, he succeeded in establishing his rule over the whole of Great Poland. During his wars against the Teutonic Order and the rulers of Brandenburg he captured Gdansk (Danzig). The appellation “Pious” denotes Boleslav’s good relations with the Church. During his reign Poland was invaded by the Mongols who left the country in ruin after their retreat. Boleslav, like other Polish rulers of the period, invited settlers from Germany, including Jews, to rehabilitate the country, granting various concessions and guarantees to the new settlers. This situation, and the policy to which it gave rise, motivated Boleslav to grant a charter to the Jews of Great Poland, issued on Sept. 8, 1264. It is patterned after, and mainly transcribed from, the charters granted to Jews in Austria in 1244 and Bohemia in 1254. Also known as the Statute of Kalisz, it was the prototype for subsequent Polish legislation concerning the Jews in the Middle Ages, such as that of *Casimir the Great.

The original text of the Statute of Kalisz has been lost, but its content is conveyed in the document of 1506 of the chancellor Jan Laski. About half of the 36 articles of the Statute concern the legal status of the Jews, who were regarded as belonging to the prince’s treasury (cf. art. 29: “Whoever robs a Jew... shall be considered as robbing Our treasure”). The Jews were protected against the *blood libel. They, their families, their possessions, and their institutions (synagogues, cemeteries) were under the protection of the prince (arts. 8–10, 14, 29) and subject to his jurisdiction (art. 8 denies the municipality any juridical authority over the Jews). The other articles relate to Jewish economic activities, and attest the ruler’s special interest in Jewish credit transactions (see *Moneylending) and their organization. Two articles deal with the commercial activity of the Jews. Four articles original to the Statute of Kalisz, i.e., not adopted from earlier documents of this kind, are article 33, permitting the purchase of a horse from a Jew in daytime only; article 34, prohibiting mintmasters from accusing Jews of forging coins; article 35, compelling their Christian neighbors to assist Jews if attacked at night; and article 36, permitting Jews to trade in provisions.

BOLESLAVSKI, ISAAC (1919–1977), Russian chess grandmaster. Boleslavski was born in Ukraine. He established himself early as one of the leading players in the U.S.S.R. He achieved his greatest success in the Candidates' Tournament at Budapest in 1950, where he shared first prize with David *Bronstein. The latter won the play-off and thus qualified to challenge Mikhail *Botvinnik. From that time on Boleslavski distinguished himself in important tournaments. He also achieved celebrity as an analyst of chess openings, and many important variations resulted from his experiments in practical play.

[Gerald Abrahams]

BOLIVIA, South American republic; population: 8,724,156 (2004). Jewish population: c. 600.

History of Jewish Settlement

Desperate to escape the increasingly vehement persecution in their homelands, thousands of refugees from Nazi-dominated Central Europe, the majority of them Jews, found refuge in Latin America in the 1930s. Bolivia became a principal recipient of this refugee influx by the end of the decade when Argentina, Brazil, Chile, and Mexico – traditional “countries of choice” for European immigration – closed their gates or applied severe restrictions to the entrance of newcomers. Indeed, in the panic months following the German *Anschluss* of Austria in March 1938 and *Kristallnacht* in November of that year, Bolivia was one of very few remaining places in the entire world to accept Jewish refugees. In the short period between then and the end of the first year of World War II, some 20,000 refugees, primarily from Germany, Austria, and Czechoslovakia, entered Bolivia – more than in Canada, Australia, New Zealand, South Africa, and India combined. When the war ended, a second, smaller wave of immigrants, mostly East European Holocaust survivors, displaced relatives of previous refugees, and Polish Jews who had fled to Shanghai after 1939 and abandoned it in the wake of the Communist takeover, arrived in Bolivia. (Also in these postwar years, a small number of Nazis who were fleeing or had help escaping prosecution in Europe – the best known among them being Klaus Barbie – came to Bolivia.) The new immigrants settled primarily in La Paz, a city more than 12,500 feet above sea level, as well as in Cochabamba, Oruro, Sucre, and in small mining and tropical agricultural communities throughout the land.

In Bolivia, the refugees began to reconstruct a version of the world that they had been forced to abandon. Their own origins and social situations were diverse in Central Europe, ranging across generational, class, educational, and political differences and incorporating various professional, craft, and artistic backgrounds. Some of them had at one time been engineers, doctors, lawyers, musicians, actors, and artists; others were skilled and unskilled workers whose living had been interrupted by Nazi exclusionary decrees. Although most people who came to Bolivia were Jews, or were married to Jews, a significant minority were non-Jewish political refugees: Communists, Socialists, and others persecuted by the Nazi

regime. Jews themselves differed greatly in the degree of their identification with their religion and its traditions. There were Zionists, atheists, Orthodox believers, High Holiday Jews, and non-practitioners among them. They shared a common identity as Jews only in the sense, perhaps, that they had all been defined as “Jews” from the outside – that the Nazis had “othered” them as Jews.

No matter what their background differences had been in Europe, the vast majority of refugees arrived in South America in dire straits, with few personal possessions and very little money. This in itself had a leveling effect, cutting across their previous class distinctions. But other factors, also helped to create a sense of collective identity among them, aiding in their adjustment and survival. Their common history of persecution was certainly one of these. Each and every refugee had been identified as undesirable, stripped of citizenship and possessions. Despite differences in the details of their particular experiences, they were all “in the same boat.” The war back in Europe, and the fact that so many of them had relatives and friends from whom they had been separated, were ever-present realities of which they were collectively conscious and that bonded them together. They kept themselves and each other informed of news about the war from accounts in the press and radio, and, they shared efforts to discover the fate of those left behind. In this regard, the German language (which they spoke at home and among themselves), was their vehicle of inquiry, information, and unity, allowing them to communicate intimately and to express themselves with a degree of familiarity that most could never attain in the Spanish language of their surroundings.

But ultimately, it was Austro-German Jewish bourgeois society, the cultural end-product of 19th century Jewish emancipation in Central Europe, that gave the new arrivals a model for emulation and a common locus for identification in their place of refuge. Indeed, at the very time when that dynamic social and cultural amalgam was being ruthlessly and systematically destroyed by the Nazis, the Jewish refugees in Bolivia tried to recall and revive a version of it in a land thousands of miles from their home; in a country that offered them a haven, but in which many of them felt themselves as mere sojourners.

Alto Perú, the region that became Bolivia after gaining its independence from Spain in 1824, had once before been the refuge of people escaping religious intolerance and persecution in Europe. In the course of the 16th century, and during the extended, often brutal sway of the Spanish Inquisition, thousands of New Christians, or *Crypto-Jews – persons of Jewish origin who had been converted to Christianity by force or prudent choice of their own – left the Iberian peninsula; clandestinely or openly, and many sought haven in Spain's Latin American colonies. Bringing badly needed technical and entrepreneurial skills with them, a number of Crypto-Jews settled around the silver-mining areas of Potosí and in centers of trade and commerce like Chuquisaca (later Sucre), Santa Cruz, and Tarija. Over the years, some of these Crypto-Jews,

or their offspring, intermarried with local Christians and were integrated into the Catholic establishment. In the process, the background religious “stain” that had made them identifiable as “outsiders” was blurred if not eradicated. But traces of their Sephardi ancestry survived – discernible both in family names and in customs of Jewish origin that were perpetuated for generations, despite the loss of their original meaning. Until well into the first decades of the 20th century, for example, it was the custom for women in some families in Santa Cruz to light candles on Friday evening, a Jewish ritual inaugurating the Sabbath, and for persons associated with some of the oldest and most distinguished “colonial” families in Sucre to maintain a semi-secluded seven-day deep mourning for their dead that, in form if not substance, bore a great resemblance to the Jewish mourning practice of *shiva*. Ancient candlesticks and silver objects of Sephardi origin, as well as incunabula inscribed in Hebrew, were passed down within some of Sucre’s families for generations.

But despite the early presence of Crypto-Jews in Bolivia’s colonial past, and relics of Judaic practices and beliefs, few – if any – Jews seem to have emigrated to the country in the first century of its independence. In this respect Bolivia was quite different from its more accessible and economically attractive South American neighbors like *Argentina, and *Brazil, whose governments had periodically encouraged “white settler” immigration from Europe, and which developed substantial Jewish communities in the course of the 19th and early 20th centuries. A few East European Jews did trickle into Bolivia in the early 1900s, fleeing persecution in Poland, pogroms in Russia in the aftermath of the failed revolution of 1905, or in the aftermath of the Bolshevik Revolution of 1917. But before the rise of Nazism very few Jews, perhaps fewer than a hundred from Alsace, Poland, and Russia had settled in this Andean land.

In the wake of the large Jewish refugee influx in the late 1930s, some resentments were generated and fueled among Bolivians against the immigrants by pro-Nazi provocateurs, especially after the discovery that many refugees had entered the country with visas bought illegally from Bolivian officials in Europe or under false pretences – with agricultural visas that stipulated that they would be engaged in rural land settlement and agricultural development. In fact, while many immigrants did receive visas as agricultural workers, the majority of them established themselves in the urban centers, in commerce and industry. Several colonization projects were attempted, however, under the auspices of the Sociedad Colonizadora de Bolivia (Socobo), founded in 1940, and with the help of the tin magnate Mauricio *Hochschild. The latter spent almost \$1,000,000 between 1940 and 1945 on an agricultural development project at Coroico; but, like an earlier one in the Chaparé jungles, it failed. Climatic conditions were exceedingly difficult, and there was a dearth of roads to suitable markets. The early years of the Jewish community in Bolivia were marked by difficult economic conditions, especially for those who did not own business enterprises. Be-

tween January 1939 and December 1942 \$160,000 were disbursed for relief by the *American Jewish Joint Distribution Committee, by the Sociedad de Protección de los Inmigrantes Israelitas, and by Mauricio Hochschild. The majority of the immigrants entered manufacturing and trade and ultimately played a prominent role in the development of industry, imports and exports, and in the free professions. By the fall of 1939, when immigration reached its peak, organized Jewish communities could already be found in La Paz and in Cochabamba. The first organization to be founded was the Círculo Israelita (1935) by East European Jews, followed by the German Comunidad Israelita de Bolivia. During the next few years other organizations were formed, such as B’nai B’rith, the Federación Sionista Unida de Bolivia, Wizo, and Macabi, with the Comité Central Judío de Bolivia coming to serve as the representative roof organization. Under the auspices of these groups, various communal services were established in the 1940s: the Chevra Kaddisha, the Cementerio Israelita, Bikkur Holim, a *kinderheim*, and a home for the aged. The La Paz community also established and maintained the Colegio Boliviano Israelita, a comprehensive school with kindergarten, primary, and secondary grades. Attracting Jewish as well as non-Jewish students because of its excellent academic program, the school exists even today, despite the drastic decline in the Jewish population of the country.

Starting with the end of World War II, continuing with the establishment of the State of Israel in 1948, and accelerating in the 1950s, the demographic trend that had been marked by a sharp increase in the Jewish population of Bolivia was reversed. Large numbers of the Jewish wartime immigrants and their children left the country, either to move to other “more Europeanized” Latin American countries like Argentina or Brazil, to the United States, to Israel, or back to their countries of origin in Europe. The consistent exodus was stimulated by a variety of factors, including the political instability in the country. The 1952 revolution that brought to power the National Revolutionary Party (the MNR, which had been close to the Nazis during the war) aroused anxieties in the Jewish community. These fears were allayed, however, when Jewish rights were not affected. Economic insecurity, health hazards caused by climatic difficulties, and the lack of adequate facilities for higher education also motivated the emigration trend.

The Contemporary Situation

By the early 1990s, there were around 700 Jews left in Bolivia. That number has declined even more, as many members of Bolivia’s Jewish younger generation decide to emigrate – either temporarily, to seek higher educational or vocational training elsewhere, or on a permanent basis. As in the past, the majority of remaining Jews live in the capital, La Paz, but there are smaller communities in Santa Cruz and Cochabamba. The Círculo Israelita, the central Jewish communal organization, now embodies both of its predecessors, the Círculo Israelita de La Paz established by East European immigrants and the German Comunidad Israelita de Bolivia.

There are synagogues and a rabbi in La Paz, and synagogues in Cochabamba and Santa Cruz. Economically, members of the community are now relatively well to do, engaged in manufacturing, merchandizing, import and export trade, and the professions.

Relations with Israel

Bolivia was among the supporters of the 1947 UN resolution on the partition of Palestine. Subsequently, a Bolivian representative was named to the Palestine Commission. In ensuing debates at the United Nations, notably those on the refugee problem, despite changing governments and resultant differences of policy, Bolivia was remarkably consistent in maintaining a friendly attitude to Israel. Israel's first minister presented his credentials in 1957, and an embassy was established in 1964; Bolivia, in turn, established its embassy in Jerusalem in the same year. The two countries engaged in a variety of assistance programs. A technical cooperation agreement between the two countries, signed in 1962, provides for an agricultural mission of Naḥal officers that has been active in Bolivia in cooperation with the Bolivian army in the fields of agricultural settlement and training. Bolivian students on scholarships in Israel included irrigation engineers and youth leaders. An effort in the private sphere is a joint study in medicinal tropical plants undertaken by the School of Pharmacology of the Hebrew University of Jerusalem and its Bolivian counterpart.

BOLM, ADOLPH RUDOLPHOVICH (1884–1951), U.S. ballet dancer and director. Born in St. Petersburg, Russia, Bolm was awarded a first prize at the Imperial Ballet and soon drew public attention with his brilliant dancing and mime. He toured European capitals with Anna Pavlova in 1908 and 1909, and in 1914 went to the U.S. as leading dancer and choreographer in Diaghilev's company. He then settled in New York, where he formed the Bolm Ballet Intime. He produced *Le Coq d'Or* at the Metropolitan Opera in 1918, danced the title role in *Petrouchka*, and established himself as a choreographer. He became maître de ballet at the Chicago Opera in 1922. In 1931, in Hollywood, his ballet *Iron Foundry* (to music by Mossolov) attracted audiences of fifteen to twenty thousand at a time. In 1932 Bolm was appointed ballet master at the San Francisco Opera, and held the post for five years. He later directed a ballet school.

BOLOGNA, city of north central Italy. There is documented evidence of a Jewish presence since 1353, when the Jewish banker Gaius Finzi from Rome took up his residence in the quartier of Porta Procola. In the second half of the 14th century around 15 Jewish families settled in the city. In 1416, at the time of the papal election, a vigilance committee of Jewish notables from various parts of Italy met in Bologna to discuss the submission of an official letter to Pope Martin v in order to improve the condition of the Jews. In 1417 the bishop of Bologna compelled the Jews there to wear the Jewish *badge and to limit their activities as loan bankers. The restrictions were confirmed in 1458. Nevertheless, the community flourished. In 1473 *Bernardino da Feltre secured the establishment of a public loan bank (*Monte di Pietà) in order to undermine the activities of the Jews. It functioned for a short time only, but further attempts were made to establish one in 1505 and 1532. Thanks to new waves of immigration, the Jewish community of Bologna increased to around 650 in these years. They were involved in loan banking, commerce (silk, secondhand textiles, jewelry), medicine, and cultural life.

In the 15th–16th centuries the Bologna community included many rabbis and noted scholars, including Obadiah *Sforno, Jacob *Mantino, Azariah de' *Rossi, and Samuel *Archivolti. There were 11 synagogues in Bologna in the middle of the 16th century, even more than in Rome. In 1546 there already existed two fraternal societies, the "Ḥevrat ha-Nizharim" and the "Ḥevrat Raḥamim."

A Hebrew press printed the Book of Psalms in 1477 (its first book), with commentary by D. Kimḥi, in an edition of 300 copies. Among the printers were Meister Joseph and his son, Ḥayyim Mordecai, and Hezekiah of Ventura. About the same time – between 1477 and 1480 – they printed two small-size editions of the Book of Psalms.

Two other Hebrew printing presses were set up in Bologna, the first under the supervision of *Abraham b. Ḥayyim dei Tintori of Pesaro (see *Incunabula) operating in 1477–82 and the second of silk makers and intellectuals (among them Obadiah Sforno) operating in 1537–41. In 1482 the first edition of the Pentateuch with Onkelos and Rashi and the Five Scrolls with commentaries were printed. Only the Pentateuch bears the city's name. In 1537 a *siddur* of the Roman rite, mostly on parchment, and some other works were printed (i.e., *Or Ammim* by Sforno in 1537 and *Piskei Halakhot* by Moses Recanati in 1538) and in 1540/41 a *maḥzor* of the same rite appeared with commentary by Joseph *Treves. The university library owns an important collection of Hebrew manuscripts and early editions.

Bologna reverted to direct papal rule in 1513, and not long after the community began to suffer from the consequences of the Counter-Reformation. In 1553 the Talmud and other Hebrew works were burned on the instructions of Pope Julius III. In 1556 *Paul IV issued an order confining Jewish residence to a ghetto. In 1566 the ghetto was established in a central area of the city, behind the Two Towers. Pius v estab-

lished a House of *Catechumens in Bologna in 1568 and in the following year Bologna was among the towns of the papal states from which the Jews were banished. More than 800 Jews were forced to leave, paying in addition the enormous fine of 40,000 scudi. The cemetery was given to the nuns of S. Pietro, who completely destroyed it in order to use the land. As a result of the apparently more liberal attitude of Sixtus V, Jews returned to Bologna in 1586, but in 1593, 900 Jews were expelled again by Clement VIII. On this occasion they removed the bones of their dead, which they reburied in the cemetery of Pieve di Cento.

Subsequently Jews were not able to settle officially in Bologna for two centuries. Foreign Jews occasionally were allowed accommodation in the central Osteria del Cappello Rosso inn. In 1796, in the period after the French conquests, several Jews went to live there. They later suffered from the renewed papal rule, and their position progressively deteriorated until in 1836 some of them who belonged to the Italian Risorgimento movement were again expelled. It was in Bologna that the kidnapping of the child Edgardo *Mortara took place in 1858, an affair that aroused the civilized world. When the city was annexed to Piedmont in 1859, equal rights were granted to the Jews and they fully participated to the cultural, economic, and social life of the city: Luigi Luzzati and Attilio Muggia were among the founders of two important charitable institutions, respectively the "Società cooperativa degli operai" (1867) and the "Casa provinciale del lavoro (1887)"; Amilcare Zamorani founded and owned the daily newspaper *Il Resto del Carlino* (1885). The family of Lazzaro Carpi, who participated actively in the Italian Risorgimento, strongly supported the Jewish community and organized the first prayer room in their home in 1859. During the 1870s the Jewish community established a new synagogue active until 1929 when a new one was built in the same place.

[Attilio Milano / Federica Francesconi (2nd ed.)]

At the beginning of the 20th century, about 900 Jews, mostly business and professional people, lived in Bologna. In January 1938, months before the anti-Jewish laws, *Il Resto del Carlino*, the local daily newspaper founded by Amilcare Zamorani, initiated a campaign against the Jews. One of the first signs of the new antisemitic atmosphere was the changing of the name of the Via de' Giudei to the Via delle Due Torri. With the onset of the anti-Jewish laws in September, Jewish teachers and students were forced to leave the public schools. The municipality established an elementary school with two classes for Jewish pupils only, while the Jewish community set up three sections for middle and upper school. Fifty-one Jewish professors were retired from the University of Bologna, including 11 tenured professors and 40 others. Also forced to leave were 492 foreign Jewish students. Italian Jewish students already enrolled at the university were allowed to finish, but no new Italian Jewish students were admitted. In addition, 17 doctors, 14 lawyers, and three journalists were no longer permitted to

exercise their professions. With only a few exceptions, there were no reactions or manifestations of dissent on the part of their "Aryan" colleagues.

After the German occupation of Italy in September 1943, the persecution in Bologna became deadly. With the collaboration of Fascist activists, Nazi raids, roundups, and deportations of Jews to death camps were frequent. Jewish properties and possessions were confiscated, and only partially returned after liberation. One hundred and fourteen Jews from Bologna were deported to Auschwitz, where nearly all of them died. About half of them passed through the transit camp of Fossoli. Eighty-four of the 114 belonged to the Jewish community. Among them was Rabbi Alberto Orvieto. Their names are engraved on the plaque on the facade of the synagogue in Via Mario Finzi. The other 30 deportees had been baptized or had chosen not to register themselves in the community. In addition to the 114, a number of deported Jews from outside Bologna were captured there.

Even before September 1943, a section of the *Delegazione assistenza emigrati* (Delasem) functioned in Bologna to help foreign Jews. It was directed by Mario Finzi, who during the German occupation produced false identity cards for Italian and foreign Jews in the Bologna and Florence area and delivered them through Don Leto Casini. Finzi was arrested in April and deported to Auschwitz in May 1944, from where he did not return. Eugenio Heiman, president of the Jewish community after the war, was also active in Delasem.

Many Jews were able to hide and save themselves with false documents provided by Delasem or the Resistance. About 20 Jews from Bologna became partisans and fought especially in the brigades of *Giustizia e Libertà*, linked to the Partito d'Azione. Several lost their lives in the struggle, including the lawyer Mario Jacchia, commander of northwestern Emilia, and 13-year-old Franco Cesana (1931–1944), believed to be the youngest Italian partisan.

The Jewish community was reconstituted in 1945. The synagogue, destroyed in an Allied bombing raid in 1943, was rebuilt under the direction of Eng. Guido Muggia, the grandson of the original builder, and inaugurated in 1954. By 1990 the number of Jews was reduced to 230 with a number of Israelis studying at the University.

BOLOTOWSKY, ILYA (1907–1981), U.S. painter, sculptor, and filmmaker. Born in St. Petersburg, Bolotowsky was drawing portraits and landscapes at the age of five. At 16 he arrived in the United States via Constantinople, where his family had lived for two and a half years. After studying at the National Academy of Design from 1924 to 1930, he was hired by the Federal Art Project's Works Progress Administration in 1934. Under the auspices of the WPA, Bolotowsky painted several realist works, but soon he turned to abstraction. As a WPA artist, he created one of the first abstract murals, for the Williamsburg Housing Project in Brooklyn (1936). Another abstract mural followed, located in the Health Building in the Hall of Medical Science at the 1939 New York World's Fair.

In 1933 he began to paint abstractly, influenced by the Neo-Plastic works of Piet Mondrian. After his initial reaction, which he described as "shock and even anger," Bolotowsky began to privilege the tensions of pure color and simplified form in vertical and horizontal arrangements, often on shaped canvases since 1947. In 1961 he began to make sculpture. These painted columns, as Bolotowsky titled them, were a natural outgrowth of his interest in the architectonic forms of Neo-Plasticism.

He co-founded "The Ten" in 1935, a group of artists that included Mark Rothko and Ben-Zion. The Ten was committed to overthrowing the Whitney Museum's hegemony and promulgation of representational art of the American scene. The group first showed their work collectively in 1938. Bolotowsky also co-founded the American Abstract Artists in 1936. Although his work did not employ Jewish subjects, Bolotowsky showed an abstract painting at the first exhibition of the World Alliance of Yiddish Culture (YKUF) in 1938.

He served in World War II in the United States Air Force as a translator stationed in Alaska, during which time he compiled a Russian-English military dictionary. After the war Bolotowsky taught at various American universities, including Black Mountain College (1946–48) and the University of Wyoming (1948–57). His best-known student is Kenneth Noland.

He made experimental films, including *Metanoia*, which won first prize in 1963 at the Midwest Film Festival at the University of Chicago. Bolotowsky published articles about his work and compiled the *Russian-English Dictionary of Painting and Sculpture* (1962).

BOLTEN, JOSHUA B. (1954–), director of the Office of Management and Budget and a member of George W. Bush's

cabinet from June 2003. Bolten was born in Washington, DC, and received his B.A. with distinction from Princeton University's Woodrow Wilson School of Public and International Affairs (1976) and his J.D. from Stanford Law School (1980), where he was an editor of the *Stanford Law Review*. Immediately after law school, he served as a law clerk at the U.S. District Court in San Francisco. During the fall semester of 1993, Bolten taught international trade at Yale Law School.

During the administration of President George H.W. Bush, Bolten served for three years as general counsel to the U.S. trade representative and one year in the White House as deputy assistant to the president for legislative affairs. During the Reagan administration from 1985 to 1989, he worked on Capitol Hill, where he was international trade counsel to the U.S. Senate Finance Committee, working closely with Senator Robert Packwood (R-OR.). Earlier, Bolten was in private law practice with O'Melveny & Myers, and worked in the legal office of the U.S. State Department. He also served as executive assistant to the director of the Kissinger Commission on Central America. From 1993, he was executive director, legal and government affairs, for Goldman Sachs International in London.

Bolten joined the Bush campaign during the primary season and from March 1999 through the November 2000 election served as policy director of the campaign. His transition to the administration as assistant to the president and deputy chief of staff for policy at the White House was seamless. Bolten is considered a Bush loyalist who views his job as advancing the President's agenda of tax cuts and private Social Security investment accounts for younger Americans. He is that rare cabinet member who is more comfortable working behind the scenes where he is regarded as most effective; he avoids the limelight and the press wherever possible. As the highest-ranking Jew in the Bush administration, he handled some specifically Jewish assignments within the administration – public and private – working closely with the Jewish liaison, appearing at the national Hanukkah candle-lighting ceremony, and taking a personal, familial interest in the Holocaust Memorial Museum. In April 2006 Bolten became chief of staff to President George W. Bush, the first Jew to hold that office and thus the highest-ranking Jew in the history of the White House.

His father, SEYMOUR BOLTEN (1917–85), was believed to be the highest-ranking Jew among known CIA agents of his time. An authority on international drug trafficking, he was a special adviser to the White House on narcotics and a senior adviser on law enforcement policy at the Department of Treasury (1981–85). At the White House, he staffed the President's Commission on the Holocaust for President Jimmy Carter.

BOLZANO (Ger. **Bolzen**), capital of Bolzano province, northern Italy. Jewish moneylenders began to settle in Bolzano after it passed to the Habsburgs in 1363. While some originated from Italy, they were predominantly of German origin. The

persecutions and expulsions which followed the blood libel in *Trent in 1475 also affected the Jews of Bolzano. A few began to settle in the city again in the first half of the 16th century. In 1754 Ḥayyim David Joseph *Azulai found only two Jewish families in Bolzano. Jewish settlement again increased during the 19th and early 20th centuries and the Jews established a small community attached to the Jewish community of Merano. Starting in 1933, a number of Jews arrived from Germany and Eastern Europe.

[Daniel Carpi / Federica Francesconi (2nd ed.)]

According to the 1938 census of Jews in Italy, there were 938 Jews in the province of Bolzano. When the Germans occupied Italy after the Italian armistice with the Allies on September 8, 1943, the province, along with those of Trent and Belluno, was separated from the Italian Social Republic and included in the Zona delle Prealpi (Alpenvorland), under direct German administration. About 38 Jewish residents of the province were deported during the period of German occupation. Another 207 Jews from all over Italy were deported from the transit camp of Gries, established in a suburb of Bolzano after the closing of Fossoli on August 1, 1944.

BOMBAY (today **Mumbai**), capital of Maharashtra and the proverbial “gateway to India.” Bombay enters Jewish history after the cession of the city to the Portuguese in the middle of the 16th century. Then a small fishing island of no great economic significance, Bombay was leased out around 1554–55 to the celebrated *Marrano scientist and physician Garcia da *Orta, in recognition of his services to the viceroy. Garcia repeatedly refers in his *Coloquios* (Goa, 1563) to “the land and island which the king our lord made me a grant of, paying a quit-rent.” After the transference of Bombay to English rule the Jew Abraham *Navarro expected to receive a high office in the Bombay council of the East India Company in recognition of his services. This was, however, denied to him because he was a Jew. In 1697 Benjamin Franks jumped Captain Kidd’s “Adventure Galley” in Bombay as a protest against Kidd’s acts of piracy; his deposition led to Kidd’s trial in London.

The foundation of a permanent Jewish settlement in Bombay was laid in the second half of the 18th century by the *Bene Israel who gradually moved from their villages in the Konkan region to Bombay. Their first synagogue in Bombay was built (1796) on the initiative of S.E. *Divekar. *Cochin Jews strengthened the Bene Israel in their religious revival. The next largest wave of immigrants to Bombay consisted of Jewish merchants from Syria and Mesopotamia. Prominent was Suleiman ibn Ya’qūb or Solomon Jacob whose commercial activities from 1795 to 1833 are documented in the Bombay

records. The Arabic-speaking Jewish colony in Bombay was increased by the influx of other “Arabian Jews” from *Sūrat, who, in consequence of economic changes there, turned their eyes to India.

A turning point in the history of the Jewish settlement in Bombay was reached with the arrival in 1833 of the Baghdad Jewish merchant, industrialist, and philanthropist, David *Sassoon (1792–1864) who soon became a leading figure of the Jewish community. He and his house had a profound impact on Bombay as a whole as well as on all sectors of the Jewish community. Many of the educational, cultural, and civic institutions, as well as hospitals and synagogues in Bombay owe their existence to the munificence of the Sassoon family.

Unlike the Bene Israel, the Arabic-speaking Jews in Bombay did not assimilate the language of their neighbors, Marathi, but carried their Judeo-Arabic language and literature with them and continued to regard Baghdad as their spiritual center. They therefore established their own synagogues, the Magen David in 1861 in Byculla, and the Kneseth Elijah in 1888 in the Fort quarter of Bombay. A weekly Judeo-Arabic periodical, *Doresh Tov le-Ammo*, which mirrored communal life, appeared from 1855 to 1866. Hebrew printing began in Bombay with the arrival of Yemenite Jews in the middle of the 19th century. They took an interest in the religious welfare of the Bene Israel, for whom – as well as for themselves – they printed various liturgies from 1841 onward, some with translations into Marathi, the vernacular of the Bene Israel. Apart from a short-lived attempt to print with movable type, all this printing was by lithography. In 1882, the Press of the Bombay Educational Society was established (followed in 1884 by the Anglo-Jewish and Vernacular Press, in 1887 by the Hebrew and English Press, and in 1900 by the Lebanon Printing Press), which sponsored the publication of over 100 Judeo-Arabic books to meet their liturgical and literary needs, and also printed books for the Bene Israel. There were also a number of Bene-Israel journals published in Bombay (*Bene Israelite*, *Friend of Israel*, *Israelite*, *The Lamp of Judaism*, *Satya Prakash*).

The prosperity of Bombay attracted a new wave of Jewish immigrants from Cochin, Yemen, Afghanistan, Bukhara, and Persia. Among Persian Jews who settled in Bombay, the most prominent and remarkable figure was Mullā Ibrahim *Nathan (d. 1868) who, with his brother Mūsā, both of *Meshed, were rewarded by the government for their services during the first Afghan War. The political events in Europe and the advent of Nazism brought a number of German, Polish, Romanian, and other European Jews to Bombay, many of whom were active as scientists, physicians, industrialists, and merchants. Communal life in Bombay was stimulated by visits of Zionist emissaries.

[Walter Joseph Fischel]

Contemporary Period

After the establishment of the State of Israel and India’s Independence the Jewish community of Bombay started diminishing due to emigration. In the early 21st century the Jewish

population of Bombay (Mumbai) was estimated to be about 2,700. The city remains the last major center of organized Jewish life in India. There are eight synagogues in Mumbai – six belong to the Bene Israel community and two to Baghdadi Jews. Mumbai is also a home to the Indian branches of *ORT (Organization for Technological Training) and AJDC (*American Joint Distribution Committee).

***BOMBERG, DANIEL** (d. between 1549 and 1553), one of the first and the most prominent Christian printers of Hebrew books. Bomberg left his native Antwerp as a young man and settled in Venice. Rich and well educated, and even having studied Hebrew, he developed a deep interest in books. He probably learned the art of printing from his father Cornelius. In all, nearly 200 Hebrew books were published (many for the first time) at Bomberg's printing house in Venice, which he set up on the advice of the apostate Felix Pratensis. He published editions of the Pentateuch and the Hebrew Bible, both with and without commentaries, and was the first to publish the rabbinic Bible *Mikra'ot Gedolot*, 4 vols., 1517–18, with Pratensis as editor, i.e., the text of the Hebrew Bible with Targum and the standard commentaries. In order to produce this work, he had to cast great quantities of type and engage experts as editors and proofreaders. As a result of the success of his early work, Bomberg expanded his operations. He published the first complete editions of the two Talmuds (1520–23) with the approval of Pope Leo X (only individual tractates of the Babylonian Talmud having hitherto been published), as well as the *Tosefta* (appended to the 2nd ed. of Alfasi, 1522). The pagination of Bomberg's editions of the Talmud (with commentaries) has become standard ever since. Similarly, his second edition of the rabbinic Bible (1524–25) edited by *Jacob b. Ḥayyim ibn Adonijah, has served as a model for all subsequent editions of the Bible. He is said to have invested more than 4,000,000 ducats in his printing plant. Bomberg spent several years trying to obtain a permit from the Council of Venice to establish a Hebrew publishing house. He also had to secure special dispensation for his Jewish typesetters and proofreaders from wearing the distinctive Jewish (yellow) hat. In 1515 the Venetian printer P. Liechtenstein printed, at Bomberg's expense, a Latin translation by Felix Pratensis of the Psalms. Apparently, the first Hebrew book to come off his press was the Pentateuch (Venice, Dec. 1516), though there is some evidence that his first work was printed in 1511 (*Aresheth* 3, 93ff.). In 1516

he obtained a privilege to print Hebrew books for the Jews and went on printing rabbinic books, midrashic-liturgical texts, etc. Among Bomberg's printers, editors, and proofreaders whose names are known were: Israel (Cornelius) *Adel-kind and his brother and Jacob b. Ḥayyim ibn Adonijah (all of whom were later baptized); David Pizzighettone, Abraham de *Balmes, *Kalonymus b. David, and Elijah *Levita (Baḥur). It seems that Bomberg's fortunes declined as a result of competition from other publishers. In 1539 he returned to Antwerp, though his publishing house continued to operate until 1548. His distinctive type became popular, and his successors not only lauded his typography but went so far as to print on the title pages of their publications "with Bomberg type," or some similar reference. The name Bomberg which appears in the Plantin Bible published in Antwerp in 1566 almost certainly refers to his son, and from him Plantin obtained a manuscript of the Syriac New Testament on which he based the Polyglot Bible known as *Regia* (8 vols., 1569–73).

[Abraham Meir Habermann]

BOMBERG, DAVID (1890–1957), British painter. He was born in Birmingham and brought up in Whitechapel, the Jewish quarter of London. Apprenticed to a lithographer, he attended evening classes and later the Slade School. In 1914 he became a founder-member of the London Group, and participated in an exhibition "Twentieth Century Art" held at the Whitechapel Art Gallery for which he organized an international Jewish section. This was the first collection of modern Jewish art to be seen in England.

In 1923 the English painter, Sir Muirhead Bone, wrote to the British Zionist Federation urging them to employ Bomberg to record pioneering work in Palestine. Bomberg visited Palestine, but fell out with the Zionists, refusing to paint what he regarded as propaganda pictures. He spent six months at Petra, where he developed his taste for sunbaked, desolate landscapes. Later he continued his travels and painted in several countries, particularly in Spain. Bomberg then fell into poverty and neglect as his paintings fell out of favor, although he was an influential and inspiring lecturer at the Borough Polytechnic, London, where he taught from 1945 until 1953. In 1954 he returned to Spain, with the intention of founding an artists' colony, but died with the plan still unfulfilled. Bomberg's early paintings show the influence of Cubism, but remain representational; these include some Jewish subjects, such as the *Jewish Theater* (1913), *Family Bereavement* (c. 1913,

commemorating his mother's death), and *In the Hold and Mud Bath* (1913–14), studies of a Jewish communal bath.

His later work is more emotional, painted in rich, fiery colors. *Hear, O Israel*, painted in Spain in 1955, represents a return to Jewish themes of his youth. In 1967 the Tate Gallery honored his memory with a comprehensive memorial exhibition.

BOMZE, NAHUM (1906–1954), Yiddish poet. Bomze was born in eastern Galicia. He made his literary debut in the *Warsaw *Yugent Veker* in 1929 and was a member of the Lemberg literary group *Tsushstayer* (1929–31). In the 1930s he lived in Warsaw and on the outbreak of WWII he went back to Lemberg (Lvov). Then he served with the Russian army during World War II and after the war tried to settle in Poland again. In 1948 he settled in the United States. He published four collections of poetry: *In di Teg fun Vokh* (1929); *Borvese Tritt* (1936); *A Gast in Farnakht* (1939); *A Khasene in Herbst* (1949). A selection of his poems with an introduction by H. *Leivick, *Ayvik Bliyen Vet der Traum* was published posthumously.

[Shlomo Bickel]

BONAFED, DAVID BEN REUBEN (1240?–?), rabbi, Talmud commentator and halakhist. A student of *Naḥmanides, David wrote novellae to a number of tractates of the Talmud. Those of Tractates Sanhedrin and Pesahim were scattered in the novellae of R. *Nissim ben Gerondi to those two tractates, and it appears that R. Nissim bases his decisions on those of Bonafed. His novellae on those two tractates have now been published separately: those on Sanhedrin by Yaakov Halevi Lifschitz (1968), and those on Pesahim by Abraham Shoshana (1978), on the basis of the only extant manuscript which is in the Casanatense Library in Rome.

The novellae on Sanhedrin were apparently written during the life time of Naḥmanides, between 1264 and 1270, since Bonafed always refers to him as being still alive and he makes extensive use of his works, as well as mentioning many details which he had heard from Naḥmanides himself. In addition, however, he employs new methods in his treatment of the subjects he deals with by examining all the various interpretations of his predecessors, before arriving at an independent halakhic decision. Like his master, he tries to establish the correct text upon which he bases his commentary.

[Yehoshua Horowitz]

BONAFED, SOLOMON BEN REUBEN (end of the 14th–mid-15th century), Spanish poet and thinker; the last important poet of Sefarad. Solomon ben Reuben Bonafed was born between 1370 and 1380, and resided in different places in the Kingdom of Aragon in today's provinces of Lleida and Saragossa. He was linked to the members of the poetry circle headed by Solomon ben Meshullam de Piera (who was considerably older) and Vidal ben Benvenist ibn Lavi de la Cavalleria. He was present at the Disputation of Tortosa and was distressed by the numerous conversions, but he tried not to lose ties to the *New Christians. He was already quite old in 1445, when he wrote poems and letters from Belchite after having been forced to leave Saragossa due to disputes with community leaders. Only a relatively small part of his *dīwān*, including poems and literary epistles, has been published; the rest is still in manuscript. We know his poetry from the manuscripts and partial editions by A. Kaminka in *Mi-Mizrah u-mi-Ma'arav* (1, 2 (1895), 107–27, and 1926–28), Y. Patay (1926), and H. Schirmann (1946). The Hebrew text of the first part of the *dīwān* has been edited and studied by A. Bejarano (Ph. D. dissertation, 1989). The largest and most important manuscript of the *dīwān* is ms. 1984 (Mich. 155) of the Neubauer Cat. at the Bodleian Library, Oxford, but other minor manuscripts have also been preserved.

As was usual in his time, most of Bonafed's literary activity was in the form of poetic correspondence with other Jewish intellectuals, often including prose as well as verse sections, though the copyists of his manuscripts did not always understand this circumstance. Both poetry and prose are written in biblical Hebrew, and in the prose sections (both rhymed and unrhymed) biblical quotations are particularly numerous.

For Bonafed, Hebrew poetry had a very old tradition with roots in the ancient poets of the Bible and in the classical poets of Andalusia. He felt that his vocation was to continue the Hebrew traditions of Andalusian poetry. He admired especially *Judah Halevi, and identified in many aspects with Solomon ibn *Gabirol, who suffered similar rejection by the Saragossa community. He also had deep respect for the great poets of his time, Solomon de Piera, Vidal ben Benvenist ibn Lavi, and Vidal Benveniste. He saw himself as the last Hebrew poet of Sefarad, and was convinced that Hebrew poetry would disappear with him.

He cultivated most of the classical genres – panegyrics, dirges, wedding poems, didactic compositions, etc. – imitating Arabic or Hebrew models; his love poems and his satirical verse are a good example of the merging of such elements with others employed in the Romance (Catalan) lyric of the epoch. He also wrote a few liturgical poems. Among his *piyyu-tim* are recorded *Shekhunah bi-Neshamah*, a *reshut* for Passover, included in the Montpellier prayer book. Bonafed is also the author of some of the last *muwaššahāt* of clear Andalusian tradition written in the Iberian Peninsula, even if they have a rather modified structure. Novelties of the incipient Renaissance, like an Italian influence, are not yet clear in his work. As was usual in Christian Spain, where the bourgeoisie was

becoming more and more important, Bonafed's poetry was realistic and full of life.

Although Bonafed mocked the excessively severe rabbinical rulings and many superstitious customs prevalent in contemporary circles, he remained strictly religious and zealous for the Jewish faith. He was in *Tortosa during the disputation in 1413–14, and wrote there several poems dedicated to friends who had gathered with him in that city. Bonafed's poems are an invaluable historical source for this event, and illuminate the psychological stresses of the period which resulted in masses of Jews adopting Christianity. An outstanding defection was that of Vidal de la *Cavalleria, who took a leading part in the disputation. Immediately after his conversion he was appointed to an important official post. Bonafed expressed his distress at Vidal's apostasy: "A precious sun has set in our West – why has it not risen on our horizon?" Many of those who had left Judaism were his former friends, "Scholars who were precious beyond words, who girded themselves with valor... How, now that they are gone, shall I erase those pleasant names from my doorposts?"

The numerous conversions of those years left a deep mark on the poetry of Bonafed.

His vision was pessimistic: the circle of Saragossa, which had had brought about a revival of Hebrew poetry after the disappearance of the great masters of the past, had been irretrievably shattered with the conversion of the two Ibn Lavis (Vidal and Bonafos) and their old tutor, De Piera. Bonafed saw these conversions as representing a betrayal of Hebrew language, culture, and poetry, but even after their conversion these poets of the circle of Saragossa, and especially Solomon ben Meshullam de Piera and Vidal Ibn Lavi remained for him the authors of his time whom he admired the most. He tried to re-establish the old friendship and to continue his poetical correspondence in Hebrew, thinking that for these Conversos, Hebrew poetry might be the strongest link with their old faith. When several years later, in 1445, Bonafed suffered serious personal problems with members of the Jewish community, he wrote to Vidal Ibn Lavi, who for decades had gone under the Christian name of Don Gonzalo de la Cavalleria.

Bonafed addressed a satirical polemic in rhyming prose and verse to the apostate Astruc *Rimoch (Francesch de Sant Jordi), who was attempting to persuade a young acquaintance to follow his example (edited with commentary by F. Talmage, 1979, 341). In it Bonafed raised the anomalies in Christian doctrine, and deduced evidence of their irrationality and untenability. Rimoch's original letter and Bonafed's reply were published by Isaac Akrish as an appendix to the well-known epistle of Profiat *Duran, *Al Tehi ka-Avoteikha* (Constantinople, 1577).

Bonafed wrote many satirical verses. Perhaps because of his satirical bent, Bonafed had many enemies with whom he settled his account in his poems and biting epigrams, including other poets and community leaders, and he also criticized the social order and public affairs. A direct object of his fury was the Sicilian Rabbi Yeshua, whom he considered mainly

responsible for his forced exit from Saragossa. Bonafed's verses contain accusations of irregularities in community administration, dishonesty, theft, disregard of the rights of community members, fraudulent practices in commerce and accounts, acceptance of bribes, usury, etc.

As a Jewish intellectual, Bonafed was aware of the tensions in his generation regarding the relationship between faith and reason, theory and practice, and attributed the confusion to a mistaken interpretation of Maimonides. Leaving aside his great respect for the Master, Bonafed was surely not an enthusiastic Aristotelian or a rationalist. Although Christian theology met with his total rejection, he had great respect for the scientific and philosophical knowledge of his Christian neighbors. Among his unpublished letters and poems there is a long discussion in Hebrew with a young philosopher, a student of Isaac Arondi of Huesca, in which Bonafed maintained that the logic taught in his time by Christian masters was superior to the logic of Arabic-Jewish tradition. He was familiar with the subject, as he had studied logic, in Latin, with a Christian teacher. Bonafed emphasized that the Christian study of Aristotelian logic, based on Boethius' translation, was more faithful to Aristotle than the accepted Jewish tradition that followed Averroes' interpretation. He distanced himself in this way from the most renowned Jewish logicians, such as Maimonides and or Gersonides. His critical attitude in this field was somewhat new in medieval Jewish thought, a proof of Bonafed's independence of mind and strong personality. However, in spite of his unequivocal dissent in the field of logic, Bonafed should in no way be included among the anti-Maimonidean thinkers of the century.

[Bernard Suler / Angel Sáenz-Badillos (2nd ed.)]

BONAFOS, MENAHEM B. ABRAHAM (also called **Bonafoux Abraham of Perpignan**; late 14th–early 15th century), philosophical author. Bonafos, who lived in France, is the author of a dictionary entitled *Sefer ha-Gedarim* ("Book of Definitions"), also called *Mikhlah Yofi* ("Perfection of Beauty"),

containing precise definitions of technical terms appearing in the Hebrew philosophical and scientific literature, particularly in Maimonides' *Guide of the Perplexed*. The entries under each letter are divided into six sections according to the following classification: ethics and politics, logic, metaphysics, physics, mathematics and astronomy, and medicine. In 1567 the book was first published, with some notes, by Isaac b. Moses ibn Arollo in Salonika, and again in Berlin, 1798, with a commentary and additions by Isaac Satanow.

BIBLIOGRAPHY: Renan, *Rabbins*, 740; Gross, *Gal Jud*, 476; REJ, 5 (1882), 254; G.B. de' Rossi, *Dizionario storico degli autori arabi* (Parma, 1807), 75; Wolf, *Bibliotheca*, 1 (1715), 763; Steinschneider, *Cat Bod*, 1719, no. 6341, 1983, no. 6546; A.Z. Schwarz, *Die hebraeischen Handschriften in der Nationalbibliothek in Wien* (1925), no 150.

BONAFoux, DANIEL BEN ISRAEL (c. 1645–after 1710), Shabbatean prophet. Bonafoux was born in Salonika, and settled in Smyrna and served there as a *hazzan* in the Pinto synagogue. He was a follower of Shabbetai Zevi and even after his apostasy Bonafoux continued to be a leading believer in him. The Shabbateans accepted Bonafoux as a visionary and a prophet. When Abraham Miguel *Cardoso came to Smyrna in 1674, Bonafoux, known as *Hakham Daniel* in documents, was at the head of the group of Cardoso's followers. In the 1680s Bonafoux returned to Salonika for a few years, and his opponents claimed that he had joined the *Doenmeh there, but this is doubtful. About 1695 when he returned to Smyrna he caused great confusion by his visionary tricks. He would read questions addressed to him in sealed letters and demonstrate various phenomena of light, etc. Many came to him for answers to their questions, among them critics from abroad who wanted to examine him and to get an idea of his Shabbatean belief. The latter included Abraham *Rovigo, whose letter about his visit to Bonafoux in 1704 is extant (Ms., Jerusalem, 80, 1466, fol. 196). Bonafoux was a close friend of Elijah ha-Kohen ha-Itamari, the principal preacher of the town, who referred to Bonafoux in "Yeled," his story of a soothsayer (*Midrash Talpiyyot* (1860), 207). In 1702 Bonafoux was expelled on the request of the leaders of the community and he lived for a while in a village near Smyrna. In a letter from the Dutch consul in Smyrna dated 1703, Bonafoux's "oracles" are described in detail. After 1707 he went to Egypt and returned to Smyrna in 1710 with an imaginary letter from the Lost Ten Tribes in praise of Shabbetai Zevi, who would reveal himself anew. The letter is found in manuscript (Ben-Zvi Institute, Jerusalem, no. 2263). Until his death, Bonafoux maintained contact with Cardoso who claimed in his letters that the "Maggid" who talked through the mouth of Bonafoux was the soul of the kabbalist David Habillo.

***BONALD, LOUIS GABRIEL AMBROISE, VICOMTE DE** (1754–1840), French political theorist. De Bonald fled France in 1791 during the Revolution. He later became a leading exponent of the Catholic and royalist political school and opposed all liberal tendencies. A logical outcome of his traditionalist views was to regard the Jews as a "deicide nation" and to combat their emancipation. In the *Mercure de France* (23 (1806), 249–67), which he directed with *Chateaubriand from 1806, de Bonald accused the Jews of aspiring to world domination. De Bonald's works, in particular the *Théorie du pouvoir*, formed the ideological arsenal from which the French clerical movement was later to forge its weapons of intolerance and antisemitism.

BONAN, family of Tunisian rabbis, some of whose members settled in *Tiberias and *Safed. MAS'UD BONAN (born c. 1705), the first known member of the family, was one of the first scholars of the renewed settlement in Tiberias. In 1748 he was sent as an emissary to Western Europe, and he spent four years in Italy, Holland, England, and Germany. While in Hamburg, he supported Jonathan *Eybeschuetz in his controversy with Jacob *Emden. In 1751 he was in London, where he wrote an approbation to *Mikdash Melekh* by Shalom Buzaglo. From 1752 he made Safed his permanent home. Following the earthquake of 1759, he signed, as chief rabbi of Safed, the letters of the emissaries who traveled to different countries to solicit aid for the rehabilitation of the community. During the wars of Ali Bey, *Mamluk ruler of Egypt in 1773, who plundered the Jews, he proceeded to Europe as an emissary, though old and in ill health. The main center of Mas'ud's activity was Leghorn, but he also visited France, Austria, and England. He apparently returned to Safed after 1778. HAYYIM MORDECAI, son of Mas'ud, was sent, together with Israel Benveniste, to Western Europe in 1767 on behalf of the Safed community, and again in 1774 to Syria, Iraq, and Kurdistan. ISAAC BONAN (died c. 1810) was an outstanding scholar of Tunis. Of his books the following have been published: *Oholei Yizhak* (Leghorn, 1821), talmudic novellae, together with notes on various halakhic codes. Also included are the halakhic rulings of Isaiah di Trani the Elder on the tractates *Rosh Ha-Shanah*, *Taanit*, and *Hagigah*; *Ohel Yesharim* (Leghorn, 1821), a talmudic methodology, arranged alphabetically (1846); *Berit Yizhak* on the Mekhilta, with its commentaries, *Zayit Ra'anani* and *Shevut Yehudah*, of Judah Najar of Tunis, together with a commentary on the Mishnah of *Berakhot* and the commentary of the tosafists on the Pentateuch. His son DAVID (d. 1850) studied under Isaac Tayib and was a rabbi of the Leghorn community in Tunis. David's books, published by his son Isaac, were *Dei Hashev* (1857), responsa compiled together with Judah ha-Levi of Gibraltar, to refute Bekhor Isaac Navarro's strictures on the above-mentioned *Oholei Yizhak*, and his own responsa under the different title *Nishal David*; *Mo'ed David* on the *Avodot ha-Kodesh* of Solomon b. Abraham Adret (Part I, on Festi-

vals, 1887); *Maḥaneh David* (1889), researches on Talmud and *halakhah*. Included are novellae by Isaiah di Trani the Elder and of the son of Nahmanides on tractate *Beḥah*. David also prepared his father's books for publication and wrote notes on *Berit Yizḥak*.

BIBLIOGRAPHY: Yaari, Sheluḥei, 460–1, 507–8; M. Benayahu, *Rabbi Ḥ.Y.D. Azulai* (Heb., 1959), 28, 553; Simonsohn, in: *Sefunot*, 6 (1962), 335–6, 346–54; Emmanuel, *ibid.*, 407, 409, 420; D. Cazès, *Notes bibliographiques sur la littérature juive-tunisienne* (1893), 36–59.

BONASTRUC, ISAAC (c. 1400), scholar. Bonastruc was among a group of scholars who settled in *Algiers after their expulsion from Majorca in 1391. It seems that he was associated with R. Simeon b. Zemaḥ *Duran and R. *Isaac b. Sheshet Perfet in the preparation of the twelve *takkanot* pertaining to marital status (1394) which remained in force for several hundred years (cf. Simeon b. Zemaḥ Duran, *Tashbez*, vol. 2 (Amsterdam, 1742), no. 292). Bonastruc had a belligerent, argumentative personality. He was compelled to leave Algiers after 1404, as a result of his slanderous remarks about Saul ha-Kohen *Astruc, the leader of the Algiers community. After the latter's death, Bonastruc settled in *Constantine, where again he was the cause of stormy controversies within the Jewish community because of his opposition to its leaders. He was appeased when he received a grant from the community on the recommendation of Isaac b. Sheshet: at the same time Simeon b. Zemaḥ asked the local *dayyan*, Joseph b. David, not to oppose him.

[Abraham David]

BONAVENTURA, ENZO JOSEPH (1891–1948), psychologist. Born in Pisa, Bonaventura was brought to Florence at an early age. Enzo was brought up without any notion of Judaism, but falling under the influence of S.H. Margulies, rabbi of Florence, had himself circumcised when he returned from World War I. In 1922 he was appointed professor of psychology at the University of Florence, where he founded and directed the psychological laboratory. Leader of the Zionist Society of Florence, he settled in Palestine in 1938 and was appointed professor of psychology at the Hebrew University. He was killed in April 1948 during an Arab attack on a convoy on the way to the Hebrew University on Mount Scopus. Bonaventura's views of psychology united the classical and the modern schools of thought, and this was apparent in his scientific work, which combined the pursuit of detail within a broad philosophical framework. Bonaventura employed the experimental method in his research into the problems of time, perception, movement, attention, volition, and conation; he also investigated the problems of mental development, especially in retarded children. His most important works in Italian are *L'educazione della volontà* (1927), *Il problema psicologico del tempo* (1929), *Psicologia dell'età evolutiva* (1930), and *La psicoanalisi* (1938).

His important Hebrew works are *La-Psychologyah shel Gil ha-Ne'urim ve-ha-Hitbaggerut* ("Psychology of Youth and Adolescence," 1943) and *Hora'ot le-Morim u-le-Mehannekhim le-Hadrakhat ha-No'ar bi-Vehirat ha-Mikzò'a* ("Instructions to Teachers and Educators in Helping Young People Choose a Profession," 1947).

[Haim Ormian]

Bonaventura's father, ARNALDO (1862–1957), was a noted musicologist. He studied law and literature at Pisa but soon devoted himself to musicology. He became librarian at the music section of the Biblioteca Nazionale Centrale at Florence, and afterward director and librarian at the Istituto Luigi Cherubini in the same town where he also taught music history and aesthetics. Bonaventura's many works include *Manuale di storia della musica* (1898) and *Storia e letteratura del pianoforte* (1918), both of which were reprinted in 13 editions, as well as critical biographies of Paganini, Verdi, Pasquini, Puccini, Boccherini, and Rossini. He also edited the compositions of Peri, Frescobaldi, Strozzi, and Caccini.

BIBLIOGRAPHY: Grove, Dict; Riemann-Gurlitt; MGG; Baker, Biog Dict; Kressel, *Leksikon*, 1 (1965), 187–8. **ADD. BIBLIOGRAPHY:** S. Gori Savellini, *Enzo Bonaventura (1891–1948); una singolare vicenda culturale dalla psicologia sperimentale alla psicoanalisi e alla psicologia applicata* (1990).

[Claude Abravanel]

BONAVOGLIA, MOSES DE' MEDICI (d. 1446), rabbi and physician in Sicily. A protégé of the House of Aragon, he studied medicine in Padua and on his return in 1420 was appointed chief judge (**dienchelele*) of the Sicilian Jews. The office, usually held by persons too close to the court, was unpopular among Sicilian Jewry. Hence Bonavoglia was twice removed from this post but was recalled each time. In 1431 he obtained from the king the abrogation of some anti-Jewish legislation. Bonavoglia was the personal physician of Alfonso V and in 1442 followed him when he conquered Naples.

[Attilio Milano]

BONCIU, H. (originally **Bercu Haimovici**; 1893–1950), Romanian poet and novelist. His poems on domestic themes and the torments of the soul appeared in collections such as *Lada cu nāluci* ("Box of Illusions," 1932). Two others were *Brom* (1939), poems about the sea, and *Requiem* (1945). His two novels, *Bagaj...* ("Luggage...," 1934) and *Pensiunea doamnei Pipersberg* ("Lady Pipersberg's Pension," 1936), were perceived by the literary critics as modern, expressionistic portrayals of the cruel and erotic aspects of life. Bonciu also published translations of German and Austrian poetry.

BONDAVIN, BONJUDAS (Bonjusas, or Judah ben David; c. 1350–c. 1420), rabbi and physician. Bondavin practiced

medicine in Marseilles between 1381 and 1389 as physician to Queen Marie of Provence, and in 1390 settled in Alghero, in Sardinia. Also a talmudic scholar, Bondavin later became rabbi of Cagliari. As such, he enjoyed the favor of the Aragonese authorities. When King Martin II of Aragon visited Sardinia in 1409, Bondavin attended his court, and the king extended his jurisdiction as rabbi to the whole of Sardinia. Bondavin's learning is demonstrated in his correspondence with Isaac b. Shesbet of Saragossa, centering on a picturesque episode at the royal court.

BONDI (Bondy, Bonte, Ponidi, בונדי, בונטי, בונדי), family name, a translation of the Hebrew “Yom Tov” (in Romance languages *bon* – “good”, *di* – “day”). A Bondia family was known in Aragon in the 13th century. In 1573 an Abraham Bondi lived in Ferrara. Adam Raphael b. Abraham Jacob Bondi and Ḥananiah Mazzal Tov b. Isaac Ḥayyim Bondi were rabbis and physicians in Leghorn in the second half of the 18th century, when the family was also represented in Rome. In about 1600 the family appears in Prague; the first known member was Yom Tov b. Abraham Bondi; subsequently Eliezer, Mordecai, Meshulam (d. 1676), and his son Solomon Zalman Bondi (d. 1732) are mentioned as communal functionaries and scholars. Abraham b. Yom-Tov Bondi (d. 1786) was the author of *Zera Avraham* on the *Even ha-Ezer*, which his son Nehemiah Feivel (1762–1831) published in Prague in 1808 with his own additions. Nehemiah published his own *Torat Neḥemyah* on the Talmud tractate *Bava Meṣia*. Elijah b. Selig Bondi (1777–1860) was a rabbi and preacher in Prague. Although he was strictly conservative, the influence of the *Haskalah is discernible in his sermons (*Sefer ha-She'arim* (1832) and *Tiferet ha-Adam* (1856), both published in Prague). He also published Solomon *Luria's *Yam shel Shelomo* on tractate *Gittin* (1812). Simeon b. Isaac Bondi (c. 1710–1775) moved to Dresden in 1745 and became *Court Jew of the elector of Saxony and head of the Dresden community. Samuel Bondy (1794–1877) was among the founders of the Orthodox congregation in Mainz; his son Jonah (1816–1896) was rabbi there. Members of the family went to the U.S. Among them were August *Bondi and Jonas *Bondi.

[Meir Lamed]

BONDI, ARON (1906–1997), Israeli agricultural nutritionist and biochemist, born and educated in Vienna. He studied chemistry and physics, earning his Ph.D. under F. Feigl in chemistry (1929). He completed postdoctoral studies in organic chemistry under D.E. Bergman in Berlin (1929–32) and conducted research in the inorganic chemistry laboratory of Feigl in Vienna (1932–34). At the invitation of Chaim *Ar-

losoroff, he joined the Agricultural Research Station, Rehovot (1934). Bondi established animal nutrition studies in Erez Israel. From 1946 until 1974 he taught animal nutrition at the Faculty of Agriculture and headed the department of animal nutrition from 1940 to 1959. Bondi joined the faculty of the Hebrew University, Jerusalem (1949), becoming professor of animal nutrition and biochemistry (1961) and headed the department of animal nutrition (1958–74). In 1984 he was awarded the Israel Prize for agriculture. Bondi's publications encompass 67 years (1929–96), starting with the study of iodine reactivity in organic solvents and ending with the importance of amino acids in layer chicken nutrition. Beside his research in analytical chemistry, phosphorus, copper, iron, and racemization reactions, his studies comprise many aspects of agricultural biochemistry, mainly animal nutrition. The studies encompass digestibility of cattle fodder, feeding surveys of milk cattle, rumen reactions, feed digestibility and absorption, vitamin availability for farm animals and biological activities, antioxidant activities, toxic agents for the farm animals, proteolytic enzymes (in vivo and in vitro studies) and their inhibitors, insect biochemistry, legume saponins, and protein metabolism in farm animals. His Hebrew textbook on animal nutrition (1982) was also published in Spanish.

[Yosef Dror (2nd ed.)]

BONDI (Bondy), AUGUST (1833–1907), pioneer abolitionist, early Jewish settler in Kansas, and supporter of John Brown's military activities. Born in Vienna, Bondi was an adventurer for much of his life. He served in the Vienna Academic Legion at the age of fifteen, and, after the failure of the 1848 revolution, was taken to the U.S. by his parents. He tried to enlist in the Lopez-Crittenden expedition to Cuba and in the Perry mission to Japan to escape the monotony that he experienced as a store clerk, the usual experience of a young European Jewish immigrant at that time. With Jacob Benjamin, he established a trading post in Kansas and joined the John Brown abolitionist forces in 1855. His reminiscences and manuscript letters report in colorful detail on the Kansas border warfare and on his later service as a soldier in the Union Army during the Civil War. In both cases, he fought out of the conviction that slavery was a moral evil. In 1866 he settled in Salina, Kansas, where he established himself as an attorney and businessman, and took an active role in civic life. Bondi's reminiscences, published in Galesburg, Illinois, as *Autobiography of August Bondi* (1910), is a fascinating record of an unusual immigrant's life.

[Bertram Wallace Korn]

BONDI, SIR HERMANN (1919–), British mathematician and cosmologist, born in Vienna, where he lived and studied under the shadow of fascism. He moved to England in 1937 and studied in Cambridge where he held academic posts (1945–1954). His studies were disrupted by World War II, when he was interned and sent to Canada as an alien subject. He

was allowed to return to England in 1941, joined Trinity college as a research fellow and received his M.A. in 1942. During that year he joined the Admiralty Signal Establishment to undertake secret research on radar. There he met the astronomer Fred Hoyle, and thus began his interest in cosmology. After the war he taught mathematics in Cambridge, and in 1954, Bondi was appointed professor of mathematics at King's College, London. He served as master of Churchill College, Cambridge, from 1983 to 1990. He was granted leave of absence in 1967 from King's College, to become director-general of the European Space Research Organization (1967–71), and in 1977–80) was chief scientist to the Ministry of Defense. From 1980 to 1984, he was the chairman of the Natural Environment Research Council. In 1959 he was elected a Fellow of the Royal Society. Bondi is best known as one of the originators of the steady-state theory of the universe. Bondi's writings include numerous papers on stellar constitution, interstellar medium, geophysics, cosmology, and general relativity. In collaboration with Thomas Gold he produced in 1948 the first paper describing the steady-state theory of the expanding universe, with its concomitant process of the continual creation of matter. His books include *Cosmology* (1962²) and *The Universe at Large* (1961). Bondi took a great interest in the role of mathematics in secondary school education and in the academic administration of science in the University of London.

[Barry Spain]

BONDI, JONAS (1804–1874), editor, from 1860 until his death, of *The Hebrew Leader*, a Jewish periodical in New York City. Bondi was born in Dresden and educated in Prague. After a business career which ended in failure, he decided to emigrate to America, bringing with him his wife and four daughters. Nathan *Adler, who had been one of his teachers in Germany and who was at the time the chief rabbi of Great Britain, gave him a recommendation on the basis of his Jewish knowledge. This testimonial brought him to the notice of the officers of Anshe Chesed Congregation of New York City in June 1858, shortly after his arrival in the city. Bondi's help in solving some halakhic problems, related to the care of the congregational cemetery, resulted in his appointment as preacher of the congregation, but he served in that capacity for only a year. He then established his journal, which was published both in German and in English. His wife conducted a private school for girls. Bondi was a member of the conservative-historical school and a moderate in theology and practice, who believed that decorum, dignity, and intelligibility were essential if Jewish survival were to be assured, and who balked at the radical changes advocated by the Liberal and Reform leaders and editors. One of Bondi's daughters, Selma, became the second wife of R. Isaac Mayer *Wise two years after her father's death. The fine halakhic reference library which Bondi had assembled was given to the *Hebrew Union College in Cincinnati by I.M. Wise.

[Bertram Wallace Korn]

BONDS, STATE OF ISRAEL. State of Israel Bonds refers both to securities issued by the government of Israel and to the commonly-used name of the company that is the exclusive underwriter for Israel bonds in the United States. The formal name of the company is the Development Corporation for Israel (DCI).

The idea of floating an overseas bond issue was conceived by Prime Minister David *Ben-Gurion in 1950 and was endorsed by Finance Minister Eliezer *Kaplan and Labor Minister Golda *Meir. Israel was in desperate need of an infusion of financial resources, as the new nation was mired in a severe economic crisis precipitated by the 15-month War of Independence. In the aftermath of the war, a nation needed to be built. Every sector had to be developed, strengthened, or modernized.

Compounding the crisis was the arrival of hundreds of thousands of new immigrants. With no more impediments to immigration, the Jews of Europe, including Holocaust survivors and internees from *displaced persons camps, immediately set sail for Israel. Moreover, thousands of Jews from the Middle East, either expelled or rescued from their countries of origin, also poured into Israel. Due to the chronic lack of absorption funds, Israel was forced to house the ongoing wave of immigrants in primitive shelters called *ma'abarot* – in essence, refugee camps. Food was scarce and severely rationed.

In September 1950, Ben-Gurion convened an urgent meeting of American Jewish leaders at Jerusalem's King David Hotel to discuss the viability of issuing Israel bonds. Among the early advocates of Israel bonds were former secretary treasurer Henry *Morgenthau, Jr., Rudolf G. *Sonnenborn, Sam *Rothberg, Julian Venezky, and Henry *Montor.

The following spring, Ben-Gurion traveled to the United States to personally launch the sale of Israel bonds, beginning with a mass rally at New York's Madison Square Garden. Ben-Gurion subsequently traveled to other cities throughout the U.S. to encourage investment in Israel bonds. Although Ben-Gurion was hopeful that initial sales would reach \$25 million, first year purchases were more than double his projections, topping \$52 million.

Development funds generated through the sale of Israel bonds were quickly put to work. Towns were built for new immigrants. The National Water Carrier irrigated nearly half a million acres, allowing Israel to become agriculturally self-sufficient. The Dead Sea Works became Israel's first major industrial undertaking. Power plants helped alleviate Israel's lack of energy resources. New ports were built to receive vital imports and increase Israel's export potential. Transportation networks were constructed and expanded throughout the country.

Specimen certificate of the first Israel Bond issue.

As Israel's economy continued to grow, so too did the Bonds organization, with the sale of Israel bonds becoming global in scope. In addition to the United States, Israel Bonds offices opened in Canada, Europe, and Latin America.

Annual sales reached new levels, passing \$200 million in 1967, \$500 million in 1973, and eventually, more than \$1 billion in 1991. Although these milestones were reached during times of crisis – the Six-Day War, the Yom Kippur War and the first Gulf War – in the 1990s and into the 21st century, yearly Israel bond sales were consistently at or above \$1 billion.

Furthermore, as sales expanded, so too did the base of support. Although the majority of purchases continued to come from the Diaspora community, non-Jewish supporters of Israel, including states, municipalities, labor unions, corporations, and financial institutions all invested large sums in Israel bonds.

Israel bonds were increasingly perceived as worthy investments, as securities offered by State of Israel Bonds / Development Corporation became diverse and market-responsive. In 1951, the sole offering was the Independence Issue, paying 3½ percent interest. Over the years, choices evolved into more than half a dozen options, including fixed rate securities with interest determined by prevailing market rates, and

variable rate securities linked to LIBOR (London Inter-bank Offered Rate). A significant aspect of the investment appeal of Israel bonds was the fact that Israel had never defaulted on payment of principal or interest.

In the 1990s, the efforts of the Israel Bonds organization program took on an historic human dimension, with funds being utilized to assist in the resettlement of the more than one million immigrants from the former Soviet republics and Ethiopia. Included in the massive population influx were scientists, engineers, and scholars who helped take Israel into the next phase of its economic development, as the nation became a global high-tech powerhouse. With high-tech becoming the engine driving Israel's economy, capital from the sale of bonds helped build infrastructure to not only encourage new innovations but to export “made in Israel” products around the world.

In May of 2001, the Bonds program commemorated its 50th anniversary at a gala event in New York. Hundreds of supporters from throughout the world – including Israeli statesman and former prime minister Shimon Peres – celebrated the extraordinary achievements stemming from Ben-Gurion's vision of economic partnership with Israel.

In September 2004, the Bank of Israel – Israel's equivalent of the Federal Reserve – completed a study in which it assessed the history of the Israel Bonds organization. The comprehensive report praised Israel Bonds as “extremely important not just as a stable source for raising external capital but also for meeting other important goals (including) diversification of sources – particularly during times when the government of Israel finds it difficult to raise funds from external sources.”

The report also commended the Israel Bonds message, which “emphasizes... the need to (invest in) the economic well-being and security of the State of Israel.”

By the beginning of the 21st century, the Bonds organization had provided Israel with \$25 billion in development capital. As Israel began an intensified period of infrastructure development that included enhanced transportation networks, port expansion, renewed industrial development, and continued cultivation of the Negev, the government again looked to Israel Bonds to help fund these ambitious new undertakings.

[James S. Galfund (2nd ed.)]

BONDY, BOHUMIL (Gottlieb); 1832–1907), Czech politician, industrialist and author. In 1866 Bondy became head of his father's iron works in Prague, which he expanded considerably. He was elected president of the Prague Chamber of Commerce (1884); the first Jew to be elected to any function on a Czech nationalist ticket. In 1885 he became president of the Industrial Museum. He also was a member of the Bohemian Diet.

In 1906 he published *Zur Geschichte der Juden in Boehmen, Maehren und Schlesien*, a two-volume collection of documents dealing with the period 906–1620, edited by the director of the Bohemian Archives, František Dvorský, in a Czech

and a German edition. A projected third volume did not appear. This collection of records is of particular importance, since about three-quarters of its contents were published for the first time. It is still a standard work for the student of Bohemian Jewish history.

[Oskar K. Rabinowicz]

BONDY, CURT (1894–1972), German psychologist, educator, and author. Bondy was born and studied in Hamburg. He started his professional career as a research assistant at the Institute of Education of the University of Goettingen and returned to the University of Hamburg in 1925 as an associate professor (full professor, 1930). He did research in social work with special emphasis on the problems of youth and adolescence, and juvenile delinquency. Bondy was compelled to leave Germany in 1933, when the Nazis came to power; he was involved in extensive refugee work in Europe and the U.S.A. until 1940, when he joined the psychology department at the College of William and Mary in Williamsburg, Virginia, becoming head of the department. In 1950 he returned to the University of Hamburg as professor of psychology and social pedagogics and continued the research tradition of his teacher William Stern until 1959. Bondy wrote extensively for periodicals and professional journals and his major works include *Die proletarische Jugendbewegung in Deutschland* (1922), *Paedagogische Probleme im Jugend-Strafvollzug* (1925), *Bedingungslose Jugend* (with K. Eyferth; 1952), *Social Psychology in Western Germany 1945–1955* (with K. Riegel; 1956), *Youth in Western Germany* (with O. Hilbig; 1957), and *Probleme der Jugendhilfe* (1957).

ADD. BIBLIOGRAPHY: P. Probst, “Das Hamburgische Psychologische Institut (1911–1994),” in: K. Pawlik (ed.), *Bericht über den 39. Kongress der Deutschen Gesellschaft fuer Psychologen in Hamburg 1994*, vol. 2 (1995).

[Ernest Schwarcz / Bjoern Siegel (2nd ed.)]

BONDY, FILIP (1830–1907), rabbi in Czechoslovakia; the first to preach in the Czech language. A pupil of S.J. *Rapoport and Aaron *Kornfeld, he graduated from Prague University and taught in Česká-Budějovice from 1857 to 1859. He officiated as rabbi in *Kasejovice from 1859 to 1868 and in Brandýs nad *Labem from 1868 to 1876. In 1886 he was appointed preacher at the Or Tamid Synagogue of the Czech-Jewish movement in Prague. His sermons *Hlas Jakubův* (“The Voice of Jacob,” 1886) and part of a Czech translation of Genesis, *Učení Mojžíšovo* (“Teachings of Moses,” 1902), were published.

BIBLIOGRAPHY: Vyskočil, in: *Judaica Bohemiae*, 3 no. 1 (1967), 42 (Ger.); Fischer, in: *Kalendář česko-židovský*, 11 (1891/92), 59f.; *Věstník židovské obce náboženské*, 9 no. 24 (1947), 145.

BONDY, MAX (1893–1951), U.S. educator. Bondy, who was born in Hamburg, Germany, was head of several schools in

Germany and Switzerland before he emigrated to the United States in 1939. The following year he founded the Windsor School in Windsor, Vermont. This progressive, coeducational school was designed to implement Bondy’s educational philosophy. The teaching was on a high level, with special emphasis on languages. The pupils were self-governing and had equal voting rights with the teachers on all important matters. They were also trained to take an active part in the activities of the community. In 1943 the school moved to Lenox, Massachusetts. After Bondy’s death, the school was directed by his widow, Gertrud.

The Roeper School in Michigan and the Marienau School in Germany carry on the Bondy legacy and philosophy. The Roeper School was founded in Detroit in 1941 by German educators Annemarie Bondy Roeper, the Bondys’ daughter, and her husband, George. It moved to Bloomfield Hills in 1946, and in 1956 was restructured as a coeducational day school for gifted children. The school had 640 students from 60 communities throughout the greater Detroit metropolitan area and 100 faculty members. From its inception, the student population has represented a wide variety of ethnic, cultural, racial, and economic backgrounds. The Roeper School’s philosophy centers on the importance of fulfilling the positive potential of each individual. The school recognizes that all people are unique and develop according to their own timetable and plan. Students strive to fulfill their distinct destiny, to express themselves sincerely, and to learn from the example of others.

The Marienau boarding school in Hamburg, Germany, ranges from grades 5 to 13. Created in 1929 by Max and Dr. Gertrud Bondy, the school’s concept that children should grow up in a natural, healthy environment still applies. Situated in idyllic surroundings, Marienau is an ecologically oriented school with 286 pupils and 44 teachers.

The documentary film *Across Time and Space: The World of Bondy Schools*, produced and directed in 2002 by Kathryn Golden, tells the story of the Bondy family and their aspiration to teach children to succeed in life through tolerant, non-violent, workable school democracy. It explores the concept that democracy and tolerance begin within the institutions that educate the next generation. The tragic events of the Holocaust increased the Bondy family’s dedication to their mission – that equal rights for all people, particularly children, should be a priority.

[Ernest Schwarcz / Ruth Beloff (2nd ed.)]

BONDY, RUTH (1923–), journalist, translator, and writer. Bondy was born in Prague, Czechoslovakia, and survived three years in the Theresienstadt, Auschwitz, and Bergen-Belsen concentration camps. After returning to Czechoslovakia, she left for Israel in 1948, starting out as a teacher and then turning to journalism, mostly for the daily *Davar*, for which she wrote sketches, essays, and commentary. In 1980 she started producing translations from Czech into Hebrew, including Hašek’s *Osudy dobrého vojáka Švejka za světové války* (“The Good Soldier Schweik”), the novels of Milan Kundera,

Bohumil Hrabal, Ota Pavel, and Michal Viewegh; the essays of Václav Havel; Avigdor *Dagan's *Hovory s Janem Masarykem* ("Conversations with Jan Masaryk"); and the works of Jiří *Weil, Josef *Bor, Jan Otčenášek, Jan Werich, and Jan Jandourek. In 1996 she was awarded the Czech Ministry of Culture Prize.

Bondy also published several biographies – *Ha-Shali'akh* (1973; *The Emissary*, 1977), a life of the Italian Zionist Enzo *Sereni; *Edelstein neged ha-Zeman* (1981; *Elder of the Jews – Jakob Edelstein of Theresienstadt*, 1989); and *Pinhas Rosen u-Zemano* ("Pinhas Rosen and His Time," 1991), a biography of Israel's first minister of justice. Her autobiography, *Shevarim Sheleimim* ("Whole Broken Pieces"), appeared in 1997 and in 2003 she published in Czech *Mezi námi řečeno* ("Between Us"), an entertaining survey of the languages used by the Jews of Bohemia and Moravia. In the same year she was awarded the *Gratias agit* prize by the Czech minister of foreign affairs.

[Milos Pojar (2nd ed.)]

BONE (or **Bona**, ancient **Hippo Regius**, named **Annaba** after Algerian independence from French rule), Mediterranean port in northeastern Algeria close to the Tunisian border. Located on a gulf between capes Garde and Rosa, it became one of the Maghreb's centers for the Phoenician settlers around the 12th century B.C.E. In later periods, Bone was dominated by the Romans before achieving its independence in the wake of the Punic Wars of 264–146 B.C.E. In 393 through 430 C.E. Bone emerged as one of the most important centers of Christian learning. It then fell into ruin (431) as a result of the massive assault by the Vandals. Aside from a Christian presence that had dwindled in the wake of the Arab conquest, only to be revitalized by the French conquest, it appears that a Jewish community existed in Bone from Roman times. When it was temporarily captured by Roger II of Sicily (1153), some of the Jews succeeded in organizing trade activity with Italian merchants from Pisa who established a trading post there. Although there is no solid evidence to suggest that Sephardi Jews arrived in Bone following their expulsion from Spain (1492), rabbinical responsa literature from the 1400s attests to a vibrant communal life. The city's synagogue, the "Ghriba," was the site of Jewish and Muslim pilgrims. Yet there are no available statistical data to determine the size of the community prior to the 19th century.

The economic and trade influence of Jews in Bone increased during the late 18th and early 19th centuries, when Algeria was part of the Ottoman Empire. Some of the most noteworthy and powerful Jewish merchants belonged to the Bensamon and Bacri families. Whereas the Bensamons catered to British trade interests at the port of Bone, the Bacris, whose influence extended to other Algerian ports, were the chief representatives of French interests.

In 1832, two years after France penetrated Algeria, Bone became a French possession. The French were instrumental in making Bone into a modern town. In the first decade of

French rule the Jewish population increased due in part to an influx of several hundred migrants from Tunisia. During World War II the Jews numbered over 3,000. They were naturalized French citizens like the rest of Algerian Jewry by virtue of the October 1870 Crémieux Decree.

There were no Jews in Bone after 1964–65, a situation attributable to the overall decolonization process, Jewish communal self-liquidation, and the exodus to France and Israel.

[Michael M. Laskier (2nd ed.)]

BONFIL, ROBERT (1937–), historian of the Jews of medieval, Renaissance, and early modern Italy. Bonfil was born in Greece and ordained at the Collegio Rabbinico Italiano. He received the Laurea in Physics at the University of Turin (1960) and served as assistant to the chief rabbi of Milan (1959–62) and then as acting chief rabbi of Milan (1962–1968). In 1968 he immigrated to Israel, receiving his Ph.D. in Jewish history from the Hebrew University of Jerusalem in 1976. He obtained full-time appointment at the Hebrew University in 1980, becoming full professor in 1990 and retiring in 2005. He was co-editor of the periodical *Italia* (1976–92) and sole editor from 1992. He was a member of numerous editorial boards and served as a visiting professor at leading institutions in Italy, France, and the United States.

Bonfil's scholarship is characterized by a thorough acquaintance with Classical Graeco-Roman literature, the Patristic and Medieval Christian tradition, European and especially Renaissance and Baroque Italian history, literature and philosophy, and the classical Jewish legal, philosophical, mystical, and historical texts, to which he applies the latest methodologies in historical and literary criticism.

Commencing with his article, "The Historian's Perception of the Jews in the Italian Renaissance: Towards a Reappraisal" (*REJ*, 143 (1984), 59–82), Bonfil pioneered the now increasingly accepted rejection of the view, based on Jacob Burckhardt's approach to the Renaissance, that the Jews assimilated and were harmoniously integrated into Italian society during the Renaissance. Rather, he pointed out, Christian Italian society did not break with the traditional hostile Catholic approach to the Jews, who continued to be restricted by legislation enacted by the secular authorities in accordance with the theology of the Catholic Church. Additionally, as he further argued, especially in his *Jewish Life in Renaissance Italy*, rather than thinking primarily in terms of the influence of the surroundings on the Jews and their conscious borrowing and assimilation, instead one should posit an acceptance of the surroundings as representing the natural unself-conscious way of doing things, realizing that the Jews maintained their identity because they considered the essence of Judaism to lie not in a cultural differentiation from Christianity but rather

in a religious differentiation, so only those patterns of thought that were considered to be specific organic characteristics of Christianity had to be rejected.

Other publications include *Rabbis and Jewish Communities in Renaissance Italy* (1990) and *Tra due mondi: cultura ebraica e cultura cristiana nel Medioevo* (1996).

[Benjamin Ravid (2nd ed.)]

BONFILS, IMMANUEL BEN JACOB (14th century), of Tarascon (in Provence, France), mathematician and astronomer. He is chiefly known for his astronomical tables called *Shesh-Kenafayim* ("Six Wings" – cf. Isa. 6:2) which were written in Hebrew about 1365 and which were subsequently translated into both Latin (in 1406) and Byzantine Greek (c. 1435). These tables are preserved in many manuscript copies and the Hebrew version was published (Zhitomir, 1872). The author is often referred to in Hebrew as *Ba'âl ha-Kenafayim* ("Master of Wings"). Each "wing" contains a number of astronomical tables concerning the movements of the sun and the moon for determining the times and magnitudes of solar and lunar eclipses as well as the day of the new moon. The tables themselves are largely based on the tables of the ninth-century Arab astronomer al-Battānī (known in Latin as Albategnius), as the author acknowledges in the preface. But they are presented according to the Jewish calendar and adapted to the longitude and latitude of Tarascon. These tables were consulted by European scholars as late as the seventeenth century. Bonfils is also known to have made astronomical observations, and his discussion of decimal fractions is among the earliest presentations of the subject.

[Bernard R. Goldstein]

BONFILS (Tov Elem), JOSEPH BEN ELIEZER (second half of the 14th century), author of a supercommentary on the biblical commentary of Abraham *Ibn Ezra. Joseph was born in Spain and journeyed to the East. In *Damascus, in 1370, at the request of the *nagid* David b. Joshua he wrote a supercommentary, *Zafanat Pa'ane'ah*, on Ibn Ezra's commentary on the Pentateuch – the most exhaustive and precise of the many supercommentaries on Ibn Ezra. In a clear and comprehensive exposition he solves Ibn Ezra's "enigmas" and defends him against the suspicion of heresy which certain of his critical views (with which Joseph manifestly sympathizes) had aroused against him. The supercommentary was published, but with the omission of the passages dealing with the criti-

cal views, under the title *Ohel Yosef*, in *Margalit Tovah* (1722), an anthology of supercommentaries on Ibn Ezra, and later in a critical edition by D. Herzog (1912–1930). From Damascus, Joseph went to settle in Jerusalem.

BONFILS (Tov Elem), JOSEPH BEN SAMUEL (11th century), the first French scholar about whom more than his name is known; called by Rashi's disciples "R. Joseph the Great." A contemporary and colleague of R. Elijah the Elder of Le Mans, he was born in Narbonne, but lived at Limoges and at Anjou. Bonfils was among the early few who shaped the Jewish way of life and halakhic tradition in France and Germany; his principal decisions are frequently quoted by later rabbinic authorities. His positive attitude toward the recitation of *piyyutim* in the prayers (*Shibbolei ha-Leket*, Prayers, 28) and his decisions with regard to taxation exerted particularly great influence, the latter serving as a basis for the later *takkanot* ("regulations") of the Jewish communities in France and Germany. Bonfils copied in his own hand and for his own personal use, some of the more important books of his predecessors, and the later *rishonim* relied heavily on these copies in order to establish correct versions of these texts. Among these books are: *Halakhot Gedolot* (cf. *Semaq*, Lavin, 60 end; Tos. to Naz. 59a); *Seder Tanna'im ve-Amora'im* (Tos. to Naz. 57b); *Seder Tikkun Shetarot* (Tos. to Git. 85b); *Hilkhot Terefot* by *Gershom b. Judah and *Teshuvot ha-Ge'onim* (Tos. to Hul. 46–47; Tos. to Pes. 30a); as well as works on Hebrew grammar, liturgy and masorah. There is no basis for S.J. *Rapoport's assumption that the collection of geonic responsa published by D. Cassel (*Teshuvot Ge'onim Kadmonim*, Berlin, 1848) is the one copied by Bonfils. Bonfils belongs to the classical French school of *paytanim* and his *piyyutim* are composed in the difficult language adopted by the writers of this genre, all being based on midrashic material, interspersed with numerous *halakhot* concerning the day on which the *piyyutim* are to be recited. Early authorities quoted from his *piyyutim* in order to arrive at halakhic decisions (Tos. to Pes. 115b; *Or Zaru'a* 2:256; Raban, 532). Some of Bonfils' *piyyutim* are to be found in the *maḥzor* according to the French rite, but for the most part they have been superseded by later compositions easier to follow. Of his commentary on the Pentateuch, mentioned by Isaac de Lattes, not even one quotation has been preserved.

[Israel Moses Ta-Shma]

BONFRÈRE, JACQUES (1573–1642), Belgian Jesuit, professor of Hebrew and Bible exegesis. Bonfrère wrote a commentary on the Pentateuch (*Pentateuchus Moysis commentario illustratus...*, Antwerp, 1625), which has been reedited several times. The book has a strong mystical kabbalistic ten-

dency. He also wrote a commentary on Joshua, Judges, and Ruth (Paris, 1631).

[Francois Secret]

°**BONIFACE**, name of nine popes. Only the last two showed significant evidence of concern with the Jews of Europe.

BONIFACE VIII 1294–1303, in his Jewish policy displayed an attitude substantially like that of his 13th-century predecessors. In 1295 he commended a citizen of Paris for having established a chapel on the spot where a miracle was said to have occurred when some Jews were supposed to have tortured a consecrated wafer (see Desecration of the *Host). The same year the pope objected to the erection of a new synagogue in Trier, Germany. In 1297 he praised the queen of Sicily for having expropriated the property of Jewish usurers and urged her to use the money for the benefit of the poor. In 1300 he himself ordered the expulsion of Jewish and Christian usurers from *Avignon. But outweighing the above was his favorable response in 1299 to the complaints of the Jews of Rome and Avignon against inquisitors who accused them of illegal acts and then compelled them to answer the charges in some distant court. Claiming that Jews were in the category of those powerful enough to overawe witnesses, inquisitors refused to divulge the names of those who accused Jews of encouraging heresy. Jews, the pope maintained, were not necessarily powerful. One of his decisions became part of Canon Law, namely that Jews, even minors, once baptized must remain Christians.

BONIFACE IX. 1389–1404 showed exceptional favor to the Jews of Rome. The city had become impoverished because of the absence of the Papal Court for the greater part of the 14th century; subsequently it was further afflicted by a succession of plagues, during which Jewish physicians had shown great skill in serving the sick of all classes. The pope continued and even amplified the favors shown these physicians by his predecessor, Urban VI, especially to Manuel and his son Angelo. He included them among his *familiares* (members of his household), reduced their taxes, and freed them from the obligation of wearing the Jewish *badge. Several other physicians were likewise favored, and the Jews of Rome in general profited from this attitude. The papal chamberlain, acting on behalf of the pope, eased the regulations on the badge, alleviated the tax burden, and even spoke of the Jews as “citizens.” The pope could not show an equally friendly attitude to Jews outside the papal territory, since this was the period of the Great Schism in the church and various states wavered in their obedience to the pope in Rome.

[Solomon Grayzel]

BONJORN, BONET DAVI(D), called **De Barrio** (14th century), Spanish physician and astronomer. He lived in Perpignan, where he also engaged occasionally in moneylending activities. Here he manufactured astronomical instruments for Pedro IV of Aragon. His wife exerted pressure on him to divorce her by withholding his astronomical instruments. His son, the famous astronomer JACOB BONET or JACOB POEL drew up astronomical tables for the year 1361 for the latitude of this city. Jacob's son DAVI(D) BONET BONJORN was authorized to practice medicine at Perpignan in 1390 after examination by two Christian physicians. His baptism in 1391 is said to have occasioned the famous satiric pamphlet *Al Tehi ka-Avotekha* (“Be Not as Your Fathers”) by his friend Profiat *Duran.

[Cecil Roth]

BONN (in medieval Hebrew literature בִּינָה), city in west-central Germany on the Rhine river and capital of West Germany from 1949 to 1990. During the First Crusade in 1096 the Jews in Bonn were martyred. A Jewish community again existed there in the 12th century which, following a murder accusation, had to pay the emperor and the bishop a fine of 400 marks. A *Platea Judaeorum* is recorded in Bonn before 1244. The Jews engaged in moneylending and many became wealthy. In an outbreak of violence on June 8, 1288, 104 Jews were killed. During the *Black Death (1348–49) the community was attacked and annihilated; the archbishop took over its property and pardoned the burghers for the crimes they had committed. Subsequently, there is no record of Jewish residence in Bonn until 1381. During 1421–22 there were 11 Jewish families who paid the archbishop of *Cologne an annual tax of 82 gulden. The Jews were expelled in the 15th century, but later returned. In 1578 the Jewish quarter was looted and many Jews were taken captive by a Protestant army besieging Bonn; they were later ransomed. During the 17th century the Jews in Bonn, who lived under the protection of the elector, mainly engaged in cattle-dealing and moneylending. They were attacked in 1665 by students from nearby *Deutz. The Jewish street was destroyed during a siege in 1689, but a new Jewish quarter with 17 houses and a synagogue was built in 1715. It was closed at night by guarded gates. Bonn was the seat of the *Landrabbiner of the Electorate of Cologne in the 17th and 18th centuries. Several *Court Jews resided in Bonn; some of them lived outside the Jewish quarter, including the celebrated physician Moses Wolff, the musician Solomon, and the court agent Simon Baruch (the grandfather of Ludwig *Boerne). The Jews in Bonn suffered from a number of anti-Jewish regulations. The Jewish quarter was severely damaged by a flood in 1784.

During the occupation of Bonn by the French revolutionary army (1794), the Jews were declared citizens with equal rights, and the gate of the ghetto was publicly torn down. Two delegates from the Bonn community attended the *Assembly of Jewish Notables convened by *Napoleon in Paris in 1806. A Jewish elementary school with an attendance of 22 boys and 15 girls was opened in 1829; a society for the promotion of Jewish craftsmen was founded in 1840; and there existed several social institutions and associations. The 18th-century synagogue was replaced by a new one in 1878, which followed the *Reform rite. The community numbered 296 in 1796; 536 in 1871; and 1,228 in 1919. From its earliest days the community in Bonn was celebrated as a center of Jewish learning. Among the tosafists who lived there during the 12th century were *Joel b. Isaac ha-Levi (Ravyah), *Samuel b. Natronai, and *Ephraim b. Jacob. Toward the end of the 16th century the rabbi of Bonn was Ḥayyim b. Johanan Treves, a commentator of the *maḥzor*. Ludwig *Philippson and Moses *Hess lived in Bonn, and in 1879 there were five Jewish professors and lecturers at Bonn University.

In 1933 there were around 1,000 Jews in Bonn. In 1938 the synagogues were destroyed in the course of **Kristallnacht*. In May 1939, 464 Jews remained after flight and emigration. In the summer of 1941 those still there were sent to a Benedictine monastery in Eindhoven, where they were joined by families evicted from Duisburg, Beuel, and other communities. During June and July 1942 about 400 Jewish inhabitants of the monastery (including around 200 from Bonn) were deported to Theresienstadt and Lodz in four transports; only seven survived. Jews in mixed marriages were sent to forced labor camps in September 1944. After the war a new community was formed and numbered 155 in 1967, mainly elderly persons. A new synagogue was opened in 1959. There were 826 community members in 2003, of whom 739 were recent immigrants from the former Soviet Union.

[Ze'ev Wilhem Falk]

BONN, HANUŠ (1913–1941), Czech poet whose lyrical poems have much common with the poetry of Jiří *Orten. Bonn was born in Teplice and was active in the Czech-Jewish movement and as editor of the “Czech-Jewish Calendar” (*Kalendář českožidovský*) in 1937–39. In 1936, a collection of his poems, *Tolik krajín* (“So Many Landscapes”), appeared, followed in 1938 by an anthology of the poetry of primitive nations in his own translation, *Daleký hlas* (“A Distant Voice”). He also

translated the stories of Kafka and the poetry of Rilke. In 1939 and 1940, he had to publish some of his poems under a pseudonym. At the beginning of the Nazi occupation of Czechoslovakia, he was active in the department of emigration of the Prague Jewish community, where he tried to help his Jewish compatriots. He was soon sent to the Mauthausen concentration camp, where he was tortured to death. After the war his collected works were published under the title *Díla* (“Works,” 1947), with an introduction by Václav Černý, and in 1995 as *Dozpěv* (“A Final Song”) with an epilogue by Zdeněk Urbánek but without Bonn’s translations.

[Milos Pojar (2nd ed.)]

BONN, MORITZ JULIUS (1873–1965), German economist. Bonn was descended from a family of bankers in Frankfurt. He studied economics at Heidelberg, Munich, and Vienna. During this period he was strongly influenced by the “*Kathedersozialist*” Lujo von Brentano. In 1895 he completed his Ph.D. under the supervision of Brentano. Afterwards he attended the London School of Economics. In 1910 he became founding director of the College of Commerce in Munich. Travels led him to Great Britain, Italy, the U.S., and Africa. Bonn became an expert on international financial affairs. From 1914 he taught in the United States, and was politically active on behalf of Germany. In 1917, just before America entered World War I, he returned home. In 1921 he was appointed professor at the Berlin College of Commerce, and became its rector in 1931. He was a member of the German delegation to the Versailles peace negotiations, and subsequently adviser to German chancellors on reparation problems. During the financial conference in Spain 1920, Bonn was – together with Walther *Rathenau, Carl *Melchior, and others – one of the founders of the idea of the “policy of fulfillment” concerning the reparation payments of the Germans after World War I. In 1922 he took part at the international conference in Genoa. In 1930–32 Bonn worked as an expert for the League of Nations. As a left-wing liberal Bonn criticized the German political situation, which eventually led to the rise of Hitler. When the Nazis came to power in 1933 Bonn emigrated to England, fearful of being further persecuted as a Jew. There he taught at the London School of Economics, but spent much of his time in the United States teaching, lecturing, and writing. He died in London and, at his request, his remains were brought for burial to Kronberg, near Frankfurt. His writings include *Nationale Kolonialpolitik* (1910), *Grundfragen der englischen Volkswirtschaft* (1913), *Die Balkanfrage* (1914), *Nordamerikanische Fragen* (1914), *Die Auflösung des modernen Staates* (1921), *Der Friedensvertrag und Deutschlands Stellung in der Weltwirtschaft* (1921), *Die Stabilisierung der Mark* (1922), *Die Krisis der europäischen Demokratie* (1925), *Amerika und sein Problem* (1925), *Kapitalismus oder Feudalismus?* (1932),

Währungsprojekte und warum? (1932), *The American Experiment* (1934), *The Crumbling of Empire: The Disintegration of the World Economy* (1938), and his autobiography, *Wandering Scholar* (1948).

[Joachim O. Ronall / Christian Schoelzel (2nd ed.)]

BONNÉ, ALFRED ABRAHAM (1899–1959), Israeli economist. Bonné, who was born in Nuremberg, Germany, and studied in Munich, settled in Palestine in 1925. From 1931 to 1936 he directed the Economic Archives for the Near East in Jerusalem. In 1943 he was appointed director of the Economic Research Institute of the Jewish Agency and a year later became professor of economics at the Hebrew University. Bonné was the first controller of foreign exchange of the State of Israel, and from 1955 until his death was dean of the Hebrew University's School of Economics and Social Sciences. Best known among his numerous publications are his studies on the economy of Palestine and Israel; social and economic development in the Middle East; and theoretical and empirical issues of growth in developing areas. Against the background of Jewish experience in Palestine, Bonné developed a theory of implanted development in underdeveloped countries, with particular tasks assigned to government undertakings carried out with the aid of foreign investment. His major publications include: *Palaestina; Land und Wirtschaft* (1932); *Der neue Orient* (1937); *State and Economics in the Middle East; a Society in Transition* (1948); and *Studies in Economic Development* (1957).

BIBLIOGRAPHY: *A Selected Bibliography of Books and Papers of the Late Prof A. Bonné* (1960).

[Zvi Yehuda Hershlag]

BONNER, ELENA GEORGIEVNA (1923–), Russian physician and human rights activist; second wife of Soviet physicist and human rights activist Andrei Sakharov, Bonner was born in Merv (Mary) in Turkmenia. Her mother, Ruth Bonner, came from an assimilated Jewish family in Siberia. Her father and stepfather (who raised her) were both Armenians. Her parents, who were active in the Communist Party, were arrested in 1937. Her stepfather was executed, while her mother spent 17 years in labor camps and internal exile before her release and rehabilitation in 1954.

Bonner volunteered as a nurse after the German invasion of Soviet territory in 1941. She was wounded twice before her honorable discharge in 1945 as a lieutenant and a disabled veteran. After two years of intensive treatment of her wartime injury, she enrolled in the First Leningrad Medical Institute, graduated in 1953, worked as a pediatrician, a district doctor, and a freelance writer, and in the smallpox vaccination campaign for the World Health Organization in Iraq in 1959.

She began to help political prisoners and their families in the 1940s. In the late 1960s, she became active in the Soviet human rights movement. Bonner knew Eduard Kuznetsov, a Jewish refusenik, who helped plan an attempt to hijack an airplane from Leningrad in June 1970. She campaigned for commutation of his and another defendant's death sentence, visited

Kuznetsov in prison, and smuggled to safety the manuscript of his prison diaries, which were published in English in 1975.

Bonner met Andrei Sakharov at a trial of political prisoners in Kaluga in 1970; they married in 1972. Under pressure from Sakharov, the regime permitted her to travel to the West in 1975, 1977, and 1979 for treatment of her wartime injury. In 1975, Sakharov, awarded the Nobel Peace Prize, was barred from travel by the Soviet regime. Bonner was already in Italy for medical treatment and was able to represent her husband at the Nobel ceremony in Oslo.

She joined the Moscow Helsinki Watch Group in 1976. Sakharov was exiled to Gorky in January 1980. In spite of harassment and public denunciation, Bonner became his lifeline, traveling between Gorky and Moscow to bring out his writings. Her arrest in April 1984 for "anti-Soviet slander" and subsequent sentence of five years of exile in Gorky disrupted their lives again. Sakharov's long and painful hunger strikes forced Mikhail Gorbachev to let Bonner travel to the United States in 1985 for sextuple bypass heart surgery.

Gorbachev allowed Sakharov and Bonner to return to Moscow in December 1986. Following Sakharov's death three years later, Bonner remained outspoken. She joined the defenders of the Russian parliament during the attempted coup in August 1991 and supported Boris Yeltsin during the constitutional crisis in early 1993. She soon established the Andrei Sakharov Foundation, and separate Sakharov Archives in Moscow and the United States. Outraged by genocidal attacks on the Chechen people, Bonner resigned from Yeltsin's Human Rights Commission in 1994. She remained critical of the Kremlin for its ongoing policies in Chechnya and the increasingly authoritarian rule of Vladimir Putin. A genuine internationalist, Bonner regarded herself as a Jew in the face of antisemitism; an Armenian when Armenians were threatened; and a Kurd when Kurds were under assault. She is the author of *Alone Together* (1987) and *Mothers and Daughters* (1992), along with numerous articles.

[Joshua Rubenstein (2nd ed.)]

BONSENYOR, JUDAH (or **Jafuda**; d. 1331), physician and Arabic interpreter for the Aragonese court. Judah's father, Astruc b. Judah Bosenyor (d. 1280), had previously served in the same capacity, originally as assistant to Bahye Alconstantini. Judah accompanied Alfonso III as Arabic interpreter during the expedition against Minorca in 1287. In 1294 James II appointed him general secretary for Arabic documents and deeds drawn up in Barcelona. He was commissioned by James II to compile an anthology of maxims from Latin, Arabic, and Hebrew sources and translate them into Catalan – the *Llibre de paraules e dits de savis e filososfs*. Judah also translated a medical treatise from the Arabic.

BONYHÁD, town in Tolna County, in southwestern Hungary. The national census of 1746 listed 13 Jewish heads of families with 30 dependents. The Jewish community grew from 382 in 1781 to a peak of 2,351 in 1852. Many of the wealthier Jews moved to larger neighboring towns, including Pécs. By 1910, the number of Jews had declined to 1,153 (16.4% of the total), by 1920 to 1,058 (15.2%), and by 1930 to 1,022 (14.6%). According to the census of 1941, the last before the Holocaust, Bonyhád had a Jewish population of 1,159, representing 13.9% of the total of 8,333. The original Jewish section of the town, including the synagogue and the communal buildings, was destroyed in a fire in 1794. To commemorate the disaster Abraham Leib Freistadt, who was appointed Rabbi of Bonyhád in 1780, composed an elegy, which was recited annually on the first Sabbath after Passover. A new synagogue was built, reportedly by voluntary Jewish labor, in 1796. A *bet ha-midrash* was established in 1802, and the community's first yeshivah shortly thereafter. Bonyhád had a number of distinguished spiritual leaders, including Isaac Seckel Spitz of Nikolsburg (d. 1768), author of *Be'ur Yitzhak* (Pressburg, 1790), a commentary on the *Haggadah*; Judah Aryeh Bisenc (d. 1781); Benjamin Ze'ev b. Samuel *Boskowitz; Tzvi Hirsch *Heller; Isaac Moses *Perles, who, after a long struggle with the pro-Reformists, had to leave Bonyhad; Moses *Pollak (1846–1889), whose yeshivah became famous; Judah Gruenwald (d. 1920), author of *Zikhron Yehudah* (1923); and Eliezer Hayyim *Deutsch. In 1868 the community split, forming separate Orthodox and Neolog (Conservative) congregations. In the early 1940s, the Orthodox community had 750 members led by Rabbis Áron Pressburger and Abraham Pollák. The Neolog congregation had 376 members, led by Rabbi Lajos Schwarz. Both congregations had their separate communal, social, and educational institutions.

During World War II the Jews were subjected to severe discriminatory measures. Many among the Jewish males were mobilized for forced labor. After the German occupation in March 1944, the Jews were first isolated and their property expropriated. According to a May 5 report by the deputy prefect of Tolna county, Bonyhád then had a Jewish population of 1,268. On May 15, the Jews were ordered into two local ghettos; The "upper ghetto" was set up in the communal buildings of the Neolog congregation; the "lower ghetto" in and around the Orthodox synagogue. The two ghettos had 1,344 Jews, including those brought in from Báticasék and from the neighboring villages in the district of Völgyeség. Among these were the Jews of Aparhant, Kakasd, Kéty, Kiszvejke, Szálka, Tevel, and Zomba. On June 28, approximately 60 Jewish patients from a mental institution in Szekszárd were transferred to the Bonyhád ghetto. The ghetto population was first transferred to the local sports arena from where two days later they were taken to the Lakics army barracks in Pécs – the concentration and deportation center for the Jews in Baranya and Tolna counties. The Jews concentrated in Bonyhád were deported to Auschwitz on July 4, 1944. Among them was Rabbi Áron Pressburger, who perished there. On October 17, approximately 1,200 Jew-

ish labor servicemen stationed in and around Bonyhád were massacred by the ss.

During the immediate postwar period, the community consisted of 352 Jews, mostly labor servicemen and camp survivors. By 1949, the Orthodox and Neolog congregations were reestablished. The former had 172 members led by Rabbi David Moskovits with Manó Galandauer serving as president. The Neolog congregation had 108 members led by János Eisner. Both congregations disappeared soon after the Hungarian Revolution of 1956. By 1963, Bonyhád had only four Jewish families left.

BOOKBINDER, HYMAN H. (1916–), U.S. social activist, Jewish community leader. Hyman Bookbinder exhibited an interest in civic concerns from an early age. In his own words, "Born into a world that soon exposed me to depression, war, and the Holocaust, I fast acquired an almost compulsive interest in public affairs." His father, Louis Bookbinder, was an avid member of the Workmen's Circle.

In 1934, at the age of 18, Bookbinder joined the Young People Socialist League, known informally as Yipsels. In 1937, he graduated from City College of New York with a degree in social science. He then worked as a clerk for the Amalgamated Clothing Workers from 1938 to 1943 while continuing his work for Yipsel. When World War II broke out, his socialist-pacifist leanings led him to oppose American involvement in the war and he registered for the draft "with the strongest protest," requesting "conscientious objector status." However, as the news of Hitler's atrocities became known, Bookbinder's conscience roiled. Inevitably, Yipsel's lack of support for the war led Bookbinder to finally withdraw from the party.

After serving in the U.S. Navy, Bookbinder again worked for the Amalgamated Clothing Worker's union (1946–50). Following this, he continued to work on behalf of labor interests. He advocated for the Production Authority (1951–53), represented the Congress of Industrialized Organizations (1953–55), and lobbied for the American Federation of Labor (1955–60).

In his memoir, *Off the Wall* (1991), Bookbinder recounts the social upheaval of the 1960s and his participation in the civil rights movement and his efforts to further equal opportunity for all Americans, regardless of race, gender, or creed. He served on President Kennedy's Committee on the Status of Women (1961–63). The committee was chaired by Eleanor Roosevelt. Known by friends and in Washington political circles as "Bookie," Bookbinder became the executive officer of the President's Task Force on Poverty in 1964. He was also assistant director of the Office of Equal Opportunity (1964) and special liaison and advisor to Vice Pres-

ident Hubert Humphrey regarding the “war on poverty” (1964–67).

In 1968, Bookbinder shifted the focus of his career. A trip to Israel in 1966 (his first) along with the 1967 Six-Day War “stimulated” his “sense of Jewishness.” Offered the position of Washington, D.C., representative to the *American Jewish Committee (AJC), he decided to take it. The AJC’s dual commitment to Jews and liberalism and the leeway it granted its top staff allowed Bookbinder to both promote AJC’s Jewish agenda (i.e., asserting Israel’s “right to exist in peace and security with its neighbors” and fighting antisemitism) as well as continue his work on behalf of the poor and victims of discrimination. Through two decades of service, he became one of the most widely recognized and respected advocates for Jewish and liberal causes. In 1986, Bookbinder was made representative emeritus.

In addition, Bookbinder took upon himself a number of other civic responsibilities. He chaired public policy for the Corporation for Public Broadcasting (1972–77). He was a member of the President’s Commission on the Holocaust (1979–80) and the U.S. Holocaust Memorial Council (1980–85). He was also Washington chair of the ad-hoc Coalition for the Ratification of the Genocide Treaty (1970–87) and special advisor to Governor Michael Dukakis in 1988. Bookbinder was also the founding member of the National Jewish Democratic Council. A passionate moderate, he brought to bear the fervor usually associated with extremists and created a dialogue if not consensus around the major issues of his concern.

[Yehuda Martin Hausman (2nd ed.)]

BOOK OF THE COVENANT (Heb. *Sefer ha-Berit*), name derived from Exodus 24:7 (“And he took the book of the covenant, and read it aloud to the people...”), and usually taken to refer to the legal, moral, and cultic corpus of literature found in Exodus 20:22–23:33. This literary complex can be divided into four major units: Exodus 20:22–26, cultic ordinances; 21:1–22:16, legal prescriptions; 22:17–23:19, religious, moral, and cultic instructions; and 23:20–33, epilogue or concluding section. The Book of the Covenant begins (20:22–26) and concludes (23:10–19) – immediately preceding the epilogue – with instructions pertaining to correct ritual procedure. A cultic frame to a juridical corpus is also characteristic of two other biblical corpora, the so-called *Holiness Code of Leviticus (17:1ff. and 26:1–2), and the laws of *Deuteronomy (12:1ff. and 26). The legal corpus proper, Exodus 21:2–22:16, immediately follows the initial cultic prescriptions and contains civil and criminal legislation on the following topics:

Section I: 21:2–6, Hebrew slave; 21:7–11, bondwoman; 21:12–17, capital offense; 18–27, bodily injuries (including the laws of talion);

Section II, 21:28–32, goring ox;

Section III, 21:33–36, pit and ox;

Section IV, 21:37–22:3, theft and burglary; 22:4–5, grazing

and burning; 22:6–14, deposits and bailees; 22:15–16, seduction of an unbetrothed girl.

In sections I and II human beings are the objects; in III and IV property is the object. Most of the individual laws are interrelated, moreover, by means of association and concatenation of similar ideas, motifs, and key words.

Similarity to Cuneiform Laws

In both form and content many of these laws are indebted directly or indirectly to laws found in earlier cuneiform collections, i.e., Laws of Ur-Namma (LU) and Lipit-Ishtar (LI), written in Sumerian; Laws of Eshnunna (LE) and Laws of Hammurapi (LH), written in Akkadian; Middle Assyrian Laws (MAL); and Hittite Laws (HL). (See *Mesopotamia, Cuneiform Law.) The laws are formulated in the traditional casuistic style. The casuistic formulation of law, which predominates throughout all of the above-mentioned extra-biblical corpora, consists of a protasis, containing the statement of the case, and an apodosis, setting forth the solution, i.e., penalty. The protasis of the main clause is introduced by Hebrew *ki*, and of subordinate or secondary clauses by Hebrew *im* or *o’* (here meaning “if”). The only exceptions to the casuistic formulation in this section are the prescriptions found in Exodus 21:12, 15, 16, 17, all of which begin (in Hebrew) with a participle.

In content too, this earliest collection of biblical law remains to a great extent within the legal orbit of its cuneiform predecessors. Several possible extra-biblical substrata are still contextually and linguistically identifiable. The threefold basic maintenance requirement for a woman (Ex. 21:10) has analogues in LI 27–28 and in legal documents from Ur III down to neo-Babylonian times. The equal division of all assets and liabilities between two owners when one ox gores another to death (Ex. 21:35–36) is identical to LE 53. The laws of talion (punishment in kind; Ex. 21:23–25) are first legislated in LH 196, 197, 200. The Bible, however, does not incorporate vicarious talion (but see Cassuto, *Exodus*, p. 277) as is the practice in LH 116, 210, 230, but does insist, on the other hand, on talion in cases of homicide (Ex. 21:23; according to LH 207, composition is acceptable). The laws of assault and battery (Ex. 21:18–19) are analogous to HL 10 in many respects. The laws pertaining to the seduction of an unbetrothed girl (Ex. 22:15–16) contain several features similar to MAL A 56. The case of an injury to a pregnant woman which results in a miscarriage, or in her own death (Ex. 21:22–23), is dealt with in LH 209–214, MAL A 21, 50–52, HL 17–18, and in earlier Sumerian collections. Another example of a common legal tradition that the biblical corpus shares with its Mesopotamian cogeners is the law of the goring ox (Ex. 21:28–32), in which there are several common features: an official warning, a lack of precaution in spite of the warning, the fatal accident, and the punishment.

Distinguishing Features

Though the legal corpus of the Book of the Covenant emerges as an integral component of ancient Near Eastern law, there are still striking differences to be observed which are due not only to the different composition of the societies, but also to

the relative set of values within each society. Though slavery is a recognized institution within the Bible, the laws in the Book of the Covenant are concerned with the protection of the slave and the preservation of his human dignity: The status of the Hebrew slave is temporary (21:2), his physical being must be guarded against abuse, and he is considered a human being in his own right and not merely his owner's chattel (21:20, 26, 27). In several of the laws the females are given equal rank with their male counterparts (a mother, 21:15, 17; a daughter, 21:31; a woman, 21:28, 29; and a female slave, 21:20, 26, 27, 32).

The laws of the goring ox best demonstrate the difference between cuneiform law and the Book of the Covenant, for the biblical version (Ex. 21:28–32) is the only one that preserves an inherent religious evaluation. The sole concern of the corresponding cuneiform laws, LE 54–55 and LH 250–252, is economic; hence, the victim's family is compensated for its loss. The laws are not concerned with the liability of the ox. Only according to biblical law is the ox stoned, its flesh not to be eaten, and the execution of its owner demanded. The stoning of the ox and its taboo status are related in turn to the religious presupposition of bloodguilt (Gen. 9:5–6). A beast that kills a human being destroys the image of God, is held accountable for being objectively guilty of a criminal action, and hence is executed. Furthermore, biblical legislation ordinarily repudiates the concept of paying an indemnification to the family of the slain man. However, since this is a case of criminal negligence in which the ox alone is guilty of the killing, the owner may redeem his own life, if the slain person's family permits it, by paying a ransom (Ex. 21:30); in this case alone is a ransom acceptable; in other instances of homicide it is strictly forbidden (Num. 35:31). Here, as well as in the other biblical corpora, the sacredness of human life is paramount. Hence, there is an absolute ban on composition (Ex. 21:22), for according to biblical law, life and property are incommensurable. Exodus 21:31 adds another new element to the law by prohibiting the practice of vicarious talionic punishment (contrast LH 116, 210, 230). The religious underpinning of this law reflects the unique characteristic of biblical law. Whereas in Mesopotamian legal corpora the gods may be credited with calling the king to establish justice and equity, it is the king who is the sole legislator. In the Bible, the law claims divine authorship. Indeed, from the Book of the Covenant one would never know that the states of ancient Israel were monarchies. Law is depicted as the expression of the will of a single God, who is the sole source and sanction of law, and all of life is ultimately bound up with this will. This explains why in the Book of the Covenant and in other biblical corpora, but not in cuneiform corpora, there is a blending of strictly legal with moral, ethical, and cultic ordinances (Ex. 22:17–23:19).

The next section, Exodus 22:17–23:19, may be subdivided as follows: 22:17–19, laws against sorcery and bestiality; 22:20–26, love and fellowship toward the poor and needy; 22:27, reverence toward God and the leader of the commu-

nity; 22:28–30, ritual prescriptions; 23:1–9, justice toward all; 23:10–19, cultic calendar.

This complex is distinguished by the use of the apodictic legal formulation. This formulation is stated as a direct address consisting of a command, whose validity is unlimited, and which obliges one to do, or refrain from doing, a certain action. The Bible uses the apodictic style to a much greater extent than do extra-biblical law corpora. This feature is due to the regular biblical setting of the laws as oral addresses to the people (see Greengus in Bibliography). Another feature of this section is the presence of motive clauses of an explanatory, ethical, religious, or historical nature. For law in Israel also constitutes a body of teaching (*torah*), which is set forth publicly and prospectively to the entire community (Ex. 21:1; Deut. 31:9–13).

The final section, the epilogue, Exodus 23:20–33, consists of two different paragraphs, verses 20–25 and verses 26–33. It contains the promise of God's presence and protection of Israel in the forthcoming conquest of Canaan as long as they remain faithful to His laws. Since several extra-biblical legal corpora (LU, LI, LH) that conclude with epilogues also commence with prologues, the question has been raised whether a prologue can be found in the Book of the Covenant. It has been suggested that in light of the final redaction of the Book of Exodus, chapter 19:3–6 actually serves the function of a prologue by setting forth the prime purpose of biblical legislation, that of sanctification. Thus, Exodus 19:3–6 and Exodus 23:20–33 would form a literary frame that encases the new constitution of Israel and binds the history and destiny of Israel to the discipline of law.

Date

Various dates have been suggested for the compilation of the Book of the Covenant, ranging from the period of Moses to post-exilic times. The resort to parallels has often been determined by a scholar's presuppositions. Thus, the slave law in Exodus 21:2–6 has been explained as meeting the needs of defaulting debtors in early Israelite society, and alternatively, as reflective of the redemption of Jewish slaves from gentiles in the Persian period described in the Book of Nehemiah (5:8). Similarly, the absence of references to the monarchy has been used to support either a pre-monarchic date or a post-monarchic date. Likewise, the office of *nasi*, “*Chieftain” (22:7), is referred to elsewhere in the Bible in both early and late settings. As a final complication, one must deal with the “boomerang phenomenon” (Zakovitch) in which a law in an early collection was reinterpreted in a later one, the interpretation subsequently finding its way into the earlier collection once both collections found their way into the Torah.

Some scholars would separate the question of the original date of compilation of the laws in the Book of the Covenant from that of its incorporation within the Torah. The monarchic period suggests itself for the original date because of the close resemblance of its laws to the ancient Near Eastern laws,

which were royal in origin. The absence of references to the monarchy would then be explained as the result of deletions from the Book of the Covenant when it was incorporated in the final redaction of the Pentateuch in post-exilic times. Plausible as this hypothesis is, it remains unproved.

[Shalom M. Paul/S. David Sperling (2nd ed.)]

BOOK OF JASHAR (Heb. סֵפֶר הַיָּשָׁר, *Sefer ha-Yashar*; "the upright [one]'s book"), one of the lost source books of early Israelite poetry from which the writers in the books of Joshua and Samuel excerpted Joshua's command to the sun and the moon in Joshua 10: 12b–13a and David's lament for Saul and Jonathan in II Sam. 1:19–27, as indicated by the accompanying citations. The command to the sun and moon is an archaic poetic unit embedded in the later prose narrative of the victory against a five-king coalition and in defense of Gibeon, a covenant ally. The narrative provides a prosaic interpretation of the couplet, in keeping with the book's presentation of the conquest as a divine miracle and not Israel's victory. In itself the couplet reflects the early Israelite understanding of the Federation's wars as sacral events, with God as commander in chief directing tactics through the agency of heavenly powers who are conceived as members of the divine Sovereign's court (cf. how the stars "fought against Sisera" in Judg. 5:20). The lament for Saul and Jonathan is unquestionably a genuine literary attestation of David's poetic talent and it helps to explain the later attribution of many biblical psalms to David. Probably a third excerpt from the Book of Jashar is found in I Kings 8:12–13, a couplet embedded in Solomon's prayer at the dedication of the Temple, which survives in fullest form in the septuagint version. In the latter, the couplet appears at the end of the prayer and is followed by a notation in verbatim agreement with the one of Joshua 10:13, directing the reader to the book of *Shir* ("Song"). It has been suggested that the latter may stem from an accidental metathesis of letters (*šyr* for *yšr*), which is not uncommon among copyists' errors. See *Book of the Wars of the Lord for another and possibly related anthology, tenth century and earlier, to which historians of Israel and Judah turned for such poetic excerpts. The Talmud (*Av*

Zar. 25a) homiletically identifies the Book of Jashar with the "book of Abraham, Isaac, and Jacob" (i.e., Genesis), who were "upright." A quasi-historical work of the 13th century bears the same title (see *Sefer ha-Yashar).

[Robert G. Boling]

BOOK OF LIFE, or perhaps more correctly **BOOK OF THE LIVING** (Heb. סֵפֶר הַחַיִּים, *Sefer Hayyim*), a heavenly book in which the names of the righteous are inscribed. The expression "Book of Life" appears only once in the Bible, in Psalms 69: 29 (28), "Let them be blotted out of the book of the living; let them not be enrolled among the righteous," but a close parallel is found in Isaiah 4:3, which speaks of a list of those destined (literally "written") for life in Jerusalem. The erasure of a sinner's name from such a register is equivalent to death (cf. Ps. 69: 29, and the plea of Moses, Ex. 32:32–33).

The belief in the existence of heavenly ledgers is alluded to several times in the Bible (Isa. 65:6; Jer. 17:1; 22:30; Mal. 3:16; Ps. 40:8; 87:6; 139:16; Job 13:26; Dan. 7:10; 12:1; Neh. 13:14 (?) – the exact meaning of some of these texts, along with I Samuel 25:29, however, is still in doubt), the Apocrypha and Pseudepigrapha (e.g., Jub. 30: 19–23; I En. 47:3; 81:1ff.; 97:6; 98:7ff.; 103:2; 104:7; 108:3, 7; I Bar. 24:1), and the New Testament (e.g., Luke 10:20; Phil. 4:3; Heb. 12:23). This belief can be traced to Mesopotamia, where the gods were believed to possess tablets recording the deeds and destiny of men. Examples are the prayer of Ashurbanipal to Nabû, the divine scribe, "My life is inscribed before thee," and of Shamash-Shum-ukin, "May [Nabû] inscribe the days of his life for long duration on a tablet." The exact equivalent of the Hebrew *Sefer Hayyim* is found in a tablet from the neo-Assyrian period and may also be present in a Sumerian hymn.

[Shalom M. Paul]

In the Mishnah (*Avot* 3:17), R. Akiva speaks in detailed terms of the heavenly ledger in which all man's actions are written down until the inevitable day of reckoning comes. On the basis of the above-mentioned reference to the Book of Life in Psalms, however, or, according to another *amora*, of the plea of Moses, the Talmud states "three books are opened in heaven on Rosh Ha-Shanah, one for the thoroughly wicked, one for the thoroughly righteous, and one for the intermediate. The thoroughly righteous are forthwith inscribed in the Book of Life, the thoroughly wicked in the Book of Death, while the fate of the intermediate is suspended until the Day of Atone-ment" (*RH* 16b).

This passage has greatly influenced the whole conception of the High Holidays and finds its expression in the liturgy and *piyyutim* of those days. Of the four special insertions in the *Amidah for the *Ten Days of Penitence, three of them are prayers for "Inscription in the Book of Life" and it is the basis of the moving prayer *U-Netanneh Tokef*.

BOOK OF THE WARS OF THE LORD (Heb. סֵפֶר מִלְחָמֹת ה'יהוה, *Sefer Milhamot YHWH*), book, mentioned only once in the Bible (Num. 21:14), which apparently contained an anthology of poems describing the victories of the Lord over the enemies of Israel. The only extant piece contains a fragmented geographical note which is very obscure. According to a tradition preserved in the Septuagint and in the Aramaic Targums the words “The Wars of the Lord” are the beginning of the poetic quotation and are not part of the name of “the Book.” The book referred to then would be the Torah. However, according to the Vulgate and medieval and modern exegeses, this is the complete title of a book which, like several other literary works, has not been preserved.

The extent of the actual quotation from this book is debated. Some think it comprises only verse 14 itself, others include verse 15 (JPS), while still others go so far as to include verses 17–20 (“The Song of the Well”) and the poem in verses 27–30. The existence of such a book indicates that early written as well as oral traditions have been incorporated within the Pentateuchal documents. The date of the work is variously assigned to the periods of the desert (Kaufmann), Joshua, or David (Mowinckel).

BOOKPLATES, labels, usually inside book covers, indicating the owner of the books. The earliest *ex libris* with Hebrew wording were made for non-Jews. One of the first bookplates was made by Albrecht Durer for Willibald Pirckheimer (c. 1504) with an inscription in Hebrew, Greek, and Latin of Psalms 111:10. Hector Pomer of Nuremberg had a woodcut *ex libris* (1525) that is attributed to Durer or his disciple, Hans Sebald Beham, with the Hebrew translation of “Unto the pure all things are pure” (NT, Titus 1:15). “A time for everything” (Eccles. 3:1) in Hebrew is found on the bookplate (1530) by Barthel Beham, of Hieronymus Baumgartner of Nuremberg.

Among the Jewish artists in England who engraved bookplates in the 18th century were Benjamin Levi of Portsmouth, Isaac Levi of Portsea, Moses Mordecai of London, Samuel Yates of Liverpool, and Mordecai Moses and Ezekiel Abraham Ezekiel of Exeter. However, they only made a few bookplates for Jews. The first known *ex libris* of a Jew was made by Benjamin Levi for Isaac Mendes of London in 1746. A number of British Jews in the 18th and 19th centuries had ar-

morial bookplates bearing the family coat of arms, although some of them were spurious. Sir Moses Montefiore had several *ex libris* which bore his distinctively Jewish coat of arms. Among the few Jewish *ex libris* made in the latter half of the 18th century in Germany were those for David Friedlaender, engraved by Daniel N. Chodowiecki in 1774; and Bernhardt Friedlaender, by Johann M.S. Lowe in 1790. In the 18th century Dutch members of the Polack (Polak) family were among the early bookplate artists. A.S. Polak engraved a heraldic *ex libris* for the Jewish baron Aerssen van Sommelsdyk. Isaac de Pinto, a Dutch Sephardi Jew, had a bookplate featuring a huge flower vase with his monogram. The modern Russian-Jewish artist S. Yudovin engraved a number of exquisite woodcut bookplates which are among the relatively few with Yiddish inscriptions. Among other European Jewish artists who have used various graphic media to execute *ex libris* are Uriel Birnbaum, Lodewijk Lopes Cardozo, Fré Cohen, Michel Fingesten, Alice Garman-Horodisch, Georg Jilovsky, Emil Orlik, and Hugo Steiner-Prag. Marco Birnholz (1885–1965) of Vienna, a foremost collector, had over 300 different ones for his own use that were made by many of the European Jewish graphic artists. Bookplates of three Jews are considered to be among the earliest American *ex libris*, dating from the first half of the 19th century. The pictorial bookplate of Barrak (Baruch) Hays of New York incorporated a family coat of arms. Benjamin S. Judah had two armorial bookplates, although there is no evidence that he was entitled to bear a coat of arms. Dr. Benjamin I. Raphael also had two *ex libris* – one showing a hand grasping a surgeon’s knife and the other a skull and bones, symbols frequently found on medical *ex libris*. Among the early American college bookplates that have Hebrew words are those of Yale University, inscribed with *Urim ve-Thummim*, Columbia with *Ori El* (“God is my light,” alluding to Ps. 27:1), and Dartmouth with *El Shaddai* (“God Almighty”). Many of the major universities in the United States have a variety of bookplates for their Judaica collections. American Jewish artists of bookplates include Joseph B. Abrahams, Joanne Bauer-Mayer, Todros Geller, A. Raymond Katz, Reuben Leaf, Solomon S. Levadi, Isaac Lichtenstein, Saul Raskin, and Ilya Schor. Ephraim Moses Lilien, the “father of Jewish bookplates,” designed many for early Zionist leaders which revealed national suffering and hopes. He gave the Hebrew rendering of the Latin term *ex libris* – *mi-sifrei* (“from the books of”) for the numerous *ex libris*, which he created with definitive Jewish significance, and inaugurated a new era in this field that was pursued by other Jewish artists. Hermann Struck drew inspiration from the monuments and landscape of Erez Israel for the *ex libris* he made. Joseph Budko created more than 50 bookplates in aquatints, woodcuts, etchings, and drawings, mostly in a purely ornamental style, leaning heavily on the decorative value of Hebrew script. His artistic *ex libris* are considered among the finest Jewish examples. Jakob Steinhardt also executed a number of bookplates. Among the other modern Israel artists who produced *ex libris* are Aryeh Allweil, David Davidowicz, Zéev Raban, J. Ross, Jacob Stark,

and Shelomo Yedidiah. Synagogues, Jewish community centers, and institutions of Jewish learning have their own bookplates on which are imprinted names of the donors of books or names of deceased persons who are thus memorialized. Important collections of *ex libris* are at Hebrew Union College, Cincinnati, consisting mainly of the private collections of Israel Solomons and Philip Goodman, and at the Museum of the Printing Arts, Safed, based mainly on the private collection of Abraham Weiss of Tel Aviv.

[Philip Goodman]

BOOKS.

Production and Treatment

The history of Hebrew bookmaking is as old as the history of the Jewish people and goes back for more than 3,000 years. It may be divided into three periods: from earliest times to the final editing of the Talmud (sixth or seventh centuries); from geonic times to the end of the 15th century and the first printed Hebrew books; and from then to the present day. To the first period belong the books of the *Bible, the *Apocrypha, and the non-biblical texts found among the *Dead Sea Scrolls. Other books are mentioned in the Bible (cf. Eccles. 12:12, “of making many books there is no end”) and also in the Talmud, but it may be assumed that in the materials used, the writing techniques, and their format they were no different from books of the Bible. Toward the middle of the geonic period (ninth and tenth centuries) technical changes resulted from Arab influence and the growth of a European Diaspora and – more important still – from the common use of paper as writing material. The revolutionary impact of printing ushered in further developments. (This article will deal with the first period of Hebrew bookmaking; the second can be found under *Manuscripts, and the last under *Printing.)

WRITING MATERIALS. For Bible period see *Writing and Writing Materials. Papyrus is not mentioned in the Bible, though the Mishnah, Talmud, and Midrash speak of *neyar*, which probably was not made out of the expensive papyrus but from tree bark and similar material. Papyri have also been found in the Dead Sea caves, among them a palimpsest of an eighth century B.C.E. letter. For sacred purposes only animal skin could be used, either in the form of *gevil* (“uncut skin”), which was reserved for Torah scrolls, or *kelaf* (“split skin,” parchment), which could be used for other biblical books and had to be used for phylacteries, while δύς χιστος (“hard to split”), an inferior kind of parchment, was to be used for *mezuzot* (Shab. 79b; Meg. 2:2, cf. Arist. 176). Later *halakhah* permitted any parchment for sacred purposes if written on the inside of the skin, while leather was used on the cleaned hair

side. Skins used for writing were also distinguished according to the treatment they received: *mazzah*, *hippah*, *difera* (Shab. 79a). The use of Greek terms indicates the origin of the type of parchment or its method of manufacture. For sacred purposes only skins from ritually pure animals could be used (TJ, Meg. 1:11, 71d; Shab. 108a, based on Ex. 13:9); deerskins were preferred (Ket., 103b; TJ, Meg. *ibid.*). Wooden tablets covered with wax (*pinkas*, פנקס, πίναξ), potsherds (*ostraca*), tree or plant leaves, and fishskins were for profane use only.

SCROLLS. In antiquity all books, Jewish or non-Jewish, were scrolls. The Torah presented in the third century to Ptolemy II (Philadelphus) of Egypt by the high priest from Jerusalem so that it might be translated into Greek (*Septuagint) was unrolled before him (Arist. 176–7; cf. I. Macc. 3:48; Rev. 5:1). One of the Torah scrolls kept in the Temple (TJ, Ta’an. 4:2, 68a) was carried through Rome among the spoils in the triumphal procession of Titus (Jos., Wars 7:5, 150, 162), but the theory that it is pictured on the Arch of Titus (T. Reinach, in *REJ* 20, 1894) is not tenable. Talmud and Midrash speak mainly of scroll-books. The high priest on the Day of Atonement read from a scroll during the Temple service and then rolled it up (Yoma 7:1; Sot. 7:7), as was done after each reading of the Law. This was an honor reserved for the leader of the congregation (Meg. 32a). If a man received a Torah scroll in deposit, he had to roll it open for airing once a year (BM 29b). A Torah scroll was rolled from both ends toward the middle, each end being attached to a cylindrical handle called *ammud* (“pillar,” BB 14a) or, in later times, *ez hayyim* (“tree of life”), enough parchment being left clear of writing for wrapping round the handle. Other scrolls had only one handle on the right end, while on the left enough parchment was left vacant for wrapping the whole scroll (BB 13b). In the Septuagint the word *megillah* is translated by Κεφαλίς (“head-piece”), referring to the handle, which thus is used to stand for the whole scroll (Ezek. 2:9; 3:1–3; Ps. 40:8). This shows that the handles were already in use in the last centuries B.C.E.

In any event, there is no reference in either biblical or talmudic literature to books in the form of codices with folded pages, unless the *pinkas*, which could have as many as 24 tablets (Lam. R. 1:14), should be regarded as its precursor. The term *tomos* (“volume,” from Greek and Latin) is used in the Tosefta (Shab. 13:4; BK 9:31) for which there is a Hebrew synonym *takhrikh* (BM 1:8); but it is not clear whether some sort of codex is meant or the traditional scroll, made of sheets sewn together. *Jerome (fourth century), who speaks of Hebrew Bibles in the possession of Christians, does not mention any Hebrew codex. However, by the fifth century most books, like the earliest Christian ones, are codices. Passages in such late talmudic works as *Soferim* (3:6; cf. ed. Mueller, 46–47) and in the minor tractate *Sefer Torah* (1:2) have been interpreted as referring to codices (Blau, in *Magyar Zsidó Szemle* 21, 1904, 284–8; idem, *Sul libro*, 38–45).

SINGLE AND COMBINED SCROLLS. Biblical books certainly remained in scroll form, and those used in the synagogue

have preserved this format. For liturgical use the five books of the Pentateuch had to be written on one single scroll (Git. 60a). According to one tradition, the Torah consisted of seven scrolls, with a division of Numbers at chapter 10:35–36, these two verses making a separate book (Shab. 115b–116a; Lev. R. 11:3; Yad. 3:5). The division of books of the Bible was largely determined by the size of the scroll. Samuel and Kings were probably originally one book but were divided and subdivided for size. The Book of Psalms too was divided into five books at an early date. Ezra, Nehemiah, and Chronicles were originally one book, as suggested by the identity of the last two verses of Chronicles with the first two of Ezra–Nehemiah. Smaller books, such as the two parts of Isaiah and of Zechariah, were combined into one scroll. The fact that the *Minor Prophets were called the Twelve Prophets as early as Ben Sira 49:10 (third–second centuries B.C.E.) proves both their separate and combined entity (see also *Hebrew Book Titles).

Talmudic sources reflect the existence of scrolls containing both single and combined books of the Bible. Single books (Psalms, Job, Proverbs), though much worn, may be given to a widow in payment or part payment of her marriage settlement (Git. 35a). The combination of single books into Pentateuch, Prophets, and Hagiographa respectively is discussed as a halakhic problem. Whether those three could be combined or written in one scroll – at least for liturgical use – was controversial, but the *halakhah* was decided in the affirmative (BB 13b; TJ, Meg. 3:1, 73d–74a; cf. TJ, Yoma 6:1, 44a). According to one opinion Baitos (Boethos) b. Zonin had the eight prophetic books fastened together with the approval of Eleazar b. Azariah; while Judah ha-Nasi reports that his court's approval was given for a complete Bible in this form (BB 13b). Heirs who had inherited biblical books were not allowed to divide between them a single scroll, but could do so if they were separate ones (*ibid.*). The five books: Song of Songs, Ruth, Lamentations, Ecclesiastes, and Esther (see the Five *Scrolls) are called *megillot* (scrolls), the last one known as “the *megillah*” in Mishnah and Talmud, because it had to be read publicly from a parchment scroll (Meg. 2:2). Like the *Sefer Torah*, the Scroll of Esther retains the scroll form today. At a later stage the custom arose – and is still current – of reading the other four *megillot* on special occasions, in some communities also from scrolls.

NON-BIBLICAL BOOKS. For special purposes excerpts from the biblical books were written in separate scrolls or on one or more sheets (*pinkas*). The most important example is the *Sefer Aftarta*, the collection of weekly prophetic readings (Git. 60a, see *Haftarah) which in some communities is still used today. In the same talmudic passage the use of *Sifrei Aggadeta* (“homiletical books”) is mentioned as well as the question whether *megillot*, meaning excerpts from the Pentateuch, could be written for teaching purposes. Though the conclusion is negative, it was the practice to copy the *Shema and the *Hallel psalms for this purpose (Tosef., Yad. 2:11). According to Numbers 5:23, the curses against the woman suspected

of adultery had to be written on a scroll (*sefer*), and the writing dissolved in water for her to drink. This scroll was called *Megillat Sotah* (Sot. 2:3–4; TB, 17a–18a), for which Queen *Helena of Adiabene presented to the Temple a master copy inscribed on a golden tablet (Yoma 3:10). Genealogical tables current in Temple and talmudic times were called *megillot* or *Sefer Yuhasin* (Yev. 4:13; 49a–b; Mid. 5:4; Pes. 62b, Gen. R. 98:7), and these are also mentioned by Josephus (Life 6; Apion 1:7; see also *Archives). The Mishnah mentions heretical books under the collective name of *Sefarim Hizonim* (i.e., “external books”; Sanh. 10:1), and this has been variously interpreted in Talmud and Midrash (Sanh. 100b and Alfasi *ibid.*; TJ, Sanh. 10:1, 28a; Eccl. R. 12:12 no. 7). Similar books were found among the Dead Sea Scrolls. These discoveries, the oldest Hebrew (or Aramaic) manuscripts in existence – some belonging to the second century B.C.E. – have considerably increased knowledge of this field. Besides manuscripts written on parchment, leather, or papyrus, a *copper scroll was found, on which a Hebrew text is engraved. Y. Yadin (*Megillat Milhemet...* (1958), 107–8) found that the Dead Sea Scrolls generally conform to the talmudic rules for the writing of sacred scrolls. Though the writing down of the Oral Law was strictly forbidden, this was circumvented by the notes taken down on so-called *megillot setarim*, i.e., private notebooks or such as the *Sifrei Aggadeta* (Shab. 6b; BM 92a; Maas. 2:4, 49d; Shab. 156a; Kil. 1:1, 27a).

SIZE OF BOOKS. From the description in the Mishnah of the reading from the Torah by the high priest on the Day of Atonement (Yoma 7:1) and by the king on the occasion of **Hakhel* (Sot. 7:8), this Temple scroll cannot have been unduly large. The measurements mentioned in the Talmud are 6 by 6 handbreadths (44 × 44 cm.) and the scroll was to be of equal height and width – but this was admittedly difficult to achieve (BB 14a). The script had to be correspondingly small – the Torah alone consists of over 300,000 letters. Jerome (*Prologium ad Ezechielem*, 20) complained that the Hebrew Bible text could hardly be read by daylight, let alone by the light of a lamp, but diminutive script was widely used in antiquity, and Jews were familiar with the Bible from childhood.

DETAILS IN USE OF PARCHMENT. Usually only one side of the writing material was used. In the Talmud the column is called *daf* (“board”), which is still used today for the double folio of the Talmud, the term for the single page being *ammud* (“pillar”), the common word for page in modern Hebrew, as distinct from *ammudah* for the half-page column. For the writing of Torah and other liturgical scrolls detailed instructions regulate height and width, space to be left between, over, and below the columns, as well as between lines, words, and letters. There are rules for the spacing between the various books of the Pentateuch and of the Prophets, and specific instructions on how many columns a single parchment sheet (*yeriah*) should be divided into, how many letters should be accommodated in one line (27), and how many lines in one column (Men. 30a–b; TJ, Meg. 1:11, 71c–d, Sh. Ar., YD 271–8).

Poetical passages in the Bible such as the Songs of Moses (Ex. 15; Deut. 32:1–43) and of Deborah (Judg. 5), II Samuel 22, and some lists, such as Joshua 12 and Esther 9:7–10, had to be written in special form of “bricks and half-bricks” (Meg. 16b). The ruling of the parchment – which had to be done with an instrument but not with ink or color – was required for sacred texts (Meg. 18b; Men. 32b) but was general practice as well (see Git. 7a).

WRITING INSTRUMENTS. In talmudic times the *makhtev* (Avot 5:6; Pes. 54a; TJ Ta’an. 4:8, 69a) was used, which corresponds to the Greek γραφίου and the Latin *graphium*. It had one sharp pointed end for writing and one broad end for erasing (Kel. 13:2). For writing on parchment or paper the *kolmos* (κάλλαμος) made of reed was more suitable. The Hebrew word for ink (*deyo*) occurs as early as Jeremiah 36:18; this was black Indian ink usually made of lampblack and gum to which occasionally an iron compound was added. Other writing liquids are mentioned in the Talmud, such as *komos* (κόμμι, commis), acacia resin, or gum arabic; *mei afazim*, the juice of gallnuts (Shab. 104b; Git 19a), whose use in writing Torah scrolls became a matter of controversy in the Middle Ages; and *kalkantum* (χάλλακτος), copper vitriol, also used as an admixture for Indian ink. For the rabbis the important consideration for sanctioning the use of one ink in preference to another was durability (Shab. 12:5; Git. 2:3). According to the Letter of *Aristeas the Torah scroll presented to Ptolemy Philadelphus and the Torah scrolls used by Alexandrian Jews (in Jerusalem?) had letters written in gold; the rabbis frowned on such ostentation and prohibited it for liturgical use (Shab. 103b; Sof. 1:9; cf. Song R. 1:11). Chrysography was of great antiquity: papyri with gold script of the Twenty-Second Egyptian Dynasty are in the Gizeh museum. Jerome and Chrysostom – like many rabbis before them – criticize the custom of writing Bibles on purple parchment with gold script and the use of precious stones. In his writing kit the scribe had, beside other auxiliary tools, an inkwell (biblical *keset ha-sofer*, Ezra 9:3), talmudic *beit deyo* (Tosef., BM 4:11), or *kalamarin* (Kel. 2:7). Examples of such (Roman type) inkwells were discovered in the ruins of *Qumran, some of them with remnants of a carbon ink still in them. They belonged to the equipment of a special *Scriptorium*, a writing room for the scribes of the Qumran sect. Such an inkwell was also found in excavations in the Old City of Jerusalem.

KEEPING OF BOOKS. Scrolls, being valuable, were kept with care. Sacred books had to be wrapped in *mitpaḥot* (sing. *mitpaḥat*; Shab 9:6), and it was forbidden to touch them with bare hands (Shab. 14a; 133b; Meg. 32a; cf. II Cor. 3:14–16). The wraps were made of linen, silk, purple materials, or leather. Today’s Torah mantle (see *Torah ornaments) has a long history. Some Dead Sea Scrolls were found preserved in linen wrappings. Books were kept in chests, alone or with other things; the synagogue *Ark is a survivor of these chests. Earthenware jars were also used as receptacles for books from Bible times (Jer. 32: 14). These have preserved for posterity the treasures

of the Dead Sea caves, the *Elephantine Letters, etc. Baskets too were used for keeping books (Meg. 26b).

GENIZAH. Worn sacred books had to be reverently “hidden away” – in a **genizah* – and were eventually buried (Shab. 16:1; Meg. 26b). This accounts for the fact that so few Torah or Bible fragments have been preserved from antiquity, as parchment, let alone papyrus, decays in the ground. Where the *genizah* was limited to storing away, it made possible such treasure troves as those from the Dead Sea caves and the Cairo **Genizah*. Heretical books too were condemned to *genizah*, and these included almost anything not admitted to the *Bible canon (Shab. 30b; 115a; Pes. 56a).

OWNERSHIP OF BOOKS. While books were costly and rare in antiquity, by the second century B.C.E. some Jews possessed their own copies of biblical books. During the persecution preceding the Hasmonean revolt, those caught possessing sacred books were burned with them (I Macc. 1:56–57; 3:48; II Macc. 2:14–15; cf. *Haninah b. Teradyon’s martyrdom, Av. Zar. 18a). On the Day of Atonement the burghers of Jerusalem could each produce their *Sefer Torah* for the admiration of all (Yoma 70a). True wealth was books, and it was charity to loan them out (Ket. 50a on Ps. 112:3). Special laws applied to the finding, borrowing, and depositing of books (BM 2:8; BM 29b), whether and under what circumstances it was permitted to sell them (Meg. 27a; see *Book Trade), and the provocative query whether a room filled with books requires a *mezuzah* at its door. This latter question is put into the mouth of Korah (TJ, Sanh. 10:1, 27d). Sacred books were above all owned by municipalities and synagogues (Ned. 5:5; Meg. 3:1). Schoolchildren, too, usually had their own books (Deut. R. 8; TJ, Ta’an. 4:8, 69a). Mention is also made of books being written and owned by gentiles, heretics, and Samaritans (Git. 4:6; 45a–b; Men. 42b).

Bindings

Bookbindings as such first made their appearance toward the end of the fourth century. Sheaves of pages (pen manuscript) were fastened together by means of two covers and a back, and then tied with strings. The early bookbindings from the Cairo *Genizah* were made of parchment with laces sewn on for fastening. Yemenite Jews used similar bindings down to a relatively recent date. These early bindings are without ornamentation. Sometimes parchment or leather ends were left for carrying the book from place to place, and on these ends the name of the copyist or owner occasionally appears.

MIDDLE AGES. In the later Middle Ages examples of Islamic bookbinding arrived in Europe by way of Venice, bookbinders apparently also migrating from Byzantium; these specimens were remarkable primarily for their gold decoration. At about the same time goat-skin binding appeared; formerly it was considered a secret of the Islamic artisans. This led to smaller and lighter bindings. Colored bindings also originated in Islamic countries, and some beautiful examples have survived. Documents from the Cairo *Genizah* reveal that ready-made

leather book covers were imported from Europe into Egypt for decoration. A 12th-century list of books speaks of their red, black, and white covers (S.D. Goitein, *Mediterranean Society*, 1 (1967), 112).

The bindings of ancient and heavy parchment volumes were generally not decorated but received “blind-stamping” or gilding only. In the decoration of bindings by Jews the influence of the environment is usually recognizable: that of Islamic countries and Byzantium and that of Christian monastic bookbinders at a later date, in the early and late Middle Ages respectively. The bindings reveal the period of their manufacture, and some book collections were arranged according to the style or origin of the bindings. The 13th-century *Sefer Ḥasidim* (no. 345) advocates binding good books with handsome bindings. It also mentions a case of a Jew learning the craft from a monk, and considers whether to have sacred books bound by a Jew or by a monk, who was the better binder (no. 280). Medieval responsa literature reveals occasional references to bookbinding.

Particular care was bestowed upon the bindings of communal prayer books (e.g., the *Worms Mahzor* of 1272) and *Memorbuch, of which some magnificent examples have been preserved, though the date of the bindings is often uncertain. Many communities disposed of special funds to pay for the binding or repairing of books in communal ownership.

Until the 17th century, binders prepared book covers by pasting together paper pages, often using old *manuscripts, cutting them and pasting them together until they achieved the desired thickness (cf. Rashba, Resp. no. 166). Christian binders sometimes used Jewish manuscripts for this purpose, particularly when anti-Jewish riots and the looting of libraries had provided them with the necessary materials. Remnants of valuable manuscripts and *Incunabula have been discovered in such bindings. Books belonging to synagogues or academies had to be carefully guarded and would be attached by iron chains to the table or the shelves in the library.

MEDIEVAL BOOKBINDERS. In the 14th century the official bookbinders at the papal court at Avignon were frequently Jews. Cases are recorded of Jews being commissioned to execute the bindings of a missal or a codex of Canon Law to be presented to a friend or relative of the pope. A certain Meir (Makhir) Solomo made artistic bindings for the royal treasury in Aragon (1367–89). From the *bull of the antipope Benedict XIII of 1415, prohibiting Jews from, among other things, binding books in which the names of Jesus or Mary occur, it is evident how important a role Jews played in the craft. On the back of a leather-bound copy of the Perpignan Bible (written in 1299), a calendar was engraved in niello-work about 1470 in honor of the owners, the Kalonymos family (see M. Narkiss, in *Memorial Volume... Sally Meyer* (1956), 180).

The most prominent name in this field in the 15th century was that of Meir *Jaffe of Ulm, who belonged to a family of Franconian artisans. Apart from bookbinding, he was also well-known as a manuscript copyist; 15 of his bindings

have so far been found (in the libraries of London, Munich, Nuremberg, and Ansbach). He was the master of a special art called *cuir ciselé*. The artist decorated the book covers by cutting ornaments and figures into the moist leather and then, by various methods, raising them into relief. This old-established craft reached its peak in the gothic style of 14th–15th-century Germany. Though it may not have been a Jewish invention, Jews became the supreme practitioners of this method, which became known therefore as “Jewish leather cutting.” One of the special features of these bindings of Hebrew books is grotesques, though the genre is found elsewhere in gothic art. Jewish artists preferred “leather-cutting” to the more frequent, simpler, and cheaper method of “blind-stamping.” The wandering Jewish artisan, traveling light by necessity, also may have found the chiseling knife easier to carry than the heavy dies.

Jaffe was responsible for the binding – executed in 1468 – of a manuscript Pentateuch (Munich State Library, Cod. Hebr. 212) belonging to the city of Nuremberg. In return the city council gave him permission to stay in the city for several months and follow his calling. This in itself is eloquent testimony to his eminence as a binder (he is called “a supreme artist”), as he must have evoked envy and opposition from the local craftsmen. Though the names of binders rarely appear on medieval books, Jaffe embossed this Bible with the Hebrew inscription: *ההומש הזה לעידה מנירנברקה שיה' מאיר המצייר*. “This Pentateuch belongs to the Council of Nuremberg, may they live [long] – Meir [Jaffe], the artist.” On another of his works (c. 1470) Jaffe, using calfskin on wooden boards, portrays a scholar on a high chair scanning a book placed before him on a pedestal. The rim of the binding is decorated with flowers. Two metal clasps are engraved with the letter *M* in Gothic type, probably being Meir’s initial. In 1490 the city of Noerdlingen (Wuerttemberg) made payment to a Jew for binding the *Stadt-buch*. It may well have been Meir Jaffe.

With the invention of printing in the 15th century and the proliferation of books more Jewish bookbinders are found all over Europe. In Poland, during the reign of Sigismund III (1587–1632), Jewish craftsmen were employed by church and state (see M. Kramer, in: *Zion*, 2 (1937), 317). In Italy, in the 17th and 18th centuries, Bibles or prayer books were bound in silver, lavishly decorated, to serve as bridal presents (*sivlonot*), sometimes bearing a representation of a biblical scene relating to the bride’s or bridegroom’s name, or the coats-of-arms of the two families. The art of filigree binding arose in Italy and France in the 17th century and spread to other European countries. At the same time embroidered or tortoiseshell bindings, though not characteristically Jewish, made their appearance in Holland and Germany, from where they spread eastward. Jews bound their *ritualia*, particularly bridal prayer books, in these beautiful materials. On these bindings metal, usually silver, is used for clasps and corners, and both are often finely engraved and decorated with emblems, monograms, or animal figures representing certain Jewish virtues. These ornately bound books are sometimes inlaid with precious stones and even

miniature drawings of the woman to whom they were presented. Similarly bound and decorated books figured as presentations by communities, societies, or wealthy individuals to Jewish or non-Jewish notables on special occasions: a rabbi or communal leader's jubilee, a sovereign's visit, or as a sign of appreciation for favors bestowed or assistance given.

MODERN TIMES. From the 19th century onward, with growing prosperity particularly among Western Jewry, the art of binding Hebrew or Jewish books developed. In Erez Israel, the establishment of the *Bezalel School of Arts and Crafts in Jerusalem in 1906 included a deliberate effort to develop a specifically Jewish style in bookbinding. This produced olive-wood covers for a variety of books. Yemenite artisans too brought with them a tradition of bindings made from leather, silver, and gold filigree, and their productions have retained their popularity. There is, however, a more artistic and less traditional trend which has produced some magnificent bindings, such as that of the *Golden Book* and the *Barmitzvah Book* at the head office of the Jewish National Fund in Jerusalem.

[B. Mordechai Ansbacher]

Book Illustrations

In the early days of printing the illustrations were far inferior to those in contemporary *illuminated manuscripts. European printing as a whole was preceded by block books, in which the text was subordinate to the illustrations. Hence, the illustrated book existed from the very beginning of printing. In early Hebrew printing nothing of the sort is known; but the very nature of the illustrated book subjected it to more wear than ordinary volumes, and it may well be that some early illustrated works have been thumbed out of existence. There are indeed some surviving wood-blocks showing Passover scenes which were probably printed in Venice c. 1480. These may have been prepared for the illustration of a Hebrew work. The earliest Hebrew printed books, however, while – like other books – leaving a space for illuminated words or letters to be inserted by hand, relied for their decorative effect entirely on the disposition of the type, which was sometimes ornamented. Such is the case with the *Turim* of Pieve di Sacco (1475), the second (dated) Hebrew book to be completed in type.

DECORATIVE BORDERS. It was only at a slightly later period that, in imitation of the more sophisticated (but not fully illuminated) manuscripts of the period, decorative borders began to be used for the opening – there were no title pages yet – and occasionally also for some of the more significant later pages.

The first Hebrew book to make use of a border was the Pentateuch printed at Hajar in Spain about 1486. The border, however, designed by Alonso Fernandez de *Cordoba, was not on the opening page but appeared as a decoration to the Song of Moses (Ex. 15), as in some Spanish Hebrew Bible manuscripts. This border is outstanding with its beautiful tracteries and charming animal figures. It appeared later in the Manuale

Saragossanum, one of the great monuments of early Spanish printing, in which Cordoba and the Jewish printer Solomon Zalmati had collaborated. The border around the first page of the *Turim*, printed by Samuel d'Ortas at Leiria in Portugal in 1495, is of particular interest. This, presumably cut by a Jewish artist and incorporating Hebrew letters, elaborates on the similes in the opening passage of the work. About the same time, the Soncino family in Italy were making use of elegant black-and-white borders borrowed from non-Jewish sources. In some cases, in order to comply with the requirements of a Hebrew book, where the opening page needed to have the wider margin on the right rather than on the left, they sometimes broke up the border and in rare cases even had it recur to adjust to the requirements of Hebrew printing. The border used in Bahya's commentary on the Bible (Ezriel Gunzenhausen, Naples, 1492) appears to have been designed and cut by the Hebrew printer's brother-in-law, Moses b. Isaac. This border also appears in the Italian work *LAquila Volante*, produced there at about the same time by Aiolfo de' Cantoni. Many of these borders were transferred from press to press, or taken by the refugees from country to country. Thus the Hajar border referred to above appears in Lisbon in 1489, and later, increasingly worn and indistinct, in various works produced in Turkey between 1505 and 1509. The Naples border was used in Constantinople in 1531/32. There are some superbly designed borders around some pages of the Prague *Haggadah* of 1526. For the Mantua editions of 1550 and 1560 these were entirely recut, as framework around the identical text. With the development of the engraved title page in the 16th century, the use of borders became an exceptional luxury, as in some of the royal publications of the Mantuan press in the 18th century.

ENGRAVED TITLE PAGES. It is only in 1505 that the first title page appears in a Hebrew book. Thereafter, these also received special care, later being enclosed within an engraved border in the form of a gate (hence the common Hebrew term for title page, *sha'ar*, "gate"), often flanked by twisted columns and later and not infrequently by figures of Moses and Aaron. In due course specially executed vignettes of biblical scenes or Jewish ritual observances were incorporated in these title pages. Printers' marks, first introduced in 1485 in Spain, became common from the 16th century.

ILLUSTRATED WORKS. Illustrations in the conventional sense first figure in a Hebrew book, so far as is known, in 1491, when the Brescia edition of the fable-book *Mashal ha-Kadmoni* by Isaac ibn *Sahula contained a number of cuts illustrating the various fables (repeated in the Barco edition of 1497/98). After this, it was customary to add illustrations to most books of fables, for example the Yiddish *Kuhbuch* (Frankfurt, 1687). The prayers for rain and dew recited on the feasts of Tabernacles and Passover were often accompanied in Ashkenazi prayer books with the signs of the Zodiac, which, however, first appear in a far from religious work, the frivolous *Mahberot Immanuel* by Immanuel of *Rome (Brescia, 1491).

MINHAGIM BOOKS. Another favorite medium for book illustration was the books of customs or occasional prayers known as **minhagim* books, also following a tradition that goes back to the days of manuscript illustration. The *Birkat ha-Mazon* (Prague, 1514) contains a few woodcuts illustrating the text which are similar to those produced in later *Haggadot*. At the turn of the century, in 1593 and 1601, two *minhagim* books were produced in Italy, lavishly illustrated with woodcuts depicting almost every stage of and event in the Jewish religious year. The later work is the more delicate and its illustrations seem to reflect faithfully the realia of Italian Jewish life of the period. The earlier one, published possibly for export, is more northern European in character, and perhaps for that reason became more popular. These illustrations were constantly reproduced in similar German and Dutch publications down to the middle of the 18th century.

PASSOVER HAGGADOT. The most popular subject for illumination among Hebrew manuscripts was the Passover **Haggadah*, and this tradition naturally continued in the age of printing. The earliest known example of this is in some fragments conjecturally ascribed to Turkey (but obviously printed by Spanish exiles) c. 1515. But the oldest dated illustrated *Haggadah* now extant is that of Prague of 1526, published by Gershon Kohen and his brother Gronem and apparently illustrated in part by their brother-in-law Hayyim Schwarz or Shaḥor. This lovely production is one of the most memorable specimens of the 16th-century Hebrew press, the three fully decorated pages being especially noteworthy. It was exactly copied so far as the text was concerned but with fresh borders in the Mantua *Haggadah* of 1560, much improved in the subsequent edition of 1568. After some further experiments, an entirely fresh and more amply illustrated edition of the work was published by Israel Zifroni in Venice in 1609. This continued to be republished with few changes until late in the 18th century and served as the model for the *Haggadot* produced in the Mediterranean basin (e.g., at Leghorn) down to recent times. In 1695, the Venetian *Haggadah* served as the model for the edition published in Amsterdam with copper-plate illustrations by the convert to Judaism who called himself *Abraham b. Jacob. Though the general arrangement of the work and the choice of subjects was strongly influenced by the Venetian edition, the artist based his art to a great extent on illustrations to the Bible and other imaginative details gathered from the publications of Matthew Merian of Basle. The work reappeared with minor changes a few years later (Amsterdam, 1699) and served as the model for a large number of editions produced in central Europe throughout the 18th century and after. The actual illustrations, much deteriorated, continue to be reprinted or copied in popular editions down to the present day. Of the some 3,000 editions of the Passover *Haggadah* which are recorded, over 300 are illustrated. In recent years, artists of great reputation (Arthur *Szyk, Ben *Shahn, etc.) have collaborated in or produced illustrated editions of this favorite work.

OTHER WORKS. Other Hebrew works which were traditionally enriched with illustrations – in most cases very crude – included the Yiddish pseudo-Josephus (*Josippon), from the Zurich edition of 1547 onward; and the women's compendium of biblical history, **Ze'ènah u-Re'ènah*, in numerous Dutch and German editions of the 17th and 18th centuries. On the other hand, for obvious reasons, the Hebrew Bible was never illustrated until a few experiments appeared in the second half of the 19th century.

PORTRAITS. Portraits of an author occasionally appear in Hebrew books printed in Holland and Italy in the 17th and 18th centuries; for example, Joseph Solomon del Medigo in his *Sefer Elim* (Amsterdam, 1629) and Moses Ḥefez (Gentili) in his *Melekheth Maḥashevet* (Venice, 1701). The *Kehunnat Avraham* by Abraham ha-Kohen of Zante (Venice, 1719) has, after the elaborately engraved title page, a portrait which seems to be by the author himself. A portrait of the rabbi Solomon *Hirschel surprisingly accompanied the London prayer book edition of 1809. Judah Leon *Templo's works on the Tabernacle of Moses and the Temple of Solomon (1650 etc.) included fine illustrative engravings.

BOOKS OF THE CHRONICLES OF THE KINGS OF JUDAH AND ISRAEL, two sets of royal annals, mentioned in I and II Kings but subsequently lost. The historian of Kings refers to these works as his source, where additional information may be found. These references show how the historian of Kings used extensive sources selectively. The books are referred to by this formula, with slight variations: "Now the rest of the acts of [the king], and all that he did, behold, they are written in the book of the chronicles of the kings of Judah/Israel." Frequently references are made to "his might," or "how we warred," and occasionally more specific deeds are mentioned (e.g., I Kings 15:23; II Kings 20:20).

The Israelite annals are mentioned 18 times (I Kings 14:19 (17); 15:31; 16:5; et al.) and the Judean annals 15 times (I Kings 14:29; 15:7, 23; et al.). Of all the kings of Israel, only Jehoram and Hosea are not mentioned as referred to in the Israelite

annals. Of the kings of Judah (after Solomon) only Ahaziah, Athaliah, Jehoahaz, Jehoiachin, and Zedekiah are not mentioned in this regard. It is uncertain whether these books were royal records themselves or edited annals based on the records. It seems likely in view of the negative references to certain kings (Zimri, Shallum, and Manasseh), which would not very likely be the product of the king's own recorders, that the books were edited annals. Furthermore, the Judean author of Kings could hardly have had access to all the royal records of the northern kingdom. The content of these books appears identical in character to the Assyrian annals. Probably the mass of facts on royal activities in Kings came from these books. Chronicles mentions the book of the kings of Israel (I Chron. 9:1; II Chron. 20:34) and the book of the kings of Israel and Judah (or Judah and Israel; II Chron. 16: 11; 27:7; et al.). The chronicler seems to be referring to the same works, but probably did not actually have them at his disposal.

BOOK TRADE.

Antiquity

Information on the book trade in antiquity among Jews is very scanty. In biblical and talmudic times the scribe himself was the seller of his products (Tosef., Bik. 2:15; Pes. 50b; Git. 54b). The Tosefta (Av. Zar. 3:7–8) and the Jerusalem Talmud (Av. Zar. 2:2, 41a) speak of a gentile bookseller in Sidon who sold Bibles. While it was forbidden to sell sacred books to non-Jews (Tosef., Av. Zar. 2:4), it was permitted to exceed the current price by half a dinar to buy (really redeem) them from them (Git. 45b). Otherwise a man might buy sacred books from every Jew, but no one should sell his own except for particularly important reasons (Meg. 27a; cf. Sh. Ar., YD 270:1). A Torah scroll is literally priceless and no claim can be made for overcharging (BM 4:9). A story is told from Babylonia in the fourth century of a *Sefer Torah* which was stolen, sold at 80 *zuz* (approx. \$1,200), and resold at 120 before the thief was found (BK 115a). A cushion and worn copies of Psalms, Proverbs, and Job were valued at five *minah* (approx. \$75; Git. 35a).

Middle Ages

In the Mediterranean area books circulated freely in the early Middle Ages, as can be gathered from documents recovered from the Cairo **Genizah*. Among the wares of Nahrai b. Nissim, a wholesale merchant of high standing in 11th-century Egypt, were a variety of Hebrew and Arabic books: Bible, Talmud, rabbinics and homiletics, grammars, etc. They were transported or shipped in wickerwork crates or other baskets as well as in tin or lead cases. One document reveals the sale by two ladies of a Bible codex for 20 dinars; books were also used as collateral and passed from generation to generation as family heirlooms. In the *Genizah* lists of books have been

found with prices attached which are apparently booksellers' catalogs (*Tarbiz*, 30 (1961), 171–85). The (auction?) catalog of the library of Abraham he-Ḥasid of Cairo, sold after his death in 1223 by the Jewish court, has also been preserved.

Individual authors, apart from the professional scribes, sold their own books, while others paid scribes to copy books for them. By the Middle Ages the itinerant bookseller emerged, "rolling" his stock from city to city or country to country in special barrels, and carrying with him booklists, a forerunner of the catalog. They approached bibliophiles whose names were well-known to offer them their wares. Aaron, whose collection, brought back from Spain, was ransacked by *Immanuel of Rome at Perugia around 1300, may have been a bibliophile, not a dealer as is generally stated, though he carried with him a list of his 180 books (*Maḥberot Immanuel ha-Romi*, ed. by D. Yarden (1957), 161–6).

TRADE IN PRINTED BOOKS. When books began to be printed from the end of the 15th century onward and were available in greater quantities and at considerably cheaper prices, it became possible to speak of a proper trade in Hebrew or Jewish books. Once more the printers themselves or their agents – as well as the authors – were the principal booksellers. The famous Gershom *Soncino sold his books while moving from place to place, while his great competitor Daniel *Bomberg handed the Swiss scholar Conrad Gesner a list with prices of 75 Hebrew books, printed by himself and others, and Gesner printed the list in Latin in his *Pandectae* (1548). Two Jewish bookdealers on a large scale, David Bono and Graziadio (–Judah?) are mentioned in Naples in 1491, being exempted from tolls and duties like other bookdealers who followed the same calling. The former is recorded as exporting 16 cases of printed books in one consignment. Whether they were in Hebrew is not specifically stated, but is probable. R. Benjamin Zeev of Arta (c. 1500) refers in his responsa to the useful function of the itinerant booksellers of his day. The will of R. *Aaron b. David Cohen of Ragusa (1656) gives some interesting details on how books were diffused: he left money for the publication of his *Zekan Aharon*, of which 800 copies were to be printed: 200 were to be sent to Constantinople, 100 to Salonika, 50 to Venice, 20 to Sofia, 10 to Ancona, 20 to Rome, 50 to Central and Eastern Europe, 50 to Holland, to various places in Italy and to Erez Israel; the last were to be distributed without charge. Issuing works in "installments" was not uncommon in early Jewish publishing, particularly by the Constantinople presses. Thus the responsa of Isaac b. Sheshet (Constantinople, 1547) were printed in sections and sold in this form by the printer to subscribers week by week.

From the 17th century onward the book fairs of Frankfurt on the Main became centers for the diffusion of Hebrew books also. Two Jewish booksellers of Frankfurt, Gabriel Luria and Jacob Hamel, were in correspondence with the *Buxtorfs with reference to the sale of books. The Buxtorfs were also in contact with Judah Romano of Constantinople, who, whether a professional bookdealer or not, was active in the

Hebrew book trade. *Manasseh Ben Israel is known to have attended the Frankfurt fair in 1634 – the only Jew among 159 Christians – but his application for membership of the Amsterdam booksellers' guild in 1648 was refused. The catalog (in Spanish) published by his son Samuel (1652) includes some books which were apparently printed by other firms. Some years before, Samuel had also distributed a list of secondhand books which he had for sale, copies of which even reached England. Isaac Fundam (Fundao) of Amsterdam produced a printed catalog of books and manuscripts in Spanish and Portuguese (1726), and works purchased from him are occasionally recorded. At the end of the 17th century, the Proops firm of Amsterdam styled themselves in their publications "Printers and Booksellers": their first catalog (*Appiryon Shelomo*) appeared in 1730; they had already been admitted to the booksellers' guild in 1677.

At the end of the 18th century Johanan Levi Rofe ("the physician") was also active in the book trade in Amsterdam. In the 18th century, especially in England, Jewish and Hebrew works were frequently published by subscription, a wealthy person sometimes purchasing several copies. The lists of subscribers printed with the works in question are often important historical sources. The business of distributing books in bulk by the publishers could be complicated. They were not infrequently disposed of by barter, in some instances in exchange for wine. In Eastern Europe the great fairs were the centers for bookdealing, and cheap *chapbooks were sold all over the country by itinerant dealers. The Council of Lithuanian Jewry in 1679 ordered that each community should appoint a person to purchase tractates of the Talmud at the fairs of Stolowicze and Kopyl so as to stimulate study. James Levi, who conducted book auctions in London from about 1711 to 1733, presumably dealt solely in non-Jewish books. On the other hand, Moses Benjamin *Foà (1729–1822), book purveyor to the court of Modena and a dealer on a grand scale, was deeply interested in Jewish literature also, though more as a collector than a merchant. D. Friedlaender and his friends obtained in 1784 a royal license for their *Orientalische Buchdruckerei und Buchhandlung* (for a catalog see Steinschneider, in ZGJD, 5 (1892), 168f.). Heirs to collections of Hebrew books who wished to dispose of them produced sale-catalogs, such as those published by the heirs of David *Oppenheim; two separate catalogs of this famous and outstanding collection were printed: *Reshimah Tammah* (Hamburg, 1782) and *Kehillat David* (*ibid.*, 1826, with Latin translation).

Modern Times

In the 19th century, in Hebrew as in general books, there was a division between printers on the one hand and *publishers and booksellers on the other. In Eastern Europe, however, the three functions remained united in the activities of such firms as Romm in Vilna, which published catalogs as well. In the 20th century, the center of the Jewish secondhand book trade was first Berlin, with the firm of Asher, and then Frankfurt with Joseph Baer, Bamberger and Wahrman (later of Jeru-

salem), A.J. Hoffmann, J. Kauffmann, and Leipzig with M.W. Kaufmann. The firms of Schwager and Fraenkel (of Husiatyn, later Vienna, Tel Aviv, and New York), F. Muller (Amsterdam), and B.M. Rabinowitz (Munich) made contributions to scholarship through their diffusion of rare books, and sometimes through their learned catalogs, as did Ephraim *Deinard in the United States. The journeys undertaken by some of these booksellers in search of rarities place them almost in the category of explorers. In London Vallentine (later Shapiro, Vallentine) was active from at least the beginning of the 19th century, followed by the firms of R. Mazin, M. Cailingold and Rosenthal, while in Paris the firm of Lipschutz was eminent for many years; in the United States the *Bloch Publishing Company has been in existence for over a century and the Hebrew Publishing Company since the 1890s. Important Jewish booksellers in Switzerland were T. Gewuerz and V. Goldschmidt of Basle; in Holland J.L. Joachimsthal and M. Packter of Amsterdam; in Berlin M. Poppelauer and L. Lamm; in Vienna and Budapest J. Schlesinger. Some non-Jewish booksellers, such as O. Harrassowitz (Leipzig, then Wiesbaden) and Spingates (Leipzig); Mags Brothers and Sothebys (London), have also played a role in the sale of Hebraica and Judaica.

[Cecil Roth / Abraham Meir Habermann]

BOONE, RICHARD (1917–1981). U.S. actor. Born in Los Angeles, Boone was the son of a successful corporate lawyer. He attended Stanford University but left before he graduated. He dabbled in painting, writing, boxing, and working in an oil field before enlisting in the U.S. Navy as an aerial gunner (1941–45). After the war, he used the G.I. Bill to study acting at the Neighborhood Playhouse and the Actor's Studio in New York. He also studied movement with Martha Graham. Boone debuted on Broadway in Judith Anderson's *Medea*. He made his motion picture debut in 1951 in *The Halls of Montezuma* and from then appeared in more than 30 films, including *The Robe* (1953), *Dragnet* (1954), *Lizzie* (1957), *The Alamo* (1960), *Thunder of Drums* (1961), *Rio Conchos* (1964), *The War Lords* (1965), *Hombre* (1967), *The Arrangement* (1969), *Madron* (1970), *Big Jake* (1971), *The Shootist* (1976), *The Big Sleep* (1978), *Winter Kills* (1979), and *The Bushido Blade* (1981).

Boone's name became a household word in the U.S. because of his starring roles on television in such series as *Medic* (1954–56); the popular western series *Have Gun Will Travel* (1957–63); and *The Richard Boone Show* (1963–64), which won

a Golden Globe in 1964 for Best Television Series. A major force on *Have Gun Will Travel*, Boone directed 27 episodes and had final approval on scripts, guest stars, and costumes. He also co-wrote the show's enduring theme song "The Ballad of Paladin," which became a hit on the pop charts. In its successful run, the show ranked in the top five programs for most of its six years. Boone was a three-time winner of the American Television Critics award for Best Actor and was a five-time Emmy nominee for his performances in each of his television series. Boone moved to Hawaii in 1964 and then to Florida in 1971. In 1972 he began commuting to Hollywood to star in the TV western series *Hec Ramsey*, produced by Jack Webb of *Dragnet* fame, until the show ended in 1974. In the mid-1970s Boone taught acting at Flagler College in St. Augustine, Florida, and the Neighborhood Playhouse in New York.

BOORSTIN, DANIEL J. (1914–2004), U.S. historian. Born in Atlanta, Georgia, he joined the University of Chicago in 1944, and became professor of American history in 1956. He also had a law degree and was a member of the Massachusetts Bar. Subsequently he served as director of the National Museum of American History and senior historian of the Smithsonian Institution in Washington, D.C. From 1975 to 1987 he was librarian of Congress, where he established the Center for the Book in 1977 to promote books, reading, libraries, and literacy. Among his early works are *Lost World of Thomas Jefferson* (1948); *The Genius of American Politics* (1953); *America and the Image of Europe* (1960); *The Image* (1962); *The Decline of Radicalism* (1969); *The Sociology of the Absurd* (1970); and two volumes of the *Landmark History of the American People* (1968/70). His highly acclaimed trilogy *The Americans* (1958, 1965, 1973) advanced the thesis that the American experience was shaped by the environment of the New World. He was awarded the Pulitzer Prize for the third volume, *The Democratic Experience*, and also won the Parkman and Bancroft prizes. In 1989 he received the National Book Award for Distinguished Contributions to American Letters. A second popular trilogy describes man's pursuit of knowledge, artistic expression, and philosophic truth. This includes *The Discoverers* (1983), *The Creators* (1992), and *The Seekers* (1998). *Cleopatra's Nose*, a volume of "Essays on the Unexpected," appeared in 1994. In 1995 the Modern Library published *The Daniel J. Boorstin Reader* and in 2000 Greenwood Press published *Daniel J. Boorstin: A Comprehensive and Selectively Annotated Bibliography*, compiled by Angela Michele Leonard and containing over 1,300 items. "For me," Boorstin said, "the task of the historian is not to chisel a personal or definitive view of the past on concrete. Rather, it is to see the iridescence of the past, fully aware that it will have a new and unsuspected iridescence in the future."

BOPPARD, town in Coblenz district in Germany. The earliest reference to Jews there dates from the last quarter of the 11th century. In 1179, 13 Jews in Boppard were murdered following a "blood libel." In 1196, eight Jews in the town were massacred by Crusaders. Subsequently, the leader of the community, the learned and wealthy R. Hezekiah b. Reuben, managed to secure the protection of the authorities. A Jewish quarter (*Judengasse, vicus Judaeorum*) is first mentioned in Boppard in 1248–50. In 1287, 40 Jews were massacred in Boppard and Oberwesel: others during the "Armleder persecutions of 1337 and during the Black Death in 1349. In 1312, Boppard ceased to be a free imperial city and the Jews came under the jurisdiction of the archbishops of *Trier. In 1418, all Jews were expelled from the archbishopric. Jews resettled in Boppard in 1532, and by the 1560s numbered approximately 32 families. There were 53 Jews living in Boppard at the beginning of the 19th century, 101 in 1880, 80 in 1895, 108 in 1910, 125 in 1926–27 (out of a total population of 7,000), and 92 in 1933. At this time the community possessed a synagogue, a cemetery, and two charitable institutions. Under the Nazi regime, two-thirds of the Jews managed to leave by 1941. On November 9, 1938 (*Kristallnacht*), the interior of the synagogue was destroyed, although the building was spared because of its proximity to neighboring buildings. The Torah scrolls, ritual objects, and communal archives were thrown into the street and destroyed. In 1942, the 32 remaining Jews were deported to the East. Three Jews settled in Boppard after World War II but subsequently left.

BOR, JOSEF (1906–1979), Czech novelist. Born in Ostrava, Bor spent the years 1942–45 in the Terezín (Theresienstadt) and Buchenwald concentration camps. His entire family perished in the Holocaust. In the 1960s he published two novels, *Opuštěná panenka* ("Abandoned Doll," 1961) on the fate of three generations of the Breuerer family imprisoned in Theresienstadt, and *Terezínské requiem* (1963; *The Terezín Requiem*, 1963) about the conductor Raphael Schachter, who performed Verdi's *Requiem* in Theresienstadt in 1944 and whose singers – Jews – were sent to the death camps of the East. In the 1970s Bor published a few short prose works in the Jewish Yearbook (*Židovská ročenka*), including *Tajemství staré knihy* ("The Mystery of an Old Book," 1970) and *Ten třetí* ("The Third One," 1971).

BORAH, WOODROW WILSON (1912–1999), U.S. historian. Born in Utica, Mississippi, Borah attended the University of California at Berkeley, where he earned his bachelor's, master's, and doctoral degrees. After teaching briefly at Princeton University, he worked for the U.S. State Department as an analyst in the Office of Strategic Services (1942–47). He joined Berkeley's history department in 1948 and was appointed professor of history in 1962. He served as chair of the campus's Center for Latin American Studies from 1973 to 1979. He retired from active teaching in 1980.

Borah was an authority on the social and economic history of Latin America, specializing in colonial Mexico and in historical demography. For decades he was considered one of the most influential and active scholars working to reconstruct the colonial experience in Spanish America. His primary interest was the development of methods for analyzing Mexican and Spanish colonial tribute data for demographic information. His chief works are *New Spain's Century of Depression* (1951), *Early Colonial Trade and Navigation Between Mexico and Peru* (1954), *The Aboriginal Population of Central Mexico on the Eve of the Spanish Conquest* (1963), *Justice by Insurance: The General Indian Court of Colonial Mexico and the Legal Aides of the Half-Real* (1983), and *Price Trends of Royal Tribute Commodities in Nueva Galicia, 1557–1598* (1992). Borah was involved in local synagogue affairs and Jewish philanthropic efforts.

[Ruth Beloff (2nd ed.)]

BORAISHA, MENAHEM (Menahem Goldberg; sometimes simply **Menahem;** 1888–1949), Yiddish poet and essayist. Born in Brest-Litovsk, the son of a Hebrew teacher, he combined a thorough Jewish education with attendance at the Russian school in his birthplace. At the age of 16 he joined the Socialist Zionists and began to write poetry in Russian and Yiddish. In Warsaw from 1905, he received encouragement from I.L. *Peretz, publishing his first poems in Yiddish journals, and drama reviews for the daily *Haynt*. While serving in the Russian Army (1909–11), he published his impressions of barrack-life in both *Haynt* and *Fraynd*. His poem "Poyln" ("Poland," 1914) expressed the tense relationship between Jews and Poles. He settled in the U.S. in 1914, and in 1918 joined the editorial board of the Yiddish daily, *Der Tog*. His book of poems *A Ring in der Keyt* ("A Link in the Chain," 1916) was followed by *Zamd* ("Sand," 1920), a collection which included a memorable poem on Theodor *Herzl. After a trip to the U.S.S.R. in 1926, he contributed to the Communist daily *Frayhayt* but parted company with it in 1929, when it justified Arab attacks on Jews. He then worked with the papers *Vokh* and *Yidish* and became press officer of the *American Jewish Joint Distribution Committee.

His poem *Zavl Rimer* ("Zavl the Harness-Maker," 1923), a novel in verse, in which Yiddish speech rhythms are combined with poetic meter, several parts of which are in the tradition of Yiddish folksong, exposed the horror of the postwar Russian pogroms. *Der Geyer* ("The Wayfare," 2 vols., 1943) is a spiri-

tual autobiography on which he worked for ten years. It describes the progress of its main character, Noah Marcon, from skepticism to faith and from the profane to the holy. The work is a poetical attempt to summarize the intellectual legacy of Judaism and Jewish history in recent generations, while generally dramatizing human thought and the struggles of conscience within vividly portrayed social and natural settings. It extends into non-human spheres, including an empathetic portrait of a dog, often attains a cosmic consciousness, and is written in a great variety of verse forms, employed with technical inventiveness. His last poems, *Durkh Doyres* ("Through Generations"), appeared posthumously in 1950.

BORCHARDT, LUCY (1878–1969), German shipping owner and operator. On the death of her husband Richard she became head of the Hamburg Fairplay Tug Company whose craft were known throughout the continent. From 1933 she devoted her energies and resources to enable Jews to escape from Germany. She herself left in 1938 and with her son Karl founded the Fairplay Towage and Shipping Company and the Borchardt Lines in London. With her son Jens she formed the Atid Navigation in Haifa which was liquidated in 1968. After having fallen out with her son Jens she established a competing line to Israel, the Lucy Borchardt Shipping Ltd. "Mother Borchardt," as she was known in shipping circles, took a special interest in the personal needs and welfare of her staff.

BORCHARDT, LUDWIG (1863–1938), German Egyptologist and archaeologist. Borchardt's outstanding career as an Egyptologist rested on his knowledge of architecture as well as Egyptian language. Born and educated in Berlin, he became assistant to the department of Egyptian art in the Berlin Museum. In 1895 he left for Egypt where he examined details in important excavations, and was thus able to revise the interpretation of typical Egyptian building complexes. He was the first to recognize that the pyramid formed an integral part of the temple area. He excavated several pyramids and published monographs on their origin and development. His study of the ancient Egyptian column types and their development helped him to work out the complicated archaeological history of the great temples at Thebes. The structure of the early Egyptian house became the subject of Borchardt's research at the time of his excavations of Tell el-Amarna, the town in which Pharaoh Amenophis IV–Akhenaton (1379–1362 B.C.E.) had lived. In the course of these excavations, he uncovered the workshops of

the royal sculptor Thutmose, with many naturalistic portrait models, among them the world-famous painted limestone model head of Queen Nefertiti. Numerous excavations and publications testify to the continuous industry of Borchardt. In 1906 he founded the German Institute for Ancient Egyptian History and Archaeology (Deutsches Institut fuer aegyptische Altertumskunde) in Cairo and was its director until World War I and from 1923 until 1929. Borchardt played an important role in the planning and organization of the great *Catalogue Général des Antiquités Egyptiennes du Musée du Caire* (1897ff., still unfinished). Later he became interested in the question of the identification of Atlantis, the lost continent, which he suggested (at a conference of the Paris Atlantidean Society, 1926) should be identified with *Baħr Atala*, i.e., “Sea of Atlantis,” submerged c. 1250 B.C.E., in the northern Sahara, south of Tunis. Among his many publications are *Die aegyptische Pflanzensaeule* (1897); *Zur Baugeschichte des Amonstempels von Karnak* (1905); *Portraits der Koenigin Nofret-ete aus den Grabungen 1912–13 in Tell el-Amarna* (1923); *Die Entstehung der Pyramide, an der Baugeschichte der Pyramide bei Mejdum nachgewiesen* (1928); and *Die Entstehung des Generalkatalogs und seine Entwicklung in den Jahren 1897–99* (1937).

[Penuel P. Kahane]

BORCHARDT, RUDOLF (1877–1945), German poet, essayist, and cultural historian. Borchardt, the son of Martin Borchardt, a leading Jewish banker and director of the *Berliner Handelsgesellschaft*, was born in Koenigsberg (Prussia). He always stressed his German and classical heritage as the exclusive determinants of his character and convictions, and categorically rejected any Jewish identification – occasioning Theodor Lessing’s remark that Borchardt was “the most forceful example of Jewish creativity arising from self-hatred.” Even after Hitler’s rise to power, he wrote to his friend and biographer Werner Kraft: “Any conception of Jews as a people is completely alien to me.” In many of his poetic writings Borchardt adapted his style to the period concerned. Thus *Das Buch Yoram* (1907) recalls the German of Luther’s Bible translation, his *Durant* (1920) the style of Wolfram von Eschenbach’s medieval *minnelieder*, and his dramatic poem *Verkuendigung* (1920) that of the German medieval mystery plays. His translations from old Italian also show this highly developed art of acculturation, for example in his version of Dante’s *Divine Comedy* into 14th-century German (1930). His historical intuition and remarkable knowledge of classical languages and cultures led him to develop certain scientific theories on the unity of Mediterranean culture. His close familiarity with the German past and his veneration for German literature of the humanist period find their expression in his representative anthology of the most beautiful German travelers’ descriptions from all over the world, *Der Deutsche in der Landschaft* (1925). Always aiming at the cultural restoration of the past, Borchardt had a close attachment to two other conservative poets, Hugo von Hofmannsthal and Rudolf Alexander Schroeder (whose niece he married), whereas

he opposed and despised the circle of Stefan George and its programmatic aestheticism. Despite his pro-German views he was persecuted by the Gestapo when he was living near Lucca in Tuscany but succeeded in going into hiding in the Tyrol, where he died.

[Phillipp Theisohn (2nd ed.)]

°BORCHSENIUS, POUL (1897–1997), Danish pastor and author. During the Nazi occupation of Denmark in World War II, Borchsenius was an active member of the underground. He escaped to Sweden, where he engaged in welfare work among his Christian fellow-refugees. He kept in close touch with Jewish fugitives from Denmark and became an enthusiastic Zionist. Borchsenius wrote a series of five volumes on Jewish history after the destruction of the Second Temple: *Stjernesønnen* (1952; *Son of a Star*, 1960), based on the life of *Bar Kokhba; *De tre ringe* (1954; *The Three Rings*, 1963), a history of Spanish Jewry; *Bag muren* (1957; *Behind the Wall*, 1964), an account of the medieval ghetto; *Løste lénker* (1958; *The Chains are Broken*, 1964), the story of Jewish emancipation; and *Og det blev morgen, historien om vor tids jøder* (1960; *And it was Morning, History of the Jews in our Time*, 1962). In two other works, *Sol stat stille* (“Sun, Stand Thou Still,” 1950) and *Syv år for Rachel; Israel 1948–1955* (“Seven Years for Rachel,” 1955), Borchsenius wrote about the State of Israel. He also published a biography of Israel’s first premier, *Ben Gurion: den moderne Israels skaber* (“Ben Gurion, Creator of Modern Israel,” 1956), and *Two Ways to God* (1968), a study of Judaism and Christianity.

[Torben Meyer]

BORDEAUX (Heb. בִּרְדֵּאוֹס), city in the department of Gironde, S.E. France; in the Middle Ages, capital of the duchy of Guienne. The first written evidence of the presence of Jews in Bordeaux dates to the second half of the sixth century, when it is related that a Jew derided a priest who expected a saint to cure him of his illness. A golden signet ring, dating from the beginning of the fourth century was found in Bordeaux in 1854 bearing three *menorot* and the inscription “Aster” (= Asterius). Prudence of Troyes relates that the Jews behaved treacherously during the capture of Bordeaux by the Normans in 848. Although based on malice, this anecdote confirms the presence of Jews in the city. A document from 1072 refers to a Mont-Judaïque, outside the walls between the present Rues Dauphine and Mériadec, where the Jewish cemetery was located. The Jewish street, called Arrua Judega in 1247 (now Rue Cheverus) lay at the foot of this hill (now leveled off). The

present Porte Dijeaux (= ijeus, de Giu) is referred to as Porta Judaea from 1075. While Bordeaux was under English sovereignty (1154–1453), the Jews were spared the edicts of expulsion issued by the kings of France, though they were nominally expelled in 1284, 1305, and 1310–11. The anti-Jewish measures introduced by the English kings were undoubtedly aimed at extorting money, since the Jews continued to reside in Bordeaux and pursue their activities. In 1275 and 1281 Edward I intervened on behalf of the Jews of Bordeaux who were being overtaxed by nobles. However, Edward II issued a further ineffective edict of expulsion in 1313, and in 1320 the Jews were savagely attacked by the *Pastoureaux. Their residence was authorized by Edward III in 1342, when they had to make an annual payment of eight pounds of pepper to the archbishop. The Jews in Bordeaux were organized into the *Communitas Judeorum Vasconie* (“Community of the Jews of Gascony”). It is not certain whether or when they were formally expelled after Bordeaux was incorporated into France in 1453.

At the end of the 15th century, Marranos began to arrive in Bordeaux, first coming from Spain and later from Portugal. The Marranos were welcomed for their commercial activities, and in 1550 they obtained letters-patent from Henry II authorizing “the merchants and other Portuguese called ‘New Christians’” to reside in the towns and localities of their choice. They outwardly practiced Catholicism, and although the general populace suspected them the authorities closed their eyes to possible Judaizing. A more liberal attitude was evinced when in 1604 and in 1612 Maréchal d’Ornano, lieutenant-général of Guienne, issued an ordinance forbidding persons to “speak ill of or do evil to the Portuguese merchants.” Since they lived mainly in the two parishes of St. Eulalie and St. Eloy, Marranos claimed burial in the cemeteries of the two parish churches, as well as those belonging to the parishes of St. Projet and St. Michel, and in the cemeteries of the Augustine, Carmelite, Franciscan, and St. Francis of Paola monasteries. In 1710 a portion of the Catholic cemetery was reserved especially for them. Their marriages were performed by Catholic priests, and all the formalities, including application for papal dispensation in cases of consanguinity, were duly observed. A change of attitude can be noted in 1710 when the Marranos began to profess Judaism more openly. While priests continued to register their marriages, they generally added a note to the effect that the marriage had been or would be performed “in accordance with the customary rites of the Portuguese nation.”

At the beginning of the 18th century, a communal institution called the Sedaca was established, ostensibly to serve as a charitable organization. Out of its funds, which were derived from regular contributions paid by its members according to their ability, the organization paid for the maintenance of the Sephardi communities of the “four holy cities” of Erez Israel, for the local poor, and for needy travelers. Subsequently, the Sedaca undertook to provide for the cost of a physician for the poor, as well as to pay for certain officeholders in the community, including the teachers of the *talmud torah* (established

before 1710), and a rabbi. The first to hold this office was Joseph Falcon (from 1719), followed by Jacob Ḥayyim Athias and the latter’s son David. It was only in new letters-patent obtained in 1723 (the previous ones had been granted by Louis XIV in 1656) that the “Portuguese merchants” were for the first time officially referred to as Jews. At the turn of the century, Jews who declared themselves as such more openly had arrived from Avignon and Comtat-Venaissin to settle in Bordeaux. In 1722 they numbered 22 families. For reasons of respectability and other considerations, the “Portuguese” deliberately kept apart from the newcomers. In 1731 the municipal administrator objected to the regulation whereby the “Portuguese” Jews of Bordeaux had to pay protection tax like the Jews of *Metz. Nevertheless, in 1734 this official reminded the Jews of Bordeaux that the practice of the Jewish religion in public was forbidden. A report of 1753 mentions as a “scandal” that the Jewish religion was being practiced in seven synagogues; in fact these were prayer rooms in private dwellings.

Meanwhile, the communal organization of the Portuguese, the Sedaca, had taken the name “Nation.” Apart from providing funds for religious and charitable requirements, it also supplied the funds necessary for registering letters-patent, for the salary of a representative in Paris, and other purposes. The “Nation” assumed the role of an internal police, in particular expelling paupers or vagrants from Bordeaux. Strictly charitable functions were henceforth administered by specialized associations, the Yesibot, which included the Hebra or Hermandad for circumcisions and wedding ceremonies, and also attended to visits to the sick and funerals; the Guemilout Hazadim, the association of gravediggers; and the Yesiba Bikour Holim and Misenet Holim, for the care of and visits to the sick (see also **Hevrah*). From 1728, the “Nation” had its own cemetery (today Cours St. Jean no. 105), acquired by David Gradis in 1724. Burials took place there from 1725 until the French Revolution (this cemetery was closed in 1911), and from 1764 in a second cemetery (now Cours de l’Yser no. 176), which subsequently served the entire Jewish community of Bordeaux. The “Avignonese” owned a cemetery from 1728 on land purchased by David Petit (now Rue Sauteyron no. 49); this cemetery was used until 1805. The status of the “Nation” of the “Portuguese” community was approved by Louis XV on Dec. 14, 1769. The “Avignonese” constituted themselves a “Nation” in 1759, but had, in fact, been an organic body for a long while. The “Portuguese” engaged in financial activities and the supply of marine equipment, the “Avignonese” engaged almost exclusively in the textile and clothing trades, new or secondhand. In 1734 a decree was issued expelling the “Avignonese, Tudesque, or German” Jews from Bordeaux. This, however, they managed to evade by obtaining permission to prolong their stay under various pretexts. New decrees of expulsion were issued in 1740 and 1748. In 1759 six Avignonese Jewish families at last obtained letters-patent similar to those of the “Portuguese.”

At the beginning of the 18th century, the Portuguese

Jews in Bordeaux numbered 327 families (1,422 persons), while the “Avignonese” Jews numbered 81 families (348 persons).

In April 1799, on the eve of the French Revolution, the “Portuguese Nation” of Bordeaux appointed two representatives, S. Lopès-Dubec and Abraham *Furtado, to attend the *Malesherbes Commission, which was studying reforms to be applied to the condition of the Jews in France. The commission proposed that clauses be included in the constitution planned for the Jews of France to ensure the maintenance of their ancient privileges relating to freedom of residence, economic activities, property, etc. It also envisaged the possibility of differentiating between the legal status of the Spanish and Portuguese Jews on the one hand, and of the “German” Jews on the other. In contrast to other communities, the Jews of Bordeaux directly participated in the preparation of the Estates-General. When on Dec. 24, 1789, this assembly determined to defer a decision on the concession of equal rights to the Jews, a deputation of seven Sephardi Jews from Bordeaux, including David Gradis and Abraham Rodrigues, went to Paris. Their activities resulted in a decree issued on Jan. 28, 1790, declaring that “all Jews known in France under the name of Portuguese, Spanish, and Avignonese Jews...shall enjoy the rights of citizens.” One of the first manifestations of this equality of rights was on Dec. 6, 1790, when A. Furtado and S. Lopès-Dubec took office on the municipal council of Bordeaux. The two men also served on the Bordeaux Committee for Public Safety formed on June 10, 1793. No Bordeaux Jews were condemned to death during the Reign of Terror, but many were imprisoned or ordered to pay heavy fines.

A census of 1806 records 2,131 Jews living in Bordeaux, of whom 1,651 were of Spanish or Portuguese origin; 144 Avignonese; and 336 of German, Polish, or Dutch origin. When the *Assembly of Jewish Notables was convened by Napoleon that year, the department of the Gironde sent two delegates, both from Bordeaux – Abraham Furtado and Isaac Rodrigues. Furtado became president of the Assembly, while Rodrigues served as its secretary. Following the sessions of the “Great Sanhedrin” (see French *Sanhedrin), held in 1807, Bordeaux became the seat of a Consistory whose jurisdiction extended over ten departments, with 3,713 members. Abraham Andrade was appointed chief rabbi. The private prayer rooms were replaced by a large synagogue (Rue Causserouge), inaugurated on May 14, 1812, and partly destroyed by fire in 1873. Of the 12 members of the municipal council in 1830, two were Jews: Camille Lopès-Dubec and Joseph Rodrigues. Lopès-Dubec was also one of the 15 deputies elected from the department of the Gironde to the National Assembly in 1848. In the mid-19th century, Jewish institutions in Bordeaux included a school for boys and girls, a trade school, and a *talmud torah*. In the second half of the 19th century, many Jews sat on the general council of the department, on the municipal council, and in the chamber of commerce. Adrien Léon was elected to the National Assembly in 1875.

During the 19th century, the Jewish population of Bordeaux dwindled through emigration, numbering only 1,940 in 1900.

[Bernhard Blumenkranz]

Holocaust and Postwar Periods

Bordeaux served as a final station for countless Jewish refugees who fled southward from northern France in May-June 1940. The town, administered within the Occupied Zone after the Franco-German armistice (June 21, 1940), was one of the most important centers of Nazi police and military activities. Two-thirds of the Jewish population, local Jews and refugees alike, were arrested and deported, including the residents of the old-age home. A census of the Jewish population of the city conducted in June 1941 showed only 1,198 persons originating from Bordeaux or from southeastern France out of a total of 5,177; most were refugees from other parts of France and even from abroad. Between July 1942 and February 1944, 1,279 Jews were deported from Bordeaux by the Germans. A monument has been erected in their memory. In January 1944, French Fascists ransacked the great synagogue, which the Nazis had turned into a detention camp where the victims of their roundups awaited deportation. After the war, the survivors of the Bordeaux Jewish community reconstructed the synagogue with the aid of photographs and eyewitness accounts. When the task was completed 12 years later, the Bordeaux synagogue (which was originally built in 1882) was restored to its former renown as the largest (1,500 seats) and most beautiful Sephardi synagogue in France. Meanwhile the Jewish population increased with the arrival of new members, including a new Ashkenazi congregation. In 1960 there were 3,000 Jews in the community, and with the arrival of Jewish immigrants from N. Africa, the population doubled, with 5,500 persons in 1969. Bordeaux, the seat of a Chief Rabbinate, maintains a community center and a network of Jewish institutions.

BORDJEL (Burgel), Tunisian family of community leaders and scholars. In the 17th century ABRAHAM amassed a large fortune in Leghorn and returned to Tunis. His son NATHAN (I) (d. 1791), a student of Isaac *Lumbroso, wrote *Hok Natan* (Leghorn, 1776–78), reprinted in the Vilna edition of the Talmud. A rabbinical authority, Nathan was consulted by rabbis from Erez Israel and elsewhere. He died in Jerusalem.

His son ELIJAH HAI (I) wrote *Migdanot Natan* (Leghorn, 1778) in two parts: commentaries on the Talmud and Maimonides' *Yad Hazakah*; and treatises and funeral orations. Elijah's son JOSEPH (1791–1857) supported a yeshivah at his own expense and had many disciples. He left two important works: *Zara de-Yosef* (1849) and *Va-Yikken Yosef* (1852). His brother NATHAN (II), scholar and philanthropist, published the first of these works and added a preface. His nephew ELIJAH HAI (II) (d. 1898), *caid* (*Maggid*) and chief rabbi of Tunis, published the second. SOLOMON, *caid* in 1853, had great influence on the bey. MOSES (d. 1945) was highly respected for his knowledge, piety, and authority. During the Nazi occupation, Moses served in the difficult position of a leader of the Tunis community.

BORENSTEIN, SAM (1908–1969), Canadian artist. Borenstein was born in Kalvarija, Lithuania. At four he moved to Suwalki, Poland, where his father, a rabbinical scholar, had a job with the Singer Sewing Machine Company. In 1921, he immigrated to Montreal, Canada where he worked for 15 years in garment factories. Borenstein studied art in his spare time at the Monument National from 1928 to 1929 and by the 1930s he was exhibiting in group and solo exhibitions in Montreal and Toronto.

Borenstein's paintings transmuted the ordinary reality of the mainly Jewish working-class district of Montreal where he lived into colorful images of material and natural energy. In addition to painting portraits of his family, Montreal Yiddish poets, and other artists, during the 1940s Borenstein began to concentrate on landscape. His paintings of rural Quebec transformed the Laurentian villages into idealized images of town life reminiscent of his memories of the shtetls of Eastern Europe. In his landscapes, Borenstein's focus was on how the landscape was changed by the sun and wind, as well as on autumnal hues and seasonal aspects such as the color and texture of ice and snow. Borenstein believed that the earth was a cosmic manifestation reflected in individual consciousness, where even the simplest forms of nature could speak directly to the artist. "Art," he said, "is my religion. Just as one prays, so does one paint – for spiritual satisfaction."

Borenstein became an antiquarian dealer who played a pivotal role in developing the first public collection of Judaic ceremonial objects in Canada. This collection is today housed in the Aron Museum located at Temple Emanu-El-Beth Shalom in Montreal. *The Colours of My Father: A Portrait of Sam Borenstein* (1991) was an animated film by his daughter, Joyce Borenstein, and produced by the National Film Board of Canada and Imageries Inc. The film won nine international awards and was nominated for an Academy Award.

[Loren Lerner (2nd ed.)]

BORGE, VICTOR (originally **Borge Rosenbaum**; 1909–2000), Danish-U.S. satirical comedian. Born in Copenhagen, Borge was the youngest of five sons of the musicians Frederikke and Bernhard Rosenbaum. His father played first violin with the Royal Danish Philharmonic Orchestra for 35 years and his mother, a pianist, began teaching her son to play the piano when he was three. Recognized as a child prodigy, Borge was awarded a full scholarship to the Royal Danish Academy of Music at the age of nine. He debuted professionally by the age of 13. He made his debut as a comedian at 23.

During the 1930s Borge became one of Scandinavia's most popular artists, developing a unique blend of humor and music. He toured Europe extensively, and by the late 1930s had incorporated anti-Nazi humor into his act. Hitler placed him at the top of his personal list of Enemies of the Fatherland. When the Germans invaded Denmark in 1940, Borge was on a concert tour in Sweden with his American-born wife, Elsie, and they fled to Finland. Through Elsie's American citizenship, the Borges secured one of the last places aboard the last passenger ship to leave Europe before World War II, and they escaped to America.

In the United States, Borge learned English by watching movies and memorizing the dialogue. He was soon featured on Bing Crosby's radio program *Kraft Music Hall*.

Borge created the classic routine known as "phonetic punctuation," in which he inserted bizarre vocal sounds into his monologue to indicate commas, periods, and question marks. Another comedic caper was to slide off the piano bench when he first sat down to play. Affectionately referred to as the "Great Dane," Borge took his blend of classical music and comedy on the road, appearing in nightclubs, concert halls, and New York's Carnegie Hall. In 1946 he hosted NBC Radio's *The Victor Borge Show* and by 1948 was a frequent guest on Ed Sullivan's radio show *Toast of the Town*. In 1953 Borge launched his one-man Broadway show *Comedy in Music*, which ran until 1956. With 849 performances, the show was entered in *The Guinness Book of World Records* as the Longest-Running One-Man Show.

Borge made his television debut on *The Ed Sullivan Show* in 1949 and appeared often on the highly rated variety program. He later hosted his own TV comedy-variety program, *The Victor Borge Show* (1951). He was a guest on many other TV shows as well, hosted by such entertainers as Dean Martin, Andy Williams, and Johnny Carson. In 1956 Borge was nominated for an Emmy for Best Specialty Act but was bested by pantomime legend Marcel *Marceau. In a more serious vein, Borge also performed as soloist and conductor with many leading symphony orchestras. In 1998 he conducted the Royal Danish Philharmonic Orchestra in a Royal Command Performance of Mozart's *The Magic Flute*.

Dedicated to noble causes, Borge was active in the civil rights movement. In 1963 he and Richard Netter created the Thanks To Scandinavia Scholarship Fund in recognition of the Scandinavian citizens who risked their lives to save thousands of Jews during the Holocaust. The multimillion-dollar

fund brought more than a thousand Scandinavian students and scientists to the United States to study and conduct research. Borge was awarded a Medal of Honor by the Statue of Liberty Centennial Committee; he was knighted by Denmark, Finland, Iceland, Norway, and Sweden; and he was honored by the United States Congress and the United Nations. In 1991 he received the Humor Project's International Humor Treasure award, and in 2000 was the first person selected for the Kennedy Center Honors.

Borge released a number of recordings and video programs, including *The Best of Victor Borge*, a collection of his classic routines. It sold three million copies worldwide during its first year.

Borge co-wrote several books with Robert Sherman, among them *My Favorite Intermissions* (1971), *Victor Borge's My Favorite Comedies in Music* (1980), and *Borge's Musical Briefs* (1982).

[Ruth Beloff (2nd ed.)]

BORGHI, LAMBERTO (1907–2000), Italian educator and author. Born in Leghorn, Borghi studied at the University of Pisa. He went to the U.S. as a refugee in 1938. In 1948 he returned to Italy to fill the chair of pedagogy at the Universities of Pisa, Palermo, and Turin. From 1954 until 1982 he was full professor at the University of Florence and directed its Institute of Pedagogy. Borghi showed a keen interest in comparative education and wrote extensively on Italian education. He was the most famous follower of John Dewey's methodology, focusing his attention on democratic and lay pedagogy. In two of his books, *Educazione e autorità nell'Italia moderna* (1951) and *Educazione e scuola nell'Italia d'oggi* (1958), he discussed the nature and problems of the Italian educational system, including education in the arts and sciences and the limitations imposed by inherited social and economic status on educational opportunities. His books include *Umanismo e concezione religiosa in Erasmus di Rotterdam* (1936); *Education in the U.S.A.* (1949); *John Dewey e il pensiero pedagogico contemporaneo negli Stati Uniti* (1951; Eng. tr., 1952); *Saggi di psicologia dell'educazione* (1951); *Il fondamento dell'educazione attiva* (1952); *Il metodo dei progetti* (1952); *L'educazione e i suoi problemi* (1953); *L'ideale educativo di John Dewey* (1955); and *Educazione e sviluppo sociale* (1962). His last work, *Educare alla libertà* (1992), is a synthesis of his theories and an anthology of European and American essays on the topic of education.

BORGIL, ABRAHAM BEN AZIZ (d. 1595?), Turkish rabbinical scholar. Borgil studied in Salonika for many years under Samuel b. Moses *Medina, later becoming head of the yeshivah of Nikopol (Bulgaria), where he employed a unique approach to the teaching of Talmud. His yeshivah became fa-

mous and the city became a center of talmudic studies. Borgil's novellae on tractates *Bava Kamma*, *Bava Mezia*, *Ketubbot*, and *Kiddushin* were published under the title *Lehem Abbirim* (Venice, 1605); the novellae on *Yevamot*, which are attributed to him, are probably not his. His novellae on *Hullin* are extant in manuscript (Moscow, Guenzburg Ms. no. 125). In his novellae, Borgil does not cite his contemporaries or *rishonim* but bases himself, for the most part, upon the tosafists, and, to a certain extent, upon Rashi. It was Borgil's practice to refer to manuscripts of the Talmud for text verification.

BORINSTEIN, LOUIS J. (1881–1972), U.S. merchant and civic leader. Borinstein was born in Indianapolis, Indiana. He entered business there and became a partner in the A. Borinstein wholesale iron company in 1920. In 1924 he became vice president of the Indianapolis Machinery and Supply Company. Active in civic affairs, Borinstein was president of the Indianapolis Chamber of Commerce (1931–36), National Recovery Administration chairman for Indianapolis, and a member of several state and municipal commissions. A president of his B'nai B'rith lodge (1917–18), Borinstein directed the Jewish Welfare Fund and managed Indiana campaigns of the United Jewish Appeal and the American Jewish Joint Distribution Committee. He served as a trustee of the Cleveland Orphan Home (from 1919) and director of the National Hospital in Denver.

[Edward L. Greenstein]

BORIS, RUTHANNA (1918–), U.S. dancer and choreographer. Boris studied ballet at the Metropolitan opera ballet school where she made her debut in *Carmen*, in 1935, and was prima ballerina from 1937 to 1942. She performed a wide range of classical and contemporary ballet roles as soloist and principal dancer for the Ballets Russes (1943–1950) and also choreographed for them *Cirque des deux* (1947) and *Quelques fleurs* (1948). Her choreography, showing a gift for comedy, included *Cakewalk* (1951), created for the New York City Ballet, and she danced for the Broadway musical *Two on the Aisle*. She was director of the Royal Winnipeg Ballet, 1956–1957, and from 1965 she was professor of dance at the University of Washington.

BORISLAV (Pol. *Boryslaw*), city in Ukraine (until 1939, Galicia, Poland). Borislav, which at the end of the 19th century was nicknamed the "California of Galicia," in 1920 supplied 75% of the oil in Poland. The industry was pioneered by Jews. Around 1880 the numerous wells they founded employed about 3,000 Jewish workers from Borislav and the vicinity. At this time, large Austrian and foreign banks, subsidizing modern techniques, began to squeeze out smaller enterprises and Jewish

labor, although a number of wells were still Jewish-owned. In 1898 some of the unemployed workers petitioned the Second Zionist Congress to grant them the means to immigrate to Erez Israel. At the request of Theodor Herzl, the Alliance Israélite Universelle assisted approximately 500 workers to leave for the United States. The Jewish community of Borislav had been affiliated with the *Drogobych *kehillah* and became independent in 1928. From 1867 to 1903 Borislav formed part of an Austrian parliamentary electoral district in which the majority of the constituents were Jewish. In 1887 the first society of Hovevei Zion was established in Borislav. In 1860 the Jewish population of Borislav numbered about 1,000; in 1890, 9,047 (out of a total of 10,424); in 1910, 5,753 (out of 12,767); in 1921, 7,170 (out of 16,000); and in 1939 over 13,000.

[Nathan Michael Gelber]

Holocaust and Postwar Periods

When the town came under Soviet administration in 1939, the Jewish institutions were disbanded and political parties ceased to function. Jewish merchants were forced out of business, while artisans were organized into cooperatives. Refugees from western Poland were deported from Borislav to the Soviet interior in the summer of 1940. When the war with Germany broke out (June 1941), many young Jews joined the Soviet army, and others fled with the retreating Soviet authorities. The town fell to the Germans on July 1, 1941, and the following day the Ukrainians staged a pogrom against the Jewish community, killing more than 300 Jews. A *Judenrat was set up, headed by Michael Herz. The first *Aktion* took place on November 29–30, 1941, when 1,500 Jews were murdered in the forests of two neighboring villages. The following winter (1941–42), hunger and disease made inroads on the Jewish community. In 1942 able-bodied Jews were sent to the labor camps of Popiele, *Skole, and *Stryj, and in August 1942 about 5,000 Jews were sent to the *Belzec death camp. Two separate ghettos were established, followed by a series of round-ups in which hundreds were sent to Belzec. Toward the end of 1942 a special labor camp was established in Borislav for the oil industries. The extermination of the Jewish community continued with the execution, at the city slaughterhouse, on February 16–17, 1943, of some 600 women, children, and elderly people. During May–August 1943 the remaining Jews were killed and only some 1,500 slave laborers were temporarily spared. Jews who tried to hide in the forests and in the city itself were mostly caught and killed by the Germans, with the cooperation of local Ukrainians belonging mostly to the bands of Stefan Bandera. In April–July 1944 the local labor camp was liquidated and the last surviving members of the Jewish community were brought to *Plaszow labor camp, from where they were transported to death or concentration camps in Germany. There were resistance groups among the young Jews of Borislav, but the only detail known about them is the fact that one of their leaders, Lonek Hofman, was killed while attempting to assault a German foreman. When Soviet forces took Borislav on August 7, 1944, some 200 Jewish survivors

were found in the forests and in local hideouts. Another 200 Jews later returned from the Soviet Union and from German concentration camps. A monument was erected to the Jews who fell in World War II but was allowed to fall into disrepair. The Jewish cemetery was closed down in 1959. In 1970 the number of Jews in Borislav was estimated at 3,000. There was no synagogue. Most of the Jews left in the large-scale emigration of the 1990s.

BORISOV, town in Minsk district, Belarus. Jews were living there in the 17th century; 249 Jewish taxpayers are recorded in Borisov in 1776. The main Jewish occupations were trade in grain and timber, sent northward by river to Riga via the Dvina and to southern Russia via the Dnieper. Jews owned all the town's match factories, most of whose workers were Jewish. Around 1900 Borisov became a center of Bund activity. The Jewish population numbered 2,851 in 1861; 7,722 in 1897 (54.2% of the total); and 10,617 on the outbreak of World War I, subsequently decreasing to 8,358 (32.3%) by 1926. In the summer of 1920 Polish soldiers staged a pogrom, killing and injuring 300 Jews. During the Soviet period many Jews were employed in artisan cooperatives and factories. In 1939 there were 10,011 Jews (total population 49,108). The Germans entered Borisov on July 2, 1941. In August, 739 Jews were murdered, followed by 439 being labeled as "robbers and saboteurs." Another 176 were murdered for opposing the creation of a closed ghetto, where about 7,000 Jews were packed in. On October 20–21, 1941 (October 7–9 according to another source), over 7,000 Jews were murdered at the airport. In October 1943 the Germans opened the mass graves nearby and burned the bodies.

[Simha Katz and Yehuda Slutsky / Shmuel Spector (2nd ed.)]

BORISOV, ANDREY YAKOVLEVICH (1903–1942), Russian Orientalist. Borisov made important contributions to the history of medieval Jewish philosophy. Among the *genizah* manuscripts preserved in Leningrad, he discovered manuscripts of Isaac Israeli and the Karaite Yūsuf al-Bāsir. His works include an article on the tractate *Ma'ani al-Nafs*, the so-called Pseudo-Bahya (in the USSR Academy of Sciences, *Izvestiya (Otdeleniye obshchestvennykh nauk*; 1929), 775–97), and on Moses ibn Ezra's poetry (*ibid.*, no. 4 (1933), 99–117). He also wrote shorter articles on problems in medieval Jewish literary history.

[Samuel Miklos Stern]

BORMANN, MARTIN (1900–?), Nazi leader. Bormann was born in Halberstadt; his family were postal workers. He enlisted in World War I but too late to reach the front. He joined the Nazi Party in 1925, after having been active in right-wing organizations and having been sentenced to a year in prison. In 1926 he was appointed head of Nazi press affairs and deputy regional commander of the SA. In 1928 he became party treasurer in Munich. By 1933, when he was elected to the Reichstag, he had become chief of staff to Rudolf Hess, Hitler's deputy. In May 1941 he replaced Hess, who had flown to London, as administrative head of the Party chancellery, which gave him control over Hitler's schedule and thus considerable power. He was active in the Euthanasia program, in the struggle with the churches, and the seizing of art work in the occupied territories. By a decree of Jan. 24, 1942, Bormann was given control over all laws and directives issued by Hitler. As the Fuhrer became preoccupied with the war, Bormann gained considerable control over domestic affairs in Germany. His representatives participated both at the *Wannsee Conference on Jan. 20, 1942, and at the March 6, 1942, conference that dealt with the fate of Jewish partners in mixed marriages and their offspring. According to the judgment of the International Military Tribunal, Bormann took part in the discussions which led to the removal of 60,000 Jews from Vienna to Poland, signing the order of Oct. 9, 1942, in which he declared that the elimination of Jews from Greater Germany could be solved only by applying "ruthless force" in the special camps in the East. On July 1, 1943, he cosigned an ordinance withdrawing Jews who violated the law from the jurisdiction of the courts and placing them under the jurisdiction of the Gestapo. Goering included him in the group of five "real conspirators" along with Hitler, Himmler, Goebbels, and Heydrich. He was with Hitler until the end, witnessing his marriage to Eva Braun and the suicide of Goebbels and his family, and even informing Admiral Donitz that he had been appointed the Fuehrer. He even attempted to conduct negotiations with the Soviet Union and then disappeared. In 1946 Bormann, who was the "Grey Eminence" of the Third Reich, was sentenced to death in absentia by the International Military Tribunal at Nuremberg. His exact whereabouts after the war remained unknown. The attorney-general of Frankfurt opened a case against Bormann and a reward of 100,000 DM was posted for information leading to his arrest. In 1973 the West German government accepted the report of a forensic expert who examined a body purported to be Martin Bormann's and declared him dead.

[Yehuda Reshef / Michael Berenbaum (2nd ed.)]

BORN, MAX (1882–1970), German physicist and Nobel Prize winner. A son of the anatomist Gustav Born, he was born in

Breslau and lectured on physics in Berlin (1915), Frankfurt (1919), and Goettingen (1921). Although he had dissociated himself from the Jewish community, Born was dismissed from Goettingen in 1933 because of his Jewish origins. He settled in England working first at the Cavendish Laboratory, Cambridge, and then from 1936 lecturing in applied mathematics at Edinburgh University. On his retirement from teaching in 1953, he returned to Germany.

Born played an important role in the development of modern theoretical physics. He developed the modern mathematical explanation of the basic properties of matter but his outstanding achievement was his work on quantum theory and the use of matrix computations. He was the first to recognize that the function of Schroedinger's waves could be explained as a statistical function which describes the probability of a certain behavior of a solitary molecule in space and time. He examined the problems of probability and wrote a number of books on physics, including *Aufbau der Materie* (1922²), *Atomtheorie des festen Zustandes* (1923), *Atommechanik* (1925), *Moderne Physik* (1933), *Atomic Physics* (1947⁴), and *A General Kinetic Theory of Liquids* (1949). Born was also concerned with the general philosophical problems of natural science, an interest reflected in his works *The Restless Universe* (1936) and *Natural Philosophy of Cause and Chance* (1949). His discussion with *Einstein (a close friend of his) on the meaning of cause and chance in modern science was summarized in his article "Physics and Metaphysics" (published in *Penguin Science News*, 17 (1950), 9–27). In 1954, Born and W. Bothe were awarded the Nobel Prize for physics for their work on the mathematical basis of quantum mechanics. Eight of Born's essays, revealing his enduring interest in the ethical problems underlying man's vast increase in power through science, were published in 1968 as *My Life and My Views*.

[Maurice Goldsmith]

BORNFRIEND, JACOB (Jakub Bauernfreund; 1904–1976), painter. Bornfriend was born in a Slovak village. Exposed to the art movements of the period between the two world wars, Bornfriend tried and then abandoned impressionism, cubism, and surrealism. He attained a fair standard in each without finding an individual style. In 1939 Bornfriend escaped to England and worked in factories for six years. He returned to his easel with a personality of his own, combining the formal influence of Picasso with the spiritual influence of Jankel *Adler. Bornfriend retained the warmth and bright colors of his early life, combining a sense of strict laws of form with a deep feeling for human pathos.

[Avigdor Dagan]

BORNSTEIN, ELI (1922–), Canadian artist. Born in Milwaukee, Wisconsin, Bornstein studied in the United States

and with Fernand Léger in Paris. He went to Canada in 1950, and later became head of the department of art at the University of Saskatchewan, Saskatoon. Bornstein headed the structurist school, which was centered in Saskatoon, and edited its magazine *The Structurist*. The structurists created a pure, geometric abstract form of art which they felt to be a development of the tradition of Cézanne and the cubists. Their favorite art form was the structurist relief, “a new synthesis of the color of painting and the actual form and space of sculpture.” Bornstein received many commissions to execute such reliefs for public buildings and created one in five parts for an exhibition commemorating the centenary of the Canadian Confederation in 1967.

[Yael Dunkelman]

BORNSTEIN, HAYYIM JEHIEL (1845–1928), authority on the Jewish calendar. Bornstein was born into a ḥasidic family in Koziénice, receiving a traditional Jewish education and studying European languages and secular subjects, especially mathematics, on his own. He worked as an accountant in a sugar factory in the village of Manishev and then settled in Warsaw in 1881. From 1886 on he was secretary of the synagogue in Warsaw. Bornstein’s knowledge of chronology, history, and mathematics enabled him to open new avenues in the study of the development of the Jewish calendar. He based his theories on several documents in the Cairo *Genizah*, the importance of which he was the first to recognize. Bornstein advanced the novel claim that the details of the Jewish calendar, with its small cycle of 19 lunar years and its method of reckoning the conjunction of the planets, had not been calculated and accepted until sometime between the mid-eighth and mid-ninth century C.E., and not in the period of the *amora'im* under *Hillel II, as had been generally believed – much less in the first century C.E., as claimed by the German chronologist F.K. Ginzler. Bornstein published “*Parashat ha-Ibbur*” (*Ha-Kerem*, 1887), “*Maḥaloket Rav Sa’adyah Ga’on u-Ven Meir bi-Kevi’at Shenot 4672–4674*” (*Sefer ha-Yovel Li-khevod Nahum Sokolov*, 1904), “*Ta’arikhei Yisrael*” (*Ha-Tekufah*, 1921, nos. 8, 9), and “*Ḥeshbon Shematim ve-Yovelot*” (*ibid.*, no. 11). M. Teitelbaum’s study of *Shneur Zalman of Lyady incorporated an appendix by Bornstein on Shneur Zalman’s knowledge of geometry, astronomy, and natural science. Bornstein also translated several classics of general literature into Hebrew, among them the Polish poet Adam Mickiewicz’s *Farys* (in N. Sokolow (ed.), *Sefer ha-Shanah* (1900), 326–34), and Shakespeare’s *Hamlet* (1926).

[Abraham Halevy Fraenkel]

BOROCHOV, BER (Dov; 1881–1917), Socialist Zionist leader and foremost theoretician; scholar of the history, economic structure, language, and culture of the Jewish people. A brilliant analyst, in debate as well as in writing, Borochov influenced wide circles of the emerging Jewish labor movement, first in Russia, later in Central and Western Europe and the U.S. He postulated the concept of an organic unity between scientific socialism and devotion to the national needs of the Jewish people. He thus freed many young Jewish intellectuals from their preoccupation with the seemingly irreconcilable contradiction between social revolution and Zionism. Borochov’s main theoretical contribution was his synthesis of class struggle and nationalism, at a time when prevalent Marxist theory rejected all nationalism, and particularly Jewish nationalism, as distinctly reactionary. Borochov regarded the mass migration of Jews in his time as an inevitable elemental social phenomenon, expressing the inner drive of the Jewish proletariat to seek a solution to the problem of its precarious existence in the Diaspora, where it is uprooted and separated from the basic processes of production. The task of Socialist Zionism, Borochov maintained, was to prepare “a new territory,” i.e., Erez Israel, through a pioneering effort, for the concentration of the masses of Jewish migrants. This would prevent the perpetuation of the Diaspora through continued dispersion in alien lands and economies, creating instead a Jewish national economic body as a framework for the natural class struggle of the Jewish proletariat.

Biography

Borochov was born in Zolotonosha, Ukraine, and grew up in Poltava, where he was educated in a Russian high school. A studious youth, he early displayed a tendency toward philosophic thought and was influenced by the revolutionary socialist trends of his period. Like most Jewish high school graduates, he was denied entrance to a Russian university, which in any case he rejected as alien to his spirit, and embarked on a strenuous process of self-education. He gained erudition in various fields and fluency in several languages. Borochov joined the ranks of the Russian Social Democratic Party, but his interests in specifically Jewish problems led him, in 1901, to establish the Zionist Socialist Workers Union at Yekaterinoslav. The association, which was active in organizing Jewish self-defense and in promoting the interests of Jewish workers, was opposed by both the Russian Social Democrats (who refused to recognize the need for an independent Jewish workers’ movement) and some Zionist leaders (who disliked the association of Zionism with socialism).

During the controversy in the Zionist movement about the Uganda Scheme, Borochov took a clear-cut “Palestinian” stand and cooperated closely with Menahem *Ussishkin and other leaders of the “Zion Zionists” who opposed any *territorialism other than in Erez Israel. Borochov traveled throughout Russia to convince the newly founded groups of *Po’alei Zion against territorialist tendencies, which seemed to be

gaining increasing influence in Socialist Zionism. He was a delegate to the Seventh Zionist Congress (1905), leading the faction of those Po'alei Zion delegates who were "faithful to Zion." During the ensuing debates among Socialist-Zionists over the territorial issue, the political struggle in the Diaspora, and Sejmism, it was largely Borochov who laid the ideological and organizational foundations of the Po'alei Zion movement. At a conference in Poltava (1906), the movement was renamed the "Jewish Workers' Social Democratic Party Po'alei Zion." Borochov crystallized its doctrine in his treatise "Our Platform" (published as a series in the Po'alei Zion Party organ *Yevreyskaya Rabochaya Khronika* from July 1906) and in supplementary articles and debates with other trends in the Jewish labor movement over the role of the Jewish proletariat and the national problem. In 1907, during the Eighth Zionist Congress at The Hague, Borochov participated in the founding of the World Union of Po'alei Zion, as a separate union (*Sonderverband*) in the World Zionist Organization. After the Eighth Zionist Congress, Borochov insisted on the withdrawal of Russian Po'alei Zion from the Zionist Organization in order to preserve the proletarian independence of Socialist Zionism. From 1907, when he left Russia, until the outbreak of World War I, Borochov worked as a publicist to further the aims of the World Union of Po'alei Zion in Western and Central Europe. He continued his philosophical studies and research into Yiddish language and literature. He left Vienna in 1914 and arrived in the U.S., where he continued his activities as a spokesman for the American Po'alei Zion as well as for the World and American Jewish Congress movements. He was also editor of and contributor to the New York Yiddish daily *Di Warheit*. With the outbreak of the Russian Revolution, Borochov returned to Russia, stopping en route in Stockholm to join the Po'alei Zion delegation at a session of an international Socialist Commission of neutral countries. There he helped formulate the demands of the Jewish people and working class in the manifesto for the postwar world order. When he arrived in Russia, Borochov became intensely involved in public activity during the stormy period before the October Revolution. In August 1917, in an address to the Russian Po'alei Zion Conference, Borochov called for socialist settlement in Erez Israel. In September 1917, he read a paper to the "Congress of Nations" in Kiev on "Russia as a Commonwealth of Nations." In the course of a speaking tour he contracted pneumonia and died in Kiev. His remains were taken to Israel in 1963 for reinterment at the Kinneret cemetery, alongside the graves of other founders of Socialist Zionism. A workers' quarter near Tel Aviv, Shekhunat Borochov, now part of the township of Givatayim, was named after him.

Theory

Borochov's Socialist Zionist credo was never dogmatic, parochial, or static; it was universal and dynamic, the evolving product of continuous inquiry and study. In an attempt to analyze the Jewish situation and its problem along Marx-

ist ideological and methodological lines, Borochov sought to probe "beyond the cultural and spiritual manifestations and to examine the deeper concealed foundations of the Jewish problem." The root of the problem, Borochov said, was the divorce of the Jewish people from its homeland. He considered a people "without a country, without an independent economic basis, and trapped in alien economic relations" to be a powerless national minority. The Diaspora was responsible for the fact that the "social physiology of the Jewish people is organically sick." It created the historic conditions in which Jewry was torn between the process of assimilation into, and the isolation from, the host society. The Diaspora had thus divided Jewry's strength, and, because of the ultimate prevalence of "alienating forces," exacerbated the tension between Jews and their non-Jewish neighbors. The growing Jewish migration, while providing relief, was also testimony to Jewry's prolonged and aching conflict between ends and available means. The Jewish worker in the Diaspora occupied a particularly anomalous position. Since he lived in an economy in which petty, backward production predominated and was denied work in the modern, heavy industry, he had a narrow labor front and an abnormal, insufficient "strategic base" for his class struggle. As long as the Jewish economy was detached from those vital branches of production, which are "the axis of the historical wheel," the proletarianization of the Jews would continue to be a slow, stunted, and uneven process.

In defining the Jewish problem, Borochov, while keenly aware of the constant threat of antisemitic outbursts in the Diaspora, never designated antisemitism as the fundamental basis or motivation of Zionism. He chose to view the whole of the Diaspora as a social aberration, reducing the Jews to a permanent state of economic inferiority and political helplessness. Thus, when proposing a solution to the problem, Borochov refused to believe that civil emancipation in the Diaspora, whether in a capitalist or socialist society, could, in itself, solve the Jewish problem. "Even when the State of Freedom will be established – and counterrevolution will be only a memory – the Jewish problem will still have to wait a long time for a specific answer." Assimilation, which Borochov attacked both theoretically and practically, was no less an anathema, whether in its bourgeois inception or in later socialist forms. The origins of assimilation – the mute antagonism between the successful individual and his miserable people – made it morally suspect, and an objective impossibility – the insurmountable objection of non-Jewish society – made it a dangerous daydream. Instead, the solution Borochov envisaged was a unique one, addressed to the particular needs of the Jews: only auto-emancipation, i.e., national self-liberation, could restore "to Jewish existence a healthy socio-economic basis, which is the keystone of national existence and national culture and the basis for a fruitful class struggle and socialist transformation of national life." This, he believed, was the Jewish people's particular road to socialist internationalism, a

development which would herald the inevitable exodus from the Diaspora.

For Borochov, the Jewish renaissance and socialism were necessarily mutually interrelated, since Zionism and socialism together served the same purpose – making Jewish life productive again. Zionism was necessary because Jewish migratory movements disperse the Jewish masses into existing societies and economies, thus continuing the traditional Diaspora, instead of concentrating them in their own new territory. The first task, therefore, was to create the conditions necessary for an independent, sovereign national life, through a new trend in Jewish migration toward a new territory. The territory in question was destined to be Erez Israel, Borochov said, for “the general pattern of Jewish dynamism” leads toward an ever-increasing “elemental” (*stychic*) migration to Erez Israel. But this “elemental” mass migration (both his followers and opponents differed over the exact implications of the term) was the culmination of an enterprise which was to evolve from an initial pioneering stage in Erez Israel. Thus, a positive, socialist, yearning for a pioneering way of life had to precede the mere recognition of the negative motives for an exodus from the Diaspora. This was the first task – the historic national mission – that Borochov assigned to the Jewish working class in the realization of Zionism. The Jewish worker was to be a “pioneer of the Jewish future,” builder of the road to a territorial homeland for the whole Jewish people.

During his contact with the Jewish population in Western Europe and in the U.S., Borochov broadened many of his earlier concepts. Thus, Erez Israel was to be not merely a strategic base for the class struggle of the Jewish proletariat, but a home for the entire Jewish people. Borochov, increasingly aware of the common fate of world Jewry and the universality of their problem in the Diaspora, also came to oppose any attempts to fragment Jewish history, as well as Jewish demography. He insisted that Jewish history was the chronicle of the Jewish masses’ uninterrupted sense of self-pride and will to struggle. He acknowledged the vulnerability of the Jews and analyzed their dangerous position in the face of national renaissance movements on the one hand, and national-social antisemitism in Europe, which he perceived even before World War I, on the other. Yet he remained insistent that future international developments also held out hopeful and exciting promises for the Jewish people.

Literary Works

Borochov’s literary efforts began in 1902 with a treatise “On the Nature of the Jewish Mind,” published in Russian in a Zionist almanac. His 1905 article on “The Question of Zionist Theory,” published in the Russian Zionist monthly *Yevreyskaya Zhizn*, decried the attempts of assimilationist Jews to reject Zionism and to rely on universal progress as the solution to the Jewish problem. Characteristically, Borochov raised the level of his polemics against the Uganda Scheme to one of fundamental principle, in his Russian treatise “On the Question of Zion and Territory” (1905). In it he introduced a materialist-historical

analysis of the Jewish problem, establishing Zionism as an elemental force produced by Jewry’s plight and sustained by its pioneering elements, becoming the true national liberation movement of the Jewish people. The pamphlet *Class Factors in the National Question*, which he published in the same year, was one of the first ventures at applying Marxist theory to the national question. Drawing a distinction between the nationalism of oppressed peoples and that of oppressing nations, Borochov investigated its expression at various class levels. He concluded that only the oppressing nationalism was “reactionary,” whereas nationalism of the oppressed did not obscure class consciousness. On the contrary, this latter nationalism, flourishing among the progressive elements, “impels them toward real liberation of the nation, normalization of the conditions and relationships of production, and the creation of necessary conditions for the true freedom of national self-determination.”

Borochov’s writings during the 1907–14 period retain special value as contributions to contemporary historiography. His thesis on “The Jewish Labor Movement in Figures” (published posthumously) is a penetrating and original statistical-sociological analysis of the “economic physiology” of the Jewish people. One of the central topics of his ideology, Jewish migration and its social implications, was treated in a brochure published in 1911 in Galicia. He contributed articles to the *Russian Jewish Encyclopedia* on various aspects of Jewish life and history. He wrote in 1908 “Virtualism and the Religious-Ethical Problem in Marxism” (published posthumously in 1920), a polemical tract against A. Lunacharsky’s “Socialism and Religion.” His essays “*The Tasks of Jewish Philology*” (1912–13) and “*The Library of the Jewish Philologist*” (a bibliography of 400 years of Yiddish research) marked his place among the scholars of Jewish language and culture. Borochov’s literary works revealed the wide range of his sustained creativity. There is a vast literature on Borochov the man, his life, and his teachings in Yiddish, Hebrew, and other languages. L. Levite et al. (eds.), *B. Borochov Ketavim*, 3 vols. (1955–66) is the best edition of his works; of special importance are the notes attached to each volume. Also in Hebrew is Z. Shazar (comp.), *B. Borochov, Ketavim Nivharim* (1944). There is a short selection in English edited by M. Cohen entitled *Nationalism and the Class Struggle* (1937). In Yiddish there are Po’alei Zion New York, *Geklibene Shriften D.B. Borochovs* (1935); B. Locker (ed.), *Geklibene Shriften* (1928); in German the anthology *Klasse und Nation: zur Theorie und Praxis des juedischen Nationalismus* (1932) and *Sozialismus und Zionismus – eine Synthese: Ausgewaehlte Schriften* (1932).

[Lev Levite]

BORODAVKA (Brodavka), ISAAC (16th-century), tax farmer and merchant living in Brest-Litovsk. A grant issued by King Sigismund August in 1560 entitled Borodavka and his associates to collect the duties on goods and merchandise passing through Minsk, Vilna, Novgorod, Brest, and Grodno for seven years. He was granted the salt monopoly for a similar term in 1561 and was permitted to build distilleries with a monopoly of production in Bielsk, Narva, and Kleszczele; in 1569 the Vilna mint was transferred to his control. These concessions excited the envy of Christian competitors, who instigated *blood libels against certain tax collectors employed by Borodavka. Although the charges proved groundless, one of the accused, Bernat Abramovich, paid with his life. The king consequently directed that henceforth all such accusations be made before the crown, and that those who made false accusations would be punished.

BORODIN (Gruzenberg), MICHAEL MARKOVITSCH (1884–1951), Russian communist politician. Born in Yanovitski, Belorussia, Borodin joined the Bund in 1901 but left it for the Bolshevik party two years later. In 1906 he went to England and in the following year to the U.S., where he became a member of the American Socialist Party. Borodin returned to Russia after the October Revolution of 1917 and worked for the Comintern. In 1922 he left for Britain again and was arrested in Glasgow. He was sentenced to six months' imprisonment for incitement and was then deported. From 1923 to 1927 Borodin was an adviser to Sun Yat-Sen, leader of the central committee of the Kuomintang, in China, where he was held in high esteem. When in 1927 the Kuomintang came under the domination of its right wing, led by Chiang Kai-Shek, Borodin was arrested and forced to leave the country. He went back to Russia to become deputy commissar for labor, but after 1932 he spent most of his time working as a journalist. He successively served as deputy director of the Tass news agency, editor in chief of the Soviet Information Bureau, and editor of *Moscow News*. In 1951 he fell victim to Stalin's reign of terror and was condemned to death. His reputation was posthumously rehabilitated in 1956.

BOROFSKY, JONATHAN (1942–). U.S. artist. Borofsky was born in Boston. At age eight he began studying art with Albert Alcaj, a Holocaust survivor. Early questions about the number tattooed on Alcaj's arm would later influence the subject matter of Borofsky's art. Borofsky received a B.F.A. from Carnegie Mellon University (1964) and an M.F.A. from Yale University (1966). After moving to New York in 1966, Borofsky became interested in Conceptual Art. Since 1969 he has been numbering his work. This ongoing project began as a stack of paper, but has expanded to all of his creations. These

coded references to the tattoos of Holocaust inmates now reach the millions.

Borofsky describes his art as autobiographical. His dreams became source material in 1973, often including recurring figures such as the Hammering Man, Man with a Briefcase, and the Running Man. First appearing around 1973, the anxiety-ridden Running Man serves as a surrogate self-portrait. Borofsky's 1977 drawing *Hitler Dream* (no. 2454568) shows a Running Man being chased by one of Hitler's soldiers accompanied by text that begins "I dreamed that some Hitler-type person was not allowing everyone to roller-skate in public places." This was Borofsky's first overt reference to the Holocaust. Since then he has readily identified himself as Jewish and often uses the Holocaust as a subject.

His multimedia site-specific installations employ myriad images, including drawings, sculptures, and found objects. He has had several international solo exhibitions at such venues as the Israel Museum (1984) and the Boston Museum of Fine Arts (2000). From 1969 to 1977 Borofsky taught at the School of Visual Arts in New York. In 1976 he moved to California, and since 1977 he has been teaching at the California Institute of the Arts in Valencia.

[Samantha Baskind (2nd ed.)]

BOROVOY, A. ALAN (1932–), Canadian lawyer, human rights activist. Borovoy was born in Toronto, and educated at the University of Toronto, where in 1956 he completed a degree in law. Active in campus Jewish life, he was vice president of the Hillel Foundation and founding editor of its journal. He personally experienced the antisemitism that tarnished Canadian democracy during his childhood. Deeply committed to the struggle against antisemitism, Borovoy became convinced that "the best way to protect the Jewish people was to promote greater justice for *all* people." In 1959 he became director of the Toronto Labour Committee for Human Rights, established by the Jewish Labour Committee of Canada, and later of the Ontario Labour Committee for Human Rights and the Canadian Labour Congress's National Committee for Human Rights. He also participated in the Jewish community's Joint Community Relations Committee, the body that pioneered Canada's earliest human rights coalitions. In 1968 he joined the Canadian Civil Liberties Association as general counsel, serving as its chief spokesperson and earning a reputation as Canada's foremost champion of human rights and civil liberties.

An eloquent speaker with an engaging sense of humor and abiding commitment to exposing injustices, he campaigned tirelessly for the "bedrock liberal principles" of freedom of expression, equality, and procedural fairness. He was prominent in exposing conditions on Native reserves, racial discrimination in employment and accommodations and battled to halt police misconduct, the involuntary treatment of

psychiatric patients, religious instruction in public schools, invasion of personal privacy, and other abuses of authority and human rights. Abjuring violence or even civil disobedience, Borovoy designed, in his words, tactics “to raise hell without breaking the law.” Through public rallies and marches, briefs and delegations dispatched to governments, appearances before public inquiries, and above all research and presentation of factual evidence documenting unfair practices, his efforts led to improved legal protections for all Canadians. He appeared regularly on television, wrote three books and numerous articles, and contributed columns to the *Jewish Standard*, the *Toronto Star*, the *Globe and Mail*, and other Canadian journals. He was visiting lecturer at Dalhousie, Windsor, York, and Toronto law schools and the Toronto Faculty of Social Work. He received honorary degrees from Queen’s, York, Toronto, and the Law Society of Upper Canada, the Order of Canada (1982), the Lord Reading Society Human Rights Award (2003), and Carleton University’s Kroeger Award for Ethics (2003). His book *When Freedoms Collide* was short-listed for the prestigious Governor General’s Award in 1988.

[James Walker (2nd ed.)]

BOROVOY, SAUL (1903–1989), Soviet historian dealing mainly with the history of Ukrainian and Russian Jewry, as well as the financial history of Russia. He was born into a well-to-do Odessa family (his father was a lawyer) that was on a friendly footing with the city’s leading Jewish cultural figures. Borovoy graduated from a business college and the university’s law faculty, studied at the Archaeological Institute, and worked from 1922 at the Jewish academic library. In 1927–30 he worked in the central academic library in Odessa, and earned his Ph.D. in pedagogy, publishing his thesis on academic libraries in Kiev in 1930. In 1938 he received a Ph.D. in history and economics. From 1934 to 1977, apart from the war and the 1952–54 period, when he was accused of cosmopolitanism and dismissed, he was lecturer at the Institute of Economics in Odessa. Between the world wars, when the Soviet authorities encouraged the Marxist approach to Jewish history, Borovoy produced several works on Jewish themes in Ukrainian, Russian, Yiddish, and Hebrew. Among his important works is “Jewish Farm Colonies in Old Russia” (1928). In his 1940 work “Descriptions of the History of the Jews in the Ukraine in the 16–18th Centuries,” he argued that during the *Chmielnicki uprising the Jews were not only victims but also a party to the war, the rich siding with the Poles and the poor with the Cossacks, a “class approach” thesis rejected by most historians. After he returned to Odessa in 1944 he wrote about the Holocaust of the Jews of Odessa (published only in 1990 in the Yiddish magazine *Sovietish Heimland*). After the liquidation of Jewish culture in 1947–48 Borovoy had to stop his research in Jewish history and started dealing with economic-historical problems. He wrote about Russian banks in the 17–18th centuries, private commercial banks in the Ukraine at the end of the 19th and the beginning of the 20th century, and the economic views of the Decembrists and of

various writers and poets as expressed in their works (such as Pushkin). In the 1960s and 1970s he returned to Jewish historical problems. He wrote several entries, like Gretz, Dubnov, Pale of Settlement, in the *Encyclopedia of History*. His “History of Jewish Public Thought in the First Half of the 19th Century” remained unpublished. Near the end of his life he wrote a letter to Communist Party Secretary Yakovlev criticizing Romanenko’s “Essence of Zionism,” which was based on Borovoy’s own descriptions of the Ukraine in the 17th century. His memoirs were published in Moscow in 1993 by the Jewish University there.

[Shmuel Spector (2nd ed.)]

BOROVSKY, ALEXANDER (1889–1968), pianist. Born in Mitau (Latvia), Borovsky studied first in Moscow with Safonov, then at the St. Petersburg Conservatory with Esipova from 1907 until 1912, and in the latter year won the Rubinstein Prize. From 1915 to 1920, he taught master classes at the Moscow Conservatory, and then embarked upon a successful international career as a concert pianist. He settled in the United States in 1941 and was appointed professor at Boston University in 1956.

BOROWITZ, EUGENE B. (1924–), U.S. theologian, rabbi, leader of liberal Judaism. Raised in Columbus, Ohio, by Eastern European immigrant parents of Litvak ancestry, Borowitz received his undergraduate degree from Ohio State University in 1943, with a focus in philosophy, and subsequently attended Hebrew Union College in Cincinnati, where he was ordained rabbi in 1948. Following ordination Borowitz initially served a congregation in St. Louis and later returned to HUC to pursue a Ph.D., but with the outbreak of the Korean War he entered the Navy and for two years served as a chaplain. At the same time, Borowitz worked toward a D.H.L. (Doctor of Hebrew Letters) degree in rabbinic literature, which he completed with distinction in 1952. He later became founding rabbi of the Community Synagogue in Port Washington, New York (where he remained active until 2000), and began to pursue a Ph.D. in religion from the joint program of Columbia University and Protestant Union Theological Seminary. After he was appointed director of the Religious Education Department of the Union of American Hebrew Congregations in 1957, Borowitz turned toward the field of education proper and earned an Ed.D. in 1958 from Columbia University.

Borowitz understood early on that a new kind of thinking was necessary which could build on the work of the early modern German religious thinkers, and yet take the modern American Jewish reality seriously. Already in 1965 he wrote on the transition from impressionist worship to expressionist prayer, representing a relatively early attempt to grapple with the impact of existentialism, phenomenology, neo-Orthodoxy, and revisionist theology.

Borowitz’s early independent study of Jewish philosophy led him, with fellow student and lifetime friend Arnold Jacob *Wolf, to the non-rationalist thought of Martin *Buber

and Franz *Rosenzweig. While Borowitz was tempted to embrace their religious existentialist positions, and while he was attracted to their understanding of the relationship between the self and God, he was deeply troubled by Buber's rejection of the possibility of absolute knowledge and his overemphasis on the autonomy of the individual independent of any uniquely Jewish commanding covenantal relationship with God. Borowitz began to develop an understanding of the commanding nature of covenant and was the first to introduce and explore the idea of "covenant theology" in 1961.

Borowitz initially demonstrated his systematic scholarship with an existentialist theology of Judaism in three books published in 1968–69: *A New Jewish Theology in the Making*, *A Layman's Guide to Religious Existentialism*, and *How Can A Jew Speak of Faith Today?* His most accessible book in this area is *Choices in Modern Jewish Thought* (1995), which outlines the development of Jewish thought from Moses *Mendelssohn through the establishment of the fields of postmodern and feminist Jewish thought.

About his early intellectual inquiry, Borowitz wrote: "Instead of becoming another confirmed mid-century agnostic, I became convinced that only belief could now found, even mandate, our strong sense of personal and human values." Given the crises of values and lack of moral absolutes invoked by the horror of the Holocaust, he realized that modern thought was deeply in need of a meaningful revitalization.

Borowitz was particularly conscious of the impact of the Holocaust and the rebirth of Jewish statehood in Israel on the psyche of American Jews, yet unlike other modern Jewish thinkers who put these events at the center of their systems, Borowitz began a lengthy process of developing a theology that was uniquely American and which represented their "pragmatic aesthetic and a pioneering, even confrontational, assault on the status quo." Borowitz has since argued that the pivotal issue that shaped a century's Jewish thought has been a standing commitment to the "commanding power of ethics" and not any issue resulting from the Holocaust or the establishment of the Jewish state.

Borowitz's commitment to human values, from the perspective of Jewish texts, led him to develop his thinking specifically about the nature of Jewish ethics. As part of his efforts to go beyond the work of Buber and Rosenzweig he identified, in his essay "A Life of Jewish Learning," "the problem of a theology of 'halakhah,' of what non-Orthodox Jews believed that should impel them to observe more than, as we still called it then, the Moral Law." Borowitz also widened his understanding of theology to include the larger claim that, in general, Jewish theology is Judaism's "meta-halakhah, the belief which impels and guides our duties." He candidly wrote: "We know we are commanded but ... we have no widespread understanding of Who or What authoritatively commands us, and how such a thing is possible ..."

His own commitment to ethical response as a Jewish duty compelled Borowitz to engage in social action, which

for many liberal rabbis was often the most natural expression of a liberal Jewish commitment to universal ethics. In 1964, Borowitz went with several rabbis join Martin Luther King, Jr., in St. Augustine, Florida, at a demonstration for civil rights following King's appeal to the CCAR conference. After 15 rabbis were arrested for praying as an integrated group, they asked Borowitz to write up from the notes of the rabbis' conversation in jail why they went, which later was a front page story in the *New York Times*.

Borowitz further developed the idea of covenant theology in his most comprehensive work on theology, *Renewing the Covenant* (1991). He identified a postmodern theology as that in which the Jewish people renews its Covenant with God in a way which compels each of us to live a Judaism in which liberalism and the categories of traditional practice created by rabbinic Judaism are complementary rather than competing modes of thought.

Much of Borowitz's work concerns itself with the dilemma of the postmodern Jew: committed to autonomy but necessarily involved with God, Torah, and Israel. Borowitz writes: "The postmodern search for a substitute absolute began as it became clear that modernity had betrayed our faith. Repelled by the social disarray and moral anarchy around us, we are attracted by systems – which provided clear cut, authoritative direction, in other words, which offer a strong, at least strongish, Absolute." "I believe," writes Borowitz in the autobiographical essay "A Life of Jewish Learning," that "we come to God these days primarily as the ground of our values and, in a non-Orthodox but nonetheless compelling fashion, as the 'commander' of our way of life."

From 1962, Borowitz taught Jewish philosophy and theology at the Hebrew Union College-Jewish Institute of Religion in New York. HUC-JIR awarded him the title Distinguished University Professor, the first time it was awarded at an American Jewish seminary. Borowitz was also awarded several prizes, including the prestigious Lifetime Achievement Award in Scholarship of the National Foundation for Jewish Culture in 1996. In 2002 the Jewish Publication Society included him in its Scholars of Distinction series with the publication of *Studies in the Meaning of Judaism*, a selection of his papers over the course of 50 years. Also among the more than 17 books that Borowitz wrote are *The Mask Jews Wear*, which received the National Jewish Book Award in 1974 in the field of Jewish thought, and an extensive evaluation of the role of theology and *aggadah* in the Talmud in *The Talmud's Theological Language-Game* (2005). In 1970, Borowitz became the founding editor and publisher of *Sh'ma, a Journal of Jewish Responsibility*.

In addition to his work in the fields of modern Jewish thought and ethics, Borowitz has engaged directly in Jewish-Christian theological dialogue from a positive stance, a product of both historical-political and historical-religious concerns. Since participating in the first formal Jewish-Catholic Colloquy held in the United States in 1965 and thereafter in his book *Contemporary Christologies: A Jewish Response*

(1980), Borowitz has sought to preserve full religious dignity and honesty in such theological exchanges.

[Rachel Sabath Beit Halachmi (2nd ed.)]

BOROWITZ, SIDNEY (1919–), U.S. physicist. Borowitz was born in New York. He received his master's degree and doctorate from New York University and began his academic career as an instructor there. Apart from a two-year tutorial in quantum electrodynamics at Harvard University with Julian *Schwinger (1948–49), after which he returned to New York University as assistant professor of physics, he spent his entire academic life at NYU, teaching at both the Bronx and Washington Square campuses. He became chairman of the department of physics at the Bronx campus in 1961 and dean of the University College of Arts and Science in 1969. In April 1972 he was appointed chancellor and executive vice president of the university, the first alumnus of the university to hold the dual post since its creation in 1960. In 1965 he was awarded the John F. Kennedy Memorial Fellowship by the Weizmann Institute in Israel, spending a year in Rehovot. Borowitz wrote some 30 scientific papers and three books.

[Ruth Rossing (2nd ed.)]

°**BORROMEO, CARLO** (1538–1584), cardinal, archbishop of Milan. In the course of his campaign for reform, which had firmly impressed itself on the spirit of the Council of Trent (1545–63), Borromeo convened a number of provincial councils in Milan of which the first (1565) and the fifth (1579) in particular passed legislation concerning the Jews. Among other provisions, it was stipulated that bishops were to arrange that missionary sermons should be delivered to the Jews by preachers with knowledge of Hebrew and of Jewish customs. Jewish attendance at the sermons was obligatory, the children being separated from their parents. Those who then declared themselves willing to be baptized would be placed in homes for *catechumens where they would receive the appropriate instruction. The fifth council provided that those who had already been baptized should be given accommodation in homes for neophytes, and imposed a series of special, strictly supervised obligations on the new converts to ensure that they would remain steadfast in the Catholic faith.

BORSA (Rom. *Borșa*), mountain village in Northern Transylvania, Maramures region, Romania; within Hungary before 1918 and from 1940 to 1944. Jewish communal life had developed there by 1751. According to local Hasidic legend, *Israel b. Eliezer Ba'al Shem Tov visited the village. At the beginning of the 19th century there were nearly 250 Jewish residents. Hasidism was strong in Borsa. Many Jews there were occupied in agriculture, forestry, and lumbering as manual laborers; Jews also owned lumber mills and woodworking plants. The

community numbered 1,432 in 1891 (out of a total population of 6,219), 1,972 in 1910 (out of 9,332), and 2,486 in 1930 (out of 11,230). On July 4, 1930, the Jewish quarter was destroyed by fire – a clear act of arson prompted by the *Iron Guard.

After the annexation of Northern Transylvania by Hungary in September 1940, the Jews were subjected to the anti-Jewish laws already in effect in Hungary. After the German occupation, the Jews were placed in a local ghetto, from which they were transferred to the concentration and entrainment center of *Viseul-de-Sus (Hg. Felsövisó) together with the Jews from the neighboring communities in the district of Viseul-de-Sus. The Jews of Borsa were among the approximately 9,100 Jews who were deported from Viseul-de-Sus in three transports on May 19, May 21, and May 25, respectively. Of those who returned, 395 were living in Borsa in 1947. Their number subsequently decreased, with most emigrating to Israel, and only two or three families remained in the 1970s.

BORSIPPA, the modern Biris Nimrud, city in Babylonia, south of the city of Babylon and the river Euphrates, and connected with Babylon by the Barsip canal. In medieval times it was known as Burs (a similar form occurs in Av. Zar. 11b; Kid. 72a). Because of its proximity to Babylon, and possibly also on account of its importance, it was sometimes referred to by the Babylonians as “the second Babylon.” Famous in the Hellenistic period for its school of astrologers (Strabo, 16:1,7 (739); cf. also Jos., Apion, 1:151f.), it had, as late as talmudic times, a temple dedicated to Nebo, the deity of the city, which was enumerated among the “five temples appointed for idol worship” (Av. Zar. 11b). The sages held the ruins of the tower at Borsippa to be those of the Tower of Babel (Sanh. 109a; Gen. R. 38:11) and the contemporary Babylon to be located on the site of the ancient Borsippa (Shab. 36a; Suk. 34a). Benjamin of Tudela, who visited the place, relates: “From there (i.e., Hillah which is near Babylon) it is four miles to the Tower of Babel, which was built of bricks by the generation whose language was confounded.... The length of its foundation is about two miles, the breadth of the tower is about forty cubits, and the length thereof two hundred cubits. At every ten cubits' distance there are slopes which go around the tower, by which one can ascend to the top. One can see from there a view twenty miles in extent, as the land is level. There fell fire from heaven into the midst of the tower, which split to its very depths.” In talmudic times Borsippa had an important Jewish population with the most distinguished genealogy of all the Babylonian Jews (Kid. 72a).

BORSOOK, HENRY (1897–1984), U.S. biochemist. He was born in London. After working at the University of Toronto until 1929, Borsook went to the California Institute of Technology, becoming professor of biochemistry there in 1935. During World War II he served on the War Production Board, the Committee on Nutrition in Industry of the National Research Council, the War Food Administration, and the Food and Nutrition Board. His contributions to scientific journals were concerned with nutrition, vitamins, amino acids, the biosynthesis of proteins, the thermodynamics, energetics, and kinetics of metabolic reactions, and erythropoiesis. He wrote *Vitamins – What They Are and How They Can Benefit You* (1940); jointly with W. Huse, *Vitamins For Health* (1942); and *Action Now on the World Food Problem* (1968). Borsook was vice president of the American Association of Scientific Workers.

BOSAK, MEIR (1912–1992), Hebrew writer. Bosak was born in Cracow, Poland, and studied in Warsaw. During World War II, he was interned in Cracow ghetto and in concentration camps. He emigrated to Israel in 1949 and taught in Tel Aviv. From 1929 he published articles in Polish and Hebrew on the history of Polish Jewry, and wrote essays on Hebrew literature and stories and poems. His works include *Be-Nogah ha-Seneh* (1933), *Ve-Attah Eini Ra'atekha* (1957), *Ba-Rikkud ke-Neged ha-Levanah* (1960; poems), *Aḥar Esrin Shanah* (1963; poems), and *Mul Ḥalal u-Demamah* (1966); *Sulam ve-Rosho* (1978); *Zamarot bi-Tefillah* (1984); *Rak Demamah po Titpalal* (1990); *Mul Sha'ar ha-Raḥamim* (1995), and the collection of essays *Shorashim ve-Zamarot* (1990).

[Getzel Kressel]

BOSCHWITZ, RUDOLPH ELI (“Rudy”; 1930–), U.S. senator, businessman. The son of Ely and Lucy (Dawidawicz) Boschwitz, Rudy Boschwitz was born in Berlin, where his father was a prosperous stockbroker. When Hitler became German chancellor in January 1933, the Boschwitzes fled first to Czechoslovakia and then to Switzerland, the Netherlands, England, and finally, in 1935, the United States.

Boschwitz received his early education in the public schools of New Rochelle, New York. At sixteen, he entered Johns Hopkins University in Baltimore, Maryland, and then transferred to New York University, where he earned a B.S. in business in 1950 at age 20 and an LL.B. in 1953. Shortly after passing the New York bar exam in 1954, Boschwitz served two years in the United States Army. After practicing law for two years in New York he joined his brother’s growing plywood business in Wisconsin in 1957. Seven years later, he moved on to Minnesota, where he founded his own business, a store stocking do-it-yourself building items, paneling, lumber, and assorted building items. He called it Plywood Minnesota. By

the time he was 45, Boschwitz had 67 Plywood Minnesota franchises throughout the upper Midwest.

Boschwitz became a household name by appearing in his company’s attention-getting, often ridiculous television advertisements. He became increasingly active in Republican politics. In 1978, he successfully ran for the United States Senate.

Entering the United States Senate in January 1979, Boschwitz was appointed to the Committee on Foreign Relations, where naturally he devoted his energies to the issue of refugees. Boschwitz was easily reelected to a second term in 1984.

During his 16 years in the Senate, Boschwitz was also a strong – though not thoroughly uncritical – supporter of Israel. He was influential during his second six-year term on Capitol Hill as chair of the Foreign Relations Subcommittee on Near Eastern Affairs as well as chair of the Republican Senate Campaign Committee. A Reform Jew, Boschwitz contributed heavily to the Lubavitch House in St. Paul and served as state chair of the Minneapolis Jewish Fund. Within the Senate, he was well known for “playing matchmaker with single Jews on his and other Capitol Hill staffs.”

In 1990 Rudy Boschwitz was challenged for reelection by Carleton College Professor Paul David *Wellstone. Like the conservative Boschwitz, the liberal Wellstone was a Jew. The race represented the first time in American history that two Jewish candidates had vied for the same Senate seat. And despite the fact that Minnesota has a tiny Jewish population – less than 1% of the total – the election hinged in large part on the issue of who was the better Jew. In a letter signed by 72 of his Jewish supporters, and sent out to Jewish voters, Boschwitz scored Wellstone for having married a non-Jewish woman and charged that his opponent “took no part in Jewish affairs and has not raised his children as Jews.” The strategy backfired; Wellstone defeated Boschwitz by nearly 50,000 votes. Following his defeat, Boschwitz was named President George H.W. Bush’s special emissary to Ethiopia. Boschwitz’s mission resulted in “Operation Solomon,” one of the boldest humanitarian airlifts in history; within a single 24-hour period, 14,000 Ethiopian Jews were evacuated to Israel.

Eager for a rematch against Wellstone, Boschwitz passed up running for an open Senate seat – a political rarity – in 1994. He got what he wanted, but lost by more than 100,000 votes. In 2005 he was named American ambassador to the United Nations Commission on Human Rights.

BOSCO, MONIQUE (1927–), Canadian writer. Bosco was born in Vienna and spent her childhood in France, where she was educated. She immigrated to Canada in 1948 and attended the Université de Montréal where she obtained her Ph.D. in 1953, with a thesis on the theme of isolation in the French-Canadian novel. After working for many years as a freelance

journalist for Canada's francophone public broadcasting network and for a number of newspapers and magazines, she obtained a position in 1963 at the French Studies Department of the Université de Montréal. Her first novel, entitled *Un amour maladroit*, published in Paris in 1961, won the First Novel Award in the United States. In 1971 her novel, *La femme de Loth*, won the Governor General's Award in Canada and was translated in 1975 by John Glassco as *Lot's Wife*. It is the story of a mature woman who reminisces about the trajectory of her life at the moment when she finds herself suddenly abandoned by her lover and in a mood of despair. Bosco has published ten other novels, all dealing with the uprooting of emigration, feminine isolation, and the bitterness of existence. She is also the author of four short-story collections and books of poetry. Bosco was awarded the Athanase-David prize in 1996 in recognition for her life's work.

[Pierre Anctil (2nd ed.)]

BOSCOVITCH, ALEXANDER URIYAH (1907–1964), Israeli composer and music critic. Born in Klausenburg (Cluj), Romania, Boscovitch studied piano with Hevesi Piroška and then, in Vienna with Victor Ebenstein and in Paris with Paul *Dukas (composition) and Lazar *Levi (piano). He became conductor of the Klausenburg Opera orchestra, and of a Jewish symphony orchestra (named after Karl Goldmark) which he founded. In 1938 he was invited to Palestine for the first performance of his *Sharsheret ha-Zahav* ("The Golden Chain"), an orchestral suite based on East European Jewish melodies. He decided to remain in the country and became one of the pioneers of Israeli music – songs, chamber music, music for the theater, concertos, and symphonies. Boscovitch was one of the founders of the Tel Aviv Academy of Music (1944), where he taught theory and composition. In 1956 he became music critic of the daily *Haaretz*. His ideology involved the expectation that an Israeli composer would avoid any personal Romantic expression and derive inspiration from the landscape and the Hebrew language, as well as from Arabic. In the early 1940s he composed four songs for the Yemenite singer Bracha *Zephira and made arrangements of Arabic instrumental music for the dancer Yardena *Cohen. In 1942 he composed a violin concerto and the following year an oboe concerto (revised version 1950) which is typical of his attempt to achieve a synthesis of oriental and western forms. His *Semitic Suite* (1946), in two slightly different versions – one for orchestra and one for piano solo – was an experiment in transferring the tone color of Oriental instruments to western ones. The composition drew from the folk music of both the Arabs and the Jews in Erez Israel at that time. In 1962 his cantata *Bat Yisrael* ("Daughter of Israel"), based on a text by the poet Bilik, marked the beginning of his preoccupation with the relationship between music and the Hebrew language, which is evident in *Concerto di Camera* (1962) for violin and ten other instruments. His last complete composition, *Adayim*, drew its inspiration from Exodus 15. This work for flute and orches-

tra utilizes the rhythmic and poetic characteristics of the Hebrew text and the liturgy of Yemenite Jews. Boscovitch also wrote theater music and songs; his most famous song is *Dudu* (1948) to lyrics by Hayim *Hefer. His writings include *Kelet es Nyugat Kozott* ("The Problems of Jewish Music," 1937) and *Ba'ayat ha-Musikah ha-Mekorit be-Yisrael* ("The Problem of Original Music in Israel," 1953). His personal archive is at the JNUL Music Department.

BOSHAL (BOSTAL), MOSES BEN SOLOMON (17th century), rabbi. Brought to Safed from Sidon by his father when he was 12 years old, Moses studied there with important rabbis. At age 25, when forced to leave because of a series of calamitous events, Moses moved to Rhodes, becoming a rabbi in that community. His only extant work, *Yismah Moshe* (Smyrna, 1675), written after years of preaching every Sabbath and holiday, contains several sermons for each Sabbath or festival Torah reading. The sermons are primarily commentaries on the Torah text, although explanations of midrashic literature, which he frequently employed, are also found. From his quotations from the Zohar in the introduction to the book – where he also includes an autobiography – Moses appears to have been familiar with kabbalistic literature. Another unpublished work, *Simhat Moshe*, is mentioned in the proofreader's introduction to *Yismah Moshe*.

BOSHAM, HERBERT DE (before 1139–c. 1194), companion and biographer of Archbishop Thomas Becket. Born in Bosham, England, he studied in Paris under Peter Lombard, and studied Hebrew probably under Andrew of St. Victor. In addition to editing the Lombard's (thereafter standard) *Great Gloss* to the Pauline Epistles and to the Psalter, he composed (after 1190) a commentary on Jerome's literal Latin translation of the *Psalms (iuxta Hebraeos)*. Herbert's work is replete with midrashic and other Jewish material taken mainly from Rashi, through whom he quotes by name *Menahem b. Jacob Ibn Saruq and *Dunash ibn Labrat; but the commentary, which is known from a unique manuscript in London (St. Paul's Cathedral), apparently was ignored until it was rediscovered in the 20th century. It is said that his Hebrew studies at times caused him to doubt the truth of Christianity.

BOSKOFF, ALVIN (1927–), U.S. sociologist. Born in New York, Boskoff received his Ph.D. from the University of North Carolina in 1950. He taught sociology at several universities and from 1964 was professor at Emory University in Atlanta, Georgia. Boskoff's main interest was the application of general sociological theories to specialized studies with particular emphasis on power, decision-making, and processes of social change. His theoretical work is embodied in *Modern Sociological Theory in Continuity and Change* (with Howard Becker, 1957), *Sociology and History* (with Werner J. Cahnman, 1964), and in his paper, "Functional Analysis as a Source of a Theoretical Repertory and Research Tasks in the Study of Social Change," in G.K. Zollschan and W. Hirsh (eds.), *Explorations in Social Change* (1964). Boskoff's own specialized research was concerned chiefly with problems of the urban community and with political sociology. He also wrote *The Sociology of Urban Regions: Juvenile Delinquency in Norfolk, Virginia* (1962), *Theory in American Sociology* (1969), *The Mosaic of Sociological Theory* (1972), and *Sociology: The Study of Man in Adaptation* (with John T. Doby and William W. Pendleton, 1973). Boskoff was an associate editor of the *American Sociological Review*. In 1979 he served as chair of the Theory Council of the American Sociological Association. As professor emeritus at Emory University, his realms of interest encompassed sociological theory, comparative urban structures, stratification, social change, mass media, and lifestyle.

[Werner J. Cahnman / Ruth Beloff (2nd ed.)]

BOSKOVICE (Ger. **Boskowitz**), town in Moravia, Czech Republic. Its Jewish community was one of the oldest and, from the 17th to 19th centuries, one of the most important. A Jewish tombstone there was thought to date from 1069. Jews from Boskovice are mentioned in decisions of the Brno municipal high court in 1243. The community began to flourish after Jews expelled from Brno in 1454 settled in Boskovice, welcomed by the local nobility in the expectation that they would make a significant contribution to the economic prosperity and growth of the town. Developing into a famous center of yeshivah study, the town attracted talmudic scholars from Poland, Germany, and elsewhere. The local population was hostile to Jews, however, and attempted to curtail Jewish economic activity, but the local congregation was able to acquire numerous privileges over the centuries. It was able to elect its own mayor, write statutes, and establish its own police force. In 1565 Jews there owned real estate but were prohibited from doing business in the surrounding villages. The statutes of the *hevra kaddisha* were compiled in 1657. There were 26 Jewish houses in Boskovice in 1676. The synagogue was built in 1698, 892 Jewish inhabitants died of the plague in 1715, and the Jewish quarter was put in quarantine for a year. A peculiar custom of the Boskovice community was to bury women who died in childbirth in a special section in the cemetery. A *gabbai* was appointed specially for the members of the *hevra*

kaddisha who were *kohanim*. The Jews were segregated in a special quarter of the town in 1727. Discrimination against Jews ended only in 1848. The small walled ghetto witnessed numerous disasters, including fires, plague, and anti-Jewish riots. In the 15th through 18th centuries, the Jews engaged in trade and handicrafts. Among the artisans were producers of swords, jewelry, pottery, and glass, as well as tailors, butchers, and furriers. During the revolution of 1848 Jews in Boskovice joined the National Guard. A political community (see *Politische Gemeinde) was established in Boskovice after 1848 which became known for its municipal activities, in particular its fire brigade (founded in 1863). Toward the end of the 19th century many Jews moved away from Boskovice. Between the two world wars Boskovice became a summer resort and was frequented by many Jews.

The community numbered 300 families in 1793; 326 families (1,595 persons) in 1829; 2,018 persons in 1857; 598 in 1900 (when 116 houses were owned by Jews); and 395 in 1930 (6% of the total population), of whom 318 declared their nationality as Jewish. Boskovice was a noted center of Jewish learning. Among rabbis who lived there were Judah Loeb Issachar Baer Oppenheim (appointed rabbi in 1704), Nathan Adler (1782), who was followed by his disciple Moses *Sofer; Samuel ha-Levi *Kolin and his son Benjamin Ze'ev *Boskowitz, whose yeshivah made Boskovice celebrated; Abraham *Placzek, who was Moravian *Landesrabbiner* from 1851 to 1884; and Solomon *Funk. The Zionist president of the Vienna community, Desider *Friedmann, and his non-Zionist deputy Josef Ticho, were school friends from Boskovice. Also from Boskovice were the German writer Hermann Ungar (1893–1929), who was part of Franz Kafka's circle, the Jerusalem eye specialist Abraham *Ticho, the historian Oskar K. *Rabinowicz, and the Brno textile-industrialist *Loew-Ber. Other locally born personalities included Moritz Zobel, the Berlin editor of the *Encyclopedia Judaica*, and the choreographer Augustin Berger (Razesberger; 1861–1945). The Jews who remained in Boskovice after the German occupation (1939) were deported to Theresienstadt on March 14–15, 1943, and from there to Treblinka, Majdanek, and Auschwitz. Ritual objects belonging to the congregation were sent to the Central Jewish Museum in Prague in 1942. Only a few Jews resettled there after the Holocaust, the congregation being administered by the Brno community. The Jewish quarter has been preserved, to a large degree in accordance with its original plan.

[Isaac Ze'ev Kahane]

BOSKOWITZ, BENJAMIN ZE'EV (Wolf) HA-LEVI (1740–1818), rabbi and author. Named after his birthplace, he was the son of Samuel *Kolin, the author of *Mahazit ha-Shekel*. In 1785 he was rabbi in Aszod (Pest district), and Prossnitz (Moravia) from 1786 to 1790. From there he returned to Alt-Ofen (Buda, part of Budapest) where he had previously resided. In 1793 he was appointed rabbi of Pest. From 1797 to 1802 he served in Balassagyarmat; he then was invited to the rabbinate of *Kolin (Bohemia), but the government refused him permission to settle there because he was by then a Hungarian subject. From about 1810 he was rabbi in Bonyhad.

Boskowitz' glosses on the Babylonian Talmud were first printed in the Vienna edition of 1830 and frequently ever since. His annotations to Maimonides' *Mishneh Torah* were partly published (to *Sefer ha-Madda* (Prague, 1820), to *Hilkhot Shabbat* (Jerusalem, 1902), to *Hilkhot Shevitat Asor* (1940), and to *Hilkhot Hamez u-Mazzah* (1941)). He also wrote: *Ma'amar Esther* – sermons on the Bible and *aggadah* (Ofen, 1822); *Shoshan Edut*, to the tractate *Eduyyot* (1903–05); and *Le-Binyamin Amar*, a commentary on the sayings of *Rabbah b. Hana in *Bava Batra* 73 (*ibid.*, 1905). Boskowitz corresponded with R. Ezekiel Landau of Prague on halakhic problems (cf. *Noda bi-Yhudah*, *Mahadurah Tinyanah*, OH 25:60, 61, and YD 14:45, 80, *passim*).

[Moshe Nahum Zobel]

BOSKOWITZ, HAYYIM BEN JACOB (18th century), rabbi and author. Little is known of his life, other than that he was born in Jerusalem and apparently lived there for many years. The evidence for this is that when he traveled abroad, apparently with the object of publishing his work, he referred to himself as “from the holy city of Jerusalem.” His work, *Toze'ot Hayyim*, homiletical comments on the Pentateuch, with an exposition of the moral values to be learned from each verse, was published in Amsterdam in 1764. The bibliographer *Ben-jacob alone gives the date as 1760. The work was printed, along with the Pentateuch, together with the commentaries of Rashi, R. Samuel b. Meir (Rashbam), and Abraham ibn Ezra. A new edition appeared in Vienna in 1794. *Toze'ot Hayyim* was also published without the Pentateuch, but with various additions, at Zolkiev in 1772. At the time, Boskowitz was living at Brody, Galicia. He seems to have been in Poland as early as 1769, when he wrote an approbation *Lehem Terumah* of Aaron b. Isaiah on the *Sefer ha-Terumah*.

[Itzhak Alfassi]

BOSNIAK, JACOB (1887–1963), U.S. Conservative rabbi. Bosniak was born in Russia, immigrated to the U.S. in 1903, and completed his rabbinical studies at the Rabbi Isaac Elchanan Yeshivah, an Orthodox seminary, in 1907. In 1917, he

was ordained at the Jewish Theological Seminary, where he earned a Doctor of Hebrew Letters in 1933. In 1921, after having served Congregation Shearith Israel in Dallas, Texas, he became rabbi of the Ocean Parkway Jewish Center in Brooklyn, N.Y., a congregation he was to serve for 28 years. He was president of the Brooklyn Board of Rabbis (1938–40), chairman of the *Rabbinical Assembly's Rabbinic Ethics Committee (1945–48) and a judge (*dayyan*) and member of the Board of Directors of the Jewish Conciliation Board of America. Believing in the need for a uniform prayer book (*siddur*) with modern English translations, Bosniak published several prayer books that gained wide acceptance in Conservative synagogues. He edited *Prayers of Israel* (1925, 1937) and *Anthology of Prayer* (1958), prayer books that included English translations of Sabbath and Holiday prayers, English hymns, responsive readings, and instructions related to worship in English. In 1944, he published *Interpreting Jewish Life: The Sermons and Addresses of Jacob Bosniak*. Upon his retirement in 1949, Bosniak was elected rabbi emeritus and devoted his time to Jewish scholarship, publishing a critical edition of *The Commentary of David Kimhi on the Fifth Book of Psalms* (1954).

[Bezalel Gordon (2nd ed.)]

BOSPHORUS, KINGDOM OF, ancient state, independent until 110 B.C.E. when it became part of the Roman Empire. It is not certain when Jews reached the northern littoral of the Black Sea (the Crimea and the shores of the Sea of Azov within the boundaries of the Cimmerian Bosphorus), but Jews were already living there in the first century, in, among other places, the towns of Panticapaecum (now Kerch), Phanagoria, and Tanais. It appears that they lived under congenial conditions. They developed well-organized communities, erected synagogues, which served as communal centers, and were even organized in the “Thiasoi,” characteristic of Hellenistic society, by which they were greatly influenced. They, in turn, according to all indications, exercised appreciable influence on non-Jewish circles, and there is reason to believe that they engaged in proselytizing activity. The main source of knowledge of the Jews of the Bosphorus kingdom is from inscriptions. One of the most important, dated 81 C.E., from Panticapaecum, reads, “... I, Chreste... have manumitted my home-born slave, Herakles... who may turn whithersoever he desires... he is not however [to forsake] the fear of heaven and attachment to the synagogue [προσευχή] under the supervision of the community [συναγωγή] of the Jews.” In many of the inscriptions there appears a formula of oaths beginning, “I swear by Zeus, Ge, and Helios.” There is a difference of opinion as to whether these inscriptions are Jewish.

[Uriel Rappaport]

°**BOSSUET, JACQUES BENIGNE** (1627–1704), celebrated French preacher. Bossuet was canon in Metz (1652–56), bishop of Condom (1669), tutor to the dauphin (1670–81), and bishop of Meaux (1681). It was chiefly while living in Metz that he had the opportunity to take an interest in the Jews. Many of his sermons from this period of residence in Metz were intended to further missionary work among the Jews. In his sermon on “The Goodness and Severity of God toward Sinners,” he emphasized the unhappy state of the Jews, from which, he considered, they could free themselves only by becoming converted to Christianity. He described them as a “monstrous people, without hearth or home, without a country and of every country; once the happiest in the world, now the laughing stock and object of hatred of the whole world; wretched, without being pitied for being so, in its misery become, by a certain curse, scorned even by the most moderate... we see before our eyes the remains of their shipwreck which God has thrown, as it were, at our doors.” The only success of this missionary activity was the conversion of two young brothers: Charles-Marie de Veil, baptized in 1654, and Lewis Compiègne de *Veil, baptized in 1655.

[Bernhard Blumenkranz]

BOSTON, capital and principal city of Massachusetts. The Jewish population of Greater Boston was estimated at 254,000 (2000).

Early History

Though Boston is one of the oldest cities in North America, having been first settled in 1628, it was not until the mid-19th century that an organized Jewish community took shape. The records of the Great and General Court of Massachusetts Bay show that in 1649 Solomon Franco, a Jew, arrived in Boston, was “warned out” by the court, and was supported for ten weeks until he could return to Holland. A 1674 tax list discloses the presence of two Jews. In 1720 Isaac Lopez was elected town constable; he paid a fine rather than serve. Judah Monis, who later became a Christian and taught Hebrew at Harvard College, arrived in Boston by 1720. Moses Michael Hays (1739–1805) arrived there around 1776 and was a well-known citizen. He was among the Bank of Boston’s original stockholders and was instrumental in establishing Masonry in New England. There is a tradition that some Algerian Jews arrived about 1830 but did not remain.

The first congregation was Ohabei Shalom, which formally organized in 1843. It followed *Minhag Polin*, since a preponderance of local Jews came from East and West Prussia, Poland, Posen, and Pomerania. In 1844 the Boston City Council, reversing an earlier refusal, permitted the congregation to purchase land for a cemetery. That same year, the congregation held services in a house and in 1852 its first synagogue was dedicated. In 1854 a secession, apparently of the South-

western German element in Ohabei Shalom, led to the formation of a second congregation, Adath Israel (generally known as Temple Israel). A third congregation, Mishkan Israel (later Mishkan Tefilla), was formed in 1858 largely by immigrants from Krotoszyn. Boston Jewry was small and more Polish than German, unlike the communities of the Midwest. In 1875, the Jewish population was estimated to number only 3,000. By 1900, thanks to immigrants from Eastern Europe, it had reached 40,000. East European Jews dominated the community by World War I, when some 80,000–90,000 Jews lived in Boston, mostly recent immigrants or their children.

Population Trends

The earliest settlers resided in the South End, but from the early 1880s growing numbers of East European Jews settled in the North End. As the immigration from Eastern Europe increased, the Jewish community spread over to the West End. Both these areas stood at the tip of the peninsula forming the oldest part of the city. Subsequently, the Jewish community spread southward to Roxbury, Dorchester, Mattapan, and later to Sharon, westward to Brookline and later to Newton, and northward, across Boston Harbor to Chelsea and Malden. These movements were followed by further dispersion to the outer suburbs and along the shores of Massachusetts Bay, and synagogues were established in those areas. In 2004, the core of the Jewish community was in Brookline, Newton, and Sharon, but the community was rapidly dispersing to remote suburbs north, south, and west of the city.

The substantial immigration and the subsequent dispersal of the community produced a wide variety of organizations. Late 19th- and 20th-century Boston was divided between the Yankees who controlled its social, cultural, and financial institutions, and the Irish who dominated its politics, and this did not make it easy for the largely immigrant Jewish group to find a recognized place. Anti-Jewish violence peaked in Boston during the depression and World War II, partly inspired by Father Charles E. Coughlin and his Christian Front movement. The city was known as one of the most antisemitic in the United States. This changed in the postwar era as Catholic-Jewish relations improved and Jews departed to safer suburbs. Whereas at the beginning of the 20th century there was a substantial proletarian element, particularly in the garment industry, by 1969 71% of heads of families were in white-collar occupations. For a time, in the 1960s and 1970s, the largest group of Jews consisted of transient students, but by 2000 the community had aged. It nevertheless continues to boast the highest proportion of Jewish academics and students of any American community.

Religious Developments

Religious reform came late to Boston owing to its small German-Jewish population. It developed only in the 1870s when Ohabei Shalom and Temple Israel shortened their services and introduced choirs and organs. Reform of a more radical kind found expression in Temple Israel during the ministry

of Solomon Schindler (1874–93) and was carried further by his successor Charles *Fleischer (1894–1911), who eventually left Judaism entirely. Under Harry Levi (1911–39) the congregation, while continuing Sunday services, returned to the Reform pattern usual in its day and embraced Zionism. Under the leadership of Rabbi Herman Rubenovitz, who served during 1910–45, Congregation Mishkan Tefilla became the standard-bearer of Conservative Judaism. Rabbi Louis M. Epstein, who served Kehillath Israel in Brookline during 1925–48, was among the most distinguished scholars in the Conservative movement. The immigration from Eastern Europe produced many Orthodox congregations, great and small. Among the more important were Beth Israel in the North End, Beth Jacob and Shaare Jerusalem, both in the West End, and Adath Israel (the Blue Hill Avenue Shul) in Roxbury. Among the leading Orthodox rabbis were Morris S. Margolies, who served during 1889–1906, and Gabriel *Margolis, 1907–10. From 1932 to 1993, Rabbi Dr. Joseph B. *Soloveitchik, one of the leading figures in American Orthodoxy, was identified with the Boston community. Levi I. Horowitz (1920–), reputedly the first American-born ḥasidic rebbe, returned to Boston in 1944, succeeding his father, Pinchas Dovid, who established the Bostoner ḥasidic line in 1915.

Of some 174 congregations in the Greater Boston area and its environs, 53 were Orthodox, 37 Conservative, 34 Reform, 5 Reconstructionist, and 45 other (2001). A survey of religious preferences indicated that 3 per cent of the Jewish population considered itself Orthodox, 33 per cent Conservative, 41 per cent Reform, 2 per cent Reconstructionist, and 20 per cent “other” or no preference. (1995). The Vaad Harabonim of Massachusetts provides *kashrut* supervision, while the Synagogue Council of Massachusetts, created in 1981, seeks to “promote and strengthen the synagogue, and to nurture a respect for diversity” within the community.

Charitable Institutions

The first specifically charitable institution was the United Hebrew Benevolent Association, founded in 1864. To this were added the Hebrew Ladies Sewing Society (organized in 1869 and revived in 1878), the Hebrew Industrial School (1890), the Free Burial Association (1891), and the Hebrew Sheltering Home (1891). By 1895 demand far exceeded income, resulting in the creation of the Federation of Jewish Charities of Boston, the first Jewish federation in the United States, later known as the Association of Jewish Philanthropies, later changed to Combined Jewish Philanthropies. At first the Federation and organized philanthropy made slow headway. Under the leadership of Louis E. Kirstein (1867–1942) the Federation developed considerably and became more comprehensive in its appeal. In 1902, against considerable opposition from some sections of the Jewish community, the Mt. Sinai Hospital, an outpatient clinic, was established in the West End. This was replaced in 1917 by the Beth Israel Hospital in Roxbury, which in 1928 moved to Brookline Avenue. In 1996, Beth Israel merged with New England Deaconess Hospital.

Schools and Colleges

In 1858 Congregation Ohabei Shalom established a day school for secular and religious subjects, which closed, however, in 1863. As the community grew, many congregational and other schools were founded. A Jewish Education Society was established in 1915. This organization promoted the association of Boston Hebrew Schools (1917) and the Bureau of Jewish Religious Schools (1918), which merged in 1920 to form the Bureau of Jewish Education. By 2000, it served as the central educational service agency for more than 140 Jewish schools, youth groups, summer camps, and adult education programs throughout the region, including 14 independent Jewish day schools under Orthodox, Conservative, Reform, and “trans-denominational” auspices.

In 1921 the Bureau established Hebrew Teachers College (later *Hebrew College), and in 1927 the Commonwealth of Massachusetts granted the college a charter enabling it to confer degrees. At first established in Roxbury, it moved to Brookline in 1951 and to Newton in 2001.

The support given to the Bureau of Jewish Education and Hebrew College reflects an interest in Jewish education and culture far more extensive than in most communities. Seeking to “vastly expand Jewish literacy and learning and facilitate a Jewish cultural renaissance,” Boston beginning in 1998 pioneered highly innovative programs in Jewish education, and became a national center for Jewish educational initiatives of every sort. Indeed, education – “quality educational programming for children, adults, and families” – became one of the Combined Jewish Philanthropies’ top priorities. The engine underlying many of the Jewish educational advances in Boston is the area’s remarkable community of academics who constitute, per capita, the largest number of Jewish scholars anywhere outside of Israel. In 2004, there were approximately 90 dedicated staff positions in Jewish studies at seven major private universities in the Boston area, with over 30 more similar positions at the colleges in Worcester and the Amherst area.

Boston was an early stronghold of the Zionist movement. Partly under the influence of Jacob de Haas, who edited the *Jewish Advocate* from 1908 to 1918, Louis D. Brandeis assumed a leading role in the movement, and his prestige had considerable influence in gaining support for it. By World War II, more than 90 per cent of Boston and New England Jews supported Zionism, a record unmatched anywhere in the United States.

In 2000, the Greater Boston metropolitan area, embracing large sections of New England, was the sixth largest Jewish metropolitan area in the United States, including some 10,500 Jews from the former Soviet Union, most of whom arrived after 1985. More than half of the community’s Jews were engaged in professional and technical work, and 40 per cent of Jewish adults held advanced degrees.

Descriptions of the life of the immigrant community are given in novels by M. Antin: *From Polotzk to Boston* (1899), *The Promised Land* (1912), and *They Who Knock at Our Gates* (1914); and in the novels of C. Angoff: *Journey to the Dawn* (1951), *In the Morning Light* (1952), and *Between Day and Dark* (1959). **ADD. BIBLIOGRAPHY:** J.D. Sarna and E. Smith (eds.), *The Jews of Boston* (1995, 2005)

[Sefton D. Temkin / Jonathan D. Sarna (2nd ed.)]

BOTAREL, MOSES BEN ISAAC (end of 14th–beginning of 15th century), Spanish scholar. After the edicts against Spanish Jewry in 1391, a pseudo-messiah named Moses appeared in Burgos. A letter extravagantly praising this Moses is attributed to Ḥasdai *Crescas; it probably refers to Moses Botarel (A. Jellinek, *Beit ha-Midrash*, 6 (1877), 141–3). There are extant works containing the adverse reactions of opponents to his messianic pretensions. On the strength of his claims, he circulated letters which he introduced with the phrase “Thus says Moses Botarel, occupying the seat of instruction in signs and wonders.” Botarel wrote books and pamphlets in every branch of the Torah, *halakhah*, Kabbalah, and philosophy. These works included many “quotations” of scholarly works from the geonic period until his day, but most of his quotations were either spurious or copied from sources entirely different from those which he named. His reasons for this form of pseudography are unclear. Certainly it did not stem from a desire to enhance the status of kabbalism for he treated purely halakhic material in the same way. Botarel lived for a long time in Avignon, and afterward wandered in France and in Spain. He used to boast of his contact with the Christian scholar Maestro Juan of Paris, insinuating that at the request of the latter he had written a number of his books. His vanity about his achievements was limitless and reached pathological proportions. In 1409 he composed a lengthy commentary on the *Sefer Yezirah*, which was printed in its 1562 edition. His commentary was not kabbalistic, but combined an eclectic miscellany of the sayings of others, mainly fabrications, superficial in content, with selections from earlier kabbalistic works here attributed to nonexistent sources. Apart from a pronounced bent toward practical Kabbalah, there is a marked tendency to reconcile Kabbalah with philosophy.

Two other pamphlets on *halakhah* were published by S. Assaf and J. Sussmann. A treatise of similar type on philosophical matters is found in manuscript (Vatican Ms. 441, fols. 175–9). An essay on the mystical interpretation of vocalization (*nekuddot*) and related lore is in manuscript in Oxford (Neubauer, Cat, no. 1947). Part of another kabbalistic work of 1407 is in manuscript Musaioff, and a collection of writings on practical Kabbalah (subsequently entitled *Ma'yan ha-Hokhmah*

or *Ma'gelei Yosher*) is in manuscript in the Jewish Theological Seminary, New York.

Many of his kabbalistic remedies are included in collections of writings of practical Kabbalah. The contemporary poet Solomon *Bonafed sharply attacked Botarel's pretensions and falsehoods, and hinted at his literary forgeries (Neubauer, Cat, no. 1984, 4, fol. 66). His fabrications have also misled some scholars who assumed that they were genuine, and utilized them to reconstruct the origins of Kabbalah.

[Gershom Scholem]

BOTEACH, SHMUEL (“Schmuley”; 1966–), British-American rabbi. Born in Miami, Florida, and educated in the United States, Israel, and elsewhere, Boteach was sent by the Lubavitcher Rebbe to Oxford as the first residential rabbi there for some decades. At Oxford he became well known for establishing the L'Chaim Society, which grew into one of the largest bodies at England's oldest university. It was devoted to sparking debate on religious issues, often by bringing high-profile speakers (including such unlikely guests as Mikhail Gorbachev and Boy George, the pop singer) to Oxford. Boteach became a familiar figure on British radio and television. He is perhaps even better known for having written widely, from an Orthodox perspective, on controversial topics, especially sex, such as *Kosher Sex* (1998) and *Kosher Adultery* (2002), and gave a four-part radio series entitled *A Jewish Guide to Sexuality*. In 1999 he won the London *Times*' Preacher of the Year contest. More recently he lived in New Jersey.

[William D. Rubinstein (2nd ed.)]

BOTEIN, BERNARD (1900–1974), U.S. jurist and leader in court reform. Botein was born to poor parents on the Lower East Side of New York City. After qualifying as a lawyer, he rapidly earned a reputation as an investigator of fraudulent schemes in the automobile accident field; his findings of fraud in the New York State Insurance Fund led to the conviction of eighteen auditors and nearly 150 businessmen and to the dismissal of forty civil servants. In 1941 Governor Herbert H. *Lehman appointed him to the State Supreme Court, on which he served for 27 years; subsequently Governor Averell Harriman named him Presiding Justice of the Appellate Division, First Department, a position he held for eleven years. In this office he won a national reputation for his judicial reforms and as a creative court administrator. Many of his innovations liberalized procedures and thereby benefited indigent defendants who suffered from inequality in the administration of criminal justice. He fought for lower bail, reorganized the Family Court, and in other ways vitalized the courts' administration and improved procedures.

The editorial obituary in the *New York Times* referred to him as “one of the lions of the law who never forgot that the cardinal principle of justice was compassion for all.” Justice Botein was president of the Association of the Bar of the City of New York 1970–1972.

He was the author of a number of legal works, including: *The Slum and Crime* (1935), *Trial Judge* (1952), and *The Prosecutor* (1956). Botein was active in Jewish communal life.

[Milton Ridvas Konvitz (2nd ed.)]

BOTON, ABRAHAM BEN JUDAH DI (1710?–after 1780), Turkish talmudist and halakhist. Born in *Salonika, in his youth he was already considered one of its great scholars. Some time before 1753, he was appointed chief rabbi of Monastir (Bitolj), where he served until his death. His responsa and halakhic novellae, together with some by his son, were published under the title *Mahazeh Avraham* (Salonika, 1795) by his grandson David di Boton who was also chief rabbi of Monastir.

BIBLIOGRAPHY: Rosanes, *Togarmah*, 5 (1938), 122; Azulai, 2 (1852), 78, no. 79.

BOTON, ABRAHAM BEN MOSES DE (154?–after 1592), rabbi and halakhist. De Boton was born in Salonika, the son of the rabbinic scholar Moses de *Boton (d. 1570). He and Mordecai *Kalai studied at R. Samuel de Medina's yeshivah; the latter later intimated that many of Abraham's ideas were really his, but this claim was never proved. De Boton served as rabbi of the large and wealthy Apulia congregation in Salonika; while this congregation was established by Italian Jews (and retained the Italian liturgy), it eventually had both Sephardi members and rabbinic leaders (of Italian ancestry) in its midst.

De Boton was not noted for one particular field of expertise but considered to be capable of judging disputes in all areas. As a result, he was consulted throughout the Sephardi Diaspora. Among his writings is a commentary to portions of the Talmud tractate *Bava Kamma* which appears in *Me-Hararei Nemarim* (Venice, 1599) as well as a collection of numerous responsa he wrote entitled *Lehem Rav* (Smyrna, 1660). The latter was published and financed by his grandson and grandson's brother-in-law. *Lehem Rav* contains decisions that were frequently quoted throughout the Jewish world and set halakhic precedents. They deal with a broad range of topics, including international trade, taxation, public leadership, and congregational regulations as well as issues of property, inheritance, business, marriage, etc. A great deal can be learned from them about the Ottoman Empire and particularly about Salonika of the 16th century. The author's style here is precise and reflects erudition and a mastery of Hebrew.

His best-known work is *Lehem Mishneh* (Venice, 1604), a commentary to Maimonides' *Mishneh Torah*. The Salonikan rabbi was not aware that Joseph *Caro was simultaneously preparing a similar study, and when Caro's *Kesef Mishneh* appeared in 1575, he was careful only to include his own

innovations and even pointed out differences and agreements of opinion. De Boton had a sophisticated critical eye, for he examined different versions of the Talmud and editions of manuscripts while preparing his own work.

Abraham de Boton fell victim to a plague some time after 1592.

Shochet, “Taxation and Communal Leadership in the Communities of Greece in the Sixteenth Century,” in: *Sefunot*, 11 (1971–77), 299–341 (Heb.).

[Renée Levine Melammed (2nd ed.)]

BOTON, HİYYA ABRAHAM BEN AARON DI (17th century), rabbi and Erez Israel emissary. Hıyya di Boton was a grandson of Abraham b. Moses di *Boton, and apparently studied in Gallipoli under his uncle, Meir di *Boton. In 1648 he was in Smyrna, where he was a member of the *bet din* of Joseph *Escapa. His only son and his daughters died in an epidemic there (before 1660). Hıyya was a friend of Hıyyim b. Israel *Benveniste and corresponded with him as well as with his kinsman Moses *Benveniste. He published *Lehem Rav* (Smyrna, 1660), the responsa of his grandfather. Boton was among those who opposed Shabbetai Zevi in Smyrna. After 1674 he immigrated to Jerusalem, where he became a member of the *bet din* of Moses *Galante, dealing particularly with cases of divorce. He went as an emissary of Erez Israel to Turkey and the Balkans and in 1680 was in Belgrade and in Sarejevo. In 1686 he was in Jerusalem, where in 1700 he was appointed chief rabbi, but he died shortly afterward.

BIBLIOGRAPHY: Azulai, 1 (1852), 7 no. 25; Frumkin-Rivlin, 2 (1928), 74 no. 15; Yaari, *Sheluhei*, 300–12; Scholem, *Shabbetai Zevi*, 1 (1957), 338.

BOTON, JACOB BEN ABRAHAM DI (1635?–1687), halakhist. Jacob was born in Salonika and was a disciple of H̄as dai ha-Kohen Perahyah. His father, Abraham b. Jacob (b. c. 1610), grandson of Abraham b. Moses di *Boton, was also a disciple of H̄as dai ha-Kohen Perahyah and was appointed chief rabbi of Salonika in 1678. He was among the opponents of Shabbetai Zevi. During the lifetime of his father, Jacob acted as *dayyan*, with the specific task of enforcing payments imposed by the *bet din*. He was acquainted with and believed in Shabbetai Zevi. When his father died, he failed in his attempt to succeed him as chief rabbi, despite the recommendation of Solomon *Amarillo. Jacob wrote many responsa, the earliest of which is dated 1658. They contain important material on the economic conditions of the time, dealing, among other things, with the guild of dyers to which he himself belonged. He made use of many manuscripts of *rishonim* and quoted early regulations of the Salonika community. A substantial part of his responsa was burnt together with his other writings when he was in Constantinople at the home of Hıyyim Alfandari. His son-

in-law, Solomon Abrabanel, published the remainder of his responsa under the title *Edut be-Ya'akov* (Salonika, 1720). He is known to have written four other books: (1) a commentary on the Mishnah, written during the plague of 1679 when he was in the village of Libada; (2) a commentary on the *Ittur* of *Isaac b. Abba Mari, a part of which was published with the responsa; (3) a work on the novellae of Solomon b. Abraham *Adret and on other topics; (4) commentaries to the Talmud and the *posekim*. A fragment from this work was included in his one printed book.

BIBLIOGRAPHY: I.S. Emmanuel, *Mazzevot Saloniki*, 2 (1968), 150–2; Azulai, 1 (1852), 86, no. 210; 2 (1852), 106, no. 12; Steinschneider, *Cat Bod*, 1195, no. 5513.

BOTON, MEIR BEN ABRAHAM DI (c. 1575–1649), rabbi and halakhist. Born in Salonika, he studied under his father, Abraham. b. Moses di *Boton. In his introduction to his father's *Lehem Mishneh*, he describes the trials and the expulsions he had experienced from his youth. He was appointed rabbi of Gallipoli and served there until his death. Students from all parts of Turkey, among them (Nissim) Solomon *Algazi, streamed to his yeshivah, which became a center of study. Even in his youth, Meir was in correspondence with the greatest halakhic authorities of the day, and problems were addressed to him even from Constantinople. He occupied himself to a considerable extent with communal affairs and also took an interest in poetry. After his death, his library was pillaged. The few responsa which remained in scattered pamphlets were collected and published with other material by his son-in-law, Jesse Almuli (Smyrna, 1660), who added his own valuable notes. Meir di Boton was a close friend of Hayyim *Benveniste, who mentions their correspondence in his *Ba'ei Hayyei*.

BOTOSANI (Rom. **Botoșani**), town in N.E. Romania. Up to the end of the 19th century it had the second largest and most important Jewish community in Moldavia, apparently originating in the 17th century. There was a considerable community in Botosani by the early 18th century. In 1745 merchants in Botosani, including Jews, were granted the right to own their houses by the prince (*gospodar*). In 1799 Prince Alexander Ypsilanti gave a privilege (now in the Central Archives for the History of the Jewish People, Jerusalem) to the Botosani community granting it the status of an autonomous corporation. In 1803 there were 350 Jewish families paying taxes in the town. In the 19th century the community increased as a result of Jewish immigration into Moldavia and in 1899 it numbered 16,817 (51.8% of the total population). By the early 19th century the Jews of Botosani had trade connections with Leipzig and Brody, and contributed to the economic development of the town. A growing number engaged in crafts. The Christian population demanded that the authorities should

ban Jews from these occupations. Despite this opposition, by 1899 more than 75% of the merchants and approximately 68% of the artisans in Botosani were Jewish. There were anti-Jewish riots in 1879. Anti-Jewish feelings again flared up during the Romanian peasant revolt in 1907. When the Jewish communities in Romania were deprived of their official status at the beginning of the 1860s, sharp internal conflicts in the Botosani community led to its disintegration and disruption of its activities; many of its institutions closed down. In 1866 Hillel Kahana, the Hebrew writer and educator, founded a secular Jewish school in Botosani. Despite opposition from Orthodox circles and several temporary closures, it existed up to the outbreak of World War I, in part supported by the Alliance Israélite Universelle. The Hebrew writers David Isaiah *Silberbusch, Zevi Lazar *Teller, and Israel *Teller taught there. At the beginning of 1882 Silberbusch and Teller published the first two numbers of the Hebrew monthly *Ha-Or* in Botosani. After World War I the community was reorganized. It numbered 11,840 in 1930 (36.6% of the total population). Institutions maintained by the community included two primary schools (for boys and girls) and a vocational school for girls. In 1940, all the Jewish men between 15 and 70 years of age were taken to forced labor. Around 11,000 Jews from small towns, and villages (Sulita, Frumusica, Ripiceni, Heci-Lespezi, Targu-Frumos, Falticeni, Pascani, Stefanesti, Mihaileni) were forcibly moved to or found refuge in Botosani. They lived in poverty, aided by the community. After the outbreak of war against the U.S.S.R. (June 22, 1941), around 8,000 Jews from Botosani worked at forced labor, half of them in Bessarabia, Transnistria, Dobruja, and Jassy. The community helped many pauperized Jews. Two Jewish secondary schools were founded for the Jewish pupils excluded from the public schools. After the war, when the evacuees from the villages in the area and those who returned from Transnistria settled in the city, Botosani's total Jewish population numbered 19,550 (1947). A few years later most of the population settled in Israel, leaving 500 families and four synagogues in 1969. The local *shohet* also served as the community's rabbi. In 2004, 125 Jews lived in Botosani, with a functioning synagogue.

BOTOSHANSKY, JACOB (1892–1964), Yiddish novelist, journalist, and critic. Botoshansky was born in Bessarabia. He was active in Romania from 1914 to 1926 as a literary pioneer of Yiddish, and, thereafter, in Buenos Aires as editor of the Yiddish daily, *Di Prese*. In 1914–15 he was one of the founders and editors of *Likht*, Romania's first modern Yiddish periodical, and collaborated with Jacob *Sternberg in writing

for the renascent Yiddish theater. In Argentina, Botoshansky quickly emerged as a leader combating the influence wielded in the Yiddish theater by the criminal elements who were then prudishly called “white slave traders”; he never ceased to play a prominent role in Jewish cultural life there. His writings include travel sketches of North and South America and of Israel. Two of his dramas, *Hershele Ostropolyer* and *Reb Ber Lyover* (1928), were staged in Argentina and Soviet Russia. His works include *Mir Viln Lebn* (“We Want to Live,” 1948) and *Di Kenigin fun Dorem-Amerike* (“The Queen of South America,” 1962), both fictional travel sketches; *Di Lebngeshikhte fun a Yidishn Zhurnalist* (“The Biography of a Jewish Journalist,” memoirs, 3 vols., 1948); and *Pshat* (“Simply Speaking,” literary essays, 1952).

BOTSTEIN, LEON (1946–), U.S. conductor and music historian. Botstein was born in Zurich, Switzerland, and moved to New York with his family in 1949. He studied violin with Roman Totenberg and conducting with Richard Wernick and Harold Farberman. Afterwards, he dedicated himself to history (Ph.D. Harvard University, 1985). In 1975 Botstein was appointed president of Bard College (New York) and Leon Levy Professor in the Arts and Humanities. In 1992 he became music director of the American Symphony Orchestra and in 1995 artistic director of the American Russian Young Artists Orchestra. He appeared as a guest conductor in Europe, Asia, and South America. In 2003 Botstein was appointed music director of the Jerusalem Symphony Orchestra.

As a conductor, he was widely known for his ambition to broaden the horizons of his audience while performing less-known and rarely played music, especially of late 19th century and 20th century composers; his recordings also served the same purpose. In 1990 Botstein founded the Bard Music Festival, whose concerts are accompanied by essays devoted to the composers performed each time. His aim was to involve listeners in a deeper absorption of music.

As a prominent music historian, Botstein was appointed editor of the professional journal *The Musical Quarterly* in 1992. His numerous publications investigate mainly the problems of performance and reception of music, the Austrian and German music tradition of the 19th and 20th centuries, and the role of Jews in the spiritual life of the German-speaking world. His books and articles have been published in German, English, and Russian. For his contributions to music he has received several awards, including the American Academy of Arts and Letters Award and Harvard University’s prestigious Centennial Award as well as the Cross of Honor, First Class, from the government of Austria.

BOTVINNIK, MIKHAIL (1911–1995), Soviet chess master. Born in Repnik, Saint Petersburg (Leningrad) district, Botvinnik was world champion in the years 1948–57, 1958–60, and 1961–63. He received the Soviet title of Grand Master in 1935 and International Grand Master in 1945. He graduated as a doctor of technical sciences in the field of electricity, distinguished himself in this field, and was decorated by the Soviet government at the end of World War II. In 1931, 1933, 1939, 1944, 1945, and 1952 he was champion of the Soviet Union. Botvinnik created the so-called scientific school of preparation for chess tournaments and brought the method to perfection. This laid the basis of the Soviet school of chess school, boasting a great many Grand Masters, including Gary *Kasparov. According to some chess specialists the best game in history belongs to Botvinnik, his victory over Capablanca in Amsterdam in 1938. From the 1960s he tried to use the achievements of chess theory to develop artificial intelligence and chess computers. Botvinnik grew up in an assimilated family, but encountered antisemitism in daily life. He displayed courage in the dark years of Stalin and after, and published warm words about Israel, Pinhas *Rutenberg, and the kibbutz, defending the right of the Jews to live in their ancient homeland. In contrast to other Jewish cultural activists, he never signed letters condemning Israel. His autobiography appeared in English translation in 1981 as *Achieving the Aim*.

[Shmuel Spector (2nd ed.)]

BOUCHARA, Algerian family, prominent in the Jewish community life of Algiers from the 17th century. ABRAHAM (early 18th century) was **muqaddim* (leader) of the community and adviser to the deys; his brother ISAAC, well-known about 1726, was a shipowner and financier in Leghorn, Genoa, and Algiers. Abraham’s son JACOB RAPHAEL (d. 1768) succeeded his father as *muqaddim*. Raphael, who was very wealthy and an associate of the dey, represented Ragusa (*Dubrovnik) as consul (1735). He was one of the principal shipowners of his time, and his commercial activities extended from Alexandria to Venice and from Leghorn to Hamburg. He supported yeshivot and printed Hebrew works at his own expense. His son JOSEPH was employed by Christian governments to ransom Christian prisoners. Jacob Raphael’s other son, ABRAHAM (d. 1801), succeeded him as consul and *muqaddim*, but in 1800 Naphtali *Busnach replaced him in the latter position. Abraham had disputes with the community, which were eventually settled in his favor by the scholars Jacob *Benaim and H.J.D. *Azulai. At the beginning of his career, Abraham represented the U.S. in its negotiations with the dey. Although involved in commercial affairs, he pursued talmudic and kabbalistic studies. He wrote three works: *Beit Avraham* and *Likkutei Tanakh*, both unpublished, and *Berit Avraham* (Leghorn, 1791), a collection of homilies.

BOUDIN, JEAN-FRANÇOIS, known as **Father Justin** (1736–1811), French Capuchin friar and preacher. Boudin was appointed by Joseph Beni, bishop of Carpentras, at the end of 1783 to deliver the conversionist sermons which the Jews of Carpentras were obliged to attend. Seventeen of the sermons he delivered between 1787 and 1790, as well as his short treatise *Notion du Talmud*, are preserved in a manuscript in the Avignon public library (Ms. 1525).

BOUDREAU, LOU (1917–2001), U.S. baseball player, member of the Hall of Fame. Boudreau's mother was from an Orthodox Jewish family and Boudreau was raised as a Jew and attended Passover Seders at his grandparents' home until he was 10, when his parents divorced. Thereafter he was raised as a Catholic by his French father. Boudreau was a career .295 hitter and standout shortstop who played 15 years beginning in 1939, mostly with the Cleveland Indians. In 1948 he fashioned one of the greatest individual seasons ever, hitting .355 with 18 home runs, 106 runs batted in, and 116 runs scored – and struck out only nine times – to win the Most Valuable Player award. He was also manager of the team, having been named skipper in 1942 at age of 24, the youngest person ever to manage a major-league team. Boudreau led AL shortstops in fielding eight times, won the 1944 American League batting title (.327), and led the league in doubles in 1941, 1944, and 1947. He was also the creator on July 14, 1946, of the legendary “Williams Shift,” when he placed all his fielders except the third baseman and left fielder on the right side of the field against the pull-hitting Ted Williams. Boudreau later managed the Athletics and Cubs. The Indians retired his No. 5 uniform number and the street bordering Municipal Stadium in Cleveland was renamed Boudreau Boulevard.

BOUGIE (Ar. **Bajaya**; ancient **Saldae**), town in Algeria. Rebuilt in 1067, Bougie attracted Muslim, Jewish, and Christian families, who had been exempted from taxes by the Muslim authorities as an inducement to settle there. A port, and often the capital city, its commerce flourished, and it became a great intellectual center. Although the city's inhabitants were spared by the conquering *Almohades in 1152, the city later declined. Jews from the Balearic Islands, Italy, and Marseilles settled there in the 13th century, but many members of the indigenous Jewish community emigrated. Later, however, because of the 1391 persecutions, many Jews from Spain and the Balearic Isles took refuge in Bougie and eventually became the town's leading businessmen. As a result, Bougie had two

separate communities: the older inhabitants and the new refugees. Among those who lived in Bougie were the scholarly rabbis Isaac 'Abd al-Ḥaqq and Astruc Cohen, the 'Ammar, Najar, and Stora families, Isaac Nafusi, the astronomer and instrument-maker (originally from Majorca), and the Bacri-Kohen family, which flourished there in the 15th and 16th centuries. When the Spanish conquered Bougie in 1510, Jewish property was pillaged and many Jews were sold as slaves, but the community continued to exist. In 1553 the Turks occupied Bougie, which from then on lost its importance (3,000 inhabitants, of whom 600 were Jews). The Turks granted exclusive trading rights and a concession of the port to David Bacri of Algiers in 1807. With the arrival of the French in 1833 the Jewish community left the town, a few Jews returning in 1838. Thereafter there were never more than 800 Jews in Bougie; none remained by the late 1960s.

BOULAY, small town in northeastern France; formerly belonging to the Duchy of Lorraine. Jews settled in Boulay in the first half of the 17th century. It was the home of Raphael *Levy, the victim of a *blood libel, executed in 1670. In 1721 Duke Leopold confirmed the right of 19 Jewish families to reside in Boulay and designated the synagogue as the main one for the duchy. A cemetery is mentioned from the end of the 17th century. The Jewish population numbered 137 in 1808, 265 in 1831, and 120 in 1931. During World War II, 11 Jews from Boulay were deported by the Germans and one was shot. The synagogue was destroyed, but was rebuilt in 1956. In 1968, the Jewish population was about 35.

[Gilbert Cahen]

BOULE (Gr. Βουλῆ), in ancient Greece, a state council; in Erez Israel a city council which played an important role during and after the Second Temple period. One of the Hellenistic institutions established in cities founded by Herod and his sons, the Boule later spread to other urban areas inhabited mainly by Jews. There was a Boule also in Jerusalem; in Tiberias it consisted of 600 members; and the Boule in Ashkelon is mentioned in a source dating from the end of the third century C.E. (TJ, Pe'ah 1:1, 15c). In some cities the Boule was housed in a special building (Aram. כְּנִישְׁתָּא דְּבוּלֵי, *Kenishta de-Boulei*), in which the sages delivered public homilies (TJ, Shek. 7:3, 50c; TJ, Ta'an. 1:2, 64a). Various talmudic sources refer to the Boule in southern Judean cities dissolved apparently because of internal friction (TJ, Ned. 3:2, 38a; TJ, Shevu. 3:10, 34d; Git. 37a). The principal function of the Boule was to levy taxes for the

Roman administration, for the collection of which the property of members of the Boule was the surety. Since the taxes had frequently to be extorted from the people, wealthy men, appointed against their will, tried various ways to evade serving on the Boule, sometimes by flight, and hence the remark of R. Johanan (middle of the third century C.E.): "If you have been nominated for the Boule, let the Jordan be your neighbor" (TJ, MK 2:3, 81b).

BOURG-EN-BRESSE, capital of the department of the Ain, eastern France. The first mention of Jews in Bourg-en-Bresse dates from 1277 when the Jews and the Cahorsins paid 50 livres to the lady of the manor. An agreement of 1438 between the city guilds and the Jews of Bourg-en-Bresse regarding their share in the expenses for fortifications was signed by 11 heads of families. The Jews then constituted some 3% of the population. The census of 1512 notes that there were no longer Jews living in Bourg-en-Bresse. At the beginning of World War II, 10 to 15 Jewish families were living in the town. Seven of the Jews arrested during the raids of July 10, 1944, were executed. There has been no subsequent Jewish community.

[Bernhard Blumenkranz]

BOURGEOIS, JEAN, son of a Parisian merchant, murdered on August 26, 1652, by members of the secondhand dealers guild which he had insulted by calling it "the synagogue." The affair was taken up in numerous broadsheets, or "Mazarinades," often in verse, which presented the event as if the dealers were Jews guilty of ritual murder. They demanded the expulsion of the Jews from France, although there were then no professing Jews in the country. Prosecution of the accomplices in the crime was stopped in June 1653, by royal writ which expressly noted that all the accused "professed the Catholic religion."

[Bernhard Blumenkranz]

BOURGES, capital of the department of Cher, central France. In 570 a Jew, Sigericus, was baptized in Bourges, while at about the same time a Jew practicing medicine there treated a cleric. *Sulpicius, bishop of Bourges, 624–647, attempted to convert the Jews in Bourges to Christianity and expelled any who resisted his missionary activities. In 1020 a Jewish quarter is mentioned to the south of the city. About 1200 a baptized Jew of Bourges named Guillaume, who had become

a deacon, composed an anti-Jewish treatise, *Bellum Domini adversus Iudaeos*. Around 1250 the pope requested the archbishop of Bourges to secure a livelihood for the baptized Jew, Jean. Between the end of the 13th century and 1305 many Jewish names appear on the municipal tax rolls and bailiff court records. A building at 79 Rue des Juifs is believed to have been used as a synagogue in the Middle Ages. The community ceased to exist after the Jews were expelled from France in the 14th century. During World War II, especially after June 1940, hundreds of Jewish refugees were temporarily settled in Bourges.

[Bernhard Blumenkranz]

BOURKE-WHITE, MARGARET (Peg; 1904–1971), U.S. photojournalist. Bourke-White was the daughter of Minnie Bourke, who was Irish-English and a Catholic, and Joseph White, formerly Weiss, from an Orthodox Polish family. Born in the Bronx, the pioneering photographer, whose father was an inventor of printing presses, grew up in Bound Brook, N.J. In 1922, while studying herpetology at Columbia University, she developed an interest in photography after studying under Clarence White, a master of impressionistic soft-focus photography. In 1925, she married Everett Chapman, but the couple divorced a year later. After switching colleges several times, she graduated from Cornell in 1927 and a year later moved to Cleveland, Ohio, where she opened a studio and specialized in architectural photography. She soon became an industrial photographer at the Otis Steel Company, where she honed her love of hard-edged industry and architecture.

Bourke-White's rise to fame in a man's world was partly the work of Henry Luce, the publisher of *Time* magazine, who recruited her to be his photographer for the new *Fortune* magazine. "She could make anything beautiful," a writer in the *New York Times* said, "piles of ground-up pig parts, rows of hanging cow carcasses, dreary assembly lines." Word got around and for years it was said that no mogul could resist her pictorial or feminine charms. She took countless pictures in factories and warehouses. By arranging industrial products and materials and lighting them dramatically, she made them dance and sing, a reviewer wrote. "Her plow blades look like legs of Rockettes."

She was a climber in more ways than one. As a child, she liked to walk along the tops of fences. When she grew up, she requested the top floors of hotels. Her office in the Chrysler Building was eye-level with the gargoyles. In 1930 Bourke-White made a trip to Germany, and while there petitioned her way into the Soviet Union to take pictures. She made the Soviet construction projects look heroic. In 1934, in the depths of the Depression and the Dust Bowl, her cor-

porate commissions began to dry up. She couldn't afford her Art Deco office in the Chrysler Building. *Fortune* sent her to cover the drought in the Midwest. Her pictures seemed to focus on the abstract pattern, the play of light and dark, and the rhythm of repetition. Her photographs of poverty in the South, published in *You Have Seen Their Faces*, a 1937 book written with the novelist Erskine Caldwell, who became her second husband, was a public success. But the book was criticized for left-wing bias and upset whites in the Deep South with its passionate attack on racism. Carl Mydans of *Life* later said: "Margaret Bourke-White's social awareness was clear and obvious. All the editors at the magazine were aware of her commitment to social causes." Luce had made her one of the original photographers for the new *Life* magazine in 1936, along with Alfred Eisenstaedt, and it was her photograph of three marching concrete pillars at the Fort Peck Dam that appeared on the inaugural cover.

She and Caldwell were the only foreign journalists in the Soviet Union when the German army invaded in 1941. She photographed the German bombing raids before returning to the United States, where she and Caldwell produced another attack on social inequality, *Say, Is This the U.S.A.?* (1942). During the World War II, she served as a war correspondent, working both for *Life* and for the U.S. Air Force. She survived a torpedo attack while on a ship to North Africa, photographed the bombing of Tunis and was with the United States troops and photographed the liberation of the Buchenwald death camp. These photographs, along with Edward R. Murrow's reporting, achieved iconographic status. After the war she continued her interest in racial inequality by documenting Gandhi's nonviolent campaign in India and apartheid in South Africa.

An incredibly hard worker with legendary stamina and perseverance, she had a reputation of being persuasive, charming, persistent, and manipulative. She constantly alienated women while trying to please men. She thrived on adventure and crisis and put her photographic ambitions ahead of virtually everything. She had just said goodbye to Gandhi and was leaving India when she got word that he had been assassinated. She rushed to his house where his family and friends – who were her friends, too – welcomed her in their sorrow. There were to be no pictures, but Bourke-White smuggled in a camera and took a shot, with a flashbulb, before she was thrown out.

In 1952 she went to the Far East to cover Japan and the Korean War. There she took what she considered her best photograph, a meeting between a returning soldier and his mother who thought he had been killed several months earlier. She felt the first symptoms of Parkinson's disease in 1953 but stubbornly refused to give in to her disabilities and worked for *Life* until 1957. She spent eight years writing her autobiography, *Portrait of Myself*, which was published in 1963.

Bourke-White's father kept his Jewishness hidden from her, and she only learned about it at his death when she was 18. Her biographer, Vicki Goldberg, in 1986, says her demand-

ing mother was an antisemite and only three or four friends knew of Bourke-White's religious background.

[Stewart Kampel (2nd ed.)]

BOUWMEESTER, LOUIS FREDERIK JOHANNES (1842–1925), Dutch actor. Born into an acting family, Bouwmeester made his first appearance at the age of 12. He became widely esteemed for his acting in Shakespeare, especially as Shylock. Other Shakespearean roles he played were Hamlet, Mark Antony, Wolsey, and Richard III. At the age of 80 he played Shylock on the occasion of the 1922 Hague Conference.

BOUZAGLO, DAVID (1903–1975), Moroccan *paytan* and musician. Born in Casablanca, Rabbi David was endowed with a refined intelligence and distinguished himself as a highly cultured person in the realm of the sacred Judaic writings (Bible, Mishnah, Talmud, and Zohar) and retained most of those texts in his extraordinary memory. This latter capacity became compulsive when his blindness began to develop in 1949. As an outstanding musician, his inborn talent enabled him to learn and master the highly sophisticated art of the Andalusian *nūba* to the extent that non-Jewish musicians used to seek his teaching and advise. This skillfulness magnified his great contribution to the singing of **bakkashot* both as interpreter and mentor. In the framework of this traditional musical genre Bouzaglo used his openness and creative mind to introduce innovative elements, which he derived particularly from the style he passionately loved, the so-called *sharqī* (lit. Oriental, meaning Egyptian, Turkish, and Near Eastern styles). Bouzaglo subtly incorporated the melodies he borrowed from this and other styles, endowing them with a Moroccan flavor.

Because of his dominating personality Bouzaglo became a legend in his lifetime and was in great demand as cantor and *paytan*. In 1969, he immigrated to Israel, where his former disciples as well as new ones continued to follow his teaching and, inspired by his spirit, preserve the Jewish musical tradition. Regrettably, he left almost no documentation of his art, always refusing insistently to be recorded, perhaps from a desire to preserve the magic halo of his live performances. Nevertheless, in 1957, in Casablanca, he made an exception and authorized the late Prof. Haim Zafrani to make a recording of a selection of chants and *piyyuṭim*. The Jewish Music Center of Tel Aviv's Bet Hatefutzot published an album including this unique recorded material in 1984.

[Amnon Shiloah (2nd ed.)]

BOVE-BUKH, a chivalric romance adapted in 1507 by Elye Bokher (Elijah Baḥur *Levita) into 650 *ottava rima* stanzas in Yiddish from a Tuscan version (*Buovo d'Antona*) of the early 14th-century Anglo-Norman original, *Boeue de Haumton*. This tale of the heroic adventures of the noble Bovo, exiled from his homeland by the machinations of his murderous

mother, his wanderings through the world (as far as Babylon), and the love story of Bovo and Druzyana, their separation, his triumphant return home, and the final reunion with Druzyana and their two sons, proved to be one of the most beloved tales in the Yiddish literary tradition over the course of more than two centuries.

BOVSHOVER, JOSEPH (1873–1915), Yiddish poet. Bovshover was born in Lubavitch, Belorussia, and immigrated to the United States from Riga in 1891. Influenced by the radical Yiddish poets, Morris *Vinchevsky, David *Edelstadt, and Morris *Rosenfeld, as well as by Heinrich Heine, Walt Whitman, and the Bible, he wrote revolutionary, anarchist poetry. Under the name of Basil Dahl, he also wrote poems in English (e.g., in Benjamin R. Tucker's *Liberty* (1896–97)). He received exaggerated critical praise, yet became increasingly melancholic and spent the last 15 years of his life institutionalized. He published essays on Heine, Emerson, Whitman, and Edwin Markham, and translated Shakespeare's *Merchant of Venice* into Yiddish. His collected verse and essays were published in the one-volume *Gezamelte shriftn* (1911, 1916²). Many of his poems (e.g. "Revolution") were set to music. Dror Abend-David shows that Bovshover's Shakespeare translation is far less *daytsh-merish* (Germanized) than his (often bathetic) verse, most probably under the influence of the Yiddish lexicographer and language reformer Alexander *Harkavy.

BOX, a shrub or tree (*Buxus sempervirens*) that grows wild in Asia Minor. It is cultivated in Israel as an ornamental tree. In the Mishnah it is called *eshkeroà*, its excellent wood being used for delicate articles and apparatus, such as the urn which was used in the Temple for the casting of lots to decide the duties of the priests (Yoma 3:9). It has a creamy yellow color and R. Ishmael said that the children of Israel "are like boxwood, neither black nor white, but an intermediate color" (Neg. 2:1). Since he lived in the south of Erez Israel, R. Ishmael was probably referring to most of the inhabitants of that region, but no conclusions can be drawn from this statement as regards the color of the skin of the Jews living elsewhere in the country. The box is not mentioned in the Bible although the Targums identify it – without basis – with certain other biblical trees, such as the *teàshur*.

BOXER, BARBARA (1940–), U.S. Democratic senator and liberal activist. Boxer has supported women's issues, education, gun control, child abuse protection, services for the underprivileged, military reform, and environmental protection. Born Barbara Levy in Brooklyn, New York, she graduated with a degree in economics from Brooklyn College in 1962 and married Stewart Boxer that same year. The couple had two children. After moving to Marin County, in northern California, in 1965, Boxer became involved in grassroots political organizations, founded a women's political caucus, and worked to reduce high school drop-out rates, provide job training, and develop child-care centers. In 1977, she won a seat on the Marin County Board of Supervisors, serving as the first woman Board president in 1982. Elected to the House of Representatives in 1982, Boxer's record demonstrated a strong commitment to women's health issues, especially breast cancer research. As a pro-choice advocate, Boxer sponsored legislation to protect abortion rights and freedom of access to abortion clinics. In 1992, Boxer and Dianne *Feinstein, also from California, were the first two Jewish women elected to the United States Senate. Like Feinstein, Boxer did not emphasize her Jewish identity. In November 2004, she easily won re-election for her third term. In the Senate, Boxer advanced her feminist campaign, supporting legislation against domestic violence and combating sexual harassment in government and in the workplace. As chair of the Superfund, Toxic, Risk and Waste Management Subcommittee, she has supported environmental issues and led efforts to clean abandoned industrial sites and to ban a gasoline additive suspected of being a carcinogen. On Middle East issues, she was a reliable supporter of Israel. Although the partisan and uncompromising bills she proposed were seldom voted into law, Boxer was an impassioned voice for women, workers, children, and the environment.

[Arlene Lazarowitz (2nd ed.)]

BOYAR, LOUIS H. (1898–1976), U.S. real estate developer and philanthropist. Boyar, born in San Francisco, resided in Los Angeles from 1934. He was a pioneer of large-scale home building and community planning in Los Angeles after World War II. Boyar built the city of Lakewood, one of the first and largest planned communities in the U.S. He directed large-scale personal benefactions and fund-raising efforts to the economic and cultural needs of Israel. He served the State of Israel *Bonds organization in many capacities, including that of chairman of the Board of Governors. He also served as chairman of the Board of Israel Investors, Inc. Many educational and social service institutions in Israel were erected by him in memory of his wife, Mae. Boyar was deputy chairman of the Board of Governors of the Hebrew University. Boyar also supported a number of U.S. institutions, particularly in Los An-

geles. In Israel, the Boyar Building is a state-of-the-art facility located in the heart of the Hebrew University of Jerusalem's Mount Scopus campus. It houses the Rothberg International School. The Na'amat women's organization's Mae Boyar Multipurpose Day Care Center helps families in distress; the Mae Boyar High School in Jerusalem is a residential school that serves disadvantaged junior and senior high school youth.

[Max Vorspan / Ruth Beloff (2nd ed.)]

BOYARIN, DANIEL (1946–), U.S. talmudist and cultural critic. Boyarin was educated at Goddard College, Columbia University (M.A.), and the Jewish Theological Seminary of America (Ph.D., 1975). He taught at the Jewish Theological Seminary and Ben-Gurion University and Bar-Ilan University in Israel; from 1990 he served as the Herman P. and Sophia Taubman Professor at the University of California at Berkeley. Among his many books are *Sephardi Speculation: A Study in Methods of Talmudic Interpretation* (Heb., 1989); *Intertextuality and the Reading of Midrash* (1990); *Carnal Israel: Reading Sex in Talmudic Culture* (1993); *A Radical Jew: Paul and the Politics of Identity* (1994); *Unheroic Conduct: The Rise of Heterosexuality and the Invention of the Jewish Man* (1997); *Dying for God: Martyrdom and the Making of Christianity and Judaism* (1999); and *Border Lines: The Partition of Judaeo-Christianity* (2004). In addition, he is the author of more than 100 articles in Hebrew and English.

Boyarin's work is characterized by the application of post-modernist and post-colonialist theory to Jewish cultural history, especially and most fruitfully, during the period of late antiquity. He numbers among the pioneers in the modern study of midrash and in the introduction of gender as a critical category in the study of rabbinic literature. His work took a decided turn in his controversial study of the apostle Paul, as his own deep hostility to Zionism emerged as a central feature in his reading of Paul. From this point forward he continually focused on the "diasporic" nature of rabbinic Judaism, in which Jewish culture expresses hostility to power and can even be characterized as "feminized." This nature is often placed in contrast to Zionist, territorialist, and nationalist readings of the Jewish past and present, which are characterized as valuing power and masculinity. Another turn emerged with his study of martyrdom and subsequent studies of the Jewish-Christian divide. It is Boyarin's contention that, despite the rhetoric of differentiation found in the works of certain religious elites, the boundaries between Jewish and Christian communities were ill defined and porous through the end of the third century C.E. Only with the emergence of Christian orthodoxy in the early fourth century did a firm boundary between Judaism and Christianity emerge.

Among his many honors, Boyarin was elected a fellow of the American Academy of Jewish Research in 2000, and in 2002 was awarded the Jewish Cultural Achievement in Scholarship Award, given by the National Foundation for Jewish Culture.

[Jay Harris (2nd ed.)]

BOYCOTT, ANTI-JEWISH, organized activity directed against the Jews to exclude them from social, economic, and political life. Anti-Jewish boycott pressure has accompanied *antisemitism as one of its more dangerous and frequent manifestations. Contacts with Jews were avoided, Jews were not accepted in merchants' guilds, trade associations, and similar organizations. This form of boycott often coincided with legal and administrative restrictions already in force in the country.

Toward the end of the 19th century, the anti-Jewish boycott became one of the basic weapons used for victimizing the Jewish population. The first International Anti-Jewish Congress in Dresden, 1882 (see Antisemitic Political Parties and *Organizations), adopted a slogan against Jewish merchants and professionals. In Western Europe, the boycott took the form of excluding Jews from membership of certain societies. In Eastern Europe the rapidly developing "national" bourgeoisie, which formed the mainstay of the rightist parties, soon adopted antisemitic tactics in the effort to squeeze out Jewish competitors. The anti-Jewish boycott campaign met with success in many parts of the Austro-Hungarian Empire. The Austrian antisemites publicized in the press and at public meetings the slogan, "Don't buy from Jews." When the government declared this slogan illegal, it was changed into "Buy from Christians only." In Bohemia and Moravia the anti-Jewish boycott spread under the slogan "Each to his own" (*svůj k svému*), at a time when the rising bourgeoisie sought to obtain an exclusive position in the economy, especially in trade.

Shortly before World War I the Ukrainian population of Galicia was swept into a boycott movement instigated because of alleged Jewish collaboration with the Poles. At the same time, some Polish public figures in Galicia (for instance, the priest Stojalkowski) proposed the boycott as a form of defense for the Polish population against alleged Jewish exploitation. In Russia, the boycott did not attain significant proportions, despite the strongly nationalist and anti-Jewish stand of the Russian merchants. The system of legal and administrative restrictions against the Jews already operating in Czarist Russia was more efficient than any form of boycott. A similar situation existed in Romania, where the Jews had been deprived of all rights of citizenship and were considered "foreigners" in the legal sense. They were not allowed to practice the liberal professions, or keep tobacconist shops (which were a state monopoly), pharmacies, etc. Following the Russian example, Romania introduced the *numerus clausus* in educational institutions. Jewish factory owners were obliged by law to employ two-thirds non-Jewish workers. In 1907 "foreigners" were prohibited from holding agricultural farms on lease. The anti-Jewish boycott drive was especially intensive in Polish areas, which at that time did not form a national state. The newspaper *Rola*, which began publication in the 1880s, proposed the slogan of "Polonization" of trade and industry. Developments took a decisive turn in the following decade when the National Democratic Party (*Narodowa Demokracja*, "ND," "En-deks"), led by Roman Dmowski, appeared on the politi-

cal horizon. Initially the Endeks did not come out with anti-semitic slogans and confined their campaign to the "Litvaks," Jews from Russia, whom they accused of promoting the Russification of Poland.

The crushing of the 1905–07 revolution in Russia was also a major setback to the aspirations of the Polish community for political liberation, and it now began to interest itself exclusively in economic problems. The Endek party campaigns became increasingly aggressive, adopting the slogans "Each to his own," "Don't buy Jewish," and "Buy Christian only." The boycott also spread to cultural life, giving birth to numerous exclusively "Catholic" or "Christian" organizations. The anti-Jewish boycott received wide public support after 1912 in connection with the elections for the Fourth Russian *Duma. The Jewish voters did not support the candidate put up by the rightist Polish party, and their votes secured the election of the Socialist candidate. In retaliation the rightist press started an intensive anti-Jewish campaign, proclaiming the beginning of the "Polish-Jewish War." The boycott in Polish areas appears to have been coordinated with the antisemitic campaign simultaneously unleashed in Russia in connection with the *Beilis case.

Between the two world wars anti-Jewish boycott agitation continued particularly in Poland where the situation deteriorated in the wake of economic difficulties, especially following the depression. In an endeavor to soft-pedal the rising social tension, rightist antisemitic circles, with the silent approval of the authorities, pointed at the Jews as the cause of the distress of millions of unemployed. Taking over trade from the Jews was made to serve as a panacea for rampant poverty and unemployment. After the Nazi rise to power in Germany the government publicly announced a general anti-Jewish boycott. Nazi agitators urged boycotting the Jews at mass meetings. On Sunday, April 1, 1933, uniformed Nazi pickets appeared in front of Jewish shops, attacked their clients, and wrote anti-Jewish slogans on their windows. The offices of Jewish doctors, lawyers, and engineers were also picketed. The official German policy roused antisemitic circles in neighboring countries to more extreme action. The anti-Jewish boycott in Poland gathered strength in imitation of the Nazi example, and Polish antisemitic groups began to adopt active boycott pressure. Pickets appeared in front of Jewish shops and stalls and terrorized the Jewish merchants as well as their non-Jewish clients. The rising number of incidents sometimes resulted in the destruction of shops and goods and also an occasional bloody pogrom, as at Przytyk and Wysokie Mazowieckie.

Anti-Jewish boycott activities received the stamp of official approval in Poland in 1937, when Prime Minister Slawoj-Skaladkowski let drop in his notorious statement the slogan "economic boycott? – please!" The Polish government also attempted to step up Jewish emigration from Poland by means of economic strangulation. The boycott did not greatly affect Jewish industrialists and big businessmen, with whom the most rabid propagandists of the anti-Jewish boycott move-

ment not infrequently had secret commercial ties. However, it weighed heavily on hundreds of thousands of small businessmen, artisans, and others. The anti-Jewish boycott – frequently referred to as the "cold pogrom" in the inter-war press – undermined the foundations of the livelihood of hundreds of thousands of Jews.

BOYCOTT, ANTI-NAZI. In protest against anti-Jewish excesses in Germany after the Nazi Party's victory at the polls on March 5, 1933, Jews throughout the world held mass rallies, marches, and a spontaneous anti-German boycott. This boycott developed into an organized movement after the demonstrative all-day boycott of the Nazis against German Jewry on April 1. The boycott proclamation of March 20 by the Jews of Vilna marked the launching of the boycott movement in Europe; Warsaw followed six days later. Soon the movement embraced virtually all Poland and was subsequently consolidated by the United Boycott Committee of Poland. This boycott movement was short-lived, however, for in January 1934, Poland signed a ten-year nonaggression pact with Hitler, in which cessation of boycott activities was stipulated as a precondition. Under Poland's premier, Józef Pilsudski, the provision was ignored. But in June 1935, about a month after his death, the United Boycott Committee was liquidated.

A mass boycott movement in England first began in the Jewish quarter of London's East End on March 24, 1935. The English-German fur business practically ceased as a result. The boycott groups included the Capt. Weber Boycott Organization, the World Alliance for Combatting Anti-Semitism, the British Anti-War Council, and the Anglo-Jewish Council of Trades and Industries. However, the *Board of Deputies of British Jews opposed the boycott throughout the 1930s.

In France, boycott sentiment was not as intense as in Poland or England; nevertheless, on the eve of the April 1 boycott, French Jewry warned that it would counterboycott the Reich if the Nazis carried out their plans, and they executed their threat by action similar to that of London's East End Jews. Two of France's most active boycott groups were the International League against Anti-Semitism, and the Comité de Défense des Juifs Persécutés en Allemagne. However, the *Alliance Israélite Universelle remained opposed to the boycott. At the end of March 1933, the anti-Nazi boycott movement spread to Romania and Yugoslavia, eventually encompassing the Jewish communities of Egypt, Greece, Latvia, Morocco, Palestine, several Latin American countries, and the United States.

In the United States the anti-Nazi boycott reached its peak. America's first established boycott group was the *Jewish War Veterans (March 19, 1933), followed by the American

League for the Defense of Jewish Rights (ALDJR), a new organization founded by the Yiddish journalist, Abraham Coralnik, in May 1933. Three months later the *American Jewish Congress (AJC) made a boycott declaration and subsequently created a Boycott Committee. In October, the American Federation of Labor, a non-Jewish worker's organization, also announced that it was in favor of the boycott. The ALDJR was first led by Coralnik, and after six months by attorney-at-law Samuel Untermyer. In a move intended to alter the League's Jewish character, Untermyer changed its name to the "Non-Sectarian Anti-Nazi League to Champion Human Rights." In 1934 the *Jewish Labor Committee (JLC) was created claiming to represent about 500,000 Jewish workers, and it immediately initiated a boycott program. Two years later, the organization's central body for boycott activities combined with the Congress' Boycott Committee to form the Joint Boycott Council (JBC). The Council and the League proved to be America's principal boycott organizations; the Jewish Veterans and other boycott groups that arose in the late 1930s cooperated with or joined these two organizations. However, attempts to unite the Council and the League were unsuccessful, the two organizations acting separately in consolidating the boycott on an international level.

The Joint Boycott Council's chairman, Joseph Tenenbaum, obtained passage of a boycott resolution at the *World Jewish Congress (WJC) in 1936. This was a reaffirmation of a worldwide boycott resolution adopted by the Second Preliminary Conference (1933), preceding the establishment of the WJC. Also in 1936, Coralnik and Untermyer convened a World Jewish Economic Conference in Amsterdam to coordinate the growing international boycott movement and help find for the boycotting businessmen substitutes for former German sources of supply. To this end, the Conference created a World Jewish Economic Federation, presided over by Untermyer. In keeping with his view that the boycott was a nonsectarian movement, Untermyer changed the Federation's name to the "World Non-Sectarian Anti-Nazi Council to Champion Human Rights." American Jewry's failure to form a united boycott front did not prevent the movement from achieving success. Thus eventually the department store colossi of Macy's, Gimbel's, Sears and Roebuck, Woolworth, and others gave in to continued boycott pressure.

There is evidence that the Nazis, at least during the first two years of their regime, feared that a tight boycott would cripple their economy. Regarding the United States, for example, a memorandum prepared for Hitler by the Economic Policy Department of the Reich as late as November 18, 1938, cited the following comparative figures, which it attributed partly to the boycott:

Year	1929	1932	1937
Import from the U.S.	1,790*	592	282
Export to the U.S.	991	281	209

* In millions of Reichsmarks

In January 1939 dissolution of the *B'nai B'rith in Germany moved its American counterpart to join the boycott movement. However, the American Jewish Committee remained unalterably opposed to the movement throughout the Nazi era. In the United States, a non-belligerent until Pearl Harbor, the boycott was continued until 1941.

[Moshe Gottlieb]

BOYCOTT, ARAB. The Arab boycott against Israel is the longest-functioning example of economic sanctions against a state. It both constituted a supplement to military force against Zionism and was a means of hampering Israel's economic development. The boycott also enabled greater Arab integration at a time when pan-Arabism was the official policy of several Arab states.

The official boycott was declared in the *Arab League Council in December 1945, almost three years before Israeli independence, but the roots were established long before. In 1910, the Haifa newspaper *al-Carmel* encouraged "an economic boycott against the Jews by not purchasing from or selling to them and not leasing properties." Since the Arab Revolt in Palestine in 1936, the boycotts against Jewish merchandise had gathered strength.

Scholars speak of three different boycotts. First, the primary boycott barred direct Arab commercial and financial transactions with the Jewish community in Palestine, and later Israel, as well as postal, radio, and telegraphic communications. After the declaration of Israeli independence, the secondary boycott blacklisted companies that invested in Israel or traded with Israel. A land, air, and sea blockade was imposed. In 1950, the Arab League Council declared that all ships carrying goods or immigrants to Israel would be blacklisted. The tertiary boycott targeted companies that traded with boycotted companies. Finally, before the Oslo accords of 1993, there was also what has become known as the voluntary boycott. Countries such as Japan voluntarily abstained from close relations with Israel for fear of being boycotted or damaging their own economic relations with the oil-producing countries.

The Arab League Council Resolution 357 of May 19, 1951, established a Central Boycott Office (CBO) in Damascus, along with a Boycott Commissioner. Liaison officers had branch offices in each member state and third party offices were opened, for example, in 1960, in New Delhi. By 1954, 5.7 per cent of the Arab League budget was allocated to the CBO in Damascus, and by 1979, the CBO had 20 employees, five with diplomatic status. In 1981 the boycott office in Damascus was supplemented by an Islamic Office for the boycott of Israel, affiliated to the Islamic Conference Organization. Non-Arab states that actively participated in the boycott included Bangladesh, India, Malaysia, Mali, Pakistan, and Uganda.

The CBO chaired a conference biannually in one of the Arab capitals. It adopted decisions regarding companies considered in breach of the boycott, coordinated policy, and drew up blacklists. Letters were then sent out to offending companies demanding proof they had broken off relations with Israel. If the company did not comply, it was boycotted by the Arab League. No private or public Arab body was allowed to trade with the company under threat of fines, imprisonment, and confiscation of goods. These meetings were backed up by legislation in each member state. Companies seeking new trade relations with the Arab world had to go through a long procedure related to the boycott.

Boycott activities intensified throughout the 1950s. On December 11, 1954, the Arab League passed the Unified Law resolution for the boycott of Israel. The new law prohibited all Arab individuals and entities from dealing with agencies or persons working on behalf of Israel or with foreign companies and organizations having interests, branches, or agencies in Israel. The overriding aim was to prevent investment so that the country could not develop. Exports of Arab goods to countries re-exporting to Israel were also prohibited. In 1958, the boycott was extended to goods produced from Israeli raw materials as well as foreign ships that had visited an Arab and Israeli port in the same sailing.

Each member state had additional legislation. Egypt authorized the seizure and impoundment of cargoes with Israeli destinations, regardless of the ship's nationality. On February 6, 1950, Egypt banned ships suspected of violating the blockade of Israel from the Suez Canal. By 1955 this list included 104 ships. Egypt was particularly careful to prevent the shipment of strategic goods, such as oil, to Israel. In November 1953, it extended the term contraband to include "any foodstuffs or other commodities likely to strengthen the war potential of the Zionists." Captains of vessels and tankers had to guarantee that they would not discharge any of their cargo in an Israeli port and had to submit log books.

In the course of the 1960s, a growing number of American films and actors, including Marilyn Monroe, were banned because the films allegedly contained Zionist propaganda or because the actors were considered pro-Israel or helped collect donations for Israel. Louis Armstrong was banned for performing in Israel.

There were notable successes for the boycott. A British Foreign Office report records that the Lebanese Department of Civil Aviation had approached BOAC, Cyprus Airways, KLM, SAS, Air France, Pan American, and TWA to boycott Israel and not to invest in the country. In 1957, the Arab League announced that its members would henceforth deny overnight and landing rights to Air France. After resisting the boycott for one and a half years, Air France finally caved in at the end of 1958.

Israel invested considerable effort to convince the international community to ban the boycott. On September 1, 1951, the UN Security Council demanded that Egypt terminate its restrictions on navigation through international waterways.

The resolution was ignored. The fight against the boycott was a lost cause because of the strength of resistance to Israel in the Islamic world. Israel's solution was to develop an economy detached from its neighbors – a process started in 1936 with the construction of the port of Tel Aviv. Avoiding the secondary and tertiary boycotts was more complex.

The success of the secondary and tertiary boycotts depended on the support of other states. The boycott organizers placed economic pressure on companies, which were in turn asked to put pressure on their governments, or at least not to implement anti-boycott legislation. There were a number of international protests, although the Soviet Union tried to intensify the boycott. In 1950, Britain, Norway, and the U.S. complained to Egypt about the banning of tankers from the Suez Canal. A Security Council resolution of 1956 ordered Egypt to lift the blockade. Except for the years 1957–59, in the wake of the Suez War, the Canal remained closed to Israeli ships and ships bound for Israel.

There is no clear legal consensus on the boycott. Arabs argued that the laws of war entitled a state both to impose an economic boycott and take action against non-neutral third parties. Israel argued that the secondary and tertiary boycotts contradicted international agreements such as articles 11 and 12 of GATT and the Treaty of Rome. In 1976, the U.S. started passing anti-boycott legislation, regulations, guidelines, and executive orders. In 1977, anti-boycott provisions were added to the Export Administration Act. Some European countries such as France, Germany, and the Benelux countries also passed some legislation.

In February 1975, the Arab League adopted a resolution calling for the intensification of the boycott, particularly in the sphere of international financing. Fourteen banks were on the list, including some of the largest and most famous international banks. In one case the Kuwait International Investment Company (KIIC) worked with Warburg and Rothschild on a \$75 million international bond issue to raise capital for Volvo and the state of Mexico. The CBO forced the KIIC to withdraw the loan issue. Entering an indirect contractual arrangement as co-manager with a blacklisted underwriter constituted a violation of the boycott.

It was during the 1970s that the first cracks became apparent in the primary boycott. Even at the height of the boycott, there was some trade with Jordan through the "Open Bridges" on the Jordan River and the "Good Fence" between Israel and Lebanon after 1975. There was always trade through third parties.

The secondary boycott was also often erratically applied. Towards the end of the 1970s six Arab League members, Algeria, Mauritania, Morocco, Somalia, Sudan, and Tunisia complied only with the primary boycott. In the late 1980s, despite the fact that the CBO refused to remove Coca-Cola from the blacklist, the company claimed that it was doing business with 11 Arab states, launched an advertising campaign in Bahrain, and opened bottling and canning plants in several Gulf states.

The peace accords between Egypt and Israel in 1978 included an undertaking to cancel the boycott. In reaction, the Baghdad Arab Summit Conference in March 1979 decided to impose economic sanctions against Egypt. However, even after the peace treaty most of Egypt continued with the boycott *de facto*. In the five years after the peace treaty, American companies received nearly 500 requests for boycott compliance. As late as 1988, three Egyptian companies with direct contacts with Israel were blacklisted.

The 1982 Israeli invasion of Lebanon gave the boycott more impetus. By 1987, 26 countries in addition to the 22 member states of the Arab League boycotted Israel economically.

The Gulf War marked a watershed. Although 1991 saw an intensification of the boycott, with another 110 companies added to the list, as a reaction to the large-scale Jewish immigration to Israel from the former Soviet Union, this was a period of contradictory signals. Many important companies such as Coca-Cola were removed and there were a string of informal meetings between Israeli and Gulf officials. Saudi Arabia started to link the boycott to Israeli withdrawal from the West Bank and Gaza Strip. After the Declaration of Principles between Israel and the PLO in 1993, the CBO was hardly able to raise a quorum. By 1994, Qatar confirmed negotiations with Israel to pipe natural gas to Israel via European destinations. On September 30, 1994, the Saudi foreign minister announced the cancellation of the indirect boycott on Israel and on October 27, 1994, following the peace treaty with Israel, Jordan canceled the boycott. By the end of 1996, 14 Arab states had openly gone against boycott. Only eight Arab states continued. The voluntary boycott crumbled in Japan, China, and Korea. Most of the major multi-nationals on the boycott list, including Cadbury, Coca-Cola, Colgate-Palmolive, Ford, Fuji, Jaguar, Schweppes, and Xerox were removed.

The treaty put the Palestinians in a difficult position. Continuing the boycott was important as a bargaining chip for final status negotiations but obstructed raising development money. However, the stalemate in the peace process in 1997 revived the boycott. Saudi Arabia again announced penalties for importing Israeli goods. Then, after the breakdown of negotiations with the Palestinians in 2000, several Arab states abruptly ended their contacts with Israel and reinforced the boycott. In March 2001, Arab heads of state reactivated the boycott in Amman, Jordan. As a result, Israeli trade representations in the Gulf states and parts of North Africa closed down. After years of declining representation, 19 Arab countries attended the 72nd conference of the CBO in April 2004. There were calls for a new boycott on Coca-Cola and Ford but anti-boycott laws had been tightened and Arab governments were more reluctant to enforce the provisions.

Trade between Egypt and Israel remained low and decreased considerably since the outbreak of the 2000 Intifada but was not discontinued. Trade levels between Jordan and Israel, on the other hand, increased rapidly after the creation of Qualified Industrial Zones offering special tax breaks for export items produced by Israeli-Jordanian ventures.

Apart from the primary boycott that was still enforced in states with no relations with Israel, trade unions and professional associations in every Arab country still implemented blacklists against individuals and companies with ties to Israel. These associations were particularly strong in Jordan and Egypt, the only Arab countries with full relations with Israel. For example, in 2004 the Egyptian pharmaceutical union called for a boycott of a U.S. drug company. In Jordan and Egypt, however, the trade unions and professional associations were more effective in implementing the boycott within their own countries than pressuring foreign companies or countries. While the voluntary boycott has all but disappeared, the primary boycott was still widespread in countries with no formal relations with Israel.

BOZECCO (Bozecchi), BENJAMIN BEN JUDAH (1290–1335), Italian grammarian and biblical exegete, who lived in Rome. His name probably derived from the town Buzecchio in the district of Forli, Italy, from which his family came. In one of his poems *Immanuel of Rome praises him as "the father of all the scholars in mathematics and geometry, preeminent in Bible and *masorah, whose talents and wisdom are unlimited" (cf. D. Yarden (ed.), *Mahberot Immanuel ha-Romi*, 1 (1957), 229–31). Of his biblical commentaries only those to Proverbs and Chronicles have survived. Written apparently before 1312, they consist mainly of explanations of difficult verses and grammatical comments. He also completed the commentary to Kings left unfinished by *Isaiah Trani the Elder. His exegesis is based upon the literal meaning, and he is considered a pioneer of this method among the Italian Bible commentators. In the introduction to his commentary on Proverbs he emphasizes his opposition to the homiletic method in exegesis, pointing out that most exegetes "follow the method of homiletical exposition (*derash*) instead of the literal, and fail to pay attention to the significance of what the rabbis call *peshat* (literal exposition), i.e., that which is *pashut*, simple and obvious." Among his grammatical works are *Mavo Kazar le-Torat ha-Higui*, on phonetics, published as an introduction to the *Sefer ha-Dikdukim* of Moses Kimḥi (Venice, 1546) and *Mevo ha-Dikduk*, a revised version and extensive summation of the former book (published by S. Loewinger, 1931). A commentary to Ezra and Nehemiah (published by Berger in *Kobez al Jad*, 7 (1896–97); see Alberstamm's note, p. 42) as well as various *piyyutim* are also attributed to him.

[Yehoshua Horowitz]

BOZRAH (Heb. בּוֹזְרָה).

(1) A city in *Bashan, south of the *Hauran mountains. It is probably mentioned in the city list of Thutmose III (no.

23) and the Tell *el-Amarna letters (EA 197) as Buzruna. It does not appear in the Bible but may be identical with Bosoa, where Jews lived in the time of the Hasmoneans (1 Macc. 5:26). Bozrah's great period began in 106 C.E. when the Nabatean kingdom was annexed to the Roman Empire and Trajan built a highway from Bozrah to Aila. He also established the camp of the Third Legion, "Cyrenaica," at Bozrah (Ptolemy 5:16, 4), and the city was then renamed Nova Trajana Bostra. Hadrian visited it in 129 C.E. Some time later it became the capital

Remains of the ancient city of Bozrah. (1). After H. C. Butler, *Architecture and Other Arts*, Princeton University Press.

of the province of Arabia, a position it retained until the end of Byzantine times (Eusebius, *Onom.* 10:46). From the third century onward, it was the seat of a Christian archbishopric and in the same century, was elevated to the rank of a Roman colony. In the fourth century, Bozrah was a flourishing city which had trade relations with Persia and Arabia. In the Roman and Byzantine periods, Jews lived at Bozrah and the community included many rabbis, such as Jonah, Eleazar, Berechiah, and Tanḥum; others, among them Resh Lakish and Abbahu, visited the city since the local Jews seem to have been lax in their religious observances. The Babylonian Talmud (Shab. 29b) mentions a synagogue at Bozrah. Bozrah was the capital of the Ghassanid principality under Byzantine suzerainty. It was captured by the Arabs in 635 and retained its status as capital of the Hauran. It is today a village in Jordan called Buṣrā-Askī Shām with about 2,000 inhabitants. The impressive archaeological remains of the ancient city include a wall, intersecting streets, a triumphal arch, a well-preserved theater, burial towers, baths (there are springs in the northwest of the city), and a large cistern, 485 × 62 ft. (148 × 19m.), from Roman times. A Christian cathedral, built in 512, contains one of the earliest known examples of a Byzantine dome. A second church has a bell tower and a monastery called Deir (Dayr) Baḥīrā after the monk with whom Muhammad is said to have lodged on his visit there. Around the Roman theater is a citadel erected in 1202 by the Mamluk sultan al-Ādil. Archaeological researches were conducted by the American University of Beirut between 1980 and 1984 in the northwest area of the city, with the discovery of settlement remains from the Early and Middle Bronze Ages. A project of mapping and excavation at the site has been conducted by a Franco-Syrian team since the early 1980s, providing much information about the Nabatean-Roman and Byzantine cities.

(2) A city of *Edom. It is mentioned in the Bible in connection with the list of Edomite kings (Gen. 36:33) and in other passages (1 Chron. 1:44; Isa. 34:6, 63:1; Jer. 49:13, 22; Amos 1:12). In ancient times Bozrah was a stronghold (hence its name, meaning “fort”) guarding the roads from the plateau of Edom to the *Arabah. Archaeological remains have been discovered at a place which the locals call Buṣayra, located 6 miles (10 km.) south of Tafila. Surveyed by N. Glueck, the site was subsequently excavated by C.M. Bennett between 1971 and 1974 and in 1980. The excavations revealed a major Edomite settlement in the Iron Age II, with later remains from the Persian, Hellenistic, and Roman phases.

(3) A village on the southern border of Trachonitis. It is mentioned as Bosor (1 Macc. 5:26) and called Buṣr al-Ḥarīrī in Arabic. Jews who settled there in the time of *Judah Maccabee appealed to him for help against their neighbors, and this help was promptly given. The name also occurs in the phrase “Trachonitis in the territory of Bozrah” (instead of “Bozrah in the territory of Trachonitis”?) in the list of the country’s borders (Tosef., Shev. 4:11; Sif. Deut. 11:21).

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

BOZRAH (Heb. בּוֹזְרָה), moshav in Israel in the southern Sharon near Ra’anana, affiliated with Ha-Ihud ha-Ḥakla’i, the middle-class settlements association, founded in 1946 by World War II veterans. After the War of Independence (1948) immigrants from Poland, Romania, and North Africa joined the settlement. The moshav’s economy was based on intensive farming, including citrus groves, orchards, field crops, and beehives. The biblical name of the moshav (literally “fortified place”) coincides with that of the Iraqi town Basra, where the first settlers served with the British Royal Engineers Corps and organized themselves for future settlement. In 1969 the moshav numbered 425 inhabitants, increasing to 671 by 2002.

BOZYK, MAX (1899–1970), Yiddish comic actor. Born in Lodz, Bozyk was touring in Argentina when Poland was overrun by the Germans in 1939. He and his wife, Rose (Reyzi), reached New York in 1941 and soon became a popular comedy touring team in the U.S. and Canada. They performed together on the American-Yiddish stage for 30 years. Bozyk acted in such films as *Castle in the Sky* (1936), *The Dybbuk* (1937), *The Jester* (1937), *Yiddel mit’n Fiddel* (1936), *Jolly Paupers* (1938), *A Brievele der Mamen* (1938), *Little Mother* (1938), *The Eternal Song* (1939), and *God, Man, and Devil* (1949). With his wife, he appeared in the vintage musical *Catskill Honeymoon* (1949). Directed by Josef Berne, *Catskill Honeymoon* tells the story of a Jewish resort hotel that celebrates the 50th wedding anniversary of a couple who are longtime clients by putting on a rollicking Borscht Belt show, replete with singers, dancers, comedians, and impressionists. The show’s grand finale is a powerful musical tribute to the year-old State of Israel. The movie was filmed at Young’s Gap Hotel in Parksville, New York. Plays in which Bozyk appeared in New York include *Don’t Worry, Brother!* (1963) and *The Travels of Benjamin III* (1969). He was president of the Hebrew Actors’ Club. His wife, ROSE (1914–1993), made her American film debut in 1988 in *Crossing Delancey*. In the role of Bubbie Kantor, Amy *Irving’s grandmother, she is said to have stolen the show.

[Ruth Beloff (2nd ed.)]

BOZZOLO, town in Lombardy, northern Italy. Jewish settlement in Bozzolo began in 1522 with the arrival of Jewish loan bankers, who had close connections with the Jews in the nearby duchy of *Mantua. During the 17th and the first half of the 18th century, a small but prosperous community existed in Bozzolo, mainly occupied in banking, commerce, and farming of the customs dues. By the first half of the 17th century, the influential Finzi family was able to build a rich network of commercial, economic, and cultural activity, such as the production, manufacture, and trade of silk. They founded a company that set up all the mulberry plantations in Bozzolo, Sabbioneta, and Rivarolo. At the end of 18th century, under Austrian rule, the economic and commercial importance of Bozzolo progressively diminished and the Jews began to leave and move to Mantua or Milan. In the 1820s 135 Jews lived in Bozzolo and a new cemetery was opened, at the edge of the town, with a stone plaque of the burial society transferred there from the old graveyard and affixed to the lodge at the entrance, reading: "Hevrat Gemilut Ḥasadim, in the month of Menahem, in the year 5532." There is also evidence of a Jewish cemetery with three tombstones from the 18th century which had been converted into a private vegetable garden. There were no Jews left in Bozzolo by the beginning of the 20th century.

[Federica Francesconi (2nd ed.)]

BRACH, SAUL (1865–1940), rabbi in Slovakia. He served as rabbi in the Hungarian communities of Nagykaroly and Dunaszerdahely, and, finally, in Košice, Czechoslovakia. His *Avot al Banim* (1926) is prefaced by a violent attack on the Zionist movement (the Mizrahi and Agudat Israel included). Here he states that believers in the law of Moses "should keep their distance from Zionists and Mizrachist homes and avoid eating and drinking with them as they would with gentiles. Further, they ought to be excluded from the community" (p. 27). Although he fully appreciated the Hebrew language, he opposed its secular use (p. 23). In his opinion the Balfour Declaration was "in the interest of the gentile world, its purpose being to rid the nations of the world of the Jews." He was the author of many works, among them: (1) *Mishmeret Elazar* 1897 and subsequent parts, on the festivals and "the excellence of the Holy Land"; (2) *Libba Ba'ei* (1911), novellae on talmudic themes; (3) *Sha'ol Sha'al* (1911), on *Yoreh De'ah*; (4) *Le-Olam ha-Ba* (1938), on *Avot*; and a series of works on the festivals and the month of Elul.

BRADFORD, city in Yorkshire, England. A Jewish community existed in Bradford by the middle of the 19th century, composed largely of German Jews attracted by the industrial and commercial growth of the city. Services are said to have been held in Bradford in the 1830s, but the first synagogue was built in 1873. A Reform community (after that of London, the second in England) was founded in 1880. The Jewish population was later reinforced by refugees from the Russian persecutions. The German Jewish group was of great significance in the cultural life of the city. The artists Sir William *Rothenstein and Albert Rutherston were born in Bradford. The poet Humbert *Wolfe went to school there and described his childhood in his autobiography (*Now a Stranger*, 1933). Jacob *Moser was lord mayor of Bradford in 1910–11. The Jewish population numbered about 700 in 1968 but dropped to approximately 170 in the mid-1990s. Nevertheless, the optional religious question asked for the first time in the 2001 British census found 356 declared Jews in Bradford. In 2004 an Orthodox and Reform synagogue existed.

[Cecil Roth]

BRAFMAN, JACOB (c. 1825–1879), Russian apostate and antisemitic author. Orphaned at an early age, Brafman fled from his native city of Kletsk to evade being forced into military service by the agents of the community (see *Cantonists). He became embittered by his experiences, and conceived a hatred for the Jewish community and its institutions. At the age of 34 he joined the Greek Orthodox Church and was appointed Hebrew teacher at the government theological seminary in Minsk. He later served as censor of Hebrew and Yiddish books in Vilna and St. Petersburg. Brafman attacked the Jewish communal organization (*kahal*) in Russian periodicals, describing the *Society for the Promotion of Culture among the Jews in Russia and the *Alliance Israélite Universelle, as "a state within a state." He alleged that they formed part of an international Jewish conspiracy. In 1869, Brafman published with official support and at government expense *Kniga Kagala* ("The Book of the Kahal"), a translation into Russian of the minutes (*Pinkas*) of the *kehillah* of Minsk. A second, enlarged two-volume edition was published in 1875; the first volume, containing essays on Jews and Jewish customs, was published posthumously with an introduction by Brafman's son (1882). The book, translated into French, Polish, and German, created a stir among Jews and Russians. It was presumed by Russian readers to give information about the "secret" customs of the Jews by which they allegedly acquired power over gentiles; antisemitic authors used it to justify anti-Jewish outrages. Although Brafman was accused of forgery, in fact his book was a fairly accurate translation of the documents. It has served a number of scholars as a historical source for knowledge of the inner life of Russian Jewry in the 19th century. The impression

made by his book is evidence of the extent to which autonomous Jewish community life was alien to modern centralistic political ideas, ideals, and modes of relationship between individuals and the state. The Russian poet V.F. Khodasevich (1886–1940) was Brafman's grandson.

BRAGADINI, noble Venetian family; printers of Hebrew books from 1550 to 1710 (see Hebrew printing in *Venice). In 1550 Alvise Bragadini published Maimonides' *Code* with annotations by Meir *Katzenellenbogen of Padua. When the rival house of *Giustiniani issued Maimonides' *Code* in 1550, the resulting dispute, together with Moses *Isserles' decision in favor of Bragadini, led to a prolonged feud and denunciations to Pope Julius III, who eventually decreed the confiscation and burning of all copies of the Talmud in 1553. For ten years the printing of all Hebrew books was prohibited in Venice, and only in 1564 did Alvise Bragadini's press resume its activities. Alvise died in 1575. Hebrew printing continued under his son Giovanni from 1579 to 1614–15, and under Giovanni's son or sons and grandsons until the 18th century. H.J.D. *Azulai reports a visit to the Bragadini printing works. A great selection of Hebrew literature came from this press.

BIBLIOGRAPHY: D.W. Amram, *Makers of Hebrew Books in Italy* (1909), 252–76, 363–75; C. Roth, *Jews in Venice* (1930), 256ff.; J. Bloch, *Venetian Printers of Hebrew Books* (1932), 17ff. and passim; H.B. Friedberg, *Toledot ha-Defus ha-Ivri be-Italyah* (1934), 53–55.

BRAGANZA, town in northern Portugal. The royal privileges of 1187 spoke of the penalty to be inflicted if a Jew who came to the city was assaulted, from which it appears that no community had yet been set up. In 1279 a number of Jews from the city, apparently recently arrived, paid King Denis handsomely for a charter of protection. Thereafter, there are frequent mentions of the community. Under Alfonso IV (1325–1357) there were complaints by the populace against the rate of interest charged by the Jews, which was henceforth limited. In 1429 the *comuna* of the Jews of Braganza were given certain privileges by the Crown, confirmed in 1434 and 1487. In 1461 the community, led by their rabbi, Jacob Cema (Zemah), assembled in a public square and appointed representatives to negotiate with the city authorities on matters in dispute. The rabbi in 1485 was Abraham, the physician who purchased the wines produced by the royal estate adjacent to the "vineyards of the Jews." On the expulsion of the Jews from Spain in 1492, 3,000 exiles arriving through Benavente are said to have established themselves in the region. After the forced conversion in Portugal in 1497, Braganza became one of the most important centers of crypto-Judaism in the country. Many Crypto-Jewish families retained their special identity, continuing to practice some Jewish customs, uphold certain beliefs, and marry

among themselves. Bragança was the place of origin of many important Converso families. It was in Bragança that Orobio de Castro, who died as a Jew in Amsterdam, was born in 1621. The number of Crypto-Jews in Bragança was very high, and some 800 local Judaizers appeared at various autos-da-fé in Portugal up to 1755. For example, more than 60 appeared in a single *auto* held at Coimbra on May 17, 1716. Traces of crypto-Judaism are still strong there, though attempts to establish some sort of organized Jewish life have failed. In 1920s services were still held in a place of worship, a synagogue where children received religious instruction. Special prayers were recited and the services were led by women. In the first half of the 20th century descendants of Crypto-Jews still lived in their own quarter.

[Cecil Roth / Yom Tov Assis (2nd ed.)]

BRAHAM, JOHN (1774 or 1777–1856), English singer. The son of Abraham of Prosnitz (d. 1779), chorister of the Great Synagogue, London. Braham sold pencils in the street before being adopted by his father's associate Meir *Leoni, who introduced him to the Great Synagogue as his assistant. Braham made his first appearance on the stage in 1787 as "Master Braham", and in due course was taken under the patronage of Abraham *Goldsmid, who provided for his musical education. In 1797 he went to Italy and toured Europe with great success together with the celebrated Madame Stora (who bore him a son, later a Church of England clergyman). On his return to England in 1801 he was hailed as the most remarkable singer of the time. It is said that no other English tenor has ever had so wide a vocal range. He himself composed many of the songs he sang, among them "The Death of Nelson," one of the most popular patriotic songs of the period. Although in later life Braham had little contact with Judaism, he collaborated in 1815 with Isaac *Nathan in "Hebrew Melodies" for which Lord *Byron wrote the text. In 1835 Braham built the St. James' Theater in London, but the venture proved disastrous financially and in 1840 he tried, with little success, to recoup his fortunes by a concert tour in America. He continued his platform appearances until shortly before his death. Braham's daughter, Francis Elizabeth, Countess Waldegrave (1821–79), was a notable society and political hostess in the mid-Victorian period.

[Cecil Roth]

BRAHAM, RANDOLPH LOUIS (1922–), historian of the Holocaust, distinguished professor emeritus of political science at the City College of New York and the doctoral program at the Graduate Center of the City University of New York. Braham was born in Bucharest (Romania) and lived until 1943 in Dej (Transylvania), from where he was sent by the Hungarian authorities to serve in a military forced labor battalion as a Jew who was not allowed to serve in his country's armed forces. Shortly after World War II he left for the United States, where he began his academic studies in comparative politics. After obtaining his Ph.D., he began to study the history of the Holocaust of Central European Jewry. His best-known work is *The Politics of Genocide: The Holocaust in Hungary* (1994²). *Studies on the Holocaust*, two volumes of his selected writings, appeared in 2000 and 2001 and he edited numerous volumes on the subject.

Among other things Braham discusses the disillusionment of the Jews of Northern Transylvania, who believed that the Hungary they encountered in 1940 was the Hungary they had known before 1919. They soon discovered that the antisemitic laws enacted there after 1919 were no better than those enacted in Romania between 1919 and 1940 and found themselves delivered into the hands of the Nazis by those same Hungarians in whose nobility they had fervently believed. Another subject dealt with by Braham is the role played by the Romanian authorities under Antonescu in the murder of between 290,000 and 390,000 Romanian and Ukrainian Jews, and which the post-1948 Communist regime tried to avoid recognizing. Braham was decorated by the presidents of both Hungary and Romania.

[Paul Schweiger (2nd ed.)]

BRAHM, OTTO (originally **Abrahamsohn**; 1856–1912), German stage director and drama critic. Brahm was theater critic for the *Frankfurter Zeitung*, *Vossische Zeitung*, and *Die Nation*, and was one of the most influential champions of Ibsen and the new naturalist school. He was cofounder and first president of Berlin's Freie Buehne (1889), a private organization which performed Ibsen and other "modernists" such as Gerhart Hauptmann and Hugo von Hofmannsthal. With the publisher S. Fischer, he founded the monthly *Freie Buehne fuer modernes Leben*, later renamed *Neue Deutsche Rundschau*, as the mouthpiece of the naturalist revolution in literature. In 1894 Brahm took over Berlin's Deutsches Theater, moving to the Lessing Theater in 1904. With his productions of Ibsen, Hauptmann, and Schnitzler, he made Berlin one of Europe's theatrical centers. The "Brahm style," a rigorous stage realism expressing subtle psychological nuances, was adopted by the actors he trained. These included Max Reinhardt and Albert Bassermann. His greatest triumph came in 1909–10 when, at the Lessing Theater, he staged a cycle of Ibsen's 13 sociocritical plays. Paul Schlenker collected Brahm's outstanding reviews and literary essays in *Kritische Schriften* (2 vols., 1913–15), enlarged and revised by Fritz Martini, *Otto Brahm, Kritiken und Essays* (1964).

[Oskar Seidlin / Bjoern Siegel (2nd ed.)]

BRAILA (Rom. **Brăila**, Turk. **Ibraila**), port on the River Danube, S.E. Romania; within the Ottoman Empire from 1544 to 1828, in which year 21 Jewish families were living there. Despite difficulties with the authorities the Jewish population grew after the annexation of Braila to Walachia and its development as an important commercial port. The number of Jews increased from 1,095 in 1860 to 9,830 (17.3% of the total population) in 1899. The majority were occupied in commerce and crafts; in 1889, 24.4% of the shops in the town belonged to Jews, and in 1899, 24.2% of the artisans were Jews. The first Reform synagogue to be established in old Romania was opened in Braila in 1863. This led to a division of the community until a unified central administration was reestablished in 1905. In 1930 there were 11,327 Jews living in Braila. Communal institutions then included a kindergarten, two elementary schools (for boys and girls), a secondary school for boys, a clinic, and a night shelter. In the Holocaust period, the situation of the Jews deteriorated. On Sept. 30, 1940, the entry of the Jews into the port was forbidden. On August 4, 1941, forced labor groups were organized which included men between the ages of 18 and 50. Many Jews were pauperized and the community had to help them. Two secondary schools were founded for Jewish pupils excluded from public schools. After the war (1947), 5,950 Jews lived in Braila, among whom were former deportees to Transnistria. The number dropped to 3,500 by 1950. In 1969 there were around 1,000 Jews in Braila, although most of the surviving Jews had settled in Israel. In 2004, there were 141 Jews living there, with a functioning synagogue.

BRAILOV, small town in Ukraine. The community numbered 638 in 1765 (living in 190 houses); 2,071 in 1847; and 3,721 in 1897 (43% of the total population). In 1852, all 78 artisans in the town were Jews, and in the 1880s, Jews owned industrial enterprises such as a sugar refinery, brewery, flour mills, and tanneries, employing many Jewish workers. The town had a *talmud torah*, a school for boys, and one for girls. On the eve of WWI Jews owned all 19 grocery stores, all 16 textile shops,

and the only pharmacy in the town. In 1918–19, during the civil war, about 26 Jews were massacred and around 100 women were raped in pogroms in Brailov, including one perpetrated by the *Petlyura gangs. The Jews in the town succeeded in warding off one attack. The Jewish population numbered 2,393 in 1926. In the late 1920s, in the Soviet period, Jewish breadwinners were 31% artisans, 21% blue-collar workers, 17% small merchants, 9% clerks, and 21% unemployed (without civil rights). From the mid-1920s, there was a Jewish village council that conducted its proceedings in Yiddish. Brailov was occupied by the Germans on July 17, 1941, and immediately 15 Jews were shot. A ghetto was established and a heavy tribute was imposed on the population. On February 13, 1942, 1,500 Jews were assembled; the sick and those discovered in hiding were shot on the spot. Around 300 artisans were sent back to the ghetto, joined by 200 still in hiding, and the remaining 1,200 Jews were executed. On April 18, 180 Jews, mostly children and elderly persons, were murdered. The last group of 503 (including 286 prisoners from *Zhmerinka) was executed on August 25, 1942.

[Shmuel Spector (2nd ed.)]

BRAILOWSKY, ALEXANDER (1896–1976), U.S. pianist of Ukrainian birth. After study with his father, a professional pianist, Brailowsky continued his training at the Kiev Conservatory, graduating with a gold medal in 1911. Following advanced studies with Leschetizky in Vienna (1911–14) and Busoni in Zurich (1915), he completed his trainings with Planté in Paris, where he made his début in 1919.

An exceptionally successful international career was to follow. Brailowsky was one of the first pianists to present a complete cycle of Chopin's solo works. He played them in six recitals in Paris (1924) and later in New York, Buenos Aires, Brussels, Zurich, and Mexico City. He made a coast-to-coast tour of the U.S. in 1936. Brailowsky was noted for his strong virtuosic approach, extreme clarity of texture, cleanly articulated phrasing, and technical panache. His repertory encompassed many of the big virtuoso works of the Romantics. He was particularly admired for his playing of Chopin and Liszt.

[Naama Ramot (2nd ed.)]

BRAININ, REUBEN (1862–1939), Hebrew and Yiddish author. Brainin was born in Lyady, Belorussia, and received a traditional Jewish education. His first article was on the last days of Perez *Smolenskin (*Ha-Meliz* (1888), no. 59). In 1892 he settled in Vienna where he published an influential but short-lived periodical *Mi-Mizrah u-mi-Ma'arav* (1894–99) which was intended to be a bridge between European and Hebrew literature. Only four issues were published at long intervals,

with articles on Tolstoy, Nietzsche, Ibsen, and Hebrew scholars such as *Elijah b. Solomon Zalman of Vilna. Brainin also published essays in the annual *Ahi'asaf*. He attracted wide attention with his caustic critique of Judah Leib *Gordon in the first issue of **Ha-Shiloah* (1896), edited by Aḥad *Ha-Am. The central theme of Brainin's work was Hebrew literature in the context of world literature. His flair for biography came to the fore in monographs on two great writers of the Haskalah period, Perez Smolenskin (1896) and Abraham *Mapu (1900), which possessed an unusual freshness of tone and approach. He championed the young and unknown Saul *Tchernichowsky, who became one of the great Hebrew poets of the century. In *Ha-Dor* (founded in 1900), Brainin published articles and sketches on contemporary Hebrew writers and artists. There was hardly a Hebrew periodical of the time to which Brainin did not contribute. He also wrote extensively in Yiddish and contributed articles to the Russian-Jewish press. In 1909 Brainin settled in America where he founded the periodical *Ha-Deror*. He spent a few years in Canada, where he edited two Yiddish papers: first the *Kanader Adler* (1912–15), then *Der Weg* (1915–16). He returned to New York and assumed the editorship of *Ha-Toren* (1919–25), first as a weekly, then as a monthly. In New York he also published the first volume of an uncompleted biography of Herzl, *Hayyei Herzl* (1919), covering the period up to the First Zionist Congress. Toward the end of his life, Brainin wrote almost exclusively in Yiddish. His championship of the autonomous Jewish province of Birobidzhan in Soviet Russia alienated him from Hebrew writers and Hebrew literature. The three volumes of his selected writings (*Ketavim Nivḥarim*, 1922–40) afford an insight into his activities as a critic, publicist, and writer of sketches and short impressionistic stories. He also translated into Hebrew M. Lazarus' *Der Prophet Jeremias* (1897) and Max Nordau's *Paradoxes* (1901). (For English translations of his works see Goell, *Bibliography*, 2010, 2763–73.)

His son JOSEPH (1895–1970) was a U.S. journalist and publicist. Joseph, born in Vienna, served with the Jewish Battalion of the British forces in Palestine during World War I. In 1918 he obtained permission from the Canadian prime minister to form a Jewish legion, which he recruited in Canada and the United States to reinforce the Jewish Battalion. In 1921 he emigrated to the United States and founded the Seven Arts Feature Syndicate. He served as its editor in chief until 1938. Joseph was associated with the American Committee for the Weizmann Institute of Science from 1953 and became executive vice president in 1957.

[Eisig Silberschlag]

BRAMPTON (Brandon, Brandão), SIR EDWARD (c. 1440–1508), Anglo-Portuguese adventurer. Although his father was a Jewish blacksmith Brampton claimed to be the illegitimate son of a Christian nobleman. He was baptized in England c. 1468, taking the name of his godfather, King Edward IV. Subsequently he received various military and naval commands and was rewarded with mercantile privileges and grants of land; in 1482 he became governor of the island of Guernsey and was knighted in 1484. Having been of service to Alfonso V of Portugal during the latter's exile in France, Brampton later returned to Portugal and was made a member of the Royal Council. His knowledge of the English court enabled him to assist Perkin Warbeck in his bid for the English throne as the alleged son of Edward IV. Brampton's family gained prominence in Portugal but suffered discrimination because of its Jewish origin, which it tried ineffectively to conceal.

BRAMSON, LEON (Leonty; 1869–1941), communal worker and writer. Born in Kovno, Bramson graduated in law from Moscow University, then settled in St. Petersburg, where he practiced, and was active in the *Society for the Promotion of Culture Among the Jews. He was also director of the central committee of the *Jewish Colonization Association from 1899 to 1906. Under his direction a statistical study was carried out on the economic situation of the Jews in Russia (published in Russian in 1904 and in French in 1906–8). He was one of the compilers of the *Sistematičeskij ukazatel literatury o yevreyakh na russkom yazyke* ("Systematic Guide to Russian Literature About Jews," 1892), and contributed many articles to *Voskhod* and other periodicals on problems of Jewish education, emigration, and colonization. Active in Jewish political life, Bramson was one of the founders of the "Jewish Democratic Group." In 1906 he was elected to the First Duma as a deputy for Kovno province, joining the Labor faction ("Trudoviki"). During World War I, the Revolution, and the Civil War, Bramson was an organizer of the Central Committee for the Relief of Jewish War Sufferers (*YEKOPO). When he left Russia in 1920, he continued to work in Western Europe on behalf of *ORT (with which he had been associated in Russia from 1909), serving as its president from 1923 until his death. Bramson had been a convinced anti-Zionist, but changed his views after a visit to Erez Israel in 1934.

BRAND, JOEL JENŐ (1906–1964), member of Va'adat Ezraha va-Hazzalah, the Budapest Jewish relief committee set up during World War II and the courier chosen by Adolph Eichmann to offer Hungarian Jews in exchange for goods, in what

became known as the "Blood for Trucks" offer. Brand, who was born in Naszód, moved to Erfurt, Germany, with his family in 1910. Active in Communist politics, he traveled to the United States, the Far East, and Latin America, returning to Germany in 1927. He was injured in a Communist-Nazi fight in 1933 but was expelled from Germany in the summer of 1934. He escaped to Transylvania and from there went to Budapest, where he joined *Po'alei Zion, and at a Zionist training farm met Hansi Hartmann, whom he married in 1935. From 1938 Brand was active in a semi-clandestine organization for helping Jewish refugees flee into Hungary, which until March 1944 was allied with but independent of Germany. He established contact with Abwehr (German military intelligence) agents under Admiral Canaris who were then secretly working in Hungary. In January 1943 the Va'adat Ezraha va-Hazzalah was formally established in Budapest under the leadership of Ottó *Komoly, aided by Rezső (Rudolf) *Kasztner. Brand was the main liaison between the Va'adah and the Abwehr, which had been disbanded in February 1944. As a member of this committee, Brand met Adolf *Eichmann, upon whose orders he left for neutral Turkey on May 17, 1944, to present the Jewish Agency with a German proposition to exchange the lives of Hungarian Jews for goods: Eichmann used trucks as an example, one million Jews for 10,000 trucks that would be used only on the Eastern front against the Soviet Union. Brand traveled to Turkey with Bandi Grosz, a double agent on a separate but not unrelated mission who was to initiate discussions with the Allies regarding a separate peace. With the German position collapsing after the defeats at Stalingrad and El-Alamein, the only hope for Germany to avoid total defeat was to split the British, American, and Soviet alliance. Eichmann was acting on the orders of *Himmler – without Hitler's knowledge and without the knowledge of the Foreign Office, which would have objected that the SS was moving in on its area of responsibility. The offer to rescue Jews may have been based on Himmler's exaggerated perception that Jews could effectively change American policy of total surrender, while the offer of a separate peace was rooted in the impending collapse of Germany. Upon arrival, Brand met with the representatives of the Jewish Agency in Istanbul, who understood the importance of the offer and hoped to prolong the negotiations in order to forestall the deportation of Hungarian Jews, which commenced on May 15, two days before Brand's departure. An emissary was immediately dispatched to Jerusalem to brief David *Ben-Gurion and Moshe Shertok (*Sharett). The Jewish Agency concluded that Shertok should travel immediately to Turkey, but Turkish authorities refused to issue a visa. Brand's offer was considered by the Americans and the British, who were fearful that the transfer of so large a population would interfere with the war effort and who were as a matter of principle not interested in a separate peace. They sensed that the Germans were trying to create a wedge between the Allies and the Soviet Union and to blame the Allies for the failure to halt the deportation of Hungarian Jews. Thus, both missions were doomed to failure. American officials insisted

that the Russians be informed of the offer, which in essence gave the Soviet Union veto power. Their reasoning was that it was better for the Russians to hear of this offer directly from the Americans than to learn of it through their own intelligence services in Istanbul, where their suspicions would be aroused. Within weeks “the blood for goods” offer was leaked to the press; an article was published in the *New York Herald Tribune*. The *London Times* called the story one of “most loathsome of the war.” Press exposure effectively killed any hope for the offer. Unable to have Shertok travel to Istanbul, Brand set off for Palestine. He was arrested in Aleppo, Syria, by the British, who claimed that they suspected him of being a Nazi agent, and was taken to Cairo. On October 7, 1944, some three months after the deportation of Hungarian Jews had ended, he was released in Jerusalem.

Brand, a defeated and bitter man, remained in Erez Israel; he became a member of the Stern Gang and testified at the Kasztner trial in 1954. The Brand mission was featured prominently at the trial, though in the end it was not regarded as germane to the judgment. The Jewish Agency was accused by the defense of sabotaging the attempted rescue. Brand devoted himself single-mindedly to tracking down Nazi war criminals. Both Brand and his wife, who was also active in the *Váadat Ezrah va-Hazzalah*, testified at the Eichmann trial that he had had direct contact with the accused. He died in Frankfurt, where he was testifying against Hermann Krume and Otto Hunsche, two of Eichmann’s chief aides. The story of Brand’s mission was dramatized by Heinar Kipphardt in his play *Die Geschichte eines Geschefts* (1965).

BRANDÃO, AMBRÓSIO FERNANDES (c. 1560–c. 1630), Portuguese author and soldier. Brandão distinguished himself as an officer in the Portuguese campaigns against the French and Indians in northern Brazil. In 1583 he lived in Pernambuco (Recife) where, like many other New Christians of the region, he practiced Judaism in secret. For attending services at a clandestine synagogue Brandão was denounced to the Inquisition in Bahia in October 1591. His name was again mentioned during the trial of another Judaizer, Bento *Teixeira Pinto, in January 1594 and he was once more denounced to the Holy Office in Lisbon in 1606. Brandão nevertheless managed to retain his freedom and eventually settled in Paraíba, where he owned sugar mills during the years 1613 to 1627. There he died prior to the Dutch invasion. Brandão is the reputed author of the *Diálogos das Grandezas do Brasil* (1618), one of the two outstanding works on the history of Brazil composed in the 17th century. In the *Diálogos*, which reflect local conditions in about 1618, conversations are conducted between Brandosio (i.e., Brandão himself) and Alviano (Nuño Alva-

res, a colleague who was also a New Christian and was similarly denounced to the Holy Office). Brandão claimed that the Brazilian Indians are descended from children of Israel who reached the Americas during the reign of Solomon, but Alviano disagreed with this view. The work contains a number of other references to the Jews.

BRANDEAU, ESTHER (18th cent.), first Jewish immigrant to New France. Esther Brandeau was the daughter of David Brandeau, a Jewish trader in St. Esprit, near Bayonne, France. She arrived at Quebec City in September 1738 on the ship *Saint-Michel*, disguised as a boy, Jacques LaFarge. When her gender was discovered the Intendant of New France ordered her arrested and held under surveillance at the Quebec hospital. Brandeau had apparently lived as a Christian boy, mainly employed in the shipping trade, for five years before arriving in Quebec City. Since it was impossible for a Jew to remain in New France, strenuous efforts were made for more than a year to convert her but she refused to abandon her religion. She was finally deported to France with the cost of her return passage paid for by Louis xv. In a letter dated January 25, 1740 the King wrote, “[the] Intendant of Canada, upon my orders sent the Jewish girl, Esther Brandeau, back to France on the ship, *La Comte de Matignon*, of New Rochelle, the owner of the ship, Sieur La Pointe, applied to me for reimbursement of the passage money....” After her deportation in 1739 nothing further is known about her.

[Cheryl Tallan (2nd ed.)]

BRANDEIS, LOUIS DEMBITZ (1856–1941), U.S. jurist, the first Jew to be appointed to the U.S. Supreme Court.

Early Years

Brandeis was born in Louisville, Kentucky, the youngest of four children of Adolph and Frederika Dembitz Brandeis. His parents, both of whom were born in Prague, came of old and cultivated Jewish families with a deep interest in European liberalism. Apprehensive of political repression and economic distress after the failure of the 1848 revolutions, both families immigrated to America. Although they had formed the romantic idea of turning to a life of farming, they were dissuaded by Adolph, who had come in advance to explore the possibilities of life in the new country. After a short stay in Marion, Indiana, where a business venture did not prosper, the families moved to Louisville. There Adolph established a grain and produce business which proved highly successful until the depression of the early 1870s.

Louis early showed himself to be a remarkable student. He was brought up in a family environment that cultivated

intellectual achievement and spiritual sensibility but in which formal religious training was eschewed. Louis' mother explained this aspect of her children's education: "I wanted to give them something that neither could be argued away or would have to be given up as untenable, namely, a pure spirit and the highest ideals as to morals and love. God has blessed my endeavors." Louis especially admired an uncle, Lewis *Dembitz, a scholarly lawyer and author in Louisville, sometimes known as "the Jewish scholar of the South," who was to become a follower of Theodor Herzl and an active Zionist. In honor of his uncle, Louis changed his middle name from David to Dembitz.

Following his graduation from high school at 15, and after the family business was dissolved because of financial reverses, Louis accompanied his parents in 1872 on an extended trip to Europe. During 1873–75 he attended the An-nen Realschule in Dresden. Although he found the demands of the classroom rewarding, the repressive discipline of the place was distasteful. He was eager to return home. "In Kentucky," he said, "you could whistle." On his return, influenced by his uncle's career, Louis entered Harvard Law School. Supported by loans from his older brother and earnings from tutoring fellow students, he completed the course before his 21st birthday with an academic record unsurpassed in the history of the school.

Law Career

Brandeis formed a law partnership in Boston with a former classmate, and by the age of 30 he had achieved financial independence, thanks both to the success of his legal practice and to a deliberately frugal style of living. This simplicity came to be shared and abetted by his wife, Alice, daughter of Joseph Goldmark, a noted Viennese scientist. The wedding ceremony was performed in 1891 by her brother-in-law Felix *Adler, founder of the Ethical Culture Society.

In appearance Brandeis was a figure at once compassionate and commanding – tall, spare, ascetic, with deep-set, dark, penetrating eyes. Many who saw him thought of Lincoln. President Franklin Roosevelt spoke of him as "Isaiah."

As a lawyer Brandeis devoted himself increasingly to public causes and to the representation of interests that had not theretofore enjoyed such powerful advocacy: the interests of consumers, investors, shareholders, and taxpayers. He became known in Boston as the "People's Attorney." When Woodrow Wilson was elected president in 1912 on a platform of the New Freedom, he turned to Brandeis for counsel in translating ideas of political and social reform into the framework of legal institutions. In 1916 Wilson nominated Brandeis as a justice of the Supreme Court, precipitating a contest over confirmation in the Senate that lasted more than four months. The conservatives in that body were unprepared for a nomination to the Court so deeply innovative: the nominee was a Jew, and he was a lawyer of reformist bent. Standing firm against great pressure to withdraw the nomination, Wilson insisted that he knew no one better qualified by judicial temperament

as well as legal and social understanding, and confirmation was finally voted on June 1, 1916.

Jewish and Zionist Activities

Brandeis' involvement in Jewish affairs began only a few years before his appointment to the Court. He had never disavowed the faith of his fathers and had contributed to Jewish philanthropies, but his concerns had been overwhelmingly secular. In 1911, he recounted, his interest in Judaism was stirred by two experiences. One was his service as mediator in the New York garment workers' strike, in an industry dominated on both sides by Jews of humble origin in Eastern Europe. He found a strong sense of kinship with these people, who were remarkable not only for their exceptional intelligence but above all for a rare capacity to see the issues from the other side's point of view. The other experience was a meeting with Jacob *De Haas, then editor of the *Jewish Advocate* in Boston, who had served as Herzl's secretary in London. De Haas was thoroughly familiar with the accomplishments of Lewis Dembitz in Kentucky, and excited in the nephew a new interest in Jewish history and particularly in the Zionist movement. Brandeis, as was his habit, read everything on the subject that De Haas could furnish, footnotes as well as text, De Haas said, and became convinced that, so far from bringing a threat of divided loyalties, American and Zionist ideals reinforced each other. "My approach to Zionism," he said, "was through Americanism. In time, practical experience and observation convinced me that Jews were by reason of their traditions and their character peculiarly fitted for the attainment of American ideals. Gradually it became clear to me that to be good Americans we must be better Jews, and to be better Jews we must become Zionists. Jewish life cannot be preserved and developed," he asserted, "assimilation cannot be averted, unless there be established in the fatherland a center from which the Jewish spirit may radiate and give to the Jews scattered throughout the world that inspiration which springs from the memories of a great past and the hope of a great future."

Brandeis' rise to leadership in the movement was rapid. When war broke out in 1914 and certain leaders of the World Zionist Organization moved to America, Brandeis consented to serve as chairman of the Provisional Committee for General Zionist Affairs. He supported the convening of an American Jewish Congress representing all important Jewish groups in the country to give the widest support to Jewish interests at the peace conference. He thereby brought himself into conflict with eminent non-Zionists in the United States. His close relations with President Wilson and high administrative officials played an important part in securing support for the *Balfour Declaration, and later for the British Mandate, with adequate boundaries.

Conflict within the Zionist Movement

A turning point in Brandeis' leadership developed out of his relationship with Chaim *Weizmann. The two met for the first time in London in the summer of 1919, when Brandeis was

making a trip to Paris, site of the peace conference, and then to Palestine. In Palestine he was exhilarated by the spirit of the settlers but distressed by the debilitating prevalence of malaria and by the lack of business methods and budgetary controls in the handling of Zionist funds. He insisted that priority be given to remedying these physical and financial troubles. In the summer of 1920, at a meeting of the World Zionist Conference in London, Brandeis sought agreement on a plan to concentrate Zionist activity on the economic upbuilding of Jewish settlement in Palestine and to conduct that activity with efficiency and in accordance with sound financial principles. He proposed a small executive body that would include Weizmann and several men of great business experience, including Sir Alfred Mond and James de Rothschild, together with Bernard Flexner, an American lawyer, and others to be co-opted with the aid of Lord Reading. Weizmann was at first attracted to the plan because of the new strength it would give to the movement; but when he found his old colleagues from Eastern Europe offended because of their exclusion from the executive, he felt the tug of divided loyalties and expressed misgivings to Mond and de Rothschild, who withdrew because of the prospect of internal strife.

Brandeis was deeply disturbed by these developments and decided that he could not accept responsibility for the work of the World Organization; he consented to continue as honorary president only when persuaded that his withdrawal would have serious implications for the safety of the Jews in Eastern Europe. In June 1921, at a convention of American Zionists, the controversy brought serious repercussions. Many delegates had strong ties of loyalty to Weizmann and other Eastern European leaders, and shared Weizmann's view that the financial autonomy Brandeis desired for the American organization would weaken the strength of the World Organization. When a majority of the delegates refused a vote of confidence to Brandeis' position, he resigned from any position of responsibility, although not from membership in the organization. In this action he was joined by his principal supporters, including Julian W. Mack, Rabbi Stephen S. Wise, Felix Frankfurter, and Robert Szold.

The ardor of Brandeis' commitment, however, did not slacken. He inspired the organization of the Palestine Co-operative Company, which became the *Palestine Economic Corporation, to work in the investment field on projects that could become self-supporting, and the establishment of the Palestine Endowment Fund to administer bequests and trust funds primarily for projects not expected to yield a financial return. Brandeis contributed generously of his spirit and fortune. In his will the largest bequest was to the Zionist cause. He continued to receive frequent calls for counsel, which he would give, consistent with his judicial office, generally in the form of searching questions that would clarify the problem for the inquirer's own good judgment.

Supreme Court

In his judicial career, as in his Zionist activity, Brandeis was

preeminently a teacher and moralist. His important judicial opinions are magisterial in character, notable not merely for their solid craftsmanship and analytical power but for their buttressing with data drawn from history, economics, and the social sciences. At a time when a majority on the Court was striking down new social legislation, Brandeis (together with his colleague Justice Holmes) powerfully insisted that the U.S. Constitution did not embody any single economic creed, and that to curtail experiment in the social sciences, no less than in the natural sciences, was a fearful responsibility. Not only did Brandeis vote to sustain such measures as minimum wage laws, price control laws, and legislation protecting trade unions against injunctions in labor disputes; his dissenting opinions in these cases served to illuminate their basis in experience and in social philosophy. These controversies arose under the vague constitutional standard of "due process of law."

Another notable category of cases concerned the distribution of governmental powers between the national government and the states. Brandeis believed that the American federal system was designed to encourage diffusion and sharing of power and responsibility, so he was receptive to the claims of the several states to engage in experimental legislation unless Congress itself had plainly exercised authority over the subject matter. Deeply convinced that responsibility is the greatest developer of men, and that even in the ablest of men the limits of capacity are soon reached, he regarded the dispersal of power within a continental domain to be both a moral imperative and a practical necessity.

In one important field Brandeis saw a duty incumbent on the Court to be less hospitable to legislative intervention: the area of freedom of thought and expression. Only when speech constituted a genuinely clear and imminent danger to public order would he uphold its suppression. He believed that "the greatest menace to freedom is an inert people;... that order cannot be secured merely through fear of punishment for its infraction; that it is hazardous to discourage thought, hope and imagination; that fear breeds repression; that repression breeds hate; that hate menaces stable government; that the path of safety lies in the opportunity to discuss freely supposed grievances and proposed remedies; and that the fitting remedy for evil counsels is good ones" (*Whitney v. California*, 274, U.S. Reports 357, 375 (1927)). By the time of his retirement in 1939, he saw the Court well on its way to the adoption of the positions he had for so long taken in dissent.

[Paul A. Freund]

BRANDEIS-BARDIN INSTITUTE was founded in 1941 by Shlomo *Bardin (1898–1976) with the initial support of Justice Louis Brandeis, and settled on its 3,200-acre campus in Simi Valley of Southern California in 1947. It was not associated with any organization or movement, religious or secular, but rather was devoted to practicing traditional Judaism as related to the needs of modern living.

The programs stressed instruction in Judaism for American Jews and non-Jews alike. There were three principal programs: Brandeis Camp Institute, a leadership training program for college youth; Alonim, a summer camp for children; and weekend sessions for adults through the House of the Book Association. The latter was centered on the observance of the Sabbath and a scholar-in-residence. Upon the death of Bardin, Dennis Prager became the director of the Institute, and in 1977 the Brandeis Institute was renamed the Brandeis-Bardin Institute.

The institute's mission is primarily "to touch and teach Jews, to inspire them through their intellect and emotion, to enhance their connectedness to the Jewish people through the arts as well as academics, and to make a contribution to the advancement of Jewish culture as a means of Jewish identity." As an educational outreach resource, in addition to its Sabbath retreats for all, the institute developed a special weekend program for newly married couples to learn more about incorporating Judaism into their lives while meeting other newlyweds and making new friends. Another innovation is the T'hila Jewish Summer Arts Institute. In this program, youth aged 14–18 study with accomplished Jewish artists as well as teachers of drama, dance, music, creative writing, and visual arts. In 1992 the institute created an Elderhostel program, offering seniors week-long educational activities and classes on Jewish themes. The Brandeis-Bardin Institute also provided the setting for media productions, from movies and TV shows to videos and student films.

[Ruth Beloff (2nd ed.)]

BRANDEIS UNIVERSITY, the only secular institution of higher learning in the Diaspora that is both Jewish-sponsored and non-sectarian. Brandeis University was founded in 1948 and has continued to rank near the top of academic life in the United States. In 1985 Brandeis was elected to membership in the Association of American Universities, an elite organization of the nation's 59 research universities. Controlling for size and judged according to faculty publications and citations, Brandeis was ranked ninth in 1997 among research universi-

ties. Over 3,000 undergraduates were enrolled at the beginning of the 21st century, plus another 1,300 graduate students. As of 2004, the campus consisted of 96 buildings, located on 235 suburban acres nine miles west of Boston. Brandeis University is especially renowned for its programs in the physical and natural sciences, in history, and in Jewish studies.

Its founding president, Abram L. *Sachar, was a scholar of Jewish history; in 1968 he retired after two decades, and became chancellor and then chancellor emeritus. (He died in 1993, at the age of 94.) Sachar's successor was an attorney, Morris B. Abram, who had served as president of the American Jewish Committee. Amid considerable political turmoil on campus, he remained as president for only two years, and was briefly replaced by Charles Schottland, the former commissioner of the Social Security Administration and the founding dean of the Florence Heller Graduate School for Social Policy and Management (established at Brandeis in 1959). By 1972, when Schottland resigned in favor of Marver H. Bernstein, the Rosenstiel Basic Medical Research Center was completed, as was the Feldberg Computer Center.

Bernstein, a specialist on the politics of Israel and the former dean of Princeton University's Woodrow Wilson School of Public Affairs, served until 1983. His tenure at Brandeis was marked in particular by deepening financial problems, stemming from a loss of donor support due to Israel's immediate needs in the aftermath of the Yom Kippur War, and from a stagnant if not declining national economy. Co-educational from the outset, Brandeis also lost a competitive advantage when neighboring Ivy League institutions accepted female matriculates. Bernstein's successor was a Hungarian-born biologist, Evelyn Handler, the president of the University of New Hampshire. Serving at Brandeis until 1991, Handler confronted an ongoing problem of how to define the Jewish auspices of the institution. It had been formed in no small measure to counteract the academic antisemitism that had especially characterized Ivy League institutions, which had discriminated against Jewish students seeking admission and Jewish scholars seeking employment. Brandeis promised to be a haven against the discrimination inherent in the quota system. But after such antisemitism had vanished, the Jewish character of Brandeis University looked increasingly ambiguous. In an effort to expand its constituency, a more variegated campus cuisine – that would include unkosher foods like pork and shellfish – was to be introduced, intensifying controversy over the Jewish heritage of the university that bedeviled its presidency.

In 1991 Samuel O. Thier, a physician who had headed the Institute of Medicine of the National Academy of Sciences, became president; he served for three years. In 1992 the Goodman Center for the Study of Zionism was established; and two years later, the Volen National Center for Complex Systems, with particular focus upon the neurosciences, was dedicated. The International Business School was also created in 1994. Thier's successor was his provost, Jehuda *Reinharz. The first Brandeis alumnus (Ph.D. 1972) to serve as president (and the

first to have been born in Israel), he had taught Jewish history in the Lown School of Near Eastern and Judaic Studies. President Reinharz served longer than any predecessor other than Sachar. He supervised the establishment of an International Center for Justice, Ethics and Public Life, which enhanced the historic reputation of the university for promoting undergraduate interest in social activism and progressive causes. Among the activists and scholars who joined the faculty during Reinharz's presidency were former Soviet refusenik and Israeli politician Natan *Sharansky, former Texas governor Ann Richards, and the former Secretary of Labor under President Bill Clinton, Robert B. *Reich.

In 1948 the Brandeis library was a converted stable, housing a few dozen volumes (including multiple copies of *Gone with the Wind*). By 1997 a million books had been shelved at the Goldfarb-Farber Library. (The millionth copy was a rare first edition of *The Law of God*, Isaac Leeser's 1845 Hebrew-English edition of the Pentateuch.) The chief source of funding for the libraries has been the Brandeis University National Women's Committee. With about 50,000 members organized in over a hundred chapters, it is the largest voluntary organization of supporters of any academic library in the United States. Jewish women themselves became objects of research in 1997, when the world's only university-based institute for the study of Jewish women, the Hadassah-Brandeis Institute, was created; its founder and co-director has been sociologist Shulamit Reinharz (Ph.D. 1977).

At the dawn of the 21st century, the university's endowment was about \$400 million; and over 300 full-time professors and instructors served on the faculty, providing an official student-faculty ratio of 9:1. The teaching staff belonged to 24 autonomous departments and 22 interdisciplinary programs, offering three dozen majors. Degrees in nearly two dozen disciplines were also offered in the graduate programs. Probably the most famous faculty member was Morris Schwartz, the subject of a memoir by his former student, Mitch Albom, 1979, entitled *Tuesdays with Morrie* (1997), which ranked first on the *New York Times* hardcover best-seller list for four straight years. MacArthur Foundation Fellowships (or "genius" grants) were bestowed on three faculty members: Bernadette Brooten of the Lown School of Near Eastern and Judaic Studies, a specialist in the social history of early Christianity; historian Jacqueline Jones, whose expertise combines the history of American women, labor, and African-Americans; and biologist Gina Turrigiano, who works on activity-dependent regulation of neuronal properties. *Washington's Crossing* (2004), by David Hackett Fischer of the Department of History, was also a finalist for the National Book Award. The faculty in the early decades of the university had been heavily stocked with Jewish refugees, some of whom had academically unconventional careers or even limited formal education. The origins of the faculty in later decades were far more likely to resemble the pattern of other elite institutions. The shift to native-born scholars was evident in Jewish studies. Brandeis was the first secular university in North America to create such a de-

partment; and its faculty has been especially distinguished, including Bible scholars Nahum *Sarna and Michael *Fishbane, sociologist Marshall *Sklare, historians Ben *Halpern and Jonathan D. *Sarna, and such scholars of Judaic thought as Nahum *Glatzer, Alexander *Altmann, Marvin *Fox, and Arthur *Green.

Because the university is neither a religious seminary nor a sectarian institution, the Jewishness of its origins and character has instigated a considerable effort to negotiate and define; and press accounts timed to honor both the 40th and 50th anniversaries of the founding of the institution referred to an "identity crisis" from which Brandeis University was reportedly suffering. That dilemma has persisted. Beginning in the 1970s and gathering momentum in succeeding decades, Brandeis has been sensitive to the celebration of diversity as a desideratum in public life and especially on the nation's campuses. About 16% of the student body is classified as "minority"; 101 foreign countries are also represented among the undergraduates and graduate students. The effort to ensure that both the student body and the personnel of the faculty and administration would reflect the ethos of multiculturalism was bound to generate some friction with a yearning to keep intact the heritage of Jewish distinctiveness, with the continuing effort of both undergraduates and institutional leaders to articulate the meaning of the Jewish legacy of Brandeis University, and with imperatives of its Jewish communal sponsorship and auspices.

[Stephen J. Whitfield (2nd ed.)]

BRANDENBURG, German province. The earliest Jewish community in the mark of Brandenburg was established in Stendal before 1267. In 1297, it received a liberal grant of privileges which served as the model for the other communities there. Most of the communities (*Berlin, Pritzwalk, Salzwedel, Spandau, *Frankfurt on the Oder) maintained synagogues but few had rabbis. A liberal charter, granted to the Jews in Neumark in 1344, was later extended to the Jews of the mark of Brandenburg (1420, 1440). The Jews were not restricted to a specific quarter in the cities of the mark and were often granted rights of citizenship. Many of the communities were annihilated during the *Black Death (1349–50). The Jews were expelled from the area in 1446, but permitted to return a year later. Exorbitant taxes were levied in 1473 which only 40 Jews were able to pay. In 1510 a charge of desecrating the *Host developed into a mass trial in which 38 Jews were burned at the stake and the remaining 400 to 500 Jews expelled. Elector Joachim II (1535–71) permitted Jews to trade in Brandenburg (1539) and to settle there (1543) after discovering that the accusations were groundless. The favor he showed toward his *Court Jews Michel *Jud and *Lippold was greatly resented.

On Joachim's death anti-Jewish riots broke out and the Jews were again driven out. Jews expelled from *Vienna in 1670 were permitted to settle in Brandenburg, then part of Prussia. The Jewish population in the province of Brandenburg, excluding Berlin, numbered 2,967 in 1816; 12,835 in 1861 (an increase mainly due to emigration from Poland); and 8,442 in 1925. After World War II, few Jews lived in the area. In the *Land* Brandenburg there were 162 Jews in 1989 and 1,028 in 2003, mostly in Potsdam.

The City of Brandenburg

Jews are mentioned in the city at the end of the 13th century. In 1322 they owned a synagogue and several private houses. Despite the sufferings caused by the Black Death, their numbers increased during the second half of the 14th century; the privilege accorded to them by Elector Frederick II in 1444 mentions their "weakness and poverty." In 1490 mention is made of a Jewish street and in 1490–97 of a Jewish cemetery ("kiffer," a corruption of the Hebrew *kever*). The Host desecration libel in 1510 led to the execution of Solomon b. Jacob and other Jews of Brandenburg (see above). In 1710 five Jewish families with residential rights were living in the city. A community was organized in 1729. It acquired a prayer hall and two cemeteries (1720, 1747). The Jewish population numbered 21 families in 1801 (104 persons; out of the total population of 10,280); 18 families in 1813; 130 persons in 1840; 209 in 1880; and 469 in 1925. It had declined to 253 by 1939 and came to an end during World War II. The Jewish community was not reestablished after the war.

BRANDES (Cohen), CARL EDVARD (1847–1931), Danish author, playwright, and politician; younger brother of Georg *Brandes, Brandes specialized in Oriental languages at the University of Copenhagen and received his doctorate in 1879. He published translations from Sanskrit and also Danish versions of Isaiah (1902), Psalms (1905), Job, and Ecclesiastes (1907). However, he openly professed atheism and had no connection with Jewish affairs. Brandes entered politics as a member of the Radical Party. After the split in the party in 1884, he founded a new opposition paper *Politiken* which attained great political and cultural influence. From 1889 until 1894 and from 1906 until 1927 he sat in the Chamber of Deputies. Brandes served as finance minister during 1909–10 and from 1913 to 1920. His diplomatic skill as a negotiator gained him considerable renown, and he acquired further distinction as the administrator of neutral Denmark's finances during World War I. Brandes was also deeply interested in the theater and even tried to become an actor. He wrote on modern Danish

and foreign drama, and in his plays fought against conventional morality and hypocrisy in human society.

BIBLIOGRAPHY: *Dansk Biografisk Leksikon*, 3 (1934), 614–28; *Dansk Skønlitterært Forfatterleksikon 1900–1950*, 1 (1959), 153–5.

[Frederik Julius Billeskov-Jansen]

BRANDES, GEORG (Morris Cohen; 1842–1927), Danish literary critic and writer. Brandes was born into an assimilated family which had retained some nominal ties with the Copenhagen Jewish community. As a student of philosophy, he was at one stage strongly attracted to Søren Kierkegaard's Christianity. Turning more and more to literature, Brandes abandoned the idealist philosophy of his time, mainly during a stay in Paris (1866–67), where he was especially influenced by Taine. In 1870 he received his doctorate for a thesis on Taine's aesthetics and at about this time he also became Denmark's leading advocate of the new positivism. A series of public lectures which Brandes delivered in 1871 appeared as *Hovedstrømninger i det 19de Aarhundredes Litteratur* (6 vols., 1872–90; *Main Currents in 19th Century Literature*, 1901–05) and was notable for its new and unorthodox approach. In this work he formulated his opposition to romanticism, and demanded that literature should stimulate the discussion of modern problems. Nevertheless, Brandes' essays on the Scandinavian romantics are among his best works.

Meanwhile, the new naturalist school had gained support and the critic found gifted disciples in Ibsen and Strindberg, among others. However, he encountered strong opposition from conservative and church circles and as a result was denied the chair of aesthetics at the University of Copenhagen. (Years later, in 1902, the title of professor was eventually conferred on him, but without the obligation to lecture.) Bitterly disappointed, Brandes left Denmark and from 1877 until 1882 lived in Berlin. There he became active in the field of German literature, embarking on a new, and ultimately decisive, trend: concentration on personalities rather than on literary currents. Brandes' essays on John Stuart Mill, Renan, Flaubert, and the two great Norwegian writers, Bjørnson and Ibsen, testify to this change, as do his monographs on Lassalle (1877) and Disraeli (1878). In 1883 Brandes returned to Denmark, where friends helped him to secure a livelihood. His new lectures and essays appeared in a selected English edition as *Eminent Authors of the 19th Century* (1886). In 1886 and 1887 travels in Eastern Europe provided him with material for two books, *Indtryk fra Rusland* (1888; *Impressions of Russia*, 1889) and *Indtryk fra Polen* (1888; *Poland, A Study of the Land, People and Literature*, 1903).

In the 1880s Brandes read the still unknown Friedrich Nietzsche and found a message for himself. His Danish article on the German philosopher (1888) was published in Germany (*Aristokratischer Idealismus*, 1890) and marked the starting point of Nietzsche's world fame. Thereafter Brandes indulged in a kind of hero worship. His books on great figures include *Shakespeare* (1895–96; seven English editions appeared from 1898 to 1924); *Goethe* (1915; Eng. tr. 1924–36);

Voltaire (1916–17; Eng. tr. 1930); *Julius Caesar* (1918); and *Michelangelo* (1921). When *Eminent Authors* appeared in a new English edition in 1923 as *Creative Spirits of the 19th Century*, it was characteristically enlarged with essays on Swinburne, Garibaldi, and Napoleon. In one of his last works, *Sagnet om Jesus* (1925; *Jesus, a Myth*, 1927), Brandes sought to refute the historical basis of Christianity and launched another attack on early Christianity in *Urkristendom* (1927). His collected works appeared in Danish (1899–1910) and in German (*Gesammelte Schriften*, 1902–1907).

Georg Brandes was one of Denmark's greatest writers and his enormous influence on Danish culture and on European literature is still apparent. He was also one of the outstanding representatives of the greatness and tragedy of the assimilated European Jew. It is significant that the Jewish figures whom he tried to understand and describe were *Heine, *Boerne, *Disraeli, and *Lassalle. Although Brandes created a new type of literary critic and was familiar with all of the different national literary and political manifestations in Europe, he himself was never really at home anywhere and his relationship with Denmark was ambivalent. He was never really accepted by the Danes and his ideas still provoke either enthusiasm or disgust. Brandes denounced the pogroms in Eastern Europe, but repudiated his own Jewishness and disliked "Jewish" characteristics in others. He defended Dreyfus, but did not take Herzl's *Jewish State* or the Zionist movement very seriously, much to Herzl's dismay. After the Balfour Declaration, Brandes recognized the reality of Zionism. He expressed this change of view in an article entitled "Das neue Judentum" (1918), which later appeared in a biographical study by Henri Nathansen. Here, an intimate friend described the critic's struggle with his Jewish identity.

Moritzen, *Georg Brandes in Life and Letters* (1922); P. von Rubow, *Liter're Studier* (1928); idem. *Georg Brandes' Briller* (1932); *Correspondance de Georg Brandes*, 5 vols. (1952–66); H. Fenger, *George Brandes et la France* (1963), contains bibliography and list of works, including posthumous editions of his correspondence; A. Bein and G. Herlitz (eds.), *Iggerot Herzl*, 1 (1948), contains Herzl's letters to Brandes.

[Frederik Julius Billeskov-Jansen / Leni Yahil]

BRANDES, LUDWIG ISRAEL (1821–1894), philanthropist and chief physician of the General Hospital in Copenhagen. Brandes was one of the first Danish doctors to understand and practice physiotherapy, and he wrote a treatise on this subject. He established the first Danish day nursery and a society for children's care. In 1859 he founded a private old-age home called Københavns Sygehjem, which still exists, and initiated several new social projects for the benefit of Danish communal life. His autobiography *Mine Arbejders Historie* ("The Story of My Works," 1891) gives evidence of a great scholar and humanist.

BIBLIOGRAPHY: *Dansk Biografisk Leksikon*, 3 (1934), 643–4.

[Julius Margolinsky]

BRANDON, OHEB (Oeb) ISAAC (1830–1902), Dutch *hazzan*. Brandon was one of the best-known Sephardi *hazzanim* of Amsterdam, serving the congregation from 1861 to 1902. He wrote a guide for *hazzanim* which was probably partly a translation of the Hebrew guide, *Seder Hazzanut*, preserved in the community's archives. Brandon's work gave minutely detailed information about the melodies used on various occasions. It also dealt with local traditions such as the allocation of functions during services and included a chapter on the Portuguese phrases used for announcements in the synagogue. Brandon had considerable influence on his successors, especially Jacob *Blanes.

BRANDSTAEDTER, MORDECAI DAVID (1844–1928), Galician Hebrew writer. A successful manufacturer, he became a leading figure in the Tarnow Jewish community, and was appointed lay judge in the district court. His first short stories, "Eliyahu ha-Navi" ("The Prophet Elijah") and "Mordekhai Kizoviz," appeared in *Ha-Shahar* (1869), which published most of his subsequent work. Brandstaedter ridiculed the Hasidim and their *Zaddikim*. He also exposed the foolishness of the so-called "enlightened" Galician Jews, and their shallow materialism. He did not employ the biting satire or the rationalistic didactic moralizing of most of his contemporaries in the Haskalah movement. He gently mocked his characters' petty and ridiculous activities, without hate or anger. His work bore traces of romanticism; he invented intricate and wonderful plots and idealized characters and situations. Although he did not delve into economic or social problems, he had a grasp of prevailing conditions in the Pale and opposed defects in marriage customs, family life, education, and communal affairs. He derided Jewish petty mercantilism and advocated that Jews engage in craftsmanship and agriculture. In later life, Brandstaedter joined the Hibbat Zion movement, and his stories "Kefar Mezagegim" ("The Glaziers' Village"), and "Zalman Goi" ("Zalman the Gentile") extolled Zionism and life in Erez Israel. In his work, the dialogue tended to take dramatic form, but occurred naturally within the plot, and avoided lengthy philosophizing and blatant propaganda. Brandstaedter shunned elaborate phrases, and preferred a more concise style. His descriptions were realistic. During World War I Brandstaedter was forced to flee to Vienna. He returned to Tarnow in 1918, and wrote a series of aphorisms, entitled "Keisamim" for the New York Hebrew magazine *Hadoar* (1924–29). His autobiography "Mi-Toledot Hayyai" also appeared in *Hadoar* (1926, nos. 12–20). A three-volume edition of his collected works was published in *Warsaw* (1910–13).

[Mordechai Rabinson]

BRANDSTAETTER, ROMAN (1906–1987), Polish poet and playwright. A grandson of the Hebrew writer Mordecai David *Brandstaedter, he was born in Tarnow. His early verse, collected in *Jarzma* (1928), *Droga pod górę* (1931), and *Wézty i*

miecze (1933), was on general themes. During the 1930s he edited Zionist periodicals and began writing poems extolling the return to Zion and the rebuilding of the Jewish national home. Two of his collections at this period were entitled *Królestwo trzeciej świątyni* ("The Kingdom of the Third Temple," 1934 and *Jerozolima światła i mroku* ("Jerusalem of Light and Twilight," 1935). For the first 40 years of his life Brandstaetter was a devoted Jew. In 1936 he published a brilliant attack on antisemitism in *Zmowa eunuchów* ("The Conspiracy of the Eunuchs," 1936), and his studies of Jewish interest included one on *Mickiewicz, *Legion żydowski Adama Mickiewicza* ("The Jewish Legion of Adam Mickiewicz," 1932) and another on the writer Julian *Klaczko, *Tragedia Juliana Klaczki* (1933). When he escaped to Palestine in 1940 he was warmly received by the Hebrew writers and his play about antisemitism in pre-war Poland was staged. After World War II Brandstaetter moved to Rome and swiftly abandoned all ties with the Jewish people, marrying the relative of a Polish cardinal, and converting to Catholicism. In 1948 he returned to Poland, where he joined the Catholic group of writers. His later works include dramas inspired by Polish history, such as *Powrót syna marnotrawnego* ("The Return of the Prodigal Son," 1948; 19562); a play about *Rembrandt; and the first part of a novel about Jesus, *Jezus z Nazaretu: Czas milczenia* ("Jesus of Nazareth: The Time of Silence," 1967; 1982).

[Moshe Altbauer]

BRANDT, BORIS (Baruch; 1860–1907), Russian Zionist, writer, and economist. Brandt, who was born in Makhnovka (now Komsomolskoye) near Berdichev, Ukraine, was educated in a *heder*. Though he learned Russian only as an adult, he graduated with honors from the law faculty of Kiev University. He wrote many books and articles on economics and taxation and in 1897 was appointed a senior official and later member of the research committee of the Russian ministry of finance. He was an adviser to the minister Count Sergei Witte. Brandt was one of the few Jewish senior officials in the czarist government administration. A convinced and active Zionist, he was forced, as a civil servant, to conceal this activity. He regarded himself as a disciple of Perez *Smolenskin, about whom he wrote a long article. He was a member of the *Benei Moshe, and participated incognito at the First Zionist Congress in 1897 as the delegate of the St. Petersburg Hovevei Zion. Brandt regarded emigration as a way of solving the Jewish problem in Russia and persuaded the Jewish Colonization Association to renew its aid to Jewish emigrants. Toward the end of his life, he collected material for a comprehensive study of the economic development and settlement in Erez Israel. He wrote (in Russian, Yiddish, German, and Hebrew) books on foreign capital in Russia, the fight against alcoholism, contemporary woman in Western Europe and Russia, and articles on Zionism and Jewish history for *Russkiy yevrey*, *Razsvet*, etc.

[Yehuda Slutsky]

BRANDT, WILLY (1913–1992), German Social Democratic politician and chancellor of the Federal Republic of Germany (FRG) from 1969 to 1974. He was born Herbert Frahm and immigrated to Norway after Hitler's rise to power, where he adopted the pseudonym Brandt. After the war, Brandt returned to Germany and started his political career, first as mayor of West Berlin, then as chancellor. His administration marked the beginning of a new era in German history. In domestic as in foreign affairs reforms were initiated. In 1971 he was awarded the Nobel Peace Prize. From 1977 until his death he was head of the Socialist International. Brandt published several volumes of memoirs (e.g., *Links und frei*, 1981; *Erinnerungen*, 1989). In 2002 an edition of his collected writings in 10 volumes began to appear.

As early as 1933, Brandt was aware of the propaganda value of antisemitism for the NS regime. After the November pogrom of 1938 (the so-called *Reichskristallnacht*) he published a remarkable report of the event in a Norwegian daily. One of his close friends, Stefan Szende (1901–1985), a Hungarian Jew, told him about the murder of Hungarian Jews. But only during the *Nuremberg Trials did he understand the extent of this "biggest crime against humanity" (Brandt, *Forbrytere og andre tyskere*, 1946, 78) and its importance. Particularly emblematic of this insight was the gesture with which Brandt's name remains connected: his kneeling in Warsaw in 1970 in front of the ghetto memorial. The photographic documentation of that moment has become one of the icons of 20th century history. In June 1973 Brandt was the first German chancellor to visit Israel. Out of deep concern for its existence he was willing to act personally on its behalf (as in the Yom Kippur War); his attempts to mediate in the Middle East conflict in general, however, were without major success.

[Marcus Pyka (2nd ed.)]

BRANDWEIN, YEHUDA ZEVI (1903–1969), kabbalistic author. A descendant of the hasidic dynasty of the rabbi of Stretyn, he was born in Safed and studied in yeshivot in Jerusalem where he was ordained by such great authorities as A.I. *Kook and H. *Sonnenfeld. Despite the fact that he was an hasidic rabbi, he did not want to earn his bread by serving as a rabbi, but preferred manual labor and worked as a builder. At night he would study and meditate on mystical writings. Brandwein was brother-in-law, disciple, and friend of R. Yehudah *Ashlag, who taught him Kabbalah. After Ashlag's death, Brandwein completed Ashlag's commentary on the *Zohar, calling it *Ma'lot ha-Sullam* (1958). He also wrote a commentary on *Tikkunei ha-Zohar* (1960); he published the complete works of Isaac *Luria (1961–64) in 14 volumes, with

punctuation, glosses, and references; and republished Moses *Cordovero's *Or Ne'erav* (1965). From 1957, he served as chairman of the Department for the Provision of Religious Requirements in the Histadrut, and was called by many, "the rabbi of the Histadrut." After the Six-Day War, Brandwein settled in the Old City of Jerusalem (1968).

BRANDYS, KAZIMIERZ (1916–2000), Polish author. Born in Lodz, Brandys studied at Warsaw University and managed to survive the Nazi occupation. After the war he became a leading figure in Polish intellectual life. He helped to found the Lodz weekly *Kuźnica* and was a member of the editorial board of the Warsaw weekly *Nowa Kultura*. Brandys' works, mainly novels, include *Miasto niepokonane* ("Invincible City," 1946), a book about Warsaw; *Sprawiedliwi ludzie* ("Just People," 1953), a play about the Polish revolt of 1905; *Obywatele* ("Citizens," 1954); *Obrona Grenady* ("The Defense of Granada," 1955); and various short stories. His novel cycle, *Między wojnami* ("Between the Wars"), comprises *Samson* (1948), *Antygona* (1948), *Troja, miasto otwarte* ("Troy, Open City," 1949), and *Człowiek nie umiera* ("Man Does Not Die," 1951). The first part, *Samson*, tells the story of a hunted Jew whose tragic existence is alleviated only when he joins the partisans. After 1955 Brandys tried to assess the effects of the Stalinist era on Poland and to apportion the moral responsibility for his country's social and political situation. An accent of irony marks the volumes of *Listy do pani Z.: Wspomnienia z teraźniejszości* ("Letters to Mrs. Z.: Memoirs of the Present," 1st ser. 1957–58, 2nd ser. 1959–60; 19682), which contain Brandys' reflections on contemporary issues and attack outdated social, political, and artistic concepts.

His brother, Marian Brandys (1912–1998), wrote travel books and stories on historical themes.

[Stanisław Wygodzki]

BRANDYS NAD LABEM (Ger. **Brandeis an der Elbe**), town in Bohemia (Czech Republic). The first Jewish settlement in the beginning of the 16th century was located in the suburb of Hrádek. After the general expulsion from Bohemia in 1559, the Jews from Brandys went to *Poznan. However, the Brandys municipality undertook to safeguard Jewish property there for an annual payment of 20 *groschen*. In 1568 the Jews were permitted to return and to reclaim their property. Nine houses in Jewish ownership are recorded in 1630. Subsequently, a considerable number of the Jews expelled from Prague in 1745 found refuge in Brandys. There was a small Jewish ghetto in the town in the 17th to 19th centuries. Filip *Bondy officiated as rabbi from 1856 to 1876. Brandys was one of the first communities in Bohemia to introduce liturgical reforms in its synagogue. The Jewish population numbered 380 in 1893; 272 in 1921 (6% of the total), 13 of declared Jewish nationality; and 139 in 1930. The community ceased to exist during the Holocaust and was not revived thereafter. The well-known Jewish surname Brandeis was probably derived from the name of the town.

[Oskar K. Rabinowicz]

BRANN, MARCUS (1849–1920), historian. Brann was born in Rawicz, Poland, where his father was rabbi. He studied under Z. *Frankel and H. *Graetz at the Jewish Theological Seminary and at the University of Breslau. From 1875 to 1883 he served as assistant rabbi in Breslau and from 1883 to 1885 as director of the Berlin Jewish orphanage. He was rabbi in Pless from 1885 to 1891, when he received a call to the Breslau Seminary as Graetz's successor, receiving the title of professor in 1914.

Brann's early studies dealt with the house of Herod (in his doctorate thesis, which was published in Latin in 1873), and *Megillat Ta'anit* (MGWJ, 25, (1876)). Later he turned to German-Jewish history. He was the first among German-Jewish historians systematically to use Jewish and general archives. Brann made a thorough study of the history of the Jews of Silesia and published in particular *Geschichte der Juden in Schlesien* (6 vols., 1896–1917). He became widely known through some more popular works such as *Geschichte der Juden und ihrer Literatur* (2 vols., 1893–95; 1910–13³) and a textbook on the history and literature of the Jewish people, *Lehrbuch der juedischen Geschichte* (4 vols., 1900–03). The historian Dubnow made great use of Brann's work in the first editions of his *History of the Jews*. In addition to the above, Brann (with others) published and annotated the posthumous editions of Graetz's *Geschichte der Juden* (1890–1909). In his popular works Brann followed the general pattern established by Graetz; in his independent scientific publications he was a faithful disciple of his mentor in his analysis of the sources and systematic presentation. In 1893 Brann revived the publication of *Monatsschrift fuer Geschichte und Wissenschaft des Judentums* (MGWJ), which had been discontinued in 1887. Until 1899 he was coeditor with David *Kaufmann, continuing alone after the latter's death. Brann also edited: D. Kaufmann's *Gesammelte Schriften* (3 vols., 1908–15); *Gedenkbuch zur Erinnerung an David Kaufmann* (with F. Rosenthal, 1900); *Festschrift zu Israel Lewy's siebzigstem Geburtstag* (with I. Elbogen, 1911); and *Festschriften* in memory of the 100th anniversary of Zacharias Frankel's and Heinrich Graetz's birth (in 1901 and 1917). Brann was also editor of part 1 (A through L) of volume 1 of the *Germania Judaica* (with A. Freimann, 1917). He also wrote *Geschichte des juedisch-theologischen Seminars in Breslau* (1904); Brann's bibliography was partly reproduced in G. Kisch (ed.), *Das Breslauer Seminar 1854–1938* (1963), 394–5. In addition to his literary activity, Brann was active in various Jewish organizations.

BRANT, HENRY DREYFUSS (1913–), composer, flautist, pianist, and conductor. Born in Montreal, the son of a violinist,

Brant began experimenting in composing at the age of eight. From 1926 to 1934 he studied in Montreal, New York, and the Juilliard Graduate School. In New York, he worked as a composer, conductor, and arranger for radio, film, jazz groups, and ballets, later extending his commercial music to Hollywood and Europe. Brant taught composition and orchestration in several institutions. Among his honors are Guggenheim Fellowships (1947, 1956), Prix Italia (first American recipient, 1955) and the Pulitzer Prize (2002).

Brant was one of the first American composers to incorporate elements of jazz and popular culture in concert music. His earlier works include a Saxophone Concerto, while *Music for a Five and Dime* (1932) for clarinet, piano, and kitchen hardware indicates his humor. Fascination with unusual instrumentation/timbral combinations has been his distinctive trait. *Angels and Devils* (1931) is scored for solo flute with flute orchestra, his *Consort for True Violins* (1965) is written for eight instruments of the New Violin Family, which he helped to develop.

In the early 1950s, inspired chiefly by Ives, Brant became a pioneer in the field of spatial music, in which the variously independent ensembles (instruments and vocal) were to be placed at specified point in space.

He felt that spatial music would speak more expressively to the human predicament, and create audience participation. Early work in the genre is *Antiphony 1* (1953) for five widely separated orchestral groups, a work that predated the signal European spatial work, Stockhausen's *Gruppen*. Later pieces also make use of theater (*The Grand Universal Circus*, 1956), lighting (*Concerto with Lights*, 1961) and continuous movement of the performers (*Windjamme*, 1969). Because of the magnitude of their production and the logistic problems of placing ensembles outdoors or around an auditorium, large-scale works like *Kingdom Come* (1970) are rarely staged and recordings fail to reflect the nature of the music.

In the 1980s Brant expanded his concept of stylistic diversity to include the music of non-Western peoples. *Meteor Farm* (1982) is scored for Indonesian gamelan ensemble, jazz band, three South Indian soloists, and West African chorus with percussion as well as conventional European performers. He also turned to improvisational scoring. Gaining recognition in his later years, Brant received commissions for big works. He continued to eschew amplification and dreamed of developing larger, louder acoustic instruments and a new kind of concert hall with movable walls. Three Brant works were premiered in the year 2000, including *Prophets* for four cantors and a *shofar* player at the Uilenberger Synagogue in Amsterdam.

Brant composed over 100 spatial works, as well as symphonic, chamber, and choral works, ballets, and films scores. He made the scoring of Ives's *Concord Sonata* (1995) a project of 30 years.

His writings include "Space as an Essential Aspect of Musical Composition" (in *Contemporary Composers on Contem-*

porary Music, ed. E. Schwartz and B. Childs, 1967) and "Spatial Music Progress Report" (in *Quadrille*, 1979).

[Naama Ramot (2nd ed.)]

BRASCH, RUDOLPH (1912–2004), Australian Reform rabbi. Brasch was born in Berlin to British parents, his father having been one of the early pioneers in South Africa. He studied at the universities of Berlin and Wuerzburg, where he received his doctorate, and, under Rabbi Leo *Baeck, at the Hochschule fuer die Wissenschaft des Judentums in Berlin, where he received his rabbinical diploma. After having held ministerial positions in London, Dublin, and Springs, South Africa, in 1949 he was appointed minister of Temple Emanuel, Sydney, and later ecclesiastical head of the Australasian Union for Progressive Judaism.

Brasch was active in the field of public and interfaith relations, conducting a weekly television program and contributing a regular weekly column on "Religion and Life" to the *Sun-Herald*, the leading Australian Sunday newspaper.

A prolific author, Brasch has a large number of books to his credit, some of which have gone into a number of editions and have been republished as paperbacks. They include *The Star of David* (1955) and a companion volume *The Eternal Flame* (1958); *The Unknown Sanctuary* (1969, American edition *Judaic Heritage*). His *How Did It Begin* (Customs and Superstitions and Their Romantic Origin, 1965) has gone into ten editions and has been translated into German and Japanese. He wrote the first biography of General Sir John *Monash, which was published by the Royal Australian Historical Society (1969).

He was awarded an O.B.E. in 1967. After his retirement from Temple Emanuel in 1979, he served for some years as a rabbi in Birmingham, Alabama.

BRASLAV (Pol. **Brasław**), small town in Belarus; in Poland until 1795 and between 1921 and 1939. A small number of Jewish families lived there in the 16th century and numbered 225 in 1766. The community grew to 1,234 in 1897 (82% of the total population), and 1,900 in 1926. There was a *Karaitic settlement in Braslav and its vicinity. Jews traded in flax and grain, exporting them to other parts of the country. In 1905 a pogrom was staged. During the Polish period most of the children studied in a Yiddish school. In September 1939 Braslav was annexed by the Soviet Union and all Jewish organizations and parties ceased their activities.

[Shmuel Spector (2nd ed.)]

Holocaust Period

In 1941, on the eve of the Holocaust, there were 2,500 Jews in Braslav. The city was captured by the Germans on June 28, 1941, and on the following day the German army and police

removed all the city's Jews to the nearby swamp area, where they were held for two days. Meanwhile, all Jewish property had been stolen by the local population. On August 2, 1941, a "contribution" of 100,000 rubles was demanded of the Jews. At the beginning of April 1942, a ghetto was established, and, in addition to the local Jewish population, Jews from Dubinovo, Druya, Druysk, Miory, and Turmont were interned there. The population of the ghetto was divided into two parts: the workers and the "nonproductive." In the first *Aktion* – on June 3–5, 1942 – about 3,000 people were killed; local farmers actively helped the Germans in this *Aktion*. After some of the Jews went into hiding, the German commander announced that those Jews who came out of hiding of their own free will would not be harmed, but the handful who responded to this call were executed on June 7. In the autumn of 1942, the ghetto was turned into a work camp in which the remainder of the Jews from the entire area were concentrated. On March 19, 1943, the Nazis began to liquidate the camp, but this time they met with opposition. A group of Jews, fortified in one of the buildings, offered armed resistance. Only after their ammunition ran out did the Nazis succeed in suppressing the opposition. The fighters fell at their posts. There were 40 survivors of the Braslav community, some of whom fought in partisan units in the area. After the war a monument was erected to the Jews killed there by the Nazis. In 1970 there were 18 Jewish families with no synagogue.

BRASLAVI (Braslavski), JOSEPH (1896–1972), Israeli geographer and author. Braslavi went to Erez Israel from the Ukraine as a boy of ten. During World War I he was an interpreter in the Turkish army. In the early 1920s he taught Hebrew in various kibbutzim. In 1924 he was sent on an exploratory journey to Transjordan and the Negev in connection with the projected settlement of *Ha-Shomer, the Jewish watchmen's organization, in these areas. He went to Berlin to study Semitics in 1927. On his return he resumed his explorations and his lectures on the geography of the country. From 1938 he taught at the Teachers' Seminary in Tel Aviv. Braslavi's most important work is his six-volume *Ha-Yadata et ha-Arez?* ("Do You Know the Land?" 1940–65), a detailed description of all the regions of Israel. Other books include: *Milhamah ve-Hitgonenut shel Yehudei Erez Yisrael me-aḥar Mered Bar-Kokhva ve-ad Massa ha-Zelav ha-Rishon* (1943); *Le-Heker Arzenu* (1954); and *Me-Rezu'at Azzah ad Yam Suf* (1956).

BIBLIOGRAPHY: Tidhar, 3 (1958²), 1233–35.

BRAȘOV (Hung. **Brassó**; Ger. **Kronstadt**; between 1950 and 1960 **Orașul Stalin**), city in Southern Transylvania, central Romania; until 1918 in Hungary. From 1492 onward Jews are mentioned living there temporarily or passing through Brașov in transit. For a long time the city was inhabited by Romanians, Hungarians, and Germans (Saxons). The Jews took

part in the trade between Hungary, Muntenia, and Turkey. In 1826 several Jewish families received permission to settle there permanently, and in 1828 they also received the right to organize their own community. In 1870 the Jewish community started a program for teaching Hebrew to its members, and for this purpose invited the Hebrew poet Solomon Ehrenkranz to serve as a teacher. The community numbered 103 in 1865 and 1,198 in 1900. A secular Jewish school was established in 1860. In 1868, the Brașov community became Liberal (see *Neology). A separate Orthodox community was established in 1877. The school continued to serve both communities. A significant part of the Jews of Brașov were assimilated (mostly to Hungarian and German culture, but some also tried also to assimilate to Romanian culture). Immediately after the end of World War I Zionist youth organizations made their appearance in Brașov and were active in promoting the ideology of reconstructing Israel. The Jewish population numbered 2,594 in 1930. During World War II, under the Fascist Antonescu regime, the communal buildings and much Jewish property were confiscated. Jewish men, including many from throughout the region, were drafted into local labor battalions and survived the war. The rehabilitated community was reorganized in 1949 in accordance with the law on the organization of Jewish communities in Romania. Instead of two communities, a unified one was established with an Orthodox section. The Jewish population numbered 1,759 in the city of Brașov and 4,035 in the district in 1956, and 2,000 in the city in 1968. At the outset of the 21st century only a few hundred Jews continued to live in Brașov, mostly elderly, the rest having emigrated to Israel or to the West.

[Yehouda Marton / Paul Schweiger (2nd ed.)]

BRATISLAVA (Ger. **Pressburg**, Hg. **Pozsony**; former Slovak name **Prešporek**), capital of *Slovakia; until 1918 in Hungary; former chartered capital of the kings of Hungary. It was one of the most ancient and important Jewish centers in the Danube region. The first Jews possibly arrived with the Roman legions. The *Memorbuch of the community of Mainz commemorates the "martyrs of Pressburg" who perished in the First Crusade. The first documentary mention of Jews in Bratislava dates from 1251. In 1291 King Andrew III granted a charter to the community, which paid taxes to the royal treasury, and from 1345 also to the municipality. Bratislava Jews mainly engaged in moneylending, but included merchants and artisans, vineyard owners, and vintners. A synagogue is first mentioned in 1335 and was rebuilt in 1339.

In 1360 the Jews were expelled from Hungary, and some of the Jews of Bratislava took refuge in Hainburg (Austria). They returned in 1367 and resumed possession of their homes. In 1371 the municipality introduced the *Judenbuch* regulating financial dealings between Jews and Christians. Isaac *Tyrnau officiated as rabbi in Bratislava about 1410. In 1392 King Sigis-

mund exempted Christians for a year from paying the interest on loans borrowed from Jews; in 1441 and 1450 all outstanding debts owed to Jews were canceled; and in 1475 Jews were forbidden to accept real estate as security. An attempt by many Jews to leave Bratislava in 1506 was prevented by Ladislav II who confiscated the property of those who had already left.

The Jews were expelled from Bratislava in the general expulsion from Hungary in 1526, although they apparently continued to live in several places, including the Schlossberg ("Castle Hill"), outside the municipal bounds. The first Jew subsequently to reside within them was Samuel *Oppenheimer, who received permission to settle in a suburb in 1692. He was followed by other Jews and a synagogue was built in 1695, where the first known rabbi to officiate was Yom Tov Lipmann. In 1699 the *Court Jew Simon Michael, who had settled there in 1693, was appointed head of the community; he built a *bet midrash* and acquired land for a cemetery. By 1709 there were 189 Jews living in Bratislava and 772 by 1736. The Jewish quarter in the Schlossberg remained outside the municipal jurisdiction. It later passed to the jurisdiction of the counts

Palfy, who gave protection to the Jews living there. In 1714 they granted a charter of privileges to the 50 families living in its precincts and in Zuckermandel. The Jews in the Schlossberg resided in a single row of houses, but in 1776 the municipality permitted Jews to settle on land owned by the city opposite these houses and thus to constitute a "Jewish street." The Jews living on the Palfy side, however, enjoyed different rights from those under municipal jurisdiction, the former, for instance, being permitted to engage in crafts and all branches of commerce. They enjoyed freedom of religious worship. After the status of the community improved, the customary provision of geese to the Viennese court on St. Martin's Day, formerly an onerous tax, developed into a ceremony (performed until 1917). The Jews in Bratislava pioneered the textile trade in Hungary in the 18th century. Under the direction of Meir Halberstadt the yeshivah became an important center of Jewish learning, while the authority of Moses *Sofer (d. 1839) made Bratislava a center of Orthodoxy for all parts of the Jewish world. During the reign of Maria Theresa (1740–80) the representatives of Hungarian Jewry used to meet in Bratislava to arrange the tax administration.

During the revolution of 1848, anti-Jewish riots broke out. The Jewish quarter was put under military protection and Jews living elsewhere had to retire within it. Jews volunteered to serve in the National Guard but were opposed by the general public. Further outbreaks of anti-Jewish violence followed the *blood libel case in *Tisza-Eszlar in 1882 and 1883. From 1898 tension mounted between the Orthodox and the pro-Reform members of the community (see *Reform; *Hungary). After 1869 the Orthodox, Neolog, and *status-quo-ante* factions in Bratislava organized separate congregations. The Orthodox provincial office (*Landeskanzlei*) later became notorious for its opposition to Zionism. The Neolog and *status-quo-ante* congregations united in 1928 as the Jeshurun Federation. A large part of the Jewish quarter was ravaged by fire in 1913 but was later rebuilt.

Jewish institutions in Bratislava included religious schools, charitable organizations, and a Jewish hospital (founded in 1710; a new building was constructed in 1931). The Hungarian Zionist Organization was founded in Bratislava in 1902 and the World *Mizrachi Organization in 1904, both on the initiative of Samuel *Bettelheim. During the Hungarian Revolution of 1919 anti-Jewish excesses were prevented by a guard formed by Jewish veterans. With the establishment of Czechoslovakia, Bratislava became the center of a number of Jewish national communal institutions and of Jewish national as well as Zionist activities. Bratislava also became the center of *Agudat Israel in Czechoslovakia. During this period, several Jewish newspapers and a Hebrew weekly, *Ha-Yehudi*, were published there. In 1930 the Jewish population in Bratislava numbered 14,882 (12% of the total population), 5,597 of declared Jewish nationality.

In the titularly independent state of Slovakia set up under Nazi auspices in 1939, Bratislava was the seat of the Jewish central office (*Ústredňa židov*). Even before the declara-

tion of the independent state, attacks on the synagogues and yeshivah on Nov. 11, 1938, inaugurated the regime of antisemitic terror. Nearly a thousand Jewish students were expelled from the university. Subsequently, anti-Jewish terrorization, restrictive measures, and pogroms increased. On the outbreak of World War II in September 1939 all Jewish shops were confiscated, and in August 1940 the Jews were forced to surrender their homes. Many transports of the “illegal” immigration to Palestine were organized in Bratislava. Numbers of Jews who had fled from Nazi persecution in Vienna in 1938 were put into camps in the Patronka and Petržalka suburbs. In October 1941, 6,473 Jews were expelled to 16 provincial towns, mostly to Trnava, Nitra, and Nove Mesto. Deportations and flight continued until the arrival of the Germans in September 1944, when the 2,000 or so remaining Jews were sent to Auschwitz via Sereď. Only a fraction of the Jewish population survived the Holocaust. The old cemetery was destroyed in a town planning project during the war. A small plot including the tomb of R. Moses Sofer was spared. In 2002 the entire area underwent restoration and reconstruction. The street leading to the tomb was named *Ĥatam Sofer*. In the ancient Jewish quarter only a few original Jewish houses survived.

Hebrew Printing

Some 340 Hebrew and Yiddish books were printed in Bratislava between 1831 and 1930, the first being *Torat ha-Emunah*, an ethical treatise in Yiddish. But already in 1789 and 1790 two smaller items had been issued here. In 1833 the well-known Vienna printer Anton Edler von Schmidt bought the press of K. Schniskes, and Schmidt's son printed Hebrew books to 1849. He was succeeded by Heinrich Sieber, and he and his heirs were active to 1872, and their successors F. and S. Nirschi to 1878. O. Ketterisch, later K. Ketterisch and Zimmermann, set up a Hebrew press in 1876. The first Jewish printers were Lewy and Alkalay, later A. Alkalay only, whose firm printed from 1877 to 1920.

[Samuel Weingarten-Hakohen]

Contemporary Period

On April 15, 1945, a few days after the liberation of the city, the Jewish community of Bratislava was reestablished, and Max Weiss became its chairman. In September, Chief Rabbi Markus Lebovič was installed in his post in a ceremony in the only synagogue that had not suffered damage during the war; the first public prayer services were held there also on the occasion of the High Holidays. In 1946 Bratislava became the headquarters of the 42 reconstituted Jewish communities of Slovakia. Religious functions – ritual slaughter, *mikva'ot*, a kosher butcher and canteen, and religious instruction in the schools – were reintroduced; the Chief Rabbinate also insured the supply of *mazzot* and kosher wine. In 1947, when the membership of the Jewish community had grown to 7,000, a second synagogue was opened. One synagogue building serves now as a television studio. International charitable organizations (notably *ORT and the *American Jewish Joint Distribution Committee) played a prominent role in the revival and

development of the religious, economic, and social life of the Jewish community. Homes for the aged, youth centers, and a hospital were also established. The *Ha-Shomer ha-Zair built training farms (*hakhsharot*) to prepare Jewish youth for settlement in Palestine under the auspices of *Youth Aliyah. Jewish periodicals, notably *Tribuna*, *Ha-Mathil*, and *Ha-Derekh*, came into being, and Bratislava became the center of the rapidly developing Jewish life in Slovakia. An archive on the Holocaust period was founded after the war by the Union of Slovakian Jewish Communities and a large section of it was later transferred to *Yad Vashem. Difficulties were encountered, however, in the restitution of Jewish property; the local Slovaks, who had become the “Aryan owners” of such property during the war, did all they could to prevent its return to its rightful owners. Antisemitic hate propaganda, which accused the Jews of having been “the tools of Magyarization and exploiters of the Slovak people,” resulted in anti-Jewish riots and the plunder of Jewish property (during the summer of 1946 and in March 1948).

The year 1949 was a turning point in the renewed history of the Jewish community. Under the Communist regime Jewish religious and cultural life was gradually restricted, the property of Jewish organizations was nationalized, and the existing social and economic institutions were deprived of their Jewish character. An agreement between Czechoslovakia and Israel facilitated the emigration of about 4,000 Bratislava Jews. In 1949 a new chief rabbi, Elias Elijah Katz, later of Beer-sheba, and a new community chairman, Benjamin Eichler, were appointed. Any attempts to reactivate Jewish life, however, were nipped in the bud. In January 1952 the Bratislava *Pravda* warned against “Jewish citizens who are in the service of the American imperialists and are trying to undermine Slovak life.” Until the end of the decade, the Jewish community, which had been reduced to about 2,000 persons, lived under the threat of dismissal from employment, compulsory manual work, evacuation to different places of residence, and long prison terms. The political changes which took place in 1963 resulted in the immediate resumption of Jewish activities and contact with world Jewry. Several Jews who had been wrongfully imprisoned were rehabilitated, and Jews found it easier to gain employment. Religious instruction was intensified and Jewish ceremonies, such as bar mitzvahs and religious weddings, became a more frequent occurrence. After the Soviet invasion of Czechoslovakia (August 1968), about 500 Jews left Bratislava. The Jewish population of Bratislava in 1969 was estimated at about 1,500. By the early 21st century it had dropped to around 800.

Following the “Velvet Revolution” of fall 1989, the Jewish community also revived. Many individuals who had hidden their Jewish identity stepped forward, swelling the local congregation. The Union developed relations with Jewish communities elsewhere and started to communicate with Jews in Israel originally from Slovakia. The Joint Distribution Committee assisted in the restoration of Jewish life. A new rabbi, Baruch Mayers, began to officiate in Bratislava's congregation

while serving at the same time as chief rabbi of all of Slovakia. The synagogue on Hajdukova Street was used for the High Holidays, while a small room was utilized for services on regular days, though a *minyān* was not always present. Bratislava had a kosher restaurant, a Hebrew kindergarten, a Jewish old age home, a *hevra kaddisha* with a well-kept cemetery, and various Jewish associations and circles. As part of the Slovak National Museum, there was a Museum of Jewish Culture, with small exhibition rooms in the Jewish Street. On the site of the former imposing Neolog synagogue a memorial to the Slovakian Jews who perished in the Holocaust was erected. In the office of the Bratislava's congregation a major collection of administrative books of the former famous yeshivah are preserved. A Holocaust Documentation Center is dedicated to research on Slovakian Jewry.

BRATSLAV, small town in Podolia, Ukraine, on the River Bug. A Jew leased the collection of customs duties in Bratslav in 1506, and it appears that a Jewish settlement developed in the town from that time. In 1545 the Jews were exempted from the construction of roads “so that they could travel on their commercial affairs.” The Jews underwent much suffering during the attacks of the Tatars on the town during the 16th century (especially in 1551). At the beginning of the 17th century, commercial relations were maintained between the Jews of Bratslav and those of Lvov. In the “Councils of the Lands, Bratslav was attached to the “Land of Russia,” of which Lvov was the principal community.

In 1635 King Ladislas IV confirmed the rights of the Jews of Bratslav. At the time of the *Chmielnicki massacres, a number of Jews from Bratslav were murdered in Nemirov and Tulchin, where they had taken refuge. The community, however, was reconstituted soon afterward. In 1664, when the Cossacks invaded the land on the western side of the Dnieper River, they massacred the Jews in Bratslav. Between September 7, 1802, and October 16, 1810 (date of his death), Rabbi *Nahman of Bratslav lived in the town, and it became an important ḥasidic center during this period. His disciple, Natan Steinherz, set up a Hebrew press in the town in 1819 and published the works of his teacher. At the end of that year, the authorities closed down the press after they had been approached

by informers. The community numbered 101 according to the census of 1765 (195 including Jews in the surrounding areas) and 221 in 1790 (398 including those in the surrounding areas). After Bratslav's incorporation into Russia (1793), 96 Jewish merchants and 910 townsmen lived in the district in 1797. The Jewish population numbered 3,290 according to the census of 1897 (43% of the total population). In the beginning of the 19th century, most of the industrial enterprises and workshops in the town were owned by Jews. Nearly all the shops also belonged to Jews and all the dentists and midwives were Jews. Between May 1919 and March 1921, there 14 pogroms in Bratslav, over 200 Jews were killed, 600 children became orphans, and 1,200 people were left without livelihoods. As a result of the pogroms, many Jews left for the bigger towns. The population dropped to 1,504 in 1923, rose to 1,840 in 1926, and dropped again to 1,010 in 1939 (total population 3,974). During the 1920s, many Jews worked as artisans but faced discrimination in their unions. The local government refused to grant land to Jews who asked to organize a farm cooperative. Bratslav was taken by the Germans on July 22, 1941, and included in Romanian Transnistria on September 1. In the same month a ghetto was established, and Jews deported from Bessarabia and Bukovina were brought there. At the end of December there were 747 Jews in the town. It can be assumed that many more had been killed or died there before that time. On January 1, 1942, most of the ghetto inmates were deported to the Pechora concentration camp and 50 were drowned in the South Bug River. There was a Jewish underground in the ghetto numbering 16 persons. They were discovered by the Romanians and executed. Bratslav was liberated on March 17, 1944. Three hundred local Jews and 30 refugees were found there. In 1989 there were 137 Jews in the town and in 1993 only 71. In 1995 a monument to those murdered in the Holocaust was erected in the local cemetery.

[Shmuel Ettinger / Shmuel Spector (2nd ed.)]

BRAUDE, ERNEST ALEXANDER (1922–1958), English chemist. Braude was born in Germany and went to England in 1937. He spent his student and working life at Imperial College, London, where he became professor of organic chemistry in 1955. The first field in which Braude specialized was in the spectral properties of organic compounds. He was one of the pioneers of the use of radioactive tracers in organic chemistry, and also of the thermochemical study of organic reactions; he also did research in the field of the chemistry of natural products, discovered lithium alkenyls, worked on the synthesis of vitamin D, and devised a new synthesis for thioacetic acid.

BIBLIOGRAPHY: *Proceedings of the Chemical Society* (1957), 297–8.

[Samuel Aaron Miller]

BRAUDE, JACOB (1902–1977), Anglo-Jewish communal leader, educationalist, and philanthropist. Braude was born in Fuerth, Bavaria, where his parents settled upon leaving Russia. He studied law at Leipzig University and received a doctorate *summa-cum-laude* for a thesis on Anglo-Saxon Common Law. When the legal profession was closed to Jews under the Nazi regime, he entered his father-in-law's business. In his student days Braude became active in youth work and represented the Orthodox (*Ezra*) movement in the Jewish Youth Center established by the community as a result of his efforts. In 1938 he emigrated to London, where he became involved in communal work. He established, with other European refugees, the Hendon Adath Yisrael Congregation which was to become one of the leading Orthodox synagogues in London and of which Braude eventually became a life president. He also took an active part in the Jewish secondary school movement, established by Rabbi Dr. Victor *Schonfeld and developed by his son Solomon.

Braude served as a member of the Executive of the Board of Deputies of British Jews, in which he organized the Orthodox group. He became a vice president of the World Jewish Congress (British Section), and served several times as chairman of the Mizrachi Federation and later as its executive vice-president. His regular reports on the state of Jewish education in Britain and elsewhere in the Jewish world, which were published in the *Jewish Chronicle*, were recognized as a reliable and valuable source of communal information. Braude also served on the Congress Tribunal of the World Zionist Organization. From 1952 he took an increasing interest in Midrashiat Noam, the pioneering yeshivah college at Pardes H'annah, and later in its preparatory school at Kiryat Yaakov Herzog, Kfar Saba. He founded the Friends of the Midrashia in Britain, of which he was chairman, and subsequently chaired its World Council as well as its Israeli branch.

[Alexander Carlebach]

BRAUDE, MARKUS (Mordekhai Ze'ev; 1869–1949), rabbi, educator and Zionist leader. Braude was born in Brest-Litovsk (then Russia). He was the son of R. Aryeh Leib Braude and his maternal grandfather was the rabbi of Lvov, Zevi Hirsch *Ornstein. Braude completed his studies at the University of Freiburg in 1898. An active Zionist from an early age, he attended the First Zionist Congress in Basel (1897), and became a leader of the Zionist Organization in Galicia. On his initiative Galician Zionists decided to take part in the political life of the country, and Braude directed their campaign for election to the Austrian Parliament (1907). Between 1909 and 1939 he was a preacher in Lodz. He founded a network of Jewish secondary schools in Poland and, between 1920 and 1926, was a member of the Polish senate. He was one of the founders of the Institute for Jewish Studies in Warsaw, and of other public and cultural institutions in Poland. Braude settled in Palestine in 1940, was active in the Polish Immigrants' Association, and undertook research in the history of Galician Jewry.

[Getzel Kressel]

BRAUDE, MAX A. (1913–1982), U.S. rabbi and organization executive. Braude was born in Harmony, Pennsylvania. He was ordained at the Hebrew Theological College in Chicago (1941). Braude joined the U.S. Army during World War II, and became the highest-ranking Jewish chaplain with the armed services in Europe, in charge of the welfare of displaced persons. In 1947 Braude joined the International Refugee Organization, with which he remained associated until 1959. In 1951 he became director of the World ORT Union, and in 1957 director general of its international office in Geneva. Frequently called upon as a consultant by the U.S. government, Braude participated in numerous conferences and studies on vocational and refugee problems.

[Edward L. Greenstein]

BRAUDE, WILLIAM GORDON (1907–1988), U.S. Reform rabbi and scholar. Braude was born in Telz, Lithuania, the son and grandson of rabbis who were scholars at the famed Telz yeshivah. In 1920, they left Europe for New York and he was enrolled at Rabbi Isaac Elchanan Yeshiva. The family then moved to Denver, Colorado, where Braude became a public school student for the first time. In 1922 his father moved to Dayton, Ohio, where Braude developed an interest in the Reform rabbinate. A graduate of the University of Cincinnati (1929), he was ordained at Hebrew Union College in 1931. After a year in Rockford, Illinois, he served as rabbi of Temple Beth El, Providence, Rhode Island, from 1932. Throughout his career, Braude was a scholar-rabbi, writing, publishing, and teaching. While in Providence, he studied at Brown University. He was awarded his Ph.D. (1939). He joined the Brown faculty, first as a lecturer in Hebrew and later in biblical literature. He later taught at Yale, the Hebrew University of Jerusalem, and Leo Baeck College.

As a rabbi, Braude was one of the leaders of the right wing within the Reform movement and advocated a return to traditional practices and became known as one of the leading students of rabbinics in the Reform movement. He was a leading supporter of the Hebrew day school concept, reintroduced the head covering at his services, and argued for respect of the dietary laws and other observances. In 1965 he participated in the civil rights demonstration led by Martin Luther King in Montgomery, Alabama. A member of various scholarly bodies, he also served on many civic agencies and lectured widely. Braude wrote *Jewish Proselyting in the First Five Centuries of the Common Era, the Age of the Tannaim and Amoraim* (1940); a translation with critical notes of *Midrash on Psalms* (1959); *Pesikta de Rav Kahana* (1975), a translation with critical notes of the *Pesikta Rabbati* (1968); and *Tanna debe Eliyyahu* (1980). These books represent important contributions to the study of midrashic literature and

are based on manuscripts and early printed editions. The synagogue library that bears his name contains more than 25,000 volumes.

[Jack Reimer / Michael Berenbaum (2nd ed.)]

BRAUDES, REUBEN ASHER (1851–1902), Hebrew novelist and advocate of social and religious reform. Braudes, who was born in Vilna, early established a reputation as a brilliant talmudic student, and published his first articles in the rabbinic periodical *Ha-Levanon* (1869). Leaving Vilna at 17, he spent three years at the rabbinical seminary at Zhitomir before wandering through southern Russia to Odessa, which was then the center of the Haskalah (Enlightenment). Influenced by the critical attitude toward traditional Judaism then dominating Hebrew literature, Braudes began to write articles advocating the religious and social reform of Jewish life such as *Si'ah Sha'ah Ahat Ahar ha-Mavet* (“A Conversation One Hour After Death”), published in *Ha-Meliz* (1870), and in his first short story, *Misterei Beit Zefanyah* (“The Mysteries of the Zephaniah Family”) which appeared in *Ha-Shaḥar* (1873). In 1875 Braudes left Odessa to spend a year in Warsaw before proceeding to Lemberg where he edited the monthly *Ha-Boker Or* (1876–79). There he published much of his novel *Ha-Dat ve ha-Ḥayyim* (“Religion and Life,” 1885), an important work describing the struggle for religious reform that raged within Lithuanian Jewry from 1869 until 1871, as well as many stories, articles, and book reviews.

The years 1879–81 were again spent in Vilna, where he edited most of the first volume of a literary miscellany, *Gan Perahim* (“A Garden of Flowers,” 1881), which contains an important article on the revival of Hebrew. Shocked by the 1881 pogroms in Russia, he joined the *Ḥibbat Zion*, although he had previously attacked Smolenskin's advocacy of nationalism in an article “*Beit Yisrael*” which appeared in 1880 in David Gordon's *Maggid Mishneh* (nos. 49–50). After a brief sojourn in St. Petersburg, Braudes fled to Bucharest where from 1882 to 1884 he edited a Yiddish periodical *Yehudit* which advocated Jewish colonization in Palestine. After his expulsion from Romania as an alien Jew in 1884, Braudes resided in Lemberg until 1891. In 1885 he founded a Hebrew biweekly, *Ha-Yahadut*, of which only four issues appeared. At the same time he participated in a story-publishing venture under the imprint *Eked Sippurim*. Part of his second novel *Shetei ha-Kezavot* (“The Two Extremes”), which skillfully depicts the clash of contemporary and traditional attitudes and habits within Jewish life in and about Odessa, appeared in the same series, while a finished version was published in Warsaw in 1888. In an introduction to his collection of eight stories (some of which had previously appeared in *Ha-Boker Or*), published under the title *Zekenim im N'arim* (“Old and Young,” 1886), Braudes laments the dearth of essential vocabulary in Hebrew which limits the scope of the Hebrew story. In 1888 he edited the second volume of the annual *Ozar ha-Sifrut* published by Shealtiel Isaac Graber in Cracow. His short monograph on Adam Mickiewicz and the Jews (Cracow, 1890) represents the

first study in Hebrew of the great Polish poet's attitude toward a Jewish renaissance in Palestine.

From 1891 to 1893 Braudes resided in Cracow, editing a weekly which appeared under the names *Ha-Zeman* and *Ru'ah ha-Zeman* in alternate weeks, to avoid paying the duty levied on a weekly. In the former he included the first part of an unfinished novel, *Me-Ayin u-Le'an* (“Whence and Whither”) which appeared separately in Cracow in 1891; and in the latter he published a long biographical novel *Shirim Attikim* (“Old Songs”), the finished version of which appeared posthumously in Cracow in 1903. Both novels depict the ideological struggles of contemporary Jewish life.

From 1893 to 1896 Braudes again resided in Lemberg, where from 1894 he edited a Yiddish weekly, which also appeared in alternate weeks, under the titles *Der Karmel* and *Der Vekker*. With the removal of the duty on weeklies, the journal appeared each week under the name *Juedisches Wochenblatt*, serving as the official Zionist organ in eastern Galicia. Toward the end of 1896 Braudes moved to Vienna where he resided until his death. Here he served as a correspondent for *Ha-Maggid he-Ḥadash*, in which capacity he attended the First World Zionist Congress in 1897. He was appointed editor of the Yiddish edition of the Zionist weekly, *Die Welt*, by Theodor *Herzl. During his last years he composed many articles, sketches and stories, although his plans to complete his unfinished novels were realized only in the case of *Shirim Attikim*.

Braudes' fame as an author rests primarily on the novels, *Ha-Dat ve-ha-Ḥayyim* and *Shetei ha-Kezavot*, both of which display a highly developed sense of literature. The narrative is clear, concise, and interesting, and the presentation straightforward and direct. The plots, particularly in the case of *Shetei ha-Kezavot*, are skillfully constructed, with events portrayed in a natural and unforced sequence. In spite of the powerful dramatic tensions and conflicts experienced by the principal characters, the novels are almost entirely free from the crude melodrama and wildly improbable devices to which most of his contemporaries were prone. Both characterization and dialogue are competent within the linguistic limitations of the period. Even the didactic elements which permeate the Hebrew literature of that time are mostly introduced without too much grating on the reader's susceptibilities. Only in the third part of *Ha-Dat ve-ha-Ḥayyim* is the literary aspect deliberately neglected in favor of Braudes' didactic purpose. In *Shetei ha-Kezavot* the author's advocacy of social reform is introduced with such consummate skill that the novel achieves an artistic unity unrivalled in the Hebrew literature of the period. By utilizing his penetrating knowledge of Jewish life in Eastern Europe, Braudes succeeded in depicting the spiritual conflicts which raged within the community in his time with an uncanny accuracy.

[David Patterson]

BRAUDO, ALEXANDER ISAYEVICH (1864–1924), Russian-Jewish historian and civic leader. After graduating from the University of Dorpat he became head of the bibliographical section of the Historical Society at the St. Petersburg (Leningrad) University and was appointed librarian of the Imperial Public Library. Braudo was active in many associations fighting for social equality and freedom for Russian Jews. He edited *Trudovaya pomoshch* (“Workers’ Relief”), cooperated with the *Society for the Promotion of Culture Among the Jews, and was on the editorial staff of the periodicals *Voskhod* and *Per-zhitoye*. He was also one of the founders and directors of the publishing house *Rasum*, dedicated to the fight against anti-semitism. His review *Russian Correspondence*, published in London, Paris, and Berlin, provided information about Russian politics, and especially about anti-Jewish activities of the Russian authorities. Braudo was among the initiators of the massive history of the Jewish people, *Istoriya yevreyskogo naroda*, contributing largely to volumes 11 (1914) and 12 (1921).

BIBLIOGRAPHY: *Yevreyskaya letopis*, 4 (1926), 195–6.

BRAUDO, YEVGENI MAXIMOVICH (1882–1939), musicologist. Born in Riga, Braudo studied music at the Riga Music School (1891–97) and philology at St. Petersburg University (graduating in 1911). He studied music history with Hugo Riemann and Hermann Kretzchmar in Germany. Braudo was appointed professor at the Russian Institute of Art History in 1921 and later professor at Leningrad University. He contributed music criticism to *Pravda* and was music editor of the first edition of the *Bolshaya Sovetskaya Entsiklopediya*. He wrote a history of music in three volumes (1922–27) as well as works on Bach, Wagner, Borodin, Nietzsche, Beethoven, Schubert, E.T.A. Hoffman, and the foundations of material culture in music.

BRAUN, ABRAHAM (Sergei; 1881–1940), Bundist leader in Latvia. Born in *Riga, Braun joined the *Bund in 1900 while a student at the Riga Polytechnikum. A brilliant speaker and propagandist, he worked clandestinely on behalf of the party in various towns and was imprisoned several times for revolutionary activities. Braun took part in 1906 in the seventh conference of the Bund in Berne and in its seventh convention in Lvov. He was also sent to South Africa as an emissary of the party. After 1917 Braun renewed his activities in the Bund, and at the eighth party convention that year he was elected to the central committee. From 1921 he lived in Riga, where he was active as a speaker and a journalist. After the Fascist take-over in Latvia in 1934, he was sent to a detention camp, and later deported. From 1938 he lived in New York, traveled as speaker for the Arbeiter-Ring (*Workmen’s Circle), and contributed to its publication *Friend*.

BIBLIOGRAPHY: J.S. Herz (ed.), *Doyres Bundistn* (1956), 298–307.

BRAUN, ADOLF (1862–1929), Austrian-born socialist leader in Germany who was active in the Social Democratic Party

for more than 40 years. He was the brother-in-law of Victor *Adler. Adolf Braun, son of a wealthy Jewish entrepreneur, joined the socialist movement in Austria as a student. In 1889 he went to Germany and became editor of several socialist newspapers. On his expulsion from Prussia under the anti-socialist laws, he edited the Nuremberg socialist daily, *Fraenkische Tagespost*. Although he belonged to the left wing of the Social Democrats, Braun did not vote against war credits during World War I. He was, however, among the first to demand the abdication of the Kaiser in 1918. His articles of that period were reprinted in the book *Sturmvoegel der Revolution* (1919). After his naturalization, Braun was elected to the National Assembly in Weimar in 1919 and then to the Reichstag. From 1920 to 1927 he was a member of the Social Democratic Party executive. He wrote on economic, social, and trade union questions. Many socialist journalists received their training in newspaper work under his guidance.

His brother HEINRICH BRAUN (1854–1927) founded, together with Karl Kautsky and Wilhelm Lichtknecht, the periodical of the German Social Democrats, *Neue Zeit*, in 1883. Periodicals devoted to the study of social policy and founded by him included the *Archiv fuer soziale Gesetzgebung und Statistik* of which he was editor until 1903; his successors were Werner Sombart and Max Weber. Braun also edited socialist publications including the *Neue Gesellschaft*. In 1903–04 Braun sat in the Reichstag but his election was declared invalid and his opponent defeated him in the following by-election. His wife and co-worker was the author Lily Braun, daughter of General von Kretschman.

ADD. BIBLIOGRAPHY: NDB, 2 (1955), 539–41; U. Lischke, *Lily Braun* (2000); I. Voss, in: M. Grunewald and H.M. Bock (eds.), *Le milieu intellectuel de gauche en Allemagne* (2002), 55–74 (Ger.).

BRAUN (Brown), ARIE (1934–), chief *hazzan* of the IDF for many years. Born in Jerusalem, Braun first trained as a *hazzan* under his father, Naḥum Yizḥak Brown, and the *hazzan* Zalman Rivlin. He further studied voice development and music under Rosenstein and the musicians Shmuel Rivlin, Yosef b. Barukh, and Yehoshua Zohar, and won a study grant from the Norman Fund. He was senior *hazzan* of the Ramah and Beth-El synagogues of Tel Aviv, and officiated at services and concerts in Australia, South Africa, Mexico, the United States and Canada. In 1974 he won first prize at the *Hazzanut Festival* in Israel. Braun served as chief *hazzan* of the IDF with the rank of major from 1976 to 1981, when he was promoted to the rank of lieutenant colonel, the first time that an IDF *hazzan* has received this rank. He has made a number of recordings. He is the proud possessor of a stentorian baritone voice, and has made a name for himself singing the Moishes *Oysher repertoire.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

BRAUN, FELIX (1885–1973), Austrian poet, playwright, and novelist. Braun was born in Vienna, where he studied history and literature. From 1928 he taught at the universities of

Padua and Palermo, but in 1939, because of his Jewish origin, he had to flee to London. He returned to Austria after the end of World War II. Braun was an impressionist poet, deeply influenced by his friend Hugo von Hofmannsthal. His first collection of verse was *Das neue Leben* (1913); *Viola d'amore* (1953) contained a selection of his poems spanning the years 1903–53. As a playwright Braun at one time showed a fondness for themes drawn from classical mythology, such as *Tantalos* (1917) and *Aktaion* (1921), and he also dramatized the biblical story of *Esther* (1925). Later, however, he turned to historical subjects, as in the tragedy *Kaiser Karl der Fuenfte* (1936) and *Rudolf der Stifter* (1956). His *Agnes Altkirchner* (1927) is a seven-volume novel depicting Austria's decay and eventual collapse after World War I. Braun's autobiography, *Das Licht der Welt* (1949), and his book of reminiscences, *Zeitgefahrten* (1963), both provide an insight into Viennese culture in the early years of the 20th century.

BIBLIOGRAPHY: F. Lennartz, *Deutsche Dichter und Schriftsteller unserer Zeit* (1959), 98–100. **ADD. BIBLIOGRAPHY:** D.G. Daviau, *Bruecken ueber dem Abgrund* (1994), 317–36.

[Sol Liptzin]

BRAUN (Braunstein), MIECZYSLAW (1900–1941), Polish poet. Braun published verse collections, some of which reflect the industrial society in his native Lodz: *Rzemiosla* (“Craftsmanship,” 1926), *Przemysly* (“Industry,” 1928), *Zywe stronice* (“Living Pages,” 1936), *Sonety* (1937), and *Poezja pracy, Wiersze wybrane* (“Poetry of Toil, Selected Verse,” 1938). He died of typhus in the Warsaw Ghetto.

BRAUN, YEHEZKIEL (1922–), Israeli composer. Braun was born in Germany but was brought to Eretz Israel at the age of two. He studied composition with A.U. *Bosco-vitch at the Academy of Music, Tel Aviv, where he was appointed as a teacher in 1966. Braun also studied Gregorian chant with Dom Jean Claire at Solesmes (1975) and served as a jury member for prizes in Gregorian chant at the Conservatoire National Superieur, Paris (1990, 1996, 1997); he published a study on a Hebrew Sephardi cantillation: *Iyyunim ba-Melos ha-Sephardi-Yerushalmi (Pe'amim 19)*. Braun is best known for his vocal compositions, which are frequently performed. He has shown originality of invention in a number of works of striking value. In his early works he adopted the ideology of a national Israeli music, merging folk dance patterns with cantillation motifs and modal chromaticism. His compositions include *Three Movements for Solo Flute* (1955); *Concerto for Flute and Strings* (1957); *Psalm for Strings, Sonata for Piano* (1957); *Pedals on Vacation for Harp* (1964); *Apartment to Let* (1968), for narrator and orchestra; *Seven Sephardic Romances*, for voices and piano (1968); *Serenade for Chamber Orchestra* (1971), commissioned by the Tel Aviv Foundation for Literature and Art; *Cantici Cantorum Caput III for Solo and Choir a capella*, commissioned by the Tel Aviv Foundation for the 1973 Zimriyyah. His subsequent major works in-

clude *Itturim li-Megillat Ruth* (“Illuminations to the Book of Ruth,” 1983); *Piano Trio No. 1* (1988), *Kinnoro shel David*, cantata (1990); *Mi-Shirei Itzik* (I. Manger, Y. Orland), for two sopranos, alt, and piano (1997); *Fantasia Lirica* for guitar and orchestra (1998); *Hexagon*, divertimento for string sextet (1998).

He was awarded the Israel Prize in 2003.

[Uri (Erich) Toeplitz / Gila Flam and Israela Stein (2nd ed.)]

BRAUNER, HARRY (1908–1988), Romanian ethnomusicologist and brother of surrealist painter Victor Brauner. Disciple and long time assistant of Constantin Brăiloiu, he was a hardworking member of the sociological teams that made pioneering monographical and interdisciplinary studies on rural Romania. From 1928 to 1939 he was a very active collaborator of the Arhiva de Folklore (Folk Music Archive) of the Societatea Compozitorilor (Composers' Society), which he then headed as deputy director (1944–1948). From 1939 he was an honorary member of The English Folk Dance and Music Society (London), and for almost two years (1948–1950) taught folk music studies at the Conservatory of Music in Bucharest. Until 1950 Brauner excelled mainly as folk music collector, and, after the late 1960s, as promoter of Romanian folk music that he considered to be genuine and traditional within nationalist frameworks. His mid-career was crowned by taking over managerial responsibility for the two national folk music archives that were scattered and somehow abandoned after World War II and he succeeded in founding the Institute of Folklore (1949), an institution of powerful, nationwide and even international academic prominence. Brauner headed this institution for just one year, after which he was involved in a political and antisemitic plot (known as “Pătrășcanu's trial”). After spending twelve years in jail and two years in an imposed dwelling in a countryside settlement, he was no longer accepted in the academic institution he had founded (which became more and more ideologized, nationalistic, ethnocentric, and propagandistic). He started to publish original children's songs and newspaper articles, served as consultant for the national records company (Electrecord), and briefly acted as founder and leader of a laboratory for ethnomusicology at the Conservatory of Music in Bucharest (1971–1974). His journalistic articles from the 1970s were collected in the volume *Să auzi iarba cum crește* (“Listening to the Growing Grass”; 1979), and a collection of monovocal songs composed during his imprisonment appeared twice, posthumously (1998, 2000). His complex personality was emphasized by several academic biographical essays as well as by a memorial book published by Irina Nicolau and Carmen Huluiță in 1999. Brauner's wife, artist Lena Constante, outlived him and continued to work for preserving, improving and enhancing Brauner's memory and intellectual legacy.

Harry Brauner was a tragic character. Although he lectured brilliantly at several international folk music festivals

in the 1930s (London, Istanbul), he failed to have an international career and was eventually prevented from enjoying national prominence.

[Marin Marian (2nd ed.)]

BRAUNER, ISAAC (Wincenty; 1887–1944), painter, graphic artist, sculptor, and stage designer. Brauner was born in Łódź, Poland, and received a traditional Jewish education. His artistic and musical gifts manifested themselves already at an early age; he attended a private art school in Łódź and took private violin classes. In 1907, he started his education at the Berlin Conservatoire, but had to give up a professional musical career because of a hand injury, deciding to dedicate himself entirely to art. In 1908–11, he studied at the Hochschule fuer die bildende Kuenste in Berlin. At Berlin art exhibitions, Brauner made his first acquaintance with Van Gogh's paintings, became an ardent admirer of his art, and even adopted his name – Wincenty. Another formative influence of this period was the work of the German impressionists, mainly members of “Der blaue Reiter” group whose artistic ideas and plastic techniques Brauner thoroughly adopted. On the eve of World War I, he returned to Łódź. In 1914–15, he showed his work at exhibitions arranged by the local Artistic Society and was praised by critics as one of the most promising young Polish artists. In Łódź, he became close to a group of young Jewish artists who shared national ideas and aspired to achieve an organic synthesis between Jewish tradition and European modernist art. Brauner became one of the most steadfast apologists for these ideas and strove to realize them in his work. As a leading figure of the Jewish artistic movement in Poland, he was a member of almost every Jewish modernist group or association. In 1919, he participated in the exhibition organized by the Artistic Section of the Kultur-Liga in Białystok. During the same period, he was among the initiators and ideologists of the “Yung Yiddish” group in Łódź (1919–21). He also maintained close contact with the “Khalyastre” group, which brought together Yiddish modernist writers, and produced a cover drawing for the group's first anthology (1921). While living in Łódź, he founded, together with Moshe *Broderzon, an Yiddish puppet show “*Had Gadya*” (1922–23), executing the settings and making puppets for its productions. In the same period, he designed the settings for productions staged by Yiddish drama theaters in Łódź and Gdansk. In 1924, Brauner moved to Warsaw and had his first one-man show, which revealed him as one of the most radical Jewish painters in Poland. Although his painting retained its general figurative style, he experimented radically with form and implemented techniques of coloristic abstraction. Most of the subjects that he treated in his paintings, chasings, wooden sculptures, and typography were scenes of Jewish *shtetl* life or episodes from Jewish folklore. In the 1930s he continued his theater work. In the late 1930s, he again settled in Łódź. From 1939, when the city was occupied by the Germans, he was confined to the local ghetto, portraying ghetto life in his graphic works and

paintings, part of which survived. In July 1944, he was sent to Auschwitz in of one of the last “selection” operations.

BRAUNER, VICTOR (1903–1966), surrealist painter. Brauner, born in Pietra Neamț, Romania, grew up in Bucharest, where he joined the avant-garde of Romanian artists. In 1930 he settled in Paris where he associated with André Breton and the surrealists and participated in all the major surrealist exhibitions until 1949. During World War II he hid from the Germans in an Alpine village and returned to Paris in 1945. Some of Brauner's early works contain an element of social satire (e.g., *L'étrange cas de monsieur K*). He later elaborated a complex private world of symbolism and mythology, and drew on numerous sources of inspiration in order to make this private world universal. To this end he studied myth, psychology, ethnology, child art, the art of the insane, and that of primitive peoples. In 1948 he made a series of paintings with himself as subject (e.g., *Victor, Empereur de l'espace Infini*). After 1951, in a state of deep depression, he painted his series of “*Rectracts*”: These are people who find no peace in the world. Unable to escape, they turn, instead, a terrifying gaze on the spectator (e.g., *Regard de la lumière*). Many of Brauner's later works were almost abstract, executed with a wry sense of humor.

BRAUNSTEIN, MENAHEM MENDEL (pen name **Mibashan**; 1858–1944), Hebrew writer and leading figure in the Zionist movement in Romania. He received his early education in Jassy and had a broad knowledge of the Bible and of traditional Hebrew literature. After his marriage, however, he took up secular studies and learned several European languages. In 1887 he was one of the founders in Jassy of Doresh le-Zion, an organization which sought to revive the movement of Romanian Jews to Palestine following the decline which had set in after the relatively large-scale emigration during 1882–83. From 1887, he edited the newspaper *Juedischer Volksfreund* (German in Hebrew script). He helped found Oholei Shem, an association aimed at disseminating knowledge of Jewish history and literature among Romanian Jewry. For 23 years he taught Hebrew subjects in Jewish schools in various towns in Romania. He advocated teaching Hebrew through the medium of Hebrew, founded Hebrew libraries, and struggled to overcome the objections of an apathetic public and of assimilationist opponents to the teaching of Hebrew in Jewish schools. He wrote *Divrei ha-Yamim li-Venei Yisrael* (“History

of the Jews." Warsaw, 1897, 1904) and *Sefer ha-Moreh* ("The Teacher's Book," Piatra, 1910). From 1885 he also contributed to the Jewish press in German and Romanian but wrote mainly for the Hebrew press. He settled in Erez Israel in 1914, and continued writing stories and poems, especially for young people. Four volumes of his works were published between 1928 and 1937. Braunstein was one of the last modern Hebrew authors to use a purely biblical style. His translations from European literature include: Lehmann's *The House of Aguilar* (St. Petersburg, 1896); Edmondo de Amici's *Il Cuore* (Warsaw, 1923); and Swift's *Gulliver's Travels* (Tel Aviv, 1944).

BRAUNTHAL, JULIUS (1891–1972), Austrian journalist, historian, and socialist leader. The son of a bookkeeper who emigrated from Russia, Braunthal joined the Socialist youth movement in Vienna at the age of 15 when he was a book-binder's apprentice. He participated in the mutiny of the Austro-Hungarian Navy at Cattaro (Boka Kotorska) at the end of World War I, and he was appointed adjutant to the undersecretary of state for the armed forces when the Austrian socialists joined the government. His journalistic activities covered a wide range. He was deputy-editor of the *Arbeiterzeitung*, the Austrian socialist daily, founder and editor of the popular daily *Das kleine Blatt*, and for many years editor of the socialist monthly *Der Kampf*. Braunthal was imprisoned for a year by the Austrian government in 1934, and after his release immigrated to England where he joined the staff of *The Tribune*, and later became editor of the *International Socialist Forum*. In 1939 he worked under Friedrich *Adler in the secretariat of the Labor and Socialist International in Brussels and after World War II he became secretary of the reconstructed Socialist International.

Braunthal's enormous literary output includes a massive two-volume *Geschichte der Internationale* (1961–63) and biographies of Victor and Friedrich Adler and Otto *Bauer. He also compiled anthologies of the writings of Victor *Gollancz, Otto Bauer, Friedrich Austerlitz, and Zsigmund *Kunfi and was editor of the *Yearbook of the International Socialist Labour Movement* and of the *Yearbook of the International Free Trade Union Movement*. Braunthal supported Labor Zionism in the Vienna Socialist press. In his autobiography, *In Search of the Millennium* (1945), he stressed the roots of the socialist idea in Jewish messianism and discussed the impact of this Jewish background on certain socialist leaders.

BRAVERMAN, AVISHAY (1948–), Israeli economist and president of Ben-Gurion University. His fields of inquiry are development economics, agricultural economics, industrial organization, public policy, and management of water resources. Braverman was born in Ramat Gan, Israel. In 1968 he graduated in economics and statistics from Tel Aviv University and in 1976 he received his Ph.D. in economics from Stanford University. From 1976 until 1990 he served as senior economist and as a division chief in the World Bank in Washington. In this position he participated in research programs, projects, and policy work of the World Bank for South America, Africa, Asia, the Middle East, and Eastern Europe. In 1990 he was appointed president of Ben-Gurion University and succeeded in getting it out of the red. Under his presidency, the university tripled its student body. Braverman was made a member of several international economic associations, the Russian Academy of Natural Sciences, the European Academy of Sciences and Arts, and the Israeli-American High-Tech Commission for Science and Technology. He was awarded the Ben-Gurion Prize in 1999 for his leadership in developing the Negev. He wrote several books and lectured on globalization, educational reform, and the Middle East. In 2006 he was elected to the Knesset on the Labor list.

[Shaked Gilboa (2nd ed.)]

BRAWER, ABRAHAM JACOB (1884–1975), Israeli geographer and historian. Brawer, who was born in Stry, Ukraine, studied in Vienna at the university and at the rabbinical seminary. From 1910 to 1911 he taught at a secondary school in Tarnopol. While there he published Dov Ber *Birkenthal's *Divrei Binah* which dealt with false Messiahs in Jewish history (*Ha-Shilo'ah*, 33 (1917); 38 (1921)). In 1911 he settled in Erez Israel and taught at the Ezra Teachers Seminary in Jerusalem. In the summer of 1914 he taught in Salonika and from 1915 to 1918 in Constantinople, where he also served as rabbi of the Ashkenazi congregation. After pursuing research work in geography at the University of Vienna, he returned in 1920 to the Teachers Seminary in Jerusalem, where he taught until 1949. He wrote *Avak-Derakhim* (2 vols., 1944–46) about his travels in Lebanon, Syria, Iraq, and Persia and his descriptive *Ha-Arez* (later *Erez Yisrael*), the first modern regional geography of Erez Israel, was published in 1928 (3rd ed. 1954). Brawer also published several textbooks on geography, an atlas, and maps and was geography editor of the Hebrew Encyclopedia. He was one of the three founding members of the *Israel Exploration Society and its first honorary secretary.

BRAWER, MOSHE (1919–), Israeli geographer, specializing in borders, cartography, and the Arab village. Brawer was born in Vienna in 1919 and immigrated to Israel in 1920

with his family. From 1934 to 1938 he studied teaching in the Mizrahi Teachers Seminar in Jerusalem. In 1938 he studied geography and geology at the University of London and in 1939–42 he studied geology and mathematics at the Hebrew University of Jerusalem. In 1945 he returned to the University of London, graduating in geography and geology in 1947. In 1950 he received his master's degree there in geography and in 1958 his Ph.D. In 1964 he joined the departments of geography at Tel Aviv and Bar-Ilan Universities. In 1980–83 he was dean of the Faculty of Humanities in Tel Aviv University, and in 1989 he became professor emeritus in Tel Aviv and Bar-Ilan Universities. During these years he was also visiting professor in universities all over the world. In addition to his academic positions, Brazer served on the editorial boards of *Ha-Zofeh* (1941–65) and the *Palestine Post* (1940–45). He was the editor of the geographical section of the *Hebrew Encyclopedia* from 1953 to 1973 and from 1963 to 1997 he served as geographical advisor to the Ministry of Education. In the 1980s and 1990s he served as a government adviser on internal and external borders. Brazer has hundreds of publications to his credit, including 19 books and atlases, among them *Regional Geography Atlas of the Middle East* (1964), *University Atlas* (1973), *The Green Line: The Border of the West Bank* (1980), and *Israel's Borders – Past, Present and Future* (1988). In 2002 he was awarded the Israel Prize for his contribution to the field of geography. The committee cited his efforts to disseminate geographical knowledge and apply it in public and political life.

[Shaked Gilboa (2nd ed.)]

BRAY-SUR-SEINE, village in the department of Seine-et-Marne, central France. In 1190, after the execution of a Christian who had murdered a Jew, a rumor spread that the Jews had crucified the murderer in order to mock the death of Jesus. The king of France, Philip Augustus, dispatched an armed force to the town, and ordered the entire Jewish community to be burnt at the stake. The identification of the place in question has been disputed, some scholars placing it in Bresmes, other in Brie-Comte-Robert. Toward the middle of the 13th century, Jews were again found living in Bray-sur-Seine. They seem to have returned there in 1315 after the general expulsion of the Jews from France in 1306. The Rue des Juifs was named Rue Emile Zola at the beginning of the 20th century.

[Bernhard Blumenkranz]

BRAZ, OSIP (Joseph; 1873–1936), painter. Braz was born in Odessa, Ukraine. He studied at the Odessa Art School and on completing the course was awarded a Grand Bronze Medal. He later continued his art education in Munich, where in 1891–93 he attended Sh. Hallosi's private art school and took drawing classes at the Academy of Art. In 1894, he lived in Holland studying old masters. In 1895–96, Braz studied at

the St. Petersburg Academy of Arts. In the same period, P. Tretyakov, a prominent patron of art and collector of Russian painting, commissioned Braz to execute a portrait of A. Chekov. The painting, which brought the artist fame, became the best-known portrait of the writer. From 1900, Braz was a regular participant of "World of Art" exhibits. He established a private art school in St. Petersburg that remained open until 1905. In 1907–11, he resided mainly in France, where together with portraits, his favorite genre, he created landscapes and still lifes. Under the influence of contemporary French art, Braz' manner underwent changes, his compositions becoming simpler, colors more intensive, and decorative features more pronounced. At the same time, he continued to execute portraits, and by World War I had created a gallery of portraits of prominent figures in Russian culture and art. After 1917, Braz participated in major exhibits of Russian artists both in Russia and West Europe. In 1918–24, he served as the curator and manager of the Department of Dutch Art at the Hermitage, being also active in the restoration of paintings. In 1924, Braz was accused of engaging in illegal art trade, arrested, and imprisoned in the correctional forced-labor camp on the Solovets Islands. He was released in 1926 and sent into exile in Novgorod. Soon afterwards, Braz was allowed to return to Leningrad and to resume his work at the Hermitage. In 1928, he left for Germany and in the same year settled in France. He lived in Paris and engaged in the antiques trade while continuing to paint. He participated in collective exhibits of emigrant artists. He had a one-man show at a Paris gallery in 1930.

BRAZER, ABRAM (1892–1942), painter, graphic artist, and sculptor. Brazer was born in Kishinev, Bessarabia. He studied art at the Kishinev Art School in 1905–10 and at the École des Arts Décoratifs, Paris, in 1912–14. He became close to a group of Jewish artists of La Ruche studios in Paris and executed several portraits of its members. He exhibited at the salons in Paris. In 1916, he returned to Russia and settled in Petrograd. He was a member of the Jewish Society for the Encouragement of the Arts and participated in its exhibitions in Petrograd and Moscow (1916, 1917). In 1917, Brazer showed his works at "World of Art" exhibition in Petrograd, and later in the same year moved to Vitebsk. In 1918–23, Brazer taught painting and sculpture at the Vitebsk People's Art School established by Marc *Chagall. In 1924, Brazer moved to Minsk. In the 1920s and 1930s, he participated in many exhibits in Minsk and Moscow. Working in all the genres, including landscapes and still lifes, he gave a prominent place to Jewish themes in his work. He executed a number of sculptural portraits of leading figures in Jewish culture and art, among them the artist Y. Pan (1921, 1926), the Jewish actor S. *Mikhoels (1926), the Yiddish poet I. *Kharik (1932), and others. He had a one-man

show in 1941 in Minsk. When the war broke out, he missed the chance to be evacuated from Minsk and remained in the ghetto, where he perished.

[Hillel Kazovsky (2nd ed.)]

BRAZIL, South American federal republic; general population (est.) 183 million (2005); Jewish population 97,000.

Jewish history in Brazil is divided into four distinct periods with a specific interval: (a) The presence of *New Christians and the action of the *Inquisition during the Portuguese colonial period (1500–1822); (b) An interval under Dutch colonialism, with the settlement of a Jewish community in *Recife, Pernambuco, Northeastern Brazil, in the 17th century, when the Dutch promoted religious freedom for the Jews; (c) The modern period, when Brazil became an independent country (1822), up to the proclamation of the Republic (1889), when non-Catholic religions were accepted. The beginning of scattered immigration to some cities was followed by the establishment of the first Jewish community in the city of Belém in the state of Pará, in the north of Brazil; (d) The period of the Republic (in 1889 Brazil adopted a constitution that guaranteed religious freedom), from the first decade of the 20th century, when communities settled in agricultural colonies of the Jewish Colonization Association (ICA) in Rio Grande do Sul, in the south of Brazil, to the years of World War I, when organized Jewish communities settled in some of the main cities of Brazil, particularly in *Rio de Janeiro, *São Paulo, and *Porto Alegre.

Estimates of the number of Jews in Brazil in 2005 range between 97,000 and 130,000 (the latter adopted by the Jewish institutions in the country). It is the fourth largest Jewish community in America, after the United States, Canada, and Argentina. The main Jewish communities are located in São Paulo, Rio de Janeiro, Porto Alegre, Curitiba, Belo Horizonte, Recife, and Salvador. Although it makes up less than 0.01% of the total population of the country, the Jewish communities of these state capitals have a solid institutional network and the Jews play an important role in many different fields and activities in the country including the economy, culture, the professions, and the arts, thus forming a minority whose participation and visibility in Brazilian life very much surpasses its minute percentage. There are Jewish federations in 13 states of the country, but in some of those, such as Santa Catarina and Amazonas, there are only a few dozen families. In dozens of other cities, there are small organized communities.

Colonial Period

The presence of Portuguese New Christians began with the discovery, conquest, and colonization of the land that would become Brazil, then inhabited by many groups of indigenous peoples. In the colonial period (1500–1822), thousands of New

Map showing the main areas of Jewish settlement in Brazil.

Christian Portuguese came to Brazil, but they never formed an organized Jewish community that expressed publicly what could be characterized as Judaism.

Until the proclamation of independence in Brazil, in 1822, Catholicism was the official religion and there was no freedom regarding the practice of other religions. The New Christians contributed to the establishment of the first villages, to the mercantilist state and church struggle against the Indians, to the finance of and participation in the expeditions to the interior, and to cultivation of the land and of sugar cane, particularly in the mills of Bahia, Paraiba, Pernambuco, and other states. New Christians were also slave merchants, farmers, and craftsmen, among other occupations. They ascended socially and economically, but they were faced with the restrictions on belonging to religious orders or holding political positions, such as the *Irmandades de Misericórdia* and *Câmaras Municipais* (city councils), plus marriage restrictions with Old Christians. Other groups such as Indians and black slaves also suffered from these restrictions.

Some sources maintain that one New-Christian, Gaspar da Gama, was part of Pedro Álvares Cabral's fleet, in 1500. A significant number of Jews were involved in the sciences and the art of navigation in Portugal during the period of overseas expansion in the early 15th century. During most of the colonial period, the *Tribunal do Santo Ofício da Inquisição* (the Inquisition) was active in Brazil. Established in Portugal in 1536, it operated in the Metropolis up to 1821. The conversion of non-Christians in the Americas (such as members of the indigenous and pre-Columbian cultures) was a central colonial activity in the process of the expansion of the Portuguese and Spanish empires. After the first auto-da-fé, in 1540 in Portugal, the emigration of New Christians to the Brazilian colony

grew, and many of them arrived in Bahia and other regions of the northeast with the first governors.

The Inquisition did not settle permanently in colonial Brazil. From 1591, the *Tribunal do Santo Ofício* carried out several visitations to Brazil, powers were delegated to some bishops, as for instance the bishop of Bahia, and clergymen used to indict people for Jewish practices and send them for trial in Lisbon. The action of the Inquisition became more intense after the union between Portugal and Spain in 1580.

The best-known action of the Inquisition against *Crypto-Jews in Brazil were the Visitations of 1591–93 in Bahia; 1593–95 in Pernambuco; 1618 in Bahia; around 1627 in the Southeast; and in 1763 and 1769 in Grão-Pará, in the north of the country. In the 18th century, the Inquisition was also active in Paraíba, Rio de Janeiro, and Minas Gerais. The Inquisition also condemned people accused of sexual deviations, witchcraft and slandering the Holy Church.

In 1773, during the liberal government of Marques de Pombal, governor general of Brazil, the differentiation between New Christians and Old Christians was abolished and the Inquisitional procedures came to an end. Consequently the New Christians were then integrated into society at large. The Inquisition in Brazil was less systematic and more infrequent than its Portuguese counterpart, probably owing to the difficulty of controlling the colony, the fact that a permanent tribunal was never established in Brazil, and the greater permeability of the social and religious relations established in the Portuguese New World, which also allowed the New Christians to find alternative forms of social and economic advancement and often alternative ways to get around restrictions, creating identity strategies to survive socially, including, in some cases, disguising New Christian traces. During the 17th century, in Rio de Janeiro, episodes were recorded of Old Christians testifying in court in favor of New Christians belonging to the same social strata, proving that there were also forms of social intercourse coexisting with the system of Inquisitorial persecution.

According to Arnold Wiznitzer, in the two and a half centuries of the Inquisition in Brazil, around 25,000 people were brought to trial by the Portuguese Inquisition, out of which 1,500 were condemned to capital punishment. In Brazil, approximately 400 judaizers were prosecuted, most of them being condemned to imprisonment, and 18 New Christians were condemned to death in Lisbon. Three New Christian writers stood out in the colonial period with works that reveal elements of Jewish expression: Bento Teixeira, author of *Prosopopéia* – one of the most important colonial poems; Ambrósio Fernandes Brandão, author of *Diálogos das Grandezas do Brasil* (both in the 16th century); and one of the best-known Portuguese playwrights, Antonio Jose da Silva, “the Jew,” who lived part of his life in Portugal and part in Brazil, and was condemned to death by the Inquisition in 1739.

The presence of New Christians in colonial Brazil has always been a controversial issue in both Brazilian and Portuguese historiography. Some historians believe that the in-

terventions of the Inquisition Tribunal in Brazil, supported by the nobility and the Catholic clergy, were aimed at expropriating the New Christians’ possessions and impeding the social ascension of a group with bourgeois aspirations. Therefore, the Inquisition created a myth regarding the origin and purity of blood, which discriminated against those with “infected blood,” according to the Statutes on Blood Purity. Other historians see strictly religious and political reasons related to the history of the Portuguese Catholic Church and Portuguese Empire.

Meanwhile, some historians maintain that Judaism or Crypto-Judaism was “fabricated” during the Inquisitional processes (that is, by means of intimidating, indicting, menacing, and torturing, the Inquisition “created” Judaism or Crypto-Judaism in order to justify its own existence and legitimacy). Others maintain that New Christians deliberately and furtively professed Judaic or Crypto-Judaic traditions inherited from their ancestors, even though in the 18th century the Inquisition condemned New Christians as such, that is, as descendants of Jews rather than Judaizers, which would show a more definite anti-Judaism on the part of the persecutors. The debate includes the manner in which to read documents of the Inquisition, the main source for these studies, and in what measure they can constitute a trustworthy source from the point of view of the Jewish way of life of each person prosecuted. This debate assumes different forms when it relates to the 16th or the 18th centuries, since in the 1700s the New Christians were evidently much more distant from their Jewish origins. There was also a regional variation in Brazil that needs to be taken into account. According to Anita Novinsky, the New Christian was a “split human being,” socially and existentially, with a differentiated identity in the colonial Portuguese-Brazilian world.

The anti-Jewish attitude found in the Inquisition’s procedures did not lead to disseminating hatred against Jews among the population in Brazil, although the imaginary extension of the Inquisition and the terror it implied can hardly be assessed and there are traces in the country of a Catholic popular imagery, which – although it has never triggered any form of persecution in modern history – does have a relatively medieval vision of the Jews and Judaism.

There is no actual link between the history of New Christians and contemporary 20th century Jewish history. Nevertheless, the remote (and secret) Jewish origin of many traditional Catholic Portuguese has been recently acknowledged by the traditional families of the country through genealogical research, and the presence of the Jews, or “Semites,” has been brought to light in the historical studies of the country. Equally, the theme and memory of the New Christians have been exaggerated by the Jewish communities in Brazil, which tend to consider erroneously all the New Christians as secret Jews, exaggerating the Jewish colonial heritage of the country. This memory often transcends the boundary which separates the New Christians’ lives in the colonial period and the establishment of modern Jewish communities in Brazil, as if

we were dealing with – and this is not the case – a continuous and identical historical line, which began with the conquest of Brazil by the Portuguese in 1500.

DUTCH DOMAIN. The first organized Jewish community in Brazil was established in Recife, Pernambuco, in the north-east, during a brief period of Dutch colonial occupation in the 17th century, which permitted religious freedom, and legally defended Jews and New Christians from the restrictions imposed by Portugal. The estimates of the Jewish population at Recife vary considerably. According to Wiznitzer, it reached 1,450 members in 1645. Egon and Frieda Wolff's research found around 350 Jews.

From the end of the 16th century, Amsterdam became an important Jewish religious, cultural, and economic center, formed mainly by New Christians of Portuguese origin who returned to Judaism. When the West India Company, aided by the Dutch government, equipped an expedition to Brazil, some Dutch Jews joined the expedition. In May 1624 two important forts in Bahia were captured by the Dutch; but a large Portuguese and Spanish expeditionary force arrived shortly afterwards, and two months later, the Dutch had to surrender (May 1625). The West India Company soon prepared another expedition, this time to Pernambuco. The States General at The Hague proclaimed that the liberty of Spaniards, Portuguese, and natives, whether Roman Catholics or Jews, would be respected. Jewish soldiers, traders, and adventurers joined the expedition that successfully landed at the ports of Olinda and Recife in the middle of May 1630.

Johan Maurits van Nassau, who was appointed governor-general of Brazil in 1637, gave the non-Christian inhabitants of Dutch Brazil a sense of security. In 1636 the Jews founded the first Brazilian synagogue in Recife, the first on American soil: Kahal Kadosh Zur Israel. Later they founded the synagogue Kahal Kadosh Magen Abraham in Maurícia. There are records of a prayer house in Paraíba. The Jewish community was very well organized along the same lines as the mother community in Amsterdam. All Jewish residents were members of the community and were subject to its regulations, taxes, and assessments. The Jewish cemetery was located in the hinterland, separated from Recife and Maurícia by the Capibaribe River. Jews from Recife addressed an inquiry regarding the proper season to recite the prayers for rain to Rabbi Hayyim Shabbetai in Salonika, the earliest American contribution to the rabbinic **responsa* literature.

By 1639 Dutch Brazil had a flourishing sugar industry with 166 sugar cane mills, six of which were owned by Jews. Jews also had an important role in tax farming, were engaged in the slave trade, and were also very active in commerce, and all these opportunities attracted many Jews to Dutch Brazil. In 1638 a group of 200 Jews, led by Manoel Mendes de Castro, arrived on two ships. Soon after, the Jews of Recife needed rabbis, Hebrew teachers, and *hazzanim* and thus invited the famous Rabbi Isaac Aboab da **Fonseca*, one of the four rabbis of the Talmud Torah congregation in Amsterdam, and the

scholar Moses Raphael **d'Aguilar* to come to Brazil as their spiritual leaders. A young Jew by the name of Isaac de **Castro*, who had come to Bahia – then under Portuguese rule – from Amsterdam via Dutch Brazil, was arrested for teaching Jewish rites and customs to the New Christians. He was extradited to Lisbon and was one of the victims of the *auto-da-fé* on Dec. 15, 1647.

Jews were enrolled into the militia; one of the four companies was composed entirely of Jews and was exempt from guard duty on Saturdays. As early as 1642 the Portuguese began preparations for the liberation of northeastern Brazil. In 1645 they began a war that lasted nine years. Jews joined the Dutch ranks, and some were killed in action. Scores of people died of malnutrition. Famine had set in and conditions were desperate when, on June 26, 1649, two ships arrived from Holland with food. On that occasion, R. Isaac Aboab wrote the first Hebrew poem in the Americas, "Zekher Asiti le-Nifle'ot El" ("I Have Set a Memorial to God's Miracles"). Soon afterwards other ships arrived with 2,000 soldiers and more supplies. The war continued, and some Jews taken prisoner by the enemy were sentenced and hanged as traitors; others were sent to Lisbon for trial. The war ended with the defeat and capitulation of the Dutch in January 1654. Even though during the war many Jews died and many returned to Holland, in 1650 there were still about 650 Jews in Recife and Maurícia. It was stipulated in the capitulation protocol of January 26, 1654, that all Jews, like the Dutch, were to leave Brazil within three months and had the right to liquidate their assets and to take all their movable property with them. The majority left for Amsterdam, but some sailed to the Caribbean Islands (**Curaçao*, **Barbados*, etc.). Wiznitzer maintains that a group of 23 Brazilian Jews arrived in New Amsterdam (old name of New York), then under Dutch rule, on the *Saint Catherine* at the beginning of September 1654 and they were the founding fathers of the first Jewish community in New York. Egon and Frieda Wolff reject this historical connection and argue that there is no documentary basis to assume that the Jews who arrived in New York were the same who had left Recife during the expulsion of the Dutch.

Independent Brazil

Two years after Brazil declared its independence from Portugal (1822) it adopted its first constitution. Roman Catholicism remained the state religion, but the constitution proclaimed some tolerance of other religions. After the proclamation of independence from Portugal and during the period of monarchy in Brazilian history (1822–89), Brazil had two emperors, Dom Pedro I and Dom Pedro II. The latter was interested in Judaism, was a Hebraist, and maintained correspondence with illustrious Jews of his time and had visited the Holy Land during one of his international voyages.

The second organized Jewish community in Brazilian history, in modern times, was founded in Belém, capital of the State of Pará, in the north, in 1840, made up of Jews who had come from Morocco. The immigrants were attracted by

the wealth derived from the rubber economy. They established the first modern synagogue in the country, Eshel Abraham, in 1823, and around 1826 the second one, Shaar Hashamaim. The first synagogue followed the rites of Tanger and Tetuán (which later became part of Spanish Morocco), and Shaar Hashamaim followed the rites of Arab Morocco (later under French colonial rule, Algeria, and other parts of North Africa). In 1842 a Jewish cemetery was founded in the same city. Revival of the rubber industry between the end of the 19th century and the beginning of the 20th attracted more immigrants. Immigrants from Morocco formed small communities in other places in northern Brazil. There were also small Moroccan nuclei in the Amazonas, another northern state, attracted by the wealth of the rubber industry, in places such as Itacoatiara, Cameté, Paratintins, Óbidos, Santarém, Humaitá, and others. Most of these Jews mixed with the local population, giving origin to many local legends mixing Judaism and Catholicism. By World War I, Belém's Sephardi community, of Moroccan origin, had about 800 people.

Early Modern Period

Contemporary Jewish Brazilian history started in the last quarter of the 19th century, when a few hundred Jewish immigrants arrived from both Eastern and Central Europe, mainly from the Alsace-Lorraine region, settling in some of the main cities in the country, principally Rio de Janeiro and São Paulo. It was not an organized and systematic immigration flow, but one which occurred rather on an individual basis. These first immigrants did not organize a Jewish community in Brazil. The new constitution adopted by Brazil in 1891, after the country became a republic in 1889, abolished all traces of religious discrimination, ensured the civil rights of all citizens, and provided for the introduction of civil marriage and the establishment of nonsectarian municipal cemeteries. The principles of freedom of conscience and religion and equality before the law have been retained in all the constitutions subsequently adopted by Brazil – in 1934, 1937, 1946, and 1967.

AGRICULTURAL SETTLEMENT. The earliest discussion of a plan for the agricultural settlement of Jews took place in 1891, when the Deutsches Central Committee fuer die Russischen Juden, established after the expulsion of Jews from Moscow, sent Oswald Boxer – a Viennese journalist and close friend of Theodor Herzl – to Brazil to investigate the possibilities of founding agricultural settlements for Russian refugees. Boxer was warmly received by government representatives and after an inspection tour he reported to the committee that Jewish settlement could indeed prosper in Brazil and that the first settlers could be dispatched as early as March 1892. The revolution of November 3, 1891, and the counterrevolution of November 23, which ended the rule of General Deodoro da Fonseca, invalidated Boxer's forecast, and the project was finally abandoned in 1892, when Boxer died of yellow fever. In 1901, on the initiative of the vice president of the *Jewish Colonization Association (ICA), who had contacts with the Belgian railway company in Rio Grande do Sul, Brazil again became

the objective of Jewish agricultural settlement. The continuing stagnation in the agricultural colonies of Argentina prompted ICA to seek new land where the expenses of agricultural settlement would be lower than in Argentina.

The first organized immigration and the first Jewish communities in contemporary Brazil settled in the State of Rio Grande do Sul, the southernmost state of Brazil, which borders on Argentina and Uruguay. Through the Jewish Colonization Association and by means of agreements with the state government, hundreds of immigrants from Eastern Europe settled in agricultural colonies, following the example of similar colonies established in Argentina from 1893.

The first colony in Brazil, with an area of 4,472 hectares, was Philippon, in the region of Santa Maria, in 1904, consisting of 37 families (267 persons) from Bessarabia. The first Jewish school in Brazil was founded in Philippon in 1906, where the official curriculum was taught. In 1908, the colony had 299 inhabitants. The meager chances of economic success in the settlement, contrasted with the prospect of more comfortable livelihoods as peddlers or artisans in Santa Maria soon led to the settlement's disintegration. In August 1926 the director of ICA in Buenos Aires reported that of the 122 families who settled in Philippon at various periods, only 17 remained.

In 1912 Quatro Irmãos was established, with over 350 families divided into four nuclei: Quatro Irmãos, Baroneza Clara, Barão Hirsch, and Rio Padre. The first colonists came from Argentina and Bessarabia. In each of the nuclei a school functioned, teaching both the official and the Jewish curricula. In 1915 the population in Quatro Irmãos reached 1,600 people.

The colonists also cleared fertile areas of forest and groves (*mato*), which were enriched by the wood ash created by burning the vegetation. The salvaged wood was sold to ICA's sawmills in the area, and, in order to facilitate transportation and marketing, ICA began building an 18-kilometer railroad that joined Quatro Irmãos and the town of Erebangó early in 1918. Flour mills and a consumer cooperative organization were also established, and in 1912 a school was built and cultural life began to develop.

In 1924 Rabbi Isaiah Raffalovich arrived in Brazil as a representative of ICA. He played a decisive role in the development of the Jewish presence in the country and tried, unsuccessfully, to organize in Brazil a unified community, inspired by *kehillah* principles.

In the 1920s the majority of the colonists moved to Porto Alegre and other cities in the hinterland of Rio Grande do Sul, such as Erebangó, Pelotas, Cruz Alta, Passo Fundo, Santa Maria, and Erechim, establishing communities in each one of these cities.

Some of the factors that made the immigrants abandon the colonies were the precarious quality of the land; lack of credit; isolation of the immigrants; lack of agricultural experience; commercial and industrial interests associated with ICA (such as the railroads) which exploited the Jewish colonists; lack of government support, plus a military uprising that oc-

curred in Rio Grande do Sul in 1923 and devastated the region, as the colonies were situated along the strategic railroads.

From the 1920s, ICA began to concentrate its immigration efforts on the cities. In 1935, with ICA's support another small agricultural colony was established in Rezende, in the State of Rio de Janeiro. The colony was planned to be also a haven for some German Jewish refugee families who had previous agricultural experience, but they were unable to obtain entry visas because of the restrictions on Jewish immigration during the Vargas regime after 1937. Another attempt at negotiations by ICA, to bring some Polish families in 1939, similarly failed. The last families of the colony of Rezende left for urban regions in 1939.

URBAN IMMIGRATION AND THE NATIONAL BASIS OF JEWISH LIFE. From World War I and through the 1920s and 1930s Jewish immigrants from Eastern and Western Europe and the Middle East formed well-structured communities in the main cities of the country, such as São Paulo, Rio de Janeiro, Porto Alegre, Curitiba, Belo Horizonte, Recife, and Salvador (as well as Belém, where a community settled in the 19th century). This process occurred during the so-called "Old Republic" or "First Republic" (1889–1930) in the history of Brazil. Jewish immigration to Brazil counted on the direct organization and support of international Jewish assistance organizations, mainly ICA, Joint, Emigdirect, and HIAS. In many cases these organizations put pressure on local Jewish groups so as to welcome more immigrants trying to flee from Eastern Europe. Small settlements were also established in dozens of cities in the interior of Brazil, following the main economic possibilities of the country. In the State of São Paulo, some small communities settled alongside the railroad that transported coffee, the main product of the country up to 1929. They settled in places such as Santos, Campinas, Santo André, Ribeirão Preto, Piracicaba, Taubaté, São Carlos, Sorocaba, Mogi das Cruzes, and São José dos Campos.

By World War I, Brazil had a Jewish population of between 5,000 and 7,000 persons. After World War I there was a marked increase in Jewish immigration, and in the 1920s, 28,820 Jews entered the country, mostly from Eastern Europe. In the 1930s, the number of Jewish immigrants increased to approximately 56,000. According to official statistics, the Jewish population per state was as follows:

State	1900	1940	1950
São Paulo	226	20,379	26,443
Rio de Janeiro	25	22,393	33,270
Rio Grande Do Sul	54	6,619	8,048
Bahia	17	955	1,076
Paraná	17	1,033	1,340
Minas Gerais	37	1,431	1,528

In Pernambuco, in 1920 there were around 150 families.

Several factors contributed to a successful process of settlement and social, cultural, and economic integration of

Jews into contemporary Brazilian society from 1910. Since the end of the 19th century, and particularly after the abolition of slavery in 1888, Brazil has become a "country of immigrants," with religious tolerance and intense social and cultural permeability, which was not hindered by the manifestations of prejudice and racism. From the 1880s to the 1940s, Brazil welcomed about 4 million immigrants (65,000 of them – up to 1942 – were Jews). Mostly, immigration came from Italy, Portugal, Spain, and Japan, but also from Germany, Syria, Lebanon, Turkey, Russia, Lithuania, Poland, and other countries. These immigrants, with their dynamic cultural, social, and economic drive, played a decisive role in the development of the country and left their mark on the urban culture wherever they settled, such as in São Paulo, Rio de Janeiro, and Porto Alegre.

As well as allowing religious freedom, Brazilian legislation was tolerant towards European immigrants and they could always find loopholes that allowed more immigrants to enter the country, despite legal bureaucracy and the need for "cartas de chamada" (call letters). It was not any different for Jewish immigrants; this was the open social environment full of economic opportunities that successive migratory waves met, at least until the 1930s. From the 1920s on, Brazil became a desirable and viable destination due to the restrictions and quotas imposed by the United States, Canada, and Argentina. In the 1920s, over 10% of all Jews who emigrated from Europe had chosen Brazil as their destination, and between 1920 and 1930 about half of the immigrants from Eastern Europe who arrived in Brazil were Jewish. Only very traditional state circles such as diplomats and the military were not always receptive to the presence of the Jews, but this did not hinder the development of Jewish life in the country by any means. Between 1920 and 1940, immigrants took advantage of the high rates of economic growth and urbanization in Brazil, as well as the commercial and industrial opportunities available. The combination of religious and political freedom, solid community ties, and the individual dream of "making it in America," produced a social and economic dynamism that allowed for individual and collective social integration and the progress of immigrant communities.

Many of the early Jewish settlers became itinerant peddlers (*klientelchik*), except for a small group of immigrants who worked as artisans. In the course of time, however, this situation underwent a change. The Jewish tradesmen who settled in the country after World War I soon became manufacturers and industrial pioneers in their fields – especially in textiles, readymade clothes, furniture, and at a later period, construction. An outstanding example of industrial pioneers is the *Klabin family, leaders in paper manufacturing and related industries.

COMMUNITY LIFE AND SOCIAL ORGANIZATIONS. The organization of the community was a decisive factor for successful integration. Wherever large groups of immigrants settled, as for instance in Rio de Janeiro, São Paulo, Porto Alegre, Salva-

dor, Recife, Belo Horizonte, Belém, and other cities, there was always at least one or more charitable organization, a credit cooperative, and one or more schools, which provided immigrant children with good social and educational opportunities. In 1917, the first Congresso Israelita no Brasil took place.

The first charitable society, *Achiezer*, was founded in Rio de Janeiro in 1912. The *Sociedade Beneficente Israelita*, Relief, was founded in 1920. Three years later the *Froien Farain* and the *Lar da Criança Israelita* (children's home) were founded. The *Policlínica Israelita* was established in 1937, later becoming the *Hospital Israelita*. In Rio de Janeiro, the *Sociedade das Damas* would later found the *Lar da Velhice* (old age home), in 1963. Also, a credit cooperative was founded in that city, which was Brazil's capital until 1960 (when it was transferred to Brasília).

In São Paulo, between the years 1920 and 1940 there were 10 charitable entities in the community which offered all the necessary support to the newly arrived immigrants, from welcome at the port, assistance to pregnant women, and loans to set up a small business. Some of these organizations were run by individuals and families who had arrived some time before and had already prospered and did not want to see their brethren having to beg in the streets or looking like poor immigrants. The *Sociedade Beneficente Amigos dos Pobres Ezra* was established in 1915, in São Paulo, followed by the *Sociedade Beneficente das Damas Israelitas* a year later. The *Policlínica Linath Hatzedek* was established in 1929, and later the *Gota de Leite of B'nai B'rith*, the *Lar das Crianças da CIP*, the *Lar das Crianças das Damas Israelitas*, the *Organização Feminina de Assistência Social (Ofidas, 1940)*, and the *Asilo dos Velhos (1941)*. Between 1936 and 1966 the *Sanatório Ezra* for tuberculosis patients operated in São Jose dos Campos (50 miles from São Paulo). It had 120 beds, taking care of Jewish people from about 30 cities from all over Brazil. In 1928 the *Cooperativa de Crédito Popular* of the Bom Retiro neighborhood was established.

Even though the Bom Retiro neighborhood of São Paulo concentrated the main nucleus of immigrants coming from Eastern Europe, there were also small communities scattered throughout the city, and the groups from Western Europe, the Germans, and the Sephardim basically kept themselves apart, maintaining contact only from time to time. Each group had its own burial society, but the cemetery was common to all. In Porto Alegre and Rio de Janeiro there were common institutions from the beginning of the immigration.

Community life also developed in and around the synagogue, social, sporting and cultural clubs, political movements, and the active press. In Rio de Janeiro, *União Israelita do Brasil* was founded in 1873 and the first synagogue, *Centro Israelita*, opened in 1910. The first Jewish institution to be opened in São Paulo was the *Kahal Israel* synagogue (1912). In São Paulo, the Sephardim from Lebanon and Syria founded two synagogues in the *Mooça* neighborhood in the 1920s. The German Jews (as well as Italian and Austrian Jews) established the *Congregação Israelita Paulista* in São Paulo (1936) and the

Associação Religiosa Israelita (1942) in Rio de Janeiro. Both were liberal congregations.

In Porto Alegre, capital of Rio Grande do Sul, the local *União Israelita* was founded in 1909 by Ashkenazi and Sephardi immigrants together. Sephardim founded the *Centro Hebraico Rio-Grandense* in 1922. *Sibra (Sociedade Israelita Brasileira de Cultura e Beneficência)* was created in 1936. In the interior of the State of Rio Grande do Sul, small communities were formed in Santa Maria (1915), Pelotas (*União Israelita Pelotense, 1920*), and Rio Grande (*Sociedade Israelita Brasileira, 1920*, with many immigrants from the agricultural colony of Philipson), *Passo Fundo (União Israelita Passo-Fundense, 1922)*, and *Erechim (1934, Sociedade Cultural e Beneficente Israelita, with many immigrants from Quatro Irmãos)*.

In Salvador, capital of Bahia, a synagogue opened in a private household in 1924. Jewish immigrants from Eastern Europe began to arrive in Recife, capital of Pernambuco, in the 1910s and in the same year a *shul* in a private house was created. In 1918 *Centro Israelita de Pernambuco* and an *Ídiche Schul* were founded, followed by the cemetery (1927), the *Synagoga Israelita da Boa Vista (1927)*, and a cooperative (1931). In the 1930s Sephardim built their synagogue in Recife. The community at Recife had a very active Jewish life, with five schools, a library, a theater group, youth movements, and Zionist women's organizations (*wizo* and *Naamat*).

In Curitiba, capital of Paraná, *União Israelita do Paraná* was founded in 1913 and later became *Centro Israelita do Paraná (1920)*. The cemetery was built in 1925 and the local community reached around 3,500 Jews.

In São Paulo, Porto Alegre, Rio de Janeiro, and Recife the Jews concentrated in specific neighborhoods: in Bom Retiro, Bonfim, and Praça Onze, respectively, in the first three cities and in Boa Viagem and Boa Vista in Recife. Eliezer Levin is the main chronicler of Jewish life in Bom Retiro and the writer Moacyr *Scliar wrote several novels set in the little *shtetl* of Rio Grande do Sul. In Rio de Janeiro, the main writer of memoirs from Praça Onze (also the heart of the Rio de Janeiro carnival) is Samuel Malamud. In these four large Brazilian cities, a defined Jewish urban space existed, with its stories, both real and imaginary, its meeting places, bars, restaurants, and lively folklore.

Women prostitutes were exploited by the international Tzvi Migdal traffic network based in Buenos Aires from the end of the 19th century and segregated by the community. They founded the *Associação Beneficente Funerária e Religiosa Israelita (1906 to 1968)* in Rio de Janeiro, and the *Sociedade Religiosa e Beneficente Israelita* in São Paulo (1924 to 1968), with their own mutual-aid organizations. They maintained separate cemeteries in São Paulo, Rio de Janeiro, and Cubatão (a neighboring city of Santos) and a synagogue in Rio. Within the Jewish communities themselves, the traffickers sponsored the Yiddish theater. The existence of Tzvi Migdal was an issue that made newspaper headlines in the 1930s and served as a pretext for those who wanted to ban Jewish immigration. But the history of the Jewish prostitutes or *polacas* (Poles), as they

were known, entered the social and cultural imagination of the two most important Brazilian cities, even though Jews were only a minority among the women prostitutes. These stories can be found in the novel *Macunaima* by Mario de Andrade, the founder of Brazilian Modernism, and they were also the subjects of paintings and songs by popular artists and musicians. The subject, already a strong taboo in the community, became the theme of a novel (*O Ciclo das Águas*) by the Brazilian Jewish writer Moacyr Scliar.

EDUCATION AND CULTURE. Jewish communities all around Brazil maintained schools in the most important cities where they settled. In 1929, there were 25 schools in the country, with about 1,600 students. In São Paulo, Rio de Janeiro, and Salvador there was an ideological plurality of schools dividing Zionists, who taught Hebrew, and Yiddishists, who taught Yiddish. In São Paulo, Rio de Janeiro, and Recife there was a Jewish theater.

The Dr. Weizmann school was established in Belém, Pará State, in 1919. The Maguen David School was founded in Rio de Janeiro in 1920, later renamed the Colégio Hebreu-Brasileiro. In São Paulo, a small *talmud torah*, a “*heder*,” opened in 1916. The first school in São Paulo was the Ginásio Hebraico-Brasileiro Renascença (1924). Renascença and *talmud torah* (1932) schools started to incorporate Jewish teaching with the Brazilian official curriculum, resulting in an important form of social integration for the children and young people. In São Paulo, a small school linked to the Bund existed in the 1930s and leftist sectors founded the Yiddishist Scholem Aleichem school in the 1940s. Other schools were C.N. Bialik and I.L. Peretz and the religious Beit Chinuch.

The Escola Israelita Jacob Dinezon of leftist and Yiddishist orientation was founded in Salvador in 1924. During the 1930s, a second school was founded – Ber Borochof, of Zionist orientation. Jewish schools were founded in Belo Horizonte (1928) and in Curitiba (1935). There were also schools in Nilópolis, in the interior of Rio de Janeiro State, and in Santos, interior of São Paulo.

The Jewish press in Yiddish was very active until the 1960s and there was an active Jewish press in Portuguese until the 1990s, when the remaining newspapers and magazines were confined to a limited Jewish public.

The first Jewish newspaper in Yiddish in Brazil was *Di Menscheit*, published in 1915 in Porto Alegre. The press reflected the ideological diversity, embracing left-wing and Zionist newspapers. Later came *Kol Yisrael* (1919) and *Dos Idische Vochenblat* (1923), later to be called *Brazilianer Yiddische Presse* (1927). Other Yiddish newspapers were *Di Yiddische Folkstsaytung*, *Yidische Tsaytung* and *Der Nayer Moment*.

The first Jewish newspaper published in Portuguese was *A Columna*, in 1916. In 1933–39 São Paulo also had a Portuguese-language newspaper, *A Civilização*. Newspaper and magazines edited in Portuguese were *Crônica Israelita*, *Semana Judaica* (both linked to CIP in São Paulo), *Aonde Vamos?*, *Shalom*, *O Reflexo*, *Revista Brasil-Israel*, *Encontro*, and *Boletim da*

Associação Sholem Aleichem in Rio de Janeiro. Many institutions had their own publication or newsletter.

ZIONISM AND POLITICAL PARTICIPATION. The large immigration of the 1920s consisted of Jews of different political positions and the whole spectrum of ideological orientation. All the Zionist parties were represented among Brazilian Jewry, and they left their mark upon the community. As a result, communal social Jewish life was greatly enriched. The first Congresso Sionista in Brazil took place in 1922, bringing together four movements – Ahavat Sion (São Paulo), Tiferet Sion (Rio de Janeiro, established in 1919), Shalom Sion (Curitiba), and Ahavat Sion (Pará) – founding the Federação Sionista do Brazil. One year before, in 1921, a Brazilian representative took part in the 12th Zionist Congress in Carlsbad. In the 1929 election to choose the Brazilian representative to the 16th Zionist Congress a total of 1,260 votes were cast, and for the Congress of 1934 the total number of votes was 2,647. The Zionist movement was very active within the Jewish communities, from Belém (Pará) to Rio de Janeiro, and in 1929, in Rio de Janeiro, Zionists assembled and marched through the streets in a public demonstration in which 1,500 people participated.

From the year 1930 Zionist youth movements were active mainly in São Paulo, Rio de Janeiro, and Porto Alegre: Hashomer Hatzair, Ichud Habonim, Dror, Gordonía and also the Scout movement Avandava. In the 1960s, Chazit Hanoar and Netzach were also active.

The leftist movements were also quite significant. The movement of left-wing Jews in Rio de Janeiro was connected with the Sholem Aleichem Library, Brazkcor, the Sociedade Brasileira Pró-Colonização Judaica in the Soviet Union, and the Centro Operário Morris Vinchevsky (the last two were established in 1928, ran a Jewish worker's school, and edited the periodical *Der Unhoib*). In São Paulo there were the groups Cultura and Progresso, as well as a small nucleus of Bund and later, in 1954, the Instituto Cultural Israelita Brasileiro (ICIB), the pro-Communist Casa do Povo (People's House), together with Teatro de Arte Israelita Brasileiro (TAIB) and the Escola Sholem Aleichem. Yiddish language and culture were key factors within these movements. The Jews were leaders in the Partido Comunista Brasileiro. In other communities, such as Porto Alegre, Belo Horizonte, and Salvador, there were also left-wing nuclei, comprising left-wing Zionists and Communists.

THE JEWS UNDER GETÚLIO VARGAS. In the 1920s and 1930s, having settled in a few cities and because of their economic, social, and cultural activities, the Jews became one of the “most visible” groups of immigrants in the words of the historian Jeffrey H. Lesser. Thus, they came to be the object of local, national, and international gambling interests, of stereotypes, and of political intrigue, “pawns of the powerful,” especially during the Vargas regime (1930–45), when “the Jewish question” was raised in the country, involving political interests.

In 1930 the “First Republic” came to an end and a revolution brought Getúlio Vargas to power with a nationalist gov-

ernment that overcame the supremacy of the rural oligarchies of the States of São Paulo and Minas Gerais, which had dominated the country since 1889. Brazil began to industrialize and define the urban middle classes in the large cities. In the year 1937, Getúlio Vargas, who had already governed since 1930, decreed the dictatorship of the “Estado-Novo” (New State). This was a turning point in Brazil’s immigration policy, which became increasingly restrictive and had an adverse effect on the immigration of Jews. In 1934 the tendency to select immigrants on the basis of their ethnic origin came to the fore, and afterwards it was taken to the extreme when a secret order was circulated through the Brazilian consulates abroad to reject all visa applications submitted by Jews. Both the 1934 and 1937 constitutions and a decree issued in 1938 provided for a quota system of immigration that was not to exceed 2% (annually) of the total number of immigrants from any particular country in the period 1884–1934 and was to consist of up to 80% agricultural laborers. The Estado-Novo military coup was orchestrated by Vargas on the pretext that a plan for a Communist revolution was underway. This plan received the (Jewish) name “Plan Cohen.”

Nevertheless, Jewish immigration, mainly from Nazi-dominated Europe, continued individually by a variety of means, mainly case by case negotiations, but never organized through charitable organizations. From time to time, special provisions were made for the immigration of people skilled in certain fields or relatives of Brazilian citizens. The law also made it possible for the authorities to accord to tourists the status of permanent residents. Some 17,500 Jews entered Brazil between 1933 and 1939 (until 1945 an additional 6,000 entered), but many refugees from occupied Europe had their visa applications denied. During this time, some diplomats tried to act sympathetically towards the Jews; among them were Luiz Martins de Souza Dantas and Aracy Carvalho de Guimarães Rosa.

During the years of the Estado-Novo (1937–1945) and World War II, a general climate of xenophobia was present in government circles and in sectors of the political elite and among intellectuals. At least two militant Jewish Communist women were deported by Vargas’ political police to Germany and handed over to the Gestapo: Jenny Gleizer and Olga Benário, wife of Luis Carlos Prestes, the most important Brazilian Communist leader, having led a Communist revolt in the country in 1935. The teaching of foreign languages and publication of newspapers in foreign languages were prohibited and immigrant organizations had to “nationalize” their names and to elect boards of directors with native-born Brazilians. As a rule, these restrictions were imposed on all immigrant groups and not exclusively on Jewish immigrants, affecting the Italians and hitting the Japanese hard (who were deported from São Paulo and Santos to the interior of the state).

Despite the dictatorship and the climate of nationalistic xenophobia, the Jewish organizations adjusted to the legislation and learned how to deal with the restrictions so as to

continue operating. The schools continued to teach Hebrew and Jewish culture, the synagogues kept up their services, radio programs played Jewish music, and innumerable organizations were established during this period (including the Associação Religiosa Israelita – ARI, founded by German Jewish refugees in 1942 in Rio de Janeiro, with around 1,000 members) resulting in a very fertile period for the organizations of the Jewish community. The German Jews were the ones who became most alarmed, especially after Brazil broke off relations with Germany and Italy in 1942, but their organizations operated as usual during the war years.

During the Estado-Novo and especially in the war years, there are no records of any forcible closure of Jewish organizations in São Paulo, then the biggest Jewish community. The antisemitism which was present in governmental and intellectual circles, among diplomats and the elite, did not result in criminal actions against the Jews living in Brazil and those who managed to evade the immigration barriers. Daily Jewish life followed its normal course, in spite of the restrictions in immigration and the antisemitic rhetoric in official circles.

In São Paulo and Rio de Janeiro the communities took part in campaigns in support of the war effort by Brazil, which broke off relations with the Axis powers in August of 1942 and followed a policy of alignment with the United States and the Allies. The Jewish community of Brazil donated five airplanes to the newly created Brazilian Air Force, in 1942, and formed several committees to help refugees of the war in Europe, some of which were linked to the Red Cross. In July 1944 Brazil sent the Força Expedicionária Brasileira (FEB) to Italy, consisting of over 30,000 men, who fought together with the U.S. Army in Northern Italy, participating in the victorious battle of Monte Castello. Jews were part of the FEB. Among them were the artist Carlos Scliar, who later published an *Album de Guerra* (*Album of War*), and Boris Schnaiderman, who published *Guerra em Surdina*, an eyewitness novel about the FEB.

Also during the war, several campaigns were undertaken to help the refugees in Europe. With the restriction on imports and the naval blockade, there was significant industrial and technical development in the great urban centers, in order to supply goods that had previously been imported. This created jobs for the inhabitants of the cities, among them the Jewish immigrants who had technical, commercial, and industrial skills.

Between 1933 and 1938 the Ação Brasileira Integralista (AIB) Fascist movement was active in Brazil, led by Plínio Salgado, Gustavo Barroso, and Miguel Reale. Inspired by European and South American Fascism, *Integralismo* had an antisemitic platform. Gustavo Barroso, the head of the militia, was the main antisemitic spokesman. He translated into Portuguese *The Protocols of the Elders of Zion*, and published adaptations of the book for the Brazilian public, such as *A Sinagoga Paulista; Brasil, colônia de banqueiros; História secreta do Brasil*, and others. Gustavo Barroso ran the column “International Judaism” in the main Integralist newspaper. He was also the author of about 80 books, a member and

president of the Academia Brasileira de Letras, and an intellectual respected throughout the country, and can be considered the most active antisemitic activist in modern Brazilian history. However, there is no documented evidence of open violence against Jewish communities, who reacted when necessary. No Jewish organization stopped functioning because of the antisemitic propaganda spread by AIB. In Curitiba, Baruch Schulman wrote *Em Legítima Defesa*, in 1937, a publication in defense of the Jews, and in Belo Horizonte the historian Isaías Golgher created an Anti-Integralist Committee. A group of Brazilian intellectuals, supported by the ICA and by the Klabin company, published a book in defense of the Jews called *Por que ser anti-semita?*, an inquiry among Brazilian intellectuals, in 1933.

Postwar Period

After the end of World War II and with the participation of Brazil in the military campaign against the Axis, the dictatorship of Getúlio Vargas fell and Brazil enjoyed a period of democratic regimes up to 1964, including the democratic election of Vargas himself as president in 1950.

It was through the creation of the Federação Israelita do Estado de São Paulo in 1946, under the inspiration of Zionism, that the community in São Paulo started to evolve a general community ideal in order to organize postwar immigration. The campaigns undertaken during the war and Zionist activism generated greater unity. The Zionist movement, which had remained inactive during the war years, resumed its public activity. The Jewish left became quite active again, also in the ranks of the Communist Party. The Federação Israelita do Rio de Janeiro was founded in 1947.

The establishment of the State of Israel in 1948 was a source of great encouragement to the Jewish minority in Brazil. In the period 1946–47, federations of Jewish organizations and institutions were formed in the larger communities, and 1951 witnessed the establishment of the Confederação das Entidades Representativas da Coletividade Israelita do Brasil (Confederation of Jewish Institutions in Brazil) – now known as Confederação Israelita do Brasil (CONIB) – to act as the authoritative and representative body of the country's entire Jewish community.

Jewish immigration to Brazil was resumed in the 1950s. In the period 1956–57 about 2,500 Jews from Egypt and 1,000 from North Africa (mainly from Morocco) and in 1956, some 1,000 from Hungary entered Brazil. According to the official census, the Jewish population of Brazil was 55,663 (1940), 69,955 (1950), 96,199 (1960), and 86,417 (1991). In 1991, 70,960 Jews lived in the Sudeste, mainly São Paulo and Rio de Janeiro; 10,614 in the South, basically in Rio Grande do Sul; 1,693 in the Nordeste; 2,308 in the North; and 841 in Centro-Oeste. According to statistical studies, estimates of the Jewish population in 2005 were 96,700 people, but Jewish institutions in the country expanded this figure to 130,000.

Israel's War of Independence (1948) and Sinai Campaign (1956) brought new waves of Sephardi immigration from Leb-

anon, Egypt, and Syria, especially to São Paulo, where four new synagogues were founded from the 1960s, three of them in the neighborhood of Higienópolis. From that period Sephardi Jews became politically active in the community and leaders of some of the more important Jewish institutions in the city and also in the country, holding positions such as the presidency of Confederação Israelita do Brasil. Generally, the integration between Ashkenazim and Sephardim in Brazil was successful.

Brazilian Jews experienced considerable economic mobility. The peddlers of the prewar period eventually became wholesalers and retailers, and some also became industrialists. Besides getting involved in trade and industry, from the 1960s a significant number of Brazilian Jews began taking up various professions, becoming physicians, administrators, engineers, university professors, journalists, publishers, psychologists, etc.

Important organizations were also founded in the postwar period. The Hebraica club, founded in São Paulo in 1953, is the largest Jewish organization in the country in terms of numbers of members (25,000). In the field of charity, the Centro Israelita de Assistência ao Menor (Ciam) was created in 1959 in São Paulo, and in 1993 it also developed into the Aldeia da Esperança (Village of Hope), inspired by the model of Kefar Tikvah in Israel. Unibes, the most important Jewish charitable organization in the country, was founded in 1976. Some time later, Ten Yad was established. The Hospital Israelita Albert Einstein, inaugurated in São Paulo in 1971, became one of the most important hospitals in the country and maintained an active Department of Volunteers carrying out important medical and social work in a neighboring shantytown.

In 1964, through a coup de état, a military dictatorship took control in Brazil, interrupting 19 years of democracy since the end of World War II. Under the military regime, there was neither a specific Jewish policy nor any spread of antisemitism. The policies of the military government benefited the middle classes and the country underwent a development boom with high economic growth rates during the 1970s, the so-called "Brazilian miracle." In São Paulo, from 1960, many Jews improved themselves economically and moved up the social ladder, leaving the Bom Retiro neighborhood for well-to-do districts such as Higienópolis, and later Jardins and Morumbi. Thus, the centers of Jewish life in the city partly moved to other neighborhoods as well.

Before Parliament was dissolved in 1968, six Jews representing various parties were elected to the federal legislature in the 1966 parliamentary elections. There were also Jewish politicians in the state legislatures and city councils. Horacio *Lafer was a leading Jewish political figure and served as finance minister and foreign minister of Brazil. A former federal deputy, Aarão *Steinbruch, was elected senator, the first Jew to be elected to that prestigious post.

In November 1975, the Brazilian vote in favor of the UN resolution condemning Zionism as "racism" aroused considerable criticism. It was considered an expression of Bra-

zil's foreign policy, aimed at the Third World and the Arab oil-exporting countries. In 1980 a document issued by the Serviço de Informações do Ministério de Minas e Energia accused the Jewish community of being among the main opponents of the nuclear agreement signed by Brazil and Germany because Jewish physicists such as Mario Schenberg, Jose Goldemberg, and others were among the leaders of this opposition. Some Jewish left-wing activists became involved in movements against the dictatorship and even joined armed guerrilla groups that fought against the dictatorship. The Academic Center of the Institute of Psychology of the University of São Paulo was named for Lara Lavelberg in memory of an activist assassinated by the military regime in 1971. In 1975 the murder of the Jewish journalist Vladimir Herzog in a military prison, reported as a "suicide," triggered off mass protests in the country and was one of the events that led to the end of the military regime. There was great tension in the Jewish community, as many opposed burying the journalist as a suicide. Rabbi Henry I. Sobel was one of the leaders of the movement who challenged the Army's official version of the facts and gave Herzog a regular burial.

In 1978 there were antisemitic outbursts in the southern state of Rio Grande do Sul. In the same year, Gustav Franz Wagner, an officer who served in the Sobibor concentration camp, was arrested after participating in a meeting of the so-called "Movement for the Liberation of the German Reich." He was held by the Brazilian authorities, while extradition was requested by Austria, Poland, West Germany, and Israel. However, the requests were rejected by the Supreme Court of Brazil. Brazil was a shelter for probably a few dozen Nazis, some of whom had arrived via Argentina. Among the Nazis who took refuge in Brazil was Joseph Mengele, who probably died in the country.

The slow return of the country to democracy started in 1979, first with the Amnesty Policy and in 1984 with the direct election for president of the republic. The return to democracy in 1984 brought new hope, but also some serious economic and social crises. Under the government of Fernando Collor de Melo (1990–92, when the president was politically impeached), Celso Lafer was minister of foreign affairs. In the two terms of President Fernando Henrique Cardoso (1994 to 1998 and 1998 to 2002) numerous members of the Jewish community took an active part in the government.

Antisemitism

Antisemitism is not a determining factor in the contemporary history of Jews in Brazil. Apart from the activism of Gustavo Barroso and Integralismo in the 1930s, antisemitism in Brazil has never been an organized movement. Even during those years Jews living in Brazil suffered neither discrimination nor violent persecution, except for a political campaign by a specific party and official antisemitism that was oriented toward restriction of immigration. In contemporary Brazilian history, antiemitism has always been ephemeral and isolated and the majority of incidents have been limited to occasional slogans

on the walls of Jewish institutions and public statements or antisemitic articles in the press or more recently on the internet, which has been used the world over as a means of racist and antisemitic propaganda.

In the 1990s a new Nazi publishing house, Revisão, published antisemitic books, such as *The Protocols of the Elders of Zion*, *The International Jew* (Henry Ford), *Brasil, colônia de banqueiros* written by Gustavo Barroso in the 1930s, and Holocaust denial books, such as *Holocausto judeu ou alemão? Nos bastidores da mentira do século*, written by S.E. Castan. The books were well publicized and had considerable repercussions. In 1989, an alliance of Jews, Afro-Brazilians, and other sectors organized a movement (Movimento Popular Anti-Racismo – MOPAR) in Porto Alegre, to fight the antisemitic editor and his books. The Revisão publishing house took part in events and book fairs in several state capitals, which provoked much debate between those who defended absolute freedom and those who attacked the distorted, racist content of these books. In 2004, the editor S.E. Castan was convicted of racism and antisemitism by the Supreme Federal Court, the highest court in the country, establishing an important precedent in this type of case.

Anti-Zionism is an important ideological component in left-wing parties and movements in the country, mainly since the 1970s, but not always has such anti-Zionism been distinctly associated with antisemitism.

Despite the fact that antisemitism was sporadic and isolated for almost four centuries, Brazil was a Portuguese colony in which the Catholic Church and the activities of the Inquisition in the country had a decisive influence until the end of the 18th century. This left a mark on the culture, mentality and popular imagination of Brazilians, diffusing elements of a medieval anti-Judaism that associate the Jews with the crime of decide, usury, and greed. There are many pejorative examples in the popular language, such as "*judiar*," meaning "to mistreat," as well "*Judeu*," meaning miserly and tightfisted. Such imagery does not induce concrete action, also because over 90% of the Jews reside in large urban centers, where this imagery has even less of an impact.

Interfaith Relations

Brazil is a country with a Catholic majority and a more recent high percentage of Protestants, mainly Evangelists. The growth of Protestantism helped produce a kind of philosemitism and greater support for Israel. The inter-religious dialogue, especially with the Catholic Church, is solid and permanent. Following the orientations of the Vatican II Council, the National Conference of the Bishops of Brazil published a *Guide for Inter-Religious Dialogue*. The archbishop of São Paulo, Cardinal Dom Cláudio Humes, repeatedly positioned himself in favor of inter-religious dialogue as an important element in a country with a Catholic and Protestant majority. The liberal rabbi Henry I. Sobel, from CIP, São Paulo, led this movement in the country and played a leading role in ecumenical and political events, where the presence of a Jewish representative

is important. He was the best-known spokesman of Brazilian Judaism. The Conselho de Fraternidade Cristão-Judaica, founded in 1962, maintained an active inter-religious dialogue. From the 1990s many Protestant groups and churches appeared as “Christian-Hebrews,” calling themselves “Jews who follow Jesus.”

In the 21st Century

As stated, the number of Jews in Brazil in 2005 was estimated at between 96,700 and 130,000. In spite of the vitality of Jewish institutional life in Brazil, there were hundreds of Jews who did not belong to any Jewish body. There were organized Jewish federations in the States of Amazônia, Bahia, Brasília (Federal District), Ceará, Minas Gerais, Pará, Paraná, Pernambuco, Rio de Janeiro, Rio Grande do Norte, Rio Grande do Sul, Santa Catarina and São Paulo. The main Jewish communities were located in São Paulo, Rio de Janeiro, and Porto Alegre, concentrating more than 80% of the Jews in the country, followed by Curitiba, Belo Horizonte, Recife, and Salvador. In Manaus, Brasília, Fortaleza, Natal, and Florianópolis, the Jewish communities numbered a few dozen families. Out of the 5,560 Brazilian municipalities there were very small Jewish groups in a few dozen of them.

Although constituting less than 0.01% of the total population of the country, Jewish communities were very active and the Jews made a notable impact in such areas as the economy, culture, professional life, and the arts. The Jewish population generally belonged to the middle and upper classes, which constituted a minority within society at large. In cities such as São Paulo (which boasted over 11% of the national income), the Jews constituted 0.6% of the total population, but this percentage was certainly much higher in the strata with high social, political, economic, and cultural visibility in a country where large sections of the population live in the margins of consumer society as second-class citizens.

The state policy of noninterference in religious freedom, social mobility, cultural tolerance, and the economic and urban development of the country resulted in the development of their communities and very successful integration in the middle and upper reaches of society for the majority of Jews. The economic and social crisis which began in the 1980s resulted in poverty for many of the Jews, but they were succored by a solid network of Jewish community aid and social assistance. Jewish social assistance institutions, hospitals, and sports clubs were very active. The Albert Einstein Hospital, in São Paulo, was one of the best in the country and the Hebraica club was one of the most important on the continent. Three social institutions in São Paulo, Unibes, Lar das Crianças da CIP, and Ciam were models of social assistance both inside and outside the community, maintaining important partnerships with local governments.

Although Jews individually played an important part in several areas of Brazilian culture, the depth and intensity of Jewish cultural production can be said to have been in decline

since the 1970s, despite the great number of events produced by Jewish organizations.

The Arquivo Histórico Judaico Brasileiro, in São Paulo, maintained the most important historical archive and Jewish library, including a Yiddish section. The Instituto Cultural Israelita Marc Chagall, in Porto Alegre (1986), the Instituto Histórico Israelita Mineiro, in Belo Horizonte, the Arquivo Judaico de Pernambuco, in Recife (1992), and the small Museu Judaico, in Rio de Janeiro (1998), housed historical documentation and promoted cultural activities. No central cultural organization existed in the country. The Jewish communities operated with almost complete independence, with little interaction or mutual connection. The communities functioned more as a conglomerate of institutions, despite the foundation of state federations and a National Confederation, CONIB, whose activities, since its origin, have been limited to several important issues.

Cultural life was associated with social life and developed in the clubs and organizations. In São Paulo, a highly developed cultural network had its main centers in Hebraica, B'nai B'rith, CIP, and the Casa de Cultura de Israel; in Rio de Janeiro, in ARI and ASA. There were also other clubs in São Paulo (Macabi), Rio de Janeiro and Salvador.

The most important Brazilian Jewish writer was Moacyr Scliar, a member of the Brazilian Academy of Letters and one of the outstanding contemporary Brazilian authors. Many critics see important Jewish traces in the work of Clarice *Lispector, one of the most important modern Brazilian writers, born in the Ukraine, particularly in her book *A Hora da Estrela*, a classic work of Brazilian literature. Among the writers and chroniclers who wrote about the Jewish experience in Brazil, one can cite Samuel *Rawett, Jacó Guinsburg, Alberto Dines, Cíntia Moscovich, and also Samuel Malamud, Eliezer Levin, and Samuel Reibcheid. Brazil had a small, but significant movement of writers who wrote in Yiddish, among them Meir Kucinsky and Rosa Palatnik. There was also a small but significant number of memoirs of immigration, with several books on the agricultural colonies in Rio Grande do Sul, and equally memoirs of the Holocaust published by survivors who had immigrated to Brazil. The writer Stefan *Zweig, a refugee of Nazism in Brazil, wrote *Brasil, País do Futuro*, praising Brazil. Perspectiva was the main Jewish publishing house in Brazil, directed by Jacó Guinsburg; other publishing houses were Sefer (which ran a Jewish bookstore in São Paulo), Mayanot, and small religious publishing companies.

There were Jewish television programs in Rio de Janeiro and São Paulo, one of them, *Mosaico na TV*, was the longest running program on Brazilian television. The Jewish written press lost much of its circulation and turned inward to the community. Most of the main organizations had their own newsletters.

Among artists distinctly reflecting Jewish culture in their works, Lasar Segall was one of most important representatives of Modernism and Expressionism in Brazil and the world. In São Paulo, the Museum Lasar Segall housed his works and a

permanent exhibit, A Festival of Jewish Cinema, was annually organized in the Hebraica club in São Paulo jointly with movie theaters in town. There were also courses in Hebrew at the state universities in Rio de Janeiro and São Paulo, where a Center of Jewish Studies in the University of São Paulo offered, besides a graduate course on Hebrew literature, Master's and Ph.D. degrees in Jewish studies.

The Jewish community in Brazil did not have a central rabbinate. Each of the two major cities had several rabbis who seldom met. The larger cities had both Sephardi and Ashkenazi synagogues. The Conservative/Liberal denomination of Judaism had the largest number of members: in Rio de Janeiro, Associação Religiosa Israelita (ARI), with around 800 families and a woman as second rabbi, and the Congregação Judaica do Brasil headed by Rabbi Nilton Bonder; in São Paulo, Congregação Israelita Paulista and the Comunidade Shalom with 350 families and a female rabbi in 2005. The Orthodox movement, with many synagogues in the country and most of the synagogues in São Paulo, had a growing interest in Brazil, exemplified by Beit Chabad in São Paulo, and in the main Jewish communities around the country. The Beit Chabad organizational structure assists small communities, sending rabbis to visit them weekly and supplying whatever is needed for worship. In Petrópolis, State of Rio de Janeiro, the Orthodox Mahane Yisrael Yeshivah was in operation.

Jewish youth movements were still active, but with less adherence than in the 1930–80 period, when they maintained an active Zionist and *halutz* ideology. The active Zionist movements were transformed in “identity ties” with Israel. Jewish youth also met in clubs and synagogues. Assimilation was a major issue, but difficult to measure, particularly because of the increasing number of mixed marriages and conversions, where the couples remain close to the Jewish community. The social and religious permeability of Brazilian culture makes it easy for the families to maintain more than one religion.

The terrorist attacks against the Israel embassy in 1992 and the Jewish Community – AMIA, in Buenos Aires, Argentina, in 1994, made the Jewish communities in Brazil more cautious. They committed themselves to improving the security systems protecting Jewish institutions in a country where daily violence is on the upswing and affects the Brazilian population as a whole.

In 2001 the federal government, through the Instituto do Patrimônio Histórico e Artístico Nacional (IPHAN), declared the site occupied by the synagogue of Recife (capital of Pernambuco State) during the Dutch domination in the 17th century a “federal historic site.” A museum was erected in the place where the first Jewish community settled in Brazil. The “Rua dos Judeus” (Street of the Jews) and the location of the ancient synagogue became the historic tourist attractions of the city.

In 2000 a demonstration in São Paulo led by Hebraica attracted about 10,000 people supporting Israel against terrorism and also supporting the peace process. It was the largest

public demonstration of the Jewish community since the festivities celebrating the foundation of Israel in 1948.

In 2002, Luiz Inácio Lula da Silva, leader of the Partido dos Trabalhadores (Workers' Party), was elected president. For the first time in Brazilian history a left-wing party won the national elections with a social program whose main objective was eradicating hunger in the country. The PT already governed cities like São Paulo, Porto Alegre, Belo Horizonte. The government's political support of the Palestinians and the Arab cause did not turn into official hostility toward Israel. President Lula visited Israel before being elected and proclaimed repeatedly his admiration for the country.

Some Jews joined the higher ranks of the federal government elected in 2002, including the spokesman of the presidency, André Singer, and special advisers to the president Clara Ant and Oded Grajew, among others. The Workers' Party (PT) maintained an officially constituted “Jewish committee” for a number of years. In 2003, President Lula, the governor of the State of São Paulo, and the mayor of the city of São Paulo were present at the celebration of the 50th anniversary of the Hebraica club, the largest Jewish institution in Brazil – a clear sign of the importance of the Jewish community in São Paulo and Brazil.

In 2005 the official delegation accompanying President Luiz Inácio Lula da Silva to Rome for the burial of Pope John Paul II consisted of only 16 people, among whom was Rabbi Henry I. Sobel of the liberal CIP. This fact shows the importance and the official and public visibility of the Jewish population in Brazil.

In 2005 the main concerns of Jews in Brazil related neither to social integration nor to prejudice in a country where they could develop and progress freely, consolidating prosperous and well-integrated communities. Their main concern was the preservation of their Jewish identity in a country whose tolerance, both official and public, presents new challenges for a community searching for ways to preserve its uniqueness in the absence of external pressure.

Relations with Israel

The Brazilian statesman Oswaldo Aranha – who, as a minister in the 1930s and 1940s, was instrumental in restricting the immigration of Jewish refugees from Europe when serving as foreign minister in the war years – presided over the 1947 General UN Assembly, which voted for the partition of Palestine and the creation of the Jewish state. Apart from casting his delegation's vote in favor of the Partition Resolution, Aranha played a key role in the adoption of the resolution, preventing delaying tactics and guiding the Assembly to the conclusive vote. In appreciation of his historical role, a street in Tel Aviv and the cultural center in kibbutz Beror Hayil (settled by Brazilian Jews) were named after him. Brazil recognized Israel in February 1949 and from 1952 maintained an embassy in Tel Aviv; Israel had an embassy in Rio de Janeiro which later was moved to Brasília, and a consulate general in São Paulo, which was closed in 2004.

Brazil followed the line of the Western powers on the question of Jerusalem, voting in favor of the internationalization of the city (December 1949) and against its reunification by Israel after the Six-Day War (June 1967). In the wake of the Sinai Campaign (1956), Brazil supported the creation of the UN Emergency Force and contributed a contingent of soldiers. In 1967, as a member of the Security Council, Brazil was active in the negotiations and debates that followed the Six-Day War and sponsored the Latin American resolution which blocked the acceptance of anti-Israel proposals.

In 2003 commerce between the two countries was very limited relative to their total trade. Of Israel's \$31.8 billion in exports \$571 million went to South America and \$364 million to Brazil, representing a little more than 1% of Israeli exports and around 0.7% of Brazilian imports. Israeli imports of Brazilian products amounted to \$128 million in 2003 (out of \$381 million from South America), representing less than 0.75% of Israel's total imports of \$34.2 billion and 0.18% of Brazilian exports.

Technical cooperation existed but could have been much more intensive, especially because of Brazil's large semi-desert areas and the necessity to improve agriculture and provide water resources. The economic and commercial interests of Brazil in Arab countries, and the adoption by different governments of Third World policies, in general hostile to Israel, have been a permanent drawback to closer relations between Brazil and Israel. Despite the inroads of the Palestinian cause in Brazil, Brazilians maintain a positive image of Israel, an example of a country which has overcome difficulties and developed both economically and culturally, particularly in the field of agriculture, which remains a permanent challenge in the semi-arid northeastern region of Brazil, an area subject to extensive droughts. This region concentrates some of the poorest communities in the country.

In 2005 the Brazilian government organized in Brasília a meeting with Arab and South American countries to improve commercial relations between the two regions. Despite Brazil's diplomatic efforts, the final document included anti-Israel rhetoric. In 2005, after the meeting in Brasília, the Brazilian foreign minister visited Israel to tighten political and commercial relations between the two countries.

According to Israel's Central Bureau of Statistics, a total of 9,914 Jews born in Brazil immigrated to Israel between 1948 and 2003. In 2003, 207 Jewish immigrants arrived from Brazil.

[Roney Cytrynowicz (2nd ed.)]

BREAD (Heb. **לֶחֶם**, *lehem*), a baked commodity from a cereal flour. The primary sense of *lehem* is “food” in general (Gen. 37:25; Num. 28:2; 1 Kings 5:2; etc.). The Ugaritic *lhm* has the same general sense and the same particular sense, while the Arabic *lahum* has only the specialized sense of “meat” (see relevant lexicons). In biblical times bread was prepared from wheat or barley, but most of the verses mentioning bread do not indicate the exact species used. Bread of *solet* (semolina, the hard particles in the interior of the wheat grain) is mentioned explicitly with reference to sacrifices (Ex. 29:2), and no doubt both the flour and the semolina (*solet*) that were baked in Solomon's ovens were from wheat (1 Kings 5:2–3). The well-known fact that barley ripens earlier than wheat explains why “bread of first fruits” was baked from it (11 Kings 4:42), and for the same reason barley bread was eaten mainly in the early summer.

It is possible that bread was also made from spelt, as was customary in the ancient Orient and as evidenced by, among other things, the remnants of such bread found in Egyptian tombs. The symbolic bread of Ezekiel – a suggestion of the bread of siege (4:9) – prepared from a mixture of different kinds of crops such as wheat, barley, beans, lentils, millet, and emmer was no doubt never resorted to except in the extreme conditions of a siege.

Bread was made of flour or semolina which was a more desirable choice than ordinary flour (Ex. 29:2; Num. 5:15; 1 Kings 5:2; 11 Kings 7:1, 16–18). The flour was made into dough that was baked on coals, like “a cake baked on the hot stones” (1 Kings 19:6; Isa. 44:19), or on special devices akin to various types of ovens. Dough to which leaven was added was called *hamez* (leavened) to differentiate it from *mazzah* (unleavened). The baked bread had several names according to its shape and possibly even according to its weight.

Kikkar (Ex. 29:23) was the round flat loaf of the Arab peasant (*fatteh*). *Hallah* (11 Sam. 6:19) was probably more like the European loaf and is the term commonly used in scripture. *Ugah* (or *ma'og*) seems to have been baked directly on

the fire or on a heated stone but covered with ashes. This explains Ezekiel's squeamishness about the nature of the fuel with which his *'ugah* was baked (Ezek. 4:12–15). As far as can be determined, the *'ugah* was not used in ritual ceremonies (e.g., Gen. 18:6; 19:3, etc.). It is possible that *rakik* ("water") was similar to the *'ugah* but thinner (Lev. 8:26; 1 Chron. 23:29). The word *pat* meant a piece of bread at first (Lev. 2:6; 1 Kings 17:11), but was sometimes used simply to refer to bread in general (Gen. 18:5; 1 Sam. 2:36; 28:22). Apparently, the *levivah* was also made simply from flour and prepared in a special shape (11 Sam. 13:6). Some ate the kernels of fresh corn (called *karmel*) or roasted corn called *kali*.

Apart from the word "bread," the combination "bread and water" was used to indicate food or was descriptive of man's minimal nutritional needs (e.g., Gen. 21:14; and in a different form in 1 Kings 19:6). The symbol of poverty is referred to in the Bible as eating "scant bread and scant water" (1 Kings 22:27; 11 Chron. 18:26), or "sparing bread and scant water" (Isa. 30:20). The phrase "bread and *wine" means "food and drink" but implies that at least the drink was not limited to water (Gen. 14:18). Bread is regarded as the mainstay of man's nourishment, as implied by the expression "every stay of bread and every stay of water" (Isa. 3:1) or "the staff of bread" (Ezek. 4:16; etc.; cf. Prov. 30:8, "my allotted bread"). (On the part played by bread in various forms in the meal offerings of the cult, see *Cult and also *Cooking and Baking.) Bread is also used as a metaphor in the Bible, e.g., the ungodly are said to "eat the bread of wickedness" (Prov. 4:17), while the good wife (*e'shet hayil*) "does not eat the bread of idleness" (Prov. 31:27).

[Samuel Abramsky]

In Rabbinic Literature

The rabbis regarded bread as the staple of any diet and no meal was considered complete without it. They instituted a special benediction to be recited before eating bread made from one of the *five species of cereals grown in Erez Israel. This blessing (popularly called *Ha-Mozi*) is: "Blessed art Thou, Lord our God, King of the universe, Who bringeth forth (*ha-mozi*) bread out of the earth" (Ber. 6:1; cf. Ps. 104:14). The benediction is pronounced by the person who presides at the table (Ber. 46a; see also Matt. 14:19, 15:36, 26:26; Acts 27:35). A person who eats alone is also required to say the benediction. After pronouncing this blessing, other food or beverages may be eaten without saying another blessing except for wine and fruits, whose particular blessings must be recited in all cases (see Sh. Ar., OH 167). Before the benediction over bread is said, one is obliged to wash his or her hands by pouring a quarter "log" (approximately 0.137 lit.) of clean water over them, and drying them properly (OH 158–64; see *Ablution). After eating a portion of bread at least the size of an olive, the full *Grace after Meals has to be said.

A religious duty of Jewish women baking bread is to separate a small portion of the dough, about the size of an olive, as *hallah* (Shab. 2:6) and to burn it (O H 457). From talmu-

dic times, it was the special duty of the housewife to bake the bread for the Sabbath (Ta'an. 24b–25a). This bread, usually prepared from white flour, is called "*hallah*" (Heb. for "loaf;" or because *hallah* was taken from its dough). Two such loaves are placed on the festive Sabbath table as a symbol for the double portion of *manna, which the Israelites in the wilderness received every Friday (Ex. 16:5), or because of the Showbread (see *Temple) in the Temple, which was displayed each Sabbath (Lev. 24:8–9; 1 Sam. 21:7). The bread for the Sabbath is usually of an oblong shape, but for Rosh Ha-Shanah it is round. Where wine is lacking, the evening *Kiddush* (but not the morning *Kiddush* or *Havdalah*) may be made over bread. As a protective measure against assimilation which might lead to intermarriage, the rabbis prohibited Jews from eating food cooked by a gentile, or bread baked by a non-Jew (*pat akkum*). However, this interdiction does not apply to bread sold by a professional non-Jewish baker (*pat palter*), if the ingredients are not otherwise forbidden by the dietary laws (Sh. Ar., YD 112). Bread must be treated with special regard. Raw meat should not be placed on it nor spilled wine be allowed to spoil it; it should not be thrown across the table nor used to support another object (Ber. 50b; DER 9). Providing bread to the poor was regarded as a great religious duty (Isa. 58:7; Prov. 22:9); the withholding of it from the hungry, a sin (Job 22:7). Even Micah, the idolater (Judg. 17), was not deprived of his share in the world to come, because he provided bread for the poor (Sanh. 103b). Whenever R. Huna broke bread for a meal, he first opened his door and said, "Let everyone in need come and eat" (Ta'an. 20b), as is done at the beginning of the Passover *seder*. Bread with salt was regarded in midrashic literature as the poor man's food (Ber. 2b) but sufficient for the humble student of the Torah (Avot 6:4), and it has remained a custom to sprinkle a little salt on bread to be eaten at the beginning of meals. A folk belief ascribed protective power to bread and salt and they were frequently given to newly married couples.

BRÉAL, MICHEL (Jules-Alfred; 1832–1915), French linguist and educator. A student of F. Bopp, one of the founders of comparative linguistics, Bréal taught comparative grammar at the Collège de France from 1864. From 1879 to 1888 he was inspector general of secondary schools. Bréal was a pioneer in the field of semantics on which he wrote his *Essai de sémantique* (1897; *Semantics: Studies in the Science of Meaning*, 1900).

He also published papers on a variety of general linguistic and Indo-European topics.

BREASTPLATE, metal shield placed in front of the mantle of the Torah scroll in Ashkenazi communities. This custom did not develop in Sephardi communities because their Torah scrolls were kept in a case (*tik*) which did not lend itself to such additional decoration. Symbolic of, and sometimes similar to, the breastplate prescribed for the high priest (Ex. 28:15ff.), the object is often called *hoshen mishpat*, the Hebrew for the breastplate. Because of this symbolic identification, the Torah ornament often contained a reproduction of the 12 precious stones which adorned the high priest's breastplate. Since more than one Torah scroll was usually kept in the synagogue Ark, it also became customary during the late Middle Ages to indicate on each scroll the occasion or festival for which it was to be used. From this practical function there gradually developed the practice of including in the breastplate a section specifying the festival on which the scroll was to be utilized. Some of the breastplates are beautiful examples of Jewish ceremonial art.

BRECHER, GIDEON (1797–1873), physician and scholar. He was born in Prossnitz, Moravia, where he was the first Jew to study for the medical profession. Brecher edited *Judah Halevi's *Kuzari*, in four parts with a Hebrew introduction and commentary (1838–40, including notes by S.D. Luzzatto and J. Weisse). He published *Transcendentale Magie und magische Heilarten im Talmud* (1850); *Beschneidung der Israeliten...* (1845), with an introduction by H.B. Fassel and an appendix by M. *Steinschneider, a nephew of Brecher, on circumcision among the Muslims; and *Unsterblichkeitslehre des israelitischen Volkes* (1857; French tr. by I. Cahen, 1857). Brecher's unfinished concordance of biblical names (*Elleh ha-Ketuvim be-Shemot*) was published posthumously in 1876.

BRECHER, GUSTAV (1879–1940), conductor, composer, and writer. Born in Eichwald, Bohemia, Brecher conducted at various operatic theaters and became music director of the Leipzig Opera (1924–33), where he presented the world premieres of Ernst Krenek's *Jonny spielt auf* (1927) and Kurt *Weill's *Mahagonny* (1930). Among his compositions was the symphonic poem *Rosmersholm*, first presented by Richard Strauss (1896). His writings were mostly concerned with operatic problems and include *Ueber Operntexte und Opernuebersetzungen* (1911). In 1940 he and his wife committed suicide on a ship intercepted by the Nazis off the Belgian coast.

BRECKER BROTHERS, U.S. jazz musicians. MICHAEL BRECKER (1949–), saxophonist, flutist, pianist, and RANDY

BRECKER (1945–), trumpeter, pianist, are unusually good weathervanes for jazz history since the 1970s. The two Philadelphia-born brothers played rock, jazz-rock, fusion jazz, and neo-bop in turn as each of these genres rose and have generally been among the most gifted practitioners of whatever musical language they have chosen. Their father was a piano player and both parents were avid jazz fans, so perhaps their career path was inevitable. Randy took up the trumpet in the third grade and by high school was playing with local rhythm and blues bands. He excelled in the jazz program at the University of Indiana and, after the school's Big Band won a competition in 1965, was part of a group sent to Europe and the Middle East by the State Department. He stayed on for three months in Europe as a freelance trumpeter before moving to New York in 1966. Michael followed him quickly, spending a year at Indiana before heading to New York in 1970. Randy had already made his breakthrough, playing with several well-regarded big bands, then joining the nascent Blood, Sweat and Tears for their first album in 1968. He recorded his first session as the group's leader that year, with 19-year-old Michael also playing on the album.

The two brothers became an integral part of the growing fusion scene, forming Dreams with drummer Billy Cobham, and eventually putting together their own band, The Brecker Brothers. Their first album under that name was nominated for four Grammy Awards. The band broke up in 1982, in no small part due to the pressures of other commitments. They co-owned the jazz club Seventh Avenue South from 1977 to 1987 and both musicians were in constant demand for recording sessions (Michael alone appeared on over 500 recordings). As fusion jazz gradually turned into the more soporific "smooth jazz," both brothers returned to their roots in be-bop.

Carr, "Michael Brecker," in: *Jazz: The Rough Guide* (1995); idem, "Randy Brecker," *ibid.*; R. Cook and B. Morton, "Michael Brecker," in: *The Penguin Guide to Jazz on CD: Fourth Edition* (1998).

[George Robinson (2nd ed.)]

BRECLAV (Ger. **Lundenburg**), town in Moravia, Czech Republic. Jews are first mentioned there in 1411. By the middle of the 16th century there was a large Jewish settlement and a synagogue. The community suffered from outbreaks of violence in 1574, 1605, and 1622, and was annihilated when the city was captured by the Swedes in 1643. Jews expelled from the Austrian town of Feldberg settled in Breclav in 1651. In 1697, the council of Moravia (see **Landesjudenschaft*) met there. The 11th of Tevet was kept as a holiday by the Breclav community to commemorate their escape in 1697, when the synagogue roof collapsed while the congregation was waiting to enter. Mordecai *Banet officiated as rabbi there from 1787 to 1789. The historian Heinrich *Graetz taught at the Jewish school from 1850 to 1852. After 1848 Breclav was constituted as a political community (see **Politische Gemeinden*). The Jew-

ish population numbered 30 families, living in 12 houses, in 1702, 66 families in 1726, and 589 persons in 1930 (4.3% of the total population), of whom 432 were of declared Jewish nationality. In April 1942 during the Nazi occupation the Jews were deported to Theresienstadt and from there to the death camps. About 100 survived the Holocaust. The synagogue appurtenances were sent to the Jewish Central Museum in Prague.

[Oskar K. Rabinowicz]

BREDIG, GEORGE (1868–1944), German physical chemist. Bredig was a faculty member at Leipzig University; professor of chemistry at Heidelberg (1901–10); at Technische Hochschule, Zurich; and at Technische Hochschule, Karlsruhe (1911–33). He took out many patents and wrote *Denkmethode der Chemie* (1923). He spent his last years in the U.S.

BREGSTEIN, MARCEL HENRI (1900–1957), Dutch jurist. Born in Amsterdam, Bregstein was professor of civil law at Rotterdam University (1934–39) and professor of commercial and private international law at the University of Amsterdam (1939–40). After the war he became professor of civil law at the University of Amsterdam (1945–57). He served the university as its rector magnificus in 1951–52. He was legal adviser to the Dutch Treasury and a member of the commission for the revision of civil legislation. He represented Holland on the committee for the unification of the legal system of the Benelux countries. His collected works were published posthumously (*Verzameld Werk*, 2 vols., 1960), with a biographical sketch by H.G. Levenbach. His son, PHILIP BREGSTEIN (1932–), is the author of both novels and works of nonfiction and is a filmmaker as well. In both books and documentaries he deals with Amsterdam Jewish history and antisemitism.

[Bart Wallet (2nd ed.)]

BREIDENBACH, WOLF (1751–1829), court agent of several German princes and champion of Jewish emancipation in Germany. He left his birthplace, Breidenbach in Hesse, to attend the yeshivah in Frankfurt and then settled in Offenbach. Breidenbach used his connections with the nobility to press for the abolition of the humiliating *Leibzoll* (“body tax”) which Jews had to pay on entering places where they had no rights of residence. Thanks to his efforts the toll was abolished in centers such as Isenburg, Hamburg (1803), the electorate of Mainz, Regensburg, Frankfurt (1804), and Darmstadt (1805). Breidenbach was a friend of the publisher and scholar B.W. *Heidenheim of Roedelheim, for whose edition of the *maḥzor* he translated several prayers into German. Two of his sons,

Moritz and Julius, held high governmental positions and became converted to Christianity after their father’s death.

[Itta Gutgluck]

BREISACH (or **Alt-Breisach**), town on the Rhine, Germany. Jews are first mentioned there in 1301. The community was annihilated during the *Black Death in 1349. Subsequently, Jews again settled in Breisach but were expelled in 1424. The community was reestablished in 1550, and a cemetery opened. In 1750, a Jew owned a textile factory in Breisach employing 330 weavers. The synagogue, built in 1756, was destroyed in November 1938. The Jewish population numbered 438 in 1825 (14% of the total), 564 in 1880 (17%), but only 231 in 1933. On *Kristallnacht* (Nov. 9–10, 1938), the synagogue was burned down. By 1940, 157 Jews had fled or emigrated, many to nearby France. On Oct. 22, 1940, the last 34 Jews were deported to the *Gurs concentration camp. In 1967, the sole survivor was a woman who tended the two remaining cemeteries.

BREITEL, CHARLES (1908–1991), U.S. judge. A graduate of the University of Michigan and Columbia Law School, Breitel served as a member of the Special Rackets Investigation from 1934 to 1937 and as assistant and then chief of the indictment bureau of the district attorney of New York County through 1941. In that position he was one of a group of young, aggressive prosecutors recruited by Thomas E. Dewey to go after a number of notorious racketeers throughout the 1930s. Dewey became governor of New York and Breitel served as his counsel from 1943 to 1950. During this period Dewey was twice the Republican candidate for president of the United States.

When Dewey named Breitel a judge in 1950, he said he had “the finest legal mind in the state.” Breitel remained on the bench throughout the rest of his career, becoming chief judge of the New York Court of Appeals, the highest in the state, in 1973. He served in that position until reaching the mandatory retirement age of 70 in 1978.

During his tenure on the Appeals Court, he wrote the opinion upholding the state’s liberalized abortion law of 1970. He also wrote an opinion saying that poor people seeking a divorce did not have the right to be represented by a lawyer paid from public funds. Another opinion, affirmed by the United States Supreme Court, upheld the landmark designation for Grand Central Terminal. Long before he joined the Court of Appeals, Breitel’s jurisprudential philosophy was well known. In a 1965 lecture that was widely quoted, he said: “The power of the courts is great indeed but it is not a power to be confused with evangelic illusions of legislative or politi-

cal primacy. If this is true, then self-restraint by the courts in lawmaking must be their greatest contribution to the democratic society.”

[Stewart Kampel (2nd ed.)]

°**BREITHAUPT, JOHANN FRIEDRICH** (1639–1713), German Lutheran Hebraist and Jurist. Breithaupt studied in Jena. He published Latin translations of *Josippon* (Gotha, 1707, reprinted in 1710) and of Rashi on the entire Hebrew Bible (3 vols., Gotha 1710–14). No earlier published version of Rashi’s commentary had covered more than isolated books or sections, and Breithaupt’s gained in importance as, in the 18th and 19th centuries, gentile Hebraists came to restrict themselves more deliberately to biblical Hebrew.

[Raphael Loewe]

BREITNER, HUGO (1873–1946), Austrian socialist economist. Born in Vienna, he worked as a clerk in the Landesbank, one of Vienna’s leading banks, and was prominent in the bank clerks’ union. Breitner became a director of the bank, but relinquished this post in 1918 to take charge of the city’s finances at the invitation of the socialist municipal council. He remained in this post until 1932 when he retired due to ill health. Breitner was a government adviser during the economic crisis of 1919–22, and persuaded the Austrian government to institute a taxation policy which alleviated the tax burden of the lower classes at the expense of the rich and could provide housing for the poor. The government actually built over 60,000 cheap and comfortable homes for workers which became the model for other European cities. In 1934 Breitner was imprisoned for a time by the fascist government of Dollfuss and fled Austria for the United States shortly before the Nazis entered Austria in 1938. From 1939 to 1942 he worked and lectured on research projects at Claremont College in California. He died shortly before his planned return to Vienna.

ADD. BIBLIOGRAPHY: E. Blau, *The Architecture of Red Vienna* (1998); W. Fritz, *Der Kopf des Asiaten Breitner: Politik und Ökonomie im Roten Wien: Hugo Breitner, Leben und Werk* (2000); H. Gruber, *Red Vienna: Experiment in Working Class Culture 1919–1934* (1991).

BREMEN, city and *Land* in Germany. There are a few references to Jews in Bremen from 1199. In 1345 Jews were prohibited from trading in Bremen, but Jewish moneylenders are still mentioned in the 14th century. Subsequently, Jews were not admitted to Bremen until 1803, when the inclusion of the Hanoverian townships of Barkhof and Hastedt within the boundaries of Bremen brought a viable Jewish community within its jurisdiction. Although Jewish settlement was still officially prohibited in Bremen, at the time of the Napoleonic Wars several Jewish families were living in the city, besides those settled in its two suburbs. The community sent representatives (see Carl August *Buchholz) to the Congress of

*Vienna in 1815 to press for Jewish rights in the German cities. The community in Bremen continued to grow, still without official authorization, and numbered 87 in 1821. The situation was regularized by the act of 1848 permitting Jews to settle in the city, and the community moved its institutions from Hastedt to Bremen. A synagogue was built in the Gartenstrasse in 1876. Subsequently, Bremen became an important port of transit for many thousands of Jews emigrating from Eastern Europe to America. The Jewish population in the *Land* Bremen numbered approximately 2,000 in 1933, including 1,314 living in the city. On Nov. 9, 1938, five Jews in Bremen were murdered and Jewish men were imprisoned in the Bremen-Oslebshausen jail until mid-December. By 1941 over 400 Jews had managed to emigrate. About 500 were deported directly from the city between November 1941 and September 1942, including 180 from the Jewish old age home. Other Bremen Jews were deported from different German cities and places of refuge outside Germany. The community was revived after the war, and a new synagogue was inaugurated in 1961. There were about 150 Jews living in the *Land* Bremen in 1967 and 132 in 1989. As a result of the arrival of Jews from the former Soviet Union, their number rose to 1,154 in 2003.

[Zëev Wilhem Falk]

BRENER, PYNCHAS (1931–), chief rabbi of Unión Israelita de Caracas, Venezuela, president of the “Committee of Relations between Churches and Synagogues Established in Venezuela.” Born in Tyszowce, Poland, where his father was a rabbi, he moved with his family to Lima, Peru, when he was four a half years old and was raised and educated there. After obtaining a teacher’s diploma and a B.A. at Yeshiva University, he received the Distinguished Rabbinic Alumnus Award and was ordained a rabbi in 1955. He was honored by the University of Bar-Ilan with an honorary doctorate and with the “History of European Jewry and their Destruction during the Holocaust” Chair. He was recipient of important awards from the Government of Venezuela and one of his books was sponsored by the Venezuelan Congress. A prolific author, Brener published *El Diálogo Eterno, Fe y Razón, Las Escrituras: Hombres e Ideas, Tradición y Actualidad, Luto y Consuelo. The Synagogues of Venezuela and the Caribbean* and a revised version of his *siddur* and *maḥzor* received the 1999 and 2000 Venezuelan National Prizes.

[Jacob Carciente (2nd ed.)]

BRENNER, FRÉDÉRIC (1959–), French photographer. After completing studies in ethnology and sociology, Brenner

began traveling around the world to document Jewish communities, from the United States to Yemen, China, and Russia, collecting a large amount of information and photographs about communities sometimes almost forgotten or capturing diverse aspects of Jewish life in America, Israel, or Europe. This quarter-of-a-century-long quest gave birth to a number of books and exhibitions (International Center for Photography, New York; *Rencontres internationales de la photographie*, Arles; Musée de l'Élysée, Lausanne), and was summarized in 2004 in an exhaustive two-volume book, *Diaspora*, where Brenner's pictures echo texts by the author and major Jewish writers or philosophers (*Derrida, Benny *Levy). The outstanding value of Brenner's work was confirmed by the Niepce Award for photography in 1981 and the Prix de Rome in 1992. He also directed the documentary film *Les derniers marranes* ("The Last Marranos," 1990).

[Dror Franck Sullaper (2nd ed.)]

BRENNER, JOSEPH ḤAYYIM (1881–1921), Hebrew writer. A disciple of the "psychology" approach to literature and a writer of the "uprooted" generation, Brenner became a key figure of the school in modern Hebrew literature; he focused and ruthlessly exposed the anxieties, self-probing, and despair of intellectual anti-heroes overwhelmed by life in a society that had lost meaning and direction. His fiction, bleak and fiercely honest, nourishes, however, a belief in artistic truth where faith in all else has failed. A contemporary and friend of G. *Schoffmann and U.N. *Gnessin, Brenner, like them, was also influenced by M.J. *Berdyczewski. In style, he considered himself a follower of Berdyczewski, and in social outlook, a disciple of Mendele Mokher Seforim. Like many Hebrew writers of the early decades of the 20th century, he was mainly influenced by Russian literature, specifically by writers such as Tolstoy and Dostoevski (he frequently mentions the latter in his letters), and by such European writers as Nietzsche and Hauptmann. Brenner, a novelist, critic, philosopher, translator, editor, and publisher, wrote in Hebrew and in Yiddish. He exercised a powerful personal influence, often exceeding his impact as a writer and a critic, on his generation, and on the following one. His colleagues and friends saw in him "a secular saint caught in a world that was not worthy of him" (H. Zeitlin), and he became their moral, social, and artistic yardstick. Brenner's approach to literature demanded a close link between the creative process, the artistic work, and real life.

Born in Novi Mlini (Ukraine), he studied in yeshivot, including that at Pochep where he befriended U.N. Gnessin, the son of the principal of the yeshivah. From there he went to Gomel where he joined the *Bund and published his first story "*Pat Leḥem*" ("A Loaf of Bread") in *Ha-Meliz* (1900). His collection of short stories *Me-Emek Akhor* ("From the Valley of Trouble"), which was similar both in spirit and style to the "social" stories of the *Ḥibbat Zion period, was published in 1901. In "*Ba-Ḥoref*" ("In Winter," written in 1902 and published in *Ha-Shilo'ah*, Jan–Dec. 1903), a short novel, his independent literary personality emerges for the first time.

Brenner lived in Bialystok and Warsaw after 1900 and served in the Russian army from the end of 1901 to the beginning of 1904. At the outbreak of the Russo-Japanese war, with the help of some friends, he escaped to London, where he was active in the *Po'alei Zion movement. He worked in a printing shop and founded the periodical *Ha-Me'orer* (1906). In 1908, he moved to Lemberg where he was editor of the periodical *Revivim* (1908–09) and wrote a Yiddish monograph on the life of Abraham *Mapu. In 1909, he migrated to Erez Israel where he worked in Ḥaderah and later moved to Jerusalem. During World War I, Brenner became an Ottoman citizen so that he would not have to leave the country. He moved to Jaffa in 1915 and taught Hebrew grammar and literature in the *Herzliah high school. When the Jews of Jaffa and Tel Aviv were driven out by the Turkish authorities he moved to Gan Shemu'el and Ḥaderah, returning to Jaffa after the British conquest of Erez Israel. Brenner contributed to two important periodicals of the Second Aliyah: *Ha-Po'el ha-Za'ir* and *Ha-Aḥdut*, and also to the weekly *Kunteres*. He continued publishing *Revivim* (1913–14), was the editor of the monthly *Ha-Adamah* (1920), and one of the founders of the *Histadrut (1920). In 1921, he returned to Jaffa from Galilee and was murdered in the Abu Kabbir district during the Arab riots on May 2, 1921.

Brenner's life and experiences are reflected in his work. In "*Ba-Ḥoref*," a young village boy goes to a yeshivah in a larger town, then to a big city where he becomes "enlightened" and participates in the life of the Jewish intelligentsia. These phases are reminiscent of Brenner's life at Pochep and Gomel. The story "*Shanah Aḥat*" ("One Year," *Ha-Shilo'ah*, 1908) reflects Brenner's own army service and the story "*Min ha-Mezar*" ("Out of the Straits," *Ha-Olam*, 1908–09) and the play *Me-Ever la-Gevulin* ("Over the Borders," *Ha-Me'orer*, 1907) deal with the life of Jewish workers in London. "*Aggav Orḥa*" (*Saf-rut*, 1909) and "*Azabbim*" (*Shallekhet*, 1911) describe the Second Aliyah to Erez Israel; "*Bein Mayim le-Mayim*" ("Between Water and Water," 1910) and "*Mi-Kan u-mi-Kan*" ("From Here and There," 1911) depict life in the Erez Israel settlements. In this last work, the main hero is the editor of a Hebrew newspaper, as Brenner had been. Brenner was attacked because of the obvious similarity of his characters to actual people and situations; his critics found parallels between the periodical described in "*Mi-Kan u-mi-Kan*" and *Ha-Po'el ha-Za'ir* and its editor Joseph *Aharonovitz. *Shekhol ve-Khishalon* (1920; "Bereavement and Failure," complete edition 1920; *Breakdown and Bereavement*, 1971) describes the transition of a pioneer, who did not succeed on the land, from an agricultural settlement to Jerusalem. His stories "*Ha-Moza*" ("The Solution") and "*Avlah*" ("Injustice," 1920) are set in Erez Israel during World War I. "*Me-Haḥalah*" ("From the Beginning," *Ha-Tekufah*, 1922) describes life in the Herzliah Hebrew high school. Brenner's writings are directly related to real events; a similar approach is also evident in his attitude to social problems. The societies which he describes are treated in a negative light, whether they be Russian Jewry at the beginning of the 20th century, Jewish workers in England, or Jewish Jerusalem

that lived on **halukkah*. His fiction is always concerned with contemporary society and its immediate social problems. The atmosphere of strict authenticity, which is a principal characteristic of Brenner's fiction, is reinforced by the narrative "I" often found in his work. As a consequence, he developed four main literary techniques: (a) The autobiography, in which the narrator recounts his experiences after a lapse of time ("*Ba-Ḥoref*"); (b) The "fragmentary" documentary technique, in which the narrator fragmentarily relates a recent event, without observing chronological sequence ("*Min ha-Mezar*," "*Mi-Kan u-mi-Kan*"); here the effect of verisimilitude and authenticity is stressed by the use of a narrator editor; (c) "Edited memoirs." The editor transfers memoirs written in the first person into the third person and acts as a sort of mediator between the authentic document (in the first person) and the fictitious work (in the third person; *Shekhol ve-Khishalon*); (d) The narrator is a reliable witness to the events, but is not the main character, e.g., the testimony of the narrator who hears the account of Ḥanina Mintz in "*Shanah Aḥat*" or the narrator who recounts the story of the hero in "*Azabbim*" as told to him by the latter.

The two novels *Mi-Saviv la-Nekuddah* and *Bein Mayim le-Mayim*, though written in the style of the "omniscient narrator," have an intimate, personal, and confessional tone. The narratives give the impression of being rooted in personal experiences. The authentic technique answers Brenner's demand for "engagé writing." His characters indulge in confessions and in the exposure of their psyche, revealing their unmediated relation to their fate. Brenner's writings are mostly tales of wandering, in which his characters constantly change their abode, deluding themselves that their destiny will also change. The wanderings are in random directions: from town to city ("*Ba-Ḥoref*" and *Mi-Saviv la-Nekuddah*); from Eastern to Western Europe ("*Min ha-Mezar*"); from the **Diaspora* to Erez Israel ("*Aggav Orḥa*," "*Azabbim*," "*Mi-Kan u-mi-Kan*"); and finally in Erez Israel itself, from the village to Jerusalem (*Shekhol ve-Khishalon*). The hero learns that the change of domicile does not necessarily mean a change of life. He comes to understand that external circumstances are less important than internal factors.

Brenner's protagonists are "anti-heroes" who openly profess their "anti-heroism" ("*Ba-Ḥoref*"); some constantly search for a meaning in life, for their identity, and hope to attain these through change (these are roving characters like Feierman, Abrahamson, Mintz, and Oved-Ezot); others are in despair from the very outset and helplessly submit to their fate (Davidovsky, Menuḥin, and Ḥanokh Hefez). The satirical antagonist is the self-satisfied hero who succeeds in his social life and in his sex life (Bursif, Hamilin, and others), in contrast to the protagonists who are failures and forever outsiders.

Brenner in his endeavor to capture reality used in his fiction the "spoken language" (Hebrew) which at the time hardly existed. He improvised by adapting Yiddish, Russian, and German words and phrases; used Yiddish idioms in Hebrew translation, and created local idioms by introducing

words from the language where the story is set (Anglicisms in *Me-Ever la-Gevulin*, and Arabisms in "*Azabbim*"). He thus broadened the scope of Hebrew. His syntax is also dramatic, close to the spoken word, using parentheses, repetitions, incomplete sentences, and emotive punctuation, e.g., dots, exclamation marks, and hyphens to give the effect of live speech. His language sometimes becomes pathetic through the use of all types of rhetoric repetition. Poetic images come only at climactic points in the narrative where they tend to epitomize the entire work.

In his many articles and essays, he took issue with the views of **Aḥad Ha-Am*. The basic point of contention between them was the interpretation of the *galut* (diaspora) concept which to Brenner was a life based on idleness as opposed to a life based on work. He felt that the Jew in the Diaspora was idle and that his salvation was in labor. Productive work for the Jewish people was a question of life. Judaism was not an ideology but an experience of individuals which could only become a collective experience through a change in the social and economic pattern. As a critic, Brenner wrote about major writers of modern Hebrew literature, including Peretz **Smolenskin* (1910), J.L. **Gordon* (1913), M.J. **Berdycewski* (1913), **Mendele Mokher Seforim* (1907 and 1914), Ḥ.N. **Bialik* (1916), S. **Tchernichowsky* (1912–13), I.L. **Peretz* (1915), U.N. *Gnessin* (1913), **Shalom Aleichem* (1916), and others. He also published criticism on Hebrew literature in general: *Ha-Genre ha-Erez Yisre'eli va-Avizeraihu* ("The Genre of Erez Israel and Its Paraphernalia," 1911), *Bavu'atam shel Olei Ziyyon ba-Sifrut* ("The Image of the Immigrant in our Literature," 1913–19), and wrote about contemporary Hebrew writers, European writers whose works were translated into Hebrew, and on Yiddish Literature. In his literary critiques, Brenner insists on "engagé writing" as opposed to art for art's sake. He nevertheless rejected ideological tendentiousness whether it was socialist or Zionist and advocated the kind of literature that educates by revealing truth. He therefore examined the creative writer on his sincerity and on his ability to harmonize experience and expression. He opposed florid phraseology and verbiage, and also the attempts of the writers in Erez Israel to glorify their actual situation.

Brenner translated into Hebrew: G. Hauptmann's *Die Weber* (1910), Michael Kramer (1911), *Einsame Menschen* (1912), *Fuhrmann Henschel* (1913); Dostoevski's *Crime and Punishment* (1924); Tolstoy's *The Landlord and his Work* (1919); A. Ruppin's *The Jews in Modern Times* (1914); and Trumpeldor's diary. He also wrote and translated into Yiddish. In his translations as in his original writings, Brenner used a simple style, avoiding the "elevated" manner of Mendele and Bialik. Contemporary critics received Brenner the writer with mixed feelings. Some condemned his style and his failure to establish aesthetic distance between the author and the aesthetic object (J. Klausner, Lubetzki). Others praised his courageous sincerity and his impact upon society, despite his artistic shortcomings (S. Zemach). Bialik found him to be an important author who wrote rather carelessly, while Berdycewski

stressed the great sincerity of his writings which compensated for his shortcomings as a novelist. Critics of a later generation (D. Sadan) emphasized his complex inner world and his heroes' attitudes to life; others tried to interpret Brenner from a purely sociological point of view. Modern Israel critics tend to refer back to Brenner, some stressing the existentialist aspects of his works (M. Megeed, N. Zach), while others praise the structural and stylistic aspects (D. Miron, N. Zach, G. Shaked), pointing out the simplicity, directness, and authenticity of the style. Brenner became the prototype for many young writers who tried to break away from the patriotic literature written in the wake of Israel's War of Independence. Through his writings they found a link with European existentialist literature. A comprehensive study, "The Literary Creation of Joseph Hayyim Brenner" (Hebr., 1972), has been published by A. Cohen.

A list of Brenner's works in English translation appears in Goell, *Bibliography*, 64–87. Excerpts from *Breakdown and Bereavement* are available in E. Ben Ezer (ed.), *Sleepwalkers and Other Stories: The Arab in Hebrew Fiction* (1999); "Nerves" is included in A. Lelchuk and G. Shaked (eds.), *Eight Great Short Hebrew Novels* (1983).

[Gershon Shaked]

BRENNER, ROSE (1884–1926), fifth president of the *National Council of Jewish Women (NCJW), helped build the organization's national membership from 30,000 to 52,000 during her tenure. Born in Brooklyn to Louise (Blumeneau) and Jacob Brenner, a judge, Brenner attended Adelphi Col-

lege, where she earned a B.A. in 1908. While still in college, Brenner took on the responsibility of raising her five younger brothers and sisters after their mother died.

After graduation, Brenner became involved in the NCJW's Brooklyn Section, serving as president from 1912 to 1918. While in office, she suggested that the Sabbath nearest Purim be designated "Council Sabbath"; synagogues across the nation later recognized and observed this date. Brenner also served as a national vice president (1915–16) and eventually national president (1920–26) of the NCJW. During her presidency, the Council's speakers bureau and junior division grew, and the Council pushed for child-labor regulations and for America's participation in the League of Nations. Likewise, under her leadership, the NCJW extended its immigrant aid work to include social-welfare services for Jews living in rural areas. NCJW's Department of Farm and Rural Work was the only organization that provided ongoing services for the religious, health, and education needs of rural Jews. The Council organized and hired traveling Hebrew teachers, nurses, and lecturers, who shared information on a variety of subjects – ranging from Jewish history to sexual hygiene – with Jewish residents in rural communities. The organization also arranged Jewish holiday celebrations and provided the required foods and ritual objects.

Brenner served on the Brooklyn School Board, was the first woman on the executive board of trustees of Beth Elohim Temple (Brooklyn), and was a president of its sisterhood. Although she remained single, she had a lifelong companion, Fannie R. Cohen.

[Aleisa Fishman (2nd ed.)]

BRENNER, SYDNEY (1927–), British scientist and Nobel laureate. Brenner was born in Germiston, South Africa, and studied medicine at the University of the Witwatersrand in Johannesburg, which incorporated a medical B.Sc. course and stimulated his interest in research. He published his first paper at age 18 and obtained an M.Sc. in cytogenetics in 1947 before becoming an M.D. in 1951. He received his Ph.D. in bacterial viruses from Oxford University in 1954, where his contacts with Francis Crick and Jim Watson determined the direction of his research interests, further stimulated by a visit to the U.S. on a Carnegie Corporation Traveling Fellowship. After a brief return to South Africa he joined the Medical Research Council's Laboratory of Molecular Biology in Cambridge in 1956, of which he was director in 1979–86. He directed the molecular genetics unit in 1986–91. In 1996 he was appointed

president and director of science at the Molecular Sciences Institute, La Jolla, California, and in 2000 distinguished research professor at the Salk Institute, La Jolla. He used the small worm (nematode) *Caenorhabditis elegans* and later the Japanese pufferfish *Fugu* to study the genetic control of nervous system development. He and his colleagues correlated gene mutations with developmental abnormalities initially by anatomical and later by gene-cloning techniques. These studies helped establish the important principle that the origin of human diseases can be investigated by detecting mutant genes and the abnormal proteins these genes encode. They foreshadowed the medical benefits anticipated from mapping the human genome. He was awarded the Nobel Prize for medicine in 2002 (jointly with Robert Horwitz and John Sulston). His honors include FRS (1965), Lasker awards (1971 and 2000), Gairdner awards (1978 and 1991), and the Harvey Prize of the Israel Technion (1987).

[Michael Denman (2nd ed.)]

BRENNER, TEDDY (1917–2000), U.S. boxing matchmaker, member of the International Boxing Hall of Fame. Widely acclaimed as the greatest matchmaker in boxing history, Brenner promoted many fights at Madison Square Garden, including the historic Muhammad Ali-Joe Frazier match in 1971. Born in Brooklyn, N.Y., Brenner was first exposed to boxing as a teenager, working the corner of a friend at the 1934 Golden Gloves. After serving with the Navy in the Pacific during World War II, Brenner started working as a matchmaker in New Brunswick, N.J., Laurel Gardens in Newark, N.J., Brooklyn's Eastern Parkway arena, Manhattan's St. Nicolas arena, the Coney Island Velodrome, and Long Beach Stadium in New York before moving full-time to Madison Square Garden. Brenner worked on and off at the Garden from 1947 to 1978, before joining Bob Arum's Top Rank in 1980. "A matchmaker is a guy who starts fights and then gets out of the way," is how Brenner defined his occupation. His philosophy for arranging matches was simple: Would he buy a ticket, and was the public interested? "The best kind of match you can make," he said, "is one where you yourself wonder which is the better man." While this conflicted with managers who preferred their boxers to take on easy competition, it nevertheless made for hundreds of exciting fights that fans were willing to pay to see. His matches included headliners such as Muhammad Ali, Sugar Ray Robinson, and George Foreman, but also amateurs in whom he saw potential, like the young Roberto Duran, Alexis Arguello, and Wilfred Benitez. "There is Teddy Brenner, and there is everybody else – he was clearly the best," said Arum, adding: "He was honest to a fault. He was a dead-honest guy. Everybody knew they could take Teddy's word. In a business that has so many sleazy people, Teddy's word was all you needed." Brenner received the Boxing Writers' Association of America's James J. Walker Award for "Long and Meritorious Service to Boxing" in 1971; he is the author of *Only the Ring Was Square* (1981).

[Elli Wohlgeleinter (2nd ed.)]

BRENNER, VICTOR (1871–1924), U.S. medalist. Born in Lithuania, Brenner received training in various crafts before going to America in 1890. He settled in New York, worked as a die cutter and engraver of badges, and studied at the Art Students' League and the National Gallery of Design. In 1898 he went to Paris where he studied under Roty and Charpentier, the famous medalists. On his return to the United States he was recognized as one of the country's foremost medalists. He was chosen to model Theodore Roosevelt's head for the Panama Canal medal and Lincoln's for the familiar one-cent piece, which remained unchanged for 50 years. The Lincoln design was well liked, except for the undue prominence given to Brenner's initials. Brenner made many medallions, including Amerigo Vespucci, John Paul Jones, and Whistler. Brenner also displayed a mastery of the nude or draped human figure. His three-dimensional work is less known; an outstanding example is the Schenley Memorial Fountain in Pittsburgh (1916). Of Jewish interest are his engravings of the pianist and composer Rafael Joseffy, the scholar Solomon Schechter, the painter Abraham Walkowitz, and the financiers Jacob Schiff and Solomon Loeb. Brenner is one of the few holders of the J. Sanford Saltus Award of the American Numismatist Society.

BRENTANO, U.S. family of booksellers. **AUGUST** (1831–1886) was the founder of the firm of Brentano's, the largest book-selling firm in the world with bookstores in many cities of the United States and London. Born in Austria, Brentano immigrated to the United States in 1853, where he sold newspapers on the streets of New York for two years before setting up a stand for the sale of local and foreign newspapers and magazines. In 1858 he opened a book and stationery store, and in 1870 established the much larger Brentano's Literary Emporium which became New York's leading bookstore, and served at the same time as a meeting place for the literati in New York City. In the 1870s he was joined in his business by his nephews **AUGUST** (1853–1899) who was born in Evansville, Indiana, **ARTHUR** (1858–1944), and **SIMON** (1859–1915), the latter two natives of Cincinnati. In 1877 August Brentano sold the business to his nephews, who expanded the firm and incorporated it in 1887. Simon, who had become head of the firm upon his uncle's retirement, devoted much of his time to the study of fire control and wrote a number of books on the subject. His principal work, which was translated into many languages, is entitled *The Control of Fire* (1904). In 1894 August Brentano was forced to retire because of illness, leaving his brothers Simon and Arthur to continue to direct and expand Brentano's, which they converted from a corporation into a partnership, with Simon as president of the company. Simon was later succeeded by his brother Arthur, who was also director of Brentano's Ltd., London, and Brentano's S.A., Paris. Arthur Brentano,

a fervent canoeist, founded the American Canoe Association and published its magazine. LOWELL (1895–1950), Simon's son, entered the firm after graduation from Harvard in 1918 and took over the responsibility for Brentano's editorial department. He wrote a number of novels and plays, some in collaboration with other writers: *Zeppelin* (1929); *The Spider* (1932); *Family Affairs* (1929); *The Penguin Pool Murder* (1931); *Lady Cop* (1934); *Torches in the Night* (1937); *Great Lady* (1938); and *Bride of a Thousand Cedars: A Novel of Bermuda* (1939). Some of his books were made into motion pictures. In 1933 he collaborated with Mae West on the screenplay for *I'm No Angel*, in which she starred with Cary Grant.

Brentano's headquarters, on New York City's Fifth Avenue, was the largest bookstore in the city and the third largest in the country, with 250,000 books for sale in its 31,000 sq. ft. The bookstore chain had some 20 branches from Chicago to San Francisco, including the Pentagon. One of the oldest and most respected booksellers, Brentano's owed its success to its vast assortment of books, the elegance of its premises, the dedication of each successive family member to the business, its erudite, hand-picked staff, and its remarkably cordial service.

BRESCH, JUDAH LOEB BEN MOSES NAPHTALI (Leyb Brześć; 15th–16th century), Polish-born translator of a Yiddish Pentateuch (*Ḥamishah ḥumshei torah im kezat perush Rashi*), published in Cremona in 1560 and based on the Augsburg and Constance translations of 1544, but radically transforming their slavishly literal style into a slightly more idiomatic Yiddish while still retaining much from the older literal syntactic tradition of biblical translation. He broadened the audience appeal of his version by integrating midrashic material into the text and adding an abbreviated version of Rashi's commentary. The rhymed preface to the translation, printed with vowel pointing, provides detailed information on 16th century Yiddish pronunciation.

[Ignacy Yizhak Schiper / Jerold c. Frakes (2nd ed.)]

BRESCIA, city in northern Italy. Inscriptions found in Brescia mentioning a *Mater Synagogae*, and an *Archisynagogos, show that there was a Jewish community there in the late classical period. In 1426 Brescia came under the sovereignty of Venice; in 1444 and 1458 the town unsuccessfully applied to the pope for permission to admit Jewish moneylenders. Later, however, moneylending was evidently permitted. The Jews in Brescia were attacked in 1475 after the blood libel case of Simon of *Trent, but further rioting was prevented by

order of the Venetian Senate. In 1481 an attempt to prohibit moneylending in Brescia was unsuccessful. *Bernardino da Feltre preached anti-Jewish sermons in 1494 and a number of Jews were again expelled from the city. Between 1491 and 1494 the printer Gershom b. Moses *Soncino was active in Brescia. His productions included the *Meshal ha-Kadmoni* of Isaac ibn *Sahula, the first illustrated Hebrew book; the *Sefer Mah̄barot le-Mar Immanuel ha-Romi* (1491) of *Immanuel b. Solomon of Rome, and the third complete edition of the Hebrew Bible (1494).

After the French captured Brescia in 1509, the houses of the Jews were plundered, moneylending was prohibited, and most of the Jews were expelled. On its reversion to Venice, however, in 1519, they were allowed to return. One of the most famous rabbis of Brescia and Mantua was Joseph (called Giuseppe) Castelfranco, ben Samuel, who lived during the first half of the 16th century. Perhaps he was the founder of Yeshivah of Brescia, mentioned by Eliah *Capsali in his *Divrey Hayamim*. Most of the Jews were expelled again in 1572 and no official Jewish community existed in Brescia until the 19th century. In 1820 forty Jews lived in Brescia and owned also a synagogue. They were mainly from Verona and devoted to commercial activities. The majority of them moved to Milan in 1840s.

[Umberto (Moses David) Cassuto]

BRESLASU, MARCEL (Bresliska; 1903–1966), Romanian poet and musician. Breslasu was born in Bucharest, where he studied law and music. His biblical poem *Cantarea Cantarilor* ("Song of Songs," 1938) was staged as an oratorio at the Bucharest Opera. Best known as a fabulist, he also wrote *Niste fabule mici si mari pentru mari si mici* ("Fables Small and Big for the Big and Small," 1946) notable for their originality and didactic satire; *Dialectica poeziei sau cantece despre cantec* ("Dialectics of Poetry or Songs about Song," 1957); *Alte niste fabule* ("Other Fables," 1962); *O noua poveste a vorbei* ("A New Story to Tell," 1963), all published in Bucharest. He also published volumes of poems for young adults. Breslasu was known for the musicality of his verse. During the 1930s he published poems in Jewish journals too, using the Hebrew pen name "Ahad Katan." After World War II Breslasu, who became a Communist in 1942, became a politically engaged poet. He published "socialist-realist" poems and was editor of the literary review *Secolul XX* ("The Twentieth Century") from 1961 to 1966 after serving as rector of the Bucharest Art Institute in 1950–53. He

also wrote nonconformist poems, including love poems and a long poem based on the biblical book of Job. They were published only in fragments after his death.

[Lucian-Zeev Herscovici (2nd ed.)]

BRESLAU (Polish **Wrocław**), city in Silesia, Poland (in Germany until 1945). The ownership by Jews of villages in the vicinity of Breslau (Klein-Tinz and Falkendorf) is recorded (1180–1208). The earliest evidence of Jews in Breslau is a tombstone of 1203. In 1267 a church synod decided to restrict the rights of the Jews in Breslau but Duke Henry IV granted them privileges between 1270 and 1290. In 1347 the community was placed under the jurisdiction of the municipality. The medieval community owned synagogues, a bathhouse, and cemeteries, from which a number of tombstones have survived. In the course of the 14th century, Jews were expelled from Breslau several times (1319, 1349, 1360). In 1453, 41 Jews were burned at the stake and the rest expelled after they had been accused of desecrating the *Host by the Franciscan John of *Capistrano. An imperial privilege *de non tolerandis Judaeis* was given to Breslau in 1455 excluding all Jews from the city, excepting those visiting the fair. The prohibition remained in force *de jure* until 1744.

From the beginning of the 16th century Jews began to visit the city, and sometimes stayed longer periods, in order to attend the fairs, which were important for trading throughout the neighboring countries. The municipal council gradually began extending visiting permits to Jews at other times. The Jews also instituted a special type of communal organization for those attending the fair. The “fair treasurers” (*Parnasei ha-Yarid*) represented the Jews to the authorities, levied imposts from them, which they assessed in accordance with Jewish law, and took precautions against thieves and swindlers. Associated with them were the “fair arbitrators” (*Dayyanei ha-Yarid*), two from Poland and one from Moravia, who were empowered to levy fines and impose the ban. The “fair committee” (*Va'ad ha-Yarid*) supervised dietary requirements for Jews attending the fairs. Functioning “between the fairs” were special officials (the *Schammesse* – שַׁמֶּשֶׁת) appointed by the Council of the Four Lands. It levied certain sums from Jews attending the fairs, and also farmed out the right to convey *etrogim* for the Jews in Poland via the Breslau fair. These officials eventually became permanent residents of Breslau, as did a number of other Jews who attended the fairs.

In the late 17th century individual Jews succeeded in obtaining limited rights of settlement in Breslau because of their usefulness to the imperial mint and their importance for trade with Poland and Bohemia-Moravia. The two categories of *Schutzjuden* (“protected Jews”) enjoyed either imperial or municipal protection. They were grouped according to their place of origin in various synagogue congregations (*Schulen*),

forming a loose union without a rabbi or cemetery, since there was officially no community in existence. They combined with the congregations formed from about 1670 in the suburbs of Breslau. One of the oldest institutions of the Breslau community was the burial society, established in 1726.

After the capture of the city by the Prussians in 1741, the new authorities permitted the organization of a community limited to 12 families in 1744, and confirmed the appointment of Bendix Reuben Gomperz (Baruch Wesel) as its first rabbi. The community acquired a cemetery in 1761, replacing the cemeteries of *Lissa, *Dyhernfurth, and *Krotoszyn. The importance of the Jews for trade with Poland led the authorities gradually to increase the number of Jews admitted as residents. These held various degrees of restricted rights, and consisted of the “generally privileged” (*Generalprivilegierte*), the “privileged,” the “tolerated,” and the *Fix-Entristen*, i.e., those paying a regular fee for temporary sojourn, as well as the *Schutzgenossen*, i.e., persons employed in communal or private service. In 1776, there were nearly 2,000 Jews in Breslau. In 1791 a new regulation divided the Jews into *Generalprivilegierte*, who formed the “community”; their relatives, *Stammnumeranten*; and *Extra-Ordinaere* (i.e., those outside the privileged categories). Although the latter formed the majority, they were not recognized as members of the community. The community was led and controlled by the wealthy “generally privileged” Jews. The leading Breslau families were generally in favor of *Haskalah and *Reform tendencies. Those of this group who stopped short of conversion, either for themselves or their children, attempted to prepare for emancipation by providing what they considered a suitable education for Jews. In order to carry out their ideas, they utilized their connections with tolerant Prussian officials, to establish schools providing a modernized education for the poorer families. Such were the Koenigliche Wilhelmsschule, established in 1791, and the Maedchenschule fuer arme Toechter (“School for Poor Girls,” 1801), which were recognized and encouraged by the government. These Haskalah-promoted schools met with resistance from Orthodox Jews.

Modern Community

The division between the majority of the community and its leadership became accentuated after the Prussian Emancipation Edict of 1812. The new communal representatives increasingly tended to work for Reform and assimilation. Their attitude gave rise to serious dissensions within the community. Solomon *Tiktin (d. 1843) and his son Gedaliah (officiated 1843–86) led the Orthodox wing against the Reform wing led by Abraham *Geiger (officiated in Breslau 1840–63). The community, however, remained an “Einheitsgemeinde” (according to the terms of the Statute of March 6, 1856) with two separate religious commissions (*Kultuskommission*), whose Orthodox and Liberal sections each maintained their own rabbis, synagogues, and schools. The “Storch” synagogue (1829), the first large synagogue building to be constructed in Breslau, and the private synagogues were governed by the Orthodox com-

mission. Both sections of the community led an active Jewish religious and cultural life.

Several rabbis of Breslau were distinguished scholars. Noted among the Orthodox section were Joseph Jonas Fraenkel (1705–1793), Isaiah b. Judah Leib *Berlin (Pick), Ferdinand Rosenthal (1887–1921), Moses Hoffmann (1921–38), and B. Hamburger (1938 until his deportation to Poland in 1943). Liberals included besides Abraham Geiger, Manuel *Joel (1863–90), Jacob *Guttman (1891–1919), Hermann *Vogelstein, and Reinhold Lewin (1938 until his deportation to Poland in 1943). Alongside the talmudic scholars, there gathered a literary circle (Breslauer Dichterschule) of Hebrew essayists and authors (Mendel Broese, Marcus Friedenthal, Raphael Fuerstenthal, Moses Koerner, Joel *Loewe-Brill, Heinrich Miro, Solomon *Pappenheim, Suesskind Raschkow, and David Samoszc). A “Bruedergesellschaft” was founded before 1800.

The study and reading circle Israelitischer Lehr- und Leserverein was established in 1842, its library later belonging to the community. The first modern Jewish theological seminary, the Juedisch-Theologisches Seminar, was established in Breslau by Zachariah *Frankel in 1854. With its celebrated library it became a center of Jewish scholarship and spiritual activity until 1938. It also published the first comprehensive Jewish learned journal, **Monatsschrift fuer Geschichte und Wissenschaft des Judentums* (MGWJ). The first Jewish students’ fraternity, Viadrina, was founded in Breslau in 1886, as a reaction to the antisemitic tone of the general student bodies. The *Juedisches Volksblatt*, later renamed *Juedische Zeitung fuer Ostdeutschland*, was published in Breslau from 1895 to 1937, and the *Breslauer Juedisches Gemeindeblatt* from 1924 to 1938. The *Blau-Weiss youth movement was founded in Breslau by Joseph Marcus in 1912. Jewish cultural activities expanded after World War I. A Jewish elementary school was established in 1921, followed two years later by a Reformrealgymnasium, both of conservative orientation. The “Neuer Juedischer Schulverein” established a school of Liberal orientation. A youth institute and a home for the aged was opened in 1930. Two outstanding personalities of the Breslau community were the historian Heinrich *Graetz, of the theological seminary, and Ferdinand *Lassalle, one of the founders of the German workers movement.

The Jewish population of Breslau numbered 3,255 in 1810; 7,384 in 1849; 13,916 in 1871; 19,743 in 1900; 20,212 in 1910; 23,240 in 1925; 20,202 in 1933; and 10,309 in 1939.

Under Nazi Germany and After

In November 1938, Jewish educational, cultural, and social activities were disrupted. All prayer houses, including the “New Synagogue” (completed in 1872), as well as schools, were destroyed. The “Storch” synagogue was the sole house of worship still standing after November 1938. Beginning in September 1941, Breslau Jews were driven from their homes and crowded into “*Judenhaeuser*,” to be deported a few months later to Gruessau, Tormersdorf, and other places in Silesia, and from

there to *Auschwitz. From April 1942 the remaining Jews in Breslau were deported directly to Auschwitz, *Sobibor, *Riga, or *Theresienstadt. By 1943 only partners of mixed marriages and some children remained of the Breslau community. Of the 3,800 deported to Theresienstadt, only 200 survived. Most of the others who were deported also perished. The oldest cemetery, consecrated in 1761, was destroyed. The communal archives, founded in 1924, were preserved in a cemetery building. They were transferred to the Jewish Historical Institute in Warsaw in 1945.

After the war a community in Breslau was established by Jews from Poland, with the “Storch” as its synagogue. In 1960 there were about 1,200 Jewish families living in Breslau, and there were three Jewish producers’ cooperatives. In 1967 a Yiddish state elementary school, that also provided secondary education, functioned in the city. After the Six-Day War most of the Jews who lived in the city immigrated to Israel. About 70 remained in 1990.

Hebrew Printing

Some 190 Hebrew books were printed in Breslau between 1719 and the end of the 19th century. Toward the end of the 18th century the Grassche Stadt-Buchdruckerei was active in face of fierce opposition from the privileged *Dyhernfurth printers. When the Dyhernfurth monopolies lapsed, Loebel Katzenellenbogen-Sulzbach, who had served his apprenticeship in Dyhernfurth, set up a press in 1814, with his son Hirsch as partner from 1825 and sole owner from 1836 to 1877, when it was sold to T. Schatzky.

[Bernhard Brillling]

BRESLAU, ARYEH LOEB BEN ḤAYYIM (1741–1809), rabbi and author. Aryeh Loeb was born in Breslau but lived from his childhood in Lissa. He served first as rabbi in the *bet ha-midrash* of Daniel Jaffe in Berlin (see responsa *Penei Aryeh*, no. 1), then as rabbi in Emden, and in 1781 succeeded Abraham Lipschutz as rabbi of Rotterdam, where he remained for the rest of his life (*ibid.*, no. 40). He gained a reputation as a profound talmudist, and several of the outstanding scholars of the time, among them Phinehas ha-Levi *Horowitz and Meir *Weyl, addressed halakhic problems to him. He was the author of *Penei Aryeh* (Amsterdam, 1790), responsa, halakhic rulings, and expositions, in which he included *Ma'amar Yesod ha-Shetarot* in 12 chapters. His responsa, distinguished by their simple and clear style and written in a pure Hebrew, reflect his tendency toward a certain degree of independence in

halakhic decision. They also contain explanations of various biblical and midrashic passages (no. 60). In connection with a responsum on levirate marriage, he discusses the problem of immortality, stressing that the essence of levirate marriage is connected with the doctrine of metempsychosis and the improvement of the soul (*tikkun ha-nefesh*), and its ultimate perfection (no. 79). Breslau also had a general education, and was in touch with Christian scholars in Holland. The prayers that he composed in Hebrew in connection with the Franco-Dutch war of 1793 were published both in Hebrew (*Tefillot u-Vakkashot*, Amsterdam, 1793), and in a Dutch translation with an introduction by the Christian Jan Scharp (Rotterdam, 1793). One of his poems, "*Mizmor le-Shabbat*," shows considerable talent. His sons adopted the family name Lowenstamm ("descendant of the lion") in reference to their father's name Aryeh ("lion") Loeb. Two of them, Abraham and Hayyim Lowenstamm, followed him in the rabbinate, as did Menahem Mendel, the son of the latter who was rabbi of Rotterdam.

[Yehoshua Horowitz]

BRESLAU, ISADORE (1897–1978), U.S. rabbi and communal leader. Born in Kabilnik, Russia, in 1897, Breslau came to Holyoke, Massachusetts, with his parents in 1906. When he was a teenager, the family moved to Albany, New York. In 1917, he interrupted his college studies at New York University to join the United States Navy during World War I, and served as a furnace stoker on the battleship *USS Kentucky*. After the war, he returned to NYU to earn his degree. He then graduated from Albany Law School, but decided against taking the bar exam or practicing law because of what he perceived as the flaws in the American justice system. Breslau then attended Albany State College. In 1923, Breslau enrolled in the Jewish Institute of Religion, where he studied under Rabbi Stephen S. *Wise, who remained Breslau's close friend.

Breslau occupied pulpits at the Washington Heights Free Synagogue and the 82nd Street Synagogue, both in New York, and Temple Israel in Waterbury, Connecticut. The Depression posed financial difficulties for many congregations, and Breslau's was no different. This forced him to leave the rabbinate to find another means to support his family, although Breslau continued to serve as a volunteer rabbi for High Holiday services.

Moving to Washington, D.C., the Breslaus opened a branch of the family business, the Mill End Shops. While his wife worked in the store, beginning in 1939 Breslau served for two years as unpaid director of the American Zionist Bureau, a forerunner of AIPAC. In 1939, he also served as an American delegate to the World Zionist Congress in Geneva. He was appointed executive director of the Zionist Organization of America in 1940, a position he kept for almost two years.

Breslau's days with the AZB and ZOA were among his happiest. He met daily to brief Justice Louis D. Brandeis, chair of the ZOA, on matters pertaining to Palestine and the Jewish community. However, the rise of Hitler and Nazism in the 1930s moved the focus of Zionism away from the Jews of Palestine and toward the endangered Jews of Europe.

Frustrated by the inability of American Jewish organizations to forestall the Nazi threat to the Jews, Breslau volunteered to serve as a military chaplain in 1943. In 1944 the Army assigned him to the European Theater, where Breslau worked with Jews liberated from Vichy France in Marseilles, and then to Germany, where Breslau became the first Jewish chaplain in Berlin, Germany, after the fall of the Nazi regime.

After the war, Breslau served as department chaplain for the Department of the District of Columbia Jewish War Veterans of the United States. In 1949, he founded and served as the first president of the Jewish Community Council of Washington, D.C., and as president of the American Association for Jewish Education, which he was also instrumental in founding.

Breslau headed the Louis D. Brandeis Zionist District of Washington, D.C., served as the chairman of the United Palestine Appeal of the Seaboard Region, and helped found and served as co-chair of the United Jewish Appeal in Washington D.C. In addition, he was a member of the National United Jewish Appeal Executive.

[Michael Feldberg (2nd ed.)]

BRESLAU, JOSEPH MOSES BEN DAVID (1691–1752), German rabbinical scholar apparently born in the city of that name. Breslau studied under Abraham *Broda, whose daughter he married. He served as rabbi in Krefeld and, from 1743 until his death, in Bamberg. He was author of (1) *Shoresh Yosef* (1730), on the laws and principles of *Migo* (in talmudic law the credence given to a party in a lawsuit on the premise that if he were lying he could have told a more convincing lie); (2) *Hok Yosef* (1730), on the laws of Passover, comprising novellae on the *Orah Hayyim* sections of the *Shulhan Arukh (429–94). In it Breslau criticizes the *Hok Yaakov* of Jacob Reischer. The two books were published together under the title *Hukkim Tovim* (1767). Reischer wrote a reply entitled *Lo Hibbit Ayen be-Yaakov*, which was published in the 1814 edition of *Hukkim Tovim*; (3) *Ketonet Yosef*, sermons, published by his son, Abraham of Muehlhausen, as an appendix to the *Toledot Avraham* (1769) of Broda. His glosses on *Orah Hayyim* and on *Yoreh De'ah* as well as responsa remain in manuscript.

BIBLIOGRAPHY: Fuenn, *Keneset*, 459; A. Eckstein, *Geschichte der Juden im ehemaligen Fuerstbistum Bamberg* (1898), 171–3; S.M. Chones, *Toledot ha-Posekim* (1910), 262.

[Yehoshua Horowitz]

BRESLAU, JOSEPH (1887–1957), U.S. labor leader. Breslau, who was born in Odessa, went to the United States in 1907. He worked as a cloak presser in the garment industry and joined

a local union in 1909. Breslaw was rapidly promoted, and in 1916 became its manager. By 1922 he had become the dominant voice in one of the metropolitan area's most important locals of the International Ladies' Garment Workers' Union, and was elected vice president of the ILGWU, leading the Union's right wing in the struggle against the communists. Unlike other prominent immigrant Jewish unionists, especially those who went to America after the 1905 revolution, Breslaw did not share a revolutionary tradition or evince socialist sympathies. He acted as a right-wing mainstay for the anti-Communist administration of President Morris Sigman between 1922 and 1925, but was forced off the General Executive Board during the compromise effort with the radical wing. However, upon the collapse of the compromise arrangements with the Communists, Breslaw was called back to office (1929), and a year later was placed in charge of the successful strike in New York City's dress industry. He was a loyal lieutenant to David *Dubinsky. Though more conservative than most garment workers, Breslaw, throughout his career, was still more radical than the non-Jewish members of the American labor movement. In 1936 he joined the newly founded American Labor Party, and became a member of its state executive committee. Breslaw was prominent in establishing the ILGWU's health center. He also served on various committees to aid Palestine labor colonies, and, for over a decade, was chairman of the American Trade Union Council for the *Histadrut.

[Melvin Dubofsky]

BRESSE, region in France. There is proof of Jewish settlement in Bresse from at least 1275. The main localities inhabited by Jews during the Middle Ages were *Bourg-en-Bresse, Bâgé, Pont-de-Vaux, Louhans, and Pont-de-Veyle. Jews often levied the tolls. They remained longest in Bâgé, leaving the town in 1524.

[Bernhard Blumenkranz]

BRESSELAU, MEYER ISRAEL (d. 1839), Hebrew writer and one of the leaders of the Reform movement. He was the state notary for the Jews of Hamburg. In 1818, together with I.S. *Fraenkel he edited and adapted a prayer book for the Hamburg Reform Temple under the title *Seder ha-Avodah*. In answer to *Elleh Divrei ha-Berit* (Altona, 1819), a pamphlet which collated the views of the greatest Orthodox rabbis of Western Europe against Reform Judaism and its innovations, he published anonymously his polemic work *Herev Nokemet Nekam-Berit* (Dessau, 1819; reprinted as appendix 4 in S. Bernfeld's *Toledot ha-Reformazyon ha-Datit be-Yisrael*, 1900). *Herev Nokemet Nekam-Berit*, a rhymed work written in a satirical biblical style, is remarkable in its witty take-off on the Orthodox rabbis who opposed the reforms in the Hamburg Reform synagogue (temple). It ranks among the best Hebrew polemic literature written at the time of the Haskalah. To counteract

Bresselau's polemic work M.L. Reinitz published *Lahat ha-Herev ha-Mithappekhet* (1820).

[Gedalyah Elkoshi]

BRESSLAU, ERNST (1877–1935), German zoologist. After taking a medical degree, he studied zoology at the University of Strasbourg, where he subsequently became professor. His major research interests were the origin of the mammary glands and the biology of the turbellarians, a class of flatworms. When in 1918 Strasbourg became part of France, Bresslau went to Frankfurt as head of the zoology department of the Institute for Experimental Therapy founded by Paul Ehrlich. In 1926 he became professor of zoology at the University of Cologne, where he established and built up an outstanding research institute. Bresslau left Germany shortly after Hitler's accession to power and in 1934 became professor of zoology at the newly founded University of São Paulo, Brazil. He started to organize a zoological institute there but died before his task was completed.

[Mordecai L. Gabriel]

BRESSLAU, HARRY (1848–1926), German historian. Born in Dannenberg, Hanover, he studied law in Goettingen and later history and philosophy at Berlin University, especially encouraged by Wilhelm Droysen. In 1869, he received his doctorate from Georg Waitz in Goettingen. Then he taught at the Philanthropin school at Frankfurt and at a Jewish orphanage in Berlin. Bresslau joined the faculty of the University of Berlin in 1872 and was appointed associate professor in 1877. From 1890 to 1918 he was professor at the University of Strasbourg, but when Strasbourg reverted to France in 1918, he was expelled as a militant German national and left for Hamburg. His remaining years he spent in Heidelberg. Bresslau was a member of the editorial board of the *Monumenta Germaniae Historica* and published a history of the *Monumenta* (1921). He edited the journal of the society for the study of earlier German history *Neues Archiv der Gesellschaft fuer aeltere deutsche Geschichtskunde* from 1889 to 1904 and in 1907 founded the historical records periodical *Archiv fuer Urkundenforschung*. He compiled the volumes dealing with the emperors Henry II and Conrad II in the *Jahrbuecher des deutschen Reiches* (1875, 1879–84). In 1909 his edition of the charters of Conrad II appeared, followed posthumously by an edition of the charters of Henry III. Bresslau's manual on the study of records, *Handbuch der Urkundenlehre fuer Deutschland und Italien* (2 vols., 1889–1915), is a basic source-book in its field. Bresslau was a founder and president of the commission for the history of the Jews in Germany and contributed extensively to Jewish historical journals. In 1880 he wrote *Zur Judenfrage*, a reply to *Treitschke's attack. An autobiographical sketch was published in *Die Geschichtswissenschaft der Gegenwart in Selbstdarstellung* (1926). Bresslau's daughter, Helena, was the wife of Albert Schweitzer.

[Zvi Avneri /Marcus Pyka (2nd ed.)]

BRESSLER, DAVID MAURICE (1879–1942), U.S. social worker and leader in American Jewish efforts to assist Jewish immigrants to the United States, and to aid European Jews during and after World War I. Bressler was born in Charlottenburg, Germany, and was taken to the United States in 1884. He served as manager of the Industrial Removal Office (1900–16), a branch of the Jewish Agricultural and Industrial Aid Society, directing the resettlement of 75,000 immigrant Jews from congested Eastern port cities of the United States to less crowded areas of the country. During World War I Bressler joined the *American Jewish Joint Distribution Committee, in which he played an important role until his death. During the 1920s he headed a number of campaigns to aid European Jews. Bressler served as national chairman of the Allied Jewish Relief campaign of 1930. During the 1930s Governor Herbert Lehman appointed him to important posts in New York State agencies.

[Irwin Yellowitz]

BREST-LITOVSK (**Brisk**, Heb. בְּרִיטְק דְּלִיטָא; until 1921 Brest-Litovsk; from 1921 until 1939 Brześć nad Bugiem; after 1939 Brest), capital of Brest district, Belarus. In the medieval grand duchy of *Lithuania, from the 14th to the 17th centuries, in particular after the union of Poland and Lithuania in 1569, it was the main center of Lithuanian Jewry. Its situation on the River Bug, at the junction of commercial routes and near the borders of the two countries, made Brest-Litovsk an important communications and commercial center. The first Jews settled there under the grand duke Kiejstut (Kestutis; 1341–82). His son Vitold (Vytautas) granted them a generous charter in 1388, which was later extended to all the Jews in the duchy. Jewish merchants from Brest-Litovsk are mentioned in 1423–33 in the municipal records of Danzig (Gdansk) where they bought textiles, furs, and other goods. The community increased toward the end of the 15th and in the first half of the 16th century, and became one of the largest in Lithuania. It also became the most important organizationally as contacts with Poland steadily expanded. The Jews of Brest-Litovsk engaged in commerce, crafts, and agriculture. Some conducted extensive financial operations, farming customs dues, taxes, and other government imposts. They also farmed and owned estates. Their business connections extended throughout and beyond the duchy. By 1483 Jews in Brest-Litovsk had established commercial ties with Venice.

In 1495 all Jews who refused to accept Christianity were expelled from Lithuania. Only one convert, of the *Jozefowicz family, remained behind in Brest-Litovsk. The Jews were permitted to return in 1503, and the community regained its former eminence. Michael Jozefowicz played a leading role in its

communal affairs in the first half of the 16th century. Records of 1566 show that there were 156 Jewish-owned houses in the town out of a total of 746. Two years later, after the great fire there, the Jews were exempted by King Sigismund Augustus from paying tax for nine years, provided that they built their homes of stone only. The Jews in Brest-Litovsk took over an increasing share in the Polish export trade to Germany and the import trade from Germany and Austria in the 16th century. Their financial success and the scale and range of the activities of the great merchants, such as the three Jozefowicz brothers, the customs contractor and merchant Michael Ryczykowicz, and many others, were partly due to the combination of customs farming with the export and import business. In Brest-Litovsk the Jews could continue to engage in agriculture, and 16% of the real estate was Jewish-owned. The influential Saul *Wahl of Padua, who lived in Brest-Litovsk, established a synagogue and yeshivah in the town.

The satisfactory relationship between the Jews and the townspeople in the 16th century subsequently deteriorated. In 1636 Christian students conducted a savage raid (*Schuelergelauf*) on the Jews. The Lithuanian Council (see *Councils of the Lands) defined it as a “calamity” and treated it as a matter of concern to Lithuanian Jewry as a whole, to be dealt with at its expense. Jewish stores were looted and burned in 1637 by the townspeople, but the Polish authorities compelled the municipality to restore the stolen merchandise to its Jewish owners and punish the rioters. A mixed Jewish-Christian watch was instituted to guard the stores. Despite the increasing anti-Jewish feelings fostered by the clergy, kings Sigismund III and Ladislas IV ratified the Jewish charters. During the *Chmielnicki uprising of 1648–49 many Jews who had the means escaped from Brest-Litovsk to Great Poland and Danzig; hundreds of those who remained were massacred (according to one source, 2,000). Shortly afterward, Jews resettled in Brest-Litovsk and were granted a charter of protection in 1655 from King John Casimir. The wars with Russia, Sweden, and Turkey caused much hardship among the Jews, and many were massacred by the Russian army in 1660. In 1661, in order to relieve their economic distress, the king exempted the Jews from the obligation to billet troops and all other taxes for four years; Jewish debtors were granted a three-year moratorium. In 1669 King Michael Wisniowiecki confirmed the privileges granted in former charters and permitted the Jews to retain the land and buildings they had owned before the wars, including synagogues, courthouses, public baths, cemeteries, and stores. Jews were permitted to engage in every sphere of commerce and crafts and were required to pay only the same taxes as Christians. The municipality and non-Jewish citizens were ordered to cooperate in suppressing anti-Jewish agitation. The privileges were ratified in 1676 and in 1720. Twenty-two Jewish merchants were recorded in the city in 1662, ten of whom were innkeepers who paid a special tax. By 1676 there were 525 Jews (excluding children under 11) living in Brest-Litovsk. The number grew during the 18th century. The 1766 census recorded 3,353 Jews in the town and its environs. To-

ward the end of the 18th century there were fresh disturbances between the Jews and the non-Jewish citizens, in particular in 1792. A memorandum was presented by 20 Jewish representatives to the Polish *Sejm* (Diet) urging that the complaints of the Jews in Brest-Litovsk should receive justice.

For many generations the Brest-Litovsk community assumed the lead in communal affairs and cultural activities of Lithuania (see *Councils of Lands). It was one of the three founding communities of the Council of Lithuania (later expanded to four and then to five constituents) in which Brest obtained the widest area of jurisdiction. At first (1623–31) the Council of Lithuania convened in Brest-Litovsk, and 19 of its 42 meetings took place there. The delegates and rabbi of Brest-Litovsk were for a long time given precedence in the Council. The community represented Lithuanian Jewry before the central authorities according to the following resolution: “It has been thus decided. If His Majesty the King has occasion to visit one of the three principal communities, in the event of his arrival in *Grodno or ... *Pinsk, they will inform the Brest community. Should the Brest community send their representative to approach His Majesty the King with a gift, then all the expenses incurred thereby shall be defrayed by the Council. Should the Brest community omit to send a representative, then half [only] of the expenses [incurred by the community where the king came] shall be defrayed by the Council, and half by the community concerned” (S. Dubnow, *Pinkas Medinat Lita* (1925). Council Session 1639, par. 398, p. 80). A resolution of 1644 further expresses the precedence accorded to the Brest-Litovsk community: “As to the order of signatures of the honorable members of the Council, it has been thus decided: they shall sign in the following order: first the Council members from Brest...” (*ibid.*, Council Session 1644, par. 415, p. 86). The demands of the Brest-Litovsk community that the importance of its institutions and their sacred character should be recognized throughout Lithuania are manifested in the following resolution: “... All the members of the sacred conventicle, the conventicle of the Great Synagogue, the Klaus in Brest-Litovsk ... All know full well that this Great Synagogue is a holy place.... For many generations its sacredness has been established.... He who seeks the Lord, whose spirit is moved to wisdom and understanding, knowledge and fear of the Lord, will come to this Great Synagogue, will take on his shoulders this burden, will bear the yoke of Torah study in groups [of students].” The resolution persuaded the Council to undertake the management of funds for the institution and to pay annual sums to it out of the funds (*ibid.*, Council Session 1667, par. 619, pp. 147–8). The leadership assumed by the Brest-Litovsk community in social and economic affairs is instanced by its attempts to control the contracting for vodka-distilling and milling (see **Arenda*) for the good of all the members of the community: “that many should have a living” (Joel Sirkes, *Responsa*, 1 (1697, 1834), par. 60).

Brest-Litovsk was a stronghold of the **Mitnaggedim* in opposition to **Ḥasidism*. Some of the early disputations between the leaders of the two movements took place there. Dis-

tinguished rabbis officiating in Brest included Jehiel b. Aaron Luria, the grandfather of Solomon *Luria (mid-15th century); Moses Raskowitz; Menahem Mendel *Frank; Kalonymos, the father-in-law of Solomon Luria (16th century); Solomon Luria; Judah Leib b. Obadiah Eilenburg, author of *Minḥat Yehudah* (1609); Moses Lipschitz; Ephraim Zalman *Schor, author of *Tevu'at Shor* (1613); Joel b. Samuel *Sirkes; Abraham Meir *Epstein; Jacob Schor, author of *Beit Ya'akov* (1693); David *Oppenheim (17th century); *Aryeh Leib, author of *Sha'agat Aryeh*; Abraham b. David Katzenellbogen; Naḥman Halperin; and *Aaron b. Meir Brisker, author of *Minḥat Aharon* (18th century); Zevi Hirsch b. Mordecai *Orenstein; Moses Joshua Judah Leib *Diskin; Joseph Baer *Soloveichik; his son Ḥayyim; and his grandson Ze'ev (Welvelei; see *Soloveichik family).

After Brest-Litovsk's incorporation into Russia in 1793, its economic importance diminished. Many historic edifices of the Jewish quarter, including the old synagogue and cemetery, were demolished to give way to the building of a fortress in 1832. The economic position again improved after the completion of the Dnieper-Bug Canal in 1841, and the Jewish community, which handled most of the commerce and industry in the city, began to grow appreciably. A tobacco factory and two large mills were established by Jews in 1845. A hospital was erected in 1838, a new synagogue during 1851–61, and a home for widows in 1866.

The Jewish population numbered 8,135 in 1847 and 27,005 in 1889 (out of a total of 41,625). In 1886, 4,364 Jews were employed as artisans and 1,235 as merchants (out of 25,000). There were 30,608 Jewish residents in 1897 (out of 46,568), 3,506 of them artisans, who were nearly all Jews at the time, many of them shoemakers and tailors. The city was almost completely destroyed by fire in 1895 and again in 1901. In the pogroms in the wake of the 1905 revolution several Jews in Brest-Litovsk were wounded or killed. A number of Jews there were active in the underground revolutionary groups. However, as elsewhere in Russia, their activities subsided with the failure of the revolution. Although the Jews comprised 70% of the population before World War I, they had only three representatives on the municipal council, while there were 20 non-Jewish members.

The Jews were driven out of Brest-Litovsk on August 1, 1915, by order of the Russian high command. On August 26 the Austro-German army occupied the city, and many of the exiles returned. Shortly afterward, however, they were again expelled by the Germans. After the Poles occupied the region in 1919, Jewish communal life revived. Although more attention was paid to secular aspects, the traditional cultural activities continued to flourish. A communal committee was organized and other institutions were established. Half of the pupils in the general schools (which included a commercial school, a *real gymnasium*, and a secondary school) were Jewish. In 1921 the Jewish population numbered 15,630 (out of a total of 29,460) and in 1931, 21,440. For several years the deputy-mayor of Brest was a Jew. Prominent in Brest in the late 19th and early 20th centuries were the philologist and talmud-

ist Jacob Nahum *Epstein; Michael *Pukhachewsky, a pioneer farmer in Erez Israel; the journalists Abraham *Goldberg and Noah Finkelstein; and the author and physician Benjamin Szereszewski.

[Nathan Michael Gelber]

Holocaust Period and After

Almost 30,000 Jews lived in Brest in 1941. The Germans first took the city on September 15, 1939, looted it, and kidnapped Jews for forced labor. Following the Soviet-German agreement on the division of Poland, however, the city came under Soviet rule (September 22, 1939). The Soviet authorities disbanded the communal bodies, repressed independent political activity, and arrested Jewish leaders. Among those exiled to the Soviet Union was Israel Tenenbaum, the local "Bund" leader. Although the community institutions could no longer function, mutual aid was set up and extended to the Jews who fled from German-occupied Poland and sought refuge in Brest. Immediately following the outbreak of the Soviet-German war the Germans reentered Brest. On June 28–29, 1941, the Germans kidnapped 5,000 Jewish men supposedly for forced labor, but the men were taken outside the city limits and murdered. In the autumn of 1941 the Jews were segregated into a ghetto, and only a few physicians and their families were allowed to remain on the "Aryan" side. Ways were devised to smuggle food into the starving ghetto. A *Judenrat was imposed, headed by Zvi Hirsh Rozenberg and his deputy, Nahman Landau. Within the ghetto, aid was organized for the needy and various workshops were created to provide the Jews with "productive" work for the Germans in an attempt to prevent their deportation to death camps. At the end of June 1942 a group of 900 skilled artisans were taken away for forced labor in the East. Only 12 of them came back to the ghetto several weeks later. In mid-1942 an underground resistance movement, led by Arieh Scheinman, came into existence in the ghetto and planned an uprising when the Germans came to liquidate the ghetto. Its members also raised funds to buy arms for fighting groups in the forests. But the Soviet unit that made contacts with them turned out to be a gang of robbers and many underground fighters were murdered. On October 15, 1942, the Germans surprised the underground and began to liquidate the ghetto, sending the inmates to Brona Gora, where they were massacred. Following the *Aktion* the Germans continued a manhunt for those hiding in bunkers. The Jews who had managed to flee the Germans joined the partisan units operating in the forests. A number of Brest's Jews belonged to the "Kotowski" Soviet partisan unit, and Hana Ginzberg of Brest was regarded as an outstanding partisan. When Brest was liberated in July 1944, there were less than ten Jews to be found in the city. After the war a committee set up in the U.S. by former residents of Brest provided aid to the approximately 200 survivors of the Holocaust from Brest, dispersed throughout Poland and in displaced persons camps in Germany. The Jewish population of the town was estimated at 2,000 in 1970. It had no synagogue, the last one having been

converted into a moviehouse in 1959. Most of the Jews left in the 1990s but Jewish life revived with a synagogue, Sunday school and *kolel* in operation.

BRETHOLZ, BERTHOLD (1862–1936), Moravian historian. He was baptized when young. Bretholz collaborated in the publication of *Monumenta Germaniae Historica* (1886–92). In 1892 he was appointed official historian of Moravia, then director of the Bruenn (Brno) municipal archives and the provincial archives (1900). Bretholz published numerous works on Bohemian and Moravian history. The "Bretholz-theory," expounded mainly in his four-volume work *Geschichte Boehmens und Maehrens* (1921–24), ascribes the descent of the Bohemian and Moravian Germans to Teutonic tribes who had settled the area before the advent of the Czechs and not to medieval colonists. The theory became an important argument of extremist German nationalists in Czechoslovakia. In the last years of his life Bretholz turned to Jewish history; he wrote *Geschichte der Juden in Maehren im Mittelalter* (1934), edited *Quellen zur Geschichte der Juden in Maehren* (1935), and contributed to the yearbooks of the Jewish historical society in Czechoslovakia. His *Geschichte der Stadt Bruenn* (1911) contains a chapter on the Jewish community in Bruenn (pp. 363–81).

BRETHREN OF SINCERITY, EPISTLES OF (Arab. *Ikhwān al-Ṣafā'*), series of Arabic treatises ostensibly covering the spectrum of philosophic studies: mathematics and logic, the natural sciences, metaphysics, and the political and religious organization of society including a discussion of the nature and organization of the "Sincere Brethren." The authors of the work were a group of people belonging to the class of government secretaries and men of letters in 10th-century *Baghdad. They were connected with the Ismā'īliyya movement which opposed the claims of the reigning *Abbasid caliphs. Their treatises or epistles no doubt also served to propagate their political and religious ideas under the cloak of a philosophic encyclopedia. The level of learning set forth in the encyclopedia is popular and its philosophy is essentially neoplatonic, in contradistinction to the purer Aristotelianism preferred by, e.g., al-*Fārābī. Their writings seem to have influenced a number of Jewish philosophers, notably Joseph ibn *Zaddik and Solomon ibn *Gabirol as well as Moses *ibn Ezra. Shem Tov Ibn *Falaquera translated excerpts from their writings in his *Sefer ha-Mevakkeh* (1778). In Arles (1316) *Kalonymus b. Kalonymus translated a treatise of the *Epistles* into Hebrew under the title *Iggeret Ba'alei Ḥayyim* ("The Epistle of the Animals"). It has been printed a number of times and the Hebrew version has been translated into Yiddish and Ladino.

[Lawrence V. Berman]

BREUER, ISAAC (1883–1946), theoretician and leader of German Orthodoxy; son of Solomon Breuer and grandson of Samson Raphael *Hirsch. Born in Papa, Hungary, Breuer was brought as a child to Frankfurt, where he studied at his father's yeshiva and became a prominent figure in the local separatist Orthodox community (*Austrittsgemeinde*). He subsequently studied law, philosophy, and history at various universities and practiced as a lawyer in Frankfurt. He soon took a leading part in various communal organizations. He defended the secession of the Orthodox from the Jewish community in his *Preussische Austrittsgesetzgebung und das Judentum* (1913). When *Agudat Israel was founded in 1912, Breuer became one of its ideologists and most prominent spokesmen, though he developed a unique, non-conventional direction within ultra-Orthodox thought. He settled in Jerusalem (1936), practicing as a lawyer, and devoting himself to organizing Po'alei Agudat Israel, of which he became the president. His appeared on behalf of the Agudah before the Peel Commission (1937) and the Anglo-American Commission (March 1946). Baruch *Kurzweil, his close student and spiritual heir, describes him as a charismatic teacher and a bohemian, artistic personality.

Breuer, an heir to the work of S.R. Hirsch's doctrine of *Torah im derekh erez*, redirected it with a national focus. In his early works – *Messiasspuren* (1918), *Judenproblem* (1922⁴; also in a condensed English edition, 1947), *Wegzeichen* (a collection of articles, 1923; in expanded form in Hebrew, *Ziyyunei Derekh*, 1955) – he developed a notion of the Jewish people's national meta-historical Being as based on the juristic act of the covenant and the common duty to fulfill the divine law. Breuer's relationship to Zionism was ambivalent and dialectic. On the one hand, he regarded the movement as removing the Jewish people from the Torah by secularizing it and by locating it within historical temporality. In that respect he believed Zionism to be the worst enemy of Judaism. While Reform Judaism explicitly attacked the Torah, Zionism falsely pretended to assure the existence of the Jewish people, detaching it from its essential nature. On the other hand, Breuer shared the Zionist notion of the centrality of Erez Israel and of the ideal of establishing a Jewish national home there, a state that should be a “state of Torah.” In a series of works (*Das juedische Nationalheim* (1925; English translation, 1926); *Elischa* (1928), *Der neue Kusari* (1934), etc.) he developed this notion, viewing the British mandate over Erez Israel and the Balfour declaration as the hand of divine providence, and called for an adjustment of the Hirschian “*Torah im derekh erez*” doctrine as “*Torah im derekh Erez Israel*.”

After settling in Erez Isrel, Breuer began to write in Hebrew (*Moriyyah*, 1944; *Nahali'el*, 1951), while selected articles

appeared posthumously in English (*People of the Torah*, 1956). In the earlier period he had written some – not very successful – novels (*Ein Kampf um Gott*, 1920; *Falk Nefis Heimkehr*, 1923), also as vehicles for his religious concepts. He defended his conception, in the philosophical terms of the 19th century that God's eternal truths were revealed in and to His “Torah people.” When historical reality forced itself on his thought, he met its demand with struggle and reluctance.

Breuer was also an heir of Hirsch in his religious-philosophic doctrine, combining a strong attachment to Kant with the freedom to move beyond the ontological and epistemological sphere of Kant's “thing-in-itself” (*Ding als sich*) as the object of faith and revelation. In line with Kant he defined rational scientific knowledge as limited and bound to its inner structures, which revelation overcomes and exceeds. Therefore miracles cannot be perceived by regular rational perception, bound to the laws of causality; only faith, perceiving the world as God's free creation, can transcend these boundaries and accept the idea of miracle.

[Yehoyada Amir (2nd ed.)]

BREUER, JOSEPH (1842–1925), Austrian physician, neurophysiologist, and precursor of psychoanalysis. Born in Vienna, he taught at the university there from 1875. From 1890, he specialized in diseases of the nervous system. His neurophysiological research on the effect of the vagus on respiration (1868) and the role of the semicircular canals of the ear in the bodily equilibrium (1874) is of great significance. In his treatment of the case of Anna O., an hysteric, which he communicated to Freud, he laid the foundation for the development of Freud's psychoanalytic methods. He and Freud collaborated in writing *Studien ueber Hysterie* (1895) but each later returned to his separate field of research. Breuer remained a widely acknowledged internist and was elected to the Viennese Academy of Science. He was active in Jewish community affairs all his life.

BREUER, JOSEPH (1882–1980), Orthodox rabbi; son of Solomon Breuer and grandson of Samson Raphael *Hirsch. Breuer was born in Papa, Hungary. In 1906, he became a lecturer at the yeshivah founded by his father in Frankfurt on the Main and became its head after his father's death in 1926.

Immigrating to the U.S. in 1939 to escape Nazi persecution, he became the rabbi of the recently founded K'hal Adath Jeshurun in Washington Heights, N.Y., and founder of its Yeshivah Rabbi Samson Raphael Hirsch (1944), modeled after the separatist Orthodox Jewish community of Frankfurt which had been founded by Hirsch. Hirsch's community had severed all institutional ties to the official Frankfurt Jewish community because the latter represented both Reform and Orthodox Jews, while Hirsch saw all cooperation with Reform as heresy. Besides a large synagogue and a school system from nursery school to advanced yeshivah, the *kehillah* which he headed had its own *kashrut* supervision, and a wide array of charitable and religious societies. K'hal Adath Jeshurun, colloquially known as "Breuer's," was the largest and most influential of over a dozen synagogues founded by German Jewish refugees from Hitler who arrived in Washington Heights, on the northern end of Manhattan in the late 1930s. The congregants at "Breuer's" were mainly strictly Orthodox German Jews from Frankfurt, its surrounding rural areas, and other large German cities, and their children.

Regarded as one of the spiritual heirs of Hirsch, his maternal grandfather, Rabbi Breuer wrote extensively in German and English defending staunch Orthodoxy. Closely affiliated with *Agudat Israel, Breuer took a strongly anti-Zionist religious stance. Compared to his more yeshivah-oriented colleague Shimon Schwab (appointed in 1958), Rabbi Breuer was also an advocate of both aspects of his grandfather's philosophy of "*Torah im derekh ereẓ*" (the idea that traditional study and pursuits should be integrated with worldly culture). He continued to favor a degree of openness to general culture and higher education even as the congregation moved further to the right. Breuer also emphasized the importance of the synagogue's decorous atmosphere and men's choir. Although he retired from official duties in 1967, he continued to be a moral influence and a beloved figure within his community until his death at the age of 98.

Breuer published biblical translations and commentaries on Jeremiah (1914) and Ezekiel (1921), introductions to S.R. Hirsch's Commentary on the Torah (Ger. 2 vols, 1926; Eng. 2 vols, 1948), translations of and commentaries (with text) on the *piyyutim* for Rosh ha-Shanah and the Day of Atonement and also wrote *Jewish Marriage* (Ger. 1923; Eng. 1956). A Jubilee Volume was published in his honor on the occasion of his 80th birthday (*Ateret Zevi*, Eng. and Heb., 1962, with a bibliography of his writings).

[Isaac B. Gottlieb / Steven Lowenstein (2nd ed.)]

BREUER, MARCEL (1902–1981), architecture and furniture designer. Breuer was born in Pécs, a city in southwest Hungary. In 1920, after high school, he won a scholarship to the Vienna Academy of Fine Art. Disliking the Academy, he went to work for an architect and then applied to the Bauhaus, a school of applied design in Weimar, Germany. At the Bauhaus, he joined the newly formed furniture workshop. By 1923

he qualified as a journeyman. He became a protégé of Walter Gropius, director of the school. Even so, Breuer became impatient and left for Paris in 1924 to work for an architect. Again disappointed with his career, when Gropius invited him back to the Bauhaus to run the furniture workshop, he accepted. In 1926, Breuer designed his tubular steel chair. Unusually light and easy to assemble from ready-made steel tubes, the result of his years of experiment, the chair became famous. It was later renamed the "Wassily" after Wassily Kandinsky. Breuer taught at the Bauhaus in Dessau until 1928 when he followed Gropius to Berlin, where he set up as an architect but was barred from practice because of lack of experience. After working in Budapest and Switzerland he joined Gropius in London and then in 1937 followed him to the United States, where they both became professors at Harvard University. With much enthusiasm, Breuer taught the principles of the International Style (form follows function) to students such as Philip Johnson and Paul Rudolph, who later became important architects. Breuer and Gropius each built their own homes: two story boxlike structures of glass, wood, and stone rubble. Commissions followed. In 1946 Breuer left Harvard to open an architectural office in New York in partnership with industrial designer Eliot Noyes. The Geller House on Long Island, completed in 1946, was hailed as the "house of the future." This house of glass, wood, and stone became the paradigm for enlightened house design in mid-century with its careful attention to each function of the dwelling. His favorite house plan was an H-plan or a T-plan, designs he used for the many homes he built on the East Coast of the U.S. In 1949 Breuer built and furnished a model home for the Museum of Modern Art and in 1953 he won, together with Pier Luigi Nervi, the competition to design the headquarters of UNESCO in Paris. Also in 1953, Breuer designed the Bijenkorf Department store in Rotterdam. For his large buildings, Breuer shifted to massive concrete block shapes. His major legacy is the 1963 Whitney Museum of Art in New York City.

[Betty R. Rubenstein (2nd ed.)]

BREUER, MORDECHAI (1921–), religious Bible scholar. Breuer was born in Karlsruhe, Germany. His father, Samson Breuer, was a mathematician, and his uncle, Rabbi Isaac Breuer, was an Orthodox Jewish thinker who carried on the work of Samson Raphael *Hirsch. Mordechai is Hirsch's great-grandson. At the age of 13, Breuer came to Israel with his family. He studied in the Horev yeshivah high school in Jerusalem, then Yeshivat Kol Torah, and finally in Yeshivat Hevron. In 1947 he taught Talmud in the *Bnei Akiva yeshivah in Kefar ha-Ro'eh. He was a Bnei Akiva emissary to the detention camps in Cyprus. During the War of Independence, Breuer was the counselor of the Bnei Akiva group that assisted in defending Jerusalem. From 1949 through 1965, he taught Tal-

mud at Yeshivat ha-Darom in Rehovot. Afterwards, he was a Ministry of Education national supervisor for Talmud study for two years. From 1967 to 1982, he taught Bible at Mikhlelet Yerushalayim le-Vanot and from 1969 he taught Bible at Yeshivat Har Ezyon and at other institutions. In 1999, he received the Israel Prize for Torah literature. He was awarded an honorary doctorate by the Hebrew University. His son, YOḤANAN, became head of the Hebrew Language Department at the Hebrew University of Jerusalem.

Breuer's major contribution to Jewish studies is in two fields. The first is in the determination of the exact text of the Hebrew Bible. In the 1970s and 1980s Mossad ha-Rav Kook published a *Tanakh* edited by Breuer based on early printed editions along with manuscript editions. Subsequently, when the Aleppo Codex became available, Breuer gained expertise in that valuable manuscript, first using it to publish a corrected *Tanakh* in 1998 and then again in 2001, in a format that mirrors the Aleppo Codex. This edition was adopted by the Hebrew University and is called *Keter Yerushalayim: Tanakh ha-Universitah ha-Ivrit bi-Yerushalayim*. Breuer has written numerous articles regarding the Aleppo Codex and his work in determining the correct text of the Bible. This edition was accompanied by Breuer's *Nusah ha-Mikra be-Kheter Yerushalayim: Mekorotav be-Mesorah u-ve-Khitvei ha-Yad* (2003). Despite his lack of academic training, his work on the Aleppo Codex has been widely accepted in the academic world.

Breuer's second contribution is also in the field of biblical studies, particularly in the area of biblical interpretation. In keeping with his Hirschian heritage of meeting the challenges presented by the "scientific" and academic study of Judaism, Breuer has developed a new approach to Bible study called "multiple perspectives." In essence, Breuer accepts the questions posed by biblical criticism but gives a totally different set of answers. As a devout Jew, Breuer accepts the divine authorship of the Bible, especially the Pentateuch. However, he acknowledges that the Pentateuch text seems to be written in different styles, which the biblical critics attribute to different authors and different historical periods. Breuer rejects the multiple authorship hypothesis and maintains instead that God, Himself, wrote the Pentateuch using the different styles and then combined them into the text we know as the Five Books of Moses. In a number of works, particularly *Pirkei Mo'adot* (2 vols., 1986) and *Pirkei Bereishit* (2 vols., 1999), he attempts to explain why God constructed the text in this manner. Aside from a small cadre of his students, Breuer's system of "multiple perspectives" has not been adopted by religious teachers.

In addition, Breuer translated Hirsch's commentary on the Pentateuch and Haftorahs from German into Hebrew (1967–88). Other works include a Passover *Haggadah* with Hirsch's commentary (Heb., 1961) and *Ta'amei ha-Mikra be-21 Sefarim u-ve-Sifrei Emet (Iyyov, Mishlei, Tehillim)* (1982).

[David Derovan (2nd ed.)]

BREUER, RAPHAEL (1881–1932), district rabbi at Aschaffenburg, Bavaria; son of Solomon *Breuer. His candidacy for the succession to his father's office led to a bitter struggle in the Frankfurt congregation in which the majority, the Israelische Religionsgesellschaft (under Jacob *Rosenheim's leadership), opposed the narrow Orthodoxy with which the name of Breuer had become associated. Raphael Breuer's published works include translations and commentaries (in German) on the Five Scrolls (1908–12; 1924²); on the Former Prophets (2 vols., 1915–22); and on Ezra and Nehemiah (2 vols., 1933–38). The literalist interpretation of his commentary on the Song of Songs (1912) caused some scandal among the Orthodox; in the second edition (1923), he gave a more traditional rendering. An appreciation of the ideas of his grandfather S.R. *Hirsch was contained in Breuer's *Unter seinem Banner* (1908). His strong anti-Zionist views were aired in *Nationaljudenthum ein Wahnjudenthum* (1903) and other polemics.

BREUER, SOLOMON (1850–1926), rabbi and author, leader of German Orthodoxy (*Trennungsortodoxie*). After studying at the Pressburg yeshivah under A.S.B. Schreiber and at German universities, Breuer officiated as rabbi in Papa, Hungary. He married the youngest daughter of Samson Raphael *Hirsch, and in 1888 he succeeded his father-in-law, in Frankfurt. A firm advocate of strict Orthodoxy, Breuer founded the Association of Orthodox Rabbis in Germany, excluding from it Orthodox rabbis who cooperated in communal work with Reform Jews. He was president of the Freie Vereinigung ("Free Union") for the advancement of Orthodoxy and cofounder of the Agudat Israel movement, barring members of mixed Reform-Orthodox communities from the leadership of this movement. In 1890 he founded a yeshivah and directed it for 36 years. In conjunction with Phinehas (Pinchas) *Kohn he published the periodical *Juedische Monatshefte* (Hebrew subtitle, *Doresh Tov le-Ammo*) from 1913 to 1920. His writings include *Hokhmah im Naḥalah* (4 vols., 1930–35), sermons, and *Divrei Shelomo* (1948), interpretations of *halakhah* and *aggadah*.

BIBLIOGRAPHY: S. Breuer, *Divrei Shelomo* (1948), introd.; H. Schwab, *History of Orthodox Jewry in Germany* (1950), index; idem, *Chachme Ashkenaz* (Eng., 1964), 35; I. Grunfeld, *Three Generations* (1958), index.

[Moshe Nahum Zobel]

BRÉVAL, LUCIENNE (née **Berthe Schilling**, 1869–1935), French soprano singer. Brevall was born in Maennedorf (Switzerland) and studied at the conservatories of Geneva and Paris, where in 1892 she made her opera debut (as Selika in Meyerbeer's *L'Africaine*), and where she remained a star for nearly 30 years, excelling in Wagner roles. She sang the title role in the first performances of Faure's *Pénélope* (Monte Carlo, 1913) and appeared at the Metropolitan (first New York performance of Reyer's *Salammbô*, 1901) and at Covent Garden. An artist of noble voice and grand, elevated style, she was the leading French soprano of her day.

[Max Loppert (2nd ed.)]

BREYER, JULIUS (gyula) (1893–1921), Hungarian chess master. Breyer won an important Berlin tournament (1920) and broke the then-existing record of 25 games for blindfold play. He was a theorist of “Hyper-Modern” school and established several variations which retain great strategic importance.

BREYER, STEPHEN GERALD (1938–), law professor, Senate staff counsel, federal appellate judge, and seventh Jewish appointee to the Supreme Court of the United States. Breyer was born in San Francisco, California, to a middle-class Jewish family. His father was a lawyer for the city school system. He excelled at San Francisco's “magnet” public high school and at Stanford University, where he graduated with highest honors in 1959. Breyer won a Marshall Scholarship to attend Oxford University, where he received a B.A. with first-class honors in 1961 and developed an interest in economics.

At Harvard Law School Breyer was selected articles editor of the *Harvard Law Review*. Following his graduation magna cum laude in 1964, he served as one of two law clerks to Supreme Court Justice Arthur J. Goldberg in 1964–65. He then worked at the Department of Justice for two years as a special assistant to the assistant attorney general of the Antitrust Division, former Harvard Law Professor Donald F. Turner. In 1967 he married Joanna Freda Hare, the daughter of Lord John Blakenham, who was a wealthy leader of Britain's Conservative Party.

Breyer began a teaching career at Harvard Law School in the fall of 1967, specializing in administrative and antitrust law. When Harvard Law Professor Archibald Cox became the Watergate Special Prosecutor in 1973, Breyer served briefly as an assistant to Cox. He became the staff director for the Senate's investigation of the Civil Aeronautics Board in 1974 and participated, after his return to full-time teaching at the Harvard Law School and at the Kennedy School of Government, in the hearings and legislation that led to the 1978 deregulation of the airline industry. In 1979 Breyer became chief counsel of the Senate Judiciary Committee under Massachusetts' Democratic Senator Edward M. Kennedy. Breyer's interpersonal skills as well as his keen intellect and even-handedness won him admirers among the Republican members of the Judiciary Committee. In the waning days of the Demo-

cratic Carter administration – after Ronald Reagan had been elected president – Breyer was nominated and confirmed with Republican support for a seat on the United States Court of Appeals for the First Circuit as the last judicial appointee of Jimmy Carter.

The First Circuit is the smallest federal court of appeals, and Breyer advanced to becoming chief judge in 1990. In 1985 he became a member of the United States Sentencing Commission and was a principal architect of the *Sentencing Guidelines*, which became the mandatory standard for federal criminal sentences in October 1987. Years later, in January 2005, a five-member Supreme Court majority held that the *Guidelines* were unconstitutional to the extent that they prescribed any increased sentence resting on factual findings not made by a jury. Breyer salvaged the *Guidelines*' applicability to future cases with a creative opinion for the four dissenting Justices, who were joined, in this aspect of the ruling, by Justice Ruth Ginsburg, who had concurred in the finding of unconstitutionality. Breyer's opinion for five Justices invalidated the mandatory nature of the *Guidelines* and made them advisory only. During his tenure as chief judge of the First Circuit, Breyer also oversaw, in detail, the construction of a modernistic federal courthouse in downtown Boston overlooking the harbor.

When the Democratic Party retook the White House with the election of President Bill Clinton, Breyer's name was frequently mentioned as a likely Supreme Court nominee. He was interviewed by President Clinton for the first such vacancy in 1993 and was nominated as the second Clinton appointment (both of whom are Jewish) in May 1994 for the seat vacated by Justice Harry A. Blackmun. Blackmun, who was not Jewish, had been named by President Richard Nixon to the “Jewish seat” that had been occupied successively by Justices Benjamin Cardozo, Felix Frankfurter, Arthur Goldberg, and Abe Fortas. Breyer was easily confirmed by an 87–9 vote and took his Supreme Court seat on August 3, 1994. The Court that he joined remained the same (with Breyer as the most junior justice) for more than a decade.

Breyer is viewed as a liberal centrist member of the Supreme Court. He concurs most frequently with Justice Ginsburg and disagrees most often with Justice Clarence Thomas. He occasionally joins the Court's three most conservative Justices – William Rehnquist, Antonin Scalia, and Thomas – and if either Justice Kennedy or Justice O'Connor agrees with the three conservatives, Breyer's is often the fifth vote to create a majority. His votes in business and criminal cases are conservative, but he joins the liberals in authorizing a broad role for federal, as opposed to state, regulation. On church-state issues, Breyer's vote is unpredictable. Although he opposed overruling a leading precedent that had prohibited state-financed teachers of handicapped students from teaching on religious-school premises and also opposed government tuition vouchers that could be used in parochial schools, he joined a Supreme Court majority that permitted the loan of publicly financed computer equipment to religious schools.

Breyer is an active questioner at Supreme Court argument sessions, although he frequently withholds his questions until late in the argument. His questions are lengthy and intricate, appearing to summarize an advocate's point but testing its logical and practical reach. His opinions are carefully balanced and tend to be scholarly rather than polemic.

In public speeches to Jewish audiences, Breyer often refers to his grandfather, who immigrated to St. Paul, Minnesota, from Poland. Breyer delivered an address at the Capital Rotunda marking Yom Hashoah 1996, and spoke stirringly of the historic significance of the *Nuremberg trial half a century earlier and the participation as prosecutor of then Supreme Court Justice Robert Jackson. Under the influence of Justices Breyer and Ginsburg, the Supreme Court for the first time in its history took an official holiday for Yom Kippur on October 6, 2003, delaying the formal opening of the Court from that date, which was the first Monday in October.

[Nathan Lewin (2nd ed.)]

BREZNICE (Cz. *Březnice*; Ger. *Bresnitz-Lokschan*), town in Bohemia, Czech Republic. Jews settled there in 1592. The Jewish quarter, with a synagogue and cemetery established about 1720, was in the suburb of Lokšany. The synagogue was destroyed by fire in 1821 but subsequently rebuilt. The two "primators" of Bohemian Jewry, Wolf and Joachim *Popper, originated from Breznice. Its rabbis included Isaac Spitz, son-in-law of Eleazar *Fleckeles and author of a volume of poems, *Matamei Yizhak* (Prague, 1843). In 1897 the community adopted Czech as the official language, closing down its German-language school in 1901. The community numbered 17 families in 1649. In 1731, 22 Jewish houses were recorded. There were 30 Jewish families in 1840, 118 Jewish persons in 1900, and 30 in 1930. Those remaining on the outbreak of World War II were deported to death camps in 1942. The old Jewish quarter, called Lokšany, still exists, offering an example of ghetto town planning.

[Oskar K. Rabinowicz]

BRIBERY, making a gift to a person in authority, especially a judge. The injunction not to take bribes is several times repeated in the Bible, twice with the reason given that "bribes blind the clear-sighted and upset the pleas of the just" (Ex. 23:8; Deut. 16:19). This was later interpreted to mean not only that a corrupt judge tends to identify the interests of the donor with his own and is thus blind to the rights of the other party (Ket. 105b, Shab. 119a), but also that such a judge would not grow old without becoming physically blind (Pe'ah 8:9). The warning is also sounded that the taking of bribes might lead to the shedding of innocent blood (Deut. 27:25). God is praised as being unreceptive to bribes (Deut. 10:17, et al.),

and as human judges are generally exhorted to imitate divine qualities (Shab. 133b; Mekh, Shirah 3) so they are urged to be impartial, and not susceptible to bribes (II Chron. 19:7), and reminded that judicial services should be given free (Bek. 29a). There is no penalty and no non-penal sanction prescribed in the Bible for taking bribes. The donor of bribes is blamed as a tempter or accomplice of the taker (Maim. Yad, Sanhedrin 23:2; Sh. Ar., ḤM 9:1), transgressing the injunction "you shall not place a stumbling block before the blind" (Lev. 19:14). Bribery seems to have been rather widespread (cf. I Sam. 8:3), or else the prophets would hardly have denounced it so vehemently (Isa. 1:23; 5:23; 33:15; Ezek. 22:12; Amos 5:12; Micah 7:3), but it was in the nature of unethical misconduct rather than of a criminal offense.

Under talmudic law, where no penalty was prescribed in the Bible for the violation of a negative injunction, the transgressor was liable to be flogged (Mak. 16a; Tosef., Mak. 5:16; see *Minḥat Bikkurim* for reading). In the case of bribery this provision was largely academic, as the requisite witnesses would not normally be available – the act being always committed in secret (cf. Ibn Ezra to Deut. 27:14). The rule was therefore evolved that taking a bribe invalidates the judge's decision, and this was extended even to the taking of fees (Bek. 4:6). The invalidation of the proceeding was regarded as a quasi-penalty (*kenas*) imposed on the judge for taking bribes or fees (Tos. to Kid. 58b top; Sma, ḤM 9:5), and it may have counted toward the judge's liability to pay damages where a party had already acted on his judgment. The prohibition against a judge taking fees was mitigated by a renowned jurist, Karna, who allowed both parties to reimburse him in equal shares for the loss he had actually suffered by sitting in court instead of earning his wages as a winetaster (Ket. 105a). This precedent was not applied to a judge who took a fee for the loss of his time without proving actual loss of money: while his decisions remained unaffected he was called "ugly" (*ibid.*). Other talmudic jurists carried the rule against bribery to extremes by refusing to sit in judgment over any person who had shown them the slightest courtesy, such as helping them to alight from a boat (*ibid.*).

Originally, judges were remunerated from Temple revenues (*ibid.*), which furnished the legal basis for their remuneration, in later periods, from communal funds. As all members were required to contribute to the communal funds, so were litigants later – as today in the rabbinical courts in Israel – required to pay court fees, not to any particular judge but into a general fund out of which all court expenses were defrayed. There are, nevertheless, occasional instances of judges demanding exorbitant fees for their services (e.g., the incident reported by Obadiah of Bertinoro to Bek. 4:6).

Bribing non-Jewish rulers, officials, and judges was regarded as legitimate at all times. In view of their bias against Jews it is not difficult to understand such an attitude. Not only was it quite usual to bribe kings (I Kings 15:19; II Kings 16:8; Ber. 28b; et al.), but expenses involved in bribing judges and sheriffs were often expressly included in the expenses recoverable from debtors (cf. Gulak, *Ozar*, 237, no. 249).

In the State of Israel the taker and the donor of bribes are equally punishable. Demanding a bribe is tantamount to taking it, and offering or promising one to giving it. Even the intermediary between the donor and the taker (or the intended taker) bears the same criminal responsibility. No extraneous evidence being normally available, the taker is a competent witness against the donor, and vice versa, and though they are accomplices their evidence need not be corroborated (Penal Law Amendment (Bribery) Law, 5712–1952).

[Haim Hermann Cohn]

In the Penal Law Amendment (Bribery) Law, 5712–1952, later incorporated in the Penal Law 5737 – 1977 (§290–297), an entire area of Israeli Criminal Law was constituted on the basis of the principles and sources of Jewish Law. The explanatory note to the draft proposal emphasized that “the proposal follows in the path of Jewish Law, which equates giving a bribe with partiality.” The Law includes a number of distinctive elements based on Jewish Law: the imposition of criminal liability on both the giver and the recipient of the bribe, and the immateriality of whether the bribery caused an injustice or not: “Thou shall not take bribes.”

“It is obviously forbidden when the intention is to pervert justice, but even if the intention is to acquit the innocent and convict the guilty it is still forbidden” – Maim., MT, *Hilkhot Sanhedrin* 23:1, in accordance with *Sifrei Devarim* §144)

On the other hand, Israeli law differs fundamentally from the position adopted in Jewish Law on two counts, also mentioned in the draft proposal. It does not obligate the recipient of a bribe to return it to the person who gave it, as opposed to the requirement to do so in Jewish Law (MT, *Yad*, *ibid.*). It also contains a provision allowing the court to confiscate the sum of the bribe, in the form of a fine. Interestingly, not a single MK challenged this departure from Jewish Law, in contrast to the staunch opposition to any deviation from Jewish Law expressed by MKs (from religious parties) in other cases. It may be that they agreed to this particular deviation because the provisions of Jewish Law requiring the return of the bribe to the briber contradict currently prevailing social and moral sentiments, a point made in the draft proposal. Another possible explanation is that the obligation of restitution is in fact a *religious obligation*, in the framework of the briber’s repentance, between himself and his Creator (and not an act of monetary restitution in the usual sense).

In the decisions of the Israel Supreme Court, as well as in halakhic discourse, it was emphasized that in Jewish Law the offense involved in bribery is not restricted to the relations between the litigant and a person fulfilling a judicial role, as indicated in the biblical sources cited above, and as discussed and decided in practice in the Talmud and the halakhic literature mentioned above. It applies to any person discharging a public function who is in a position to adopt decisions that may either benefit or harm the briber. In this context the comments of Rabbi J.M. *Epstein, in his book *Arukh ha-Shulhan* (חמ 9.1), were cited: “And not only the judge is enjoined from

receiving bribery, but all officials and persons involved in public matters, even though their decisions do not have the status of the law of the Torah, are forbidden to be biased in any matter as a result of friendship or hostility, and all the more so by the taking of bribery.”

These remarks were cited by the court (Justice Elon) in *State of Israel v. Darwish* (Cr.A. 121/88), 45 (2) 663). The case concerned the State’s appeal against the acquittal of Jerusalem Municipality employees who had accepted benefits from a tour company in return for their recommendation to all of the Municipality’s employees to avail themselves of the tour company’s services:

In concluding this matter I would add that the laws of bribery were discussed extensively in Jewish Law ... The issues raised in our case can be illuminated and reinforced by the principles of Jewish Law on this issue, although this is not the forum for their explication. But it should be mentioned that while the principles governing the offense of the Jewish sources were set forth primarily with respect to people discharging judicial roles (see Deut. 16:18–19, 25; Micah 2:11, and other biblical sources, and even in Maimonides, *Hil. Sanhedrin* 23; *Tur* and *Shulhan Arukh* (חמ 9), where the rules of bribery appear in relation to judges), the prohibition was also applied to “all those engaged in public affairs,” and was not restricted to judicial or quasi-judicial frameworks ... [In this context, mention was generally made of the aforementioned comments of *Arukh ha-Shulhan* – מע.] Those dealing in public affairs should “devote themselves conscientiously to the needs of the community” (*Tanya Rabbati*, *Hilkhot Shabbat*, 16. Sabbath Morning Service). This is especially applicable to those serving the needs of the public in Jerusalem, where the high-minded people were meticulous in their habits and their conduct (see *Sanh.* 23a and other sources). (*ibid.*, 689–90).

Another kind of bribery dealt with in case law of the Israel Supreme Court and in halakhic literature over the last few years is election bribery (Cr.A. 71/83 *Flatto Sharon v. State of Israel*, 38 (2) PD 757). In this case the Court heard the appeal of a candidate for the Knesset who was convicted for having promised payment to those who would vote for him. In its ruling the Court (Justice D. Levin) ruled that certain halakhic authorities regarded election bribery as bribery for all intents and purposes, citing the responsum of Ḥatam Sofer:

This was the ruling and the view of our Sages regarding bribery in general, and similarly with respect to what we refer to as an election bribe. R. Moses Sofer (Ḥatam Sofer), a prominent Hungarian rabbi during the last part of the eighteenth century and the first part of the nineteenth century, ruled already in his day that, where there were competent witnesses who testified that, during the elections for community rabbi, some members of the electoral body received bribes, it would invalidate the appointment of the rabbi, and necessitate new elections. He further added that: “if there are witnesses that the rabbi himself offered a bribe, then he is absolutely disqualified from being a rabbi until he repents.” As for the recipients of bribery, the view was expressed that they might be disqualified for any public office, but in any event were no longer permitted to participate in the new elections for the appointment of the communal rabbi,

even if they had returned the bribe they received, had repented, and had undertaken by oath never to repeat such actions. The reason given was “for they already have an affinity for him and they will always remain biased ...” (*Resp. Ḥatam Sofer*; pt. 5, ḤM 160; cf. *Resp. Minhṭat Eliezer*, pt. 1:6) (p. 773 of judgment).

The Ḥatam Sofer’s responsum, coupled with others, also served the Supreme Court in an additional ruling (LCA 83/94 *Hisrallah v. Election Clerk*, 49 (3) PD 793, Justice Goldberg), which ruled that election bribery constitutes grounds for their nullification.

In another judgment the Supreme Court emphasized that the prohibition on bribery in Jewish Law applies not only to money but also to a bribe by way of “words” (i.e., action): “If the recipient mistakenly thought that the prohibition on bribery only applied to a monetary bribe, the Sages corrected him; for the taint of bribery and its impropriety apply not only to a monetary gift, but also to any matter liable to produce the negative result, in accordance with the Sages’ teaching, ‘And thou shalt take no gift’ – there was no need to speak of [the prohibition of] a gift of money, but even a bribe of words is also forbidden, for Scripture does not write, ‘And thou shalt take no gain’ [but rather ‘thou shalt take no gift’ – in other words, it is not necessarily pecuniary – ME]” (Cr.A. 355/88 *Levi v. State of Israel*, 43 (3) 221, 229 *per* Justice Levin).

[Menachem Elon (2nd ed.)]

BIBLIOGRAPHY: ET, 1 (1951) 266; 3 (1951), 173ff. **ADD. BIBLIOGRAPHY:** M. Elon, ILR, 4 (1969), 99ff.; *idem*, *Ha-Mishpat ha-Ivri* (1988), 3:1376–77; *idem*, *Jewish Law* (1994), 4, 1640–42; A.Z. Sheinfeld, “*Netinat Shoḥad le-Oved Zibbur*,” in *Tehumin*, 5 (1984), 332; E. Shohetman, *Ma’aseh ha-Ba ba-Averah* (1981), 231.

BRICE (Borach), FANNY (1891–1951), U.S. actress and singer. Born in New York, Brice made her first appearance at the age of 14, eventually becoming a leading comedienne of stage, screen, and radio. She had a gift for mime and satire, and was noted for songs with a Brooklyn accent.

Brice was the third child of relatively well-to-do saloon owners of Hungarian descent. Her first amateur appearance was in a talent contest at Keeney’s vaudeville theatre in Brooklyn, where she won first prize.

In 1910 Florenz Ziegfeld heard her singing in a burlesque house and made her a headliner in his *Follies* of that year. From then on, she appeared in almost every annual production of the *Ziegfeld Follies* until 1924. In 1910 she was asked to appear at the College Girls, a major New York theater, and perform in a benefit. Needing some original material to sing, she went straight to her long-time friend Irving Berlin. He wrote several special numbers for her, including “Sadie Salome, Go Home.” When he played it for her, he insisted that a Yiddish accent was needed to render it. Although Brice did not know any Yiddish, it soon became her trademark dialect. But Brice attained real stardom with the song “My Man.” Already famous as a comedian, she introduced the poignant ballad in the 1921 edition of the *Follies*. On a trip to Paris, Ziegfeld had bought the rights to a heartbreaking chanson called “Mon

Homme” and had English lyrics written for it. Brice wanted to play it for comic effect, but Ziegfeld knew that she had the pathos to sing it from the heart. The song became her cachet. Other songs identified with Brice were “Second Hand Rose,” “I Should Worry,” and “Rose of Washington Square.”

Belasco’s Broadway production *Fanny* (1926), starring Brice, marked another high point of her career.

And, in Billy Rose’s Broadway musical revue *Crazy Quilt* (1931), she introduced the character of Baby Snooks, a mischievous toddler she had first played in vaudeville. That character later became a *Follies* favorite. From the late 1930s until her death, she had her own radio show, featuring her as the bratty baby. Brice also appeared in several motion pictures: *My Man* (1928), *Night Club* (1929), *Be Yourself!* (1930), *The Man from Blankley’s* (1930), *The Great Ziegfeld* (1936), *Everybody Sing* (1938), and *Ziegfeld Follies* (1946).

Brice first met the notorious Julius (Nick) Arnstein in Baltimore while on tour in the Shubert Brothers’ 1912 revue *Whirl of Society*. At the time, he was betting on horses under the name Nick Arnold, one of his many aliases to cover his criminal record of international swindling. They married in 1919, after waiting seven years for his divorce to come through. Shortly after they met, he went to jail for wiretapping, and Brice visited him every week in Sing Sing prison. In 1920 he and several other hoodlums stole \$5 million worth of Wall Street securities. After remaining in hiding for four months, he surrendered to the authorities but fought the charges in court for four years. Ultimately, a federal court sent him to Leavenworth prison for 14 months. Upon his release in 1927 Arnstein ran off, abandoning Brice and their two children and leaving her no recourse but to divorce him. In 1929 she married Broadway producer/lyricist Billy Rose; the marriage ended in divorce in 1938.

Brice’s fame has lived on for decades through the Broadway musical *Funny Girl* (1966) and the films *Funny Girl* (1968) and *Funny Lady* (1975), loosely based on her life.

[Ruth Beloff (2nd ed.)]

BRICEVA, Jewish agricultural settlement in Bessarabia, Ukraine; in Romania 1918–40 and 1941–44. Briceva was founded in 1838 on an area of 308 hectares (approx. 760 acres) acquired by colonists originating from Podolia. In 1899 there were 301 Jewish families (1,510 persons), of whom 83 owned their holdings (averaging approx. 9½ acres per family), possessing 1,244 sheep and goats. Because of the scarcity of farm equipment, plowing was hired out. As a result of the Romanian agrarian reform of 1922, 72 Briceva farmers received 216 hectares (approx. 533 acres) from the state. In 1924, 176 Jewish families were engaged in agriculture on an area of 1,134 hectares (approx. 2,800 acres, of which 1,605 acres were lease-held); in 1930 the Jewish population numbered 2,431 (88.9% of the total). A Jewish elementary school and a Hebrew in-

intermediate school operated in Briceva. In the face of antisemitic outbreaks in the 1930s, a Jewish self-defense group was organized.

[Eliyahu Feldman]

Holocaust Period

The settlement's proximity to the Dniester River enabled many Jews of Briceva to escape to the U.S.S.R. before the arrival of the Romanian and German troops in July 1941. Those who stayed, as well as those caught in flight, were robbed; the women were raped by Romanian soldiers. Later they were deported to *Transnistria, where most of them met their death. After the war, a few dozen families, the surviving remnant of the community, returned to Briceva, finding their homes occupied by non-Jews. None remained there.

BRICHANY (Rom. **Briceni**), town in Bessarabia, Moldova. Jews first settled there in 1760. There were 137 Jewish families living in the town in 1817; another 47 had previously left the settlement when it was partly destroyed by fire. The community increased in the first half of the 19th century, and by the middle of the 19th century it was among the largest in the region. In 1897 there were 7,184 Jews in Brichany (96.5% of the total population), served by seven synagogues and a Jewish state school, opened in 1847. A branch of Hovevei Zion was active there. In February 1917 and particularly in 1918 Romanian soldiers staged pogroms. In 1924, 125 Jews were engaged in agriculture on 641 hectares (approx. 1,600 acres) of land, most of it (500 hectares) held on lease. According to the official census figures, the Jewish population numbered 5,354 in 1930 (95.2% of the total). Between the world wars Jews traded in cattle, hides, and farm produce. Communal institutions on the eve of World War II included a hospital, founded in 1885, and a Hebrew *Tarbut school.

[Eliyahu Feldman]

Holocaust Period

Before the war many Jews from surrounding areas concentrated in Brichany and by 1940 it had a Jewish population of about 10,000. In June 1940, when the city was annexed by the U.S.S.R., Jewish property and community buildings were confiscated and only the synagogue was saved because it was used as a granary. Some 80 Jews, mainly community leaders, were exiled to Siberia. On July 8, 1941, Romanian and German troops passed through Brichany and murdered many Jews. Jews from the neighboring towns of *Lipkany and *Sekiryany were brought to Brichany. On July 28, all Jews were dispatched across the Dniester and several were shot en route. When they arrived in Mogilev, the Germans "selected" the old people and forced the younger ones to dig graves for them. From Mogilev the rest were turned back to *Ataki in Bessarabia and then on to Sekiryany. Hundreds died en route. For a month they stayed in the ghetto, only to be deported again to *Transnistria. All the young Jews were murdered in a forest near Soroca.

In 1944–46 about 2,500 Jews from the town and surrounding area returned and reestablished the community.

BRICK, DANIEL (1903–1987), journalist, born in Stockholm, Sweden. He founded a number of short-lived Jewish newspapers and periodicals (some of them together with M. *Ehrenpreis). At the head of a group of young Jewish intellectuals, Brick launched the *Judisk Kronika* in 1932, which immediately became the organ of the young Zionist movement in Sweden. Brick was the general secretary of the Zionist Organization in Sweden from 1935 to 1949 and in 1952 a forest was planted in his honor in Israel. In 1957 he established the Judiska Kulturinstitutet in Stockholm, where both Jews and non-Jews attended lectures and participated in discussions on Jewish problems. His dedication and hard work made Zionism an accepted part of the Swedish cultural and political scene of his day, aided not least by publications such as *Varför anklagar man judarna?* ("Why Are the Jews Always Blamed?" 1939, 1944) and *Mot anti-Semitism, Svenska författare uttalar sig* ("Against Anti-Semitism; Swedish Authors Take a Stand," 1943).

BRICKNER, BALFOUR (1926–2005), U.S. Reform rabbi. Brickner, the son of Rabbi Barnett *Brickner and Rebecca Aaronson Brickner, was born in Cleveland and served in the United States Navy during World War II (1943–46). His parents' strong Zionist leanings are evident in his given name. He received his B.A. from the University of Cincinnati (1948) and his M.H.L. together with ordination from *Hebrew Union College-Jewish Institute of Religion in 1952. He was twice awarded Doctor of Humane Letters degrees – from Iowa's Simpson College (1969) and Mississippi's Tougaloo College (1980) – as well as a Doctor of Divinity degree from HUC-JIR (1981).

Brickner began his career as the founding rabbi of Temple Sinai in Washington, D.C. (1951–61), where he also taught biblical and post-biblical history as the Resident Jewish Chautauqua Society lecturer at American University (1952–61). While living in the U.S. capital, Brickner gained a reputation as a leader of social and political activism in the Reform movement; the positions he espoused were influenced by his outspoken conviction that right-wing influences on American life were historically threatening to Jews. In 1961, Brickner was appointed co-director of the National Commission on Social Action of the *Union of American Hebrew Congregations (UAHC), a position he held until 1978. Throughout the 1960s, Brickner was a prominent Jewish activist on behalf of civil rights, traveling widely through the South under

a Merrill Foundation grant (1961–64) to rally Jewish support for equal rights – campaigning that frequently landed him in local jails. He was also a leader of religious opposition to the Vietnam War: he founded, and served on the executive board of, Clergy and Laity Concerned about Vietnam (1955–73), visiting that country in 1970 at the behest of the Fellowship for Reconciliation.

At the same time, Brickner moved to the forefront of national Jewish involvement in interfaith activities. In 1961, he became the founding director of the UAHC Department of Interreligious Affairs, in which capacity he displayed diplomacy, creativity, and innovation. He hosted a popular weekly radio program, “Adventures in Judaism,” which won the coveted Religious Heritage Foundation Award (1968) and several Ohio State Awards. In the realm of cross-faith understanding, he wrote *An Interreligious Guide to Passover and Easter* and a study guide to *Jesus Christ Superstar* (1978). He also initiated and co-directed an annual summer seminar program in Israel for Christian scholars on “The Jewish Sources of Christianity.” As a founder of Religious Leaders for Free Choice (later, Religious Coalition for Abortion Rights) and an executive board member of the National Association for the Repeal of Abortion Laws (NARAL), Brickner took a forthright pro-choice stand on this controversial issue.

In 1980, Brickner became rabbi of the Stephen Wise Free Synagogue in New York, a position he held until 1992, when he was appointed senior rabbi emeritus. In addition to his congregational duties, he lectured at Fordham University (1983), the New York Theological Seminary (1987–88), and the New School for Social Research, while continuing to pursue an unrelenting activist agenda. In the Jewish world, he served, among other positions, as co-chairman of the National Religious Cabinet of State of Israel Bonds and vice president of the American-Israeli Civil Liberties Coalition. In addition, he was a leader of the Interreligious Coalition for Health Care; a member of the national board of the Planned Parenthood Federation of America; a board member of the New York Civil Liberties Union; and a member of the New York City Commission on Human Rights.

In 1992, Brickner was appointed executive director of the Alfred and Gail Engelberg Foundation. He is the author of numerous articles, pamphlets, and filmstrips, as well as of *Searching the Prophets for Values* (with Alfred Vorspan, 1981) and *Finding God in the Garden: Backyard Reflections on Life, Love and Compost* (2002).

[Bezalel Gordon (2nd ed.)]

BRICKNER, BARNETT ROBERT (1892–1958), U.S. Reform rabbi. Born in New York, Brickner was a youthful orator in Zionist circles on New York’s Lower East Side. He attended Columbia University and was awarded a B.S. and an M.A. (1914) and simultaneously studied at the Teachers Institute of

the Jewish Theological Seminary (1910–15) before moving to Hebrew Union College, Cincinnati, where he was ordained in 1919 and received a Ph.D. in social science at the University of Cincinnati (1920). He then became rabbi of the Holy Blossom Congregation in Toronto in 1920. He also served as president of the Toronto Federation of Jewish Philanthropies and editor of the *Canadian Jewish Review*. In 1925 Brickner moved to Cleveland as rabbi of Congregation Anshe Chesed (Euclid Avenue Temple, later called the Fairmont Temple). There he instituted Sunday services (later discontinued), which attracted large audiences and improved the congregation’s educational program, and became active in the life of the city. He was appointed president of the Cleveland Bureau of Jewish Education (1932) and was active in Zionist affairs and a significant figure in the United Palestine Appeal. He argued forcefully for the primacy of Israel in the life of American Jews. He also advocated that Reform rabbis spend a year of study in Israel well before it became commonplace. In 1942 Brickner became chairman of the Committee on Chaplains of the Central Conference of American Rabbis, which was responsible for recruiting chaplains for the U.S. armed forces. Later he was appointed administrative chairman of the Committee on Army and Navy Activities of the Jewish Welfare Board, and undertook a world tour of American military bases. He received a Medal of Merit (1947), the highest honor the American government confers on a civilian and the first one ever given to a rabbi. He was an activist within his community and in international Jewish life. Brickner served as chairman of the Jewish Welfare Fund Committee in Cleveland, and president of the Central Conference of American Rabbis (1955–56), among others. He was the author of *The History of the Jews of Canada* (1925) and *The God Idea in Light of Modern Jewish Thought* (1930).

[Sefton D. Temkin / Michael Berenbaum (2nd ed.)]

BRIDEGROOMS OF THE LAW (Heb., sing., חָתָן תּוֹרָה, *hatan Torah*), honorary titles bestowed on those who are called up to the reading of certain sections of the law during the morning service of *Simḥat Torah (which coincides, in Israel, with Shemini Azeret), when the annual cycle of the reading of the Torah is concluded and a new one begun. “Bridegroom of the Law” is, strictly, the title reserved for the person called up to read the last portion of the Pentateuch (Deut. 33:27–34:12). The person called up to the reading of the first chapter of Genesis, immediately afterward, is called the “bridegroom of the beginning” (*hatan Bereshit* (Genesis) or *hatan mathil*). The Yemenite and Egyptian rites have only one bridegroom, who completes the reading of Deuteronomy, and commences that of Genesis. Other Oriental communities have three: *hatan Torah*, *hatan Bereshit*, and *hatan me'onah* (the first word of the passage). Where the passage is further subdivided, the second part begins with Deuteronomy 34:1, and the bridegroom is known as *hatan va-ya'al*. Some Ashkenazi congregations

have four “bridegrooms,” with the title of *ḥatan maftir* given to the person called up to read the *haftarah*, and *ḥatan kol ha-ne'arim* (“bridegroom of all the lads”) to the person for whom Deuteronomy 33:22–26 is read. The latter term derives from the fact that the person called up is joined in his *aliyah* to the Torah by children under **bar mitzvah* age.

In both the Ashkenazi and Sephardi rites, the bridegrooms of the law are summoned to the Torah reading by special *piyyutim*. These vary in the different rites, but all emphasize, with much poetic hyperbole, the privilege of concluding and beginning the reading of the Torah, and they laud and bless the honored *ḥatanim*.

According to the *Mahzor Vitry* (ed. by S. Hurwitz (1923²), 458), the term *ḥatan Bereshit* was already known to the disciples of Rashi in the 12th century. The kabbalistic elaboration of the ancient rabbinic image of the Torah as the “betrothed of Israel” (an aggadic interpretation of Deuteronomy 33:4 associates *morashah*, “heritage,” with *me'urasah*, “betrothed”) may have helped to popularize the custom.

The honor of *ḥatan Torah* was usually given to the rabbi of the congregation or a scholar; and *ḥatan Bereshit*, the president, or a distinguished lay member of the congregation. In some Sephardi and Oriental communities, it was customary to so honor actual bridegrooms of the past year.

In some Oriental rites, candy is showered on the *ḥatanim* as they ascend or descend to and from the reading (cf. Ber. 50b). In medieval Europe, *ḥatanim* made generous donations to charity and threw sweets to the children in the synagogue. In some communities it was customary to erect a baldachin (as for real bridegrooms) on the *bimah* for Simḥat Torah, to decorate the synagogue walls with carpets, and to provide special seats of honor for the bridegrooms. In many congregations it is customary for the *ḥatanim* to entertain the members of the congregation after the service or on the afternoon of Simḥat Torah.

During the last quarter of the 20th century, particularly in North America, it gradually became customary to include women in the Simḥat Torah honors. It began with women joining in the *hakkafoṭ* (processions with the Torah) and then with their carrying and dancing with the Torah. In some Modern Orthodox circles, women danced separately with a Torah on one side of the *meḥizah* (partition separating the sexes) or in a separate room. In Conservative synagogues, the honors of *ḥatan Torah* and *ḥatan Bereshit* were made available to women who had served the community and the congregation. In *Siddur Sim Shalom*, published by the Rabbinical Assembly and the United Synagogue of Conservative Judaism, the medieval *piyyutim* are given in two versions: the traditional one in the masculine form and a rephrased version for a *Kallat ha-Torah* (bride of the Torah) and a *Kallat Bereshit* (bride of Genesis).

BRIDGEPORT, largest city in the state of Connecticut, U.S. A handful of Central and West European Jews, part of what is known as the German migration, settled in the city in the mid-19th century. A much larger migration of Jews from Eastern Europe began in 1881. In addition to the predominance of Russian and Polish Jews, a large number came from Hungary and gave Bridgeport proportionately one of the most sizeable Hungarian Jewish populations in America. The city had a Hungarian neighborhood that housed Jews and non-Jews from Hungary. The city's general population also reflects this ethnic distribution. In the mid-20th century, most Bridgeport Jews were self-employed, in retail and wholesale business, manufacturing, and the professions. By the end of the 20th century, the movement into the professions was dominant. Their economic standing is higher than the average in the city and the surrounding suburbs. Migration to the suburbs began in the 1950s and continued unabated though some Jewish institutions have remained in the city. Most Bridgeport-area Jews live in Fairfield, Stratford, Trumbull, Easton, Shelton, Monroe, Redding, and Huntington as well as in one enclave within Bridgeport proper. As a result of the suburban migration, the Jewish Federation is known as the Federation of Eastern Fairfield County. There are five separate Federations within the County: Westport, Greenwich, Stamford, Danbury, and Eastern Fairfield.

In the early 21st century there were 10 congregations in greater Eastern Fairfield County, which is now synonymous with greater Bridgeport – three Orthodox, five Conservative, one Reform, and one Humanistic, which is the only synagogue community not to have its own facility. Three rabbis served their congregations for many decades; Conservative rabbis Israel Stein and Leon Waldman and Orthodox rabbi Moshe Epstein. In the mid-20th century, long-serving Rabbi Harry Nelson established Conservative congregation Rodeph Shalom as a dominant regional institution.

In 1996 the Jewish Community Center and the Federation merged to become one organization: the Jewish Center for Community Services. For recreational and fundraising purposes a separate identity is sometimes used but the community supports a Jewish Home for the Elderly; Jewish Family Service; a Modern Orthodox day school called Hillel Academy, along with a family and children's agency. The Torah Institute of Connecticut, which is a post-high school program, is also based in Bridgeport. The Jewish population of greater Bridgeport was 12,000 in 2005, a decline of some 20% from the figure in 1968. There is more westward migration and movement down the coast toward New York as socioeconomic conditions are more favorable the closer one is to New York.

[Eli Kornreich (2nd ed.)]

BRIE, LUIS HARTWIG (1834–1919), Argentinian communal leader. Born in Hamburg, Germany, Brie arrived in Brazil in 1847 and enlisted in the Brazilian Legion formed to help General Urquiza in his uprising against Rosas, who held absolute power in Argentina. He participated in the battle of Caseros in 1852, in which Rosas was ousted. He stayed in Argentina and became a citizen in 1871. In spite of the fact that he intermarried and his children were raised in the Catholic faith, Brie was very active in the foundation and organization of the main Jewish institutions in Argentina. He was president of the Congregación Israelita de la República Argentina during the periods 1895–97 and 1904–15, one of the promoters of the *hevrah kaddisha* in 1894 (see *AMIA), and was its first president during 1894–97. Brie participated in the Argentine war against Paraguay during the 1860s and served in the government's forces against the uprising in 1890. He also held responsible posts in the municipality of Buenos Aires for several decades.

[Victor A. Mirelman]

BRIEL, JUDAH BEN ELIEZER (1643–1722), exegete, halakhic authority, and polemicist. Appointed a member of the *bet din* of Mantua, Briel succeeded Moses Zacuto (d. 1697) as the rabbi of that community, a position he occupied until his death. Among his pupils was Isaac *Lampronti. In the controversy connected with the banning of the writings of the Shabbatean Nehemiah *Hayon, Briel expressed his vehement opposition to Hayon in polemical letters. Briel's antipathy to Kabbalah stemmed from his hostility to the Shabbatean movement. Stimulated by the contemporary polemics between Judaism and Christianity and the appearance of numerous antisemitic writings, Briel wrote works against Christianity in Italian and Hebrew. Most are still in manuscript. They include (1) *Discorso Apologetico* (in defense of Manasseh Ben Israel against the attacks of the priest Vincenzo of Ragusa); (2) *Riposta alla Sinagoga disingannata dal padre Pinamonti*; (3) *Animadversiones in evangelia* (a criticism of the New Testament). Of his many other works only *Kelalei ha-Dikduk* ("The Rules of [Hebrew] Grammar," Mantua, 1729) has been published. Those still in manuscript include his responsa and his commentary on the Prophets and the Hagiographa. He also wrote occasional poems, such as a sonnet in honor of Isaac Cardoso, and translated the letters of Seneca from Latin into Hebrew.

[Yehoshua Horowitz]

BRIGHTON, town on the south coast of England. Jews began to settle in Brighton in the middle of the 18th century. When the town became a fashionable resort, wealthy Jews flocked there, including the *Goldsmid family at the beginning of the 19th century and the *Sassoons at its end. A congregation was

first organized in 1800 but soon fell apart. It was reorganized in 1821. Jewish affairs are coordinated by the Brighton and Hove Jewish Council. The Jewish population of Brighton and Hove was estimated in 1968 at 7,500. In the mid-1990s the combined Jewish population numbered approximately 10,000. The 2001 British census found that there were 3,358 Jews by religious affiliation in Brighton and Hove, although the actual figure was probably much higher. In 2004 Brighton continued to have a wide range of Jewish institutions, including four synagogues, two Orthodox, one Liberal, and one Reform.

BRIK, OSIP MAKSIMOVICH (1888–1945), Russian literary critic, scholar, and writer. Brik was born in Moscow and graduated from the Law Faculty of Moscow University. He began to publish his works in 1915. A founding member of the Society for the Study of Poetic Language (ОРОУАЗ), he was publisher of its famous *Sborniki* (1916–17). In 1917, he published his pioneering study *Zvukovye povtory* ("Sound Reiterations"), in which he analyzed the repetitions of consonantal groups in the poetry of Pushkin and Lermontov. In 1919–20, he took an active part in the organization of the Moscow Linguistic Circle. Although he published very little, his deep insight into the problems of poetic structure profoundly influenced most members of the Russian formal school. Together with V. Mayakovsky, he edited the Russian avant-garde periodicals *Iskusstvo Kommuny* (1918), *LEF* (1923–25), and *Novy LEF* (1927–28). In the mid-1920s, Brik developed the "theory of social demand" and wrote several important studies of the sociology of art, trenchant critical articles directed against the epigones of Tolstoyan realism among the so-called Proletarian writers, and another outstanding paper on poetics, "*Ritm i sintaksis*" ("Rhythm and Syntax"), *Novy LEF* 1927, No. 3–4, 6. Among his numerous screenplays, the best known is *Potomok Chingis Khana*, known in the West as "Storm over Asia" (dir. by V. Pudovkin, 1928). Brik's short "publicistic novel" *Evrey i blondinka* ("A Jew and a Blonde"), which he completed in 1927, remains unpublished along with many of his scholarly papers, but his literary works have been preserved and some of them appeared in 1969–70 in the French structuralist journal *Change*.

BIBLIOGRAPHY: O.M. Brik, in: *Michigan Slavic Materials*, 5 (1964) (with a postscript by R. Jakobson); idem., *Texte der russischen Formulisten*, 2 (1971) (Germ. translation of *Rhythm and Syntax*).

[Omri Ronen]

BRILL, ABRAHAM ARDEN (1874–1948), Austrian-born psychoanalyst. Brill studied with *Freud in Vienna, and to him belongs the main credit for introducing Freud's writings to the English-speaking world. Beginning in 1909 with a

translation of *Studien ueber Hysterie* (1895; *Studies in Hysteria*, 1936), written by Freud jointly with J. Breuer, Brill continued over the years to present a systematic translation of most of Freud's work. In 1911 he founded the New York Psychoanalytical Society, and was appointed head of the Psychiatry Clinic at Columbia University.

While Brill's most significant contribution to psychoanalysis was his translation of Freud, he was a talented psychoanalytic practitioner and did some noteworthy research especially on necrophilia. He made an historic contribution to the integration of psychoanalytic concepts into psychiatry. Brill's own writings include *Freud's Contribution to Psychiatry* (1944) and *Psychoanalysis: Its Theories and Practical Application* (1922³).

BRILL, AZRIEL (1778–1853), rabbi and scholar born in Zay-Ugróc, Hungary. He studied under Ezekiel *Landau, Moses *Muenz, and Mordecai *Banet. In 1814 he was appointed teacher of Hebrew, mathematics, and geography at the Jewish school in Pest, and in 1827 he became a member of the rabbinate of that city. Brill was the author of *Ein ha-Arez* (Buda, 1821), an outline of the geography and history of Hungary in Hebrew; and *Hadrat Kodesh* (1828), a vocalized text of the Mishnah orders *Rosh Ha-Shanah* and *Yoma*, with a German translation and commentary, and the liturgy for the High Holy Days. Azriel's brothers adopted the name Schossberger; one of them, Eliezer, was the ancestor of the barons Schossberger of Tornya. His son, SAMUEL LOEW BRILL (1814–1897), was appointed in 1850 a member of the *bet din* in Pest, which he headed from 1872. His glosses on the Talmud were published by L. Blau (in *Magyar zsidó Szemle*, 1896, and in *MGWJ*, 1897).

BIBLIOGRAPHY: V. Bacher, in: *Magyar Zsidó Szemle*, 9 (1892), 708; A. Loewinger, *ibid.*, 16 (1899), 272–8; L. Blau, *ibid.*, 19 (1902), 40–81, 128–36 (on Samuel Loew).

[Alexander Scheiber]

BRILL, ISAAC LIPA (1874–1936), U.S. rabbi and journalist. Brill was born in Mainz, Germany, the son of Jehiel *Brill, noted scholar and journalist who published the first Hebrew-language newspaper in Palestine. Isaac Lipa attended Marcus Lehmann's Religionshule until he was 10 and then moved with his family to London, England, where he attended the Yiddish Folkshule. With both his parents fervent Zionists, he enrolled in the youth group, Pirchei Zion, and became an avid Zionist for life.

Brill studied at London's Jews' College and in 1896 continued his secular studies at Berlin University and his Jewish studies at Rabbi Azriel *Hildesheimer's rabbinical seminary. At the same time, he was a journalist for *Die Deutsche Zeitung*. After he married in 1898, he returned to England to work for two Jewish newspapers in Leeds: the *Jewish Express* and the

Jewish Recorder. He freelanced for the *Jewish Chronicle* and the *Jewish World*, both in London.

When in his mid-thirties, Brill and his wife decided to immigrate to United States, arriving in 1909. He became the editor of a fledgling newspaper, *the Hebrew Standard*, which later merged with *the Jewish Tribune*. At the same time, he was the editor of the English section of *Yiddische Tageblatt*. He wrote hundreds of articles, several plays, and short stories. At the same time, Brill, the avid Zionist, joined and served on the national executive committee of the Zionist Organization of America. He was also the executive secretary and "outspoken advocate" for the *Union of Orthodox Jewish Congregations of America and for Orthodox Jewish values.

He received his ordination from Rabbi Moses S. Margolies and became a pulpit rabbi at Congregation Shaarei Tzedek and later at Agudath Achim in the Bronx, New York. In the 1920s, he served as the spiritual leader of the Jewish Center in University Heights, and devoted a great deal of his philanthropic zeal to a number of Jewish organizations: HIAS, the Federation of Jewish Philanthropies, Young Judaea, and the YMHA.

[Jeanette Friedman (2nd ed.)]

BRILL, JEHIEL (1836–1886), pioneer of the Hebrew press in Palestine. Brill left his native Russia in the late 1850s, and after much wandering went to Erez Israel. He married the daughter of Jacob *Saphir, and settled in Jerusalem from where he sent reports to Hebrew newspapers in the Diaspora. Together with Joel Moses Salomon and Michael Cohen he established Jerusalem's second Hebrew printing press, and began publishing the monthly *Ha-Levanon* (1863), the first Hebrew periodical to appear in Palestine. A year later the publication was suspended and Brill went to Paris. There he revived his paper in 1865, first as a biweekly and later as a weekly. After the Franco-Prussian War (1870–71) he moved to Mainz, where he established a Hebrew printing press and published *Ha-Levanon* (1872–82) as a Hebrew supplement to *Der Israelit*, the Orthodox German weekly. *Ha-Levanon* supported the *halukkah* and the Jerusalem rabbis. A staunch defender of religious tradition, Brill also pleaded the cause of settlement in Erez Israel along the lines attempted by members of the old *yishuv*, outside the Jerusalem walls, and in Petaḥ Tikvah. After the Russian pogroms of 1881 and the rise of *Hibbat Zion*, Brill returned to Erez Israel at the head of a small group of Jewish farmers from Belorussia who settled in Mazkeret Batyah (Ekron). However, he became embroiled in an argument concerning the policy of the agricultural school, *Mikveh Israel, and with other settlers and left the country disillusioned. Brill related these experiences in *Yesud ha-Ma'alah* (1883). In 1884 he settled in London and began publishing the short-lived Yiddish weekly, *Ha-Shulamit*. Shortly before his death he re-

vived *Ha-Levanon* in London, but only 11 issues appeared. During his stay in Paris and Mainz, he published several medieval Hebrew manuscripts: *Yein Levanon* (1866, three manuscripts, including one of Maimonides, on tractate *Rosh ha-Shanah*); R. Hananel's commentary on tractate *Pesahim* (1868); *Sefer Iggerot* by R. Meir ha-Levi Abulafia (1871), and *Be'er ha-Golah* (1877).

BRILL, JOSEPH (better known by his pen name **Iyov of Minsk**, אִיִּוּ מִמִּינְסֵק; derived from the initials of *Ani Yoseph Brill*; 1839–1919), Hebrew writer and humorist. Brill, who was born in Gorki near Mogilev, studied at Lithuanian yeshivot where he began to read modern Hebrew literature clandestinely. He became a *maskil* and took to writing. His first essay appeared in *Ha-Maggid*, 2 (1858), 35–36. From 1858, he published critical essays and satirical *feuilletons* in *Ha-Karmel*, *Ha-Meliz*, and *Ha-Boker Or*. He supported the Socialists against *Smolenskin and published a stinging poem against the latter in *Asefat Hakhamim*, 3 (1878). He translated Richard Cumberland's comedy *The Jew* into Hebrew (1878). Particularly popular in their time were Brill's parodies: *Mishnat-Mevakerim* (*Ha-Shaḥar* (1877), 317–24), a satire on Hebrew writers and the low state of culture among Russian Jews; *Megillat Ta'anit* in *Keneset Yisrael* of Saul Phinehas *Rabbinowitz, 1 (1886), 593–605, a satire on assimilationists; a parodied *Kizzur Shulḥan Arukh* for educators and teachers, in *Ozar ha-Sifrut*, 3 (1889–90), section on "Satire and Humor," 17–34. Some of his letters were published in *Ozar Mikhtavim ve-Sippurim* ed. by J. Rosenberg (1882).

BIBLIOGRAPHY: *Toledot Iyov* (autobiography), in *Ozar ha-Sifrut*, 4 (1892), 643–50; Klausner, *Sifrut*, 5 (1955), 117–8.

BRILLING, BERNHARD (1906–1987), German rabbi and scholar. From 1927 to 1939 Brillling was archival assistant and then archivist of the Breslau Jewish community. After settling in Palestine in 1941, he served for a time as archivist of the city of Tel Aviv. From 1957 Brillling pursued various scholarly projects at the Institutum Judaicum Delitzchianum of the University of Muenster. Of his nearly 50 publications in Jewish history, the most important are *Geschichte der Juden in Breslau von 1454–1702* (1960) and, together with Richterling, *Westfalia Judaica 1005–1350* (1967).

[Michael A. Meyer]

BRIN, SERGEY (1973–), U.S. co-founder of Google, the most popular search engine in the world. The son of a mathematician-economist, Brin, who was born in Moscow, left the Soviet Union with his family in 1979. He followed in his father's footsteps, earning a degree in computer science and math at the University of Maryland in 1993, and began graduate studies at Stanford University that fall. He met Larry Page

in 1995 when Page, son of a highly regarded computer science professor at Michigan State University, attended an orientation for new students.

According to industry lore, Brin and Page argued often, though the sparring soon ended when they began developing a new kind of Internet search engine from their college dormitory. They called their program BackRub for its ability to analyze "back links," the pointers from one Web site to another. They developed the theory that a search engine based on a mathematical analysis of the relationships between Web sites would produce better results than the basic techniques then in use. BackRub allowed the search engine to list results according to the popularity of the pages, after Brin and Page realized that more times than not the most popular result would also be the most useful. They worked on BackRub until mid-1998, and then sought to sell licenses to the technology. Their immediate goal was to move out of the dormitory and pay off the credit card debt they had amassed. Andy Bechtolsheim, a co-founder of Sun Microsystems, was immediately enthusiastic about the technology, which Brin and Page called Googol, for the amount of information the search engine would be able to search. Googol is a word for the number represented by 1 followed by 100 zeros. At their first meeting, Bechtolsheim did not need to hear too many details; he wrote a check for \$100,000, Brin said. The check was made out to Google, Inc., essentially forcing the two young men to set up a corporation, if only to cash the check, with a slightly different spelling from their original name.

Ultimately, Brin and Page raised \$1 million from family, friends, and other investors, and on Sept. 7, 1998, Google was commercially launched from a friend's garage in Menlo Park, Calif. Initially, Google got 10,000 queries a day. By 2004, the number was 200 million a day.

Operating out of a 500,000 sq. ft. headquarters in Mountain View, Calif., affectionately known as the GooglePlex, the company in 2004 had almost 2,000 employees. According to forms filed with the Securities and Exchange Commission, Brin and Page owned more than 38 million shares of Google stock, or roughly 40 percent of the company. When Google went public in 2004, it was estimated that the company had a value of \$23 billion, and each founder was worth many billions of dollars. Many employees, whose perks at the workplace include washing machines, doctor visits at company offices, roller hockey, table tennis, pool, a staff masseuse, and free meals and snacks, became millionaires.

"To google," as a verb, has come to mean "to search for something on Google"; because of Google's popularity (80 percent of all Web users, perhaps) it has also generically come to mean "to search the Web." At its peak in early 2004, Google handled upwards of 80 percent of all search requests on the World Wide Web through its Web site and clients like Yahoo!, AOL, and CNN.

In September 2004, Brin and Page went to Israel for the 80th birthday party of Shimon *Peres and praised Israeli technology. "Israel looks to me like the next Silicon Valley; it has

the potential to be even more successful than Silicon Valley, because people here are hungrier,” Brin said.

[Stewart Kampel (2nd ed.)]

BRINDISI, seaport in southern Italy. Jews lived in Brindisi from an early period, as testified by several tombstone inscriptions, one of which dates back to 834. The inscriptions include several lines of a poem attributed to Amittai, derived, apparently, from the same source as the poems of *Amittai ben Shafatiah in Megillat *Ahimaaz (the Scroll of Ahimaaz). Brindisi was destroyed in 838 during the Muslim invasions of Southern Italy and rebuilt by the Byzantines at the end of the 10th century. About 1165 *Benjamin of Tudela reported that ten Jewish families of dyers lived there. The Jews of Brindisi were occupied as dyers, moneylenders and brokers, and skilled artisans. In 1278 King Charles I of Anjou invited the Jew Simone, an expert at melting gold in the mint of Brindisi, to exercise his skills in the mint of Naples. By the end of the 13th century the Jews had left Brindisi to escape forced conversions and onerous taxes, mainly to the lands of the pontifical state and Taranto. In 1323 the Jews of Brindisi again sought to escape the city because they were being forced by the Christian inhabitants to convert. Fearing that without the Jews the city's economic prosperity would be affected, the inhabitants petitioned the king to order their return, promising to protect them. King Robert the Wise declared in 1334 that even the rights of “those who were outside the womb of the Church” should be respected. Ten years later the Jews suffered another wave of persecution, and Queen Joanna I ordered the local population to cease molesting the Jews and advised the archbishop to investigate cases of forced conversion. But in 1368 Joanna treated harshly converts and false converts who left Brindisi and Alessano for Lecce and Copertino to return there to Judaism. The Dominican Pino Giso, archbishop of Brindisi, and the Franciscan Marchisio da Monopoli played an important part in instigating the persecution of converts and the destruction of new synagogues. But during most of the 15th century the Jews of Brindisi enjoyed a peaceful existence. In 1409 King Ladislas, addressing the request of the citizens of Brindisi, confirmed the right of Jews to loan money at interest, up to 40 percent. The city's population was greatly reduced in the first half of the 15th century. According to a privilege issued in 1463 by King Ferrante I to Brindisi, the city complained that out of a hundred Jewish families who had once lived there, only 12 or 15 remained. The king promised the city that he would offer inducements to encourage their return. In 1468 the city again petitioned the king to prevent the Jews' from leaving for other cities or the lands of the barons. In 1494–95, when Jews in the kingdom of Naples were attacked, the Jews of Brindisi attempted to avert disaster by signing over their property to the municipality. However, in 1496 the 50 families living there found it preferable to move from Brindisi to nearby Gallipoli. In 1510 the Jews of Brindisi were included in the general expulsion of Jews from the kingdom of Naples. A few families were

able to return in 1520, but in 1540–41 the decree of expulsion was definitely renewed.

BRINIG, MYRON (1896–1991), U.S. novelist. Brinig was born in Minneapolis and grew up in Butte, Montana, where many of his most noted works were set. As an adult, Brinig lived in Taos, New Mexico, and New York City, where he died. His painted a grim picture of the life of second-generation American Jews. Largely autobiographical, *Singermann* (1929) tells the story of a Jewish family in Silver Bow (Brinig's fictitious name for Butte): parental authority collapses and the children drift away, marry non-Jews, and are scattered. This family chronicle was continued in three later novels, *This Man Is My Brother* (1932), *Sons of Singermann* (1934), and *The First Book of Michael Singermann* (1935), but these were less successful. Brinig's other works largely reflect memories of life in the American West or in New York. They include *The Sisters* (1937), *Anne Minton's Life* (1939), *The Family Way* (1942), *Footsteps on the Stair* (1950), *The Sadness in Lexington Avenue* (1951), and *Looking Glass Heart* (1958). *The Sisters* was turned into a film of the same title in 1938 starring Errol Flynn and Bette Davis. Brinig's fictional protagonist, Harry Singermann, is considered the first significant gay character to appear in American Jewish fiction; Brinig's compassionate and sympathetic characterization avoids the stereotypes of the era. Brinig's papers are housed in the Beinecke Library at Yale University. His letters are described in Yale University Library's “Gay and Lesbian Studies Research Guide” as providing a “detailed account of the life of a gay man in New York.”

[Judith R. Baskin (2nd ed.)]

BRINKER, MENACHEM (1935–), scholar of philosophy and literature. Brinker was born in Jerusalem. In 1956 he received his B.A. in literature and philosophy and in 1960 his M.A. in philosophy, both from the Hebrew University of Jerusalem. He received his Ph.D. from Tel Aviv University in 1973. In 1968 he became a teacher in the Department of Philosophy and in 1969 in the Department of Literature at Tel Aviv University. In 1969–70 he was the editor of *Massa*, a literary journal. In 1974 he founded and served as editor (until 1978) of *Emdah*, a journal for culture and social affairs. In 1976–79 he was the chairman of the Israel Association of Philosophy. In 1978–79 he taught literature and Jewish studies at Harvard University. In 1988 he became a full professor at the Hebrew University and in 2000 professor emeritus. In 2004 he was awarded the Israel Prize.

Brinker had some 250 publications, including five books. He wrote on Sartre, Spinoza, and Nietzsche as well as Tolstoy, Dostoyevsky, and Shakespeare. He edited *Jerusalem Studies in Hebrew Literature in Memory of Dan Pagis* (1988).

[Shaked Gilboa (2nd ed.)]

BRISBANE, capital of Queensland, Australia. The first community was organized there in 1865, and its synagogue, Sha'arei Emunah (now the main synagogue), was consecrated in 1886. There were then 446 Jews in Brisbane out of 724 for the whole of Queensland. The small South Brisbane Congregation, consisting principally of Russian immigrants, was founded in 1928. Another synagogue was opened at Surfers' Paradise, a holiday resort, in 1961. Although religious observance is not strong, all three synagogues are Orthodox. The small congregation in Toowoomba (100 mi. (160 km.) from Brisbane) is now extinct. The main synagogue, to which a hall, classrooms, and a *mikveh* are attached, is the center for social and cultural activities. There is a strong Zionist movement; the overall Zionist body, the State Council, is affiliated with the Zionist Federation of Australia. Relatively few immigrants settled in Brisbane after World War II, and the growth of the community has been slow. In 1966 Brisbane Jewry numbered approximately 1,400; another 400 lived in Surfers' Paradise and other country towns. In 1911 Australian-born Jews represented 64% of the Jewish population in Queensland; Jews from the United Kingdom 16.9%; and from Europe 16.7%. The figures for 1961 were: 53.1%; 11%; and 27.4%. In the late 20th century Jewish numbers in Queensland expanded considerably, although chiefly as a result of migration to the Gold Coast, a resort area south of Brisbane, rather than to Brisbane itself. Indeed, Brisbane's Jewish population apparently declined after the mid-1990s. According to the 2001 Australian census, there were 1,667 declared Jews by religion in Brisbane, 39.0% of Queensland's total of 4,271 Jews. In 2004 Brisbane had an Orthodox and Liberal synagogue.

[Israel Porush]

BRISCOE, ROBERT (1894–1969), Irish politician and communal leader who was the first Jewish member of the Irish Dail (parliament) and the first Jewish Lord Mayor of Dublin. He was active in the struggle for Irish independence. From 1917 to 1924 he served in the Irish Republican Army and was sent to the United States to secure financial and moral aid from Irish Americans. He sat in the Dail as a member of De Valera's Fianna Fail Party from 1927 to 1965. From 1928 he was a member of the Dublin Corporation (city council), serving as mayor from 1956 to 1957 and 1961 to 1962. Briscoe was an active supporter of the Revisionist movement and a member of the executive of the New Zionist Organization. He gave support to

the activities of the *Irgun Zeva'i Le'ummi, which utilized his experience of clandestine paramilitary strategy in Palestine. Briscoe was also active in Jewish affairs and was president of the Dublin Board of Shehitah. His son Benjamin was elected to the Dail in his father's constituency after the latter's retirement from politics in 1965 and also served as Lord Mayor of Dublin in 1988. Briscoe wrote his autobiography *For the Life of Me* (1959). After his death, a Robert Briscoe Award was created to honor Jews who helped Ireland or Irish immigrants to the United States.

BRISTOL, seaport in southwest England. Its medieval Jewish community is sometimes said to have been one of the more important in England, although it ranked only thirteenth among the twenty-one communities in the 1194 Donum. In about 1183 it was accused of ritual murder (*blood libel) but few details are extant. At the end of the 12th century, an **archa* for the registration of Jewish financial transactions was set up. In 1210 all the Jewish householders of England were sent as prisoners to Bristol and a levy of 60,000 (or 66,000) marks was imposed upon them. During the Barons' Wars, in 1266, Bristol Jewry was attacked and the *archa* burned. Another attack occurred in 1275, though no lives were lost. At this time the Bristol community received an influx of Jews from Gloucester who were sent there after the expulsion of the Jews from the queen mother's dower-towns. Subsequently, several Bristol Jews were hanged for coin clipping. The community came to an end with their expulsion in 1290. Medieval scholars of Bristol include Samuel ha-Nakdan (probably identical to Samuel le Pointur) and Moses, a descendant of R. Simeon the Great of Mainz and ancestor of R. Moses of London and Elijah b. Menahem of London.

In the middle of the 16th century Bristol was the only English town other than London where *Marranos are known to have lived. No organized Jewish community was established, however, until about 1751. Despite the virtual absence of Jews, the local Tory newspaper was among the most vociferously anti-Jewish during the agitation over the “*Jew Bill” of 1753. In 1786 the former Weavers' Hall was taken over as a synagogue. The community leader was Lazarus *Jacobs, a glassmaker, whose work is still sought after by collectors. His son Isaac Jacobs was glass manufacturer to George III. A secessionist community existed between c. 1828 and 1835 when it rejoined the parent body. A new synagogue was opened in Park Row in 1842. The present synagogue was constructed in 1870. Eastern European Jews arrived after the beginning of the Russian persecutions in 1881. In the 20th century the community dwindled, numbering 410 in 1968.

[Cecil Roth / Joe Hallaby (2nd ed.)]

In the mid-1990s the Jewish population numbered approximately 375. There was some growth, however, in the size of

the local community at the end of the 20th century, with the 2001 British census finding 823 Jews by religion in Bristol. In 2004 Bristol had an Orthodox and a Liberal synagogue.

BRISZK, family of Transylvanian rabbis.

MORDECAI BEN JOSHUA BRISZK (1884–1944), founder and head of the yeshivah at Tasnad. He was educated in the home of his father who was born at Brest-Litovsk (Brisk), Lithuania, whence he took his family name, but later moved to Hungary, where he became rabbi of Tiszadada. Briszk subsequently studied at the *bet midrash* of Mordecai Loeb Winkler, the rabbi of Mad. In 1908 he was appointed *dayyan* at Marghita, Transylvania, where he had already laid the groundwork for a yeshivah. After he became rabbi of Tasnad in 1919, he expanded his yeshivah, which in 1935 had 450 pupils, making it the largest in Hungary and Transylvania. In his teaching he pursued two basic aims: to equip his pupils with an extensive knowledge of the Talmud and its commentaries, and to prepare them to arrive at halakhic decisions based on a clear understanding of the principles contained in the authorities. Accordingly, he did not limit himself to teaching talmudic themes (*sugyot*) alone, but provided a thorough grounding in the literature of the earlier and the most outstanding later authorities. In 1937 he erected a large building for his yeshivah. Seven years later he and his family were taken to the ghetto at Simleul-Silvaniei. From there he was transported to Auschwitz where he died. Briszk published the work of his father-in-law, Joshua Aaron Zevi Weinberger, the rabbi of Marghita, with important addenda of his own, in 1913. He himself was the author of responsa in three parts (Tasnad, 1939), but the printing of the third part was interrupted in the middle and completed in New York in 1963. NATHAN ZEVI BEN JOSHUA (1883–1944), rabbi and author. The brother of Mordecai and the son-in-law of Naphtali ha-Kohen Schwarz, he too perished in Auschwitz. From 1909 he was rabbi of Magyarcséke (Ceica), and later of the Orthodox community of Nagyszalonta (Salonta), both in Transylvania. He was the author of several works: *Naḥalat Zevi*, on *Avot* (1916); *Naḥalat Avot*, a commentary on the Passover *Haggadah* (1919); *Naḥal Dimah* (1923); *Naḥalat Shivah* (1932), on the festivals and on talmudic themes; and *Ma'amar Esther* (1937), homilies on the Book of Genesis.

[Naphtali Ben-Menahem]

BRITH ABRAHAM, fraternal order founded on June 12, 1859, in New York City by German and Hungarian Jews. It later attracted also Russian, Polish, and Romanian Jews. The five original objectives set by Brith Abraham were (1) aiding members in need, (2) giving medical aid, (3) burying deceased members “in accordance with Jewish Law and ritual,” (4) providing for families of deceased members, and (5) assisting members to become citizens. In 1887, 27 delegates to the convention in New York left the order, and at a synagogue on Norfolk Street, under the chairmanship of Jacob Schoen, founded the Independent Order of Brith Abraham. These delegates were dissatisfied with the incompetence of the administration of the original order, and being unable to bring about a change from within, they decided to organize a new order with the same objectives and programs as the old one. In time Brith Abraham became the largest Jewish fraternal order in the world. Yet, though it outnumbered B'nai B'rith, it never equaled the latter in importance. Early in the 20th century, the Independent Order of Brith Abraham reported 302 lodges with a membership of 56,949; by 1909 the number grew to 210,000, but by 1940 the membership declined to 58,000 and since then it has continued to decline. The old Order Brith Abraham had 73,109 members in 1913, but was dissolved in 1927. In 1968 the Independent Order Brith Abraham (which now calls itself Brith Abraham) listed as its activities and objectives: “Fosters brotherhood, Jewish ideals and traditions, and concern for welfare of Jews; provides fraternal benefits to members; supports camps for under-privileged children and senior citizens.” It also espoused interest in Zionist and general philanthropic activities. It issued a publication called *The Beacon*.

BIBLIOGRAPHY: *History of the Independent Order Brith Abraham* (1937).

[Morris A. Gutstein]

BRITISH COLUMBIA, province of Canada bordering the Pacific coast. Although much smaller than the Jewish communities of Ontario and Quebec, the Jewish presence in Canada's western-most province, British Columbia (B.C.), has been part of the region's history and development since the late 1850s. Drawn to B.C. by the discovery of gold in the Fraser River and Cariboo regions of the mainland, by 1858 approximately 100 Jewish merchants had established themselves in the port city of *Victoria, then capital of the crown colony of Vancouver Island. Predominantly of British and West European origin, many of these merchants had business connections with gold-trading firms in San Francisco. From their base in Victoria, these Jewish businessmen played a significant role in developing the wholesale and distribution networks which supplied Victoria and the B.C. hinterland with a wide range of consumer goods. A smaller number of Jewish miners, traders, and small shopkeepers also ventured into B.C.'s interior, pioneering in boomtowns like Yale and Barkerville.

By the mid-1860s, Victoria's Jewish population reached about 250. In addition to its economic prominence, the highly

acculturated community enjoyed social acceptance. When the city's first synagogue, Temple Emanu-El, was consecrated in 1863, more than half of the building fund contributors were non-Jews. Further, many Victoria Jewish businessmen were elected to important civic and political positions. In 1860 Selim *Franklin became the first Jew to take a seat in any legislature in British North America. His brother Lumley Franklin was elected Victoria's mayor in 1866. He campaigned for political union with the mainland of B.C., which came to pass that same year. In 1871, soon after B.C. joined Canada, Victoria merchant Henry *Nathan became the first Jew elected to the House of Commons in Ottawa.

The decline of the gold trade in the 1870s spurred a shift in the province's Jewish demographics. Victoria's Jewish community stagnated. Many of its most prominent residents relocated to Vancouver, attracted by the potential of its natural harbor and resources. Among them was David Oppenheimer, who became widely known as "the father of Vancouver." Although *Vancouver was soon to become the center of Jewish life in the province, during these early years its Jewish population remained quite small. When a Reform congregation was established by Rabbi Solomon Philo in the 1890s, it had a membership of only 22 families. A smaller, more traditional congregation numbered only a dozen men.

This situation changed dramatically with the influx of large numbers of East European Jews between 1901–31. Vancouver's Jewish population grew from 214 to 2,440. The newcomers were largely from Russia, bringing with them strong currents of Orthodox Judaism, Zionism, and socialism. Unlike their more affluent and acculturated Jewish counterparts in the west end of the city, the majority of the East European Jews initially clustered in Vancouver's east end Strathcona and immigrant districts, adjacent to Chinatown. While some had spent time in eastern Canada or the U.S., the majority were new to Canada. Their arrival in Vancouver coincided with a period of growth, permitting a fairly high degree of economic mobility. Many peddled produce or various forms of second-hand merchandise until they accumulated enough capital to open their own retail or manufacturing establishments, particularly in the clothing industry. To assist economic integration, the community organized a Hebrew Aid and Immigration Society and Hebrew Free Loan Association in 1915, succeeded in 1927 by an Achduth Cooperative Society.

The East Europeans concentration in Vancouver's east end also created a more "Old-World" style community revolving around religious observance and a cluster of Jewish shops and institutions. In 1911–12 Vancouver's first synagogue, the Sons of Israel, opened. In 1917 the Orthodox congregation was renamed Schara Tzedek, and in 1921 it consecrated a new house of worship with a seating capacity of 600. The synagogue was led by Nathan Mayer Pastinsky, who, while not an ordained rabbi, was highly esteemed by all Vancouverites for his religious knowledge, welfare work, and tireless activity among immigrants. A Conservative congregation, the Beth Israel, was also established in the mid-1920s and incor-

porated in 1932, absorbing what remained of the community's Reform element. Each synagogue maintained its own congregational school. The school originally associated with the Schara Tzedek synagogue eventually evolved into the Vancouver Talmud Torah, the city's only Jewish day school.

Vancouver's small Jewish community reflected a broad range of organizational affiliations, even in its formative period. A B'nai B'rith lodge was established in 1910, followed in 1913 by a Zionist and Social Society. A local Hadassah chapter was founded in 1920 as well as a chapter of the National Council of Jewish Women in 1924 and Pioneer Women in 1933. Active groups for young people included Habonim, Aleph Zadik Aleph, and Young Judaea. Communal fundraising was managed through a Jewish Community Chest, the precursor to a 1932 Jewish Administrative Council. The latter also oversaw the community's only newspaper, the *Jewish Western Bulletin*, which began publishing in 1928, the same year that a Jewish community center opened. In the mid-1930s, B.C. delegates began participating in the activities of the Canadian Jewish Congress (CJC) but it was not until 1949 that a CJC Pacific Region encompassing B.C. was formed. During World War II, CJC helped to organize the Jewish community's war relief efforts and assumed responsibility for community relations and numerous Jewish cultural and educational initiatives.

The postwar period was one of tremendous growth for B.C. Jewry, Vancouver remaining the primary center. By 1971 the city's Jewish community had grown to more than 10,000. Newcomers included many former military personnel and Jews from other parts of Canada, as well as more than 400 Holocaust survivors and 250 Hungarian refugees. The community enjoyed substantial upward mobility and occupational diversity, and shifted its geographic center from the east end to the more affluent Oakridge district in the city's southwest. In 1948 both the Schara Tzedek and Beth Israel congregations built new synagogues in this area, followed by an impressive new Jewish Community Center in 1964. Organizational expansion also included the founding of a Reform congregation in 1965, the establishment of a Sephardi group in 1973, and a Lubavitch presence in 1974.

Among community priorities during these years, fundraising and advocacy support of Israel remained very prominent. Although antisemitism was never regarded as a major problem in B.C., the B'nai B'rith and Pacific Region of the CJC spearheaded considerable human rights activism in coalition with other like-minded groups. The community also included a strong Jewish secularist presence through the Peretz Institute created after the war to foster secular humanist Judaism. Vancouver also had a chapter of the left-wing United Jewish People's Order. The Vancouver section of the National Council of Jewish Women was a pioneer in areas of social welfare, organizing programs in volunteer training, preschool education, and gerontology.

Jews also had an impact on the larger civic society. Between 1972 and 1975, David *Barrett, a social worker and the leader of the New Democratic Party, served as the premier of

British Columbia. Several well-known Jews were also heavily involved in support of higher education in B.C., including former provincial chief justice Nathan *Nemetz and Jack *Diamond, a prominent businessman and philanthropist. The *Belzberg, *Wosk, and Koerner families have also been extremely generous Jewish donors to the province's universities.

By 2001 the Jewish population of B.C. had grown to more than 30,000, a nearly threefold increase in 30 years, but Jews still constituted less than one percent of the provincial population and only about eight percent of Canadian Jewry. Unlike earlier years, when fully 90 percent of B.C.'s Jews lived in Vancouver, recent growth occurred outside of Vancouver, particularly in the nearby suburbs of Richmond, Maple Ridge, and Burnaby. Victoria's Jewish community likewise witnessed a revival, and relatively new Jewish communities emerged in interior towns such as Kelowna. As a result, approximately one in four B.C. Jews now lives outside of Vancouver. The need to provide community services and outreach to this increasingly dispersed populace led in 1986 to the creation of a Jewish Federation of Greater Vancouver, a central body responsible for the planning and distribution of communal funds. With B.C. being an attractive destination for retirees, an aging Jewish population is of particular concern. Other prominent items on the communal agenda are support for Israel and Holocaust awareness. The latter is coordinated through the Vancouver Holocaust Education Centre, created in 1985.

BRITISH ISRAELITES, advocates of the Anglo-Israeli theory, which maintains that the English and their ethnic kinfolk throughout the world are descended from the *Ten Lost Tribes of Israel. The theory is based on bizarre theological and linguistic assumptions. Christianity's claim to be the "New Israel" is reinforced by the legend that Joseph of Arimathea established an English church predating that of Rome; the belief that British monarchs, seated at their coronation on the Stone of Scone, are thus in fact consecrated by the patriarch Jacob's stone of Bethel; and the old Puritan idea that the English have refought Israel's battles against God's enemies. By a selective and – according to currently accepted criteria – utterly unscientific interpretation of the Scriptures, British Israelites are able to "prove" that the Japhetic Cymri or Cimmerians are the ancient Britons (*Berit-Ish*, or "Men of the Covenant") and the Saxons, "Isaac's Sons," while the wanderings of the "lost" tribe of Dan are traced from the Dnieper to Denmark and those of the Gadites, from Gotland to Cambria.

Anglo-Israelism's first manifesto was issued by the Puritan Member of Parliament John Sadler, author of *Rights of the Kingdom* (1649), but the movement began to gather force only at the end of the 18th century, when Richard *Brothers, a messianic prophet and self-styled "Nephew of the Almighty," began publishing a series of pamphlets. A later writer, Edward Hine, published the bestselling *Forty-seven Identifications of the British Nation with the Lost Ten Tribes of Israel* (1871), by which time Anglo-Israelism had crystallized into an organized

movement. The British Israel World Federation, with headquarters in London, claims hundreds of thousands of supporters in English-speaking countries; but a kindred organization in the U.S., the Anglo-Saxon Federation of America, exploited antisemitism in order to further its claims. Anglo-Israelism has become part of the doctrine of various Christian sects, for example, the Mormon church. In recent years the long-established British Israelite movement has unquestionably dwindled in size, consistent with a loss of certainty about Britain's special status and the decline of unscientific ethnic theories.

[Godfrey Edmond Silverman]

BRIT IVRIT OLAMIT (Heb. "World Hebrew Union"; Eng. "World Association for Hebrew Language and Culture"), organization for the promotion of Hebrew language and culture. The idea of establishing what became the Brit Ivrit Olamit originated in October 1930, when Simon *Rawidowicz delivered a lecture at a meeting in the Bet Am Ivri in Berlin, in which he surveyed the development of modern Hebrew literature. Noting that Hebrew creativity in Eastern Europe and the Germanic lands had greatly declined after World War I and perceiving in this a great danger for the Jews of the Diaspora as well as for Hebrew creativity in general, he proposed the creation of a broad-based cultural organization to deal with the situation. Rawidowicz's idea gained much support, and together with Dov Lipitz, head of the *Tarbut school system in Lithuania, he established a committee to organize a Hebrew Conference that convened in Berlin in June 1931. There, in his opening speech, Rawidowicz went beyond the issue of establishing an organization to stimulate and guide Hebrew creativity in the Diaspora, as he additionally proposed a completely new approach to Jewish life and culture that rejected the accepted view that the Land of Israel should serve as a spiritual center for the Diaspora and instead advocated a theory of "partnership" according to which the Diaspora was to assume responsibility for actively creating its own Hebraic culture. While Rawidowicz's idea of establishing an international Hebrew movement was accepted, the ideological basis that he proposed generated much heated discussion. Finally, it was decided to establish an organization called the Brit Ivrit Olamit, and to set up a Temporary Central Committee to administer the Brit and to organize a Hebrew Congress. That committee then entrusted Rawidowicz with heading the Brit, and began to plan the Congress.

However, with the Nazi rise to power in early 1933, the Central Committee could not continue to function in Berlin and decided to establish a new Temporary Central Committee in Warsaw under the direction of Zvi Zohar. This Committee convened an enlarged committee of the Brit which met in Prague in August 1933 before the Eighteenth World Zionist Congress. There, it was apparently decided that Central Com-

mittees of the Brit were to be established in Warsaw and London and an Executive in London, which was headed by Rawidowicz; additionally, some members of the Berlin Central Committee who had settled in Erez Israel were apparently authorized to set up a local Central Committee, but instead they, together with some local figures, claimed to be the sole successor of the Berlin Central Committee and rejected the claim of the London Executive to jurisdiction over the Brit, thereby greatly limiting the scope of its activities.

The Brit in Erez Israel immediately ran into financial difficulties and its activities were very limited, although it published a significant series, *Am va-Sefer* (1936–74, 1981–92). Finally after World War II and the establishment of the State of Israel, it convened the long-awaited Hebrew Congress in 1950. Headed by distinguished figures such as Izhak Ben-Zvi, Zalman Shazar, and Arieh Tartakower, the Brit remained an independent organization which cooperated with the Jewish Agency and the World Zionist Organization in fostering the study of Hebrew in the Diaspora. In the early 21st century its main activity consisted of co-sponsoring European academic Hebrew conferences (17 up to 2005), many of whose proceedings have been published, and also the journal *Revue européenne des études hébraïques* (since 1996).

[Benjamin Ravid (2nd ed.)]

BRITTAN, LEON, BARON (1939–), British Conservative politician who held a variety of senior offices in the government of Margaret Thatcher. Educated at Cambridge University, where he was president of the Cambridge Union Society in 1960, Brittan practiced as a barrister and became a member of the Queen’s Council in 1978. He was chairman of the Conservative Party’s Bow Group in 1964–65. Brittan served as a Conservative member of Parliament from 1974 to 1988 and held cabinet posts as home secretary (1983–85) and secretary of state for trade and industry (1985–86). A pro-European moderate within the Conservative Party, in 1986 he resigned from Margaret Thatcher’s cabinet in protest over its alleged anti-European policy in the Westland Helicopter affair. Brittan then served as British commissioner of the European Communities from 1989 until 1993 and as a full member of the European Commission in 1993–94. Brittan was knighted in 1986 and given a life peerage in 2000. His brother SIR SAMUEL BRITTAN (1933–) is a well-known economics columnist on the London *Financial Times*.

[William D. Rubinstein (2nd ed.)]

BRITTANY (Fr. *Bretagne*), region and former province of western France and ancient independent duchy. Canon 12 of the ecclesiastical Council of Vannes in Brittany (465) forbade clerics to partake in meals with Jews. At about the same time, Nunechius, bishop of *Nantes, welcomed a newly converted Jew. Jews are again found in Brittany from the end of the 12th century living in Ancenis, Clisson, Dol, Guérande, Lamballe, Nantes, and Rennes, and probably also in some other places. By an agreement of Feb. 23, 1222, Pierre Mauclerc, duke of Brittany, confirmed the jurisdiction of the bishop of Nantes over the Jews living in his see. In 1236 many Jews in Brittany were massacred by Crusaders. The remainder were expelled in April 1240 by the duke Jean le Roux who declared a moratorium on all debts owed to Jews and ordered them to return all pledges of chattels or real estate. The duke bound himself and his successors to uphold the decree in perpetuity. For several centuries, therefore, only converted Jews are found living in Brittany. A problem is presented, however, by the Hebrew tombstone (dated 1574) of Solomon b. Jacob Semahes found in Quimperlé. From the beginning of the 17th century, numerous *Marranos settled in Brittany, mainly in Nantes; their Christian competitors failed to have them expelled. During the 18th century, Jewish traders from Bordeaux, Alsace, and Lorraine began to visit the fairs and markets. In 1780, as a result of an isolated incident, they were all expelled. Immediately after the French Revolution, they are found again, notably in Nantes, Brest, Rennes, and Saint-Servan. In 1808, when the *consistories were established, the total number of Jews living in Brittany was only about 30. In the late 20th century there were communities in Nantes, Brest, and Rennes.

BRIVIESCA, city in Castile, northern Spain. Briviesca Jewry was closely connected with the communities of *Burgos and *Miranda de Ebro. In 1240 Ferdinand III of Castile ordered the community to continue to pay the amount of 30 denarii annually to the cathedral in lieu of the 30 shekels paid to Judas Iscariot. A number of Jews who had settled in the quarter of Santa Cecilia in Briviesca were conveyed in gift to the monastery of Huelgas by Alfonso X in 1270. Briviesca Jewry was annihilated during the civil war between Pedro the Cruel and Henry of Trastámara in 1366–69 but subsequently reestablished. Records of 1380–81 show Jews of Briviesca engaged in various tax-farming operations. In 1387 the Cortes convened in Briviesca and promulgated a series of anti-Jewish restrictions, including separation of the Jewish, Moorish, and Christian quarters. In 1414 a number of Jewish residents of Briviesca sold land in their possession to a monastery in neighboring

Oña. The levy for the war with Granada imposed in 1485 on the Briviesca community and Jews in the vicinity totaled 127 Castilians. No information is available on the fate of the Briviesca Jews after the expulsion from Spain in 1492.

[Haim Beinart]

BRIYO VE-ZIMRO, anonymous Yiddish narrative from 1585. This remarkable tale is a love story without equal in early Yiddish literature, features one of the earliest significant female characters in Yiddish, and displays the intense emotion of contemporary Shakespearean tragedy, while uniting the lovers by means of a post-mortem wedding in Paradise, thus weaving a variety of international motifs (a quasi-Solomonic judgment, a hero's journey to the bewitched Other World, star-crossed lovers whose union is blocked by parental prohibition, the riddling hero who saves himself by his wits while in the power of the enemy leader, the sword in the stone) into an essentially Jewish narrative set during the Maccabean monarchy.

[Jerold C. Frakes (2nd ed.)]

BRNO (Ger. **Bruenn**), capital of Moravia, Czech Republic. A community was established there in the first half of the 13th century by Jews invited by the margrave of Moravia. A charter granted in 1254 guaranteed protection to Jewish lives and property, freed Jews from restrictions on trade and occupations, and exempted them from wearing distinguishing dress; the community had to contribute a quarter of the amount required for the upkeep of the city fortifications. The charter was renewed in 1268 and incorporated in the city statutes in 1276. There were about 1,000 Jews living in Brno in 1348. A charter granted in 1345 encouraged Jewish settlement. There was then a Jewish quarter with its own “Jews’ Gate.” Jewish tombstones have been discovered dating from 1373. In the first half of the 15th century Israel *Bruna officiated as rabbi. The Jews were expelled from Brno in 1454, after John of *Capistrano preached there, and were formally excluded from Brno until 1848 by the privilege *de non tolerandis Judaeis*. Individual Jews, however, paid for permission to attend the markets in the city with an admission fee. This license was extended in 1627 and 1648, but curtailed in 1661. A special inn (leased in 1724 by Jacob Dobruschka) was assigned for Jewish travelers who were officially permitted to spend one night in the city, but often stayed longer illegally. In 1706 the authorities prohibited Jews from holding religious services in public, although these services were tolerated in private. There were then 52 Jews liv-

ing in Brno. In 1722 the chief representative of Moravian Jewry, the *Landesjudensollicitor*, was permitted to settle near the city gate. The exclusion of the Jews from Brno was renewed in 1745. In 1764 the brothers Hoenic took over the city bank but in the following year, when two of the brothers were permitted to lease houses in Brno, there was an outbreak of rioting. In 1769 Solomon Dobruschka received permission to hold services in his house and to keep a “small” Torah scroll there. However, the authorities still made attempts to prevent the holding of services in public and in 1812 levied a special tax for “keeping a Torah.”

A Hebrew printing press was set up in Brno in 1753 by Franz Joseph Neumann. Jacob *Frank lived in Brno between 1773 and 1786. Following the revolution of 1848 the Jewish community was organized and received official recognition in 1859. The first rabbi was David Ashkenazi. A cemetery was consecrated in 1852, and a synagogue built in 1855. Baruch *Placzek, when rabbi of Brno, also held the title of *Landesrabbiner from 1884 until his death in 1922, when it was discontinued. Jewish industrialists, such as Lazar *Auspitz, Julius Ritter von *Gomperz, Loew-Beer, and others, played an important part in developing the textile industry in Brno. During World War I about 16,000 refugees from Eastern Europe were received by the community and many remained there after the war. The Jewish school network established there included the only Jewish high school in western Czechoslovakia. The Jewish population numbered 134 in 1834; 2,230 in 1859; 4,505 in 1869; 7,809 in 1890; and 10,202 (6.9% of the total population) in 1930, of whom 3,295 declared their nationality to be Jewish. Jewish students from Eastern Europe studied at the University of Brno between the two world wars. Largely members of Zionist student groups, they influenced the local Jewish youth in the national spirit. Brno was the seat of the Juedischer Buch- und Kunstverlag and the weekly *Juedische Volksstimme*, founded by Max *Hickl.

During World War II the mass deportation of Jews from Brno and its surrounding commenced on Nov. 26, 1941, when 1,000 Jews were sent to the Minsk ghetto. Another 2,000 were sent to Theresienstadt on Dec. 2 and 5, and 7,000 more were deported between Jan. 28 and May 27, 1942, most perishing in Auschwitz. A memorial plaque to the Jewish victims of Nazism deported from Brno has been affixed to the building where the transports of deportees were concentrated. The survivors who returned to Brno after the Holocaust numbered 1,033 in 1948. The Orthodox synagogue (built in 1932) was restored in the 1950s and was in use in 1968. The rabbi of Brno, Richard *Feder, in 1969 was also chief rabbi of Bohemia and Moravia. The community numbered c. 500 in 1959 and c. 700 in 1969, but by the early 2000s the number had dropped to slightly less than 300. The community was responsible for the management of 10 synagogues and 45 cemeteries throughout Moravia, including restoration work.

[Isaac Ze'ev Kahane]

BROAD, ELI (1933–), U.S. businessman, philanthropist, art collector. The New York-born only child of Lithuanian immigrants, Broad built two of the largest businesses in the United States from the ground up. He was chairman of AIG Retirement Services Inc., formerly SunAmerica Inc., and founder-chairman of KB Home, formerly Kaufman & Broad Home Corporation.

Broad grew up in Detroit and earned an accounting degree from Michigan State University in 1954. In 1957, with \$25,000 borrowed from his in-laws, Broad teamed up with a builder, Donald Kaufman, to produce simple low-priced houses (no basements, no garages) for first-time buyers. In the 1960s their company went public and expanded to California, where it became one of the largest builders in a market that was growing spectacularly. (Kaufman left the company shortly after it went public in 1961 and died in a plane crash in 1983.) The business eventually lost its challenge for Broad, and in the early 1970s he devoted himself to his family and to travel. When the California real estate bubble burst in 1973, Broad returned to his company and spent 10 years building it up again. All told, the company constructed more than 500,000 homes. In 1983 Broad decided to devote more of his time to financial issues and philanthropic activities. He also achieved some notoriety as one of the financial backers of Ivan F. *Boesky's and Michael R. *Milken's questionable junk-bond operations.

For his next move, Broad theorized that the people who had bought houses from him were starting to worry about retirement. Kaufman & Broad had a small insurance subsidiary. It was spun off in 1989 to become his next vehicle, SunAmerica, an insurance conglomerate that was the fastest-growing stock on the New York Stock Exchange for much of the 1990s. Broad believed that insurers, selling policies against an early death, should be selling policies to baby boomers who faced a long life that might outpace savings. His solution was annuities. When he sold SunAmerica in 1998 to the insurance giant AIG, Broad had amassed the largest fortune in Los Angeles, estimated in 2004 at \$4.8 billion. Broad also owned the Sacramento Kings professional basketball team.

Avid supporters of contemporary art, the Broads created one of the world's finest art collections. Since 1984 the Broad Art Foundation has operated an active "lending library" to more than 400 museums and university galleries worldwide. From 2001 to 2003 an exhibition of their collection was shown

at the Los Angeles County Museum of Art, the Corcoran Gallery of Art in Washington, the Museum of Fine Arts in Boston, and the Guggenheim Museum in Bilbao, Spain. The Broads also announced a major gift to build the Broad Contemporary Art Museum at the Los Angeles County Museum of Art.

In 1999 the Broads founded the Broad Foundation, whose mission is to dramatically improve urban public education. In its first five years, it committed over \$400 million to support new ideas and innovative leadership in the largest urban school systems. In 2001 the Eli and Edythe L. Broad Foundation created the Broad Medical Research Program, which seeks to stimulate innovative research on inflammatory bowel disease. And in June 2003, in partnership with the Massachusetts Institute of Technology, Harvard University, and the Whitehead Institute, the Broads announced the founding gift to create the Eli and Edythe Broad Institute for biomedical research.

Strong believers in higher education, the Broads made a major contribution to the School of the Arts and Architecture at the University of California at Los Angeles toward the construction of the Edythe L. and Eli Broad Art Center, designed by Richard *Meier. In 1991 the Broads endowed the Eli Broad College of Business and the Eli Broad Graduate School of Management at Michigan State, his alma mater. In addition, the Broads were major contributors to Jewish philanthropic causes, and they were among the early donors of works to the Israeli Museum in Jerusalem.

[Stewart Kampel (2nd ed.)]

BROCH, HERMANN (1886–1951), Austrian novelist and essayist. Broch was born in Vienna into a Jewish industrialist family. He was educated privately with the intention of getting an administrative position in his father's textile factory. It was not until he was in his forties that he turned to writing. Broch published his first novel, the trilogy *Die Schlafwandler* (3 vols. 1931/32; *The Sleepwalkers*), dealing with the decay of values in Germany in the period between 1888 and 1919. The spread of fascism made Broch abandon his literary projects. He was arrested by the Nazis in 1938. Inspired by the visions of impending death in prison, he wrote a few elegies, which became the core of *Der Tod des Vergil* (1945; *The Death of Virgil*), a philosophical novel describing the end of Virgil's life after his return from Greece. Broch's interest in the collective psychological sources of Nazism was later expressed in *Massenpsychologie* (1951) and in *Die Schuldlosen* (1950). Broch traces the rise of Nazism to political apathy and the psychological disorientation of European society. His characters have lost their values; they are outsiders in their own life. *Die Verzauberung* (1976) also deals with mass psychology. The story is set in a small Tyrolean mountain village where farmers believe the promises of a fanatical fundamentalist and participate in the ritual murder of a young girl. Broch worked on the book periodically from the 1930s, but it was left unfinished. Broch's literary style has a lyrical, almost hymn-like quality. His writing is pervaded by the sense of man's mortality; his characters

struggle to overcome their constant awareness of their inevitable end. However, he perceives a redeeming spark of divinity which breaks through the contemporary decline of values and allows new hope to spring from apparent despair. On the eve of a planned return to Europe from the United States, where he had settled, Broch died in 1951. His *Gesammelte Werke* were published in 10 volumes (1952–61).

BIBLIOGRAPHY: R. Koester, *Hermann Broch* (1987); Luetzeler, P.M., *Die Entropie des Menschen* (2000); E. Kiss, *Philosophie und Literatur des negativen Universalismus* (2001).

BROCINER, JOSEPH (1846–1918), publicist and communal leader in Romania. Brociner was born in Jassy and after studying law moved to Galati, where he spent most of his life and was active in the struggle of Romanian Jewry for emancipation during and after the Congress of Berlin (1878). His major contribution was in the sphere of literary polemics. He sought to refute by historical evidence the claim that the Jews were “aliens,” adduced against granting them citizenship rights in Romania. The most important of these works is *Chestiunea Israelitilor Romani* (“The Romanian Jewish Question,” 1910), because of the many documents published in it, some for the first time. However, his publication of documents was in an apologetic rather than a scholarly form. Brociner was also active in reconstructing the officially recognized Jewish communal organization, which had been disorganized since 1862. In March 1896, he convened in Galati a general conference of the representatives of the communities in Romania, the first in the country, where a plan for communal organization was reviewed. In 1901, he convened a second conference at Jassy, when the Union of Israelite Communities in Romania was founded. He also wrote several publications on the subject, among them a detailed memorandum to the government; these publications also included important historical documents. Brociner was among the first members of *Hovevei Zion* in Romania. He also became associated with political Zionism and sent a proposal to Theodor *Herzl for the organization of the Zionist movement in Romania. Brociner’s brother MAURICIU (Moritz; 1855–1946) was the first Jewish officer in the Romanian Army. He distinguished himself in the Romanian War of Independence of 1877 and later attained the rank of colonel. For many years he filled senior administrative posts at court and served as private secretary to the queen. Another brother was the Austrian author and playwright MARCO BROCINER (1852–1942). Another brother, ANDREI BROCINER (1842–1930), was also a publicist and fighter for emancipation of the Jews in Romania.

[Eliyahu Feldman]

BROD, DOVIDL (Strelisker, David; 1783–1848), Hungarian **hazzan*. Born in Brody, Brod officiated in synagogues as a child prodigy but received no musical training. Although destined originally for the rabbinate, he entered business. His business failed and he became a professional *hazzan* in Althofen, Austria, in 1822. In 1830 he moved to Budapest where he served as *hazzan* until his death. Unable to read a musical score, he improvised his own melodies and though he left no written record of his compositions, most of the *hazzanim* of Hungary and Galicia and their pupils owed their style and their melodies to his inspiration.

BROD, MAX (1884–1968), Czech-born German author, composer, and representative member of the “Prague Circle” (*Prager Kreis*). Born in Prague, Brod studied law at the German university there and then entered the Czech civil service. After working in postal management in Prague, he became a minor government official for cultural affairs. In 1929 he joined the *Prager Tagblatt* as theatrical and musical editor. His acquaintance with Martin Buber, who gave lectures in Prague in 1909/10, influenced Brod as well as his encounter with a Yiddish actors group and, a few years later, with Jewish war refugees from Eastern Europe. He became active in the Zionist movement and helped found the National Council of Jews of Czechoslovakia in 1918. As its vice president he not only tried to gain equal rights for Jews but also national acceptance and cultural autonomy. As a central representative of the Prague *Kulturzionismus* he initiated the establishment of Hebrew schools in Prague. In 1939 he left Prague with his wife and settled in Tel Aviv, where he worked as a music critic and drama adviser to *Habimah.

Brod’s prolific writings include poetry, fiction, plays, libretti, literary criticism and essays on philosophy, politics, and Zionism. The fundamental thought in all his writing is the problem of dualism, i.e., the difficulty of reconciling a belief in God with the evil that exists in the world. Man’s task, he believes, is to strive toward perfection. Judaism, which represents the “miracle of this world,” is a critical stage on this road as opposed to the “continuation of this world” in paganism and the “negation of this world” in Christianity. This is propounded in his most influential philosophical work, *Heidentum, Christentum, Judentum*, 2 vols. (1921). Brod’s best-known writings are his 20 novels, some of them romantic, others historical. The former include *Schloss Nornepygge* (1908), *Juedinnen* (1911), *Arnold Beer: Das Schicksal eines Juden* (1912), *Die Frau, nach der man sich sehnt* (1927), and *Die verbotene Frau* (1960); among the latter are *Tycho Brahes Weg zu Gott* (1916); *The Redemption of Tycho Brahe*, 1928; *Rëubeni, Fuerst der Juden* (1925); *Galilei in Gefangenschaft* (1948); *Unambo* (1949), about the Israel War of Independence; *Der Meister* (1949) – another version of this book about Jesus appeared in Hebrew in 1956 with the title *Ahot Ketannah* – and *Armer Cicero* (1955). Brod’s plays include *Eine Koenigin Esther* (1918), *Die Retterin* (1919), *Die Faelscher* (1920), and *Klarissas halbes Herz* (1923). He also wrote a biography of Heine (1934).

Brod was the first person to recognize the unique quality of his lifelong friend Franz *Kafka, about whom he wrote his novel *Das Zauberreich der Liebe* (1928; *The Kingdom of Love*, 1930). It was Brod who arranged the publication of Kafka's works after the novelist's death despite Kafka's wish that the works be burned. His biography of Kafka appeared in 1937. He also revealed the genius of Jaroslav Hašek, author of *The Good Soldier Schweik*, and of the composers Leoš Janáček (whose biography he published in 1924–25) and Jaromir *Weinberger, publishing German translations of Janáček's *Jenufa* (1918) and Weinberger's *Schwanda the Bagpiper*.

Many of Brod's books and plays were translated into Hebrew and together with Shin *Shalom he wrote two dramatic works in Hebrew: *Sha'ul, Melekh Yisrael* ("Saul, King of Israel," 1944) and the libretto for Marc *Lavry's opera *Dan ha-Shomer* (1945).

Brod's last works were his autobiography, *Streitbares Leben* (1960), and reminiscences, *Der Prager Kreis* (1967).

[Felix Weltsch / Mirjam Triendl (2nd ed.)]

As a Composer

Brod studied music with Adolf Schreiber and began composing in 1900. Among his compositions are works for orchestra, notably *Requiem Hebraicum*, song cycles, and several suites. His musical style is lyrical and expressive, and thoughts about music were always woven into his novels and poetry. After he moved to Palestine, he tried to blend Oriental and European traditions in the "Mediterranean" style, as in *Zwei israelische Bauerntänze*, which was played by the Israel PO. His book *Die Musik Israels* (1951) deals with the early development of Israeli music. His numerous writings include a biography of Janiček and a book on Mahler (1961). He also translated opera librettos (notably for Janiček) in addition to writing his own.

BRODA, family of rabbis in Lithuania and Slovakia (then in Hungary) from the 17th century on. ḤAYYIM BRODA, a grandson of Abraham *Broda was rabbi of Janow; his son AARON was rabbi of Kalvanja, Lithuania; and his son BENJAMIN (d. 1818) was appointed rabbi of Grodno in 1792 and was the last *av bet din* of the city. A dispute between the supporters of Broda and the adherents of Tanhum b. Eliezer led to the abolition of the office.

Benjamin's son ḤAYYIM wrote *Torah Or ve-Derekh Ḥayyim* (Grodno, 1823), on the laws of ritual slaughter, and *Zera Ḥayyim* (published by his grandson Ḥayyim *Heller in 1907), the aim of which was to defend the rulings of the Shulḥan Arukh against the criticisms of *Shabbetai b. Meir ha-Kohen in his *Gevurot Anashim*. Ḥayyim engaged in halakhic correspondence with Abraham *Danzig and *Abraham Abele b. Abraham Solomon Poswoler of Vilna. One of his sons, DOV BER (d. 1897), was the author of *Divrei Binah* (2 pts., 1888–90) on the tractate *Makkot*. Ḥayyim's son-in-law was Israel Issar b. Mordecai Isserlin (1827–1899), who served as rabbi in Vilna. The following among his works are known: *Shem Yisrael* (1859, published anonymously), a commentary to the Mishnah *Seder Zera'im*; *Ishei Yisrael* (1864), novellae to the tractate *Shabbat*; *Tosefot Yerushalayim* (1871), on the *Tosefta*; *Pithei Teshuvah* (1875), on the Shulḥan Arukh, *Orah Ḥayyim*. Another son-in-law of Ḥayyim Broda was Eliezer b. Samuel Landau (1805–1883), who was born in Vilna and served as the head of the Brodno community. He was the author of *Dammesek Eliezer* (1868–70), a commentary in two parts on the expositions of *Elijah b. Solomon Zalman to the Shulḥan Arukh, *Orah Ḥayyim*.

Other important members of the family were (1) AARON B. ISRAEL (second half of the 17th century), who compiled *Otot le-Mo'adim* (Grodno, 1798), a calendar for the years 5549–5624, appended to which is *Nahara u-Fashta*, a book on customs by Ḥayyim b. Israel Broda. He also wrote *Tekumah*, a digest in rhymed prose of the laws of the Shulḥan Arukh, of which only the section on *Even ha-Ezer*, *Even Zivyon be-Mishpat*, was published (Shklov, 1784; complete edition by his son Nissim, Vilna, 1818). Other works have remained in manuscript; (2) ZEVI HIRSCH B. DAVID (d. 1820?), rabbi of Szenice, and after 1787 rabbi of Kittsee (Köpcsény), Hungary; was the author of *Erez Zevi* and *Te'omei Zeviyyah* (pt. 1, Vienna, 1823; pt. 2, Presburg, 1846), a commentary on chapters 1–65 and 119–178 of the Shulḥan Arukh, *Even ha-Ezer*; and *Shenei Ofarim* (Prague, 1825), sermons, published by his son Aaron; (3) ABRAHAM B. SOLOMON ZALMAN (1825–1882) was born in Ungvár (Uzhgorod) and studied in the yeshiva of Moses *Sofer in Pressburg. He lived in Kleinwardein and was rabbi of Nagyberezna from 1876 until his death. He was the author of *Peri he-Ḥag* (2 pts., 1871–76), on the laws of Passover, and *Halikhot Olam* (1874–75, pt. 1 (1927⁵), ed. by I. Gruenwald), in Judeo-German on laws of daily application; (4) ABRAHAM AARON B. SHALOM (d. after 1860) was born in Vilna. He was the author of *Beit Va'ad* (1832), a selection of laws from the four parts of the Shulḥan Arukh, to which was appended *Beit Middot* on weights and measures in the Talmud; and *Bayit ha-Gadol* (1838), a commentary on *Pirkei de-Rabbi Eliezer*; (5) MORDECAI B. NATHAN NATA (1815–1882) was born in Nádas, Hungary, and from 1864 served as rabbi of Myjava. His *Ḥiddushei She'elot u-Teshuvot Maharam Broda* (1908) was published by his son-in-law Akiva Strasser. His son JOSEPH, who succeeded him as chief rabbi of Myjava, perished at Auschwitz in the Holocaust.

[Josef Horowitz]

BRODA, ABRAHAM BEN SAUL (d. 1717), rabbi and halakhic authority. Broda was born in Bunzlau (Bohemia) and served as rabbi in Lichtenstadt and in Raudnitz. In 1693 he was appointed head of a yeshiva in Prague but left after a dispute with other rabbis of the city. In 1709 he was appointed rabbi of Metz, and in 1713 of Frankfurt, where he remained until his death. In these last two cities he established yeshivot which attracted many students. In his approbation to *Eshel Avraham*, Jonathan *Eybeschuetz paid tribute to Broda's contribution to education and teaching: "He was remarkably successful in learning, teaching, and disseminating Torah, and most contemporary scholars of renown were his disciples." Among his outstanding students were Nethanel *Weil, Jonah *Landsofer, and Samuel Helman of Metz. His novellae were noted by his students, who quoted them in their works, or published them together with their own works. Broda's most important work is *Eshel Avraham* (1747), novellae on the tractates *Pesahim*, *Hullin*, and *Bava Batra*. This reveals his erudition, keen intellect, and methodical treatment of the subject matter. The first part, *Hiddushei Halakhot*, summarizes each topic on the basis of the Talmud and its commentaries, and the second, *Hiddushei Posekim*, deals with halakhic rulings which derive from these sources. Other works by Broda are *Hiddushei Ge'onim* (Offenbach, 1723), on *Bava Kamma*, *Bava Mezia*, and *Sanhedrin*; *Hiddushei Hilkhot Gittin* (Wandsbeck, 1731), published by his disciple, Jonathan b. Isaac ha-Levi; *Shema'ta Hadta* (Frankfurt, 1737), novellae and explanations on *Ketubbot* and the second chapter of *Gittin*, and *Toledot Avraham* (Fuerth, 1769), novellae to *Kiddushin* and *Ketubbot* (incomplete). Israel Isserl b. Isaac ha-Levi (beginning of 18th century), a disciple of Broda, published *Asefat Hakhamim* (1722), which included novellae by Broda. In a *takkanah* of 1715, Broda deals with the question of modesty, warns against extravagant festivities, and pleads for abstention from extravagance and forbidden foods. His son, MOSES (1674–1741), served from 1704 as rabbi of Hanau, and from 1718 as rabbi of Bamberg, transferring to Worms in 1733. He prepared his father's *Eshel Avraham* for publication, adding to it his own glosses, entitled *Ohel Moshe*. The publication was completed by Moses' son Saul.

[Yehoshua Horowitz]

BRODER (Margolis), BERL (c. 1815/1817–1868), Yiddish balladist and folksinger, who derived his name from the city of Brody (Galicia), where he started his nomadic artistic activity. A brushmaker by profession, Broder composed songs and rhymed verses in the style of the *badhanim*, although his themes and compositions were quite original. He later became a buyer for his firm and on his business trips entertained his fellow travelers and chance acquaintances at the various inns with his lyrics. Itinerant minstrels imitated and disseminated his texts and tunes, which influenced Benjamin *Ehrenkranz (Velvel Zbarazher), Eliakum *Zunser, and Abraham *Goldfaden. In the 1860s Broder organized the first troupe of professional Yiddish folksingers, which traversed Galicia, Hungary, and Romania, singing in wine cellars and inns. The stage of the *Broder Singers consisted merely of a table with two lit candles. Though their lyrics were at first hardly suitable for such dramatic presentation, the success of their acting and singing was immense, and they paved the way for the Yiddish theater. Only a small part of Broder's original songs survived in his collection *Shire Zimre, Draysik Herlikhe Broder Lider in Reyn Yudesh Loshn* ("30 Marvelous Brody Songs in Pure Yiddish," Pressburg, c. 1860, Warsaw 1882²).

BIBLIOGRAPHY: N.M. Gelber, *Aus zwei Jahrhunderten* (1924), 70–100; idem, *Toledot Yehudei Brody* (1957), 227–9; Rejzen, *Leksikon*, 1 (1926), 395–401; LNYL, 1 (1956), 428–9; B. Margolis, *Dray Doyres* (1957), includes songs of Broder and his son and grandson. **ADD. BIBLIOGRAPHY:** D. Sadan, in: *Avnei Miftan*, 1 (1961), 9–17.

[Sol Liptzin]

BRODER, DAVID SALZER (1929–), U.S. political columnist. Broder, who was born in Chicago Heights, Ill., received his bachelor's degree and a master's in political science from the University of Chicago. He served in the Army for two years. Upon his discharge in 1953, he got a job on *The Pantagraph*, a newspaper in Bloomington, Ill. Two years later he joined the *Congressional Quarterly* in Washington, where he stayed for five years. He covered his first presidential campaign, the Kennedy-Nixon election, in 1960 for *The Washington Star*. He covered national politics for *The New York Times* from 1965 to 1966 before joining *The Washington Post*. He covered every national political campaign and convention from 1960, traveling up to 100,000 miles a year to interview voters and report on the candidates. In May 1973 Broder won the Pulitzer Prize for commentary for his columns the previous year. He became an associate editor of the *Post* in 1975. His twice-weekly columns, which are nationally syndicated, cover a broad spectrum of American life beyond politics. In March 2001 the *Washingtonian* magazine rated Broder among the four leading and most influential journalists, calling him "the most unpredictable, reliable and intellectually honest

columnist working today.” He was also voted, in 1990, the “hardest working” and “least ideological” among 123 columnists by opinion-page editors of the largest 200 newspapers in the United States. Broder is also a regular commentator on television’s leading public affairs programs. He is author or co-author of seven books, including *Democracy Derailed: Initiative Campaigns and the Power of Money* (2000) and *Behind the Front Page: A Candid Look at How the News Is Made* (1987). His column is carried by more than 300 newspapers around the world.

[Stewart Kampel (2nd ed.)]

BRODERICK, MATTHEW (1962–), U.S. actor. The son of an actor and a playwright, Broderick was raised in New York City’s Greenwich Village and began appearing in theater workshops at the age of 17. Broderick’s first success came quickly, with critical acclaim for his role in Harvey Fierstein’s off-Broadway production *Torch Song Trilogy*. Following a Tony Award-winning performance in the role of Eugene Jerome in Neil Simon’s Broadway play *Brighton Beach Memoirs* in 1983, Broderick launched his film career later that year with his turn as a teenaged computer hacker in the film *War Games*. In 1986, Broderick achieved a new level of stardom with his breakthrough performance as celebrity high-school delinquent Ferris Bueller, in John Hughes’ iconic comedy *Ferris Bueller’s Day Off*. In 1989, he received acclaim for his dramatic role opposite Morgan Freeman and Denzel Washington in the Civil War film *Glory*. Broderick’s range was displayed during the early 1990s with roles in films as disparate as the gangster farce *The Freshman* (1990) and Disney’s animated blockbuster *The Lion King* (1994). During this period, Broderick continued to move effortlessly between the stage and the screen, winning his second Tony Award in the Broadway musical *How to Succeed in Business Without Really Trying* (1994). Broderick made his directorial debut in 1996 with the romantic comedy *Infinity*. His subsequent notable performances included roles in the satire *Election* (1999) and Kenneth Lonnergran’s family drama *You Can Count on Me* (2000). In 2001, Broderick returned to Broadway in Mel Brooks’ highly popular musical *The Producers*. In 1997, Broderick married his longtime girlfriend, actress Sarah Jessica Parker.

[Walter Driver (2nd ed.)]

BRODER SINGERS, generic name for small groups of itinerant male Yiddish singers who from the 1850s entertained on weekdays (as distinct from Sabbaths and festivals) on improvised stages in wine cellars and restaurant gardens in Galicia, Romania, and southern Russia. The name designates a kind of cabaret tradition, its style and repertoire, rather than a specific group or individual. The impact of this tradition on the Yiddish poetic imagination may be gauged in Peretz’ drama *Baynakht oyfn Altn Mark*, and in the works of Itzik Manger.

The Broder Singers are important in the prehistory of the modern Yiddish theater. They were essentially vocalists (many were former *badḥanim* (see **Badḥan*) and choirboys)

who gradually added costume, mimicry, and dance to songs which to begin with were generally dramatic monologues. Solo performance gave way to dramatized duet and subsequently to the musical sketch, with prose recitative linking the songs. The Broder Singers were a source for the first Yiddish stage professionals – Yisroel Gradner, regarded as the first “regular” Yiddish actor, was a Broder Singer before joining *Goldfaden. The reputed “father” of the Broder Singers was Berl *Broder. Though Broder’s date and place of birth are disputed, it is almost certain that his association in the years before the Crimean War with the Galician commercial center, Brody (from which he took his name), accounts for the name Broder Singers. Broder composed songs, some of which are extant, but the repertoire was mainly appropriated from the folk poets Eliakum *Zunser and Velvel Zbarazher (Benjamin *Ehrenkranz), from I.J. *Linetzky and the dramatist *Goldfaden, all four of whom were closely linked to the Broder Singers. The repertoire was serious as well as satiric and comic. The prevalence of anti-ḥasidic songs does not justify the often expressed view that the Broder Singers were the poor man’s Haskalah, for the principal emphasis was always on entertainment.

[Leonard Prager]

BRODERZON, MOYSHE (1890–1956), Yiddish poet and theater director. A descendant of a family of wealthy merchants who were permitted to reside in Moscow, Broderzon received his early education in that city and at a Lodz business school. He experienced the revolution in Moscow and then lived in Lodz (1918–38). Active as a journalist, poet, and writer of short plays, he founded little theaters in Lodz: *Had Gadya* (the first Yiddish marionette theater), *Ararat*, and *Shor ha-Bor*. He was head of the literary group **Yung-Yidish* and discovered many new Jewish talents for the stage. He wrote songs for children, which were frequently reprinted and set to music, and also libretti for operas, including *Bas-Sheve* (“Bathsheba,” 1924). His volume *Yud: Lid in Fuftsik Kapitlen* (“Yod: Poem in 50 Chapters,” 1939) comprises 50 poems of 16 lines each, laden with premonitions of the catastrophe looming over Polish Jewry. Broderzon returned to his native Moscow in 1939. At the time of Stalin’s persecutions of Yiddish writers he was imprisoned in a Siberian slave labor camp (1948–55). Repatriated to Poland on his liberation, he was enthusiastically acclaimed by the surviving Jews there, but collapsed and died a few weeks later while visiting Warsaw. Broderzon was a consummate stylistic master of Yiddish and composer of strikingly original Yiddish rhymes. His poems combine Jewish folklore with European expressionism. His wife, the actress Sheyne Miriam Broderzon, described their years of suffering

(1939–56) in *Mayn Laydnsvog mit Moyshe Broderzon* (“My Tragic Road with Moshe Broderzon,” 1960). His *Oysgeklebene Shriftn* (“Selected Works,” 1959) and *Dos Letste Lid* (“The Last Poem,” 1974) appeared posthumously.

[Melech Ravitch / Jerold C. Frakes (2nd ed.)]

BRODETSKY, SELIG (1888–1954), mathematician and Zionist leader. Brodetsky, who was born in Olviopol, Ukraine, was brought to London by his family in 1893. He received his early education at the Jewish Free School in London, at the same time attending a *talmud torah*. The exceptional ability which he early displayed in mathematics earned him a scholarship to Cambridge. At the age of 20 he was given the honors title of Senior Wrangler. He continued his studies in mathematical astronomy at the University of Leipzig and received his doctorate in 1913. In 1914 he returned to England, where he was appointed lecturer in practical mathematics at Bristol and was professor at the University of Leeds from 1920 to 1949. A highly successful educator, he specialized in theoretical aerodynamics, a field vital for the development of the airplane, dealt with in his *Mechanical Principles of the Aeroplane* (1920). He also wrote on the general theory of relativity and on Newton as well as popular works on mathematics and the sciences. *The Meaning of Mathematics* (1929) was translated into Dutch, Spanish, and Hebrew. From his earliest youth Brodetsky was a dedicated Zionist. When the Zionist Association was established in Cambridge in 1907, Brodetsky was appointed its secretary. In Leipzig, he served as president of the Zionist Student Organization. In 1928 he became a member of the executive committee of the Zionist Organization in England, and through it, also of the governing body of the Jewish Agency, serving as head of its Political Department in London. In this position he led the struggle against Lord Passfield's White Paper of 1930. He was a loyal supporter of Chaim *Weizmann. From 1939 to 1949 he was president of the *Board of Deputies of British Jews, the first East European Jew to serve in this capacity. He was responsible for bringing this body closer to Zionism. When Weizmann became president of the new State of Israel, Brodetsky succeeded him as president of the British Zionist Federation. Brodetsky was also a member of the board of trustees and of the academic council of the Hebrew University. In 1949, he succeeded Judah *Magnes as president of the Hebrew University, making his home in Israel. For reasons of ill health and because of differences of opinion over the management of the university, he resigned from this position and returned in 1952 to England. Brodetsky was a Fellow of the Royal Societies of Astronomy

(FRAS) and of Aeronautics (FRAE-S) and for some time was also the president of the Association of University Teachers in England. He was the president of the World Organization of Maccabi. His biographical work, *Memoirs – From Ghetto to Israel*, was published posthumously in 1960.

[Yehudah Pinhas / Leo Kohn]

BRODIE, SIR ISRAEL (1895–1979), chief rabbi of the British Commonwealth, 1948 to 1965. Brodie was born in Newcastle-on-Tyne and educated at Jews' College, London, and at Oxford.

He served in World War I as a Jewish chaplain on the Western Front, and then worked in London's East End. From 1923 to 1937 he was senior minister in *Melbourne, Australia. Brodie returned to England in 1937 to study for an advanced degree at Oxford, and was also on the staff of Jews' College. He again served as a military chaplain during World War II, becoming senior Jewish army chaplain in 1944. He was briefly principal of Jews' College in 1946 and in 1948 he succeeded J.H. *Hertz as chief rabbi, holding office until 1965. He was involved in two important controversies: one over his ruling (later modified) that the Israeli pronunciation of Hebrew should not be used in synagogues and in classrooms; the other when he decided that the liberal theological views of Louis *Jacobs disqualified him from being appointed as principal of Jews' College or a minister of the United Synagogue. Brodie edited the *Ez Hayyim* of *Jacob b. Judah Hazzan of London (3 vols., 1962–67). He was the divisional editor for rabbinical literature in the *Encyclopaedia Judaica*. Brodie was chief rabbi at a time of far-reaching change, marked by the creation of the State of Israel, the end of the British Empire, and the emergence of many divisions within Anglo-Jewry. He was a dedicated Zionist and recognized the centrality of Israel to contemporary Jewish life. He insisted on maintaining the traditional Orthodox interpretations of Jewish identity and practice. He generally conducted his office – with the exceptions noted above – in a quiet, reserved manner which avoided controversy. It can be argued that the *United Synagogue was at the peak of its influence during this time, which was generally one of expansion in the Anglo-Jewish mainstream. A Festschrift for Brodie, *Essays Presented to ... Israel Brodie*, edited by Hirsch Jacob Zimmels, Joseph Rabinowitz, and Israel Finestein, was published in two volumes in 1967.

[Vivian David Lipman / William D. Rubinstein (2nd ed.)]

BRODSKI, family of industrialists and philanthropists in Russia, whose members played an important role in the Russian economy and Jewish communal life from the middle of the 19th century. It was founded by Meir Schor, a member of the Schor family of distinguished rabbis and communal leaders, who moved from Brody in Galicia to Zlatopol in the province

of Kiev in the early 19th century and took the name of Brodski (i.e., “from Brody”). Of his five sons, all wealthy businessmen, the most prominent, ISRAEL (1823–1888), took a leading part in the development of the sugar industry in the Ukraine. During the 1840s, he financed the establishment of several sugar refineries by Russian estate owners in conjunction with other investors. Subsequently, he began to manage them himself and leased or founded additional plants. Brodski introduced many improvements in production methods and an elaborate administration for marketing the sugar within Russia and for export. In 1876 he moved to Kiev, where he became one of the leaders of the community. He built the Jewish hospital and other welfare institutions there. He also helped the *Volozhin yeshivah to establish a *kolel* for young scholars.

His sons ELIEZER (Lazar; 1848–1904) and ARIEH LEIBUSH (Lev; 1852–1923) enlarged their father’s enterprises. In the early 1890s the plants owned by Brodski produced approximately one-quarter of the total amount of sugar refined in Russia. The brothers continued to contribute generously to Jewish and Russian cultural and welfare institutions, and among other benefactions founded the polytechnical and bacteriological institutes in Kiev, donated 300,000 rubles for the establishment of a Jewish school with a department for vocational training, built the great synagogue in Kiev, and gave substantial assistance to victims of the pogroms. The efforts of the Zionist Organization of Russia to persuade Lev Brodski to redeem the area around the Western Wall in Jerusalem were unsuccessful. The Brodski firms employed thousands of Jewish office workers and agents. The Hebrew writers, J.L. *Levin (Yehalal) and Eleazar *Schulmann, were among their employees. After the 1917 Revolution their property was confiscated and Lev Brodski left with his family for Western Europe. ABRAHAM (1816–1884), Israel’s brother who settled in Odessa in 1858, contracted to collect the communal meat tax and donated the revenues to Jewish institutions. He also established two Jewish agricultural colonies. Both he and his son SAMUEL (1837–1897) served as municipal councillors in Odessa.

[Yehuda Slutsky]

BRODSKII, ISAAK (1883/1884–1939), painter, graphic artist, art critic, and educator. Brodskii was born in Sofievka, Taurida county, Ukraine. He studied at the Odessa School of Art from 1896 to 1902. He then attended the Academy of Arts in Saint Petersburg until 1908, receiving a grant from the institute to travel in Western Europe between 1909 and 1911. As early as 1904, Brodskii exhibited his paintings with various associations, in particular with the Society of Itinerant Art Exhibitions and the “World of Art” group. Before 1917, he primarily painted landscapes and portraits. Examples of the former include *Through the Branches*, 1907 (I. Brodskii Museum of Painting, St. Petersburg); the latter genre was repre-

sented by his *Portrait of the Artist’s Wife on the Terrace*, 1908 (Russian State Museum, St. Petersburg). With a fine sense of color, Brodskii combined the realistic study of nature with impressionist techniques and stylization in the spirit of art nouveau. Critics reviewed his vivid works favorably, and he quickly achieved commercial success. He became a fashionable portrait painter, with Russia’s leading political, cultural, and literary figures gladly posing for him and commissioning portraits. Thus, for example, even as a student traveling abroad he painted a portrait of Gorky on the Isle of Capri, 1910 (A.M. Gorky Museum, Moscow). Brodskii’s social and political views reflected Russian liberalism. In 1905, he took part in the student strike at the Academy of Arts, and in 1907 he drew political caricatures for a number of opposition satirical journals. The events of the first Russian revolution also became the source of one of Brodskii’s rare works on a Jewish topic, the painting *After the Pogrom*, 1907. Although he was far from the mainstream of Jewish cultural and social life, Brodskii served as a member of the board of the Jewish Society for the Encouragement of the Arts and participated in its 1916 exhibition, as well as in the Exhibition of Paintings and Sculptures of Jewish Artists held in Moscow in July–August 1918. His main interests, however, lay elsewhere. After the Revolution of 1917, Brodskii was one of the first Soviet artists to use the genre of multigure monumental composition for portraying events of the Bolshevik Revolution and glorifying its leaders (among his works was *Lenin and Mass Demonstration*, 1919). In 1924, Brodskii served as a leader and ideologist of the Association of Artists of Revolutionary Russia (АКХРР), a group of artists who used realism and had as their goal “to subordinate artistic creativity to the objectives of socialist construction.” In pursuit of these “objectives,” Brodskii painted several large-format canvases, with Lenin as the main figure. In 1928, after completing a portrait of Stalin, Brodskii became the Soviet Union’s leading official portrait artist. In 1932, he was appointed professor at the All-Russian Academy of Arts (in Leningrad), and from 1934 he was its director. His paintings set the basic iconographic standard depicting Lenin in Soviet painting. Indeed, Brodskii’s work exerted great influence on the formulation of the style of official Soviet art.

[Hillel Kazovsky (2nd ed.)]

BRODSKY, ADOLF (1851–1929), Russian violinist. Brodsky was born in Taganrog and studied in Vienna and Moscow, where he was professor at the conservatory from 1875 to 1879. He was a friend of Brahms, Grieg, and Tchaikovsky, who dedicated his *Violin Concerto* to him. Brodsky gave the first performance of the concerto with the Vienna Philharmonic Orchestra in 1882. From 1883 to 1891 he was a professor in Leipzig, where he formed the noted Brodsky Quartet. He toured widely as a soloist and was leader of the *Damrosch

Symphony Orchestra in New York (1891–94) and of the Hallé Orchestra in Manchester, England. On Hallé's death in 1895, Brodsky succeeded him as director of the Royal College of Music in Manchester.

[Dora Leah Sowden]

BRODSKY, JOSEPH (Yosif Brodski; 1940–1996), Soviet Russian poet and translator. Although he was widely regarded as one of the most promising Soviet poets, none of Brodsky's original verse had been allowed to appear in the U.S.S.R. as late as 1970. He was known there only as a translator from several languages, including English, Spanish, and Polish, and as the author of poems printed in the illegal, mimeographed literary journal *Sintaksis* (1958–60). In February 1964, Brodsky was tried as a "social parasite" (*tuneyadets*) who changed jobs too frequently, and was sentenced to forced labor in the far north. His trial had pronounced antisemitic overtones. Jewish witnesses for the defense, such as the scholars Y.G. Etkind and V.G. *Admoni, were ridiculed for their "strange-sounding" names; and the intercession of such distinguished older writers as Kornei Chukovski, Samuel *Marshak, and Anna Akhmatova also failed to help Brodsky. He was later arrested and released several times. Brodsky's verse is traditional, though with occasional traces of symbolist and surrealist influence. *Isaak i Avraam*, one of his long narrative poems, is based on biblical motifs, while *Yevreyskoye kladbishche okolo Leningrada* ("The Jewish Cemetery near Leningrad") is one of the most remarkable poems on a Jewish theme ever written by a Soviet author.

[Maurice Friedberg]

A new collection of Brodsky's poetry, *Ostanovka v pustyne* ("Halt in the Wilderness"), which appeared in Russian in New York (1970), confirmed his reputation as the most talented Russian poet of the 1960s and a daring innovator in Russian syntax. In 1972, Brodsky was forced to leave Russia and immigrated to the United States, where he became the University of Michigan's poet-in-residence. Brodsky received the Nobel Prize for literature in 1987, and in May 1991 was named the fifth U.S. poet laureate. His collected poems appeared in English in 2000. His essays were collected in *Less than One* (1986) and *On Grief and Reason* (1995).

BIBLIOGRAPHY: G. Stukov, in: Y. Brodski, *Stikhotvoreniya i poemy* (1965), 5–15; J. Brodski, *Elegy to John Donne and Other Poems* (tr. by N. Bethell, 1967), contains in the introduction part of the transcript of Brodsky's trial; the entire transcript appeared in *The New Leader*, Aug. 31, 1964; S. Volkov, *Conversations with Joseph Brodsky* (1997).

BRODSKY, STANLEY L. (1939–), U.S. psychologist and criminologist. Born in Boston, Mass., Brodsky received his M.A. (1962) and his Ph.D. (1964) from the University of Florida. He taught and pursued research at the Center for the

Study of Crime, Delinquency and Correction, Southern Illinois University. He was a co-founder of the American Psychology-Law Society and in 1967 was elected president of the American Association of Correctional Psychologists. Brodsky's main interests were the psychology of criminal behavior, the development of psychological services in correctional setting, and the improvement of police attitudes toward suspects and treatment facilities. While serving in the U.S. Army (1964–67), he engaged in fundamental research projects on the psychological aspects of military prisons.

Brodsky was a professor of psychology at the University of Alabama and the coordinator of the Psychology-Law Concentration, an academic program that aims to develop scientist-practitioners who can apply research and intervention skills to the understanding, prevention, and treatment of behavioral problems. In 1996 he received the Distinguished Contribution Award for Outstanding Achievement in Forensic Psychology by the American Academy of Forensic Psychology. Regarded by many as the premier expert on courtroom testimony in the U.S., Brodsky led workshops in the U.S. and Canada on the subject, with an emphasis on interactive teaching. He also had a private practice in forensic and clinical psychology as well as trial consultation.

Brodsky was the founding editor of the bi-monthly international journal *Criminal Justice and Behavior*, the official publication of the American Association for Correctional and Forensic Psychology. Books by Brodsky include *Psychologists in the Criminal Justice System* (1974), *Families and Friends of Men in Prison: The Uncertain Relationship* (1975), *Handbook of Scales for Research in Crime and Delinquency* (with H.O. Smitherman 1983), *The Psychology of Adjustment and Well-being* (1988), *Testifying in Court: Guidelines and Maxims for the Expert Witness* (1991), *The Expert Expert Witness: More Guidelines and Maxims for Testifying in Court* (1999), and *Coping with Cross-Examination and Other Pathways to Effective Testimony* (2004).

[Ruth Beloff (2nd ed.)]

BRODY, city in Lvov district, Ukraine (in Russia until 1772; in Austria, 1772–1919; and in Poland, 1919–39). An organized Jewish community existed in Brody by the end of the 16th century. In 1648 approximately 400 Jewish families are recorded. The Jewish quarter was destroyed by fire in 1696. Subsequently the overlords of Brody, the Sobieskis, granted the Jews a charter (1699) permitting them to reside in all parts of the town, to engage in all branches of commerce and crafts, and to distill beer, brandy, and mead in return for an annual payment; the communal buildings, including the hospital and the homes of the rabbi and cantor, were exempted from the house tax. The Jews gradually replaced the Armenian commercial element in Brody until by the middle of the 18th century trade was concentrated in Jewish hands. The Jewish artisans in Brody – cordmakers, weavers, and metalsmiths – achieved a wide reputation and exported their products. The Potockis, who subsequently controlled Brody, continued to support the

Jews; in 1742 they compelled merchants living on their other estates to attend the Brody fairs.

In 1664 the Jewish community of Brody joined with the communities in Zholkva and *Buchach to attain independence from the communal jurisdiction of Lvov, which had extended its authority over the outlying communities. At the session of the provincial council of Russia (see *Councils of the Lands) held at the time, Brody obtained two seats out of seven, and in 1740 the Brody delegate, Dov Babad, was elected **parnas* of the provincial council. For generations a few powerful families controlled the Brody community, among them the Babad, Shatzkes, Perles, Rapaport, Brociner, Bick, Chajes, Rabinowicz, and Bernstein families.

In 1742 the bishop of Lutsk challenged the Brody Jews to a public religious disputation in the synagogue. As he refused to recognize the rights of the representatives of the congregation – the physician Abraham Uziel and the *dayyan* Joshua Laszczower – to participate in the debate, the community leaders invited the surrounding settlements to choose alternative disputants. When the group assembled in Brody, however, it was disbanded by Count Potocki, who arrested several of the Brody communal leaders.

The community in Brody vigorously opposed the Frankist movement (see Jacob *Frank), which found supporters in the area in the middle of the 18th century. Brody was the meeting place of the assembly which excommunicated the Frankists in 1756. A rabbinical assembly convening in Brody in 1772 excommunicated the followers of *Ḥasidism, and Hasidic works were burned there. In these struggles the circle formed by the Brody *Klaus* joined talmudic scholars and mystics as protagonists of Orthodoxy.

During the 1768–72 wars in Poland, the Jews of Brody were ordered to provision the armies passing through the town. The Jewish economic position deteriorated considerably as a result, and to save the community from ruin the overlords of the town granted it a loan. After the annexation of Galicia – including Brody – by Austria in 1772, the lot of the Jewish merchants improved. They were exempted from payment of customs dues on all merchandise in transit through the empire. The guilds of Jewish innkeepers, bakers, and flour dealers were supported by the central authorities in Vienna, in compelling the lord of the town to reduce the taxes. Brody had the status of a free city between 1779 and 1880. After 1880 many Jewish wholesale merchants living in Brody moved to other towns with which they had business connections. A group of Brody Jews had already settled in *Odessa and founded a synagogue there.

In 1756 there were 7,191 Jews living in Brody; in 1779, 8,867 (over half the total population); in 1826, 16,315 (89%); in 1910, 12,188; and in 1921, 7,202.

Rabbis officiating in Brody include Saul Katzenellenbogen, appointed before 1664; Isaac Krakover (“from Krakow”), who was the progenitor of the Babad family (end of the 17th century); Eleazar *Roke’ah; and Aryeh Loeb *Teomim. In the 19th century Solomon *Kluger exerted a wide influ-

ence. The last rabbi of the community was Moses Steinberg (1929–42).

The Jews of Brody, who often traveled to Germany, helped to diffuse the philosophy of the Berlin Enlightenment (*Haskalah) movement in Galicia. Some of its earliest adherents living in Brody were Israel b. Moses ha-Levi of Zamosc, Menahem *Lefin, Jacob Samuel *Bick, and Naḥman *Krochmal. The community opened a *Realschule* in 1815 where teaching was in German. Among *maskilim* residing in Brody in the middle of the 19th century were Dov Ber Blumenfeld, Isaac *Erter, and Joshua Heschel *Schorr, who published the Hebrew periodical *He-halutz* (“The Pioneer”) in Brody between 1852 and 1889. Other noted personalities from Brody were the literary historian Marcus Landau, the Orientalist Jacob *Goldenthal, the writer Leo Herzberg-Fraenkel, and his son Sigmund Herzberg-Fraenkel, the historian. A folk choir, the “*Broder Singers,” was founded by Berl (Margolis) *Broder. Baruch Werber and his son Jacob edited the Hebrew weekly *Ivri Anokhi* (also, *Ivri*) in Brody between 1865 and 1890. As a border town, Brody often served as a point of assembly for the masses of Jewish refugees from the Russian pogroms, intending to emigrate to America or to Western Europe.

Throughout the period of Austrian sovereignty, Brody returned Jewish deputies to the parliament in Vienna. In 1907 the president of the Galician Zionists, Adolf *Stand, was elected as deputy; however, he was maneuvered out of office in 1911 as a result of government pressure and political manipulation by the assimilationist Heinrich *Kolischer. After Brody reverted to Poland in 1919, Jewish communal life was revived under the leadership of Leon Kalir.

[Nathan Michael Gelber]

Holocaust Period

There were approximately 10,000 Jews in Brody when World War II broke out. This area came under Soviet occupation following the partition of Poland in 1939. The town fell to the Germans in July 1941, at which time the Germans set up a Judenrat headed by Dr. Abraham Glasberg. Persecution of the Jews began immediately, and several hundred were murdered by the Nazis and their Ukrainian collaborators. Among the victims were 250 Jewish intellectuals. A ghetto was established in January 1942 for the 6,500 remaining Jews of Brody, who were joined later on (in September 1942) by some 3,000 refugees from the neighboring towns and villages. The unbearable conditions in the ghetto (lack of fuel and foodstuffs), led to the decline of the ghetto population at a rate of 40–50 daily. In the hopes of better chances for survival, a few Jews managed to get into work camps in the vicinity by bribing the guards. Typhoid fever, claiming several hundred victims, broke out in the ghetto which was completely sealed off from contact with the outside.

Mass extermination of the Brody community began with the deportations to *Belzec death camp of several thousand Jews on Sept. 19–21, 1942, followed by several thousand more on November 2. The ghetto and labor camp for Jews were fi-

nally liquidated on May 21, 1943, when the surviving 3,500 Jews were deported to *Majdanek. Around 250 Jews survived the war.

RESISTANCE. During the Russian occupation and particularly after the Nazis invaded Russia, large numbers of young Jews from Brody joined the Soviet Army. By the end of 1942 a fighting unit (ZOB), consisting of young Jews of all political trends was formed in the ghetto, and led by Jakub Linder, Samuel Weiler, and Solomon Halbersztadt. The ZOB was divided into an urban unit which prepared for armed resistance within the ghetto, and a unit which trained small groups for partisan operations in the neighboring forests. The Jewish fighting organization maintained contacts with the non-Jewish resistance. So far as is known no Jewish community was reconstituted in Brody after World War II.

Lotman, *Studia nad dziejami handlu Brodow w latach 1773–1880* (1937).

BRODY, ALTER (1895–1979), U.S. poet. Born in Pruzhany, Belarus, in Czarist Russia, Brody immigrated to New York City in 1903 and grew up on Manhattan's Lower East Side. In his first book, *A Family Album and Other Poems* (1918), Brody contrasted his childhood in Europe with the harsh realities of the New World, and interpreted industrial history against a background of ancient dreams. Indeed, according to Louis Untermeyer's appreciative introduction, Brody presented young America seen through the eyes of old Russia. This volume contains his most famous poem "Kartushkiya-Beroza," as well as poems with American themes such as "Times Square," "A Family Album," and "The Neurological Institute."

Brody's next literary volume was *Lamentations: Four Folk-Plays of the American Jew* (1928). The *New York Times* reviewer saw "... a powerful crescendo movement in each piece which carries the reader through to the end; a cumulative effectiveness, but an effectiveness of argument rather than dramatic effectiveness."

Alter Brody's other books were concerned with the political situation in Eastern Europe on the eve of World War II. The three titles, *The U.S.S.R. and Finland* (1939), *War and Peace in Finland* (1940), and *Behind the Polish-Soviet Break* (1943) were all published in New York by Soviet Russia Today, a Soviet government agency. Brody attempted to explain the outbreak of war in a Soviet light, stressing the plight of Polish Jewry from 1939 to 1942.

[Mark Padnos (2nd ed.)]

BRODY, HEINRICH (Ḥayyim; 1868–1942), researcher of Sephardi *piyyutim* and medieval Hebrew poetry. Brody was born in Ungvar (Uzhgorod), Hungary, the son of Solomon Zalman *Brody, the grandson of Solomon *Ganzfried, author of *Kizzur Shullhan Arukh*. Brody studied at the Bratislava (Pressburg) Yeshivah and at the Rabbinical Seminary in Berlin where he also attended university and came under the influence of Abraham *Berliner and Moritz *Steinschneider. In 1894 he published the first part of his proposed edition of the poems of Judah Halevi. Brody continued until 1930 to edit Halevi's poems, with extensive commentaries, but he never completed this edition. Brody intended to publish the works of all the important medieval Hebrew poets. In 1897 he began to publish the poems of Solomon ibn Gabirol, in 1910, those of Samuel ha-Nagid, and in 1926, *Maḥberot Immanuel* of Immanuel of Rome; but for various reasons these editions, too, were not completed. Brody became a Zionist while serving as rabbi in Nachod, Bohemia. After the establishment of the Mizrachi in 1902 he became president of the Hungarian organization. Brody expressed his views on Zionism and the role of religion in a pamphlet (published under the nom de plume H. Salomonsohn) *Widerspricht der Zionismus unserer Religion?* (1898). In 1905 he coauthored with K. Albrecht an anthology of Hebrew poetry of the Spanish-Arabic school entitled *Sha'ar ha-Shir* (English ed., 1906). In 1922, with M. Wiener, he edited an anthology of Hebrew poetry, *Mivḥar ha-Shirah ha-Ivrit*. Brody founded the bibliographical periodical *Zeitschrift fuer hebraeische Bibliographie* in 1896 and published it until 1906 (from 1900 to 1906 together with A. Freimann). He went to Prague in 1905 to head the local *talmud torah* and after the death of Nathan *Ehrenfeld became in 1912 chief rabbi of Prague. When the institute for research of Hebrew poetry (Ha-Makhon le-Ḥeker ha-Shirah ha-Ivrit) was founded in Berlin by S. Schocken in 1930, Brody was invited to head it, and in 1933 he moved with the Institute to Jerusalem. During his years at the Institute he edited the secular poems of Moses ibn Ezra (1935) and *Be'ur la-Divan* (a commentary on the *diwan* of Judah Halevi), a book containing a wealth of information on Hebrew poetry in Spain. He also published the *diwan* of Eleazar bar Jacob (1935) and edited (from 1933 to 1938) the Institute's studies (ΥΜῩΣΙ) in which he printed important original works. Brody published other research papers in Hebrew, German, and Hungarian. Years after Brody's death, Ḥ. Schirmann published under Brody's and his own name the critical edition of Ibn Gabirol's secular poetry (1974).

[Abraham Meir Habermann]

BRODY, JANE E. (1941–), U.S. health and science writer. Born in Brooklyn, N.Y., Brody earned a B.S. degree in bio-

chemistry from the New York State College of Agriculture and Life Sciences at Cornell University in 1962 and a master's degree in science writing from the University of Wisconsin School of Journalism the following year. She worked as a general assignment reporter for the *Minneapolis Tribune* until 1965, when she joined the *New York Times* as a specialist in medicine and biology. In 1967 she was named Personal Health columnist, and her no-nonsense, clearly written accounts of common health problems became one of the most widely read and frequently quoted columns in the country. In addition to her column, she wrote articles on other aspects of science and medicine; these appeared in more than 100 American newspapers. She also wrote scores of magazine articles and eight books, which were revised and updated regularly, and lectured widely on health and nutrition to audiences of lay people and professionals. Her books frequently turned up on the best-seller lists in hardcover and paperback.

As part of her belief in health, she insisted on daily physical activity, alternating with walking, cycling, swimming, ice skating, tennis, hiking, and occasionally roller-blading and cross-country skiing. A diminutive woman, she maintained a trim figure. Her regular menu focused on vegetables, fruits, grains, potatoes, beans, and peas as well as low-fat dairy products, lean meats and poultry, and all varieties of fish and shellfish. For those struggling with the battle of the bulge, she preached moderation and variety, not deprivation and denial.

Her reports on a healthy nutritious diet and good health – she was fervently against smoking – were widely influential among the medical profession. No medical topic was excluded from her columns: the minor risks of circumcision, fighting cancer (her mother died of cancer); the latest research on sleep; allergies; the perils of too much sun; raising twins (she had twin boys); caring for the elderly, or Marfan's syndrome, to name a few subjects from the thousands of articles she wrote. Brody appeared on countless radio and television programs and received numerous awards for journalistic excellence. In 1987 she was awarded an honorary doctorate from Princeton University and in 1993 an honorary doctorate from Hamline University in St. Paul. Among her books are *Jane Brody's New York Times Guide to Personal Health*, *Jane Brody's Good Food Book*, and *Jane Brody's Food Gourmet*.

[Stewart Kampel (2nd ed.)]

BRÓDY, LÁSZLÓ (1897–), Hungarian poet. Brody's verse, the first collected volume of which, *Bohóc* ("Clown"), appeared in 1921, deals with urban poverty and often betrays nostalgia for traditional Jewish life. His works include the verse comedy, *Bábszínház* ("Puppet Theater," 1926), and *Eszteendő* ("Years," 1945), poems written during the Nazi era. Some of his verse has been translated into Hebrew and Yiddish.

BRÓDY, LILI (1906–1962), Hungarian author and journalist. A regular contributor to *Pesti Napló*, Lili Bródy wrote sketches and short stories that were popular in the 1930s, but made her

name with novels such as *A Mancsi* (1932) and *Felesége tartja el* (1932; *Kept by his Wife*, 1936). Although the characters were not explicitly Jewish, the novelist in fact painted a vivid picture of the Budapest Jewish middle class between the world wars.

BRÓDY, SÁNDOR (1863–1924), Hungarian novelist and playwright. Born in Eger (Hungary), Bródy began his career as a journalist. In 1902 he started his own monthly *Fehér könyv* ("The White Book") and three years later helped to found the weekly *Jövendő* ("The Future"). He portrayed the typical citizen of Pest and his writing helped to mold the characteristic brand of humor associated with Budapest. Bródy's real literary merit lies, however, in the fact that he prepared the ground for the flowering of Hungarian prose in the 20th century. His style was archaic and folkish, interspersed with the emerging idiom of Pest. A number of his stories and plays introduce Jewish characters, and with *Nyomor* ("Misery," 1884) he became the first writer in Hungarian literature to describe the Jewish worker. His letter to Géza Gárdonyi (reprinted in *Haladás*, 1947, no. 17) praises Judaism, and in his last novel *Rembrandt* (1925; Eng. tr. 1928) his own Jewish associations and memories form an integral part of the whole book. His play *Timár Liza* (1914) dramatized the decadence of assimilated Jewish parvenus. Some of Bródy's plays were performed outside Hungary and several were adapted for the screen.

[Jeno Zsoldos]

BRODY, SOLOMON ZALMAN BEN ISRAEL (1835–1917), rabbi and author. Brody, a member of the well-known rabbinical family of that name, was born in Ungvar (Uzhgorod), Hungary. He was a pupil of Abraham Samuel *Sofer at the Bratislava yeshivah. From 1885 he served as *dayyan* in his native town. Brody became known for his insistence on the strict observance of the law, and in particular took a stand against circumvention of the law of usury. He set out his uncompromising attitude in an essay called "*Neshekh ve-Tarbit*" (*Ha-Maggid*, 23 (1879), nos. 34–38), in which he opposed the practice, then customary, of a *shetar iska* (an agreement between a lender and borrower in connection with an interest-bearing loan applied for trading purposes). Despite his conservative outlook, he took a positive attitude in support of Zionism, to which he devoted an essay, "*Derishat Ziyon*" (first published in D.Z. Katzburg's *Tel Talpiyyot*, 12, 1904), and containing some of his homiletical and halakhic novellae. He also wrote a work called *Divrei Shelomo ha-Yisre'eli*, the manuscript of which was in the possession of his son Hayyim, chief rabbi of Prague. Brody was the son-in-law of Solomon *Ganzfried, the author of the *Kizzur Shulhan Arukh*.

[Elias Katz]

BRODY, TAL (1943–), basketball player, Israeli sports hero. Born in Trenton, New Jersey, Brody played at the University of Illinois, where he was named All-American in 1965 and was the No. 13 pick in the NBA draft, selected by the Baltimore Bullets. Brody led the U.S. team to a gold medal at the 1965 Maccabiah Games before joining the Maccabi-Tel Aviv team a year later. He was named Israel's Sportsman of the Year in 1967 after leading Maccabi-Tel Aviv to a second-place finish in the European Cupholders Cup. Drafted into the U.S. Army in 1968, Brody served primarily on the All-Army and All-Armed Forces basketball teams, with the latter finishing third in the World Championships in Belgrade. He helped Israel win its first Maccabiah Games basketball gold medal in 1969 and became a citizen of Israel in 1970. Brody then led Maccabi-Tel Aviv to a European Champions Cup in 1977, a historic moment in Israeli sports history, with political undertones. The key game on the road to the championship was against CSKA Moscow – the Red Army team – four-time winners of the European Cup. The Soviet Union had no diplomatic relations with Israel and the team refused to play in Tel Aviv or allow the Israelis to come to Moscow. The game was played at a neutral site in Virton, Belgium, where Brody's Maccabi team triumphed 91–79. The championship contest against Italy's Mobil Girgi was held in Belgrade, Yugoslavia, and the El Al plane that brought the team was the first Israeli plane permitted to land in the country. Maccabi-Tel Aviv defeated Italy 78–77 to capture the European title. Brody's exultant postgame interview, in heavily accented and less than perfect Hebrew, gave Israel one of its most famous quotes: "We're on the map and we're staying on the map, not just in sports but in everything!" Brody went on to help Maccabi-Tel Aviv win 10 Israeli championships and six Israeli State Cups, and in 1979 received the Israel Prize for his contribution to sports.

[Elli Wohlgernter (2nd ed.)]

BRÓDY, ZSIGMOND (1840–1906), Hungarian journalist and poet. He used his pen in the struggle to attain equal rights for Jews. This was also the theme of his poetry, written under the pen-name, "A Hungarian Jew." His hymns (in Hungarian) for the Neolog Great Synagogue in Pest were in use for some years. Bródy was cofounder of the literary periodical *Pannonia*, which published Hungarian writings in German translations, and became known for his contributions to the papers *Magyar Sajtó* and *Pesti Napló*. He was active in Hungary's struggle for equality with Austria under the Hapsburg monarchy and was secretary at the Ministry of Interior in 1871. Resigning the following year, he bought the German-language newspaper *Neues Pester Journal*. In 1896 he was appointed to the Hungarian Upper House as a life member. Bródy made large donations to charitable causes and left most of his estate to a Jewish hospital for children, which was named after his wife Adel.

°BROGLIE, VICTOR-CLAUDE, PRINCE DE (1757–1794), French statesman. Broglie supported the French Revolution, but opposed granting the Jews emancipation, both in writing (*Opinion sur l'Admission des Juifs à l'Etat Civil*, in Bibliothèque Nationale, Paris) and at the Constituent Assembly. Broglie argued that granting civil rights to German-speaking Jews would cause further unrest in Alsace and Lorraine, that the majority of Alsace Jews were indifferent to citizenship, and that the Jewish claim for citizenship was based on a Jewish plot (January 1791). On September 27, 1791, after a draft resolution demanding equal rights for Jews was approved almost unanimously by the Assembly, Broglie proposed that the Jews be required to swear the Oath of Citizenship ("to Nation, King, and Law"), which amounted to a renunciation of their communal jurisdiction. A modified version of Broglie's amendment was finally approved. Broglie's arguments were among those that inspired Napoleon Bonaparte's policy toward the Jews and their communal organizations.

BROIDA, SIMḤAH ZISSEL BEN ISRAEL (1824–1898), rabbi and moralist. He came from a distinguished family which traced its descent to Abraham Broda, rabbi of Frankfurt. Broida was the outstanding disciple and follower of Israel Lipkin (Salanter), the founder of the Musar movement. Broida was usually referred to as the "sabba (an affectionate term, roughly equivalent to "grand old man") of Kelme." Broida taught the principles of *musar* in Zagare (Lithuania) and St. Petersburg, subsequently founding the *talmud torah* in Kelme which became the chief center for the spread of the movement. Compelled to leave Kelme as the result of a false accusation, he went to Grobin and founded a *talmud torah* which eventually numbered hundreds of disciples, including noted rabbis of the succeeding generation: Nathan Zevi Finkel, Isser Zalman Melzer, Aaron Bakst, Moses Mordecai Epstein, Naphtali Trop, Joseph Leib Bloch, and Joseph of Nowogródek. His ethical teachings emphasized the need for self-improvement, humility, and making allowance for others. He himself was regarded as a living example of his teaching.

BROIDES, ABRAHAM (1907–1979), Hebrew poet. Broides, who was born in Vilna, settled in Palestine in 1923. He worked for several years as a laborer, an experience which his poetry is rooted in, and was one of the founders of Ha-No'ar ha-Oved ("Working Youth Organization"). From 1928 until 1964 he was secretary of the Hebrew Writers Association and also edited their publication, *Daf*. Broides first began to publish poetry in the early 1920s in *Ha-Kokhav* and other journals. He began as a proletarian poet describing the anguish

and the toil of the poor. Later he wrote landscape poetry with simple and lyrical lines. He is also the author of several volumes of children's verse.

[Getzel Kressel]

BROIDO, EPHRAIM (1912–1994), Hebrew essayist, translator, and editor. Born in Bialystok, he went to Tel Aviv at the age of 13. From 1931 to 1933 he studied at the University of Berlin, during which time he also contributed articles to *Davar*, was a member of the Central Committee of He-Ḥalutz, and compiled the *Kedem Taschen-Woerterbuch* (1934–35), a Hebrew-German dictionary. In 1934 he returned to Tel Aviv and joined the editorial staff of *Davar*, writing numerous articles on political, social, and literary issues and translating poetry and prose. During World War II he was *Davar's* correspondent in London. In 1948 he founded the influential literary-political monthly *Molad* (from 1968 a bimonthly).

Among the works he edited are *Derekh Ge'ullim* (1935), a selection of M.L. Lilienblum's writings; and two chrestomathies, *If I Forget Thee* and *The Call of Freedom* (London, 1941). Broido translated Shakespeare's sonnets and several of his plays: *Macbeth* (1954), *The Tempest*, *A Midsummer Night's Dream*, *Much Ado About Nothing* (all published in 1964), and *The Comedy of Errors* (1965). He also translated selections from the poetry of W.B. Yeats and of Michelangelo.

[Ezra Spicehandler]

BROIDO, LOUIS (1895–1975), U.S. business executive and communal leader. Broido was born in Pittsburgh. He served with the U.S. Army in France, in World War I, then as a member of the U.S. Commission for War Claims in France and Italy until 1920. Broido returned to practice law in Pittsburgh and then in New York from 1926 to 1936, when he left the bar to become executive vice president and later chairman of the advisory commission of Gimbels Brothers. He retired from this post in 1961 and became managing partner of a private investment company from 1962. Named New York City commissioner of commerce in 1961, Broido was also a New York retail trade leader and a member of several municipal committees. He was vice chairman of the Union of American Hebrew Congregations for many years, president of the United Jewish Appeal in 1951 and 1952, and from 1965 chairman of the *American Jewish Joint Distribution Committee. His wife, LUCY KAUFMANN BROIDO (1900–1969), helped found the Women's Division of the New York United Jewish Appeal. She was vice president of the Jewish Education Committee (1946–53), and president of the New York section of the National Council of Jewish Women (1949–53).

[Edward L. Greenstein]

BROKERS. The large variety of commercial intermediaries and agents to which this term refers, in both medieval and modern times, generally included a substantial proportion of Jews. They were particularly numerous at fairs and in ports which were centers of interregional trade, and later also in various types of exchanges. In this kind of occupation, skill, information, a wide command of languages, and international connections were the chief requirements, and even men with little initial capital of their own could make a living and often a fortune.

Jewish brokers, itinerant and resident, were frequently found in the Mediterranean commercial centers throughout the Middle Ages. In Muslim countries brokerage was often specialized to a high degree. The activity of Jewish brokers was not distinct from that of non-Jews, but benefited periodically from Christian-Muslim political tension. In Christian countries the economic value of brokers was not widely recognized in the early Middle Ages, and their activity was often curtailed. In addition, Jewish traders and brokers suffered from religious animus. Nevertheless Jewish brokers were found in major ports such as Marseilles, Pisa, Barcelona, and Venice. In Spain the position of *corredor* ("broker") was a lucrative one, licensed by the king's bailiffs. Their activity was not limited to the ports, for they were also active in the countryside, particularly on royal and noble estates where they were in charge of selling agricultural produce and buying luxury commodities. The economic and social position of the broker within the Jewish community was generally inferior to that of the merchant. Brokers were excluded from community leadership in Majorca in 1356.

A new era in the history of Jewish brokerage began in the 16th century with the waves of exiles from Spain and Portugal to the ports of Italy, northern Europe, North Africa, the Balkans, and the Ottoman Empire, which coincided with European maritime expansion. Many of the exiles turned to brokerage, utilizing connections between their far-flung places of refuge. In Amsterdam brokerage in goods from the colonies, especially tobacco and sugar, was very profitable; Jewish brokers were allowed to operate unhindered; the entire brokerage of Brazilian sugar was in Jewish hands. In 1612 ten of the 300 authorized brokers were Jewish, and 30 of 430 in 1645. Among the 1,000 unauthorized brokers were many Ashkenazim. Of the 442 Jews who had an annual income exceeding 800 guilders in 1743, 25 were licensed and 100 unlicensed brokers. Marrano brokers had been active in England even before the readmittance (1656). In 1668 there were ten Jewish brokers on the London exchange; in addition there were also many unlicensed ones. An attempt to suppress the activities of unauthorized brokers (and to evict the Jews) led to a parliamentary commission which in 1697 regulated the number of brokers at 100 Englishmen, 12 aliens, and 12 Jews. Attempts to raise the permitted number of Jews failed in 1723, 1730, and 1739. In Hamburg there were four professional Portuguese-Jewish brokers in the early 17th century in addition to numerous unauthorized ones, mainly Ashkenazi; by 1692

there were 20 Sephardi and 100 Christian brokers. The city council succeeded in lowering the ratio and total number of Jewish brokers in the 18th century.

A different type of Jewish brokerage developed in Poland-Lithuania. During the 16th and 17th centuries domestic commerce as well as export (timber, grain, furs; see *Arenda) and import (cloth, wine, luxuries) were largely in Jewish hands, and brokers played an important role, particularly at the regular fairs (*Lublin and *Jaroslaw). The anti-Jewish polemicist Sebastian *Miczyński wrote in 1618, "A short while ago ... the Jews made, among themselves, a general agreement and regulation whereby no Jew is to deal with a Christian for their profit, neither to act as intermediary for any merchandise if they request it of him, nor to lead a merchant to Christian merchants or craftsmen, but to Jews alone. And on whoever transgresses this agreement they have applied great bans, curses, and punishments." This is a hostile presentation of a real conflict within the Jewish community. Merchants, who were predominant in community leadership, struggled to preserve their vested interests against brokers.

Tension between brokers and merchants is illustrated in the *Poznan community, where resident brokers dealing with foreign merchants were vigorously harassed. Between 1626 and 1696 the community records show an attempt to address their activity almost annually, but warnings, fines, and excommunications were to no avail for their numbers increased. Their commission was fixed between ½ and 1%, a rate that could be profitable only given a high turnover. Merchants were considered as justified in paying the regular fee only, even when a higher one had been agreed upon; brokers were accused of causing the economic ills of the community, in particular of revealing trade secrets to Gentiles; they were sometimes equated with informers. Toward the end of the 17th century pronouncements against brokers became milder and rarer. The community, in economic straits, had acquiesced to a situation in which ever-growing numbers of its members were brokers or prepared to deal in brokerage.

On their arrival in Western Europe and the United States, immigrants from Eastern Europe found a niche in several new types of brokerage, among them many new intermediary businesses like real estate brokerage, employment agencies, commodity and security exchanges, and commission agencies. In Central Europe the position of Jewish brokers combined Eastern and Western characteristics. Jews handled a large proportion of the trade between town and country, particularly grain and livestock, but were often excluded from the exchanges in the main cities. The first Jewish merchant to enter the Danzig exchange did so in 1808, accompanied by French gendarmes, after the occupation of the city. In Leipzig, center of the *fur trade, six Jews were appointed brokers for the duration of the fur fair in 1813. By 1818, 28 of 35 fair brokers were Jews, 14 of them from *Brody. Jews were prominent in regional as well as central exchanges in southern and central Germany, Hungary, and Romania. Their position deteriorated in the 20th century as a result of the rise of producers' cooperatives, which at-

tempted to bypass the middleman, and other developments hostile to small traders.

In Yiddish literature Shalom Aleichem created the figure of the broker Menahem Mendel of Kasrilevke who with his dreams is a kind of Jewish Walter Mitty.

Henry Wasserman]

BRONER, ESTHER M. (1930–), U.S. author. Broner was born in Detroit and is the author of nine books, including her first publication, the play *Summer is a Foreign Land* (1966), the novel *A Weave of Women* (1978), and the work of non-fiction *Bringing Home the Light: A Jewish Woman's Handbook of Rituals* (1999). The child of Russian immigrants, she is best known for her attempts to include women in Jewish ritual. Using feminist principles, her work often turns to alternative traditions of healing and magic. Broner's concern with boundaries and separation led her to fight the constraints traditional Jewish ceremonies imposed on women. In *A Women's Haggadah* (co-written with Naomi Nimrod), part of the *The Telling* (1993), she chronicles the creation of the first women's *seders* in New York. Within this feminist *Haggadah*, the women ask and answer questions about the contributions women have made to Judaism. Broner's work has appeared in numerous national publications, including *Ms. Magazine*, *Women's Review of Literature*, *North American Review*, *Mother Jones*, *The Nation* and *Tikkun*. She has taught and lectured at numerous American and Israeli universities: Columbia University, CUNY-City College, Haifa University, Ohio State, New York University, Oberlin College, Sarah Lawrence College, Tulane University, and UCLA. She has also received various honors, the O. Henry Award, two National Endowment for the Arts Awards (1987 and 1979), The City of New York Award for "A Celebration of Jewish Heritage" (2000), and a Distinguished Alumni of Wayne State University Award, where she is professor emerita. In addition to writing about Jewish ritual and faith, she has performed various peace ceremonies around the world, for example, in the Sinai Desert, on the White House lawn, and at a UN event in Nairobi.

[Sara Newman (2nd ed.)]

BRONFENBRENNER, MARTIN (1914–1997), U.S. economist. Bronfenbrenner was born in Pittsburgh, Pennsylvania.

He received his Ph.D. from the University of Chicago in 1939. He taught for some time before going into government service, first with the Treasury (1940–41) and then with the Federal Reserve System. In 1947 he returned to teaching, at Wisconsin (1947–57), Michigan State (1957–58), and Minnesota (1958–62) Universities. In 1962 he joined the Carnegie Institute of Technology in Pittsburgh, and in 1966 became chairman of the economics department at Carnegie-Mellon University. He then taught at Duke University in North Carolina, where he held the Kenen Chair from 1971 until 1984. Bronfenbrenner moved to Japan in 1984 as a professor of international economics at the Aoyama Gakuin University in Tokyo. He returned to Duke University in 1991, where he taught until his death.

He served as vice president of the American Economic Association (1976–77), president of the Southern Economic Association (1979–80), and president of the History of Economics Society (1982–83). In 1997 he was elected a Distinguished Fellow of the American Economic Association.

Bronfenbrenner's main interests were the economics of the Far East, particularly of Japan and Korea. His books include *Lessons of Japanese Economic Development* (1961), *Survey of Inflation Theory* (1963), *Academic Encounter: The American University in Japan and Korea* (1963), *Is the Business Cycle Obsolete?* (1970), *Income Distribution Theory* (1971), *Macroeconomic Alternatives* (1979), *Economics* (1987), *Macroeconomics* (1987), and *Microeconomics* (1990).

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

BRONFMAN, Canadian family prominent in business, philanthropy, and Jewish affairs. **SAM BRONFMAN** (1891–1971), the patriarch of the family, claimed he was born in Brandon, Manitoba, in 1891 although, according to his biographer Michael Marrus, he was probably born in Russia shortly before the family immigrated to Canada. Before World War I Sam and his brothers, Abe (1882–1968) and Harry (1886–1963), worked in the small family-owned Manitoba hotels, better known for their bars than their rental rooms.

Even as Prohibitionist sentiment rolled across English-speaking Canada, an ambitious and competitive Sam Bronfman gradually refocused his business goals from running bars to distributing liquor – skirting the edge of the law as he supplied spirits to bootleggers who serviced Prohibition America – and eventually to manufacturing liquor. In 1924 Bronfman and his wife, Saidye, moved to Montreal, Quebec, where attitudes toward liquor were more open. Here Bronfman built his first distillery.

Bronfman's timing could not have been better. Prohibition was a waning force in Canada and, Prohibition or no Prohibition, there was money to be made in quenching the thirst of nearby American population centers. With the end of Prohibition in the United States, Bronfman's liquor company, Seagram's, acquired a significant share of the American liquor market and Bronfman came to control one of the largest family fortunes in Canada. With the passage of time, Bronfman also expanded into other profitable enterprises,

including commercial and business land development across North America.

While Sam Bronfman, Mr. Sam as he was commonly called, retained the rough edges of his gritty upbringing, wealth afforded him membership in Montreal's Jewish elite. By the early 1930s Bronfman was active in a wide range of Montreal Jewish fund-raising activities, although the Yiddish-speaking industrialist kept his distance from the Montreal downtown immigrant world and its politics, preferring philanthropy over ideology.

In November 1938 came **Kristallnacht* (the “Night of Broken Glass” in Germany and Austria). The Canadian Jewish elite was forced to admit that philanthropy afforded no answer to the rise of Nazism in Europe, to the crisis of Jewish refugees denied Canadian entry, and to fears of growing antisemitism in Canada. A new and active community political agenda was required. Bronfman, now an influential community leader and financial powerhouse, was approached by H.M. Caiserman to become actively involved in the Canadian Jewish Congress and, specifically, to take up the cause of Jewish refugees. Bronfman, who had previously dismissed the Congress as an ineffectual debating society for “greenies,” an organization scarred by ideological divisions he neither understood nor cared to understand, accepted. For Bronfman, the challenge was not just to advance the cause of refugees but also to build the Canadian Jewish Congress into a powerful voice in Jewish and Canadian life. This, he concluded, required a firm hand at the organizational wheel, his hand. He was soon elected president of the Canadian Jewish Congress and with him and his financial clout came support from others in the Jewish elite, a revitalized and “Canadianized” Congress agenda, and a businesslike organization run by dedicated professional staff. With Bronfman as its president for a quarter century and supporter until his death in 1971, the Congress became the organizational heart of Canadian Jewry.

In spite of the Congress' organizational success, not all of Bronfman's hopes were realized. An outspoken Canadian patriot, he never satisfied his personal dream of being appointed to the Canadian Senate. But he did cast a long shadow across Canadian and particularly Montreal Jewish life, contributing generously to the organizational and institutional success of the community. An ardent champion of Israel, Bronfman was also active in support of the Jewish state. In 1964 Bronfman was appointed the first Jewish governor of McGill University, reflecting both his status and the changing status of Jews in Montreal. When Bronfman died, the billionaire head of the world's largest distillery had been for 40 years the single most influential leader of the Canadian Jewish community.

On his death, Bronfman's business empire, as well as his legacy of community service, passed to his four children: Aileen (Baronne Alain de Gunzburg), Phyllis (*Lambert), Edgar Miles *Bronfman, and Charles Rosner Bronfman.

AILEEN MINDEL BRONFMAN DE GUNZBURG (1925–1986) was born in Montreal. She went to Smith College in the United States before taking a graduate degree in history at Columbia.

In 1953 she married Alain de Gunzburg, a banker and member of a prominent and aristocratic French-Jewish family. They lived in Paris, where, then a baroness, she became deeply involved in *Youth Aliyah.

CHARLES ROSNER BRONFMAN (1931–) was born in Montreal and attended McGill University. He joined the family business and in 1958 assumed responsibility for the family's Canadian holdings, which had gradually expanded beyond the liquor business to include new areas of enterprise, including major commercial property development. His business interests also included professional sport when, from 1968 to 1990, he was chairman and principal owner of the Montreal Expo baseball team. He also served as chairman of Koor Industries Ltd., Israel's largest industrial holding company.

Deeply committed to Jewish community life, Charles Bronfman has devoted time and wealth to community service. His Andrea and Charles Bronfman Philanthropies is working to strengthen Canadian identity and to promote Jewish education and cultural awareness in Canada, the United States, and Israel. To foster appreciation for Israel among Jewish youth around the world, Bronfman was also a founding partner of Birthright Israel and chairman of its forerunner organization, Israel Experience. He helped found and was chairman of United Jewish Communities, an umbrella body of merged Jewish Federations and the United Jewish Appeal across North America, and he serves on many boards including the McGill Institute for the Study of Canada and the Washington Institute for Near East Policy.

The Bronfman family's tradition of service to the Jewish and larger community continues but their financial empire has been greatly reduced. After the handover of management of the family's business empire to a new generation, a series of business reversals and resulting corporate adjustments in the 1990s cost the family considerable wealth.

[Harold Troper (2nd ed.)]

BRONFMAN, EDGAR MILES (1929–), industrialist and Jewish leader. Bronfman was born in Montreal to Saidye and Samuel *Bronfman. He attended Trinity College in Port Hope, Ontario; Williams College in Williamstown, Massachusetts; and graduated with a bachelor's degree from McGill University in Montreal in 1951. In 1953 he joined Distillers Corp. Seagram Ltd. in Canada (renamed the Seagram Company Ltd. in 1975). In 1955 Bronfman moved to New York, where he became a naturalized citizen of the U.S. In 1957 he became president of the U.S. subsidiary of Seagram and undertook the construction of a new corporate headquarters, the Seagram Building, a New York City landmark skyscraper. After his father's death in 1971 Bronfman assumed complete control of the firm, becoming chairman and chief executive officer of the Seagram Company Ltd., the Canadian parent firm, and of Joseph E. Seagram & Sons, Inc., the U.S. subsidiary, in 1975. Under his leadership the Seagram empire grew and diversified, from

natural gas and oil holdings in Asia and Europe to a significant interest in the international chemical firm E.I. du Pont de Nemours & Company. In 1995 Bronfman acquired Universal, one of Hollywood's major studios. In 1998 he purchased the PolyGram NV record company. In 1994 he relinquished the position of chief executive officer to his son, Edgar Bronfman, Jr. The senior Edgar Bronfman served as chairman of the Seagram Company Ltd. until its merger under Vivendi Universal in 2000.

Bronfman had a notable career as a Jewish communal leader and philanthropist. Foremost among his positions is that of president (from 1981) of the *World Jewish Congress, an association of Jewish representative organizations in more than 80 countries. Bronfman took that organization through a period of consolidation and assumed an active role on behalf of Jewish communities and causes in many parts of the world. He also held significant positions with many other Jewish and non-Jewish organizations, such as the International Board of Governors of Hillel, the American Jewish Committee, the American Jewish Congress, the ADL, and the National Urban League.

Bronfman wrote three books: *The Making of a Jew* (1996), *Good Spirits: The Making of a Businessman* (1998), and *The Third Act: Reinventing Yourself after Retirement* (2002). In 1999 he was awarded the Presidential Medal of Freedom by President Clinton, the highest civilian honor in the U.S.

[Mark Friedman / Ruth Beloff (2nd ed.)]

BRONFMAN, YEFIM (1958–), Russian-born Israeli, later American pianist. Bronfman began his training with his mother, a piano teacher. When he was 15, the family immigrated to Israel. There he studied piano with Arie *Vardi, then head of the Rubin Academy of Music in Tel Aviv. He made his international debut with Zubin *Mehta and the Montreal Symphony Orchestra (1975). After his appearance in the Marlboro Music Festival in 1976, he immigrated to the U.S. He continued his studies at the Juilliard School in New York City and the Curtis Institute of Music in Philadelphia, as a pupil of Leon *Fleisher, William Masselos, and Rudolf *Serkin.

Noted for his commanding technique and exceptional lyrical gifts, Bronfman appeared with leading orchestras and conductors. He gave recitals in North America, Europe, and the Far East, and made acclaimed debuts in Carnegie Hall (1989) and Avery Fisher Hall (1993). In 1991 he gave a series of joint recitals with Isaac *Stern in Russia. That same year he was awarded the Avery Fisher Prize.

A devoted chamber music performer, Bronfman has collaborated with the Emerson, Cleveland, and Juilliard Quartets, as well as with Yo-Yo Ma, Joshua *Bell, Shlomo *Mintz, and Pinchas *Zukerman. His expansive repertoire extends from Scarlatti to contemporary music. Among his recordings are the complete Prokofiev Piano Sonatas; all five of the Prokofiev Piano Concertos; and works by Rachmaninoff, Mussorgsky, Stravinsky, and Tchaikovsky. He won a Grammy award in 1997 for his recording of the three Bartok Piano Concertos.

Summer engagements have regularly taken him to the Aspen, Lucerne, Mostly Mozart, Ravinia, Salzburg, Tanglewood, and Verbier festivals.

[Naama Ramot (2nd ed.)]

BRONOWSKI, JACOB (1908–1974), British mathematician, philosopher, and writer. Bronowski was born in Poland, and went to England at the age of 12. He was educated at Cambridge and from 1934 to 1942 lectured in mathematics at the University College of Hull. During World War II, he was sent to Washington to work on the Joint Target Group and served as a member of the chiefs of staff mission to Japan in 1945–46. In 1948–49 he was UNESCO's Head of Projects and from 1950 headed the Coal Research establishment of the National Coal Board. In 1964 he became a senior fellow and deputy director of the Salk Institute for Biological Studies and settled in the United States.

He became an authority on the poet William Blake; his books on this subject include *William Blake, a Man without a Mask* (1944). Bronowski also wrote a number of experimental radio plays, of which *Face of Violence* won the international Italia Prize for 1951. His philosophical appraisal of the history of ideas appears in *The Western Intellectual Tradition* (1960). The urgency of the need for the scientist and the humanist to understand each other's language became his preoccupation from the 1950s onward. His works in this field include *The Common Sense of Science* (1951) and *Science and Human Values* (1958).

During his later years Bronowski attained fame as a leading popular exponent of the philosophical basis of scientific research, which reached its climax in a 13-part television series done for the British Broadcasting Corporation entitled "The Ascent of Man." The filming of the series took place from July 1971 to December 1972, and was first broadcast between May and July 1973. The book of the same name, based on the series, was a best-seller. Bronowski also published *William Blake and the Age of Revolution* (1972). Two books of his essays edited by Pierro E. Ariotten in collaboration with Rita Bronowski have also appeared: *A Sense of the Future: Essays in Natural Philosophy* and *The Visionary Eye: Essays in the Arts, Literature, and Sciences*.

[George H. Fried]

BRONSTEIN, DAVID (1924–), Russian chess grand master. Born in Belaya Tserkov (Ukraine), Bronstein established his place by victories gained in Moscow in 1946, 1948, and 1949, and in Stockholm in 1948. At Budapest in 1950 he shared first place in the Candidates' Tournament with Isaac *Boleslavski, whom he defeated in the play-off. This victory qualified him to play a match of 24 games with Mikhail *Botvinnik, only to draw the match, which left Botvinnik the world champion. He

did not win a Candidates' Tournament after 1950 though he was highly placed more than once. He played exceptionally well in the Interzone Tournament in Goteborg in 1955. Bronstein owed his successes to his exceptional originality. His tremendous efforts of thought in the middlegame often left him too exhausted to do justice to the endgame. He contributed much to chess theory, especially regarding openings. His book *Zurich International Chess Tournament, 1953* (1979), annotating all the games in that famous competition, was published in several editions and translated into many languages. In the 1980s he visited Israel twice.

[Gerald Abrahams / Shmuel Spector (2nd ed.)]

BRONSTEIN, HERBERT (1930–), U.S. Reform rabbi and liturgist. Bronstein was born in Cincinnati, Ohio, where he earned his B.A. (1952) and M.A. (1953) at the University of Cincinnati. He received his B.H.L. from Hebrew Union College in 1954, followed by his M.H.L. in 1956, and rabbinic ordination in 1957. Bronstein began his career as a congregational rabbi at Temple B'rith Kodesh in Rochester, New York (1957–72), where he also taught history of religions at the University of Rochester, founded the Institute of Pastoral Counseling in cooperation with the Department of Psychiatry of that university's Medical School, and served as chairman of the Jewish Community Relations Council. In 1972, Bronstein was appointed senior rabbi of North Shore Congregation Israel, in Glencoe, Illinois, a suburb of Chicago, where he also lectured on the faculties of the University of Illinois at Chicago, Northwestern University, and the Catholic Theological Union. In addition, he served as president of both the Chicago Association of Reform Rabbis and the Chicago Board of Rabbis. In 1997, he was appointed rabbi emeritus/senior scholar of the congregation he had served for 25 years. From 1995, he lectured on history of religions at Lake Forest College.

Active in interfaith relations, Bronstein founded a number of ecumenical organizations on the local, regional, and international levels. He founded the Council of Religious Leaders of Metropolitan Chicago and served as its first vice president (1987). Together with Joseph Cardinal Bernardin, he established the Catholic-Jewish Dialogue (1984), and later the Midwest Conference on Conscience, under the auspices of the Religious Action Center of the Union of American Hebrew Congregations and the Board of the Joseph Cardinal Bernardin Center. Additionally, Bronstein was a founder, member, and trustee of the Council for the Parliament of World Religions from its inception in 1988, as well as founder and co-chair of the Jewish-Muslim dialogue under the auspices of the Council for the Parliament of World Religions. He delivered papers at the Parliaments of Religions sessions in Chicago (1993), Cape Town, South Africa (1997), and Barcelona, Spain (2004), and helped write and organize the Inter-Religious Celebrations that opened the first parliament in Chicago, as well as the opening of the Assembly of Religious Leaders at Monserrat, Spain, prior to the Barcelona Parliament.

Bronstein was a leading figure in shaping the liturgy and ritual of the Reform movement. He was a member of the Reform Jewish Liturgy Committee of the *Central Conference of American Rabbis for more than 30 years (1965–97) and chairman of the committee for six of those years (1981–87). During that time, the committee published the “Gates of . . .” series of prayer books, plus two works that Bronstein himself edited: the *Haggadah* for Passover and the Five Scrolls (Festival Worship). The *Haggadah* has had several editions issued over the years; in 1999, the CCAR declared it a “Modern Liturgical Classic.” Additionally, Bronstein was chairman of the Joint [CCAR-UAHC] Commission on Worship (1972–82) and a member of those organizations’ Joint Social Action Committee. He also served on the Executive Committee of the Central Conference of American Rabbis and chaired the CCAR’s first two Rabbinic Academic Convocations (1992, 1994). In 1988, Bronstein received the Isaac Mayer Wise Award for contributions to Reform Judaism, and was designated Distinguished Alumnus of the Year 2000 at McMicken College of Arts and Sciences of the University of Cincinnati.

[Bezalel Gordon (2nd ed.)]

BROOK, BARRY SHELLEY (1918–1997), U.S. musicologist. Brook studied at the City College of New York and at Columbia University and received his doctorate from the Sorbonne in 1959. In 1945 he became professor of musicology at Queens College, New York, and was a visiting professor at New York University (1964–65) and the University of Paris (1967–68). From 1974 he was responsible at City University of New York for a facsimile archive of 18th- and early 19th-century autographs, manuscripts, and prints. He was the general editor of the Breitkopf Thematic Catalogues (New York, 1966) and of the historical series *The Symphony, 1720–1840* (New York, 1979–85). Brook was also the president and editor of the planned 17-volume reference work *Universe of Music*. His special fields of research were 16th-century secular music and 18th-century instrumental music. He was one of the pioneers in the application of computer technologies to various musicological and bibliographical problems. In 1966 he founded the computerized *Répertoire International de Littérature Musicale* (RILM), the first journal of systematic musicological abstracts. His publications include *La symphonie française dans la seconde moitié du XVIII^e siècle* (3 vols., 1962); *Thematic Catalogues in Music: An Annotated Bibliography* (1972); and *The Symphony, 1720–1840: Reference Volume* (1986). Other editions of his include, with F. Degradà and H. Hucke: *Giovanni Battista Pergolesi: The Complete Works* (1986–); with B.C. MacIntyre: *Streichtrios, Joseph Haydn: Werke, XI/1–2* (1986–96).

ADD. BIBLIOGRAPHY: Grove online; MGG²; A. Atlas (ed.), *Music in the Classic Period: Essays in Honor of Barry S. Brook* (1985).

[Israëla Stein (2nd ed.)]

BROOK, PETER STEPHEN PAUL (1925–), British theater producer, director, and filmmaker. Born to Russian Jewish immigrants in London, by his early twenties Brook be-

came famous for his avant-garde productions of the plays of such writers as Jean-Paul Sartre and, especially, for his experimental and controversial staging of Shakespeare’s plays at the Royal Shakespeare Company in Stratford-on-Avon. At the age of only 22, he was also appointed director of the Royal Opera House, Covent Garden. In 1964 Brook achieved notoriety by staging Peter Weiss’s *Marat/Sade*, with its shocking depictions of sadism. Brook also directed a number of films, including *The Lord of the Flies* (1963). Among the best-known and most influential theatrical figures of the recent past in Britain, in 1998 Brook was made a Companion of Honour (C.H.); he is the author of an autobiography, *Threads of Time: A Memoir* (1999).

[William D. Rubinstein (2nd ed.)]

BROOKNER, ANITA (1928–), writer and art historian. Brookner was born in London, England, into a family of Polish origin. She was educated at the University of London and at the Courtauld Institute in London. In her professional life, her achievements have been in the areas of both art history and English literature. She was a visiting lecturer at the University of Reading from 1958 to 1964 and shortly thereafter became a lecturer in art history at the Courtauld Institute. From 1967 to 1968 she was Slade Professor at Cambridge University, the first woman to hold that position. She is considered an international authority on 18th- and 19th-century painting. Her academic works include *The Genius of the Future: Studies in French Art Criticism* (1971) and *Greuze: The Rise and Fall of an Eighteenth-Century Phenomenon* (1972).

In the field of literature, Anita Brookner has written literary reviews for the *Times Literary Supplement*, *Observer*, *London Review of Books*, and the *Times* (London). However, she is best known for her novels. She wrote *A Start in Life* (1981; U.S. title *The Debut*), *Providence* (1982), *Look at Me* (1983), *Hotel du Lac* (1984) for which she was awarded the Booker Prize of 1984, *Family and Friends* (1985), and *Fraud* (1992). She continued to write prolifically, publishing 11 books in the period between 1995 and 2005, including *Altered States* (1995), *Bay of Angels* (2001), and *Leaving Home* (2005)

Brookner’s literary style very much reflects her background in art. She writes in an elegantly formal, highly structured prose reminiscent of the staid, carefully composed character studies found in 18th- and 19th-century portraits of individuals. With the exception of *Family and Friends* her novels are, in fact, verbal portraits of a single main character.

Brookner’s novels concern the relationships between men and women in modern society. She depicts men as the activists and catalysts in the world, while women, though competent and accomplished, are presented as meek, lonely objects waiting for men to confer love upon them to deliver them from their prudent, patient, long-suffering lives.

Alexander Malcolm, *Understanding Anita Brookner* (2001); G. Soule, *Four British Women Writers ... An Annotated ... Bibliography* (1998).

[Beverly Mizrahi]

BROOKS, ALBERT (1947–), U.S. director, actor, comedian. Albert Brooks was born Albert Lawrence Einstein in Beverly Hills, Calif., to radio comedian Harry and singer Thelma Einstein (née Leeds). One of his three brothers is Bob Einstein, a writer and comedian who performs under the name Super Dave Osborne. As a child, his best friend was Rob *Reiner. Reiner's father, Carl, when asked who the funniest person he knew was, answered that it was a 13-year-old kid named Albert Einstein. Albert Brooks began his professional career as a sportswriter for KMPC radio in Los Angeles (1962–63), briefly attended Los Angeles City College, and then studied drama at Carnegie-Mellon University from 1966 to 1967. He changed his name to Albert Brooks when he went into stand-up comedy in 1968, the same year he wrote for the ABC TV show *Turn On*. Brooks directed his first short film in 1973, titled *Great American Dream Machine*, and then created shorts for NBC's *Saturday Night Live* in 1975–76. He made occasional appearances on TV starting in 1968, including memorable appearances on *The Johnny Carson Show*, but his first acting debut in a feature film came with Martin Scorsese's *Taxi Driver* (1976). Brooks continued to star in films, including his Academy Award-nominated turn as frustrated reporter Aaron Altan in *Broadcast News* (1987), but his primary focus was directing, which served as his platform to lampoon everything from the film industry to family relationships to the afterlife. Brooks' first feature film, *Real Life* (1979), was a black comedy about suburban life. *Lost in America* (1985) offered up a yuppie take on *Easy Rider*, while in *The Muse* (1999) he starred alongside Sharon Stone and Andie McDowell. He also won great acclaim as the voice of "Marlin," the father, in *Finding Nemo* (2003).

[Adam Wills (2nd ed.)]

BROOKS, JAMES L. (1940–), U.S. producer, director, writer. Born in Brooklyn, New York, to Edward M. and Dorothy Helen (Sheinheit) Brooks, James L. Brooks grew up in suburban New Jersey. He attended New York University from 1958 to 1960. At CBS News, he worked his way up from copy boy to news writer and reporter, from 1964 to 1966. He left New York for Hollywood in 1966, working for producer David Wolper at Wolper Productions and selling scripts he penned for shows like *My Three Sons*, *The Andy Griffith Show*, *My Mother the Car*, and *That Girl*. In 1968, he was hired on as executive story editor for ABC and created the Emmy Award-winning series *Room 222* with partner Allan Burns. Brooks went back to CBS in 1970, creating, writing, and producing the hit TV show *The Mary Tyler Moore Show*, based on his experiences working for CBS News. Brooks finished out the decade with numerous Emmy wins under his belt and three

series on the air at the same time – *Rhoda* (1974–78), *Lou Grant* (1977–82), and *Taxi* (1978–83). He moved into feature films first as a writer on *Starting Over* (1979) and then as writer-director of the Academy Award – winning *Terms of Endearment* (1983), a comedy about a dysfunctional family and fatal illness starring Shirley MacLaine, Debra Winger, and Jack Nicholson, based on the novel by Larry McMurtry. Brooks launched his own production company, Gracie Films, in 1984, and in 1987 drew again from his time at CBS News for the film *Broadcast News*, and served as executive producer of the TV comedy *The Tracey Ullman Show* (1987–90). As a producer, his string of hits continued with *Big* (1988), *Say Anything...* (1989), *The War of the Roses* (1989), and *Jerry Maguire* (1996). As a director, his films after *Broadcast News* included *I'll Do Anything* (1994), *As Good as It Gets* (1997), and *Spanglish* (2004). Before *The Tracey Ullman Show* ended, Brooks spun off a series of animated shorts featured on the show into its own series, *The Simpsons* (1989), which has the distinction of being the longest running cartoon in the history of television. Brooks has been nominated for and won numerous Emmys (41 nominations, 18 wins), Golden Globes (11 nominations, three wins), and Academy Awards (eight nominations, three wins). In 1998, he was inducted into the Academy of Television Arts and Sciences Hall of Fame.

[Adam Wills (2nd ed.)]

BROOKS, MEL (Melvin Kaminsky; 1926–), U.S. comedian, actor, director. Born in New York, Brooks began working as a stand-up comedian in a string of resorts in the Catskill Mountains. He was known for his odd antics, including performing impromptu monologues and routines, pretending to insult both his co-workers and the guests. After years of stand-up, he began writing jokes for Sid Caesar's TV program *Your Show of Shows* until the mid-1950s. Turning to Broadway, Brooks wrote the material for *All American* (1962), *Shinbone Alley* (1957), and *Leonard Sillman's New Faces of 1952* (1953). In the 1960s he teamed up with fellow writer Carl Reiner on a number of comedy albums based on Brooks' character The 2,000 Year Old Man, which led to a best-selling album, a Grammy award, and numerous television appearances. He then teamed up with Buck Henry to develop *Get Smart*, a successful satirical spy sitcom (1965–70).

Turning to yet another medium, Brooks wrote and played the title role in the four-minute animated short *The Critic* (1963). It won an Academy Award for Best Short Subject, Cartoon. Brooks broke into feature films by writing and directing the critical success (but commercial failure) *The Producers* (1968), for which he won an Oscar for Best Original Screenplay. Brooks' second film, *The Twelve Chairs* (1970), met a similar fate. But his third effort, *Blazing Saddles*, (1974), was a box-office hit. It was followed by many other films, including *Young Frankenstein* (1974); *Silent Movie* (1976); *High Anxiety* (1977); *History of the World, Part I* (1981); a remake of the 1942 wartime comedy/drama *To Be or Not To Be* (1983) in which Brooks co-starred with his wife, Anne Bancroft; *Spaceballs*

(1987); *Life Stinks* (1991); *Robin Hood: Men in Tights* (1993); and *Dracula: Dead and Loving It* (1995).

Mel Brooks' production company, Brooksfilm, has produced a wide variety of formidable films. In addition to Brooks' films, the company produced the movies of other filmmakers, such as David Lynch's *The Elephant Man* (1980); David Cronenberg's *The Fly* (1986); Graeme Clifford's *Frances* (1982); Richard Benjamin's *My Favorite Year* (1982); and David Hugh Jones' *84 Charing Cross Road* (1986), for which Anne Bancroft received the BAFTA Film Award for Best Actress.

In 2001 Brooks parlayed *The Producers* into a Broadway show. He produced it and wrote the music, lyrics, and book for the musical version. It won three Tony Awards for Best Musical, Best Book of a Musical, and Best Original Score. After more than 1,500 performances, it was still going strong in 2004.

He also won three successive Emmys as Outstanding Guest Actor for his role of Uncle Phil on the TV sitcom *Mad about You* (1997, 1998, and 1999). In addition, Brooks received three Grammy awards, for Best Musical Show Album (*The Producers*); Best Long Form Music Video for Recording (*The Producers: A Musical Romp with Mel Brooks*); and Best Spoken Word Album (*Comedy for The 2000 Year Old Man in the Year 2000*). Thus Mel Brooks was one of a select few to win an Oscar, an Emmy, a Grammy, and a Tony.

Brooks was named one of *People* magazine's 25 Most Intriguing People of 2001 and was listed as one of E!'s Top 20 Entertainers of 2001. Brooks also wrote a number of books: *Get Smart* (with Buck Henry 1967); *Mel Brooks History of the World* (1981); *The 2000 Year Old Man* (1984); *The 2000 Year Old Man in the Year 2000: The Book* (with Carl Reiner, 1998); and *The Producers: The Book, Lyrics, and Story Behind the Biggest Hit in Broadway History* (with Tom Meehan, 2001)

[Jonathan Licht / Ruth Beloff (2nd ed.)]

BROOKS, RICHARD (Ruben Sax; 1912–1992), U.S. film director and writer. Born in Philadelphia, Pennsylvania, Brooks worked as a sportswriter for the *Philadelphia Record* (1932–34). After joining the *Atlantic City Press Union*, he moved to New York, where he got a job with Radio WNEW. He was appointed news writer, commentator, and narrator for NBC radio. In 1940 Brooks founded the Mill Pond Theater Company with David Loew in Roslyn, New York, where he made his directorial debut. That fall, on a trip to California, he landed a job at a local radio station, writing a short story every day and reading it over the air. He also wrote and directed the radio show

William Sands. In 1942 Brooks got his start in the feature film industry, writing additional dialogue for *Sin Town* and *Men of Texas*. In 1943 he wrote his first screenplay for the feature film *White Savage*.

That same year he joined the U.S. Marine Corps, where he was threatened with a court-martial for his novel about racial discrimination in the services, *The Brick Foxhole* (1945). Sinclair Lewis intervened successfully on his behalf, and he later won an Oscar for his direction of Lewis's *Elmer Gantry* (1960). Brooks also wrote the screenplay and directed *Blackboard Jungle* (1955), a film about racial tension in New York City schools, and the racially charged *Something of Value* (1957) as well as *Cat on a Hot Tin Roof* (1968); *The Brothers Karamazov* (1958); *Sweet Bird of Youth* (1962); *The Last Time I Saw Paris* (1954); *Lord Jim* (1965); *The Professionals* (1966); *In Cold Blood* (1967); *The Happy Ending* (1969); *The Heist* (1971); *Bite the Bullet* (1975); *Looking for Mr. Goodbar* (1977); *Wrong Is Right* (1982); and *Fever Pitch* (1985). He also wrote the screenplay for director John Huston's *Key Largo* (1948). He married actress Jean Simmons in 1960; they divorced in 1977.

ADD. BIBLIOGRAPHY: P. Brion, *Richard Brooks* (1986).

[Ruth Beloff (2nd ed.)]

BROOM, the biblical *rotem* (Ar. *ratam*), the wild shrub *Retam roetam*, widespread in the deserts of Israel and in sandy regions. It produces a few leaves in the winter, which it sheds in the summer, its green stalks filling the function of the leaves in photosynthesis. According to R. Meir the shrub under which Hagar left her son Ishmael (Gen. 21:15) was the broom, "since it grows in the desert" (Gen. R. 53:13). Elijah lay down in the shade of a broom in the wilderness "a day's journey from Beersheba" (1 Kings 19:3–5), "and he requested for himself that he might die"; and indeed it is difficult to find refuge from the powerful rays of the desert sun in the shade of this leafless bush. In the tents of Kedar they used "coals of *rotem*" for fuel and for fashioning arrows (Ps. 120:4–5). The roots are bitter but it is apparently possible to render them edible by roasting. Thus the hungry dwellers in the desert eat the saltwort (Heb. *malu'ah*, *Orach) "and the roots of the broom are their food" (Job 30:4; however, some translate *lahmam* לַחֲמַם, "their food" as "to warm themselves thereby" from חָמַם). According to the *aggadah*, the glowing embers of the broom have a remarkable characteristic: "For all embers are extinguished within [after they die down on the outside] but broom embers still burn within when extinguished on the outside" (Gen. R. 98:19). According to another *aggadah* coals of broom retain their heat for 12 months (BB 74b). Onkelos and the Vulgate translate the *rotem* by *juniper to whose embers Jerome attributes this quality of retaining their heat for 12 months. This identification is however wrong.

[Jehuda Feliks]

BROSS, JACOB (1883–1942), lawyer, a founder and leader of the *Jewish Social Democratic Party (ZHPSD.) in Galicia. Bross became known as an orator for the party and the editor of its organ *Social-Demokrat*. The son of a tailor in Cracow, he was attracted to socialism when still at secondary school. His brother, Ignatius, was already active among Jewish workers during the 1890s. While still in the Polish Social Democratic Party of Galicia, Bross fought against assimilationist tendencies and campaigned for organizational autonomy of the Jewish workers in the party. After demobilization from the Austrian Army in 1918, he did not assume a political function in the Polish *Bund. He lived in Cracow and appeared as an advocate in political trials. He was also active in child and youth welfare. He died in the Holocaust in Kremenets. His essays on the history of the Jewish socialist movement in Galicia were published in *Royter Pinkes*, 2 (1921); a second essay in *Historishe Shriften*, 3 (1939) was reproduced in *YIVO Annual* (5 (1950), 55–85).

BROTHERS, JOYCE (1927–), U.S. psychologist and television and radio personality. Born Joyce Diane Bauer, Brothers grew up in Queens, New York City, and studied at Cornell and Columbia University, receiving her Ph.D. in 1953. She served as a research fellow on a United Nations leadership project and as an instructor at Hunter College, New York City.

In 1955 she tried out for *The \$64,000 Question* quiz show. She chose boxing as her subject and became the only woman ever to win the top prize of \$64,000. She was equally successful in the same category on the *\$64,000 Challenge*.

A co-host of NBC’s *Sports Showcase*, Brothers was offered a TV counseling show on NBC in 1958. Her sympathetic approach and straightforward advice made the program a great success, pioneering the discussion of intimate emotional and sexual matters on daytime television. She continued to host radio phone-in programs, write a daily column syndicated in some 350 newspapers nationwide, contributed a monthly column to *Good Housekeeping*, and was a special feature writer for United Press International. A UPI poll named her one of the 10 Most Admired Women in America, and for six years she was on the Gallup poll’s list of Most Admired Women.

A motivational speaker and a consultant to the business world, Brothers created and performed in films and seminars designed for corporate personnel training programs. She appeared on numerous TV talk shows and in more than 50 television acting roles, often as herself as the consummate advice-giver. She made cameo appearances in this capacity in dozens of films as well, including *Oh God! Book II* (1980); *The King of Comedy* (1983); *The Lonely Guy* (1984); *Troop Beverly*

Hills (1989); *The Misery Brothers* (1995); *Dear God* (1996); and *Analyze That* (2002).

Brothers’ books have been translated into 26 languages. They include *Ten Days to a Successful Memory* (1959); *Woman* (1961); *What You Probably Don’t Know about Sex Relations* (1968); *The Brothers System for Liberated Love and Marriage* (1972); *Better Than Ever* (1975); *How to Get Everything You Want Out of Life* (1978); *What Every Woman Should Know about Men* (1983); *The Successful Woman: How You Can Have a Career, a Husband, and a Family – and Not Feel Guilty about It* (1988); *What Every Woman Ought to Know about Love and Marriage* (1985); *Widowed* (1990); and *Positive Plus: The Practical Plan for Liking Yourself Better* (1994).

[Rohan Saxena and Ruth Beloff (2nd ed.)]

BROTHERS, RICHARD (1757–1824), founder of the British-Israelite movement. After serving in the Royal Navy (1771–83) Brothers retired on half pay but refused to take the statutory oath on religious grounds. He next began to address letters to the king, the prime minister, and other public personages foretelling the future. He regarded himself as the messiah who was to restore the “Hebrews” (i.e., Englishmen who had seen the light of truth) to their land. His name, according to him, signified that he was descended from James, the brother of Jesus, so that he called himself “The Nephew of the Almighty.” In 1794 Brothers published the first part of his *A Revealed Knowledge of the Prophecies and Times* foretelling the restoration of the “Hebrews” to Jerusalem in 1798. He had many followers, and large numbers of pamphlets were published supporting or opposing his views. Jews showed no interest, but David *Levi published a derisive pamphlet. Brothers’ activities were suspected of being exploited for revolutionary ends and the government had him confined in an asylum for the criminally insane (1795–1806). Although his prophecies were unfulfilled, this did not affect the faith of his disciples. To the last Brothers continued to compose pamphlets about the government and architecture of the new Jerusalem. Upon his death, leadership of the group passed to John Finleyson (1770–1854).

[Cecil Roth]

BROUDY, HARRY SAMUEL (1905–1998), U.S. educator. Born in Filipowa, Poland, Broudy studied at Boston University and at Harvard, where he began teaching philosophy. Between 1937 and 1957 he was professor of philosophy and education at two Massachusetts colleges – North Adams and Framingham. In 1957 he became professor of education in the College of Education, University of Illinois, where he taught until his retirement in 1974. His best-known work, *Building a Philosophy of Education* (1954), reveals his concern with established tradition and his emphasis on the function of education for

intellectual discipline, moral character, cultural conservatism, and national survival.

He and his wife, Dorothy, conducted seminars on interdisciplinary thinking and esthetic education in the U.S., Canada, Europe, South America, Asia, and Australia. Broudy served as editor of *The Educational Form* (1964–72) and was the general editor of the University of Illinois Press. He also served on the editorial boards of *The Music Educators Journal*, *Educational Theory*, and *The Journal of Aesthetic Education*. In 1984 he was honored by the state of Illinois for his efforts to create statutory requirements for arts education in schools. He served on the advisory board and was a senior faculty member of the Getty Institute for Educators on the Visual Arts.

Broudy's other books include *Psychology for General Education* (1957); *Paradox and Promise* (1961); *Democracy and Excellence in American Secondary Education* (1964); *Exemplars of Teaching Method* (1965), with J.R. Palmer; *Philosophy of Education* (1967); *The Real World of the Public Schools* (1972); *Enlightened Cherishing: An Essay on Aesthetic Education* (1972); and *The Role of Imagery in Learning* (1989).

°**BROUGHTON, HUGH** (1549–1612), English Puritan, Hebraist, and controversialist. Broughton studied at Cambridge from 1569, learning Hebrew from A.R. Chevalier; he lived and lectured in London from 1579 to 1589, and thereafter lived mainly in Germany and Holland (Middelburg). Much of his energy was devoted to the defense of the scriptural chronology of his first book (*Concent of Scripture*, London, 1588), to the proposal of a new English Bible translation, and to the castigation of the resultant King James' Version (1611). Broughton also worked on a Hebrew New Testament, but published only *Apocalypse* (Book of Revelations) (Middelburg?, 1610). His lectures on chronology at St. Paul's Cathedral attracted weekly audiences of 100, and he exhibited enough Jewish scholarship to engage in controversy at Frankfurt in 1590 with R. Elijah *Loans. This resulted in Hebrew correspondence from David *Reuveni of Constantinople, which, together with his reply, was published in English, Latin, and Greek (Amsterdam, 1606, etc.). He was apparently interested in Jewish conversion, and published his controversy with R. David "Farar" on Jesus' genealogy in Latin (1605) and English (Amsterdam, 1608). Broughton's works were republished incompletely by J. Lightfoot (London, 1662), with a prefixed "Life"; manuscript material, largely relating to Bible translation, is held at the British Museum (Mss. Sloan 3088, Harley 1525; *Lansdowne Catalog*, pp. 220, 331, 332).

[Raphael Loewe]

BROWARD COUNTY, district in the southwestern part of Florida, U.S. In 2005 Broward had around 260,000 Jews, about 15% of the population there and the largest concentration of

Jews in Florida. Broward County comprises 30 cities, including Fort Lauderdale, Hollywood, Cooper City, Deerfield Beach, Hallandale Beach, Margate, Oakland Park, Pembroke Pines, Plantation, Pompano Beach, Tamarac, and Weston.

By 1910, five years before Broward became a county, Louis Brown, a Jew, had arrived in Dania, the first of the county's cities. The Sokolow and Rubinstein families followed. In 1916 Rose Seitlin and Max Lehrman, who married in 1913 in the first Jewish wedding in Miami, moved with two daughters to Fort Lauderdale, where they had two more children, the first to be born there in 1918 and 1919. By 1923 seven Jewish families were living in Fort Lauderdale. Among them were Moe and Mack Katz, who had migrated there to speculate in real estate. It is believed that Moe received the first real estate license issued in Florida, just prior to the boom that transformed a frontier area into an emerging metropolitan region. The boom reached its peak in 1925, when Fort Lauderdale claimed, for the first time, a growing Jewish population. Mack Katz, Abe Newman, Archie Robbins, and other pioneer Jews opened stores that provided most of the retail activity for the towns. These first Jewish families faced much discrimination, but more Jews arrived, and together they built the foundations of a Jewish community. The first Jewish service in Broward County was held on September 17, 1926, in rented quarters over a restaurant on Las Olas Boulevard. The building was destroyed a few hours later by the fury of the killer hurricane of 1926. This congregation became Temple Emanu-El, which erected the county's first synagogue in 1937. The businesses that Jews opened, the institutions they created, and the civic leadership they demonstrated all helped to make it more attractive and comfortable for other Jews to settle there. By 1940 there were 1,000 Jews in Broward County; in 1970 there were 40,000; and in 1990 there were 275,000, with a slight decline by 2005. The median age of the current Jewish population was 59; 50 percent were over 65 and 29 percent over 75. About 24,000 or 9 percent were "snowbirds," 5,300 Hispanic, and 3,400 Israeli, another 275 households Russians, and over 7,000 Holocaust survivors.

The boom went bust in 1926, but the Jewish community remained. By the second half of the 1930s, the area was emerging from the economic doldrums on the heels of a surge of tourism, another building boom, and the advent of commercial aviation. No family was more influential in the development of the city of Hollywood than the Horvitzes through their Hollywood Inc. In the 1920s, Sam Horvitz entered into a contract to build sidewalks and streets for Hollywood, and with the bust he ended up controlling more than half the vacant land in the city. With nearly 25,000 lots, Horvitz began building and selling single-family homes; after World War II, he introduced the first planned residential community, then Hollywood Mall, considered at the time of its opening in the 1970s as a prototypical mall.

For much of its existence, Broward County has also relied heavily on agriculture as an economic engine. Thus many Jews were drawn into farm-related businesses, including the

families of Rubinstein (tomatoes), Gross (poultry), Levy (cucumbers and other produce), Roth (citrus), and Berman (dairy cows).

The 1939 story of the plight of 937 Jewish refugees aboard the s.s. *St. Louis*, who were fleeing the Nazis on the eve of World War II, is familiar. But there is little awareness of Broward County's role in the drama. The ship attempted to land off the coast of southeast Florida, awaiting permission to enter the U.S. Instead, Coast Guard vessels dispatched from Fort Lauderdale patrolled the waters to prevent anyone from swimming ashore. The Jews aboard the *St. Louis* stared at the Broward-Dade coastline but were denied entry. After the ship was forced to sail back to Europe, some Jews disembarked in England. The remainder went to France and Holland, where a year later they were again subject to the Nazi terror after the German invasion.

A rising postwar prosperity contributed to the early stages of recovery. The advent of air-conditioning made year-round living in Florida much more comfortable. Members of Broward's small but growing Jewish community remained close to one another, knitted together by their common interests and institutions. In 1943 the Jewish Welfare Federation of Hollywood began operations; young physicians arrived. In the 1950s, Broward's 2,200 Jews began playing an ever-larger role in county affairs. Jews recorded solid accomplishments in community building, operating major businesses, entering politics, and leading the way in philanthropic endeavors. New cities were developed. Russian-born Morris Cooper arrived in the U.S. in 1908 with one suit and pocket change. He went to work in a shirt factory making \$4 a week. Within four years Cooper owned the shirt company and began visiting Florida and buying citrus groves. In 1958 he retired to Florida and created Cooper City. Moving to Hollywood in 1950, Abraham Mailman, renowned for his leadership and philanthropy, played a large part in shaping the Broward Jewish community. Mailman was a highly successful industrialist, property developer, and banker. He created the city of Miramar to provide affordable homes for working people. Samuel Friedland, who built the Diplomat Hotel and Country Club in 1956, was already a successful grocer with his Food Fair chain of stores and a developer of shopping centers when the \$26 million hotel opened. Leonard Farber, another pioneer in shopping-center development, built dozens of centers, including the Galleria Mall on East Sunrise Blvd., "Fort Lauderdale's most fashionable address." For Jewish culture and traditional experiences, many Jews still reached out to Miami Beach and Palm Beach County, so this was an impetus for many new organizations. In 1966 Maynard Abrams was Broward's first Jewish mayor (of Hollywood). Notwithstanding these gains, antisemitism and discrimination remained a reality in Broward.

In the 1970s, the Jewish population of Broward was growing at a much more rapid rate than that of Dade County, which had been since the end of World War II one of America's most important Jewish communities. The large influx of Jews in Broward enabled them to develop a real sense of community.

Synagogues opened in new municipalities. Nova Southeastern University grew when Dr. Abraham Fischler served as its president for ten years, followed by another Jew, Dr. Stephen Feldman.

By the end of the 1980s, Broward County contained a larger Jewish population than Dade County. The epicenter for this population stood west of I-95 along West Oakland Park Boulevard. Increasingly, Jewish retirees were embracing Broward as their new home and for many of them the proliferating retirement communities in west Broward, such as Century Village in Pembroke Pines, helped fill their needs for community and activity. The vast increase in the number of Jews was especially evident in the community's heightened political involvement. By 2005 more than 114 Jews had served in public office in Broward County, including four U.S. Congressional representatives, 33 state legislators, 29 mayors, 41 judges, and 7 county commissioners. Mara Giuliani was serving her seventh term as mayor of Hollywood (1986–2005).

As the population exploded, the number of synagogues grew, while new cultural and educational centers continued to proliferate. In 1979 the Jewish Community Center of Fort Lauderdale purchased 16 acres of land in Plantation that became the Samuel and Helene Soref Jewish Community Center. David Posnack had begun as a peddler before moving to Hollywood in 1944, where he went into the produce business and prospered. He quickly immersed himself in philanthropic pursuits; the David Posnack JCC in Davie and Posnack Hebrew Day School are some examples.

By the 1990s, Jews comprised over 25 percent of the enrollees at Broward Community College, which offered a Judaica Studies program. Jewish women deepened their involvement in every element of community life. Culturally, Jews were the driving force in the creation and direction of the new County Performing Arts Center as well as the art museum. Fort Lauderdale is the yachting capital of the world and Jewish yacht builders, brokers, and owners play a prominent role.

At the outset of the 21st century, Jews in Broward were living a vibrant community life with about 65 congregations and a full array of support organizations. In Davie, the United Jewish Community of Broward County, referred to also as the Federation, was created in 1996 with the merger of the Jewish Federation of South Broward (Hollywood) and the Jewish Federation of Greater Fort Lauderdale, which was founded in 1967. The Broward edition of the *Jewish Journal* began publishing in 1976 and continued into the 2000s. In 2004 the county's first congregation, Temple Emanu-El, merged with Temple Kol Ami. The 24-year-old Holocaust Documentation and Education Center secured a permanent home in Hollywood. A Jewish Home for the Aged in Broward was being planned. Florida's largest Jewish community was thus entering its second century with a robust future, having come from an environment that discouraged Jews from settling there at all.

[Marcia Jo Zerivitz (2nd ed.)]

BROWN, AIKA (1937–1964), Israeli painter. Brown was born in Tel Aviv, and studied graphics at the Bezalel School of Art, Jerusalem. He lived in Paris from 1959 to 1963, and after a short stay in Israel returned to France where he was killed in a car accident. Brown's early paintings were abstract, with intense colors and brushstrokes, but the whole composition suggests concrete images such as landscapes, as in his *Sun over Houses* (1959). Shortly after arriving in Paris, however, he produced his first assemblages, which showed a drastic change in his work, attitude, and place, and which reflected new means of expression, new style, and new materials. Torn sacks, hammers, screws, pieces of wood, and ropes were assembled into dramatic compositions, revealing a new reality which he was striving to obtain. Employing the pieces of junk which cluttered his studio as legitimate art material, he endowed them with a new expressive reality, at the same time painting them as objects of everyday use. Brown most frequently employed dolls to represent anonymous figures. A Memorial Exhibition of his work was held at the Israel Museum in 1965.

BIBLIOGRAPHY: Y. Fischer, *Ariel Brown 1937–1964* (1967).

[Judith Spitzer]

BROWN, BENJAMIN (1885–1939), organizer of U.S. Jewish farm cooperatives. Brown was born in Tulchin, Russia. He immigrated to the United States in 1901 and studied at Philadelphia. Moving to Utah, Brown was president from 1909 to 1915 of the Jewish Agricultural and Colonial Association, which sponsored a farm settlement in the central part of the state, after which he continued to be active in the cooperative movement in Utah, Idaho, and the Pacific Northwest. In 1929 he traveled to Russia as part of an American commission to act in an advisory capacity to Jewish agricultural settlers in Birobidzhan. Upon his return he served as chairman of the Provisional Commission for the Establishment of Jewish Farm Settlements in the United States. In 1936 Brown was instrumental in founding the New Jersey Homestead, a cooperative Jewish settlement near Heightstown, New Jersey. The project was discontinued in 1939, the year of his death.

BROWN, DAVID ABRAHAM (1875–1958), U.S. industrialist and civic leader. Brown, born in Edinburgh, Scotland, was brought to Detroit, Mich., as a child. He became a prominent businessman and community leader, and moved to New York in 1929. There he assumed control of the Broadway National Bank and Trust Co. He published the weekly *American Hebrew* (1930–35). Brown was national chairman of the American Jewish Relief Campaign (1921–22) and the United Jewish Campaign (1925–28) as well as the U.S. division of China Famine Relief (1928–33). He played an active role in the American Jewish Joint Distribution Committee and the Union of American Hebrew Congregations.

[Robert Rockaway]

BROWN, HAROLD (1927–), U.S. physicist and secretary of defense. Brown was born in New York and graduated from

Columbia University, earning his Ph.D. in physics in 1949 at the age of 21. After a short period of teaching and postdoctoral research, Brown became a research scientist at the Radiation Laboratory at the University of California in Berkeley. In 1952 he joined the staff of the Lawrence Radiation Laboratory at Livermore, California, and became its director in 1960. During the 1950s he served as a member of or consultant to several federal scientific bodies and as senior science adviser at the 1958–59 Conference on the Discontinuance of Nuclear Tests. In 1961 he was appointed a member of the President's Science Advisory Committee. That year he was awarded the Distinguished Civilian Service Award of the U.S. Navy.

Brown worked under U.S. Secretary of Defense Robert McNamara as director of defense research and engineering from 1961 to 1965, and then as secretary of the Air Force from 1965 to 1969. From 1969 – when he was appointed general advisor to the Committee on Arms Control and the Disarmament Agency – to 1977 he was president of the California Institute of Technology.

Brown, the first scientist to become secretary of defense, served in the Carter administration from 1977 to 1981. While in office, he helped lay the groundwork for the Camp David accords and took part in the strategic arms negotiations with the Soviet Union. After leaving the Pentagon in 1981, he remained in Washington and joined Johns Hopkins University's School for Advanced International Studies as a distinguished visiting professor of national security. He was later appointed chairman of the university's Foreign Policy Institute. He continued to speak and write widely on national security issues. In later years Brown was affiliated with research organizations and served on the boards of a number of corporations.

[Ruth Rossing (2nd ed.)]

BROWN, HERBERT C. (1912–2004), U.S. chemist and Nobel laureate. Brown was born in London to parents who had emigrated from the Ukraine. The family moved to Chicago in 1914. He received his B.Sc. (1936) and Ph.D. (1938) from the University of Chicago. Following a year as a postdoctorate fellow, he was appointed to the staff at the university with the rank of instructor. In 1943 he went to Wayne University and in 1947 transferred to Purdue University. He was made distinguished professor in inorganic chemistry in 1954, research professor in 1960, and emeritus professor in 1978. Subsequently, he became R.B. Wetherill Research Professor Emeritus.

In 1979 Brown was awarded the Nobel Prize in chemistry for his studies on the application of borohydrides and diborane to organic synthesis, which has had a revolutionary impact on synthetic organic chemistry. He discovered that the simplest compound of boron and hydrogen, diborane, may be added with remarkable ease to unsaturated organic molecules to give organoboranes. In addition, his studies of molecular addition compounds contributed to the reacceptance of steric effects as a major factor in chemical behavior.

Brown was elected to the National Academy of Sciences in 1957 and to the American Academy of Arts and Sciences

in 1966. He was the recipient of numerous awards, including the American Chemical Society's Award for Creative Research in Synthetic Organic Chemistry for 1960, the Elliott Cresson Medal for 1978, the National Academy of Sciences Award in Chemical Sciences for 1987, the ACS Herbert C. Brown Medal and Award for Creative Research in Synthetic Methods for 1998, and selection by the ACS publication, *Chemical Engineering News*, as one of the Top 75 Chemists Contributing to the High Status of Current Chemistry (1998).

BIBLIOGRAPHY: Les Prix Nobel 1979.

[Ruth Rossing (2nd ed.)]

BROWN, LAWRENCE H. (Larry; 1940–), U.S. basketball coach and member of the Basketball Hall of Fame. Brown is the only coach to win both a college basketball championship (University of Kansas, 1988) and an NBA championship (Detroit Pistons, 2004), and the only person to ever win an Olympic gold medal as a player (1964) and coach (2000).

Born in Brooklyn, New York, the 5' 9" point guard grew up on Long Island, where he attended Long Beach H.S. before playing at the University of North Carolina from 1959 to 1963, captaining the 1962–63 team as a senior and being named an honorable mention All-American. Selected by the Baltimore Bullets in the seventh round (56th overall) but considered too small to play in the NBA, Brown went to the NABL Akron Goodyear Wingfoots, where he played for two years (1963–65), leading the team to the 1964 AAU National Championship, and then played that summer on the 1964 U.S. Olympic team.

After serving as an assistant coach at North Carolina (1965–67), Brown joined the newly formed American Basketball Association and played for five teams in five years, being named MVP of the 1968 All-Star game and holding the ABA record for assists in a game with 23. In 1972 Brown became head coach of a Carolina Cougars team that had gone 35–49 the year before and led the team to a league-best 57–27 regular-season record and his first Coach of the Year award. After one more season with Carolina, Brown took over the Denver Rockets and won two more Coach of the Year awards, in 1975 and 1976. The ABA then merged with the NBA and the Rockets became known as the Nuggets in 1976–77 with Brown leading them to Midwest Division titles in 1977 and 1978 before resigning late in the 1978–79 season.

Brown then coached at UCLA for two seasons before returning to the NBA with the New Jersey Nets in 1981. He led them in the 1982–83 season and became head coach at the University of Kansas, winning the 1987–88 national title by defeating Oklahoma 83–79 and earning the Naismith Award as College Coach of the Year.

Brown returned to the NBA to coach the San Antonio Spurs from 1988 to 1992, when he was let go midway through the season, the first time Brown was ever fired. He took over the Los Angeles Clippers less than two weeks later and led them to their first playoff appearance in 16 years.

Brown coached the Indianapolis Pacers in 1993–97, when he resigned after posting only his second losing season in 25

years of coaching. Brown became coach of the Philadelphia 76ers five days later, leading a team that had gone 22–60 the year before his arrival to playoff appearances in five of his six years there. The 2001 team went to the NBA championship game for the first time in 18 years and Brown won Coach of the Year honors.

Brown began coaching the Detroit Pistons in 2003, and in his first year led the team to the 2004 NBA championship, becoming the oldest coach in NBA history to win a title and the only coach in NBA history to lead seven different teams to the playoffs – no other coach had even done it six times. He thus became the fifth Jewish head coach to win an NBA title, joining Eddie *Gottlieb, Red *Auerbach, Red *Holzman, and Les *Harrison. Brown again reached the finals in 2005, losing in seven games. His lifetime record was 177–61 in seven full collegiate seasons for a .744 winning percentage; 229–107 (.682) in four ABA seasons; and 987–741 (.571) in 23 NBA seasons as of the end of the 2005 season. Brown ranks first in all-time cumulative coaching victories, covering all levels of basketball from high school to professional including playoffs, and is second all-time with 1,216 combined NBA/ABA head coaching victories. After the 2005 season Brown left the Pistons and was named coach of the New York Knicks.

Brown won a gold medal at the 1961 Maccabiah games, and in 2002 was the 20th Jewish inductee in the National Basketball Hall of Fame in Springfield, Mass.

HERB BROWN (1936–), Larry's older brother, is also an experienced basketball coach. Herb graduated from the University of Vermont in 1957. He was Coach of the Year at SUNY Stony Brook in 1969 and in 1975 coached the Israel Sabras to the championship of the European Professional Basketball League. Brown was head coach of the Detroit Pistons from 1976 to 1978 and assistant coach for a number of NBA teams. He was also a head coach in the WBA and CBA, and other professional basketball leagues in his 40-year coaching career. He coached the U.S. team to a gold medal at the 2001 Maccabiah Games and a bronze at the 1997 games. He is the author of three books, *Basketball's Box Offense* (1995), *Preparing for Special Situations* (1997), and *Let's Talk Defense* (2005).

[Elli Wohlgeleinter (2nd ed.)]

BROWN, MICHAEL STUART (1941–), U.S. medical geneticist and Nobel laureate. Brown was born in New York and received his B.A. in chemistry (1962) and his M.D. (1966) from the University of Pennsylvania. He was an intern and resident at the Massachusetts General Hospital in Boston, where he met Joseph L. *Goldstein, who was to become his lifelong scientific collaborator. Between 1968 and 1971 Brown was a postdoctoral fellow, first with Dr. Earl Stadtman at the National Institutes of Health, then at the National Institute of Arthritis and Metabolic Diseases, and finally in the biochemistry laboratory of the National Heart Institute.

In 1971 Brown moved to Texas and joined the faculty of the University of Texas Southwestern Medical School in Dal-

las. He became a professor in 1976 and in 1985 was appointed Regental Professor of the University of Texas.

Soon after his arrival in Dallas, Brown succeeded in solubilizing and partially purifying 3-hydroxy-3-methylglutaryl coenzyme A reductase, a previously enigmatic enzyme that catalyzes the rate-controlling enzyme in cholesterol biosynthesis. Formal scientific collaboration with Goldstein began in 1972, after Goldstein returned to Dallas from a postdoctoral fellowship in Seattle. The two discovered the low-density lipoprotein (LDL) receptor, which controls the level of cholesterol in blood and in cells. They showed that mutations in this receptor cause familial hypercholesterolemia, a genetic disease in which excess cholesterol accumulates in blood and tissues because cells are not able to absorb low-density lipoprotein. The disorder leads to premature heart attacks in one out of every 500 people in most populations.

Brown and Goldstein received many awards for their work, most notably the Nobel Prize for medicine in 1985. In addition, Brown was awarded the Albert D. Lasker Award in Basic Medical Research (1985); the William Allan Award of the American Society of Human Genetics (1985); the U.S. National Medal of Science (1988); and the Albany Medical Center Prize in Medicine and Biomedical Research (2003).

Michael Brown was elected to the U.S. National Academy of Sciences in 1980. He is a member of the American Academy of Arts and Sciences, the American Society for Clinical Investigation, the Association of American Physicians, the American Society of Biological Chemists, and the American Society for Cell Biology. He is a diplomate of the American Board of Internal Medicine and a fellow of the American College of Physicians. From 1974 to 1977 he was an Established Investigator of the American Heart Association. He served on several review boards, including the Molecular Cytology Study Section of the National Institutes of Health (1974–77) and the editorial boards of the *Journal of Lipid Research*, the *Journal of Cell Biology*, *Arteriosclerosis*, and *Science*. He was a member of the Board of Scientific Advisors of the Jane Coffin Childs Fund from 1980. At the University of Texas Southwestern Medical School, he became Paul J. Thomas Professor of Molecular Genetics and director of the Jonsson Center for Molecular Genetics.

[Ruth Rossing (2nd ed.)]

BROWN, SAUL PARDO (d. 1702), the first known religious leader, or *hazzan*, of New York. Brown (an English alias for Pardo) came to New York in about 1685 from Rhode Island where he had been a merchant. In that year he petitioned Governor Thomas Dongan for permission to engage in retail trade. The privilege was denied to all Jews, but he did receive the right to be a wholesale trader. In 1695 Brown was already *hazzan* when he is recorded as ministering to the Congregation Shearith Israel. It is possible that Brown died in Curaçao. The family disappeared from New York records after the death of his wife in 1708.

[Leo Hershkovitz]

BROWNE, EDWARD B.M. (1845–1929), U.S. Reform rabbi, lecturer, and writer on talmudic and rabbinic literature. He was an honorary pallbearer for President Ulysses S. Grant in 1885, and the first rabbi to give the opening prayer in the United States Senate, 1884. Browne translated *The Book Jashar*, and created *Prayers of Israel*, for American Reform Services in Temple Gates of Hope, New York, 1884. Born in Eperies, Hungary, the son of Jacob and Katje Sonnenschein Browne, he immigrated to United States in 1865, after studying at a government academy and receiving a rabbinical degree from I.H. Hirschfield at Fuenfkirchen Theological Seminary. He studied with Isaac Mayer Wise in Cincinnati in 1868–69, earned a medical degree from Cincinnati College of Physicians and Surgeons, and a law degree from the University of Wisconsin. Among colleagues he became known as “Alphabet” Browne because of the many academic letters in his signature, E.B.M. Browne, L.L.D., A.M., B.M., D.D., M.D.

Highly popular on the public lecture circuit, he served numerous congregations in the South, Midwest, and Northeast, notably Atlanta, 1871–81, where he established *The Jewish South*, the first Jewish newspaper in the South; New York, 1881–89, where he established *The Jewish Herald*; and Columbus, Georgia, 1893–1901. Often in conflict with New York’s Reform leadership, he first offended philanthropists in 1881 by identifying malpractice in the treatment of Jewish immigrants. He drew criticism for insisting on walking rather than riding with the other pallbearers in the funeral procession of President Grant because the event took place on the Jewish Sabbath, and again opposed Jewish leadership in a long struggle to win excused absences from public schools for Jewish children on the High Holidays. He was forced to leave New York after defying popular opinion to save the life of an innocent Jewish immigrant who had been railroaded to death row on a much publicized murder charge.

While basically a “reformer” who began his career as a disciple of I.M. Wise, Browne became estranged from his former mentor and veered away from the Reform Movement as the more radical changes took place. He opposed the Sunday Sabbath Movement and embraced Zionism, being appointment as a delegate to the First Zionist Congress in 1897, but was prevented by his congregation from attending it. While rabbi in Atlanta, he was appointed by Georgia Governor Alfred Colquitt to represent the state at a “World Congress of Social Science” in Stockholm but had to cancel the trip due to the illness of his wife. A staunch advocate for public education, he was the spokesman and the only Jew on a committee appointed by the Union League Club of New York to lobby Congress for a bill temporarily subsidizing schools in states unable to establish them without help, and he served as vice

president of the United States Government Educational Congress at the World's Columbian Exposition in Chicago. In the 1890s and again in 1902–03, he traveled in the Middle East on behalf of the European Jewish Archaeological Commission, under the protection of the Ottoman government.

[Janice Rothschild Blumberg (2nd ed.)]

BROWNE, LEWIS (1897–1949), U.S. Reform rabbi, author, radio commentator, and lecturer. Browne was born in London, England, and immigrated to the United States in 1912. He received his B.A. from the University of Cincinnati in 1919 and was ordained at Hebrew Union College in 1920. Browne served as a rabbi of Temple Israel in Waterbury, Connecticut (1920–23), while attending Yale University, where he earned his M.A. in 1923. In 1924, he became rabbi of the Newark, New Jersey, branch of Stephen S. Wise’s Free Synagogue in New York. When his sermon topics provoked controversy among his congregants, he left the practicing rabbinate for the world of academia. He organized, taught, and acted as president of Newark Labor College (1925), was a visiting professor at Pennsylvania State College (1926), and subsequently joined the faculty of the University of California (1932–37) and the University of Hawaii (1937).

Browne achieved a measure of celebrity extending far beyond the Jewish community as a writer, pundit, world traveler, and lecturer. In addition to being a contributor to *The Nation*, *The New Republic*, and other well-known periodicals, he became a popular author of historical and biographical works. These books include *Stranger Than Fiction: A Short History of the Jews from Earliest Times to the Present Day* (1925, 1929, 1932), *This Believing World: A Simple Account of the Great Religions of Mankind* (1926), and *Blessed Spinoza: A Biography of the Philosopher* (1932). He compiled *The Wisdom of Israel: An Anthology* (1945; reissued in 1987 as *The Wisdom of the Jewish People*) and also wrote a novel, *See What I Mean?* (1943).

Throughout his entire adult life, Browne conducted correspondence with hundreds of people, some of them quite famous, especially in the areas of literature, politics and entertainment. Letters he exchanged with such notables as George Bernard Shaw, Sir Arthur Conan Doyle, Joseph Conrad, Hubert Humphrey, Upton Sinclair, Charlie Chaplin, and many more have been preserved in a collection of his manuscripts. Browne’s papers also include notes on the lecture tour he made with Sinclair Lewis in 1941 and transcripts of his radio broadcasts.

[Bezalel Gordon (2nd ed.)]

BROWNING, CHRISTOPHER R. (1944–), U.S. historian of the Holocaust, primarily concerned with the study of its perpetrators. Long associated with Pacific Lutheran University, Browning was the Frank Porter Graham Professor of History at the University of North Carolina, Chapel Hill from 1999 replacing the distinguished scholar Gerhard Weinberg. His best-known book, *Ordinary Men: Reserve Police Battalion 101 and the Final Solution in Poland* (1992), challenges conventional notions about the men who carried out the Final Solution. Analyzing a group of middle-aged men who were members of a reserve unit of Order Police, Browning found that when given a choice the men participated willingly in the round-up and face-to-face killing of Jews. Browning contends that it was not ideology but peer pressure that swayed the ordinary Germans to commit genocide. His work received blistering criticism from Daniel Jonah Goldhagen, who worked through the same set of documents and argued that these killers were not “ordinary men but ordinary Germans who moved from eliminationist antisemitism, getting rid of the Jews, to exterminationist antisemitism with relative ease.” In intense dialogue that turned into heated debate, Browning responded in measured tones, weighing evidence, interpreting documents, avoiding personal attacks or responding to them. He maintained the same posture in a widely publicized lecture at Yad Vashem, which had sponsored his book, *The Origins of the Final Solution*, whose conclusions differed markedly from the work of the Jerusalem school.

Browning is widely regarded as the leading successor of Raul Hilberg in the United States, a man of documents and decision-making, yet he researches slave labor camps based on the oral testimony of its Jewish survivors. His publications include *The Final Solution and the German Foreign Office: A Study of Referat D III of Abteilung Deutschland, 1940–43* (1978), *Fateful Months: Essays on the Emergence of the Final Solution* (1985), *The Path to Genocide: Essays on Launching the Final Solution* (1992), *Nazi Policy, Jewish Workers, German Killers* (2000), and *Collected Memories: Holocaust History and Post-war Testimony* (2003). He wrote with Jurgen Matthaus *The Origins of the Final Solution: The Evolution of Nazi Jewish Policy, September 1939–March 1942* (2004).

Browning served as a consultant to the U.S. Holocaust Memorial Museum War Crimes Branch and the Office of Special Investigations, Justice Department, U.S. He also gave expert witness testimony in court in several cases, including David Irving vs. Penguin Books and Deborah Lipstadt in Great Britain, in which he was called upon to give evidence of the “Final Solution.” He is regarded as a moderate functionalist arguing that the rivalry within the unstable Nazi power structure provided the major driving force behind the Holocaust. After other programs of expulsion did not work, they resorted to genocide.

[Beth Cohen (2nd ed.)]

BROWNING, JOHN (1933–2003), American pianist. Born in Denver to a musical family, he made his concert debut at

the age of ten, performing a Mozart concerto. He studied in Los Angeles with Lee Pattison (a Schnabel pupil) and in New York with Rosina *Lhevinne at the Juilliard School of Music. In 1954 Browning won the Hollywood Bowl Young Artist Competition and the Steinway Centennial Award, and in 1955 the Edgar M. Leventritt Award. He made his debut with the New York Philharmonic Orchestra in 1956, and won second prize (after Vladimir *Ashkenazy) at the Queen Elizabeth International Competition in Brussels. Browning was exceptional in his interpretive skills and blessed with one of the easiest, most brilliant techniques of any pianist of his time. The range of music he played was distinguished: chamber music; the first performance of the Samuel Barber Piano Concerto in September 1962, a modern and difficult work that became his signature piece; concertos by Prokofiev and works by Debussy and Ravel as well as the standard repertory. He made many world tours, including trips to the Soviet Union, performing with leading orchestras. Awarded honorary doctorates in music, he became a professor at the Juilliard School of Music in 1986). Among his many recordings are the complete piano concertos of Prokofiev with Leinsdorf and three recital-length disks of Rachmaninoff, Liszt, and Musorgsky. His recording of the complete Barber repertoire for solo piano earned him a second Grammy Award.

[Max Loppert / Naama Ramot (2nd ed.)]

BROWNING, ROBERT (1812–1889), English poet who wrote many works of Jewish interest. Browning's appearance and associations combined to give rise to a report that he was of Jewish extraction, but this was wholly unfounded. Nevertheless, he knew Hebrew, was an assiduous student of the Old Testament (in Hebrew), had some knowledge of rabbinical literature, and always displayed strong sympathy for the Jews. During his long residence in Italy, he witnessed the degradations inflicted by the ghetto system in its last phases. The most famous of Browning's Jewish poems is "Rabbi Ben Ezra" (1864). It sets forth, in the form of a soliloquy, the optimistic philosophy of a Jewish sage, who may perhaps be identified with Abraham *Ibn Ezra. "Jochanan Hakkadosh" (1883) is apocryphal legend, Jewish in feeling as well as in title; "Ben Karshook's Wisdom" (1865) is a short, perceptive poem based on R. Eliezer's celebrated injunction that a man should "repent the day before his death" (Avot 2:15); and "Paracelsus" (1835) shows some understanding of the Kabbalah. "Holy Cross Day" (1855), another soliloquy, presents a Roman Jew of the 17th century forced to attend a conversionist sermon at Eastertide. Other poems by Browning of Jewish interest are "Saul" (1845) and "Solomon and Balkis" (1883), while Hebrew phrases or reminiscences may be found in "Doctor," "The Melon Seller," and "Two Camels." Browning showed his practical sympathy by supporting in 1881 a public protest in London against the persecution of the Jews in Russia.

[Cecil Roth]

BRUCE, LENNY (Leonard Alfred Schneider; 1926–1966), U.S. comedian. Born in Mineola, New York, Bruce moved to Hollywood after World War II, in which he served in the Navy, to take acting classes. He spent the next few years entertaining in nightclubs and soon attracted attention for his blunt attacks on sacred-cow subjects and remarks on sex and race, areas that few comics had ever ventured into. The 1950s was a significant decade for comedians and satirists like Bruce, Mike *Nichols, Elaine *May, and Mort *Sahl, all of whom were Jewish, and all of whom found an audience among sophisticated, generally college-educated people with their scathing wit and assaults on hypocrisy. It was a style that came to be known as "black humor," and Bruce was its progenitor. Bruce's humor was pointed and sharp.

"A lot of people say to me, 'Why did you kill Christ?'" Bruce said in one of his routines. "I dunno. It was one of those parties, got out of hand." Then he added, with an eye on contemporary beliefs: "We killed him because he didn't want to become a doctor, that's why we killed him."

But Bruce's acerbic rants, which included gutter language, offended a more conservative audience and he was arrested in 1961 after a performance in a San Francisco nightclub for using a vulgar word. He was later acquitted but in 1963 he was refused permission to enter Britain and his show was banned in England and in Australia. He was unable to perform some of his material because club owners feared arrest, but Bruce refused to clean up his language. "'Sex' and 'obscenity' are not synonymous," Bruce said. Nevertheless, in 1964 he was arrested and convicted of obscenity. A hundred writers and intellectuals, including Norman *Mailer, defended him as a social satirist "in the tradition of Swift, Rabelais and Twain."

Bruce also developed a serious drug habit. In 1961 he was arrested in Philadelphia for possession of narcotics; the charges were later dropped. In 1962 he was arrested again for drug possession and later became addicted to heroin. For most of the 1960s he fought charges of obscenity and drug possession and these bouts sapped his strength and forced him to stray from comedy to monologues about his legal troubles. The public became less receptive to his problems. In 1965, with the help of the writer Paul Krassner, he published his autobiography, *How to Talk Dirty and Influence People*. The book was inspired by Hugh Hefner, the publisher of *Playboy*, who published the book in serial form over two years. It found a wide audience. In 1966 Bruce was found dead in the bathroom of his home, a victim of a drug overdose. He was 40 years old.

Bruce's life inspired the 1971 Broadway play *Lenny*, largely composed of his nightclub routines, but also dealing with his failed marriage, his court cases, and his fantasies. It reproduced his mocking attacks on the Establishment, his scorn for the misuse of words, his hatred of cant and hypocrisy. In 1974 the film *Lenny* was produced by Bob Fosse, portraying Bruce as a martyr of freedom of speech. Bruce was played by Dustin Hoffman, who performed many of Bruce's most-remembered monologues from recordings and nightclub engagements, with a live audience looking on.

Because of his influence on latter-day comedians and performers, Bruce inspired a number of books and articles, including a memoir by his daughter and a song by Bob Dylan.

[Stewart Kampel (2nd ed.)]

BRUCHSAL, town in Baden, Germany. The first mention of Jews there dates from 1288. In 1337 the bishop of Speyer granted them the right of domicile for an annual payment of 700 marks. The community was annihilated during the Black Death, 1348–49. After a long interval Jews again settled in Bruchsal, but were persecuted during the Reformation. A prayer room is first mentioned in 1672. The synagogue, built in 1881, was restored in 1923. Between 1886 and 1928, 641 children were educated in the orphanage founded by J. Eschelbacher. A Jewish district school was opened in 1935–36. Violent anti-Jewish riots occurred in Bruchsal during the March Revolution of 1848. The Jewish population numbered 128 in 1814, and 752 in 1885 (6.2% of the total); it had diminished to 501 in 1933, but there were still six benevolent societies. On Nov. 11, 1938, the synagogue was burned down. By 1939 the community had declined to 166 in the wake of flight and emigration. Of those who remained 79 were deported to the Gurs concentration camp in 1940. The community no longer exists.

BRUCK, GRIGORI (Zevi Hirsch; 1869–1922), Russian Zionist. He was born in Chernigov, Ukraine, graduated in 1893 as a physician from Kiev University, and worked as a doctor in Gomel. From his youth, he was a member of the Hovevei Zion and the Zionist movement, and at the Third Zionist Congress he was elected regional representative for Belorussia. In 1901 he became government-appointed rabbi in Vitebsk. In 1905 he was elected to the first Duma on the Constitutional Dem-

ocratic (Kadet) Party ticket. When the Duma was dissolved, he was a signatory to the protest of the radical delegates (the Viborg Manifesto) and was arrested and removed from his official rabbinical post. Opposing the Helsingfors Program (1906) which required the Zionists to act as a political party in the Diaspora, he retired from the Zionist leadership. During World War I he served as a doctor in the Russian Army. At the 1917 Russian Zionist Conference in Petrograd he again opposed the participation of Zionists as a party in the Russian Revolution. In 1920 he settled in Erez Israel.

[Yehuda Slutsky]

BRUCK, LAJOS (1846–1910), Hungarian painter, specializing in Hungarian folk life. He was brother of the painter Miksa Bruck. Bruck settled in Paris in 1874. There his sentimental and idealistic style of painting was not to the French taste. Later he moved to England, where he was very popular. Among his most important paintings are *Loneliness*, *View of Budapest*, *The Quartet Rehearsal*, and *The Postmaster*. His works were widely disseminated through engravings and photographs.

BRUCK, MIKSA (1863–1920), Hungarian painter born in Budapest, brother of the painter Lajos Bruck. In 1887 he exhibited his picture *At the Races* in the Budapest Hall of Arts, but he became well known for his paintings of interiors, some of which hang in the Budapest Museum of Art. He founded and administered the Society of National Art Buyers.

BRUCKHEIMER, JERRY (1945–), U.S. movie/TV producer. The son of German Jewish immigrants, Bruckheimer grew up poor in Detroit, Michigan. After graduating with a degree in psychology from the University of Arizona, he landed a job in advertising. He went from creating commercials to producing, first as an assistant producer on a few small-budget pictures to producing such films as *American Gigolo* (1980) and *Thief* (1981) and the remake of *Cat People* (1982) (as executive producer). In 1983 Bruckheimer partnered with former publicist Don Simpson to create Simpson-Bruckheimer Productions. Together they generated a string of high-concept hits at Paramount: *Flashdance* (1983), *Beverly Hills Cop* (1984), *Top Gun* (1986), and *Beverly Hills Cop II* (1987), a streak that ended with the Tom Cruise car-racing picture *Days of Thunder* (1990). Simpson-Bruckheimer moved their operation to Disney's Hollywood Pictures in 1991, and after a shaky start with *The Ref* (1994), they found success with *Bad Boys* (1995), *Crimson Tide* (1995), and *Dangerous Minds* (1995). *The Rock* (1996) would be the last film the two produced together. One month after Bruckheimer ended the partnership, Simpson died from a drug-related heart attack. Bruckheimer continued to produce glossy high-octane thrillers and even family films with unparalleled success, including *Con Air* (1997), *Arma-*

geddon (1998), *Enemy of the State* (1998), *Coyote Ugly* (2000), *Remember the Titans* (2000), *Pearl Harbor* (2001), *Black Hawk Down* (2001), *Bad Boys II* (2003), and *Pirates of the Caribbean* (2003). Bruckheimer also is of the most successful television producers ever, producing such shows as the *C.S.I.* franchise (*C.S.I.*, *C.S.I. Miami*, *C.S.I. N.Y.*), *Cold Case*, and the reality program *The Amazing Race*.

[Adam Wills (2nd ed.)]

BRUCKMAN, HENRIETTA (1810–1888), founder of the Independent Order of True Sisters. Henrietta Bruckman and her husband Philip, a physician, immigrated to America from Bohemia in 1842, settling in New York City. The Bruckmans joined the city's immigrant German Jewish elite, supporting charitable efforts on behalf of their less well-off fellow immigrants, and participating in the community's cultural life. Shortly after his arrival, Philip, together with a group of other middle-class German immigrants, founded the Mendelssohnian Society. This *Cultus Verein* provided the impetus for the establishment of the *B'nai B'rith, a secular Jewish fraternal order, in 1843, and the basis of Temple Emanu-El, which was formed in 1845. Despite considerable interest, the B'nai B'rith refused to accept female members. Temple Emanu-El similarly rebuffed efforts to create a society for the women of the congregation. In 1846, Henrietta Bruckman, mustering support from among her friends, proposed the creation of a female counterpart to the B'nai B'rith open exclusively to women. The initiative was supported by Philip Bruckman, his business partner Dr. James Mitchel, Rabbi Dr. Leo *Merzbacher, the minister of Emanu-El, and a number of influential members of the B'nai B'rith and Temple Emanu-El. The Emanuel Lodge of the Unabhängiger Orden Treuer Schwestern (Independent Order of True Sisters) was established a few weeks later as a philanthropic and educational organization. At its first meeting, James Mitchel provided instruction in the ritual and functioning of the lodge system, and Henrietta Bruckman was installed as its first president. Thereafter the Order operated independently of the B'nai B'rith. At its founding, it was the only fraternal organization in America open exclusively to women.

[Adam Mendelsohn (2nd ed.)]

BRUCKNER, FERDINAND (pseudonym of **Theodor Tagger**; 1891–1958), German poet and playwright. Bruckner was born in Vienna, and studied music and law in Vienna and Paris. He began his literary career as a lyric poet and essayist, but soon became a playwright. In 1923 he founded and became director of the Renaissance-Theater in Berlin. After Hitler came to power, Bruckner wrote the first anti-Nazi exile-drama, a play titled *Die Rassen* (1934). This play was directed and performed in the Zürcher Schauspielhaus the same year. Bruckner emigrated to the U.S. He returned to Berlin in 1951,

where he lived until his death. Most of Bruckner's plays deal with contemporary life and politics. One of his favorite themes was the struggle between the generations, which he dealt with in *Krankheit der Jugend* (1928), *Die Verbrecher* (1929), *Die Rassen* (1934), and *Die Befreiten* (1945). Bruckner also wrote several historical dramas, including *Elisabeth von England* (1930), *Napoleon der Erste* (1937), and *Simon Bolivar* (1945). His last play was *Pyrrhus und Andromache* (1952).

[Rudolf Kayser / Noam Zadoff (2nd ed.)]

BRUDO, ABRAHAM BEN ELIJAH (known also as **Abraham Chelebi**; 1625?–1717), Turkish rabbi and preacher. Born in Constantinople, he was appointed rabbi there at an early age. When the Shabbatean movement began to spread, he became one of its adherents. In 1666 he was a signatory to a letter of the rabbis of Constantinople and Smyrna supporting Shabbetai Zevi's messianic claims. However, a year later they sent another letter now expressing opposition, but apparently some time later the spark of Shabbateanism was rekindled in him. In 1688 or somewhat later, he served as rabbi and preacher in Adrianople, afterward returning to Constantinople. Following the war between Venice and Turkey (1685–87), in which the Venetians conquered the Peloponnese (Morea), he traveled to raise ransom money for the Jews who had fallen captive. In 1694 he was in Leghorn and from there proceeded to other Italian cities. In 1695 he was in Amsterdam, Germany, and Austria, and in 1696, again in Venice. After this journey he settled in Jerusalem, where he spent his remaining years as chief rabbi. Among his disciples were many Ashkenazim, including Nethanel *Weil. In 1697 Abraham published *Birkat Avraham*, a book of sermons on Genesis, in the introduction to which he mentions a book he wrote on the Bible. A few of his numerous responsa were published in works of his contemporaries.

[Abraham David]

BRUDO, MANUEL (c. 1500–c. 1585), Marrano physician and author. His father, Dionysius Rodrigues (d. 1541), was at first physician to the Royal Court in Portugal and later practiced medicine in London and Ferrara. Like his father, Manuel also practiced medicine for some time in London and later in Italy. His study on diets (*De Ratione Victus, Venice, 1544, 1559*) includes much curious information on the living conditions of the Marranos who escaped to England. He finally settled in Turkey (probably in Constantinople) and openly returned to Judaism. Here he entered the employment of the sultan for

whom he composed a work, translated into Turkish under the title, *Asā-i Pirān* ("The Walking Stick of the Old"), on the maladies of old age and their cure. There is some doubt as to his authorship of the book *Tāamei ha-Mitzvot* mentioned by *Ibn Verga in his *Shevet Yehudah* (par. 64) which dealt with the reasons of the sacrifices. Brudo's arguments against Christianity are mentioned admiringly by Abraham ha-Levi ibn Migash in his *Kevod Elohim* (Constantinople, 1585, 127b).

[Cecil Roth]

BRUELL, family of Jewish scholars. The first member of the family was Jacob *Bruell, talmudic scholar. NEHEMIAH (Nahum; 1843–1891) was the son of Jacob. After rabbinical ordination, he continued his studies in Vienna at Jellinek's *bet ha-midrash* under I.H. Weiss and M. Friedmann and at the university. He became associated with the Reform movement, and after serving as rabbi in Bisenz (Moravia), he succeeded A. *Geiger in 1870 as rabbi of the Reform synagogue in Frankfurt where he took an extreme standpoint regarding religious matters. Here he found a doughty opponent in S.R. Hirsch. After his failure in the struggle with Orthodoxy, and as a result of heavy personal attacks against him, Bruell eventually left the rabbinate and devoted himself to scholarship. He founded and edited the *Jahrbuecher fuer juedische Geschichte und Literatur* (ten volumes, 1874–90) contributing most of the articles himself. His plan for publishing the *Central-Anzeiger fuer juedische Literatur* as a continuation of *Steinschneider's *Hebraeische Bibliographie*, was cut short after the appearance of the first volume (1891) by his death.

Bruell's monographs in Hebrew and German covered nearly the entire field of Jewish studies, including Bible and Apocrypha, *halakhah* and *aggadah*, talmudic and rabbinic literature, Jewish history, medieval Hebrew, *piyyut* and poetry, and Hebrew grammar and linguistics. His best studies (mostly published in the *Jahrbuch*, as well as in other periodicals and jubilee volumes) include monographs on the literary development of the Babylonian Talmud (in which the contribution of the *savoraim* is well described), the origins and composition of *Avot*, the character of the *Tosefta*, the *Sifrei Zuta*, foreign words in the Talmud and Midrash, the tractates on mourning, the apocryphal addition to Daniel, and the Jewish (including Yiddish) medieval folk-legends. He had prepared a new edition of Zunz's *Gottesdienstliche Vortraege* (1892), in which his notes were included. Collections of Bruell's sermons and speeches were published in 1869, 1878, 1891, and 1895. Bruell was an astute and profound scholar, whose works on the tannaitic literature and the Babylonian Talmud were an important contribution to research in these fields.

ADOLF (Elhanan; 1846–1908) was another son of Jacob Bruell. Bruell studied at the universities of Vienna, Prague, and Breslau, and at the Breslau Jewish Theological Seminary.

From 1871 to 1903 he taught at the Philanthropin Jewish High School in Frankfurt. His special field of study was the Samaritan translation of the Pentateuch. Among his published works are *Fremdsprachliche Redensarten... in den Talmuden und Midraschim* (1869), *Trachten der Judenim nachbiblischen Alterthum* (1873), *Kritische Studien ueber Samaritanische Manuscript-Fragmente* (1875), *Zur Geschichte und Literatur der Samaritaner* (1876), and *Beitraege zur Kenntniss der juedisch-deutschen Literatur* (1877). Bruell also edited articles in the *Populaerwissenschaftliche Monatsblaetter zur Belehrung ueber das Judentum fuer Gebildete aller Konfessionen* (1881–1908), to which he contributed numerous articles. He wrote a biography of David Einhorn and was a contributor to the *Jewish Encyclopedia*.

BRUELL, IGNAZ (1846–1907), Austrian pianist and composer. Born in Prossnitz, Moravia, he was taken to Vienna at the age of three, showed early talent, and became famous as a concert pianist. He toured Europe and gave twenty concerts in London in 1878. As a composer he had most success with "Das Goldene Kreuz" (1875, libretto by S.H. *Mosenthal). Also popular was "Der Husar" (1898). He composed ten operas, two piano concertos, and a body of chamber music. Bruell was a close friend of Brahms and, being a remarkable sight reader, often tried out new works with the composer in four-hand arrangements. He also gave the first public performance of some of them.

[Dora Leah Sowden]

BRUELL, JACOB (1812–1889), talmudic scholar. Born in Neu-Raussnitz, Moravia, he was ordained by his father-in-law Nehemiah *Trebitch. From 1843 until his death, he served as rabbi in *Kojetin. Among his disciples were his sons Adolf and Nehemiah *Bruell, and David *Kaufmann, all of whom became renowned Jewish scholars. Bruell developed his own distinctive, scientific, critical approach. His first scholarly work was an annotated and revised edition of Zevi Hirsch *Chajes' *Iggeret Bikkoret* on the Targums and Midrashim (1853). His own "addition, corrections, and criticism," were named *Misgeret*. The influence of Zunz's *Gottesdienstliche Vortraege* is noticeable in Bruell's critical notes. His *Doresh le-Ziyyun* ("Interpreter of Signs," Ger. *Die Mnemotechnik des Talmuds*, 1864) deals with the mnemotechnical signs in the Babylonian Talmud. Bruell's largest and most important work is his *Mevo ha-Mishnah* ("Introduction to the Mishnah," 2 vols., 1876–85). The first volume deals with the biographies and methods of sages from the time of Ezra to the end of the mishnaic period, and the second, with the method used by Judah ha-Nasi in the arrangement and editing of the Mishnah. Bruell's last work was *Ben Zekunim* (studies in talmudic literature, 1889). He also

contributed extensively to the periodicals *Ben Chananja* (ed. by L. Loew) and *Beit Talmud* (ed. by I.H. Weiss).

BRUGGEN, CARRY VAN (1881–1932), Dutch novelist and philosophical writer. Born in Smilde as Carolina Lea de Haan, she was the sister of Jacob Israel de *Haan. Her first husband was the non-Jewish writer Kees van Bruggen, her second the art historian A. Pit. Carry van Bruggen, who worked for a while as a schoolteacher, published her first novel, *De Verlatene* (“The Forsaken Woman”), in 1910. This was pitilessly self-analytical and autobiographical, as were *Heleen* (1913), *Het Huisje aan de Sloot* (“The House on the Canal,” 1921), and her last novel, *Eva* (1927). Carry van Bruggen displayed an ambivalent, at times antagonistic attitude to Jewish tradition and nationalism, although she described the joys and sorrows of the religious family in which she grew up with great affection. The tragedy of believing Jews whose children become estranged from tradition is a constant theme in her work. She was an original thinker, with a profound knowledge of the history of philosophy. Her main work, *Prometheus* (1919), is an attempt to follow a freethinker in his struggle with the powers of darkness, and it had a significant influence on leading Dutch writers. She analyzed modern superstition in *Hedendaagsch Fetischisme* (“Fetishism in our Time,” 1925). Her novels further include *Het Joodje* (“The Little Jew,” 1914), *Een Indisch Huwelijk* (“An Indian Marriage,” 1921), and *Vier Jaargetijden* (“Four Seasons,” 1924). She also published some minor novels under the pen name Justine Abbing. Carry van Bruggen spent the last years of her life in a mental hospital.

BRUNA, ISRAEL BEN HAYYIM (c. 1400–1480), German rabbi and communal leader. He studied under David of Schweidnitz, and later Jacob Weil, Israel Isserlein, and Zalman Cohen of Nuremberg. His first rabbinical post was in Bruenn, his native city. When R. Goddel of Orenburg arrived there sometime later, and began to exercise rabbinical functions, Bruna lodged a complaint before Isserlein who advised him to resign himself to Goddel’s presence. By 1446 he was in Regensburg, where he opened a yeshivah and served as rabbi to his followers, thereby arousing the hostility of a well-known local rabbi, Anshel Segal, who also headed a yeshivah. Despite the decisions of Jacob Weil and Israel Isserlein (Isserlein, *pesak* 128), upholding Bruna’s right to work and teach in Regensburg, his rival’s supporters made him endure great indignity, which ceased only with R. Anshel’s death, at which time Bruna became the acknowledged leader of the community and *av bet-*

din. After the death of Weil and Isserlein, he was recognized as the halakhic authority of Germany, and his opinion in communal and rabbinical matters was widely sought. In 1456 Bruna was imprisoned for 13 days, apparently to spur the collection of a “coronation tax” imposed on the Jews of his city by the emperor Frederick III. In 1474 he was imprisoned again, this time the victim of a blood libel; an apostate, Hans Vayol, accused him of buying a Christian youth and killing him to make use of his blood. The Church demanded his death, but the community secured the intervention of Frederick III and Ladislav II, king of Bohemia, which led to Vayol’s confession and subsequent execution. Bruna was freed only after formally renouncing all claim to compensation for the injustice done to him. His son was *dayyan* in Prague. Bruna’s responsa, which provide valuable information on the German Jewish scene of his time, were collected and published posthumously (*Salonika*, 1788) with many printing errors, again in 1860, with even more errors, and a third edition was published in 1960.

[Isaac Ze’ev Kahane]

BRUNER, JEROME SEYMOUR (1915–), U.S. psychologist. Bruner was born in New York City and educated at Duke University (A.B., 1939) and Harvard, (M.A. 1939; Ph.D., 1941); he served in the U.S. Army during World War II as an intelligence officer, studying public opinion and propaganda. He joined the faculty at Harvard in 1945 and remained there through 1972; with George Miller, he founded Harvard’s Center for Cognitive Studies in 1960 and was its director from 1961 to 1972. That year he became Watts Professor of Psychology at Wolfson College, Oxford. In 1980 he returned briefly to Harvard and in 1981–88 was George H. Mead University Professor at the New School in New York. From 1991 he was research professor of psychology and adjunct professor of law at New York University. Among other organizations, Bruner was a fellow of the American Academy of Arts and Sciences, the American Association for the Advancement of Science, and the National Academy of Education. He was a member of the executive committee of the International Union of Scientific Psychology and was president of the American Psychological Association in 1964–65.

Bruner’s work focused on the study of perception and cognition and their implications for education. He is considered to be a seminal thinker in these areas and a founder of modern cognitive psychology – the study of how people think. His work of the late 1940s and 1950s, drawing on contemporary developments in linguistic philosophy and anthropology, is credited with turning American psychology (and educational theory) away from the sort of physiologically based behaviorism associated with B.F. Skinner and toward

a more flexible understanding of the (culturally conditioned) psychological process of discerning the logic of a given problem (“to perceive is to categorize”). In 1959 Bruner chaired a curriculum reform group sponsored by the National Academy of Sciences (a response to the national anxiety induced by the Soviet success in 1957 in launching Sputnik), and his summary report, *The Process of Education*, became a classic (and a bestseller in 1960). Its conclusions (“Any subject can be taught effectively in some intellectually honest form to any child ... providing attention is paid to the psychological development of the child”), recommending that children be taught in such a way that they develop a grasp of the logic of the material being taught, rather than being made to remember contextless facts, became highly influential among educators in the 1960s and 1970s.

In later years Bruner concerned himself with the function of narrative, or “storytelling,” as a way of mediating or creating a context for information, and in the creation of a culturally characteristic “folk psychology.” He collaborated with law professor Anthony Amsterdam in examining the role of narrative and rhetoric in the shaping of legal cases.

Bruner was a prolific and influential author. Among his more important books are *A Study of Thinking* (1956), *The Process of Education* (1960), *On Knowing: Essays for the Left Hand* (1962), *Man: A Course of Study* (1965, a proposed school social studies curriculum), *Toward a Theory of Instruction* (1966), *Processes of Cognitive Growth* (1968), *Beyond the Information Given: Studies in the Psychology of Knowing* (1973, edited by Jeremy M. Anglin), *In Search of Mind: Essays in Autobiography* (1983), *Actual Minds, Possible Worlds* (1986), *Acts of Meaning* (1990), *The Culture of Education* (1996), *Minding the Law: How Courts Rely on Storytelling, and How Their Stories Change the Way We Understand Law and Ourselves* (2000, with Anthony Amsterdam), *Making Stories: Law, Literature, Life* (2002).

°**BRUNETTI, ANGELO** (known as “**Ciceruacchio**”; 1800–1849), leader of liberal reform in Rome. Without formal education, Brunetti exerted great influence over the populace. On July 8, 1847, he achieved a reconciliation between the Jews of Rome and the inhabitants of the Regola quarter, near the ghetto, who had always been anti-Jewish. Eight days later, thousands of citizens streamed into the ghetto and publicly fraternized with the Jews. On April 17, 1848, hearing that Pope Pius IX had ordered the abolition of the ghetto, he rallied help to demolish the walls, while the Jews, unaware of his action, were celebrating Passover. He was executed by the Austrians in Northern Italy after the collapse of the Roman Republic in 1849.

[Umberto (Moses David) Cassuto]

°**BRUNNER, ALOIS** (1912–), Nazi deportation expert. Bruner was born in Rohrbrunn, Austria. “He was an extremely unscrupulous individual, one of the best tools of *Eichmann. He never had an opinion of his own, and as Eichmann himself described him, he was ‘one of my best men.’” Adolf Eichmann’s reliance on Alois Brunner confirms this Nuremberg testimony of Dieter Wisliceny, Brunner’s coworker in the ss program to deport Europe’s Jews to Poland.

Adolf Eichmann turned over the Central Office of Jewish Emigration in Vienna to Brunner, who organized the first European experiments in deportation of the Jews as early as October 1939. As director of the Central Office in 1941 and 1942, Brunner co-opted Jewish leadership by threats and promises; after decimating the Austrian Jewish community, he was promoted to ss Hauptsturmfuehrer in 1942. In the fall of 1942 Brunner applied the methods he had used in Vienna in Berlin. Then, in February 1943 Eichmann posted Brunner to command technical aspects of deportation in Salonika, Greece, the center of Sephardi Judaism in Europe. There Brunner perfected his methods of pressure and deception, destroying in six weeks a community that had flourished for five centuries. He also presided over the deportation of Jews from Bulgarian-occupied Thrace and Macedonia.

In order to accelerate the deportation program in France, Eichmann sent Brunner to France’s main transit camp, Drancy, where he was commandant from June 1943 to August 1944. Brunner radically altered Drancy, and with it the condition of the Jews in France: he denied French officials access to the camp, provisioned it with funds taken from Jews, deceived and tortured the inmates, and deported even those with *de facto* exemptions – Jews from neutral or friendly states, welfare workers, orphans, and French-Jewish nationals. When Germany occupied the Italian zone of southern France in September 1943, Brunner took charge of one of the most brutal roundups in Western Europe, sending off transports even as the Germans retreated from France. He then took up his last post, commandant of Camp Sered, the deportation center of Slovakia.

In Slovakia, from September 1944 to April 1945, Brunner dismantled the Jewish community, and punished both Jews and Nazis who had negotiated to ransom Jewish lives. In 1945, as Russian troops approached, Brunner disappeared. According to his own account, Brunner was arrested by Czechs, Americans, and British, but released under a false name. He obtained false papers and left Europe in 1954 for Egypt and then Damascus, Syria, where he lived under the name Georg Fischer. Brunner claimed to have planned to bomb a World Jewish Congress meeting in Vienna, with Syrian help, and also to abduct Eichmann from Israel. Warrants for his arrest are on the books in Germany and Austria; France sentenced him to death *in absentia*; West Germany requested his extradition in 1984, but the Syrian government refused to respond.

Brunner deported at least 129,000 people to ghettos and death camps in Poland – 47,000 from Vienna, 44,000 from Salonika, 24,000 from France, and 14,000 from Slovakia.

[Mary Lowenthal Felsteiner]

BRUNNER, ARNOLD (1857–1925), U.S. architect. Brunner was born in New York and graduated from the Massachusetts Institute of Technology. Most of his buildings were of a public character and included bridges, hospitals, university buildings, and synagogues as well as the Lewisohn Stadium for the College of the City of New York, which is used as an open-air concert hall. Brunner was a pioneer of civic planning and did valuable work in this field in Baltimore, Rochester, Albany, and Denver. Of his synagogues, Beth El (1891) and Shaaray Tefila (1894) in New York, and Mishkan Israel (1897) in New Haven, were designed in a Romanesque style with Islamic and Byzantine elements. This concept of synagogues had originated in Germany and spread to America through the German Jewish congregations. Brunner's later synagogues were built exclusively in a classical style. This change was due, he maintained, to the investigation of ancient synagogues in Galilee, built in a Greco-Roman tradition. An example of this style was the new place of worship Shearith Israel (1897) built for the Sephardi community of New York. He also employed this classical style for the small Henry S. Frank Memorial Synagogue (1901) on the grounds of the Jewish Hospital in Philadelphia. In this case the design was inspired by *Kefar Baram, a second-century synagogue in Galilee.

BIBLIOGRAPHY: R. Wischnitzer, *Synagogue Architecture in the U.S.* (1955), 49–60; Roth, Art, 739–40.

BRUNNER, CONSTANTIN (pen name of **Leopold Wertheimer**; 1862–1937), German philosopher. He lived in Potsdam until 1933, and immigrated to Holland when the Nazis came to power. He constructed his own philosophical system. He followed Plato, and to an even greater extent, Spinoza. His major work is *Die Lehre von den Geistigen und vom Volk* (1908).

Central to Brunner's theory is the characterization of three different aspects of contemplation (including emotion and will): (1) Practical reason, which every human possesses and which serves one's normal needs. (2) The spiritual faculty, which rises above the relative truth residing in experience and in science, and strives toward a perception of the one eternal and absolute essence. This spiritual faculty finds expression in the artist's inspiration, in the endeavor to penetrate the mysteries of the universe as part of the pursuit of the absolute, and in philosophy as the knowledge of the eternal. Very few are endowed with this faculty. (3) "Superstition" – pseudo-contemplation, which is the mode of contemplation of most ordinary men. Unfounded belief is a distortion of the spiritual faculty. While practical reason recognizes that the "relative" is only "relative," superstition elevates what is relative to the status of the absolute. As part of his theory of society and the

state, Brunner argued for total assimilation of the Jews and staunchly opposed Zionism. Among his admirers were Gustav *Landauer and Walter *Rathenau. In 1924 the Constantin Brunner Society was founded in Berlin. An International Constantin Brunner Institute exists in The Hague. Brunner's other works include *Der Judenhass und die Juden* (1918); *Materialismus und Idealismus* (1928); *Von den Pflichten der Juden und von den Pflichten des Staates* (1930); and *Derentlarvte Mensch* (1951).

[Otto Immanuel Spear]

BRUNNER, SEBASTIAN (1814–1893), Viennese Catholic priest and antisemitic journalist and writer. Ordained in 1838, Brunner was employed in *Metternich's police bureau from 1843 to 1848. He subsequently founded the conservative daily *Wiener katholische Kirchenzeitung* which he edited until 1860. In its pages Brunner claimed, among other allegations, that the Old Testament spirit was vindictive and that Jewish influence endangered Christian morals. In 1860 the Jewish communal leader Ignaz *Kuranda forced Brunner to sue him for libel, claiming that Brunner had merely resurrected the old charges made by Johan Andreas *Eisenmenger and Johannes *Pfefferkorn, and that he was motivated by business interest. Kuranda was acquitted. The proceedings aroused great interest among Eastern European Jewry and were published in Hebrew by David Gordon (*Millhemet ha-Ḥoshekh ve-ha-Or*, 1861).

BRUNSCHVICG, LEON (1869–1944), French philosopher. In 1909 he was appointed professor of philosophy at the Sorbonne, and in 1920 a member of the Académie des Sciences Morales. Brunschvicg, who was a spokesman of the idealistic school of thought in France, published many books, best known of which are *La modalité du jugement* (1897); *Introduction à la vie de l'esprit* (1900); the valuable historical work *Les étapes de la philosophie mathématique* (1912); another historical work *Le progrès de la conscience dans la philosophie occidentale* (1927); *La Raison et la Religion* (1939); *Spinoza et ses contemporains* (1923); and *Descartes et Pascal, lecteurs de Montaigne* (1944). Brunschvicg published the standard edition of Pascal's writings (1897–1904) and for many years he was also editor of the *Revue de métaphysique et de morale*. In 1945 a memorial collection of essays was published by this journal.

Brunschvicg advocated an idealism of consciousness and did not admit any existence outside the realm of consciousness. The irrational, which consciousness confronts and which appears to consciousness to exist independently, is nothing but the limits of consciousness itself, confronted by consciousness with astonishment and pain. As the spirit develops, the limits of consciousness expand – but only in consciousness itself are both truth and existence present together. God is but the “word” – the force which sets consciousness in motion and gives life to it. The development of consciousness in Brunschvicg’s conception is very close to Hegel’s “spirit of the absolute,” though contrary to Hegel, it does not follow an inevitable course; rather it splits into various directions, which are sometimes determined by chance, as an expression of absolute freedom. What Brunschvicg thus attempted was the integration of Hegel’s view with Bergson’s. Brunschvicg’s doctrine is an immanent, monistic philosophy, sometimes reminiscent of Spinoza’s. He believed that with the development of consciousness and the elevation of man to higher stages, humanity would reach a “third covenant,” which would be able to replace the “second covenant” (“the New Testament”). Brunschvicg saw 20th-century religion as at a crossroad. Religion’s past weighs down on it and may smother it. According to him, only a brave decision between its past and future can save it. Religion’s past is the religion of personification, which enslaved itself to the selfish aspirations and hopes of man, whereas the future of religion is the pure religion which would free itself from anthropomorphism – a religion of the heart, a pure spiritual religion, a philosophical religion. At a meeting of the French Philosophical Society on March 24, 1928, Blondel, Gilson, and Le Roy debated with Brunschvicg and defended traditional religion. Brunschvicg defended himself against the accusation of atheism. The protocol of this convention was published in Brunschvicg’s book *De la vraie et de la fausse conversion, suivi de la querelle de l’athéisme* (1951). His *Ecrits philosophiques*, edited by A.R. Weill-Brunschvicg and C. Lehec, were published in two volumes (1951–54).

[Pepita Haezrahi]

BRUNSCHVIG, GEORGES (1908–1973), Swiss lawyer and communal leader. Brunschvicg was born in Berne, where he studied law; during his military service, he was an artillery captain and also served as a judge. Brunschvicg was one of the lawyers at the trial held in Berne in the 1930s at which the *Protocols of the Learned *Elders of Zion* were declared a forgery. Together with another of the lawyers, Emil Raas, he published *Vernichtung einer Faelschung* (1938), dealing with the history of the *Protocols* and giving an account of the trial. He distinguished himself in two sensational espionage trials: one in 1958 at which he served as counsel for Max Ulrich who was accused of handing over State secrets to French Intelligence; the

other in June 1963, when he defended an Israeli agent named Ben-Gal, and an Austrian scientist, Otto Joklik, who had been charged with threatening German scientists who purchased radioactive materials for Egypt to use against Israel. Brunschvicg was prominent in Jewish affairs from his early years. From 1940 to 1948 he served as the youngest president of the Berne community, and in 1946 was appointed president of the Swiss Federation of Jewish Communities, retaining the position until his death. In this capacity his advice was often sought by Swiss authorities on matters affecting the Jewish community. In 1962 he became the first president of the Le-Ma’an Yerushalayim Society in Zurich, and offered his services to Israel to exploit any possibility of a neutral Switzerland intervening in the Arab-Israeli conflict.

ADD. BIBLIOGRAPHY: J. Picard, *Die Schweiz und die Juden 1933–1945* (1994), v. Index.

BRUNSCHVIG, ROBERT (1901–1990), French Orientalist. Brunschvicg, who was born in Bordeaux, began his teaching career at Tunis University. In 1932 he became professor of Muslim civilization at Algiers and in 1945 was appointed professor of Arabic language and literature at Bordeaux. Ten years later he went to Paris, where he became director of the Institute of Islamic Studies at the Sorbonne and editor of the journal *Studia Islamica*.

Brunschvicg wrote many authoritative works on *Islam and Islamic culture, including a monumental political, literary, social, and religious history of the Hafside Kingdom, *La Berbérie orientale sous les Hafrides, des origines à la fin du xv^e siècle* (2 vols, 1940–47). This contains an impressive study of the Jews of Algeria and Tunisia, based on the responsa of North African rabbis. There is also some important historical information about Jews in his *Deux récits de voyage inédits en Afrique du Nord au xv^e siècle* (1936).

Always an active Zionist, Brunschvicg worked tirelessly on behalf of the persecuted Jews of Algeria during the Vichy regime of World War II. In 1940, when they lost their education rights, he organized primary and secondary schooling for them throughout the country. He was on the executive of the Committee for Study, Aid, and Assistance which saved the lives of many Jews, and in 1942–43 was president of the Committee of Social Studies which played a political role in the face of Algerian antisemitism.

[David Corcos]

BRUNSWICK (Ger. **Braunschweig**), city and former duchy in Germany. Jews were living in the duchy at the beginning of the 12th century, and in 1137 the emperor gave jurisdiction over them to the duke. The only specific information concerning the Jews living in the duchy before the *Black Death relates to Blankenburg (1223) and Helmstedt (1247), apart from the capital city where a community was established at the end of the 13th century. Both the dukes and the municipality gave the

Jews protection and levied taxes. Their economic conditions and legal status were favorable, and Jews from other places in northern Germany moved there. At the beginning of the 14th century the Jews in the capital lived in a street near the market and ducal castle. By the middle of the century they numbered approximately 150. Over half were massacred during the Black Death (1348–49). In 1364 jurisdiction over the Jews passed entirely to the municipality. Jews from Goslar were permitted to settle in Brunswick in 1417. The Jews in the city of Brunswick were accused of desecrating the *Host in 1510, and 16 were expelled. Anti-Jewish riots occurred in 1543, provoked by the polemical writings of Martin Luther, and in 1571 the Jews were expelled from the duchy. The emperor procured their return seven years later, but the decree of expulsion was renewed in 1590. This time the imperial representations were of no avail and the Jews were compelled to leave.

Several Jews were permitted to settle in the duchy at the beginning of the 17th century. Duke Charles William Ferdinand (1780–1806), whom Israel *Jacobson served as *Court Jew, corresponded with Moses *Mendelssohn on philosophical and religious subjects; he invited Mendelssohn for a visit and encouraged him to write his *Morgenstunden*. In 1805 the duke abrogated the *Leibzoll* (“body tax”) hitherto levied on Jews. The school Jacobson founded in Seesen in 1801, the first to educate children in the spirit of *Haskalah, was opened under ducal patronage. A second “progressive” school, the Samson school, was opened in *Wolfenbuettel in 1807; I.M. *Jost and Leopold *Zunz were among its pupils. Between 1807 and 1813 Brunswick formed part of the Napoleonic kingdom of Westphalia, and the Jews were granted civic equality. After the downfall of Napoleon in 1814, when the kingdom was abolished, the Jews were again disqualified from holding public office and deprived of the franchise. They acquired the franchise and elective rights in 1832. The “Jewish oath” was abolished in 1845. In 1848 mixed marriages were legalized and Jews were allowed to acquire real property. The civil service remained closed to Jews until 1919. A synagogue was built in the city of Brunswick about 1780 and another in 1784. The Brunswick community adopted *Reform Judaism at the beginning of the 19th century. The rabbi of Brunswick, Levi *Herzfeld (1842–84), convened the first *synod of German rabbis there in 1844. The community in Brunswick numbered 378 in 1812, 258 in 1852 (0.3% of the total), and 1,750 in 1928. However, by 1933 the number had decreased to 980, since the city had become a stronghold of Nazism. On *Kristallnacht* (Nov. 9–10, 1938), with 620 Jews remaining in the city after further flight and emigration, the synagogue was burned down and Jewish stores were demolished. Another 200 managed to flee up to 1941. The rest were deported to the east in 14 transports up to the end of the war; in all, 377 local Jews perished in the Holocaust. A concentration camp was established in Brunswick; there were a number of Jews in it at the end of World War II. There were 43 Jews living in the city of Brunswick in 1967.

BRUNSWIG, ALFRED (1877–1927), German philosopher of the school of Theodor Lipps, later influenced by *Husserl. He was born at Plan, taught at Munich (1911–16) and then became professor of philosophy at Muenster. He tried to synthesize psychology and pure logic, and to analyze phenomena to bring together philosophy and experimental research. He was an advocate of critical realism as well as an interpreter of Kant and German idealism. His main works were *Die Frage nach dem Grunde des sittlichen Sollens* (1907), *Das Vergleichen und die Relationserkenntnis* (1910), *Das Grundproblem Kants...* (1914) as well as works on Hegel (1922) and Leibniz (1925).

[Richard H. Popkin]

BRUSSELS, capital of *Belgium. A Jewish community existed in Brussels by the mid-13th century. Its cultural standard is attested to by the fine illuminated Pentateuch completed there by the scribe Isaac for Ḥayyim, son of the martyr Ḥayyim, in 1310. The Jews of Brussels were massacred during the *Black Death (1348–49). A few subsequently resettled, but a further massacre followed an accusation of desecrating the Host (May 1370), and the Jews were officially excluded from Brussels until the end of Spanish rule in Belgium. The memory of the reputed sacrilege was preserved, as the wafers became an object of worship, still commemorated on the third Sunday of July. The episode is depicted in the stained-glass windows of the St. Gudule Cathedral of Brussels. Marranos, however, found their way to Brussels from time to time, such as the Mendes family in the 16th century. In the 17th century several Marranos, including Daniel Levi (Miguel) de *Barrios, served in the Spanish army in Brussels. Some of them later settled in Amsterdam where they openly professed Judaism.

After the Treaty of Utrecht in 1713, Belgium came under Austrian rule and Jews began to settle in Brussels. Decrees of expulsion were issued in 1716 and in 1756, but were averted by gifts to the crown. In 1757 the community of Brussels consisted of 21 men, 19 women, and 26 children, many of whom had moved there from Holland. In 1783 Philip Nathan, who received the right of citizenship of Brussels, asked the authorities to assign a site for a new Jewish cemetery. With the annexation of Belgium in 1794 by France, Jews were able to settle freely in Brussels. At the beginning of the 18th century, the Brussels community recognized the authority of the rabbinate of Metz. The Napoleonic edict of March 17, 1808, included Brussels in the *Consistory of Crefeld. When Belgium was united with Holland, Brussels became the head of the 14th religious district of Holland. Belgium became independent in 1830 and the constitution of 1831 accorded religious freedom. Brussels became

the center of the Belgian consistories, and Eliakim *Carmoly (1802–1875) was appointed chief rabbi of Belgium in 1832. The community, originally made up primarily of Jews from Holland and Germany, increased through immigration from Poland and Russia and, after 1933, again from Germany. Before World War II, the Brussels community totaled some 30,000, although it remained second in size to Antwerp.

[Kenneth R. Scholberg]

Holocaust Period

The Nazis occupied Belgium in May 1940. A committee of the Association de Juifs en Belgique (AJB) was created in Brussels. All Jews were subjected to direction from this organization under the pretext of providing social relief for their brethren. The local Jews were sent to the labor camp of Mechlin (Malines) and from there they were sent to the extermination camps in the east.

For details see *Belgium: Holocaust Period.

Contemporary Period

From 1945 until approximately 1950, the Jewish population of Brussels was as large as it had been before World War II (about 27,000), owing to the temporary sojourn of thousands of refugees from Eastern and Central Europe there. After that period, however, immigration to Belgium decreased and an important wave of emigration began to the U.S.A., Canada, Australia, and Israel. The total population was not known precisely, but certain statistical data, such as the average family size (which is 2.6 persons), indicated that it did not substantially exceed 18,000. The age distribution, owing to a low birthrate and an increasing trend of assimilation, points to the fact that the population had become stationary and was on the road to natural diminution. The community's reconstruction after World War II was severely hampered by Belgium's economic instability and the process of rehabilitating war victims. Furthermore, as the majority of Jews were foreigners, it was difficult for them to obtain work permits. In 1946 a monthly average of 4,500 persons required relief or some form of aid from Jewish agencies, while only a few hundred were still in need in 1970. Priority was given to the creation of general institutions for social assistance and public services, such as L'Aide aux Israélites Victimes de la Guerre (now the Service Social Juif), L'Heureux Séjour, an old-age home, and the Caisse de Prêt de Crédit, to cope with the needs of the postwar Jewish community. The important contributions of the *American Jewish Joint Distribution Committee and the *Conference on Jewish Material Claims against Germany to the institutions largely supported by them for 20 years eventually tapered off. A central fund-raising agency, La Centrale d'Oeuvres Sociales Juives, unifying 15 institutions, was created in 1952.

In 1970 Brussels had two primary Jewish day schools run on different ideological bases: one religious-traditionalist, l'École Israélite, and the other, Ganenou, more specifically Zionist-oriented. The Athénée Maimonide high school was run by the same board as the École Israélite. These three schools were recognized and subsidized by the state. Participa-

tion in a Jewish curriculum was also been expanded through other endeavors, such as the creation of Sunday schools, a school of Yiddish language and literature, and a number of Hebrew classes. Three ideologically different communal centers also provided educational and leisure activities. Apart from its four legally recognized religious communities (three Ashkenazi and one Sephardi), Brussels had several groups that organized their own religious services. In 1966 Belgian Jews and American Jews residing in Belgium created L'Union Israélite Libérale de Belgique, which had a Progressive ideology. The Centre National des Hautes Études Juives, created by the Free University of Brussels and subsidized by the state, promotes research and studies on contemporary Jewry and played an active role in the cultural renewal of the community.

The community grew slightly in the ensuing decades and reached a population of around 15,000 in 2002, representing about half the Jewish population of Belgium (with the other half in *Antwerp). In addition to maintaining its three Jewish schools, the community saw to the religious instruction of those in public schools in voluntary classes taught by Consistoire-appointed rabbis, with around 60% of Jewish public school children in attendance. The community had over a dozen synagogues and a yeshivah operated in the borough of Forest, where Orthodox Jews were concentrated. A Jewish Studies Institute operated within the framework of the Brussels Free University. The Jewish Secular Community Center (Centre Communautaire Laïc Juifs) offered lectures, seminars, and Hebrew and Yiddish classes.

BRUSILOVSKY, YEVGENI GRIGORYEVICH (1905–1981), Soviet composer. Born in Rostov-on-Don, he revealed his musical talent during performances while on military service. He studied in Moscow and then moved to Leningrad, where he played the piano in cinemas. From 1926 he studied composition at the conservatory with M.O. Steinberg. His first two symphonies, performed in 1931 and 1932, won instant acclaim. In 1933 he settled in Kazakhstan and began collecting Kazakh folk music as a member of the local Music Research Institute. Brusilovsky's first opera, *Kyz-Zhibek* (1934), initiated the development of a Kazakh national opera; it was followed by *Zhalbyr* (1935), *Zolotoye zerno* (1940), *Dudaray* (1953), and other operas and ballets. He was artistic director of the Kazakh Music Theater (1934–38), and taught at the Alma-Ata conservatory. In 1970 he settled in Moscow. Brusilovsky composed nine operas, three ballets, nine symphonies, instrumental concertos, cantatas, and other works. He was awarded the Badge of Honor (1936), the title People's Artist of the Kazakh S.S.R.

(1936), the Order of the Red Banner of Labor (1945, 1956), and the State Prize of the U.S.S.R., the Order of Lenin (1959), and the State Prize of the Kazakh S.S.R. (1967).

[Michael Goldstein / Marina Rizarev (2nd ed.)]

BRUSTEIN, ROBERT SANFORD (1927–), U.S. drama critic, playwright. Born in New York City, Brustein was educated at Amherst College, Yale, and Columbia. He wrote for the weekly magazine *The New Republic* and other periodicals, putting forward his belief in the need for a theater that expressed social concerns and political realities. In 1965 he was given an opportunity to test his theories when he was appointed dean of the Yale School of Drama. At Yale he sought to develop a professional repertory theater in which students could learn and work with established actors, playwrights, directors, and stage designers. To that end, he founded the Yale Repertory Theater. His unconventional ideas and imaginative productions led to vigorous controversy. He elaborated his theories in *The Theater of Revolt; An Approach to the Modern Drama* (1964). In 1978 the Yale Drama School decided not to renew his contract.

After leaving Yale, Brustein moved to Harvard, where he founded the American Repertory Theater. Brustein served for 36 years as director of the Loeb Drama Center, which is the headquarters of the American Repertory Theater. He was professor of English at Harvard and served as drama critic for *The New Republic* from 1959. He wrote eleven adaptations for the American Repertory Theater, such as *Shlemiel the First*, *The Wild Duck*, *The Master Builder*, *Three Farces and a Funeral*, and *Enrico IV*, and authored 13 books on theater and society. His plays include *Demons*, *Nobody Dies on Friday*, *Poker Face*, *Chekhov on Ice*, and *Divestiture*.

Brustein received the George Polk Award in journalism; the Elliot Norton Award for professional excellence in Boston theater; the New England Theater Conference's 1985 Annual Award "for outstanding creative achievement in the American theater"; the 1995 American Academy of Arts and Letters Award for Distinguished Service to the Arts; the Pirandello medal; and a medal from the Egyptian government for his contribution to world theater. His *Six Characters in Search of an Author* won the Boston Theater Award for Best Production of 1996. Brustein is a member of the American Academy of Arts and Letters and the American Academy of Arts and Sciences.

Books by Brustein include *Seasons of Discontent: Dramatic Opinions, 1959–1965* (1967); *The Third Theater* (1969); *Revolution as Theater: Notes on the New Radical Style* (1971); *The Culture Watch: Essays on Theater and Society, 1969–1974* (1975); *Critical Moments: Reflection on Theater & Society, 1973–1979* (1980); *Making Scenes: A Personal History of the Turbulent Years at Yale, 1966–1979* (1981); *Who Needs Theater? Dramatic Opinions* (1987); *Reimagining American The-*

ater (1991); *Dumbocracy in America: Studies in the Theater of Guilt, 1987–1994* (1994); *Cultural Calisthenics: Writings on Race, Politics, and Theater* (1998); and *The Siege of the Arts: Collected Writings 1994–2001* (2001).

[Raphael Rothstein / Ruth Beloff (2nd ed.)]

BRUTZKUS, BORIS DOV (1874–1938), Russian agrarian economist and communal leader. Boris Brutzkus, a brother of Julius *Brutzkus, was born in Palanga, Lithuania. He studied agriculture in Poland and in 1898 became head of the agriculture department of the *Jewish Colonization Association (ICA) in Russia. The following year he took part in the association's investigation of Jewish farming in Poland, Lithuania, Belorussia, and the Ukraine. In 1907 he resigned from ICA because he disagreed with its philanthropic approach and became a lecturer at the Agricultural Institute in St. Petersburg, where he remained for some 15 years. At the same time he worked for the Russian-Jewish organization *ORT, and came to play an important role in its activities both in Russia and in Germany.

Brutzkus was a leading figure, together with Simon *Dubnow, in the Jewish People's Party (*Folkspartei*), but nevertheless showed considerable interest in settlement in Erez Israel. In 1922 he left the U.S.S.R. and settled in Berlin, where until 1932 he served as professor at the Russian Scientific Institute. During these years he was active in *YIVO and, together with Jacob *Lestschinsky and Jacob Segall, edited the *Bleter far Yidische Demografye, Statistik un Ekonomik* (1923–25). When Hitler came to power Brutzkus moved to Paris and from there to Erez Israel. He settled in Jerusalem in 1936 and became professor of agrarian economy at the Hebrew University.

His principal books were *Professionalny sostav yevreyskogo naseleniya v Rosii* ("Jewish Population in Russia by Professions," 1908); *Yevreyskiye zemledelcheskiye poseleniya Yekaterinoslavskoy gubernii* ("Jewish Agricultural Settlements in Ekaterinoslav," 1913); *Agrarny vopros i agrarnaya politika* ("Agricultural Question and Agrarian Politics," 1922); *Sotsialisticheskoye khozyaystvo* ("Socialist Economy," 1923); *Agrarentwicklung und Agrarrevolution in Russland* (1925); *Di Yidische Landvirtschaft in Mizrekh-Eyrope* (1926); *Die Lehren des Marxismus im Lichte der Russischen Revolution* (1928); *Der Fuenfjahrplan und seine Erfuellung* (1932); *Economic Planning in Soviet Russia* (1935, a translation and abridgment of the two foregoing works); *URSS, terrain d'expériences économiques* (1937); and *Kalkalah Hkhal't* ("Agrarian Economics," 1942), which contains a selected list of his works.

[Joachim O. Ronall]

His son DAVID ANATOL BRUTZKUS (1910–) was an Israeli architect. He was born in St. Petersburg and went to Erez Israel in 1935. His public buildings stress their individual function and the character of the site. Brutzkus was also active in town planning. He collaborated with H. *Rau on the first town planning project for Jerusalem after the War of Independen-

dence, and after the Six-Day War worked with A. *Sharon on a plan for the Old City and surroundings.

BIBLIOGRAPHY: Ginzburg, in: *Zukunft* (Feb., 1939), 99–100; B. Dinur, *Benei Dori* (1963), 80–85; I. Gruenbaum, *Penei ha-Dor*, 1 (1957), 326–8.

BRUTZKUS, JULIUS (1870–1951), communal worker, brother of Boris *Brutzkus. He was born in Palanga, Lithuania, and studied medicine at the University of Moscow during the 1880s. Brutzkus was a member of the Benei Zion (see *Hibbat Zion) group and worked for an improvement in the conditions of the Jews who had been expelled from Moscow in 1891. He settled in St. Petersburg where he participated in the activities of the “Society for the Propagation of Culture Among Russian Jews” and became a member of the editorial board of the Russian-Jewish monthly **Voskhod*. He also took a part in the activities of the ICA (*Jewish Colonization Association) among the Jews of Russia. In 1902 he resigned from *Voskhod* because of its anti-Zionist attitude. In 1905 he became a member of the editorial boards of the Zionist periodicals *Yevreyskayazhizn* (“Jewish Life”) and the reestablished **Razsvet* (“Dawn”). During the revolution of 1905 he played a role in the Committee for the Protection of Emancipation of Russian Jews. In 1909 he was elected to the enlarged Zionist organization executive and to the council of the *Jewish Colonial Trust. Brutzkus favored “practical work” in Palestine. In 1917 he was elected to the all-Russian Constituent Assembly as the representative of the “Jewish List” of the Minsk district. In 1921 Brutzkus became the minister for Jewish affairs in the Lithuanian government. In 1922 he was elected to the Lithuanian parliament. After the restriction of Jewish autonomy in Lithuania, he settled in Berlin where he worked with *YIVO, became a vice president of *OSE, and was one of the founders of the Zionist Revisionist Party. When the Nazis rose to power in Germany, he immigrated to France. Arrested by the Vichy government, he succeeded in escaping and immigrating to America, and finally to Palestine. As a historian, Brutzkus’ activity was principally concerned with the history of the Jews in Russia and Lithuania and the Khazars. His works were published in Russian, Yiddish, and German. His writings include *Ukazatel o russkoy literatury o yevreyakh* (“Bibliographical Guide to Russian Literature on the Jews”) in collaboration with L. Bramson (1892); “Documents and Records on the History of the Jews in Russia” (Rus., 1899–1900); *K istorii yevreyev v Kurlyandiyi* (“History of the Jews in Courland”; in *Voskhod*, 1895); “History of the Mountain Jews of Caucasus” (in YIVO, 1938); and *Pismo khazarskogo yevreya ot X veka* (“Letter from a Khazar Jew of the Tenth Century”; in a special pamphlet in Russian, 1924, and in English, 1935).

[Abba Ahimeir]

BRYANSK, Oriol district, Russia. Jews lived in the town in the 15th century but were expelled. Bryansk was outside the *Pale of Settlement, and the community established there in the second half of the 19th century was made up of Jews who

were permitted to live outside the Pale (discharged soldiers, registered merchants of the guilds, etc.). In 1896 they were authorized to maintain a synagogue and by 1897 the Jewish residents numbered 1,321. Pogroms occurred in Bryansk in October 1905. After the 1917 Revolution, the Jewish population increased, numbering 2,500 in 1926 (9.1% of the total) and 5,102 in 1939 (total population 87,490). The Germans occupied the city on October 6, 1941. The Jews who had not managed to escape were murdered in August 1942. After the war 7,500 bodies of Jews and gypsies were found in 14 graves. In 1970 it was estimated that between 4,000 and 6,000 Jews lived in the town. They had one synagogue but no rabbi. According to the 2002 Russian census the Jewish population of the entire Bryansk district, of which the city of Bryanski was the capital, was 2,344.

[Yehuda Slutsky]

BRYER, MONTE (1912–), South African architect. Born in Bloemfontein, he practiced in Johannesburg. His work as an architect was marked by boldness of conception and a flair for experimentation. His outstanding achievement was in 1963, when he headed a team that produced the winning design in an international competition for the new civic center of Johannesburg. Also typical of his technique was a design for a metal industries center, in which he exploited to the full the use of structural steelwork instead of reinforced concrete and of light metals instead of heavy conventional materials. Bryer’s other works included the Jewish communal center and synagogue in Bloemfontein. He was president of the Institute of South African Architects (1961–62), and a joint president of the Royal Institute of British Architects, representing the South African Institute on that organization.

[Louis Hotz]

BRYKS, RACHMIL (1912–1974), Yiddish poet and novelist. Bryks was born in Skarzysko, a Polish townlet in the district of Kielce which he commemorated in his *Di Vos Zeinen Nisht Geblibn* (“Those Who Didn’t Survive,” 1972).

Bryks began his literary career in Lodz in 1937 with a poem in the local Yiddish literary journal *Inzl* (Island) and then with a volume of lyrics entitled *Yung-Grin-Mai* (“Young Green May,” 1939). Three months after its publication, however, Lodz was occupied by the Germans, and Bryks experienced the horrors of its ghetto until 1944. In that year, after reading his long poem *Geto Fabrik 76* (“Ghetto Factory 76”) before a ghetto audience, he was deported to Auschwitz, but was saved when the camp was liberated in 1945. (The manuscript of the poem was later discovered in the ruins of the Lodz ghetto and published in 1967, with an English translation, and as a cantata, with music by William Gunther.) After recuperating in Sweden, Bryks settled in New York in 1949.

All Bryks’ subsequent works are based on his ghetto experiences. The first, *Oif Kiddush Ha-Shem* (“For the Sanctifica-

tion of God's Name," 1952; Heb. 1970) deals with the degradation of man by his fellow men, and also the ability to surmount all pressures and to sanctify the name of God in the hour of death. His grotesque *A Katz in Geto* ("A Cat in the Ghetto," 1959) met with considerable success. It was translated into English in 1954 with a foreword by Eleanor Roosevelt, into Hebrew in 1966, and was filmed in 1970.

His *Der Kaiser in Geto* ("The King in the Ghetto," 1961) and its sequel *Di Papierne Kroyn* ("The Paper Crown," 1969) center on Chaim Mordechai *Rumkowski, the head of the Lodz Judenrat. The compassionate novelist portrayed Rumkowski at the summit of his power, sending tens of thousands of Jews to their death, and then, crushed by the weight of conscience, adding his own name to the list of deportees.

His last completed novel *Antloifers* ("Escapees"), portions of which appeared in 1974, deals with the plight of Jews from the outbreak of the war until the sealing of the Lodz Ghetto; it is largely autobiographical.

BIBLIOGRAPHY: S. Liptzin, *History of Yiddish Literature* (1972), 435–6.

[Sol Liptzin]

BRZECHWA, JAN (**Jan Wiktor Leśman**; 1900–1966), Polish poet. A lawyer by profession, Brzechwa wrote satirical works and poems for children and adults in the style of the folk song or fairy tale. His works include *Oblicza zmyślone* (1926), *Talizmany* (1929), and *Wiersze wybrane* (1955), collected verse, and *Poszła w las nauka* (1956), a fairy tale.

BRZEG (Ger. **Brieg**), town in Opole province, southwest Poland (until 1945 in Germany). Jews living in Brieg are mentioned in the 14th century. In 1358 certain Jews loaned sums of money to noblemen and the duke of Brieg, Ludwig I, who granted the Jews freedom of movement in the duchy in that year. An outbreak of anti-Jewish violence occurred in 1362. In 1423 Ludwig II granted the Jews rights of residence on payment of an annual tax of 20 gulden, but they were expelled from the duchies of Brieg and Liegnitz in 1453 as a result of the inflammatory preachings of the Franciscan John *Capistrano. Among the few Jewish residents in the 16th century was the ducal physician, Abraham. In 1660 a community was again formed. There were five Jewish families in Brieg in 1741. A cemetery was opened in 1798, and a synagogue was built in 1799. A rabbi was first appointed in 1816. For many years the popular German yearbooks *Jahrbuch des Nuetzlichen und Unterhaltenden* (from 1841) and *Deutscher Volkskalender und Jahrbuch* (from 1851) were published in Brieg by K. Klein and H. Liebermann, both Jews. The Jewish population numbered 156 in 1785; 376 in 1843; 282 in 1913; 255 in 1933; and 123 in 1939. In the **Kristallnacht* pogroms of 1938 the interior of the synagogue was completely demolished and the Torah scrolls publicly burned; numerous shops were ransacked. Deportations to the east commenced in March 1942. The community was not reestablished after World War II.

BRZESC KUJAWSKI (Rus. **Brest Kuyavsk**; Yid. **Brisk de Koyavi**), town in Warsaw district. A Jewish community is mentioned in 1538; the Jews then owned 15 houses there. On April 15, 1656, 100 Jewish families were massacred by Polish soldiers in Brzesc Kujawski after they refused to be baptized. The Jews again suffered in the mid-17th century during the Swedish invasion. Between 1822 and 1862 Jewish residence was restricted to certain parts of the town. The Jewish population numbered 164 in 1765; 678 in 1897; 794 in 1921 (out of a total of 3,813); and 633 in 1939. In the independent Polish Republic (1918–39) the Zionists and the Bund were active. The Jews earned their livelihoods in trade and crafts.

[Shlomo Netzer (2nd ed.)]

Holocaust Period

Under the Nazi occupation Brzesc Kujawski belonged to the Warthegau. At the outbreak of World War II about 630 Jews were living there. A *Judenrat was created, but no ghetto set up. Jews underwent physical suffering, were plundered of all their property, were compelled to perform humiliating work, and endured acts of religious persecution, e.g., the burning of the synagogue. During January–September 1941, able-bodied men and women were deported to slave labor camps in the Posen region. Most of the remaining 400 Jews were then removed to *Lodz ghetto and the rest were sent to the death camp at *Chelmno.

BRZEZINY (Yid. **Brezin**), town 2 mi. (3 km.) E. of Lodz in central Poland. Jews are mentioned there in 1564. In 1656, 40 Jewish families were massacred in Brzeziny by Polish soldiers (Czarnecki units). At the beginning of the 20th century, Brzeziny became a big Jewish garment-manufacturing center, exporting to Russia and the Far East. In the early 1920s the economic situation deteriorated when the town was cut off from its Russian markets. Most of the Jewish tailors were unemployed and left the town. In the interwar period the Zionist organizations were very active, taking part in the elections to Parliament, to Zionist Congresses, and the community and local councils. In 1930s there was a sharp rise in antisemitic incidents.

The Jewish population numbered 243 in 1765, 3,917 in 1897 (over half of the total population), 8,214 in 1912, and 4,980 in 1925.

[Sara Neshamith / Shlomo Netzer (2nd ed.)]

Holocaust Period

In 1939 there was still a Jewish majority in Brzeziny – 6,850 out of a total population of 13,000. During the Nazi occupation Jewish property was confiscated and pillaged; people in the streets or in their homes were kidnapped for forced labor; and community leaders and members of the liberal professions were deported to unknown destinations. In February 1940, a ghetto was established and included over 6,000 inhabitants. In 1942 (Purim?) there was a public execution of ten Jews. The final liquidation of the ghetto took place on May 19–20, 1942. Elderly Jews were sent to *Chelmno extermination camps and others to *Lodz ghetto.

BUBER, MARTIN (1878–1965), philosopher and theologian, Zionist thinker and leader. Born in Vienna, Buber as a child lived in Lemberg with his grandfather Solomon *Buber, the noted Midrash scholar. From 1896 he studied at the universities of Vienna, Leipzig, and Zurich, and finally at the University of Berlin, where he was a pupil of the philosophers Wilhelm Dilthey and Georg Simmel. Having joined the Zionist movement in 1898, he was a delegate to the Third Zionist Congress in 1899 where he spoke on behalf of the Propaganda Committee. In this speech, which bore the influence of modern Hebrew and Yiddish writers, notably of Aḥad Ha-Am, Buber emphasized the importance of education as opposed to a program of propaganda. In 1901 he was appointed editor of the central weekly organ of the Zionist movement, *Die Welt*, in which he emphasized the need for a new Jewish cultural creativity. This emphasis on cultural rather than political activity led, at the Fifth Zionist Congress in 1901, to the formation of the Zionist *Democratic Fraction which stood in opposition to Herzl. Buber, a member of this faction, resigned before the Congress as editor of *Die Welt*. Together with his friends, he founded the *Juedischer Verlag in Berlin, which went on to publish (in German) books of literary quality. At the age of 26 Buber took up the study of Ḥasidism. At first his interest was essentially aesthetic. After attempting to translate the tales of Rabbi *Naḥman of Bratslav into German, he decided to retell them in German in the form of a free adaptation. Thus originated *Die Geschichten des Rabbi Nachman* (1906; *The Tales of Rabbi Nachman*, 1956) and *Die Legende des Baalschem* (1908; *The Legend of the Baal-Shem*, 1955). Later Buber's interest turned from the aesthetic aspect of Ḥasidism to its content. Deeply stirred by the religious message of Ḥasidism, he considered it his duty to convey that message to the world. Among the books he later wrote on Ḥasidism are *Gog u-Magog* (1941, in *Davar*; translated into English under

the title *For the Sake of Heaven*, 1945), *Or ha-Ganuz* (1943), and *Pardes ha-Ḥasidut* (1945; translated into English in two volumes *Hasidism and Modern Man*, 1958, and *The Origin and Meaning of Hasidism*, 1960).

In 1909 Buber resumed an active role in public affairs. He delivered three addresses to the Prague student organization, *Bar Kochba, in 1909, 1910, and 1911 (*At the Turning, Three Addresses on Judaism*, 1952; see also Bergman, in *Ha-Shilo'ah*, 26 (1912), 549–56), which had a great influence on Jewish youth in Central Europe, and also marked a turning point in Buber's own intellectual activity. With the outbreak of World War I Buber founded in Berlin the Jewish National Committee which worked throughout the war on behalf of the Jews in Eastern European countries under German occupation, and on behalf of the *yishuv* in Palestine. In 1916 he founded the monthly *Der Jude*, which for eight years was the most important organ of the Jewish renaissance movement in Central Europe. In the spring of 1920, at the convention of *Ha-Po'el ha-Za'ir-Ṭe'irei Ziyyon in Prague, Buber defined his Zionist socialist position and his adherence to utopian socialism in an address which reflected his affinity to Aharon David *Gordon and Gustav *Landauer. He was opposed to the current concept of socialism which looked upon the state, and not upon a reaffirmation of life and of the relationship between man and man, as the means of realizing the socialist society. Buber envisaged the creation of *Gemeinschaften* in Palestine, communities in which people would live together in direct personal relationship. During the years following World War I Buber became the spokesman for what he called “Hebrew Humanism,” according to which Zionism, described as the “holy way,” a notion explained in *Der heilige Weg* (1919), was different from other nationalistic movements. Buber also emphasized that Zionism should address itself also to the needs of the Arabs and in a proposal to the Zionist Congress of 1921 stated that “... the Jewish people proclaims its desire to live in peace and brotherhood with the Arab people and to develop the common homeland into a republic in which both peoples will have the possibility of free development.” In 1923 Buber published his *Ich und Du* (*I and Thou*, 1937) which contains the basic formulation of his philosophy of dialogue. In 1925 the first volumes of the German translation of the Bible appeared as the combined effort of Buber and Franz *Rosenzweig. In *Die Schrift und ihre Verdeutschung* (1936) the translators set forth the guiding principles of their translation: today's reader of the Bible has ceased to be a listener; but the Bible does not seek to be read, but to be listened to, as if its voice were being spoken today. The Bible has been divested of its direct impact. In the choice of words, in sentence-structure, and in rhythm, Buber and Rosenzweig attempted to preserve the original character of the Hebrew Bible. After Rosenzweig's death in 1929 Buber continued the work of translation alone and completed it in 1961.

In 1925 Buber began to lecture on Jewish religion and ethics at the University of Frankfurt, and in 1930 he was appointed professor of religion there, a position he retained until

1933, when with the rise of the Nazis to power he was forced to leave the university. In 1932 Buber published his *Koenigtum Gottes*, which was to be the first volume of a series dealing with the origins of the messianic belief in Judaism. This work was never completed. The third German edition (1956) was translated into English (*Kingship of God*, 1967). In 1933 Buber was appointed director of the newly created Central Office for Jewish Adult Education (Mittelstelle fuer juedische Erwachsenenbildung) established to take charge of the education of Jews after they were prohibited from attending German educational institutions. In the same year he was invited to head the Juedisches Lehrhaus in Frankfurt. During the beginning of the Nazi period Buber traveled throughout Germany lecturing, teaching, and encouraging his fellow Jews, and thus organized something of a spiritual resistance. In 1935 he was forbidden to speak at Jewish gatherings. He was then invited to speak at Quaker meetings until the Gestapo prohibited his appearing there as well.

In 1938 Buber settled in Palestine and was appointed professor of social philosophy at the Hebrew University, where he taught until his retirement in 1951. In 1942 his first book written in Hebrew, *Torat ha-Nevi'im* (*The Prophetic Faith*, 1949) was published. This book, a history of biblical faith, is based on the supposition that the mutuality of the covenant between God and Israel testifies that the existence of the Divine Will is as real as the existence of Israel. Another book born out of Buber's efforts to penetrate the essential meaning of the Bible is his *Moses* (1946). Buber in his later years remained very active in public affairs and in Jewish cultural endeavors. He was one of the leaders of Ihud, formerly *Berit Shalom, which advocated the establishment of a joint Arab-Israel state. Even after the outbreak of the Arab-Israel war, Buber called for a harnessing of nationalistic impulses and a solution based on compromise. Recognizing the importance of the cultural assimilation of immigrants to Israel, especially those from the Islamic countries, Buber was one of the founders of the College for Adult Education Teachers (Beit Ha-Midrash Le-Morei Am) established to train teachers from among the new immigrants themselves. Buber was the first president of the Israel Academy of Sciences and Humanities (1960–62), one of the founders of Mosad Bialik, and active in many other cultural institutions. In the years following World War II Buber lectured extensively outside Israel, visiting the United States in 1952, and again in 1957–58, and became known throughout the world as one of the spiritual leaders of his generation, making a deep impact on Christian as well as Jewish thinkers.

[Samuel Hugo Bergman]

Buber made a substantial contribution to the ethical thought and the religious consciousness of the 20th century. In his Hebrew humanism, he considered Judaism principally as a pioneering way of life in ethical openness. Philosophically he influenced many thinkers, including Gabriel Marcel, Theodor Steinbuechel, Ernst Michel, Paul Tillich, Wilhelm Michel, Walther Nigg, J.H. Oldham, M. Chaning-Pearce, John Baillie,

H.H. Farmer, Reinhold Niebuhr, Sir Herbert Read, Karl Heim, Friedrich Gogarten, Eberhard Grisebach, Karl Barth, Friedrich-Wilhelm Marquardt and Emmanuel Levinas.

Philosophy

Buber refused to be called a philosopher because he thought that philosophical language did not adequately render the idea of dialogical life. He wanted to conduct a conversation. He tended to disqualify systematic thinking as belonging the I-it domain, which he, in almost Manichaean fashion, separated from the I-you (I-Thou in Smith's translation) sphere. He only used the philosophical discourse because he had no alternative. The book "What is Man," first published in Hebrew in 1943, contains his philosophical anthropology: it discusses the self-understanding of man from Aristotle to Max Scheler, and defines human being as dialogical. However Buber's philosophical masterpiece is the small book, *Ich und Du*, "I and you." (The German "Du," which has widely been translated in archaic English as "Thou," is used in German for an immediate and intimate relationship, e.g., within the family or with children, and is also how God is addressed in prayer, in contrast with the formal form "Sie.")

The first outline of "I and you" goes back to May 1916. The book received its final form in the spring of 1922. The two English translations are of Ronald Gregor Smith (first edition 1937) and of Walter Kaufmann (1971).

"I and you" develops the idea that the I exists in-relation rather than as a separated Cartesian thinking entity. In a non-fragmentary attitude to what surrounds it, the I is I-you. It becomes I-it in a partial approach. In I-it there is a dichotomy between subject and object: things, persons, and ideas are situated in time and space. Causality reigns in the I-it realm. In the authentic relationship there is presence, mutuality, and directness.

The I as the related I welcomes without interpreting, and is distinguished from the dominating, controlling, and mastering I. The other is to be approached not first of all by knowledge but in answerability as the one to whom one owes response from the whole and united I. Response leads to responsibility. Buber uses the term *Umkehr*, turning, to describe the return to the center of the self by the recognition of "you." The I is called to answer a you and to turn back to perfect relation. The I (*Ich*) by turning to a you (*Du*) becomes I-you.

The two types of relationship, I-you and I-it, are mutually exclusive. When I experiences, utilizes, thinks, or imagines the other, the relation is characterized as I-it. When I relates with his whole being, in immediacy, the relation is characterized as I-you. There is a connection between I-it and I-you, since everything in the world can become you, but it necessarily also becomes an it, because one can not always live on the intense plane of I-you. The link and tension between the two ways of relating and Buber's own hesitations in this respect gave way to different interpretations in secondary literature (see Theunissen and Bloch). In Buber's perspective,

I—it is to be overcome. Man stands for a choice: either to address the world as “you” or to treat it as an object. The world of relation arises in three spheres: in our life with nature, with man, and with spiritual beings (*geistige Wesenheiten*). Relation (*Beziehung*), as the I that recognizes a you, leads to encounter (*Begegnung*) as the peak of relation. Encounter is the graceful moment of reciprocal openness of the I and you. Buber’s I–you is not the result of a mere idealistic attitude: the relating I is part of an event that occurs between (*zwischen*) I and you. Encounter cannot be sought out. There is a task, man has to initiate it, but the grace of a real encounter can never be acquired in activism.

The relation between the I and the eternal You is explicitly discussed in the third part of “I and you.” In every you, one addresses the eternal You. One can only address God as You. He cannot be made object of speculation. Buber made one significant change in a subsequent edition of his “I and you.” He found the biblical backing for his eternal You in the divine words in the episode of the burning bush, which he translated (with Rosenzweig) as “I am there such as I am there” (Ex. 3:14; the translation of Exodus was published in 1926; cf. Rashi’s commentary on the verse). Buber now wrote: “The word of revelation is, *I am there such as I am there (Ich bin da als der ich da bin)*” and expressed thereby that revelation is divine Presence, the everlasting voice that sounds, nothing more.

Various thinkers influenced Buber’s thinking in “I and you,” especially Franz Rosenzweig. Buber felt that his dialogical thoughts were close to those expressed in Rosenzweig’s *Star of Redemption*, which he read as early as December 1921. The two friends had many parallel thoughts. But there were also disagreements. In the essay “Atheistische Theologie” (1914), Rosenzweig had attacked Buber’s early thought as excessively immanent. He further criticized “I and you” for not appreciating the I–it and focusing too exclusively on the I–you, as if God did not create the world of objects. He also thought Buber ignored the we-it relation. Rosenzweig finally disagreed with Buber’s rejection of positive, institutional religion in favor of informal and personal religiosity, which he regarded as the real kernel of all religions.

According to Buber’s own testimony, it is fruitful to compare his “I and you” with Ferdinand Ebner’s “*Das Wort und die geistigen Realitaeten*” (Innsbruck, 1921; “The World and the Spiritual Realities”) and with the work of the Protestant theologians Karl Heim, Friedrich Gogarten, and Emil Brunner. Buber knew Ebner’s work, parts of which were first published in the periodical *Der Brenner* in 1920. Ebner formulated the dialogical principle of the I in relation with the divine You, who remains a-cosmic and exists only in the second person. Buber also speaks of God in the second person: God had always to be addressed in the second person and could not to be spoken of in the third person, which would degrade Him to an object and displace Him in the it-world. Like Ebner, Buber did not lend importance to religious forms. There are also divergences between the two thinkers: Ebner denied the world, Buber highlighted the relation between people.

Rivka Horwitz analyzed the inception and development of Buber’s “I and you” in his lectures “*Religion als Gegenwart*” (“Religion as Presence”) which he delivered in Rosenzweig’s Freies Juedisches Lehrhaus and contain the themes that later appeared in “I and you.” (*Buber’s Way to I and Thou*, 1988).

Thinking about God

Buber thought that God is spoken to, not spoken about. His is a living God, to be met in dialogue, not a philosophical God. One has to get rid of the concept of God, in order to meet Him through the inter-subjective encounter. His living presence comes through the presence of a “you.” In his essay “The Question to the Single One” (“Die Frage an den Einzelnen,” 1936), Buber attacked Søren Kierkegaard’s notion of the “single one,” and contrasted this notion with that of the “person,” who lives in the presence of others and, consequently, in the presence of the eternal You. There is no contact with the eternal You, except through relations with finite beings. God does not help or intervene: He is linked to the inter-human relation. By saying “you,” one catches a glimpse of God.

After the Holocaust, Buber had to cope with the idea of God and the problem of evil. In his *Eclipse of God* (1952), he maintained that God’s face has been temporarily obscured by the deeds of humans. Emil Fackenheim has maintained that Buber did not cope with the Holocaust in his thinking. Others, including David Forman-Barzilai, have shown that this reading of Buber is incorrect. Buber’s God is not magical: human beings are responsible for His absence.

For Buber, revelation is an ongoing event. The content of revelation, however, remains undefined. Revelation is the meeting of the divine and the human, not a divine content poured into an empty human vessel.

Whereas Ebner, under the influence of the Gospel of John and of Kierkegaard, developed a Gnostic view of God, Buber gradually internalized Rosenzweig’s criticism and came to accept God as Creator of the world. His attack on Kierkegaard, who fully neglected the Creator and the inter-human relation to You, should be seen in this perspective, and gradually Buber put aside the Gnostic tendencies that are palpable in his early writings.

Religion

Buber opposed religion as a domain apart. He developed a ḥasidic way of thinking in which the entire life should be hal- lowed. In contrast to Ḥasidism in its historic appearance, however, Buber opposed religious observance. He advocated religiousness as the recognition of divine Presence in daily life. He had a negative attitude towards religions which were an “exile.” Consequently, he had an aversion to any kind of mission.

Buber is critical of institutions, especially political and religious ones. His is a religiousness that combined humanism with a way of life inspired by the Bible and Ḥasidism. Ritual in this perspective is problematic and precludes the immediacy of God’s presence. Buber felt that institutionalization of relations depersonalizes and that authentic life lies outside institutionalized religion. His emphasis was on religiosity, which

is spontaneous, informal, and personal, rather than on positive religion, which he regarded as institutionalized, formal, and historical.

Buber inherited the term “religiosity” from his teacher Georg Simmel. He defined it as the attitude that needs not to be expressed in observances, prescriptions, or dogmas, which reduce it to a conditional universe. This explains why he wrote extensively on Ḥasidism without committing himself to the ḥasidic way of life, based on Halakhah and ritual observance. He was linked to the tradition, but felt himself free of its shackles. He laid bare the deeper layers of the Jewish tradition without considering the different commandments and ritual prescriptions as divinely promulgated. Religiosity brings no security, but is rather the difficult demand to become an answerable being.

Buber appreciated the plurality of religions. He was one of the three editors of *Die Kreatur*, an inter-religious journal, the other two editors being the Catholic Joseph Wittig and the Protestant Viktor von Weiszaecker.

In *Two Types of Faith* (1950) he distinguishes between the Greek word for faith, *pistis*, and the Hebrew one, *emunah*. *Emunah* is trust, belief “in” God, *pistis* is belief “that” God exists. Community creates *emunah*, *pistis* causes community. The first type of faith is that of a community that lives in *teshuvah*, in return to real life. The second is that of an individual who comes to faith through a mental act, *metanoia*. In his description of both types of faith that are different and related, Buber is influenced by Rosenzweig’s theory in the third part of the *Star of Redemption*. *Pistis* is typical of Christianity, which is mainly a community of converted individuals, whereas *emunah* as characteristic of Judaism, which is a community of covenant into which one is born. Despite their fundamental differences, Buber sees the possibility of a true relationship between Christians and Jews.

He held original Christianity in high esteem. The teaching of Jesus is authentically Jewish. Jesus is his Jewish “big brother.” Nevertheless, with time, Buber became more and more critical of Christianity. He came to associate Christianity with a Gnostic dichotomy of matter and spirit and with a faith that lacks demands and realization. He severely criticized Kierkegaard’s position and his “suspension of the ethical.”

Judaism

True religiosity for Buber is anti-magical and anti-Gnostic. Magic and Gnosis threaten true religiosity, i.e., true meeting: in magic, one manipulates the higher reality in a childish way and in gnosis, there is mastery through secret knowledge. Buber’s Judaism is a believing humanism, a humanism which cannot exist without faith, and vice versa. The real *humanum* is the capacity of meeting other existing beings. Against Kierkegaard, who recognizes only the meeting between humans and God, and against Ludwig Feuerbach, who excludes any transcendent element from the inter-subjective relation, he sees the I–you relation as a relationship with God *and* humans.

The Jewish people have the vocation of realizing unity. Buber was convinced that no other community had entered with such fervor into the experience of the dialogical situation as had the Jews. His position on the Jewish law (*halakhah*) is a much discussed topic in the secondary literature. In Buber’s eyes, Judaism comes before the Law. The Law is addressed to the soul, which cannot be understood outside of this Law. But the soul is not the Law. For Buber, the soul of Judaism is pre-Sinaitic. He disliked halakhic Judaism, afraid as he was of objectivization and neutral codification. His attitude is not Lawless, yet he regarded all ritual as potentially magic.

In Buber’s eyes, symmetrical communication is the only authentic relation. Strategic rationality would belong to the domain of I–it. Buber made strategic rationality responsible for the evil in the world. He emphasized that this functional rationality in the economic, political, or scientific sphere is not enough. He separated the relating I–you from the controlling, knowing and comparing I–it. Yet, one may ask if institutions do not reduce man’s problematic natural state. Buber could have placed more emphasis on the conjunction of I–you and I–it. Nonetheless, by his prophetic criticism of the institutions of Israel, by his stressing the prophet rather than the priest, he wanted to bring a healthy correction of structures that tend to eternalize themselves at the expense of dialogical, living reality.

Buber called for a renewed, dialogic lifestyle of which Jews are destined to be pioneers. His Judaism was far from pious or dogmatic, and he approached it in terms of engagement with the world at large.

Mysticism and Dialogue

Buber was attracted to mysticism. The subject of his doctoral thesis (Vienna, 1904) was: “The History of the Problem of Individuation: Nicolas of Cusa and Jacob Boehme.” In 1909 he published his *Ekstatische Konfessionen* on ecstatic mystics, mostly Christians, but also Jewish, Sufi, Chinese, and Hindu mystics. Later, he moderated his initial enthusiasm and became a religious existential thinker for whom the realization of a true community was imperative. In “I and you” he rejects mystical union with God: I and You remain distinct and the one cannot be absorbed by the other. Paul Mendes-Flohr described Buber’s transition from his earlier asocial interest in mysticism to dialogue, and illuminated the shift of the axis of Buber’s thinking from pathos to ethos. Whereas Buber in his mystical enthusiasm initially overlooked the moral dimension, his later philosophy of dialogue required alertness to the interpersonal and to the moral dimension of reality.

Buber wanted a true community such as he found in Ḥasidism, and it is not surprising that he became famous for his retelling of ḥasidic tales. Real life for him is meeting in which the I transcends itself. In the words of Daniel, it is “realization” (not “orientation”), or in the words of *I and you*: it is I–you, not I–it.

Zionism

Buber advocated dialogue with the Palestinian Arabs. Very

early, he distanced himself from Theodor *Herzl's *Realpolitik*, which was first criticized by *Ahad Ha-Am and later by *Weizmann, *Feiwel, and Buber himself. The renewal of the Jewish spirit would depend upon coexistence with the Palestinian Arabs. Buber took part in the group *Ihud* (Unity) that strived for cooperation between Jews and Arabs and for a bi-national state. This group, to which belonged Judah Magnes, Henrietta Szold, Ernst Simon, Chaim Kalvarisky, Gavriel Stern, and Moshe Smilansky, saw Palestine as the land of two peoples. Buber feared, as did the prophet Samuel, that the nation of Israel would become like all other nations, and wanted Zionism to be the teaching and realization of righteousness.

Buber was critical of Israeli politics. Already at the Twelfth Zionist Congress in Karlsbad, in 1921, he pleaded that Arabs and Jews unite their life interests. Made aware of the pathology of nationalistic chauvinism by his friend Gustav Landauer, he became allergic to nationalism in the form of collective egoism. Before World War II, he thought, as did many Jews at that time, that a Jewish State was not necessary. Social units could be linked in a federation and form a greater society. After the foundation of the Jewish State, he had a dovish standpoint in the Jewish-Arab dispute. Buber believed that Israel is more than another nationalism.

Buber conceived Zionism as the possible embodiment of Jewish Renaissance. His socialist, cultural Zionism, influenced by Ahad Ha-Am, hardly matched the practical, national approach of the movement. Although in 1901 he became editor of the Zionist periodical *Die Welt*, his Zionism was much more spiritual than political. He proclaimed that the renewal of Judaism and the renewal of the world were one. Judaism had had its creative periods: it was renewed in the time of the prophets, in early Christianity, through the *hasidic* masters, and finally, in the period of the Zionists pioneers. Buber longed for a just society in Israel and conjoined ethics and politics. He wanted the creation of a new community of Hebrew humanism.

Bible

Buber studied and translated the Bible, and adopted biblical criticism as well as the unity of the Bible. However, what finally interested Buber, like Rosenzweig, was not the critical question of how the Bible was written (the Bible as Scripture, *Ketuvim*), but the spiritual question of how it is read (the Bible as *Mikra*). Biblical scholars did not consider him to be one of their own, because his aim was not so much the reconstruction of history as the hearing of the voice of the supreme Presence. He came to an existential-dialogical understanding of the biblical text, which was seen as an example of dialogue. In 1925 he started a new German translation of the Bible with Rosenzweig. In this project, Buber translated and sent his translation to Rosenzweig, who commented upon it. They discussed the translation in their correspondence and in regular meetings. In their translation, they wanted to recapture the spoken character (*Gesprochenheit*) of the Bible, so that the reader could become a listener of the ongoing Divine voice. They stayed

close to the Hebrew original, to the Hebrew sentence structure and rhythm, to the Hebrew words and sounds. They did not Germanize Hebrew, they surprised German with Hebrew culture. The very fact of the translation itself was a bridging of German and Jewish cultures. At the time of Rosenzweig's death in 1929, they had reached the book of Isaiah. Buber finished the translation of the entire Bible only in 1961. Buber's other works on the Bible include *Das Kommende. Untersuchungen zur Entstehungsgeschichte des messianischen Glaubens. I. Koenigtum Gottes (Kingship of God, 1932; Eng., 1967)*, *Moses* (first published in Hebrew, 1945; English, 1946; German, 1948), and *Der Glaube der Propheten (The Prophetic Faith)* (first published in Dutch translation, 1940; Hebrew, 1942; English, 1949; German, 1950).

Socialism

In *Paths in Utopia* (English, 1947; Hebrew 1949) he gives vent to his utopian socialism from which he expected the birth of an authentic and true "religious" society. He discusses the theories of Saint-Simon, Fourier, Owen, Proudhon, Kropotkin, and finally Gustav Landauer. He further discusses Marx, Engels, and Lenin. The last chapter of the book is entitled "An Experiment that Did Not Fail," which deals with the *kevtzrah* (village commune) and *kibbutz* (working collective) as small groups that did not fail. In his social as in his political thinking, Buber contributed to the ethical renewal of society.

[Ephraim Meir (2nd ed.)]

Centenary of Buber's Birth

The centenary of Buber's death (1978) was marked in a number of ways. A four-day conference on his philosophy, attended by 300 scholars from Israel and abroad, was held at the Ben Gurion University of the Negev in January, and a one-day conference in New York in February, sponsored jointly by Fordham University and the Hebrew Union College-Jewish Institute of Religion.

The West German Government issued a special commemorative stamp to mark the centenary and the Hebrew University initiated a fund to endow a Buber Chair in Comparative Religion.

Buber's former home in Heppenheim became headquarters for the International Council of Christians and Jews in 1979.

A comprehensive bibliography of Buber's writings (1897–1978) was published in 1980, edited by M. Cohen and R. Buber.

BUBER, SOLOMON (1827–1906), scholar and authority on midrashic and medieval rabbinic literature. Buber was born in Lemberg, Galicia, into a well-known rabbinic family and devoted himself to the publication of scholarly editions of existing Midrashim, printed or in manuscript, and to the reconstruction of those that had been lost. His Midrash editions and those of some medieval works constituted a veritable revolution in the production of reliable texts. Their learned introductions are major research works in themselves, and the annotations give a complete picture of the textual problems and parallel passages. While scholarship in this field has not stood still since Buber's days and his work and method are in part, at least, outdated, subsequent researchers in this field owe him much.

Buber was a man of independent means and financed his scholarly projects personally. Not only did he pay for the expense of publication, but he also paid for people to visit various libraries to copy manuscripts. Buber's achievement is all the more remarkable in view of his active business life. He was

a governor of the Austro-Hungarian Bank and the Galician Savings Bank, president of the Lemberg Chamber of Commerce, and a member of the Lemberg Jewish community's executive council from 1870.

Buber's Midrash editions were (1) **Tanḥuma* (on the Pentateuch), an older and different version of the previously known and printed Midrash of that name (Vilna, 1885, 1913; repr. 1946, 1964); (2) **Midrash Lekah Tov* or *Pesikta Zutrata* by Tobias b. Eliezer (11th century) on the Pentateuch (part of the work, from Leviticus on, had been printed previously) in Buber's edition with a commentary by Aaron Moses Padua of Karlin (1880, 1884, 1921–24; repr. 1960); (3) *Midrash Aggadah* on the Pentateuch (1894; repr. 1961); (4) *Sekhel Tov* on Genesis and Exodus by Menahem b. Solomon (12th century; 1900–02; repr. 1959, 1964); (5) **Aggadat Bereshit* on Genesis (first published by Abraham b. Elijah of Vilna, 1802), 28 homilies following the triennial cycle of the Palestinian rite (1903, 1925; repr. 1959); (6) *Likkutim mi-Midrash Avkir* on Genesis and Exodus (1883; repr. 1967); (7) a reconstruction of *Midrash Devarim Zuta* in *Likkutim mi-Midrash Devarim Zuta*, on Deuteronomy (1885); (8) **Midrash Shemu'el* (1893, 1925; repr. 1965); (9) **Midrash Tehillim*, or *Shoḥar Tov*, on Psalms (1891; repr. 1966); (10) *Yalkut ha-Makhiri* on Psalms by Machir b. Abba Mari (14th century; 1900; repr. 1964); (11) **Midrash Mishlei* on Proverbs (1893; repr. 1965); (12) *Midrash Zuta* on the Five Scrolls except Esther (1894, 1925; repr. 1964); (13) *Eikhah Rabbah [Rabbati]*, on Lamentations (1899; repr. 1964); (14) *Aggadat Ester*, part of *Midrash ha-Gadol* (1887, 1925²; repr. 1964); (15) *Sifrei de-Aggadata*, three Midrashim on Esther (1887; repr. 1964); and (16) *Pesikta de-Rav Kahana*, a hitherto unpublished selection of homilies for special Sabbaths and festivals by Rav Kahana, first discovered by L. Zunz, from a manuscript written in Egypt in 1565, which Buber found in Safed (now in the Alliance Israélite Universelle in Paris, no. 47; 1868, 1925; repr. 1963). Of these 16 items, numbers 1, 9, and 15 are the most important. Buber also annotated L. Gruenhut's edition of the *Yalkut ha-Makhiri* on Proverbs and of *Yelammedenu* fragments on Genesis (*Sefer ha-Likkutim*, 6, 1903). He also edited many other works by medieval authors as well as some historical works, including a biography and bibliography of Elijah *Levita. Buber also contributed some hundred articles to various periodicals. Martin *Buber was his grandson.

BUBIS, IGNATZ (1927–1999), German-Jewish political leader. Born in then German Breslau to Polish-Jewish parents, Bubis returned with his family to Polish Deblin in 1935. After his mother died of cancer, Bubis was forced into the Deblin ghetto in 1941 together with his father, who was murdered in Treblinka a year later. Spending the rest of the war in the camps of Deblin and Czestochowa, Bubis was liberated in January 1945. He first moved to the Soviet Occupa-

tion Zone of Germany, and in 1949 settled in West Germany. He became a successful businessman, specializing in jewelry and later real estate.

In 1978 Bubis was elected president of the Frankfurt Jewish community. In 1985 he aroused public attention as one of the leading opponents of the staging in Frankfurt of the allegedly antisemitic play *The Garbage, the City, and the Death*. In this play the renowned film writer Rainer Werner Fassbinder depicted a wealthy real estate owner, according to some based on Bubis, as "The Rich Jew." Bubis and other members of the Jewish community successfully prevented the staging of the play and were thus responsible for the first major public demonstration among Jews in postwar Germany. In 1992 Bubis was elected president of the Zentralrat der Juden in Deutschland, successor to the late Heinz *Galinski. During his seven years in office, Bubis became enormously popular with the German public and was once proposed as a candidate for president of Germany, an offer he rejected immediately. He visited hundreds of schools to discuss Jewish matters with German pupils and was a regular guest on German TV talk shows. He was also active in the Liberal Free Democratic Party, heading their list in the Frankfurt communal elections in 1997.

In 1998 Bubis accused the German writer Martin Walser of relativizing the Holocaust after Walser's acceptance speech for Germany's most highly regarded literary prize. The Bubis-Walser debate split the German public and was one of the most fiercely contentious issues in the Germany of the late 1990s. In his last interview in July 1999, Bubis distanced himself from his earlier optimistic tone regarding German-Jewish reconciliation when he stressed that he had not been able to achieve much during his period in office. He asked to be buried in Israel out of fear that his grave might be desecrated in Germany. Shortly after his burial an Israeli artist desecrated his grave.

An autobiographical volume, *Ich bin ein deutscher Staatsbürger juedischen Glaubens. Ein autobiographisches Gesprach mit Edith Kohn*, appeared in 1993.

[Michael Brenner (2nd ed.)]

BUBLICK, GEDALIAH (1875–1948), U.S. Yiddish journalist and Orthodox Zionist leader. Bublick was born in Grodno, Russia. He began his literary career in 1899 with an article on Jewish nationalism that appeared in the Hebrew periodical *Ha-Shilo'ah*. In 1901 he helped lead a group of 50 Jewish families from Bialystok to Moissville, Argentina, where he worked for three years teaching Hebrew. Settling in New York City in 1904, Bublick joined the editorial staff of *Yidishes Tageblatt*. He became editor in chief in 1915, and continued as co-editor when the paper merged with the *Morgen-Zhurnal* in 1928. Bublick was appointed president of the American *Mizrachi organization, which he helped to establish in 1911, and in 1918 vice president of the *American Jewish Congress. He served on the executive of the World Zionist Organization (1919–26), and of the Jewish Agency for Palestine (from 1929). Among Bublick's publications were *Mayn Rayze in Erets-Yisroel* ("My

Travels in Palestine," 1921), and *Min ha-Mezar* ("Out of Distress," 1923), a collection of his lectures and essays about modern Judaism. He was a frequent contributor to Hebrew and Yiddish periodicals.

°BUCER (Butzer), MARTIN (1491–1551), German religious reformer. Bucer displayed a characteristically ambivalent approach toward the Jews. Ostensibly preaching understanding for and love toward them, in practice his teachings stirred up hatred – his thesis being that the Jews, having scorned the message of Jesus, had, according to him, forfeited the promised privileges; however they still remained free to embrace Christian teachings, this being the ultimate destiny of Israel and the purpose of its survival. Like Martin Luther, Bucer regarded the Jews as the descendants of the Patriarchs, a people who had received the Commandments from God, but who had been rejected by Him in anger for not fulfilling His will. When Landgrave Philip of Hesse wished to give the Jews in his territories a definitive status (1538), Bucer and six Hesse clergymen offered their written opinion to the effect that the Jews should not be allowed to raise themselves above the Christians but should be confined to the lowest estate. Against the recriminations of Bucer, Joseph (Joselmann) of Rosheim appeared as spokesman on behalf of the Jews.

[B. Mordechai Ansbacher]

BUCHACH (Pol. **Buczacz**), city in Tarnopol district, Ukraine (until 1939 in Poland). A Jewish settlement there is mentioned in 1572; the earliest Jewish tombstone dates from 1633. In 1672 the town was burned down by the Turks, who killed most of the inhabitants. In 1699 the overlord of the town, Stephan Potocki, renewed privileges previously granted to Buchach Jewry, according to which Jews were not subject to the jurisdiction of the Christian courts; disputes between Jews and Christians were heard by an official appointed by the lord of the town, and inter-Jewish suits by the *bet din*. Jews were free to own and build houses and to trade or engage in crafts, including distilling of brandy and barley beer. In 1765 there were 1,055 Jews living in Buchach and a further 300 in neighboring settlements within the bounds of the Jewish community of Buchach. Jewish economic activities expanded under Austrian rule (see *Galicia), particularly after the grant of equal civic rights in 1867. In the period preceding 1914, most of the large estates in the neighborhood of Buchach were Jewish owned

or leased from the Polish nobility. Distilling and commerce remained major Jewish occupations. Between 1867 and 1906 Buchach, Kolomyja, and Sniatyn were combined to form a single constituency and a Jewish deputy was elected to the Austrian imperial parliament. At the beginning of the 20th century, there were approximately 7,000 Jews living in Buchach. During World War I most of the Jewish inhabitants left but many returned later.

Among notable rabbis of Buchach were Zevi Kara (18th–19th centuries), author of *Neta Sha'ashu'im*; his son-in-law Abraham David b. Asher *Wahrmann, the "holy" Ḥasid (d. 1841), author of *Da'at Kedoshim* (on the laws of ritual slaughter and dietary laws); Abraham Te'omim, author of the responsa *Ḥesed le-Avraham*; and Samuel Shtark, author of *Minḥat Oni*. The Orientalist David Heinrich *Mueller was also from Buchach. Among the writers of the *Haskalah movement before 1914, the best known is Isaac *Fernhof. A Yiddish weekly *Der Yidisher Veker* was published at the beginning of the 20th century, edited by Eliezer *Rokeah of Safed. A large printing press was established in 1907. Descriptions of Jewish life in Buchach are given in the tales of S.Y. *Agnon, the Nobel prizewinning author, who was born there.

[Abraham J. Brawer]

Holocaust Period

On the eve of the Nazi invasion about 10,000 Jews lived in Buchach (1941). Under Soviet rule (1939–41), Jewish community life suffered and its institutions ceased functioning. All independent political activity was forbidden. Private enterprise was suppressed and the few privately owned stores that remained were subjected to heavy taxes in order to bring about their liquidation. Officially, religious life was not repressed, but synagogues were obliged to pay heavy taxes. The Hebrew education system was disbanded and in its place a Yiddish language school was set up. When war broke out between Germany and the U.S.S.R. (June 22, 1941), Jews were drafted into the Soviet Army. Groups of young Jews also fled to the Russian interior. The Germans invaded Buchach on July 7, 1941. The Ukrainians immediately began murdering and looting the local Jews. On July 28, 350 Jews were killed on Fedor Hill, about a mile (2 km.) from the town. A *Judenrat was set up, headed by Mendel Reich, the head of the former Jewish community organization until its dissolution in September 1939. Jewish refugees began arriving from Hungary and were extended aid by the Judenrat and local community. Young, able-bodied Jews were taken off for forced labor in camps at Velikiye Borki. On Oct. 17, 1942, the Germans carried out a massive *Aktion* in which over 1,500 Jews were rounded up and sent to *Belzec death camp. Over 300 Jews were murdered during the *Aktion*. On Nov. 27, 1942, a second transport with 2,500 Jews was dispatched to Belzec, while about 250 persons were shot in the roundup. On Feb. 1–2, 1943, close to 2,000 Jews were murdered at Fedor Hill on the contention that they were infected with typhus. A labor camp was then set up in a suburb, Podkajecka, for skilled craftsmen. In March–April, over 3,000

Jews were also murdered at Fedor Hill, while other groups were shipped to *Chortkov, Kopiczynce, and Tlusta.

Resistance

A Jewish resistance movement was organized in Buchach at the end of 1942. Arms were obtained and training was given in preparation for a break for the forests. In mid-June 1943 the Germans liquidated the ghetto and labor camp, but met with resistance. Some Jews managed to escape to the forests while others were murdered near the Jewish cemetery. Armed Jewish bands were active in the vicinity, notably attacking Nazi collaborators. On March 23, 1944, when the city was captured by Soviet forces, about 800 Jews came out of hiding and returned from the forests. However, the German Army again took over, and additional Jews fell victim. On July 21, 1944, when Soviet forces definitively entered the city, there were less than 100 Jewish survivors. About 400 Jews returned from the U.S.S.R. After the war most of them emigrated from Buchach to settle in the West or in Israel. The community was not re-established after the war.

BUCHALTER, LOUIS ("Lepke"; 1897–1944), U.S. racketeer. At the age of 18 he embarked on a criminal career. After serving three years in Sing Sing prison on two burglary convictions, he turned to racketeering, commanding 200 gangsters, who extorted millions of dollars from his victims. He "protected" manufacturers from strikes and unionization of their shops by intimidating workers and using strong-arm measures. He forced unions to do his bidding by installing his own business agents or by creating his own rival unions. In 1933 Buchalter was arrested for violating an anti-trust law. Found guilty, he was fined and sentenced, but a higher court reversed the decision and he was freed on bail. He went into hiding, but in 1939 he surrendered to FBI Director J. Edgar Hoover at a rendezvous arranged by the radio commentator Walter Winchell. He was tried on a narcotics charge and sentenced to 14 years imprisonment, during which he was returned to New York City to be tried on a charge of murder committed in 1936. He was found guilty and executed.

BUCHANAN, CLAUDIUS (d. 1815), Christian missionary and collector of Hebrew manuscripts. Buchanan went to Calcutta as chaplain in 1797, and was appointed professor and vice provost of the College of Fort William. During repeated visits to southern India between 1806 and 1808 Buchanan stayed in Cochin searching for ancient Hebrew manuscripts. His methods alarmed the Jewish population. They claimed that they were being robbed of their records and sought the intervention of the chief magistrate of Cochin. Buchanan also

made a facsimile of Jewish copperplate inscriptions and was accused of having taken away the original. He deposited the manuscripts, obtained from both Jews and Syrian Christians, in the Cambridge University library.

[Walter Joseph Fischel]

BUCHAREST (Rom. **București**), capital of Romania. Before the union of the Danubian principalities (Moldavia and Walachia) in 1859, it was the capital of the principality of Walachia. Up to the 19th century almost the entire Jewish population of Walachia was concentrated in Bucharest, where the great majority continued to live subsequently. Thus the history of the Jewish community in Bucharest is essentially the history of Walachian Jewry. The community, consisting of merchants and moneylenders from Turkey and the Balkan countries, is first mentioned in the middle of the 16th century in the responsa of several Balkan rabbis (e.g., Samuel de Medina, nos. 5, 54). When Prince Michael the Brave revolted against the Turks in November 1593, he ordered the massacre of the Jews in Bucharest along with the other Turkish subjects. Toward the middle of the 17th century, a new community, now predominantly Ashkenazi, was established. In the 18th century the Jews were concentrated in the suburb of Mahalaua Popescului, but as the community grew, a number began to move to other parts of the city, where they even established synagogues; however, these were closed by the princes. The populace, afraid of Jewish economic competition, was intensely hostile toward the Jews, and in 1793 the residents of the Razvan suburb petitioned Prince Alexander Moruzi to remove Jews who had recently settled there and demolish the synagogue they had erected. The prince ordered the synagogue to be closed (January 1794), but refused to have the Jews removed from the suburb, and a few days later even issued a decree affording them protection. In 1801 there were anti-Jewish riots following blood libel charges, and 128 Jews were killed or wounded. The community again suffered persecution during the Russian occupation of Bucharest from 1806 to 1812, and in particular during the Greek revolt (*Hetairia*) under Alexander Ypsilanti and its suppression by the Turks in 1821. During this period, the Bucharest Jews, like those elsewhere in Walachia and Moldavia, were organized as an autonomous Breasla Ovreilor (“Jewish corporation”) headed by a *Staroste* (“provost”). The head of the Bucharest community also acted as the deputy of the *hakham bashi* (Jassy rabbi and Jewish leader of Moldavia), whose authority extended over Walachian Jewry as well. In 1818–21, the *Staroste* of Bucharest seceded from the authority of the Moldavian *hakham bashi* and assumed the title independently. The few Sephardi Jews, whose numbers began to increase only at

the end of the 18th and the beginning of the 19th century, did not then constitute a separate community, although they had their own synagogue in a rented house in Mahalaua Popescului and in 1811 established their own burial society. In 1818 they were granted permission to build a synagogue. The Bucharest community grew rapidly in the 19th century through immigration. From 127 families registered in Bucharest in 1820 and 594 in 1831, the community grew to 5,934 persons in 1860 and 40,533 (14.7% of the total population) in 1899. (See Table: Bucharest Jewish Population). Under the capitulations system foreign subjects were free from the regular taxation and jurisdiction in Romania. Hence the immigrants questioned the authority of the community leadership and refused to pay the tax on kosher meat, which constituted its sole income. The authorities, drawn into the conflict, at first upheld the traditional rights of the Breasla Ovreilor. Following repeated complaints from both sides, however, as well as constitutional changes in the principality resulting from the promulgation of the Organic Statute (see *Romania) in 1832, the community was given a new constitution in that year which severely curtailed its autonomy and placed it under the direct authority and close supervision of the municipality. The Ashkenazi community was again reconstituted in 1843, and the new statute, which further curtailed the community’s autonomy, was confirmed with slight changes by the reigning prince in 1851; although never formally abolished, it fell into disuse in the second half of the century. In the meantime the Sephardi Jews (numbering about 150 families in 1854) had founded their own community. Within the Ashkenazi community, the conflicts between the native and foreign-born members continued. Finally, in 1851, the Prussian and Austrian subjects (about 300 families) were permitted to found a separate community. In 1861, a bitter conflict broke out between the native community and the Russian subjects because some articles had allegedly been removed from the Russian synagogue.

Bucharest Jewish Population

Year	Number of Jews
1800	204 families
1835	2,600
1860	5,934
1889	23,887
1899	40,533
1912	44,000
1930	74,480
1940	95,072
1942	98,048
1947	150,000
1956	44,202
1969	50,000
2004	5,313

At that time, the Bucharest Ashkenazi community was also torn by violent strife between the Orthodox and Progressive wings (the latter led by Julius *Barasch and I.L. *Wein-

berg). The controversy centered around the modern school opened in 1852 (a year earlier a similar school had been established by Austrian and Prussian subjects) and a proposal in 1857 to build a Choir Temple and introduce certain reforms into the service. The dissension reached its peak when, in 1858, Meir Leib *Malbim was called to the rabbinate. He placed himself at the head of the Orthodox wing and a fierce struggle ensued. The conflict also had a social character since the Progressives were drawn mainly from the well-to-do, while the masses were Orthodox. In 1862 the Progressives achieved success; the government deposed Malbim from the Bucharest rabbinate, and in 1864 he was arrested and expelled from the country. The Temple project was resumed in 1864; it was completed in 1866 and became the center of Progressive Jewry and the focus of a variety of cultural and educational activities. Continued quarrels within the community and repeated complaints to the authorities by each of the competing factions brought about in 1862 the government's decision (which applied to the whole country) not to interfere any more with the internal affairs of the Jewish communities and to withdraw from them their official status. The decision, reiterated in 1866, led to the gradual disorganization and dissolution of the Ashkenazi community in Bucharest, which in 1874 had ceased to exist as an organized entity. Several attempts were later made to reconstitute the community, the most serious in 1908. However, it was only in 1919 that an organized Jewish community was again established in Bucharest. Until then various benevolent societies and organizations undertook educational and social welfare activities. Chief among them were the Choir Temple Congregation, formally constituted in 1876 as a separate and independent organization levying its own tax on kosher meat, and the Brotherhood Zion of the B'nai B'rith, founded in Bucharest in 1872 by the American consul B.F. *Peixotto. These succeeded in setting up and maintaining a network of educational and charitable institutions, including, in 1907–08, 15 schools, filling the void created by the lack of an organized community. Cultural bodies were also established, and a number of Jewish journals and other publications made their appearance. Bucharest also became the center of Romanian Jewry's political activity and the struggle for emancipation. National Jewish bodies, among them the Union of Native Jews, established their headquarters there. Among the most prominent spiritual and religious leaders of the community before World War I were Antoine Levy and Moritz (Meir) *Beck, rabbis of the Choir Temple Congregation from 1867 to 1869 and 1873 to 1923, respectively, and Yitzhak Eisik *Taubes, rabbi of the Orthodox congregation from 1894 to 1921. The most prominent lay leader was Adolf *Stern. In the 19th century, a high proportion of the Jews in Bucharest were occupied in crafts. There were 2,712 Jewish artisans in the city in 1899. Others engaged in commerce and several, notably Sephardi Jews, were prominent in banking. During the second half of the 19th century a number of anti-Jewish outbreaks occurred in Bucharest. In 1866, when the legislative assembly was discussing the legal position of the Jews, an

excited mob started a riot in which the new Choir Temple, then under construction, was demolished. Another serious riot took place in December 1897, when hundreds of Jewish houses and shops were attacked and looted.

After World War I

In the period between the two world wars the Bucharest community grew in both numbers and importance. The Jewish population of the city, now the capital of greater Romania and attracting settlers from all parts of the country, increased from 44,000 in 1912 to 74,480 (12% of the total population) in 1930, and to 95,072 in 1940. About two thirds of those gainfully employed were occupied as artisans, workers, clerks, and shop assistants; others were active in the liberal professions, especially medicine and law. In 1920, the statute of the reconstituted Ashkenazi community was officially approved, and in 1931, following the publication of the new law for the Organization of the Cults, the community was officially recognized as the legal representative of the city's Ashkenazi Jewish population; at the same time the community's statute was amended to conform to the requirements of the law. The organization of the community was again modified by a new statute in 1937. With the reconstitution of the organized community, all Jewish institutions were brought under its jurisdiction. The community's religious, educational and welfare institutions included over 40 synagogues, two cemeteries, 19 schools, a library and historical museum, two hospitals, a clinic, two old-age homes, and two orphanages. The spiritual head of the Ashkenazi community during this period was rabbi J.J. *Niemirower, while the outstanding lay leader was W. *Filderman. Like many other Jewish communities in Romania, the Bucharest community and its leaders continued to play an important role in the social and political life of Romanian Jewry, representing in particular the attitude of the Jews from the Old Kingdom.

Holocaust Period

In 1941, 102,018 Jews lived in Bucharest, although possibly there were more, due to the influx of refugees from other parts of Romania. Many Jewish properties were "Romanized." Jewish professionals were not allowed to work, and Jewish pupils were excluded from public schools. On January 21, 1941, when the Iron Guard rose in rebellion against Antonescu, Jewish districts, institutions, and persons became victims. The legionnaires robbed Jewish shops, homes, and synagogues. Among the destroyed synagogues was the Sephardi ("Spanish") Great Temple ("Kahal Grande"), considered the most beautiful synagogue in the city. One hundred and twenty-five Jews were murdered; some of the bodies were carried to the slaughterhouse and the words "kosher meat" were written on them. Order was reestablished after three days, but the legal status of the Jews did not improve. The Federation of Jewish Communities was dissolved and its place the *Centrala evreilor* (Jewish Center) was set up. The only Jewish journal published was *Gazeta evreiasca*, which was censored. The Jews of Bucharest were obliged to pay high taxes. Many Jewish men were taken

to forced labor. Due to the pauperization of many Jews, the community had to help them. However, Jewish schools – primary, secondary, and higher – were founded. A Jewish theater was opened. A Jewish canteen for the poor also operated. Zionist leaders made efforts to prepare the Jews for emigration to Erez Israel and dealt with the Romanian government in order to enable emigration. At the end of 1943 and in the beginning of 1944 the situation began to improve.

Communist and Post-Communist Period

After a short period of democratization (August 23, 1944–December 30, 1947), and the establishment of the Communist regime in 1947, all Jewish national, cultural, and welfare institutions in Bucharest were gradually closed down. The welfare institutions were nationalized and the schools absorbed in the general educational network. A state Yiddish school was opened in 1949, but closed a few years later. Communal activity was organized by the Federation of Jewish Communities in Romania. Jewish cultural activities centered on the Yiddish theater taken over by the state in 1948. Two Jewish newspapers, the Romanian *Unirea*, followed later by *Viața Nouă* and the Yiddish *Ikuf Bleter* were published, but both were discontinued in 1952–53. From October 1956 a periodical (sometimes biweekly, sometimes monthly) in Romanian, Yiddish, and Hebrew, *Revista Cultului Mozaic* (“The Review of Jewish Religion”) was published on behalf of the Federation of Jewish Religious Communities. It continued until 1994, when it was superseded by *Realitatea Evreiască*, a cultural biweekly in Romanian, Hebrew, and English. The Federation also cared for the religious needs of its members, supplying them with matzot, prayer shawls, prayer books, etc. In the late 1960s, there were 14 regular synagogues in Bucharest, including the Choir Temple. There was also a *talmud torah*, a “Hebra-Shas” (weekly courses in Talmud), a Yiddish theater, and a kosher restaurant. About 400 Jewish students participated in courses in Hebrew and Jewish history organized by the religious community. Of the 44,202 Jewish (3.6% of the total population) registered in the city in the 1956 census, 4,425 declared Yiddish to be their mother tongue. In 1969 it was estimated that 50,000 Jews lived in Bucharest. After the 1989 revolution, Jewish communal property nationalized by the Communist regime was returned to the Federation of Jewish Communities. Jewish life was reborn. A Jewish publishing house, Hasefer, was founded and many books on Jewish subjects were published. The Center of Jewish History in Romania, founded in 1976 but lacking legal status, obtained legal standing. A department of Jewish studies was founded at Bucharest University. In 2004, 5,313 Jews lived in Bucharest, where three synagogues, a community center, a youth club, an old-age home, a kosher restaurant, three cemeteries, and other institutions operated.

BUCHBINDER, NAHUM (1895–?), Soviet historian. Buchbinder was born in Odessa. Son of the Yiddish writer Abraham Isaac Buchbinder, he studied from 1916 at the Seminary for Oriental Studies at Petrograd (Leningrad) and began his literary career in the Russian press in Odessa and Simferopol. Buchbinder was one of the first to join the Commissariat for Jewish Affairs after the Revolution and edited Yiddish Communist newspapers and other publications in Moscow and Minsk. He first wrote on Russian-Jewish literature (studies of Lev *Levanda) and afterward specialized in the history of the Jewish labor movement in Russia, on which he published articles in the learned journals *Krasnaya letopis*, *Proletarskaya revoliutsiya*, and *Yevreyskaya starina*. His main work, *Istoriya yevreyskogo rabocheho dvizheniya v Rossii* (“History of the Jewish Labor Movement in Russia,” Leningrad, 1925; Yiddish translation, Vilna, 1931), chiefly dealing with the Bund, is based on material from the czarist police archives. Nothing is known of Buchbinder’s fate after the 1930s.

[Yehuda Slutsky]

BUCHENWALD, German concentration camp on the Ettersberg, near Weimar. Opened on July 19, 1937, it was one of the largest camps in Germany proper with 130 satellite camps and units. Buchenwald was considered the worst of the camps prior to World War II. Its first commander was the notorious Karl Koch, who remained in charge until his transfer to *Majdanek, Poland, on Jan. 22, 1942. He was replaced by Hermann Pister. The camp was divided into three parts: the large camp, the small camp, and later a “tent camp” set up for Polish prisoners after September 1939. Originally erected to house prisoners from several smaller camps that were being disbanded, its first inmates were professional criminals. They were soon followed by political prisoners. When the criminals were found to be stealing, the political prisoners, among whom were several Jews, succeeded in appropriating for themselves such administrative posts as were available to prisoners. That facilitated the beginning of resistance cells. The first whole group of Jews were political prisoners who arrived in June 1938 as a result of an action against “asocial” Jews. In the

summer of 1938, 2,200 Austrian Jews were transferred from *Dachau. Later that year, the mass arrests of Jewish men aged 16–60 after the **Kristallnacht* more than doubled the number of Jewish prisoners. The 10,000 new Jewish prisoners, quartered in recently built huts, suffered far more than the non-Jews, 244 dying during the first month of their imprisonment. Jews arrested on *Kristallnacht* could still leave the country if they had somewhere to go. Most of the Jewish prisoners were released by the spring of 1939, deprived of their property, and compelled to leave Germany. More than 600 were killed or died, some by their own hand before the war began. The outbreak of World War II brought a new influx of prisoners, most of them stateless people from Poland. As Hitler's armies conquered further territory, the camp's population was swollen by prisoners from the occupied countries. Most Soviet prisoners of war were killed upon arrival, at least until their potential as workers was recognized. Hermann Pister, Koch's successor, remained commander until the camp's liberation in 1945. From the beginning of 1942, Buchenwald, in common with other camps in Germany, became a forced labor camp for war production. The demands of German industry brought transport after transport from all over Europe. On Oct. 17, 1942, in keeping with a general order to transfer all Jewish prisoners in the Reich to Auschwitz, all Jewish prisoners, with the exception of 200 building masons, were transferred to *Auschwitz. After December 1942, the camp received German criminals who had been handed over to the *ss by the prison authorities. Most of them became the victims of the pseudo-medical experiments performed in the camp hospital. After May 1944 Hungarian Jews arrived from Auschwitz and were distributed among the various satellite camps, especially the infamous Dora. On Oct. 6, 1944, the number of prisoners reached a peak of 89,143. This increase in numbers diminished the food supplies, led to a further deterioration in the already dangerously unhygienic conditions, and increased the death rate. From the winter of 1944, and especially after January 1945, the camps in the east were evacuated owing to the approach of the Soviet Army, and thousands of prisoners, among them many Jews, were transferred to Buchenwald. The mass arrival of prisoners, already weakened by what was known as the death marches, overwhelmed the camp, whose facilities could not handle the new prisoners. Among those who arrived were Shelomo Wiesel and his son Eliezer. Exhausted by the march, Shelomo died along with a great numbers of other Jews. At the beginning of April 1945 the ss evacuated several thousand Jews. It is estimated that some 25,500 people were killed during the forced evacuation of Buchenwald and its satellite camps. During the last weeks of the camp's existence an armed underground movement came into being among the prisoners, which helped slow down the pace of evacuations. The Germans left before the American troops arrived on April 11, 1945, so members of this underground movement were in control and handed over the camp to them. Of the 238,380 prisoners the camp held since it was opened, 43,045 had died there or been murdered. Around 21,000 Jews were liberated,

4,000 of them children. American troops entered Buchenwald on April 11, 1945. General George Patton, who was not known for his love of Jews, ordered the citizens of Weimar marched through the camp. Their visit was filmed. They entered as if they were on an excursion, a picnic. They left gasping for air.

Twenty-one Nazi leaders of Buchenwald were tried by an American court in 1947; two were sentenced to death, four were imprisoned for life.

°**BUCHHOLZ, CARL AUGUST** (1785–1843), German lawyer and author. A champion of Jewish civil rights, Buchholz was an admirer of Moses *Mendelssohn's philosophy. He was appointed by the Jewish communities of *Luebeck, *Hamburg, and *Bremen as their representative at the Congress of *Vienna (1815), the conference of Aachen (1818), and at the Diet of Frankfurt. In 1815 he published a collection of laws regarding the improvement of the status of the Jews issued by various German principalities and states (*Aktenstuecke, die Verbesserung des buergerlichen Zustandes der Israeliten betreffend*), with a foreword which is considered one of the best pleas for Jewish emancipation written in that period by a gentile. He advocated uniform all-inclusive legislation for the Jews in all German states.

BUCHMIL, JOSHUA HESHEL (1869–1938), Zionist leader. He was born in Ostrog, Volhynia, and from 1896 to 1903 studied agriculture and law at the University of Montpellier (France), where he was a member of the Zionist student organization, Atidot Israel. In 1896 Herzl assigned him the task of persuading the Hovevei Zion of Russia to participate in the First Zionist Congress, and he succeeded in this, visiting cities and villages in the south of Russia and in Lithuania. A militant opponent of the *Uganda Scheme, Buchmil was a member of the *Democratic Fraction of the Zionist Organization and one of its leading spokesmen. In 1906 he was sent by the *Odessa Committee of the Hovevei Zion to Erez Israel to study the economic and legal aspects of Jewish colonization there. After the Revolution of 1917, he joined the Central Zionist Committee of Russia. In 1921 he left for Poland and in 1923 went to Erez Israel where he worked for *Keren Hayesod. He published articles on current topics in the Zionist press in Russian, French, and Yiddish and also wrote *Problèmes de la renaissance juive* (1936), with a biographical essay by Avraham Elmaleh.

BUCHNER, ABRAHAM (1789–1869), assimilationist and linguist, born in Cracow. Buchner left Cracow in 1820 for Warsaw at the invitation of the banker Joseph Janasz to teach his children. On his recommendation, Buchner was appointed teacher of Bible and Hebrew at the rabbinical seminary of Warsaw. In his Hebrew works, *Doresh Tov* (Warsaw, 1823), *Yesodei ha-Dat* (*ibid.*, 1836; with Pol. tr.), and *Ha-Moreh li-Zedakah* (*ibid.*, 1838), a commentary on the reasons for the *mitzvot* according to Maimonides, Buchner advocates loyalty to the state, religious tolerance, and “productivization” of the Jews. He also compiled *Ozar Lashon Ivrit* (1830), a Hebrew-German dictionary with an appendix on grammar. His *Kwiaty wschodnie* (“Flowers of the East,” 1842) attempts to show the talmudic legends in a positive light. He also praises the Talmud in his Polish “The True Judaism” (Warsaw, 1846). From 1848, however, an inimical tone appears; he was in contact with the antisemitic priest *Chiarini, for whom he translated portions of talmudic and rabbinic literature. Buchner’s German work *Der Talmud in seiner Nichtigkeit* (“The Worthlessness of the Talmud,” 1848) expresses this attitude. His two sons converted to Christianity.

[Moshe Landau]

BUCHNER, ZE’EV WOLF BEN DAVID HA-KOHN (1750–1820), Hebrew grammarian and liturgical poet. Buchner, who was born and lived most of his life in Brody, was the secretary of the Jewish community and one of the fore-runners of the Haskalah movement. He wrote several epistolary guides in poetic language, e.g., *Zeved ha-Melizah* (1774); *Zeved Tov* (1794); and *Zahut ha-Melizah* (1810), all of them dealing with Hebrew style. The last work also contained 120 samples of letters. These works went through several editions. He also wrote religious poems, such as *Keter Malkhut* (“Royal Crown,” 1794), in the style of Ibn Gabirol’s hymn by the same name; *Shir Nifla* (“Wonderful Song,” 1802); *Shir Yedidut* (“Song of Friendship,” 1810); and *Shirei Tehillah* (“Songs of Praise,” 1808³). The last work consists of two parts. In the first, the roots of all the words have only letters from *alef* to *lamed*, while the second part contains words composed of letters from *lamed* to *tav* only.

BUCHWALD, ART (1925–), U.S. columnist. Born in Mt. Vernon, N.Y., Buchwald, together with his three sisters, spent his first four years in a Seventh Day Adventist children’s shelter, as his mother had been institutionalized a few weeks after his birth. His father, a successful businessman, visited his

children once a week but took them out of the facility when he heard his young son singing, “Jesus loves me, this I know.” Buchwald spent the next several years in various foster homes in New York. He worked from age nine until he dropped out of school to join the Marines at 17. After the war ended, he enrolled in college but left before graduating and went to Paris on the money he received from the GI Bill. He remained there for 14 years.

Buchwald began his journalistic career in 1948, working for *Variety* and then the Paris edition of the *Herald Tribune*. He wrote with zest and irreverence about people, politics, and places. In 1952 his editors brought his column to the U.S., and the *Washington Post* Syndicate began running it in 1966. His popular political satire later became syndicated with the *Los Angeles Times* Syndicate, appearing in more than 550 newspapers around the world. In 1982 Buchwald won the Pulitzer Prize in the category of Outstanding Commentary. Four years later, he was elected to the American Academy and Institute of Arts and Letters.

Collections of his columns have been published in volume form, among them the autobiographical *The Brave Coward* (1957), *Is It Safe to Drink the Water?* (1962), *And Then I Told the President* (1965), and *Have I Ever Lied to You?* (1968). He also wrote *Son of the Great Society* (1966); *Counting Sheep* (1970); *I Am Not a Crook* (1974); *Washington Is Leaking* (1976); *Down the Seine and Up the Potomac with Art Buchwald* (1977); *The Buchwald Stops Here* (1978); *Laid Back in Washington* (1981); *While Reagan Slept* (1983); *You Can Fool All of the People All of the Time* (1985); *I Think I Don’t Remember* (1987); *Whose Rose Garden Is It Anyway?* (1989); *Lighten Up, George* (1991); *Leaving Home* (1993), an autobiography; *I’ll Always Have Paris* (1996), the second volume of his memoirs; *Stella in Heaven: Almost a Novel* (2000); and the post-9/11 *We’ll Laugh Again* (2002).

[Ruth Beloff (2nd ed.)]

BUCHWALD, NATHANIEL (*Naftule*; 1890–1956), Yiddish theater critic. Born in Volhynia, Buchwald immigrated to New York in 1910 and studied at New York University. He contributed to various socialist publications and was on the editorial staff of the left-wing daily *Frayhayt* from 1922 and later contributed to the *Morgn Frayhayt*. In the 1920s he translated some works of leading Communist authors into Yiddish and took a deep interest in Soviet Russia. His cultural interest, however, focused on the problems of the Yiddish theater, especially in the United States, where he founded the Frayhayt Dramatic Studio, which later achieved eminence under the name *Artef*. His criticism tended to be both learned and emotional, and he was under fire at times from left-wing partisans for approving plays which they would have preferred him to denounce. His most important work in this field is *Teater* (“Theater,” 1943).

BUCHWALD, THEO (1902–1960), conductor. Born in Vienna, Buchwald studied harmony, counterpoint, and composition with Arthur T. Scholz, musicology with Wilhelm Fischer and Guido Adler, and piano with Richard Robert. He began his conducting career at the Barmen–Elberfeld (Wuppertal) in 1922. Later he held conducting positions at the Berlin Volksoper (1923), Magdeburg (1924–26), and Munich (1927–29). He worked under Erich Kleiber at the Berlin State Opera (1929–30), and was director of symphony concerts in Halberstadt until the Nazis came to power in 1933. Reaching South America (Santiago) in 1935, he conducted in Chile and later moved to Peru, where he was entrusted by the government with creating the National Symphony Orchestra in Lima (1938). He was appointed permanent director of the National SO, and toured with the orchestra throughout South America for 20 years while serving in this post.

BUCKY, GUSTAV (1880–1963), radiologist. Born in Leipzig, from 1918 to 1923 he was head of the department of roentgenotherapy of the Berlin University clinic. He emigrated to the U.S. in 1923 but returned to Berlin in 1930 to serve as director of the radiological department and cancer institute of the Rudolph Virchow Hospital. In 1933 he left Germany and served as head of the department of physiotherapy at Sea View Hospital in New York City, consulting physiotherapist at Bet David Hospital, and as clinical professor of radiology at Bellevue Hospital, N.Y. Bucky is known as the inventor of the Bucky diaphragm for roentgenography, which prevents secondary rays from reaching the film, thereby securing better definition. He also invented a camera for medical color photography in radiography and was the originator of grenz ray therapy (infra roentgen rays) called Bucky rays. He wrote numerous scientific articles on his subject and was the author of *Die Roentgenstrahlen und ihre Anwendung* (1918); *Anleitung zur Diathermiebehandlung* (1921) and *Grenzstrahltherapie* (1928).

BUCOVICE (Cz. *Bučovice*; Ger. *Butschowitz*), small town in southern Moravia, Czech Republic. Its Jewish community, one of the oldest in Moravia, increased in importance when Jews expelled from *Brno in 1454 settled in Bucovice. Moravian community synods were held there in 1709, 1724, and 1748. Bucovice was one of 52 communities officially recognized in 1798. A synagogue was built in 1690, and rebuilt in 1853. The community numbered nine families in 1673, 508 persons in 1798, 566 in 1848, 180 in 1900, and 64 in 1930 (2.07% of the total population), 13 of whom declared their nationality as Jewish. Rabbis included Avigdor, son of the “saintly” R. Paltiel (d. 1749), Abraham Hirsch Halberstadt, and Bernard *Loewenstein (1857–1863), author of *Juedische Klaenge* (1862), pop-

ular poems which he dedicated to the community. In March and April 1942 the Jews were deported to Theresienstadt and from there to the death camps.

[Oskar K. Rabinowicz]

BUDAPEST, capital of Hungary, formed officially in 1873 from the towns of Buda, Obuda, and Pest, which each had Jewish communities.

Buda (Ger. *Ofen*; Heb. *אונג*)

A community was formed there by the end of the 11th century. Its cemetery was located near the Buda end of the present Pest-Buda tunnel under the River Danube. In 1348 and 1360 the Jews were expelled from Buda but returned after a short interval. As Buda became the royal residence under King Sigismund (1387–1437), its community rose to prominence in the Jewish life of the country. Its leaders were entrusted by the king with the representation of Hungarian Jewry, and the position of Jewish prefect was held by members of the Buda *Mendel family, who sometimes took part in royal ceremonies. After 1490 the Jews of Buda were subjected to continual persecution, their property was frequently confiscated and the debts owing them were often unpaid. Following the Ottoman victory over the Hungarians at Mohacs in 1526 many Jews from Buda fled abroad or to the western part of Hungary, while the remainder were deported to Ottoman territory. Shortly afterward, in 1528, Jews were again living in the Jewish quarter of Buda. A census of 1547 showed 75 Jewish residents in Buda and 25 newcomers. During the 150 years of Ottoman rule the Jews were severely taxed, but their numbers continued to increase. A conscription roster of 1580 numbered 88 Jewish families, comprising about 800 persons, including three rabbis, inhabiting 64 houses. They engaged in commerce and finance, and sometime rose to hold official posts in the treasury as inspectors or tax collectors. Jews specialized in the manufacture of decorative braids for uniforms; the family physician of the pasha of Buda was a Jew (c. 1550). In 1660 the community numbered approximately 1,000 and was the largest and wealthiest in Hungary. The ruinous fighting between the Ottoman and Austrian imperial forces put an end to this prosperity. The Jews sided with the Turks; when in 1686 Buda was taken by Austria only 500 Jews survived the siege, the Jewish quarter was pillaged, and the Torah scrolls were burnt.

Jewish residence in Buda was prohibited until 1689, when a few Jews began to resettle there and had a prayer room by 1690. In 1703, when Buda was constituted a free royal city, a struggle began between the Jews of Buda, who preferred to remain under royal protection, and the citizenry which made efforts to extend its jurisdiction to the Jewry. This culminated in a decree ordering the expulsion of the Jews in 1712. In 1715 Charles III ordered the burghers to end the continual dis-

turbances and a more tranquil period ensued. A few Jewish families were exempted by the emperor from certain restrictions. The exemptions led to an attack and plunder of Jewish homes in the fall of 1720. Charles, however, again gave them protection. According to a 1735 census, the community numbered 35 families (156 persons), the majority merchants; five families owned open stalls. The repeated accusations of the citizenry bore fruit, however, under *Maria Theresa who in June 1746 issued a decree ordering the expulsion of the Jews from Buda. The obstinate resistance of the burghers was broken by *Joseph II, and in 1783 Jewish residence was again permitted. The antagonism of the guilds recrudesced during the Hungarian revolution of 1848 when renewed demands were made for the Jews' expulsion.

COMMUNAL LIFE. Organized communal life in Buda dates to the 13th century. Under King Matthias Corvinus (1458–90) the head of this community had jurisdiction over the Jews of the entire country. During the Ottoman era, Buda Jewry had Sephardi and Ashkenazi congregations. Two synagogues are known to have existed in 1647.

RABBIS. The first rabbi whose name is recorded was *Akiva b. Menahem ha-Kohen (15th century) known by the honorific of *nasi*. In the second half of the 17th century difficulties in finding appropriate candidates for the rabbinate of Buda compelled the community to employ as rabbis scholars passing through Hungary on pilgrimage to Erez Israel. *Ephraim b. Jacob ha-Kohen, a refugee from Vilna, became rabbi of Buda in 1660. About this time the movement of *Shabbetai Zevi gained a large following in Buda; a number of rabbis, among them Ephraim's son-in-law Jacob Sak, supported the messianic movement. The Austrian capture of Buda is recorded in the *Megillat Ofen* of Isaac b. Zalman *Schulhof. Jacob's son was the celebrated Zevi Hirsch *Ashkenazi (Hakham Zevi). Among rabbis of the Haskalah period was Moses Kunitzer. Prominent Jews of Buda in the 19th and 20th centuries include the orator and poet Arnold Kiss (d. 1940), and the scholar and educator Rabbi Bertalan Edelstein (d. 1934).

SYNAGOGUES. The synagogue of the Jewish community of Buda fort is mentioned in the Buda chronicle of 1307 as having stood beside the Jews' Gate. It remained in existence until the expulsion of the Jews from Buda in 1360. The second synagogue, built in 1461 in the new Jews' Street, survived until the recapture of Buda. It is mentioned and reproduced in 17th-century engravings. A Sephardi house of worship has been revealed, dating back to the Ottoman era. Subsequently the Jews of Buda could only hold prayer meetings in rented rooms. In 1866 a temple was built in Moorish style in Öntöház Street. In the heyday of assimilationism (from the mid-19th century), especially after the administrative union of Buda and Pest, the Pest community repeatedly tried to impose its hegemony on that of Buda, which, however, succeeded in safeguarding its unique historical character. The Buda community opened an elementary school in 1830.

Obuda (Hung. *Óbuda*, Ger. *Alt-Ofen*, Heb. אורבן ישן)

“Old Buda,” a village and later part of Buda, had a Jewish community in the 15th century which disappeared after the Ottoman conquest in 1526. It was rehabilitated from 1712 on, when the Jews lived under the protection of the counts Zichy, who granted them a charter in 1746, and to whom they paid an annual protection tax. The 1727 census records 24 Jewish families living in Obuda, and the 1737 annual conscription roster, 43. By 1752 there were 59 families, and the community employed two rabbis and three teachers; by 1784 there were 109 families with four teachers. The 1803 conscription list records 527 families. An elementary school was opened in 1784, the first secular Jewish school in the country. Moses *Muenz was rabbi in Obuda from 1781 to 1831. The Jewish linen weavers of Obuda won a reputation for the town; the Goldberger factory had an international reputation. After the revolution of 1848–49 a large contribution was levied on the Obuda community. The old synagogue of Obuda was demolished in 1817 and an imposing new one, still in existence, was consecrated in 1820. Julius *Wellesz was rabbi of Obuda from 1910 to 1915.

Pest

Jews are first mentioned in Pest in 1406; in 1504 they owned houses and land. Records again mention Jews living in Pest from the middle of the 16th century, and a cemetery is known to have existed by the end of the 17th. After the Austrian conquest in 1686, Jewish residence within the city was prohibited. In the middle of the 18th century Jews were allowed to attend the country-wide weekly markets held in Pest, but the only Jews permitted to stay in the city for a specified time were *Marganten* (“transients”; see *Familiants laws). In 1783 Joseph II abrogated the municipal charter with its exclusion privileges and permitted Jews to resettle in Pest. The first “tolerated” Jew received permission to settle within the city walls in 1786 in return for paying a “toleration tax” to the local governorate. Article 38 of the *De Judaeis* law passed in 1790 ratified the legal position of the Jews established under Joseph II. In Pest, however, the law was understood to apply only to Jews living there before 1790, hence new arrivals were not permitted to settle permanently. An attempt was even made to expel the married children of the “tolerated” Jews. In 1833 there were 1,346 Jewish families in Pest. The restrictions on Jewish residence were abrogated by article 29 of the annual national assembly of 1840. Jews had the right to establish factories, and engage in trade and commerce as well as to acquire property. Pest Jewry took the lead in pressing for the abolition of the tolerance tax, and in 1846 the “chamber dues” were abolished. On the outbreak of the Hungarian revolution of 1848, Jews volunteered for civil defense, but the German citizens of Pest objected to their enrollment. On April 19 a mob which attacked the Jewish quarter was repelled by the military. Nevertheless many Jewish youths enlisted in the revolutionary army, and the Jews of Pest gave large financial contributions to the revolutionary cause. After the suppression of the revolt, a huge contribution was levied on the Pest community, and to help

the Obuda and Pest communities a collection was made by Hungarian Jewry of 1,200,000 forints. The Pest community played a leading role in the struggle for *emancipation in Hungary. The half century preceding World War I was a period of prosperity and cultural achievement for Pest Jewry. Their numbers increased, and they played a prominent role in the capital's economic development. Max *Nordau and Theodor *Herzl were born there during this period. With the growth of Nazism before World War II Jewish communal and economic life was again restricted.

COMMUNAL LIFE. Active community life is not recorded in Pest until the first half of the 18th century. The first synagogue was opened in 1787, and in 1788 the community received a burial site from the municipality; Moses Muenz of Obuda officiated as rabbi. The first rabbi of Pest (1793), was Benjamin Ze'ev (Wolf) *Boskowitz. Other noted rabbis of the community were Loew *Schwab, S.L. Brill, W.A. Meisel, S. *Kohn, M. *Kayserling, S. *Hevesi, and J. *Fischer. The new constitution for the religious community, approved by the local authorities, came into effect in 1833. The noted Orientalist I. *Goldzicher served as secretary of the Neolog community of Pest from 1874 to 1904. A separate Orthodox community was established in Pest in 1871. Koppel *Reich became its rabbi in 1886, and a member of the Hungarian upper house in 1926.

See *Orthodoxy, *Reform

SYNAGOGUES. The Jews of Pest rented a place for worship in the Orczy building in 1796, whose congregation observed the conservative ritual; a more progressive temple existed in the same building, known as the "Kultustempel." In 1859 a double-turreted Moorish-style temple was built in Dohány Street. Construction of the octagonal temple in Rombach Street was completed in 1872. In 1913 the synagogue of the Orthodox congregation was erected in Kazinczy Street.

EDUCATIONAL INSTITUTIONS. The first Jewish school in Pest was established in 1814 by Israel *Wahrmann. A Jewish girls' school was opened in the fall of 1852 and in 1859 a Jewish teachers' training college was founded. After the attainment of emancipation, a number of Jewish schools closed down, including those in Buda and Obuda. The Orthodox congregation of Pest opened its school for boys in 1873. The Rabbinical Seminary and its secondary school (gymnasium), opened in 1877, helped to make Pest the center of Jewish learning. The Pest community established a comprehensive secondary school in 1891. Following the widespread antisemitism aroused by the *Tiszaeszlar blood libel case in 1882, the idea of establishing a Jewish secondary school (gymnasium) found increasing support, and in 1892 Antal Freystaedtler donated one million forints for this project. The school was opened in the fall of 1919 as the Pest Jewish Boys' and Girls' Gymnasium. Because of the existing discriminatory restrictions, the Pest community also opened an engineering and technical college and a

girls' technical college. The rabbinical seminary and a secondary school continue to function.

WELFARE INSTITUTIONS. Welfare and communal institutions of the Pest community included a hospital, opened in 1841; the hospital of the Orthodox congregation, opened in 1920; the Hungarian Jewish Crafts and Agricultural Union (MIKEFE), established in 1842; the Pest Jewish Women's Club, founded in 1868, which established an orphanage for girls in 1867; an orphanage for boys, established in 1869; the deaf and dumb institute, founded in 1876; and the blind institute, founded by Ignác Wechseltmann and his wife in 1908. In 1950 the Orthodox community and the communities of Pest, Buda, and Obuda were unified by government order, forming the Budapest Jewish community existing under conditions similar to those prevailing in other communities in Soviet satellite states.

The Jewish population of Budapest, 1813–2004

Year	Numbers	Percentages
1813	5,525	0.78
1830	8,750	0.81
1848	18,265	13.80
1869	44,890	16.60
1880	70,227	19.70
1910	203,687	23.10
1920	215,512	23.20
1925	207,563	21.60
1935	201,069	18.90
1941	184,453	15.80
1946	96,000	9.50
1967	50,000	3.90
2004	80,000	0.07

POPULATION. The annual registers of 1735–38, the first to show the number of Jewish families residing in the area which forms Budapest today, recorded 2,531 heads of families of whom 1,139 engaged in commerce. The Jewish population increased with the development of a capitalist economy and the growth of Budapest into a metropolis and reached its highest level in the period preceding and immediately following World War I. Subsequently it declined sharply due to the lowered birthrate, an increasing number of conversions to Christianity, and emigration during the counterrevolution and the Horthy regime. There were 44,890 Jews living in Budapest in 1869, 102,377 in 1890, 203,687 in 1910, 215,512 in 1920, and 204,371 in 1930. (See Table: Jewish Population of Budapest.)

[Jeno Zsoldos]

Holocaust Period

According to the census of 1941, the last before the Holocaust, Budapest had a Jewish population of 184,453, representing 15.83% of the total of 1,164,963. In addition, the city also had some 62,000 converts or Christians who were identified as Jews under the racial laws then in effect. As a result of the anti-

Jewish measures taken by the various Hungarian governments between 1938 and the German occupation on March 19, 1944, approximately 15,350 Jews of Budapest perished. Most among these victims were labor servicemen; many others were murdered near Kamenets-Podolski in late August 1941 following their deportation for failure to prove their Hungarian citizenship. The Jews of the capital were subjected to severe social and economic restrictions in the wake of the many anti-Jewish laws. Many of these, including the first two major anti-Jewish laws of 1938 and 1939, were passed with the support of the Christian church leaders. Thousand of men of military age and older were drafted into labor service companies, many of which were deployed in the Ukraine.

The status of the Jews turned for the worse after the German occupation, which took them and their Christian supporters by surprise. On the day of the occupation, the Germans arrested a large number of hostages – prominent anti-Nazi Hungarians as well as influential Jews – on the basis of lists prepared in advance by the Gestapo. They also arrested a large number of ordinary Jews who happened to be in and around railroad stations and boat terminals. Most of these Jews were first interned in the facilities of the National Rabbinical Seminary, then transferred to the internment camps at Kistarcsa and Topolya, from where they were among the first to be deported to Auschwitz in late April. Supreme control over Jewish affairs was exercised by the Eichmann-*Sonderkommando*. The SS was able to implement the Final Solution program at lightning speed primarily because it had received the support of the newly established Döme Sztójay government that placed the instruments of state power at its disposal. The Sztójay government, constitutionally appointed by Miklós Horthy, Hungary's head of state, played a determining role in the planning and implementation of the Final Solution. Within the government, the Ministry of the Interior headed by Andor Jaross and his two undersecretaries of state, László Endre and László Baký, coordinated its anti-Jewish activities with the *Sonderkommando*. On March 20, the leaders of the Jews of Budapest were ordered to establish a Central Jewish Council with exclusive jurisdiction in all matters affecting the Jews of Hungary. The Council was organized under the chairmanship of Samu Stern, the head of the Jewish community of Pest, and included representatives of the major communal organizations: Ernő Boda, Ernő Pető, and Wilhelm Károly, representing the Neolog community of Pest; Samu Csobádi, representing the Neolog community of Buda; Samu Kahan-Frankl and Fülöp Freudiger, representing the Orthodox community; and Nison Hahan, representing the Zionists. As elsewhere in Nazi-dominated Europe the Council of Budapest, while doing its best to serve the community, was exploited by the Nazis as an instrument for the implementation of their sinister designs. The Council's Nazi-censored weekly, the *A Magyar Zsidók Lapja* (Journal of Hungarian Jews), served as a major vehicle in the Nazis' anti-Jewish drive, distracting the Jews from the danger awaiting them.

Within a few days after the occupation, the Jews of Budapest, like those of Hungary as a whole, were subjected to a large number of anti-Jewish measures calculated to bring about their isolation and eventual destruction. Starting on April 5, the Jews were compelled to wear a yellow star on their outer garments. Unlike the Jews of the countryside, however, the Jews of Budapest escaped being placed into a ghetto – at least until early December 1944. The authorities decided against establishing a territorially contiguous ghetto for fear that the Allies might then bomb the other parts of the capital. The Jews' freedom of movement was severely restricted, especially in the wake of the first major bombing that took place on April 2. At first, the Jews were ordered to vacate hundreds of apartments for Christian bombing victims. They were later concentrated in buildings that were identified by a yellow star. The so-called yellow star buildings were selected on the basis of a housing inventory made in May as ordered by Endre earlier in the month. According to that inventory, 2,681 of the close to 36,000 residential buildings in the capital were originally designated as yellow star houses. As a result of complaints by Christians, the yellow star designation was subsequently removed from 700 to 800 buildings, drastically reducing the living space assigned to Jews. In accordance with the June 16 order issued by Mayor Ákos Doroghi Farkas, the relocation and concentration of the Jews of Budapest in the designated yellow star-marked buildings was completed by June 24. Overall responsibility for the resettlement of the Jews was exercised by Rezső Müller, the head of the Housing Department of the Jewish Council, acting in conjunction with József Szentmiklóssy, head of the Social Policies Section of the Municipality of Budapest. At first the Jews were allowed to leave the buildings only between 2:00 and 5:00 P.M., a restriction that was later eased to 11:00 A.M. to 5:00 P.M. György Auer and other leaders of the Association of the Christian Jews of Hungary campaigned for the exemption of the 40,000 to 50,000 converts from these restrictions.

Under the Nazis' original plan, the Jews of Budapest were to be deported to Auschwitz following the completion of the anti-Jewish drive in the countryside. The plan failed because Horthy halted the deportations on July 7 – a decision he took largely in response to pressure from abroad and especially the realization that the Axis would lose the war. The Nazis, nevertheless, managed to continue their deportation program until July 9, liquidating the Jewish communities in the cities surrounding the capital, including those of Kispest, Újpest, Sashalom, and Szentendre. While the Jews of Budapest were under the constant threat of deportation, they survived relatively intact until October 15, 1944, when the Arrow Cross Party, popularly known as the *Nyilas*, came to power with the help of the Germans.

Under the leadership of Ferenc Szálasi, the *Nyilas* unleashed a terror campaign against the Jews. Thousands of Jews, labor servicemen and others, men and women, were murdered by roaming gangs and thrown into the Danube. Tens of thou-

sands, mostly women, were concentrated in the brickyards of Óbuda, from where they were force-marched early in November to the border with the Reich, ostensibly to build fortifications for the defense of Vienna. Approximately 50,000 Jewish labor servicemen were handed over to the Germans. The anti-Jewish drive by the *Nyilas* was largely coordinated with Eichmann, who had returned to Hungary on October 17. (He was compelled to leave the country at the end of August.)

Representatives of the Vatican and the neutral powers in Budapest did their best to help the Jews by issuing various protective passes (*Schutzpässe*). Officially, some 7,800 Swiss, 4,500 Swedish, 2,500 Vatican, 698 Portuguese, and 100 Spanish *Schutzpässe* were issued. A large number of these safe-conduct passes (and a variety of Hungarian identification papers) were reproduced and distributed by the underground Zionist groups, saving countless numbers of Jewish lives. It was during the *Nyilas* era that foreign representatives, including Angelo Rotta of the Vatican, Carl Lutz of Switzerland, and Raoul Wallenberg of Sweden, engaged in heroic rescue efforts. The Jews in possession of foreign passports or protective passes were placed in specially designated “protected buildings” that came to be known as “the international ghetto.” With the approach of the Red Army, close to 70,000 Jews were placed in a closed ghetto established in District VII, close to the Dohány Street Synagogue, early in December. They lingered there under awful conditions during the Soviet siege of the capital, suffering thousands of casualties. The Nazis and their Hungarian accomplices planned to destroy the ghetto prior to their withdrawal. At the end, the ghetto together with the Pest part of the capital was liberated by the Red Army on January 17–18, 1945; the Buda part was liberated on February 13.

The losses of the Jews of Budapest were not as great proportionately as those incurred in the countryside. At the time of the German occupation, Hungary had a (racially defined) total Jewish population of 762,007, of whom 231,453 lived in Budapest. Of the total of 564,507 Jewish casualties incurred during World War II, 100,803 (17.8%) were from Budapest. Of these, 85,453 were killed during the German occupation and 15,350 before the occupation, especially in labor service. At the end of 1945, Budapest had a Jewish population of approximately 144,000, representing 75.78% of the total of about 190,000 Jews who then lived in Trianon Hungary. Of these, 119,000 had been liberated in Budapest: 69,000 in the ghetto, 25,000 in protected houses of the international ghetto, and 25,000 who had been in hiding (most with false Aryan papers). The others had moved to the capital from other parts of liberated Hungary.

Postwar Community

The Jewish community of Budapest had a strong base for revitalization. During the first phase of the post-liberation period, the survivors devoted much time to the day-to-day problem of survival and the arrangements for the return of the liberated deportees. They organized communal hostels and public kitchens, supported largely by the American Jewish Joint

Distribution Committee – the Joint. The Neolog and Orthodox Jewish communities resumed their operations soon after the end of hostilities. The Neolog community was led by Lajos Stöckler (the last head of the Central Jewish Council), who was also elected president of the National Bureau of Hungarian Jews. The Orthodox community was led by Samu Kahan-Frankl, who concurrently served as head of the Central Bureau of Orthodox Communities. The various relief and welfare organizations were unified to form the National Jewish Aid Committee under the chairmanship of Frigyes Görög, the head of the Joint in Hungary. The National Committee for the Care of Deportees was in charge of aiding the return of deportees and recording their personal accounts.

The surviving Jews regained their legal rights under the terms of the Armistice Agreement of January 20, 1945. In accordance with these terms, on March 17, the Provisional National Government repealed all the anti-Jewish laws and decrees that had been enacted during the Horthy and *Nyilas* eras. The Jewish communities’ drive for restitution and reparation ended in failure, largely because of the bankruptcy of the state after the war and the policies of the Soviet-backed Communist regime that was installed in 1948–49. The political and socioeconomic measures of the Communists induced many of the Budapest Jews to leave the city. In particular, the antisemitic drive of the Stalinist era, disguised as a struggle against Zionism and Israel, convinced approximately 20,000 to 25,000 Jews to leave the city after the Hungarian Revolution of 1956, mostly for Israel and other parts of the free world. During the Communist era, the Jews of Hungary were represented by the National Representation of Hungarian Jews, an umbrella organization led by Endre Sós and later Géza Seifert. It operated under the guidance of the Department of Religious Affairs, an agency of the Ministry of the Interior.

Following the systemic change of 1989, Jewish life was revitalized with the emergence of a number of social, cultural, educational, and Zionist organizations and institutions. The National Rabbinical Seminary, the only theological institution in the Soviet Bloc, was transformed into a Rabbinical University. Several of Budapest’s synagogues, including that on Dohány Street, were refurbished, and in 2004 the Páva Street Synagogue was transformed into a Holocaust Museum. A Jewish day school sponsored by American philanthropist Ronald S. Lauder was opened. The Jewish community of Budapest in 2004 included most of the approximately 80,000 Jews living in Hungary, constituting the largest concentration of Jews in East Central Europe. Of these, only 3,000 to 4,000 were dues-paying members of either the Neolog or Orthodox communities.

°BUDDE, KARL FERDINAND REINHARD (1850–1933), German Protestant Bible scholar and Hebraist. Budde was born at Bensburg near Cologne. He taught Bible at the universities of Bonn (1873–88), Strasbourg (1889–99), and Marburg (from 1900). With B. Duhm, B. Stade, R. Smend, and Emil Kautzsch, Budde was an ardent supporter of historical criticism as formulated by Eduard Reuss, Abraham Kuenen, Karl Heinrich Graf, and, above all others, Julius Wellhausen, his intimate friend. His detailed study *Die biblische Urgeschichte* (1883) is an attempt to recover the original sources of Genesis 1–11, to clarify their relation to each other, and to determine their origin. During the years 1888–89 Budde delivered a series of lectures at Harvard University on *Religion of Israel to the Exile* (1899), in which he championed the *Kenite hypothesis of the origins of YHWH worship. Throughout his life he was deeply interested in the history of Israel's literature and its literary characteristics. The former received expression in his work *Geschichte der althebraeischen Litteratur* (1906, 1909²); the latter, in a series of articles on Hebrew metrics (in *ZAW* 1882, 1883, 1892) and in his discussion of Hebrew poetry in J. Hastings (ed.), *A Dictionary of the Bible* (vol. 4, 1902). Among his greatest achievements was his treatment of the *kinah*, or lamentation meter.

With the advance of critical studies, the need arose for a new series of exegetical commentaries on the Bible, and Budde joined with many other scholars in the publication of the *Goettinger Handkommentar zum Alten Testament*. In addition to those mentioned above, the following are his most important works: *Die Buecher Richter und Samuel, ihre Quellen und ihr Aufbau* (1890); *The Books of Samuel, Critical Edition of the Hebrew Text* (1894); *Das Buch Hiob* (1896, 19132); *Die sogenannten Ebed-Jahwe-Lieder und die Bedeutung des Knechtes Jahwes in Jesaja 40–55, Ein Minoritaetsvotum* (1900); *Der Kanon des Alten Testaments* (1900); and *Die Buecher Samuel* (1902). Budde also translated into German a number of works of Abraham Kuenen, edited several editions of W.A. Hollen-

berg's *Hebraeisches Schulbuch*, and coedited *Eduard Reuss: Briefwechsel mit seinem Schueler und Freunde Karl Heinrich Graf* (1904).

[James Muilenburg]

BUDKO, JOSEPH (1888–1940), painter and graphic artist. Budko, who was born in Plonsk, received a traditional Jewish education. In 1902 he went to study at the art school in Vilna. In 1910 Budko moved to Berlin where he learned metal-chasing and also studied at the Museum of Arts and Crafts. In Berlin Budko met Hermann *Struck who taught him the technique of etching. Eventually he also took up woodcutting, lithography, and painting. In 1933 Budko settled in Palestine. In 1935 he became the director of the reopened New *Bezalel school of arts and crafts. Budko stressed the teaching of graphic design and utilized the ornamental value of the Hebrew letters. Budko's subject matter was determined by the Jewish environment in which he grew up and to which he returned in Jerusalem. Budko developed a style that combined the personal with the Jewish, being a synthesis of Jewish tradition and modern art. He also revived the spirit of Jewish book illustration, adapting it to modern design. Among the books he illustrated are the *Haggadah*, and he designed many bookplates.

[Elisheva Cohen]

°BUDNY (Budnaeus), SZYMON (Simon; c. 1530–1593), Polish sectarian theologian. During the struggles of the Reformation in Poland-Lithuania he led the Lithuanian anti-Trinitarian ("Arian") wing of the Polish reformist camp which took a radical stand in questions of theology though a conservative one in its acceptance of the social order. Budny translated the Bible into Polish, using the Hebrew text. An original thinker, he was well known to and in contact with Jewish scholars. In the anti-Trinitarian camp Budny represented a trend of opinion, mainly prevalent in Lithuania where he conducted his theological activity, which while stressing the human nature of Jesus opposed many of the other anti-Trinitarians in their advocacy of pacifism and rejection of all secular or ecclesiastical authority. Budny was much concerned with upholding the purity of the biblical canon and preserving it in translation. His social views stemmed from his appreciation of Mosaic law and biblical Jewish society, which he regarded as the paradigms for the ideal Christian society. In support of his appreciation of authority he argued in his *Ourzedzie miecza uzywajacem* (edited in 1932 under this title; first published as *Obrona...* in 1583) that "the Lord Jesus Christ is not a law-giver, but he is the interpreter of Divine Law... You have to accept that the Divine Law recorded by Moses is excellent in itself. The most that you may say perhaps is that it is not perfect from this aspect, that we cannot fulfill it in its entirety..."

You well know what Jesus says in Matthew chapter 5 – that it is not against Moses, or his Law but against the Jewish clergy and the Pharisees (who set up themselves as exponents and were therefore so-called) that the sayings and teachings of Christ are directed... He opposes and rejects their commentaries, but not the words of Divine Law... Therefore, as the Divine Law is not destroyed and even now exists how can they [i.e., the pacifist Arians] say now there is no need of an office carrying the sword in the Divine Church... With every word they usually call out: 'What have we to do with Moses? What is the Old Testament to us? For Christ gave us another law. According to the one it was permitted to kill. According to the second it is even forbidden to be angry.' Now it has been proved that these are monkish legends, inventions and errors – to invent two laws" (ed. by St. Kot (1932), 102–3). In another connection he quotes the argument of his opponents: "You do not quote anything from the New Testament, only everything from the Old Testament" (*ibid.*, p. 53). Budny's contemporary, Isaac b. Abraham *Troki, who was well acquainted with Budny's writings and Bible translations, remarked the Jewish significance of this passage. In his *Hizzuk Emunah* (Breslau, 1873, 129), Isaac refers to Budny's "book called *Obrona*" summing up Budny's opinion that Jesus was a commentator on the Law only, and stating, "and he [Budny] adduced there lengthy evidence from the prophets and rational arguments as you will see on page 39 and page 41 and also in other places in this book." While Isaac praises Budny as "the scholar, the latest of Christian translators" (p. 50), elsewhere he refers to him as "our opponent" (p. 65). Altogether there are 24 quotations from Budny in *Hizzuk Emunah*.

In his translation of the New Testament, Budny stressed the importance of the knowledge of Hebrew for a proper understanding of the Gospels, "For as the holy Matthew wrote in Hebrew... then he could not quote these testimonies... except as he read them in the Hebrew books" (H. Merczyng, *Szymon Budny jaro krytyk tekstów biblijnych* (1913), 141). In his other notes to the New Testament Budny bases arguments on proof from the Hebrew spirit and semantics, and accepts many Jewish interpretations. The extent of Budny's Judaizing was limited by his devotion to Jesus. He expressed great indignation at the Jewish custom of pronouncing Christian Hebrew names in a way that tarnished them (*ibid.*).

Budny had a forceful and stirring impact on his contemporaries, but his influence was not permanent. His relative rationalism and broad general culture, as well as his knowledge of Hebrew and deep appreciation of the Hebrew Bible, combine to make him an outstanding figure in the history of reciprocal contacts and influences between Jews and Poles and Judaism and Christian opinion in Poland-Lithuania of the 16th century.

[Haim Hillel Ben-Sasson]

BUDYNĚ NAD OHŘÍ (Ger. **Budin**), town in Bohemia (Czech Republic). Jews are first mentioned there in the 13th century. A Hebrew inscription in a flour mill records that in 1535 the Czech traveler Jan of Hazmburk leased it to a Jew to obtain money for his journey to Palestine. A synagogue was built in Budyně in 1631 (burnt down in 1759 and rebuilt in 1821). The community numbered 49 persons (11 families) in 1638. The old cemetery was closed under *Joseph II and a new one consecrated in 1798. In 1800 the community adopted a yellow flag for its insignia, similar to the guild flags. In 1892 it adopted Czech as the official language and closed down its German-language school. There were 176 persons living in 11 localities under the Budyně communal jurisdiction in 1902, and 50 Jews living in Budyně in 1930. The community was liquidated by the Nazis in 1942.

[Oskar K. Rabinowicz]

BUECHLER, ADOLF (1867–1939), theologian and historian. Buechler received his early training in the Jewish seminaries of Budapest and Breslau and was awarded his doctorate in Leipzig in 1890. His earliest studies were in the fields of Hebrew philosophy and masorah. He was ordained rabbi in Budapest in 1892 and held a rabbinic post in that same city for a short time. He spent some time doing research under the guidance of his renowned uncle, Adolf *Neubauer, after which he was invited to work as an instructor at the Israelitisch-Theologische Lehranstalt in Vienna. In 1905 he was invited to become chief assistant to Michael Friedlaender, the principal of Jews' College, London, and in 1907 succeeded the latter as principal.

Buechler's main contribution to Jewish learning concerned the history of the Second Temple period, especially the latter part of that era. He wrote the important work on the Great Sanhedrin, *Das grosse Synhedrion in Jerusalem und das grosse Beth-din in der Quaderkammer des jerusalemischen Tempels* (1902). This work contained his theory of the two Sanhedrins. His articles appeared in learned periodicals in several languages. He made a very important contribution to the history of the synagogue during his stay in Oxford; it was published in the *Jewish Quarterly Review* (vols. 5, 1893, and 6, 1894), under the title "The Reading of the Law and Prophets in a Triennial Cycle." In these essays he displayed an enormous amount of erudition and initiative. His main theological work appears in *Studies in Sin and Atonement in the Rabbinic Literature of the First Century* (1928). Part of his work included a probing criticism of E. *Schuerer based on rabbinic sources, emphasizing the religious element of Pharisaism.

The greater part of Buechler's active life was spent at Jews' College. As principal, he was a very exacting man. It was admitted even by his admirers that he did not understand the Anglo-Jewish community any more than the community understood him. He was never completely reconciled to the fact that at Jews' College men were being prepared for the min-

istry of an Anglo-Jewish community, and he overburdened the students with a type of learning in *Juedische Wissenschaft* which so far as that community was concerned was superfluous for its clergy. After a great deal of dissatisfaction on the part of many leaders with the affairs of the college, a committee was established to revise the curriculum (1938). Buechler died suddenly during the critical stage of these deliberations. Buechler twice criticized the chief rabbinate at public events at Jews' College. He acidly criticized Chief Rabbi Herman Adler in 1911, disagreeing with the evidence given by the latter at the Divorce Law Commission set up by Parliament. In 1913 he attacked the chief rabbi's court for having granted the rabbinical diploma to a student who, he claimed, should have been examined by the college.

Buechler always maintained a great interest in raising the standard of Jewish education. He failed nevertheless in his attempt to establish a department of pedagogics at Jews' College.

Apart from the works mentioned above, some of his more important monographs are *Types of Jewish Palestinian Piety from 70 B.C.E. to 70 C.E.* (1968²), *The Political and Social Leaders of the Jewish Community of Sepphoris in the Second and Third Centuries* (1909), and *Der galilaeische Am Ha'ares des zweiten Jahrhunderts* (1906).

[Alexander Tobiasz]

BUECHLER, ALEXANDER (1870–1944), Hungarian historian. From 1897 he served as rabbi at Keszthely and also lectured on Hungarian Jewish history at the Budapest university. In 1944 he was deported to the Auschwitz concentration camp, where he died.

Buechler wrote *A zsidók története Budapesten* ("History of Budapest Jewry," 1901). On the basis of archival material he prepared material for a continuation of S. Kohn's *A zsidók története Magyarországon* ("History of the Jews in Hungary," 1884), which covered events to 1526; however, only a few monographs appeared (*Magyar Zsidó Szemle*, 10 (1893), 7–15; A. Wertheimer, et al., *Emlékkönyv... Dr. Mahler Ede* (1937), 406–14; A. Scheiber (ed.), *Jubilee Volume... B. Heller* (1941), 139–46). Buechler also published letters of such scholars as S.J. *Rapoport in *Shai la-Moreh* (1895), which he edited.

[Alexander Scheiber]

BUEDINGER, MAX (1828–1902), historian. Buedinger was born in Cassel, Germany, the son of a Hebraist and teacher. After completing his studies in Marburg and Berlin – his teachers included the great German historians Leopold von Ranke and Heinrich von Sybel – Buedinger was unable to obtain an academic appointment because of his Jewishness. He tutored

private pupils in Vienna (1857–61), traveled widely, and joined the circle of young Austrian historians. In 1861 he obtained a professorship of history at Zurich University, and during his ten years' tenure of the chair raised Swiss historiography to its highest level. After his conversion to Protestantism, he was appointed professor of general history at Vienna (1872–99). A universal historian, Buedinger combined excellent teaching with imaginative writing on ancient, medieval, and modern European history. Among his many books and articles was the first critical history of early Austria from unpublished primary sources (*Oesterreichische Geschichte bis zum Ausgange des 13. Jahrhunderts*, vol. 1, 1858). His major works include *Die Universalhistorie im Alterthume* (1895), *Untersuchungen zur mittlern Geschichte* (2 vols., 1871), *Untersuchungen zur roemischen Kaisergeschichte* (3 vols., 1868–70), and *Vorlesungen ueber englische Verfassungsgeschichte* (1880). Buedinger shared Ranke's views about the role of ideas in history and the interlinking of civilizations, and combined romantic ideas with historical criticism. An essay on Egyptian influences in Jewish ritual which he published in 1871–73 reflected contemporary scholarly fashion, but was marred by fallacies.

°BUEHLER, JOSEF (1904–1948), Nazi official. After studying law, Buehler was articled to Hans *Frank in Munich in 1930, joined the Nazi Party in 1933, and thereafter was Frank's deputy in the various posts he held. Frank, appointed governor-general of Poland, made Buehler a head of government with the title Staatssekretär (from 1939 to January 18, 1945). On January 20, 1942, Buehler represented the General Gouvernement of Poland at the *Wannsee Conference. He duly represented the problems of his domain of responsibility, explaining the overcrowding of the Polish ghettos and the potential problems for disease and epidemics. Thus, he pressed that the "Final Solution," which at that point was to come to mean the systematic deportation of Jews to death camps in the occupied territory begin with Poland where the problem was most urgent and transportation was less of a problem. Jews constituted a danger there as "carriers of disease." He argued that their black market activities were threatening the economy and that most were in any case "unfit to work." However, the liquidation should be carried out "without upsetting the local population." Buehler managed to leave Cracow before the entry of the Soviet Army, but was arrested in April 1946. He appeared as a defense witness for Frank at the International Military Tribunal at Nuremberg. He was later extradited to Poland and tried there by the People's High Court, charged with planning, organizing, and executing mass robbery and murder of the population in the General Gouvernement. The indictment mentioned the persecution and liquidation of Jews in the territory he administered. The verdict declared that Buehler caused the deaths of an incalculable number of

Jews. He was sentenced to death and hanged in Cracow on August 21, 1948.

[Nachman Blumental]

BUENO (Bueno de Mesquita), family of Marrano origin. JOSEPH BUENO (d. 1641), physician and poet, graduated in medicine at Bordeaux, where he used the alias Ruy Gómez Frontera. In Amsterdam, where he openly professed Judaism, he became noted for his medical skill; in 1625, he attended Prince Maurice of Orange on his deathbed. Bueno, who was on intimate terms with *Manasseh Ben Israel, contributed a laudatory preface to his *Conciliador* and a prefatory sonnet to the *De la Resurrección de los Muertos*. His son EPHRAIM HEZEKIAH (alias Martin Alvarez; d. 1665) was also a physician, graduating in medicine in Bordeaux in 1642. He edited and subsidized many works; he translated into Spanish and published a good part of the liturgy as well as the Book of Psalms, helped to edit the Shulḥan Arukh of Joseph Caro, and wrote Spanish poetry. In 1656, with Abraham Pereira, he founded the Or Torah academy. Bueno's portrait was painted by Rembrandt as *The Jewish Doctor*.

[Kenneth R. Scholberg]

The BUENO DE MESQUITA family later became distinguished and its members are found in Amsterdam, London, and America. DAVID BUENO DE MESQUITA (17th century) was resident in Holland for the margrave of Brandenburg, and was moreover entrusted with various diplomatic missions by the sultan of Morocco. In 1684 he served as agent general of customs of the duchy of Brunswick-Lüneburg (Miguel de Barrios, *Aumento de Israel*, p. 172). In that same year “Enigma del principio” was presented in his honor when he was ḥatan on Simḥat Torah. JACOB (17th century) escaped from the Inquisition and settled in Salé, Morocco, where, in collaboration with his relatives in Amsterdam and London, he established an important business firm before 1670. He was one of those who expected the Messiah to appear in 1672 in Holland, according to an anecdote reported by G. Mouette (*Relations de la captivité*, Paris, 1683). He was one of the wealthy members of the synagogue in Amsterdam, where he had a very prominent seat. ISAAC and JOSEPH were appointed by the Dutch government in 1682 to negotiate the peace treaty with Morocco that was signed in 1683, as a result of the collaboration of Joseph Maimoran and Joseph Toledano, both Moroccan subjects, and the rich Amsterdam merchants Jacob de Oliveira, Daniel de Mesquita, and Manoel de Belmonte. The famous Jacob *Sasportas also had a hand in the affair, which was of interest primarily to the Jewish Dutch-Moroccan big business interests. ISAAC was sent as the Moroccan ambassador to The Hague in 1729. The monument erected to BENJAMIN BUENO DE *MESQUITA, who died in New York in 1683, is one of the oldest in the city. DAVID BUENO DE MESQUITA (1878–1954)

was assistant ḥazzan and later ḥazzan (1904) of the Spanish and Portuguese congregation of London (1901–45).

BUENO, ISAAC ABRAHAM (17th century), Jerusalem rabbi. Bueno studied under Isaac Zabaḥ, an eminent Jerusalem scholar. His signature appears before that of Moses ibn *Ḥabib on an attestation of 1627. In 1680, he was in Leghorn, where he gave his approval to a halakhic decision of Jacob *Sasportas (*Oholei Ya'akov* (1737), no. 50), and Sasportas corresponded with him in connection with his bitter dispute with the communal leaders of Leghorn. Bueno wrote *Shullḥan Melakhim* (in manuscript) on *Orah Ḥayyim* and *Yoreh De'ah*, in which he incorporated the customs of Jerusalem as well as a selection from the novellae of Jacob *Castro. The work was used to a considerable extent by Jerusalem scholars in succeeding generations, among them Naḥman Nathan *Colonel, in his *Zekher Natan*.

BUENOS AIRES, (1) the most important province in the Argentinian republic in terms of economic wealth (cattle raising, wheat farming, and industry) and concentration of population (13,827,203 out of a total population of 36,60,130 in 2001); (2) federal capital of the Republic of Argentina, general population 2,768,772 (2001). The Jewish population of the capital and its suburbs (“Greater Buenos Aires”) was estimated at 180,000–200,000 in 2004.

The Province

The first colony of the *Jewish Colonization Association (ICA) – Mauricio (1891) – was established in Buenos Aires and was followed by the Baron Hirsch colony (1904–05) a few years later. In the early 21st century there were many small Jewish communities in the province, the largest being La Plata, Bahia Blanca, Mar del Plata, and Rivera, all affiliated with the Va'ad ha-Kehillot.

The City

During the colonial period a few *Crypto Jews settled in Buenos Aires, mainly during the 16th and 17th centuries. There is evidence that the number of “Portuguese” (as many judaizers were identified at the time) of Jewish descent rose during the 18th century as Buenos Aires developed into an important administrative and commercial port city. However, there is no trace of Jews living openly as such during the time of the revolt

against Spanish rule (1810), or at the time of Argentina's declaration of independence (1816). During the middle decades of the 19th century Jews arrived in small number from two areas, Western Europe and Morocco. The earliest public Jewish event was an officially recognized religious marriage ceremony in 1860. The first *minyán* took place during Yom Kippur of 1862, which led to the founding of the first Jewish organization, the Congregación Israelita de la República Argentina (CIRA). New arrivals from North Africa and Gibraltar led to the founding of the Congregación Israelita Latina (1891). The year 1889 saw the arrival in the port of Buenos Aires of a group of 824 Jews from Russia, most later proceeding to the Province of Santa Fe. From then on a steady migration movement from Eastern Europe ensued, helped by the open door policy in Argentina early on, and by the publicity given to Argentina in the European Jewish press as the agricultural settlements of the ICA were established and developed. Thus Argentina, especially its capital city of Buenos Aires, turned into a major target of immigration for East European Jews.

In 1909 there were approximately 25,000–30,000 Jews in Buenos Aires. In spite of some manifestations of antisemitism, especially during the repression against workers' strikes during the early years of the 20th century, and the "red-scare" pogrom – known in Argentina as *La Semana Trágica* – of January 1919, whose main targets were Russian Jews, immigration continued unabated, interrupted only during World War I.

After the war it was further enhanced by the quotas established in the United States starting in the early 1920s. By 1936 there were over 120,000 Jews in the capital, constituting over 5% of the total population. After 1933 a relatively large number of Jews from Central Europe established themselves in Buenos Aires. A few more did so after World War II from neighboring countries in South America. However, the Argentinian government closed Jewish immigration after the war, and only a small number of Jews entered after that. The city's Jewish population increased naturally and by internal migrations from provincial cities and from the ICA settlements.

Buenos Aires was a city of immigrants, cosmopolitan in character, and the Jewish population remained diversified as well. About 85% of the Jews were Ashkenazim, the vast majority from Eastern Europe and a minority from Central Europe. The other 15% were Sephardim from various areas in the Balkans, the Middle East, and North Africa. These Jews founded their new societies and communities along the lines of their places of origin. Ashkenazim were organized in *AMIA, the largest community organization in Argentina, while Sephardim organized themselves in four separate communities: Moroccan, Ladino-speaking (from Turkey and the Balkans), and two Arabic-speaking ones, the Jews from Damascus and the Jews from Aleppo. Each group had its own cemeteries, religious leadership, schools, and mutual-aid institutions. Most synagogues founded during the formative period by East Europeans and Sephardim were Orthodox, while those founded by the German Jews were either Conservative or Reform. During the 1950s CIRA became Conservative.

The founding of the Bet El community in 1963 and the Seminario Rabinico Latinoamericano in 1962 led to the spread of this movement not only in the city of Buenos Aires but also throughout Latin America.

The Reform movement established the Emanuel congregation in 1964. In addition, the Chabad movement has gained adherents, especially during the past generation. Nevertheless, Jewish identification is based more on national consciousness, and the influence of Israel and of Israeli political parties is greater.

This is made particularly evident by the important role of the OSA (Organización Sionista Argentina). Another central organization is DAIA, the representative body of Argentinian Jewry vis-à-vis the government and in the sphere of world Jewry.

Jewish education in the city was imparted along ideological and political lines as well as according to communal groupings. Most of the latter fall under the umbrella of the Va'ad ha-Hinnukh. Some of the day schools are among the best schools in the city, and at the end of the 1990s about 50% of Jewish children of primary school age and more than a third of secondary school age were reached by them. Many cultural, social, and sports organizations served local Jewry, especially Sociedad Hebraica Argentina, Hacoaj, and Maccabi ha-Ko'ah and Hebraica.

In earlier decades Buenos Aires was a major center of Yiddish journalism, to the point that in the 1940s three Yiddish dailies were published. In addition many monthly publications in Yiddish reflected the vigorous political and ideological splits in the community, ranging from Zionism of various schools to Bundism, socialism, communism, and anarchism. Buenos Aires was also a world center for the publication of books in Yiddish and a leading city for Yiddish theater. Subsequently, Spanish became the predominant and almost exclusive language for communal publications.

The Jewish population of Greater Buenos Aires peaked somewhere in the 1950s at approximately 250,000–260,000. From then on its numbers diminished, mainly because of emigration. The largest group immigrated to Israel, mostly for ideological reasons, during the military repression of 1976–83. Israel became a haven for Jews suspected of leftist or guerilla activism. Moreover, during the Argentine economic debacle that began in 2001, another current of emigration to Israel developed. In addition, Jews left Buenos Aires for other places in Latin America, the U.S., and Europe, mainly for professional and economic reasons, though, again during the repression, for political reasons as well. Thus, Buenos Aires, and Argentina as a whole, went from being a city of settlement to a city of exodus.

Jewish institutions were targeted during the 1990 by groups generally considered to be serving the cause of anti-Israel terrorism. Thus the Israeli embassy in Buenos Aires was bombed in 1992 with 29 people killed, and the premises of AMIA were razed in a major terrorist act in 1994 which killed 85 people. Ten years after the latter event the Argentine

courts had not resolved important issues, including the local connections of the perpetrators nor their true international connections.

In spite of the ups and downs of antisemitism, especially, but not only, during military repressions, Jews have played an important role in industry, commerce, the arts, literature, and journalism, and also in politics. During the administrations of Alfonsín (1984–90) and Menem (1990–2000), Jews were visible in all spheres of government.

[Victor A. Mirelman (2nd ed.)]

BUERGENTHAL, THOMAS (1934–), judge on the International Court of Justice since 2000. Born in Lubochna, Slovakia, to Menachem (Mundek) and Gerda Buergenthal (Silbergleit), he came to the United States in 1951 and was naturalized in 1957. At age nine, he was one of the youngest survivors of Auschwitz (Aug. 1944–Jan. 1945), including a death march from the camp, and Sachsenhausen (Feb. 1945–Apr. 1945). Prior to that, he had survived the *Kielce ghetto in Poland and various labor camps in the Kielce region.

In the United States Buergenthal was taken in by his aunt and uncle and despite having just two and a half years of schooling in Germany before the war and about a year of high school in New Jersey, he was accepted on a scholarship by Bethany, a Christian college in West Virginia. Buergenthal completed his courses at Bethany and went on to become a distinguished professor of law, dean of American University's School of Law, and one of the nation's leading authorities on human rights.

Buergenthal held endowed professorships in international law and human rights at various U.S. law schools. He was the Fulbright & Jaworski Professor of Law at the University of Texas (1975–80), the I.T. Cohen Professor at Emory University (1985–89), and the Lobingier Professor at the George Washington University (1989–2000). He served as dean and professor of international law of the American University's College of Law, Washington, D.C. (1980–85).

Buergenthal served as judge (1979–91), vice president (1983–85), and president (1985–87) of the Inter-American Court of Human Rights of the Organization of American States. He was nominated to the court by Costa Rica. He is the only U.S. citizen to date to be elected to that court. (The U.S., not being a party to the American Convention on Human Rights, is not in a position to nominate its citizens to the court.) Buergenthal also served as judge of the Administrative Tribunal of the Inter-American Development Bank (1989–94) and as its president (1993–94). He was an arbitrator (1997–2000) and vice chairman (1999–2000) of the

Claims Resolution Tribunal for Dormant Accounts in Switzerland.

As a member of the United Nations Truth Commission for El Salvador (1992–93), Buergenthal helped investigate the large-scale violations of human rights committed in that country during its lengthy civil war. In 1995, Buergenthal became the first U.S. citizen to be elected to the United Nations Human Rights Committee. He resigned from the committee in 1999 in order to assume the vice chairmanship of the Claims Resolution Tribunal for Dormant Accounts in Switzerland, a position he had to relinquish when he was elected to the International Court of Justice. His was the lone dissent in the 2004 ICJ vote against Israel's erection of a fence/wall separating Israeli and Palestinian territories, insisting that the context of terror and suicide bombers must be considered.

Between 1974 and 1978, Buergenthal represented the United States in various UNESCO bodies dealing with human rights issues. In that capacity he helped, *inter alia*, to draft the UNESCO Recommendation on International Education and Human Rights (1974). He was the chief U.S. representative to the UNESCO working group (1976–78) that drafted the UNESCO procedures for dealing with human rights complaints, and was one of its principal drafters. Similarly, as a member of the U.S. delegation to the 1990 Human Dimension Meeting of the Organization of Security and Cooperation in Europe, Buergenthal helped draft the “rule of law” section of the 1990 Copenhagen Declaration on the Human Dimension.

[Jeanette Friedman (2nd ed.)]

BUERGER, LEO (1879–1943), U.S. physician born in Vienna, who contributed substantially to knowledge of urology, pathology, bacteriology, and the study of vascular diseases. In 1901 he became pathologist and later surgeon at Mt. Sinai Hospital in New York City. In 1930 he was appointed professor of urological surgery in Los Angeles. Buerger gave his name to “Buerger's disease” (thromboangiitis obliterans), a non-inflammatory vascular condition of the extremities which is apt to cause severe occlusion and ultimately even loss of the limb. The disease had been known from 1878 but had not been accurately described in pathological terms until Buerger did so in 1908. It is an infrequent disease and only affects males, generally in middle age. It occurs among all races, but is more common among Jews and for some time was erroneously thought to be a disease peculiar to Jews.

[Joshua O. Leibowitz]

BUFFALO, the second largest city in New York State and the seat of Erie County. Erie County had a Jewish population in 2004 of between 15,000 and 18,000. In heavy industry, the principal support of Buffalo's economy, Jews have occupied relatively minor roles. They are chiefly involved in trade distribution and professional services. In 2004 a major hi-tech bio-informatics and health sciences campus was built in Buffalo, attracting Jewish scientists and researchers in growing num-

bers. It is expected that this, along with new economic initiatives, will help to stem the tide of the region's dwindling Jewish population. There were 13 congregations in Greater Buffalo in 2004: three Conservative, five Orthodox, one Reconstructionist, three Reform, and one Traditional. The first Jew in the area came during the War of 1812, when Captain Mordecai Myers was assigned to the Williamsville cantonment. In 1825 Mordecai Manuel *Noah launched his short-lived utopian plan for a Jewish homeland, the city of Ararat, near Buffalo. Jewish settlers came to Buffalo in the decades following 1825, a period of great growth for the city. The first Jew to arrive was L.H. Flersheim, who emigrated from Germany in 1835 and taught his native language in the public schools. Jewish merchants and manufacturers soon followed Flersheim. Buffalo's first retail clothing store was opened by Mordecai M. Noah's nephew in the 1840s. Congregation Beth El, composed of Polish and German Jews, was established in 1847. Needy German-Jewish arrivals were aided by the Jacobsohn Society, organized in 1847 on the community self-help idea. The society lasted into the 1860s and also established Buffalo's first Jewish cemetery. Differences in background created dissension in Beth El, and in 1850 the German element seceded to form Beth Zion, one of a succession of splinter groups to emerge from the original congregation. By 1864 the various Reform elements had united to form Temple Beth Zion. Eventually, Beth El became a Conservative congregation.

Most Buffalo Jews are descendants of the Eastern Europeans who came after 1880. These newcomers worked as peddlers, tailors, junkmen, and storekeepers, and with the immigration, the main location of the Jewish residential population shifted from lower Main Street to the East Side. A community house, a Jewish library, and about twelve Orthodox synagogues were set up in the area.

While the synagogues were unable to bring unity into the ghetto, the lodges and charitable organizations were a unifying force. A *hevra kaddisha* appeared early in the life of Buffalo Jewry. Montefiore Lodge of B'nai B'rith dates from 1866 and was the first of many groups which provided social companionship and mutual aid. In the 1850s the Buffalo Young Men's Hebrew Association, one of the first in the U.S., aided Jews traveling through the city and also offered cultural programs. Other institutions that were set up included an orphans' home, operated in conjunction with Rochester Jewry, a sheltering house, and Zion House, established by Beth Zion's Sisterhood to care for the newly arrived Russian Jews. Zion House was popularly known as the Jewish Community Building and formed the nucleus for the Federated Jewish Charities of Buffalo, which was established in 1903. The Federated Jewish Charities incorporated several rival societies and became the direct ancestor of the present United Jewish Federation. While Buffalo Jews early established afternoon and Sunday Hebrew schools, it was not until the late 1920s that a bureau of Jewish education was established which in 1928 established The High School of Jewish Studies, which today has over 200 students. In 1959 the Kadimah School created an elementary

and middle school. The weekly *Buffalo Jewish Review* has been published since 1917.

Following World War I the Jewish East Side began to deteriorate. Greater Jewish affluence and the increased speed of urban transportation resulted in a general exodus, first to the West Side of the city, then to the Humboldt-Utica-Ferry section of mid-Buffalo, and still later to the North Park-Hertel Avenue part of North Buffalo. The Humboldt area was served by Temple Beth David, established in 1923, and Congregation Ohel Jacob, established in 1926. In North Buffalo, Anshe Zedek, later named Ner Israel, eventually merged with Beth David which had also resettled in the northern part of the city. Temple Emanu-El, Conservative, was founded in the mid-1920s. In 1967, Emanu-El and Beth David joined as Shaarey Zedek. Then many of the former East Side congregations were now situated in the North Park area. As industries expanded in western New York, bringing general prosperity, Jews moved to Kenmore, the town of Tonawanda, Snyder, and other suburban settlements. Beth Zion (Reform), Beth Am (Reform), Sinai (Reconstructionist), Beth El (Conservative), Havurah (Reform), B'nai Shalom (Traditional), Amherst Synagogue (Orthodox), Kehillat Ohr Zion (Orthodox), Shaarey Zedek (Conservative), and Young Israel (Orthodox) are among the congregations in the suburbs.

While Beth Zion decided to rebuild its main sanctuary in the central city after it was destroyed by fire in 1961, the congregation also has a suburban branch. The population shift has continued from North Buffalo to the suburbs. In 2004 the Jewish population was higher in the suburbs than in the city.

BUFFALO (Heb. מֵרִי, *meri*; אֵב “fat cattle” or “fatling”), animal which in biblical times was sacrificed and the flesh eaten (11 Sam. 6:13; 1 Kings 1:9, 19). The Dead Sea Scroll text of Isaiah 11:6 has *yimru* instead of *meri* (“they shall pasture”) for the masoretic reading “*Meir*” and this corresponds to the Septuagint reading. The reference is to the water buffalo, the *Bubalus bubalis*, which until the end of the 1940s roamed in the Huleh marsh, where the Bedouin reared it for food. It is also reared in the Beteha Valley at the foot of the Golan Heights, the biblical Bashan, which was famed for its buffaloes (Ezek. 39:18). The buffalo originates from a wild species found in India. It is a powerful animal suitable for work and was employed in Erez Israel for plowing. In addition to the identification of the *meri* with the buffalo (see also the Bible translation of Saadia Gaon who uses the Arabic word *jamūs*), some have identified the buffalo with the *te'ò* (תֵּאוֹ) listed as a clean animal (Deut. 14:5) and which Isaiah mentions as being caught in a net (51:20). This identification is improbable, however, since in Erez Israel it was a domesticated and not a wild animal. The *te'ò* has also

been identified with the bison (*Bison bonasus*). Others have identified the buffalo with the *koi* (כוי) mentioned in the Talmud in connection with the doubt whether it belongs to the category of *behemah* (domesticated cattle) or *hayyah* (wild beast), which would involve differing regulations concerning ritual slaughter (cf. Hul. 80a, where four opinions are expressed as to its identity).

°**BUGENHAGEN, JOHANN** (also known as **Pomeranus**, i.e., from Pomerania; 1485–1558), German reformer; friend of Martin Luther. In 1517 he became lector in Scripture and patrology in a monastery of the Premonstratensian order in Belbuck. From 1523 onward he served as professor in the University of Wittenberg. He was influenced by the writings of Erasmus and Martin Luther. Bugenhagen was among those who aided Luther in translating the Bible. His most important work is his commentary on the Psalms (*Interpretatio in librum Psalmorum*, Basle, 1524).

°**BUHL, FRANZ PEDER WILLIAM MEYER** (1850–1932), Danish biblical and Semitic scholar. Buhl was born in Copenhagen and educated at the University of Copenhagen, where he taught Old Testament from 1880 to 1890. From Copenhagen he was called to the University of Leipzig, remaining there until 1898, when he was recalled to Copenhagen as professor of Semitic languages (1898–1932). Buhl collaborated in the editing of the 13th (1915) and following editions of *Hebraeisches und aramaisches Handwoerterbuch ueber das Alte Testament* of Gesenius, and of R. Kittel's *Biblia Hebraica* (where he edited the books of Psalms, 1930, and Esther, 1935). In his article on biblical poetry, "Dichtkunst bei den Israeliten" (in *Realencyklopaedie fuer protestantische Theologie und Kirche*, 4 (1898), 626–38), he anticipated the study of form criticism in his recognition of the literary types (*Gattungen*) and life situations of the poetic compositions. His study of the canon and text of the Old Testament appeared originally in German, *Kanon und Text des Alten Testaments* (1891; English translation by J. Macpherson, 1892) and is among the most influential of his works. Besides the foregoing, he wrote *Den gammeltestamentlige Skriftoverlevering* (1885; German translation, 1891; English translation, 1892); *Jesaja oversat og fortolket* (8 parts, 1889–94); *Gennesaret Sø og dens Omgivelser* (1889); *Palästina i kortfattet geografisk og topografisk Fremstilling* (1890); *Det israelitiske Folks Historie* (1892, 19368); *Geschichte der Edomiter* (1893); *De messianske Forjttelser i det Gamle Testament* (1894); *Til Vejledning i de gammeltestamentlige Undersøgelser* (1895); *Geogra-*

phie des alten Palaestina (1896); *Die socialen Verhaeltnisse der Israeliten* (1899); *Psalmene oversatte og fortolkede* (12 parts, 1898–1900); and *Muhammeds Liv* (1903; German translation, 1961³). A *Festschrift* was presented to Buhl on the occasion of his seventy-fifth birthday in 1925.

[James Muilenburg]

BUHLER, CHARLOTTE (1893–1974), developmental and clinical psychologist. Born in Berlin, Buhler taught at the University of Vienna from 1923, becoming assistant professor in 1929. She focused her research on the cognitive and personality development of children from infancy through adolescence. She wished to create a unified theory of the psychological development of childhood that included a child's entire life experiences. When Hitler came to power, she and her husband, Dr. Karl Buhler, were arrested on racial and political grounds. They fled to the U.S. in 1938. There they held positions in Minnesota, Massachusetts, and California. Buhler served as a professor of psychology, the director of a child guidance center, and a clinical psychologist, respectively. At the University of Southern California she specialized in the study of the development of children and their social behavior in infancy. As early as the 1920s, her research and writings reflected the concept of personal fulfillment and the use of one's own special talents to attain goals. She believed that people could find personal fulfillment by using their full potential, living constructively, setting goals and assessing progress, and establishing a personal system of values. She distinguished her theories from those of traditional psychoanalytical theory by calling hers "humanism," implying that one lives with a purpose and a goal and seeks a meaning in life beyond oneself. In California she met Carl Rogers and Abraham Maslow, whose ideas were similar to hers. She is believed to have influenced Maslow, who is regarded as the "father of humanistic psychology." In 1950 she retired to private practice. She returned to Germany in 1972 to spend the last years of her life with her son.

Among her numerous published works are *Soziologische und psychologische Studien ueber das erste Lebensjahr* (1927; *The First Year of Human Life*, 1930); *Kindheit und Jugend* (1928), *Kind und Familie* (1937; *The Child and His Family*, 1939), *Childhood Problems and the Teacher* (1952), *From Birth to Maturity* (1956), *The Course of Human Life: A Study of Goals in the Humanistic Perspective* (1968), *Psychology for Contemporary Living* (1968), *The Way to Fulfillment: Psychological Techniques* (1971), and *Introduction to Humanistic Psychology* (with M. Allen, 1972).

BUHUSI (Rom. **Buhuși**), town in Moldavia, E. Romania. Jews settled there haround 1823, when the lord of the land of Buhusi, which was then a village, decided to set up a town on its grounds; they numbered 82 in 1831. Buhusi became an important center of Ḥasidism in Moldavia when the *zaddik* Isaac Friedman (1835–1896), the grandson of Rabbi Israel of

*Ruzhin, many of whose followers being Bessarabian and Moldavian Jews, made his home there. The community increased from 537 in 1859 to 1,728 in 1899. Welfare associations and educational institutions included a *talmud torah* and a Jewish-Romanian elementary school, founded in 1897. A yeshivah, founded in 1908 adjacent to the “court” of the *zaddik*, existed until 1916. In 1930 there were in Buhusi 1,972 Jews (22.6% of the total population), occupied in commerce and crafts. Beginning in 1940, their situation deteriorated. In 1940, 20 Jews, among the leaders of the community, were arrested and taken hostage. In June 1941 a project was planned to deport all Jewish men between the ages of 16 and 60 to the Targu-Jiu concentration camp, but was not carried out. Jews from the villages of Rediu, Roznov, Tazlau, Candesti, and Borlesti and from the town of Targu-Neamt were forcibly transferred to Buhusi. The community had to help them, together with other pauperized Buhusi Jews.

After the war the Jewish population rose to about 8,000 as some of the people driven out of the nearby villages chose to resettle in Buhusi. Most of these emigrated and by 1969 the town had 50 Jewish families and one synagogue. In 2004, there were no Jews left in Buhusi, but the synagogue of the *zaddik* remained and members of the *hasidic* community of Buhusi (“Bohosh”), organized in Bene Berak, Israel, made a pilgrimage there once a year.

BUITRAGO, town in Castile, central Spain. The first information about the Jewish community there dates from 1290, when it paid an annual tax of 6,048 maravedis, a relatively inconsiderable sum indicating it was a small community. It was one of the four *aljamas* in the vicinity of Madrid and was still a legally recognized community in the second half of the 15th century. At the time of the expulsion of the Jews from Spain in 1492, more than 50 Jews owned buildings within the town and valuable properties outside. Moshe Cuéllar possessed a huge and modern farm. Don David de Hija was then the majordomo to the duke of Infantado, the local feudal lord – an office occupied in 1482 by Isaac Adarique. The property of the Jews expelled from Buitrago was bestowed by the Catholic Monarchs upon the duke in compensation for his loss of the Jewish revenues. Although the majority of the Jews in Buitrago were craftsmen, some were very rich. At the expulsion, the majority went to Portugal and some continued to North Africa. After 1493 some of the refugees returned to Buitrago and were baptized. Six files recording prosecutions by the *Inquisition of New Christians in Buitrago between 1514 and 1532

are extant; among them was the municipal councillor (*regidor*), Inigo López de León.

In Buitrago there were two Jewish quarters. One was by the wall of the city where there were about 100 houses and the other was outside the city walls, in Arrabal, where some 30 families lived. In each Jewish quarter there was one synagogue.

BUKARAT (Abukarat, Abucarat, Bukrat), ABRAHAM BEN SOLOMON HA-LEVI (late 15th–early 16th century), exegete and poet. Bukarat lived in Malaga, Spain. He was well versed in the natural sciences as well as in Spanish and Arabic. After the expulsion of the Jews from Spain he went to Tunis, where he remained for many years. His *Sefer ha-Zikkaron* (Leghorn, 1845), one of the best supercommentaries on Rashi to the Pentateuch, was completed there in 1507. In it he reveals himself as a painstaking scholar, with a sensitive feeling for language. Bukarat utilized his linguistic knowledge to elucidate the meaning of words and concepts and also to collate manuscripts to determine the correct version. Some of his poems are preserved in the Guenzburg collection, Moscow. His elegy on the expulsion from Spain, which was printed by Ben-Sasson, is of considerable importance. In it he describes the situation of those Spanish and Portuguese exiles who came to Morocco and Algeria, giving precise information as to their numbers. According to A. Berliner, Bukarat translated the responsa of Isaac Alfasi from Arabic to Hebrew. **ABRAHAM BEN ISAAC HA-LEVI ABUKARAT**, who lived in the following generation in Egypt, may have been his grandson. He was a wealthy scholar, whose library contained important manuscripts.

BUKHARA, capital of the former khanate of the same name in Russian Central Asia, now within Uzbekistan (see Map: Bukhara).

Introduction

The Jews of Bukhara are an ethnic and linguistic group, concentrated in Central Asia, particularly in the area of the Uzbek and Tadjik Republics. The term “Bukharan Jewry” was coined by European travelers who visited Central Asia before the Russian conquest; it derived from the fact that at that time most of the community lived under the Emir of Bukhara. The members of the community call themselves “Isro’il” or “Yahudi.” They speak a distinct dialect of the Tajik language, the so-called Judeo-Tajik, defined also as the Judeo-Tajik lan-

guage. In Uzbekistan the largest concentrations are in Samarkand, the second largest city in the Uzbek Republic, Tashkent (capital of the Republic), Bukhara, Kokand and other cities. In Tadjikistan they could be found mainly in the capital, Dushanbe. A considerable number of Jews of Bukharan origin can be found in Israel.

It is difficult to estimate exactly how many Jews lived in Central Asia before the second half of the 19th century. Benjamin of Tudela estimated that at the end of the 12th century there were 50,000 in Samarkand alone, but there is no doubt that this figure was not based on direct observation. Arminius *Vambery estimated the Jewish population of the Bukharan khanate in 1863–64 at 10,000. At the end of the 19th century the figure was about 16,000. On the basis of Soviet censuses and other assessments it may be assumed that in 1970 30–35,000 Jews lived in Soviet Central Asia (with 8,500 in Bukhara itself). This figure dropped to around 10,000 in the early 21st century after the mass emigration of the 1990s. Of the 200,000 or more Bukharan Jews in the world, around 100,000 live in Israel and 50,000 in New York.

The Jews of Iran, Central Asia and Afghanistan constituted a single community until the 16th century, when historical-political developments divided them into two sections: the community of Iranian Jews and the community of the Jews of Central Asia and Afghanistan. In the middle of the 18th century, similar circumstances brought about a further division of the latter group into two separate communities.

The Origin and Sources of the Jewish Community

It may be assumed that the first Jews arrived in Central Asia following the conquest of Babylonia by Cyrus King of Persia (539 B.C.E.): the majority of the Babylonian exiles did not return to the Holy Land (see Ezra 1:4, 2:64) and remained in Babylonia, at that time part of the Persian Empire. It is thus not unlikely that some came to the three Central Asian provinces of the Empire.

Rabban Gamaliel the Elder (first half of the first century C.E.) addressed a letter “to our brothers the children of the exile of Babylonia and to our brothers in Media and to the other exiles of Israel” (Sanh. 11). It is possible that “the other exiles” referred to the Jews living east of Babylonia and Media, including those of the area known as Central Asia. The first unquestionable evidence about the Jewish presence in Central Asia is a story in the Babylonian Talmud (Av. Zar. 31b) about the refusal of an *amora* called Samuel bar Bisna (the first half of the 4th century C.E.) to drink wine and beer in Margwan, i.e., Margiana, the medieval Merv (now the region of Mari in Turkmenistan). Early Muslim sources (late 7th, early 8th century) refer to the presence of Jews in the area. At the beginning of the 8th century a Jew called Akiva is mentioned as collecting taxes from the Jewish community of Merv. The Jews were the only group in Central Asia which did not accept Islam.

There is evidence that Jewish communities in the area flourished in the 9th to the 12th centuries, particularly in the towns of Balkh, Khorezm and Samarkand and that they rec-

Map showing the location of Bukhara, Uzbekistan

ognized the authority of the exilarch in Baghdad and communicated with him.

The *Mongol invasions which early in the 13th century laid waste the cultural centers of Central Asia apparently also devastated the Jewish communities. Data from the 13th century attest to the existence of the remnants of a community in Balkh and a small community in Khorezm, where Jews from other places were prohibited by the authorities from settling. A Jewish presence in Bukhara is first mentioned in the 13th century. In 1336 a religious disputation was conducted in Merv, apparently sanctioned by the Muslim authorities, between Christian monks and one of the leaders of the Jewish community. In 1339 Solomon b. Samuel compiled in the town of Gurganj an exegetical dictionary of the Bible in Judeo-Persian, the literary language common to the Jews of Iran, Afghanistan and Central Asia in this period.

At the beginning of the 16th century a dynasty that adopted Shi'ism – the non-Orthodox stream of Islam – ruled in Persia, while Central Asia and Afghanistan retained their allegiance to the Sunni, Orthodox stream of Islam. As a result, the links between the Jews of the area were severed, and the community was divided into two distinct entities.

The town of Bukhara apparently became a center of Jewish life in Central Asia in the 16th century, also absorbing many Jews living in cities in the zone of battle between the Persians (Iranians) and the local Sunni rulers.

Toward the end of the 16th and at the beginning of the 17th centuries the Jewish quarter (*Mahalla*) was established in the town of Bukhara, still known as the “Old *Mahalla*,” and the Jews were forbidden to reside outside its boundaries. The main (and today, only) synagogue of this town was built in this quarter in the first half of the 17th century.

The middle of the 18th century saw the creation of the Afghani kingdom, ruled by the Durrani dynasty (1747–1842), while Bukhara was ruled by the Manghit dynasty (1753–1920), who made their country the strongest in Central Asia. There was constant hostility between the two countries, and the ties between the Jews of Afghanistan and those of Central Asia were effectively severed too. From that time Central Asian Jewry became a distinct entity, known as the “Community of Bukharan Jews.”

Forced Conversion and Detachment from Jewish Centers

In the middle of the 18th century the first attempt was made at forcibly converting the Jews of Bukhara, leading to the creation of a community of *anusim*, called in the local languages (Tajik and Uzbek) *Chala* (lit. “not this and not that”), i.e., Jews who were externally faithful to Islam but secretly observed the commandments of their own faith.

Forced Islamization was resumed at the beginning of the 19th century and the number of *anusim* increased. However, when Russia conquered the kingdoms of Central Asia in the last third of the 19th century (see below), the new rulers did not recognize the *Chala* as Muslims, and regarded them as a special group of Bukharan Jews; some of them, living in those areas of Central Asia that were under direct Russian administration, returned to Judaism. Relicts of the *Chala* community have survived in Central Asia, especially in Bukhara, and are registered as Uzbeks or (in Tadzhikistan) as Tadzhiks.

Toward the end of the 18th century separation from Jewish culture centers led to a decline in the spiritual and religious level of the Jews of Bukhara. One consequence was the community’s inability to produce its own religious leadership. The spiritual-religious decline, the absence of leadership and the forced Islamization could have produced a process of increasing assimilation within the general population. However, in 1793, R. Joseph Mamon (Mamon) Maghribi, a native of Morocco, arrived in Bukhara as an emissary from the community of Safed, where he had settled a few years previously. When he saw the wretched situation of the Bukharan community he decided to settle there, and thanks to his efforts a revival of the religious and spiritual life took place. He introduced the Sephardi prayer rite to replace the existing Persian rite.

The Jewish population of Bukhara increased and the Muslim authorities permitted them to settle outside the quarter; this led to the establishment of the “*New Mahalla*” and the Amirabad quarter, which for administrative purposes was regarded as part of the “*New Mahalla*.” During the first half of the 19th century Jewish quarters were established in Marghelan, Samarkand, Dushanbe as well. There were also relatively large concentrations of Jews in Shahrissabz and Merv, which in the 1840s absorbed many Jews who had escaped from Meshed, Persia, after its community was forcibly converted to Islam.

The Jewish community enjoyed a degree of autonomy before the Russian conquest. The community of every town was headed by a *kalontar*, elected by the community. His election had to be ratified by the head of the government (*qöshlegi*) as well as by the Emir of Bukhara himself. He was aided by two deputies – *ossoqols*, heads of the Old and New *Mahallas*, whose election also had to be approved by the Emir. These communal officers served for life, unless removed from office by request of the authorities or a considerable number of community elders. They acted as judges in cases of litigation within the community; the *kalontar* also represented the community vis-à-vis the authorities. There were instances where the chief rabbi of Bukhara was appointed a *kalontar* as well. Criminal

cases, as well as cases in which a Muslim was involved, were brought before the Muslim court.

Bukharan Jewry set up a network of schools, similar to the *heder* of European Jews, known as *khomlo*. Although it was obligatory for all children up to bar-mitzvah age to attend these schools, this regulation was in fact never implemented, and there were no schools for girls. On the other hand, there was a yeshivah, established, according to several sources, by R. Joseph Mamon Maghribi. Prayerbooks were imported, especially those printed in Leghorn, including some that contained *tafsir* – a Judeo-Persian translation with commentary. Other study books (e.g., alphabet books, portions of the Pentateuch) were prepared by the teacher (*khalfa*) himself.

As in all other Muslim countries, the Jews had to pay the *jizya*, the tax required of non-Muslims. The Muslim tax-collectors were emissaries of the government, but the assessment was made by Jewish assessors, who were subordinate to the *kalontar*. After receiving his due, the Muslim tax-collector would slap the Jews twice on the cheeks. (Respected members of the community received a mere symbolic tap.)

The chief occupation of the Jews of Bukhara on the eve of the Russian conquest was dyeing of cloths. This trade was so typical that visiting Central Asia in the mid-19th century European travelers could recognize the local Jews by their stained hands. Other less common crafts were weaving of special silk and cotton cloths, tailoring and hairdressing. Craftsmen would sell their own products, and the number of Jews who engaged in trade was small. A Hebrew letter written from Central Asia by a Jew called Benjamin to the Jews of Shklov, Russia, in 1802, indicates that at that time the Jews financed the commercial activities of their Muslim fellow-townsmen, who peddled their wares in Russia. Subsequently the Jews themselves began to trade in goods produced in Bukhara (particularly cotton) within nearby areas of the Russian empire, and also to import Russian-made goods. A Russian regulation of 1833 permitted the “Asian” Jewish traders to reside outside the Pale of Settlement, which was in force for the Jews of Russia. They were also permitted, in 1842, to trade at the fairs at Orenburg and Troitsk, and in 1844 even at the country’s most famous fair at Nizhni-Novgorod (present-day Gorki).

After the Russian Conquest

The concessions accorded in Russia to the Jewish traders from Bukhara helped to disseminate the notion that the situation of the Jews in the Russian Empire was good, and when Russia conquered Central Asia in 1864–88 the Jews welcomed the Russians and even aided them, for example in the conquest of Samarkand (1868). According to the 1868 peace treaty, Bukhara, which had been decisively defeated, became a vassal of Russia and other parts of its territories, including Samarkand and several other towns with a Jewish population, were incorporated into the region (*kray*) of Turkistan, which was annexed directly to the Russian Empire. In the first few years, the Russians took several measures to gain the allegiance of Central Asian Jewry, which they regarded as the only loyal ele-

ment within the native population. The regime did not restrict Jewish autonomy, and only added to the communal structure the office of official rabbi (*kazyonny ravvin*), whose functions were similar to those of the official rabbis in other areas of the Russian Empire. The Russian-Bukharan peace treaty included three paragraphs that defined the rights of the Jews of Bukhara to live freely in Russia, to trade freely there, and to purchase real estate within its borders. In 1866 and 1872 it was decreed that the Jews of Bukhara and two other states in Central Asia, Khiva and Khuqand, or, in the Russian pronunciation Kokand (in the former, which became a Russian vassal in 1873, there were, in effect, no Jews, while the latter was abolished in 1876 and its territory annexed directly to Russia) would be granted Russian citizenship even if they resided in these countries, on condition that they join the trade guilds in Russia (thus exempting them from the law that denied Russian citizenship to “alien” Jews).

This policy aided Bukharan Jewry in acquiring a powerful status in trade relations, both with Central Asia and in trade with central Russia. Bukharan Jews established trading companies which opened branches in the large Russian cities as well as factories for the initial processing of local products, especially cotton and silk (the most known of them – the Va’adiyayev, the Potilahov and the Dividov companies). The local Jewish trader and industrialist, familiar with local conditions, had the advantage in competition with his Russian counterpart who was new to the area. At the same time the Emir of Bukhara and his government attempted to make of the Jews who remained within the borders of the kingdom scapegoats for their defeat, persecuting them and extorting money from them. These decrees resulted in the mass emigration of Jews from Bukhara to Turkistan. The Jewish population increased greatly in Samarkand, Tashkent and other cities. Fierce competition between the local Jewish tradesmen and industrialists and their Russian rivals and the movement of Jews from Bukhara to Turkistan were the main causes for the imposition of discriminatory measures against the Jews of Central Asia as early as the 1880s. In secret government circulars these measures were explained unequivocally as necessary to protect the Russian traders and industrialists and to limit the number of “native” Jews in the Turkistan region. In the year when the Russian conquest of Central Asia was completed (1888), the Russian authorities decreed the expulsion of the Jews from all the towns of the Trans-Caspian *kray*, which covered approximately the territory of the Turkmen Soviet Republic. However, implementation was postponed indefinitely for fear of damaging the interests of the Russian traders engaged in trade with the local Jews. At the same time a decree was issued (but in a short period of time suspended) closing the synagogues in Merv. In 1887–89 new regulations were issued that divided the Bukharan Jews who lived in the Turkistan *kray*, into two categories: “native Jews of the Turkistan *kray*,” i.e., the Jews who had lived in what was now the *kray* before the conquest and their direct descendants, and those who could not prove that they or their ancestors were natives of the *kray*. The for-

mer were granted equal rights with the local Muslims, while the latter (as well as the Jews from Iran and Afghanistan who were in Turkistan) were regarded from a legal standpoint as foreign citizens. Their rights were restricted and it was stipulated that by 1905 they were “to return to their place of residence,” i.e., within the borders of the Bukharan khanate. From 1900 on they were permitted to reside only in three border settlements – Osh, Katta-Qurghan and Petro-Alexandrovsk (now Törtkäl) – three townlets which were not industrially developed and located away from the trade routes.

The possibility of obtaining Russian citizenship, accorded in regulations between 1866 and 1872, remained merely theoretical and its realization became very difficult. In 1892 the general governor of the Turkistan region issued a secret circular severely restricting the entry into the region of Jews residing within the boundaries of Bukhara. Czar Nicholas II himself added a note to the protocol of the government session held on November 20, 1898, defining the policy of the regime in Central Asia towards the Jews as follows:

To protect the General Governorship (region) of Turkistan and the General Governorship of the Steppes (i.e., the Kazak and Kirgiz areas conquered by Russia in the second half of the 19th century) from the harmful activities of the Jews, so long as this is possible.

However, already in 1900 it was evident that it would not be possible to implement the proscription. The authorities were confronted by the mutual responsibility of the members of the community, who protected the “aliens” in their midst and covered up for them, thus preventing the attempt to banish individuals, and even groups of Jews. The Jews were also aided by the lack of organization and the confusion in the Russian administration of the region. Moreover, the lower echelons of officialdom, whose task it was to carry out these orders, often accepted bribes and ignored the presence of the “aliens.” Implementation of the decree was thus postponed first until 1909 and then until 1910, and in the meantime, the chief rabbi of Turkistan, R. Salomon Tajer, intervened in this matter. He appealed to the government, using the assistance of advocates who were well-versed in the law and wealthy Bukharan traders, and thus the town Khuqand, Marghelan, and Samarkand were added to the list of places where residence was permitted. In 1910 the committee of Count Pahlen, entrusted with the task of examining the situation in the Turkistan region, recommended that additional decrees be issued against the Jews residing there. One of the high officials of the local regime announced publicly in that same year that the Jews are “robbers of the people” and “counterfeiters of documents.” He ended his statement thus: “It is to be expected that the people itself will issue a sentence against the Jews.” This was an open call to the masses to terrorize the Jews. Indeed, already in January 1911 a memorandum to the authorities by a high official reported that “the local population [i.e., the Muslims] demands that all the Jews be banished,” and that it “requests permission to massacre them.” During these years the press

and literature of local Muslim modernists (*jadids*) displayed hostility towards the Jew (and the Armenian), the “robber,” and usually depicted an image of a Jewish tradesman “robbing” the local Muslim tradesmen of their profits, since the latter do not know how to compete with him.

With the outbreak of World War I, there was a violent upheaval within the Muslim population of Central Asia, which in 1916 became an open revolt that the Czarist army managed to subdue only with great difficulty. The Jewish problem thus lost some of its urgency. But even during the course of World War I, as is attested in secret documents of the period, the rulers continued to formulate decrees directed against the Jews.

The Russian conquest aided in the establishment of a stratum of tradesmen and industrialists within Bukharan Jewry that was limited in number but had significant economic power and ability to compete. Nevertheless, the new conditions brought about the impoverishment of the masses of Bukharan Jewry since the importation of the cotton and silk cloths that were produced in Russian industrial enterprises resulted in the elimination of the major occupation of the Jews of Bukhara – the dyeing of cloths. The impoverished craftsmen turned to other professions. Thus, by the end of the 19th and the beginning of the 20th century, hairdressing and shoe-shining and repairing became the almost exclusive monopoly of the Jews in Central Asia; many of them also became petty traders.

The advent of the Russian regime brought changes also in the field of education. Alongside the *khomlo* (*heder*), schools were established that taught some basic principles of secular culture. The teachers were mostly Bukharan Jews who had been educated in Jerusalem, where a Bukharan community had been established. In addition secular schools supported by the regime were established “Russian-native Jewish schools,” in which the language of instruction was Russian. The first periodical in the language of the Bukharan Jews, entitled *Rahamim*, began to appear in 1910 in the town of Skobelev (now Ferghana) and continued to be published until 1916.

Under the Soviets

Military actions carried out after the Bolshevik Revolution of October 1917, ending in 1920 with the conquest of Bukhara by the Red Army and the abolition of the Emir’s rule, were regarded by the Bukharan Jewish masses as a further manifestation of the conflict between the Russians and Muslims; despite the harsh decrees of the Russian regime, many sided with the Russians. The radical Jewish intelligentsia in Turkistan supported the idea of establishing a democratic republic, whether an independent state or tied to Russia on the basis of local autonomy. Two representatives of Bukharan Jewry, Raphael Potilaḥov and Jacob Va’adiayov, served in 1918 as ministers in the short-lived autonomous government in Khuqand. Radical representatives of the Jewish community in Bukhara supported Muslim modernists (*jadids*) in their demands for reform; one of the Jewish radicals, Yunusov, was executed after

the Bukharan authorities broke up a *jadid* demonstration in 1918. There were around 3,500 Jews in Bukhara during the 1930s. The entrenchment of the Soviet regime brought to an end the existence of the upper strata of Bukharan Jews. Most of them lost all rights because they had been engaged, according to the Soviet conception, in occupations of exploitation. Even the petty traders, who constituted a significant part of the community, were deprived of rights. Heavy taxes were imposed on the craftsmen and most of them had no choice but to work as laborers in government-supervised enterprises. Thus there were many Jews among the workers in the national factories, especially those near the Jewish quarters such as the silk-mill of Samarkand, or the cotton gin in Khuqand. Cooperatives of tailors, shoe repairers and barbers were organized, and many former craftsmen had to join them.

From 1926 on, under the aegis of OZET (the Soviet organization for the encouragement of agriculture among the Jews), many attempts were made to set up Jewish kolkhozes in Uzbekistan. In 1929 there were 26 such kolkhozes, but the experiment failed and by the early 1950s only two still existed. The censuses of 1959 and 1970 show that the number of Jewish rural dwellers in Central Asia was negligible.

Attempts were also made to weaken and ultimately to eradicate religious ideology. Notwithstanding the fact that this policy was implemented more cautiously in Central Asia than in the European sector of the Soviet Union, most synagogues were closed down by the late 1920s and early 1930s. The campaign against the Jewish religion increasingly intensified throughout the 1930s and was halted for a few years during World War II but resumed in greater force in the late 1940s. It resulted in a situation in which only one synagogue remained in each of most of the large communities, while in smaller centers prayer services were held in private homes. Nevertheless, the great majority of members of the community of all ages, regardless of education or social status, maintained traditional religious observances relating to the human life-cycle: circumcision, marriage and burial practices. Maintenance of *kashrut* and observances related to the yearly cycle (e.g., week-day prayers individually or in a *minyān*, Sabbath observance, synagogue service on Sabbath and the festivals, traditional practices relating to Passover and Sukkot, fast days) was more widespread among the older members of the community and in the lower echelons of social and educational status.

The Soviet authorities initially declared war on traditional antisemitism but anti-Jewish hostilities did not abate, and even intensified periodically. Thus, for example, there were blood libels in 1926 in Charjui (now in Turkmenistan), and in 1930 in the village of Aghaliq near Samarkand. After World War II, an antisemitic campaign was directed from above. In 1948–53, when there was intensive anti-Jewish agitation in the U.S.S.R. in general, the press in Uzbekistan and Tajikistan also printed some “satirical” feuilletons whose villain was the local Jew. From the late 1940s the Jews of these two republics were excluded from the regulation that gives priority to natives of the region in studies at the local univer-

sities and the prestigious institutes of higher learning in the major academic and cultural centers of the U.S.S.R., such as Moscow and Leningrad, according to the quota allotted to every distant republic.

In 1956, during and following the Sinai Campaign, letters and declarations signed in the names of Bukharan Jews appeared in the newspapers of Uzbekistan and Tajikistan, in not a few cases the signatories had been compelled to write the letters or to sign letters written in their name by others.

New blood libels erupted against the background of increased anti-Jewish public sentiments. In 1961 an old Jewess of Marghelan was accused of kidnapping a two-year-old Uzbek child and killing him for religious purposes. The child was found shortly thereafter in perfect health. A similar event occurred in Tashkent in 1962. In 1967, after the Six-Day War, articles appeared in the press signed by Bukharan Jews and in 1973, during the Yom Kippur War, some Bukharan Jews spoke at meetings condemning Israel and displaying “solidarity with the peoples of Egypt and Syria who are struggling for their freedom.” In these years, too, in many cases, this was in obedience to instructions given by the organizers of the campaigns. On the other hand, however, instances are known in which local Jews refused to sign letters condemning Israel or to speak at anti-Israel meetings.

At the onset of the Soviet rule a network of secular government schools was established for the Bukharan community; the first teachers in these schools were Ashkenazi Jews, who did not know the language of the Bukharan Jews, and the language of instruction in these schools was Hebrew. From 1923, however, Judeo-Tajik became the language of instruction at schools. In 1921 a teachers’ seminary was opened in Tashkent, and in 1925 a newspaper entitled *Rōshnōyi* began to appear in this language (its name was changed to *Bayroq-i Miḥnat* in 1930). In 1929 the alphabet of Judeo-Tajik was changed from Hebrew to Latin. A literary journal entitled *Hayot-i Miḥnati* began to appear in the early 1930s, and several years later a Judeo-Bukharan language theater was established in Samarkand, as well as a “section” of Judeo-Bukharan writers. In the 1930s Tashkent became the center of book publishing in Judeo-Tajik. Numerous books were issued in this language, especially propaganda works and textbooks, but also original literary creations.

The wave of imprisonments of 1936–38 dealt a harsh blow to cultural activity. In 1938–39 the newspapers were closed down, theatrical activity was terminated and in 1940 the publication of Judeo-Tajik books as well as the functioning of the Judeo-Bukharan schools was discontinued. The elimination of Judeo-Bukharan culture greatly accelerated the processes of assimilation with the community. In the large cities of Central Asia, where the Bukharan Jewish population is mainly concentrated, thirty years after the elimination of the community’s cultural life and particularly its network of schools, the Judeo-Tajik language was the major means of communication in all areas of life only among those aged 55–60 or more. For most middle-aged Jews the cultural language is Russian,

while the language of the community is spoken in the home. The younger generation often prefers Russian to the language of the community even in daily domestic usage. As for the children – some of them do not understand the language at all, and some of them understand but cannot speak it. Thus, the same intensive process of linguistic assimilation that occurred in the Ashkenazi community of the Soviet Union in the late 1920s–early 1930s is occurring, one generation later, within this community.

A basic change in the occupational composition of Bukharan Jewry occurred during the period of Soviet rule. The complex hierarchical structure of the Soviet society, in which personal social status is directly related to education, resulted after World War II in a sizeable increase in the members of the community who had received secondary and higher education. The most widespread occupations in the community still remain those that had constituted the primary means of livelihood at the end of the 19th and the beginning of the 20th century (i.e., hairdressing, shoe repairing, and instead of petty trades – selling in government stores); however, there was a great increase in the professions (doctors, teachers, engineers) and the free professions (actors, singers, artists, lawyers, etc.).

The Literature of Bukharan Jewry

Because, as stated above, until the beginning of the 16th century the Jews of Iran, Afghanistan and Central Asia constituted one community, they had a common literature, which was created in their common literary language – the classical Judeo-Persian. In the early 16th century the poet Khaja Bukhari composed a poem about Daniel, “*Daniel-nama*.” In the 17th century the poet Elisha b. Samuel Raghīb wrote a verse and prose work entitled *Ben ha-Melekh ve-ha-Zufi* (“The Prince and the Sufi”) about the same subject which in Hebrew literature is treated in Abraham ibn Ḥasdai’s *Ben ha-Melekh ve-ha-Nazir* (“The Prince and the Hermit”). In the 18th century the poet Joseph b. Isaac Bukhari wrote a poem “*Antiochus nama*” about the Maccabees and a poem “*Haft Biradarau*” (“Seven Brothers”) about Hannah and her seven sons (following a poem on the same subject by a Judeo-Persian poet, Imrani, who lived at the end of the 15th–beginning of the 16th century). At the beginning of the 19th century the poet Ibrahim ibn Abi-l-Khayr dedicated a poem in memory of his contemporary Khuidadcha (Khudaidad) who had been executed for refusing to convert to Islam. R. Simeon Ḥakham (1843–1910), who came to Jerusalem in 1890, laid the foundation for the Erez Israel literary school of Bukharan Jewish literati, which engaged primarily in translations. His greatest achievements were the translation into Judeo-Tajik of the Bible and of Abraham Mapu’s *Ahavat Ziyyon*, popular with generations of Bukharan Jews. Members of the school of R. Simeon Ḥakham also translated Shakespeare’s *Comedy of Errors* and Abraham Friedberg’s *Zikhronot le-Veit David*.

The Judeo-Bukharan literature created during the Soviet period follows the path of Soviet literature in general.

From an artistic point of view its most important creations are the prose works (whose most prominent representatives are J. Hayyimov, N. Fuzailov, M. Yitshaqbayev, B. Qalandrov, G. Samandarov). Drama, written for the most part for performance by amateur troupes, is influenced by contemporary Uzbek plays (the foremost dramatists are J. Hayyimov, and M. Amonov), while poetry is influenced by the Tajik literature, which in terms of language is very close to the Judeo-Bukharan literature. Prominent from the artistic standpoint are the poems of Muhib (Mordechai Bachayev) and Y. Kurayov.

As has been stated, Judeo-Bukharan literature ceased in 1940; from that time to the present day no work has been issued in this language in the Soviet Union.

Immigration to Israel

The first information about Jews immigrating to the Holy Land from Central Asia dates to the beginning of the 19th century, but large groups of Bukharan Jews who immigrated to and settled in Israel are known only from the 1880s. In the early 1890s the quarter called Rehovot was established by them in Jerusalem (to this day it is known as the "Bukharan Quarter"), which was considered at the time one of the most magnificent quarters of the New City. Groups of Bukharan immigrants, some of whom had managed to bring money with them and were among the wealthy of Jerusalem at that time, continued to arrive in Erez Israel until the outbreak of World War I. The number of Bukharan Jews who arrived in this first Bukharan Jewish *aliyah* has been estimated at approximately 1,500. These immigrants represented about 8 percent of the total community, a proportion which had no equal in any land of Jewish emigration at that time.

The second *aliyah* of Bukharan Jews began in the 1920s and continued until the early 1930s. The number of members of the community who settled in Erez Israel during these years is not known, but it may be assumed that it was no less than 4,000 souls. The overwhelming majority had to leave Russia secretly, to cross the borders with Iran or Afghanistan with the aid of Muslim guides, and then to receive permits on the basis of certificates issued to them by the British consulate. Only a minority of these immigrants chose the legal procedure. They would sail by boat from Odessa to Turkey, with the help of documents attesting to their Afghani, Persian or Turkish citizenship (purchased at high prices from the legations of those countries), and in Istanbul they would obtain their immigration permits for Erez Israel.

Henceforth followed the period of almost complete severance of Bukharan Jewry from Erez Israel, and only in 1972, with the beginning of mass immigration from the U.S.S.R., did they renew the tradition of immigration to the Holy Land – this time to the State of Israel. About 8,000 Bukharan Jews arrived from 1972 to the first half of 1975. A new wave commenced in the late 1980s.

Costume

Before the Russian Revolution, Bukhara and the other towns of Uzbekistan were distinguished by the splendor of their costumes, jewelry, woven silks, and embroidered fabrics. Restrictions were imposed periodically on Christians and Jews with regard to costume. In earlier periods, they were obliged to wear special colors, in the case of the Jews black and yellow, the black generally an outer garment, worn in the street. Until the 1920s, Jewish men were obliged to wear in the street a cord girdle and a hat trimmed with fur – the *telpak*. The latter was apparently of a special type but its exact shape cannot be ascertained. These two items seem to be the last vestiges of a Jewish costume known only through vague literary descriptions. Apart from these features imposed on their costume, the only garments peculiar to Jewish wear in Bukhara were the white robes worn on the Day of Atonement, and a bridal gown with a special type of veil, both made of bespangled white cotton tulle. Otherwise Jewish costume was similar to Muslim; ceremonial robes were copied from those worn at the court of the emir, who used to present such robes to his distinguished subjects, Muslims and Jews alike.

Men's coats were long garments of the "kaftan" type found in various versions all the way from Eastern Europe to China. Their cut was in simple, straight lines, in a wide, enfolding shape. They wore several coats, one over the other. Women's coats were of three kinds:

- (1) the *kaltshak*, a long ceremonial coat, narrow at the waist, open in front, with very wide sleeves;
- (2) the *kamzol*, for more general use, shorter and of a European-style, flared-out cut; and
- (3) the *frandjin*, a mantle worn in the street, enveloping the whole figure from head to toe. Their dresses were wide, long, shirt-like. They were cut from lengths of cloth without a shoulder seam. The fabrics used were mostly local silks or imported materials.

Ornamentation on the costumes was of various kinds: most common were many-colored edgebands, generally tablet woven, on the borders of nearly all garments. Headgear and the paired bands on the front of women's dresses were embroidered with colored silk threads but also with gold thread, which was used lavishly for ceremonial attire. In private, Jewish men wore various kinds of caps; those current among Bukharan Jews even today are caps heavily embroidered with colored silk or gold. Women had various types of caps, and many kinds of kerchiefs and scarves. Unmarried women at ceremonial or family gatherings wore a *topi-tos*, a soft cap entirely covered with gold embroidery in traditional geometric patterns. For festive dress, mothers and older women bound the forehead with a special kerchief of brocade. On ceremonial occasions Jewish notables wore jeweled belts. In private, Jewish men wore various kinds of the plain cord girdle obligatory on the street. Soft boots of colored, floral patterns were worn indoors and boots resembling black leather goshes outdoors.

Jewelry

Jewelry formed part of a girl's dowry, and was handed down from mother to daughter. Women normally wore simple earrings, a ring, and a bracelet, but on ceremonial occasions put on a magnificent display of jewels, including various kinds of forehead ornaments, earrings, necklaces, bracelets, and rings. They were made of gold, adorned with pearls, green and rosy stones, and coral beads. The design of jewels for the head and neck comprised two main ornamental elements:

(1) solid pieces, originally made of solid gold and later of gold sheet stuffed with a kind of bitumen, studded with semi-precious and precious stones;

(2) pendants, known as *poya* ("feet"), made of coiled gold wire threaded with a varying number of pearls, stones, and granulated gold beads.

Bukharan folkways and costumes were long perpetuated by the community in Jerusalem, making it the most colorful and picturesque element in Jerusalem Jewry. In recent years, however, this distinctive dress has been increasingly abandoned, being worn only at weddings and on other festive occasions.

Musical Tradition

Jewish musicians in Bukhara and other centers of Uzbekistan and Tajikistan were active in all spheres of musical life, Jewish and non-Jewish. The first and foremost of the different generic-stylistic groups in which they were involved was the traditional art music called *Shashmaqom* (*six maqoms*) and referring to a cycle of six extensive vocal-instrumental suites principally performed both by Jewish and Muslim musicians at the court of the Bukharan *emirs* until the 20th century. However, the Jewish musicians were generally recognized as among the most distinguished interpreters. This was the case with Boruhi Kalkhok (1845–1891) and Levi Babakhanov (1873–1926).

During the Soviet period, Jewish musicians continued to occupy an important position as performers of *Shashmaqom* in concerts, on the radio, and in studio recordings. In the 1960s, Jews make up at least 30% of the contingent performers in Uzbekistan and Tajikistan. Among them were family clans of performers such as the Babakhanovs, Tolmasovs, Mullokandovs, Davidovs, and distinguished individuals including singers Barno Izhakova, Izhak Katayev, Neryio Aminov, Izro Malakov, and others.

WOMEN'S MUSIC AND DANCE GENRE. A popular women's music-dance *sozanda*, is included in the musical category involving a secular repertoire that marks life-cycle events (marriage, circumcision, etc.). This genre was mostly typical of the Bukharan Jews. In Bukhara and Samarkand the *sozanda* is performed in bands of three or four women. One is the soloist, who sings and dances, the others accompany her performance with a *doira* (frame drum) and sing the refrains of the songs. The repertoire of *sozanda* consists of large vocal-dance cycles with elements of theatrical playing, and requires

a high professional performing level. The best *sozandas* were performed at the Emir's court. Among the prominent female music-dance Jewish artists during the early 1930s were Shishahon and Malkoi Oshma, Tuvoi and Michali, Karkigi, Kundal, Chervonhon, Gubur, Noshputi. Tuhfahon was quite popular from the 1960s to the 1980s. Berta Gulomova, Mindal, Nina Bakaeva, and others gained prominence in Dushanbe (Tajikistan), during the years 1940–80.

MALE FOLK MUSIC GENRES. On mourning occasions, Bukharan Jews usually perform the *haqqoni* pieces, which are extensive vocal compositions sung without accompaniment, either by soloist or antiphonally by two or three male singers. The *haqqoni* are performed both by Muslims and Jews in the Bukhara region but the Jews chant them typically as part of the funeral repast. In connection with the latter one should mention the remarkable chanting of the *Sefer ha-Zohar* (Book of Splendour), performed by a specialized singer (*Zuarhon*) on various ceremonial occasions, but especially at the funeral repast.

BUKHARAN JEWS IN CONTEMPORARY ART MUSIC. In the post-Revolutionary period, Bukharan Jews were among the musicians who played leading roles in the formation of new genres of Western art music. In 1930 the first Bukharan-Jewish Theater of musical drama was founded where such well-known actors as Freho Mullokandova, Nina Bangieva, and Pinchas Kurayev were active. In 1938 this theater was closed. Many Jewish artists continued their activities in the musical and theatrical institutes of Uzbekistan and Tajikistan. In Uzbekistan, one finds numerous prominent Jewish opera singers: Ksenia, Morduchai and Michoel Davidovs, Sara and Zaur Samandarovs, Sason Beniaminov, Robert Boruchov, and Moshe Mosheev; in Tajikistan: Roshel and Zalman Mullokandovs, Raphael Tolmasov, Michoel Alloev, and Roza Mullojanova.

Bukharan-Jewish composers made an important contribution to the contemporary music of Central Asia. Solomon Udakov was among the leading Uzbek composers. He wrote operas, cantatas, chamber vocal music, and music for the national anthem of Tajikistan. His opera *Tricks of Maisara* is the first Uzbek comic opera. Manos Leviev composed the ballet *Suhail and Mehri*, musicals, dramas, comedies, and vocal music. The noted Tajik composer Yahiel Sabzanov was well known for his opera *Bozgasht* ("Return") as well as his vocal-symphonic compositions.

After the break-up of the U.S.S.R. in the 1990s most of the prominent Bukharan-Jewish musicians resettled in Israel and the U.S., where they continue to develop their musical traditions.

BUKIET, MELVIN JULES (1953–), U.S. writer. Born to a father who was a Holocaust survivor and his American-born wife, Bukiet has devoted much of his fiction to the world of the Holocaust. In *Stories of an Imaginary Childhood* (1992), which deals with a young boy growing up in pre-Holocaust Poland, Bukiet creates the dimming world – as did Aharon Appelfeld and I.J. Singer – of those whose ends we already know, but whose actions are now understood with pathos and terror. His concern with the legacy of the Holocaust includes the collection *While the Messiah Tarries*, (1995), the novel *After* (1996) and his edition of *Nothing Makes You Free: Writings by Descendants of Jewish Holocaust Survivors* (2002). He is at ease in enfolding myth – both Jewish and Christian – into his works, as *Signs and Wonders* (1999) testifies. His writings also concern Israel, as with the darkly comedic *Strange Fire* (2001) and his sobering thoughts about the peace process in the Middle East, “Hope Against Hope” (*New York Times*, June 11, 2001). He taught at Sarah Lawrence College and was fiction editor of *Tikkun*.

[Lewis Fried (2nd ed.)]

BUKOFZER, MANFRED (1910–1955), musicologist. Born at Oldenburg, Germany, Bukofzer lectured at the Volkshochschule in Basle (1937–38). In 1941 he joined the faculty of the University of California at Berkeley, becoming chairman of the music department in 1954. His writings, characterized by lucidity and creative thinking, which furnished important contributions to the study of music from the Middle Ages to the baroque, include *Geschichte des englischen Diskants und des*

Fauxbourdons (1936), *Music of the Baroque Era* (1947), *Studies in Medieval and Renaissance Music* (1950), and an edition of the complete works of Dunstable (1954). A brilliant scholar, Bukofzer was one of the most important Jewish musicologists active in the transfer of the center of musicological research from Germany to the U.S. following the ascent of the Nazis to power.

BUKOVINA, region between the E. Carpathians and the upper Dniester, part of Ottoman Moldavia until 1775, when it passed to the Austrian Empire as a result of the Kutsug-Kainargi peace treaty (the entire region named Bukovina from 1774); after World War I incorporated into *Romania; in 1940 the northern part was incorporated into the Soviet Union (western Ukrainian S.S.R.), the southern part remaining in Romania. The main town of Bukovina is *Chernovtsy, formerly Czernowitz (see entry for some major aspects of Jewish life in the region. Czernowitz is the German form of the city’s name; in Romanian it is called Cernauti, in Ukrainian Tsernivcy). Jewish merchants passing through Bukovina are mentioned from the 13th century, and Jews settled there from the 14th century. In 1408 they were granted the right of freedom of movement and commerce along the Moldavian trade routes. The Jewish population increased steadily, and maintained close commercial links with the Jews of *Poland-*Lithuania, being mainly occupied in the transit trade and purveying of alcoholic beverages. The Cossack invasion from the Ukraine in 1656 (see *Chmielnicki) caused much suffering in the region.

Jewish communal life in Bukovina developed along the same lines as in the other communities of the Ottoman Empire. From 1710 to 1834 Bukovina Jewry had an independent **hakham bashi*, who held hereditary office, and was also responsible for collecting the taxes imposed on Bukovina Jewry. Another office of the Jewish leadership from 1716 was that of *rosh medinah* (head of the region). From the end of the 17th century the growing Polish-Jewish element imparted a distinct Ashkenazi character to the Bukovina communities. The census of 1776 recorded a Jewish population of 2,906 in the region, now under Austria. Their economic position was satisfactory. That year the government prohibited additional Jews from settling in the communities of Bukovina and limited trade in alcoholic beverages to Jews resident there before 1768. In 1780, when 1,069 Jewish families were recorded in Bukovina, a proposal was made to limit residence of the Jews to three main towns, with permission to settle elsewhere only if they engaged in agriculture. Orders along these lines became effective in 1782, and by 1785 the number of Jewish families had dwindled to 175. It had increased by immigration from *Galicia to 360 in 1791. From 1816 Jews were granted individual residence permits to settle in the region. After 1867 the Jews of the region were emancipated together with the rest of the Jews in Austria-Hungary. The number of Jews increased through-

out Bukovina after 1848 and the attainment of emancipation (see *Austria), and by 1890 numbered approximately 90,000. Ḥasidism struck roots in Bukovina, one of the early leaders there being *Abraham Joshua Heschel of Apta (Opatow). A branch of the *Ruzhin dynasty of *zaddikim* made Sadagora a center of Ḥasidism in the region. Another dynasty originating in Kossow settled in *Vizhnitsa. From the second half of the 19th century Jews in Bukovina tended increasingly to prefer a secular education, in which the Chernovtsy community led the way. They also took part in the political and social life of Bukovina, in general tending toward assimilation into Austro-German culture and identification with its aspirations. Zionism penetrated Bukovina at the end of the century. Jews took an active part in Bukovina's industrial and commercial development, initiated timber and cement industries, and were prominent in railroad construction and banking. A number of these Jewish industrial and financial magnates were awarded Austrian titles. Most owned large estates. The status of Jewish artisans also improved, and certain trades, such as tinsmithing, were exclusively Jewish. The relative prosperity of the Jews provoked frequent nationalistic outbursts amongst the Ukrainian (Ruthenian) and Romanian population of the region. After the incorporation of Bukovina into Romania – in 1919 – the situation of the Jews declined, since Romanian Jews had not yet been legally emancipated like the Austrians and because of the virulent antisemitism of the local Romanians and Ukrainians. However there was an upsurge of communal, in particular Zionist, activity among the Bukovina Jews. The *Bund gained ground among the growing Jewish proletariat. Among Jews active in politics was the Zionist leader and member of the Romanian senate Meir *Ebner. The incorporation of northern Bukovina into the western Ukrainian S.S.R. – in 1940 – brought new economic and political hardship to the local Jewish population, and Jewish cultural and social life came to a total standstill. On June 18, 1941, 3,800 “bourgeois” Jews of the region were deported to Siberia. When in July 1941 northern Bukovina was occupied by the Germans and the Romanian Fascists, the German and Romanian soldiers proceeded to massacre the Jewish population. The yellow *badge was introduced, their personal belongings were looted, and all occupation in professions and crafts was prohibited to Jews. Forced labor was imposed. On Oct. 11, 1941, a ghetto was set up in Chernovtsy; 40,000 Jews were deported from there, to be followed shortly by another 35,000 Jews from the surrounding areas, to the death camps in *Transnistria. On the partition of Bukovina after World War II, the Jews in the northern sector eventually had to conform to the general pattern of Jewish existence under Soviet rule. In 1945 a few thousand non-Bukovinian Jews were allowed to repatriate to Romania. The more liberal attitude of communist Romania permitted emigration to Israel from the south, where very few Jews remained. The majority of the Jews who continued to live in Ukrainian Bukovina (in the cities) were mostly not local inhabitants but Jews from the rest of the former Soviet Union (including the non-Slavic republics) who

tried to improve their lives by moving closer to the western parts of their homeland.

BULA, RAPHAEL MOSES (d. 1773), scholar and emissary of the Jerusalem community. During his stay in Constantinople (1752) while on a mission to Turkey, Bula published his homiletical collection, *Ḥayyei Olam*. In 1758 he was one of the scholars at the Neveh Shalom yeshivah in Jerusalem. He wrote *Get Mekushar* (Constantinople, 1767) on divorce, and *Zekhut Moshe* (Salonika, 1818) on ownership rights. Bula is one of the signatories of the letter (1770) authorizing Yom Tov *Algazi and Jacob Ḥazzan to collect funds on behalf of the Jerusalem community. Bula's son SOLOMON (1734–86), a Jerusalem-born rabbi and halakhic authority, left Jerusalem after his father's death and went to Salonika, where he became one of the most renowned scholars. Solomon's work *Leḥem Shelomo* (Salonika, 1795) deals with possession, property rights, and divorce law. His responsa were never published.

BŪLĀN, Khazar king. According to tradition he instituted Judaism in Khazaria. The “Reply of Joseph” to the letter of *Ḥisdai ibn Shaprut in the “Khazar Correspondence” refers to Būlān as a reforming king who drove the diviners and idolaters (i.e., shamanists) from the land, and accepted monotheism (Judaism) in consequence of a dream or vision. In consequence of another dream or vision he made a successful military expedition south of the Caucasus to Ardabil, from the spoils of which he consecrated cult objects (tabernacle, ark, candelabrum, etc.), still preserved in the time of the writer. After a religious debate held in Khazaria on the merits of Christianity, Islam, and Judaism respectively, Būlān gave his verdict in favor of Judaism which henceforth became the religion of the king and his servants, i.e., apparently the leading Khazars, rather than the people as a whole. Būlān here appears as the Khazar khaqan to whom the beg (Heb. *sar*, “general”) is subordinate. M.I. Artamonov makes Būlān the beg. The most probable date for these events, the historicity of which is confirmed at least in part by other sources, is 730–40 C.E. Parallels for the acceptance of a new faith after a religious debate are the conversion of the Ugurs to Manichaeism shortly after 762 and the account of the missions of the Muslims, Latins, Jews, and Greeks to Vladimir I in 986 in the “Russian Chronicle,” before Vladimir's final acceptance of Orthodoxy. The name Būlān appears to be Turkish, but there is no agreement as to the meaning. The suggestion of J. *Brutzkus that it is a participial form from the root *bil*, “know,” in the sense of “wise,” has met with no general acceptance. S. Szyszman, followed by Artamonov, proposes *bulan*, “elk” or “stag” in some Turkish dialects, as the origin of the name, and finds numer-

ous place and personal names in Russia of which *Būlān* is the principal component.

[Douglas Morton Dunlop]

BULAT, JUDAH BEN JOSEPH (c. 1475–c. 1540), talmudist who settled in Turkey after the expulsion from Spain. The first mention of him is in 1510, when he published the second and corrected edition of the *Halikhot Olam* (Constantinople, 1510) of Yeshu'ah b. Joseph ha-Levi. To it he appended *Mevo ha-Talmud*, attributed to Samuel ha-Nagid. He served in Constantinople as a *dayyan*. Bulat was opposed to the practice of basing halakhic rulings on the codes without studying thoroughly the actual circumstances of the case. He tended to disregard stringencies not found in the Talmud. When the Constantinople rabbis decided that a certain bill of divorce was invalid, Bulat declared it valid even against the opinion of Elijah *Mizrahi. Some of his published responsa testify to serious differences of opinion between him and contemporary scholars. His responsa appear among those of Elijah Mizrahi (Constantinople, 1560), and in the responsa *Oholei Tam* of Tam ibn Yahya, which are included in *Tummat Yesharim* (Venice, 1622). Another halakhic work of Bulat is mentioned in the *Yemin Moshe* of Moses Ventura (Mantua, 1624). He also published *Kelal Kazar* (Constantinople, 1532; new ed. 1936), a methodology for the study of the Torah, *halakhah*, and exegesis. He also deals with the classification of the sciences, extending the accepted system to include Jewish studies.

BULAWAYO, one of the two main commercial and industrial centers in *Zimbabwe (formerly Rhodesia). Jews were among the earliest pioneers in Bulawayo. The first white child born there (April 1894) was Jewish, and the first newspaper (March 1894), the *Matabele Times and Mining Journal*, was owned and edited by a Jew, William Francis Wallenstein. A Hebrew congregation was formed that same year and the foundation stone of the synagogue building was laid in 1897. A Chovevei Zion society was established in 1898. In 1900, when there were 300 Jewish residents (76% of the total Jewish population of Rhodesia), Moses Isaac Cohen (1876–1939) from London became minister of the Bulawayo Hebrew Congregation. He was an active Zionist and the acknowledged leader of the Jewish community. An authority on general education, he helped plan the system of public education in Rhodesia and was also a mediator in industrial disputes.

Despite its remoteness, Bulawayo Jewry was notable for its active communal and cultural life, and especially for its

strong Zionist affiliation. In 1958 a Jewish primary day school, Carmel, was established, which in 1968 had 158 pupils (57% of total Jewish school attendance). A Progressive congregation, with its own rabbi, was established in 1956. In addition to local communal institutions, two national organizations had their headquarters in Bulawayo, both formed in 1943 – the Rhodesian Zionist Council and the Rhodesian Jewish Board of Deputies. The Jewish population declined precipitously following Rhodesia's Unilateral Declaration of Independence in 1965 and the white-black civil war that ensued. The conclusion of the war and the ushering in of black majority rule in what was now called Zimbabwe in 1980 did not halt the exodus. From the mid-1990s, Zimbabwe entered into a prolonged period of political strife, authoritarianism, and economic collapse, resulting in the small Jewish community declining still further. Carmel School, whose pupil enrollment had become almost entirely non-Jewish, finally closed at the end of 2003. The historic Bulawayo synagogue burned down in a freak fire that same year and services are today held on the premises of the Jewish old age home, Savyon Lodge, and in the hall of the now defunct Reform congregation. The Jewish population in 2004 numbered 140, with an average age of over 70.

Jews established many of the light industries in the former Rhodesia, and predominated in the furniture and clothing sectors. Many were prominent in commerce and Jews were well represented in medicine, dentistry, law, and accountancy. They also took an active part in civic affairs. The first mayor of Bulawayo was a Jew, I. Hirschler (1897–98); later Jewish mayors have been E. Basch (1907–11), H.B. Ellenbogen (1927–29), C.M. Harris (1934–36), A. Menashe (1965–67), and J. Goldwasser (1968–). Cecil Isidore Jacobs (1896–1967), prominent in communal and legal circles, was president of the Rhodesian (later Zimbabwe) Jewish Board of Deputies for seven years. The Hon. Abe Abrahamson represented the Bulawayo East constituency in parliament from 1953 to 1965. During these years he served as a cabinet minister from 1958 to 1962, initially holding the portfolios of Treasury and Housing and later of Labor and Social Welfare and Housing. Abrahamson was also extensively involved in Jewish communal affairs, *inter alia* serving as president of the Rhodesian Jewish Board of Deputies from 1956 to 1958 and from 1964 to 1979, and as chairman of the South African Zionist Federation following his relocation to South Africa in 1986.

[Maurice Wagner / David Saks (2nd ed.)]

BULGARIA, East Balkan republic located along the Black Sea.

Ancient Period

A Jewish settlement is known to have existed in Macedonia in the time of Caligula (37–41 C.E.; Philo, *Embassy to Gaius*, par. 281). A late-second century Latin inscription found at the

village of Gigen on the shore of the Danube (near Nikopol, the site of the ancient Roman settlement Oescus) bearing a *menorah* testifies to the existence of a Jewish community. The Latin inscription mentions the *archisynagogos Joseph. Theodosius I's decree to the governors of Thrace and Illyria in 379 shows that Jews were persecuted in these areas and synagogues destroyed.

Byzantine and Bulgar Rule

When the Byzantine emperor Leo III (718–41) persecuted the Jews, a number of them may have fled to Bulgaria. There, during the reign of the Bulgar czar Boris I (852–89), the Jews are said to have tried to exploit the religious unrest among the Bulgars, then heathens, by converting them to Judaism, but Christian emissaries were more successful. The faith of the early Bulgarian Christians was, however, a syncretistic mixture of Christian, Jewish, and pagan beliefs. A curious insight of the contemporary religious situation is afforded by the 106 questions submitted by Bulgarian representatives to Pope Nicholas I (858–67). Among the questions on which guidance was requested were the proper regulations for offering the first fruits; the law concerning amulets; which day is the day of rest – Saturday or Sunday; which animals and poultry may be eaten; whether it is wrong to eat the flesh of an animal that has not been slaughtered; should burial rituals be

performed for suicides; how many days must a husband abstain from intercourse with his wife after she has given birth; should a fast be observed during a drought; should women cover their heads in houses of prayer; and so on. The names of the Bulgarian princes at this time – David, Moses, Aaron, and Samuel – may also show Jewish influence.

The monks Cyril (Constantine) and Methodius from Salonika, who were sent to Greater Moravia in 863 by the Byzantine emperor Michael III (840–67) to convert the Moravians, had mixed with Jews in their native town and studied with Jewish teachers. Cyril invented a new script called Glagolitic (later Cyrillic) in which to write Slavonic. The script was based on the Greek alphabet, but used the Hebrew alphabet as well in order to represent sounds which did not exist in the Greek alphabet, e.g., *Sh* and *Ts*. It is believed that Cyril made his translations of parts of the Bible from the Hebrew original.

There is evidence of Jewish settlement in Nikopol in 967. In the early 12th century Leo Mung, born a Jew and later a pupil of the 11th-century Bulgarian talmudist Tobiah b. Eliezer, became archbishop of the diocese of *Ochrida and Primate of Bulgaria. The Bogomil movement, a Christian sect that spread through Bulgaria in the 11th century, rejected most books of the Old Testament, but awakened interest in Judaism as the source of certain Christian theological doctrines. The Bulgarian attitude to Jews at the time was generally favorable; Jewish

Jewish population of Bulgaria, 1878-1948.

merchants from Italy and Ragusa (*Dubrovnik) who settled in Bulgaria received royal privileges. Also during the Crusades many Jews may have found refuge in Bulgaria. Jacob b. Elijah in his polemical letter to the apostate Pablo *Christiani mentions two Jews who were thrown from a mountaintop for refusing to obey the order of Czar Ivan Asen II (1218–41) to put out the eyes of Theodore I Angelus, Greek ruler of Salonika in 1230. Czar Ivan Alexander (1331–71) married a Jewish woman named Sarah, who took the name Theodora on her baptism (see *Sarah of Turnovo); her influence on state affairs was considerable. The church's struggle with heresy in Bulgaria also affected the Jews. The Church Council of 1352 excommunicated Jews and heretics. Three Jews were condemned to death on a false charge of blaspheming saints. Although the verdict was repealed by the czar, the mob took vengeance on the accused.

The largest part of the Bulgarian Jewish community before the 15th century belonged to the Byzantine (Romaniot) Jewish rite. Only a minority spoke Bulgarian. The *Romaniots had their own special prayer book, which eventually was replaced by the Sephardi prayer book. They regarded the sending of gifts from the groom to the bride as part of the marriage ceremony, and if the bride did not later marry the sender of the gifts, she had, in their opinion, to receive a divorce (*get*) before she could marry another man (see Kid. 3:2). The bride's dowry was guarded and the husband was forbidden to negotiate with it. Furthermore, according to their custom a husband could not inherit from his wife. The Romaniots did not accept the decree of R. *Gershom b. Judah in the 11th century forbidding bigamy. Among the rabbis of the Romaniot synagogue was Abraham Semo (15th century) who befriended the new Ashkenazi community that settled in Sofia (1470). Another famous rabbi of the Romaniots was Joseph b. Isaac ibn Ezra (late 16th–early 17th centuries), who wrote the book *Massa Melekh* (1601).

Many Jews went to Bulgaria from Hungary after the expulsion of 1376. These Hungarian Jews kept their own particular customs, but later adopted the customs of the other Ashkenazim, and eventually all of them adopted Sephardi customs and spoke *Ladino. A famous contemporary sage was Rabbi Shalom Ashkenazi of Neustadt, who founded a yeshivah at *Vidin. His pupil Rabbi Dosa the Greek wrote in 1430 *Perush ve-Tosafot*, a supercommentary to Rashi on the Pentateuch.

Turkish Rule

At the time of the final Turkish conquest of Bulgaria (1396), Jews were living in Vidin, *Nikopol, Silistra, *Pleven, *Sofia, Yambol, Philippopolis (now *Plovdiv), and *Stara Zagora. Jewish refugees came to Bulgaria from Bavaria, which had banished them in 1470, and, according to various travelers, Judeo-German was heard for a long time in the streets of Sofia. Despite their adoption of Sephardi customs, language, and names, the Ashkenazi Jews maintained separate synagogues for a long time and followed the medieval German rite. The Ashkenazi prayer book was printed in 1548–50 in Salonika by

R. Benjamin ha-Levi Ashkenazi of Nuremberg who was also the rabbi of the Sofia Ashkenazi community.

Spanish Jews reached Bulgaria apparently after 1494, settling in the trading towns in which Jews were then living. They came to Bulgaria from Salonika, through Macedonia, and from Italy, through Ragusa and Bosnia. Until 1640 Sofia had three separate Jewish communities – the Romaniots, the Ashkenazim, and the Sephardim. Then a single rabbi was appointed for all three communities. R. *Levi b. Ḥabib lived for a short time in Pleven and R. Joseph *Caro lived in Nikopol for 13 years (1523–36). Caro founded a yeshivah there and continued to write his great work *Beit Yosef*. In the 17th century Bulgarian Jewry was caught up in the whirlwind of the pseudo-messianic movement of Shabbetai Zevi; Samuel *Primo and *Nathan of Gaza, proponents of Shabbateanism, were active in Sofia in 1673.

Jews conducted trade with Turkey, Walachia, Moldavia, Ragusa, and Venice. Jewish traders were granted firmans giving them various privileges. One of the most important trading towns in the 16th century was Tatar-Pazardzhik, to which the Jewish merchants of Salonika turned after the wars with Venice (1571–73). They established commercial relations with Sofia merchants and some of them settled there as well. Merchants from *Skoplje (Turkish Üsküb) bought clothing in Salonika and sold it in Sofia and neighboring towns. In 1593 Sinan Pasha founded an annual fair at Ozundzhovo in the district of Khaskovo, southern Bulgaria. It was attended by Jews from European Turkey and Western Europe. Some Jews also farmed the taxes on European merchandise. The Jewish merchants were able to extend their commercial activities when the Ragusa merchants, who had taken part in the Bulgarian rising of 1688 against the Ottoman rule, had to give up their businesses. In Samokov some Jews owned quarries and leather tanneries. Jewish government officials of that period are also known. In the early 19th century a Jew, Bakish, of Tatar-Pazardzhik, held an important position in the court of the sultan, and proposed the introduction of a uniform system of Turkish coinage.

From Independence to World War II

General rioting, robbery, and arson broke out in Sofia in 1878 when the Turks retreated from the town; the Jews formed their own militia and a fire brigade to prevent the Turks from setting fire to the town; the fire brigade was retained after independence. Among those who welcomed Russian General Gurko were the rabbi of Sofia, Gabriel Mercado Almosnino, and three other Jews. During the war Jewish property was looted and in Vidin, Kazanlik, and Svishtov, where the local population regarded them as supporters of the Turks, Jewish property was plundered, and Jews were expelled in atrocious circumstances; most of them fled to Adrianople and Constantinople. Before the Congress of Berlin in 1878 the major Jewish organizations of Western Europe had tried to secure equal rights for Bulgarian (as well as Serbian and Romanian) Jewry; the Berlin Treaty included a clause obliging the Balkan

countries to give equal rights to Jews. Rabbi Gabriel Almosnino attended the Bulgarian Constituent Assembly (*Sobranie*) in 1879 as the Jewish delegate *ex officio* as the chief rabbi and cosigned the constitution. In 1880 an official code to regulate the organization of the Jewish communities was formulated. Jews also participated as advisers in town councils. However, the Bulgarian population displayed signs of resentment against the Jews. Most Bulgarian political parties were steeped in antisemitism. The Bulgarian peasantry did all in their power to prevent Jews from acquiring land, and from time to time there were blood libels.

In 1885, during the war between Serbia and Bulgaria, Jews were drafted into the Bulgarian Army for the first time. The principle of equality concerning the defense of minority groups was emphasized after World War I in the Treaty of Neuilly (1919). However, despite all declarations, the principle of equal rights had no genuine value for Jews; in practice the various Bulgarian governments discriminated against Jews. Anti-Jewish legislation was introduced indirectly in various memoranda. Jews were not accepted at the military academy, the state bank, or in government or municipal service. The coup against the Stamboliski regime in 1923 prepared the ground for the spread of antisemitism and its intensification. In the difficult years that followed the Bulgarian people's wrath was channeled toward the minority groups, especially the Jews, whom they held responsible for their hardships. Antisemitic nationalist associations sprang up. In 1936 the Ratnik ("Warrior") antisemitic association was founded; it was structured on the lines of Hitlerite organizations, accepting their theory of race and adapting it to its own ideological concepts. Nonetheless, in all this period, and even during the war, the Jews did not experience pogroms.

In the decades preceding World War II, the relative percentage of Jews within the Bulgarian population declined steadily, indicating a lower birth rate than the national average. The 1934 census showed 48,565 Jews, constituting 0.8% of the total population. (The respective percentages for the years 1920 and 1926 were 0.9 and 0.85.) In the mid-1930s more than half of Bulgaria's Jews resided in Sofia. Most Jews were engaged in commerce, and the majority were self-employed. In the prewar years, the number of wage earners showed a certain upward trend. A growing identification with Jewish national ideals characterized the intellectual development of the Bulgarian Jewish community. In the interwar period the Zionist movement completely dominated all Jewish communal organization, including the highest elected body, the Jewish Consistory. The younger generation spoke Bulgarian rather than the Ladino of their fathers.

THE ZIONIST MOVEMENT. Bulgarian Jewry joined the movement for national revival as early as the days of Hovevei Zion (founded in 1882). Three Bulgarian delegates attended the First Zionist Congress in 1897 at Basle – Zvi *Belkovsky, Karl *Herbst, and Yehoshu'a (Joshua) *Kalef. Before the congress, in 1895, Bulgarian Jews had founded the settlement Har-Tuv in

Erez Israel. However, there was also considerable emigration to other countries. In 1900 several Jews settled on the land at Kefken in Turkey, on the shores of the Black Sea. Other Bulgarian Jews took up farming in Adarpazari (in the Kocaeli district near Istanbul). Among the pioneers of Zionism in Bulgaria, the most noteworthy was Joseph Marco *Baruch. Between 1919 and 1948, during the British Mandate, 7,057 Bulgarian Jews emigrated to Palestine.

ORGANIZATION OF THE JEWISH COMMUNITY. After 1878 a chief rabbinate was created, headed by a chief rabbi. In 1900 a conference of Jewish communities assembled and passed a new constitution, which, however, was not recognized by the Bulgarian government. The constitution dealt with elections to synagogue or community and school committees. The community committees chose a central council (Consistory) of Bulgarian Jewry from among their members. The council functioned independently of the chief rabbi, who was also head of the central rabbinical court. The central rabbinical court exercised authority over the rabbinical courts of Sofia, Plovdiv, and Rushchuk (now Ruse).

EDUCATION. Bulgarian Jewish education passed through three periods: (1) the period of the *meldar*, the Sephardi religious school, equivalent to the Ashkenazi *heder*, which flourished in Bulgaria before national independence; (2) the period after independence during which the Alliance Israélite Universelle maintained many schools; and (3) the period of modern, national education. Jewish schools were maintained at the expense of the community. Many Jewish children, especially in large cities, attended schools of other denominations.

RABBIS AND SCHOLARS. Rabbi Isaac b. Moses of Beja (16th century), who lived in Nikopol after the Turko-Walachian war (1598), wrote the book *Bayit Ne'eman* (1621). Rabbi Isaiah Morenzi (d. after 1593), who also lived in Nikopol, introduced new customs into the yeshivah founded by Joseph Caro. Another rabbi of Nikopol was Abraham b. Aziz *Borgil, author of the book *Lehem Abbirim* (1605). Moses Alfas of Sofia, a famous preacher, published *Va-Yakhel Moshe* (Venice, 1597). In the 18th century Solomon Shalem of Adrianopolis and Issachar Abulafia were among the famous rabbis. Chief rabbis after Bulgarian independence (1878) were Gabriel Almosnino, Moses Tadjer, Simon Dankowitz from Czechoslovakia, Mordecai Gruenwald, and Marcus *Ehrenpreis. Zemaḥ Rabbiner was chief preacher to the Bulgarian communities. David Pipano, author of *Ḥagor ha-Efod* (1925) and other books, was head of the rabbinical court. Other scholars of Bulgaria include Solomon *Rosanes, author of *Divrei Yemei Yisrael be-Togarmah*, the standard history of Turkish Jewry. Mention may be made also of Saul Mézan, author of *Les Juifs espagnols en Bulgarie*.

JOURNALISM. In 1899 the Bulgarian-language newspaper *Chelovecheski prava* ("Human Rights") was published to repudiate the libels of antisemitic newspapers. The first Ladino newspaper, *La Alborada* ("The Dawn"), was launched in 1884.

Later, Ladino publications ceased publication and were replaced by Bulgarian-language periodicals. In 1933 the *Yevreski Vesti* ("Jewish News") began to appear, resuming publication after WWII and continuing to come out every two weeks through the early years of the 21st century.

[Simon Marcus]

Demography of Jewish Population (within the boundaries of historical Bulgaria)

Year	Number of Jews	% of Total Population
1878	19,000	0.900
1888	23,541	0.750
1893	27,777	0.830
1900	33,663	0.900
1905	37,656	0.930
1910	40,076	0.920
1920	43,232	0.890
1926	46,558	0.850
1934	48,565	0.800
1945	49,172	0.800
1949	9,707	0.014
1950	7,000	0.009
1964	7,000	0.008
1967	6,000	0.007
2004	7,000	0.001

In World War II

Comprehensive anti-Jewish legislation in Bulgaria was introduced after the outbreak of World War II. The regime's main motivation in its antisemitic pursuits could be explained by its determination to conform to the orientation of Nazi Germany, with which Bulgaria was allied. Yet even a German official, Karl Hofmann of the RSHA, expressed skepticism that conditions were ripe for the expulsion of Jews. He wrote: "The Jewish problem does not exist in Bulgaria in the sense that it exists in Germany. Ideological and racial prerequisites for convincing the Bulgarian people of the urgent need for a solution to the Jewish question as in the Reich are not to be found here."

The turning point in events came on Feb. 15, 1940, with the appointment of Bogdan Filov, a noted scientist and a determined Germanophile, to the premiership. In July 1940 the government announced its decision to curb the freedom of the Jewish minority. In August of the same year the cabinet approved the anti-Jewish "Law for the Protection of the Nation," patterned after Nazi regulations. On Dec. 24, 1940, Parliament approved the proposed legislation, which was officially promulgated on Jan. 23, 1941. On March 1, Bulgaria joined the Tripartite Pact and the German Army entered the country. A declaration of war on the western Allies followed; yet Bulgaria did not enter the war against the Soviet Union, mainly because of Slavophile sentiments of its population. In June 1942 Minister of Interior Gabrovski, the architect of the anti-Jewish legislation, demanded and received from Parliament a blank authorization empowering the government with

absolute prerogatives on all questions pertaining to the Jews. Protests against this measure, coming from such well-known democrats as Nikola Mushanov, were of no avail. The fact of such protests was an indicator of things to come. At the end of August the government promulgated new restrictive regulations and provided for the establishment of a Commissariat for Jewish Affairs. On Sept. 3, 1942, the lawyer Alexander *Belev, a German-trained antisemite, became the head of this Commissariat.

The Deportations Program

In January 1943 Adolf Beckerle, the German minister to Sofia, was joined by ss-Obergruppenfuehrer Theodor Dannecker, an associate of *Eichmann, who came to Bulgaria in order to arrange for the deportation of Bulgarian Jews to the eastern territories. By the summer of 1942, the Bulgarian government had already surrendered into German hands Bulgarian Jews residing in countries occupied by Germany, but not Bulgarian Jews residing in Bulgaria. On Feb. 2, 1943, Gabrovski and Dannecker agreed that all Jews living in Greek and Yugoslav Macedonia and in Thrace, administered by Bulgaria since the spring of 1941, would also be surrendered to the Germans for deportation. On Feb. 22, Belev and Dannecker signed a formal agreement to deport 20,000 Jews. As the total number of Jews living in Bulgarian-held Thrace and Macedonia was only slightly over 11,000, Dannecker informed Eichmann that Jews from Bulgaria proper, mainly from the capital and other large towns, would also be deported. On March 2, the government approved the surrender of 20,000 Jews into German hands, but the fiction that only Jews from Macedonia and Thrace were to be deported continued to be maintained. The collection of Macedonian and Thracian Jews into special transit camps began immediately. Bulgarian police controlled the entire operation until the Jews boarded the train. Preparations were also begun for the concentration of those Jews from Bulgaria proper who were to make up the agreed figure of 20,000.

OPPOSITION TO THE DEPORTATIONS. Rumors of the forthcoming deportations and of the fate of the deportees aroused unexpected opposition. An action group headed by the vice president of the Bulgarian Parliament, Dimiter Peshev, was organized in the town of Kustendil. Peshev appeared before the minister of interior on March 9, and insisted that the deportation orders be altered forthwith. Both humanitarian and political considerations motivated the protest movement. Conditions in 1943 were rather different than in 1942 when German victories seemed inevitable. There were pragmatic as well as altruistic reasons for coming to the aid of the Jews. In the aftermath of the German debacle at Stalingrad, it was thought that Bulgaria should not endanger her chances of an eventual disengagement from the German alliance by giving her hand to so monstrous an act. The initiative of Dimiter Peshev developed into a minor revolt within the government's own majority in Parliament. On March 17 Peshev presented the prime minister with a petition against the deportations signed by 42 deputies. Political figures outside Parliament and prominent

figures from the Greek Orthodox Synod hierarchy joined in the effort. Under the pressure, the government of Bogdan Filov decided on a compromise. It ordered all deportations of Bulgarian Jews to be stopped. The surrender of Macedonian and Thracian Jews, however, was carried out. Transported in part by railroad and in part by river boats on the Danube, a total of 11,384 Jews from the “new territories” were taken to the death camps in the east (Poland), where the overwhelming majority died. For the remaining Jews of Bulgaria proper, conditions were difficult, dangerous, even deadly, but they did not face deportations. Unlike the Italians, the Bulgarians treated the Jews with exceptional cruelty and strictly applied the racial restrictions: the Jews were prohibited the free use of the main thoroughfares, were not allowed to move from one town to another or to engage in commerce, had to wear the yellow badge, and were issued special yellow identity cards. Jewish houses were identified as such by a special sign. In the summer of 1942, several hundred young Jews were sent to forced labor, and in January 1943 young conscripts were sent to Bulgaria to work on road construction. Every town with a Jewish population had its commissioner for Jewish affairs, whose task it was to ensure that the anti-Jewish orders were properly carried out. Any jewelry and gold currency in the possession of Jews was confiscated and handed over to the Bulgarian national bank. Later, the government justified its action by contending that since Macedonia and Thrace were never formally annexed to Bulgaria, and since Thracian and Macedonian Jews were not given Bulgarian citizenship, the regime could not effectively withstand German pressures. On March 26, Dimitar Peshev was reprimanded by Parliament and removed from the vice presidency. His bold intervention on behalf of the Jews of Bulgaria later helped save his life at the People’s Trials held in the winter of 1945. The Nazi representatives in Sofia continued to press for the deportation of the Bulgarian Jewish community during April and May of 1943. In the light of the parliamentary upheavals of March, the government showed signs of vacillation. At the end of May it ordered the resettlement of the Jews of Sofia in the provinces – their expulsion from the city – as a first step toward their eventual dispatch to the death camps in the east. Neither an abortive mass demonstration attempted by the Jews of Sofia on May 24, nor several protestations by pro-Jewish public figures prevented the execution of the order. But even if the demonstration was not effective in achieving its goal it was a public demonstration of Jews protesting their own fate, something that was rare indeed in German-dominated Europe. Furthermore, several hundred prominent Jewish families were sent to the Somovit concentration camp established on the banks of the Danube. Throughout the war male Jews continued to work in forced labor camps, employed in various public construction projects. With these programs, the summit of anti-Jewish persecution was reached, and the gravest danger of deportation to the German-occupied eastern territories passed. On Aug. 28, 1943, King Boris III died under somewhat mysterious circumstances. According to N. Oren, Boris showed no

special affection for the Jews of his country, nor did he exhibit any particular humanitarian inclinations. The contention that Boris’ own act of benevolence had prevented the deportation of the Jews from Bulgaria proper is without firm foundation, but, in common with his government, Boris responded to the pressures from below generated by Peshev and his friends. According to Nuremberg Document No. NG-062, although Boris had agreed to the deportation of Jews from Macedonia and Thrace, he was unwilling to deport Jews from Bulgaria proper, with the exception of “Bolshevist-Communist elements.” The other Bulgarian Jews were to be sent to forced-labor camps to work on road construction.

ABOLISHMENT OF ANTI-JEWISH POLICIES. In September a Regency Council and a new government headed by Dobri Bozhilov were established. Minister of Interior Gabrovski was not included in the new cabinet. Belev, the head of the Commissariat for Jewish Affairs, was also dropped and replaced by the more moderate Khristo Stomaniakov. In December the resettled Jews of Sofia were allowed to return to the capital for brief periods in order to attend to private affairs. Early in 1944 a small number of Jewish families were permitted to leave the country for Palestine. These and other signs of relaxation were aimed at establishing Bulgaria’s greater independence in foreign affairs, and the Bozhilov regime’s effort to appear more reasonable in the eyes of the western Allies. Representations on behalf of the Bulgarian Jewish community by Jewish organizations to both Washington and London produced a number of Allied protests, communicated to the Bulgarian government throughout 1943 and 1944. At the end of May 1944 the cabinet of Bozhilov was replaced by a new cabinet headed by Ivan Bagrianov. Determined to extricate Bulgaria from her war involvement, the Bagrianov regime opened truce negotiations with the western Allies. Earlier, secret talks were held between Nikola Balabanov, Bulgaria’s minister to Turkey, and Ira Hirschmann, representative of the United States War Refugee Board, one of the few American officials with permission to negotiate directly with the enemy. In August Hirschmann was informed of the decision of the Sofia government to abolish all anti-Jewish measures. On Aug. 24 the minister of interior told representatives of the Bulgarian Jewish community that the Commissariat for Jewish Affairs had been abolished. All anti-Jewish legislation was officially abrogated on Aug. 29. The decrees of abolition were published on Sept. 5, 1944, by which time a new government, headed by the democratically oriented agrarian leader Kosta Muraviev, had come to power.

On Sept. 5, 1944, while truce talks were being held between Bulgarian and Anglo-American representatives in Cairo, the Soviet Union declared war on Bulgaria. On Sept. 8, the Soviet Army entered the country, and on the following day the Muraviev government was overthrown and replaced by a coalition government of the Fatherland Front, which was dominated by the Bulgarian Communist Party. Following an armistice agreement, signed in Moscow on Oct. 28, 1944, Bul-

garia was placed under the surveillance of a Soviet-controlled Allied Control Commission, which governed the country until the ratification of a peace treaty in 1947. With the institution of the Fatherland Front regime, organized Jewish life was reestablished. After September 1944 there existed 34 Jewish communities headed by a Central Jewish Consistory as well as a Jewish weekly, *Yevreyski vesti* ("Jewish News"), and an anti-Fascist Jewish society named "Ilya Ehrenburg." According to Consistory figures, there were a total of 49,172 Jews in the country in the autumn of 1945. More than three-quarters of them lived in seven urban communities: Sofia, 27,700; Plovdiv, 5,800; Ruse, 1,927; Varna, 1,223; Kustendil, 1,100; Yambol, 1,076; Dupnitsa, 1,050.

The reasons that the fate of Bulgarian Jews differed from that of most of Germany's allies are contested by historians. As expected, the Communists credit the Communists; some government figures give undue credit to the king. Undoubtedly, two effective forces on behalf of the Jews were the Parliamentarians and the Church, where intervention on behalf of the Jews was direct. There were protests on behalf of the Jews from various segments of the Bulgarian populace, most especially lawyers and physicians and prominent cultural figure, which had their effect on the government and its perception of popular opinion. The protests also strengthened the internal resilience of the Jewish community. Certainly, the Bulgarian alliance with Germany lessened direct German involvement in the deportations and the sense that Germany was losing the war and that the Allies were interested in the Jewish question also influenced government policy. Omar Bar Tov commented: "On the moral scale that is most urgent to those who try to extract lessons from the Holocaust – what really matters are the moments, however rare, in which a few shades of goodness were introduced into the general canvas of evil, opportunism, and indifference. These moments matter not because they made a significant difference in the general scheme of things: they did not. They matter because they illustrate that, all the contemporary (and subsequent) talk of inevitability notwithstanding, it was possible to make choices and that the right choice at the right time by the right people could make a difference for *some* of the victims."

[Nissan Oren / Michael Berenbaum (2nd ed.)]

The Postwar Period

REVIVAL OF JEWISH LIFE. From the beginning of the Fatherland Front's rule, Jewish communal life fell under the control of the Communists and their sympathizers. Jewish communities were controlled by the Central Jewish Committee of the Fatherland Front, which was in turn subordinate to the Front's Commission for National Minorities. The Communists supervised the Central Jewish Consistory, and, as a rule, policy statements were signed jointly by the Central Jewish Committee and the Consistory. In January 1945 the official Jewish Communist leaders announced Bulgarian Jewry's severance from all international Jewish organizations, Zionist or otherwise. Bulgarian Jews were to be considered

Bulgarians of Jewish origin, having nothing in common with other communities around the world. The Zionist organization was called bourgeois and chauvinist. The majority of Bulgarian Jews, however, continued to support the Zionist organization. In 1946 its president, Vitali Haimov, claimed 13,000 active members. Zionist organizations continued to function in the face of continuous harassment. Independent weeklies were published until 1948 by the General Zionists and Po'alei Zion. The majority of Jewish youth were organized by He-Halutz ha-Za'ir and *Ha-shomer Ha-Za'ir.

Since political power resided with the Jewish Communists, whereas rank-and-file support was given to the Zionist groups, the Communists, under the leadership of Zhak Natan, undertook to absorb the Zionists by way of "unification" in the common "struggle against antisemitism and Fascism." In May 1946 the Zionist groups joined the Communists in a formal agreement providing equal representation in the Consistory, the Central Jewish Committee of the Fatherland Front, and all other Jewish communal organizations. An effective Communist majority was assured, however, since the balance of power was in favor of pro-Communist Jewish Social Democrats and pro-Communist "non-partisans."

ECONOMIC RESTITUTION. The economic condition of Bulgarian Jews was desperate. Immediate restitution of property lost during the war was essential if the Jewish population was to recover from the deep poverty to which it had been reduced. In March 1945 the government passed the Law of Restitution, providing for the return of all Jewish rights and property, but many months passed before the law began to be enforced. Determined to achieve the eventual socialization of all property, the Fatherland Front regime actually prevented the execution of its own laws. Throughout the existence of the Front, there continued to be a huge discrepancy between the letter of the Law of Restitution and its implementation. Only a small part of Jewish losses were actually recovered, and these were further reduced by the postwar inflation. Thanks to relief measures from international Jewish organizations, a large number of Bulgarian Jews were able to carry on until their eventual emigration. The regime exhibited greater interest in punishing those guilty of anti-Jewish persecutions during the war. A special section of the People's Court, set up at the end of 1944, dealt with crimes against the Jews, and the sentences it issued were among the most severe in postwar Europe.

EXODUS TO ISRAEL. During the first two years of its tenure, the Fatherland Front regime expressed open hostility to Jewish emigration, particularly to Palestine. The first signs of change in this attitude came in 1946. The reversal of Soviet policy on Palestine was reflected in Bulgaria and reinforced by local conditions that showed the Zionist movement to be much more influential in the Jewish population than expected. Upon assuming the premiership in December 1946, the veteran Communist leader Georgi Dimitrov told a group of Jewish leaders that, in principle, resettlement in Palestine would be allowed. The real turn in events came with Gromyko's UN

speech in favor of the partition of Palestine and the establishment of an independent Jewish state. Although they supported the Jewish efforts in Palestine, the Communist Jewish leaders continued their assault on all Zionist manifestations at home. Ironically, the campaign against local Zionists was intensified alongside growing Jewish Communist support for the Haganah and Israel's War of Independence. Throughout the postwar period "illegal" movement from Bulgaria to Palestine was considered a crime. On several occasions frontier guards shot and killed Jewish youth attempting to leave the country clandestinely, though groups of children whose *aliyah* certificates had been issued within the framework of the Youth Aliyah movement during the wartime regime were allowed to leave legally. Only after the United Nations' Partition Plan was voted upon did the regime permit the emigration of able-bodied young men and women, who were to join in the "fight against imperialism."

Between September 1944 and October 1948, 7,000 Bulgarian Jews left for Palestine. The exodus was due to deep-rooted Zionist sentiments, a relative alienation from Bulgarian intellectual and political life, and depressed economic conditions. Humanitarian considerations and a general feeling of goodwill on the part of the Bulgarian people helped to ease the process of resettlement. The Bulgarian Communist Party was not weakened by the exodus because few Communist Jews held central positions of power. Bulgarian policies toward national minorities were also a factor that motivated emigration. In the late 1940s Bulgaria was anxious to rid itself of national minority groups, such as Armenians and Turks, and thus make its population more homogeneous. Further numbers were allowed to depart in the winter of 1948 and the spring of 1949. The mass exodus continued (between 1949 and 1951, 44,267 Jews emigrated to Israel) until only a few thousand Jews remained in the country.

After the Exodus

In the following decades Jewish life in Bulgaria was systematically circumscribed in keeping with the agenda of the Communist regime. The organized religious life of the community steadily declined while the rate of intermarriage increased. There were no recognized rabbis to provide leadership or religious schools to perpetuate Jewish education. Religious affairs were directed by the Jewish Religious Council, affiliated with the Cultural and Educational Society of Jews in Bulgaria, a non-religious, Communist-dominated organization that replaced the Consistory in 1957 and was responsible for conducting Jewish affairs and officially representing the Jewish community. It held lectures, supported a theater group, and presented programs and exhibitions honoring Jewish anti-Nazi resistance. The Bulgarian Academy of Sciences published a number of works on Jewish subjects, among them an authoritative collection of responsa pertinent to the economic history of the Balkan Jews (A. Hananel and E. Eškenazi, *Fontes Hebraici...*, 2 vols., 1958–60, Heb., Bul., Fr.). The Hebrew Scientific Institute was founded in 1947; from 1952 it was a part

of the Bulgarian Academy of Sciences. The Bulgarian government looked with disfavor upon ties with other Jewish communities, but the remnant of Bulgarian Jewry lived free from persecution. The Jewish Religious Council also continued to publish *Yevreyski Vesti*, which incorporated news from the Jewish press in other countries, including news on Israel. In 1966 the Cultural and Educational Society began publishing its *Godishnik* ("Annual"), a literary miscellany in Bulgarian and English for Jewish studies in history, ethnography, linguistics, and Jewish folklore. A film, *The Transports for the Death Camps Have Not Yet Departed*, showing Nazi preparations for the deportation of Bulgarian Jews during the German occupation in World War II, won its producer, Naim Oliver, the National Front Prize at the third festival of short films held at Plovdiv in 1978. Only one synagogue continued to function in Sofia, attended by a handful of elderly people with a quorum on Sabbath. The only other synagogue was in Plovdiv where services were held only on the Day of Atonement. The synagogue in Burgas was converted into an art gallery and the one in Pazardzik into a museum. In the late 1970s, in only one marriage in three were both partners Jewish. By the 1980s the first post-war generation of Jewish communal leaders and outstanding personalities in the public life of the country had almost entirely disappeared following the deaths of Dr. Salvator *Israel, head of the Cultural and Educational Society and a participant with observer status in meetings of the World Jewish Congress, even when held in Jerusalem, and of the international lawyer, Dr. Nissim *Mevorah.

[Nissan Oren]

Post-Communist Period

After the collapse of the Communist system in 1989–90 and the institution of democratic changes a new wave of *aliyah* set in as 4,288 Bulgarians took advantage of the Law of Return and moved to Israel – Jews with their families, many of them in mixed marriages or themselves the product of mixed marriages and all retaining their Bulgarian citizenship. At the same time, in accordance with the new Bulgarian legislation, a great number of Jews who left in the 1949–51 period had their Bulgarian citizenship restored and their property returned and thus began to spend a large part of the year in Bulgaria. Consequently, it is estimated that around 7,000 Jews lived in Bulgaria in 2004.

The post-1990 period also saw the creation of the Shalom organization in place of the Communist-oriented Cultural and Educational Society. In 2004 it had around 4 000 members in 15 independent branches – Burgas, *Varna, *Vidin, Dupnitsa, *Kyustendil, Lom, *Pleven, *Plovdiv, *Ruse, Sliven, *Sofia, *Stara Zagora, Haskovo, Shumen (*Kolarovgrad), and Iambol. In addition, Maccabi, Ha-Shomer Ha-Tzair, and B'nai B'rith were active. Shalom was the coordinator of the social, educational, and cultural life of the Bulgarian Jewish community and was generally recognized as its representative. The restitution of Jewish communal property made it possible for Shalom to develop Jewish educational and cultural facilities.

The synagogues in Sofia and Plovdiv were restored. The community had a rabbi who was officially recognized as the chief rabbi of Bulgaria. Jewish education had a formal and informal aspect. Formal Jewish education is received in a state secondary school, one of the best in the country, which, though mixed, has compulsory Hebrew and Jewish history studies for all 800 of its students. Informal Jewish education is in framework of Sunday schools run by the bigger regional organizations.

The Jewish population included over 1,300 Holocaust survivors. An old age home, considered the best in Bulgaria, operated in Sofia, as well as the Keshet Jewish theater, which put on An-Ski's *Dybbuk* in 2004, the Haggadah Jewish Choir, and the Dulce Canto Jewish Vocal Ensemble. Around 500 Jewish children participated yearly in Jewish camps and seminars.

[Emil Kalo (2nd ed.)]

Relations with Israel

Bulgaria recognized the State of Israel upon its establishment, and formed diplomatic ties with her. The two states also developed trade relations. Over the years, however, Bulgaria grew closer and closer to the official Soviet line on relations with Israel. In the process of deteriorating relations, a Bulgarian Air Force plane shot down an El Al passenger plane that had crossed the Bulgarian border in error in August 1955, killing all the passengers aboard. In 1967, after the *Six-Day War, Bulgaria severed diplomatic relations and discontinued trade relations with Israel (the expected turnover for 1967 was to have been about \$10 million). In addition, Bulgarian representatives in the UN were conspicuous in the sharpness of their attacks against Israel. In the beginning of 1968, however, Bulgaria resumed trade relations with Israel. In 1977 a delegation of members of the Israel Knesset participated in the Inter-Parliamentary Union which met in Sofia, one of the rare occasions since the establishment of the State that elected representatives of Israel set foot on Bulgarian soil. In 1990, with the collapse of the Communist regime, diplomatic relations between Bulgaria and Israel were reestablished and general relations between the two countries improved dramatically.

BULGARIAN LITERATURE. The early history of Bulgarian literature is closely linked with that of the Bulgarian language, and with both there are interesting Jewish associations. During the 9th century C.E., as part of his proselytizing campaign in the Balkans, the missionary monk Cyril of Salonika (also called Constantine the Philosopher) created Glagolitic, the basic Slav alphabet, later modified by Clement of Ohrid to form the Cyrillic alphabet. Since the Greek symbols on which this was based could not convey all the phonemes of the old Slav tongue, several consonantal symbols had to be drawn from other sources, including the Hebrew alphabet which yielded Б (ב), П (פ), Ч (ץ), Ш (ש), and Ц (ש) – the phonetic equivalents of *b*, *ts*, *ch*, *sh*, and *shch*. This new alphabet facilitated the translation of Greek liturgical works into the new literary language – Old Church Slavonic (or Bulgarian) – to which Cyril, his brother Methodius, and perhaps their pupils such as Clement added a version of the Bible, reputedly translated from the original Hebrew. According to some authorities, they had learned Hebrew from the Jews of Salonika and Kherson; Cyril and Methodius also translated part of a Hebrew grammar. The influence of a Hebrew textual source (as well as of Greek or Latin translations) has been detected in an Old Church Slavonic version of the Psalms – the 12th-century *Psalterium Sinaiticum* – now in the possession of St. Catherine’s Monastery in the Sinai Peninsula. Other medieval Bulgarian works translated or drawn from Jewish sources include *Shestodnev* (“The Six Days”), an account of the creation of the world in the biblical tradition, composed by Ioan (John) the Exarch (b. 860). During the 11th and 12th centuries the Bogomils – a heretical Christian sect, the Western counterparts of which were known as the Cathars or Albigensians – produced a literature rich in biblical themes.

The Figure of the Jew in Bulgarian Literature

From the beginning of the Bulgarian national revival in the early 19th century, most Bulgarian writers instinctively sympathized with their fellow Jewish victims of oppression. While protesting against antisemitism, some of these non-Jewish writers portrayed Jewish suffering as a tragic destiny, while others advocated a solution to the problem, either through total emancipation or Zionism. Authors in the first category were Peyo (Kracholov) Yavorov (1877–1914), a leading symbolist poet who wrote *Yevrei* (“Jews,” 1901) on Jewish martyrdom; Petko Yordanov Todorov (1879–1916), whose “Kamuni” (“Stones”) published in *Idilii* (1908) describes the Jewish tragedy; and the versatile Petko Rachev Slaveykov (1827–95), who

portrayed Jewish suffering with an elegiac pathos reminiscent of the Psalms in his poem “*Plachete za oniez*” (“Weep for These,” 1852). The poet and playwright Emanuil Pop Dimitrov (1885–1943) used his knowledge of Bulgarian Jewry in two biblical works, *Deshcherite na Yeftaya* (“Jephthah’s Daughter”) and *Rut* (“Ruth”), which appeared between the world wars. On the other hand, there were writers like Konstantin Konstantinov (1890–1970) who, after World War I, regarded the Jew as a comrade in the struggle for social justice. Jewish participation in the Bulgarian national movement is a prominent theme of the novel *Robi* (“Slaves,” 1930) by the social writer Anton Strashimirov (1872–1937); Aleko Konstantinov (1863–97), outraged by the police brutality against Joseph Marcou *Baruch, the founder of the Bulgarian Zionist movement, wrote a pro-Jewish pamphlet entitled *I sega biyat, brate moy* (“We Fight On, My Brother,” 1921). Other works in this genre were E.P. Dimitrov’s *Yevrei* (“Jews”), and “*Poslednata kal*” (“The Last Mud,” 1929), a story by Yordan Kovachev (1875–1934). Hostile treatment of the Jew is rare in Bulgarian literature, the one outstanding example being the classic drama *Kem propast* (“Toward the Abyss,” 1910) by the prolific Ivan Vazov (1850–1921). In this play, which has a medieval setting, the central character, Queen Theodora, is shown to have been responsible for the defeat of her realm. The figure of Theodora is directly inspired by the converted Jewess, originally named Sarah, whom the Bulgarian czar Ivan Alexander married in 1335. Periodically from the late 19th century and especially during the decade of fascist rule (1934–44), some pamphleteers and journalists encouraged antisemitic tendencies, but their activities gained little popular support.

After World War II Bulgarian writers generally saw the Jew as an anti-fascist hero. In his novel *Na zhitov ili smert* (“Life or Death,” 1953) Dimitur Anghelov (1904–) portrays the Jewish democrat Sami Mevorakh executed by the fascists; Dimitur Dimov (1909–1966) brings several Jewish characters into his novel *Tyutyun* (“Tobacco,” 1953), sympathetically describing the Communist Max Eshkenazi and the partisan Varvara, and including some dialogue in Judeo-Spanish (Ladino); while Dimitur Talev (1898–1966) introduces into his novel *Glavovete vi chuyam* (“I Hear Your Voices,” 1954) several Jewish heroes, including a young Macedonian revolutionary. Similar figures also appear in the novel *Krayat na delnite* (“The End of the Brigands,” 1955) by Emil Manov (1919–1982); in the play *Borbata produlzhava* (“The Fight Continues,” 1945) by Krum Kulyavkov (1893–1955), and in a number of other works. In the tragedy *Ivan Shishman* (1962) by Kamen Zidarov (1902–1987), Queen Theodora (whom Ivan Vazov had earlier treated rather unsympathetically) is presented in a positive light.

The Jewish Contribution to Bulgarian Literature

At around the time of World War I Jews began to write literary works in Bulgarian as well as Ladino. The pioneer in this field was the gifted poetess Dora Gabe (1866–1983), who produced many of the classics of Bulgarian literature. Later she

became president of the Bulgarian PEN Club and head of the Council of Bulgarian Writers. Haim Benadov (1907–1991) describes Jewish poverty in a Sofia suburb in his satiric short stories. In the first half of the 20th century there were three significant poets who devoted their works to the Zionist ideal: Oram ben Ner (pen name of Saul Mezan, 1893–1944), author of *Pesni za Erusalim* (“Songs of Jerusalem”); Simcho Isakov (1919–1949), author of *Stihove* (“Poems,” 1953); and Leo Cohen, who wrote *Moiat narod* (“My People,” 1930) and *Poezia I jivot* (“Poetry and Life,” 1938). Bucha Behar wrote popular stories about Jewish country life. Mois Benaroya (1896–1967) worked as a critic, and Albert Mihael was a prolific contributor to the Jewish press as well as a playwright. A number of Jewish writers worked in the field of political journalism. The most important of them was Jossif Herbst (1875–1925), murdered by the Fascists because of his acerbic pen. Others were Benjamin and Eliezer Arditi, Jossif Israel, and Isak Naimovich. This important Jewish contribution to Bulgarian literary life undoubtedly inspired leading Bulgarian writers to submit a petition to the Bulgarian Parliament in 1940 protesting proposed anti-Jewish legislation.

After World War II many more Jews gained literary prominence. Armand Baruh (1908–1990) was a popular novelist, mainly known for *Ralevi* (1955). Victor Baruh (1921–) wrote mainly about the fate of the Jews during the Holocaust years. His most famous work is the novel *Otrecheni ot zakona* (“Denied by the Law,” 1960). Others are *Svatbeni sveshti* (“Wedding Candles,” 1968), *Iaponskata kukla* (“The Japanese Doll,” 1965), and *Oklevetenata* (“The Slandered,” 2003). Valeri *Petrov was an outstanding poet, theater and cinema writer, and translator, under the pen name of Valeri Mevorah (1920–). Poems like “*V mekata esen*” (“In the Soft Autumn,” 1961) and “*Krai sinioto more*” (“Along the Blue Sea”) made him one of the most important Bulgarian poets of all times, while his plays such as *Kogato rozite tantzuvat* (“When the Roses Dance”), *Biala prikazka* (“White Story”), and *Kopche za san* (“Button for a Dream”) are produced in many dramatic and puppet theaters around the world. Also highly acclaimed is his translation of Shakespeare into Bulgarian. David Ovadia (1923–1995) was a poet whose work dealt mainly with anti-Fascist resistance. Salis Tadjer (1924–1988), poet and belletrist, wrote *Kopnej v pustiniata* (“Longing in the Desert,” 1960) and *Bulgaria v mene* (“Bulgaria Within Me,” 1964). The outstanding Jewish playwright of the 1960s was Dragomir Asenov (pen name of Jak Melamed, 1926–1981), who wrote *Rojden den* (“Birthday,” 1965) and *Rozi za Doktor Shomov* (“Roses for Doctor Shomov,” 1967). The fate of one Jew is the subject of his trilogy *Kafiavi horizonti* (“Brown Horizons,” 1961), *Golemiat kamenen dom* (“The Big Stone House,” 1963), and *Plodat na vetrovete* (“The Fruit of the Winds,” 1966).

The two most important Jewish literary critics were Iako Molhov (1915–2002), who wrote *Problemi na savremennia balgarski roman* (“Problems of the Contemporary Bulgarian Novel,” 1956) and Maxim Naimovich (1921–1982). Also prominent during the postwar period was the prolific novelist

and screenwriter Anjel *Vagenshtajn (1922–), whose screenplays were internationally acclaimed. “In his later years he turned mainly to novels, with Jewish themes predominant in *Petoknijie Isakovo* (“Pentateuch of Isaac”) and *Sbogom, Shanhai* (“Good-bye, Shanghai”). Leon Daniel (1926–) is an outstanding essayist. The poetry of Victor Samuilov (1946–) and the prose of Chavdar Shinov (1941–) are richly satiric. Eddy Schwartz (1937–) works as a playwright and novelist.

BULLS, PAPAL, generally official statements by the head of the Roman Catholic Church. Although the term “Bull” (from the Latin *bullum*, “seal”) was sometimes applied to imperial documents as well, its use has been limited as defined above. Bulls bearing the seal of the reigning pope and dealing with matters of Jewish interest were fairly numerous in the Middle Ages, though they constituted a small fraction of the vast papal correspondence; in recent centuries their number has decreased. Earlier they took the form of letters addressed to prelates, to secular rulers, to the Christian faithful in general, and in rare instances directly to Jews. Later, they increasingly took the form of memoranda (briefs outlining policy), headed by the phrase *Ad futuram rei memoriam* (“A reminder for the future”). Either type of document usually began with a statement of general attitude, proceeded to a discussion of the specific problem involved, continued with the pope’s decision on the resolution of the problem, and concluded with a statement of the penalties for disobedience. The statement of attitude frequently cited scriptural verses or referred back to the authority of the incumbent’s predecessors. The following are examples of some of the more significant papal bulls concerning the Jews, illustrative of Church policy. They are identified, as usual, by their initial words.

Sicut Judaeis. First issued by *Calixtus II around 1120, it was a general Bull of Protection for the Jews, who had suffered at the hands of participants in the First Crusade (1095–96) and were being maltreated by their Christian neighbors. It forbade killing them, using force to convert them, and otherwise molesting them, their synagogues, and cemeteries. The bull was modeled on a letter, which began with the same phrase, sent to the bishop of Palermo by Pope *Gregory I in 598, objecting to the use of force as a conversionary method. Calixtus’ formulation was repeated by most of the popes from the 12th to the 15th centuries. They often added references to problems current in their day. Several of them condemned the accusation of ritual murder (see *blood libel).

Post Miserabile by *Innocent III in 1198, was addressed to the prelates of Europe and dealt at length with the need for another crusading effort in the Holy Land. Among the privileges granted to those who took the cross was the protection

of their property while they were away, including the suspension of payment of principal and interest on their debts to Jews. The formula in which this suspension was expressed became standard in calls to Crusades which followed in the next few centuries.

Etsi non displiceat by Innocent III in 1205, addressed to the king of France, is a list of accusations against the Jews: usury, blasphemy, arrogance, employing Christian slaves, and even murder. The king is urged to put a stop to the evils. Yet the same “evils” continue to be mentioned by various popes for centuries and to be completely disregarded by others.

In generali concilio by Honorius III in 1218, addressed to the archbishop of Toledo, demanded the enforcement of the decision of the Fourth *Lateran Council that Jews wear clothing to distinguish them from Christians; also that Jews be made to pay the tithe to local churches. Both items were frequently repeated by later popes.

Etsi Judaeorum by *Gregory IX in 1233, addressed to the prelates of France, urged the prevention of attacks on the Jews, usually motivated by greed. The sentiment, if not the exact words, was repeated by a number of popes in the 14th and 15th centuries.

Si vera sunt also by Gregory IX, in 1239, addressed to the kings and prelates of France and Spain, ordered the seizure and examination of the Talmud and all other Jewish books suspected of blasphemies against Jesus and Christianity. The burning of such Jewish books was ordered several times from the 13th to the 16th centuries.

Lachrymabilem Judaeorum by *Innocent IV in 1247, addressed to the prelates of Germany in response to Jewish complaints, urged an end to murder and persecution on the baseless blood libel. Several other popes made the same plea, but neither consistently nor forcefully.

Turbato corde by *Clement IV in 1267, addressed to the inquisitors of heresy, expressed dismay over the rumor that Jews were trying to induce Christians (possibly converts from Judaism) to turn to their religion. Charges of such Judaizing activity were raised frequently by later popes.

Vineam soreth by *Nicholas III in 1278, addressed to Franciscans in Austria and Lombardy, ordered the selection of trained men to preach Christianity to the Jews. Secular rulers were requested not to interfere with the preachers. Henceforward, frequent reference is made to this method of missionizing among Jews.

Quamvis perfidiam by *Clement VI in 1348, addressed to various prelates, urged the protection of Jews against the accusation that they had brought on the *Black Death by poisoning the wells. It was an instance of specific application of protection in the face of a threat to Jewish life.

Etsi doctoribus gentium by antipope *Benedict XIII (Peter of Luna) in 1415, a brief for the guidance of Church policy,

was one of the most complete collections of anti-Jewish laws. Though not by a recognized pope, it served as a precedent for several later popes.

Numquam dubitavimus by *Sixtus IV in 1482, empowered Ferdinand of Aragon to appoint inquisitors to extirpate heresy and to prevent Jewish practices among those who had been converted to Christianity.

Cum nimis absurdum by *Paul IV in 1555, was a brief in the spirit of antipope Benedict XIII. It established the ghetto in Rome, limited Jewish economic activities, prohibited more than one synagogue in a town, and forbade contact between Jews and Christians.

Hebraeorum gens by Pius V in 1569, a brief, accused the Jews of many evils, including the practice of magic. It ordered the expulsion of the Jews from all papal territory, excepting Rome and Ancona.

Sancta mater ecclesia by *Gregory XIII in 1584, confirming his Vices eius nos of 1577, ordered the Jews of Rome to send 100 men and 50 women every Saturday afternoon to listen to conversionist sermons which were delivered in a church near the ghetto.

Christiana pietas by *Sixtus V in 1586, relieved the Jews of many oppressive social and economic restrictions which had been imposed upon them by Paul IV and Pius V. They enjoyed this relief for only a few years, for in 1593 *Clement VIII issued a number of edicts restoring the previous situation which remained in force till the 19th century.

BULLOFF, JOSEPH (1899–1985), U.S. Yiddish actor. Buloff was born in Vilna, Lithuania. At the age of 20, he played with the Vilna Troupe, performing in Russian, German, Yiddish, and Polish. In 1926 he was invited by Maurice *Schwartz to join the Yiddish Art Theater in New York. After working

with him for about a year, Buloff became director of the Jewish Literary and Dramatic Society in Chicago (1927–29). After having performed in more than 225 Yiddish plays, Buloff turned his talents to acting in English, making his Broadway debut in 1936 in the comedy *Don't Look Now*. He appeared in many other comedies on Broadway, including *Call Me Ziggy* (1937); *To Quito and Back* (1937); *The Man from Cairo* (1938); *Morning Star* (1940); *My Sister Eileen* (1940–43); *Spring Again* (1941–42); *Oklahoma* (1943–48); *The Whole World Over* (1947); *Once More with Feeling* (1958–59); *Moonbirds* (1959); as well as John Hersey's Broadway version of *The Wall* (1960–61) and the drama *The Price* (1979).

In 1952 he directed *Mrs. McThing* on Broadway, which he staged in Hebrew in Israel. In 1952 he also staged a Yiddish version of *Death of a Salesman*, in which he starred as Willy Loman. Buloff's wife, Yiddish actress Luba Kadison, took on the role of his stage wife, Linda. In 1968 Buloff toured with *The Kibbitzer* in Israel, where he later settled. In 1982 Buloff and Kadison wrote and performed off-Broadway in *The Chekhov Sketchbook*, three short stories by Anton Chekhov that they adapted for the stage.

On screen, Buloff appeared in the films *Let's Make Music* (1941); *They Met in Argentina* (1941); *Carnegie Hall* (1947); *To the Victor* (1948); *The Loves of Carmen* (1948); *A Kiss in the Dark* (1949); *Monticello, Here We Come* (1950); *Somebody Up There Likes Me* (1956); *Silk Stockings* (1957); and *Reds* (1981).

He appeared on such television shows as *The Philco Television Playhouse* (1950s); *The Untouchables* (1959); *Ben Casey* (1964); and *Medical Center* (1969). He also was a regular on the 1951 sitcom *Two Girls Named Smith* and appeared in the TV movies *Wonderful Town* (1958) and *Running Out* (1983).

He won an Obie Award in 1973 and 1978.

Buloff wrote *From the Old Marketplace: A Memoir of Laughter, Survival, and Coming of Age in Eastern Europe* (translated and published in 1992), and *On Stage, Off Stage: Memories of a Lifetime in the Yiddish Theatre* (with Luba Kadison and Irving Genn, published in 1992).

[Richard F. Shepard / Ruth Beloff (2nd ed.)]

BUND (abbr. of **Algemeyner Yidisher Arbeter Bund in Lite, Poyln un Rusland**; "General Jewish Workers' Union in Lithuania, Poland and Russia"), Jewish socialist party founded in Russia in 1897; after a certain ideological development it came to be associated with devotion to Yiddish, autonomism, and secular Jewish nationalism, envisaging Jewish life as lived out in Eastern Europe ("Doykeyt"; "Hereness," in Bund ideology), sharply opposed to Zionism and other conceptions of a world-embracing Jewish national identity.

Beginnings (Pre-Bund)

The structure and ideology of the Bund, while stemming from the social patterns and needs, from the problems and tensions within Jewish society in the *Pale of Settlement in the second half of the 19th century, were also an outcome of the aims,

tendencies within, divisions in, and methods of the Russian socialist movement in the multinational empire of the czars.

The first stirrings of the Jewish labor movement in general, and the formation of the Bund subsequently, occurred in "Jewish Lithuania," i.e., the six northwestern Lithuanian-Belorussian provinces with some adjoining districts, headed by Vilna. From here came the earliest leaders and pioneers of the Bund. In this region the working element was relatively important in Jewish society and its proportion among the proletariat (occupied in crafts and industry) in the cities and towns was higher than elsewhere. The trend to *assimilation was less strong in a region where sociocultural and political conflict among the Russian, Polish, Lithuanian, and Belorussian elements was rife, none of whose aims appealed to the Jewish population which had attained independently a high cultural standard, exemplified in its celebrated yeshivot. From the Lithuanian-Belorussian provinces the Jewish labor movement spread only gradually to Poland and the Ukraine.

The Jewish labor movement, in particular "pre-Bund" and Bund socialism, drew its support from three sectors in Jewish society. The first, the hired-worker class, was just then assuming corporate consciousness and cohesion as an outcome of the capitalization of the crafts and the breakup of the traditional craft associations (**hevrot*), which brought about the separate organization of apprentices (from the mid-19th century especially in the garment industry). Sporadic strikes had taken place in the 1870s among the textile and tobacco workers. Secondly, there were the circles of the radical intelligentsia who in this region combined revolutionary ideas and Marxist ideology with feelings of involvement with their Jewish identity and of responsibility toward the Jewish proletariat. Finally there was the semi-intelligentsia, who, though lacking a formal general education, were deeply rooted in Jewish culture.

In the 1870s Aaron Samuel *Liebermann and his circle made the first attempts to spread socialist ideas among the Jewish people in their own language and to start a revolutionary movement. From the 1880s this became a continuous development creating the Jewish labor movement.

Study circles for Jewish intellectuals to promote culture and socialism among Jewish working men were formed in Vilna during 1886 and 1887, and all their activities were conducted in Russian. Workers' mutual assistance funds were founded and attempts were also made to found *artels*. Gradually, however, the ideology of these circles changed, and, from following the traditional populist position taken by Russian socialists, turned to Marxism as advocated by Plekhanov. The circles of intelligentsia also gradually changed their attitude toward the Jewish artisan and abandoned their former "cosmopolitan" stand, which in practice had meant the "Russification" of the Jewish elements in Russia.

The change matured through several stages during the years 1890 to 1895, in which a leading part was taken by A.I. *Kremer, S. *Gozhanski, J. *Mill, I. *Eisenstadt, Z. *Kopelsohn,

V. *Kossovski, and A. *Mutnik(ovich), among others. The number of circles and their membership increased, while efforts to obtain an amelioration of working conditions were intensified, in particular to shorten the working day in the sock-knitting, tobacco, and tailoring trades where conditions were notoriously disgraceful.

In addition to the general revolutionary tension in Russia at this time, unrest among Jews was enhanced by the widespread antisemitism in general society and government circles, which, combined with the social and economic constriction in the overcrowded shtetl, also led to massive emigration, and revived *Hovevei Zion* activity (see *Zionism). Eventually the leaders of these circles reached the conclusion that Jewish workers could and must form their own socialist labor movement, since their specific circumstances necessitated demands which were largely peculiar to the Jewish worker. They also considered that the Jewish environment in general was more objectively receptive to the idea of opposition to and revolt against the authoritarian czarist regime. A new line of action was formulated by Kremer in his "On Agitation" that was to influence the whole Russian Social Democratic movement. Elaborated by Gozhanski ("Letter to Agitators," 1893) and Julius *Martov (May Day lecture, 1895), it called for a change from activity in closed propaganda "circles" to mass "agitation" in order to rally workers to struggle for better conditions as a "phase" toward revolutionary political consciousness and activity. To enable the "agitation" to reach the Jewish masses, both orally and in writing, it was decided to replace Russian by Yiddish as the medium for propaganda, and "Jargon committees" were formed (in Vilna in 1895) for this purpose. Thus the movement was integrated into the concomitant process of revival of the Yiddish language and literature. The radical Jewish intelligentsia was called upon to abandon its "mistrust of the Jewish masses" and "national passivism," to work for the establishment of an organization of Jewish workers aimed at obtaining their rights, and to carry on a "political national struggle" in order to obtain civic emancipation for all Jews. This organization should associate itself with the non-Jewish proletariat and the all-Russian labor movement in an "indissoluble bond," but only on the basis of equal partnership and not of integration of the Jewish within the general labor movement. This dualism was to be the cause of ideological oscillation throughout the whole of the Bund's existence.

The "Workers' Opposition" to the "new program" led by A. *Gordon failed, and from 1894 the new trend gained support in many industrial centers. Funds ("*Kases*") hitherto established for mutual assistance were converted into workers' struggle funds (trade unions). At the beginning of 1896, 32 such funds existed in Vilna alone. A wave of successful strikes ensued. The Jewish labor groups were represented at the congress of the Socialist International in London in 1896. A central "Group of Jewish Social Democrats" was formed, and published the periodical *Yidisher Arbayter* (1896–1905), as well as *Arbayter Shtime* (1897–1905), both of which later became the organs of the Bund.

The Bund

The Bund was founded at a secret convention held in Vilna on Oct. 7–9, 1897, with the participation of 13 delegates (eight of them working men). At the founding convention of the Russian Social Democratic Labor Party in March 1898, three of the nine delegates were Bundists. The Bund entered the Russian party as an autonomous body, and Kremer was elected a member of its central committee. The sovereign institution of the underground Bund was its periodic convention. In addition to the founding meeting, the following conventions were held: the second convention, October 1898, in Kovno; the third, December 1899, in Kovno; the fourth, May 1901, in Bialystok; the fifth, June 1903, in Zurich; the sixth, October–November 1905, in Zurich; the seventh, August–September 1906, in Lemberg (Lvov); the eighth, December 1917, in Petrograd (Leningrad). The convention elected a central committee which was the chief political administrative and representative body of the Bund. Between the conventions, conferences, whose authority was more limited, also met. Larger branches were headed by committees, mostly comprising members nominated by the central committee. The “strike funds,” including the national unions of bristlemakers and tanners, were integrally incorporated within the Bund. There were also groups of intellectuals. The number of Bund members from 1903 to 1905 varied between 25,000 and 35,000. The “Committee Abroad,” which was founded in December 1898 by students and workers who had left Russia, its members including at various periods the most important Bund leaders, served as the Bund representative vis-à-vis the international socialist movement, raised funds, printed literature, and organized its transportation. Considerable assistance was given to the Bund by its “Landsmanschaften” and branches of sympathizers in the United States, headed by the “Central Farband,” which in 1906 comprised 58 organizations with 3,000 members. Although the Bund opposed cooperation with the Jewish labor movement in other countries, it had a significant influence on the formation of the *Jewish Social Democratic Party in Galicia in 1905. Bundist principles contributed to the establishment of the Jewish Socialist Federation of America in 1912. Some prominent activists of the American Jewish Labor Movement came from the ranks of the Bund, including S. *Hillman, B. Hoffmann (*Zivion), B. *Vladeck, Y.B. Salutzki-Hardman, M. *Olgin, N. Chanin, and D. *Dubinsky. The activity and ideas of the Bund also had influence on Jewish socialism in Argentina, Bulgaria, and Salonika (Greece).

From the beginning of the 20th century, the Bund concentrated its activities on the political sphere, and the party became an important factor in Jewish public life. The fourth convention of the Bund (1901) already recommended discretion in the proclamation of strikes – for the government was suppressing them severely and they brought little amelioration of the workers’ conditions – and called for struggle through purely political agitation, May Day demonstrations and strikes, accompanied by political demands. This trend gained in strength as a result of various economic, social,

and political factors (see also *Independent Jewish Workers’ Party).

Feelings became inflamed when Jewish workers were flogged during the May Day demonstrations in 1902 on the order of the governor of Vilna who was subsequently shot by a Bundist youth, Hirsh *Lekert. However, the tendency to advocate violent measures – “organized vengeance” – which evolved in the Bund after this assault was short-lived. The pogroms at the beginning of the 20th century intensified political alertness among the Jews as a whole, and efforts were made toward active *self-defense. These bloody attacks dissipated the reservations of many who had formerly held aloof from the revolutionary activity of the Bund. The Bund then became one of the principal promoters, and in some places the main organizer, of the self-defense movement to combat the perpetrators of the pogroms. It began to find support among the Jewish middle classes, and gained adherents in the provincial towns of Poland and southern Russia. From mid-1903 to mid-1904 the Bund held 429 political meetings, 45 demonstrations, and 41 political strikes, and issued 305 pamphlets, of which 23 dealt with the pogroms and self-defense. The number of Bundist political prisoners in 1904 reached 4,500. A children’s organization, Der Klayner Bund, was formed. The Bund reached its peak influence during the revolution of 1905. It then acquired semilegal status, played an important role in general revolutionary and political activities, and began to publish a daily newspaper under various names (*Veker, Folksdaytung*).

About this time (at the fourth convention in 1901) the Bund advanced beyond its former demand for equal political and civic rights for Jews. Various internal and external factors pressured this change, such as the solutions advocated by S. *Dubnow, the views of H. Zhitovsky, and the growth of Zionism. The Bund now drew a Marxist legitimation for its nationalist tendencies from the Austrian Social Democratic Party which had changed its structure to a federal-nationalist one, approximate to the concepts of *autonomism, as the basis for the constitution of a multinational state. The third convention of the Bund (1899) still rejected Mill’s suggestion that the demand for Jewish “national rights” be included in its program. However, at the fourth convention, promoted by M. *Liber, a representative of the second generation of Bund leaders, with the support of the older leaders, Kremer, Mill, and Kossovski who were absent at the convention, the proposition was advanced that Russia should be converted into a federation of nations without reference to region of domicile, with the provision that the concept of nationality should be applied to the Jews. However, as a compromise with opponents of this proposal, it was decided not to campaign for Jewish autonomy as a concrete demand for fear of “inflating the national feeling” which was liable “to blur the class consciousness of the proletariat and lead to chauvinism.” This limitation was not observed in practice even in 1904, and was officially removed at the sixth convention in 1905. A further resolution of the fourth convention sought to reconstruct the Russian Social Demo-

cratic Labor Party on a national-federal basis. This proposal was rejected by the second convention of the Russian Social Democratic Party. In consequence the Bund seceded from it and constituted itself as an independent party.

Even after its fourth convention, the Bund did not consider the Jews a worldwide national entity, and was opposed to a global Jewish policy, limiting its demands for rights and autonomy with reference to Russian Jewry. The Bund rejected, in the name of class-war principles, any collaboration with other Jewish parties, even in the organization of self-defense against pogroms. While assimilationist Russian Social Democrats regarded Bundist ideology as “inconsistent Zionist,” the Bund, for its part, defined Zionism as reactionary and bourgeois or petit-bourgeois, even including such parties as the *Po’alei Zion, the *Jewish Socialist Workers’ Party (the Sejmists), and the *Zionist Socialist Workers Party (the Territorialists), in this category. From 1903 the struggle with other Jewish parties sharpened, as the Bund’s Zionist and other rivals penetrated the proletarian camp. The Bund itself remained in a constant state of ideological vacillation and internal strife in its perpetual effort to square nationalism with internationalism, and the conception of the Jewish proletariat as part of the all-Russian proletariat with its position as part of Jewry. Opposing nationalist, cosmopolitan, and semi-assimilationist elements confronted each other within the Bund and prevented a clear-cut decision either for or against devotion of its efforts to seeking full Jewish political and cultural identity, while even its positive attitude toward the use of Yiddish was mainly governed by pragmatic considerations. Hence the Bund adopted the doctrine of neutralism developed by the party ideologist V. *Medem with the fundamental reservations of Kossovski. Neutralism assumed that no prognosis of the survival of the Jewish people could be advanced: they might equally be expected to subsist or assimilate. The task of the Bund was to fight for a political framework which would guarantee freedom of evolution for both trends, but not to regard as incumbent on it to assist intentionally national continuity. During 1905–06, the Bund sided on many questions with the Bolsheviks, whose support at the convention of the Social Democratic Party in Stockholm in 1906 enabled the Bund to return to the all-Russian organization. After a sharp cleavage of opinion, the “softliners,” prominent among them Medem, Rosenthal, and B. *Mikhalevich, prevailed, and amalgamation with the Social Democrats was decided at the seventh convention of the Bund (1906). The question of the national program was left open, and in practice the Bund retained its independence.

1907 to 1917

With the failure of the 1905 revolution the Bund suffered a serious decline and succeeded in maintaining only the nucleus of its organization. Terrorization, frustration, and despair, together with the massive emigration, considerably reduced the ranks of the Bund. With the limitation of political and trade union activities, the semilegal activities of the Bund now con-

centrated on culture – the organization of literary and musical societies, evening courses, and drama circles. The Bund became an advocate of fundamental Yiddishism. The eighth conference of the Bund (October 1910) decided in favor of pressing for freedom of rest on the Sabbath and for state Yiddish schools. The Bund agreed to participate in several conferences and cultural institutions of a general Jewish nature, such as the *Society for the Promotion of Culture among the Jews of Russia and the meeting of Jewish communal leaders, where the Bundists demanded greater autonomy, and secularization, and democratization in Jewish communal life. The theory of Neutralism was rejected by some prominent Bundists. In 1910–11 the Bund made renewed efforts to strengthen its organization, both openly and by underground activity. It took part in the elections to the fourth *Duma (1912). In Warsaw the joint candidate of the Polish Socialist Party (PPS) and the Bund, E. Jagello, was returned thanks to the support of the nonsocialist Jewish electorate. The Bund campaigned actively on several Jewish issues, including the Polish anti-Jewish *boycott, and the ousting of Jewish workers from their places of employment. It organized a protest strike (Oct. 8, 1913) in reaction to the *Beilis trial, which was observed by some 20,000 Jewish workers. The Bundist press was also revived (*Lebns-Fragen, Tsayt*). In regard to the division in Russian social-democratic opinion between those who supported continued underground activity and those opposing it, the Bund in general adopted a mediatory stand. After the final split between the Bolsheviks and Mensheviks in 1912, the Bund remained within the Menshevik Social Democratic Party, which now tended to favor Jewish national-cultural autonomy, while the Bolsheviks hardened their position against it. The Bund belonged to the socialist wing that condemned all belligerents in World War I, and approved the manifestos of Zimmerwald, 1915, and Kienthal, 1916. The Bund at this time turned more expressly toward adopting a general Jewish stand. At a consultation held in Kharkov (spring 1916) the Bund decided, in contrast to its former position, to take part in activities of the communal Jewish relief organizations, such as *ORT, *OZE, and *Yekopo. It also recognized there, to a certain extent, that the Jewish question had assumed some international significance. The Bund publicized cases of persecution of Jews in Russia through its committee abroad. However, discussion on the question of constituting a World Jewish Congress was not resolved.

The 1917 Revolutions and Their Aftermath

By the end of 1917 the Bund had approximately 40,000 members, in almost 400 branches, of whom 20% were outside the former Pale of Settlement, mostly refugees expelled from the Pale. On the general political scene, Bund leaders (M. Liber and R. *Abramowitz) were spokesmen for both the right and left wings of the Mensheviks, and the Bund discussed and took a stand on problems connected with the revolution. At the same time, it brought forward the claim for Jewish national-cultural autonomy. It participated in communal elections and

was represented on the organizing committee for a general Jewish convention to be held in December 1917. However, it opposed the moving of Zionist formulations there as well as debate on the guarantee of rights to Jews living outside Russia. In the Ukraine, the Bund, led by M. *Rafes, was in favor of an autonomous Ukraine as part of federal Russia. At the elections for the Jewish National Assembly of the Ukraine (November 1918), the Bund received 18% of the votes.

From the fall of 1918, Bundist sympathies, especially in the Ukraine, the scene of frightful pogroms, began to incline toward the Communists. In March 1919, the "Communist Bund" (Kombund) was established in the Ukraine led by Rafes. In May it joined the United Jewish Communist Party to form the Komfarband, which in August amalgamated with the Communist Party of the Ukraine. At the all-Russian (12th) conference of the Bund held in Moscow (April 1920), a split occurred. The majority, led by A. *Weinstein and *Esther (Lifschitz), favored affiliation with the Communists, but on an autonomous basis. Although this condition was rejected by the Communist International, the conference at Minsk (March 1921) nevertheless decided to join the Russian Communist Party. In January 1925, there were only 2,795 former Bundists in the Communist Party, forming 9% of its Jewish members. These included some leaders of the *Yevseksiya (Jewish section of the Russian Communist Party). A minority at the 12th conference (which included Abramowitz, Eisenstadt, and G. *Aronson) broke away and established the short-lived Social Democratic Bund. Sooner or later the activists in both factions became victims of Communist government persecution.

The Polish Bund

In November 1914, when the threat of German invasion became apparent, a Committee of the Bundist Organizations in Poland was formed in Warsaw by the central committee of the Bund (including *J. Portnoy and *V. Shulman). The forced dissociation from the all-Russian movement, and the resurrection of Poland led the Polish Bund to constitute itself as an independent body. The more moderate regime of the German occupation authorities enabled the Bund in Poland, though still functioning clandestinely, to stress Jewish demands, and to set up Jewish trade unions, workers' kitchens, cooperative shops, and a network of cultural institutions. It began to publish a weekly organ (from the end of 1918, a daily), *Lebns-Fragen*. The Bund also participated in elections to the municipal councils. At the first conference of the Polish Bund at Lublin (end of December 1917) an independent central committee for Poland was elected. At the first all-Polish convention in Cracow (April 1920), the Bund organization became united with the Jewish Social Democratic Party of Galicia.

Subsequently the following conventions were held: the second, in December 1921, in Danzig; the third, December 1924, in Warsaw; the fourth, January 1929, in Warsaw; the fifth, June 1930, in Lodz; the sixth, February 1935, in Warsaw; the seventh, November 1937, in Warsaw. The most prominent leaders of the Polish Bund were H. *Ehrlich and *V. Alter. It

published a daily organ *Naye Folksdaytung* between 1921 and 1939. The Polish Bund functioned as a legal, independent political party from the outset, unlike the Russian parent body. It maintained a youth organization, Zukunft, which numbered 15,000 members on the eve of World War II; a children's organization, SKIF, from 1926; a women's organization, YAF; and a sports organization, Morgenstern. During the first years of its existence the Polish Bund was severely persecuted because of its opposition to the war against Soviet Russia. During the 1930s some of its activists were incarcerated in the *Bereza Kartuska concentration camp. The party was split into permanent factions, which were proportionately represented in its central institutions, the centrist or rightist faction (Einser) and the leftist (Tsvayer). The split originally occurred over affiliation to the International. Parallel to development of the Kombund in Russia, the Bund in Poland also shifted its allegiance to the "dictatorship of the proletariat" and "government of the Soviets." The Cracow convention in 1920 decided in principle on affiliation with the Comintern, which demanded that the Bund accept its full program as a condition to affiliation. The intended affiliation did not materialize but caused some older prominent Bundists to feel out of place within the movement and they finally emigrated (V. Medem, *A. Litwak); others (notably P. *Rosenthal) formed the short-lived Social Democratic Bund. One group, however, established the Kombund which later joined the Communist Party. The question of affiliation with the Comintern continued to disturb and divide the Bund for a long time, the majority shifting first one way and then the other. Even the leftist faction, whose chief spokesman was Joseph *Lestschinsky ("Chmutner"), had reservations in regard to affiliation if this was likely to impair the unity of the Bund. The fifth convention (1930) decided, by a small majority, on affiliation to the Socialist International, where the Bund formed part of the left wing. Another cause of division was its relationship with the Polish Socialist Party (PPS), which left-wing Bundists regarded as anathema because of its "nationalism and reformism" and its policy to form a center-left front with the nonsocialist peasant parties. A convergence between the two parties occurred, mainly as a result of the Bund's affiliation to the Socialist International and radicalization within the PPS during the 1930s.

Among the Jewish public, the Bund pursued its relentless campaign against Zionism and religious Orthodoxy, but in contrast to its former policy, collaborated in various fields with other Jewish labor parties. On more than one occasion it aligned with the left Po'alei Zion in municipal elections. In 1930, a common list was drawn up with the right Po'alei Zion for the elections to the Sejm (parliament). The Bund held the overwhelming majority in the national council of Jewish Trade Unions, which, at the end of 1921, comprised seven unions with 205 branches and 46,000 members, and, in 1939, 14 unions with 498 branches and approximately 99,000 members. The Polish Bund, not without opposition, approved initiatives and institutions to work with and organize small-scale artisans' and contractors' cooperatives (1927)

in conjunction with the *American Jewish Joint Distribution Committee and ORT.

In 1921 the Central Yiddish Schools Organization was established, with large participation of the Bund. The Bund was adamant in its extreme opposition to instruction in Hebrew but slightly modified its attitude toward the traditional Jewish holidays and the teaching of Jewish history. In the 1930s the Bund was active in the party lists for Jewish representation on municipal councils and for communal leadership. It maintained a bureau to deal with emigration – but its fixed attachment to the principle of “Doykeyt” (“hereness”) prevented the Polish Bund from appreciating the importance of Jewish emigration.

The Polish Bund achieved its greatest political influence between 1936 and 1939, on the eve of the Holocaust. It scored a substantial success in the municipal elections. This was due less to its socialist appeal than to the role it played in campaigning against the rabid antisemitism within the Polish government and general public after Hitler’s rise to power. The Bund displayed initiative and energy in organizing self-defense groups, a protest strike after the pogrom of *Przytyk, a Workers’ Congress against antisemitism (1936), which was banned by the authorities, as also a proposed Congress for the Struggle of the Jewish Population in Poland (1938).

During the Nazi occupation of Poland, the Bund took an active part in the Jewish resistance movement (prominently A. Blum, L. Feiner, B. Goldstein, M. Edelman). *S. Zygelbojm left the Bund underground in order to represent it on the National Council of the Polish Government-in-Exile in London. His suicide in 1943 was a heroic symbolic act of identification with the Jewish martyrs and a protest against the silence and apathy of the general public in face of the annihilation. The Bund was also active among the refugees from Poland in the Soviet Union. Two of its prominent leaders – V. *Alter and H. Erlich – were executed in 1941 by the Stalinist regime on false espionage accusations.

After World War II the Bund renewed its activities among the survivors of Polish Jewry but it was liquidated in 1948 with the Communists’ liquidation of the general political life of the country.

The International Jewish Labor Bund

At the beginning of World War II, some of the Polish Bundists succeeded in reaching the United States, mainly with the assistance of the Jewish Labor Committee. An American Representation of the Bund was formed and for some time continued activity under the leadership of Portnoy. Beginning with 1941 the monthly *Unzer Zeit* has been published in New York. The first world conference of the Bund was held in Brussels (1947). It established a World Coordinating Committee of Bundist and Affiliated Socialist Jewish Organizations, with headquarters in New York. Its secretary until 1961 was Emmanuel Novogrodski, formerly the secretary of the Bund in Poland and later of the Representation in the United States. The World Bund affiliates included the Bund organization of

Israel, as well as the older Bundist organizations of various countries, most of which had already existed before World War II, and later absorbed the refugee members of the former Polish Bund. In its postwar transfiguration it embodied the previously rejected idea of Jewish world nationality. The Bund differed from other sections of Jewish labor opinion in the United States in that it did not recognize the special importance of the State of Israel in the life of the Jewish people or necessity for a Jewish international policy. At the same time the Bund demanded that the Jewish population in Israel recognize the supremacy of world Jewry. It took a “neutralist” position on the Israeli-Arab conflict. A minority in the Bund, as represented by Liebmann, *Hersh and J. *Pat, attempted to argue for a certain re-evaluation toward a more positive attitude of the Bund toward the State of Israel. As a moribund movement, it remained officially affiliated with the Socialist International.

The Gotteiner Institute for the History of the Bund and the Jewish Labor Movement was established in 1991. The archives of the Jewish Labor Bund are located at the YIVO Institute for Jewish Research in New York City.

BUNIM, IRVING M. (1901–1980), U.S. lay leader. Born in Volozhin, Lithuania, Bunim arrived in the United States in 1909 and settled with his family on the Lower East Side of Manhattan. He attended the Rabbi Jacob Joseph Yeshiva on the Lower East Side and DeWitt Clinton High School in the Bronx, and took business courses at Columbia University. In 1919, he established Eden Textiles Company in New York, which became a prosperous business.

Bunim was raised in a home steeped in Jewish values and tradition and dedicated his life to furthering Orthodox Judaism and Jewish education, often acting as an ad hoc ambassador from the Orthodox to the more secular American Jewish community. He was a prominent lay leader in the Orthodox Jewish community and a philanthropist active in the *Va'ad ha-Hazzalah (the Orthodox Rescue Committee) to save Jews during the Holocaust. He also wrote *Ethics from Sinai*, three volumes of commentaries on Ethics of the Fathers (*Pirkei Avot*), and was the subject of a book, *Fire in his Soul* (1987), written by his son, Amos.

After the Depression, Bunim dedicated himself to Young Israel, the nascent Orthodox synagogue movement, whose roots were in his own Lower East Side neighborhood. There he delivered lectures on religious topics and organized synagogue youth activities. A charismatic, inspiring speaker, he succeeded in lessening assimilation among the youth in his area.

Young Israel was a base for Bunim's World War II activities. He helped mold Rabbi Aharon *Kotler's and Rabbi *Kalmanowitz's Va'ad ha-Hazzalah into an important rescue organization. Already a public speaker of note, Bunim argued effectively for an increase in U.S. immigration quotas and battled indifference to the plight of Europe's Jews. He publicized Nazi atrocities against the wishes of Rabbi Stephen *Wise, the established Jewish community organizations like the Federations of Jewish Philanthropies and the American Jewish Joint Distribution Committee, fundraising indefatigably and facilitating negotiations with the Nazis for the release of the *Kasztner Transport.

After the war, Bunim turned his attention to Jewish education. His support was instrumental in the development of the Rabbi Jacob Joseph School, the Beth Yosef Navarodker Yeshiva, the Beth Jacob/Esther Schoenfeld girls' school on the Lower East Side, and the founding of Beth Midrash Govoha, the prestigious Lakewood, New Jersey Yeshiva. He championed the cause of Torah Umesorah in America and Chinuch Atzmai in Israel, both umbrella organizations for networks of religious elementary schools, Yeshiva University, and the Rabbi Isaac Elchanan Theological Seminary.

BUNIN, HAYYIM ISAAC (1875–1943), author and teacher. Bunin was born in Gomel, Belorussia. He spent most of his life as a wandering teacher in Russia, Lithuania, and Poland, settling in Warsaw in 1929. Bunin devoted himself in particular to research on *Habad Hasidism, on which he first published a series of essays and studies in *Ha-Shilo'ah* (1913–15, 1928, 1929, 1931). His monumental work, *Mishneh Habad*, mainly a compilation from the sources and sayings of its leaders, appeared in installments from 1932 to 1936. His publicist writings and literary compositions were published in the Hebrew and Yiddish press after World War I in the journals *Ha-Zefirah*, *Ha-Mizrahi*, and *Ha-Toren*, among others. In 1922 in Lodz he published and edited a journal entitled *She'ar Yashuv*. He also published *Limmudei ha-Yahadut* ("Instruction in Judaism," 1917) and his *Ketavim* (1936). He perished in *Treblinka during the Holocaust.

[Esther (Zweig) Liebes]

BUNSHAFT, GORDON (1909–1990), Pritzker Prize-winning architect. Bunshaft was born in Buffalo, New York, and received his master's degree in architecture from the Massachusetts Institute of Technology. After winning two fellowships to study abroad, he explored Europe and North Africa. Returning home, he worked first for architect Edward Durell Stone and then joined Louis Skidmore in 1937. Bunshaft first designed some buildings for the 1939 World's Fair. Then World War II intervened and he served in the Army Corps of Engineers. When he returned to work in 1946, his firm had become Skidmore, Owings and Merrill, otherwise known as SOM, and Bunshaft became a partner. His first major project in 1952 was the 24-story Lever House in New York City. This building is often considered to have helped establish the International Style for corporate architecture in America. Known for its use of steel, glass, simplified surfaces, and cantilevered construction, Lever House has since been declared a national historic landmark. Although his garden for Lever House was unrealized, Bunshaft went on to design other gardens with sculptor Isamu Noguchi, such as the sunken garden at the Yale University Beinecke Rare Book and Manuscript Library (1960–64), the Plaza at the Chase Manhattan Bank, New York (1961–64), two gardens at IBM headquarters (Armonk, N.Y., 1964) as well as the garden complex of the Hirshhorn Museum in Washington, D.C. (1974). In 1954 Bunshaft designed the Manufacturer's Trust Bank, a 13,000 sq. ft. glass box on Fifth Avenue, New York, that used clear glass curtain walls because heat-resistant glass was not available in the size needed. These panes were the largest ever used up to that time. Additions to the Albright-Knox Art Gallery (Buffalo, N.Y., 1962) and the Lyndon Baines Johnson Library (Austin, Texas, 1971) are among Bunshaft's best-known buildings. But his last building, created before his retirement, was his favorite. The design for the National Commercial Bank Headquarters in Jeddah, Saudi Arabia (1981–83), combines the movements of natural air – with warm desert air rising through a funnel – with that generated by air-conditioning and through vents. "The dramatic 100-foot-wide fa-

cade openings were designed to provide daylight without direct sunshine." Windows on the top floor are set 10 feet back from the outer wall surface. The citation for the Pritzker Architecture Prize Laureates which Bunshaft received (together with architect Oscar Niemeyer) in 1988 stated that "perhaps no other architect has set such a timeless standard in the urban/corporate world, a standard by which future generations will judge this era, no doubt with acclaim thanks to his abilities. Already acknowledged by peers and critics of his own era, the bestowing of the Pritzker Architecture Prize reaffirms his place in history for a lifetime of creativity in beautify and uplifting the environment."

BUNZEL, RUTH LEAH (1898–1990), U.S. anthropologist. Born in New York City, Bunzel was an art student before she studied anthropology under Franz *Boas. Bunzel obtained intimate knowledge of primitive art and artists by her research on the potters of the Pueblo Indians of the American Southwest. Her first fieldwork experience came as part of a trip to observe the Zuni. Remarking that women were barred from the ritual practices of the Zuni, Bunzel gravitated toward researching pottery, as it offered her an area in which women's work and skill were integral. In 1960 she became professor of anthropology at Columbia University. Her field research on American Indians was done in New Mexico, Arizona, Guatemala, and Mexico; she also undertook social and anthropological studies of the Chinese community in New York City. Her later research interests were problems of a national character, American and Chinese, and the interrelations of personality and culture.

She contributed to Boas' *General Anthropology* (1938) and to the journal *Psychiatry*.

Among her publications are *The Pueblo Potter: A Study of Creative Imagination in Primitive Art* (1929); *Zuni Katchinas: An Analytical Study* (1932); *The Golden Age of American Anthropology* (1960), which she edited with Margaret Mead; and *Zuni Ceremonialism* (1992).

BUNZL, Austrian and British industrialists. In 1854 Moritz Bunzl founded a shop for fashion accessories in Bratislava, which his son Max transferred to Vienna in 1883. Under the leadership of Max and Max's sons, HUGO, MARTIN, ROBERT, EMIL, FELIX, and GEORGE, "Bunzl & Biach" became Austria's most important paper manufacturer and had branches in all parts of the Austro-Hungarian empire by 1914. In 1936 the company became a corporation with headquarters in Switzerland, while the Austrian branches were "aryanized" and taken over by the Nazis two years later. After World War II the enterprise expanded to England, the United States, Germany, Switzerland, Italy, South Africa, and Austria. In the

early 2000s Bunzl & Biach, located again in Austria, supplied materials to paper mills and dealt with waste and wastepaper management.

Hugo (1883–1961) studied in Manchester and joined the company in 1905. In the interwar period his mills became famous for their workers' benefits, which earned him the nickname the "Red Industry Baron." In 1938 he emigrated to England, where he became chairman of Bunzl Pulp & Paper Ltd. in 1948. GEORGE (1915–1981) joined the firm in 1936 and in 1960 became chairman of the board. He subsequently was succeeded as the firm's chairman by his nephew Gustav George. George Bunzl was prominent as an artist, photographer, and art collector and was active in Jewish communal work.

°BURCHARD OF WORMS (c. 965–1025), bishop of Worms from 1000. The publication of the *Decretum*, a canonical collection compiled by Burchard or under his direction between 1008 and 1012, was an important event in the history of canon law. The canons concerning Jews appear in Book IV, which deals with questions of baptism and confirmation. As the theological basis for behavior toward the Jews, Burchard refers to a passage from the *Moralia* of *Gregory the Great which recalls the prophecy of their final conversion. Extensive use of Burchard's *Decretum* was made in the canonical collection of *Ivo of Chartres toward the end of the 11th century but a much more hostile attitude to the Jews was evident by then.

BURCHARDT, HERMANN (1857–1909), German explorer. The son of a wealthy merchant family in Berlin, Burchardt worked for many years in his father's business but was never happy there. Following his father's death he set out in 1890 on a series of travels to remote corners of Asia, North Africa, the Middle East, and Australia. Following a brief return to Berlin in 1892, during which he studied Oriental languages, he renewed his expeditions with a sharpened ethnological interest and greater linguistic equipment. In the course of his journeys he amassed a large collection of photographs of places never previously visited by Europeans, which was later presented to the Berlin University Library, and also collected legends and folklore of the areas he visited. While on an extended trip in Yemen he took an interest in the all-but-forgotten Jews of that country and later brought them to the attention of world Jewry. He met his death at the hands of marauders in the Arabian desert between Mecca and San'a.

During his lifetime Burchardt contributed articles to various journals of ethnography. His photographs of South Arabian inscriptions were edited and published by Martin

Hartman in his *Orientalische Literaturzeitung* (1907–09) and portions of his travel diaries were published posthumously by Eugen *Mittwoch in 1926, together with a detailed report written by Burchardt's traveling companion and Arabic tutor Ahmad al-Jarādi. He wrote essays on the Jews of Yemen in *Ost und West* (1902) and on the Jews of Persia in *Ost und West* (1906)

BURCHARDUS DE MONTE SION (13th century), German Dominican. Born at Strasbourg or Magdeburg, Burchardus traveled to the East in 1232, visiting Egypt, Syria, and Cilicia. From 1275 to 1285 he resided in Jerusalem where sometime before 1283 he wrote his *Descriptio Terrae Sanctae* (Latin edition by W.A. Neumann, 1880; Eng. by A. Steward, 1896). Burchardus arranged his book by "divisions" radiating from Acre, with special focus on Jerusalem. For a pious medieval author he was tolerant, and an accurate observer. His work was handed down in two different versions; in 14th- and 15th-century Europe it was widely read and translated into German and French.

BURCKHARDT, JOHANN LUDWIG (1784–1817), Swiss Orientalist and explorer. Burckhardt specialized in Oriental studies in Leipzig and in Goettingen. In 1809, he set out on behalf of the British Society for African Exploration for Aleppo (Syria), where he mastered the Muslim way of life so well that he was able to travel through Arab lands under the name of Ibrahim ibn Abdullah, without arousing any suspicion. Burckhardt visited Palmyra, Damascus, the Lebanon, and afterward the Hauran. From there he proceeded to Safed, Tiberias, Nazareth, Beth-Shean, and by way of the Sinai Peninsula, to Cairo. Reports on his journey based on his personal notes were published between 1819 and 1830. One of these monographs (London, 1822) is a description of his travels in Syria and the Holy Land. Burckhardt paid special attention to the layout of the ancient cities which he visited, and to the Greek and Latin inscriptions. From Burckhardt the Europeans first learned of the antiquities of Petra (see also *Seetzen). Burckhardt also was the first to draw an accurate map of the Gulf of Elath. He died in Cairo, possibly by poison.

BURDUJENI, small town in Moldavia, Romania. Jews began to settle there from 1792 when the urban settlement was founded, and there were 183 Jewish taxpaying heads of families in 1820. During the 19th century, the number of Jews grew to constitute the majority of the population, numbering 1,140 (two thirds of the total) in 1859 and 2,038 in 1899. A Jewish school for boys was founded in 1898, with the help of the Jewish Colonization Association (ICA). In 1907 anti-Jewish riots broke out in Burdujeni. After World War I the Jewish population decreased, numbering 1,244 (25.7% of the total population) in 1930. A Jewish elementary school for boys was functioning then in the town. After the outbreak of the war against the U.S.S.R., all the Jews of Burdujeni (1,261 persons) were deported to Transnistria and their property confiscated (Oct. 9–10, 1941). Half of them died. Survivors returned to Burdujeni after the war. About 20 Jewish families were living there in 1970. In 2004, no Jews lived in Burdujeni.

BURG, AVRAHAM (Avrum; 1955–), Israeli Labor politician, member of the Twelfth, Thirteenth, Fifteenth, and Sixteenth Knessets. Avraham Burg was born in Jerusalem, the son of National Religious Party leader Yosef *Burg. He attended a yeshivah in Jerusalem and studied sociology and African studies at the Hebrew University of Jerusalem.

After Operation Peace for Galilee, in which he was wounded, Burg set up a group of "soldiers against silence" and was one of the speakers at the mass demonstration held at Malkhei Yisrael Square in Tel Aviv on September 25, 1982, in protest against the Sabra and Shatila massacre in Lebanon, and demanding the establishment of a Commission of Inquiry and the resignation of Minister of Defense Ariel *Sharon. He became active in *Peace Now, and was wounded on February 10, 1983, when a hand grenade was thrown by a right-wing Jewish protester into a Peace Now demonstration in Jerusalem, killing Emil Grunzweig. Burg joined the Labor Party and served as advisor on the Diaspora to Shimon *Peres when he became prime minister in 1984. In 1986–88 he headed the Center for Judaism and Tolerance. He was then one of a group of young dovish MKs elected by the Labor Party to the Twelfth Knesset. In the Labor Party Conference held in November 1991, Burg supported the adoption of a declaration in favor of the separation of religion and state, but finally agreed to a compromise that spoke of the separation of religion and politics. In the elections to the Thirteenth Knesset he was elected to third place on the Labor list after Yitzhak *Rabin and Peres, but was not included among the ministers chosen by Rabin to serve in his government because he had supported Peres in the

primaries for the chairmanship of the Labor Party. He served as chairman of the Knesset Education and Culture Committee until resigning from the Knesset in July 1995 when he was elected chairman of the *Jewish Agency. There he called for major changes in the structure of the Zionist Organization and Jewish Agency, made major cuts in their expenditures, and fought for the return, to the Jewish people, of money deposited during World War II in Swiss banks by Jews who later perished in the Holocaust.

After leaving the Jewish Agency, Burg was reelected to the Fifteenth Knesset, and after prime minister Ehud *Barak failed to appoint him as a minister in his government, ran successfully against Barak's candidate for speaker of the Knesset. As Knesset speaker, he established the Knesset Research and Information Center and the office of the Commissioner for Future Generations, and in defiance of Foreign Ministry policy hosted the Tibetan Dalai Lama and the speaker of the Palestinian parliament, Ahmad Ali Saliman Kari'a (known as Abu Allah) in the Knesset. In December 2001 he contested the Labor Party leadership opposite Binyamin (Fuad) *Ben-Eliezer and lost by a narrow margin, claiming fraud. He was reelected to the Sixteenth Knesset but, frustrated by the situation created within the Labor Party following Amram Mitzna's defeat, resigned in June 2004 to take time out from active politics and go into business.

[Susan Hattis Rolef (2nd ed.)]

BURG, MENO (Menke; 1788 or 1789–1853), Prussian officer. After studies at the Berlin Stadtschule (the later famous Gymnasium zum Grauen Kloster) and the Berlin Bauakademie, Burg became land surveyor in 1807. Six years later, after the appeal "*An mein Volk*" by Prussian king Frederick William III, he sought to enter the Prussian guard, but was refused because of his religion. Through the good offices of the king's uncle, Prince August of Prussia, he was allowed to enter the artillery and became an officer, teaching geometry at several military academies in Danzig and Berlin. Here he published a didactic treatise on the subject. Despite his military rank, he was never an active combatant (conceivably to prevent him as a Jew from commanding Christian soldiers in a battle). Burg was an active member of the Berlin Jewish community, including service on its board of directors (probably in 1849–50). Though he had considered conversion in 1824, some years later, when he was asked to become a Protestant, he refused. He remained the only Jew in Prussia's officer corps in the 19th century, a celebrity known as "*Judenmajor*." When he died, 60,000 people are said to have gathered for the funeral. In his later years he wrote his memoirs, which were published posthumously (*Geschichte meines Dienstlebens*, 1854; 1909 with a foreword by Ludwig *Geiger; 1998 with forewords by Geiger and Hermann Simon).

[Marcus Pyka (2nd ed.)]

BURG, YOSEF (1909–1999), national-religious political leader and member of the First to Eleventh Knessets. Burg was born in Dresden, Germany. His father, Abraham, who came from East Galicia, was active in the *Mizrachi and in the establishment of religious institutions in Dresden, and Yosef Burg attended the *talmud torah* founded by his father, receiving a religious education side by side with a general education. He was ordained a rabbi by the Hildesheimer Rabbinical Seminary in Berlin and, after studying at the universities of Leipzig and Berlin, received his doctorate from the latter. During his student days he was active in Berit Ḥalutzim Datiyyim (Baḥad; "Covenant of Religious Pioneers") in Berlin, and during the Nazi regime worked for *Youth Aliyah, until settling in Eretz Israel in 1939. In that year, just before the outbreak of the World War II, Burg was a delegate to the Twenty-First Zionist Congress in Geneva, and after being elected to the Zionist General Council, remained in Geneva as a director of Youth Aliyah until 1940, when he returned to Eretz Israel. From 1942 to 1946 he taught and directed a religious school for youth and adults in Tel Aviv. From 1946 until the elections to the First Knesset, he was director of the Central European section of *Mizrachi and *Ha-Po'el ha-Mizrachi in Paris, which offered aid to Holocaust survivors and displaced children.

After returning to Israel, he became politically active in Ha-Po'el ha-Mizrachi, and set up the Lamifneh faction that called for cooperation with the nonreligious labor movement, moderation in the political sphere, and settlement activities in the spirit of the slogan "*Torah va-Avodah*" (Torah and Labor). Burg was elected to the First Knesset within the framework of the United Religious Front. He was deputy speaker in the course of the First Knesset. In 1956 he was one of the founders of the *National Religious Party, which united Mizrachi and Ha-Po'el ha-Mizrachi. Burg served in all the Israeli governments from 1951 to 1986, except for a brief period at the beginning of the first Rabin government in 1974 and at the end of the 1976–77 term, after he was dismissed from the government when he and his colleagues abstained in a vote of no-confidence in the government over the alleged desecration of the Sabbath as a result of a military ceremony held at an air force base. Burg served as minister of health (1951–52), minister of postal services (1952–58), minister of welfare (1959–70), minister of the interior (1970–76), and minister of the interior and police (1977–81). In the Tenth Knesset (1981–84) Burg was minister of the interior and police as well as minister for religious affairs, and in the first National Unity Government, led by Shimon *Peres (1984–86), he served as minister for religious affairs. Following the signing of the peace treaty with Egypt, Burg headed the ministerial committee that held talks with Egypt on an autonomy plan for the Palestinians, but these talks broke down in 1980. From 1977 to 1986 he stood at the head of the NRP, but under his moderate policy, in a period when the national-religious public in Israel started moving to the right, the party lost around two-thirds of its seats. Burg resigned.

Burg served as a member of the board of directors of *Bar-Ilan University, chairman of the Social Welfare Council in Israel, and chairman of the board of *Yad Vashem. He wrote *Das leben geht weiter* ("Life Goes On," 1980) and *Perakim me-Otobiographiah* ("Chapters from an Autobiography," 2001).

Yosef Burg's son Avraham (Avrum) *Burg was a member of the Twelfth to Thirteenth and Fifteenth to Sixteenth Knessets and speaker of the Knesset.

[Susan Hattis Rolef (2nd ed.)]

BURGENLAND, one of the federal states of Austria, on the Hungarian border. Located in Burgenland were the "seven communities" (*sheva kehillot*), noted for their outstanding yeshivot and eminent rabbis: *Eisenstadt (Hung. Kismarton; Heb. ש"א), *Mattersburg (Mattersdorf; Hung. Nagymarton), *Deutschkreutz (Hung. Sopronkeresztúr, Németeresztúr, today Keresztúr; Hebr. צעלם, צלם), *Frauenkirchen (Hung. Boldogasszonyfalva; Heb. abbr. ק"פ), Kittsee (Hung. Köpcsény; Heb. קיניע, Kobersdorf (Hung. Kabold; Heb. ק"ק), and Lackenbach (Hung. Lakompak; Heb. ל"ב). Other communities in the region were those of Donnerskirchen, Gattendorf (in Jewish sources, Kottendorf), Guessing, Neckenmarkt, Neufeld (for some time included in the "seven communities"), Nikitsch, Rechnitz, Rust, and Schlaining (Stadtschlaining). Under Hungarian administration, the community of *Sopron (Oedenburg) was closely connected with the seven. According to legend there was a Jewish settlement in the region in the eighth century, but the first documentary record of the Jews of Eisenstadt is from the year 1296. Jews are also mentioned in the Eisenstadt city privileges from 1373. From 1491, when the region was under the administration of Lower Austria, the communities of Burgenland were ruled by local lords, who treated them well. In 1496 Emperor *Maximilian I resettled in the area Jews expelled from *Styria. In 1529 *Ferdinand I renewed the Jewish privileges for Eisenstadt, Mattersdorf (Mattersburg), and Kobersdorf. The Burgenland communities began to flourish when between 1622 and 1626 they came under the protection of the counts Esterházy; the southern communities of Rechnitz, Guessing, and Schlaining were protected by the counts Batthyány, others by the counts Nádasdy. From 1647 the region was administratively a part of Hungary within the framework of the Habsburg monarchy. At the time of the expulsion of the Jews from Lower Austria in 1670–71, the communities of Eisenstadt, Kobersdorf, and Mattersburg were also forced to leave, but these communities were transferred by the Esterházy to other localities in their territories and were soon able to return. Around 1700 12 Jewish communities were situated in Burgenland.

The charter granted by the Esterházy in 1690 to the Eisenstadt community, which guaranteed them autonomy and protection in time of war, was extended later to all the seven communities, and formed the basis of their considerable measure of self-administration. The representatives of the seven communities met periodically in Eisenstadt, mainly to apporportion among themselves the heavy taxes and "gifts" (*mezigot*)

which they had to make to all the staff of the count, including the coachman, and to defend their legal position. The minutes of these meetings were recorded in the "black ledger" of the seven communities. When in 1749 the Hungarian government fixed the "tolerance-tax" to be paid by Jewish residents according to counties, five of the communities (excluding Frauenkirchen and Kittsee) were included in the county of Sopron, thus terminating their special status. They organized themselves as the "five communities" and were joined by a sixth community formed by the Jews scattered throughout Sopron county. In 1840 the Hungarian parliament (Reichstag) authorized free choice of settlement and profession for Jews. As a result of changes following the 1848 revolution in Austria-Hungary, all the communities except those of Eisenstadt and Mattersdorf lost their autonomy. Many Jews left Burgenland, mainly for Vienna. Around 1850 the Jewish population in Burgenland was 8,487 persons, in some communities over 50% of the population.

In the late 19th century the Burgenland communities became the mainstay of separatist *Orthodoxy in Hungary. The rabbi of Deutschkreutz, Menahem Katz-Wannfried, invited the rabbis of Hungary to decide on secession (1869). At the end of the 19th century the communities diminished in importance. After World War I and the collapse of Austria-Hungary Burgenland became part of the new Austrian republic (1921). Before 1921 the seven communities were organized in the Orthodoxe Israelitische Landeskanzlei; Schlaining, Rechnitz, and Guessing were part of the liberal Israelitische Landeskanzlei. In May 1922 the combined communal organization was renewed as the Verband der autonomen israelitischen Kultusgemeinden des Burgenlandes, which included all the Burgenland communities. The Austrian school law of 1936 gave the Jewish schools in Burgenland equal status with Catholic and Protestant schools. The Jewish population in Burgenland numbered 3,800 in 1938.

Immediately after the Anschluss, the Jews were driven out; 1,900 had been expelled or had emigrated by February 1938, and 1,510 were removed, entirely destitute, to Vienna. Ten places, including Eisenstadt, were declared "free of Jews" (*Judenrein). A notorious incident was the fate of 51 Burgenland Jews, who were placed on a narrow land-strip in the middle of the Danube, because neither Czechoslovakia nor Hungary would let them enter their territory. Nearly all the synagogues in Burgenland were destroyed on November 10, 1938 (**Kristallnacht*), the others at a later date. At least 30% of the Jewish population of Burgenland was killed in concentration camps.

After 1945 and into the 21st century there were no organized Jewish communities in Burgenland; the cemeteries were cared for by the Vienna community's Israelitische Kultusgemeinde Wien (Kobersdorf, Lackenbach) or the individual communities (Deutschkreutz, Eisenstadt, Kittsee, Mattersburg, Frauenkirchen). The Verein Schalom association helped to rebuild and care for the cemeteries. Many of the relics of the communities were preserved in the special department

(developed out of the museum established by Sándor Wolf) of the Burgenlaendisches Landesmuseum in Eisenstadt, and the Juedisches Zentralarchiv des Burgenlandes, which is part of the Burgenlaendisches Landesarchiv, contained nearly 100,000 items.

In 1972 the Austrian Jewish Museum (Oesterreichisches Juedisches Museum) was founded, located in the former residence of the Hof- und Kriegsoberfactor rabbi Samson *Wertheimer (1658–1724) in Eisenstadt. The private synagogue of Wertheimer on the first floor is part of the museum. The collection contains a small part of the Judaica collection of Sándor Wolf. From 1974 the Verein Oesterreichisches Juedisches Museum Eisenstadt has published the “Studia Judaica Austriaca” series.

The synagogue of Stadtschlaining (Schlaining) is today used as a library for the Oesterreichisches Studienzentrum fuer Frieden und Konfliktloesung and the EPU – European University Center for Peace Studies.

[Aharon Fuerst / Barbara Staudinger (2nd. ed.)

BURGOS, city in Spain, formerly capital of Old Castile. Information about Jewish settlement in the neighborhood of Burgos dates from 974, and in Burgos itself from the 11th century. The Jews then resided close to the citadel of Burgos, while in the 12th century they moved to the fortified enclosure of the castle. It was here that the emissaries of the Cid raised a loan

Jewish centers of population in the diocese and province of Burgos at the period of maximum settlement, before 1492. Sefarad, vol. 8, 1948.

from certain Jews to finance his campaigns. In 1200 a Burgos Jew was acting as *almoxarife* (collector of revenues) and Todros b. Meir *Abulafia, also connected with the court, lived there too.

During the 13th century the Burgos community became the largest Jewish center in north Castile, and together with Toledo the most flourishing Jewish cultural center. The literary sources indicate clearly that Burgos was a very lively and productive seat of Jewish learning. Some of the greatest Jewish scholars of 13th century Castile came from Burgos. These include R. Meir Halevi *Abulafia, R. Todros ben Joseph Halevi *Abulafia, the poet Todros Halevi *Abulafia, and others. The large number of Hebrew manuscripts written in Burgos indicate clearly the prominent place the Jews of Burgos played in Jewish culture in Castile. Future generations referred again and again to the very precise manuscripts produced in Burgos.

Burgos also occupies a major position in Hebrew book illumination. The question of the relationship between Burgos and Toledo poses no problem. Many of the great scholars whom we find in Toledo began their careers in Burgos. This should in no way mislead us into thinking of the Burgos Jewish center as a center of secondary importance. Quite the contrary, Burgos should be seen as part of the foundation of the Jewish scholarship that developed in Toledo in the 13th century and as a necessary and vital stage before Toledo reached the peak of its cultural efflorescence. Some 120–150 families lived there at the end of the century, occupied as merchants, tax farmers, and physicians, and owning real estate and vineyards. During the reign of Ferdinand III (1217–1252) they paid a regular tax of 30 denarii to Burgos cathedral, and from 1282 also a tithe to the Church. The rabbis of Burgos appointed the administrative officers (*muqaddimin*) of the Sahagun community, a day's journey distant, and the *bet din* of Burgos also served Sahagun. The non-Jewish authorities assisted in enforcing adherence to Jewish observances by the community when necessary, and sometimes imposed fines on offenders. In the second half of the 13th century the kabbalist R. Moses b. Solomon b. Simeon, a disciple of R. Jacob ha-Kohen, was living in Burgos, while many kabbalists were to be found in the small towns of the vicinity. Some of the important kabbalists of the second half of 13th century in Castile were born in Burgos, lived there, or stayed there for a while. In 1325 Alfonso XI bestowed an annual grant of 4,000 maravedis on the convent of Santa Maria la Real, out of the yearly tax paid by Burgos Jewry; the grant was subsequently increased by a further 1,000 maravedis from the same source.

During the civil war for the crown of Castile (1366–68) the city supported Pedro. When Henry captured Burgos he exacted a sum of one million gold maravedis from the Jews; to meet this demand the community was forced to sell the crowns and ornaments on all the Torah scrolls, except the celebrated “scroll of Ezra the Scribe.” In addition Henry declared a moratorium on Jewish loans to Christians, ruining the Jewish creditors. When Henry was forced to leave Castile, Burgos again passed to Pedro, and on Henry's second entry he was attacked from the Jewish quarter and the fortress, which only surrendered after the walls had been destroyed. In 1379 new restrictions were enforced and Jewish trading outside the *Judería* was prohibited.

During the persecutions of 1391, the Jews of Burgos took refuge in the houses of the Christian merchants. A small number were martyred. Some were baptized and later settled in a special quarter for Conversos. The best known convert from Burgos was its rabbi, Solomon Halevi, who assumed the name *Pablo de Santa María and the position of the bishop of Burgos. He joined several other converts on the Iberian peninsula who led the campaign against the Jews. In 1414 many Jews became converted through the activities of Vicente *Ferrer. During the 1440s only 23 heads of families are recorded as liable to pay tax. Several Jews are known to have practiced as physicians in the 1450s and 1460s. In 1485 the Jews of Burgos

and district paid 56½ castellanos toward the cost of the war with the Moors in Granada, and both Jews and Moors were forbidden to engage in commerce, ostensibly in order to keep prices low. Toward the end of the 1480s even more severe restrictions were imposed on the Jewish residents, until the municipality was directed by the crown to alleviate their condition. The majority of the Jews of Burgos adopted Christianity after the Edict of Expulsion of 1492; those who remained in the faith left, presumably for Portugal. The Conversos in Burgos adapted themselves to Christianity, and few were tried by the *Inquisition.

[Zvi Avneri / Yom Tov Assis (2nd ed.)]

BURGUNDY, former French duchy (to be distinguished from the county of Burgundy; see *Franche-Comté). Jews were living in Burgundy at least from the first half of the ninth century, primarily in *Chalon-sur-Saône and *Macon. From the tenth century, Jews cultivated fields and vineyards in the neighborhood of these two towns. The Jewish population of Burgundy reached its maximum in the 13th century. The presence of Jews is attested to in about 50 additional towns in the duchy, including *Auxerre, Auxonne, Avallon, *Baigieuxles-Juifs, Beaune, *Bourg, and *Dijon. The Jews of the duchy were under the jurisdiction of the duke, except in Dijon where both the municipality and the duke claimed them. In addition to the regular *taille*, or poll tax, the Jews were required to pay extraordinary taxes, known as the “*rançon*” (ransom). The amounts paid in taxes increased constantly. For the fiscal year 1277, the Jews in the duchy paid a total of almost 1,500 livres, while between 1297 and 1302 those in the bailiwick of Auxerre alone paid almost the same amount. The position of the Jews deteriorated at the beginning of the 14th century. Although ducal protection was specifically recommended by Duke Robert II who declared in his testament in 1302, “I desire that the Jews shall live on my land,” in 1306 they received the same treatment as the Jews in the kingdom of France and were expelled. Most of them took refuge in the county of Burgundy. The debts and securities seized in Chalon and Buxy alone amounted to 33,295 livres. A few Jews apparently returned to Burgundy after 1311, and a general permission to return was given in 1315, when they mainly settled in the same localities as previously. The Jews in Burgundy continued to share the fate of the Jews in the kingdom of France, both expulsion in 1322 and readmission in 1359. In 1374 Duke Philip the Bold granted privi-

leges to the Jews in Burgundy, but limited the number of families with authorized residence to 12, increased in 1380 to 20. Despite popular requests for their expulsion, the duke made them a new grant of privileges in 1384; he also increased the number of families to 52, although in fact fewer were willing to take advantage of this. In this period, Jews were only living in Dijon, Chalon, and Beaune. In 1394, before the end of their 12-year term, they were all expelled. Numerous medieval Jewish scholars were natives of Burgundy. The liturgy used by the Burgundian communities had some special features.

BURIAL.

In the Bible

Decent burial was regarded to be of great importance in ancient Israel, as in the rest of the ancient Near East. Not only the Egyptians, whose extravagant provision for the dead is well known, but also the peoples of Mesopotamia dreaded above all else the thought of lying unburied. One of the most frequently employed curses found in Mesopotamian texts is: "May the earth not receive your corpses," or the equivalent. In the same way one can measure the importance that Israelites attached to burial by the frequency with which the Bible refers to the fear of being left unburied. Thus, one of the curses for breach of the covenant is: "Thy carcasses shall be food unto all fowls of the air, and unto the beasts of the earth" (Deut. 28:26). Again and again the prophets use this threat, especially Jeremiah. He says, in judgment on King Jehoiakim, "He shall be buried with the burial of an ass, drawn and cast forth beyond the gates of Jerusalem" (22:19).

There is also abundant positive evidence for the importance of burial. Abraham's purchase of the cave at Machpelah as a family tomb (Gen. 23) and the subsequent measures taken by later patriarchs to ensure that they would be buried there (Gen. 49:29–33; 50:25–26) occupy a prominent place in the patriarchal narratives. Biblical biographies ordinarily end with the statement that a man died, and an account of his burial (e.g., Josh. 24:30), especially if this was in some way unusual (e.g., that of Uzziah, the leprous king, II Chron. 26:23); this is not only a literary convention, but reflects the value assigned to proper interment. To give a decent burial to a stranger ranks with giving bread to the hungry and garments to the naked (Tob. 1:17–18). Tombs of the Israelite period in Palestine show that considerable, though not lavish, care was given by those who could afford it, to the hewing out of tombs and the provision of grave goods.

Nevertheless, this assessment of the importance of decent burial must be qualified. Archaeology reveals no distinctively Israelite burial practices during almost the whole of the biblical period. The Israelites continued to use modes of burial em-

ployed in Palestine long before the conquest. It follows that it is risky to draw firm conclusions about Israelite religious beliefs on the basis of specific burial practices, e.g., the provision of grave goods or lack of them, communal or individual burial, and so on, since any or all of these may have been dictated by immemorial custom rather than by consciously held conviction. The law says relatively little about burial, and where it treats the subject, the concern is to avoid defilement by the dead (Num. 19:16; Deut. 21:22–23). The dead do not praise God, they are forgotten and cut off from His hand (Ps. 88:6, 10–12), and in consequence mourning and the burial of the dead are at most peripheral matters in Israelite religion.

The one thing expressed most clearly by Israelite burial practices is the common human desire to maintain some contact with the community even after death, through burial in one's native land at least, and if possible with one's ancestors. "Bury me with my fathers," Jacob's request (Gen. 49:29), was the wish of every ancient Israelite. Thus, the aged Barzillai did not wish to go with David, "that I may die in mine own city, [and be buried] by the grave of my father and of my mother" (II Sam. 19:38); and Jerusalem was beloved to Nehemiah, in exile, as "the city of my fathers' sepulchers" (Neh. 2:5). In harmony with this desire, the tomb most typical of the Israelite period is a natural cave or a chamber cut into soft rock, near the city. Bodies would be laid on rock shelves provided on three sides of the chamber, or on the floor, and as generations of the same family used the tomb, skeletons and grave goods might be heaped up along the sides or put into a side chamber to make room for new burials. This practice of family burial, though not universal if only because not all could afford it (see references to the graves of the common people in II Kings 23:6; Jer. 26:23), was common enough to give rise to the Hebrew expressions "to sleep with one's fathers" (e.g., I Kings 11:23) and "to be gathered to one's kin" (Gen. 25:8; et al.) as synonyms for "to die."

There is no explicit biblical evidence as to how soon after death burial took place (Deut. 21:23 refers to hanged criminals only), but it is likely that it was ordinarily within a day after death. This was dictated by the climate and by the fact that the Israelites did not embalm the dead (Jacob and Joseph were embalmed following Egyptian custom, Gen. 50:2, 26). *Cremation was not practiced by the ancient Israelites. There is no archaeological evidence that this was their practice, and the references to "burnings" at the funeral of certain kings (Jer. 34:5; II Chron. 16:14; 21:19) presumably refer to the burning of incense or some of the king's possessions, not the body. On the other hand, it may be going too far to say, as is often done, that cremation was regarded as an outrage. That the men of Jabesh-Gilead burned the mutilated bodies of Saul and his sons is not spoken of as a desecration, but as part of their loyalty (*hesed*) to their overlord (I Sam. 31:9–13; II Sam. 2:5). The references to burning of certain criminals, often cited in this connection, refer to a mode of execution, not to a mode of burial (Gen. 38:24; Lev. 20:14; 21:9), and note the remarkable way in which the Mishnah (Sanh. 7:2) prescribes that this

be carried out – burning of the corpse is not involved. Bodies were buried clothed and carried to the tomb on a bier (11 Sam. 3:31), but not in a coffin. Joseph's coffin is to be understood as Egyptian custom (Gen. 50:26).

The New Testament sheds some light on Jewish burial practices of the first century C.E. Jesus' disciples took his body, bought a great quantity of myrrh and aloes, "and wound it in linen clothes with the spices, as the manner of the Jews is to bury" (John 19:40). There was a delay in completing the preparation of the body for burial because of the Sabbath (Mark 16:1; Luke 23:56). Luke (7:11–17) gives a vivid picture of the simple funeral of the poor; the body of a young man of Nain is borne out of the city on a pallet, clothed but without coffin, followed by the weeping mother and "much people of the city."

[Delbert Roy Hillers]

In Post-Biblical Times

Rabbinic legend stressed the antiquity of inhumation by relating that Adam and Eve learned the art of burial from a raven which showed them how to dispose of the body of their dead son Abel by scratching away at a spot in the earth where it had interred one of its own kin (PdRE 21). Maimonides ruled that even a testamentary direction not to be buried is to be overruled by the scriptural injunction of burial (Maim. Yad, Evel, 12:1 and *Sefer ha-Mitzvot*, Positive Commandments no. 231). The Talmud (Git. 61a) rules that the burial of gentiles is also a religious duty (cf. Tosef., Git. 5:5 and TJ, Git. 5:9, 47c).

In talmudic times, burial took place in caves, hewn tombs, sarcophagi, and catacombs; and a secondary burial, i.e., a re-interment (**likkut azamot*) of the remains sometimes took place about one year after the original burial in *ossuaries (Maim. Yad, Evel, 12:8). The rabbinic injunction (Sanh. 47a) that neither the righteous and the sinners, nor two enemies (Jeroham b. Meshullam, *Sefer Adam ve-Havvah* (Venice, 1553), 231d, *netiv* 28) should be buried side by side is the origin of the custom of reserving special rows in the cemetery for rabbis, scholars, and prominent persons.

Jewish custom insists on prompt burial as a matter of respect for the dead, a consideration of particular relevance in hot climates. According to one kabbalistic source, burial refreshes the soul of the deceased, and only after burial will it be admitted to God's presence (*Midrash ha-Ne'lam* to Ruth; cf. Zohar, Ex. 151a). The precedents set by the prompt burials of Sarah (Gen. 23) and of Rachel (Gen. 35:19) are reinforced by the Torah's express command that even the body of a man who had been hanged shall not remain upon the tree all night, but "thou shalt surely bury him the same day" (Deut. 21:23). The Talmud (BK 81a) states that speedy burial of a corpse found unattended (*met mitzvah*) was one of the ten enactments ordained by Joshua at the conquest of Canaan and is incumbent even on the high priest who was otherwise forbidden to become unclean through contact with the dead (Nazir 7:1). Josephus records that it is forbidden to let a corpse lie unburied (Apion, 2:211), and consideration for the dead is one of the central features of Tobit (2:8). Some delays in burial

are, however, justified: "Honor of the dead" demands that the proper preparation for a coffin and shrouds be made, and that relatives and friends pay their last respects (Sanh. 47a; Sh. Ar., YD 357:1). Even then, however, only a few hours should elapse (David b. Solomon ibn Abi Zimra, *Responsa*, Warsaw ed., 1 (1882), no. 311). In talmudic times, while the burial was not delayed, graves were "watched" for a period of three days to avoid all possibility of pseudo-death (Sem. 8:1). Later, however, it became customary to bury as soon after death as possible and in 1772, when the duke of Mecklenburg-Schwerin (with Moses Mendelssohn's approval) decreed an interval of three days before the burial, the leading rabbinic authorities protested vigorously (*Hatam Sofer*, YD 338). Certain delays are unavoidable. Funerals may not take place on the Sabbath or on the Day of Atonement; and although the rabbis at one time permitted funerals on the first day of a festival, provided that certain functions were performed by gentiles, and regarded the second day of *yom tov* as a weekday as far as the dead are concerned (Bezah 6a), some modern communities prefer postponement. Where there are two interments at the same time, respect demands that the burial of a scholar precedes that of an *am ha-arez* ("average citizen"), and that of a woman always precedes that of a man.

The duty of burial, although primarily an obligation incumbent on the heirs (Gen. 23:3 and 25:9; Ket 48a), ultimately rests with the whole community. In talmudic times, the communal fraternal societies (**hevra kaddisha*) for the burial of the dead evolved out of an appreciation of this duty (MK 27b).

Similarly, escorting the dead (especially a deceased scholar) to his last resting place is considered a great *mitzvah* "the fruit of which a man enjoys in this world while the stock remains for him in the world to come" (Pe'ah 1:1 as adapted in the morning service). It justifies even an interruption in the study of the Torah (Ket. 17a and Sh. Ar., YD 361:1) and is called "the true kindness" (*hesed shel emet*) since one can expect no reciprocation of any sort (Rashi to Gen. 47:29; cf. Gen. R., ad loc.). Josephus states that "All who pass by when a corpse is buried must accompany the funeral and join in the lamentations" (Apion, 2:205); the minimum duty is to rise as the funeral cortege passes (TJ, Bik. 3:3, 65c; Sh. Ar., YD 361:4), and accompany it for four cubits ("four paces"). "One who sees a funeral procession and does not escort it," states the Talmud (Ber. 18a), "transgresses thereby 'whoso mocketh the poor (i.e., the dead) blasphemeth his Maker' (Prov. 17:5), and should be placed under a ban" (YD 361:3). Only if the hearse passes a bridal cortege is the bride given preference: to honor the living is considered greater than to honor the dead (Ket. 17a, Sem. 11:6, although cf. Maimonides' conflicting opinion, Yad, Evel 14:8). A custom instituted by kabbalists, and still largely observed in Jerusalem, forbids sons to follow the bier of their father and attend his funeral.

In rabbinic times, funeral processions were led by lamenting female mourners, often professionals. The Mishnah quotes R. Judah as ruling that "even the poorest in Israel

should hire not less than two flutes and one wailing woman” for his wife’s funeral (Ket. 4:4). Women also composed elegies that were chanted aloud, as evidenced by the Talmud’s inclusion of eight elegies attributed to the women of Shoken-Zeb in Babylon (MK 28b). Prohibitions against women’s voices being heard in public were relaxed for funerary rituals (Kid. 80b; Suk. 52a). The more elaborate ancient rituals have either disappeared or been modernized. The recital of psalms in the home still precedes the burial act; however, the custom of having musicians (Ket. 46b), torchbearers, and barefooted professional mourners in the funeral procession has been discontinued. In Great Britain, the custom of reciting the *mehillah* (asking pardon of the corpse on the arrival at the cemetery) was discontinued by Chief Rabbi Marcus Adler in 1887. The dressing (*halbashah*) of the dead (even princes) in costly garments of gold or silver is forbidden (Maim., Yad, Evel 4:2), despite the rabbis’ view that anyone who dresses the dead in comely shrouds (*takhrikhim*, from the Hebrew verb “to wrap up”) testifies to a belief in the resurrection (*Nimmukei Yosef* to Alfasi, MK 17a). R. Judah ha-Nasi expressly ordered that he be buried in a simple linen shirt (MK 27b). Since talmudic times, it has been customary to bury a male in the *tallit* which he had used during his lifetime, after its fringes have been deliberately rendered ritually unfit. The victim of an unnatural death is buried in his blood-soaked garments over which the white shrouds are placed in order that all parts of the body should be interred (Nahmanides, *Torat ha-Adam; Inyan ha-hoz’ah*).

Coffins were unknown to the early Israelites (as they are to contemporary Oriental Jewry). The corpse was laid horizontally and face upward on a bier (II Sam. 3:31); the custom of burying important personages in coffins evolved only later. R. Judah ha-Nasi, however, ordered that holes be drilled in the base of his coffin so that his body might touch the soil (TJ, Kil. 9:4, 32b) and Maimonides mentions the custom of burial in wooden coffins (Yad, Evel 4:4). In Erez Israel, coffins are not usually used. In the Diaspora, it is still customary to spread earth from Erez Israel on the head and face of the corpse, but the customs of placing ink and pen beside a deceased bridegroom (Sem. 8:7) and a key and book of accounts beside a childless man (*ibid.*) have been discontinued (*Bah*, YD 350). The older practice of food offerings to the dead (Deut. 26:14; Tob. 4:17; Eccles. 30:18), of placing lamps in graves, and of burying the personal effects of princes and notables with the corpse (as was done for Gamaliel I by Onkelos (Av. Zar. 11a)), have completely disappeared. The more recent custom of placing flowers on the grave is discouraged by Orthodox rabbis because of **hukkat ha-goi*. Before the funeral, the mourners tear their upper garment as a symbol of mourning (**Keri’ah*).

The funeral service, now often conducted in the vernacular, varies according to the age of the deceased. A male child who died before he was seven days old is circumcised and given a Hebrew name at the cemetery (*Haggahot Maimoniyot*, Milah 1:15). Only two men and one woman participate

at the funeral of children who die before they reach the age of 30 days, although children who have learned to walk and thus are already known to many people are escorted as adults. In such and normal cases, the coffin is carried on the shoulders of the pallbearers into the cemetery prayer hall (*ohel*; Maim., Yad, Evel 4:2) where the **zidduk ha-din* (“acknowledgment of the Divine judgment”) beginning with the affirmation “The Rock, His work is perfect, for all His ways are judgment” is recited. In some communities, this prayer is recited after the coffin has been lowered into the grave, and on those days on which the **Tahanun* is not said, Psalm 16 is substituted for *zidduk ha-din*. In the cemetery while the coffin is being borne to the grave, it is customary (except on those days when the *Tahanun* is not recited) to halt at least three times and recite Psalm 91. In talmudic times, seven stops were made for lamentations (see Ket. 2:10; BB 6:7), symbolizing the seven times that the word *hevel* (“vanity”) occurs in Ecclesiastes 1:2 (BB 100b); corresponding to the days of the creation of the world and also to the seven stages which man experiences during his lifetime (Eccles. R. 1:2). Some Sephardi rites have the custom of seven *hakkafof* (“circumambulations”) at the grave.

When the coffin is lowered into the grave, those present say, “May he (or she) come to his (or her) place in peace”; they then fill in the grave. As they leave, they throw grass and earth behind them in the direction of the grave, while saying, “Remember (God) that we are of dust.” Prior to leaving the cemetery they wash their hands (in Jerusalem, it is customary not to dry them afterward). In the *ohel*, Psalm 91 and the **Kaddish* are recited by the mourners. The participants at the funeral then recite “May the Almighty comfort you among the other mourners for Zion and Jerusalem” as they stand in two rows between which the mourners pass. The precise order of the funeral varies from place to place and from community to community. Many of the customs among the Sephardi Jews are closer to those of talmudic times than Ashkenazi customs.

Reform Jewish Practice

Certain burial practices are unique to Reform Jews (mainly in the U.S.). Embalming and delay of burial for a day or two are permitted if necessary to wait for the arrival of relatives from a distant city (sometimes funerals are delayed even without this reason). Reform Jews are usually buried in ordinary clothes, without dirt in the coffin. Reform rabbis generally permit cremation, although it is still rare among Jews. Suicides are buried in their family plots.

Sephardi Practice

In the Sephardi communities in Erez Israel, it is customary to carry the bier of a rabbi or scholar by hand, whereas for an ordinary person it is carried on the shoulders. When the men of the burial society leave the house they break an earthenware jar in front of it, symbolic of man as a “broken sherd” and in order to frighten away the evil spirits.

In Safed it was customary to immerse the corpse in the *mikveh* of R. Isaac Luria which is close by the cemetery whereas in Tiberias, Lake Kinneret was used for this purpose.

In most communities it is usual to walk in a ceremonial circle seven times around the bier reciting appropriate verses and in some, coins are thrown to the four directions and the verse "And to the children of Abraham's concubines he gave gifts" (Gen. 25:6) is recited. The "children of the concubines" are the evil spirits and the money is in order to satisfy them so that they should not make claims on the deceased.

It was also customary for old men to buy a grave and actually go into it, after which they would give a festive banquet.

In Egypt the funeral service usually was held in the synagogue. Occasionally the deceased's *tefillin* were buried with him and he was buried with his head toward Jerusalem. In Yemen, however, the body was buried with the feet toward Jerusalem so that when the dead will be revived he will stand and immediately bow toward the Holy City.

In Libya if a man died and left a wife in the early stages of pregnancy, those carrying the bier would lift it high when they left the house and the widow would pass under it in order to demonstrate that the deceased is the father and prevent malicious gossip later. Sons did not go near the bier and did not enter the cemetery but stayed at the entrance where they recited the *Kaddish* at the end of the burial service. The burial society supplied the mourners' meal and buried the remains of it in the ground so that mourning should not return to that family.

If the deceased was an old scholar a small meal was eaten before the bier was removed from the house. Participation in the meal was meant to ensure long life. At such a funeral no dirges or lamentations were recited. **Yigdal* and **Adon Olam* and a special *piyyut* in honor of Simeon b. Yoḥai were recited instead.

In Yemen the mourners followed the bier in black *tal-litot* (prayer shawls) and the sons of the deceased uncovered their right arms and shoulders (cf. BK 17a). The participants walk around the bier seven times and a formal declaration releasing the deceased from all penalties that may have been put on him is made.

In Kurdistan the sons of the deceased do not follow the bier but remain in the courtyard of their house.

BURLA, family of Jerusalem rabbis from the 18th century onward; members of the Burla family are also found in Greece and Turkey.

ISRAEL JACOB BURLA (d. 1798) is mentioned in 1770 as one of the seven leading scholars who headed the Jerusalem community. He was a member of the *bet din* of Yom Tov Algazi, and later *av bet din*. In 1774, a year after the invasion of

Erez Israel by the armies of Ali Bey, ruler of Egypt, he and Yakar b. Abraham Gershon Kitover traveled to Europe as emissaries, to acquaint the communities there with the misfortunes of the Jerusalem community and to enlist their aid. His letter of appointment, printed in Portuguese in Amsterdam, 1776, contains an account of important historical events. His plan for a system of taxation, written at the request of the communal leaders of Siena, during his stay there in 1777, was published in Italian in a pamphlet entitled *Legge del Zorkhei Zibbur* (Florence, 1778). In 1782 Israel was back in Jerusalem, where he remained for the rest of his life. His responsa, *Mekor Yisrael* (1882), were published by his great-grandson, Joseph Nissim Burla, together with the responsa, *Naḥalat Ye'udah*, of his son, Judah Burla.

Israel Jacob Burla's son JUDAH BEKHOR BEN ISRAEL JACOB (d. 1803) was also a Jerusalem scholar. His signature appears on approbations beginning with 1789, and in 1795, while still a young man, he was the third member of the *bet din* of Raphael Joseph b. Rabbi. After Napoleon's invasion of Erez Israel in 1799, and the consequent suffering of the Jerusalem community, he went as an emissary to Arab countries, and in 1800 was in Baghdad. His responsa, *Naḥalat Ye'udah*, were published together with those of his father.

SAMUEL BURLA (d. 1876) was a wealthy Jew of Janina, who settled in Jerusalem and was appointed Greek consul. MENAHEM BEN JACOB BURLA (possibly Israel Jacob's son), Hebron scholar, traveled abroad in 1835 as an emissary for the Hebron community.

JOSEPH NISSIM BEN ḤAYYIM JACOB BURLA (1828–1903) was a rabbinical emissary, and preacher. In 1859 he was sent to Morocco together with Baruch Pinto. Joseph Nissim was one of those who built and settled in the Mishkenot Sha'ananim quarter, the first settlement outside the walls of Jerusalem. The sermon he preached at its consecration in 1863 was published under the name *Divrei Yosef* (1863). That same year he was sent as an emissary to North Africa and Western Europe on behalf of the Battei Maḥaseh community in Jerusalem and in 1871 he was sent to Turkey. In 1878–81 he and his son Ḥayyim Jacob were emissaries to North Africa and Tripoli. In 1882 he helped Nissim *Behar found the Torah u-Melakhah school. Joseph Nissim was the author of: (1) *Leket Yosef* (1900), a collection of laws arranged in alphabetical order; (2) *Va-Yeshev Yosef* (1905), responsa, published together with *Shuvu Banim*, sermons; (3) *Yosef Ḥai* (Jerusalem, National Library, Mss. Heb. 8° 716, 715), the first part a collection of his sermons for the years 1848 and 1852, and the second part a talmudic methodology; (4) *Olat Shabbat* (*ibid.* 4° 153), sermons; (5) *Petaḥ ha-Ohel* (*ibid.* 8° 719), a talmudic methodology; (6) a responsum on the Mishkenot Sha'ananim development, in manuscript in the Benayahu collection. He also composed prayers and *piyyutim*, some of the latter being included in *Yagel Ya'akov* by his nephew Jacob Ḥai Burla.

His son, ḤAYYIM JACOB (1847–1929), accompanied his father as an emissary to Turkey and Morocco. Twelve volumes of his sermons, along with a register of promissory

notes, accounts, etc., are in the National Library of Jerusalem (443, 8^o).

JACOB HAI BEN JUDAH BURLA (d. 1892) was a Jerusalem cantor. He founded the *Hemed Baḥurim* society for evening and Sabbath study, and published a number of *tikkunim* ("orders of study for special occasions"): *Marpe la-Nefesh* (1873), studies for the Sabbath in accordance with *Hemdat Yamim*; *Tikkun ha-Berit* (1881); and *Orah Ḥayyim* (1890), a *tikkun karet* ("an order of expiation"). He also published *Yismah Yisrael* (1875), a small collection of poems, a Ladino edition of *Shivḥei ha-Ari* (1876), and *Yagel Ya'akov* (1885), poems by himself and other authors.

JOSHUA BEN BEKHOR JUDAH BURLA (1852–1939), book-binder by trade, was in charge of the graves of Rachel in Bethlehem and Simeon ha-Zaddik in Jerusalem. He was the father of the writer, Yehuda *Burla.

BURLA (Bourla), YEHUDA (1886–1969), Hebrew novelist, one of the first modern Hebrew writers of Sephardi Middle Eastern background. Born in Jerusalem, Burla was a descendant of a family of rabbis and scholars (originally from Izmir, Turkey) that had settled in Erez Israel some three centuries previously. He studied in yeshivot and the Jerusalem Teachers' Seminary (1908–11). During World War I he served in the Turkish army as an interpreter. After the war he was director of Hebrew schools in Damascus for five years. He taught in Haifa and Tel Aviv. From 1930 he spent several years as head of the Arab Department of the Histadrut, was an envoy of Keren Hayesod to the Latin American countries (1946), and director of Arab Affairs in the Ministry of Minorities (1948). Burla served several terms as president of the Hebrew Authors' Association and as chairman of the Bio-Bibliographical foundation, Genazim.

When he was 18, Burla read the classical modern Hebrew authors (*Mendele Mokher Seform, Ḥ.N. *Bialik, J.Ḥ. *Brenner, I.L. *Peretz) for the first time, and discovered that they portrayed only the life of the Ashkenazim of Eastern Europe, while neglecting the world of the Middle Eastern Sephardim. He determined to correct this imbalance by depicting the milieu, language, customs, and thinking of this hitherto neglected community. When he completed his final year in the Teachers' Seminary, he wrote his first story "*Lunah*," which he sent to the noted writer Joseph Ḥayyim Brenner. A week later came the decision, a turning point in Burla's life: "You are talented," said Brenner, "Write!"

Beginning with "*Lunah*," a love story set in the Sephardi communities of old Jerusalem, and continuing with his many other works, Burla became the first modern Hebrew writer to deal extensively with the life of Middle Eastern Sephardim.

He may be termed the epic writer of this Jewry, encompassing Jewish life in Arab and Balkan lands as well as in Erez Israel – Jerusalem, Safed, Hebron – from its Turkish period to the State of Israel. Just as an entire Eastern European Ashkenazi society could be reconstructed from the works of *Shalom Aleichem and S.Y. *Agnon, so the Sephardi Jewish world can be recreated from Burla's writings. His novels and stories depict a way of life that is fast disappearing as a result of immigration and acculturation to Israeli life. His fiction recorded the garb, diet, language, and folklore of that community.

"*Lunah*" set the tone in subject matter (Sephardi Jewry), theme (characters overwhelmed by the power of love and the forces of destiny), and narrative mode (a blend of realism and romanticism) of his ensuing works. His second story "*Beli Kokhav*" ("Without a Star," 1937) continues this method. Here the setting changes to Bedouins instead of Jews, but the same tragic fate in love befalls the protagonists. Burla's first novel *Isho ha-Senu'ah* ("His Hated Wife," 1928) centers on a Sephardi Jew in Erez Israel who does not love his wife, but, afraid of the financial ruin that a divorce might bring, remains married to her. The same theme of emptiness in marriage is seen in *Naftulei Adam* (1929, *In Darkness Striving*, 1968), the story of a man who is continually unfaithful to his wife and falls in love with a selfless Arab divorcee. In this series of infidelities as a traveling merchant in the Arab villages on the outskirts of Damascus, he expresses his soul's longing for beauty and his gratitude to God who blessed him with such good fortune. Tragedy in love and the eventual insanity of the beloved are themes developed in *Alilot Akavyah* ("The Adventures of Akavyah," 1939). This two-part novel portrays a romantic and primitive child of nature with a sense of prophetic mission. He falls in love with an Armenian woman in the Anatolian mountains, is later rejected by her, then goes to Erez Israel where he meets her reincarnation. Burla's two major historical novels deal with Sephardi Jews who had visions of Zion restored. *Elleh Masei Yehudah Halevi* ("The Journeys of Judah Halevi," 1959) depicts the life of the great poet of the Golden Age who 800 years ago called for a return to Erez Israel, and *Ba-Ofek* ("On the Horizon" (three parts), 1943) portrays R. Judah Hai *Alkalai, the early 19th century Sephardi rabbi who urged immediate resettlement of Zion without waiting for miracles.

Although Burla's subject matter is mainly the Jews of Middle Eastern communities, his aesthetics and literary discipline are Western, shaped both by his education and his readings in modern Hebrew literature. His writing has no educational or didactic purpose, as did the works of the first Hebrew authors of Ashkenazi Jewry. Burla is primarily a storyteller. He is not a revolutionary in form or style but a traditional, somewhat romantic, narrator of the realistic school. Other works by Burla include (1) story collections: *Im Shaḥar* (1946), *Nashim* (1949), *Tom va-Meri* (1951), *Be-Magelei Ahavah* (1953), *Reshafim* (1961); (2) novels: *Meranenet* (1930), *Bat Ziyon* (1930–1), *Na'amah* (1934), *Bi-Kedushah o-Ahavah* (1935), *Senunit Rishonah* (1954), *Baal be-Amav* (1962); (3) collected works (8 volumes) were published in 1962. For

[Curt Leviant]

BURLE-MARX, ROBERTO (1909–1994), Brazilian landscape designer. Born in São Paulo, Burle-Marx began his career as a painter. He turned to landscape gardening and joined the revolutionary group which introduced modern architecture into Brazil in the 1930s. Among his gardens are the Flamengo scheme for landscaping a million square yards of land reclaimed on the coastline of Rio de Janeiro, the botanical and zoological garden for Brazilia, and six patios for the UNESCO building in Paris. As a painter, his works gradually came to express the colors and shapes of the Brazilian landscape.

BURLE MARX, WALTER (1902–1990), conductor, composer, and pianist. Born in São Paulo, Burle Marx started his musical studies with Henrique Oswald and Angelo Franca. At the age of 12, he appeared in two piano concerts with Artur Napoleao. From 1924 he studied in Europe: piano with Kwast (1924–26), orchestration with Reznicek (1926–28), and conducting with Weingartner (1928–29). In 1925–26 he toured Europe as a pianist. On his return to Brazil, he formed the Philharmonic Orchestra of Rio de Janeiro (1931) and in 1947 became director of the Rio Municipal Theater. In 1952 he was appointed to teach the piano and composition at the Settlement Music School, Philadelphia. His compositions include four symphonies (1945, 1950, 1956, 1970), *Theme, Variations and Fugue* (1926), *Episodio Fantastico* (1939), *Variações sobre o hino nacional* (1947), and *Samba concertante* (1961).

BURMA (Myanmar), republic in southeast Asia. Jews from Calcutta, Cochin, and Persia may have settled in various towns of Burma in the first half of the 19th century. Specifically Baghdadis from Calcutta with business interests – often based on opium – further east would stop at Rangoon on the way to Singapore, Jakarta, Manila and Shanghai. The first Jew known definitely to have settled in Burma was Solomon Gabirol, probably a *Bene Israel, who served as commissar in King Alaungpaya's army. A Jewish merchant, Goldenberg, from Romania, engaged in the teakwood trade and accumulated

Movement of Jews to and from Burma in the 19th and 20th centuries.

great wealth. Solomon Reineman of Galicia arrived in Rangoon, the capital of Burma, in 1851 as a supplier for the British army and opened stores in various places. His *Masot Shelomo* ("Solomon's Travels," 1884) contains a long chapter on Burma, and is the first Hebrew account of the country and its towns. In 1857 the synagogue Mazmi'ah Yeshu'ah was established in Rangoon, first taking the form of a wooden structure and later in 1893–6 rebuilt in stone. A second synagogue, Beth El, was built in 1932. The Jewish community, scattered in several places in the country, particularly Mandalay (where there are still a few Jews), Bassein, Aykab, and Toungyi, included members of the *Bene Israel group from Bombay, Arabic-speaking Jews from Calcutta, and Jews from Cochin and other parts of the Oriental Diaspora. The number of Jews in Rangoon and other places peaked at 1200. With World War II and the Japanese invasion of Burma, community life was disrupted and many Jews fled to Calcutta or Erez Israel. After the war, about 500 Burmese Jews returned, but later they left the country. In 2005 just a handful of Jews remained in Rangoon although the Mazmi'ah Yeshu'ah was still maintained through the efforts of Jack Samuels, the community leader.

"Lost Jews"

From the beginning of the 19th century, first Christian missionaries and later some Jews found reason to believe that the populous Karen tribe of Burma was descended from Jewish stock. Above all it was the cult of the High God Yuwah or Ywa, reminiscent of the Hebrew YHWH , which excited Christians and later Jews and inspired them with the certainty that here must be some long-lost relic of the ancient religion of the Hebrews. Until recent times, when the cause of the Karen was taken up by Amishav, Christian and particularly Baptist missionaries were the most fervent supporters of the idea. Nonetheless some Jews too were convinced of similarities. In a Bombay Jewish journal, *The Jewish Tribune*, of April 1934, there appeared the first of a series of articles written by a member of the Bene Israel by the name of J.E. Joshua. Joshua, who was

based in Rangoon, called his article “The Lost Jews of Burma.” “They live in forests and villages and hills,” he wrote. “They hunt animals, grow paddy and keep elephants.... In fact, the Chinese Jews, who originally migrated from Persia to China, are to-day within the confines of the land of golden pagodas, spirits and white elephants but known as Karens.”

[Walter Joseph Fischel / Tudor V. Parfitt (2nd ed.)]

Burma-Israel Relations

Burma became independent in January 1948 and therefore did not participate in the deliberations of the UN on the partition of Palestine. The specific Jewish aspect of the problem was completely alien to her and, like many Asian countries, she regarded the Jewish settlement in Palestine as a manifestation of “Western Colonialism.” Thus, in the spring of 1949, when Israel applied for membership in the UN, Burma cast a negative vote. However, following a seeming stabilization of the situation in the Middle East, in December 1949 Burma accorded full recognition to Israel. The first contacts between the two countries were created in the framework of the international labor movement. In 1952 a Burmese socialist mission visited Israel and additional contacts were developed when an Israel delegation, headed by the then foreign minister, Moshe Sharett, took part in the first Asian Socialist Congress in Rangoon in 1953. Shortly after, full diplomatic relations were established and Israel’s first minister to Burma, David Hacohen, opened a legation in Rangoon. The Burmese opened theirs in Israel in 1955. Until 1963 the relations between the two countries developed swiftly. Prime Minister U Nu paid the first state visit to Israel in 1955, shortly after the Bandung Conference, at which Burma unsuccessfully fought for Israel’s admittance to the caucus of Asian-African countries. A special agreement concluded in 1956 served as a framework for the constantly growing cooperation. Israel sent a large number of professional and agricultural experts to further Burmese projects. A model agricultural settlement was set up by Israeli experts in the northern dry zone (the “Namsang” project); a joint shipping line was built (the Burma Five Star Line); irrigation schemes were set in motion; nurses were trained; the Burma Pharmaceutical Industry (BPI) was provided with Israel technological assistance; a joint construction and contracting firm was established; and expert counselors co-managed important Burmese projects. This cooperation also extended to the Burmese army, the nucleus of whose parachute corps was Israeli-trained. Under a commercial contract, Israel imported substantial quantities of rice from Burma. A constant exchange of visits was made by leaders of both countries: the chiefs of staff paid almost annual visits; Israel’s president Ben-Zvi went to Burma in 1958, Prime Minister Ben-Gurion in 1961, Golda Meir, then foreign minister, in 1962. General Ne Win, who succeeded U Nu, also visited Israel. Both countries’ missions were raised to ambassadorial level in 1957. This wide-ranging cooperation came to a rather abrupt end in 1963, when Burma, under General Ne Win, embarked on a new policy of nationalization, self-reliance, and reemphasis

on strict neutrality and noninvolvement with non-Burmese parties. Israel-Burma joint ventures wound down, though some Burmese students and professionals still came to Israel to study and a number of Israel experts went to Burma. Mutual trade also continued. In 1988, after the Burmese (Myanmar) armed forces (or Tatmadaw) formed the State Law and Order Restoration Council (SLORC) and took over control of the country, there were rumors of a secret military partnership between Israel and Burma. Low-level contacts in others spheres continued into the 21st century.

BURNING BUSH, the *seneh*, which is connected with God’s revelation to Moses and of which it is stated that “The bush burned with fire, and the bush was not consumed” (Ex. 3:1–4). Various identifications have been proposed for the plant. One suggestion is that it is a variety of thorn-bush which grows extensively in desert wadis, namely, the wild jujube (*Zizyphus spina-Christi*) known in Arabic as in Egyptian as *nabs*. An ancient inscription found in the Sinai Desert reads: “The god Safdu who dwells in the *nabs*,” an expression analogous to the biblical Divine epithet “Dweller in the bush” (Deut. 33:16). Others identify the *seneh* with a variety of acacia widely found in Sinai or with a parasite plant that lives on it; the climber, *Loranthus acaciae*, is covered by red flowers and fruit, and from a distance creates the illusion of being on fire. Others see a similarity between the biblical word and the plant known in Arabic as *sana*, the desert plant *Cassia obovata*, which grows very low and might appear too humble a vehicle for the revelation. However, the opening of an incantation prescribed in the Talmud suggests that the *seneh* is a rather low tree. It reads: “O *seneh*, it is not because you are the tallest of the trees that the Holy One, blessed by He, caused His Divine Presence to rest upon you, but because you are the lowliest of all the trees” (Shab. 67a). Yet others, on the basis of the traditions of the monastery of St. Catherine in Sinai, identify it with the shrub *Colutea istria* which has bright yellow flowers and distended pods, or with the bramble, or blackberry (*Rubus sanguineus (sanctus)*). The latter identification is supported by rabbinic literature in which the bramble is referred to as *seneh* and its fruit, first red and later black, as *innevei seneh* (“the berries of the *seneh*”; TJ, Ma’as. 1:3, 48d). In their many homilies in *Midrash Rabbah* on the revelation of God in the *seneh*, the sages had the bramble in mind, and sought to explain why God had chosen to reveal Himself to Moses in this particular plant. The homilies cited here are those that contain some description of it. The bramble grows on wadi banks (also in Sinai) and in moist fields, hence the homiletical interpretation: “Even as the *seneh* grows both in a garden and by a river, so Israel has

a share in this world and in the world to come.” “Even as this *seneh* flourishes wherever there is water, so Israel flourishes only by virtue of the Torah which is called water.” The bramble has no central stem but instead produces long, thin branches with spiked thorns and is therefore used as a hedge: “Even as this *seneh* is used as a hedge for gardens, so is Israel [a hedge] for the world.” The thorns of the bramble are unusual in that “they all bend downward” so that whoever picks the sweet black fruit “puts his hand into it and feels nothing but when he withdraws his hand it gets scratched. Even so when Israel went down to Egypt no one knew them, but when they went out, they went out with signs and wonders.” Similarly, a bird “gets into it and feels nothing but when it goes out, its wings are scratched.” The bramble has pink flowers that resemble small roses and hence “the *seneh* produces thorns and produces roses.” Its leaves consist of between three to five leaflets and the fact that “the *seneh* has five leaves” was used in an allusion to Abraham, Isaac, Jacob, Moses, and Aaron. (The sources of the above Midrashim are Ex. R. 2:5 and Song R. 1:6.) These descriptions confirm the sages’ identification of the *seneh* associated with God’s revelation to Moses with the bramble. This is the earliest and most authentic tradition.

[Jehuda Feliks]

BURNS, ARTHUR FRANK (1904–1987), U.S. economist. Born in Stanislau, Austria, Burns studied at Columbia University, New York, and then taught at Rutgers and Columbia. In 1930 he began a long association with the National Bureau of Economic Research, whose president he became in 1957. Burns served as a presidential adviser and was a member of numerous government bodies concerned with economic matters. From 1953 to 1956 (during the Eisenhower administration) he was chairman of the President’s Council of Economic Advisers. In October 1969 Burns was named chairman of the Board of Governors of the U.S. Federal Reserve System by President Nixon, a position he held until 1978.

Later on, he took a position at the American Enterprise Institute. He then served as an adviser to Ronald *Reagan. From 1981 to 1985 Burns was the U.S. ambassador to the Federal Republic of Germany.

His publications include *Economic Research and the Keynesian Thinking of Our Times* (1946), *Measuring Business Cycles* (with W.C. Mitchell; 1946), *Stepping Stones Towards the Future* (1947), *The Cumulation of Economic Knowledge* (1948), *Production Trends in the United States since 1870* (1950), *New Facts on Business Cycles* (1950), *Looking Forward* (1951), *Business Cycle Research and the Needs of Our Times* (1953), *Frontiers of Economic Knowledge* (1954), *Prosperity without Inflation* (1957), *The Business Cycle in a Changing World* (1969), *Reflections of an Economic Policy Maker* (1978), *The Anguish of Central Banking* (1979), *The Condition of the American Economy*

(1979), *The Ongoing Revolution in American Banking* (1988), *Arthur Burns and the Successor Generation: Selected Writings of and about Arthur Burns* (with Hans N. Tuch; 1988).

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

BURNS, GEORGE (1896–1996), U.S. comedian. Born in New York City, Burns was one of 12 children. He supported his family with his show business earnings after his father died.

As Nathan Birnbaum, the young Burns sang for pennies at street corners. He started his career at the age of seven, singing in the Pee Wee Quartet. He went on to vaudeville, where he worked as a seal trainer, a trick roller skater, and a dance teacher. In 1923 he teamed up with his future wife, Gracie Allen. Their act starred Burns as funny man, but later they exchanged roles. They appeared in big vaudeville houses and in 1932 were hired for a radio program, *The Burns & Allen Show*, which ran for 17 years.

In 1950 they starred in their own TV program, *The George Burns and Gracie Allen Show*, which ran until 1958 when Gracie retired. Essentially using themselves and their family life as the main premise for the show, Burns added an unprecedented and seemingly original dimension to programming for television viewers. But, as Burns put it, “My major contribution to the format was to suggest that I be able to step out of the plot and speak directly to the audience, and then be able to go right back into the action. That was an original idea of mine; I know it was because I originally stole it from Thornton Wilder’s play *Our Town*.” Eventually, the show’s writers (Burns was head writer) gave him additional omniscience by placing a closed-circuit TV in his den, which enabled him to watch the goings-on in the household and comment on the activities even when he was not a participant.

His production company, McCadden, produced the sitcoms *The Bob Cummings Show* (1955–59), *The People’s Choice* (1955–58), and the highly popular show about a talking horse, *Mister Ed* (1961–66).

When Gracie died in 1964, Burns continued performing on his own, taking on dramatic roles as well as comedic ones. In 1975 he co-starred with Walter Matthau in the film *The Sunshine Boys*, which won him an Academy Award as Best Supporting Actor. At 80, he became the oldest Oscar recipient. Still going strong, Burns appeared in several other movies, namely *Oh God* (1977); *Going in Style* (1979); *Just You and Me, Kid* (1979); *Oh God! Book II* (1980); *Oh God! You Devil* (1984); and *18 Again* (1988). He also recorded several albums, and at age 84 won the 1990 Grammy for Best Spoken-Word Recording for *Gracie: A Love Story*. In 1994 *The Burns & Allen Show* was inducted into the Radio Hall of Fame.

Burns’ signature feature was his ever-present cigar. Not just a prop, he actually smoked at least ten a day, and lived to be 100. When someone asked him what his doctor’s opinion of his frequent smoking was, Burns responded, “My doctor is dead.” For his body of work over the many years, Burns received Lifetime Achievement Awards from the American Comedy Awards (1987 and 1978), the British Comedy Awards

(1991), and the Screen Actors Guild (1995). In 1988 he was a recipient of the Kennedy Center Honor.

Burns produced his first book of memoirs in 1955, entitled *I Love Her, That's Why!* He went on to write *Living It Up, or They Still Love Me in Altoona* (1976); *The Third Time Around* (1980); *How to Live to Be 100: Or More! The Ultimate Diet, Sex and Exercise Book* (1983); *Dear George: Advice and Answers from America's Leading Expert on Everything from A to Z* (1985); *Gracie: A Love Story* (1988); *All My Best Friends* (with David Fisher, 1989); *Wisdom of the 90s* (with Hal Goldman, 1991); and *100 Years, 100 Stories* (1996).

[Ruth Beloff (2nd ed.)]

BURRIANA, city in the medieval kingdom of Valencia, eastern Spain, which was part of the medieval Crown of Aragon. Shortly after the Christian reconquest of the area in 1233, Jews settled in the citadel and the unwallled area nearby, as well as in the neighboring village of Villareal. The history of the communities in the two places was closely connected. The status of the Jews was regulated by the *Furs*, the local collection of laws and customs. As the Jews belonged to the Crown, James I decreed that the Jews of Burriana would be under the jurisdiction of the *justicia*, a local functionary who held judicial authority. Several Jews of Burriana were in the service of the king. Astruc Jacob Siso (Xixo) served as *baile* of Burriana from 1268 until 1273. Documents give a picture of his varied commercial activities, including loans to royalty, administration of the salt tax, and supervision of works on the fortress of Peñíscola. Another local notable was Solomon Vidal who received from James I land for orchards, vineyards, and gardens, and for building a residence, and was appointed *baile* of Villareal in 1276. Salomon Vidal, who was the *baile* of La Plana, collected the rents of the region that included Burriana, Castellon, and Onda in 1278. During the 13th century, Jewish landowners were granted various privileges. The communities of Burriana, Murviedro (Sagunto), Onda, and Segorbe formed a single tax administrative unit (*collecta*), assessed to pay an annual tax of 2,000 sólidos. The first reference to the *aljama*, to a legally constituted community, is from 1326 under James II. In that same year the King gave instructions that land for a cemetery should be made available to the community. The *juhería* or *judería* of Burriana consisted of two main streets, known today as de la Mare de Déu dels Desamparats and Santa Teresa. There were about 30 dwelling places in the Jewish quarter. The Jews also had their synagogue there. When the *baile* appointed an unacceptable candidate as *hazzan* in 1369, the community appealed to Pedro IV who ordered the *baile* to appoint someone with more suitable qualifications. The physician Vidal Garcian practiced here in 1390; his son Lobell was physician to the royal family. During the massacres of 1391 the Jewish quarter was destroyed. The king empowered Francisco Desplugues, governor of Valencia, to restore looted property to

its rightful owners. The municipality and city elders (*jurados*) were fined 13,000 sólidos of the Barcelona mint, and the optimates and council of Villareal, 7,000 sólidos. Subsequently the Burriana community recovered to some extent. Martin I freed a number of reputed Conversos who had come to Burriana from Castile and whose extradition had been demanded. At the time of the expulsion in 1492 the Burriana Jews left Spain from the nearby port of Valencia.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

BURROWS, ABE (Abram Solman Borowitz; 1910–1985), U.S. author and director. Born in New York City, Burrows was educated at the City College of New York and New York University. He began his writing career as a scriptwriter for *Duffy's Tavern* on radio, and later for the Rudy Vallee program. He sang on his own radio program (*The Abe Burrows Show*), in nightclubs, and on television.

Burrows wrote *Guys and Dolls* (1951), *Can-Can* (1953), *Silk Stockings* (1955), *The Solid Gold Cadillac* (1956), *How to Succeed in Business Without Really Trying* (1961), and *Cactus Flower* (1965).

On Broadway, he directed *Two on the Aisle* (1951–52), *Can Can* (1953–55), *Happy Hunting* (1956–57), *Say, Darling* (1958–59), *How to Succeed in Business Without Really Trying* (1961–65), *What Makes Sammy Run?* (1964–65), *Cactus Flower* (1965–68), *Forty Carats* (1968–70), and *Guys and Dolls* (revival, 1976–77).

When *Guys and Dolls* first appeared on Broadway in 1951, it won a Tony Award for Best Musical. It is still considered one of the finest musical comedy scripts ever written. And Burrows' *How to Succeed in Business Without Really Trying* was so successful that in 1962 it garnered him a Pulitzer Prize for Drama, as well as three Tony Awards for Best Musical, Best Author, and Best Director. Because of his talent for music and comedy, Burrows was known in the business as "the show doctor," often being called in to administer to an ailing script or libretto.

Burrows also hosted several television shows, namely *This Is Show Business* (1949–51), *Abe Burrows' Almanac* (1950), *We Take Your Word* (1950–51), *The Name's the Same* (1951–52), *This Is Show Business* (1956), and *What's It For?* (1957–58). He also made frequent appearances as a guest panelist on such shows as *What's My Line?* and *To Tell the Truth*. In 1980 Burrows wrote his autobiography *Honest, Abe: Is There Really No Business Like Show Business?* His son, JAMES (1940–), was the director of such popular TV sitcoms as *The Bob Newhart Show*, *Lou Grant*, *Taxi*, *Cheers*, *Night Court*, and *Friends*, and won seven Emmys.

[Ruth Beloff (2nd ed.)]

BURSA (Brusa, formerly Prusa), city in northwestern Anatolia, capital of the Ottomans in the 14th century; afterward a provincial capital. According to seven Hebrew inscriptions from 820 C.E., Jews lived in Bursa in the Byzantine period. When Bursa was captured by the Ottomans (1326), the city was vacated by its inhabitants but the Jews returned shortly thereafter. A 14th-century colophon identifies a member of the Jewish community in Bursa as Shlomo ha-Nasi, son of Rabbi Jesse ha-Nasi of Trnovo. In one case, in 1471–74, the public scales at the market in Bursa, where goods were officially weighed and certified, were in the hands of Istanbul Jews originally from Trnovo and Cernova. The tax farmers were still paying off their debt to the government as late as 1478. Spanish exiles settled in the city in the first half of the 16th century and the existing community of *Romaniot (Byzantine) Jews assimilated among them. The Jews in Bursa lived in a special quarter where they continued to reside until the 1960s. The Ez Ḥayyim synagogue, which resembles a mosque, is the oldest of the town's three synagogues, the others (Gerush and Mayor) having been established later by Spanish exiles. In 1592 several Jews were accused of luring a man named Mirza b. Ḥusain into their home and tying him to a pillar where they drew his blood although he ultimately escaped. The sultan ordered the eight Jews involved to be exiled to Rhodes. In the late 16th century, an attempt was made to remove Jews from shops in the marketplace at Bursa, but the Jews were able to produce orders proving that the government had guaranteed them the right to occupy those shops without interference and even to pass them on to their children. This privilege was probably issued in the early part of the century to encourage Jews to settle and stay in Bursa. According to the Tapo documents and other Ottoman documents, in the years 1538–39 and 1540–41, 166 Jewish families lived in the city of Bursa, in 1546 there were 250 Jewish families, and in 1594–95 there were 650. By 1598, 735 Jewish families lived in Bursa. All these families paid the *jizya* tax to the Ottoman Empire. There are many documents about the Jewish community of Bursa in the 17th century. In 1618–19 and c. 1641–42, 270 Jewish families lived in the city, but by 1696–97 there were only 141 Jewish families in Bursa. The Jews lived in large corporate houses that were owned by Muslim waqfs in the city, the majority of them in the Koroçesme quarter. The Jews were deeply involved in the economic activities of Bursa unlike the Christians. Generally, the Jews enjoyed the favors of the authorities and there were Jews who even purchased Muslim slaves. They also bought Jewish slaves and ransomed them. Only a few Jews were murdered in Bursa during the Ottoman period. The Jews owned many shops in the city markets and did business with other groups. The Jews were also members of the local guilds. They paid the *jizya* tax through their representative, the **kakhya*. In 1603–04 the *kakhya* was Joseph ben Moses. In the 17th century there were local Jews who had a monopoly (*iltizam*) on the mercantile taxes of the Ottoman government, including the Persian silk tax, the wine tax, etc. By the mid-17th century many Jews lost their businesses to military personnel who took con-

trol of the markets. During the Ottoman period the Jews in Bursa stood out especially as goldsmiths, luxury metalworkers, and financiers but only a few were moneylenders. Sometimes the Sarraf-Bashi in the city was a Jew, such as Isaac ben Joseph. The majority of Jews were textile workers and merchants. Many imported Persian silk and were members of the silk merchants guilds. Many others were silk manufacturers and dyers. Many, however, were poor. In 1539 or 1543 Rabbi Abraham Ibn Ya'ish (b. c. 1520) lived there. He was a member of the yeshivah founded around that time by R. Isaac ibn Lev and also the rabbi of the Gerush congregation in the city. Other known scholars of the period were Moses Ibn Gamil, Yom Tov Alroyo, Meir Halevi ibn Migash, Moses Shorbiel, and Jacob Sirilano. They corresponded with such famous rabbis as Joseph *Caro and Samuel *Medina. R. Gabriel ben Elia founded another yeshivah in Bursa and was head of the city's rabbis until 1560. He settled in Lepanto in 1561 but died before 1570. Ibn Ya'ish immigrated to Istanbul and died there before 1579. The rabbis of Bursa in the first half of the 17th century were Abraham Algazi and his son Judah Algazi (d. 1636) and Abraham Ganso. In the second half of the same century the rabbis Samuel Sagnis and Isaac Raphael Alfandari served in the city. Moses Algazi, the father of R. Solomon Algazi of Izmir, was the chief rabbi of Bursa in 1668. Joshua *Benveniste lived in the city for a short period in the mid-17th century. Raphael Samuel Hadjes was the chief rabbi in 1672–80. At the beginning of the 18th century Elijah Joseph Shilton was the chief rabbi in the city, and Yom Tov Saban officiated in Bursa in the mid-18th century.

The majority of Bursa Jews during the Ottoman period were religious but not cultured people. Modernity penetrated the city only in the late decades of the 19th century and at the beginning of the 20th century. The Jews spoke and wrote Ladino. Before Passover 1865, another blood libel accusation occurred, but the authorities took immediate measures to punish the Greeks who rioted in the Jewish quarter. At the end of the 18th century R. Ḥayyim Moses Galipolity lived in the city. The latter was also a physician. In the 19th century R. Jacob de Leon, the stepfather of R. Hayyim *Palache, lived in Bursa. He wrote *Tikkun ha-Shulhan*, published in Istanbul in 1849. R. Shabbetai Galipolity served as a rabbi in the second half of the 19th century and wrote his book *Yismaḥ Mosheh*, published in Izmir in 1868. Other rabbis in the city during the last decades of the 19th century and the beginning of the 20th were Nissim Medini, Solomon Uziel, David Papo, and Moses ben Habib.

The Alliance Israélite Universelle founded a boys and a girls school in 1886, which 450 pupils attended in 1914–18. In 1923 the schools were closed and the students were transferred to a Turkish school. Another scholar in that town was R. David Papo, the author of the book of sermons *Benei Me'ir*, which was published in Izmir in 1888. There were a few cases of local Jews who married Muslims. In 1883, 2,179 Jews lived in the city; in 1886, 600 families (2,800 people). The entire Jewish community lived in the same quarter and was poor. Before World

War I the community numbered 3,500. In 1927 this fell to 1,865, due to considerable immigration to South America. In 1939 there were 2,400 Jews, but by 1969 only 350–400 remained. By 1977 that number had dwindled to 192 Jews. The number of those employed was 52, of whom 46 were textile merchants. The leaders of the community were then Joseph Ventura and Kamal Ezuz. The rabbi was Uriel Arisa, a native of Istanbul. The Jewish waqf survived. It contained a complete street with 30 shops that in the past were rented by Jews and a large area where the Etz Hayyim synagogue once stood. This synagogue was burned in 1851. The estate is rented to Gentiles, with the monies going to the community treasury. The Gerush synagogue has existed for 400 years and includes seating for 500 men and 200 women. The ancient Mayor synagogue has seating for 250 men and 100 women.

BURSTEIN, family of actors. PESACH (1900–1986), born in Warsaw, joined a wandering Yiddish troupe as a boy. In 1924 he was engaged by Thomashefsky's Broadway company and appeared in many productions. In 1940 he married the Yiddish actress Lilian Lux and with her formed a company which had its own theater, the Hopkinson, in Brooklyn, N.Y. They played there in summer and toured abroad in winter. In 1954, they settled in Israel. The family enjoyed its biggest success in the musical *The Megilla*, based on poems by Itzik Manger, and featuring their son Mike Burstyn (1945–), a popular performer. After Pesach's death, his wife remained active in the Yiddish theater. In 1999 a documentary film called *The Komediants* on the Burstein family premiered in Israel and the United States, and winning an Israeli Academy Award.

[Dora Leah Sowden]

BURSTEIN, ABRAHAM (1893–1966), U.S. rabbi, author, and editor. Born in Cleveland, Burstein was ordained at the Jewish Theological Seminary in 1917. After serving in graves registration for the Jewish Welfare Board in France, he held pulpits in New England and New York. He was chaplain for the New York Department of Correction from 1934 until his death, chaplain of the Jewish Theatrical Guild from 1924, and executive secretary of the Jewish Academy of Arts and Sciences. Burstein was editor of the *Jewish Outlook*, editor and researcher of many Jewish scholarly works, and a leading book reviewer for the Anglo-Jewish press for many years. Author

of books for children, he wrote *Boy of Cordova* (1934) about Moses ben Maimon, *Adventure on Manhattan Island* (1957) about Peter Stuyvesant and the Jews, and *A Jewish Child's Garden of Verses* (1940). He also wrote *Religious Parties in Israel* (1936) and *Laws Concerning Religion in the United States* (1950). Among his other books are *Ghetto Messenger* (1928), *Unpastoral Lyrics* (1930), *A Boy Called Rashi* (1940), *Judah Halevi in Granada* (1941), *The Boy of Wilna* (1941), and *West of the Nile: A Story of Saadia Gaon* (1942).

BURSTEIN, ISRAEL (1891–1951), Hebraist. Born in Nadvornaya, Galicia, he studied at the University of Vienna, specializing in research on Hebrew language, the results of which he published in his book *Vollstaendige Grammatik der neuhebraeischen Sprache* (1929). After the *anschluss* of Austria by the Nazis, Burstein immigrated to Palestine in 1939 where he became an associate of the Va'ad ha-Lashon (see *Academy of the Hebrew Language). His main work *Torat ha-Hegeh ba-Lashon ha-Ivrit* (1941) deals with Hebrew phonology. He elaborated a new method of Hebrew shorthand and a system for the fusion of Hebrew numbers (based on the Hebrew alphabet) with the commonly used (Arabic) numerals.

BURSTYN, MIKE (1945–), U.S. actor. Born to Yiddish-theater performers Pesach Burstein and Lilian Lux in New York, he first appeared on stage at the age of three. Often billed as Motele, Burstyn toured the world with his parents and sister Susan from 1952 to 1962, moving from the United States to Argentina and then to Israel seeking out Yiddish audiences. In Israel, Burstyn kicked off his screen career with a small part in director Ephraim Kishon's *Sallah Shabbati* (1964), followed by roles in *Shabbat Hamalka* (1965), *The Dybbuk* (1968), and *Hershelle* (1977). However, Burstyn is best remembered for his Kinor David award-winning performance as Kuni Leml in *The Two Kuni Lemls* (1966) and *Kuni Leml in Tel Aviv* (1976). After serving in the Israeli Defense Forces in 1967, Burstyn performed in the Broadway production of *The Megillah of Itzik Manger* (1968–69) with his parents and then in *Inquest* (1970). He relocated to Holland in 1978, where he hosted *The Mike Burstyn Show* (1978–81), a TV variety program that also aired in Israel. In 1980, he played the lead of P.T. Barnum in the Tony Award-winning musical *Barnum*, and the lead in the musical comedy *Ain't Broadway Grand* (1993). His numerous off-Broadway performances include *The Rothschilds* (1990) and a turn as Tevye in *Fiddler on the Roof* (1997). Burstyn continued to appear on stage in such productions as *Jolson* (1998) and *The Tale of the Allergist's Wife* (2003) and on screen as a Mossad agent in *Minotaur* (1997). In 1999, Burstyn, his family, and the history of Yiddish theater were the subject of the documentary *The Komediants*.

[Adam Wills (2nd ed.)]

BORSZTYN, MICHAL (1897–1945), Yiddish novelist. Borsztyn, who was born in Blonie, left home for Warsaw at age 12, studied in Polish schools, and then at the university. A teacher of history and literature, he was among the pioneers of Jewish *shtetl*-tourism in Poland during the 1930s. He contributed articles and short stories to various Yiddish journals. His first novel, *Iber di Khurves fun Ployne* (“On Ployne’s Ruins,” 1931), a realistic depiction of the difficulties of Polish-Jewish coexistence in independent Poland, won him immediate recognition. This work, his two later novels, *Goyrl* (“Destiny,” 1936) and *Bay di Taykhn fun Mazoyve* (“By the Rivers of Mazovia,” 1937), and his stories collected in *Broyt mit Zalts* (“Bread and Salt,” 1939) vividly chronicle all levels of Jewish society in Poland until the Holocaust. In September 1939 Borsztyn escaped to the Soviet territories. Trapped in the Kovno ghetto in 1941, he continued writing. He died in March 1945 at Dachau concentration camp.

BURTON, SIR MONTAGUE (1885–1952), British industrialist and philanthropist. Born in Russia as Moïshe Osinsky, Burton went to Leeds, England, as a young man and, after working as a tailor, founded a clothing factory in 1910. He soon became known as a pioneer of cheap, well-made men’s clothes and established a chain of shops which was the largest of its kind in Europe, employing over 20,000 people. Burton held radical views on the relations between employer and employee, and his factories were known for their good working conditions and generous employee benefits. He endowed chairs of industrial relations at the universities of Cambridge, Leeds, and Cardiff, and of international relations at Oxford, London, Nottingham, and the Hebrew University of Jerusalem. An enthusiastic traveler, Burton wrote a two-volume diary of his journeys, *Globe Girdling* (1936–38). Long after his death, Burtons continued to be one of the most familiar and successful of High Street retailers in Britain, probably the best-known men’s clothing chain.

BURY ST. EDMUNDS, English country town in Suffolk, East Anglia. A Jewish community developed there in the later 12th century, under the aegis of its famous monastery, where Jews were allowed to deposit their deeds and money and send their families for refuge in time of danger. During the slack rule of Abbot Hugh (1173–80) the monastery fell deeply into debt to a group of Norwich Jews. His successor, Abbot Samson, set about freeing it from its debts. In 1181 the Jews were accused of ritual murder and on Palm Sunday 1190, 57 Jews were killed in a massacre. Shortly afterward, Samson procured a royal writ to expel the survivors on the grounds that

all inhabitants ought to be vassals of St. Edmund – the first occurrence of its kind in England. The whole episode became famous through Carlyle’s account in *Past and Present* (1843). No basis exists for the suggestion that Moïse’s Hall was the medieval synagogue.

BUSAL, HAYYIM BEN JACOB OBADIAH DE (d.c. 1565), rabbi and kabbalist in Salonika. Busal, a Spanish exile, studied under Elijah Mizrahi in Constantinople and was a disciple of Isaac Amarillo in Salonika. After the death of Eliezer Hashimoni (1530), Busal was elected to succeed him as rabbi of the Catalan community in Salonika. His tenure was marked by conflicts in the Salonika communities, particularly between the rabbi and lay leaders over the extent of their respective authorities. A major dispute occurred between Busal and the community before 1540. Busal was required to issue a certain document (of an unknown nature) and was warned that his refusal to comply with the requirement would disqualify him and any of his sons from being rabbi of the community. Busal refused to submit the document. Another dispute took place between him and one of the great rabbis of Salonika, Joseph Taitazak. Tam b. Yaḥya of Constantinople endorsed the legal decisions of Busal; however, after Taitazak wrote to Tam, the latter changed his mind and withdrew his support from Busal (responsa *Oholei Tam* no. 162 in *Tummat Yesharim*, Venice, 1620). Shortly after 1550, Busal went to Constantinople (Joseph Caro, *Avkat Rokhel*, no. 209). Nevertheless he continued to serve as rabbi of the Catalan community until his death. The poet Saadia Longo wrote an elegy on him and considered him one of the important scholars of his generation. The manuscripts of most of the numerous responsa he issued have been lost. However, several of his responsa, as well as his endorsements (*haskamot*), have been printed or mentioned in the works of his contemporaries (e.g., *Mabit*, resp. no. 218; *Divrei Rivot*, nos. 130, 186; *Maharashdam*, YD, resp. nos. 61 and 89 and EH nos. 2, 21, 129; *Mishpetei Shemu’el*, resp. no. 100). Hayyim Benveniste mentions some of his responsa (*Ba’ei Hayyei*, YD no. 215; EH nos. 7, 11, 12). Busal was engaged for many years in the composition of his code of law following the order of the talmudic tractates. In 1546 he had completed his work on the order of *Zera’im*, as well as 13 additional tractates. He was one of the few Salonika scholars – who were mostly also kabbalists – whose kabbalistic works were published. His kabbalistic works include *Be’er Mayim Hayyim*, the first two parts of which were published (Salonika, 1546).

The other parts exist only in manuscript (Munich, Ms. 46). There are also some passages on eschatology (Oxford, Ms. Opp. Add. 40 105 and 181).

BUSCH, CHARLES (1954–), U.S. actor and playwright. New York City–born, Busch grew up in the Westchester suburbs but was infatuated with the theater from an early age. He attended Northwestern University, where, he said, he realized he was an offbeat type, and the only way he was going to have a career was to create roles for himself. He started writing material to perform solo, learned the basics of style and exposition, and booked himself at gay bars and small theaters around the country.

In the early 1980s he and a friend assembled an informal company of performers who put on campy shows at a New York nightclub. With Busch performing in women's clothing, their play, *Vampire Lesbians of Sodom*, won a cult following and moved to the Off Broadway Provincetown Playhouse, where it ran for five years. In 1986 he created *Psycho Beach Party*, a spoof of surf movies. He wrote *The Lady in Question* in 1989, ostensibly a takeoff on World War II movies, as a critique of the New Age philosophy of enlightened selfishness. Another play, *Red Scare on Sunset*, in 1991, was a comic melodrama set during the McCarthy era with a heroine who spouted a politically incorrect ideology. "As I began creating these vehicles for myself," he said, "I gradually, without intending to, became a writer."

In the 1990s he experimented with several literary forms and wrote a novel, *Whores of Lost Atlantis*, a nightclub act, a musical revue, a play in which he played a male role (*You Should Be So Lucky* in 1995), and the book for an unsuccessful musical. Around that time, Busch wrote a one-man show in which he played several female characters, one of whom was a New York housewife seeking self-expression. "This was one of the few times I'd looked at my own suburban Jewish background and the people I grew up with," he said. He conceived of putting these characters in a cryptic Harold *Pinter-like play, and *The Tale of the Allergist's Wife*, with Linda *Lavin, was born. The major character, Busch said, was a composite of his octogenarian Aunt Belle and his late Aunt Lillian, who raised him after his mother died when he was seven. "It's ironic that the career I had all these years was based on my sexuality and performing in drag, which was a little too weird for a woman of her generation to embrace," he said. "And yet it was only because she made me so confident about myself that I was able to have this very odd career." The play ran for 777 performances on Broadway and received a Tony nomination for best play. Busch wrote and starred in the film versions of his plays *Psycho Beach Party* and *Die Mommie Die*, the latter winning him the Best Performance Award at the Sundance Film Festival. For two seasons he appeared on television as the cross-dressing inmate Nat (Natalie) Ginzburg in the HBO prison drama *Oz*.

In 2003 he received a special Drama Desk Award for career achievement as both performer and playwright.

[Stewart Kampel (2nd ed.)]

BUSEL, JOSEPH (1891–1919), Zionist-Socialist pioneer; one of the originators of the idea of the *kevuṣah* (see *kibbutz movement) and among its founders in Erez Israel. Busel was born in Lachowicze, Minsk Region (Belorussia). Before he went to Erez Israel in 1908 he worked in an agricultural settlement established by *PICA in the Kherson province in the Ukraine. In Erez Israel he joined the group cultivating land at the settlement of Kinneret, where he evolved the idea of the independent agricultural collective group. In 1910 Busel, together with members of his "commune of Haderah," settled at Um-Juni (*Deganyah), which became the first *kevuṣah*. He played a major role in formulating and implementing the principles on which the *kevuṣah* was founded, e.g., equal burden of work for men and women and communal child care. Busel was a leader of *Ha-Poel ha-Zair, and during World War I was active in the general institutions of the *yishuv* in Erez Israel. He drowned while crossing Lake Kinneret from Tiberias to Deganyah. His wife, HAYYUTA BUSEL (1890–?), was an educator and agriculturalist. She was born in Lachowicze, settled in Erez Israel and married Joseph in 1917. She was a leading member of the *Histadrut and women's labor movement, and of Iḥud ha-Kevuṣot *ve-ha-Kibbutzim. She settled in Deganyah.

[Simha Katz]

BUSH, GEORGE HERBERT WALKER (1924–), 41st president of the United States (1989–93). Bush was born in Milton, Massachusetts, in 1924 to a prominent New England family. He is the son of Prescott Bush, a United States senator from Connecticut. After distinguished war service and graduation from Yale, he moved to Texas to make his fortune in the oil business. After losing a bid for the Senate in 1964, he was elected to the House of Representatives in 1966. He ran again for the Senate in 1970 and was again defeated. He then served as U.S. ambassador to the United Nations (1971–72), chairman of the Republican National Committee (1973–74); chair of the Liaison Office in Beijing (1974–76) and director of the CIA (1976–77). In 1980, he ran unsuccessfully for the Republican presidential nomination and then accepted Ronald Reagan's offer of the GOP vice presidential nomination. He served two terms as vice president (1980–88) and won the presidency in 1988, soundly defeating Democratic candidate Michael Dukakis, a Massachusetts liberal whose wife was Jewish, by carrying 54% of the vote. The Jewish community, however, supported Dukakis by a margin of almost two to one. After reaching pinnacles of popular support for his victory in the 1991 Gulf War, he lost a three-way election in 1988 to William Jefferson Clinton.

For many in the Jewish community, Bush's presidency could be encapsulated in his offhand quip to reporters in September 1991 during an AIPAC lobbying effort on Capitol Hill in support of the proposed \$10 billion loan guarantee to Israel: "I'm one lonely little guy" up against "some powerful political forces" made up of "a thousand lobbyists on the Hill." The comment triggered a spate of antisemitic letters and comments for which the president later apologized.

Bush had opposed the loan guarantees as long as Israel continued settlement in the West Bank and Gaza. The president finally agreed to a loan guarantee package in August 1992, requiring as a set-off any funds Israel spent to build housing or infrastructure in the territories. Despite this action, the political damage was done. The loan guarantee controversy later motivated Jewish opposition to President Bush, who received no more than 12% of the Jewish vote in the 1992 election (down from close to 35% in 1988). While some claimed that Jewish opposition to Bush caused his 1992 defeat, there is little evidence that this was the case. Other actions had caused problems with the Jewish community as well. In March 1990, Bush expressed objection to "new settlements in the West Bank or in East Jerusalem." His reference to eastern Jerusalem and his suggestion that it was not a sovereign part of Israel created a furor and added to strained feelings between Israel and the U.S.

Bush's relations with the Jewish community, however, were far more nuanced than the issue of loan guarantees. As vice president, he personally spearheaded Operation Joshua, the 1985 rescue of Ethiopian Jewry, and was involved in every step of the U.S. military's manning and execution of that mission. In 1991, America was a key to the success of Operation Solomon, which brought 14,000 more Ethiopian Jews to Israel. In 1991, the Bush administration succeeded in reversing the infamous U.N. resolution that equated Zionism with racism.

In addition, the aftermath of the 1991 Gulf War led to a heightening of the military relationship between the two countries. Central to Bush's strategy was keeping Israel from entering the war and thereby placing the U.S. in the role of Israel's protector from an irate Iraq. Patriot anti-missile batteries were sent to Israel to provide protective cover. In the end, Iraq sent missiles towards Israel, and while they caused terror among the population, and isolated property damage, only one person was killed. Israel's responsiveness to U.S. strategy needs led to an intensification of the military relationship. Intelligence sharing, joint exercises, access to military, equipment, and personal relationships among military personnel reached new levels. The Bush Administration financed much of the Arrow anti-missile program and created the concept of repositioning of U.S. arms in Israel.

Bush's perception problem with the Jewish community grew, in large measure, from the views and actions of his Israeli counterpart for much of his term, Prime Minister Yitzhak *Shamir. Shamir's "tough" line on issues related to settlements and to negotiations with the Palestinians would have made his relations with most American presidents delicate at best. Secretary of State James Baker's widely reported

statement, "Bleep the Jews; they didn't vote for us anyway," did little to help.

One of the major achievements of the George Herbert Walker Bush administration was the Madrid Peace Conference of 1991, which reopened the door to the Middle East peace process and indirectly to the Oslo accords. Bringing all the parties to the table in Madrid was a triumph for Bush's Secretary of State James Baker, who alternatively applied carrots and sticks to cajole the parties to sign on.

[Marshal Breger (2nd ed.)]

BUSH, GEORGE WALKER (1946–), 43rd president of the United States (from 2001). Bush was born in New Haven, Connecticut, the oldest son of George Herbert Walker *Bush, the nation's 41st president, and Barbara Bush. In 1994, Bush won the election for governor of Texas and was reelected in 1998, the first Texas governor to win consecutive four-year terms. He was elected president in 2000 defeating Al Gore in a race so close it was only decided after the Supreme Court, by a 5–4 decision, awarded him Florida's electoral votes, giving him a 271–266 victory in the Electoral College. He was re-elected in 2004, besting Massachusetts Senator John Kerry by around 2.5%.

Bush's share of the Jewish vote in 2000 was a modest 19%. During his first administration the Republican Party made concerted efforts to outreach to Jews, including a special event for Orthodox Jews at the 2004 nominating convention. Given his strong support for Israel's security concerns, many thought Bush would achieve a breakthrough in Jewish popularity. Notwithstanding his increased popularity among American Jewish activists, Bush received no more than 22–25% of the Jewish vote. Nonetheless, the 2004 election cast in doubt the "myth" of a homogeneous Jewish vote, institutionalizing the idea that American Jews are a two-party community with Republicans having a niche of predominance among the Orthodox.

Bush's presidency was transformed by the September 11 terrorist attack on the United States. The subsequent "war on terror" led to the invasions of Afghanistan (Oct. 7, 2001) and Iraq (March 20, 2002). It became the defining act of his presidency.

After 9/11, American Jewish opinion of Bush changed as the president moved closer to Israeli Prime Minister Ariel *Sharon as an ally in the war against terror. Even Democrats spoke of his support for Israel in glowing terms. Many credit his strong religious faith for this attitude. In particular, Bush gained considerably in the Orthodox community, where his strong pro-Israel views and his social conservatism found significant resonance.

Domestically, Jews remained concerned about the perceived rise of the Christian right in government. During Bush's first term, his political advisors focused on his conservative evangelical base and indeed, many credit that voter group for Bush's 2004 victory. The president explicitly spoke of himself as "born again." He urged use of "faith-based" organizations to provide social welfare, which concerned many Jewish or-

ganizations. He supported “school vouchers” for private (including religious) schools. He supported efforts to stop enactment of a Florida State Court – ordered withdrawal of life support for Terry Schiavo. He limited Federal funding for stem-cell research.

Bush came to the White House without much foreign policy experience. He had visited Israel in 1998 with the Republican Jewish Coalition and took a famous helicopter trip with Ariel Sharon over the West Bank. Because of the failure of President Clinton’s Camp David initiative, Bush’s initial attitude in the first year of his administration was to maintain a “hands-off” policy and do little to force the peace process forward. As the second Palestinian Intifada grew in intensity and Sharon turned to the military option, sending Israeli troops into Palestinian-controlled areas, the U.S. showed considerable understanding of Israel’s needs. After Israeli forces captured 50 tons of weapons on the *Karine-A* vessel designated for the Palestinian uprising, Yasser Arafat’s credibility with Bush was destroyed; it was never to be regained.

On June 24, 2002, Bush called for “a new and different Palestinian leadership” effectively rejecting Arafat. At the same time he called for creation of an independent and democratic Palestinian state, and for Palestinian leadership opposed to terror and committed to reform. This two-part vision became the lodestar of Bush administration policy and the basis for the U.S. sponsored “road map” designed to assure security to Israel and result in the creation of an independent Palestinian state.

With the death of Yasser Arafat on November 11, 2004, the U.S. re-engaged in the peace process promoting both parts of Bush’s June 24 vision. It supported Sharon’s “unilateral” withdrawal from Gaza and parts of the West Bank and held out the future promise of a “two-state” solution.

The Bush presidency showed unusual understanding of Israel’s security needs. It supported the controversial “security fence” (while pressing for a route closer to the “green line”), called suicide bombers “homicide bombers,” and praised Sharon even while he was being accused of war crimes in many parts of Europe. Bush underscored his preferences by never inviting Arafat, who had been a most frequent visitor during the Clinton presidency, to the White House.

The Bush administration received plaudits from American Jews for its efforts to combat increased antisemitism in Europe and elsewhere. Under his watch, the U.S. walked out of the 2001 UN Durban World Conference on Racism; publicly rebuked Malaysian Prime Minister Mahathir Mohamad for allegedly antisemitic remarks; with the passage of the Global Anti-Semitism Review Act of 2004, established an office to monitor and combat antisemitism in the State Department; and appointed a special envoy on antisemitism with ambassadorial rank.

[Marshall J. Breger (2nd ed.)]

BUSH (Busch), ISIDOR (1822–1898), journalist, political liberal, and viticulturist. Bush was born in Prague, the son

of Jacob Busch, partner of the Hebrew printer Anton von Schmid. He entered the printing profession at the age of 15 under the influence of M.H. Letteris, who worked for his father as a proofreader, and became interested in Hebrew literature. For a number of years he published yearbooks in German to which well-known Jewish writers contributed. In 1842 he initiated the *Jahrbuch fuer Israeliten*, the first almanac by Jewish authors for a Jewish public. Together with I.S. Reggio he published the Hebrew-German *Bikkurei ha-Ittim ha-Hadashim* (one issue, Vienna, 1845), and edited its German section, stressing in his preface the need to disseminate the Hebrew language. In 1848 he and Letteris published the weekly *Oesterreichisches Centralorgan fuer Glaubensfreiheit, Kultur, Geschichte und Literatur der Juden* and he also issued *Mikhtevei Ivrit*, a compilation of Hebrew letters (1847).

He participated in the revolutionary movements of 1848 and, after their failure, fled to America. In New York City in 1849, he became a bookseller and publisher-editor of the liberal German weekly *Israels Herold*, which soon failed. He then moved to St. Louis, where his wife’s relatives, the well-known Taussig family, had already settled. Bush engaged in a number of business ventures, only one of which, the introduction of viticulture, seems to have been genuinely successful. At various times he was also a grocer, real estate promoter, banker, actuary, hardware dealer, and railroad executive. However, his major interests were cultural, political, and communal. He was a founder of Congregation Beth El, a leader in B’nai B’rith, and a popularizer of Jewish learning. He served as a St. Louis alderman in 1866 and as a member of the Board of Education from 1881 to 1884. In 1865 Bush was secretary of the Missouri State Board of Immigration, for which he had been prepared by his presidency for 12 years of the St. Louis German Immigrant Aid Society. His most notable political activity was as a Republican member of the Missouri state constitutional conventions during the Civil War, in which he warmly supported the Union cause and abolitionism in an area where large numbers of Confederate sympathizers lived.

BUSH, SOLOMON (1753–1795), U.S. patriot and Revolutionary War soldier. Bush was born in Philadelphia, Pa., the son of a merchant, Mathias Bush. He was seriously wounded during a skirmish against the British in September 1777, and taken prisoner. Freed, Bush was made a lieutenant colonel in the Continental army (1779), the highest rank held by a Jewish officer in the Revolutionary army. In 1782 Bush contributed toward a new building for the Mikveh Israel Congregation in Philadelphia. A prominent Mason, Bush also joined the Quaker Abolitionist Society. At his own request he was buried in the Friends Burial Ground in Philadelphia.

[Leo Hershkwowitz]

BUSHIRE (Arab. **Bushehr**), port city at the northern end of a peninsula on the Persian Gulf. During the 18th century it was a small town when Nader Shah (1736–47) built a naval base for Iran's fleet there. Subsequently Bushire became a center of trade and thus attracted the attention of the English East India Company (EIC), which later moved many Iranian Jews as well as Iraqi Jews from *Basra and *Baghdad, and those who already had been living around the Persian Gulf, to settle in the city. The Jews of Bushire were mostly connected with the EIC and Dutch Trading Company, an exporter of silk, woolen cloth, sugar and spices to European markets.

In the 18th century the general population was estimated at 20,000, which remained more or less stable throughout the 19th century. In 1808 Dupré counted 24 Armenian and Jewish households in Bushire. The Jewish traveler David d'Beth Hillel wrote the following about the Jews of Bushire in around 1828: "Bushire is a small town ... it is a place of much trade, because it is the gate of Persia ... there are about 200 poor families of Persian Israelites, having three synagogues; most of them are goldsmiths; they are very badly treated by the common Mahometans [i.e., Muslims]." He also reported that there were 500 families of Armenians who were "ill treated as are the Jews," all of them live among 5,000 Muslim families (p. 106; see Bibliography below).

Twelve years later, Coste found 200 Jewish and five Armenian households in the city. Around that time, because of Davud Pasha's despotic rule in Baghdad (1817–31), many Jews emigrated to the East, and probably some of them on their way to Calcutta, Sydney, and China settled in Bushire. Benjamin II (1850) wrote: "Here [Bushire] live about 70 Jewish families, who are less oppressed than those living in the interior of Persia. They owe this to the English consul" (p. 226). Rabbi Yehiel Fischel Castlemen (1860) reported that there were 40 Jewish families in Bushire, most of them silversmiths (p. 58).

The Anglo-Indian telegraph (completed in 1876) was one of the main factors that boosted the economy and made Bushire the main harbor on the Iranian side of the Persian Gulf, which accounted for 40 percent of all traffic in the Persian Gulf at the beginning of the 20th century. After World War II, *Abadan and Khorramshahr took the lead in commerce, which caused Bushire to decline. Naturally, the Jews were affected by the deterioration of the economy. However, the city's general population increased from 30,000–40,000 in the mid-1950s to over one million according to the census at end of the 20th century.

The Jews of Bushire were among the first groups of Khuzestani Jews who emigrated to the Land of Israel at the end of 19th and the beginning of the 20th centuries. They organized an institution (1913) called *Hevrat Shalom ve-Re'ut*, which aimed at helping the poor Persian Jews in Jerusalem. The sign on the door of their institution can still be seen in Agrippas Street near Maḥaneh Yehudah. According to *Ālam-e Yahūd*, a Jewish Persian monthly published in Teheran, there were 400 Jews in Bushire after World War II. About 10 per-

cent belonged to the middle class and the rest were poor. They had four synagogues and most were small-scale goldsmiths and textile dealers. They had no Jewish school of their own and lived under poor sanitary conditions. After the Islamic Revolution (1979) many left for *Teheran, Israel, and the U.S., so that no Jewish families were reported in Bushire by the end of the 20th century.

BUSINESS ETHICS.

The Role of Wealth

Any discussion of business ethics, within any cultural or religious framework, requires at the very outset a definition of the role of material wealth, financial assets, and other forms of economic possessions. Furthermore, there is a limit to what legislation can achieve and therefore, as important as is having legislation which caters to ethical principles, it is essential for a society to have a moral code within which its members are educated and to which they aspire beyond the discipline of the courts. As often as not, it is their attitude towards these material goods which will determine in no small measure the behavior of people in the market place. In those societies in which the possession of material goods is the be-all and end-all of man's life, or where simply ownership is the main thrust of the culture, it is very difficult, perhaps impossible, to maintain any form of ethical behavior since the norms of that society, both legal and cultural, will crumble before the onslaught of unbridled wealth. A concept of unlimited private property will destroy the social obligations which go together with the possession of wealth. The needs of the weak and the inefficient members of society will be neglected as will the protection given to other people's property against damage to the environment or to the natural resources by possessors of such unlimited private property rights. On the other hand, a society which rejects possession of material goods or which does away with concepts of private property or one which insists on poverty as a desirable social goal, creates its own moral problems since this runs contrary to the normal instincts of man. In such societies there soon grows a separate real underground economic reality of vast inequalities alongside the official egalitarian one.

So too a discussion of Jewish business ethics has to begin with an examination of the Jewish attitude to wealth and the moral attitudes created by its religious teachings, literature, and role models.

By and large, apart from a number of isolated ascetic trends in the days of the Second Temple and later in the 14th century pietistic movements of European Jewry, Judaism sees nothing wrong per se with the pursuit of wealth and with its acquisition. Basically this human need to provide for the material needs of the individual, the family, and society, is viewed in Judaism merely as one of many needs or urges possessed by the individual, which are considered to be essential for the propagation and continuation of the human race. The attitude of Judaism towards economic activity is exactly the same as its treatment of other human needs such as food, clothing, shelter, sex, and social organization. These needs or urges are legitimate provided they operate within the framework laid down by Jewish law and tradition. The aim of Judaism in this respect is not to destroy or to uproot these urges, which is considered both impossible and undesirable, but to educate them so that man will become sanctified in the way he satisfies these needs.

All wealth originates from the Deity who in His unlimited benevolence, grants it to His creatures in order to satisfy their legitimate needs. This promise of the Divine provider frees man from the unremitting pressure to provide through his own efforts, not just for himself but also for his children, grandchildren, and even for the unborn generations. This lesson was taught in its simplest form in the daily gift of manna to the children of Israel coming out of Egypt. It continues, however, to be part of the Jewish business fabric even though the miraculous manna was substituted in the Land of Israel and down to our own times, by the normal economic cycle of human endeavor in all its forms. The first fruits of the Jewish farmer were brought to the Temple in a confession which stressed that the source of that wealth was not man's luck, wisdom, or prowess but God; the blessings and grace over food, the institution of the sabbatical and jubilee years, and the prayers for prosperity on the Days of Awe, all contribute to the awareness of this source.

The Divine origin of wealth, however, brings with it an obligation to a pattern of business conduct in accordance with the Divine will. Over and above the parameters for the conduct of business activity lies the injunction to study Torah. This is an injunction which is unlimited in time, being unrelated to one's intellectual ability, age, economic welfare, or political status. Since time is an economic good and severely limited, such learning reduces the amount of time available for the acquiring and spending of wealth and is an important limitation on the business activity of the Jew. Furthermore, the use of wealth for conspicuous consumption and as a means of power becomes limited since the time devoted to this form of economic endeavor is being taken away from Torah study. So a concept of modesty in lifestyle and the pursuit of wealth becomes a basic tenet of Jewish business education.

Wealth therefore is legitimate provided it is earned and used within the parameters of Jewish religious teaching. These parameters insure the highest moral and ethical form of living since they owe their existence to a Divine code of absolute truth and morality. By and large, Jewish economic life, both that of individuals and that of society, has operated for thousands of years according to this framework within which the satisfaction of material wants is limited by the demands of morality, the rights of the individual are protected and provision is made for the needs of society, both at the individual and communal levels.

Since Judaism is an action-oriented religion rather than one which emphasizes faith, these parameters are expressed in detailed and clearly defined legal constraints and obligations. Furthermore, the fact that it aims to create a holy national group as distinct from religious individuals gives communal welfare and needs a proprietary interest which has to be recognized within the parameters of economic activity of the individual.

Sources

It may be argued that the moral and ethical framework for Jewish business behavior represents an idealistic society which never existed in reality. There is however sufficient empirical evidence to show that this argument is not valid. The three major codes of law – Maimonides' *Mishneh Torah* (12th century, North Africa), Jacob ben Asher's *Arba Turim* (14th century, Spain) and Joseph Karo's *Shulhan Arukh* (16th century, Erez Israel) – include sections related to business activity alongside sections regarding marital relations, religious ritual, and the dietary laws. It is illogical to admit that all the latter have always been an integral part of Jewish living and at the same time to argue that only the halakhic rulings regarding business are different. Furthermore, the extant enactments of the Jewish communities, which in effect represented mini-states rather than associations of co-religionists, included market regulations and punishment for economic misdeeds as well as curbs on patterns of consumption. The autonomous communities existed in all the countries of the Jewish Diaspora from the beginning of the exile after the destruction of the First Temple (586 B.C.E.) down to the Napoleonic period and even later in parts of Eastern Europe and North Africa.

Alongside the codes and communal enactments there exists an extensive responsa literature (halakhic answers to problems covering all aspects of Jewish civil, commercial, and ritual law) which shows that Jews had recourse to the rabbinic courts on business practices and litigation both at the individual and communal levels. This literature serves not only as evidence of the practical implementation of the Jewish ethical parameters for business activity but also as a refutation of the common assumption that Jewish law applies to an archaic, primarily agrarian economy.

Change in business techniques consistently requires re-examination of previous halakhic rulings to ascertain which of them are applicable and which are not. The responses to

questions addressed to rabbinic authorities in all the centuries and countries of the Diaspora are a reflection of the applicability of the *halakhah* to changes in business techniques. In our day questions of advertising, full disclosure, insurance, labor unions, ecology, etc., form part of the ongoing responsa literature. At the same time, the basic human responses to having or not having wealth remain the same in all economic systems and therefore the moral guidelines of Judaism apply irrespective of the sophistication or lack of it in a particular stage of economic development.

Individual or Corporate Moral Responsibility

It would seem that many of the problems in modern business ethics flow from the separation of identity which exists in almost all legal systems between the corporation and the individual share holders who make up that corporation. This creates moral problems since the same person who in his private life would not think of stealing or robbing or breaking the law sees nothing wrong with doing exactly those things in his role as a director or an official of a corporation. It is as though the individual is divorced from the machinery and mechanism which goes to create wealth in our modern society by viewing the corporation as a separate legal personality. Jewish law has a provision for such business forms as the corporation in which the liability to the creditor is limited to the share capital of that corporation with no recourse to the private assets of the individual shareholders. This is something which is public knowledge and therefore it can be assumed that all involved in the transaction are aware of it so that there is no moral problem involved.

Judaism, however, cannot accept the separation between the corporation and the individual when it comes to abrogate the responsibilities of the latter as seen in Jewish business law. Two examples may suffice to demonstrate this (*Minḥat Yizḥak*, Part 3, section 1; Part 4, sections 16 and 18). Jews are not allowed to own leavened bread during Passover, so a corporation which has a majority of Jewish shareholders would likewise be forbidden from possessing such leavened bread. In the same way, the view that since the corporation is not a human being, the biblical injunction against interest does not apply to loans between two corporations or between an individual and a corporation has been rejected by most rabbinic authorities. So, a corporation whose shareholders are Jewish would suffer the same restriction on lending money at interest as do individual Jews. This means that the limitations on business activities imposed by Jewish moral teachings and rabbinic law, and the social obligations flowing from the possession of wealth, which apply to the individual, are binding on the corporation as well. Jewish executive officers cannot claim that their sole responsibility is to maximize the profits of their shareholders even in those cases where this can only be done contrary to Jewish ethical principles. In the same way, shareholders would be required to dismiss their corporate officers if these would perform actions on their behalf considered to be immoral or non-permissible in Judaism; otherwise, the re-

sponsibility, moral and legal, devolves on them. Furthermore, awards for damages granted by a *bet din* (rabbinic law court) against the corporation could be made against the private assets of the shareholders and not just against those of the corporation, since they are morally responsible for the actions of the corporation.

Truth in Trading

The basis of any business ethic is the protection of the property rights of all those involved in the market; buyer and seller, employer and employee, developer and community. So it is easy to follow Maimonides in regarding the Mosaic laws against dishonest dealings which in effect deprive one of the parties of their property, simply as rational and logical sanctions, essential to the existence of the market place. Most biblical commentators, however, did not accept this attitude but saw the injunction against theft as revealed Divine wisdom and therefore extending beyond human wisdom (Malbim on Exodus 20). Furthermore, business dishonesty thus becomes a transgression against God's will, a religious crime, over and beyond the legal aspects of the crime involved. This aspect becomes clear when we read the comment of the Talmudical sages that the fate of the generation of the Flood was only sealed because of *ḥamas*, robbery or theft even of something of no intrinsic value. The ḥasidic rabbi of Sochaczew queried why this should have been the cause of the Flood, since we know that that generation actually committed all three of the gravest sins – idolatry, adultery and murder – for which the penalty is death. He explained that *ḥamas* is the beginning of the unraveling of the whole fabric which culminates in the three cardinal sins, so that it was the robbery which sealed their fate.

This viewpoint is categorically at odds with the cost-benefit analysis common to much present-day teaching of business ethics which seeks to calculate the cost (imprisonment, shame, etc.) of committing a crime against the benefit (increased profits, status, etc.). Basically this argues that crime does not pay and therefore it should not be committed. However, when crime does not pay, no moral dilemma exists and therefore this type of analysis does not contribute much to an ethical framework. The Jewish value structure, in contrast, provides a framework of permissible and non-permissible actions irrespective of the gain or loss involved.

Halakhically, dishonesty in business falls into two categories – theft and robbery – both extended far beyond the idea of the cat burglar and highwayman. Theft is understood as all those acts whereby one takes illegal possession of another's property without him being cognizant of it, while robbery refers to the forcible taking of that property, exploiting the other's inability to protect himself. An example of the former is the case of a hired buying agent who accepts bribes or payments under the table in order to prefer a certain supplier so that his employer receives either inferior goods or pays a higher price; in those cases, where the goods are identical in every way to that of the other suppliers the bribe has to be shared with the employer since one is not allowed to make

a profit from the use of somebody else's property. Robbery includes all those cases where a person uses his legal or financial position in order to withhold from another property which rightly belongs to him. So a debtor who falsely takes an oath that he has repaid a debt, a squatter living in somebody else's property without paying rent, or one who finds an article which he is obligated to return to the owner by Jewish law but does not do so are all considered robbers. The personal use of trust money, one who receives an asset as security for a debt and then claims to have bought it, and the withholding of a worker's wages are all seen in rabbinic language as cases of robbery.

Halakhically there are, however, other forms of business dishonesty, such as "*geneivat da'at*," literally "stealing another's knowledge," defective weights and measures, "*li-fenei ivver*" – a stumbling block in the path of the blind (Lev. 19:14), and **ona'ah*, the act of wronging another by selling him an article for more than its real worth.

The mixing of good and inferior apples is classified by all the codes as *geneivat da'at* but the ruling goes far beyond this simple example. Judaism in essence rejects the concept of "let the buyer beware" and places the full onus for disclosing defects and other shortcomings on the seller, even in the absence of a written guarantee. So *geneivat da'at* applies to the sale of a used car when the seller hides the fact that it has been involved in a serious accident, as it applies to the supply of goods or services which are not in accordance with the specifications regarding weight, size, color, etc. Advertising properties of goods which they do not really possess, false statements regarding the comparative efficiency of the articles sold, and even decorative packaging or wrapping so as to create a false impression are all examples of *geneivat da'at*.

When a corporation does not make full disclosure of any items in its financial reporting which are relevant to its creditors or its shareholders or the governmental agencies, it could quite easily be guilty of *geneivat da'at* since the trading conditions under which it is operating are not what they are made out to be. This lack of full disclosure of the corporate financial reporting would also seem to be an infringement of the law of *ona'ah*, which provides for redress for overcharging. Maimonides rules that in all those cases where important information regarding price is withheld, the injured party could claim the protection of the rabbinic court against the infringement of his rights under the law of *ona'ah* (Yad. Hilkhoh Mekhirah, chapter 13, halakhah 4). Since the financial reporting has an effect on the price of a corporate share, the withholding of such information could also constitute an infringement of *ona'ah*.

The biblical injunction against putting a stumbling block in the path of the blind comes within the framework of truth in trading beyond its meaning of a physical obstacle in the path of a blind person (Rashi on Lev. 19:14). The rabbis considered as blind one who does not have access to unbiased information relevant to his business dealings, or one who is unaware of the physical and moral damage done to him by

the consumption of certain goods. Halakhically, one may not give a person business advice in which the interest of the giver is not made clear, so any professional who advises his clients to purchase certain goods or certain stock in which he has an undisclosed interest or which he intends to sell, would be guilty in rabbinic terms of *li-fenei ivver* and could be forced to make redress in a rabbinic court. The same would apply to the giver of bribes to a purchasing officer in order to make a sale or to the use of insider information in trading on a stock exchange. This concept also poses a problem when we are selling goods which are harmful to somebody, such as cigarettes, liquor, drugs, pornography, and weapons which are used for aggression. In each case where a person is ignorant of the physical or moral damage done to him the seller would be guilty of *li-fenei ivver*. Naturally, the same would apply to the advertising of such goods.

The injunction regarding just weights and measures is repeatedly ordered in the Bible and so forms another facet of Jewish business morality. The fact that in all Western countries there exist laws protecting the public against defective weights and short measures does not detract from the importance of this Jewish injunction. *Halakhah* places responsibility on the rabbinical courts for the supervision of scales, measures, etc., so that infringement of them becomes a religious transgression irrespective of whether pertinent legislation exists outside the Jewish framework or not. Some rabbinic insights into these laws have a special contribution to business ethics since they create an ideological framework for our actions in the market place.

Most economic crimes are carried out in great secret, the fear of discovery often being a major constraint on business immorality. Tampering with weights and measures, "short changing" clients, and "cutting corners" are especially conducive to the secret defrauding of others and are often not considered to be serious crimes. The sages saw them in a different perspective. In the book of Deuteronomy, the verses regarding weights and measures precede the commandment to wipe out the memory of the arch enemy of God and Israel, Amalek. Rashi questions this linkage and answers that it was because the Jews were negligent of honesty in their weights and measures that God sent enemies upon them. Furthermore, infringements of these market rules were considered not only immoral but also illegal even if they were almost valueless, unlike other forms of theft which had to be of at least some value before they could be dealt with in a court of law. In Exodus the laws of weights and measures are linked to the deliverance of the Jews from Egypt. The *Sifri* explains the connection between the two seemingly unrelated matters by saying that "He who distinguished between the seed of the first born and that of the other sons will surely search out one who soaks his weights in salt (in secret and to distort them)."

Once, Israel Ba'al Shem Tov, the founder of Hasidism, was traveling by coach. The coachman halted the horses in order to reap some barley from one of the fields adjacent to the road. He asked the Ba'al Shem Tov to keep guard and to

call him when he saw anyone watching him. As soon as the coachman put the sickle to the barley, the rabbi called out, "They see, they see." Quickly the coachman dashed to the coach, got up on his seat, looked around and saw nobody. He turned angrily to the Ba'al Shem Tov to complain about his needless intervention since nobody was there to witness the theft. "But there really is," answered the Ba'al Shem Tov, pointing heavenward, "there really is."

Social Responsibility

The purpose of all business is to earn profits for the entrepreneur, and the sages of the Talmud, recognizing this, held that a trader who bought and sold without profit was not a trader. The question, however, is whether the managing directors of a corporation have only an obligation to earn maximum profits for their shareholders or do they also have social obligations and objectives. This question goes beyond the requirement of truth in trading and also beyond the demands of legality. After all, laws of human society are the result of the consensus of the members of that society so that it is quite easy to imagine one which negates the social responsibilities of the individual and refuses to pass legislation providing for the communal needs. From what has been said above, it should be obvious that the corporation has the same social obligations as individual shareholders and therefore, just as they may not conduct their business without respect to these obligations, so too their representatives, the directors of the corporation, may not shirk them. The full discussion of these obligations is an extensive topic and here we will look at only two aspects of the social responsibility of business; the issue of ecological damage and the field of communal costs.

ECOLOGICAL DAMAGE. In Jewish law a man may not cause damage either with his body or property to another man's body or property, and, whenever such damage is done, monetary compensation has to be paid (Yad, *Hilkhot Nizkei Mamon*, ch. 5; Sh. Ar., *ḤM*, sections 153–156). It is immoral, however, to plan or conduct one's economic activity which will cause damage on the assumption that it is cheaper to pay for the damage concerned than to introduce technological devices to prevent that damage. Businesses, therefore, which pollute the environment or which destroy the quality of living, either physical or aesthetic, have to be placed in such areas as to prevent any damage from occurring to others; alternatively, where the siting of the firm or plant of itself does not cause ecological damage then safeguards must be introduced to prevent any damage.

Jewish teaching, in this respect, does not differentiate between ecological problems relating to individual neighbors and those problems which arise from the clash of interests between individuals and the community. Halakhically, the community has economic needs which have to be met and this often means acquiring rights in the private property of the individual through taxation not only of money, but also of assets. So, a Jewish community can force corporations or

individuals to pay taxes in order to provide for the costs of communal living and to appropriate land for roads and other facilities. In the same way, Jewish law requires zoning of industrial and commercial premises in a way which prevents damage or enhances the aesthetic pleasure of the community. There may, however, be cases where the economic advantage to the community far outweighs the damage caused by the industry, as for instance where ecological restraints on development mean unemployment and poverty. There are rabbinic responsa which ruled in favor of an industry as against the ecological damage where the livelihood of the entire community depended on that industry (*Teshuvot Maharashakh*, part 2, subsection 98, and *Shemesh Zedakah*, *ḤM*, section 34, subsection 11). However, the same sources held that this was only a result of Jews living in exile where they did not have authority to introduce zoning rules, but in their own country they would be able to plan so as to ensure economic development without suffering ecological damage.

Where the damage caused is one to life or to the human body, there can be no compromise and no monetary compensation is sufficient. If an industry is shown to be detrimental to the health of its workers, then the owners would have to introduce safeguards to protect them. If there are no technological possibilities for removing the danger to health then it might well be that in Jewish law such industries would not be possible at all. Furthermore, since Judaism does not see a man as being the master of his own body, one is not allowed to place oneself in danger. Workers therefore cannot agree to accept employment which is hazardous to their health, even if the employer is willing to increase their wages.

The conflict between individuals or between individuals and the community regarding scarce resources may take the form of nuisance issues or minor discomfort rather than actual damages. In these cases, Judaism argues that one should do another person a favor and forego one's rights. In a 14th-century responsa, for example, the case was ruled against a plaintiff who argued that the smoke from his neighbor's kitchen bothered him. Even though smoke constitutes a major ecological damage, nevertheless the rabbi held that people could not cook without using their stoves and this outweighed the irritation caused (*Teshuvot ha-Rashba*, part 2, section 65).

Judaism teaches that man has the right to use the wealth of the world since that is the purpose for which God created that wealth. At the same time, he does not have the right to willfully mismanage it or waste it, even if it is legally his property. This means that the wasteful use of natural resources by the corporation or by society in general would be frowned upon. Steps have to be taken to insure that future generations have the ability to enjoy these resources just as the present one does. At the same time, however, if there is a conflict between destroying a certain species in order to provide a livelihood for human beings, the needs of man take precedence since the whole creation was meant for the enjoyment and profit of mankind.

COMMUNAL COSTS. Man's wealth is given to him by God in trust to be used inter alia to assist the weaker and inefficient members of society and to fulfill his communal responsibilities. This applies also to the wealth of the corporation. This wealth sharing is not left up to the conscience or generosity of the individual, but is a religious obligation, enforceable by a rabbinic court. So the community has the right to tax its members, corporate or otherwise, in order to provide for these costs. The evasion of such taxes is considered tantamount to theft, either from the recipients of the communal services or from other taxpayers who are required to pay more. This applies not only to the taxes levied by the Jewish community but also to those of the general society in which Jews live (Yad, Hilkhoh Gezeilah ve-Aveidah, ch. 5, *halakhot* 11–12; Tur, Sh. Ar., ה"מ, section 369. A.I. Ha-Kohen Kook. *Mishpat Kohen*, section 148, who extended this to include Jewish state authority even where there is no longer a king). This is in keeping with the principle that in money matters "*dina de-malkhuta dina*" – "the law of the land applies" except where it contradicts Torah law. It is only where the government is illegal, having usurped its powers, or where the laws are discriminatory, immoral, or erratic, that some authorities have ruled that it is permissible to disobey the law and this too only on condition that others are not harmed thereby.

Today, many corporations have their headquarters in a country or area which has a lower tax rate rather than the area in which they conduct their business, thus escaping their obligation to share in the latter's social costs. Jewish law would require taxes to be paid where the money is earned thus insuring the social and physical infrastructure (*Teshuvot ha-Rashba*, part 1, nos. 664, 788). There are even precedents in Jewish law where the community has prevented wealthy citizens from leaving, on the grounds that this would damage or destroy their tax base (*Takkanot Va'ad Arba Arazot* – enactments of 1661).

There is a halakhic consensus that competition between entrepreneurs is permissible where the community benefits from it or where the competition in no way involves any aspect of theft or coercion. As often as not, however, competition brings with it not only communal economic benefits but also social dislocation. This occurs when it results in the dismissal of workers or in the destruction of the inefficient competitor. In these cases, society has to decide whether or not there is any moral responsibility for the unemployed or for the displaced entrepreneur. If so, the question remains as to who is obligated to bear that responsibility, the corporation or society itself.

In Judaism there is undoubtedly a clear-cut moral problem created by the unemployed worker and by the displaced entrepreneur since obligations are owed both to the people who are poor as well as to those who become so. The question as to whether it is their fault or not is irrelevant. Nor is there a concept of "the deserving poor." Nevertheless, the issue of placing the responsibility for solving the moral problem is less clear.

It would seem that, in order to provide a Jewish answer to this question, a distinction has to be made between legal rights which can be enforced by a rabbinic court and what is required by Jewish concepts of charity.

Employer-employee relationships are in Jewish law primarily part of the general laws of hiring and these make the fulfillment of contracts binding. The corporation therefore has a responsibility for any compensation provided for in the employees' contracts as well as those provided for by local custom such as severance pay, even where these are not expressly mentioned in the contract. In parenthesis it should be noted that workers who, owing to old age or illness, become unable to work at their usual productivity cannot be fired without compensation, either monetary or through shortened work hours or physically less demanding jobs. Those unable to work at all have to be compensated. Some authorities would link this to the grant given in the Torah to the Hebrew bondsman while others argue that long-term employment assumes that people age or get ill so that, even in the absence of a contractual agreement, the employers express their assumption of this obligation (*Ziknei ha-Dayyanim, Torah ve-ha-Medinah*, vols. 9–10; see also Mordechai, Bava Me'zia 246, who holds that courts can enforce charitable acts on Jews. See also *Teshuvot ha-Rosheh*, part 1, section 300).

It seems, however, that, where the firing is the result of economic factors such as unprofitability or competition, the employer does not have any obligation to provide compensation other than that granted by custom or specified in the labor contract. Similarly, it would seem that the corporation has no legal obligations to the competitor who has been displaced as a result of halakhically permitted competition. There is no doubt however about the halakhic obligation of the community to provide either the financial or spiritual assistance needed or of the corporation (or its shareholders) to participate in funding this assistance through their tax payments. Assistance to the poor and needy is one of the obligations of the communal purse and cannot, for example, be negated by majority vote, in order to lower the communal tax burden as can other communal services.

This assistance, nevertheless, is charity, not a redistribution of income or transfer payment. Charity, even though a hallmark of Jewish life throughout the Diaspora and over the centuries, and despite the fact that it shares in Hebrew a common root with justice, is nevertheless charity with all its negative overtones for the recipient. So the rabbis frowned on making a living off charity a profession, insisting that a man should flog a carcass in public (considered one of the lowest menial tasks) rather than be dependent on the community. This in no way lessens the obligations of the giver, community, individual, or corporation but militates against the creation of a welfare mentality.

Although the communal obligation is clear, nevertheless, the possessor of wealth also has charitable responsibilities, even if these cannot be enforced in a court, over and above

his communal taxation. Maimonides classifies giving a person a job, a loan, or suitable business advice which will prevent him from becoming dependent on the communal purse as the highest form of charity (Yad, Hilkhoh Mattanot Aniyyim, ch. 10, *halakhot* 7, 18, 19). It would seem that in this respect the corporation can be far more effective and varied than the individual. Employees who are laid off, or for that matter displaced competitors, can be retrained, using the corporation's equipment and technology so as to qualify for alternative employment. The corporation can make information regarding job opportunities and economic prospects, either locally or nationally, available, thus overcoming a serious obstacle to re-employment, or to establishing new small enterprises. Part of the corporate profits can be set aside to form a fund for granting interest-free loans to its unemployed workers or those whose firms have ceased to operate as a result of its competitive success. Such interest-free loans, the corollary to the biblical and rabbinical injunctions against taking interest, have been a feature of Jewish communal living since biblical days. These loans are not meant solely for temporary assistance to hard-pressed farmers. Their use for enabling people to start their own business is legitimate and could constitute a major corporate contribution not only to the discharged workers but also to the unemployed, underprivileged, and temporarily financially strapped entrepreneur in general.

Summary

There exists a distinctive Jewish ethical framework for the conduct of business within which Jews have always operated. This framework regards wealth as a gift of God, legitimate and useful but operative within the parameters laid down by Jewish law, morality, and custom. These parameters forbid the earning of wealth through dishonest means which include theft but also coercion, misrepresentation, unrevealed conflict of interest and defects, rejecting the concept of "let the buyer beware" but placing the onus for full disclosure on the seller. Corporations share the moral obligations of the shareholders and therefore what is not permissible for the individual is also forbidden to the corporation.

As a result of the national orientation of Judaism, the group and society have, as it were, a share in the wealth of the individual. Private property rights are recognized and protected but are never absolute. This means that possessors of wealth, corporate or otherwise, can be taxed to meet the social needs of the community, whether these include charity for the poor and inefficient citizens or the unemployed, or the provision of public services. Furthermore, business may not be conducted in such a way as will damage another's property or health, or for that matter the ecological quality of life of other individuals or of society.

The legal nature of Judaism means that its ethical framework is transferred into obligations, permissible or otherwise, and the rabbinical courts are obligated to enforce them. At the same time operating beyond the limits of the law, doing one's fellow man an economic favor and voluntarily relin-

quishing one's property rights are part of the religious education of the Jew.

Additional Aspects

In general, the realm of ethics in trade and business is divisible into three categories: (a) tradesman-customer relations; (b) competition and relations among and between tradesman and craftsmen; and (c) competition among customers. Regarding the first category, see *Consumer Protection; *Deceit; **Hafka'at She'arim* (Profiteering); *Sale; and *Mistake. Concerning the subjects included in the second category, the monopoly rights of professionals and holders of licenses in specific occupations, and intellectual property rights, see *Trespass. In the present entry we shall focus on further issues in the second and third categories: the frustration of an emerging transaction between the parties; protection from competing business; price cutting; and advertising. Some of the discussions may be relevant to more than one of the aforementioned subjects.

The basic doctrine governing commercial law is the legal principle of trespass. The term and doctrine of "trespass" (*hassagat gevul*; lit. "moving a landmark") underwent many stages of expansion and development. The Torah, from which the phrase originates, uses it to refer to the unlawful taking of a neighbor's land by physically moving the boundary markers into the neighbor's property so as to annex part of that property to the trespasser's own adjacent land. The Torah deals with this situation in two verses: (a) "You shall not move your neighbor's landmarks, set up by previous generations, in the property that will be allotted to you in the land that the Lord your God is giving you to possess" (Deut. 19:14) and (b) "Cursed be he who moves his neighbor's landmark" (Deut. 27:17). Even in the patriarchal period, it was customary to insist on precise landmarks, as evidenced from the description of the field in "Machpelah" (lit., the "double cave") that Abraham bought from Ephron the Hittite (Gen 23:17). The Hebrew prophets and wisdom literature protested against the movers of landmarks (Hos. 5:10; Prov. 22:28; Job: 24:2), and the prohibition of trespassing into another person's land was also discussed in talmudic literature and in the Codes (Maimonides, Yad, Hil. Genevah 7:11; Sh. Ar., ḤM 370.1; cf. at length in **Hassagat Gevul* (Encroachment).

Already in talmudic times, and particularly in the post-talmudic era, it was necessary to confer legal recognition and protection to rights which had not yet been crystallized in legal formulae. Legal expression and protection was given to such rights by extending the doctrine of "moving a landmark" to include the prohibition against "moving" or "trespassing" upon various economic, commercial, and intellectual boundaries. The meaning of the term "boundary" was likewise extended beyond the physical to include additional areas, so that even those relating to the occupation and livelihood of a competing business owner came to be referred to as a "boundary." Initially this prohibition was of moral standing only, without any legal sanction. However, the steadily increasing development

of businesses and commercial life from the talmudic period to modern times was accompanied by an increased development and sophistication of categories and parameters enabling the qualified exercise of judicial coercive power in preventing the violation of the business owner's rights by unfair competition, without unduly restricting free market trade.

TRESPASS BY FRUSTRATING THE CRYSTALLIZATION OF A TRANSACTION BETWEEN PARTIES – “THE POOR MAN SIFTING THROUGH LEFTOVER BREAD.” According to the talmudic rule, when a poor man is sifting through leftover bread and another one comes and takes it for himself, the latter is called “an evildoer” (Kid. 59a). The Talmud cites this rule in the commercial context of “competition” between two potential purchasers vying for the same item. When a person is about to purchase an item from a seller, and another person precedes him and buys the same item (hereinafter, “an interloper”), the latter is also called “an evildoer.” The talmudic commentators and medieval codifiers established the rules governing the application of this principle.

The determining stage of the transaction for the application of the rule is the stage at which the two parties – the seller and the would-be purchaser – agreed upon the sale of the item and set its price. From that stage onwards, any third party who attempts to replace the party interested in purchasing is called an “evildoer” (Maharam of Rutenburg, cited in Mordechai, Bava Batra §651; Rema, on *ḤM* 237:1). According to the *Perisha*, even prior to the determination of the price – i.e., during the negotiating stage – an acquisition by the interloper will be regarded as an act of trespass (Tur, *ibid.*).

Where the interloper's potential loss exceeds that of the would-be purchaser, the prevailing opinion among the authorities is that the interloper will not be called an evildoer. The reason is that it resembles the case in which the potential purchaser and the interloper are competing over an abandoned article, in which case it cannot be claimed against the interloper that he could have found an item similar to the one being sold in another place. This view endorsed the opinion of Rabbenu Tam (Tos., Kid. 59a; see also in Asheri, Kid. 3b).

According to the authorities, the legal import of the determination that the interloper is called “evildoer” is that, for as long as he has not completed the transaction, he should be prevented from doing so (Resp. Maharshadam, on *ḤM* 259). On the other hand, if the transaction between the seller and the interloper has already been completed, the would-be purchaser cannot take the item away from the interloper (Ritba, Kid. 59a; Responsa Maharik, 132; Rabbenu Tam's view, cited in Ritba, *ibid.*, is that the item can be taken from the interloper). The only sanction is therefore a public declaration in the synagogue that the interloper is an “evildoer” (*Hagahot Maimoniot*, Hil. Hovel, 5:1; *Perisha*, *ḤM* 237).

The Severity of Damage and the Scope of the Right. Where the effort invested by the potential purchaser exceeds that of the interloper, or if he stands to incur a pecuniary loss if the trans-

action is not completed, the sages ruled that the interloper was to be regarded as a *robber*. The Mishnah provides that: “If a poor man gleans on the top of an olive tree [i.e., beats the tree so that its fruit will fall] that which is beneath him is regarded as having been robbed, in the interests of peace” (Mish. Git. 5:8). In this case, even though the fruit is regarded as having been abandoned (*shikhehah*; forgotten fruit), the sages made an enactment that, insofar as the poor man had already invested effort and work to acquire them, their appropriation by an interloper would be regarded as robbery (Maharik §132). Admittedly, an object considered as “robbed” by virtue of rabbinic edict cannot be judicially expropriated; nevertheless, during the medieval period this Mishnah served as the basis for the ruling that where a person sought to rent an apartment in the city for purposes of setting up a shop, and during the course of his negotiations for the shop's rental another person came and preceded him in renting it, then the rights of the former prevail, and the latter is enjoined from entering the shop without the former's consent. (Maharik, *ibid.*).

Consent to Waive an Act of Trespass. The nature of the prohibition against trespass precluded a determination of its precise parameters. Any attempt to fix a determining stage for purposes of this prohibition could be circumvented by a merchant encroaching upon his neighbor's borders and interfering with a transaction about to be completed, at a stage not covered by the prohibition. This possibility induced Rabbi Jair Ḥayyim Bacharach (Germany, 17th century) to rule that it was forbidden to make conditions for reciprocal waiver of the prohibition, even within a defined group of merchants (Resp. *Ḥavot Yair*, 163).

PROTECTION FROM A COMPETING BUSINESS – ENCROACHING UPON A NEIGHBOR'S CRAFT. In a Midrash cited in the Babylonian Talmud (Mak. 24a) the *amoraim* construe the verse “nor taketh up a reproach against his neighbor” (Ps. 15:3) as implying a prohibition against “entering the profession of his neighbor.” Ezekiel 18:6, “neither has he defiled his neighbor's wife,” is interpreted similarly (Sanh. 81a). This midrashic exegesis does not lay down binding law, but rather establishes a moral threshold; the authorities therefore ruled that it was “a degree of piety” not to do so, even though legally it was permitted (Resp. Maharam of Rutenburg, 4:67; Resp. *Ḥavot Yair* §42).

The *beraita* (BB 21b) refers to a case in which an artisan prevents his fellow from receiving anticipated profit that he would definitely have received: “Fishing nets must be kept away from [the hiding-place of] a fish [which has been spotted by another fisherman] the full length of the fish's swim” (i.e., where a fisherman discovers a place where fish live and leaves a bait there to capture them, it is forbidden for another fisherman to lay down his own traps). According to Tosafot, this case is restricted to a professional fisherman; hence, the other fisherman may apply for and receive a remedy from the court. This contrasts with our earlier comments regarding the poor man beating an olive tree, which did not concern the

protection of a person engaged in his craft, thus precluding the possibility of receiving a judicial remedy.

When dealing with craftsmen competing over a group of customers, the issue is not one of absolute denial of profit, but rather of its reduction. Moreover, the profit itself is not certain, being dependent on customers who have complete discretion to decide which craftsman to approach. Consequently, the sages' enactment in this case differed from their enactment in the aforementioned *beraita*, and considerably less protection is afforded to the owner of an existing business. The Tosefta deals with cases in which the sages made enactments to prevent a craftsman from opening a business in a particular place: "The residents of a passageway can prevent one another from bringing in a tailor or a tanner or any other kind of craftsman, but one resident cannot prevent another resident. R. Simeon b. Gamaliel, however, says that they may prevent one another" [Tosef., ed. Zuckerman], BM 11:16; a similar formulation is also cited in Bava Batra 21a; cf. *Tosef. ki-Feshuta*, Lieberman, *ad loc.*). The aforementioned tannaitic dispute on the question of whether one resident can prevent another one from engaging in a particular occupation is also found among the *amoraim* – i.e., R. Huna and R. Huna b. Rav Yeshoshua (*ibid.*) The codifiers and the talmudic commentators disputed the interpretation of this ruling. Who exactly was permitted to prevent another person from engaging in his craft? Who has the authority to prevent him: the craftsman himself or the local residents? And is such prevention justified by the need to protect a person already engaged in that craft in that particular place, or by the need to prevent the environmental disturbance caused by his work?

The *halakhah* is that the damage to his business ("denial of livelihood; *posek le-hayuto*) does not constitute grounds for preventing one craftsman from opening a business in competition with another craftsman in the same town (Maim., *Yad, Hil. Shekhenim*, 68; Maharam of Rutenburg S677; Tur, *ḤM* 156:10; Sh. Ar., *ḤM* 156:5).

Even so, where the opening of a new business is not merely competition, but will actually eliminate the livelihood of the original craftsman (*bari hezekah* – lit. definite damage), the Rema ruled, following the view of Aviasaf (cited in the Mordechai, BB 21b, 616) that the businessman can prevent the opening of a competing business by the competitor, even if the person wishing to open it comes from the same town (*Darkhei Moshe*, *ḤM* 156:4; Resp. *Rema* 10, The First Principle).

When a person comes from another town, the *amoraim* agreed that the townspeople can prevent him from opening a business in competition with the residents of that town, so as not to harm their businesses, unless he shares in the tax burden of that town (BB 21b; Maim., Sh. Ar., *ibid.*). However, according to some authorities, permission to open a competing business on the same street as that of an existing business of one of the town's residents will only be granted if the competitor establishes his residence in the same town (Tos. BB, *ibid.*; Tur. *ibid.*; *Rema* on *ḤM* 156:6–7).

In trade, on the other hand, a distinction is drawn between peddlers who regularly go from town to town – not being restricted in any form – and merchants who regularly bring their specific merchandise to the market day and who are only permitted to come on the market day (BB 22a; Maim., *Yad, Hil. Shekhenim* 6:9–10; Tur, *ḤM* 156:9; Sh. Ar. 156:6–7).

The Israeli Rabbinical Court of Appeals adjudicated a dispute between a group of ritual circumcisers (*mohalim*) who had received permission from a particular hospital to offer their services to women who gave birth, and a *mohel* who had recently joined their number. The group claimed that by joining the group he was encroaching upon their professional domain and damaging their livelihood (File 5730/89, 8 PDR 227). Citing *Rema's* aforementioned distinction between definite damage caused by the elimination of livelihood and a situation which only leads to increased competition, R. Eliashiv ruled that such a distinction had not been accepted, and that the leading authorities – Alfasi, Maimonides, Semag, Tur, and Shulḥan Arukh – made no mention of the law that "fishing nets must be kept away." Consequently, the Rabbinical Court was unable to prevent the *mohel* from competing with his colleagues in offering services in the hospital.

R. Yisraeli, on the other hand, felt that the *Rema's* distinction should be adopted and that as a matter of *halakhah* one must draw a distinction between a competitor who merely reduced the income of the craftsman, regarding whom "it cannot be said that he damages him at all, because the purchasers still have a choice, and it is in the hands of Heaven," and a case in which the competitor "actively attracts customers to him." In the latter case, "even if he only reduces the income of the original party, he is regarded as if he altogether negated income, because he [the original *mohel*] cannot say, 'Whoever comes to me will come, and whoever goes to you will go to you.' The reason is that the latter invests efforts and stratagems in attracting people to him" (p. 237 of judgment). According to R. Yisraeli, in this particular case, the new *mohel* was clearly trespassing upon the domain of the other *mohalim* and would definitely reduce their income. Hence, it should be regarded as if he was altogether negating their livelihood and therefore engaged in outright robbery, the fruits of which may be expropriated by the *bet din*.

Nevertheless, R. Yisraeli agreed to dismiss the appeal and allow the new *mohel* to be accepted for work. The reason was that the new *mohel* had originally applied for permission to work in the hospital alongside the other *mohalim*, and the hospital had denied his request for no justified reason.

PRICE CUTTING. *Price Cutting in Relation to the Market Price*. The Mishnah (BM 4:11) cites a dispute as to whether one of the merchants in a city is allowed to reduce the prices of his merchandise below the market price in order to attract customers: "R. Judah said: ... Nor may he reduce the price; but the sages say, he is to be remembered for good." The reason cited in the *gemara* is "because he eases the market" (i.e., reduces the overall market price). In other words, not only will

the residents of the town benefit from the price cut, but the suppliers will also reduce their prices accordingly, so that the merchants will not suffer as a result. The *halakhah* was fixed in accordance with the sages' view; namely, that it is permitted (Maim, Yad, *Hil. Mekhirah* 18:4; Tur, *ḤM* 228:17; Sh. Ar., *ḤM* 228:18). However, beyond this the *Rema* rules that a substantial price reduction is not permitted, because in such a case one can say that the damage is certain "*bari hezek*," similar to the rule concerning the opening of a business in competition with an existing business. (Resp. *Rema* 10, §1).

Some of the authorities restricted the permission given for price reduction, limiting it to the cheapening of basic consumer items only, such as dairy products and fruit, because the consideration of the customers' benefit is only relevant with respect to this kind of item. It is forbidden to reduce the prices of other kinds of produce, such as liquor, because such a reduction would cause a "market failure" and damage the other merchants. (Resp. Mahariaz Amil, §69; Arukh ha-Shulhan, 228:14).

Price Cutting in Relation to the Agreed Price. The Tosefta states that the residents of the town are permitted to determine prices and rates that will be binding upon all the residents: "The townspeople are at liberty to fix weights and measures, prices, and wages, and to inflict penalties for the infringement of their rules." (Tosef., ed. Zuckerman, טב, ב"מ 11:23; a similar formulation also appears in Bava Batra 8a; c.f. Lieberman, *Tosef. ki-Feshuta*, *ibid.*). This authority also includes the power to adopt decisions that may cause profits to some and losses to others, such as the fixing of low prices that will harm the sellers and profit the buyers. These decisions need not be supported by all of the townspeople, and the communal leaders can adopt the decisions in a manner that binds the entire community (Resp. Rashba 5:125). Similarly, a particular sector of craftsmen are permitted to enact regulations that bind all members of the same craft (Tos., ed. Zuckerman, ב"מ 11:24–25; cf. Lieberman ad loc; BB 9a). However, according to talmudic commentaries and authorities, the majority has no power to force its position on the minority, and the regulations only bind those who agreed to their enactment. Consequently, a new member of the same craft who came to the town, and did not agree to the regulation regarding the fixing of prices is not bound thereby and can sell his merchandise at a price lower than that prescribed (Resp. Maharshadam 1:117; *Lehem Rav* §216.)

MARKETING AND ADVERTISING. Both the Mishnah and the Talmud abound with examples of techniques adopted by shopkeepers and craftsmen to advertise their wares in order to attract customers – by presenting their merchandise in an attractive manner (ב"מ 60b; Pes. 37a), and by public proclamation (*ibid.*, Pes. 116a).

The Mishnah (ב"מ 4:11) records a dispute between the *tannaim* as to whether the shopkeeper is permitted to hand out sweets to children in order to accustom them to come to him. R. Judah prohibits it and the sages permit it. The law was fixed

according to the view of the sages (Maim., Yad, *Hil. Mekhirah* 18:4; Sh. Ar., *ḤM* 228:18) – in other words, the other merchants cannot prevent him from doing so.

Regarding the improvement of the merchandise's external appearance in order to promote sales, the rule in the Mishnah is that "men, cattle, and utensils may not be painted [enhancing]" (*ibid.*). The Talmud explains that the prohibition lies in altering the external appearance of the merchandise in a manner that may mislead the customers as to their real nature (*ibid.*, 60b) The *amoraim* distinguish between the adornment of old utensils to make them appear new, which is prohibited because of the laws of deception, and the adornment of new utensils, where the merchant's intention is to induce the customers to purchase from him and not from other merchants, which is permitted. Here too the authorities fixed the *halakhah* in accordance with the position of the sages (Maim., Yad, *Hil. Mekhirah*, 18:2–4; Sh. Ar., *ḤM* 228:9, 17).

THE LAW IN THE STATE OF ISRAEL. The Commercial Wrongs Law, 5759 – 1999, addresses some of the issues dealt with in Jewish Law. Section 3 of the law provides that: "No person who carries on business shall unfairly prevent or impede access by customers, employees, or agents to the business, property or service of another person who carries on business." The law does not specify what kind of action will constitute "prevention" or "impeding" and what manner thereof would be "unfair." In addition, the law prohibits "misleading use" – in other words using the trade name of another so that an asset or service provided by one person will be mistakenly regarded as being the asset or service of another person (§1); false description regarding the occupation or the service of the advertiser or of another person (§2); and theft of trade secrets, defined as the unauthorized receipt, appropriation, or use of commercial information which is not public knowledge, whose secrecy grants its owner an advantage over his competitors (§§5–10). The law permits the court to award damages without proof of actual damage.

BUSK, small town in Ukraine (E. Galicia); in Poland until 1772 and from 1918 to 1939. Jews were known there before the 16th century. In 1518 the king exempted them from taxes for one

year as they had suffered from Tatar raids. In the first half of the 18th century Busk was known as a Shabbatean center (see *Shabbetai Zevi), and later King Augustus III assigned the town as a residence for Frankists. Nahman b. Samuel of Busk represented the Frankists in the disputation at Kamenets-Podolski in 1756. Jacob *Frank himself stayed for a while in Busk, leaving there in 1759 to take part in the disputation at Lvov. There were about 481 Jews living in Busk in 1765, about 2,000 in 1909, and 1,460 in 1921.

Holocaust Period

About 1,900 Jews lived in Busk when German forces entered in July 1941. Jews were immediately kidnapped for slave labor; the free movement in public of Jews was restricted, and Jews were physically attacked. A *Judenrat was set up, headed by Isaac Margalit. It attempted to organize the Jews for the emergency, in particular by ensuring work for the entire community, in the belief that thereby deportation could be avoided. The Germans carried out the first *Aktion* on Yom Kippur 1942 (Sept. 21), executing around 700 Jews in a village near Zloczow. In November a ghetto was set up for all the Jews in the area. A resistance movement, headed by Jacob Eisenberg, collected arms inside the ghetto and made plans for a breakthrough to the forests, but these could not be carried out, because on May 19–21, 1943, the ghetto was liquidated. There is a society of former residents of Busk in Israel and a B'nai B'rith branch in New York comprising former residents of the town.

BUSNACH (Heb. בּוּסְנַח), Algerian family of shipowners and merchants. In the 17th century the Busnach family emigrated to *Leghorn, *Italy, but was reestablished in Algeria in the 18th century. In 1721 NAPHTALI left Italy and after two years in Minorca (then under English rule), settled in *Algiers. Together with his relatives the *Delmar and *Bacri families, he established there a powerful commercial firm. His grandson NAPHTALI BEN MOSES played a significant political role in Algeria in the latter part of the 18th century. Enjoying an unprecedented degree of trust by the bey and in direct contact with European governments whose representatives had to rely on his intervention, he dominated foreign policy, made beys and overthrew them, controlled the administration of the treasury, and with the help of his uncle Joseph Bacri and his many agents in Europe, monopolized trade. Nicknamed the “viceroy of Algiers,” he was jealous and dominating. However, he had remarkable courage. His coreligionists described him as pious, educated, generous, and upright; in February 1800 he was appointed “head of the Jewish nation.” Busnach’s power displeased the Turkish garrison, which on occasion revolted against excessive shortages of grain; they blamed the shortages on Busnach’s export of large quantities

of wheat to *France. In 1805, Naphtali b. Moses was assassinated by a janissary. Subsequently, when Algiers was pillaged, the Busnach family took refuge in Leghorn, settling there for the second time.

[David Corcos]

BUSTANAI BEN HANINAI (c. 618–670), the first exilarch in Babylonia after the Arab conquest. According to legend, toward the end of Persian rule in Babylonia the king decreed that all the descendants of the house of David be killed, including the exilarch Haninai, whose wife was pregnant at the time. Later the king had a dream in which he saw himself hewing fruit trees in a grove (*bustan*). Before the last tree was felled, a venerable old man appeared before him and struck him on the forehead. On the advice of his courtiers the king consulted a Jewish sage concerning the meaning of this dream. The sage, who was Haninai’s father-in-law, interpreted that the old man represented King David trying to prevent the extermination of his descendants. The king then summoned Haninai’s widow to his court and supplied her with all her needs. When she bore a son, she named him Bustanai in memory of the king’s dream. When Bustanai grew up, he appeared in court before the king and the wisdom he displayed on that occasion amazed all who were present. Thereafter the king honored him and appointed him exilarch, to the great satisfaction of the Jews. After the Arabs had conquered Babylonia, the Caliph Omar confirmed Bustanai as exilarch; he gave Azdaudar, one of the captive daughters of Chosroes II, king of Persia, to Bustanai in marriage, while the caliph himself married her sister, thereby giving de facto recognition to Bustanai as one of the successors of the kings of Persia. (According to the *Sefer ha-Kabbalah* of Abraham ibn Daud, it was the daughter of Yezdegerd III, the son of Chosroes, and the caliph was ‘Ali.) This legendary story throws light upon the course of events after the death of Bustanai. The Persian princess bore Bustanai three sons (according to another version, five sons). When Bustanai died, however, his other sons by his Jewish wives sought to treat their brothers by the Persian princess as slaves, because their mother had not been converted to Judaism. The scholars of the yeshivot, however, decided in favor of Izdundad, and her relatives, who held high offices in the government, also decided in her favor. The first *dayyan* who ruled that the descendants of the Persian wife were legitimate Jews was Haninai in the ninth century. The eldest son of Bustanai and the Persian woman even married a daughter of a chief *dayyan*. Nevertheless the question of the legitimacy of her sons remained a subject of controversy in the halakhic literature of the geonic period and thereafter. Sherira Gaon in the 10th century made a point of stressing that he himself was from the house of David but not a descendant of Bustanai. Bustanai was the progenitor of the Babylonian exilarchs of the period of Arab

rule. His first successors were the offspring of his son born to one of his Jewish wives. Among the offspring of his Persian wife who attained the office of exilarch was Zakkai, a fourth-generation descendant of Bustanai. There was a longstanding rivalry between the descendants of Bustanai and the old *geonim* of Erez Israel. R. Abraham ibn Daud believed that the Persian woman converted to Judaism. Concerning the age of Bustanai at the time of the Arab conquest, there are different versions. One says that he was 35 years old. According to other sources, the name of Bustanai's father was Kofnai. It seems that Bustanai was very active in the messianic movement before the Arab conquest of Babylonia. Arab sources note that he was in Medina in c. 623. Bustanai has other names and nicknames in Arabic and Christian sources. It seems that at the beginning of his activity he fought with the Muslim tribes, but he decided to sign an agreement with them in which he represented the Jews of Babylonia. At that time he received from the Muslim conqueror the Persian woman, an annual rent, and recognition as an exilarch. Bustanai was killed in a battle in 638. His sons by his Jewish wife were Hisdai (Gamil) and Bardai (Haled).

[Simha Assaf / Leah Bornstein-Makovetsky (2nd ed.)]

BUSTENAI (Heb. בוֹסְתַנַּאי; "Owner of Orchard"), a Hebrew weekly of the *Farmers' Union and the *General Zionists, published in Palestine (1929–39). The journal supported the views of Chaim Weizmann, advocated Arab-Jewish cooperation, and the employment of Arabs by Jews under certain circumstances. This last point was a perpetual matter of controversy between the paper and the labor circles which demanded that the Jewish economy, especially agriculture, employ Jewish labor exclusively. The editors were Moshe *Smilansky, T.Z. Miller, who edited the agricultural column and coined many Hebrew agricultural technical terms, S. Perlman, and the journalist P. Ginsburg (1894–1947). *Bustenai* also published a magazine for youth, *Bustenai la-No'ar* (1935–37), and the monthly (later bi-monthly) *Mi-Yamim Rishonim* (1934–35), which published material on the history of the *yishuv* and the new agricultural settlements in Palestine.

[Getzel Kressel]

BUTLER, JUDITH (1956–), U.S. theorist and philosopher. Butler's interest in philosophy grew out of many years of education at the synagogue in her hometown of Cleveland, where she was first exposed to existential theology and ethics. After attending Bennington College, she received a B.A.

and, in 1984, a Ph.D. in philosophy from Yale University. She was named Maxine Elliot Professor in the Departments of Rhetoric and Comparative Literature at the University of California, Berkeley, and also taught at Wesleyan and Johns Hopkins Universities.

Regarded as one of the founders of queer theory, Butler is best known for her work addressing gender, identity, power, and desire. In her influential 1989 book *Gender Trouble: Feminism and the Subversion of Identity*, she draws on thinkers such as Michel Foucault, Jacques Lacan, and Jean-Paul Sartre in order to argue against the assumption that one's masculine or feminine gender identity is necessarily linked to his or her reproductive sex. Rather, she argues, gender is a fluid variable, with no independent existence of its own, and it shifts and changes depending on a person's context. She describes this phenomenon as "performance," suggesting that repeated, subtly gendered acts take shape to form a "coherent" gender identity. But, she maintains, this identity can never be stable, both because it is never performed the same way twice, and because a myriad of acts are performed daily which, though unacknowledged in significance, ultimately disrupt the otherwise consistent pattern of gender. In other words, all people do things that "perform" gender in different ways depending on the situation, but they also are responsible for other actions that, if included in a reading of one's gender identity, would tell a very different story about that same person's gender. She suggests that the deconstruction of assumptions about gender and even the unconscious performance of acts that subvert a neat binary "male/female" system has the potential to create a more equal society in which people are not constrained by masculine and feminine gender roles.

Butler extends this premise in *Bodies That Matter: On the Discursive Limits of "Sex"* (1993), in which she integrates an analysis of race in her examination of power's effects on our understandings of materiality itself. She addresses the intersection between the notion of "subjection," or the act of becoming a subject, and gay and lesbian identity in *The Psychic Life of Power* (1997), and applies a theory of agency to hate speech in *Excitable Speech: Politics of the Performative* (1997). *Undoing Gender* (2004) investigates the ways in which gender is regulated in social policy, aesthetics, and psychology. In *Precarious Life: The Power of Mourning and Violence* (2004), Butler examines war's impact on language and thought, using the political landscape after September 11, 2001, as a reference point.

Some of Butler's other publications include *The Judith Butler Reader* (2004), *Antigone's Claim: Kinship Between Life and Death* (2000), *Hegemony, Contingency, Universality* (2000), *What's Left of Theory?: New Work on the Politics of Literary Theory* (2000), *Feminist Contentions: A Philosophical Exchange* (1995), *Feminists Theorize the Political* (1992), *Subjects of Desire: Hegelian Reflections in Twentieth-Century France* (1987).

[Danya Ruttenberg (2nd ed.)]

BUTNAH (Heb. בִּוּטְנָה), the site of a fair in Erez Israel, famous in mishnaic and talmudic times. The fair was apparently established by Hadrian and is mentioned together with those of Acre and Gaza (TJ, Av. Zar. 1:4, 39d; Gen. R. 47–end). Josephus refers to Butnah as “a huge terebinth tree” (Wars, 4:533). After the collapse of the Bar Kokhba war (132–35 C.E.), large numbers of Jews were sold into slavery there. It was identified with *Mamre in the Second Temple period. In later times Jews, Christians, and pagans worshiped there. The emperor Constantine erected a church at Butnah and abolished the pagan cult, but as late as the sixth century Butnah attracted both Jewish and Christian pilgrims. It has been identified with Rāmat al-Khalil, about 1¼ mi. (2 km.) north of Hebron, and east of the Jerusalem-Hebron highway. The site was excavated in 1926–28 by E. Mader, who discovered remains of a Herodian enclosure surrounded by a strong wall (enclosing an area of 213 × 164 ft. (65 × 50 m.), as well as a Constantinian church, an altar, and a sacred well filled with the offerings (money, figurines, etc.) of worshipers. Additional excavations were conducted at the site by Y. Magen between 1984 and 1986. Butnah is apparently also to be identified with Ayelet mentioned in the Mishnah (Maʿas. Sh. 5:2), a locality one day’s journey south of Jerusalem, and with the Bet Ilnis mentioned in *Sifrei Deuteronomy* (306). In the Roman period it was one of the forts of the Palestinian frontier fortifications (*limes*). It is represented on the *Madaba Map by a church and the inscription [Ter]ebinthos.

[Michael Avi-Yonah]

BUTRYMOWICZ, MATEUSZ (1745–1814), Polish noble, officer and politician, proponent of a liberal plan to ameliorate the status of the Jews. His interests in landed property in Belorussia convinced Butrymowicz that it was necessary to solve the problem of the status of the large Jewish population there. In 1789 he reprinted a tract, published in 1782 under the title “The Jews, or on the Urgent Necessity for Reform of the Jews in the Lands of the Polish Crown, by an Anonymous Citizen,” entitling it “A Way of Transforming the Jews into Useful Citizens of the Country” and adding his own comments. He opposed limiting Jewish rights and advocated assimilation by liberal methods. While against state interference with the principles of Judaism, he suggested introducing certain changes in the Jewish way of life and limiting the number of Jewish holidays. Butrymowicz considered the notions that Jews should be granted the same rights as were accorded to burghers, and that Jewish communal authority should be

limited to religious matters. He did not consider the question of Jewish military service relevant. As a deputy to the Sejm (diet) of 1788–92, he worked for the passage of reform legislation on these principles. He elaborated his ideas in a speech made in the Sejm on Jan. 31, 1789, suggesting that changes be introduced into the occupational hierarchy of the Jewish population by excluding Jews from innkeeping and directing them to agriculture, crafts, and commerce. On Dec. 4, 1789, he submitted his suggestions in a memorandum entitled “Jewish Reform” to King Stanislas Poniatowski. In May 1790 Butrymowicz was appointed to the Commission for Jewish Reform, becoming its most active member. At the same time he and two other deputies, Jacek Jezierski and Tomasz Wawrzecki, denounced in the Sejm the anti-Jewish riot that had taken place in Warsaw.

[Jacob Goldberg]

BUTTENWIESER, U.S. family. **JOSEPH LEON** (1865–1938), lawyer, realtor, and community leader. Buttenwieser was born in Philadelphia, Pa., the son of German immigrants. A successful lawyer and real estate operator, Buttenwieser influenced New York State real property legislation. He belonged to the American Jewish elite and participated actively in communal and philanthropic activities in New York. He was prominent in the establishment of the Federation for the Support of Jewish Philanthropic Societies and served as its president during 1924–26. He served on the board of directors of the Hebrew Technical Institute for 28 years and played a major role in the Hebrew Sheltering Guardian Society, United Hebrew Charities, and United Palestine Appeal as well as the Associated Alumni of City College. **BENJAMIN JOSEPH** (1900–1992), son of Joseph, banker, civic leader, and philanthropist. Born in New York City, he graduated from Columbia College (1919), intending to devote himself to an academic career. However, he joined the investment-banking firm of Kuhn, Loeb and Company as a clerk, and by 1932 had become a partner. After service as an officer in the navy during World War II, Buttenwieser decided to go into public service. He was named assistant high commissioner for Germany by John J. McCloy in 1949, serving there as his adviser on economic matters and de-Nazification. He resigned in 1951, sensing a revival of German antisemitism and “arrogant nationalism.” Buttenwieser was active in American politics from the 1930s. He became a leading backer of the Republican Wendell Wilkie in 1940. He was active in New York City and State civic affairs, serving as chairman of the State-City Fiscal Relations

Committee in 1956, and participating in labor mediation panels.

Buttenwieser's philanthropic commitments, both Jewish and nonsectarian, were manifold. In 1959 he became a trustee of Columbia University, to which his family contributed substantially. Prominent in the work of the Federation of Jewish Philanthropies from his youth, Buttenwieser served as its president in the 1940s. His wife HELEN LEHMAN (1905–1989), lawyer and civic leader, a niece of Herbert H. *Lehman, started her career as a social worker. She practiced law in New York City for many years, in addition to numerous civic activities.

[Morton Rosenstock]

BUTTENWIESER, MOSES (1862–1939), Bible scholar. Buttenwieser studied at German universities, received his Ph.D. at Heidelberg, and then went to the United States, where he was appointed professor of biblical exegesis at the Hebrew Union College, Cincinnati, in 1897. He accepted the general approach of the K.H. Graf-J. Wellhausen school, but did not follow it slavishly. He drastically reconstructed the text of Job. He denied that the apocalyptic developed out of prophecy: Ezekiel and his successors, he held, were genuine prophets, though not of the highest rank, whereas the apocalyptic was altogether contrived, and borrowed its characteristic features from Iranian tradition. According to Buttenwieser, Isaiah held consistently to his conviction that Jerusalem was doomed to fall; and the narrative of Isaiah 37 (= II Kings 19) is legendary. Taking up a view first advanced by Seineke in the 1880s, he argued that Deutero-Isaiah lived in Erez Israel rather than Babylonia.

He effectively stressed the precatory use of the Hebrew perfect tense; in light of this phenomenon, many Psalms previously understood as acknowledgment of past favors prove to be pleas for Divine help in the present. His English translations of the Bible are exceptionally vigorous and poetic. His earliest publications dealt with the medieval Hebrew apocalypses, *Die hebraeische Elias-Apokalypse* (1897) and *Outline of the Neo-Hebraic Apocalyptic Literature* (1901). Thereafter he concentrated on biblical studies, his principal works being *The Prophets of Israel* (1914), *The Book of Job* (1922), and *The Psalms, Chronologically Treated with a New Translation* (1938; 1969², with introd. by N.M. Sarna).

[Bernard J. Bamberger]

BUTTONS, RED (Aaron Chwatt; 1919–2006), U.S. vaudeville and television comic. Born in New York City, Buttons sang on streetcorners at a young age to earn money. He then sang in the Coopermans Choir for three years, with the renowned cantor Yossele *Rosenblatt.

At 16, while in high school, he got a position as a singing waiter at Dinty Moore's Tavern in the Bronx. For the job he had to wear a bellhop's uniform, which had 48 shiny buttons. With that outfit and his red hair, the young Aaron was soon dubbed "Red Buttons." That summer, he got a job entertaining in the Catskills. In 1939, he began to perform at Minsky's Burlesque House. In 1942, he performed in *Vickie* on Broadway and in *Wine, Women, and Song* at Minsky's. This was the last burlesque performance in New York City, as Mayor La Guardia wanted to close these shows down. Buttons was actually on stage the night they raided Minsky's.

While serving in the army, Buttons appeared on Broadway in Moss Hart's *Winged Victory* (1943–44). After that stint, he joined Mickey Rooney's outfit in France and entertained the troops throughout Europe during World War II. After the war, he performed on Broadway in *Barefoot Boy with Cheek* (1947) and *Hold It!* (1948). From then until 1952, he performed with Big Bands in Broadway movie houses and nightclubs and made guest appearances on television. Then he landed his own TV show on CBS, *The Red Buttons Show* (1952–55). He won the Academy of Radio and Television Arts and Sciences Award (which later became the Emmy) as Best Comedian of 1953.

In 1956, at the Empire State Music Festival, Buttons performed with Basil Rathbone in *A Midsummer Night's Dream*, with Leopold Stokowski directing a new score by Carl Orff.

In 1966, Buttons performed in another TV series, a spy spoof entitled *The Double Life of Henry Phylfe*. Adapting well to the small screen, Buttons was a guest on all the major TV variety shows, from *Ed Sullivan*, *Dinah Shore*, and *Andy Williams*, to Johnny Carson's and Merv Griffin's talk shows. Buttons was particularly popular on the *Dean Martin Roasts* (1974–79), where he initiated his famous "Never had a dinner" routine. His appearances on TV dramas included early theatrical programs such as *Playhouse 90*, *U.S. Steel*, and *Studio One*, and later series such as *Knots Landing*, *E.R.*, and *Street Time*.

On the big screen, Buttons' performance in the film *Sayonara* (1957) earned him an Academy Award and a Golden Globe for Best Supporting Actor. His other film credits include *Winged Victory* (1944), *Imitation General* (1958), *The Big Circus* (1959), *Hatari!* (1962), *The Longest Day* (1962), *A Ticklish Affair* (1963), *Your Cheatin' Heart* (1964), *Up from the Beach* (1965), *Harlow* (1965), *Stagecoach* (the remake, 1966), *They Shoot Horses, Don't They?* (1970), *The Poseidon Adventure* (1972), *Gable and Lombard* (1976), *Viva Knievel* (1977), *Pete's Dragon* (1977), *Movie, Movie* (1978), *When Time Ran Out* (1988), *18 Again* (1988), *The Ambulance* (1990), *It Could Happen to You* (1994), *The Story of Us* (1999), and *Odessa or Bust* (2001).

In 1995, to celebrate his 60th year in show business, he presented *Buttons on Broadway*. An original solo stand-up act, it ran for 33 performances.

Buttons received The City of Hope Spirit of Life Award, the Eddie Cantor Foundation's Suzie Award, the Friar's Club Lifetime Achievement Award, and the Junior Achievement

Award for his charitable contributions to many worthy causes.

[Ruth Beloff (2nd ed.)]

BUTZEL, family in Detroit, Michigan. **MARTIN BUTZEL** (1828–1906), born in Burgellern, Bavaria, immigrated to the U.S. in 1845. In 1851 he opened a dry goods store in Peekskill, New York, then moved to Detroit, and became associated with his brother-in-law, Emil S. Heineman, in the wholesale clothing business. In 1862 Martin, his brother Magnus, and Heineman opened the firm of Heineman, Butzel and Company, supplying uniforms for the Union Army, and later manufacturing ready-made clothing and men's apparel. Martin was a member of the first Detroit Public Lighting Commission and a charter member of the Merchants and Manufacturers Exchange and the Board of Charities. He was president of Detroit's Temple Beth El (1874–78) and of the Beth El Hebrew Relief Society. He took an active interest in the Palestine Colony in Bad Axe, Michigan, an unsuccessful venture in colonization by Russian Jewish refugees in the 1890s. **MAGNUS** (1830–1900), brother of Martin, born in Burgellern, Bavaria, left Bavaria in 1852 and joined his brother Martin in Peekskill, in the dry goods business. He moved to Detroit in 1861 as a partner in the clothing business. Magnus was a member of the Detroit Board of Education, president of the Detroit Public Library Commission, one of the first directors of the Detroit Board of Commerce, and a leader in the Michigan Republican Party. He was a leader in B'nai B'rith and congregational life. **LEO M.** (1874–1961), son of Martin Butzel, was born in Detroit. In 1919 he became the first president of the First National Company, an investment affiliate of the First National Bank of Detroit, and in 1925 he became a director of the bank. A recognized authority on corporation law, Leo was considered the city's outstanding lawyer for many years. His role was particularly important in developing the corporate structure of the automobile industry. Butzel was active in Temple Beth El and the American Jewish Committee. His three children included **MARTIN L.** (1906–82), a prominent Detroit attorney, and president of Temple Beth El and the Detroit chapter of the American Jewish Committee. **HENRY M.** (1871–1963), son of Magnus, was born in Detroit. He graduated from the University of Michigan (1891), where he was a founder of the student newspaper *Michigan Daily*. He was admitted to the Michigan Bar (1892) and, with his brother Fred, established the law firm of Butzel and Butzel in 1897. The firm specialized in corporation law and was general counsel for major companies and banks. In 1929 Henry was appointed to the Michigan Supreme Court. He was subsequently elected for a short term in 1930, then reelected in 1931, 1939, and 1949. He served as chief justice three times, in accordance with the bench's system of rotation. With his brother Fred, Henry founded the Detroit Legal Aid Bureau of the Bar Association. He was chairman of the Legal Aid Committee during World War I. Henry served as president of Temple Beth El, and also was president of the United Jewish Char-

ties and of other Jewish organizations, receiving many public honors. **FRED M. BUTZEL** (1877–1948), brother of Henry, was born in Detroit and joined his brother Henry in law practice. However, Fred devoted most of his time to public service and became one of the nation's distinguished Jewish leaders. His main philanthropic interest was youth work. Fred was active during World War I in the Detroit Patriotic Fund, predecessor of the Community Chest (later the United Foundation), which he also helped to organize. He was president of the Servicemen's Bureau, Detroit Community Union, and Legal Aid Bureau, which he and his brother Henry founded. He served as commissioner of the House of Corrections. Deeply concerned with the problems of blacks, Fred served for 30 years on the board of the Detroit Urban League, was president of Parkside Hospital, a black institution, and helped finance the college education of many African-American boys. He took a deep interest in immigrants and aided hundreds of newcomers to the U.S. Fred Butzel was one of the few American-born Jews who actively espoused Zionism in its early years. He was president of the United Jewish Charities, one of the original directors of the Detroit Motor Bus Company, vice president of the Detroit Board of Commerce, and a director of the Detroit Federal Savings and Loan Association. In 1952 the Detroit headquarters of the Jewish Welfare Federation and many of its agencies were named after him.

[Irving I. Katz]

BUXBAUM, NATHAN (1890–1943), Polish leader of the *Po'alei Zion movement, and later of left-wing Po'alei Zion. Buxbaum was born in Lemberg (Lvov) and while at school, he was first secretary-general and from 1912 chairman of the high-school students' Po'alei Zion movement. After serving in the Austrian army during World War I, he became a leader of Po'alei Zion and edited the movement's newspaper, *Der Yidisher Arbayter*. When the party split in 1920, Buxbaum joined left-wing Po'alei Zion and edited its journal, *Folksblat*. In 1924 he moved to Warsaw where he was active in the administration of the party and contributed to its publications in Yiddish. From 1927 Buxbaum was a member of the Warsaw City Council. He visited Erez Israel in 1937 and published a series of enthusiastic articles about the labor settlements. When World War II broke out, he lived in Lvov until he was brought to Warsaw by the National Jewish Council (the Jewish underground engaged in the rescue of Jews). He lived on the "Aryan side," but in early 1943 was deported with his wife and daughter as an "alien" to *Bergen-Belsen, from where he was taken in October 1943 to an unknown destination, probably Auschwitz.

[Getzel Kressel]

BUXTON, ANGELA (1934–), tennis player; winner of the Wimbledon Doubles Championship in 1956 with Althea Gibson and singles finalist the same year. Buxton was born in Liv-

erpool, England, her father's parents having arrived in England from Russia at the turn of the century. Her parents divorced when she was 13, and Buxton began playing tennis at a boarding school in North Wales. After winning junior tournament titles in the under-14, under-15, and under-18 categories, she and her mother moved to London to develop her potential. It was there that Buxton first faced antisemitism from the tennis establishment, which she would face her whole life. She took lessons at the Cumberland, one of London's leading clubs, but was not allowed to join. Indeed, even after reaching her 70th birthday she still had not been invited to join the exclusive All England Lawn Tennis Club, which hosts Wimbledon. "I think the antisemitism is still there," Buxton said in an interview in June 2004. "The mere fact that I'm not a member is a full sentence that speaks for itself." Buxton and her mother moved to Los Angeles in 1952, but again Buxton ran into antisemitism when the Los Angeles Tennis Club refused to let her play there. After playing on public courts under the tutelage of tennis great Bill Tilden, Buxton won her first international tournament at age 19, beating world-ranked No. 8 Anita Kanter at the Maccabiah Games in 1953. Buxton was ranked No. 4 in Britain in 1954 and No. 9 in the world in 1955, and played in the Wightman Cup for Great Britain in 1954, 1955, and 1956. Antisemitism continued to be a factor in her career, despite her top rankings, and Buxton had trouble finding doubles partners. In 1956 she joined with Althea Gibson, an African-American herself shunned by her American teammates, to form a lifetime friendship and an unbeatable doubles team. "The antisemitism made me more isolated, which I shouldn't have been," she said. "It made me more determined, more detached. People didn't realize what I was going through, because I didn't bother to spell it out. I just took another route. The result of which was that I was on my own and, for different reasons, she [Althea Gibson] was on her own. And then we came together and beat everybody." A book by Bruce Schoenfeld on the racism both of them faced, *The Match: How Two Outsiders – One Black, the Other Jewish – Forged a Friendship and Made Sports History*, was published in 2004.

Buxton was ranked No. 5 in the world in 1956 after capturing the Wimbledon doubles and reaching the singles finals. That year she also won the English Indoor and London Grass Court singles championships and the English Hard Court doubles with Darlene Hard. Buxton reached the semifinals of the French singles, and won the French Open doubles with Althea Gibson. A severe hand injury forced Buxton to retire after winning the Maccabiah Games singles in 1957, at the age of 22. She is the author of *Tackle Lawn Tennis This Way* (1958), *Starting Tennis* (1975), and *Winning Tennis Doubles Tactics* (1980), with C.M. Jones. She also helped found the Israel Tennis Centers.

[Elli Wohlgelernter (2nd ed.)]

°**BUXTORF, JOHANNES (I)** (1564–1629), Hebraist, professor of Hebrew at the University of Basle. He was also called "the elder," or "the father" (to distinguish him from his son

Johannes Buxtorf II). Buxtorf devoted himself to compiling an edition of the Hebrew Bible with the Aramaic Targum, Masoretic Text, and the most important Jewish commentaries. He employed two Jewish scholars for this work. Buxtorf secured the right of residence for scholars from the Basle authorities, since, at that time, no Jews were allowed to live there. Buxtorf contended that the masoretic vocalization and cantillation marks are of very ancient origin. He also accepted Elijah *Levita's conception that the Hebrew canon was the product of Ezra and the men of the great assembly. His Bible research brought him into the field of rabbinical literature, of which he possessed a rich collection. He maintained a correspondence with Jewish scholars in Germany, Holland, and Constantinople as well as with non-Jewish Hebrew scholars. Many of his letters are preserved at the library of the University of Basle and are an important source for the study of the spiritual conditions of his time. His famous Hebraic library, which was supplemented by his son and grandsons, became part of the Basle Public Library (1705). Among his most important works are (1) a Hebrew textbook (*Praeceptiones Grammaticae Hebraicae*, 1605), which ran into 16 editions, one of them in English translation (London, 1656); (2) several Hebrew vocabularies and lexicons: *Lexicon Hebraicum et Chaldaicum* (1607), *Concordantiae Bibliorum Hebraicae* (1632), *Lexicon Chaldaicum Talmudicum* completed by his son (1640) which, although unreliable, served for generations as a guide for Christian scholars in their Jewish studies; (3) a catalog of his Hebrew books (with 324 entries); (4) a treatise on Hebrew abbreviations; and (5) a collection of over 100 Hebrew letters of medieval scholars (*Institutio Epistolaris Hebraica*, 1610). Buxtorf's attitude toward the Jews, as voiced in his work *Juden Schuel* (1603), was negative. This book enjoyed several editions and was known in its Latin version by the name *Synagoga Judaica*.

[Zvi Avneri]

°**BUXTORF, JOHANNES (II)** (1599–1664), Hebraist, the son of Johannes Buxtorf I, succeeded his father in the chair of Bible and Hebrew studies at the University of Basle and edited some of his unpublished works. In common with his father, he held the view that the Masoretic Text is the genuine version of the Bible (*De Literarum Hebraicarum Genuina antiquitate*, 1643) and that the Hebrew square script preceded the Samaritan. The vocalization of Hebrew, he maintained, originated at least as early as the time of Ezra. These issues were the subject of his fierce controversies with another Hebraist, Ludovicus Capelus, with each defending his viewpoint in a series of scholarly studies. Buxtorf's view was formally adopted by the Swiss Church in 1675. Buxtorf translated *Maimonides' *Guide of the Perplexed* (1629), *Judah Halevi's *Kuzari* (1666), and part of Isaac *Abrabanel's commentaries to the Bible into Latin. The numerous Jewish scholars in many

lands with whom he was in contact included *Manasseh Ben Israel. His collection of letters is preserved at the university libraries of Basle and Zurich.

[Chaim M. Rabin]

BUZAGLO, Anglo-Moroccan family, sons of Moses Buzaglo, rabbi in *Mogador. ABRAHAM BUZAGLO (1710–1782), after an adventurous career, settled about 1762 in *England, and in 1765 was granted a patent for a new type of stove, known after him as “buzaglo.” Making use of this invention, he introduced a new method of physical therapy whereby muscular exercise is undertaken after the body has been thrown into a profuse sweat; he recommended this method especially for gout. For a time it had great success, and is widely referred to in the literature of that period. He also invented a carriage warmer. JOSEPH BUZAGLO (d. 1767), who called himself De Paz, had a lively career in *France, during which he was condemned to the galleys, invented an incendiary bullet, and was imprisoned in the Bastille on a charge of spying for England. On his release from the Bastille he negotiated a commercial treaty between *Denmark and *Morocco, but when difficulties ensued, the sultan condemned him to death by burning and he again spent a long time in prison. Released through the intercession of the Danish authorities, he followed his brothers to England, and died in St. Eustatius (West Indies) on a fruitless journey to trace his son, who had become a soldier. Joseph’s other brother was SHALOM *BUZAGLO.

[Cecil Roth]

BUZAGLO (Buzaglio, Buzagli, Busaglo), SHALOM BEN MOSES (1700–1780), Moroccan kabbalist. Buzaglo was born in Marrakesh. Among his teachers in Kabbalah were Abraham b. Israel *Azulai, one of the rabbis of Marrakesh (d. 1741), Jacob Pinto, and Isaiah ha-Kohen. In his native land Buzaglo was persecuted by the sultan and was subjected to torture by fire. As a result of this experience he signed himself, “brand plucked out of the fire” (Zech. 3:2). In about 1745 he left Morocco and settled in London and there wrote his books on esoteric and exoteric matters. His major work was his commentary on the *Zohar. In the controversy between Jacob *Emden and Jonathan *Eybeschutz both sides attempted to influence Buzaglo to endorse their particular points of view but he tried to remain neutral. He acknowledged, however, that Eybeschutz’ amulets were Shabbatean in character, but he also accepted the argument that they had been falsified. Buzaglo’s commentaries on the Zohar were first published in 1750–1755 in Amsterdam and London. These are *Mikdash Melekh*, a commentary on the whole Zohar, book by book, in four volumes (to which he also added Moses *Zacuto’s commentary

from a manuscript); *Hadrat Melekh*, on difficult passages in the Zohar; *Penei Melekh*, *Hod Melekh*, and *Kevod Melekh*, all on the *Idras* in the Zohar and on *Sifra di-Zeni’uta Kisse Melekh* on *Tikkunei ha-Zohar*. *Mikdash Melekh* was the first systematic commentary on the whole Zohar to be published. It was very popular and was printed several times. Subsequently the text of the Zohar together with Buzaglo’s commentaries were printed in Leghorn (1858) and in Zolkiew (1862). These were based mainly on Lurianic Kabbalah, including all the scattered work of Isaac *Luria’s disciples, which Buzaglo usually copied word for word, occasionally quoting other opinions. Although this book does not convey the literal meaning of the Zohar, it has had a continuing value for scholars. In several books he added his own novellae on the Talmud. He spent his last years in London where he seems to have served for a time as a member of an Ashkenazi *bet din*. A number of his pamphlets referring to a halakhic dispute which broke out in London in 1774 were also published. He died in London. Several of his manuscripts were preserved in the *bet ha-midrash* of the Great Synagogue in London.

[Gershon Scholem]

BUZAU (Rom. **Buzău**), town in Walachia, central Romania. The Jewish community there grew in the 19th century from three families in 1831 to 1,660 persons (7.6% of the total population) in 1899. An organized community was formed in the 1830s, but the communal organization in the second half of the 19th century was unstable. A Jewish school was founded in 1873. According to the official census, the Jewish population numbered 1,604 (4.5% of the total population) in 1930. Communal institutions before World War II included an elementary school for boys and for girls, a kindergarten and a bathhouse.

In December 1940, all Jews were sent to forced labor. In July 1941, all Jewish men between 18 and 60 were arrested and held prisoner until the end of the year. Jews from other Romanian cities (e.g., Targu-Neamt, Iasi) were forcibly expelled to Buzau. The community had to help them as well, including 900 orphans from Transnistria who arrived in April 1944. After World War II, the number of Jews in Buzau diminished considerably as a result of emigration. The Jewish population numbered 274 in 1956. In 1970 there about 30 families with a rabbi and *shoḥet*. In 2002, 22 Jews lived in Buzau.

BUZZARD (Heb. **אֵיָאָה**, *ayyah*), bird of prey of which different species are found in Israel. The long-legged buzzard (*Buteo ferox*) feeds on birds, mammals, and insects. It can see very far and is apparently the *ayyah* referred to in Job 28:7 (AV: “vulture”), where the desert is described as a place which “even the eye of the *ayyah* has not seen.” It is enumerated among the unclean animals (Lev. 11:14; Deut. 14:13). According to Abbahu, it is identical with the *ra'ah* mentioned in the same verse “and why is it called *ra'ah* – because of its remarkable sight” (*ra'ah*, it saw), adding “it can be in Babylon and see a carcass in the land of Israel!” (Hil. 63b).

[Jehuda Feliks]

BYADULYA-YASAKAR, ZMITROK (pen name of **Samuil Yefimovich Plavnik**; 1886–1941), Soviet Belorussian writer, who was one of the founders of Belorussian literature. The son of a coachman, Byadulya-Yasakar studied in a yeshivah and began writing Hebrew verse at the age of 13. Only glimpses of this early phase of his career appear in his autobiographical novel *V dremuchikh lesakh* (“In the Depths of the Forest,” 1939). Byadulya-Yasakar began publishing his works in 1910, under the pseudonyms “Byadulya” for prose works and “Yasakar” for verse. His prerevolutionary books portrayed downtrodden Belorussian peasants. An impassioned Belorussian nationalist, Byadulya-Yasakar was at first hostile to the Communist regime, to which he only gradually became reconciled. Except for the tales and poems rooted in Belorussian folklore – *Paleskiya bayki* (“Fairy Tales of Polesie,” 1922) and *Yaryla* (1922) – his later work was conventional. Byadulya-Yasakar’s more important achievements include two historical novels, *Salavey* (“Nightingale,” 1927) and *Yazep Krushinski* (1929–1932); the background to the latter is the Russian Civil War.

[Maurice Friedberg]

BYDGOSZCZ (Ger. **Bromberg**), capital of Bydgoszcz province, north central Poland. There were Jews living in the fortress of Bydgoszcz (*castrum Bydgoscense*) in the 11th and 12th centuries. Later a considerable number of Jews, engaged in trading provisions with Gdańsk, were found in the city adjoining the fortress, which was built by the order of Casimir the Great in 1346. In 1555 the city was authorized to expel the Jews, who moved to the nearby city of Fordon. The authorization was annulled by Frederick the Great after Bydgoszcz was annexed by Prussia in 1772. By 1788 there were 41 Jews living in Bydgoszcz, chiefly occupied in the silk trade, but a community was not officially established in Bydgoszcz until 1809. Jewish settlement in Bydgoszcz was subject to the agreement of the municipality until this restriction was revoked by the “Jewish Law” of July 23, 1847; subsequently the number of Jewish

residents increased. The status of the Jewish community was enhanced through the efforts of the banker Louis Aronsohn, a member of the Prussian Landtag (Diet). In 1884 a magnificent synagogue was established, as well as a school and benevolent institutions. The 27 communities of the district formed a federation, presided over by Aronsohn in 1897. In 1905 the Jews numbered 2,600 out of a total population of 54,231. When the city was incorporated into Poland in 1918, most of the Bydgoszcz Jews moved to Germany; the community archives were transferred to the general archives of the German Jews in Berlin. In 1924 there were only 1,000 Jews living in Bydgoszcz, but by 1931 their number had increased to 3,000.

[Nathan Michael Gelber]

Holocaust Period

In the period of World War II Bydgoszcz was the second main town (after Danzig) of “Reichsgau Danzig-Westpreussen,” a district created and incorporated into the Nazi Reich by a decree of Oct. 26, 1939, several weeks after the outbreak of World War II. Many of the Jewish families living in Bydgoszcz had fled before the entry of the German army on Sept. 5. Those who stayed behind were murdered or expelled to General Gouvenment territory, making the town one of the first in Poland to be “free of Jews” (*juderein*). After World War II the community was not rebuilt.

BYK, EMIL (1845–1906), lawyer, politician, and assimilationist leader in Austrian *Galicia. Byk was among the founders in 1869 of *Shomer Israel, the first Jewish political organization in Galicia, which adopted at first the policy of liberalism within the Austrian centralist framework. On Byk’s initiative the Jewish communities in Galicia held a convention in Lemberg (LVOV) in July 1878 in order to establish their national framework. During the elections for the Austrian parliament in 1873, Shomer Israel, under Byk’s leadership, adopted a special list of candidates in alignment with the Ruthenians, which was directed against the Poles. Later, however, the changed political situation caused Byk to alter his views. In 1879 he began to support the Polish national platform in Galicia and joined the Polish faction in the Austrian parliament. In internal Jewish affairs Byk also took up a pro-Polish assimilationist stand. He was one of the most determined opponents of the Zionist movement, and also opposed in the Austrian parliament, to which he was first elected as deputy for Brody in 1891, the proposed establishment of a special Jewish *curia* (electoral constituency). He was president of the Lemberg Jewish community (1903–06), and led it in an assimilationist pro-Polish spirit. Byk considered the central government in Vienna and not the Poles responsible for antisemitism in Galicia. Before his death in 1906, he convened representatives of the communities in Galicia to rally opposition to the claims put for-

ward by anti-assimilationist Jews. The Zionists demonstrated against the convention.

[Nathan Michael Gelber]

BYKHOV (or **Stary Bykhov**), city on the River Dnieper, Mogilev district, Belarus. It was one of the most important fortified cities in Belorussia. The Jewish community is mentioned in the reports of the period of the *Chmielnicki massacres 1648–49. In 1652 the Lithuanian Council (Va'ad ha-Medinah) decided to grant 40 zloti to the local synagogue. The minutes book of the *hevra kaddisha* of Bykhov contains entries from 1673. Three hundred Jews in Bykhov were massacred when it was captured by the Russians in 1659. For the help they extended to Polish troops in 1662, the Jews received a grant of privilege from the king Michael Wisniowiecki in 1669 relieving them of taxes for 20 years to ease conditions after the destruction of the city. A conference of the communities of the “Lands of Russia” (a part of Lithuanian Council; see *Councils of the Lands) met in Bykhov in 1670. In 1758 the community was given a special privilege by the lord of the city. The Jewish population numbered 887 in 1766; 3,046 in 1847; 3,037 in 1897 (47.6% of the total); 2,575 in 1926 (32.5%); and 2,295 (total population 11,026) in 1939. During the Soviet period most of the Jews were artisans and laborers and 44 families joined two kolkhozes. Bykhov was occupied by the Germans on July 4, 1941, and in September they murdered 250 Jews. In November, 4,000 Jews from the town and environs were held in the local castle for a few days without food and water and then executed. In 1943 children of mixed marriages were murdered. Two monuments were erected in Bykhov in memory of those killed. One bears the Russian inscription “Here lie buried the Jews of Bykhov murdered by German Fascists” above which is a *magen david*. In 1970 about 800 Jews lived in Bykhov; there was no synagogue.

[Simha Katz / Shmuel Spector (2nd ed.)]

***BYRON, GEORGE GORDON, LORD** (1788–1824), English poet. Byron's affection for the Old Testament and romantic interest in oppressed peoples led him to collaborate with Isaac *Nathan in publishing the *Hebrew Melodies* for which Nathan composed or adapted the music. Though not all are specifically Jewish in theme, some express sympathy for the plight of the Jews. They were published in 1815 as *A Selection of Hebrew Melodies, Ancient and Modern; with appropriate symphonies and accompaniments; the poetry written expressly for the work by the Right Hon. Lord Byron*. One of the best known of these poems is “The Destruction of Sennacherib.” “Weep for those that wept by Babel's Stream” contains the familiar lines:

“The wild dove hath her nest/the fox his cave/Mankind their Country/Israel but the grave!”

These poems were translated into Hebrew by J.L. Gordon as *Zemirot Yisrael* (1884) and into Yiddish by Nathan Horowitz (1926). There are musical settings by Balakirev, *Hiller, Loewe, *Mendelssohn, Moussorgski, Schumann, *Joachim, Hugo Wolf, and others.

In a later work, the satirical *Age of Bronze* (1823), Byron adopted a hostile attitude toward the Jews, whose emancipation he opposed and whose alleged support for foreign tyranny (Turks against Greeks) he denounced with many unpleasant allusions. More controversy was aroused in Christian circles by Byron's biblical verse play, *Cain* (1821), which reflected the radical poet's religious skepticism.

BYTOM (Ger. **Beuthen**), town in *Silesia; in Germany until 1945. There were probably Jews living in Bytom before the *Black Death (1349), but the community disappeared; it was reestablished in 1655–59 by Polish Jews. In 1708 Jews without right of domicile in Bytom were expelled, those who remained being mainly taxfarmers. A cemetery was established in 1732, the first synagogue built in 1810, and a larger one in 1869. The Jewish population numbered seven persons in 1784; 131 in 1792; 255 in 1810; 2,549 in 1900; 3,500 in 1932 (3.77% of the total population), and 1,362 in 1939. A number of Polish Jews settled there after World War I. Attacks on Jews and Jewish shops occurred as early as 1923. In 1932 the community maintained a synagogue, an elementary and a religious school, and benevolent and cultural organizations. During World War II, 1,078 Jews were deported from Bytom (1942), most of them ending up in *Auschwitz. After the war a new community was established by Polish Jews, which maintained a Hebrew school and a producers' cooperative. In 1962 there were 248 Jews living in Bytom.

BYZANTINE EMPIRE. Jewish communities existed in the Byzantine Empire throughout its history, from the foundation of *Constantinople in 330 to the Ottoman conquest of the city in 1453. The centers of Jewish population and the status of the Jews there underwent drastic changes throughout this long period and shifted under the impact of events within and outside the empire. The history of the Jews in the Byzantine Empire can therefore be divided into three major sections.

From Constantine to the Iconoclastic Period (c. 720).

LEGAL AND SOCIAL STATUS. Numerous Jewish communities were located in the eastern Mediterranean region, including the Balkans, present-day Greece, Asia Minor, Constantinople, Syria, Erez Israel (which alone had 43 communities), and Egypt. The legal status accorded to the Jewish faith within the Roman Empire as a *religio licita* (a religion permitted by law) was not changed explicitly. However, the attitude of the Byzantine rulers and society in practice, the methods employed by the Church, the language of official documents and legislation on details combined to humiliate the Jews and narrow the confines of Jewish society and religion and the opportunities open to Jews. Almost at the beginning of his legislative activity *Constantine described the Jewish religion as “baleful,” and warned Jews, under threat of capital punishment, not to molest converts to Christianity. The second part of the law containing this injunction made it a crime to become a Jew: a Jew who circumcised his slave forfeited ownership of the slave (Cod. Theod. 16:8 (4, 1, 5)). Constantine and his mother Helena inspired a movement to Christianize Erez Israel. His son Constantius added to his father’s legislation a prohibition

on marriage between Jews and Christians. An abortive revolt by the Jews in Erez Israel against the provincial commander Gallus during his reign was suppressed in 351. The benign interlude of the reign of Emperor *Julian the Apostate only resulted in increased enmity on the Christian side and disappointment to the Jews.

The failure of Julian’s plans to revive the pagan empire and its tolerance of the Jewish religion contributed to the breakdown of the old concepts and existent attitudes among religions and people. The consistent fanaticism prevailing in Byzantine Christendom covers the long span from Julian’s death until the fall of Constantinople in 1453. Emperor *Theodosius I revived missionary activity and prohibited Jewish parents from disinheriting children who had apostatized to Christianity. However, the burning of the synagogue in Callinicum (Mesopotamia) in 388 led to a clash between the imperial traditions and the aims of the Church. The emperor still tried to uphold the imperial tradition of law and order for all, including the Jews. He therefore ordered that the perpetrators of the outrage in Callinicum should be punished and the synagogue reconstructed at their expense. *Ambrose, the

Byzantine Empire end of 12th century showing the major centers of Jewish settlement.

bishop of Milan, viewed the emperor's order as sacrilegious and succeeded in compelling him to annul it. Thus toward the end of the fourth century the humiliation of the Jews and ascendancy of ecclesiastical ideas in regulating their affairs became established in the Byzantine Empire in both theory and practice. The temporary expulsion of the Jews from *Alexandria by the patriarch Cyril in 415 also marked a victory for the hatred stirred up by the Church among the populace with assistance from the authorities. The code of *Theodosius II (438) summed up the former anti-Jewish legislation, and included a prohibition on building new synagogues, permitting structural repairs only if absolutely necessary. Certain Purim celebrations were forbidden. In spirit and language this fifth-century codification crystallizes the atmosphere prevailing in the Byzantine Empire in the fourth century. A Church rent by internal struggles, bent on heresy hunting with the help of the imperial authority, and using increasingly violent and uncouth language toward its Christian adversaries, developed over the fourth century a vitriolic anti-Jewish polemic literature. Both writers and preachers seemingly vied with one another in their acrimony toward, and vilification of, the Jews and Judaism. In the eight sermons delivered by John Chrysostom from his pulpit in Antioch in 387, every imaginable evil is ascribed to the Jews. The venom embodied in these writings and sermons to a large degree lies at the root of medieval Jew-hatred, spreading beyond the boundaries of the Byzantine Empire and its culture.

In the sixth century the reign of *Justinian I inaugurated a hardening of attitudes toward the Jews and a departure for the worse in their treatment. The Jewish-Arab kingdom of *Himyar in southern Arabia was destroyed on Byzantine instigation. Justinian attempted to regulate internal Jewish life and modes of worship in accordance with what he considered necessary and right from a Christian point of view through a number of laws and practical actions. In his famous *novella* 146, of the year 553, he even attempted to dictate to the Jews concerning their divine worship and forbade the use of the *deuterosis* (Mishnah) for understanding the Torah; he also took it upon himself to lay down which biblical translation (*Targum) they might use. This gross interference in Jewish religious practice is justified in the *novella* by hints that there was a division within Jewish society on these matters. However, while it is known that Greek was then beginning to be used in the Byzantine communities, which developed the "Romanian" rite of prayer, it is also certain that no professing Jews would have asked for an imperial order to use translations which were mainly Christological. Justinian's tendency to resort to coercion found its severest expression in his *novella* 37, of 535, prohibiting the practice of Judaism in the reconquered territories in North Africa. All these measures were included in his *Corpus juris civilis*, with other anti-Jewish legislation. The first half of the sixth century saw a severely enforced but short-lived attempt by the emperor to abolish formally the last shreds left to Judaism of its status as a *religio licita*. Under assault from enemies from both within and without, the

emperors of the weak empire of the second half of the sixth and first half of the seventh centuries permitted anti-Jewish riots and forced conversions of the Jews, such as ordered by Emperor Phocas in 608. The Jews reacted by revolts in self-defense. In the uprising near Antioch in 608 the patriarch was killed. The clashes of opposing forces and violence came to a head under Emperor *Heraclius, when the Jews, notable among them *Benjamin of Tiberias, allied themselves with the invading Persians during their capture of Jerusalem. On its recapture in 629, Heraclius avenged himself on the Jewish population by a series of massacres.

The appearance of Islam and the Muslim conquests deprived the Byzantine Empire of Erez Israel and Egypt among other territories and awakened messianic expectations among the Jews (see *Messianic movements). In the remnant left to the Byzantine Empire the prevailing attitude toward the Jews was not relaxed. A council presided over by Emperor Justinian I in 692 prohibited Jews and Christians from bathing together in public places, and Christians from consulting Jewish physicians.

SOCIAL AND CULTURAL LIFE. At the beginning of this period, the Jews formed part and parcel of civic life in the towns. Like others, they refused to serve in the decurionate; Constantine's enforcement of their obligation to do so reflected the general reluctance of the citizenry to undertake this onerous municipal function and a specifically anti-Jewish bias on the part of the emperor. The Jews gradually withdrew from, or were forced out of, civic life, although they still continued to be active in the *circus parties for a long time. The abolition of the Jewish patriarchate (see *Nasi) in Erez Israel in 425 threw back Jewish communal life onto the local leadership, already well established before this troubled time. The community's elders (*presbyteroi*), *archipherecites, and leaders with other titles led Jewish society in the various localities in all aspects of life. Apparently birth and wealth, in addition to scholarship, were major factors in attaining these leading positions. In the economic sphere, the Jews were only gradually ousted from their professions and positions of wealth, and from their places of residence in the cities (see *Constantinople). Many of them engaged in overland and maritime commerce. In a number of areas, such as Erez Israel and Egypt, there was still a solid Jewish peasant population. In the sixth century *dyeing is mentioned as a major Jewish industry, remaining so down to the end of the Byzantine Empire.

In the cultural sphere, the center in Erez Israel and its institutions led creative endeavor within the Byzantine communities in every field, even after the Arab incursions. Erez Israel was the main source of Hebrew liturgical poetry, its leading poets including *Yose b. Yose, *Yannai, and Eleazar *Kallir. The monk Romanos, an apostate from Judaism, had a formative influence on Byzantine hymnology, transposing the mode of religious expression and worship used by the *paytanim* to the Byzantine liturgy and cultural expression. The violent changes at the end of the seventh and beginning

of the eighth centuries aroused visions of an apocalyptic nature (see *Apocalypse) among Byzantine Jewry.

From the Iconoclastic Period to the Fourth Crusade (1204)

LEGAL AND SOCIAL STATUS. Throughout this period Jews were living in the major cities in the territories still remaining under Byzantine rule. The situation of the Jews in the Byzantine domains of southern Italy is well documented through the contacts they had with Erez Israel as well as with countries under Christian rule, and by information given in the chronicle of *Ahimaaz. Main centers were *Bari, *Oria, and *Otranto. *Benjamin of Tudela in the mid-12th century describes many communities in the Balkans and Asia Minor, and in Constantinople, with their varied economy. The very nature of the Iconoclastic movement made its adherents suspicious of possible Jewish influences. The actual degree of such influence, if any, on the emperors and priests who rejected icon worship is still very much in dispute. Their opponents, the icon worshipers, regarded this influence as a certainty, and the iconoclasts were branded in sermons and tales circulating at the time as “Jews.” The final restoration of icon worship in 843 was accompanied by renewed violent anti-Jewish manifestations. *Basil I issued a decree ordering the forcible conversion of his Jewish subjects in 873–74, and in the Ahimaaz chronicle he is depicted as the archenemy of Judaism and the Jews. The decree was rescinded by Leo VI. In 943 *Romanus I Lecapenus made another attempt at forcible conversion. There are reports of Jews who fled to Khazaria from these persecutions. Byzantine Jewry in the 11th and 12th centuries apparently lived under a regime of absolute humiliation although assured of relative safety for their lives and property.

SOCIAL AND CULTURAL LIFE. The economic structure of the Jews in the Byzantine Empire remained substantially the same in this period. Benjamin of Tudela found Jews in the Balkans engaged in agriculture, besides being occupied in the silk weaving and cloth dyeing industries which were widespread Jewish occupations throughout the Byzantine communities. According to his descriptions of the communal leadership, the smaller communities were headed by two elders and the larger by five. He seems to indicate that the *Karaites had a separate communal organization and leadership. The most flourishing area of Byzantine Jewish cultural life at the time was to be found in southern Italy. The stories in the Ahimaaz chronicle describe the strong ties of the Jews there with the center of learning in Erez Israel and denote that a good knowledge of Hebrew was widespread, as well as showing the imprint of mystical and even magical elements on Jewish society in this area. Members of the upper circles of Jewish society are pictured as living a warm and diversified family life. The *Josippon chronicle, which was compiled in southern Italy in this period, reflects in many places the influence of Byzantine views and chronological techniques. Southern Italy in the 9th to 11th centuries produced a considerable number of

paytanim. Through its contacts with the north, it became the fountainhead of the Jewish culture of *Ashkenaz and the matrix of the Ashkenazi prayer rite. The Karaite communities also had a rich and variegated cultural life from the second half of the 11th century, centering around Constantinople. Prominent Karaite scholars of Byzantium were *Jacob b. Reuben, Judah *Hadassi, and *Tobias b. Moses. In some of the writings of this period apocalyptic ideas continue to find expression, as in the Vision of *Daniel. The First Crusade of 1096 gave rise to a messianic movement in Salonika.

From the Fourth Crusade to the Capture of Constantinople by the Turks in 1453

LEGAL AND SOCIAL STATUS. The Fourth Crusade (1204) disrupted the Byzantine Empire and placed its Jewish communities under the various administrations set up by the Latin (i.e., Western European) countries which had taken part in the crusade. The Jewish quarter in Constantinople, Pera, was burned down and pillaged during the sack of the city by the Latins. After the Latin rule ended in 1261 Jews lived both in Pera and outside the area, including parts of the city where the Venetians had been given special rights and commercial privileges. The existence of a Jewish quarter outside Pera elicited a complaint from the patriarch Athanasius to Emperor Andronicus II (1282–1328), who before 1319 assigned the Jews a quarter near that of the Venetians, although they were not restricted to that area. Many engaged in tanning, and the majority apparently were wealthy. Neither the native dynasty nor the Latin rulers made basic changes in the status of the Jews. In the parts of Greece and the Balkans, however, which fell to various Greek rulers and minor royalty (often referred to as “despots”), proscriptions of Judaism were issued at times, as in Epirus and Salonika under Theodore I Angelus (1214–1230), and in Nicaea under John III Vatatzes (1222–1254). Other former imperial lands, such as Chalcis, Rhodes, Patras, and Cyprus, were ruled by the Genoese, the Venetians, the Knights of Malta, the Veronese, and the Turks. The Jews continued to pursue their previous occupations, particularly the silk trade and commerce.

Social and Cultural Life

Jews in all these areas continued to follow the Romaniot rite which developed specific features. Among the Karaites there was extensive cultural activity, represented by such scholars as *Aaron b. Joseph ha-Rofe, the *Bashyazi family, and Caleb b. Elijah *Afendopolo. The year 1453 marked the end of the Byzantine Empire. For the Jews its downfall, after a short period of disruption, brought a renewed lease on life in the *Ottoman Empire in much improved conditions. Less than half a century later, the Jews exiled from Spain and Portugal found communities in the former Byzantine Empire ready and able to shoulder the burden of absorbing the refugees economically, and capable of integrating their social and cultural life. Although little information is available about conditions in the communities in this period, scholars and leaders of the stature of Elijah b. Abraham *Mizrahi and Moses b. Elijah

*Capsali, with their diversified scholarship, creative abilities, and well-developed methods of leadership, could not have arisen out of a void. That the conditions existed in which they were able to flourish shows that in the period before the Ottoman conquest, Byzantine Romaniot Jewry had large reserves of intellectual ability and social cohesion, continuing a situation which still prevailed after the troubles of 1204.

[Andrew Sharf]

BZENEC (Ger. **Bisenz**), town in Moravia, Czech Republic. The synagogue demolished in 1859 had probably stood for 500 years. Its community was one of the oldest in Moravia. It is referred to by a Bzenec medieval chronicler as *nidus judaeorum* (“nest of Jews”). The Jewish quarter was destroyed in 1458. In 1604 there were 400 Jewish residents, living in 49 buildings, and a Jewish hospital. The Jewish quarter was again destroyed in 1605. The community suffered extreme hardship during the Prussian invasion of 1742; in 1777 the 93 houses in Jewish ownership were burnt down. It became a political community (see **Politische Gemeinden*) in 1852. A new synagogue was built in 1863. There was a matzah factory in Bzenec and a sugar refinery owned by Rudolph *Auspitz. Rabbis of Bzenec include Nehemiah *Bruell (1866–70) and Moses Rosenmann (1894–97). The community numbered 137 families in 1753; 965 persons in 1857; 416 in 1900; and 138 (3.4% of the total population) in 1930. In Jan. 1943 the Jews in Bzenec were deported to Theresienstadt via *Kyjov and later to Nazi death camps, and the synagogue equipment was sent to the Jewish Central Museum in Prague. A small congregation administered by the Kyjov community was reestablished after World War II. In 1956 a monument in memory of the Nazi victims was dedicated in the cemetery.

Initial "C" at the opening of II Chronicles in the Bible of Saint Martial of Limoges, France, 12th century, depicting Solomon enthroned. Paris, Bibliothèque Nationale, ms. Lat. 8, vol. II, fol. 102.

CA-COF

CAAN, JAMES (1939–), U.S. actor. Son of a German Jewish butcher, Caan grew up in the working-class neighborhood of Sunnyside, Queens, New York City, home to a mix of Italian, Irish, and Jewish families. Caan played football for Michigan State University, but transferred by the end of his first year to Hofstra University. After taking part in a small project at a children's theater, Caan was accepted to the Neighborhood Playhouse in 1960. His film debut was an uncredited part in Billy Wilder's *Irma La Douce* (1963). And while his role as Brian Piccolo in *Brian's Song* (1971) earned him critical attention, it was his break-out performance as family enforcer Sonny Corleone in Francis Ford Coppola's *The Godfather* (1972) that gained him the most notoriety, garnering him an Oscar nomination for best supporting actor and two nods as "Italian of the Year." He followed that performance with appearances in a diverse range of films such as *Freebie and the Bean* (1974), *The Gambler* (1974), and *Rollerball* (1975). A longtime rodeo fan with the nickname "The Jewish Cowboy," Caan snuck off during production of *Funny Lady* (1975) to take part in a roping competition in Palm Springs. Married four times, he lived in the Playboy Mansion after his divorce from second wife, Sheila Ryan, in the late 1970s. Caan made his directorial debut with *Hide in Plain Sight* (1980) and then starred in the well-received *Thief* (1981). After *Godfather II* (1974), he worked with Coppola again in the Vietnam War-era

film *Gardens of Stone* (1987). Caan followed with such films as *Alien Nation* (1988), *Dick Tracy* (1990), *Misery* (1990), *Honey-moon in Vegas* (1992), and *Eraser* (1996). In 2004 he became known to a new generation with his starring role on the hit TV series *Las Vegas*.

[Adam Wills (2nd ed.)]

CABBAGE, vegetable known in rabbinic literature as *keruv*, i.e., kale (*Brassica oleracea var. acephala*). Highly regarded for nutritive and medicinal purposes (Ber. 44b), its leaves were eaten raw or boiled (*ibid.* 38b), its stem, called *isparagos* in the Mishnah (Ned. 6:10), being likewise used as food. In addition to kale which was grown as a perennial, garden cabbage, called *teruvtor* in the Mishnah, was also cultivated (Kil. 1:3).
