Glossary

840

Initial letter "G" of the word "Ge" ("I" in old French) at the opening of a paraphrase of and commentary on I Sam. 19:11 in Old French and Latin. The historiated initial in this 13th-century manuscript depicts Saul sending messengers after David. Munich, Bayerische Staatsbibliothek, Cod. gall. 16, fol. 36r.

GOS-GY

GOSHEN (Heb. גֹּשֶׁן), a grazing area in the N.E. of lower Egypt, east of the delta. Goshen was the residence assigned to Jacob and his family, and it was there that the Israelites lived in Egypt (Gen. 45:10; Ex. 9:26). It is currently assumed that the name is derived from the Semitic root גִּשָּׁן, i.e., compact, solid, and fertile land, suitable for grazing and certain types of cultivation. In the Bible Goshen is described as "the best part of the land" of Egypt (Gen. 47:6). It is also called "the land of Rameses" (Gen. 47:11) and it was probably identical with or not far from the "field of *Zoan" (Tanis; Ps. 78:12, 43), the name of the Egyptian capital during the *Hyksos period. The Septuagint (Gen. 46:28) renders Goshen as Heroopolis (i.e., *Pithom, Ex. 1:11), and once (Gen. 46:34) as "the Arab land of Gesem." Therefore it is generally assumed that Goshen is to be located in Wādi Tumeilāt, which stretches from the eastern arm of the Nile to the Great Bitter Lake and is known to be excellent pasture land. Support for this identification is found in a papyrus (Pritchard, Texts, 259) from the end of the 13th century B.C.E. which describes how nomadic shepherds moved from the land of Edom, past the Mernep-tah fortress in Teku to the wells of Pithom in order to keep themselves and their cattle alive (cf. Gen. 45:10; 47:4). Teku is Wādi Tumeilāt. The rulers of Egypt would therefore seem to have permitted nomadic Semitic tribes to come to Goshen and graze there.

[Pinhas Artzi]

GOSHEN-GOTTSTEIN, MOSHE (1925–1991), scholar of Semitic linguistics. Born in Berlin, Goshen-Gottstein immigrated to Palestine in 1939. He studied at the Hebrew University of Jerusalem and taught there from 1950 on, becoming professor of Semitic linguistics and biblical philology in 1967. He was also director of the lexicographical institute and biblical research institute of Bar-Ilan University. In 1988 he was awarded the Israel Prize in Jewish studies.

His three areas of research were biblical studies, Hebrew linguistics, and Semitic linguistics. His numerous articles and books included *Medieval Hebrew Syntax and Vocabulary as Influenced by Arabic*, *Introduction to the Lexicography of Modern Hebrew*, and *The Aleppo Codex*. He worked on a number of dictionaries, among them the *Millon ha-Ivrit ha-Hadashah* ("Dictionary of Modern Hebrew"), the first synchronic dictionary of Hebrew, of which only the introductory volume was published (1969).

GOSLAR, city in Lower Saxony, Germany. Jewish merchants from *Worms are mentioned there in 1074 and 1114. In 1252 the city demanded the rights to the taxes from its Jewish settlement for itself, opposing the royal prerogative on the Jews as **Servi camerae*; royal taxes were levied on them through the municipality from 1274. In 1312 the community paid a direct tax identical to that paid by Christians. The city council intervened on behalf of the community against the exactions of Emperor Louis IV in 1336 and 1340. The community of Goslar did not suffer persecution even at the time of the *Black Death, and the local form of the Jewish *oath was relatively free of degrading formulas. Problems of residence rights (**herem*

ha-yishuv) gave rise to bitter quarrels between old and new settlers, which the municipal council was often called upon to arbitrate, and resulted in a split in the community in 1331 which lasted for seven years. At that time there were approximately 30 Jewish taxpayers.

From 1312 the city council issued an increasing number of *Judenbriefe* conferring rights and obligations on individual Jews, so that by 1340 at least half of the Jews in Goslar were not included in the community for taxation purposes. This process continued in the latter half of the 14th century, accompanied by increased taxation and decline of the community. By 1400 not even a *minyán* could be organized, and in 1414 several Jews secretly left for Brunswick to evade a heavy imperial tax. A **blood libel* about 1440 contributed to the decline of the community. A community in Goslar is mentioned in 1615, when a *parnas* was installed and took the oath of office. The *pinkas* registering a community of nine members was begun in 1677. A synagogue was built in 1693.

The community numbered 43 persons in 1871 and 38 in 1933. On **Kristallnacht*, Nov. 10, 1938, the synagogue (consecrated in 1802), and Jewish shops and homes were attacked and looted. The well-preserved community archives were destroyed. Twenty-two members of the community perished during the Holocaust. A new community was organized, with 46 members in 1948, but declined soon afterward.

[Henry Wasserman]

GOSLAR, HANS (1889–1945), a senior official of the Prussian government during the Weimar Republic and a leader of the **Mizrachi* movement in Germany. Born in Hanover, Goslar wrote for periodicals, specializing in economic problems. He became an early adherent of Zionism and in 1911 published a book entitled *Die Krisis der juedischen Jugend Deutschlands* (1911). During World War I he served in Eastern Europe, where he came to know the Jewish masses and this profoundly revised his religious outlook. On his return to Germany in 1919, his activities in the German Social Democratic Party earned him the title of Ministerialrat and an appointment as director of the press section of the Prussian government, a post he retained until he resigned in 1932. In 1919 he published *Die Sexualethik der juedischen Wiedergeburt*, in which he urged a return to Jewish family ethics. He maintained his general Jewish, Zionist, and Mizrachi activities and published several books on Jewish as well as general themes. In 1933 Goslar immigrated to Amsterdam, where he continued his communal activities, especially on behalf of the rescue of Jews from Germany. He was a neighbor of Anne **Frank's* family, and his daughter was Anne's friend, mentioned in Anne's diary on several occasions.

In 1943 he was deported to the **Westerbork* concentration camp and in 1944 was transferred to **Bergen-Belsen*, where he died shortly before the liberation in 1945. He also wrote *Juedische Weltherrschaft: Phantasiegebilde oder Wirklichkeit?* (1919) and *Hygiene und Judentum* (1930).

[Getzel Kressel]

GOSLAR, NAPHTALI HIRSCH BEN JACOB (c. 1700–?), rabbi and philosopher. Goslar acted as *dayyan* in his native **Halberstadt*, but later moved to Amsterdam. Only in his 50th year did he begin to study Maimonides' *Guide* and religious philosophy in general. In his *Ma'amar Efsharut ha-Tivit* (Treatise on Natural Potentiality, Amsterdam, 1762), composed in dialogue form and partly in rhymed prose, he criticizes the doctrine of an uncreated prime matter and polemicizes against deism. The appendix to the *Ma'amar* contains talmudic novellae under the title *Meromei Sadeh*. Goslar addressed two letters, dealing with theological problems, to his son Samuel who too was *dayyan* at Halberstadt (published in German translation by B.H. Auerbach, *Geschichte der israelitischen Gemeinde Halberstadt* (1866), 100ff., 199ff.).

[Moshe Nahum Zobel]

GOSTYNIN, town in central Poland. The Jewish population numbered 157 in 1765, 634 in 1856, 1,849 in 1897, and 1,831 (27.5% of the total) in 1921. Between 1823 and 1862 there were special residential quarters for the Jews. The old synagogue, destroyed by fire, was rebuilt in 1899. It was situated in the former Jewish lane, and a side alley there was popularly known as the "alley of the dead," recalling the location of the old Jewish cemetery. The *hasidic* leader and rabbi Jehiel Meir **Lipschuetz* lived in Gostynin in the 19th century. There were 2,269 Jews living in Gostynin on the eve of World War II.

Holocaust Period

Immediately after the German army entered the town in Sept. 1939, mass arrests and attacks on Jews began along with requisition and looting of Jewish property. Jews were ordered to hew the old wooden synagogue into pieces and carry them to German inhabitants for fuel. They were ordered to pay two "contributions" (fines) in succession; when the president of the community was unable to collect the second sum in time, he sent a delegation to the Warsaw Jewish community (on a German suggestion) and received the required amount.

A ghetto was set up in Gostynin which was at first open, but subsequently surrounded by barbed wire. Order was kept by Jewish police. Most of the Jews left the ghetto every morning for hard labor assignments. In August 1941 transports of men and women began to be sent to labor camps in the Warthegau. The ghetto was liquidated on April 16–17,

1942, when nearly 2,000 Jews were sent to the death camp at Chelmno.

By the end of the war all traces of Jewish life in the town had been obliterated. The cemetery had been desecrated and destroyed, the tombstones hauled away, and the tomb (*ohel*) of the local *zaddik* destroyed. The few Jews from Gostynin who survived the Holocaust subsequently emigrated.

BIBLIOGRAPHY: *Pinkes Gostynin: Yizkor Bukh* (1960); D. Dąbrowska, in: *BZH*, 13–14 (1955), 122–84 passim.

[Danuta Dombrowska]

GOTA, MOSES ZERAHIAH BEN SHNEUR (d. 1648), Turkish rabbi. Gota studied under Jehiel Basan and Joseph di Trani. After spending most of his life in Constantinople, he moved to Jerusalem and from there, to Hebron; financial difficulties compelled him to leave for Cairo, where he remained for the rest of his life. His contemporaries describe him as a great *posek* and as expert in Kabbalah. Apart from some responsa, all his works have remained in manuscript. They are: *Zerah Yaakov* on the *Beit Yosef* of Joseph Caro; a commentary on Maimonides' *Mishneh Torah*; a supercommentary on Rashi's Pentateuch commentary; collected responsa and sermons. Some of his responsa are to be found in the Bodleian Library together with those of Eliezer Arha (rabbi in Hebron from 1634) and David Habillo. Others appear in various works, among them in the collection of responsa *Zera Anashim* (1902). Gota's remains were interred on the Mount of Olives in 1650.

BIBLIOGRAPHY: Conforte, *Kore*, 51; Frumkin-Rivlin, 2 (1928), 31; Fuenn, *Keneset*, 337.

[Simon Marcus]

GÖTEBORG, city in S.W. Sweden. In 1780 a number of Jewish families were granted permission to enter the area, and by 1792, 20 Jews lived in the city. Though the first synagogue was built in 1808, the congregation was unable to secure the services of a rabbi, Carl Heinemann, until 1837. After an attempt to introduce radical reform measures, opposed by the rabbi, two members of the congregation secured Heinemann's resignation in 1851, replacing him with the liberal German rabbi, Moritz Wolff, who led the community until 1899. Numbers of Polish and Russian Jews settled in Göteborg between 1903 and 1920. During World War II the Göteborg community absorbed many Jewish refugees from Denmark and also from Poland and Russia (1943–45). The Jewish population increased steadily and in 1968 reached 1,450, making Göteborg the third largest Jewish community in Sweden. With the exodus of Jews from Poland in 1968, many Polish Jews settled in Göteborg as well as in Sweden's two other major cities of Stockholm and Malmö. Following the collapse of Soviet power and the dismantling of the Berlin Wall, a new wave of Jewish emigration saw a significant increase in the number of Jews arriving from Russia and its satellites. Now constituting the second largest Jewish community in Sweden, Göteborg's Jewish population stood at 1,600 in the early years of the 21st century, with an-

other thousand or so living in and near the city who are not affiliated with the congregation.

BIBLIOGRAPHY: *Göteborgs mosaiska församling, 1780–1955* (1955); *Skrift till invigningen av mosaiska församlingens i Göteborg nya församlingshus...* (1962); H. Valentin, *Judarna i Sverige* (1964). **ADD. BIBLIOGRAPHY:** *Mosaiska församlingen i Göteborg 200 år* (1980).

GOTHA, city in Thuringia, Germany. Jews from Gotha are mentioned in *Cologne in 1250 and later in *Erfurt. Eight members of the community were killed in connection with a *blood libel in Weissensee in 1303. The community suffered during the *Black Death persecutions (1349) and again in 1391. Though the community disappeared after the persecutions of 1459–60, a *mikveh* (*Judenbad*) is mentioned in 1564 and 1614. Until 1848 no Jews were allowed to live in the duchy of Gotha but restricted trading was permitted. The community formed after 1848 increased from 95 in 1872/3, to 236 in 1880, and 372 in 1910 (0.9% of the total population). A synagogue was built in 1903. In 1932 the prosperous community of 350 members maintained a synagogue, school, cemetery, library, and six social and charitable organizations. On Nov. 10, 1938, the synagogue was burned down and 28 men of the community were sent to *Buchenwald. The 80 remaining Jews had been deported by 1939. The community was not reestablished after World War II.

GOTLIEB, ALLAN (1928–), Canadian lawyer, diplomat, public servant. Gotlieb was born in Winnipeg. His parents, David and Sarah Gotlieb, were very active in Jewish community and Israel support activities. Sarah Gotlieb was a leading figure in Canadian Hadassah and served as national president of the organization from 1951 to 1955.

Allan Gotlieb earned a B.A. at the University of California at Berkeley, his M.A. while a Rhodes' Scholar at Oxford, and a law degree from Harvard University. In 1957 he joined the Canadian Department of External Affairs, where in 1967 he became an assistant undersecretary and legal adviser. Gotlieb met Pierre Trudeau shortly after Trudeau was first elected to Parliament in 1965. While Trudeau was first parliamentary secretary to Prime Minister Lester Pearson and then minister of justice, the two men developed a close working relationship and consulted often on issues of federal-provincial relations and foreign affairs. When Trudeau became prime minister in 1968, Gotlieb was appointed deputy minister of the Department of Communication and in 1971 deputy minister of manpower and immigration. In 1977 he returned to External Affairs as an undersecretary and in 1981 Gotlieb was appointed Canadian ambassador to the United States, a post he held until 1989. While in Washington, Gotlieb, with the assistance of his wife, Sondra, was particularly effective in representing Canada's interests and raising Canada's profile.

From 1989 to 1994 Gotlieb was chairman of the Canadian Council for the Arts, a government-funded organization

charged with fostering and promoting the study, enjoyment, and the production of art in Canada. He then became a senior adviser to a major Canadian law firm, specializing in areas of arbitration, government relations, and regulatory and public policy. In addition to his various professional and business interests, Gotlieb was also active in support of a number of arts foundations and research institutions. Among his many honors, he was a Companion of the Order of Canada.

[Harold Troper (2nd ed.)]

GOTS, Russian revolutionary family. **ABRAM RAFAILOVICH GOTS** (1882–1937 or 1940) was born in Moscow into the family of a wealthy tea merchant; from 1906 Gots was an active member of the fighting organization of the Socialist-Revolutionary (SR) party and a member of its central committee. For his participation in the planning of a terrorist act in 1907 he was sentenced to eight years imprisonment. After the February 1917 Revolution he led the SR faction in the Petrograd soviet. In June 1917 at the First Congress of Soviets he was elected chairman of the All-Russian Central Executive Committee. Following the October Revolution Gots joined the anti-Bolshevik Committee for Saving the Homeland and the Revolution. He was an organizer of the armed attack of the junkers (cadets) which took place in Petrograd, November 11–12, 1917. At the 4th Congress of SRS (November 1917) he defended the right to resort to terror against the forces which had usurped the rights of the Constituent Assembly. In 1920 he was arrested and in 1922 sentenced to execution, which was subsequently changed to five years imprisonment. In 1927 he was exiled, first to Simbirsk and then to Alma-Ata. In 1937 he was arrested again. According to some sources, he was shot together with Mark Liber in Alma-Ata. In Soviet political literature his name always appears as part of the trio “Gots-Liber-Dan” (see Fyodor *Dan) whom Lenin referred to as “social defenders,” i.e. leaders of socialist parties who advocated the continuation of the war after the February Revolution.

His brother, **MIKHAIL RAFAILOVICH GOTS** (literary pseudonym, M. Rafailov; 1866–1906), entered Moscow University in 1885, but in the following year was arrested for revolutionary activities, and in 1888 was exiled to Eastern Siberia for 8 years. For armed resistance to the authorities in Yakutsk in 1889, during which he was wounded, he was sentenced to permanent exile, but in 1895 received amnesty. He lived in Kurgane, and then in Odessa where he took up literary activities. In 1901 Gots emigrated to Paris where, in collaboration with other revolutionaries, he published the journal *Vestnik russkoy revolyutsii*. From the establishment of the SR party (in late 1901) until his death, Gots was one of the heads of the party. In 1902 he moved to Geneva where he helped to publish the central organ of the SRS *Revolyutsionnaya Rossiya*. Gots' apartment in Geneva served as SR headquarters and he himself directed all party work. In 1903 when visiting Italy, Gots was arrested at the request of the Russian government but due to a campaign in the European socialist and radical press he was freed and deported to Switzerland. The

money he received from rich relatives he used for party purposes. Apart from articles, he published a book: on criticism, dogma, theory, and practice.

[Mark Kipnis / *The Shorter Jewish Encyclopaedia in Russian*]

GOTSFELD, BESSIE (1888–1962), U.S. social worker and Zionist. Born Beilka Goldstein in Przemsyl, a middle-sized city in southeastern Poland, this daughter of a religiously Orthodox yet modern family was educated in a Polish gymnasium. In 1905, her family migrated to New York, where Beilka became Bessie. In 1909 she married Mendel Gotsfeld, her English tutor. A Zionist since her youth in Poland, Gotsfeld's interest in the movement was rekindled through contact with Mizrahi leaders Rabbis Wolf Gold and Meir Berlin. Thereafter she dedicated her life to religious Zionism. She cherished Mizrahi's objective, which was to secure “the land of Israel for the people of Israel, in accordance with the law of Israel.”

In 1925 she founded a national organization, Mizrahi Women of America (which after 1982 became known as Amit). MWOA's double objective was to give voice to the inchoate desire of Orthodox women for a gendered connection to the new Zionist settlement in Palestine and to widen educational and vocational opportunities for the female Orthodox population of Erez Israel.

To investigate the feasibility of starting a school, Gotsfeld traveled there in 1929–30 and selected a Jerusalem building to refurbish as a technical school. En route home, she contacted European women's groups and solicited their support. She convinced Orthodox women in Europe and America that this school would foster Zionism and religion. Skilled young women would contribute to the economy of the new settlement, put a new face on Orthodoxy, and assure continuity into the next generation.

In 1931 the Gotsfelds settled permanently in Tel Aviv and Bessie became the official (though unpaid) “Palestine representative of MWOA.” At her suggestion and under her supervision MWOA founded three urban vocational schools for adolescent girls and two large farm villages that instructed girls and boys along similar lines. The largest, Kefar Batya in Ra'anana, bears her Hebrew given name. MWOA also constructed children's homes in small settlements, supported day care centers in the cities, and funded youth programs. Gotsfeld kept the MWOA membership informed through letters, bulletins, and speaking tours in the United States.

Gotsfeld was caught up in the fierce battles between secular and Orthodox Jews over the education of child refugees who found their way to Palestine before, during, and after World War II. She found places in Orthodox institutions for Youth Aliyah children and immigrants from Arab countries. No other branch of Mizrahi matched MWOA's accomplishments during the pre-state years. Along with Hadassah and Pioneer Women, the other major American women's Zionist organizations, MWOA played a critical role in building the Yishuv.

Gotsfeld retired officially in 1948 but maintained a grip on organizational policy until her death in 1962. Her whirlwind activities over three decades is remarkable in light of illness and mounting disabilities suffered through most of her adult life. The institutions that she founded exemplify the process of modernization within 20th century Orthodox Judaism. They trained a generation of Orthodox female technicians and teachers competent in advanced methods of pedagogy, agriculture, and technology, and eager to assert their status as equal citizens of the new state.

[Baila Round Shargel (2nd ed.)]

GOTTESFELD, CHONE (pseud. **Tuvye Shmeykhl**; 1890–1964), Yiddish humorist and writer of comedies. Born in Skala, Galicia, he attended gymnasium in Czernowitz, before immigrating at 18 to the U.S. From 1914 until his death he was on the editorial staff of the New York daily *Forverts*, editing for many years the news, as well as the humor section. Among his comedies, staged in the U.S. and Poland, the most successful were *Gevald, Ven Shtarbt Er?* (“Heavens, When Will He Die?” 1926) and *Parnose* (“Livelihood”). Rudolph *Schildkraut and Maurice *Schwartz directed and acted in his plays. His humorous memoirs, *Vos Ikh Gedenk fun Mayn Lebn* (“What I Remember of My Life”), appeared in 1960 (Eng. 1965).

[Melech Ravitch]

GOTTESMAN, U.S. family of philanthropists. **MENDEL GOTTESMAN** (1859–1942), industrialist, banker, and philanthropist, was born in Munkacs, Hungary, and immigrated to the United States in the 1880s. He was a pioneer in the paper and pulp industry, and later founded and became president of an investment banking company. Gottesman founded and supported several *talmud torahs* on the Lower East Side of New York, particularly between the 1890s and 1915, during which time he became associated with the forerunner of Yeshiva University, the Isaac Elchanan Theological Seminary. In 1917 he organized the Gottesman Tree of Life Foundation, through which many of his charitable activities were carried out, including granting scholarships to Yeshiva University students. He served as treasurer of Yeshiva University for many years and as president of the Yeshiva Endowment Foundation, which he conceived and established, from 1928 to 1942. **DAVID SAMUEL GOTTESMAN** (1884–1956), merchant and financier, was born in Munkacs, Hungary, the son of Mendel Gottesman. He became his father’s partner in the wood pulp industry and later developed his own companies in that business

and in investment banking. In 1941 he established the D.S. and R.H. Gottesman Foundation to donate funds for higher education, local welfare, Jewish studies, and other causes. Among the foundation’s charitable contributions were four Dead Sea Scrolls, purchased for the State of Israel in 1955, and the donations of funds in 1961 for the construction of the Shrine of the Book in Jerusalem to house the Dead Sea Scrolls; the building is now part of the Israel Museum.

BENJAMIN GOTTESMAN (1897–1979), born in New York City, the son of Mendel Gottesman, carried on his father’s work in both business and philanthropic association with Yeshiva University. A trustee of the university, he was vice president and treasurer of the Gottesman Tree of Life Foundation, one of the founders of the Albert Einstein College of Medicine of Yeshiva University, president of the Yeshiva Foundation Endowment Inc., and chairman of the Investment and Endowment Committee. Gottesman also served on the Investment Advisory Committee of *Hadassah, of which his wife **ESTHER GOTTESMAN** (1899–1997), born in New York City, was national treasurer.

GOTTHEIL, GUSTAV (1827–1903), Reform rabbi, liturgist, and U.S. Zionist leader. Gottheil was born in Pinne, Posen. He was drawn to liberal Judaism at the University of Berlin, and studied with such scholars as Steinschneider and Zunz. During 1855–60 Gottheil was a teacher at the Reform Gemeinde in Berlin and preaching assistant to Samuel *Holdheim, who impressed him greatly. In Manchester, England, where he served the progressive Congregation of British Jews from 1869 to 1873, Gottheil mastered English, then joined Temple Emanu-El of New York City in 1873 as co-rabbi to the aging Samuel *Adler. Challenging the ethical culture theories of Felix Adler, son of Samuel Adler, Gottheil espoused a more traditional theistic Judaism, and was upheld by the congregation. He attempted to maintain a rabbinical school under Emanuel’s auspices during 1874–85, but it had very few students. Gottheil published a hymnal in 1886 and a devotional compilation *Sun and Shield* (1896). He voluntarily abandoned issuing his own prayer book in favor of the *Union Prayer Book*, which included a number of his translations and renderings. The most important American rabbi publicly to support Zionism during the First Zionist Congress in 1897, Gottheil, his son Richard *Gottheil, and Stephen S. *Wise were among the founders of the Federation of American Zionists. Gottheil was a teacher and friend to such young rabbis as Stephen S. Wise, Leon Harrison, and Samuel Schulman. In a sense he was a bridge from the German beginnings of Reform to its Eastern – as distinct from Midwestern – American flowering.

BIBLIOGRAPHY: R.J.H. Gottheil, *Life of Gustav Gottheil, Memoir of a Priest in Israel* (1936).

[Bertram Wallace Korn]

GOTTHEIL, RICHARD JAMES HORATIO (1862–1936), U.S. Orientalist. Gottheil was born in Manchester, England, the son of Gustav *Gottheil, and immigrated to New York with

his parents in 1873. He taught Semitic languages at Columbia University from 1886 until his death, except for one year, 1920–21, at the University of Strasbourg; he was director of the Oriental Department of the New York Public Library from 1896 until his death and president of the American Oriental Society, 1933–34. Gottheil was an active Zionist and prominent in American Jewish life. Among other activities he served as president of the American Federation of Zionists, 1898–1904, president of the Society of Biblical Literature, 1902–03, and vice president of the American Jewish Historical Society from 1904 on. He founded the Zeta Beta Tau Fraternity, originally a Zionist society, and was one of the founders of the Jewish Institute of Religion (see *Hebrew Union College-Jewish Institute of Religion in New York). Among the works Gottheil published, in addition to numerous articles in scholarly and general periodicals and books, are *Zionism* (1914), *The Holy War* (1915), *The Belmont-Belmonte Family* (1917), and *The Life of Gustav Gottheil; Memoir of a Priest in Israel* (1936). Among the works he edited and translated are *A Treatise on Syriac Grammar by Mâr(i) Eliâ of Sôbhâ* (1887), and with W.H. Worell, *Fragments from the Cairo Genizah in the Freer Collection* (1927). He was an editor of the *Jewish Encyclopedia* (1901–06) and the editor of the *Columbia University Oriental Series* (vols. 1–29, 1901–36).

BIBLIOGRAPHY: G.A. Kohut, *Professor Gottheil – an Appraisal at Seventy* (1933); J. Bloch, in: *JAOS*, 56 (1936), 472–9; S. Rosenblatt, in: *BASOR* (Dec. 1936), 2–3.

GOTTLIEB, ADOLPH (1903–1974), U.S. painter and sculptor. Best known for his abstract expressionist paintings, New York-born Gottlieb studied at the Art Students League with John Sloan and Robert Henri (1920–21). After traveling through Europe for two years, and attending life drawing class at the Académie de la Grande Chaumière in Paris, Gottlieb returned in 1923 to New York for additional art instruction. His first solo exhibition was held at the Dudensing Gallery in New York in 1930.

In 1935 Gottlieb cofounded “The Ten,” a group of artists committed to progressive tendencies in art that also included Mark Rothko. The Ten exhibited together regularly until 1939. Working under the Works Progress Administration’s Federal Art Project since 1936, Gottlieb executed a mural for the Yerington, Nevada Post Office in 1939.

Influenced by European surrealists who settled in New York before World War II; primitive art; and Southwest Indian symbols, introduced to him in Arizona where he lived from 1937 to 1939; Gottlieb created his first pictograph in 1941. An amalgamation of abstraction and the subjectivity of Surrealist-inspired automatism, the Pictograph series is comprised of grid compartments in which Gottlieb placed stylized iconography that sometimes drew on his interest in ancient myths. Critics relate his art of the period to the distress of World War II. The Pictographs (1941–51) were followed by two other major series: Imaginary Landscapes (1951–57) and Bursts (1957–74). The Imaginary Landscapes, such as *The Fro-*

zen Sounds, No. 1 (1951, Whitney Museum of American Art, New York), are characterized by a horizontal line across the center of a canvas, above which he painted different geometric shapes reduced in color from the Pictographs. In the lower half of the canvas he applied a dense array of gestural marks. The Bursts marked the beginning of Gottlieb’s work on oversized canvases. Gottlieb typically placed one or more disks floating on the top half of the canvas contrasting with an exploding mass of black gestures on the lower half. Similar shapes comprise sculptures executed in the 1960s.

In addition to painting, Gottlieb designed an ark curtain for Congregation B’nai Israel, Millburn, N.J. (1951), and a tapestry for the prayer hall as well as the valance of the ark curtain for Beth El in Springfield, Mass. (1953). He designed and supervised fabrication of a 35-foot-wide, four-story-high stained glass facade for the Milton Steinberg Center at New York’s Park Avenue Synagogue (1954). Using compartmentalization similar to the Pictographs, 31 compositions are repeated and interspersed in 91 panels displaying partly abstracted Jewish symbols, biblical stories, religious rituals, and holidays. An arrow, for example, is meant to symbolize a Torah pointer, a serpent symbolizes phylacteries, and 12 calligraphic signs delineate the 12 tribes of Israel.

[Samantha Baskind (2nd ed.)]

GOTTLIEB, BERNHARD (1885–1950), dental scientist. Born in Kutý, Slovakia, Gottlieb trained in Vienna, where he did research in diseases of the teeth, specializing in the cause of caries. He was the first to describe the epithelial tissue which joins the tooth surface to the gum. During World War I he served as a dental surgeon on the Russian-Romanian front. In 1921, he started to lecture at the University of Vienna, and was a pioneer in experimental animal studies which drew the attention of researchers in this field in Europe and the U.S. In 1938, under Nazi rule, Gottlieb was dismissed from his post at the university. With the help of some non-Jewish admirers he was able to leave Austria. Gottlieb was a keen talmudist, and identified with the cause and interests of a Jewish state in Erez Israel. He went to Palestine where he spent two years teaching at the Hebrew University and helped to set up dental clinics. In 1940, Gottlieb emigrated to the United States, where he was visiting professor at the Kellogg Foundation Institute at Ann Arbor, Michigan.

[Jacob Yardeni]

GOTTLIEB, EDWARD (“Eddie,” “The Mogul”; 1898–1979), pioneer innovator, administrator, and promoter of U.S. basketball; member of the Basketball Hall of Fame. Born in Kiev, Gottlieb and his family immigrated to the U.S. when he was a child, first to New York and then Philadelphia, where he graduated from South Philadelphia High School in 1916. Gottlieb

helped organize an amateur team under the Young Men's Hebrew Association in 1918, which was subsequently sponsored by the South Philadelphia Hebrew Association. That social club provided uniforms with the acronym SPHAS across the chest in the Hebrew letters *sameh, pe, he,* and *alef*, and the legendary team – considered one of the greatest early professional teams – won three league titles in the Philadelphia League, three out of four in the Eastern League, and eight of 13 in the American Basketball League, primarily with Jewish players. In 1946, Gottlieb helped establish the Basketball Association of America, winning the league's first championship, and was instrumental in merging the BAA with the National Basketball League to form the National Basketball Association in 1949. He coached the Philadelphia Warriors from 1947 to 1955, purchased the team in 1952, and led them to their first NBA title in 1956.

After selling the team in 1962 for a then-record price of \$850,000, Gottlieb remained with the Warriors as general manager when they became the San Francisco Warriors, and stayed with the team until 1964. He served as chairman of the NBA Rules Committee for 25 years and was instrumental in the adoption of the 24-second clock, the rule against zone defenses, and the bonus penalty shot. For nearly 30 years he was the NBA's sole schedule maker. Gottlieb also helped organize overseas tours for the Harlem Globetrotters, and promoted professional doubleheaders. Upon his death, *The New York Times* wrote: "His mental powers were extraordinary and his memory almost faultless. He remembered the scores of games, the gate receipts, the attendance, and even the weather." The Eddie Gottlieb Trophy is awarded annually to the NBA's Rookie of the Year. Gottlieb was inducted into the Basketball Hall of Fame in 1971.

[Elli Wohlgelernter (2nd ed.)]

GOTTLIEB, EPHRAIM (1921–1973), historian of Kabbalah. Gottlieb was born in Munkács (Mukachevo), and received his education in Czech schools, yeshivot, and the Hebrew high school at Munkács, where he took part in Zionist activities. Immigrating to Erez Israel in 1941, he first taught in the agricultural school at Mikveh Israel (until 1955). From 1945 to 1947 he was in Hungary on behalf of the *Berihah ("Aliyah Bet"), organized by the Jewish Agency. From 1955 to 1965 he taught Jewish subjects in a municipal high school belonging to the religious trend in Tel Aviv. During the years 1952 to 1963 Gottlieb studied Talmud, Jewish philosophy, and Kabbalah (in which he specialized), becoming one of the foremost pupils of Gershom *Scholem and gaining his Ph.D. in 1963. From that year he lectured on Kabbalah at Bar-Ilan University, from 1964 at Tel Aviv University, and from 1965 at the Hebrew University of Jerusalem, where he became senior lecturer in 1966 and associate professor in 1970. Gottlieb's contributions (all in Hebrew) to the history of early Spanish and Italian Kabbalah, between the 13th and 16th centuries, are distinguished by profundity, wide knowledge of the sources, and philological precision. The history of Spanish kabbalistic

literature, in particular, has benefited from this research. In his book *The Kabbalah in the Writings of R. Bahya ben Asher ibn Ḥalawa* (1970), he analyzed the sources of Bahya's famous commentary on the Torah and proved conclusively that the author used some parts of the Zohar extensively, translating, or paraphrasing them in Hebrew. His other studies, most of which appeared in *Tarbiz*, *Kirjath Sepher*, and the *Shenaton* of Bar-Ilan University, include research into the kabbalistic exegeses on Genesis 1 in the Gerona circle (*Tarbiz*, 37, 1968), into the works of (or attributed to) Joseph Gikatilla (*Tarbiz*, 39, 1969–70), and into the *Pekudin* section of the main body of the Zohar, later used by the author of the *Raaya Meheimna* portion of the Zohar and incorporated into this secondary work (KS, 48, 1973). Gottlieb studied the concepts of *devekut* and prophecy in an unpublished work by Isaac b. Samuel of Acre (*Papers of the Fourth World Congress of Jewish Studies*, 2, 1969) and some of the writings of R. Joseph from Ḥamadān which were first identified by him (KS, 48, 1973). He conclusively identified the hitherto anonymous author of the commentary on *Ma'arekhet ha-Elohut*, printed in the Ferrara edition of this work (*Memorial Volume for Prof. Benjamin de Vries*, 1969), and analyzed the discussion on the theory of transmigrating, held in 1466 in Crete and preserved in two Vatican manuscripts (*Sefunot*, 11, 1974). He also disproved the authenticity, or in another case the lack of value, of kabbalistic texts which had been considered important by earlier scholars (the falsification of the work *Ginnat Bitan* and its commentaries ascribed to the early 14th century, in *Studies in Honour of G. Scholem*, 1968, and the construction of R. Elhanan the Blind's epistles, in *Michael*, 1, 1973). Gottlieb proved them to be plagiarisms based on Judah Ḥayyat's work *Minḥat Yehudah*. His lectures on the Kabbalah at the end of the 13th century, especially on Gikatilla and the book *Ma'arekhet ha-Elohut*, were published in mimeographed form (1969). Gottlieb died suddenly in October 1973, a month after his appointment as head of the Institute of Jewish Studies of the university.

[Gershom Scholem (2nd ed.)]

GOTTLIEB, FRANTIŠEK (1903–1974), Czech poet and author. Born in Klatovy, Bohemia, Gottlieb studied law and was influenced by Otokar *Fischer at Charles University in Prague. He was an active Zionist in his youth, and made Jewish nationalism the ideological basis of his first book of poetry, *Cesta do Kanaán* (The Way to Canaan, 1924), and of his earliest novel, *Životy Jiřího Kahna* (The Lives of George Kahn, 1930, 1947²) a tragic story of the son of a Jewish merchant. In 1939, he emigrated to Palestine, but during World War II joined the Czechoslovak army in the Middle East. After the war, he returned to Prague, where he entered the Czechoslovak Foreign Ministry. His impressions of wartime Palestine are embodied in a volume of poems, *Dvojí nástup* (Double Ascent, 1942, 1946²), and in two books of short sketches, *Čelem proti čelu* (Head On, 1947) and *Jaro a poušť* (Spring and Desert, 1956, 1962²). Eventually, he published a drama, *Golem* (1965), about Rabbi *Loew, in 1966 a volume of poems, *Rozpjatý den* (An

Extended Day), and a short story, “Z okna do okna” (“From Window to Window,” 1973), a sorrowful tale of a Jewish family. Gottlieb was not deterred from dealing with Jewish themes after the Communist coup of 1948.

[Avigdor Dagan / Milos Pojar (2nd ed.)]

GOTTLIEB, HEINRICH (1839–1905), lawyer, communal leader, and writer, born in Lvov. He practiced law in Kalisz and Lvov. As deputy chairman of the Lvov community, Gottlieb was responsible for its educational department and did much to develop its activities. His book *Schulbetrachtungen* (1872) deals with educational questions. He also wrote studies on pedagogy, law, philosophy, natural sciences, and history, including a series of articles on the Jewish Khazar kingdom (in *Oesterreichische Wochenschrift*, nos. 13, 17, 21, and 48, 1894). He was editor of the Polish periodical *Ekonomista* and contributed to *Izraelita*. Gottlieb also wrote literary essays and poetry (*Weltuntergang*, 1888).

BIBLIOGRAPHY: M. Bałaban, in: *YE*, 6 (c. 1910), 733–4.

GOTTLIEB, HINKO (1886–1948), Yugoslav author, translator, and Zionist leader. Born in a Croatian village, Gottlieb made his name as a Zionist poet and writer on Jewish themes while he was still a student in Zagreb. After graduating, he divided his activity between law practice and literary pursuits. His verse, which combined imagination and realism, reflected contemporary events and his whole output testified to his strong Jewish loyalties and his anti-Nazi sentiments. A prominent contributor to most Jewish publications in Yugoslavia between the world wars, Gottlieb founded the Jewish monthly *Ommanut*, which he edited from 1936 until 1941. He published Serbo-Croat translations of German, Yiddish, and Hebrew works, the latter for an anthology of modern Hebrew literature (1933), as well as translations from Heine (1936). A collection of his poems *Ijar, jevrejski maj* (“Iyyar, the Jewish May”) appeared in 1935. As a lawyer, Gottlieb often defended Yugoslav communists and had contacts with Josip Broz, the World War II partisan leader who became President Tito. Following the Nazi invasion in 1941, Gottlieb was arrested and imprisoned in Vienna and then in Zagreb. He managed to escape and joined Tito’s forces. In 1944 he was sent to Bari, Italy, where he organized the rescue of 1,500 Croatian Jews. In the following year he left Europe for Erez Israel, where he completed and revised his stories of the Holocaust period. These later works include *Ključ od velikih vrata* (*The Key to the Great Gate*, 1947), a novel which later appeared in Hebrew (1950); and the short story *Kadiš u šumi* (“Kaddish in the Forest,” 1944), which has been acclaimed as one of the outstanding products of Jewish underground literature.

[Zdenko Lowenthal / Cvi Rotem]

GOTTLIEB, HIRSCH LEIB (1829–1930), Hebrew journal-
ist. Born in Szigetvar, Hungary, Gottlieb translated works of
Goethe, Schiller, and others into Hebrew. In 1878, in his na-
tive town, he began to publish *Ha-Shemesh*, the first Hebrew
paper in Hungary. Among those who contributed to the pa-
per were the Hebrew writers R.A. *Broides, G. *Bader, and
D.I. Silberbusch. As a result of the opposition of the rabbi of
Szigetvar the paper was moved for a time to Kolomea, Galicia,
where it appeared once under the name *Ha-Shemesh* and once
as *Ha-Harsah*. Gottlieb ceased publishing it at the turn of the
century, returned to Szigetvar, and began to publish Yiddish
newspapers. Because of open advocacy of Zionism in his Yid-
dish paper *Zion* he was persecuted by religious extremists, but
he nevertheless persevered until the eve of World War I. Got-
tlieb was also a well-known humorist whose anecdotes and
light verse were published in his newspaper and in his book
of Yiddish verse, published posthumously.

of his autobiography); Yaari, in: *KS*, 35 (1959/60), 111–2.

[Getzel Kressel]

GOTTLIEB, JACOB (Yankev; 1911–1945), Yiddish and He-
brew poet, short story writer, and essayist. Born in Kovno,
Lithuania, Gottlieb was a descendant of the ḥasidic rabbis of
Nowy Sacz. He published his first poem at age 14 and contrib-
uted to numerous East European Yiddish periodicals. His first
poetry collection, published at age 20, proved his mastery of
various lyric styles as well as of blank verse. His poems were
characterized by mystic imagery and treated universal themes
such as love and nature, as well as social and national subjects.
He envisaged a coming world decline and another Jewish cas-
tastrophe. Three additional volumes of lyrics appeared in 1933,
1936, and 1938, along with a study of H. *Leivick in 1939. With
the outbreak of World War II, Gottlieb fled eastward from the
Nazis, and survived the war years in Mari (Turkmenistan),
where he died of typhus in 1945. A posthumous selection of
his poems, *Geklibene Lider* (“Selected Poems”), was published
in Montreal in 1959.

Golden Peacock* (1961).

[Melech Ravitch / Marc Miller (2nd ed.)]

GOTTLIEB, JEDIDIAH BEN ISRAEL (d. 1645), talmudic
scholar and itinerant preacher in Poland. He visited the major
Jewish communities, especially Lvov (Lemberg), Cracow, and
Lublin. His biblical and talmudic homilies (*Ahavat ha-Shem*)
were published in Cracow in 1641, and again in Lublin in 1645.
This work includes 50 different explanations of Deuteronomy
10:12. His biblical commentaries, printed in Cracow in 1644 in

three volumes under the title *Shir Yedidut*, reflect Jewish social, religious, and economic life in Poland in the first half of the 17th century, prior to the catastrophe of the *Chmielnicki uprising. As a prominent preacher, Gottlieb had the courage to castigate the rich members of the Jewish communities for being overzealous in their pursuit of worldly riches. He enjoined them to bequeath part of their fortunes for community needs and scholars, rather than leave everything to their children. From Gottlieb's homilies it also transpires that Jews with drive and initiative easily found economic opportunities in trade and tax farming, and acquired considerable wealth. He expressed his preference for "self-made" men over those who acquired wealth by inheritance, and supported their claim to social status. Gottlieb is representative of the itinerant preachers of that period who sensed the spirit of the times and often aroused delight by clever, humorous, or anecdotal explanations of the texts.

GOTTLIEB, MAURICY (1856–1879), Polish painter. Born in Drohobycz, in eastern Galicia, he was the son of a prosperous owner of an oil refinery. At the age of 13, he studied at the art school in Lemberg, and three years later at the Vienna Academy. Later, under the influence of his teacher at the Cracow Academy, professor Jan Matejko, an ardent champion of Polish nationalism, Gottlieb turned from German to Polish subject matter. Gottlieb was subjected to antisemitic taunts, and painted a self-portrait called "Ahasuerus," which referred to the legend of the Wandering Jew who was shunned by everyone. In 1876 he received a prize at Munich for his painting, "Shylock and Jessica." The noted publisher Bruckmann then commissioned him to make 12 illustrations for a deluxe edition of Lessing's drama *Nathan der Weise*. Yielding to antisemitic pressure, Bruckmann canceled the commission after seven of the illustrations had been finished. Gottlieb's next major work, "Jews Praying on the Day of Atonement," was stimulated by his studying Heinrich *Graetz's *History of the Jews*. The picture caused a sensation in Jewish circles, and the Jewish press hailed it as a genuinely Jewish masterpiece. With the aid of a Viennese patron, Gottlieb went to Rome, where he again met his teacher Matejko, who greeted him as "the most hopeful disciple of Polish art, whom I greet as my successor." After a few months in Rome, Gottlieb went back to Cracow, where he died at the age of 23. Considering the fact that Gottlieb's career covered only four or five years, his extant work is remarkable both in quality and quantity. "Shylock and Jessica" is so well and richly painted that the theatricality of the scene is overlooked, and "Jews Praying on the Day of Atonement" (which embodies a self-portrait) is an indisputable masterpiece. Gottlieb was also an excellent portraitist. His portraits are gems of psychological penetration in an era that often beautified and falsified its sitters. His portraits of girls and elderly women have delicacy, lightness of touch, and charm.

Mauricy's younger brother LEOPOLD GOTTLIEB (1883–1934), the 13th child of the Gottlieb family, studied in Cracow, Munich, and Paris, and for a while taught at the Bezalel School in Jerusalem. During World War I he was a lieutenant in the Polish Legion, and thereafter fought under Pilsudski in Poland's War of Independence. Among the numerous personalities who sat for him for portraits were Pilsudski and the writer Sholem Asch.

[Alfred Werner]

GOTTLIEB, YEHOSHUA (1882–c. 1940–41), Zionist journalist and leader in Poland during the interwar period. Born in Pinsk, Gottlieb began his Zionist activities in 1913, becoming a member of the central committee of the Zionist Organization in Poland in 1916. He served the movement mainly as a journalist, writing for the great Warsaw Yiddish dailies *Haynt* (1919–35) and *Moment* (1935–39), and was one of the outstanding newsmen and essayists of his time. In 1935 he was elected to the Sejm (Polish parliament). From 1927 to 1934 he was chairman of the Warsaw Journalists' Association and from 1924 to 1939 was a member of the Warsaw Jewish Community Council, serving as its deputy chairman from 1926 to 1930. He was one of the founders of the Et Livnot ("Time to Build") faction of the *General Zionists, which supported *Weizmann's idea of an "enlarged" *Jewish Agency. On behalf of his faction, Gottlieb worked diligently in support of the Fourth Aliyah (from 1924 on), which consisted mostly of middle-class Jews from Poland. When World War II broke out, he fled to Pinsk, where he was arrested by the Soviets soon after their entry into the city. He died in prison in Poland, according to one version, while another version has it that he had been taken to northern Kazakhstan.

[Getzel Kressel]

GOTTLOBER, ABRAHAM BAER (pseudonyms **Abag** and **Mahalalel**, 1810–1899), Hebrew and Yiddish writer and poet. Born in Staro-Konstantinov (Volhynia), Gottlober was taken to Tarnopol (now Ternopol), Galicia, by his father at the age of 17. In Galicia he came in contact with the Haskalah, of which he was a staunch advocate most of his life, and met Joseph *Perl in 1828. Upon his return to Volhynia, his pious father-in-law, violently opposed to his secular studies, compelled him to divorce his wife. Gottlober, embittered by the affair, developed a hostility toward orthodoxy and Hasidism which found satiric expression in his writings. At 19 he remarried and moved to Podolia where, under the influence of Menahem Mendel *Levin's works, he began writing in Yiddish and in Hebrew. He wandered from place to place, living between 1830 and 1850 in Bessarabia, Berdichev, and Kremenets. In

Kremenets he married for the third time and befriended I.B. *Levinsohn. Upon obtaining a government teaching license in 1850, he taught school until 1865 when he was appointed instructor of Talmud at the rabbinical seminary in Zhitomir. There he remained until the government closed down the seminary in 1873.

Hebrew Works

Gottlobler's literary career extends over a 60-year period and though his writings are of a limited aesthetic value, they are a real, if modest, contribution to the development of the modern Hebrew language and literature and to Yiddish literature. During the 1830–50 period, he published two collections of Hebrew poems: *Pirhei ha-Aviv* (1837) and *Ha-Nizzanim* (1850). In 1874, on an extended sojourn in Vienna, he published his Hebrew translation of Lessing's *Nathan der Weise*, a number of nationalistic poems in Hebrew, and the short story "*Kol Rinnah vi-Yshu'ah be-Oholei Zaddikim*" (*Ha-Shahar*, 1874–75). When the editor of *Ha-Shahar*, Perez *Smolenskin, attacked the Berlin Haskalah and wrote disparagingly of Moses *Mendelssohn, Gottlobler broke with him and founded the Hebrew monthly *Ha-Boker Or* which appeared intermittently in Lemberg and later in Warsaw (1876–86). The periodical, mainly a vehicle for Gottlobler's attack on Smolenskin's views, published also many of his short stories and studies in biblical exegesis, and in 1886 the second part of his memoirs, *Zikhronot mi-Ymei Ne'urai*. (The first part had appeared separately in Warsaw in 1881, while supplementary material was published in *Ha-Asif*, 1885.) With the demise of his journal, Gottlobler left Warsaw and lived first in Dubno, then in Rovno, spending the last years of his life in Bialystok. While the poet's longing for Erez Israel found some poetic expression in the 1870s, the 1881 pogroms shocked him into further national realization: he joined the Hibbat Zion movement and most of his poetry was now imbued with yearning for the Land of Israel. *Kol Shirei Mahalalel* (1890) is a collection of his poetry, original and translated, that had not appeared in the previous collections. A scholar, Gottlobler also published a number of research and critical works. Among these are *Bikkoret le-Toledot ha-Kara'im* (1865) a study of the history of the Karaites; *Iggeret Bikkoret* (1866), a critical work on modern Hebrew poetry; a translation of Moses Mendelssohn's *Jerusalem* (1867); and *Toledot ha-Kabbalah ve-ha-Hasidut* (1869), a history of the Kabbalah.

Yiddish Works

Gottlobler's most productive period in Yiddish writing was between the years 1840 and 1870. One of his earliest works, *Feldblumen*, a collection of lyrics, and *Di Farkerte Welt*, a didactic poem, were lost, but most of the poems were recovered in the 1920s and 1930s. Many of Gottlobler's Yiddish works were published long after they had been written: his three-act comedy "*Der Dektukh oder Tsvey Khupes in Eyn Nakht*" was written in 1838 and published in 1876, and the poem, "*Der Bidne Yisrolik*," written in 1843, appeared in 1876. Often depicted against a ḥasidic background, the works are written in an everyday dramatic speech into which the author intro-

duced a satirical note. Gottlobler's attitude toward Yiddish was ambivalent: while he saw it as a language "without literature, without grammar, and without logic," he also felt that he could address the Jewish public only in its own language. Among his best Yiddish works are *Dos Lid finem Kugel* (1863), a parody on Schiller's poem *Lied von der Glocke*; "*Der Seim oder di Groyse Aseyfe in Vald, ven di Hayes Hoben Oysgekliben dem Layb far a Meylekh*" (1863, but written in 1842), a satiric fable in verse form; and "*Der Gilgul*" (1896), a sharp social satire which was first published in *Kol Mevasser* in 1871. "*Zikhroynes vegem Yudishe Shrayber*" (*Yudishe Folksbibliotek* 1, 1888) is his important nonfictional work in Yiddish. A collection of his Yiddish works appeared in 1927, *A.B. Gottlobler's Yidische Verk* (A. Fridkin and Z. Rejzen, eds.).

Initial Evaluation

Greatly overestimated in the prime of his career, Gottlobler's writings have, nevertheless, left their mark on Hebrew and Yiddish letters. A facile writer, his style is fluent rather than compelling. Much of his writing is a direct attack on the obscurantism of the period and shows his firm support of the Haskalah. During the last 20 years of his life, however, he had become disappointed with the ideals of the Haskalah and had become one of the early champions of the nationalist movement and of the revival of Hebrew. While his poems are strongly marked by lyricism and often reflect his own experiences, his personal feelings were so closely interwoven with the public weal that much of his poetry bears a journalistic stamp. Its artistic value lies in the fact that it mirrors the aspirations and aesthetic criteria of his time. His incisive criticism influenced contemporary Hebrew poetry and led to greater metrical flexibility; his memoirs and short stories remain valuable for the interesting light they shed on many facets of Jewish life in Eastern Europe. Gottlobler was also one of the first Hebrew writers to translate Russian poetry into Hebrew. His studies on the Karaites and on the Kabbalah, although highly imitative, served to draw attention to important but neglected areas of Jewish interest.

[David Patterson]

GOTTSCHALK, ALFRED (1930–), chancellor emeritus of Hebrew Union College-Jewish Institute of Religion. Gottschalk was born in Oberwesel, Germany, and immigrated with his family to the United States in August 1939, just weeks prior to World War II. His parents had been comfortable in Germany as wine, grain, and hide dealers. His grandmother had been one of the first woman mayors in the Weimar Republic.

Upon arrival in the United States, his parents worked in the garment industry for seven dollars a week so young Alfred had to peddle newspapers. He entered school without speaking English. By the time he graduated high school, he was a football player, playing semi-pro. Though offered a scholarship to Brandeis and Brown, he chose to stay close to his recently widowed mother. After graduating from Brooklyn College he studied at the Hebrew Union College-Jewish Institute of Religion, first in New York and later in Cincinnati, where he was ordained in 1957. He was appointed dean of the newly established California School of HUCJIR in 1959, which served the rapidly expanding Jewish community of Los Angeles and all of California. Concurrently, he completed his Ph.D. at the University of Southern California (1965). Gottschalk served as dean until 1971, when he was appointed president of the Hebrew Union College-Jewish Institute of Religion, succeeding Nelson Gleuck, as the sixth president of the college, which had become a four campus facility. Headquartered in Cincinnati, the college has thriving programs in Los Angeles, New York and Jerusalem. He was also the John and Marianne Slade Professor of Jewish Intellectual History. Under his leadership, the college was set on firm financial footing. He ordained the first woman rabbi of the contemporary era in Sally Priesland and opened both the Rabbinical and Cantorial School to women. He established the first school of Jewish Communal Service and also was the first to train Israelis for the Reform rabbinate in Israel. The first Israeli woman Reform rabbi was ordained in 1992.

Leadership of the Reform movement is divided between the congregational arm, which was the Union of American Hebrew Congregations (now the Union of Reform Judaism) and The Hebrew Union College. Together with Rabbi Alexander Schindler, another German-Jewish refugee, Gottschalk provided stable and innovative leadership for Reform Jews, which has overtaken the Conservative movement as the allegiance of choice for a plurality of the American Jewish community.

Deeply sensitive to good fortune to be a refugee from Nazi Germany and thus to escape the Holocaust, Gottschalk was appointed in 1979 to the President's Commission on the Holocaust and then in 1980 to the United States Holocaust Memorial Council. He chaired the council's Academic Committee and stepped in as acting chairman of the council when Elie Wiesel suddenly resigned as chairman in 1986. He brought administrative skill and much needed stability to his brief service. After his retirement from Hebrew Union College in 1996, he served for a time as president of New York's Museum of Jewish Heritage: A Living Memorial to the Holocaust. He participated in the inauguration of President Ronald Reagan's second term but was not hesitant to criticize the President over the Bitburg issue.

Gottschalk's main interest is modern Jewish thought, particularly its relation to earlier Jewish sources. He was a leading authority on Aḥad Ha'am, the leader of cultural Zionism. He contributed articles on this subject to various

publications. In addition, he has published *Your Future as a Rabbi – A Calling that Counts* (1967; 1989) and *Aḥad Ha-Am as Biblical Critic – A Profile* (1970).

GOTTSCHALK, LOUIS MOREAU (1829–1869), U.S. composer and pianist. Gottschalk grew up in New Orleans where he was exposed to the Creole music with its African-Caribbean rhythms that would later become a characteristic ingredient of his music. A child prodigy he went at 13 to Paris for piano and composition lessons and by 19, through the success of his "Creole" piano pieces, was hailed as the New World's first authentic musical spokesman, and his keyboard virtuosity was compared with Chopin's. After playing in Switzerland (1850) and Spain (1851) with spectacular success, he returned to the United States. His father's death (1853) proved to be a turning-point in his career; he was forced to increase the frequency of his concerts to earn enough money to support his family. For three years Gottschalk toured the country, his sentimental ballads ("The Last Hope," 1854, "The Dying Poet," 1863) proved immensely popular. He also contributed to the new "Western" idiom with his genre pieces *Le banjo* (1853, 1855). He spent the next five years in Puerto Rico, Guadeloupe, Martinique, and Cuba. There he found his musical roots and his vocation as a composer and wrote some of his finest works, including *Souvenir de Porto Rico*, *Ojos criollos* (four hands), a symphony and several operas. He also wrote for the American and French press. In 1862 Gottschalk had to resume his virtuoso career playing again for American audiences. In four and a half months he gave 85 recitals, a brutal pace which he maintained for more than three years, during which he did more than any other American musician to champion the Unionist cause and also to obliterate the line between high and popular art. In 1865, he had to leave the States after being unjustly accused in a scandal. The last four years of Gottschalk's life were spent in a triumphant tour of South America, where also he encouraged local talents, promoted classical music and championed public education. Gottschalk's own account of his troubled life was first published in 1881 as *Notes of a Pianist*.

[Naama Ramot (2nd ed.)]

GOTTSCHALK, LOUIS REICHENTHAL (1899–1975), U.S. historian. Born in Brooklyn, N.Y., Gottschalk taught at the University of Chicago from 1927 where he was professor from 1935. Gottschalk was assistant editor (1929–43) and acting editor (1943–45) of the *Journal of Modern History* and president of the American Historical Association (1953). Gottschalk's main historical interests were the era of the French Revolution, modern European history in general, and historiography. His major works include *Jean Paul Marat: a Study in Radicalism* (1927); *Era of the French Revolution* (1929); a multi-volumed study of Lafayette (5 vols., 1935–1969); and *Understand-*

ing History: A Primer of Historical Method (rev. ed., 1969). While maintaining exacting standards for the verification of past events, he recognized the influence of the historian's own environment on his interpretation. Gottschalk served on the International Commission for a Scientific and Cultural History of Mankind from 1956, becoming vice president in 1962. Gottschalk was active in Jewish affairs, and was president of the Chicago Board of Jewish Education (1942–45); council member of the Conference on Jewish Social Studies; and chairman of the Union of Chicago B'nai B'rith Hillel Foundation from 1963.

[Joseph I. Shulim]

GOTTSCHALK, MAX (1889–1976), Belgian social scientist and Jewish leader. Born in Liège, Gottschalk was a member of the bar at Liège and Brussels and joined the staff of the International Labor Office (1921–23). At the end of 1923, he was invited to join the Institute of Sociology of the Free University of Brussels as research professor, and was mostly occupied with problems of unemployment. The representative of the ILO for Belgium and Luxembourg (1923–40), Gottschalk became government commissioner for unemployment (1933–34) and president of the Social Security Board (1935–40). During World War II Gottschalk went to the United States, where he taught at the New School for Social Research in New York. After the war, he returned to the Institute of Sociology in Brussels, where he was president of the Center of Regional Economy and president of the International Council for Regional Economy (1958–68). On retiring from the Belgian and International Associations for Social Progress, he became honorary president of both these organizations.

His Jewish activities were religious, social, and intellectual. He presided over the Central Jewish Consistory of Belgium (1956–62). In the social field, he was vice president of the *Jewish Colonization Association, board member of *Alliance Israélite Universelle and ORT-Union, and a founder of the Centrale d'Oeuvres Sociales Juives (United Jewish Appeal) in Brussels. He directed the Research Institute for Peace and Postwar Problems of the American Jewish Committee (1940–49) and from 1959 the Centre National des Hautes Etudes Juives, financed by the Belgian government. As president of the Belgian Committee for Refugees from Nazi Germany (1933–40), he was instrumental in the rescue of the passengers from the ship *St. Louis*, which was sent back from Cuba and finally permitted to land in Antwerp (July 1939). Gottschalk wrote numerous publications in Jewish and non-Jewish fields.

GOTTSCHALL, MORTON (1894–1968), U.S. university teacher and administrator. Gottschall was born in New York City. He graduated from the City College of New York (1914), and became a tutor in history there. In 1919 he was named re-

corder of City College, a post he held for 15 years. During this period he also taught history and legal philosophy. In 1934 Gottschall was appointed professor and dean of the college, a capacity in which he served until his retirement in 1964. As dean, he was known for his consideration for the individual student. He was head of a large college whose enrollment was mostly Jewish and with whose needs and aspirations he deeply sympathized.

[Louis F. Sas]

GOUDCHAUX, MICHEL (1797–1862), French banker and politician. Born in Nancy, Goudchaux was a director of his father's bank there. In 1826 he became manager of the bank's Paris branch and helped found a working-class newspaper *Le National*. He participated in the revolution of July 1830 and was wounded when he placed himself at the head of an insurgent group. After the revolution, Goudchaux was made mayor of his district, member of the general council of the department of the Seine, and paymaster general in Strasbourg. In 1834, however, he returned to Paris and bitterly attacked the government's economic policies in a series of articles in *Le National*. Goudchaux became minister of finance in the Second Republic and in 1849, vice president of the National Assembly. He was defeated in the elections of 1852 and devoted his life to philanthropic work, founding Jewish schools in Nancy. In 1857 he was elected to the Legislative Assembly but refused to swear the oath of allegiance to Napoleon III and did not take his seat.

BIBLIOGRAPHY: R. Lazard, *Michel Goudchaux, son oeuvre et sa vie politique* (1907); Rabi (pseud.), *Anatomie du Judaïsme français* (1962), 65; JC (Jan. 9, 1863), 7.

[Shulamith Catane]

GOUDEKET, MAURITS (1912–1989), rabbi and leader of Progressive Judaism in the Netherlands and Curaçao. Dr. "Mau" Goudekete, who had been active in the Resistance, was a young physicist when he came out of hiding after the Holocaust. He immediately rode by bike to Levi Levisson, prewar Liberal Jewish leader in The Hague, and urged him to reestablish the Liberal Community. Goudekete had been an active member in prewar Amsterdam; he had great knowledge of Judaism and saw the reestablishment of the community as a crucial issue. In 1946 however, Mau, his wife Riek and their infant son moved to Willemstad, Curaçao, where he had accepted a job both as a teacher in physics at the local high school and as the new religious leader of the Reform congregation, Temple Emanu-El. This moribund community had lived in splendid isolation from mainstream developments in Reform and Liberal Judaism for about a century. Goudekete, functioning as its rabbi, revived the congregation and it became a member of the World Union for Progressive Judaism. In 1960 the Goudekete family returned to Amsterdam, where Goudekete became rector of the Spinoza Lyceum and, later on, advisor in educational affairs to the Amsterdam city council. He was soon chosen president of the Union of Liberal Religious Jews in the Netherlands and, two years later, president of the Liberal Con-

gregation of Amsterdam after its first postwar leader Louis Jacobi stepped down. Goudekete rose to leading positions in the World Union for Progressive Judaism and, together with Rabbi Jacob *Soetendorp in Amsterdam and Robert A. *Levisson in The Hague, guided the Liberal Jewish community through a period of explosive growth during the 1960s and early 1970s. Three additional congregations were founded. Goudekete realized that a younger generation of rabbis had to be brought to the Netherlands and personally coached the young rabbi David Lilienthal. In the late 1970s Goudekete became president of Joods Maatschappelijk Werk (Jewish Social Work) in the Netherlands, the first Liberal Jew chosen for such a position. He played an important role in the European Council of Jewish Community Services.

[Chaya Brasz (2nd ed.)]

GOUDSMIT, JOEL EMANUEL (1813–1882), Dutch lawyer. Goudsmit was the first Jew to become a university professor in Holland and member of the Royal Netherlands Academy of Sciences. Goudsmit, who was born in Leiden, graduated in law in 1842. After a period in practice he was appointed professor of Roman law at Leiden in 1859. At the university he served as a secretary to the Senate in 1866 and became rector of the university in 1871. As a scholar he became famous through his *Pandecten-Systeem* (1866; *The Pandects*, 1873) which was translated into several languages. He was a member of the board of the first lawyers' association in the Netherlands. He was a member of the Leiden municipal council from 1861 until 1881. Also active in local and national Jewish affairs, he was for many years chairman of the Society for the Promotion of the Welfare of the Jews in Holland. He publicly protested against antisemitic publications in Holland and advocated the rights of the Jews in Romania.

[Henriette Boas / Bart Wallet (2nd ed.)]

°GOUGENOT DES MOUSSEAUX, HENRI (1805–1876), French antisemitic writer. A Catholic aristocrat who called himself “a soldier of Christ,” Gougenot des Mousseaux was obsessed with demons and Jews. He is chiefly known for *Le Juif, le judaïsme et la judaïsation des peuples chrétiens* (1869). Published on the eve of the first Vatican council with the blessing of Pope *Pius IX, it was influential in Conservative circles in France before *Drumont's *France Juive*. The theme of the book is an alleged Jewish conspiracy to destroy Christianity and rule the world by means of 18th-century Liberalism and *Freemasonry. Translations appeared in 1876 in Austria and Romania, and a second edition was published in France in 1886.

GOULD, ELLIOTT (1938–), U.S. actor. Born Elliott Goldstein in Brooklyn, New York, Gould was educated at the Pro-

fessional Children's School and Columbia University and made his Broadway debut with *Rumple* at the Alvin Theater in 1957. Other Broadway performances include *Say, Darling; Irma La Douce*; and *I Can Get It for You Wholesale* (where he performed opposite Barbra *Streisand, whom he married in 1963). The 6' 3" curly-headed actor began his film career in 1964 with *The Confession*, but is best remembered for *Bob and Carol and Ted and Alice*, for which he received an Academy Award nomination. His memorable role as Trapper John in *M*A*S*H* made him a counterculture icon, as did appearances in such films as *Getting Straight*, *Move*, and *Little Murders*. He appeared in Ingmar Bergman's first English-language film *The Touch*, Robert Altman's *The Long Goodbye*, *California Split*, and *Nashville*, and Richard Attenborough's *A Bridge Too Far*. He is most recently remembered for his role as Jewish casino owner Reuben Tishkoff in *Ocean's Eleven* and *Ocean's Twelve*. His television series work includes *ER*, *Sessions*, *Getting Personal*, and the 1997 Stephen King mini-series *The Shining*. He also made appearances on *L.A. Law*, *Friends*, *Cybill*, *The Simpsons*, and *Alef-Bet Blast-Off*. Gould divorced Barbra Streisand in 1971. They had one child together, actor Jason Emanuel Gould.

[Adam Wills (2nd ed.)]

GOULD, MILTON S. (1909–1999), U.S. lawyer. Born in New York City, Gould graduated from Cornell University with a B.A. in 1930 and a law degree in 1933. He began practicing law at White & Case in the 1930s, a period in which predominantly Protestant firms tended to exclude Jewish lawyers. When Gould discovered that he would not be allowed to be in contact with clients but would be assigned only research duties, he quit that firm and joined the Jewish law firm Kaufman, Weitzner & Celler, with which he remained in private practice for many years.

In the 1930s he was legislative adviser to the Commissioner of Immigration and Naturalization and to the Assistant Attorney General in charge of the criminal division. From 1935 to 1937 he served under Federal Judge Samuel H. Kaufman as special attorney and special assistant in the U.S. Department of Justice.

In his private practice he specialized in corporate litigation arising under the Securities Exchange Act of 1934, the Investment Company Act of 1940, and the Public Utilities Holding Company Act. He was also active in litigation for utility companies.

In 1964 Gould's firm Gallop, Climenko & Gould merged with a Catholic firm run by William Shea, for whom New York City's baseball stadium was later named. Shea and Gould ran the firm together for 20 years, making a point of maintaining a balanced number of Christian and Jewish lawyers. From 1994 on, Gould was a partner at the law firm LeBoeuf, Lamb, Greene, & MacRae.

Gould also participated in the prosecution and defense of criminal cases in the federal courts. He especially attracted public notice internationally for his representation of Gen.

Ariel Sharon, who sued Time, Inc., for libel, arising out of the Israeli action in Lebanon in the early 1980s, in which the jury's finding was that Sharon had in fact been libeled, although no monetary damages were awarded. A powerful litigator, Gould represented many other high-profile clients, such as Donald Trump, Aristotle Onassis, Aldo Gucci, Abe Beame, David Dinkins, Leona Helmsley, and George Steinbrenner.

Gould served as an adjunct professor at Cornell Law School and at New York Law School, and lectured at the law school of the Hebrew University. He was active for the United Jewish Appeal. He was the author of two books: *The Witness Who Spoke with God and Other Tales from the Courthouse* (1979); and *A Cast of Hawks* (1985).

[Milton Ridvas Konvitz / Ruth Beloff (2nd ed.)]

GOULD, MORTON (1913–1996), composer, conductor, pianist. Born in Richmond Hill, New York, Gould was a precocious pianist and composer. He entered the Institute of Musical Art in New York at the age of eight. Later, he studied at New York University. By the time he was 18, his 3 *Conservative Sketches* (1932) had been published by G. Schirmer. He worked as a pianist, arranger, composer, and conductor with various radio orchestras and at Radio City Music Hall in New York. He composed for television shows, including the educational World of Music series, the World War I and Holocaust broadcasts. Later he appeared as guest conductor with many of the major U.S. orchestras. In his compositions, Gould moved freely between the domains of light and serious music, often using American folk and popular idioms, and in many works adapting jazz resources to classical forms. In 1933 Stokowski and the Philadelphia Orchestra performed the premiere of his *Chorale and Fugue in Jazz*. Gould wrote for films (such as *Delightfully Dangerous* in 1945), stage, and ballet, and composed major works for concert bands (including two symphonies and orchestral works which he transcribed for band). His music is an important part of the American band repertory. In 1994 he received a Kennedy Center Honor for his contributions to American culture. His final orchestral work, *Stringmusic*, written for the farewell of Rostropovich from the National SO, won the Pulitzer Prize. Among his well-known pieces are: *Three American Symphonettes*, for orchestra (1933, 1935, 1937; the *Pavane* from the second symphonette became a popular light concert piece); *Spirituals*, for orchestra (1941, also frequently performed); *Chorale and Fugue in Jazz*, for two pianos and orchestra (1936); *Latin American Symphonette*, for orchestra (1941), *Of Time and the River*, for unaccompanied chorus (1946); *Concerto for Tap Dancer and Orchestra* (1952); *Viola Concerto* (1944).

[Israella Stein (2nd ed.)]

GOULD, SAMUEL BROOKNER (1910–1997), U.S. educator and university administrator. Born in Shelton, Connecticut,

Gould studied at Bates College and New York, Oxford, Cambridge, and Harvard Universities. He received his B.A. from Bates and his M.A. from New York University (1936). He converted to Christianity during his undergraduate years. He taught English at William Hall High School, West Hartford, Connecticut (1932–38). During World War II, he was a lieutenant commander in the U.S. Navy Pacific Theater, earning several medals for his service. He was head of the department of speech of the Brookline (Massachusetts) school system (1938–47). From 1947 to 1953, he served at Boston University, first as professor of radio and speech and director of the division of radio, speech, and theater, and then as assistant to the president. At BU he helped design the School of Public Relations and Communications and started Boston's first FM radio station as well as a TV studio and theater. Gould's major contribution to education was in college and university administration as president of Antioch College (1954–58) and chancellor of the University of California, Santa Barbara (1959–62). He also served as chancellor of the multi-campus State University of New York (1964–70), bringing the disparate SUNY campuses into one unified institution. As president of the Educational Broadcasting Corporation (1962–64), he took a leading role in raising the standards of American educational radio and television.

In 1970, Gould retired from SUNY and became chancellor emeritus. He served briefly as a director at McKinsey and Company. From 1971 to 1974, he was chairman of the Carnegie Commission on Non-Traditional Study, which attempted to modify and set new goals for education. During the 1970s, he worked periodically with the Venezuelan Ministry of Education in developing that country's university system, and in 1977 he accompanied his close friend Vice President Rockefeller on his tour of Latin America.

After he retired to Florida in 1974, Gould served for 10 years on the board of the University of Florida New College, helping draw up a master plan for higher education in the state. From 1976 to 1977, he served as interim chancellor for higher education for the State of Connecticut. He also served as a trustee of the Teachers Insurance and Annuity Association, and on the Commission for Post-Secondary Educational Planning in Florida.

Gould wrote *Knowledge Is Not Enough* (1959), *Today's Academic Condition* (1970), and *Diversity by Design* (1973). He edited *Explorations in Non-Traditional Study* (1972).

[William W. Brickman / Ruth Beloff (2nd ed.)]

GOULD, STEPHEN JAY (1941–2002), U.S. paleontologist and author. Born in New York City, Gould was educated at Antioch College, Yellow Springs, Ohio (A.B., 1963), and Columbia University (Ph.D., 1967). After a year of teaching geology at Antioch, Gould accepted an appointment at Harvard in 1967, where he remained for the rest of his life. At his death Gould was the Alexander Agassiz Professor of Zoology, with a concurrent appointment in the Department of the History of Science.

Gould was a leading evolutionary biologist who developed (with Niles Eldredge) a theory of evolutionary development called “punctuated equilibrium,” which states that species do not evolve at a steady, even rate, but in sudden bursts over relatively short (in evolutionary time) periods during speciation, after which they remain stable in form – that is, in a state of “equilibrium” – until they become extinct. While this theory has not been wholly accepted, much of it has, and was in the 1970s a fruitful focus of ongoing scientific debate.

Gould became widely known, however, less for his academic work than for his prolific writing for a popular audience. As a columnist for *Natural History* magazine for 24 years and the author of many books (including several bestsellers), he was an eloquent popularizer of scientific discourse, educating the public about biology, geology, and evolution as well as issues such as scientific racism and the social context of science generally. He was a tireless advocate for good science and education and testified in a number of public hearings regarding the teaching of evolution in public schools. Probably his best-known work for a general audience is the classic *The Mismeasure of Man* (1981; revised edition 1996), an account of the fraudulent science and racist assumptions that lay at the origins of IQ testing. This instructive and realistic examination of how science is shaped by social values was a forceful intervention in an ongoing cultural and political debate in the 1980s that earned him the enmity of many on the political right. Gould’s other works for general readers include collections of essays: *Ever Since Darwin* (1977), *The Panda’s Thumb* (1980), *Hen’s Teeth and Horse’s Toes* (1983), *The Flamingo’s Smile* (1985), *An Urchin in the Storm* (1987), *Bully for Brontosaurus* (1991); and *The Lying Stones of Marrakech* (2000); and books such as *Time’s Arrow, Time’s Cycle* (1987), and *Wonderful Life: The Burgess Shale and the Nature of History* (1989). His academic works, beside journal articles, include *Ontogeny and Phylogeny* (1977) and his final, comprehensive statement of his understanding of evolution, published the year he died, *The Structure of Evolutionary Theory* (2002).

[Drew Silver (2nd ed.)]

GOURD (Heb. גִּלְעָת; pl. גִּלְעָיִם), a plant. It occurs in the Bible only in the form of a place-name Dilan, a town in the inheritance of Judah (Josh. 15:38), but it is frequently mentioned in talmudic literature. In modern Hebrew the word is applied to the gourd of the genus *Cucurbita*, now grown extensively in Israel, but since this genus originates in America the word undoubtedly designated some other plant in ancient times. From its many descriptions in talmudic literature, the reference is clearly to the calabash gourd (*Lagenaria vulgaris*), then a most important crop in Erez Israel. Its large fruit, usually shaped like a broad-bellied bottle, was used as a vegetable when soft and when hard its shell was used as a container for liquid and food (Kil. 7:1). Vessels made from the fruit have been found in ancient Egyptian graves. Talmudic literature has many descriptions of the gourd. Its extremely smooth skin gave rise to the expression “he shaves himself as smooth as a gourd”

(Sot. 16a). Various dishes were prepared from the soft fruit (Shev. 2:10), but its dried seeds are not fit for eating (TJ, Shev. 2:10, 34a). The plant has leaves which are very large and hard, and which could be written on in an emergency (Tosef., Git. 2:3); it has tendrils by which it climbs any support (TJ, Er. 1:1, 18b). Various strains of the gourd were grown, among which the Mishnah mentions the Syrian, Egyptian, Remuzian, and Greek gourds (Kil. 1:5; Ned. 51a). Of these the last strain was the most important and so vigorous that one plant could cover an entire field (Kil. 3:7). Also used in the Talmud to designate the gourd, *kara*, apparently an Aramaic word, is included among the food eaten on the New Year (Ker. 6a). (For the correct meaning of *kikayon* in Jonah 4:6 et al. (AV, JPS “gourd”) see *castor plant.)

[Jehuda Feliks]

GOURI, HAIM (1923–), Hebrew poet and novelist. Born in Tel Aviv, Gouri served in the *Palmaḥ from 1942 to 1947. He was sent on various missions by the Haganah to the displaced persons (DP) camps in Europe after World War II and was an officer in the Israeli forces during the War of Independence. From 1954, he wrote a weekly column in the daily *La-Merḥav*.

His first poems were light verses which appeared in various publications of the Palmaḥ, and in 1943 he began to publish in literary magazines. *Pirḥei Esh* (“Flowers of Fire,” 1949) was his first collection of poems. He published further volumes of poetry, as well as works of reportage, and a novel. He also translated French poetry and drama into Hebrew.

His early poetry, influenced by Natan Alterman, portrays a young boy’s reactions to the newly discovered wonders of the world. Depicting mostly concrete situations where God, death, and time become tangible realities, most of these poems are void of abstractions. In *Pirḥei Esh* and *Ad Alot ha-Shaḥar* (“Till Dawn Breaks,” 1950), the young maturing boy, in his first encounter with the adult world, assimilates the collective experiences of the Palmaḥ fighters, confronted by war and death, into an intimate personal experience. *Shirei Ḥotam* (1954) is marked by the poet’s attempt to cling to the memory of distant experiences; he wishes to relive them, but, at the same time, emphasizes the gap existing between the original experience and life as now lived by his generation. His poetry became more cerebral; the early concrete grasp of reality was replaced by abstract expressions and conceptualizations.

Shoshannat ha-Ruhot (“The Wind Rose,” 1960) portrays Gouri’s poignant awareness of the sharp contrast between his lost world, alive only in memories – recalled through symbols and emotions which are rooted in the poet’s strong ties to his homeland, in a collective responsibility, and in the demands of the times made on the individual – and the present in which the poet sees his homeland as an alien land. He is torn between two extremes: the desire to escape his past, to live anonymously in an “alien” land and cast off his heavy bur-

dens; and his regret at his own alienation and isolation. The past, from which the poet finds no escape, is also revealed in the clear relation between these later poems and Gouri's early work. The early language patterns, imparting a new meaning, recur; these combine with the poet's longing to convert every visual phenomenon and inner mood into a lofty aesthetic experience.

Gouri's novel *Iskat ha-Shokolad* (1965; *The Chocolate Deal*, 1968) presents the Holocaust through the experience of its two heroes, whose physical survival and well-being belie their psychological deformity. The author, using allusive dialogue, interior monologue, and symbolic references, creates a mood where the dividing line between the real and the imagined, the believable and the unbelievable, becomes blurred, the whole melting into a painful reality. Another work, *Mul Ta ha-Zekhukhit* (1962; French *La cage de verre*, 1964), is a chronicle of the Eichmann trial in Jerusalem.

Two major books published after the Six-Day War were *Dappim Yerushalmiyyim* ("Jerusalem Pages," 1968), a miscellany, and *Tenu'ah le-Magga* ("Seek and Destroy," 1968), a collection of poems. The most important work in *Dappim Yerushalmiyyim* is a diary in which the author records his experiences as company commander of the Jerusalem brigade faced with the taking of Ammunition Hill, one of the strongest fortifications of Jerusalem. The work also includes feuilletons and sketches written before the war. The mood is strongly nationalistic. *Tenu'ah le-Magga* is a variation of the earlier theme, but the anguish of nostalgia for the past is relieved by a new element: personal youthful memories now search out the national collective reservoir on which the poet draws through his knowledge of the Bible. For the first time, biblical figures such as Joseph and his brothers Samson, Absalom, and Amos appear in his poetry, drawn intimately, as if they had risen out of the poet's childhood world. The experience in *Tenu'ah le-Magga*, reminiscent of *Pirhei Esh*, is the poet's rediscovery, at a higher level, of his identification with the collective experience of his nation, meeting it for the first time on the ancient battlefields in the Bible. Gouri was awarded the Bialik Prize (1974) and the Israel Prize (1988) for literature. Other books of poems include *Marot Gehazi* (1973), *Ad Kav Neshet* (1980), *Milim be-Dami Holeh Ahavah* (1996; translated into English as *Words in My Lovesick Blood*, 1996). His later prose works include *Sefer ha-Meshugah* (1971), *Mi Makkir et Yosef G.* – (1980), and *Ha-Hakirah* (1981). Gouri has written and produced two movies related to Holocaust themes, *The Eighty-first Blow* (1974), on the Warsaw ghetto uprising, and *The Last Sea* (1978), on illegal immigration to Palestine. His poems, *Ha-Shirim*, appeared in two volumes in 1998. Later poems appeared as *Me'uḥarim* (2002). Poems by Gouri have been translated into a number of languages and are included, for instance, in T. Carmi (ed.), *The Penguin Book of Hebrew Verse* (1981) as well as in *The Modern Hebrew Poem Itself* (2003). A list of English translations of his work appears in Goell, *Bibliography*, 826–48.

[Matti Megged]

GOVERNMENT, PRAYER FOR THE, the prayer for the welfare of the government that forms part of the synagogue ritual on Sabbath mornings and on the festivals. Its inclusion in the service is based on the Mishnah: "R. Ḥanina, Segan ha-Kohanim said: Pray for the welfare of the government; since but for fear thereof, men would swallow each other alive" (Avot 3:2). The idea is found as early as Jeremiah; the prophet counseled the Jews who were taken into the Babylonian captivity: "Seek the peace of the city whither I [i.e., the Lord] have caused you to be carried away captive, and pray unto the Lord for it; for in the peace thereof shall ye have peace" (Jer. 29:7).

The prayer for the welfare of the ruling powers of the state (king, government, etc.) and petitions for the welfare of the congregation, belong to the morning service and are recited before the Scrolls of the Law are returned to the Ark. The Sephardim recite it on the Day of Atonement after *Kol Nidrei*. The traditional version of the prayer starts: "May He Who dispenseth salvation unto kings and dominion unto princes, Whose kingdom is an everlasting kingdom, Who delivereth His servant David from the destructive sword... [etc.]... may He bless, preserve, guard, assist, exalt, and highly aggrandize our Sovereign..." the titles following.

In non-monarchic countries the prayer is recited for the welfare of the head of the state (the president) and the government. In modern times the prayer is recited in most synagogues in the vernacular. The wording has frequently been modified in accordance with the circumstances.

In Israel a new version of this prayer was formulated and approved by the Chief Rabbinate after the establishment of the state in 1948; it also includes a prayer for the welfare of all Jews in the Diaspora. The prayer is also recited in the U.S. at public services on special occasions such as Thanksgiving Day, July 4, and Armistice Day.

For samples of prayers for the government in the different rituals, see P. Birnbaum (ed.), *Daily Prayer Book* (1949), 379 (Orthodox); Hertz, *Prayer*, 506–7 (Orthodox); Rabbinical Assembly of America and United Synagogue of America,

Sabbath and Festival Prayerbook (1946), 130 (Conservative); *Union Prayerbook*, 1 (1946), 148 (Reform).

GOZAN (Heb. גוזן; Akk. Guzana), an Aramaean city on the western shores of the Habor River, a tributary of the Euphrates. The site of Gozan, now Tell Halaf, was first excavated and explored by M. von Oppenheim (1911–19; 1929). Although Tell Halaf – from which is derived the name of the “Halaf Period,” a period in the development of northeastern Mesopotamian polychrome pottery – is in itself a key site in the history of civilization, its chief historical importance lies in the fact that it was the site of Gozan, the capital city of the Aramaean kingdom of Bit Baḥiāni (see *Aram) which was established between the 11th and 10th centuries B.C.E. The remains of the administrative and cultic center of Gozan disclosed by the excavations at Tell Halaf are of great importance for the understanding of the development of the mixed Hittite-Hurrian-Mesopotamian peripheral architecture, art, religion, and changing way of life in the first millennium B.C.E. On one of the orthostats there is the first depiction of an Aramaean camel rider. Bit Baḥiāni and Gozan are first mentioned in the annals of Adad Nirari II, king of Assyria. It is recorded that in his seventh campaign, around 894 B.C.E., he gained the submission of Abisalamu (Heb. Absalom) son of the House/Tribe Baḥiāni. Although there is further evidence of this submission in the Assyrian annals, further archaeological evidence seems to indicate that there was a short independent period in the history of Bit Baḥiāni and its capital Gozan. The central figure during this period was (according to this Aramaean inscription) Kappara, son of Ḥadijānu (from a new dynasty). It was he who erected the monumental architecture of Gozan during the latter part of the second half of the ninth century B.C.E. which was a period of severe crisis in Assyria, especially between the end of the reign of Shalmaneser III and that of Shamshi Adad V (between 827–810). This period of independence ended in 808 B.C.E. when according to the Eponym Canon (Cb-1) Gozan was reconquered by Sammu-ramat (classical Semiramis), the queen mother, and her son Adad-Nirari III. By 793 B.C.E. Gozan was already an organized Assyrian province. According to II Kings 17:6 inhabitants of Israel and Samaria were deported to the area along the “Habor River of Gozan.” Assyrian documents discovered in Gozan and in other administrative centers contain information on the life of the inhabitants and deportees. Among these documents is a letter from Ḥabbishu of Samaria to the king (Waterman, no. 6331) which deals with various local affairs, mentioning several Hebrew-sounding names, such as *Ni-ri-ia-u* (Heb. Neriah), the *rab nikāsi*, overseer of income (*nekhasīm*) and *Pa-al-ti-ia-u* (Heb. Paltiah), and also a woman, all “servants” to the local governor. Another document (Waterman no. 167) speaks of moving inhabitants from Gozan, perhaps to Dūr-Sharrukīn, the new capital of Sargon II, king of Assyria, according to his policy of population mixing. The sender reports that some people mentioned in his list are missing, for

example, Ḥūli the gardener with his family of five. Finally, a deed of slave sale discovered in Gozan (in AFO, supplement 6, no. 111) contains many other Hebrew names, such as *Da-ana-a* (Heb. Dinah); *Isī’a* (Heb. Hosea), *Milkirāme* (Heb. Malchiram), *Yasimēl* (Heb. Ishmael?); but one of the witnesses is Rīmanni-Ishtār, an Assyrian. The documents date from the late eighth and seventh centuries.

[Pinhas Artzi]

GOZHANSKY, SAMUEL (pseudonyms: **Ha-Moreh**, “**Lanu**,” 1867–1943) Bundist, born in Novovola, Belorussia. The son of a wagoner, Gozhansky graduated from the Teachers’ Seminary in Vilna in 1888. He became a socialist and from 1891 to 1895 led the Jewish Social Democrats in Vilna, the pioneers of the *Bund. As almost their only writer in Yiddish, Gozhansky composed most of the explanatory pamphlets directed to the workers. The most important, the “Letter to Agitators” (1893–94; preserved in typescript in Russian, retranslated into Yiddish, 1939, and into Hebrew, 1967), primarily sets out the fundamentals of the ideology of the Jewish workers’ movement. According to this, Jewish workers would obtain their social and political rights if they constituted “a recognizable force” of their own which would conduct “the national political struggle” for obtaining civil rights for all the Jews. The Jewish workers would join up with the general workers’ movement as an independent body. Gozhansky was arrested for revolutionary activity in Bialystok in 1896 and exiled to Siberia. He returned in 1902. Subsequently he was active in the Bund in Warsaw, Vilna, and other places, standing as Bundist candidate in the elections for the second Duma, and contributing to the Bundist paper *Folkstzeitung* during this period he was imprisoned several times. He was a member of the foreign committee of the Bund and as its delegate served as secretary of the Congress of the Russian Social Democratic Workers’ Party in London in 1907. He wrote the pamphlets *Zionism* and *The Jewish Proletariat*. During World War I Gozhansky lived in Tula. After the 1917 Revolution he edited the Bund organ *Dos Profesionele Lebn* in Petrograd (Leningrad). He joined the Communist Party in 1919 but was not active in the *Yevseksiya (Jewish section).

[Moshe Mishkinsky]

GOZLAN, ELIE (1876–1964), Algerian pedagogue and journalist. Gozlan took part in the First Zionist Congress in Basle

in 1897, was the secretary-general of the Algiers Jewish Consistory, and was one of the founders of the Algiers branch of the World Jewish Congress. He established and edited the *Bulletin de la Fédération des Sociétés Juives d'Algérie* (1936–47), which he courageously published during the Vichy regime. With the collaboration of outstanding Catholic and Muslim personalities, he helped found the Union des Croyants Monothéistes in Algiers. The Union was temporarily effective in establishing harmonious relations among all elements of the Algerian population.

[Robert Attal]

GRABSKI, STANISLAW (1871–1949), Polish statesman and economist; he was the most prominent ideologist of the *Endecja (ND) Party and its leader for many years. Grabski held office as minister of education in 1923. In 1925–26, before the May Revolution, he played a prominent role in the conclusion of an agreement (*ugoda*) between the Jewish Parliamentary Club and the Polish government headed by his brother Władysław. In 1926, he became alienated from Endecja because of his opposition to Fascist circles. Grabski was inconsistent in his political opinions during World War II in the government-in-exile in London, and in 1946 he returned to Warsaw, having reconciled himself with the new regime.

WLADYSŁAW GRABSKI (1874–1938) was Stanisław's brother. Before World War I he was a National Democrat (Endecja) deputy in the Russian *Duma. In independent Poland after the war, where he was a deputy of the Sejm (parliament), he left the party and took an independent position, serving as minister of finance in several governments. When the Red Army invaded Poland in 1920, Grabski became prime minister for a short while, and again headed the government from 1923 to 1925. The financial policy and taxation system introduced by Grabski became a severe financial burden to Jewish merchants and shopkeepers. The resulting crisis in the economic life of Polish Jewry served as an impetus to emigration on the "Fourth Aliyah" to Palestine of 1924–26, which became known as the "Grabski aliyah."

Korzec, "Heskem Memsholet W. Grabski im ha-Nezigut ha-Parlamentarit ha-Yehudit," in: *Galed*, 1, 175–210.

[Moshe Landau]

GRACE AFTER MEALS (Heb. בִּרְכַת הַמֶּזֶן, *Birkat ha-Mazon*), a central feature of the liturgical service in the Jewish home. It is considered to be a biblical ordinance, inferred from the verse "Thou shalt eat and be satisfied and bless the Lord thy God for the good land which He has given thee" (Deut. 8:10). If

one is in doubt whether he has recited it it should be repeated rather than not said at all (Tur and Sh. Ar., oḥ 184; Maim., Yad, Berakhot 2:14; cf. Ber. 21a). Grace after Meals consists of four blessings and is recited only after a meal at which bread has been eaten. If bread is not eaten, a shorter form of grace is recited (for versions see below). The first blessing (*Birkat ha-Zan*) praises God for providing food for all His creatures. The second (*Birkat ha-Arez*) expresses Israel's particular gratitude for the "good land" God has given it, the redemption from Egypt, the covenant of circumcision, and the revelation of the Torah. The third benediction, called *Boneh Yerushalayim* and also *Neḥamah* (consolation), asks God to have mercy on Israel and to restore the Temple and the Kingdom of David. It includes a plea that He may always sustain and support Israel. To these three benedictions which form the core of the Grace a fourth (*Ha-tov ve-ha-metiv*) was added after the destruction of *Bethar. It combines thanks for God's goodness, with the prayer that He may fulfill specific desires (Ber. 48b–49b). It is followed by several petitions which begin with the word *Ha-Raḥaman* ("May the All-Merciful..."). Originally phrased to suit individual desires, the supplications have now become standardized. The number of these petitions varies greatly in different rites; the general Sephardi rite has some 15, while the Ashkenazi has nine.

According to the Talmud (Ber. 48b), the first benediction was instituted by Moses when the manna fell from heaven; the second by Joshua when he conquered Erez Israel; the third by David and Solomon; and the fourth by the rabbis of *Jabneh in gratitude for the miracle that the corpses of the unburied dead of Bethar did not decay, and that permission was ultimately granted for their burial (see: *Bar Kokhba). Finkelstein, however, points out that the fourth blessing was known to *Eliezer b. Hyrcanus (Ber. 48b) who died before the fall of Bethar, and to *Yosef the Galilean (Tosef., Ber. 1:9) and *Ishmael (TJ, Ber. 7:1, 11a), who do not mention the incident. He, therefore, suggests that this blessing may have originated in the early years of the reign of *Hadrian. The Book of Jubilees (22:6–9) quotes the original threefold blessing, and attributes it to Abraham. Josephus (Wars, 11:131) testifies to the custom of thanksgiving after meals, and traces it back to *Simeon b. Shetaḥ (also mentioned in TJ, Ber. 7:2, 11b). The Book of Ben Sira (Ecclus. 36:12–14, 17–19) clearly follows parts of the third benediction, and the Christian thanksgiving prayer in the *Didache* (a Christian work of the last decade of the first century) chapter 10, also bears strong resemblances to the Jewish formula. Among Portuguese Jews the Grace is known as *benção*, and among Ashkenazim by the Yiddish term *benshn*, a corruption of the Latin "benedictio" (by way of Old French).

According to the Talmud (BB 60b) it is forbidden to forget the destruction of the Temple even during meals, and thus the recitation of Grace should be preceded on weekdays by Psalm 137. The custom, however, is not often observed. More common is the practice to recite Psalm 126 on Sabbaths and festivals, its optimistic vision better fitting the spirit of these

days. The rabbis ordained that whenever three or more have eaten bread together, one of them must summon the others to say Grace with him (Ber. 7:1–5). In reply to the invitation “Gentlemen, let us say Grace” (in Sephardi usage “with your permission”), the others reply “Blessed be the name of the Lord henceforth and forever.” The leader repeats the statement and then continues, “With your consent (in Sephardi usage “with the permission of Heaven”) let us now bless Him of whose food we have eaten.” The others then respond: “Blessed be He whose food we have eaten and through whose goodness we live.” This formula is known as *zimmun*, and according to the Talmud (Ber. 45b; Ar. 3a) must even be recited by three women who eat together. According to one opinion in the Mishnah, the *zimmun* formula becomes increasingly elaborate as the number of participants grows to ten, a hundred, a thousand, and ten thousand; more numerous and more solemn epithets of God are added every time (Ber. 7:3; Meg. 4:3). In modern times, the word *Eloheinu* (“our God”) is inserted in the third line of the formula when the number of participants is ten or more. The custom of communal grace, originally used only when the participants numbered at least ten, can be traced back to the custom of **havurah* (community) meals, held especially on the Sabbaths. The practice was widespread in the Second Temple period among the Pharisees, and certain sectarian groups such as the Essenes.

Grace may be recited in any language (Sot. 7:1), but must be said at the table from which one has eaten (Maim. Yad, Berakhot, 4:1) and on which some bread should be left until the conclusion of the benediction (Tos. to Ber. 42a and Sanh. 92a). It is followed by a blessing on a cup of wine. The codifiers differ as to whether the cup of wine is required only when Grace is recited with *zimmun* or even when it is recited individually (Sh. Ar., OH 182:1). It has become customary to have the cup of wine only at *zimmun* on Sabbaths, festivals, and other special occasions. Various changes are made in the grace to suit different circumstances. On Sabbaths and festivals a special section (*Rezeh* and *Ya'aleh ve-Yavo* respectively) is inserted in the third blessing and an additional petition added in the series of *Ha-Raḥaman*; in the Ashkenazi rite the word *Magdil* (from Ps. 18:51) in the final *Ha-Raḥaman* is changed to *Migdol* (from II Samuel 22:51). The change probably originated through the confusion, by some early editors of the *siddur*, between *בש"ב* “B.SH.B.” (meaning “in II Samuel”), and *בש"ב* *be-Shabbat* (“on Sabbaths”). Special *Ha-Raḥaman* petitions are also inserted on New Moons, Rosh Ha-Shanah, Sukkot, and the Passover *seder*. On Hanukkah and Purim, Al **ha-Nissim* is said during the second blessing which is devoted to thanksgiving (Shab. 24a; cf. Rashi *ibid.*). At a wedding banquet, the third line of the *zimmun* is changed to read “Blessed be our God in whose abode is joy, of whose food we have eaten and through whose goodness we live” (Ket. 8a; cf. Rashi *ibid.*), and the seven wedding benedictions are recited at the conclusion of Grace (Maim. Yad, Berakhot, 2:9, 5:5). At the house of a mourner, a special prayer is substituted for the end of the third benediction, a change is made in the text of

the fourth, and the *zimmun* is slightly changed (Ber. 46b; Sh. Ar., YD 379, OH 189:2). At the meal which follows a circumcision ceremony, the wording of the *zimmun* is changed to suit the occasion. Among the several lines which begin with *Ha-Raḥaman* in the fourth blessing, a child, a guest (see Ber. 46a), and the master of the house may each insert passages to suit their particular circumstance (see Tur., OH 189). Since the establishment of the State of Israel, some families have also inserted a fourth *Ha-Raḥaman* “May the All-Merciful bless the State of Israel, and all who work for her.”

Shorter Forms

Ever since the formulation of a “complete” *Birkat ha-Mazon*, there have been shorter versions for extraordinary occasions. The guiding principle has been that the *mitzvah* of reciting *Birkat ha-Mazon* is commanded by the Torah, but the actual content has developed over the ages. Workmen who eat during working hours, therefore, may recite a shortened form, consisting of the first *berakhah*, the “blessing for the land,” and mention of Jerusalem (Sh. Ar., OH 191:1). Children are required to recite only small sections. In cases of extreme emergency, he who says, “Blessed be the Merciful One, the King, the Master of this land” has fulfilled his obligation. The *siddur* of Saadiah Gaon contains a highly abbreviated version of *Birkat ha-Mazon*. Another shortened form is found in the *Magen Avraham* commentary to the Shulḥan Arukh (OH 192:1). In general, shorter forms include the entire first *berakhah*, mention of the Covenant and the Torah as well as the blessing for the land in the second *berakhah*, and mention of Israel and the Davidic Kingdom in the third *berakhah*.

In the United States, the Conservative movement has evolved a shortened version based on this formula, used at public gatherings and summer camps (the traditional long form is usually recited on the Sabbath).

The Reform Prayer Book has a short version made up of two English paragraphs and concluding with the Hebrew ending of the traditional first *berakhah*.

When bread is not eaten there are two other forms of grace (known as *Berakhah Aḥaronah* – “final benediction”) to be recited, depending on the nature of the food consumed. For food prepared from the five species of grain (wheat, barley, rye, oats, and spelt), wine, or the fruits of Erez Israel (grapes, figs, olives, pomegranates, and dates) a short summary of the Grace after Meals is said. This is in the form of one benediction with insertions for the type of food eaten and for special occasions such as the Sabbath and festivals. This is called in the Talmud *Berakhah Me'ein Shalosh* – “the benediction summarizing the three” (benedictions of the regular grace). For any other food a short benediction (called in the Talmud *Ve-Lo-Khelum*, “Nothing,” but popularly known by its first two words (*Bore Nefashot*) is recited (Ber. 37a–b; laws codified Sh. Ar., OH 207–8; texts Hertz, Prayer, 984, 988).

GRACE BEFORE MEALS. The rabbis required a blessing before partaking of food since they considered it sacrilegious to “enjoy of this world without a prior benediction” (Ber. 35a). They instituted separate blessings for the various species of food, of which those over bread and wine are considered the most important. The blessing for bread, “Who bringest forth bread from the earth” (*Ha-mozi lehem min ha-arez*; Ber. 6:1), is based upon Psalms 104:14, and, when recited at the start of a meal, exempts one from the obligation to recite most additional blessings for the remaining courses (Sh. Ar., OH 177). Since this blessing is often the only one recited before a meal, the popular term for the grace before meals is *Mozi*. The blessing for wine, “Who createst the fruit of the vine” (*Bore peri ha-gafen*; Ber. 6:1), is recited, even when the wine is drunk in the course of the repast and not at the beginning (Sh. Ar., OH 175, and see also 176).

Although the actual formulation of the blessings before meals was delineated during rabbinic times, the practice itself is of ancient origin. Thus in 1 Samuel 9:13 there is a reference to the people waiting for the prophet to bless the sacrifice before they would partake of its flesh. Josephus describes the grace before the meal recited by the *Essenes (Jos., Wars, 2:131). The rabbis attached great importance to the proper recitation of these blessings, and the father of R. Simeon b. Zevid was praised “as being a great man and well versed in the benedictions” (Ber. 38a).

GRACIAN (Hen), SHEALTIEL BEN SOLOMON (14th century), Spanish rabbi, a contemporary of *Isaac b. Sheshet (Ribash), to whom he was related. Both apparently studied under R. Nissim Gerondi. After his marriage he lived in Fraga and was appointed rabbi of the community of Alcala in c. 1369, at which time he acceded to its request to affirm under oath that he would never leave this position. Later he regretted his hasty oath and requested Nissim Gerondi and Isaac b. Sheshet to absolve him of it, but they refused, and Isaac wrote him that “the truth is dearer to me – since both of us must respect it” (Ribash, no. 370). Around 1375 Shealtiel was appointed rabbi of Barcelona, in succession to Nissim who had died. R. Isaac b. Sheshet corresponded with him and mentions him in his responsa frequently and he states that, “he was a preeminent rabbinic authority... of outstanding scholarly attainments... and of foremost renown in Spain” (*ibid.*, no. 365). Isaac b. Sheshet asked him to mediate in a quarrel which arose between his daughter and her father-in-law. He urged him to lend his support, writing, “and should those in dispute with me, my enemies and their supporters, endeavor to incite you against me, do not listen to them” (*ibid.*, no. 415 end). However, Shealtiel disagreed with the stand which had been taken by Isaac b. Sheshet, and the outcome of the matter is unknown.

[Yehoshua Horowitz]

GRADE, CHAIM (1910–1982), Yiddish poet and novelist. Born in Vilna, Grade became that city’s most articulate literary interpreter. After his father’s early death, his mother ran a market stall in order to provide him a traditional education; he attended several *yeshivot*, including seven years under the famed scholar-rabbi, the Hazon Ish, becoming attracted to the *Musar movement. He made his literary debut in *Dos Vort* (1932), became a member of Yung Vilne (1934), and soon was one of its staunchest pillars. The group sought both to synthesize secular Yiddish culture with new currents in world literature, and to bring the impoverished Jewish home into contact with the progressive forces of contemporary society. Grade’s poems appeared in leading Yiddish periodicals in Europe and the U.S. His first book, *Yo* (“Yes,” 1936), was acclaimed by critics for its stylistic elegance and its affirmation of faith in a synthesis of traditional and modern currents. His long poem “Ezekiel” demonstrated his understanding of the tragic nature of human and especially Jewish existence. Extremely important in his early period was *Geveyn fun Doyres* (“Weeping of the Generations,” 1936), which treats the issues of Jewish identity and national history. His long poem “Musernikes” (“Musarists,” 1939), describes the spiritual struggles of *yeshivah* students torn between the Musar traditions and worldly temptations. During World War II, Grade found refuge in Russia and continued to write, his next collection of poems, *Has* (“Hate,” 1943), appearing in Moscow and following Soviet directives. After the war he dedicated a series of poems, “Mit Dayn Guf af mayne Hent” (“With Your Body in My Hands”) to his wife who perished in the Holocaust. In his volumes *Doyres* (“Generations,” 1945), *Pleytim* (“Refugees,” 1947), and *Shayn fun Farloshene Shtern* (“Light of Extinguished Stars,” 1950), he mourned the victims of the Holocaust and describes the survivors. With this attempt at confronting the national Jewish tragedy, Grade became in a sense the national Jewish poet, as Bialik had been in his day.

Grade’s return to Vilna in 1946 was traumatic, as described in “Af di Khurbes” (“On Ruins,” 1947), and he left for Poland but after the Kielce pogrom (July 1946) moved on to Paris, where he helped to revivify Yiddish cultural life among the surviving Jews, leading the Yiddish literary club. A collection of his poems from the years 1936 to 1939, *Farvoksene Vegn* (“Overgrown Paths,” 1947) appeared. In 1948, he was sent to the U.S. as a delegate to the Jewish Culture Congress, settled in New York, and began his contributions to the (*Tog-*) *Morgn Zhurnal*, *Tsukunft*, *Yidisher Kemfer*, and *Di Goldene Keyt*. In 1950, he received a prize from the World Congress of Jewish Culture for *Der Mames Tsavoe* (“My Mother’s Will,” 1949), which includes some of the most outstanding lyrics in Yiddish, permeated with love and respect for his mother, who perished during the Holocaust. The dramatic dialogue “Mayn Krig mit Hersh Reseyner” (1951; Eng. trans. “My Quarrel with

Hersh Rasseynner"; *Commentary*, 1954; also in: I. Howe and E. Greenberg, *A Treasury of Yiddish Stories* (1954, 1989²), 624–51) played an important role in Grade's artistic development. His mother is the central figure of his three-part *Der Mames Shabosim* (1955; Eng. trans. "My Mother's Sabbath Days," 1986), which describes his orphaned childhood in Vilna, his life as a refugee in Russia, and his return to postwar Vilna, decimated of its Jews and its Jewish institutions. Prewar Jewish Vilna comes to life in the collection *Der Shulhoif* ("The Courtyard of the Synagogue," 1958), displaying some of the finest prose of the post-classical generation and including *Der Brunem* (Eng. trans. *The Well*, 1967). His novel, *Di Agune* ("The Abandoned Wife," 1961; Heb. trans. 1962; Eng. trans. 1974), depicts all segments of Jewish Vilna between the wars. *Der Mentsh fun Fayer* ("The Man of Fire," 1962) includes his poems on Israel and his elegy on martyred Soviet Yiddish writers. Two further volumes of poetry appeared: *Oyf Mayn Veg tsu Dir* ("On My Way to You," 1969) and *Parmetene Erd* ("Parchment Earth," 1968, with Heb. transl.). His poems in English translation appeared in J. Leftwich, *The Golden Peacock* (1961) and R. Whitman, *Anthology of Modern Yiddish Poetry* (1966).

Grade was one of the rare interpreters of yeshivah life in modern Yiddish literature, recreating the daily life of the yeshivah student with photographic accuracy, objectivity, and affection, and illustrating it with such scenes as rabbis discussing talmudic law, as in the novel *Tsemakh Atlas* (2 vols. 1967–8; Eng. trans. *The Yeshiva*, 1976–7; Heb. trans. 1968). Following that novel, he published two more collections of stories: *Di Kloyz un di Gas* ("The Small Synagogue and the Street," 1974; partial Eng. trans. *Rabbis and Wives*, 1983) and *Der Shtumer Minyan* ("The Silent Minyan," 1976), which again attempted to reconstruct the atmosphere of prewar Vilna. Grade's postwar poetry expressed, above all, the traumatic experience of the Holocaust and focused on the question of his own survival, while his prose works continued to reconstruct Jewish Vilna and the specific features of mind and piety of Lithuanian Jewry. From the beginning, his works possessed a distinct philosophical dimension.

GRADE, LEW, BARON (1906–1998), British managing director of television networks. Born in Russia, son of Isaac Winogradsky, Grade grew up in England and went into the entertainment industry. He acquired interests in radio, television, and film companies, and in 1955 became deputy managing director (later managing director) of two leading companies in their field, Associated Television Ltd. and Incorporated Television Company Ltd. He also became chairman of AP Films Ltd., of ATV (France) and other companies associated with ATV in Australia, Canada, and the U.S. He was a brother

of Lord Bernard *Delfont. At the time of the 1967 Arab-Israeli war, Grade and his brother Lord Bernard each gave £40,000 to Israel. In 1976, Grade was given a life peerage. Grade's later film-making career became noted for its expensive flops, such as his *Raise the Titanic!* (1980). In 1987, Grade published an interesting autobiography, *Still Dancing*. Grade's nephew, MICHAEL GRADE (1943–), the son of Lord Grade's brother and partner Leslie Grade, was appointed director-general of the BBC in 2004 after a controversial career in British television which included service as chief executive (1988–97) of Channel Four.

GRADENWITZ, PETER EMANUEL (1910–2001), musician, composer, and publisher. Born in Berlin, Gradenwitz studied musicology, sociology, and literature in Freiburg and Berlin with Wilibald Gurlitt, Arnold Schering, and Curt Sachs, and composition with Joef Rufer. In 1934 he pursued his research in Paris and Berlin, and in 1936 he received his doctorate with a thesis on the Stamitz family. In 1936 he joined the large migration of Jewish refugees from Germany and settled in Palestine, where he founded the first publishing house which specialized in concert music, Israeli Music Publications (IMP), in 1948. In 1968 Gradenwitz was appointed lecturer at Tel Aviv University. He regularly published concert reviews, mostly in *Das Orchester*, *Opernwelt* and the *Neue Zeitschrift fuer Musik*. In 1980 he was appointed honorary professor at Freiburg University.

One of his main fields of interest was music appreciation. He published three listening guides (in Hebrew) to symphonic (*Olam ha-Simfonyah* 1945, 1959), chamber (*Ha-Musikah ha-Kamerit*, 1948, 1953), and piano music (*Olam ha-Pesanteran*, 1952) which were widely read in Israel. He also studied the history of Jewish and especially Israeli music. His main publication in this field was *The Music of Israel* (1949, 1996²). In 1954 he organized in Haifa the first Annual Music Festival of the International Society for Contemporary Music to be held outside Europe or the United States.

[Jehoash Hirshberg (2nd ed.)]

GRADIS, family of ship owners and community leaders, of Marrano extraction, which flourished in Bordeaux from the 17th century. DAVID GRADIS (1665–1751) founded an import-export firm (David Gradis et fils, 1696) whose trade relations extended to England, Canada, and the French West Indies. His nephew ABRAHAM (1699–1780) increased the firm's scope and prestige and was appointed royal purveyor in 1744. In 1748 he founded the Société Gradis et fils under the auspices of the French government, and contracted to provide regular shipping services to Quebec for six years. For the entire period of the Seven Years' War (1756–63) his trade with Canada amounted to 9,000,000 livres. There were many losses, for more than half of the ships that he sent out were captured by

the English, and he had trouble collecting from the state. Nevertheless, the Gradis House prospered greatly. In 1763 A. Gradis' friend Choiseul became the naval minister, and Gradis was given a contract to provision the French possessions in West Africa. In these transactions Gradis supplied spirits, gunpowder, knives, and cloth, taking his payment in slaves, whom he sold in San Domingo for sugar. In return for his services during the war, Gradis was praised by Louis xv through his minister Berryer, and later instanced by Abbé *Grégoire in support of arguments in favor of Jewish emancipation. MOSES GRADIS (1740–1788), a cousin of Abraham, inherited the firm after the latter's death. His brother, DAVID GRADIS (the Younger; 1742–1811), was a candidate for Bordeaux in the elections to the States General of 1789, and wrote several works on religion and philosophy. Similarly, his son BENJAMIN (1789–1858), and his grandson HENRI (1830–1905), divided their time between business, politics, and writing. Henri wrote *Histoire de la révolution de 1848* (2 vols. 1872), *Jérusalem* (1883), and *Le Peuple d'Israël* (1891). He was vice-mayor of Bordeaux and head of the Bordeaux *Consistory.

°**GRAEBE, HERMANN FRIEDRICH** (1900–1986), non-Jew who saved Jews during the Holocaust. A native of Solingen, Germany, Graebe worked for the construction company, Jung. At one point he joined the Nazi Party, but after speaking out against them, he was sentenced to a short term in prison. The Jung company sent Graebe to Zdolbunov, Volhynia, in October 1941. There he was to be responsible for their undertakings for the German civil administration.

The Jung company employed thousands of Jews and Graebe did his best to ensure they were treated reasonably. In November 1941 and again in July 1942, he safeguarded his Jewish workers from being sent to their death, through contacts with the SD in Rovno. Sensing that the Jews who worked in the Jung head office in Zdolbunov were in danger, Graebe provided them with papers which represented them as Aryans and transferred them to Poltava. Ostensibly they were to work for Jung there, but in fact Graebe had moved them without the company's knowledge and supported them himself. In the fall, Graebe went to Dubno, where he saved the lives of several dozen Jews during the final *Aktion*. He described this incident at the Nuremberg Trial. After the trial, he immigrated to the United States. In 1966 he was officially recognized by *Yad Vashem for his courageous deeds.

[Robert Rozette]

GRAEBER, SCHEALTIEL EISIK (1856–?), Hebrew writer and publisher. Born in Galicia, he became involved in the Has-kalah movement at an early age. He wrote for various Hebrew journals, but his major contribution in Hebrew letters was as

a publisher. He published the periodical *Ha-Ohev Ammo ve-Erez Moladeto* (1881), the annual *Beit Ozar ha-Sifrut* (from 1887), and the works of Italian Jewish scholars, such as S.D. Luzzatto (*Iggerot Shadal*, 1882–94) and M.I. Tedeschi.

[Getzel Kressel]

°**GRAES (Gratius), ORTWLN VAN DE** (1480–1542), Dominican friar and fanatic anti-Jewish polemicist. He was co-author (or translator) of Victor von *Carben's *De vita et moribus Judaeorum* (1509) and translated into Latin some of the polemics of Johann *Pfefferkorn, to whose *Judenfeind* (1509) he wrote an introductory poem *De pertinacia Judaeorum* ("On the Obstinacy of the Jews"). In 1513 Johannes *Reuchlin directed his defense in his controversy with Pfefferkorn mainly against Graes who was also the principal target of *Epistolae obscurorum virorum* (1515 and 1517). Graes's wordy reply (*Lamentationes obscurorum virorum*, Cologne, 1518) was no match for this savage satire. The *Praenotamenta* (1514) and *Defensio* (1516) against Reuchlin's *Augenspiegel* are also considered Graes's work.

BIBLIOGRAPHY: Graetz, Hist, index; M. Brod, *Johannes Reuchlin und sein Kampf* (1965), 178 ff.; J. Kracauer, *Geschichte der Juden in Frankfurt...*, 1 (1925), 247 ff.; D. Reichling, *Ortwin Gratius...* (Germ., 1884).

GRAETZ, HEINRICH (Hirsch; 1817–1891), Jewish historian and Bible scholar. Graetz was born in Xions (Ksiaz Wielkopolski), Poznan, the son of a butcher. From 1831 to 1836 he went to the yeshivah in Wolstein (now Wolsztyn) near Poznan. At the same time, Graetz taught himself French and Latin and avidly read general literature. This brought him to a spiritual crisis, but reading S.R. *Hirsch's "Nineteen Letters on Judaism" in 1836 restored his faith. He accepted Hirsch's invitation to continue his studies in the latter's home and under his guidance. Eventually their relationship cooled; he left Oldenburg in 1840 and worked as a private tutor in Ostrow. In 1842 he obtained special permission to study at Breslau University. As no Jew could obtain a Ph.D. at Breslau, Graetz presented his thesis to the University of Jena. This work was later published under the title *Gnostizismus und Judenthum* (1846). By then Graetz had come under the influence of Z. *Frankel, and it was he who initiated a letter of congratulations to Frankel for leaving the second *Rabbinical Conference (Frankfurt, 1845) in protest, after the majority had decided against prayers in Hebrew. Graetz now became a contributor to Frankel's *Zeitschrift fuer die religioesen Interessen des Judenthums*, in which, among others, he published his programmatic "Construction der juedischen Geschichte" (1846).

Graetz failed to obtain a position as rabbi and preacher because of his lack of talent as an orator. After obtaining a teaching diploma, he was appointed head teacher of the orthodox religious school of the Breslau community, and in 1850, at Hirsch's recommendation, of the Jewish school of Lundenburg, Moravia. As a result of intrigues within the local community, he left Lundenburg in 1852 for Berlin, where during

the following winter he lectured on Jewish history to theological students. He then began to contribute to the **Monatschrift fuer Geschichte und Wissenschaft des Judentums*, which Frankel had founded in 1851 and which he later edited himself (1869–88). He also completed Volume IV (the first to be published, dealing with the talmudic period) of his *Geschichte der Juden von den aeltesten Zeiten bis zur Gegenwart* (“History of the Jews...,” 1853). In 1853 Graetz was appointed lecturer in Jewish history and Bible at the newly founded Jewish Theological Seminary of Breslau, and in 1869 was made honorary professor at the University of Breslau.

The Historian and His Work

One of the major aspects of Graetz’s outlook on the Jewish people and its history appear to have been laid during his association with S.R. Hirsch and under the influence of his ideas concerning the mission of the Jewish people. A second important source of his ideas can be found in his juvenile readings of Enlightenment authors as well as his studies in Breslau in philology and philosophy (the latter with Christlieb Julius Braniss (1792–1873)). In general, Graetz remained faithful to these ideas to the end of his days.

He set out his first comprehensive attempt at a concept of Jewish history in the two essays *Construction der juedischen Geschichte* (spring and autumn 1846; later editions as a continuous text, 1936, 2000; Heb. tr. *Darkhei ha-Historyah ha-Yehudit*, 1969; Engl. tr. *The Structure of Jewish History*, 1975). Proceeding from Hegelian ideas, he considered the basic ideas of Judaism as eternal, changing only their external forms. But as he failed to define such a basic idea, these two essays do not constitute a coherent text. In the first part, dealing with the history of the destruction of the Second Temple, the ideal form is harmony of the political and religious elements. Therefore Graetz regarded Judaism as a unique politico-religious organism, in which “the Law is the soul, the Holy Land the body.” As for the second, the exilic part of Jewish history, however, Graetz agrees that theoretical-philosophical ideas have taken over: “Judaism becomes scientific scholarship,” with the “talmudic system” instead of the Holy Land. He stated, however, that the process is not yet concluded and that “the task of Judaism’s God-idea [seems to be] to found a religious state which is conscious of its activity, purpose, and connection with the world.” Graetz’s ideas on the nature of Jewish history underwent further development. In an essay titled *Die Verjuengung des juedischen Stammes* (in Wertheimer-Komperts’ *Jahrbuch fuer Israeliten*, 1863; repr. with notes by Zlocisty in *Juedischer Volkskalender*, Brno, 1903; Eng. tr. in I. Lesser’s *Occident* (1865), 193 ff.) he rejected the belief in a personal Messiah, and maintained that the prophetic promises referred to the Jewish nation as a whole. In this period (1860s) Graetz under the influence of M. Hess’ *Rome and Jerusalem* did not believe in the political revival of the Jews and in the possibility of the creation of a Jewish center in Erez Israel (see letters to Hess and the conclusion of his pamphlet *Briefwechsel einer englischen Dame ueber Judentum und Semitismus*, which he

published anonymously in 1883; also under the title *Gedanken einer Juedin ueber das Judentum...*, 1885). Both in this pamphlet and in his essay “The Significance of Judaism for the Present and the Future” (in JQR, 1–2, 1889/90), he emphasized the historical and religious significance of continuous Jewish existence. He saw the main importance of Judaism in the ethical values which it was its task to impart to the world. Judaism is the sole bearer of monotheism; it is the only rational religion. Its preservation and the propagation of the sublime ethical truths to be found in Judaism, these are the tasks of the Jews in the world and this is the importance of Judaism for human culture.

Graetz’s life work is his *History of the Jews* and most of his other writings were merely preliminary studies or supplements to this gigantic structure. Even though attempts had been made before him by both Christians (Basnage) and Jews (Jost) to write a Jewish history, the work of Graetz was the first comprehensive attempt to write the history of the Jews as the history of a living people and from a Jewish point of view. With deep feeling, he describes the struggle of Jews and of Judaism for survival, their uniqueness, and their mission in world history. His approach has often been characterized as a history of suffering and intellectual achievement. Out of his appreciation of Judaism and his reaction against all that Christianity had perpetrated against Judaism, Graetz pointed out the failure of the Christian churches to provide a religion and ethics to serve as a basis for a healthy society. The writing of such a Jewish history in the midst of a society which in its vast majority identified itself with Christian culture was a daunting task.

After Volume 4 came out in 1853, eight further volumes of his *Geschichte der Juden* appeared between 1856 and 1870, leaving only the first two volumes – dealing with the biblical period and the early Second Temple period – to be completed. Volume 1 of the *History of the Jews* (to the death of Solomon) appeared in 1874, after Graetz had been able to travel to Palestine, and the two parts of the second volume (to the revolt of the Hasmonians) followed in 1875–76.

From a historiographic point of view, the *History of the Jews* was a great and impressive achievement. Graetz made use of a vast number of hitherto neglected sources in several languages, though these were mainly literary sources; there was hardly any archival material on Jewish history available in his days. The same holds true for many social and economic aspects of history, though he recognized early the importance of coins as a historical source. In general, he adopted the philologic-critical method and succeeded in clarifying several obscure episodes in Jewish history. Having studied the works of outstanding personalities, especially those with whom he felt a spiritual affinity (such as Maimonides), Graetz succeeded in painting a series of particular figures as representatives of their respective epochs and the history of Judaism in general. His intuition as a historian was astonishing. Thus, for example, the documents discovered in the Cairo **Genizah* after the death of Graetz confirmed several of his surmises concerning the

development of the *piyyut* and the period of the *geonim*. But Graetz the historiographer had his weaknesses as well, among which was his excessive and rather naive rationalism. He described everything which appeared to him understandable and logical in the history of his people and emphasized the forces and the ideals which had assured its survival throughout the centuries. Thus he stressed the importance of the universalist ethics of Judaism and showed little understanding for mystical forces and movements such as *Kabbalah and *Hasidism, which he despised and considered malignant growths in the body of Judaism. Graetz was not acquainted with and scarcely interested in the history of the Jews of Poland, Russia, and Turkey, and in his attachment to Haskalah expressed contempt bordering on hatred for “the fossilized Polish talmudists.” To Yiddish he refers as a ridiculous gibberish (“jargon”).

Nevertheless, Graetz wrote in a lively and captivating though sometimes partisan, style, which secured remarkable and long-lasting success for his work. Between 1887 and 1889 an abridged edition of his great work was published in three volumes under the title *Volkstuemliche Geschichte der Juden* (1887–89; 10 editions to 1930; Eng. tr. 1930⁴), which became one of the most widely read Jewish books in Central Europe. For several generations of Jews this work served as a very common bar mitzvah gift.

As to biblical research, Graetz’s approach to the Pentateuch was traditional, but in his studies of Prophets and Hagiographa he occasionally adopted radical views. His commentaries on Song of Songs and Ecclesiastes (the latter written according to him in the time of Herod) were published in 1871 and his commentary to Psalms in 1882. These were generally not favorably received, though by making use of the old Bible versions and of talmudic Hebrew he was able to obtain some valuable results. Toward the end of his life it was Graetz’s intention to publish a critical text on the Bible, but he left nothing more than emendations to the Prophets, Psalms, and Ecclesiastes which his student David Kaufmann published posthumously.

Critics and Legacy

Graetz’s work had a tremendous effect on Jews everywhere, but he was not short of critics either. S.R. Hirsch voiced strong criticism as early as the publication of Volume 4 in the early years of his *Jeschurun* (1855–57), calling it “the phantasies of superficial combinations.” The breach between teacher and pupil was now complete. From the opposite direction came Geiger’s verdict that the work contained “stories but not history” (*Juedische Zeitschrift*, 4 (1866), 145ff.; cf. also Steinschneider’s censure in *HB*, 3 (1860), 103f.; 4 (1861), 84; 6 (1863), 73ff.). Graetz replied to his contemporary critics in periodicals and in subsequent volumes of his history.

Beyond scholarly debates and throughout his life, Graetz was a pugnacious character. During his student years in Breslau, he fought ardent battles in Jewish and non-Jewish journals against Abraham *Geiger and the Reform movement. On

his return from the Middle East, he published a memorandum which was highly critical of the social and educational conditions in Erez Israel and of the system of **Halukkah* in particular. He also played a role in the new wave of antisemitic attacks. In 1879 the nationalistic Prussian historian Heinrich von *Treitschke violently attacked the 11th volume of the *History of the Jews*, which dealt with recent times. He accused Graetz of hatred of Christianity, Jewish nationalism, and the lack of desire for the integration of Jews within the German nation (“Unsere Aussichten,” in *Preussische Jahrbuecher*, 1879). This led to a public debate in which both Jewish and non-Jewish writers participated. While many of them rejected Treitschke’s virulent antisemitism, even Jewish writers dissociated themselves, with few exceptions, from Graetz. That he was a controversial figure became once again evident when the Union of Jewish Communities set up in 1885 a Jewish Historical Commission with the purpose of publishing the sources for the history of the Jews in Germany. Despite his merits, Graetz was not invited to serve in any way. Thus in his later years, Graetz was cautious in his involvement in public affairs. He warmly welcomed the philanthropic program of the *Kattowitz Conference (1884), but withdrew immediately when the *Hovevei Zion movement took a political turn and tried to use his name for its purposes.

A wider Jewish public, and the world of Jewish scholarship in particular, honored Graetz on the occasion of his 70th birthday; a jubilee volume was published to celebrate the event. Graetz was invited to deliver the opening speech at the Anglo-Jewish Exhibition in London in 1887, which was published under the title of *Historic Parallels in Jewish History* (translated by J. Jacobs, 1887). In 1888 he was elected honorary member of the history department of the Academy of Madrid in honor of his description of medieval Jewish history in Spain up to the expulsion in 1492.

Graetz’s *History* became the basis and the source for the further study of Jewish history, and in some fields of research its influence is felt to this day. It was translated into many languages. The great number of editions and translations (also of single volumes: cf. Brann, in *MGWJ*, 61 (1917), 481–91) of the *Geschichte* speak their own language of success. The various volumes were published in up to five editions until World War I. Several volumes of the last edition (11 vols., 1890–1909) were edited and annotated by M. Brann and others. The best known Hebrew version is an adaptation/translation by S.P. Rabinowitz (with A. Harkavy, 1890–99), which exerted much influence among the Hebrew-reading public of East European Jewry. Yiddish translations appeared in 1897–98, 1913, and 1915–17. The various English translations were influential as well: (1) without the notes and excurses, by Bella Loewy (5 vols., 1891–92), authorized and with an introduction and final retrospect by Graetz himself (1901); (2) the same with a sixth volume including P. Bloch’s memoir, 1892–98; and (3) the “Popular History” (5 vols., 1919). As to French translations: volume 3 was translated by Moses *Hess under the title *Sinai et Golgotha* in 1867; and the whole work by M. Wogue and M.

Bloch (1882–97). The work was also translated into Russian, Polish, and Hungarian.

Most of Graetz's other published work was preparatory to the main "History," and appeared in the *Monatsschrift* and in the *Jahresberichte* of the Breslau Seminary. On the occasion of Graetz's 100th birthday anniversary the *Monatsschrift* (vol. 61 (1917), 321ff.) and the *Neue Juedische Monatshefte* (vol. 2, nos. 3–4, 1917–18) issued a series of memoirs and first biographical sketches on the life and works of the historian. A number of Graetz's essays and personal writings have been published in Hebrew (*Darkhei ha-Historyah ha-Yehudit* (1969), tr. by J. Tolkes), and an extensive selection of his diaries and letters was published by R. Michael (*Heinrich Graetz. Tagebuch und Briefe* (1977)). In more recent times, a few comprehensive studies of the life and work of Graetz have been finished.

[Shmuel Ettinger / Marcus Pyka (2nd ed.)]

GRAF, HERBERT (1904–1973), opera producer and administrator. Graf, who was born in Vienna, was the son of the critic Max Graf. He studied at the University of Vienna with Guido Adler, graduating in 1925, after which he worked as stage director at the opera houses of Muenster, Breslau, Frankfurt on the Main, and Basle until 1934, when he left Germany. Thereafter he worked in the United States with the Philadelphia Opera and, from 1939 to 1960, at the Metropolitan (where he was general director of productions until 1949). He was head of the Curtis Institute of Music's opera department from 1949. As an opera producer, he worked at almost all the important world opera houses and festivals. Graf was director of the Zurich Opera (1960–63) and of the Grand Theatre, Geneva, from 1965 until his death. His many publications include *Opera for the People* (1951) and *Producing Opera for America* (1961).

[Max Loppert]

GRAF, KARL HEINRICH (1815–1869), German Protestant Bible scholar. Graf was born in Mulhouse, Alsace, and died in Meissen, Saxony. He began as a teacher of French and Hebrew in Paris and Meissen, where, in 1852, he became a professor. The hypothesis of his teacher, E. Reuss, that the prophetic books preceded the literary formulations of the Pentateuchal

laws led Graf to the further hypothesis (*Die geschichtlichen Buecher des Alten Testaments*, 1866) that the Priestly Code, i.e., the source which includes Leviticus, which had until then been considered the earliest source of the Pentateuch, was actually the latest of the Pentateuchal sources. This contribution to the reconstruction of the history of ancient Israel was later developed by J. Wellhausen. He also wrote commentaries on Moses' blessing (1857) and the Book of Jeremiah (*Der Prophet Jeremia*, 1862).

ADD. BIBLIOGRAPHY: R. Smend, in: *DBI*, 1, 460–61.

GRAFFMAN, GARY (1928–), U.S. pianist. Graffman was born in New York City, and studied at the Curtis Institute of Music, Philadelphia, with Isabelle Vengerova (1936–46) and at Columbia University (1947–48). His debut as a soloist was with the Philadelphia Orchestra under Ormandy (1947). Two years later he won the Leventritt Award, which marked the beginning of an important international career. Graffman, a typically brilliant virtuoso in the American style, made many recordings, in addition to numerous public appearances.

[Max Loppert]

GRAFSTEIN, JERAHMIEL S. (Jerry; 1935–), Canadian senator, lawyer, and businessman. Grafstein was born in London, Ontario, where his father, a Polish university-educated immigrant to Canada, was in business. Jerry Grafstein graduated with a B.A. from the University of Western Ontario and a law degree from the University of Toronto Law School. In 1960 he was admitted to the Ontario Bar and appointed Queen's Counsel in 1973. He founded and edited the *Journal of Liberal Thought* in 1965–66. Drawn to politics he was a Liberal Party fundraiser and political adviser who worked on numerous Liberal political campaigns. A skilled policy adviser, he worked in several important government ministries, including the Departments of Transportation, External Affairs, and Justice. He also served as a senior adviser to former Prime Minister Pierre Trudeau and in 1984 Trudeau appointed him to the Senate of Canada. Grafstein became a partner in the Toronto law firm of Minden, Gross, Grafstein and Greenstein specializing in communications and administrative law. He was also a financier and patron of many arts and health organizations. Among his business interests, Grafstein was one of the founders of CITYTV in Toronto in 1972, chaired the boards of media corporations, such as CUC Broadcasting Ltd., CITY TV, and Muchmusic, and served on the boards of other corporations such as the World Film Festival of Toronto and the Toronto Arts Awards. He served as co-chair of the Canada-U.S. Interparliamentary Group, the largest parliamentary group in Canada, and the Advisory Committee to the 1988 Toronto Economic Summit and as a member of the Executive of the 2008 Toronto Olympic Bid Committee. He published articles, delivered lectures, made panel appearances, and led conferences in the areas of technology, television, cable, film, broadcasting, and corporate and international finance.

[Andrea Knight (2nd ed.)]

GRAHAM, BILL (Wulf Wolodia Grajonca, Wolfgang Grajonca; 1931–1991), rock 'n' roll concert promoter and manager, member of the Rock and Roll Hall of Fame. Graham was born to Frieda (Sass) and Yankel, religious Russian Jews who had moved to Berlin before his birth. Jacob died from an accident two days after Graham was born, and his mother was forced to put her only son and the youngest of her five daughters in the Auerbach orphanage so that she could seek employment.

On July 4, 1939, Graham and 39 other children from the orphanage in Berlin left on a **Kindertransport* to France, arriving at Chateau de Quincy, 30 km southeast of Paris. Later Graham was placed in a baby orphanage in Paris, and then the group was spirited in the middle of the night into Free France, transported to Chateau de Chaumont, Creuse. In July 1941, Graham and his sister, Tolla, joined a group of children who took a train south to Marseille, and then to Spain and Portugal, not long before their mother was gassed by the Nazis. The children were severely malnourished, and Tolla fell ill with pneumonia in Lyon; Graham never saw her again. He left Lisbon with 55 other children on the Serpa Pinto on September 9, 1941, arriving in New York on September 24, 1941. Brought over by *HIAS as part of the One Thousand Children – the only group of unaccompanied children who were rescued from the Holocaust by the United States – Graham was sent to an orphanage at Pleasantville, N.J., and was subsequently adopted by Alfred and Pearl Ehrenreich. He changed his name to Graham and became an American citizen in 1949. Graham fought in the Korean War and was awarded a Bronze Star and a Purple Heart.

In 1955 he moved to San Francisco, joining two of his sisters who had emigrated there from Israel. After a few office jobs and acting gigs, he became the manager of the San Francisco Mime Troupe. Graham produced his first concert, a benefit for the Mime Troupe, on November 1, 1965, featuring the Jefferson Airplane, Lawrence Ferlinghetti, The Committee, The Fugs, Allen Ginsberg, and other elements of the San Francisco art scene and subculture. Four months later, on February 4, 1966, Graham promoted his first show under his new company, Bill Graham Presents, featuring the Jefferson Airplane at the Fillmore Auditorium, a dilapidated auditorium that Graham transformed into a tightly run concert hall. It was at the Fillmore that Graham helped launch the careers of some of the icons of rock: Janis Joplin, Otis Redding, Jefferson Airplane, Cream, Big Brother and the Holding Company, and the Grateful Dead.

“The Fillmore ... was the church of rock 'n' roll, and Bill was the shepherd tending the flock,” said Mickey Hart, the drummer for the Dead.

In 1968, Graham moved the Fillmore into the Carousel Ballroom, another old dance hall, and renamed it the Fillmore West to go with his opening the Fillmore East in New York City. He subsequently took over Winterland, another San Francisco concert venue. Graham also branched out into band management and tour promotion.

Considered the Barnum and Bailey of rock 'n' roll, Graham revolutionized concert promotion, bringing professionalism to the business of presenting rock shows. That included having great lighting, great sound, shows that started on time, making artists do encores, making sure artists showed up on time for shows – in short, Graham brought the rules, order, and concept of theater to rock 'n' roll, as well as setting the standard for well-produced large-scale rock concerts.

Graham, who lived by himself in a Marin County house he named “Masada,” also devoted much time and energy to produce benefits, mobilizing musicians on behalf of a wide range of social issues. In 1975, Graham paid for Chabad's 22-foot-high “Mama Menorah,” the first giant public menorah displayed outside Israel, which is now replicated around the world. After he was killed in a helicopter crash in California, the Bill Graham Foundation was formed as a supporting foundation of the Jewish Community Federation of San Francisco.

An unauthorized biography, *Rage & Roll: Bill Graham and the Selling of Rock*, was written by John Glatt in 1993, and Graham was in the middle of writing his own autobiography, *Bill Graham Presents: My Life Inside Rock and Out* (1992) with Robert Greenfield when he died. Graham was inducted into The Rock and Roll Hall of Fame in 1992.

[Elli Wohlgeleinter (2nd ed.)]

GRAJEWÓ, small town in Białystok province, Poland. Jews settled there at the beginning of the 18th century. According to the 1765 census, there were 83 Jews aged over one year (17 families), of whom six families resided in their own houses and eleven in leased dwellings; 336 Jews were living in 38 villages in the vicinity. They leased taverns or were occupied as small traders or artisans (tailors, tinsmiths). Until 1862 Grajewo was included in the towns of the Russian-German border zone, where Jewish residence was subjected to various restrictions. Jews organized a community in the late 18th century. They operated a number of factories and many owned stores. In the 19th century many Jews in Grajewo exported agricultural produce to Eastern Prussia. The community numbered 197 (39% of the total population) in 1808, 727 (57%) in 1827, 1,457 (76%) in 1857, 4,336 in 1897 and 2,834 (39% of a total 7,346) in 1921. There were anti-Jewish outbreaks in 1933. Under the Soviet occupation (September 1939–June 1941) Jewish businesses were nationalized.

The Germans captured the town on June 22, 1941, and instituted a reign of terror. In August 1941, 1,600–2,000 Jews were confined to a ghetto. In December 1942 most of the Jews in Grajewo were deported to Treblinka and the rest in January 1943 to Auschwitz.

GRAJEWSKI, ARYEH LEIB (1896–1967), talmudic scholar, jurist, and journalist. Grajewski was born near Lomza in Po-

land and studied in the yeshivah of Israel Meir Ha-Kohen (the “Ḥafez Ḥayyim”), in Radin and at Slobodka. At the age of 16 he was ordained rabbi by outstanding scholars. He left for Erez Israel in 1913, but at the outbreak of World War I in 1914 he and his family were compelled to move to Egypt because of their Russian citizenship. On the initiative of Joseph Trumpeldor he participated in the founding of a school for the children of the refugees and exiles from Erez Israel then in Alexandria. He assisted his father Simeon Ḥayyim, who was appointed Jewish chaplain to the British expeditionary force in the Near East. In 1919 he returned to Jerusalem where he taught Talmud in the Hebrew Gymnasium. In 1921 he went to Paris, completing his legal studies in the following year, taught Talmud at the Rabbinical Seminary of Paris, and was a member of the central council of the Federation of French Zionists, chairman of the Union of Jewish Students, director of a school preparing young refugees for teaching, president of the Paris union of Hebrew teachers, etc. He published poems, stories, and articles on Jewish and general topics in French newspapers (in *L’Intransigeant*, in which he ran a special section on Hebrew and Yiddish literature, in *Les Nouvelles Littéraires*, and in the *Revue du Levant*), in Jewish French-language newspapers, and in Hebrew papers in Erez Israel and elsewhere; and he edited the French column of the Paris Yiddish paper, *Parizer Haynt*. He devoted himself mainly to research in Hebrew law and Talmud. His first articles in this field were published in Hebrew in *Ha-Toren* (no. 11, 1945), and in French in *Hamenora*. He was a regular contributor to the Jerusalem periodicals *Ha-Mishpat* and *Ha-Mishpat ha-Ivri*. In 1935 Grajewski returned to Erez Israel and for two years was engaged in teaching, after which he devoted himself to law, practicing also as a rabbinic lawyer. He published a monograph on Joseph ibn Migash (1953, 1963²). He published *Dinei Perudin u-Ketatot ba-Mishpat ha-Ivri* (1948). He died in Jerusalem and bequeathed his library to the library of Hechal Shlomo in Jerusalem.

[Zvi Kaplan]

GRAJEWSKI, ELIEZER ZALMAN (1843–1899), rabbinic scholar, traveler, and journalist. Grajewski was born in Malyaty (Maletai), near Vilna. He served first as the rabbi of Kletsk and later of Orsha. In 1873, he visited Erez Israel, where he became a strong supporter of the new settlers. Upon his return, he published reminiscences of his journey in *Ha-Ivri*. When the Mazkeret Moshe organization was founded to honor Sir Moses Montefiore, leading Russian rabbis advocated the appointment of Grajewski as its director in Erez Israel, and for this purpose he went to England in 1876. He did not, however, obtain the appointment but instead was appointed rabbi in Liverpool in 1877. He also traveled extensively throughout the United States, where he lectured on the necessity of encouraging the upbuilding of Erez Israel. In 1890 Grajewski settled in Jerusalem, where he lived for the remainder of his life, although he died in Rigród, near the Prussian border, after having gone to Vienna for medical treatment. His published works include

Ginmat Egoz (1887), consisting of sermons and talmudic novellae: *Ginzei Keneset Yisrael* (1877), and *Gevul Yam* (1889), two commentaries to the *Haggadah*; and *Si’ah Eli’ezer* (1896), explanations of *piyyutim* recited on special occasions.

GRAJEWSKY, PINCHAS (1873–1941), Erez Israel historian. Grajewsky was born in Jerusalem, where he received a traditional yeshivah education. He was an official in the Bikkur Ḥolim Hospital in Jerusalem for 43 years. In 1895 he became a member of the Yishuv Erez ha-Kodesh Association, which was founded to train yeshivah students for agricultural work. Grajewsky’s main literary activity was in the publication of documents, letters, and memoirs, along with biographical sketches, relating to Jerusalem and Erez Israel personalities, synagogues, and public institutions. Many of the 170 pamphlets published by Grajewsky were in series: *Mi-Ginzei Yerushalayim* (25) contained documents, memoirs, and Turkish *firman*s; *Avnei Zikkaron* (15) was on tombstones and inscriptions; *Zikhron ha-Ḥovevim ha-Rishonim* (20) on important individuals; *Benot Ziyyon* (10) on distinguished women of Jerusalem. Although his biographical material was not always accurate, it was because of him that many historical documents which might otherwise have been lost were preserved. He also published *Sefer ha-Yishuv* (1929) on the residential quarters of Jerusalem.

[Benjamin Jaffe (2nd ed.)]

GRANACH, ALEXANDER (Isaiah Gronach; 1890–1945), German and Yiddish actor of proletarian types, who distinguished himself in expressionist portrayals. Granach, who was born in Werbowitz (Galicia), reached Berlin at the age of 15 while traveling with a Yiddish troupe. He was accepted at Max *Reinhardt’s school and joined the Reinhardt Theater in 1908. He volunteered for the Austro-Hungarian Army during World War I and was sent to Galicia. After World War I, he specialized in modern plays, but also won acclaim for his *Shylock* and his *Mephistopheles*. He also played in Yiddish, appearing in Sholem Asch’s *God of Vengeance*, and presented Yiddish plays in New York in 1931. After a period in Poland and Russia, he emigrated in the U.S. in 1938. Here he staged *Shylock* and other plays in Yiddish, and acted minor parts in Hollywood.

[Gershon K. Gershony / Bjoern Siegel (2nd ed.)]

GRANADA, city and province in Andalusia, S. Spain. According to tradition in the legends of Spanish Jewry, some of the Jews exiled by Nebuchadnezzar settled in Granada (Solomon ibn Verga, *Shevet Yehudah*, ed. by A. Shochat (1947), 33–34), which they called “the pomegranate of Spain.” Even the Moors thought that the Jews had founded the city, which they called *Garnat al-Yahud* (“Granada of the Jews”). The earliest extant information on the Jewish community in Granada is that the garrison stationed in the city after its conquest by the Moors in 711 was composed of Jews and Moors. During the Umayyad period Granada was one of the most important communities in all Spain. In the 11th century as a result of the fragmentation of Andalusia – when Granada became an independent principality – Jews received a large share in its administration. *Samuel ha-Nagid was not only leader of his own people but also vizier and military commander in the state. Prominent Jews were also among his political opponents who fled from the principality after the victory of Samuel’s faction (Ibn Daud, *Tradition*, 74). The Jewish position in the leadership of the state is explained by the conditions within the principality – controlled by a Berber military clique that did not strike roots within the state. In the many court intrigues the king could depend on a Jew who had no aspirations for the throne. At that time, the Jewish population of Granada was estimated at 5,000 people, constituting around 20% of the population, and Samuel led the Jews for the benefit of the state. Various libelous documents were issued against the position of the Jews, and were circulated through neighboring principalities. An anti-Jewish polemical tone was even voiced in their wars against Granada.

Samuel’s son, Joseph ha-Nagid, fell victim to a mass revolt in 1066 in which the “[Jewish] community of Granada” perished along with him (*ibid.*, 76). According to a later testimony, “more than 1,500 householders” were killed (Ibn Verga, *op. cit.*, 22). Soon afterward the Jews returned to a position of influence in Granada, however not for long. At the time of the conquest of the city by the Almoravid Ibn Tāshfin in 1090, the community was destroyed and the *Ibn Ezra family was among the refugees. During the Almohad regime (1148–1212), only Jews who had converted to Islam were permitted to live in the city. The attempt of Jews and Christians to overthrow Almohad rule in 1162 met with failure. At first, Jews, together with Christians, were expelled from the town during the wars of the Reconquest (1232). They returned to Granada when the kingdom of Granada was ruled by the Muslim Naṣrid dynasty (1232–1492). There is no available information on the Jews of Granada during the 13th–15th centuries, yet it is known that several of the kings of Aragon sent Jews as legates to Granada.

After 1391 *Conversos found shelter in Granada, where they openly returned to Judaism. In the agreement of surrender signed between the king of Granada and Ferdinand and Isabella in 1491 it was stated that Jews who were natives of Granada and its environs, and designated to be transferred to Spain, would be granted protection; those who wished to leave the country for North Africa would be given the op-

portunity to do so. Conversos who returned to Judaism were given a deadline to leave the country. It was also agreed that no Jew would have the right of judgment over the Moors, and that Jews would not serve as tax collectors.

On March 31, 1492, the edict of expulsion of the Jews from Spain was signed in the recently captured Granada. The traveler Hieronymus Muenzer, who visited Granada in 1494–1495, states that Ferdinand ordered the razing of the Jewish quarter in 1492, where, according to Muenzer, 20,000 Jews resided. Sources from the Archivo de Simancas prove this figure to be an exaggeration. According to Laredo Quesada the number of Jews in Granada in 1492 was around 550. In addition to the families of Samuel ha-Nagid and Ibn Ezra, natives of Granada included Judah ibn *Tibbon, Saadiyah b. Maimon *Ibn Danān, Solomon b. Joseph ibn Ayyūb, and many other scholars and authors. The Jewish quarter in Granada was not located in a single place throughout the centuries of Muslim rule. It was moved, expanded, or contracted by the various dynasties which ruled the city. According to one source, *Garnat al-Yahud* (the City of the Jews) was on the hill by the *Alcazaba*, from the *Torres Bermejas* up to the Daro River, while according to Muenzer as far as the *Puerta Real*. The Jewish quarter was completely demolished, by order of King Ferdinand, and on its location a cathedral and a hospital were erected. In the Alhambra Palace, according to some scholars, the fountain in the Patio of the Lions was brought from the palace of Joseph ibn Nagrela. Ibn Nagrela’s fountain is described in the contemporary Hebrew poetry. In the Alhambra, in the Ambassadors Hall the Catholic monarchs signed the Edict of Expulsion on March 31, 1492, three months after the fall of the Kingdom of Granada.

[Haim Beinart]

GRANADA, GABRIEL DE (b. 1629), Marrano, arrested for Judaizing by the Inquisition in Mexico in 1642. During his

trial, although not under torture as is commonly supposed but under the frightening pressures of his surroundings, he implicated over 80 other people, including his mother, four aunts, grandmother, and brother. His father, Manuel de Granada, who had traveled to the Philippines, died before Gabriel's arrest; his mother, Maria de Rivera, starved herself to death in the Inquisition jail. The trial dragged on at least until September 1645 and Gabriel was not sentenced until April 16, 1646, when he was reconciled to the Church.

[Martin A. Cohen]

GRANDE, BENZION MOISEEVICH (1891–1974), Russian physician, Orientalist. Grande was born in Lithuania. On the eve of World War I he visited Erez-Israel and the neighboring Arab countries and became interested in the Arabic language and culture. As a student in the medical faculty in Moscow he served as a medic in the Russian army during World War I. In 1918 he graduated as a physician and served in the Red Army. In 1922 he graduated from the Institut of Eastern Sciences and began his career teaching and studying Arabic. He did much to help develop the written languages of the small national groups in Russia, and from 1940 to 1960 held the Arabic chair at Moscow University. He published the results of his research on Semitic languages and after his retirement in 1960 devoted himself to studying the Hebrew language. In 1963 he edited F.L. Shapiro Hebrew–Russian Dictionary.

[Shmuel Spector (2nd ed.)]

GRANDITSKY, PALLE (1923–2001), Swedish actor and director. Granditsky worked at the City Theater of Uppsala and Gävle (1954–57) and was head of the City Theater of Borås (1957–64). Here he directed *Antigone* by Jean Anouilh and *The Three Sisters* by Chekhov. He then returned to Uppsala, where his outstanding productions were *The Dance of Death* by Strindberg and *Rhinoceros* (1964) by Ionesco.

GRANDVAL (Hirsch-Ollendorf), GILBERT YVES EDMOND (1904–1981), French statesman. Born in Paris, Grandval was director of a chemical production concern from 1917 to 1940 and after the fall of France joined the French Resistance, becoming one of its leaders. He was appointed military governor of the Saar region in 1945 and from 1948 to 1952 was French High Commissioner for the Saar. Grandval was later resident-general in Morocco (1953), secretary of state for foreign trade (1962), and from 1962 to 1966 was minister of labor.

GRANIN, DANIEL ALEKSANDROVICH (pseudonym of **D.A. German**; 1918–), Soviet author. Granin, who was born and raised in Petrograd, became an engineer and worked for a number of years at various industrial enterprises. After serv-

ing in the Red Army in World War II, he turned to literature. His favorite theme was the clash between the professional and personal integrity of a scientist or a technocrat and the powerful political pressures exercised by the Communist bureaucracy. Granin's early works include *Variant vtoroy* ("Second Version," 1949) and the novel *Iskateli* (1954; *Those Who Seek*, 1956). The publication of his story *Sobstvennoye mnenie* ("One's Own Opinion") in 1956 was one of the most significant events of the post-Stalin "thaw." He justified his advocacy of independent thought as serving, in the final analysis, the best interests of the Soviet state. But it provoked the anger of Party bureaucrats because it was taken, not unreasonably, as implying that the party's policy of thought control was harmful to the country. Granin's best-known novel is *Idu na grozu* (1962; *Bison*, 1990), which has been credited with providing the best portrait of the world of Soviet scientists. With Ales Adamovich he wrote *A Book of the Blockade* (1982) about the siege of Leningrad, and with William Styron he edited *The Human Experience: Contemporary American and Soviet Fiction and Poetry* (1989).

[Maurice Friedberg]

GRANOTT (Granovsky), ABRAHAM (1890–1962), Israeli economist, head of the *Jewish National Fund. Born in Folesti, Bessarabia, Granott was appointed secretary of the JNF in 1919. After the transfer of the JNF Head Office to Jerusalem in 1922, Granott settled in that city, becoming the Fund's managing director, chairman of its board of directors (1945), and president (1960). His plan for a joint land authority of the JNF and the State of Israel served as the basis for the land legislation passed by the *Knesset in 1960. In 1948 Granott was cofounder and chairman of the Progressive Party (see *Independent Liberal Party) and was elected to the first Knesset in 1949, serving as chairman of its finance committee. His main contribution to Israel's economy consisted of establishing the principles for a progressive agrarian policy, which he formulated in a number of works such as *Land System in Palestine* (1952) and *Agrarian Reform and the Record of Israel* (1956). For a full bibliography of Granott's writings (in Hebrew, English, French, Spanish, German, etc.) up to 1951, see the appendix to his book *Be-Hitnaḥel Am* (1951).

[Theodore Hatalgui]

GRANOVSKY, ALEXANDER (pseudonym of **Abraham Azarch**; 1890–1937), Soviet theatrical director and founder of the post-Revolution Jewish State Theater. Born in Moscow, he studied at the Institute of Stage Arts in St. Petersburg and worked in Munich, where he was influenced by Rienhardt. Granovsky organized an amateur Yiddish drama group in 1918. In 1919 he was authorized to open a studio in Petrograd

(Leningrad), and after six months he presented Maeterlinck's *The Blind* followed by Sholem *Asch's *The Sinner* and *Amnon and Tamar*. Granovsky aimed at the creation of a new Jewish style which would break with the Yiddish "primitive" tradition. His studio grew into a repertory theater, and was finally called the "Jewish State Theater." It moved to Moscow and presented works mainly by Jewish authors, Shalom *Aleichem, Sholem *Asch, A. *Goldfaden, I.L. *Peretz, S. *Abramovitch (Mendele Mokher Seforim), and L. *Reznik, and plays by non-Jewish authors such as *Uriel Acosta* by K.F. Gutzkow and *Trouhadec* by Jules Romains. His method of production was exemplified in his presentation of Peretz's *Night in the Old Market* (1925), which relied largely on music, movement, lighting, and the "art of silence." In 1928–29 he toured Western Europe. He did not return to Russia, but stayed in Berlin and directed Arnold Zweig's *Sergeant Grischa* in German and *Uriel Acosta* for *Habimah (1930). After the Nazis came to power, he moved to Paris, where he worked in the opera and cinema. Among his admirers and students were Solomon *Mikhoels and Benjamin Zuskin.

GRANT, BARON ALBERT (**Albert Gottheimer**; 1831–1889), British financier. Born in Dublin, educated in London and Paris, Grant introduced in Britain the *Crédit-Foncier* type of mobilizing small investments for large projects. Many of his enterprises lacked solidity, and he was often attacked and lampooned. His companies, 37 in all, included public utilities and financial institutions in Europe and overseas. Their issued capital totaled 25 million sterling (\$125 million), but eventually were worth only 5 million (\$25 million). Grant also initiated slum clearance and collected paintings. He was member of Parliament for Kidderminster, 1865–68 and 1874–80. He purchased Leicester Square (London), then a garbage dump, converted it into a public garden, and handed it over to the Metropolitan Board of Works in 1874. In 1868 he was ennobled by King Victor Emanuel of Italy. He died in comparatively poor circumstances at Bognor. One of the most visible and colorful Anglo-Jewish businessmen of his time, Grant is often said to have been the original of Auguste Melmotte in Anthony Trollope's famous novel *The Way We Live Now* (1875).

GRANT, LEE (**Lyova Rosenthal**; 1927–), U.S. actress. Born in New York, Grant was nominated for an Oscar in her first screen role as the young shoplifter in *Detective Story* (1951), but soon after was blacklisted because of her refusal to testify against her then-husband, tv/screenwriter Arnold Manoff (aka Joel Carpenter), before the House Un-American Activities Committee. After more than a decade, Grant returned to films and television, winning both an Oscar (Best Sup-

porting Actress, *Shampoo*, 1975) and Emmy Awards (*Peyton Place*, 1966 and *Neon Ceiling*, 1971). Appearing in more than 70 films, she played diverse roles in such motion pictures as *Middle of the Night* (1959); *The Balcony* (1963); *In the Heat of the Night* (1967); *Valley of the Dolls* (1967); *The Landlord* (Oscar nomination for Best Supporting Actress, 1970); *Plaza Suite* (1971); *Portnoy's Complaint* (1972); *Voyage of the Damned* (Oscar nomination for Best Supporting Actress, 1976); *Little Miss Marker* (1980); *Teachers* (1984); *The Big Town* (1987); *It's My Party* (1996); *The Substance of Fire* (1996); *Under Heat* (1996); *Dr. T and the Women* (2000); *Mulholland Drive* (2001); and *Going Shopping* (2005).

She directed the films *Tell Me a Riddle* (1980); *What Sex Am I?* (1985); *Down and Out in America* (Academy Award for Best Documentary, 1986); and *Staying Together* (1989). In addition to directing several TV movies, such as *Nobody's Child* (1986) and *Seasons of the Heart* (1994), from 1998 Grant directed dozens of biographical TV documentaries entitled *Intimate Portrait*. The subjects of these personal profiles included such figures as Vanessa Redgrave, Gloria *Steinem, Bella *Abzug, Jessica Tandy, Betty *Friedan, Bo Derek – and herself (2001).

In 1983 she received the Congressional Arts Caucus Award for Outstanding Achievement in Acting and Independent Filmmaking; in 1989, Women in Film granted her their first-ever Lifetime Achievement Award.

Grant's daughter, Dinah Manoff, is also an actress (*Grease*; *Ordinary People*; *I Ought to Be in Pictures*; *Staying Together*; and the TV series *Soap*; *Celebrity*; *Empty Nest*; and *State of Grace*).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

°GRANT, ULYSSES SIMPSON (1822–1885), victorious Union Army general of the Civil War and 18th president of the United States (1869–77). Grant's name has been linked irrevocably with anti-Jewish prejudice through his signature on General Order Number 11, issued at his headquarters of the Department of the Tennessee, located in Holly Springs, Miss., on December 17, 1862: "The Jews, as a class violating every regulation of trade established by the Treasury Department and also department orders, are hereby expelled from the department within twenty-four hours from the receipt of this order. Post commanders will see that all of this class of people be furnished passes and required to leave, and any one returning after such notification will be arrested and held in confinement until an opportunity occurs of sending them out as prisoners, unless furnished with permit from headquarters. No passes will be given these people to visit headquarters for the purpose of making personal application for trade permits." It cannot be proven indisputably whether this blanket condemnation and order of expulsion, executed in the area under Grant's military control in parts of the states of Kentucky, Tennessee, and Mississippi, was composed by Grant himself or by an underling, on the inspiration of an official of the War Department or in response to complaints by General W.T. Sherman, or in accor-

dance with the wishes of gentile cotton-buyers in the area. Extensive research has uncovered much anti-Jewish prejudice on the part of military officers and civilian officials, but no conclusive key to the identity of the specific instigator of Grant's Order. The general himself had instructed one of his subordinates on Nov. 10, 1862, to insure that "no Jews are to be permitted to travel on the railroad south from any point... they are such an intolerable nuisance that the department must be purged of them." On the same day that he signed Order No. 11, he reported to an assistant secretary of war that "I instructed the commanding officer of Columbus [Mississippi] to refuse all permits to Jews to come South, and I have frequently had them expelled from the department.... The Jews seem to be a privileged class that can travel everywhere..." An explanation which Grant offered on September 14, 1868, in the thick of the presidential campaign, implied that reports to him from the field and a reprimand from Washington had led him to issue and publish the order "without reflection and without thinking of the Jews as a sect or race to themselves but simply as persons who had successfully... violated an order..." It is also possible that the fact that Grant's own father was involved in business dealings with Jews at this time had something to do with his frame of mind.

Lincoln insisted that the order be revoked, despite Grant's unique facility for winning battles. Debates about the order took place on the floor of both the House and Senate, but opinion was divided fairly closely along party lines. During Grant's victorious presidential campaigns of 1868 and 1872, discussion of the anti-Jewish order appeared in the public and Jewish press, and some Jews and non-Jews were torn between their admiration for General Grant and their detestation of Order Number 11.

No single act or word, let alone edict, of another president or federal official, in all of American history, compares with the Grant order for rank generalization, harshness, or physical consequences. Yet Grant did not previously, nor subsequently, reveal animus toward Jews or Judaism. He appointed a number of Jews to important office during his presidency, offering the secretaryship of the Treasury to Joseph Seligman, whose family included long-term friends of Grant dating back as far as 1849. In 1870 Grant appointed the former head of the American B'nai B'rith, Benjamin Franklin Peixotto, to the unsalaried position of consul at Bucharest as part of an effort to persuade the Romanian government to relent from its violent campaign of pogroms against its Jews. Simon Wolf, a vigorous, albeit unofficial and unsupervised, representative of Jewish concerns in Washington, believed that Grant "did more on and in behalf of American citizens of Jewish faith, at home and abroad, than all the Presidents of the United States prior thereto or since." But Grant was a Republican, and so was Wolf, and Grant appointed Wolf recorder of deeds of the District of Columbia in 1869.

The Grant affair underlines the unconscious assimilation by many Americans of traditional anti-Jewish stereotypes, and the constant search for scapegoats which took place during

the traumatic experience of the Civil War as it did in other periods of social and psychological crisis.

[Bertram Wallace Korn]

GRANZ, NORMAN (1918–2001), U.S. jazz impresario. Born in Los Angeles to parents who owned a store that failed in the Depression, Granz grew up to make a fortune from the music he loved as a young man. After service in the Army Special Services in World War II, he attended the University of California at Los Angeles, where his major was philosophy. In 1944, he created Jazz at the Philharmonic, a touring group that took the jazz idiom out of the smoky, noisy bars and dance halls and tucked it into sumptuous concert halls, where it flourished. He also represented stars like Ella Fitzgerald and Oscar Peterson and sought to protect black musicians from the abuses of segregation, insisting that their concerts be open to blacks, no matter how segregated the city. He began Jazz at the Philharmonic in Los Angeles with Nat King Cole, then a jazz pianist who worked with a trio but was not yet a pop star. Granz persuaded him to appear in concert with the saxophonist Lester Young and Billie Holiday, the singer. Besides providing good music, the concert raised money for young Mexicans, whom Granz felt had been wrongly arrested in the Zoot Suit riots of 1944. The concert proved a smashing success and within a few years an ever-changing troupe of musicians and singers, including J.J. Johnson, Benny Carter, Illinois Jacquet, Duke Ellington, Count Basie, Buddy Rich, and others, were touring the country under the Jazz at the Philharmonic rubric. Granz paid them, regardless of color, equally and well. He also persuaded Fitzgerald to record her "songbooks" of the works of Cole Porter, George Gershwin, and other creators of American popular standards, recordings that kept selling well into the 21st century. Granz was also the founder, in 1955, of Verve Records, with which he recorded the artists whose appearances he sponsored. Under his leadership Verve captured some of the finest jazz performances ever recorded. He sold Verve to MGM in 1960; the label was subsequently taken over by Polygram. In 1974 Granz formed a record company he called Pablo, named after Picasso, whose work he admired and collected and whose friendship he cherished. From 1959 to the end of his life, Granz lived, mostly in retirement, in Geneva.

[Stewart Kampel (2nd ed.)]

GRASSHOPPER. Among the insects mentioned in the Bible as permitted for food are those "that go upon all fours, which have jointed legs above their feet, wherewith to leap upon the earth" (see *Animals of the Bible). These are "the *arbeh* ("locust") after its kinds, and the *solam* (AV, JPS, "bald locust") after its kinds, and the *hargol* (AV, "beetle"; JPS, "cricket") after its kinds, and the *hagav* (AV, JPS, "grasshopper") after its

kinds" (Lev. 11:21–22; and see *Dietary Laws). The last three, each followed by the expression "after its kinds," refer to numerous species of grasshopper, there being, according to an *amora*, as many as 800 (Ḥul. 63b). Although in the Bible *ḥagav* applies to the grasshopper and not to the locust, it may have the latter meaning in the verse, "if I command the *ḥagav* to devour the land" (11 Chron. 7:13), as it has in the Mishnah, which speaks of it as being at times a countrywide plague. In Israel there are many species of grasshopper, some small, others up to 2 in. (5 cms.) and more in size. The small grasshopper hiding in the high grass symbolizes the puniness of man when viewed from above (Num. 13:33; Isa. 40:22). All species of the grasshopper in Israel develop (like the locust) by metamorphosis, that is, the larva (*zaḥal*) has no wings but the adult has wings covering most of its body, an essential characteristic of the permitted grasshopper (Ḥul. 65b). In mishnaic and talmudic times the grasshopper was widely used as food, being also preserved in salt (Av. Zar. 2:7; et al.). There are Yemenite Jews who, on the basis of tradition as to their *kashrut*, still eat locusts and species of grasshopper.

It is difficult to identify "the *solam* after its kinds." The word means "destroying, eating," and refers to the grass-eating grasshopper, said to have the characteristic of being *gabbahat*, that is, apparently, having an arched back and slender feelers; many such species are found in Israel. Some identify it with the long-headed grasshopper of the genus *Acridium* (but see Av. Zar. 37a), i.e., with a species known as *ayyal kamza* which is *kasher* according to evidence from Second Temple times (Eduy. 8:4). With regard to the next permitted group "the *ḥargol* after its kinds," the sages stated that the outstanding characteristic of the *ḥargol* is "that it has a tail." This applies to the long-horned grasshopper of the family Tettigoniidae, whose female has a long protuberance which is a tube for the laying of eggs. Most of these species do no damage to agriculture, since they feed on insects and not on grass. Among them are also species whose imago is wingless, such as the *Saga* species, the largest grasshopper in Israel, and prohibited as food (see Ḥul. 65b).

[Jehuda Feliks]

°**GRATIAN (Franciscus Gratianus;** d. before 1179), monk of Bologna. He is known for his canonical compilation *Decretum Gratiani*, assembled about 1140. The other title of the compilation, *Concordantia discordantium canonum*, clearly indicates its purpose, to bring together a large number of patristic texts and decrees of Church councils and popes, arranged in order of content. Though never officially adopted by papal authority, it was used in schools and synods, and from around 1159 was the manual of the Roman Curia. Among the thousands of texts assembled in the compilation only a few isolated ones concern the Jews. They include canon 61 of the Fourth Council of Toledo held in 633 (see *Church Councils), securing for

children who are true Christians the belongings of their parents who have returned to Judaism (E. Friedberg (ed.) *Corpus Juris Canonici*, 1 (1871), 419: c. 7, c. 1, qu. 4). Others are canon 34 of the Council of Agde held in 506, imposing an eight-month instruction period for Jewish candidates for baptism, and canon 56 of the Fourth Council of Toledo, compelling Jews converted by force to remain Christians (*ibid.*, 1392: c. 93–94, d. 4, De cons.). One small group of texts concerns mixed marriages, which must be dissolved and the children brought up by the Christian party; the converted Jews (of Spain) who have readopted Judaism, whose children must be given into the care of monasteries; converted Jews, who must avoid all contacts with their former coreligionists; and the prohibition on Christians eating the unleavened bread of Jews, living among them, consulting their physicians, bathing with them, or finally, sharing meals with them (various councils; *ibid.*, 1087: c. 10–14, c. 28, qu. 1).

[Bernhard Blumenkranz]

°**GRATTENAUER, KARL WILHELM FRIEDRICH** (1770–1838), German antisemitic pamphleteer. His first publication *Ueber die physische und moralische Verfassung der heutigen Juden* (1791) launched the idea of an unchangeably negative and corrupt "Jewish mentality." In another of his widely circulated tracts attempting to rouse public opinion against Jewish emancipation *Wider die Juden* (1803, running into five editions), Grattenauer suggested that the Berliners remove Moses *Mendelssohn's bust and replace it with Voltaire's. Following in the wake of the latter's allegedly rationalist arguments against the Jews, Grattenauer was among the first to introduce the concept of race, thus heralding a new and ominous tendency in antisemitism, based no longer on religious but on pseudo-scientific grounds. "That the Jews are a very singular race, no historian or anthropologist can contest," wrote Grattenauer.

ADD. BIBLIOGRAPHY: J. Katz, *From Prejudice to Destruction. Anti-Semitism 1700–1933* (1980).

GRATZ, U.S. family of merchants and community leaders in Philadelphia. The Gratz family was founded in the United States by BARNARD GRATZ (1738–1801), who was of Polish birth and who emigrated from London in 1754. After working in the mercantile house of David Franks, in 1757 he went into partnership with Michael Moses, and a few years later he and his younger brother MICHAEL (1740–1811) formed a long-lived partnership under the family name as shippers and traders operating on the east coast and inland. As part of their trading operation, the partners sold *kasher* meat to the West Indies and conducted an extensive and sometimes dangerous Indian trade. In the midst of a very busy social and business career Barnard, with other merchants, signed Non-Importation Agreements to boycott British goods during the Stamp

Act and Townshend Act crises prior to the Revolution. Always deeply involved with Jewish communal activities, the brothers helped found the first Philadelphia synagogue, which in 1773 evolved into Congregation Mikveh Israel. Barnard Gratz was named its first *parnas*, and Michael was on the board of directors. The Gratz family supported the Revolution, as did many Philadelphia Jews, and supplied goods to the Continental Army. After the war, the Gratzes became involved in a successful struggle for equal rights in Pennsylvania. Always interested in western lands, the Gratzes supplied money to the Indian trader and agent George Croghan and to George Rogers Clark in his Revolutionary expedition to capture Detroit, and in 1794 invested in real estate around Louisville, Kentucky. Michael founded Gratzburg, in Otsego County, New York, in 1793.

Two of Michael's sons, SIMON (1773–1839) and HYMAN (1776–1857), carried on the family business. Hyman was elected director of the Pennsylvania Company for Insurance in 1818 and president in 1838. He founded *Gratz College. Both brothers participated in the affairs of the Pennsylvania Academy of Fine Arts and the Pennsylvania Botanical Gardens. Though Simon and his younger brothers JACOB (1789–1856) and BENJAMIN (1792–1884) married gentiles, through their sisters' marriages the family was related to other prominent Jewish families. Their sister FRANCES (1771–1852) married Reuben *Etting; RACHEL (1783–1823) married Solomon Moses; and RICHEA (1774–1858) married Samuel *Hays. Richea is reputed to have been the first Jewish girl to attend college in the United States. Others of the Gratz family achieved considerable careers in law and politics as well as in business. Another of Michael's sons, JOSEPH (1785–1858), was an ardent Federalist, as was his brother Hyman. Joseph was a director of the Philadelphia Institution for the Instruction of the Deaf and Dumb, and of the Atlantic Insurance Company.

Jacob joined the family firm in 1806, but soon left to form his own dry goods firm. He received an M.A. degree (1811) from the University of Pennsylvania. In 1824 and 1839 he was elected to the state legislature. His younger brother Benjamin also joined the family firm and studied at the University of Pennsylvania. He was admitted to the bar in 1816. One of the early Jewish residents of Kentucky, where the family held land, he helped organize the Lexington and Ohio Railroad in 1830 and in 1835 helped found the Lexington branch of the Bank of Kentucky. Perhaps the best known of the Gratz family was Michael's daughter Rebecca *Gratz (1781–1869), who was active in various women's and children's organizations.

[Leo Hershkowitz]

GRATZ, REBECCA (1781–1869), founder and leader of innovative organizations concerned with women and children. Gratz was born in Philadelphia, the middle child of ten in the family of Michael and Miriam Simon Gratz. She received an elite education at the Young Ladies Academy and at home, where she had access to an extensive library and learned about organizational life from her father, uncle, and brothers, who discussed their businesses, synagogue involvement, and philanthropic associations. Gratz, who never married, outlived all but her youngest sibling, and found meaningful social support and intellectual sustenance managing the organizations she established, in her study of Judaica available in English, and in her literary correspondence with luminaries such as Washington Irving, Maria Edgeworth, Fanny Kemble, and Grace *Aguilar.

In 1801 Gratz and her mother joined 20 Jewish and gentile women to found the Female Association for the Relief of

Women and Children in Reduced Circumstances, a women's mutual aid society which enabled married women to raise and dispense funds they could not legally control as individuals. Fourteen years later Gratz helped found the Philadelphia Orphan Asylum (1815). She served as secretary for both associations for more than two decades and advised her sister-in-law, Maria Gist Gratz, in establishing an orphanage in Lexington, Kentucky. Gratz lived with three bachelor brothers and her sister, Sarah, and raised six nephews and nieces following their mother's death in 1823. After Sarah's death, Gratz organized a short-lived and informal Hebrew school for her extensive family taught by an applicant for synagogue *hazzan*. She also developed close relationships with women of her Philadelphia synagogue, Mikveh Israel, and in 1819 organized the first non-synagogal Jewish charity in America, the Female Hebrew Benevolent Society, which remained active in the early 21st century. Gratz served as secretary, writing minutes, annual reports, and corresponding with donors, leaving more prestigious positions to others to ensure their commitment. Jewish women nationwide organized similarly named institutions throughout the 19th century.

To combat Christian evangelism, Gratz convinced the FHBS managers to open the Hebrew Sunday School in 1838. Educators Simha Peixotto and Rachel Peixotto Pyke supplied pedagogical expertise and wrote textbooks while Gratz served as superintendent. Isaac Leiser, *hazzan* at their synagogue, provided guidance and more advanced texts. Female graduates returned as volunteer faculty. Gratz assisted women in Charleston, Savannah, and Baltimore in establishing similar schools and due to her efforts Jewish Sunday schools staffed by female volunteers became the most popular Jewish educational institution in 19th century America. Gratz lived to see Philadelphia's Jewish Foster Home established in 1855. Much younger women shouldered most responsibilities but she assumed the vice presidency. She died with a reputation as the foremost Jewish woman in America. Some descendants thought her the inspiration for Rebecca of York in Sir Walter Scott's novel, *Ivanhoe*.

Friedman (ed.), *Jewish Life in Philadelphia, 1830–1940* (1983), 143–62; A. Braude, "The Jewish Woman's Encounter with American Culture," in: *Women and Religion in America*, vol 1 (1981).

[Dianne Ashton (2nd ed.)]

GRATZ COLLEGE, oldest independent college of Jewish studies in North America. In 1856 Hyman *Gratz, Philadelphia merchant, philanthropist, and scion of one of America's earliest Jewish families, established a trust indenture of approximately \$150,000 to provide an annuity for his adopted son and, if the son died without issue, for a nephew. By 1893, both son and nephew had died childless. According to the deed of trust, the estate was then assigned to Congregation Mikveh Israel to establish "a college for the education of Jews residing in city and county of Philadelphia."

The limitations of the trust's income led Mikveh Israel to establish Gratz College for the more specific mission of educating Jewish teachers. Gratz's founders wanted it to serve the entire Philadelphia Jewish community and thus from its inception, Gratz accepted women, the first institution of higher Jewish education to do so. In that same spirit, even before the college opened classes, the Orthodox Mikveh Israel inaugurated the institution with public presentations by the leaders of Reform and Conservative Judaism.

Dedicated to the methodology of *Wissenschaft des Judentums and to being nondenominational, Gratz's mission was to teach Hebrew texts, train teachers for Jewish schools, and provide adult education. In 1909, it established a "school of observation practice" that allowed students to take college courses, while observing and practicing teaching in a Jewish elementary school. As Gratz's leaders were also dedicated to Zionism, the college introduced courses conducted in Modern Hebrew in 1922. As the Jewish community of Philadelphia expanded under the Jewish Federation model, Gratz College merged with the older Hebrew Education Society in 1928. Founded in 1848 by Isaac *Leiser, the Hebrew Education Society had received a state charter that allowed it to "furnish to graduates and others the usual degrees of Bachelor of Arts, Master of Arts and Doctor of Laws and Divinity." The merger thus conveyed to Gratz College the right to offer academic degrees, but despite faculty support, decisions of Gratz's governing board delayed Gratz's issuing of such degrees until 1952, when it awarded its first Bachelor of Hebrew Literature (BHL).

During the 1920s, Gratz's founding commitment to all streams of Judaism as well as to the Wissenschaft approach led to debates and compromises particularly regarding the training of Reform Jewish teachers. These concerns were ultimately resolved in 1960 by Gratz's establishment of the Isaac Mayer Wise program within its normal school, a unique development that produced educators specifically qualified to teach in Reform religious schools and recognized by the Union of American Hebrew Congregations (now the Union for Reform Judaism).

In 1967, Gratz College received full accreditation by the Middle States Commission on Higher Education. By 1987, Gratz had introduced master's degrees in Hebrew literature, Jewish music, Jewish education, Jewish studies, and Jewish liberal studies, as well as various graduate certificates. Self-study occasioned by the accreditation process more clearly defined Gratz's secondary school offerings eventually leading to the establishment of its Jewish Community High School (JCHS). Consolidating the Isaac M. Wise program with the large array of courses on topics ranging from intensive text and language to service learning to classes designed for Jewish students with special needs, the JCHS grew to 13 sites and almost 1,000 students by 2005.

As Gratz College developed, its funding by the local Jewish federation lessened. Thus, from the 1960s through 2005, the percentage of its funding from the Jewish Federation of

Greater Philadelphia declined from 78% to 12%. This reduction was both relative and absolute, yet it did not prevent Gratz from expanding its offerings and personnel.

Gratz's broad communal commitment extended to its academic resources. Its Tuttleman Library was opened to the public in 2003 and contains a research collection covering all areas of Judaica scholarship as well as specialized holdings such as rare Judaica beginning with the dawn of Hebrew printing, a major collection of Jewish music, and an archive of oral histories of the Holocaust that was among the first to be assembled in the United States. In the 1990s Gratz College inaugurated a Master of Arts in Education for teachers in public and private schools throughout eastern Pennsylvania. By 2005, some 900 graduate students had matriculated in that program.

From the 1990s Gratz College students had come from communities throughout the United States as well as from Israel, Europe, and occasionally East Asia. Building on its original mandate, Gratz College had become a transdenominational institution where Jews from all streams taught and studied together as members of its faculty, student body, and public audiences. In 2005 they pursued graduate certificates and professional degrees that provide advanced credentials for serving the Jewish community and general education and could also earn the baccalaureate. By 2005 Gratz's adoption of technology allowed it to offer more online courses in Jewish studies than any other institution as well as the first online Master of Arts in Jewish Studies. It also developed video conference courses and week-long intensive immersion courses while strengthening its on-campus offerings.

Kutnick, "Serving the Jewish Community, Pursuing High Jewish Learning: Gratz College in Historical Perspective," in: R.M. Geffen and M.B. Edelman (eds.), *Freedom and Responsibility: Exploring the Challenges of Jewish Continuity* (1998), 321–48.

[Jonathan Rosenbaum (2nd ed.)]

GRAUBART, Y.L. (Judah Leib; 1861–1937), rabbi and halakhic authority. Judah Leib Graubart was born in Szrensk, Poland. One of at least eight children, he was raised with an appreciation of Talmud scholarship and ḥasidic piety even as he was exposed to Haskalah. His teachers included his father, elder brother Issachar Plock, the Kalisher rabbi, Ḥayyim Eliezer Wax, and Rabbi Nathan Leipziger of Szrensk. Graubart received *smicha* from both Wax and Leipziger.

Graubart went on to serve as rabbi in Yanov, Makov, and Stashov. In Makov he published the first volume of his five-volume collection of clarifications of talmudic texts and of responsa, the *Havalim be-Ne'imim* (1901–39); volume 2 appeared while he was in Stashov. At the outbreak of World War I, the Russians accused Graubart (and others) of espionage, and imprisoned him in Siberia. By the time of the Bolshevik Revolution, Graubart was free in Moscow, where he led prayer services, taught, and collected funds for impoverished

Jews. Graubart recorded his experiences in his memoir, *Sefer Zikaron* (Lodz, 1925/6).

Returning to Poland, Graubart supported Mizrachi Zionism against the Agudat Israel rabbis. Like prominent Polish Mizrachi Zionist, J.L. Zlotnik (Elzat), Graubart immigrated to Canada in the early 1920s. He became rabbi to Toronto's Polish Jews, while Jacob *Gordon served Russian-born Jews. Relations between the two soured when they sparred over supervision of kosher meat. In Toronto Graubart also spoke out against violators of the Sabbath, and even preached several outdoor Sabbath sermons in Toronto's bustling Jewish Kensington Market. A strong advocate of Jewish education, Graubart supported the *talmud torah* Eitz Chaim (est. 1918). He had complete disdain for the Reform rabbinate. He also acknowledged, with regret, that North American Orthodox rabbis fell short of an old-world level of learning. He nevertheless recognized that a new generation of North American-trained rabbis was needed and supported the modern Orthodox yeshivas in New York and Chicago.

Graubart continued writing in Canada. His last three volumes of *Havalim be-Ne'imim* reflect New World concerns and show that he was now corresponding with other Orthodox rabbis in Canada. He published a collection of sermons in Hebrew, *Devarim Ki-Khetavam* (St. Louis, 1931/2) and a second collection of essays and sermons, *Yabi'a Omer* (Lodz, 1936). A number of shorter essays were published in the Yiddish press.

Despite misgivings about the state of Judaism, Graubart energetically worked to build Orthodox Jewish life in Toronto. He also fostered a tradition of advanced rabbinic scholarship in Toronto continued by Abraham *Price, Gedaliah *Felder, and others.

[Richard Menkis (2nd ed.)]

GRAUMANN, SIR HARRY (1868–1938), South African mining magnate, industrialist, and financier. Born in England, Graumann went to South Africa at the age of 16 and engaged in mining in the Transvaal. He became a member of the Johannesburg Sanitary Board (forerunner of the town council) and was one of the city's four aldermen under the Kruger regime. During the Boer War (1899–1902), Graumann worked for Transvaal refugees in Capetown. After the war, he became the first Jewish mayor of Johannesburg. In 1912 he protested against the proposed restriction of Jewish immigration. He was elected to parliament in 1915. His memoirs, *Rand Riches and South Africa*, appeared in 1935.

GRAUR, ALEXANDRU (1900–1980), Romanian linguist. Born into the family of an accountant, Graur studied classical philology at the Bucharest University. Until 1946 he taught at various Bucharest high schools, with a few years off because

of the racial laws that did not allow Jews to teach in non-Jewish schools (1939–44). In 1946 Graur became a university professor. At the University of Bucharest he taught general linguistics courses. He was interested both in the history of language and in its contemporary functioning (according to European descriptivists). In addition he was also interested in the popularization of his science, and he tried to explain how a natural language functions and its relationship to the culture it is called upon to serve (with special emphasis on the Romanian language). Graur's distinct theoretical orientation was a more traditional one (he never overstepped the theoretical frameworks of comparative-historical linguistics); he accepted very few, and those mostly critically, of the basic tenets of the different structuralist or post-structuralist trends in linguistics. Although never explicitly, he rejected from the very beginning generativism and all the other linguistic paradigms that appeared in the wake of Noam Chomsky's theories, starting from 1957.

Graur's attitude toward a culturally oriented Judaism was somewhat ambiguous: only in his old age did he start to show a certain interest in his forefathers' religion, culture, and language: he published in the Jewish community's newspaper several articles in which he demonstrated the Hebrew etymology of several Romanian words which entered this language through the intermediacy of the Greek and Latin languages, or through international use.

[Paul Schweiger (2nd ed.)]

GRAUR, CONSTANTIN (1877–1940), Romanian journalist. Born in Botosani, N. Moldavia, Graur started his career as a proofreader. In his youth he was a socialist. He began to publish in the Socialist journal *Munca* in 1894. In 1896 he was already a well-known socialist personality in the Bucharest party. He criticized the exodus of Romanian socialist intellectual leaders to the Liberal Party in 1900. He later edited newspapers in Galați and Ploesti, and went to Bucharest in 1919 to edit *Cuvîntul Liber* ("The Free World"). With other Romanian journalists, he founded the magazine *Facla* ("The Torch"), but continued writing for other papers, including the Jewish periodicals *Infratirea* ("Union") and *Adam*. In 1921, he became the chief manager of two daily papers *Dimineata* ("Morning") and *Adevărul* ("Truth"), which came to be regarded as "Judaized," because of the number of their Jewish contributors. During Nazi demonstrations, copies of these papers were burned on the streets. Graur had a democratic outlook and campaigned for Jewish emancipation and against antisemitism. His writings, many of them polemics embracing a socialist point of view, include *Manasse, cercetare critică* ("Manasse, Critical Research," 1904), *Din istoria socialismului Român* ("From the History of Romanian Socialism," 1912), *Socialiștii Români în slujba Germaniei* ("Romanian Socialists in Germany's service," 1914), *Cativa insi* ("Some People," 1931) and *Cu privire la Franz-Ferdinand* ("Concerning Franz Ferdinand," 1935). For his friend Dobrogeanu-Gherea, one of the founders of the Socialist movement in Romania, Graur wrote an obitu-

ary in the journal *Chemarea* (1920) in which he mentioned his Jewish origins.

Atanasiu, *Miscarea socialista 1881–1900* (1932), 429 (index); C. Graur, in: Th. Loewenstein and N. Kittler (eds.), *Israel in lume*, (1939), 75–96.

[Abraham Feller / Lucian-Zeev Herscovici (2nd ed.)]

GRAY, HERBERT ESER (Herb; 1931–), politician and Canada's first Jewish cabinet minister. Gray was born in Windsor, Ontario, graduated from the School of Commerce of McGill University and Osgoode Hall Law School in Toronto. He was admitted to the Ontario Bar in 1956. Gray practiced law in Windsor before entering politics in 1962 when he was elected the Liberal Party Member of Parliament for Windsor West. A strong advocate for human rights and freedom of conscience, Gray was returned to office in the next 12 consecutive elections, becoming the longest continuously serving Member of Parliament in Canadian history with close to 40 years of service in the House of Commons.

In October 1969, Gray was named minister without portfolio in Pierre Trudeau's first government, the first Jewish cabinet minister in Canadian history. He went on to hold a number of Liberal cabinet portfolios including National Revenue and Industry, Trade and Commerce, and president of the Treasury Board. When the Liberals were out of office, Gray served as Opposition House leader from 1984 to 1990, leader of the Opposition in 1990, and finance critic for the Official Opposition from 1991 to 1993. With the Liberal return to power in 1993, he was appointed leader of the Government in the House of Commons and solicitor general of Canada. From 1997 to 2002, he served as deputy prime minister, the first to turn this position into a full-time cabinet post. Following his retirement from the House of Commons in January 2002, he was appointed Canadian chair of the International Joint Commission, a Canadian-American bilateral organization dealing with transboundary issues.

Among his many honors, he received the title "Right Honourable," one of only six Canadians ever to hold the title usually reserved for current and former prime ministers, governors general, and chief justices of the Supreme Court of Canada. He was also a Companion of the Order of Canada. Gray's wife, SHARON SHOLZBERG-GRAY, served as president of the Canadian Healthcare Association.

[Judith E. Szaport (2nd ed.)]

GRAY, MARTIN (1925–), writer. As a Polish Jew from Warsaw, Gray was interned in the Warsaw ghetto and deported to the Treblinka extermination camp, from which he managed to escape, but left behind his entire family, of which he was the sole survivor. After his escape, he joined up with the Soviet Army advancing west towards Germany. After the war he settled in the United States, then in France where he published the bestselling *Au nom de tous les miens* (1971, written

in collaboration with Max Gallo), which was adapted for the screen by Robert Enrico in 1983. Though some parts of the story may have been embellished and cannot therefore be considered historical documentation, Gray remains a valuable witness to the destruction of the Warsaw ghetto and the extermination process, and the publication of the book marked a crucial point in the development of Holocaust awareness in France, the specificity of the Jewish Holocaust having long been ignored in France because of the emphasis placed on the deportations of Resistance fighters.

[Dror Franck Sullaper (2nd ed.)]

GRAY, MORRIS ABRAHAM (Moishe Guraryeh; 1989–1966), Winnipeg community leader and politician. Gray was born near Gomel, Russia, to Abraham and Sara Guraryeh. He came to Canada in 1907 at age 18 and settled in Winnipeg. By 1917 he was a leader in the Winnipeg Jewish community, serving as secretary of the *Hilfs Farband*, an early mutual aid society, and of the Western Canada Jewish War Relief campaign to aid sufferers in World War I. He took a leading part in immigrant aid work and by 1923 was serving as secretary of the Jewish Immigrant Aid Society in Western Canada and served as president of the Jewish Children's Aid and Orphanage of Western Canada. Gray was a pioneer of the Labor Zionist movement in Western Canada and a founder of the Canadian Jewish Congress in 1919. First elected to public office in 1926, Gray served first as school trustee, then as Winnipeg city alderman for 16 years, endorsed by the Independent Labour Party. In 1941 he was elected as CCF member of the Manitoba Legislature, where he served for 25 years until his death.

In political office Gray campaigned for welfare for the unemployed, for increased old age pensions, and for anti-discrimination laws and a Bill of Rights, as well as for the establishment of a Manitoba Dental College. But his Jewish political engagement was also strong. During the Depression he worked with the Jewish Colonization Association to place unemployed Jews on farms, he was a founder of the Jewish Economic Bureau, which considered economic problems affecting Jews, he was president of the Jewish National Workers Alliance, and he was active in the reorganization of the Canadian Jewish Congress in 1934. He campaigned against antisemitism and was a leader in the anti-Nazi protest movement of the 1930s and 1940s. Gray was also a founder of the Labor Zionist's Histadrut Campaign in Western Canada. In 1957, he was honored at Winnipeg's annual Negev Dinner to mark the 50th anniversary of his arrival in Canada.

[Abraham Arnold (2nd ed.)]

GRAYZEL, SOLOMON (1896–1980), U.S. historian and communal leader. Grayzel was born in Minsk, Belorussia, but was educated in the United States. He received his B.A. from the City College of New York in 1917 and his M.A. in sociology from Columbia University in 1920. He was ordained by the Jewish Theological Seminary in 1921 and served as the first rabbi of Congregation Beth-El in Camden, N.J., continu-

ing his studies at Dropsie College, where he earned a Ph.D. in history (1926). In 1929, upon his return from research studies abroad, he began teaching Jewish history at Gratz College in Philadelphia, continuing to teach there and serving as registrar until 1945. In 1939, he took an editorial position with the Jewish Publication Society of America, working under Isaac *Husik. At the latter's death in the same year he became the editor in chief, a position he held until 1966. He was elected to the presidency of the Jewish Book Council of America in 1945 and was connected with the *Jewish Book Annual* from its inception in 1942. From 1966, he taught Jewish history at Dropsie College.

Grayzel's major scholarly efforts centered on the relationship of Christians and Jews during the Middle Ages. His doctoral thesis, *The Church and the Jews in the Thirteenth Century* (1933, 1966²), was followed by individual articles on related subjects, which appeared in the *Jewish Quarterly Review*, *Historia Judaica*, the *Hebrew Union College Annual*, and other publications. He also wrote a popular, one-volume *History of the Jews from the Babylonian Exile to the Present* (1947, 1968²), widely used as a textbook, and *A History of the Contemporary Jews from 1900 to the Present* (1960).

BIBLIOGRAPHY: A.A. Steinbach, in: *Jewish Book Annual*, 28 (1970), 110–115.

[Simcha Berkowitz]

GRAZ, capital of *Styria, considered one of the oldest Jewish settlements in Austria. Although a gravestone, excavated in 1577 and erroneously dated to 70 B.C.E., long led to the belief that the community was much older, adjacent Judendorf was recorded in documents dating from 1147. In Graz itself there is reliable evidence of the presence of Jews only in the last decades of the 13th century. At that time they made their living mostly through moneylending, particularly to the local nobility. By 1398 a community had come into existence, located in a Jewish quarter, headed by a *Judenmeister* and a *iudex Judaeorum, and possessing a synagogue and a *mikveh*. Though expelled in 1439, the Jews returned by 1447. After the expulsion of the Jews from Styria in 1496, together with the rest of Austrian Jewry, almost four centuries passed before there was again a formal settlement of Jews in the town. Only in 1783 were they permitted to attend the yearly trade fairs then held in Graz. Individual families with special permits were allowed to settle in Graz after 1848. By 1863 a community had come into being and in 1868 the demand for special permits was rescinded; at that time an official organization of the community took place. From then on the community grew rapidly, partly because of economic factors. It numbered 566 in 1869 (0.7% of the total population), 1,238 in 1890, and 1,720 (1.1%) in 1934.

The community was able to finance its activities not only through the imposition of taxes on the Jews of Styria but on those of Carinthia and Carniola as well. Soon after its formal organization, a primary school was founded. By 1892 a large school was built; in 1895 an impressive synagogue was dedicated. The anti-Zionism of Graz's communal leaders was pro-

nounced, but a large influx of refugees from Eastern Europe in the wake of World War I strengthened the Zionist movement considerably, and in 1919, the Zionists gained a majority in the community. The Jews in Graz were socially segregated, and in the later 1930s Graz was a center of Austrian National Socialism (known as the “capital of the insurrection” after 1938).

Immediately after the *Anschluss* (March 12, 1938), the Jewish cemetery was desecrated. The members of the community board were arrested and released only after prolonged negotiation. Local functionaries were anxious to make Graz the first town to be *Judenrein*. On the initiative of the head of the Jewish community, Elijah Gruenschlag, Adolf *Eichmann agreed to the transfer of 5,000,000 marks to facilitate the emigration of 600 Jews to Palestine, but the events of Nov. 10, 1938, put an end to the project. On the night of Nov. 9–10 (**Kristallnacht*), the synagogue was dynamited and burned to the ground. More than 300 Jews were taken to Dachau concentration camp, to be released in April 1939. Of the 1,600 Jews in Graz on *Kristallnacht*, 417 emigrated. In June 1939, only 300 were still in the city; most were sent to Vienna and then to the death camps. After World War II, 110 Jews settled in Graz. There were 420 in 1949 and 286 in 1950. A small synagogue in a communal center built on the site of the synagogue ruins was consecrated in 1968. A Jewish community of fewer than 100 members remained at the beginning of the 21st century. A new synagogue on the site of the one destroyed on *Kristallnacht* was consecrated in 2000.

The historian David *Herzog was rabbi of Graz (1908–38), and the Nobel Prize laureate Otto *Loewi taught pharmacology at Graz University from 1909 to 1938. Wilhelm Fischer-Graz (1846–1932), a writer popular at the time for many novels, mainly set in the town itself or in Styria, worked in Graz as a librarian.

[Meir Lamed]

GRAZER, BRIAN (1951–), U.S. producer-writer. Born in Los Angeles to a Jewish mother and Catholic father, Grazer graduated from USC with a bachelor’s degree in psychology in 1974. He also attended the University of Southern California Law School for one year. He began his career in the entertainment industry as a legal intern with Warner Bros. and then joined Brut/Faberge Productions as a script reader. After joining the Edgar J. Scherick-Daniel Blatt Company, Grazer produced his first made-for-TV movies, *Zuma Beach* and

Thou Shalt Not Commit Adultery in 1978. He signed a development deal with Paramount Pictures in 1980 and in 1982 he produced his first feature film, *Night Shift*, which also marked his first collaboration with director Ron Howard. In 1984, Grazer received an original screenplay Oscar nomination for his first turn as a writer on *Splash*, also directed by Howard. Grazer and Howard formed Imagine Entertainment in 1986, which developed such films as *Parenthood*, *Kindergarten Cop*, *The Doors*, *Backdraft*, and *Far and Away*. Grazer and Howard continued to work together on such feature films as *Apollo 13* and *A Beautiful Mind* (2001), which won the Academy Award for best picture. Grazer’s other television work includes *From the Earth to the Moon*, *SportsNight*, *Felicity*, *24*, and *Arrested Development*.

[Adam Wills (2nd ed.)]

GRAZIANI, YITZHAK (1924–2003), Israeli conductor, arranger, and composer. Born in Russe, Bulgaria, Graziani studied composition and conduction at the Academy of Music in Sofia. In 1948, he immigrated to Israel and for 12 years was the conductor of the Zaddikoff Choir, founding its children’s choir. He was instrumental in founding the Kol Israel Light Orchestra and, from 1961 to his death was the conductor of the Israel Defense Forces Orchestra. He also conducted performances of many musicals, the Israeli Opera, and Israeli song festivals. Besides his conducting, Graziani arranged more than a thousand pieces and composed music for a few Israeli films such as *Dalia ve-ha-Malakhim* and *Moishe Vintilator*.

[Uri (Erich) Toeplitz, Yohanan Boehm / Israela Stein (2nd ed.)]

GRAZIANO, ABRAHAM JOSEPH SOLOMON BEN MORDECAI (d. 1684), Italian rabbi. Graziano was born in Pesaro where he studied under Isaac Raphael Ventura. He lived for some time in Rome, proceeding from there to Modena where he studied under his grandfather, Nathaniel Trabot, who ordained him in 1647. He first served as a member of the *bet din* of Modena, where he was later appointed rabbi. His characteristic signature, *Ish Ger* (“a strange man”) is a play on the first letters of his name and on his being a “stranger” in Modena. Abraham’s leniency with regard to some local customs aroused the opposition of his contemporaries. He is known as the first collector of books and manuscripts among Italian Jews. He left no published works of his own; most of his rulings remain in manuscript and some are occasionally found in the work of his contemporaries. His commentary on the Shulḥan Arukh is mentioned in the *Zera Emet* (vols. 1,2) of Ishmael ha-Kohen. One of his responsa, from the year 1665, is written in Italian, interspersed with biblical verses and quotations in Hebrew. Of the 54 poems in his collected work, poems for festivals, births, weddings, and funerals, some have been published. His elegy on his brother, Aaron, who died in 1648, is of a high literary standard. Two elegies preserved at the beginning of *Ma’avar Yabbok* of Aaron of Modena are erroneously ascribed to him.

[Simon Marcus]

GREAT POLAND (Pol. *Wielkopolska*; Heb. פּוֹלֵן גָּדוֹל), historic administrative unit of Poland-Lithuania, and a Jewish historical geographical entity within the framework of the *Councils of the Lands. The region, which lay on both sides of the Warta River, consisted of the provinces of *Poznan, *Gniezno, *Kalisz, *Plock, Rawa, Sieradz, Leczyca, and Pomerania; in the Jewish organizational framework, it included 36 communities and mother communities, and over 60 small communities and subsidiary communities. Of the mother communities, the important communities of Poznan, Kalisz, *Leszno (Lissa), and *Krotoszyn attained a special status. The region was under Polish rule until the partitions of 1772 and 1793; largely under Prussian (later German) rule until 1918, with the interruption of the government of the grand duchy of Warsaw between 1807 and 1815; since World War I in independent Poland, with the interruption of Nazi German rule from 1939 to 1945.

The communities of Poznan, Gniezno, Kalisz, Plock, and others were founded in the 12th to 14th centuries, the legal basis for their development being laid down by the charter issued by Prince *Boleslav the Pious (1264). As throughout Poland-Lithuania, Jewish settlement in Great Poland developed considerably in the 16th to 17th centuries, while in the 18th century it underwent a decline. The Great Poland province (לְיִלָּה, “circuit”) in the Jewish autonomous framework was under the hegemony of the community of Poznan until the middle of the 17th century, passing to Kalisz until the beginning of the 18th century, and then to Leszno until the close of that century.

During the period under the hegemony of Poznan, rights of residence were obtained and preserved by means of a prolonged and stubborn struggle. The Jewish organizational framework was developed in the form of a Council for the Province of Great Poland, or the Council of the Province of Poznan, which acted on behalf of the Jews as regional spokesman in contact with external powers, such as the ecclesiastical authorities and the municipality, and with internal bodies, such as the local community leadership and the Council of Four Lands. Among the Jewry of Great Poland there thus developed an independent regional consciousness, having a specific social significance, collective responsibility, and spiritual authority and tradition (of the “Great Poland rite”). The foundations were therefore laid for the conservative pattern which successfully withstood the storms accompanying the religious-social movements which swept this Jewry during the 17th and 18th centuries. During the period of leadership of the communities of Kalisz and Leszno, a period of chaos in Poland when there was a third wave of Jewish settlement, both the local and central organs of the Jewry of Great Poland were weakened and the communities plunged into an increasing state of insolvency and “debts to the state.” After

the area passed to Prussia (by stages, in the late 18th century), severe restrictions were imposed on the Jews of Great Poland. In consequence of the limitations placed on their numbers, thousands of Jews were expelled from the communities. The ideas of Haskalah began to spread there owing to the proximity to Berlin and the influence of Solomon *Maimon. Under the government of the grand duchy of Warsaw from 1807 to 1815, the chances of emancipation for the Jews in Great Poland vanished, and new taxes were imposed on them (the recruiting tax and the kosher meat tax (see *Korobka). As a result, an increasing number of Jews immigrated to the German states. Following the renewal of Prussian rule in 1815, the struggle for emancipation was again taken up (1848–50), because the general regulations and the “temporary measures” (1833) had not granted emancipation to all the Jews of the province (with a distinction between citizens and “tolerated” persons). In accordance with the “temporary measures,” changes were made in the structure of the communities (1833–47); attempts were made to reorganize the Jewish educational institutions, and germanization and Haskalah became of increasingly important influence in the lives of the Jews of the region. The Prussian authorities supported the Jewish communities, which made up about 15% of the total population, since they were useful in suppressing the Polish element, which formed about one-half of the total population of the region; as a result of the Jews’ pro-German orientation, their relations with the Polish inhabitants became strained. On the other hand, tension arose between the German inhabitants and the Jews because of their economic success; these stresses resulted in increased waves of Jewish emigration to the West and overseas, so that a number of communities in Great Poland died out or were greatly reduced in size. When the region was incorporated into independent Poland after the end of World War I, the hostility of the Poles and Polish authorities toward the Jews was intensified in this area because of their pro-German tendencies. The social and economic ties of the communities there with Germany having been disrupted by the political changes, emigration appeared to many to be the best solution. After the Nazi occupation the community of Great Poland came to an end.

The Council of the Land (Province) of Great Poland

Great Poland is important in the history of Jewish *autonomy through this institution. The beginnings of the Council are obscure; its formation, however, preceded that of the councils of the communities of the other parts of Poland (see *Councils of the Lands). At the earliest, its creation is connected with the charter issued to the Jews by Boleslav the Pious in 1264. The history of the Council falls into two periods: the period of consolidation, which continued up to 1519, and its subsequent history until 1764. Its achievements during the first period include the extension of rights of residence and their renewed ratification (1364, 1453); defense against the slander of having introduced the *Black Death (1348), as well as many other negotiations accomplished successfully by *shtadlanut*

(see *shtadlan); the appointment of a chief rabbi of the province or “provincial rabbi,” the *Episcopus Judaeorum Poznaniae*; the extension of the area under his jurisdiction and the definition of the scope of his authority (1389–93, 1458, 1519). The Jewish leadership was also successful in its opposition to the officially appointed tax lessee, and was empowered to choose 11 assessors and five collectors (with the exception of Poznan and Kalisz) for estimating the amount of taxation (the *sekhum*, “sum”), its distribution and collection, and its transfer to the state treasury, the ministers, and the Council itself for its own internal requirements (1512–19). The history of the Council extends over a period of about 250 years (1519–1764). It met from once in three years to twice a year in various communities of the province of Rydzyna. During this period the Council extended its activities. A considerable part of these, of a general and standard nature, were drafted in the form of regulations, some of which have been preserved in the communal registers. The subjects it dealt with include livelihood, established claims, municipal affairs, disputes, loans, peddling, fairs, commerce in general and with non-Jews in particular, and Torah study. Responsibility for execution of the decisions was entrusted to the rabbi of the province and its communal leaders. The rabbi of the province was elected by 32 electors of the community of Poznan, in conjunction with (9–19) delegates from the province, by a majority vote for a period of three years. He acted as the rabbi of the community of Poznan and served as its *rosh yeshivah* (uninterruptedly from 1651). Until the middle of the 17th century he was assisted in his functions by one of the *dayyanim* of the province, chosen from the *dayyanim* of Poznan. Occasionally the influence of the rabbi of Great Poland extended beyond the borders of the province to the communities of Silesia (1540, 1583, 1626, 1637). The *parnasim* (leaders) of the communities usually acted as the *parnasim* of the province. The number of provincial *parnasim* varied between nine, six, and eleven (1668, 1677, 1685, 1754). Of these, two to three were delegates from Poznan. The *parnas* of the Council was assisted by the *ne’eman* (treasurer) of the province, the *sofer* (secretary) of the province (generally the same person), the *shammai* (assessor) of the province, the *shammash* (clerk) of the province, and the *shali’ah* (emissary) of the province. They were chosen by the *parnasim* of the Council during its sessions. The *parnas* of the Council was empowered to impose a series of punishments, such as imprisonment, expulsion, fines, and the *herem* (ban) to ensure that these functions were fulfilled (1669). He was occasionally assisted by the influence and connections of the *shtadlan* of the Poznan community.

GREECE (Heb. יָוָן, *Yavan*), country in S.E. Europe.

SECOND TEMPLE PERIOD (TO 330 C.E.)

Although the earliest known Jews on the Greek mainland are to be found only from the third century B.C.E., it is highly probable that Jews traveled or were forcibly transported to Greece by way of Cyprus, Ionia, and the Greek isles by various enemies of Judah during the biblical period (cf. Joel 4:6; Isa. 66:19; see *Javan). The first Greek Jew known by name is “Moschos, son of Moschion the Jew,” a slave mentioned in an inscription, dated approximately 300–250 B.C.E., at Oropus, a small state between Athens and Boeotia. This date coincides with the reign of the Spartan king *Areios I (309–265), who, according to later sources, corresponded with the Judean high priest Onias (1 Macc. 12:20–1; Jos., Ant., 12:225). If this fact is to be accepted (cf. S. Schueller, in: *JSS*, 1 (1956), 268), one can assume that such a correspondence entailed a certain amount of Jewish travel to Greece and is thereby possibly connected with the establishment of a local Jewish community. Further growth of the Jewish community probably took place as a result of the Hasmonean uprising, when numbers of Jews were sold into slavery. At least two inscriptions from Delphi (Frey, Corpus, 1 (1936), nos. 709, 710) from the middle of the second century B.C.E. refer to Jewish slaves. Among those Jewish fugitives to reach Sparta during the reign of Antiochus IV Epiphanes was the high priest Jason (11 Macc. 5:9).

During the Hasmonean period the Jewish community in Greece spread to the important centers of the country, and from the list of cities in 1 Maccabees 15:23 – probably dating to the year 142 B.C.E. – it appears that Jews already resided at *Sparta, Delos, Sicyon, Samos, *Rhodes, *Kos, Gortyna (on *Crete), Cnidus, and *Cyprus (cf. F.M. Abel, *Les Livres des Maccabées* (1949), 269). A similar list of Jewish communities in Greece is transmitted by Philo (*Legatio ad Gaium*, 281–2), and thus reflects the situation during the first century C.E.

Among those places containing Jews Philo lists “Thessaly, Boeotia, Macedonia, Aetolia, Attica, Argos, Corinth, and most of the best parts of the Peloponnesus. Not only are the mainlands full of Jewish colonies but also the most highly esteemed of the islands of Euboea, Cyprus, and Crete.” That a sizable Jewish colony existed at Delos is further attested by the Jewish inscriptions in the area, including a number from the local synagogue (Frey, Corpus, 1 (1936), nos. 725–731; cf. Jos., Ant., 14:231–2, regarding Jews of Delos who are also Roman citizens). It may be assumed that the community at Rhodes was in close contact with the Judean king Herod, who is known to have generally supported the needs of the island (Jos., Wars, 1:424; 7:21; Ant., 16:147). The Jews of Crete are also mentioned by Josephus in reference to the imposter claiming to be the prince Alexander, who had been put to death by Herod (Jos., Wars, 2:103). The second wife of Josephus was also a resident of Crete (Jos., Life, 427). The Jewish population of Greece probably grew considerably during and after the Jewish War (66–70), and in one case Josephus relates that Vespasian sent

6,000 youths from Palestine to work for Nero at the Isthmus of Corinth (Wars, 3:540). An extremely large and powerful Jewish community also existed by the second century on Cyprus, for during the Jewish wars under *Trajan (115–7) the capital of Cyprus, Salamis, was laid waste by Jewish inhabitants and thousands of non-Jews were murdered. The consequence of this uprising, however, was a total ban on Jewish residence on the island, under pain of death (Dio Cassius 68:32; Eusebius, *Chronicon* 2:164). After Trajan, Hadrian (117–138) resorted with severe penal laws against the Jews, prohibiting circumcision, but these laws were allowed to lapse by Antoninus Pius (138–161), and henceforth the Jews were accorded a larger degree of tolerance. From the second century they were subject to the spiritual jurisdiction of a hereditary patriarch resident in Palestine. The Jews of the Diaspora early forgot Hebrew and adopted Greek (except for liturgical purposes), using a translation of the Bible – the Septuagint – which was begun at Alexandria under Ptolemy II. Apart from Cyprus, Greek Jews did not suffer any particular upheaval during the Roman period, and the ancient Jewish settlement served as a foundation for the Jewish settlement during the Byzantine period (from 330 C.E., see below) – when the capital of the Roman Empire was removed to Constantinople – and a basis for Jewish settlement in other Balkan countries (see individual countries).

[Isaiah Gafni]

EARLY AND MIDDLE BYZANTINE PERIODS (330–1204)

Byzantium's secular institutions, with the emperor at their head, gave her long periods of stability, while in the West the Church added to the feudal disorder. These characteristics had their bases in the seventh-century Heraclian dynasty, which brought agrarian reform and a reorganization of the provinces, producing an army from small landowners and controlling the capital of the empire. The Heraclians were not only able to preserve their domains after Syria, Palestine, and Egypt had fallen and Constantinople had been besieged, but were also able to maintain their own authority against incursions from the outside. The struggle against Islam and the internal and external threats to imperial sovereignty were the dangers, which faced Byzantium up to the First Crusade. Her successes in these realms shaped her external and internal policy. The emperor received and held the secular and ecclesiastical support of the people, enough so that this did not become a problem to the underlying unity of the empire. Religious conflicts which existed were largely resolved by the emperor, a believing Christian, who decided for the Church who was a heretic and who was not.

A far greater threat arose in the tenth century, when the Macedonian emperors had to fight against the attempts to destroy the foundations of Byzantine economic and military security through the acquisition of great estates, i.e., the liquidation of the smallholdings and the control of the soldiers settled upon them. Although the emperors were successful

for a time, the end of the old order came in about the middle of the 11th century. Great landowners, partially independent from the emperor's influence, caused radical changes in the structure of Byzantine society. Additionally, the Normans in the western parts of the empire, the *Seljuks in Anatolia, and finally the Normans again – this time as Crusaders – succeeded in shattering the empire.

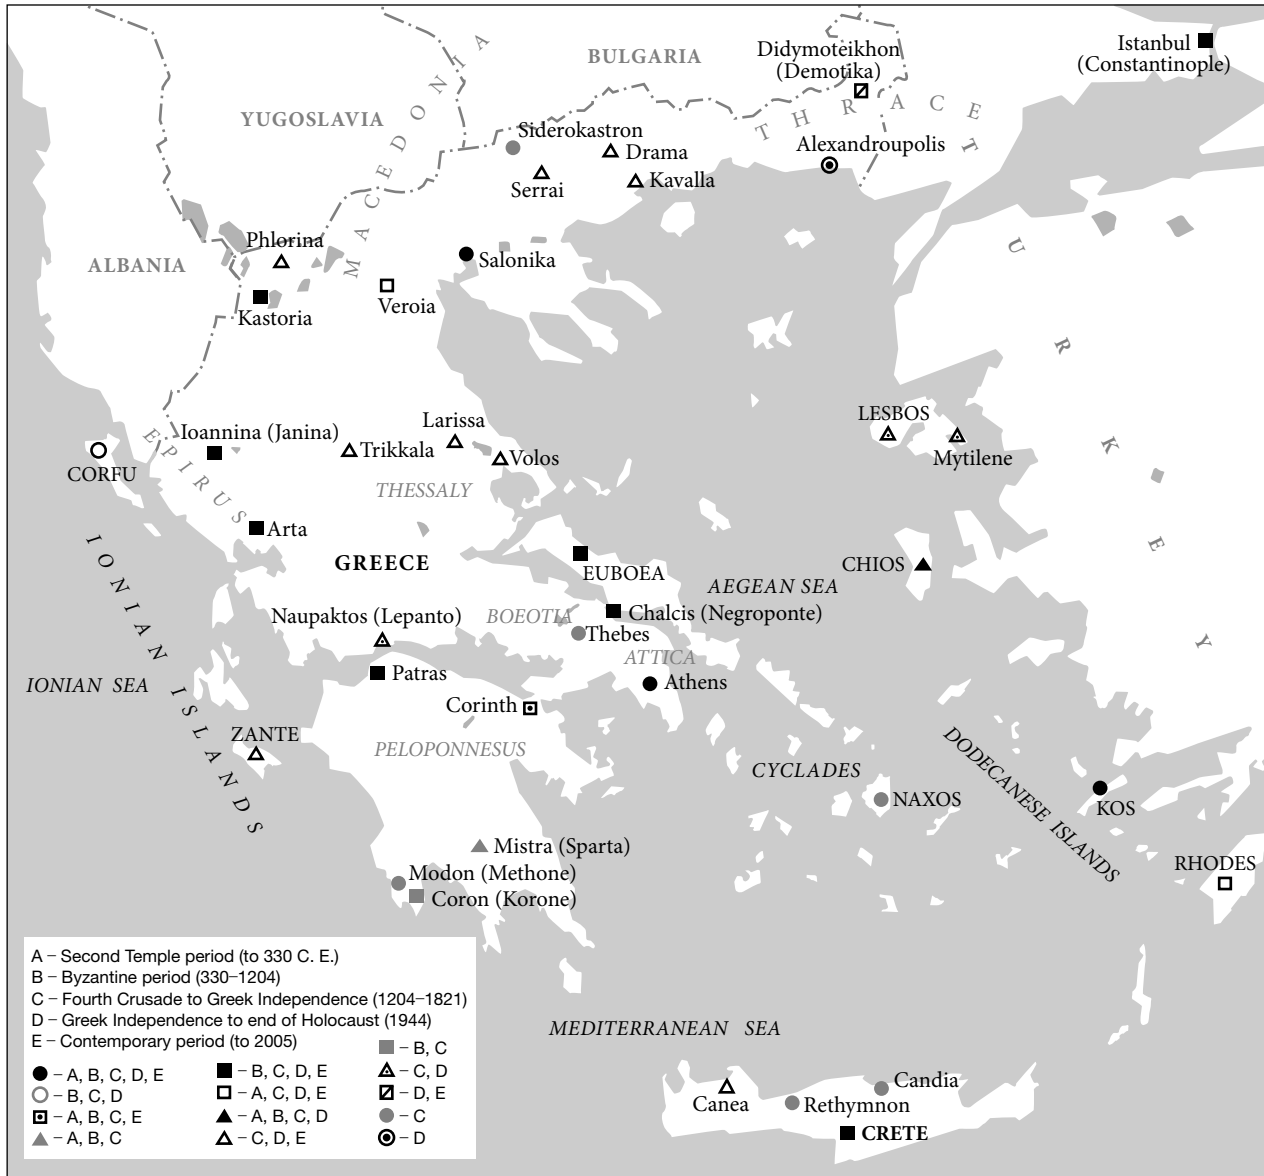

Byzantine Jewry in the seventh century is assumed to have continued in the status it held during the Roman period, as urban life was preserved and with it the main centers of Jewish population. Greece suffered greatly from Slavic incursions but the towns were hardly affected. *Salonika's Jewish history was unbroken and there were Jews in Rhodes and Cyprus.

The Middle Ages, for the Jew at least, begin with the advent to power of Constantine the Great (306–337). He was the first Roman emperor to issue laws which dramatically limited the rights of Jews as citizens of the Roman Empire, which were conferred upon them by Caracalla in 212. With the growth of Christianity the Roman emperors were influenced to further restrict the rights of the Jews. Constantine denied the Jews the right of proselytizing and prohibited intermarriage and Jewish possession of slaves. The legal status of the Jews was established by Christian Rome in the fifth century, when Theodosius II (408–450) introduced specific regulations into his codification of the laws, in his *Codex Theodosianus* (438). The Jewish community was recognized legally, even though not in a friendly manner, and religious worship was protected. In the sixth century, although more hostile and interfering, Justinian I (527–565) left the basic situation unaltered. It remained so in the seventh century also. Leo III (717–741), in the next imperial compilation of laws, the *Ecloge* ("Selections," 740), made no reference to the Jews. This preservation of legal status was very important to the Jewish community, as the Christian heretic had no legal status at all. Formal protection of the law minimally meant that the Jew had a place in the social structure.

Forced Conversion

In 632 Heraclius ordered the conversion of all Byzantine Jewry. This was a major point in his program of strengthening imperial unity, as he looked on the Jews as a political threat. Feeling that the Jews had shared in Persian military successes, he wanted to minimize their independence and influence within the empire. This policy of forced conversion was extended to Christian heretics but never took root for the Jews, who continued to be active in the civic life of the empire.

In 721 Leo III issued a decree, which later proved to be ineffectual, ordering all Jews to be baptized. In leading a new dynasty to power he, like Heraclius, wished to insure imperial unity and also may have suspected a lack of Jewish loyalty. The messianic movements to the East, having aroused fears in Leo's mind, had attracted Jewish support and may have caused the order to forcibly convert the Jews of the empire. In spite of these state actions Jewish prosperity still had

Major Jewish settlements in Greece. Jews are known to have settled in Greece in all the above periods, but in very few places was their settlement continuous, even within any specific period. Although there were Jews in many cities in the contemporary period, their numbers in the early 21st century were insignificant except in Athens (3,000) and Salonika (1,100).

room for existence in the empire and the results of the decree were as limited as they were in 632, even though some Jews left the empire and some converted outwardly. The termination of this decree seems to have been by 740.

The second Council of Nicaea in 787 reversed Leo's policy and criticized his handling of the Jews, proclaiming that Jews had to live openly according to their religion. According to Gregorios Asbestas, then metropolitan of Nicaea, the Jews who actually accepted Leo's inducements to convert were numerous enough to arouse this religious statement. Generally, these actions by Heraclius and Leo had little, if any, effect on the Jews of the empire.

Basil I (867-886), like his predecessors, also made an effort to convert the Jews forcibly, possibly to increase imperial unity but more probably to show his hand as a knowledgeable ruler in religious matters. Failing, where earlier Christians had, to persuade the Jews to convert, he issued a decree of forced conversion about 874. Like the Byzantine rulers before him, he failed in his efforts. The legal code of the period, the *Basilica*, made no basic changes in what Justinian had to say about the Jews, i.e., their legal status in religious and communal affairs continued to be recognized, and in some sense protected. Leo VI (886-912) apparently tried to follow in his father's policies but quickly gave it up.

Under Romanus I Lecapenus (920–944), who ruled in Constantine VII's (913–959) stead, further forced conversions, as well as persecutions, of the Jews were effected. This possibly happened by 932 and definitely by 943. His policy is known to have caused considerable migration to Khazaria. These acts may have been caused by Romanus' insecurity on the throne, as Constantine was the legitimate ruler and the former looked for ways to insure his position. In any event the persecutions were particularly severe, surpassing those of his predecessors. They were stopped quite suddenly when *Hisdai ibn Shaprut wrote to either Constantine or Helena, Romanus' daughter and the former's wife.

The last 250 years before the Fourth Crusade seem to have been a relatively quiet period for the Jews of the empire and it can be inferred that the situation actually improved and that no attempts were made by the authorities at coercing the Jews to convert. Further emphasis of this situation is provided by the fact that when the monk Nikon (tenth century) incited the inhabitants of Sparta to banish the Jews from their midst, his words were to no effect. In Chios an expulsion decree in 1062 was issued against those Jews who had recently settled there. There is no reason to believe that during the First Crusade in 1096, which took place during the reign of Emperor Alexius I Comnenus, the Jews were attacked when the Crusaders passed through the Balkans. The Jewish quarters, however, were looted. In the general panic which struck the Jewish world, a messianic effervescence also came to the surface in Salonika, Adrianople, and other cities. It is related that certain communities left their homes for Salonika in order to sail to Palestine from there. A tremendous emotion seized the community of Salonika, where both the authorities and the archbishop showed a positive attitude to the messianic spirit.

Social and Economic Conditions

The legal disabilities of the Jews during the period, known from the *Basilica*, were minimal and included exclusion from service in the armed forces and the government, even though Jews had been employed as tax collectors on Cyprus during the first two decades of the 12th century. Jews were forbidden to buy Christian slaves, but this had little effect on them. No other restrictions existed concerning economic matters which did not also affect Christians. The charging of interest in trade and the purchase of land, except Church land, were permitted, although the emperors tried to control these matters for themselves. The question as to whether there was a specific Jewish tax seems to be open to a great deal of debate, but J. Starr (see bibl. *The Jews in the Byzantine Empire*) felt that such taxes did exist but were little enforced after the seventh century. In short, the taxes provided for by Theodosius II in 429, Justinian's *Corpus*, and again three centuries later in the *Nomocanon* had little more effect on the Jewish community in the later period than on the Christian one. Such legal restrictions which did exist included the absence of the right of Jews to testify in cases involving Christians; the overriding imperial authority over religious matters between Jews; the right of Jewish testi-

mony before Jewish judges only in civil litigation between Jews; the prohibition of Judaizing; and the necessity for Jews to take an oath in legal cases, which was contemptuous of the Jewish faith. Nevertheless, circumcision was officially permitted, the Sabbath and the Festivals were protected, synagogues were allowed, and even though the building of new ones was formally proscribed, the prohibition was not rigidly enforced. Although the Jew was restricted, he was in a much better position than Christian heretics. Jews were active as early as the seventh century as physicians and skilled artisans, particularly as finishers of woven cloth (e.g., in Sparta), dyers (in Corinth), and makers of silk garments (in Salonika and Thebes). Jews were also involved in commerce and farming and as owners of land.

In religious matters Hebrew remained the language of the Jews, although it was paralleled by the limited usage of Greek. Karaism began to appear in the empire in the tenth century (see Ankori, in bibl.) but only began to take root after the First Crusade. R. Tobiah b. Eliezer of Kastoria was an important Rabbanite spokesman. Aside from R. Tobiah little if any writing was apparently done in the areas of Midrash, Talmud, and *halakhah* during this entire period in Byzantium. There was literary activity in southern Italy, but then this area can only be included in the widest definition as to what was territorially part of Byzantine Greece. Additionally, about this time both Rabbanites and Karaites began to come to Byzantium from Muslim territory.

*Benjamin of Tudela, the 12th-century traveler, states that in his time there were Jews in Corfu, Arta, Aphilon (Achelous), Patras, Naupaktos, Corinth, Thebes, Chalcis, Salonika, Drama, and other localities. The Greek islands on which Jews lived were Lesbos, Chios, Samos, Rhodes, and Cyprus. He found the largest community in Thebes, where there were 2,000 Jews, while in Salonika there were 500, and in other towns from 20 to 400. The Jews of Greece engaged in dyeing, weaving, and the making of silk garments. After Roger II, the king of the Normans in Sicily, conquered some Greek towns in 1147, he transferred some Jewish weavers to his kingdom in order to develop the weaving of silk in his country. On Mount Parnassus Benjamin of Tudela found 200 farmers; there were also some serfs among the Jews. During the reign of the Byzantine emperor Constantine IX Monomachus (1042–1055), there were 15 Jewish families in Chios who were perpetual serfs to the Nea Moné monastery. The Jews of Chios paid a poll tax – in reality a family tax – which the emperor transferred to the monastery. The Jews of Salonika also paid this tax. The majority of the Jews conducted their trade on a small scale and with distant countries. The Greek merchants envied their Jewish rivals and sought to restrict their progress. *Pethahiah of Regensburg describes the bitter exile in which the Jews of Greece lived (see also *Byzantine Empire).

FOURTH CRUSADE AND LATE BYZANTINE PERIOD (1204–1453)

Greece from 1204 to 1821 was the subject of many conquests, divisions, reconquests, and redivisions at the hands of the Nor-

mans of Sicily, the Saracens, the Crusaders, the Venetians, the Genoese, the Seljuks, the Bulgars and the Slavs, the Byzantine emperors, the Cumans, the Ottoman Turks, and others.

Greek Rule

During this period Theodore Ducas Angelus, the Greek despot of *Epirus (?1215–30), who was defeated in 1230 by the czar of the Bulgars, John Asen II (1218–41), was notorious for his cruelty. Theodore added the kingdom of Salonika to his domain in 1223 or 1224, holding it until 1230. He initiated an anti-Jewish policy which other Greek rulers followed after him. Theodore apparently enriched himself by confiscating the wealth of the Jews, and refused them redress against his abuses. He is also charged with proscribing Judaism. After Theodore was defeated by John Asen, he was condemned to death and two Jews were ordered to put out his eyes. When they took pity on him and did not fulfill the emperor's order, they were thrown from the summit of a rock.

The Greek rulers of the Empire of Nicaea were also harsh in their policy toward the Jews. John III Ducas Vatatzes (1222–54) apparently continued Theodore's decree against the Jews. The motive for persecuting the Jews is conjectural, but it seems to reflect the upsurge of nationalism in the provinces which remained under Greek rule. Jewish presence in the Latin states and in the areas ruled by the ambitious John Asen apparently strengthened the distrust, which the Greek rulers had for their Jewish subjects in both Asia and Europe. Bulgaria's territorial expansion might have offered a degree of relief for the Jews, but the decline of the Latin Empire must have had a negative effect on them. By 1246 John III had entered Salonika and controlled the area from Adrianople to Stobi and Skopje, including the town of Kastoria.

With the restoration of Byzantine rule (in the guise of the Nicaean Empire) over a large part of the Balkans, various Jewish communities felt the weight of the rulers' anti-Jewish policy. Little information is available on this but it can be assumed that the communities of Kastoria, Salonika, and several others suffered from the Greek advances. Once the Greek "rump state" of Nicaea had recovered Constantinople under the leadership of Michael VIII Palaeologus (1258–82), the anti-Jewish policy became outdated. He then began to resettle and reconstruct the ravaged capital, evidently realizing that his program required the cooperation of all elements, other than those who were then hostile (notably the Venetians and the subjects of the kingdom of Naples). It is not known whether there were Jews in Constantinople when Michael captured it, but after his conquest he renounced the policy of John III and made it possible for Jews to return and live there quietly.

From the end of the Latin Empire the Byzantine emperors began to recover part of the Peloponnesus, nevertheless being frustrated in part in their attempts by Murad I, who held Salonika from 1387 to 1405, and Murad II, who secured Salonika for the Ottoman Empire (1430–1913). The disintegration of the Byzantine Empire and in a large part its seizure by the Ottoman Turks led to generally favorable conditions for

the Jews living within the Turkish sphere (see *Ottoman Empire; Covenant of *Omar).

Jewish Immigrations into Greece

The important Jewish communities which existed after the Fourth Crusade were Crete, Corinth, Coron (*Korone), *Modon, *Patras, and *Chios. The *Romaniots (*Gregos*) – the acculturized Jewish inhabitants of Greece – were Greek-speaking. Until recently Greek was still spoken by the Jews of Epirus, Thessaly, Ioannina, Crete, and Chalcis (see also *Judeo-Greek). From the end of the 14th century refugees immigrated from Spain to Greece, and from the end of the 15th century from Portugal and Sicily. Jews who were also expelled from Navarre, Aragon, Naples, Provence, and elsewhere in the Iberian Peninsula and other Mediterranean Papal States in the late 15th and 16th centuries migrated to the Greek Peninsula. In towns such as Trikkala, Larissa, Volos, and above all in Salonika the Sephardim introduced their own language and customs. With the flight of the Jews from Hungaria in 1376 (probably connected with the Black Death and the persecution of Jews in Eastern Europe at the time) many Jews settled in the towns of Kavalla and Siderokastron; they brought their special customs with them. As a result of Sultan Suleiman's journey to Hungaria in 1525, a number of Jews emigrated from there to Greece (the Greek Peninsula), which was actually part of the Ottoman Empire then. The descendants of the Hungarian Jews were completely absorbed by the Sephardim after a few generations. A third group in Greek Jewry was that of the Italian-speaking Jews of Corfu, whose ancestors were expelled from Apulia in southern Italy.

During the 16th and 17th centuries the Jewish population increased with the addition of the Spanish Marranos, who fled to the countries dominated by the Turks, and after the persecutions of 1648, Polish refugees. The congregations (*kehalim*) were organized according to the regions of origin, and by generation and migratory waves. The Salonikan *kehalim* from Italy, Lisbon, Catalan, and Sicily were each divided into Yashan (old) and *Hadash* (new) based on migratory waves. Thus, during the 16th century in Patras there were the following *kehalim*: Kehillah Kedoshah Yevanim ("Greek Holy Community"), Kehillah Kedoshah Yashan ("Ancient Community," of Sicilian origin), Kehillah Kedoshah *Hadash* ("New Community," refugees from Naples and smaller Italian towns), and Kehillah Kedoshah Sephardim ("Sephardi Holy Community"). In Arta there were *kehalim* whose founders had come from Corfu, Calabria, Apulia, and Sicily.

OTTOMAN (AND LATE VENETIAN) RULE (1453–1821)

The important communities during the Turkish (and late Venetian) periods were, in the first place, Salonika, which was probably the largest Jewish community during the 16–18th centuries and which until the beginning of the 20th century was populated most of the time by a majority of Jews; Naupaktos; Patras, whose merchants were known as courageous travelers who went as far as Persia; Arta; Thebes, which was "renowned

for its wisdom” (responsa of Elijah *Mizrahi (Constantinople, 1559–61), No. 71); and *Ioannina (Janina), the largest Romaniot community. On Crete the Jews played an important part in the transit trade; the island was also known for its rabbis and scholars, notably the *Capsali family, *Delmedigo, and others. There were also some Jews on Cyprus. After the conquest of Rhodes by the Turks in 1552, Jews from Salonika arrived on the island, where their commercial role became an important one. The island also became a stopping place for pilgrims on their way to Palestine. It was widely known for its rabbis, especially the rabbinical dynasty of the *Israel family.

When Sigismondo Malatesta conquered Mistra (Sparta) in 1465, he burned down the Jewish quarter. In 1532 when the forces of Andrea Doria attacked the Greek towns which were in the hands of the Turks, the Jews of Coron, Modon, and Patras suffered greatly. Their property was confiscated and they were taken captive. During the reign of Selim II (1566–74) Don Joseph *Nasi was appointed duke of Naxos and the surrounding isles of the Cyclades. In 1669 the Venetian armies attacked the island of Chios. To commemorate the miraculous stand against their siege, the local Jews annually celebrated “Purim of Chios” on Iyyar 8. With the Venetian invasion of the Peloponnese in 1685, the Jews abandoned Patras in fear and fled to Larissa. They were also compelled to flee for their lives from the islands of the Aegean Sea. The Greek-Orthodox of the Peloponnese, who often rebelled against the Turks, massacred the Jews whom they considered allies of the Turks. During this period of confusion in the 18th century the communities of Patras, Thebes, Chalcis, and Naupaktos were greatly harmed and almost destroyed. In 1770, when Russia captured several sea towns of the Greek coast, the Ottoman Turks sent forces to the area. They did not differentiate between Greek-Orthodox and Jews and the Jewish communities of Patras, Thebes, Chalcis, and Lepanto (Naupaktos) were almost destroyed.

Religious Culture Under Ottoman Rule

The 16th century was the Golden Age of Salonikan Jewry, with religious figures like the decisors Rabbi Samuel de *Medina (Rashdam) and Isaac *Adarbi; Rabbi Joseph *Caro, who prepared a good part of his halakhic work *Beit Yosef* while residing 17 years in the city; the eminent Joseph Taitazak, *gadol ha-dor* (the foremost rabbi of his generation); Judah Abravanel; Moses *Alshekh; *Levi ben Habib (the Ralbah); Jacob ibn Verga; Eliezer ha-Shimoni; Joseph ben Lev; the *paytan* Solomon Alkabez, author of the Sabbath hymn “*Lekha Dodi*”; and the poet Saadiah ben Abraham Longo. The *talmud torah* was a mammoth center that not only was a school for over 10,000 pupils and 200 teachers but had a printing press, produced fabrics, and served as the bank for the community where members kept their money. It relieved the individual *kehalim* from the financial burden of maintaining their own schools. Salonika as a world Sephardi center hosted the Beit Midrash Le-Shirah ve-le-Zimrah, which approved *piyyutim* before they were accepted into prayer. Israel *Najara, a descendant of a

Salonikan family, came to Salonika to develop and receive approval for his famous hymn “*Zur mi-Shello Akhalnu*.”

*Anusim left the Iberian Peninsula in the 16th and 17th centuries and returned to Judaism when they reached Salonika and other Ottoman communities. The physician Lusitanus arrived in Salonika with a profound knowledge of religious Judaism. He was an expert on the menstrual cycle, published numerous treatises on the subject, and established both a medical school and yeshivah when he settled in Salonika. The newly arriving *anusim* and veteran former *anusim* also brought religious fervor, fanaticism, and an acute and active messianism, which created great turbulence within the Jewish communities of the northern Greek Peninsula. Salonika hosted the false messiahs Solomon Molcho and *Shabbetai Zevi; the latter causing a great decline among Salonikan Jewry after he was proclaimed messiah in 1666. The Jewish masses were swept up in the messianic frenzy and abandoned traditional Jewish law and religious customs and beliefs. While the core supporters converted to Islam after Shabbetai Zevi was exiled by the Sultan, forced to convert to Islam, and finally died in Montenegro, most Jews did not convert. Strict religious *takkanot* were enforced within the Salonikan Jewish community. This did not prevent the community from falling into spiritual and economic decay, but in the 18th century many more religious exegeses were published than previously, in the new spirit of religious conservatism.

Besides Salonika, which during the 16th and 17th centuries was a major Jewish center, there were also important rabbis and scholars in the smaller communities of Greece. During the 16th and 17th centuries these included Solomon Cohen (Mahar-SHa-KH) of Zante and the Peloponnese; Samuel b. Moses *Kalai, the author of *Mishpetei Shemu'el*, of Arta; Moses *Alashkar of Patras, the author of responsa; during the 18th century: Isaac Algazi, the author of *Doresh Tov*; Isaac Frances of Kastoria, the author of *Penei Yizhak*; Ezra Malki of Rhodes, the author of *Malki ba-Kodesh* and other works; Jedidiah Tarikah of Rhodes, the author of *Ben Yadid* and other works; Isaac Obadiah of Patras, the author of *Iggeret Dofi ha-Zeman*; Eliezer b. Elijah ha-Rofeh (“the physician”) Ashkenazi of Nicosia, Cyprus, the author of *Yosif Lekah* on the Book of Esther.

Economic Situation of the Jews

During the Turkish period (1453–1821) the Jews of Greece were principally engaged in the crafts of spinning silk, weaving wool, and making cloth. They also controlled an important part of the commerce, money lending, and the lease of the taxes. In the Greek islands under Venetian rule the Jews only engaged in retail commerce, as the larger type of commerce was the monopoly of the Venetian nobility. Under Turkish rule, however, the wholesale trade was concentrated in Jewish hands. The Jews succeeded in developing connections in Italy, France, Amsterdam, Hamburg, London, and in the Orient with Constantinople, Izmir, and Alexandria. The merchants of Kastoria traded in hides, furs, cattle, metals, and broken sil-

ver vessels. The Jews of Naupaktos were engaged in the trade of palm branches. At a later stage the tobacco, grain, sesame, hashish, and raw hides trades became those of the Jews. However in Thessaly, the Peloponnesus, and the Balkans the Jews engaged in peddling and tinsmithing, living in extreme poverty. In Salonika all the port activities were in Jewish hands and the port was closed on Sabbaths and Jewish festivals.

GREEK INDEPENDENCE (1821)–WORLD WAR II (1940)

With the outbreak of the Greek revolt in 1821 Greek Jewry suffered intensively because of its support of and loyalty to Ottoman rule. In those towns where the rebels gained the upper hand, the Jews were murdered after various accusations had been leveled against them. In the massacre of the Peloponnesus 5,000 Jews lost their lives; the remainder fled to Corfu. From that time the condition of the Jews who lived among the Greeks, even within the boundaries of Turkish rule, began to deteriorate. From time to time there were blood libels, such as in Rhodes (Turkish until 1912; Italian until 1947) in 1840. In 1891 disorders broke out on the Greek islands; the Jews left in panic. During the same year there was also a blood libel in Corfu (Greek, from 1864). The Jews on the island, as well as on the neighboring island of Zante, were attacked. About 1,500 Jews left the Greek islands and settled in Italy, Turkey, and Egypt. The Jews of Corfu suffered a large-scale blood libel in 1891; for three weeks the Jews were locked into their ghetto during continual rioting, some 22 Jews died, and in light of apathy on the part of the Greek army, the Great Powers sent ships-of-war off the coast in order to pressure the government to restore order. Even the active participation of the Jewish citizens of Greece in the war against Turkey in 1897 was not mentioned in their favor; with the end of the hostilities in Thessaly, anti-Jewish riots broke out and an important part of the Jewish population was compelled to seek refuge in Salonika. At the beginning of the 20th century there were about 10,000 Jews in Greece. After the Balkan War (1912–13), with the annexation of further territories in 1912, which included Salonika, Chios, Crete, Epirus, Kavalla, and Phlorina, their numbers grew to 100,000.

After the population exchanges between Turkey and Greece as a result of the Treaty of Lausanne (1923) and the arrival in Salonika of 100,000 Greeks from Anatolia, the status of the Jews deteriorated because of the increased competition in commerce and the crafts. Many Jews were compelled to leave the city. The Asia Minor refugees introduced legislation in Salonika in 1924 forbidding work on Sunday, thus compelling Salonikan Jewry either to lose a day's work or break the Sabbath. When the legislation was promulgated nationally, Jews began leaving Ioannina for Erez Israel. In the late 1920s, zealous elements amongst the Asian Minor refugee population continued to bait Salonikan Jewry and incited them in the Salonikan daily Greek newspaper *Makedonia*. In 1931, Isaak Cohen, a young Jew from Salonika and member of Maccabi who went to Sofia for a regional Maccabi meeting, was falsely accused on the front page of *Makedonia* of going to

Bulgaria for Macedonian nationalist meetings and riots broke out against Salonikan Jewry in much of the eastern part of the city, which was heavily Jewish. The Campbell neighborhood, which housed Jewish fishermen and port workers, who had become homeless after the devastating 1917 fire, was burned to the ground by the student EEE (Nationalist Greek Union) and Jewish migration ensued to Erez Israel. On the other hand, the economic position of the Jews in the provincial towns of Epirus, Thessaly, Macedonia, and the islands did not arouse the jealousy of their neighbors. Until World War II the situation of the Jews in Greece was satisfactory. They controlled the markets of paper, textiles, medicines, glassware, ironware, wood, and hides, and were also represented in heavy industry, international commerce, and banking. Many Jews were also employed in manual labor as stevedores, coachmen, and fishermen, as well as in various handicrafts. The number of Jews in Greece on the eve of World War II was 77,000.

Civic and Cultural Conditions of the Jews

Greece recognized the civic and political equality of the Jews from the time of its establishment as a modern state in 1821. In 1882 legal status was granted to the Jewish communities. This status was confirmed on various occasions when laws defining the privileges and obligations of the communities were passed. The community councils, which were elected by general suffrage, were responsible for the religious, educational, and social affairs.

At the beginning of the 20th century the Alliance Israélite Universelle still maintained a number of Jewish schools in Greece. The Jewish schools were attached to the communities and did not have any attachment to religious or political trends. Jewish children attended the state schools and the religious studies were entrusted to *hazzanim*, who were content to teach the prayers in their traditional tunes. It was only in Corfu that the religious studies were of a higher standard. In those regions, which were under Turkish rule until 1912, such as Thrace, Macedonia, and Epirus, there was a Jewish school in every community, which was supported by the Alliance. The greatest concentration of Jewish schools was in Salonika. In Salonika alone, at the beginning of the 20th century, there were some seven schools under the auspices of this Parisian-led Jewish school system. Between the two worlds was there were 12 Jewish schools founded by the community, institutions of the Alliance, as well as private schools. In 1931 a law was passed which prohibited children of Greek nationality from attending foreign schools before they had completed their elementary education. This came as a fatal blow to the Alliance schools; the institutions of the Alliance amalgamated with the community schools in 1935. The Italians opened a seminary for the training of rabbis and teachers of Jewish subjects on the island of Rhodes, but it closed in 1938.

HOLOCAUST PERIOD

The Italian army attacked Greece on Oct. 28, 1940, and the Germans invaded on April 6, 1941. According to statistics of

the *Salonika Jewish community, 12,898 Jews, among them 343 officers, served in the Greek army and several hundred Jews fell in battle. The entire country was occupied on June 2, 1941, and split up among the Axis (German, Italian, and Bulgarian) forces. Treatment of the Jews differed from one occupied zone to another.

German Zone

Salonika was taken by German troops on April 9, 1941. Anti-Jewish measures were at once instituted, beginning on April 12 when Jewish-owned apartments were confiscated and the Jewish inhabitants ordered to vacate them within a few hours. Three days later, the members of the Jewish community council and other prominent Jews were arrested. A “scientific” delegation arrived from Germany for the purpose of plundering the community of its valuable Hebrew books and manuscripts for transfer to the Nazi “Institute for Jewish Affairs” in Frankfurt. Before long, the impoverishment of the community became overwhelming and the community council was unable to extend aid to all those who were in need. Contagious diseases spread and the death rate rose steeply, especially among the children. In July 1942 the men were sent on forced labor; a short while later, however, the community council made an agreement with the Germans, whereby it undertook to pay them the sum of 2,500,000,000 old drachmas, due Dec. 15, 1942, in consideration of which the Germans would refrain from drafting Jews for forced labor. At the end of 1942 Jewish-owned factories and groceries were confiscated and the well-known Jewish cemetery was destroyed. On Feb. 6, 1943, racial restrictions were introduced; Jews were ordered to wear a yellow badge and confined to a ghetto, while special signs had to be posted above windows and establishments belonging to Jews. Jews were also prohibited from using public transport and had to be indoors by sundown. The transfer to the ghetto, set up in a specially designated area, had to be completed by March 25, 1943. On February 25, the trade unions were ordered to expel their Jewish members; on March 1 the Jews had to declare all the capital in their possession, and 104 hostages were seized to ensure full compliance with this order. At this time, a rumor spread that the Jewish population was about to be deported to *Poland. The recently established Jewish underground warned the Jews of the danger confronting them, but little heed was taken and only about 3,000 escaped to Athens. The first transport of Jewish deportees left Salonika for the gas chambers on March 15, 1943, followed by further transports of 3,000 Jews each at intervals of two to three days. Thus, various sectors of the ghetto were systematically cleared of their inhabitants. Five transports left in the last two weeks of March, nine in April, and two in May; in June 820 Jews were dispatched to Auschwitz, the transport consisting of members and employees of the community council and teachers. On Aug. 2, 1943, skilled workers, “privileged” Jews, and a group of 367 Spanish citizens were sent to *Bergen-Belsen, where they remained until Feb. 7, 1944. On Aug. 7, 1,800 starving Jewish forced laborers were brought to Salonika and deported from

there in the 19th and final transport from Salonika to the death camps. In all 46,091 Salonika Jews were deported – 45,650 to Auschwitz and 441 to Bergen-Belsen – 95% of whom were killed. The renowned Salonika community, the great center of Sephardi Jewry, came to an end.

Other Districts under German Occupation

On Feb. 3, 1943, the chief rabbi of Salonika, Rabbi Zevi Koretz, was ordered to ensure adherence to the racial restrictions in the provincial towns under the jurisdiction of German headquarters in Salonika. These were the towns in East Thracia, near the Turkish border, as well as Veroia, Edessa, and Phlorina in central and eastern Macedonia. On May 9, 2,194 Jews from these towns were sent to Auschwitz. A few Jews were saved by the local population and the chief of police, e.g., in the town of Katherine. Prominent Greeks, among them the archbishop of Athens and labor leaders, tried to assist the Jews, and there were Greeks who offered shelter and helped the Jews escape to the mountains.

ITALIAN ZONE. The Italian forces controlled Athens and the Peloponnesus. As long as the zone was held by the Italians, the Jews were not persecuted, the racial laws were disregarded, and efforts were made to sabotage the Italian racial policy. After the Italian surrender (Sept. 3, 1943), however, the Germans occupied the entire country, and on Sept. 20, 1943, Eichmann's deputy, Dieter *Wisliceny, arrived in Athens with detailed plans for the destruction of the Jews. Elijah Barzilai, the rabbi of Athens, was ordered by Wisliceny to provide a list of all the members of the Jewish community. Instead of doing so, the rabbi warned the Jews of Athens and himself fled to a provincial town. This enabled a considerable number of Athenian Jews to escape. On Oct. 7, 1943, Juergen *Stroop, the *hoehere ss und Polizeifuehrer* in Greece, published an order in the newspapers, dated October 3, for all Jews to register, on penalty of death. Archbishop Damaskinos gave instructions to all monasteries and convents in Athens and the provincial towns to shelter all Jews who knocked on their doors. On March 24, 1944, the Athens synagogue was surrounded by the Nazis and 300 Jews were arrested; another 500 Jews were routed out of hiding. They were first interned in a temporary camp at Haïdar and later sent to their death in Auschwitz on April 2, along with other Jews caught in Athens. The rest of Athenian Jewry hid with their Greek-Christian neighbors. The Jewish partisans supplied food to those in hiding in cellars and attics.

BULGARIAN ZONE. A large part of Thrace and Eastern Macedonia remained under Bulgarian occupation, including the towns of Kavalla, Serrai, Drama, Besanti, Komotina, and Alexandroupolis (Dedeagach). Over 4,000 Jews from Thrace and over 7,000 from Macedonia were deported by the Bulgarians (see *Bulgaria, Holocaust) to the gas chambers in Poland; about 2,200 Jews survived.

The total number of Jews in Greece sent to death in the extermination camps is estimated at 65,000 – about 85% of the entire Jewish population.

Jewish Resistance

The conquest of Athens by the Germans on April 27, 1941, marked the end of open warfare. Over 300 Jewish soldiers and 1,000 other Jews joined Greek partisan units. The Jewish partisans sabotaged German military centers and military factories, blew up German supply ships, and severed lines of communication. A group of 40 Jewish partisans took part in the blowing up of Gorgopotamo Bridge, causing a break in the rail link between northern and southern Greece. At the beginning of 1943 partisan units made up entirely or primarily of Jews were set up in Salonika, Athens, and Thessaly, under the command of Greek or British officers. The Salonika partisan units gathered information on troop movements in Macedonia and transmitted it to partisan headquarters in Athens. In Thessaly the national resistance organization, set up by the Jews in the towns of Volos, Larissa, and Trikkala, was under the command of an aged rabbi, Moses Pesah, who roamed the mountains with a rifle in his hand. The courage and heroism displayed by the Jewish partisans earned them the praise of field marshal Wilson, the commanding officer of the Allied Forces in the Near East. Their main task was the establishment of contacts between the various parts of Greece and the Allied general headquarters in Cairo. The Jewish partisans also succeeded in hiding hundreds of Jews in the mountains and remote villages. Others worked for the Germans under assumed names in such places as the port of Piraeus and carried out acts of sabotage. The greatest single heroic act of the Greek-Jewish underground was the mutiny of 135 Greek Jews in Auschwitz; they were members of a *Sonderkommando*, charged with cremation of the corpses from the gas chambers. With the aid of a group of French and Hungarian Jews they blew up two crematoriums. Attacked by the SS guards and by five planes, the rebels held out for an hour until all 135 were killed.

CONTEMPORARY PERIOD

In the autumn of 1944, when Greece was liberated from Nazi occupation, over 10,000 Jews, almost all of them destitute, were in the country. A variety of factors (the general political instability, successive changes in the composition of the government, and the extended economic crisis) made the reconstruction of the Jewish community difficult. The Greek civil war also made emigration difficult for the Jews, as the majority of the men were obligated by the draft and could not receive emigration permits. After Greece's de facto recognition of the State of Israel a Greek cabinet committee decided (on Aug. 4, 1949) to permit Jews of draft age to go to Israel on condition that they renounce their Greek citizenship. Until the end of the 1950s about 3,500 Jews from Greece settled in Israel, 1,200 immigrated to the United States, and a few hundred others immigrated to Canada, Australia, South Africa, the Congo, and Latin American countries. In 1950 the number of Jews in Greece was about 8,000; in 1958 it was 5,209; and in 1967 about 6,500 Jews were scattered among 18 communities; 2,800 in Athens, 1,000 in Salonika (a number which rose to 1,300 by 1968), and 450 Jews in Larissa. As early as November 1944

a meeting of Athenian Jews elected a temporary council of 12 members that was recognized by the government as the representative of the Jewish community; in June 1945 the council was accorded legal status.

During the war, almost all of the synagogues had been destroyed or severely damaged; the synagogue in Athens was reconstructed, however, as were synagogues in other cities. A major obstacle to the reestablishment of Greek Jewry was the question of restitution of property that was confiscated during the occupation by the Nazis and compensation for the Nazi persecution. Although the anti-Jewish laws were repealed in most areas in 1944, they were canceled in Salonika only in June 1945. The question of compensation, however, involved a slower process. In 1949 the Organization for the Assistance and Rehabilitation of Greek Jews was established by official order to deal with this problem, but its work made no progress for a number of years. In spite of the lack of legal evidence as to who was deported to death camps, an agreement was signed in Bonn in March 1960 between the governments of West Germany and Greece on compensation to Nazi victims. About 62,000 claims for compensation were registered under this law; 7,200 of them were by Jews, of which about 6,000 were registered by Jews living outside Greece who had lost their Greek citizenship, and thus also their right to compensation.

During the first years after the liberation, Greek Jewry was materially supported by world Jewish organizations – the American Jewish *Joint Distribution Committee, the *Jewish Agency, etc. Only slowly did it rise above its state of poverty. As late as 1954 large numbers of survivors of the Holocaust continued to live in substandard conditions. Over the years the situation improved: unemployment decreased, and by the late 1960s the Jewish population included many artisans, merchants, retailers and wholesalers, industrialists (especially in clothing and textiles), free professionals, etc.

In spite of the stormy changes that passed over Greece after the war – and in spite of the influence of Nazi propaganda during the occupation – organized antisemitism was not evident in Greece, and the people generally refrained from activities motivated by hate against the Jews, except for some isolated incidents. Strong cultural contacts exist between the Jews and the Greeks, and the rate of intermarriage is on the rise.

A special problem arose from the fact that during the occupation a relatively large number of Jews participated in the struggle of the partisans and some of them afterward went over to the Communist camp. After the civil war the minister of defense issued a special order that clarified the position of the Jews who served in the ELAS brigades. He emphasized that these Jews were not to be viewed as “Communists,” since during the Nazi occupation they had no choice but to flee to the mountains. Nonetheless, a number of Jewish partisans were executed. Five Jews who were condemned to death and 21 others who were deported to the islands were freed on the condition that they immigrate to Israel and renounce their Greek citizenship. When the situation in Greece became more stable,

the Jews slowly returned to civilian life. They participated in elections – and were even candidates on various party lists – and a few were absorbed into government positions.

In 1964 a Jewish school existed in Athens with 150 pupils. Other areas were deprived of Jewish educational activities because of the small number of children and a shortage of teachers. The religious and communal life of Greek Jewry was very weak. Synagogues were empty except during the High Holidays. In the 1950s, in addition to the rabbi in Athens, there were rabbis in Volos, Ioannina, and Larissa; later there was only the one rabbi in Athens who also served as the chief rabbi of Greek Jewry. The Council of Jewish Communities was affiliated with the *World Jewish Congress and published a bi-monthly; *WIZO carried on activities for women.

In the 1970s the Jewish population of Greece was approximately 5,000; 2,700 in Athens and about 1,000 in Salonika. The Council of Jewish Communities was affiliated with the World Jewish Congress and published a monthly magazine, *Chronika*. Other Jewish publications were *Jewish Review* (monthly) and *New Generation* published by the Jewish Youth Organization of Athens.

There were three rabbis in Athens, while Thessaloniki, Larissa, Volos, and Chalkis were served by *hazzanim*. The Athens Jewish school had 150 pupils, and there were educational facilities in Thessaloniki and Larissa. Women were particularly active in communal affairs and were organized in movements such as WIZO. There was also a chapter of B'nai B'rith and B'noth B'rith.

The 1980s can be characterized as the beginning of an active historical commemoration of the Judeo-Greek and the Sephardi heritages in Greece. Greek Jewry had aged, but a new generation of youth was being educated. Assimilation had taken a great toll and the legalization of civil marriages by the Papandreou government in the early 1980s greatly accelerated the process. Since then, most marriages were mixed and conducted outside of the synagogue, and there was no compelling need for the female to convert to Judaism. Jewish communities dwindled due to deaths in places such as Corfu, and Ioannina, and in Didamotiko, Zakynthos, and Cavalla deaths of influential leaders and the elderly brought Jewish communal life to an end. During the Lebanon War, Greek society was very critical of Israel and hostile to Israeli tourists and athletes. The press and the media vociferously condemned Israel for invading Lebanon, the course of the war, the bombing of civilian targets, and its treatment of Palestinian refugees in Lebanon. Greek Jewry was very uncomfortable during this period.

Until 1985, *Yad Vashem had only recognized 42 Greeks as Righteous Gentiles during the Holocaust. By 1994, 160 were recognized. In October 1992, at the dedication of Yad Vashem's Valley of the Communities, Greek Jewry was represented with stones for the communities of Salonika and Rhodes, and one general stone with the names of the other annihilated Greek Jewish communities by the Germans in the Holocaust. Yad Vashem established a room in their archive in memory of the

annihilated Jewish community of Rhodes, and a foyer with an exhibit on the destroyed Salonikan Jewish community. In July 1994, Yad Vashem recognized the late Princess Alice as a Righteous Gentile for saving two Jewish families in Athens in WWII. Her son, Prince Philip of England, and daughter came to Jerusalem for the ceremony. Greek opposition leader Miltiadis Ebert came to Yad Vashem in 1995 for a ceremony honoring his father, Angelos Ebert, deceased Athens police chief, who had issued new identification cards with Greek names to thousands of Jews during WWII.

In 1999 at Yad Vashem, Bracha Rivlin, Yitzchak Kerem, and Leah Bornstein-Makovetsky published *Pinkas Kehillot Yavan*, a memorial volume on the history of the past Jewish communities of Greece destroyed in the Holocaust. The Holocaust Museum of Kibbutz Lohamei ha-Gettao't established a permanent exhibition on Salonikan Jewry, the largest Jewish community of Greece annihilated in the Holocaust.

The Jewish Museum in Athens was founded in 1979 by the art historian Nikos Stavroulakis. After several years, it moved from Amalias Street to a new building purchased on Nikis Street. Stavroulakis in the late 1990s also restored the neglected synagogue of Chania, Crete, and turned it into a Jewish museum.

Greek Jewry, in particular in Athens, lost many of its elderly dynamic leaders. Owing to transportation problems in vast Athens, Jewish elementary school enrollment greatly decreased. The Jewish summer camp in Loutraki, operated by the Salonikan Jewish community, serving all the Jewish youth of Greece, increased its enrollment significantly in the latter half of the 1980s.

The retiree, Moshe Halegua officiated as rabbi in Salonika in the late 1980s. Rabbi Elie Shabetai left his position in Athens at KIS to serve in Larissa.

Several antisemitic events were passed over in the 1980s with little publicity and repercussions. During the Lebanon War, the doors of the Corfiote synagogue were damaged. In the 1989 Greek election campaign, the campaign staff of Prime Minister Andreas Papandreou fabricated a photo of opposition leader Mitsotakis embracing two Nazis, when the latter was a resistance officer in Crete. In Larissa, the Holocaust martyrs' memorial was defaced several times with antisemitic graffiti. In the 1980s Greek society shared identification with Jewish suffering in the Holocaust. Prime Minister Papandreou laid a wreath for Greek Jewry at Auschwitz in November 1984.

In the 1980s, 40 years after the Holocaust, Jewish survivors from Greece began to speak of their World War II experiences. By the early 1990s several books of Greek Jewish survivor testimonies were published. In 1985, "Dor Hemshech," the second generation of Greek Jewish Holocaust survivors in Tel Aviv, was founded. It publishes an annual publication on Greek Jewry and the Holocaust on Yom ha-Shoah.

The Salonikan Jewish community has been active in preserving its rich history. Local Jewish community historian Albertos Nar established the Salonikan Jewry Study Center in

1985. Salonikan Jewish academics founded the Society for the Study of the Jews of Greece, and organized a conference in fall 1991. Historian Yitzchak Kerem uncovered a rare photo collection of the Bulgarian deportation of Jews from Macedonia and Thrace in WWII to Treblinka.

At Cambridge University, England, the *Bulletin of Judeo-Greek Studies* was founded to advance the field of the study of Greek Jewry since classical times. David Recanati published in 1986 the second volume of *Zikhron Saloniki* ("Salonika Memoir").

Greek Jewry received growing exposure through the arts. Films on Greek Jewry in the 1980s and early 1990s included *Auschwitz-Saloniki*, *Ioannina*, *Athens*, *Jerusalem* (Yitzchak Kerem & Israeli Television Society), and *Because of that War* (Yehuda Polikar).

During the 1985–86 Austrian presidential election campaign, former UN secretary Kurt Waldheim was accused of WWII Wehrmacht activities in Yugoslavia and Greece as an intelligence officer outside of Salonika, and of connections to the deportations of the Jews of Ioannina, Crete, Corfu, and Rhodes. The Salonikan Buna (Auschwitz III) champion boxer Jacko Razon sued his former best friend and boxing apprentice Salomon Arouch and the producers for stealing his identity in the film *Triumph of the Spirit*. The problem of 700 Israeli Greek Holocaust survivors, who never received reparations from Germany, was aired on Israeli TV. The Israel government began to grant some of the survivors indemnities, but the Claims Conference, despite promises in writing in 1980 by its president Nahum Goldmann, did not recognize most Sephardi Holocaust survivors for German reparations. On May 7, 1995, Israeli Salonikan Auschwitz survivors appealed to the Israel High Court to upgrade their reparations payments parallel to German Jews.

Prominent Greek Jews include filmmaker and author Nestoros Matsas, radio interviewer Maria Rezan, radio music commentator Jak Menachem, play director Albert Ashkenazi, Post Office Director-General Moisis Kostantini, former Energy Ministry Director General Raphael Moisis, retired brigadier-general Marcos Moustakis, and retired military colonels Edgar Allalouf and Doctor Errikos Levi.

In the summer of 1993, the existing practice of listing one's religion on the identification card in Greece became a major news issue. A delegation of U.S. Jewish leaders met with Prime Minister Papandreou, and other officials, who promised to find a solution for the Jewish objections. The interior minister supported a change in the practice, but the political weight of the Greek-Orthodox Church was overwhelming. The European Parliament passed a decision noting that the obligation of entering one's religion on an identity card creates prejudice and is an infringement upon human rights. In the summer of 1991, there were anonymous threats to the Jewish summer camp in Loutraki.

Several changes occurred within the Greek Jewish leadership. In the unprecedented holding of communal elections in fall 1993, the Jewish community of Salonika elected Andreas

Sephiha as president. The new regime was committed to Jewish education, Jewish renewal and continuity, and historical restoration and commemoration.

In Athens, Joseph Lovinger, Board of Greek Jewish Communities (KIS) chairman for many years, died and was succeeded by Nissim Mais, and later Mois Konstantini.

The Beit Loḥamei ha-Getta'ot Holocaust Museum established a permanent exhibition on Salonikan Jewry in September 1993. At Bar-Ilan University, Shmuel Refael produced a temporary exhibit on Jewish life in Salonika.

In New York in spring 1995, a Second Generation group of Salonikan Holocaust survivors was established by Dr. Joe Halio. For the Spielberg Foundation of the Shoah, Yitzchak Kerem filmed 99 Greek Jewish Holocaust survivors in the USA, France, and Israel, and Rena Molho interviewed several dozen survivors in Greece. Unfortunately, the Spielberg Shoah Foundation lacked the dedication to actively film Salonikan and other Greek Jewish survivors on a mass level in Tel Aviv.

After the revelation of the Secret Archives in Moscow of captured documents taken from Nazi Germany at the end of World War II, hundreds of Salonikan Jewish community files as well as several from the Jewish community of Athens were microfilmed for the U.S. Holocaust Museum in Washington, D.C.

The Jewish population of Salonika increased to some 1,100 in 2000 from about 800 in the 1980s.

Despite the establishment of numerous Holocaust memorials throughout Greece, media attention, and exposure to the Holocaust by both Jewish and non-Jewish Greek authors, the end of the 1990s marked a resurgence of Neo-Nazi activism and attacks on Jewish Holocaust targets in Greece.

Worrisome was the secret and spontaneous international gathering of 500 Neo-Nazis and Holocaust deniers in Thessaloniki in 1999. Neo-Nazi and Holocaust denial literature was still published in Greece by publishing houses like Nea Thesis, and Eleftheri Skepsis (Free Thought). General antisemitic literature still flowed freely. The Greek government and the Greek Jewish community did not combat this danger.

The small fascist Chryse Avge Party has been a very disturbing element. Remarks by antisemitic MP Yiorgos Karataferis about Greek Jewry or wild allegations about the Jewish roots of Greek politicians were generally not criticized by the government or Greek and Jewish organizations.

Attacks on most of the public memorial squares and statues took place in 1999 and 2000. Holocaust memorials for the annihilated Jewish communities were tainted by antisemitic graffiti and vandalized in Larissa, Athens, Thessaloniki, and Chalkis. Some of the messages called for the Jews to leave Greece. Also the Jewish cemeteries in Thessaloniki and Athens were vandalized by both far left and Neo-Nazi groups.

Opposed to Neo-Nazi activity in Greece, the Board of Jewish Communities (KIS) and general Greek-Orthodox groups have encouraged Holocaust education and commemoration. KIS encouraged students and authors to write essays on the Holocaust. In 1997, the Central Board of Jewish Commu-

nities began an active public Holocaust education campaign. The active role of Greek television in the production of documentary films on Greek Jewry in the Holocaust in Greece has increased public awareness.

The initiation of Jewish Holocaust squares and monuments in Athens, Salonika, Ioannina, Volos, Larisa, Castoria, Drama, Rhodes, and elsewhere has been a positive step in public Holocaust recognition in Greece.

In 2000–1 the Jewish Museum in Greece began an educational Holocaust project with Greek public schools. In Autumn 2004 the first Greek Holocaust conference for educators was held in Athens.

Following Neo-Nazi activity in the late 1990s and exacerbated by reactions to the second Palestinian Intifada, Greek antisemitism reached dangerous and unprecedented levels in the press, in desecration of cemeteries, synagogues, Holocaust memorials, and in threats and attempted attacks against Jewish institutions and individuals in Greece. Perturbing was the lack of condemnation by the Greek government and the Greek-Orthodox Church. Official revival and sponsorship by the Greek government and the Greek Orthodox Church of the Burning of Judas ceremony on Easter is equally heinous and surprising. Voices of Greek intellectuals and artists in support of Israel and Greek Jewry are rarely heard, and the singer Mikis Theodorakis created an international scandal with his pronouncements that the Jews and Israel are sources of all global evil and with his interview in *Haaretz* justifying his grandmother's belief in blood libel and Greek ΕΟΝ Fascist Youth Movement activities of the late 1930s. Neo-Nazi publications continue to be published actively in Greece, the Protocols of the Elders of Zion have been reprinted in Greek, and large segments of Greek society are influenced by conspiracy theories directed against world Jewry. In an October 2001 ΚΑΡΑ poll conducted amongst 622 households in greater Athens, 42% believed that 4,000 Jews intentionally did not go to the World Trade Center on September 11, 2001, while only 30% rejected the theory.

In Salonika, a Jewish museum opened and the community was strengthened by the hiring of young Rabbi Frezis, a native Greek-speaking Athenian ordained in Israel. In Athens, a Chabad center was opened at the beginning of the 21st century.

Relations with Israel

The relations between Greece and Israel have generally been cool. Greece was the only European country to vote against the UN partition plan for Palestine in 1947. After the establishment of the State of Israel, Greece recognized the new state de facto, but for a time did not establish diplomatic ties with it. Diplomatic representations were set up in Athens and Jerusalem only in 1952, but not on the level of an embassy or legation. Greece usually supports the Arab side in disputes brought before the UN. However, shipping, air, and trade ties exist between the two countries. After the *Six-Day War of 1967, Arab terrorists made Athens the scene of attacks on Israel air com-

munications. In 1970 seven Arab terrorists were convicted by Greek courts and sentenced to various prison terms, from two to 18 years, for attacks on an El Al plane, throwing a bomb at the El Al office, killing a Greek child, and trying to hijack a TWA plane. In August 1970 when Arab terrorists hijacked an Olympic Air Lines plane and demanded the release of the seven convicted terrorists, the Greek government submitted to their blackmail and released them. After that incident, Greek authorities seem to have taken special precautions against the renewal of Arab terrorist activities on Greek territory.

The main event of the 1980s was the culmination of the process lasting throughout most of the decade in preparing the terms and the establishment of full *de jure* diplomatic relations between Greece and Israel, which was technically achieved on May 21, 1990. With the election of the Socialist Pasok Party in 1982 under the leadership of Andreas Papandreou, gradual preparations were made for eventual full diplomatic relations between Greece and Israel. When the moderate Nea Demokratia Party came into power in 1989, full diplomatic relations with Israel were established. In November 1991, Greek Prime Minister Constantinos Mitsotakis paid an official state visit to Israel. Israel Ambassador Moshe Gilboa toiled for the exit of over 300 Albanian Jews, most of whom were of Greek Ioanniote origin, to immigrate to Israel.

From the early 1990s relations between Greece and Israel have been cordial. Prime Minister Andreas Papandreou, returning to the premiership after sitting as opposition leader for four years, adopted a more moderate Israel policy than in the past. He apologized to Israel's deputy minister of foreign affairs, Yosi Beilin, for his past harsh policy toward Israel and his affinity for extremist Arab movements and countries. Following the Israeli-Palestinian peace accord Greek Defense Minister Gerasimos Ersenis visited Israel in December 1994. Greece and Israel signed a mutual military cooperation agreement.

[Simon Marcus / Yitzchak Kerem (2nd ed.)]

MUSICAL TRADITIONS OF GREECE AND THE BALKANS

The eastern migration of Jews expelled from the Iberian Peninsula, at the end of the 15th century, toward the main centers of the Ottoman Empire, led to a synthesis of musical traditions in the Balkan Peninsula in which Spanish elements – of Mozarabic or medieval Christian origin – were deeply fused with Greco-Byzantine, Turkish, and Slavic ones. Among the Balkan Jews, three distinct stylistic traditions could still be discerned at least up through the late decades of the 20th century: (1) the *Sephardi*, which was most evident until World War II among the Jewish cultural centers of Salonika, Larissa, and Volos (Greece) as well as in Sarajevo (Bosnia), Sofia (Bulgaria), Monastir (Bitolj, Yugoslavia), Bucharest, and Creiova (Romania). This Sephardi musical tradition differed from those of the dominant Arabic communities of the Near East, as well as the Andalusian in northern Morocco, and the Portuguese, which was more prominent in Western Europe (Amsterdam, Bayonne, Leghorn (Livorno), etc.). (2)

The **Romaniot*, evident in such isolated centers of continental Greece as Arta, Chalkis (Euboea, Negroponte), Ioannina, Patras, and Trikkala, and Crete, preserved remnants from the musical and liturgical traditions of the Byzantine period, in spite of the overwhelming influence of the Sephardi newcomers. The Romaniot Jews maintained a Judeo-Greek dialect in their hymnographic tradition, whose characteristic melodic conventions evolved independently during the 16th through 18th centuries. Even though they adopted the Sephardi rite in their liturgy, they did not entirely abandon their traditional music. (3) The *Italianate*, evident on the island of Corfu and neighboring centers – such as Zante – reflected the liturgical and musical influences of southern Italy which the Jews carried with them as early as the 14th and 15th centuries. A similar influence, traceable to Venice, was apparent in the now extinct Sephardi communities of Dalmatia – such as Dubrovnik, Split, and Vlona.

The chant of Balkan Sephardim, which was directly linked to that of the communities of Asia Minor (Izmir and Rhodes), integrated Greek and Turkish elements. The **Makam* scales of *hijjāz* and *hijjāz Kar* were widely used in secular songs; the Phrygian cadence (*a-g-f-e*) was frequent, while the *Makam Sika* (*Siga*) was preferred for the reading of the Torah. The stylistic differences between the men's and women's repertoire, however, was not as striking as one might surmise. The men's style, more Orientalized (microtonal) and ornamented, had been influenced by the florid *kontakionic* and *kalophonic* styles of Byzantine hymns and chants, respectively, and by the florid Muslim chant which was practiced mainly in the synagogue repertoire. The women, who preserved a domestic repertoire in Judeo-Spanish, sang in a more relaxed manner, yet with varied degrees of vocal ornamentation, microtonal inflection, and in a medium to high vocal register. Within the more predominantly Greek communities, the 15th-century Castilian ballads (*romances*) which had survived in their repertoire were stylistically different from ballads sung in other centers of the Balkans and northern Morocco. The predominant Greek traits included those that were found in Greek *klephtic* songs, wherein the textual hemistichs did not coordinate with the melody phrases, and the popular $\frac{7}{8}$ *epitrite* dance meter. Even their texts varied greatly from those preserved in non-Greek centers. Like the folksongs of pre-World War II Greece, the varied Sephardi communities also assimilated elements from classical Greek and Byzantine church music. Chants, songs, and hymns in Judeo-Spanish played an important role during the varied liturgical and paraliturgical occasions. The chants, sung as vernacular translations of Hebrew texts, could be heard during the removal of the Torah scroll from the Ark, as well as the homiletic translations of Jonah, and the *haftarah* sung on the Ninth of Av. The songs were interspersed during the reading of the *Haggadah*; and the hymns were fervently rendered for Simḥat Torah.

The earlier Byzantine ("Romaniot") style flourished much more overtly in the areas where Judeo-Greek was spoken, particularly in Ioannina, Chalkis, and partly in Corfu.

The men's synagogal chant was highly influenced by the Greek *kalophonia* and the microtonal intonations of the surrounding Greek and Muslim cults (as in Ioannina). Among the women, the style was plaintive, with minimal ornamentation and flourishes, and there existed the ancient practice of singing funeral lamentations mainly as distichs or quatrains bearing short verses that were sung responsorially or antiphonally. The women were also assigned the singing of paraliturgical hymns, like those on Purim, often based on midrashic traditions. These songs flourished during the 17th and 18th centuries, coinciding, more or less, with the post-Shabbatean period that also gave rise to the mystic brotherhoods. The traditional literature of liturgical music was performed in rhymed distichs or quatrains, often with refrains or intercalations in Hebrew, which revealed the existence of a more ancient homiletic tradition, preserved both orally and in manuscripts. It reached its highest level in the 17th century with the poet-composer Samuel Hanen.

Three distinct traditions coexisted and still exist to some degree among the Corfiote communities in Tel Aviv and Trieste: 1) the *Italian* or *Pugghiesi* (from Salento in Apulia-Puglia), which has remained the only important witness to the tradition of the medieval Jewish communities of southern Italy; 2) the *Greek* or "*Romaniot*," which was similar to that of Ioannina; and 3) the *Sephardi*. Some are sung alternatively in four languages (Judeo-Greek, Italian, Judeo-Spanish, and Hebrew) which confirm this symbiosis. A well-known bilingual folksong, which concerns a lubricious quarrel between mother and daughter, provides a good example of the differences of class and culture between the more bourgeois and assimilated Greeks, and the earthier Pugghiesi. However, the translations in the ancient Apulian dialect and the songs of this tradition, which are included in the Passover *Haggadah*, were the common property of all Corfiote Jews. A considerable number of manuscripts bear witness to the existence of a *Minhag Corfu*, rich in *piyyutim*, such as the elegy on the destruction of the Temple, for the Ninth of Av, in the Apulian-Venetian dialect. The chant of the Pugghiesi displays a singular persistence of medieval styles, also preserved in Greco-Italic church chants (mainly in those of the 8th mode). The more recent religious synagogue and domestic chants, Sabbath hymns, and popular poems in Hebrew, or in their Italian translation, are performed as polyphonic settings for three to six voices, similar to the folksongs sung among the gentile populations in the Adriatic-Dalmatic region.

GREEK AND LATIN LANGUAGES, RABBINICAL KNOWLEDGE OF. The nature and extent of the knowledge of Greek and Latin on the part of the rabbis are subjects of scholarly controversy, differing opinions even being based on the same data, since they lend themselves to several interpretations. Such data are the Greek quotations in Talmud and Midrash, rabbinical knowledge of Greco-Roman institutions,

written historical sources, archaeology, epigraphy, and certain changes in the Hebrew language. The problem is compounded by fluid historical situations prevailing in late antiquity, such as the varying policy of Rome as the protagonist of Hellenism in the Near East and the degree of native assertion which, in Jewish Palestine, led to sporadic condemnations (Meg. 9a) and supposed prohibitions of Greek. Among these, those after 66 C.E. (TJ Shab. 1:6, 3c) and during the “War of Quietus” (116 C.E.; Sot. 9:14, etc. – a prohibition of the use of Greek, which itself employed the Greek loanword *polemos* for “war”!) are probably real. However the ruling against the use of Greek in 65 B.C.E. because of an incident at the siege of Jerusalem, as cited in the Talmud (Sot. 49b; cf. Jos., Ant., 14:25–8) is probably legendary (although E. Wiesenberg argues that it was probably historical). The Tosefta (Av. Zar. 1:20) and *Menahot* 99b (c. 90 C.E. and before 135 C.E.) discourage the study of Greek wisdom. This very repetition of anti-Greek measures, however, and some endorsements (Yad. 4:6; TJ, Sanh. 10:1, 28a; Rabbi in: Sot. 49b; Meg. 1:8) and positive evaluations of Greek (Esth. R. 4:12; Gen. R. 16:4, 36:8) indicate the temporariness or ineffectiveness of prohibitions. The Talmud tries to harmonize these contradictions by declaring that Greek was permissible for foreign contacts only (Sot. 49b, et. al.) or as a social asset for girls (TJ, Sot. 9:16, 24c). Use of liturgical Greek is indicated in the Jerusalem Talmud (Sot. 7:1, 21b), possibly in *Sotah* 49b (Rabbi, et al.); and a sort of public or official instruction is reflected in the metaphorical “500” students of Greek of *Simeon b. Gamaliel II, c. 140 C.E. (Sot. 49b). Occasionally Greek wisdom is distinguished from Greek language but seems to be identical with it in the Hasmonean War report of Sot. 49b, etc. It may signify “sophistry” (Graetz) or the “rhetorical art” as preparation for administrators but hardly a full ephebic or philosophical-scientific education. Opinions as to rabbinic Greek thus differ widely: bilingualism or trilingualism (Hebrew, Aramaic, Greek), even a Palestinian version of the general Hellenistic vernacular (*koin*) and a Judeo-Greek have been surmised, in opposition, for example, to the view that the midrashic use of Greek stances is merely a device to impress non-understanding audiences!

There is, however, complete unanimity that Latin was little known (cf. Git. 80a, et al.), Greek being for nearly a millennium the language of Macedonian, Roman, and Byzantine administrations and many semi-independent cities in Palestine (332 B.C.E.–636 C.E.) and of importance even in Parthia. Moreover, “Latin” loanwords in Hebrew (*dux*, *matrona*, Caesar, “legion,” “family,” a.o.) were often loanwords already in the Greek from which they had been borrowed. Estimates as to the ratio of Greek to Latin loanwords in rabbinic literature have been as high as one hundred to one.

In view of this deadlock of opinions, the problem under review must be examined through fresh approaches.

Languages in Contact

Insufficient use has been made so far of the discipline of modern linguistics in solving this task. Both Aramaic and Hebrew

of this period underwent transformation not only in lexicography – c. 3,000 Greco-Roman loanwords – (which is generally acknowledged) but also in phonology (e.g., the gradual weakening of laryngeals in some localities, cf. Meg. 24b; Ber. 32a; Er. 53b; cf. E.Y. Kutscher, in: JSS, 10 (1965), 21–51); in syntax (especially the dissolution of the construct case into a prepositional phrase); the frequency of an absolute nominative before conditional clauses (cf. M.H. Segal, *Grammar of Mishnaic Hebrew* (1927, repr. 1958), 213–4) resembling the Greek genitive absolute. According to Bendavid (see below) certain usages of the Palestinian sages indicate quasi-mechanical transfer from the Greek and can be found in phraseology (e.g., Heb. *lashon ha-ra*, Gr. *kakoglossia*, “evil tongue”); in semantics (Heb. *batlan*, “scholar,” and Gr. *scholastikos* both allude to “leisure”; Heb. *yishuv*, Gr. *oikoumene*, “habitation”); change of gender (biblical *makkel*, “staff,” becomes feminine after Greek *bakteria* and *rhabdos*); the increase of reflexive verbs; and new properties of the prepositions. The verb, according to linguists the most conservative element in language, was affected by a new tense system, notably a precise present tense and compound tenses (with auxiliary verb), and the creation of Hebraized roots from the Greek, among them such important verbs as *k-l-s*, “praise”; *k-r-z*, “proclaim”; *h-g-n*, “be proper”; *p-y-s*, “pacify” and “cast lots”; *t-g-n*, “fry”; *t-k(k)-s*, “arrange”; *s-m-n*, “signify”; *k-t-r-g*, “accuse”; and *p-r-s-m*, “publicize.” The loanwords cover all aspects of life but are especially prominent in certain areas of material civilization (architecture, agriculture, fashion, commerce, and technology) and public life (government, taxation, law, and warfare). Apart from the salient keywords of Greco-Roman civilization, such as “circus,” “theater,” “stadium,” “hippodrome,” “column,” “icon,” “colony,” “metropolis,” “triumph,” “emperor,” “senator,” “tyranny,” “pedagogue,” and “philosopher,” even indispensable terms of daily life are loanwords, such as “air,” “sandal,” “tome,” “collar,” “sum,” “salary,” “mint,” “nausea,” “diarrhea,” “character,” “person,” “type,” et al. (all preceding English examples being approximately identical with the Greco-Hebraic terms). Even proper names of rabbis are affected: Alexander, Antigonus, Boethus, Dosa, Pa(p)pus, Symmachus, Tarphon, etc., alongside basic religious terms: Sanhedrin, *bimah*, *afikoman*, “angel” (Targum), *kairos*, “mystery,” “blasphemy,” et al. (Of course thousands of other Greco-Roman terms in modern Hebrew have been added in the modern technological era.) The orthography of actual Greek words and of loanwords is fairly systematic (though difficult to date and subject to error in scribal tradition and reveals Greek language change, e.g., the Greek *upsilon* in certain diphthongs is already given as *v* (or *f*) as in Byzantine and modern Greek (Seleucus for Seleucus, *avto-* for *auto-*). All these observations, however, do not yet give any information regarding the rabbinic knowledge of written Greek sources, especially since Krauss’s views of the derivation (see below) of certain loanwords from Homeric or rare Greek poetry have not been generally accepted.

Greek as an Intercultural Representative Prestige Language

This was especially true of public display, including inscriptions in the Temple (even its ritual objects, cf. Shek. 3:2), and on synagogues, epitaphs, etc. Some of the Greek in Palestinian cemeteries may belong here and may not be diaspora Greek. To claim that all rabbis were excluded from this vast sector of public life through ignorance or hostility is manifestly absurd. It has been assumed, however, that the opposition to Greek was strongest among some popular preachers who continued earlier Zealot attitudes (see below, Avi-Yonah, 71).

Greek as Professional Expertise

There is much justification for the claim that Jewish mercenaries, slaves, tax collectors, and certain artisans, e.g., sculptors for idolatrous customers, and the rulers, courtiers, and diplomats of the Hasmoneans and Herodians had to resort to Greek because of their social-economic functions. It seems that the *tannaim* and many leading Palestinian *amoraim*, as well as their Pharisaic predecessors, belong to a group of “technocrat” experts who could administer, legislate, interpret, edit law and literature, theologize, moralize, and console – precisely the abilities and functions of their Greco-Roman counterparts, the rhetorician-scholar-bureaucrats, from Cicero to Seneca (once practically vice-emperor), from Dio Chrysostom to Plutarch (a priest-magistrate). The rabbis’ idealization of the Sage – the characteristic ideology of hellenized bureaucracies – their popular ethics and their uses of Hellenic myth, literary forms, and hermeneutics, their academic institutions and efforts at preserving tradition, suggest knowledge of their Greco-Roman colleagues. The presence of schools of law, philosophy, and exegesis in and near Palestine (Ashkelon, Beirut, Caesarea, Gederah, Gaza), the Roman administrative center in Caesarea, and wandering rhetors must have furthered the spread of “professional” Greek. True, most of the grecianized talmudic data could stem from audio-transmission of rhetorics, the expertise of Greco-Roman bureaucracy. Yet Greco-Hebrew legal terminology (*diatheke*, *hypotheke*, *epitropos*, *k(o)inonia*, cf. Prosbul, etc.), some talmudic science, and rabbinic use of isopsephy (**Gematria*) are more technical than the usual orations. Actual Greek halakhic documents (e.g., a marriage contract) and numerous Greek translations of Hebrew literature indicate some measure of literary experience. (Not for all the latter could the aid of proselytes be claimed. In any case, the semilegendary portrayals of the translator *Aquila, a proselyte *Elisha b. Avuyah, the “heretic,” and *Meir, a reputed descendant of proselytes, may belong to periods of native reassertion when it had become unthinkable that rabbis were fluent in Greek.) Moreover, the insistence on oral transmission may occasionally have been merely a literary pose in conformity with a general trend toward cynicism in rhetoric (cf. Diogenes Laertius, 6:2, 48). At this stage of history, Jewish tradition and its agents were probably highly literate and literacy-minded. The Greek knowledge of the Hillelite dynasty to *Rabbi, 200 C.E., and beyond of Joshua, Meir, and *Abbahu,

must have been considerable, as their use of Hellenistic materials and disciplines, their friendliness toward Greek, and their contacts with the Roman government indicate. In later centuries, however, the increasing impoverishment of Palestine and the accompanying alienation from Christianized Rome may have modified this situation.

Comparative Studies of Other Hellenizing Cultures would further illustrate Judean situations: Cato the Elder, the Roman arch-conservative speaking excellent Greek; Roman senators outlawing Greek rhetoric; a similar mass of loanwords even within societies resisting Greek, such as the Western Roman Empire, the Syrian Church, and native Armenia and Egypt; and slaves, proselytes, and uprooted populations spreading the knowledge of Greek (in Judea: after the Maccabean wars, cf. E.E. Urbach's discussion of the "Canaanite slave," in: *Zion* 25 (1960), 141–89, Heb.).

All in all, the scarcity and ambiguity of talmudic sources and the problematics of the historical data do not lend themselves to generalizations. What type of "rabbi," for example, is mentioned in the Greek Leontius memorial of Bet She'arim (Frey, 1006). Did the rabbis debate with Christians in Aramaic or Greek? When they declared Greek as "suitable" for poetry and Latin for war (Est. R. 4:12), did they thereby evaluate languages or merely characterize these cultures in general? Do halakhic statements on Homeric books presuppose their intimate knowledge (TJ, Sanh. 10:1, 28a; Yad. 4:6)? Perhaps the true question is not whether the rabbis knew Greek slightly or in depth (even the rhetors used various aid books), but whether they knew it adequately for their purpose. Only additional finds, such as actual Greek literature or more Greek halakhic documents, will throw further light on these problems.

GREEK LITERATURE, ANCIENT. Greeks came into contact with the Land of Israel long before the Hellenistic period, but there is no information as to the impression made by Jews or Judaism upon them in the classical period. The only classical writings extant referring to the Jews are *Herodotus' *Histories*, but his acquaintance with them is at best highly superficial, and he considers them to be Syrians who practiced circumcision, which custom they had acquired from the Egyp-

tians. Aristotle does mention a lake in Palestine, but without connecting it in any way with the Jewish people. Thus, although the ancient civilizations of Egypt, Babylon, and Persia were familiar to the Greek men of letters and philosophers – at least in their general outline even before the days of Alexander the Great – they were apparently completely ignorant of the specific religion and culture of Palestine.

This situation changed radically after Alexander the Great and the foundation of the various Macedonian kingdoms throughout the East. From earliest times descriptions of Jews and Judaism occur in the works of Greek authors, some of whom belonged to the school of Aristotle. Thus, Theophrastus, one of Aristotle's foremost pupils, in his work "On Piety" described the Jewish sacrificial rites as utterly different from those of the Greek, consisting entirely of holocausts, offered in the middle of the night. The Jews are described by him as philosophers whose custom it is to converse among themselves about theology at the time of the offering of the sacrifices and to gaze at the stars. His contemporary, Clearchus, who was also a member of the Peripatetic school, in his dialogue "On Sleep" gives the contents of a conversation supposedly held between Aristotle and a Jew in Asia Minor (see below). The Jews are also described as philosophers in the work of the traveler Megasthenes (see below).

More detailed, and in some respects more realistic, is the detailed description vouchsafed by *Hecataeus of Abdera, who spent a long time in Egypt at the beginning of the Hellenistic period. Hecataeus describes the origin of the Jewish people as resulting from an expulsion from Egypt of undesirable elements at the time of a plague. Their leader Moses, who excelled in ability and valor, conquered the land of Judea for the Jews, founded Jerusalem, erected the Temple there, and set down the constitution of the Jewish people. Hecataeus was familiar with the division into 12 tribes and was the first of the Greek writers whose works are still extant to note that the Jews make no images of their godhead, nor conceive Him to be of human form, since, according to him, the Jews equate their God with the heavens. Moses entrusted the keeping of the laws to the priests, whom he also appointed as judges. The Jewish constitution does not know the form of monarchy, and the high priest is described as the head of the Jewish nation. The position of high priest is filled by one of the priests, chosen from among the rest for his excellence of character and wisdom. Moses also commanded the Jews to raise all the children born to them, which is the reason for the rapid increase in their numbers.

At the beginning of the Hellenistic period, Judaism was known to Greek thinkers and men of letters only in the vaguest of outlines. Their impressions are not very different from those they had of other ancient civilized peoples of the East. Their tendency to consider the Jews to be the bearers of a philosophic religion is evident, and their descriptions are generally quite highly idealized. It should be noted that the descriptions of the Jews, not excluding that of Hecataeus, still lack any taint of that hostility which is characteristic of most of the later

writers. This general attitude continues into the third century. Thus, Hermippus of Smyrna states that Pythagoras received some of his teachings from the Jews, and that his philosophy was influenced by Judaism.

From the third century B.C.E. on, however, with the crystallization of an anti-Jewish outlook, the Jews, their religion, customs, and origins, begin to be described in a definitely negative light. This new approach flourished in the anti-Jewish atmosphere of Egypt and was abetted not a little by the old tensions between Egyptians and Jews. As time passed, it continued to gather strength, fanned by the Greco-Jewish clash in Alexandria, particularly during the days of the early empire. Since the Greco-Alexandrian literature was one of the main cultural flowerings of the age, it was a very important instrument in the formation of informed public opinion throughout the Hellenistic world and the Roman Empire.

One of the most important authorities of this new, anti-Jewish spirit in Greek literature was the Egyptian priest, *Manetho. He seems already to have identified the Jews with the *Hyksos and Moses with the Egyptian priest Osarsiph, who was described by him as the leader of the lepers and the other unclean and defiling elements who had been harming the population of Egypt. It was probably at this time that the belief that the Jews worshiped an ass – the animal holy to the Egyptian god Seth-Typhon, Osiris' enemy – was evolved. Manetho was only one of the many mouthpieces for the anti-Jewish propaganda. Even more rabid than he was *Lysimachus of Alexandria. According to him also, the Jewish nation stems from the impure and undesirable elements who had been expelled from Egyptian society. Their leader, Moses, taught them to hate all mankind, and their opposition to the temples of other nations typifies their entire approach.

It was *Apion of Alexandria (first century C.E.) who collected this anti-Jewish material. Not only did he refine the literary form of the tradition concerning the Exodus, which was most derogatory to the Jews, but he also protested against the Alexandrian Jews' demands to be considered citizens of the city, spoke with contempt of the Jewish religious practices, repeated the statement that the Jews worshiped an ass, stressed their supposed hatred of foreigners, said that they had contributed nothing to human civilization, and saw in their lowly political status an expression of the worthlessness of their religion. Actually, Apion added little of his own, but in his works the anti-Jewish spirit was given free rein and his writings contain virtually the entire gamut of the anti-Jewish themes which formed the antisemitic stereotype in the ancient world, and they also left their mark on Latin literature.

In spite of the generally extreme anti-Jewish character of the Alexandrian Greek literature, which was not a little influenced by the national Egyptian tradition, one nevertheless finds at least one writer – Timagenes of Alexandria (second half of the first century C.E.) – who apparently preserved a more objective approach to the Jews and in his history even expressed admiration for the Hasmonean king Aristobulus I. Interest in Jews and Judaism was also shown by Greek writers

outside Egypt, from Syria and other parts of the Greek world. Asia Minor was of first rank in the intellectual and cultural life of the Hellenistic-Roman period, and it was also liberally sprinkled with areas thickly populated by Jews. It is in the works of one of the writers from Asia Minor – the historian Agatharchides of Cnidus (second century B.C.E.) – that the first mention in Greek sources is found of the Sabbath rest. He notes with scorn that it was because of this superstition that Jerusalem, the capital of the Jews, was conquered by Ptolemy I.

In the wake of the conflict between the Jews and Rome and Pompey's conquest of Jerusalem, there was an increased interest in the history of the Jews and in their religious observances on the part of the Asia Minor writers. It found its expression, *inter alia*, in the writing of books devoted entirely to this subject. Among these, *Alexander Polyhistor's anthology is particularly interesting, consisting as it does largely of excerpts from other authors and particularly from Jewish-Hellenistic literature. Teucer of Cyzicus also wrote a special work on the Jews. *Apollonius Molon's book on the Jews enjoyed great influence. Apollonius was a rhetorician from Alabanda in Caria and some of the foremost men of Roman society were influenced by his works. He had some knowledge concerning Abraham, Isaac, Joseph, and Moses, and the biblical tradition is clearly reflected in his work. Nevertheless, his attitude toward the Jews was most negative, and he considered them to be the least capable of the barbarians (i.e., non-Greeks), a nation which had added nothing to the cultural store of mankind.

A different approach is to be found in the works of the historian and geographer *Strabo, from Amaseia in Pontus, who lived in the time of Augustus. In the 16th book of his geography he describes Moses as an Egyptian priest who rejected the Egyptian forms of divine worship which centered around the deification of animals, and likewise objected to the anthropomorphism of Greek theology. Moses' god was identified with the heavens and the natural world, and many people of discerning intellect were convinced by him and became his followers. Under Moses' leadership they gained control of what is now called Jerusalem and there he founded a polity in accord with his views. Strabo expresses his complete approval of this polity and adds that for some time Moses' successors continued to live according to his constitution and were truly just and God-fearing. However, in the course of time the priesthood – which among the Jews encompassed the political power as well – fell into the hands of superstitious men, and after them in the hands of those who had despotic leanings. The superstitions which were introduced gave rise to the Jewish laws concerning forbidden foods, circumcision, and the like. The tyranny engendered robbery and violence, and large portions of Syria and Phoenicia were subjugated by the Jews. In short, Strabo looked upon Judaism as a basically positive phenomenon, and lauds the pure belief in God which typified it in its early days, but according to him Judaism had in the course of time degenerated and become corrupt.

Among the representatives of Greek literature in Syria, the philosopher, historian, and polymath *Posidonius of Apamea is of importance. He also wrote concerning the Jews and undoubtedly influenced those who came after him, but his views concerning Jews and Judaism are still a mystery, since it is difficult to determine what is to be ascribed to him and what to his followers. An allusion to “the cold Sabbath” of the Jews is to be found in the works of the poet Meleager of Gadara (first century B.C.E.). More than any of the other Greco-Syrian writers, *Nicholas of Damascus was intimately connected with Jewish affairs. He wrote his “Universal History” under Herod’s inspiration and spent many years in his court in Jerusalem. The history of Herod’s reign and the events of contemporary Jewish history were assigned a very prominent place in his work. He also included biblical traditions in the earlier portions of the history. Unlike the other contemporary gentile authors, Nicholas dealt with the period of the Israelite monarchy, including such events as David’s wars with the Arameans. Abraham is described by him as a king in Damascus.

Typical of the level of knowledge concerning Judaism current among the educated classes of the Hellenistic world in the first century B.C.E. is the material brought by the universal historian, Diodorus of Sicily. He mentions Moses among those lawgivers who ascribed their constitutions to divine inspiration, and he states that the God of the Jews was called Ἰάω. Elsewhere in his work – where he is apparently dependent upon Posidonius – he relates the origins of the Jewish people according to the version which grew up and became current in Greco-Egyptian circles; i.e., that the first Jews had been lepers who had been expelled for this reason from Egypt. The personality of Moses is also presented in a positive light by Pseudo-Longinus, a literary critic of first rank, in his excellent work “On the Sublime.” The author, whose name has not come down, quotes the early part of the Book of Genesis (“...and there was light...” etc.) as an excellent example of lofty and exalted style and in this connection also expresses praise for the Jewish lawgiver.

*Plutarch is the only Hellenistic writer of the period of the early Roman Empire from Greece proper who is known to have written about Judaism. Most of his comments respecting the Jewish religion are to be found in his “Table-Talk,” where the essence of the Jewish ritual is discussed as well as the nature of the Jewish godhead, and one of the participants even explains the supposedly close connection between the Dionysian rites and the Jewish festival of Tabernacles. At any rate, the tone is serious and does not reflect any innate animosity toward Jews or Judaism, and this is equally true in respect of the parts dealing with Jewish history which appear in his biographies of famous people, although in his work “On Superstition” the conduct of the Jews on the Sabbath during wartime is brought in as an illustration of superstitious conduct – just as it was already stressed by Agatharchides of Cnidus at the very beginning of the Hellenistic period.

In short, it may confidently be stated that Judaism as a phenomenon was familiar to the writers of the later Hellenis-

tic period and to those who wrote during the early days of the Roman Empire. Their information concerning the history of the Jewish people is scanty and the influence of Jewish literature, even in translation (the Septuagint), is extremely meager. The attitude toward Judaism in Greek literature is not monolithic. Whereas particular hatred for the Jewish people and its religion is the hallmark of the representatives of the Greco-Egyptian literary school, definite sympathy is reflected in the writings of Pseudo-Longinus, and writers like Strabo or Plutarch express a relatively balanced view. In the descriptions of Judaism, stress is usually laid upon the origin of the Jewish nation and its religion, upon the personality of Moses on the one hand and on contemporary events on the other.

The attitude toward Judaism continued to be a live issue during the second half of the second century C.E., even after the rebellions during the reigns of Trajan and Hadrian had greatly weakened the Jewish people, and its religious influence diminished because of the competition posed by the spread of Christianity. *Numenius of Apamea, the forerunner of the neoplatonic school, may have been influenced in his philosophic thought by Philo of Alexandria. Be that as it may, his attitude to Moses was one of open admiration, and he even compared Moses to Plato. *Galen treats the Jewish philosophical conceptions seriously and critically. He is familiar with the cosmogony of Moses and specifically states his preference for the Greek conceptions in the form in which they are expressed by Plato. Whereas, he states, according to the Jewish view God’s will is sufficient cause for anything and everything, according to the Greek view certain things are physically impossible and God chooses the best out of the possibilities of becoming. Moses is censured for having omitted the *causa materialis* and having thus postulated the *creatio ex nihilo*.

The historian *Dio Cassius also makes some interesting remarks touching upon Jewish history, in connection with his general survey of the history of Rome. Pompey’s conquest of Jerusalem gave him the opportunity to describe the nature of the Jewish religion. He states that the Jews differ from all the rest of mankind in respect of their way of life, but in contrast to some of his predecessors he does not explain Jewish separatism on the grounds of misanthropy. He stresses the monotheistic and abstract nature of the Jewish belief, noting particularly the observance of the Sabbath, the Jew’s loyalty to his faith, and the phenomenon of proselytization. As a contemporary of the Severi, he appreciates the fact that the Jews, in spite of their repression in the period immediately preceding, had nevertheless preserved and eventually won the right to live freely according to their customs.

The struggle between paganism and Christianity brought in its wake a pagan reappraisal of its attitude toward Judaism. The polemical works against Christianity of Celsus of Porphyrus and of Julian, who had been raised as a Christian, reflect some accurate knowledge of the Bible. But to the extent that they come to grips with the Jewish outlook their attacks are in fact aimed mainly against Christianity, the roots of which are

in the sanctified Jewish tradition. Hence, in spite of Judaism's particularistic and intolerant attitude toward paganism, they evince a sincere readiness to try to understand it as a national religion, anchored in an ancient tradition, contrasting it in this way to revolutionary Christianity. As the domination of Christianity became a fact, pagan writers like the Antiochene rhetor Libanius began to see Judaism as being in the same defensive camp as the pagan Hellenistic tradition.

No less than in the regular literary sources, the influence of Judaism is also clearly reflected in the syncretistic magical texts of the ancient world and in *Hermetic writings. Both these genres are replete with Jewish elements. The name of the Jewish godhead and the names of the angels are extremely common in magical papyri, and the thread of the biblical cosmogony is inextricably woven into the fabric of Hermetic tradition.

GREEK LITERATURE, MODERN. The literary image of the Jew was molded in Greece by the Jews themselves, by Greek non-Jews and, indirectly, by the Turks. In ancient Greece, Jews were referred to as a “community of philosophers.” In the Hellenistic period there was some anti-Jewish writing; but, in the main, Jews and Greeks enjoyed a friendly cultural relationship (see *Hellenistic Jewish Literature; *Greek Literature, Ancient).

Influence of the Bible

Probably no work contributed more to the harmonious relationship between *Hellenism and Judaism than the *Septuagint. But in the *Byzantine Empire, fanatical rulers enacted anti-Jewish decrees which altered the image of the Jew and even threatened his survival, e.g., the anti-Jewish decrees of Constantine I, Novella 146 of *Justinian, as well as the anti-Jewish enactments of Basil I (867–886), as described in the *Chronicle* of *Ahimaaz b. Paltiel. The Greek Jews and the newly arrived Sephardi exiles from Spain, welcomed by Sultan Bajazet II, fared well under the *Ottoman Empire. Hebrew studies became popular and talmudic schools multiplied. Important achievements were an anonymous Polyglot Pentateuch (1547), the Book of Job (1576), and a medieval Greek translation of

the Hebrew Bible in 1576 (see *Judeo-Greek). Jewish writing was revived again in the 18th and even more in the 19th centuries. Hebrew education was popularized in both synagogue and home by the Judeo-Greek translations. Among 20th-century Greek writers, G. Th. Vafopoulos wrote a tragedy based on the story of Esther (1934). Kosta Papapanayiotou published two dramas, one about Esther and the other about Rizpah, in 1963. Nikos Kazantzakis, in his *Sodhoma kye Ghomorra* (1956), relates the age of the Bible to the modern world which, in his view, has reverted to the corruption of the past. Despite his preference for the Old Testament over the New, Kazantzakis distorts rabbinic Judaism and the character of his own Jewish contemporaries. Ioanna Dhriva Maravelidhou, in her verse drama *Esther* (1967), pays homage to those Jews in the Persian Empire who were prepared for any sacrifice to preserve the idea of one God. In his book *Simon Bar Kochba*, published in 1966, Vassos Kaloyannis dealt with the epic Jewish struggle against Rome.

The Figure of the Jew in Modern Greek Literature

Contemporary prejudice marks the poetic “Story of the Little Jewess Marcada” (Venice, 1627), which tells of the heroine's abduction by her Christian lover and her subsequent apostasy. *I thisia tou Avraam* (“The Sacrifice of Abraham,” 1696), a mystery play probably written in 1635 by the Cretan Kornaros (d. 1677), is the only masterpiece by a Greek of that time. The earliest surviving edition was printed in Venice in 1713. It may have been based on an earlier Italian drama and reveals both the influence of the Bible and a humanistic treatment of the Jew. In the *Thisia*, which continues to be revived in Greece almost annually and has been translated into all the major European languages, the author presents an anthropomorphic God and depicts Abraham not as a Hebrew patriarch but as a distraught father torn between love for his son and love of God.

For the next three centuries Greek writers devoted their efforts to liberating their country from the Turks. As a strategic measure against the revolutionary tide which finally led to the successful War of Greek Independence (1821–32), the Turks created a climate of covert hostility between Greek and Jew. It was not until almost all of Greece was liberated that a humanistic treatment of the Jew was again found in Greek literature. The novelist Gregorios Xenopoulos wrote a drama entitled *Rachel* (1909) on the expulsion of the Jews from Zante; Konstantinos Cavafy, the Alexandrian Greek poet, wrote a poem, in which he philosophized ironically on the dangers of Jewish assimilation; and Nikolaos D. Vizinos published several refutations of the *blood libel.

The one Greek writer to portray the Jew in universal terms was Nikos Kazantzakis who devotes a chapter to the Russian Jew in his travel book *Ti idha sti Rousia* (“What I Saw in Russia,” 1928). Here he sees the Jew as a rebel and revolutionary by force of historical circumstance. In his autobiographical *Anafora ston Greko* (1961; *Report to Greco*, 1965) he shows profound sympathy for the suffering of the German Jewish students he met in Berlin. In Jerusalem, he longed not

only for his own God but also for the Old Testament God, and he visited Mount Sinai to hear His voice as Moses heard it. Kazantzakis nevertheless remained bitterly opposed to Zionism, which he considered a reactionary delusion. Elsewhere, he showed admiration for Eliezer *Ben-Yehuda, the father of the Hebrew revival. In the novel with the Hebrew title *Todah Rabbah* (1934, English translation 1956), Kazantzakis portrays the Russian Jew as “one facet of a single consciousness that experienced and mirrored the complex, fluid, many-sided reality of the Soviet Union.”

The playwright Spyros Melas turned to historical drama in *Judas*, first produced in Athens in 1934. In this play Judas is portrayed as a revolutionary leader who joins Jesus for the liberation of Judea. Manolis Georgiou Skoulidhis wrote *I ipothesis Dreyfus* (“The Dreyfus Case,” 1960), in which he dramatized modern opinions about this famous trial. Pantelis Georgiou Prevelakyis, influenced by the ideology of his close friend Kazantzakis, wrote *O Lazaros* (1954), a drama in which he examined the attitude of an early Christian toward the new religion. A prose work by V. Ghazis on the Cain and Abel theme (1955) consists of seven allegorical accounts, the last of which predicts an eventual atomic war.

Several authors who were personally involved in World War II wrote works dealing with the Nazi occupation of Greece and their concentration camp experiences. One was Elias Venezis, whose play, *Block c*, was published in 1945. Venezis’ novel *Okeanos* (“Ocean,” 1956) gives a sympathetic portrait of a Jewish stowaway from Smyrna bound for the United States. Jacob Kampaneli, who spent the years 1943–45 in the Mauthausen concentration camp, wrote the first draft of a prose work on his experiences in 1947 and published a final version in 1965. His pro-Jewish sympathies are very evident, since after the liberation he remained in the camp until all the Jewish survivors who wished to had immigrated to Palestine. Other works on the concentration camp theme are the play *Epistropi apo to Buchenwald* (“Return from Buchenwald,” 1948) by Sotiris Patatzis and a long poem by Takis Olympios, 40382 (1965), inspired by the number branded on the arm of a girl who survived Auschwitz. A volume of poems by Sophia Mavroidhi Papadhaki (1905–), *To louloudhi tis tefras* (“The Flower of the Ashes,” 1966), had its origin in a flower she saw growing among the ashes of Dachau. Papadhaki also wrote a life of David and short stories about Ruth and Jonah.

Vassos Kaloyannis was one of several non-Jewish authors to write about Jewish communities in Greece, which he did in his *Larissa, Madre d’Israel* (“Larissa, Mother of Israel,” 1959). Demetrius Hatzis wrote about the Janina Jewish community in *I mikri mas polis* (“Our Small City”) and the archimandrite Nikodemos Vafiadhis gave an account of the Jewish community of Didymotichon in his *I israilitiki kyinotis Dhidhimotichou* (1954). The art critic Anghelos Georgios Procopiou, who spent a year in Israel, described his impressions of the country in his book *O Laos tis Vivlou* (“The People of the Bible”). The image of the Jew in Greek literature is still clearly identified with the history of Judaism and the Bible. In mod-

ern times, however, Greek authors are trying to create an emphatic, three-dimensional image of the Jew as a Greek citizen whose sufferings must not be forgotten. George Zoghrafakyis (1908–?), a non-Jewish writer from Salonika, who edited the works of Eliyia and published essays on modern Jewish figures such as *Herzl and *Agnon, should also be mentioned.

The Jewish Contribution to Greek Literature

Until World War II Salonika was the center of Greco-Jewish culture and Jewish authors wrote mainly in *Ladino, the language spoken by the majority of the Jewish community. Among the very few Jewish writers in Greek, who, between the two world wars, sought to interpret their background and traditions in terms of the contemporary world were the prominent journalist Moisis *Caïmis and the brilliant and prolific poet Joseph *Eliyia. After World War II Jewish writers in Greece showed a natural preoccupation with the tragic fate of their community during the Nazi occupation. J. Matarasso published the poignant *Kye omos oli tous dhen pethanan* (“Still They All have not Died,” 1948); P. Chajidhimiou wrote a book of commemorative verse entitled *Bene Israel* (1957); and Joseph Matsas investigated the cultural achievements of the Jews in his native Janina. Although he wrote in French, Albert *Cohen, born in Corfu, used his native background as a setting for some of his novels.

Other Jewish writers returned to the path blazed earlier by Caïmis and Eliyia. They include the Zionist author Asher *Moïssis; Raphael Konstantinis (1892–?), who edited two Jewish periodicals; Julius Caïmis; Joseph (Pepo) Sciaki; Baruch Schiby; and the outstandingly successful Nestoras *Matsas, who converted during World War II but retained a burning interest in his Jewish heritage and the tragedy of his people.

[Rachel Dalven]

The Jew in Modern Greek Literature

Frequent references are to be found in modern Greek literature to the Jewish people in general and more specifically to Greek Jews and the Holocaust. A number of the authors concerned emanate from or had close connections with Thessaloniki (Salonika) or Ioannina with their famed Jewish communities. The works are often inspired by personal experiences based on relations with Jewish friends annihilated in the Holocaust. Many of these appeared in the 1960s with the stimulation of public interest through the trial of the Nazi Dr. Merten in Greece and the *Eichmann trial in Israel.

Traditional Greek language and literature created a mass of negative stereotypes of the Jew, as found in proverbs, folk-songs, and the shadow-theater. The figure of the Jew in this pre-modern literature has often no relation to reality. This has often passed into modern works. In the words of the outstanding writer Yiorgos Ioannou in 1979, “The still unstable modern Greek society does not even have the time and strength to collect its energy to combat the poisonous luxury of anti-semitism and racial discrimination.”

However, other voices were heard also in the past. The national poet of Greece, Dionysios Solomos (1798–1857), pub-

lished in 1822 a series of sonnets inspired by the Bible. In one of these he compared the revolutionary Greek nation to Zion reborn. The poet K.P. Kavafi (1863–1933) wrote two poems about the Jews of the Hellenistic period. In the poem “About the Jew – 50 B.C.E.,” his protagonist is the imaginary Ianthis Antoniou who desires that “there always will be Jews, holy Jews.” The second poem relates to Alexander Yannai and his wife, Hellenizing rulers of the Jewish state at the end of the Hasmonean era. Kostas Palamas (1852–1943) extravagantly praised the Zionist movement and was deeply impressed by Max Nordau. Alexander Papadiamantis (1851–1911) started from negative positions but revised his views, notably in his article “The Repercussion of Sense” where he reacted to the 1891 pogrom of the Jews in Corfu.

Of all the later writers, pride of place goes to Nikos Kazantzakis (1883–1957) who relates in his autobiography *Relation to Greco* that he persuaded his father to permit him to study Hebrew with the rabbi of Irakleon but was prevented due to the prejudices of the rest of his family. He also presents impressions of travelers from Jerusalem and Sinai who expound on the virtues of the Jewish people. In the memoirs of his mature age, he speaks of his bond with the German Jew, Rachel Lipstein, which is also indirectly reflected in his novels *Christ Recrucified* and *Captain Michael*.

Of later works, mention should be made of the fictional biography by M. Karagatsi (1908–1960) *King Laskos*, whose hero is in charge of a boatload of Jewish immigrants trying to beat the British blockade of Palestine, and the novel *Sergio and Bacchante* which pays tribute to the role of Jews in modern civilization. Ilia Venezi (1904–1973) wrote travel impressions from modern Israel as well as stories against the background of the 1948 Arab-Israel War. Yianni Berati (1904–1968) in his book *The Wide River* writes of the heroism of the Greek Jewish soldiers in the Greco-Italian War of 1940. Dimitri Yatha (1907–1979), the leading theatrical author, writer, and humorist, describes his recollections of a Jewish family of bankers in his *The Land of the Sea*. Strati Mirivili (1892–1963) also refers to Jewish soldiers in the anti-war chronicle *Life in a Grave*. Kosma Politi (1893–1974) preserved aspects of the Jewish community of Izmir in his book *To a Western European Pilgrim*. Dimitri Hatzi (1914–1981) described the Jewish community of Ionnina in his story “Shabetai Kabilli” in his book *The End of our Small City*, and Toli Kazantzi in his narrations sketches the coexistence of Greeks and Jews in pre-War Salonika.

A body of poetic work has been inspired by the Holocaust. Among the poets mention should be made of Manoli Anagnostaki (b. 1925), Taki Barvitsioti (b. 1916), Nino Kokkalidou-Nahmia (b. 1922), I.A. Nikolaidi (b. 1936), Marino Charalambous (b. 1937), Dino Christianopoulo (b. 1931), Yiorgos Ioannou (1927–1985), G. Th. Vafopoulou (b. 1903), the surrealist Niko Engonopoulo (1910–1986), George Kaftantzi (b. 1920), Prodromo Markoglou (b. 1935), and Kimona Tzalla (1917–1988). Outstanding is the poem of Zoe Karelli (b. 1901), “Israel,” which harks back to the sufferings of the Jews in bibli-

cal times and links them with the tragic fate of the Jews of Salonika. She seeks the causes of antisemitism and of the Holocaust, showing the common element throughout history, and also shows how Jews always maintained a discreet strength in their resistance to persecutions.

Among prose writers who have been affected by the Holocaust are G. Th. Vafopoulou in his *Pages of Autobiographies*; Ilia Venezi (1904–1973) in the fictionalized biography *Archbishop Damaskinos*; the diary of Iakavou Kampanelli (b. 1922) *Mauthausen*; the tender novel *Tziokonta* of Nikou Kokantzi (b. 1927); Nikou Bakala (b. 1927) in his novel *The Big Square* and works by Vasili Vasilikou (b. 1934), Georgou Theotoka (1905–1966), Yianni Lambrinou (1909–1949), Nestoria Matsa (b. 1932), Kostoulas Mitropoulou (b. 1940), I.M. Papiotiopoulou (1901–1981), Yianni Starki (1919–1987), and Frikosou Tzioba (b. 1919).

The major author who wrote of the Holocaust of Salonika Jewry is Yiorgos Ioannou. In his poems “Iliotropia” (1954) and “The Thousand Trees” (1963), he describes the last night of a Jewish family who lived in a nearby apartment and of his grief over their unbelievable disappearance. His book *For the Honor* (1964) describes the leveling of the old Jewish cemetery of Salonika. In *The Sarcophagus* (1971), *Our Own Blood* (1978), and *The Capital of the Refugees* (1984), he wonders at the persecution of the Jews in his neighborhood which culminated in the pillage of their homes and the testimony of his own father, a railroad worker, who experienced at first hand the songs sung on the journeys to the death camps from inside the sealed animal wagons.

All these works face the Jews with reverence and treat their suffering with the utmost respect and sympathy, emanating from the recognition of a longtime harmonious symbiosis.

[Albert Nar]

Noted Gentile Greek authors who wrote about Greek Jewry include Lily Zografos, who focuses on Jews in the Holocaust in *I Evrai Kapote (Mikael)* (“The Jews Once, Mikael,” 1966) and elsewhere in *Antignosi, Ta thekanikia tou kapitalismou* (“Bad Sense, The Crutches of Capitalism,” 1974); Yiorgos Zografakis, who published biographies of the military war hero Colonel Mordechai Frizis or the early 20th century Ioanniote poet and author Josep Eliyia; Dimitri Hatzi, who in the form of short stories colorfully depicted Ioanniote Jewry in the early 20th century several decades before its destruction in the Holocaust; or the literature professor Frangiski Ambatzopolou who wrote about Greek Jewish Holocaust survivors in modern Greek literature, *I Logotechnia Os Martitiria, Ellines Pezografi Yia to Yenoktonia Ton Evraion, Anthologia* (“The Literature of Testimonies, Greek Prose Writers on Horrific Events of the Jews, Anthology,” 1995), and translated into Greek testimonies of Greek Holocaust survivors published in Hebrew in Israel and added a few testimonies of remaining survivors in Salonika.

Several Greek Jews can be included among popular Greek authors.

Nestoras *Matsas wrote a biography of Alexander the Great, *To Hirografo Tis Babilonas, Megalexandro Apomnimonemvmeta* ("The Manuscript of Babylon, the Memoirs of Alexander the Great," 1980), and about his experience hiding as a young boy in Athens during World War II in *Avto to paidi pethane avrio, Imerologio Katochis* ("That Boy Died Tomorrow, A Diary of the Occupation," 1987), and in *I Istorio Ton Hamenon Peristerion: Imerogio Enos Paidou Ston Emfilio* ("The History of the Lost Pigeon: Diary of a Boy in the Civil War," 1995). Michel Feis, born to a Jewish father in Cuomotini in 1957, wrote fictional accounts of Jewish life in Cuomotini through the centuries and generations, and published *Avto-biografia, enos vivliou, Mithistorima* ("The Autobiography of a Book, A Novel," 1995). He also wrote a book of short stories called *From the Same Glass and Other Stories* (1999), which won the State Short Story Award in 2000, and two works on Giulio Caimi, a Jewish artist: *Greek Landscapes* (1993) and *Giulio Caimi, A Man Suppressed. Recollections and Criticism. Selected Articles (1928–1976)*. Nina Kokkaidou-Nachmia has written over a dozen books since 1970 including the novel *Telefoniko Kentro* ("Telephone Center," 1972), the children's book *Ti nea, kirie Gate* ("What's New, Sir Cat," 1984), *Otan I Ellines Iortazoun* ("When Greeks Celebrate," 1995), and *Palia Thessaloniki Kai Istoriki Diadromi Tis D.E.Th. 1926–1989* ("Old Thessaloniki and Historical Journey of the Municipality of Thessaloniki 1926–1989," 1996), which depicts the Old Salonika and its Jews, musicians, and modern postwar life. She also wrote a moving book related to the Holocaust entitled *Reina Zilberta, ena paidi sto geto tis Thessalonikis* ("Reina Zilberta, a Girl in the Ghetto of Thessaloniki," 1996).

[Yitzhak Kerem (2nd ed.)]

GREEN, ABEL (1900–1973), U.S. theatrical journalist, editor of *Variety*, the chief theatrical paper in the U.S. While at New York University, Green wrote theatrical interviews for the *New York Sunday World*. *Variety* was founded by Sime Silverman in 1905 and Green succeeded him as editor in 1933. A chronicler of theatrical news, Green added to English theatrical slang with coinages which he called "un-King's English." A shrewd critic, Green once capsuled a film review with the succinct phrase, "It went in one eye and out the other." He was the author of *Mr. Broadway*, a film script of *Variety*'s founder-editor; coauthor with Joe Laurie, Jr. of *Show Biz from Vaude to Video* (1952); and editor of *Variety Music Cavalcade* (1952) and *The Spice of Variety* (1953).

[Jo Ranson]

GREEN, ADOLPH (1915–2002), U.S. theatrical writer. Born in the Bronx, New York, Green was educated at the City College of New York. He worked as a lyricist on many Broadway musicals. Among them were *On the Town* (and book, 1946); *Two on the Aisle* (1952); *Wonderful Town* (1953); *Peter Pan* (1954); *Bells Are Ringing* (and book, 1956); *Do Re Mi* (1960); *Subways Are for Sleeping* (and book, 1961); *A Doll's Life* (and book, 1982); *Singin' in the Rain*; (1985); and *The Will Rogers*

Follies (1991). His main collaborator in lyrics, libretto, and screenplay work was Betty *Comden. His chief musical collaborators included Leonard *Bernstein, Jule *Styne, Andre *Previn, and Morton *Gould.

In the world of film, Green wrote the screenplay for such films as *Good News* (1947); *The Barkleys of Broadway* (1949); *On the Town* (1949); *Singin' in the Rain* (1952); *The Band Wagon* (1953); *It's Always Fair Weather* (1955); *Auntie Mame* (1958); *Bells Are Ringing* (1960); *What a Way to Go* (1964); and the TV movie *Applause* (1973).

Some of Green's best-known songs are "New York, New York," "The Party's Over," "Just in Time," "Make Someone Happy," "I Get Carried Away," "Lonely Town," "Lucky to Be Me," "Ohio," "Long Before I Knew You," "Something's Always Happening on the River," "Comes Once in a Lifetime," and "I'm Just Taking My Time."

In 1991 he won a Tony Award for Best Original Score for the Broadway musical *The Will Rogers Follies*. In 2001 the Writers Guild of America awarded Green and Comden the Laurel Award for Screen Writing Achievement. From 1960 Green was married to actress Phyllis Newman.

[Ruth Beloff (2nd ed.)]

GREEN, ARTHUR (1941–), U.S. scholar, theologian, and rabbi. Born in Paterson, N.J., Green grew up in Newark. Raised in a non-observant Jewish home, he was educated as a child in public schools, a Conservative Hebrew school, and Camp Ramah.

After completing a B.A. at Brandeis University in 1961, Green trained for the rabbinate at the Jewish Theological Seminary (JTS) in New York. There, he was a close student of Abraham Joshua Heschel. Upon ordination from JTS in 1967 Green began doctoral studies at Brandeis under the direction of Alexander Altmann. The following year he co-founded *Havurat Shalom* in Somerville, Mass., a new informal religious community that wove together the insights of Jewish mysticism, Neo-Hasidism, and American counterculture. *Havurat Shalom* helped birth the national *Havurah* and Jewish Renewal movements.

Green established himself as an academic with the publication of *Tormented Master: A Life of Rabbi Nahman of Bratslav* (1979). Widely read by scholars and general readers in the United States and Israel, it appeared in Hebrew translation in 1980. Green's other academic contributions include several essays and monographs on hasidic leadership and the history of kabbalistic symbolism, including *Keter: The Crown of God in Early Jewish Mysticism* (1997). Green has also translated several classical hasidic texts, including *The Language of Truth: The Torah Commentary of the Sefat Emet* (1998).

Green left *Havurat Shalom* in 1973 to join the department of religion at the University of Pennsylvania, where he remained for a decade. In 1984 he became dean and then president of the Reconstructionist Rabbinical College (RRC)

in Philadelphia. Green's move to the RRC is indicative of his dual interests in academic and rabbinic education and his desire to serve as both a scholar and a religious leader. It was while at the RRC that Green wrote his major theological work, *Seek My Face, Speak My Name: A Contemporary Jewish Theology* (1992), a text that draws on an array of Jewish mystical sources in the construction of a modern Jewish spiritual vision. Green helped introduce a new appreciation for Jewish spirituality at the RRC, an institution founded upon Mordecai Kaplan's rationalistic program.

In 1990 Green left the RRC because of ongoing tensions with older Kaplan loyalists who were uncomfortable with his religious views, and because of his dissatisfaction with fundraising and administrative responsibilities. The following year Green returned to his alma mater, Brandeis University, assuming the Philip W. Lown Chair in Jewish thought, a position once held by his doctoral advisor, Alexander Altmann. In 2004 Green published *Eheyeh: A Kabbalah for Tomorrow*, an introduction to and contemporary interpretation of Kabbalah.

In 2004 Green was named founding dean of the Rabbinical School of Hebrew College in Newton, Mass. The Hebrew College Rabbinical School is a pluralistic Jewish seminary without any denominational affiliation. Green's turn to transdenominational rabbinic education represented the fulfillment of a dream from his time in *Havurat Shalom*, which he originally envisioned as a seminary/community. In 2005, Green retired from Brandeis to devote himself to the development of the Rabbinical School.

[Or N. Rose (2nd ed.)]

GREEN, DAVID EZRA (1910–1983), U.S. biochemist. Green was born in New York. He obtained a master's degree in biology (1932) from New York University, followed by a Ph.D. in biochemistry at Cambridge University, England (1934), before leaving for Harvard University Medical School (1940). He moved to Columbia University School of Medicine in New York (1941) until his appointment as professor and co-director of the Institute for Enzyme Research at the University of Wisconsin in Madison (1948), where he worked until his death. His lifelong interest in enzymes was stimulated in Cambridge. His major research achievement was to develop techniques for isolating and characterizing single enzymes initially, which contributed enormously to the characterization of multi-enzyme pathways and particularly those involved in fatty acid oxidation. In addition to his prodigious personal creativity, he directed highly successful programs which launched the careers of many young biochemists who achieved prominence in biochemistry. His honors included the first Paul-Lewis Award in Enzyme Chemistry (1946) and election to the National Academy of Sciences (1962).

[Michael Denman (2nd ed.)]

GREEN, GERALD (1922–2006), U.S. screenwriter, producer, author, and radio director. Three of Green's novels, *The Last Angry Man* (1956), *To Brooklyn with Love* (1967), and *The Brook-*

lyn Boy (1968), recreate life in New York City as remembered, stretching back to the 1930s. In *The Legion of Noble Christians* (1965), he satirized fanatical anti-Communism within a fictional framework of Christian efforts to save Jews during the Hitler era. Green also wrote *The Lotus Eaters* (1959), *The Heartless Light* (1961), *The Artists of Terezin* (1969), and *The Stones of Zion: A Novelist's Journal in Israel* (1971). He worked for NBC as a writer, director, and producer. Among his better-known screenplays are *The Last Angry Man* (1959; television, 1974) and *Holocaust*, a television miniseries (1978). In 1980 Green was awarded the Belgium Prix International Dag Hammerskjold for his novel *Holocaust* (1978) and his other literary work.

[Lewis Fried (2nd ed.)]

GREEN, PHILIP (1952–), British businessman. Born in London, the son of a property investor who died when he was 12, Green left school at 16 and worked for a shoe importer before starting a company which imported jeans from the Far East. Over a period of 20 years, starting in the mid-1980s, he built up one of greatest of contemporary British retailing fortunes. In the late 1990s he bought British Home Stores (BHS), a High Street retailing fixture with hundreds of branches, vastly increasing its profitability by a combination of hands-on direct management of all phases of BHS's operations and such counterintuitive means as not advertising. Green expanded his retailing empire to include such retailing giants as Arcadia, Top Shop, and Dorothy Perkins, although bids by him to purchase Safeway (2003) and Marks & Spencer (2005) were not successful. Green, who has lived in Monaco in recent years, was ranked in 2005 as Britain's fifth wealthiest man, worth £4.85 billion.

[William D. Rubinstein (2nd ed.)]

GREEN, SHAWN DAVID (1972–), U.S. baseball player. Born in Des Plaines, Illinois to Ira and Judy, Green grew up in a non-practicing family in Tustin, California, did not attend Hebrew school, and did not have a bar mitzvah, but Green became a highly visible symbol for the Jewish community throughout his career. Green's father, a gym coach who later became the owner of a baseball training facility, worked closely with him to improve his baseball skills, and he became a standout player at Tustin High School. He made his Major League debut on September 28, 1993, and came up from the minors to stay in 1995. In 1998 Green became the first Jew to hit 30 home runs and steal 30 bases in one season. On May 23, 2002, Green had the most productive day in baseball history with the 19 total bases, hitting four home runs, a double and a single. The next day Green homered and singled, tying a two-game record with five HRs and 25 total bases. The following day Green hit two more HRs, and the seven home runs in three games was also a record. He had his best season in 2001, batting .297 with 49 HRs, 125 RBIs, and 20 SBs. He was voted to the All-Star team in 1999 and 2002, and won a Gold Glove Award in 1999. In 2005, Green hit his 300th career HR, the second Jew to ever do so.

Green was the most visible Jewish player during his career, in part because of his status as the best Jewish player of his generation. After the 1999 season with Toronto, he asked to be traded to a team in a city with a large Jewish population, and was sent to Los Angeles. In 2001, in the midst of a pennant race, Green opted not to play on Yom Kippur – while the other Jewish players did – which made news as it voluntarily stopped his 415 consecutive-game streak. Three years later, Green again made headlines when faced once more with a decision whether to play on Yom Kippur, in the midst of a crucial series in a late-season pennant race. This time he had games on Yom Kippur night and the following day, and decided to split the day, opting to play Kol Nidrei night but not the following afternoon. Green hit the game-winning home run that night, but the issue and his split decision was debated across the country, with many praising him for honoring the holiday and others criticizing him for his not fully observing Yom Kippur.

“Everyone approaches their worship in their own way and goes about it differently,” Green said. “I’m not Orthodox. I am Jewish and I respect the customs, and I feel like this is the most consistent way for me to celebrate the holiday. I feel real good about my decision.”

[Elli Wohlgernter (2nd ed.)]

GREENACRE, PHYLLIS (1894–1989), U.S. psychiatrist. Greenacre, who was born in Chicago, received a B.S. from the University of Chicago in 1913, and graduated from Rush Medical College in 1916. She was appointed clinical professor of psychiatry at Cornell University Medical College in 1935. In 1942 she joined the faculty of the New York Psychoanalytic Institute and was its president from 1948 to 1950. She served as president of the New York Psychoanalytic Society from 1956 to 1957. She was also vice president, and later honorary vice president, of the International Psychoanalytical Association. She served on the editorial board of the influential annual *The Psychoanalytic Study of the Child*, from its inception in 1945.

One of her main interests was the subject of anxiety. In 1941 she published a paper in which she sought the roots of anxiety in the birth trauma of the fetus, as revealed in the newborn child and in the memory traces of the adult patient in psychoanalysis. Birth, with its enormous sensory stimulation after the relaxed fetal state, in her view, produced a strong narcissistic drive and a defensive organization of anxiety in the infant. Her book *Trauma, Growth and Personality* was published in 1952.

A further focus of Greenacre’s interest was the sexual anomaly of fetishism. She stressed the magical value represented by the fetish in early life as a result of disturbed mother-child relationships. She wrote, too, on identity and its relation to body image, stressing the role of visual perception and perceptual distortion in the fetish image of the genitals and face. In 1953 she edited *Affective Disorders*. Her analysis of the creative personality and imagination was set out in her study of two lives, *Swift and Carroll* (1955). Her other publi-

cations include *The Quest for the Father: A Study of the Darwin-Butler Controversy as a Contribution to the Understanding of the Creative Individual* (1963); and *Emotional Growth: Psychoanalytic Studies of the Gifted and a Great Variety of Other Individuals* (1971).

BIBLIOGRAPHY: A. Grinstein, *Index of Psychoanalytic Writings*, 2 (1957), 6 (1964).

[Louis Miller / Ruth Beloff (2nd ed.)]

GREENBAUM, EDWARD SAMUEL (1890–1970), U.S. lawyer, soldier, and public servant. Greenbaum was born in New York, the son of Samuel, a Supreme Court Justice in New York, and Selina, president of the Jewish Working Girls Vacation Society. He entered law practice in 1915. A skillful attorney, Greenbaum dealt with diverse legal problems, and his clients included prominent public personalities. Greenbaum’s public service career began in the 1920s when he participated in a study of U.S. legal practice. Reform of the courts became a lifelong interest: as a member of the Judicial Conference of the State of New York, he was a key campaigner for reorganization of the New York court system, finally achieved in 1960–61. Greenbaum enlisted in the army in World War I, retiring at its end as a major. Returning to active duty in 1940, he rose to brigadier general. During World War II he was a principal aide to the secretary of war and played a leading role in establishing War Department labor policy, for which he was awarded the Distinguished Service Medal in 1945. Public positions he held include Alcohol Control Commission chairman (1933); special assistant to the attorney general’s office (1934–38); Long Island Railroad Commission counsel (1938); and alternate delegate to the United Nations (1957). He helped found the Jewish Big Brothers Organization; served on the executive committee of the Jewish Welfare Board, Armed Services Division; and was active on the American Jewish Committee and the Jewish Board of Guardians. He served as trustee of the Institute for Advanced Studies at Princeton. Greenbaum coauthored *King’s Bench Masters*, a study of British pretrial practice (1932), and wrote an autobiography, *Lawyer’s Job* (1967).

[Barton G. Lee]

GREENBERG, CLEMENT (1909–1994), U.S. art critic. After studying at the Art Students League (1924–25) and receiving a B.A. from Syracuse University (1930), Greenberg began contributing articles on art, literature, and politics to the left-wing journal *Partisan Review*, where he served as editor in 1940–42. Among other venues, his articles appeared in *The Nation*, a magazine for which he was the regular art critic (1942–49); *Contemporary Jewish Record*, where he served as managing editor from June 1944 until the final issue in June 1945; and *Commentary*, where he was associate editor (1945–57).

Greenberg was one of the most influential art critics of the 1950s and 1960s. Along with critic Harold Rosenberg, Greenberg championed Abstract Expressionism. In particular, Greenberg was pivotal in the ascent of Jackson Pollock. After early consideration of social factors in his pivotal *Partisan*

Review article "Avant-Garde and Kitsch" (1939), Greenberg's formalist and often polemical mode of art analysis mostly ignored contextual considerations, a position largely rejected by subsequent art critics.

In addition to writing on Jewish themes and subjects, Greenberg also wrote about or discussed his own Jewish identity. In a 1944 contribution to a symposium on Jewish American literature Greenberg commented that he "has no more of a conscious position towards his Jewish heritage than the average American Jew – which is to say, hardly any." Unconsciously, however, Greenberg believed that "a quality of Jewishness is present in every word I write."

Along with his book *Art and Culture: Critical Essays* (1961), which includes "Avant-Garde and Kitsch," Greenberg wrote the monographs *Joan Miró* (1948), *Matisse* (1953), and *Hans Hoffman* (1961). His collected essays were published in four volumes (1986–93).

BIBLIOGRAPHY: D.B. Kuspit, *Clement Greenberg: Art Critic* (1979); J. O'Brien (ed.), *Clement Greenberg: The Collected Essays and Criticism*, 4 vols. (1986–93); F. Rubinfeld, *Clement Greenberg: A Life* (1997).

[Samantha Baskind (2nd ed.)]

GREENBERG, DAVID MORRIS (1895–1988), U.S. biochemist. Greenberg was born in Boston, obtained his doctorate at the University of California in 1924, and became professor of biochemistry at Berkeley in 1941. On his retirement in 1963, he worked as a research biochemist at the Oncologic Institute, University of California Medical School in San Francisco and played a key role in the development of biochemistry on the campus. He contributed broadly to studies on mineral metabolism, enzyme chemistry, and cancer research. Greenberg served on the U.S. Atomic Energy Commission and on the isotopes panel of the National Research Council. He was editor of the *Proceedings of the Society of Experimental Biology and Medicine*, and served as chairman of the California section of this society. Greenberg was a pioneer in the use of radioisotopes for biochemical investigations. He wrote *Aminoacids and Proteins* (1951), *Chemical Pathways of Metabolism* (1954), and *Metabolic Pathways* (1960). He published more than 400 scientific articles.

[Samuel Aaron Miller / Bracha Rager (2nd ed.)]

GREENBERG, ELIEZER (1896–1977), Yiddish poet and literary critic. Born in Bessarabia, at an early age he was influenced by the poets Eliezer *Steinberg, Jacob *Sternberg, and Moshe *Altman, who were pioneers of Hebrew and Yiddish literature, and, later, by American English modernist poetry. In 1913, at the age of 17, Greenberg immigrated to the U.S., but impressions of his native town enriched his poetry throughout his life. His lyrics and essays began to appear in Yiddish periodicals and anthologies in 1919. He studied at the University of Michigan, before settling in New York. Together with Elihu Shulman, he edited *Getseltn* ("Tents," 1945–48), a periodical of verse and literary criticism. He and Irving *Howe edited im-

portant anthologies of translations from Yiddish into English: *A Treasury of Yiddish Stories* (1954), *Five Yiddish Poets* (1962), *A Treasury of Yiddish Poetry* (1969), *Voices From the Yiddish* (1972), *Yiddish Stories Old and New* (1974), *Selected Stories of I.L. Peretz* (1974), and *Ashes Out of Hope* (1977). His first volume of poetry, *Gasn un Evenyus* ("Streets and Avenues," 1928), portrays New York as the symbol of the modern ambition. It was followed by *Fun Umetum* ("From Everywhere," 1934), *Fisherdorf* ("Fishing Village," 1938), *Di Lange Nakht* ("The Long Night," 1946), "Baynakhtiker Dialog" ("Night Dialogue"), *Eybiker Dorsht* ("Eternal Thirst," 1968), and *Gedenkschaft* ("Memorabilia," 1974). The depression of the 1930s led to a more social proletarian tone in his poems. In the 1940s his verses became angrier and more despairing in response to unfolding events in Europe, later returning to calmer tones. As a critic, Greenberg wrote primarily about modernist Yiddish poets, including studies of Moyshe-Leyb *Halpern, H. *Leivick, and Jacob *Glatstein.

[Sol Liptzin / Anita Norich (2nd ed.)]

GREENBERG, HAYIM (1889–1953), Zionist leader, essayist, and editor. Greenberg, born in the Bessarabian village of Todoristi in Russia, joined the Zionist movement while still a youngster and attracted immediate notice as a self-taught intellectual prodigy. In 1904 he attended the Zionist Congress in Helsinki as a correspondent, and while still in his teens moved to Odessa, where he emerged before long as a leading figure in Hebrew and Zionist letters, excelling as both an orator and an essayist on philosophical and political themes. With the outbreak of World War I, Greenberg moved to Moscow, where he edited the Russian-Jewish weekly *Razsvet* ("The Dawn"). After the Russian Revolution he served for a while as an instructor in medieval Jewish literature at the University of Kharkov and lectured at Kiev Academy. Arrested several times for Zionist activities by the Communist authorities, he left for Berlin in 1921, where he edited *Haolam* ("The World"), the official weekly of the World Zionist Organization.

Greenberg immigrated to the U.S. in 1924 to become editor of the Yiddish Zionist publication *Farn Folk* ("For the People"), which later became *Der *Yidisher Kempfer* ("The Jewish Warrior"), and in 1934 became editor of the Labor Zionist monthly *The Jewish Frontier*. From 1934 he was a permanent member of the Central Committee of the Labor Zionist Organization of America. During World War II he served as head of the American Zionist Emergency Council, and in 1946 he was appointed director of the Department of Education and Culture of the Jewish Agency Executive in America. Greenberg's influence on Zionist activities during these years was great. Particularly noteworthy were his accomplishments in winning the votes of several Latin-American delegations at the United Nations for the creation of a Jewish State, and later in

helping to forge strong cultural ties between the new State of Israel and Jews the world over.

As an essayist in three languages, Yiddish, Hebrew, and English, Greenberg was distinguished by his breadth of knowledge, urbanity of approach, and deep moral earnestness. The core of his writings was devoted to expounding the philosophy of Zionism and attempting to demonstrate its consistency with the ideals of socialism, pacifism, and universalism to which he adhered. Collections of his essays have appeared in several volumes in Yiddish and in English, including: *The Inner Eye* (2 vols., 1953–64); *Yid un Velt* (1953); *Beytlakh fun a Tog-Bukh* (1954); *Mentshn un Vertn* (1954); and *Hayim Greenberg Anthology* (1968).

[Hillel Halkin]

GREENBERG, HENRY BENJAMIN (“**Hammerin’ Hank**”; 1911–1986), U.S. baseball player, first Jewish sports superstar, first Jew inducted into the Hall of Fame. Greenberg was born in Greenwich Village, New York, the third of four children, to Orthodox Romanian immigrants Sarah (Schwartz) and David, who owned a textile factory. The family moved to the Bronx, kept a kosher home, and sent Greenberg to Hebrew school, but young Henry just wanted to play sports. He became an outstanding athlete in baseball, basketball, and soccer at James Monroe High School, leading the basketball team to a New York City title in 1929.

After graduation from high school in 1929, Greenberg signed with the Detroit Tigers, and played one game for them in 1930. He then played three seasons in the minors. At Raleigh, North Carolina, one of his teammates walked slowly around Greenberg staring at him, saying he had never seen a Jew before. “The way he said it, he might as well have said, ‘I’ve never seen a giraffe before,’” said Greenberg. “I let him keep looking for a while, and then I said, ‘See anything interesting?’”

Greenberg, a strong physical presence at 6’ 4” and 215 pounds, joined the Tigers permanently in 1933. In 1934 he hit .339, and drove in 139 runs to lead Detroit to its first pennant since 1909, but not without some fanfare: Rosh Hashanah that year fell on September 10, in the middle of the pennant race. Greenberg, in a quandary whether to play, consulted a rabbi, who told him it was permissible. He hit two homers that day to win the game 2–1, and the next day the *Detroit Free Press* printed Greenberg’s picture with Happy New Year in Hebrew captioned above the photo. However, Greenberg did not play on Yom Kippur, receiving instead a standing ovation when he showed up in synagogue.

Greenberg’s Rosh Hashanah-Yom Kippur decisions stirred intense interest in the Jewish community, where second-generation Jews saw in Greenberg’s refusal to play on Yom Kippur an example of how to balance loyalty to religion and tradition with the need to integrate fully in American

life. Greenberg’s resolution was echoed 31 years later, when Sandy *Koufax refused to play Yom Kippur in the first game of the World Series.

In 1935 Greenberg again helped guide the Tigers to the pennant, and a World Series win over the Chicago Cubs despite breaking his wrist in the second game. He led the league in RBIs, a statistic he valued above all others, with 170, and was named MVP. In 1936 Greenberg broke his left wrist again in the 12th game of the season, and sat out the remainder of the year. Well rested, he came back in 1937 to lead the league again in RBIs with 183, one shy of the American League record held by Lou Gehrig. It was Greenberg’s biggest regret that he failed to break that record, more than Babe Ruth’s record of 60 home runs that he chased the following season. Greenberg had 58 with five games left in 1938, and some claimed opponents prevented him from setting the record because of anti-Jewish sentiment, but Greenberg dismissed the notion as “crazy stories.” He did, however, face constant reminders throughout his career from fans and other players on his ethnic background. “How the hell could you get up to home plate every day and have some son-of-a-bitch call you a Jew bastard and a kike and a sheenie and get on your ass without feeling the pressure?” he said. “If the ballplayers weren’t doing it, the fans were. I used to get frustrated as hell. Sometimes I wanted to go into the stands and beat the shit out of them.”

The following season Greenberg was moved to left field, and his hard work to master the position – and his ever-powerful bat – resulted in a second MVP, one of only three players to win MVP’s at two different positions. He again took the Tigers to the American League pennant, slugging 41 homers and driving in 150 runs.

Greenberg was drafted into the army 19 games into the 1941 season, and missed the rest of that year and the next three and a half seasons. When Pearl Harbor was bombed two days after he was discharged, Greenberg immediately volunteered for more duty, and rose to the rank of captain serving in the Far East. Greenberg returned in the middle of the 1945 season and again led Detroit to the pennant, clinching it with a grand slam in the top of the 9th inning of the last game of the season. “The best part of that homer was hearing how the Washington Senators players responded,” said Greenberg. “‘God-damn that dirty Jew bastard, he beat us again.’” His seven hits in the World Series helped the Tigers again beat the Cubs for the world championship. Greenberg returned to first base in 1946, and led the league with 44 HRs and 127 RBIs.

Greenberg played his final year for the Pittsburgh Pirates in 1947, the year Jackie Robinson became the first black to play baseball. Greenberg remembered the taunts he had to endure himself over the course of his career. Standing together at first base one game, Robinson recalled later, Greenberg “suddenly turned to me and said, ‘A lot of people are pulling for you to make good. Don’t ever forget it.’ I never did.”

Upon retiring Greenberg became a baseball executive, first as farm system director and general manager with the

Cleveland Indians, and then as part owner and vice president of the Chicago White Sox.

Despite his lost years to the war, Greenberg remains high on the career list of achievement nearly six decades after retiring: The five-time All-Star batted .313, with 331 home runs and 1,276 RBIs in 1,394 games. His .605 slugging percentage is sixth all-time, and his rate of .915 RBIs per game is third-best all time. Greenberg was the subject of a documentary, *The Life and Times of Hank Greenberg* (1998), and author of an autobiography, *The Story of My Life* (1989), with Ira Berkow. Greenberg was inducted into the Hall of Fame in 1956.

[Elli Wohlgeleerter (2nd ed.)]

GREENBERG, IRVING (Yitz; 1933–), U.S. rabbi, author, and educator. Born in 1933 in Brooklyn, New York, Greenberg attended Yeshiva High School in Brooklyn and from there he attended the Yeshiva Bais Yosef, from which he received ordination as an Orthodox rabbi in 1953. At the same time he attended Brooklyn College, where he received a B.A. in history. He went on to obtain his M.A. and Ph.D. in American history from Harvard University. In 1959 he began teaching American history at Yeshiva University where he was among the first to introduce the teaching of Holocaust studies into a university curriculum. From 1965 to 1972 he was the communal rabbi of the Riverdale Jewish Center while he also taught at CCNY (1965–72). Shortly thereafter, he founded the organization that would later come to be known as the National Jewish Center for Learning and Leadership and served as its director from 1974 to 1997.

In 1975, along with Elie Wiesel, Greenberg founded the Holocaust memorial organization Zachor. In 1979 he was invited to serve as director of the President's Commission on the Holocaust and participated in the development of the initial recommendations for a center that later became the United States Holocaust Memorial Museum. Twenty years later, from 2000 to 2002, he served as chairman of the museum's governing body, although his tenure was marred by controversy and internal dissension. From 1998 he also served as president of Jewish Life Network/Steinhardt Foundation, whose aim is to create and enrich the cultural and institutional life of American Jewry.

Rabbi Greenberg's thoughts and ideas have been disseminated through four decades of teaching and writing often in pamphlets and other popular articles. He has lectured in every American city with a fair-sized Jewish community and published his work in almost all major Jewish publications. He is the co-editor of a pioneering work, *Confronting the Holocaust*. Greenberg is also the author of *The Jewish Way: Living the Holidays* (1988) and *Living the Image of God: Jewish Teachings to Perfect the World* (1998), which presents his teachings on a wide range of subjects, including those central to his redemptive covenant theology.

Greenberg writes of the shattering of the covenant in the Holocaust. Following Elie Wiesel and Jacob Gladstein, he suggests a deep theological humility: "No statement, theological

or otherwise, should be made that would not be credible in the presence of burning children." He states that the authority of the covenant was broken in the Holocaust, but the Jewish people, released from its obligations, chose voluntarily to renew it again. Greenberg writes, "We are in the age of the renewal of the covenant. God is no longer in a position to command, but the Jewish people are so in love with the dream of redemption that it volunteered to carry out the mission."

Greenberg is known for his thoughts on the issue of pluralism in Jewish life. His widely publicized essay "Will There Be One Jewish People in the Year 2000?" catapulted the issue of Jewish unity to the forefront of American Jewish concerns. He has often been accused of being the Conservative and Reform's Orthodox rabbi. A strong proponent of "centrist Orthodoxy" Greenberg has labored against its weakening from radical shifts, left and right. He has been a strong advocate of Orthodox Jews' full participation in American national life, seeking a synthesis between traditional Judaism and modernity. And as a strong champion of interfaith dialogue he has for four decades campaigned for Jewish and Christian reconciliation.

[Shalom Freedman and Michael Berenbaum (2nd ed.)]

GREENBERG, JOANNE (1932–), U.S. novelist. *The King's Persons* (1963) was a picture of Jewish life in medieval England. Her other works include *I Never Promised You a Rose Garden* (1964), written under the pseudonym Hannah Green; *The Monday Voices* (1965); *Summering* (1966); *In This Sign* (1970); *Season of Delight* (1981); and *Appearances* (2006).

GREENBERG, JOSEPH (1915–2001), U.S. anthropologist and linguist. Born on 28 May 1915, Joseph Greenberg was a gifted young pianist who had considered becoming a classical performer. He instead entered the academic world, graduating from Columbia University in 1936 and then earning his doctorate from Northwestern University in 1940. During World War II he served in the U.S. Army Signal Corps and Intelligence Corps. After the war he taught at the University of Minnesota, then at Columbia from 1948 to 1962. He was a professor of anthropology at Stanford University from 1962 to 1985; he served as chair of the Anthropology Department from 1971 to 1974, and from 1964 to 1981 also chaired the Committee on African Studies.

Greenberg's linguistic studies, which were concerned with both the structure of language and the similarities between languages, earned him an international reputation. His *Language Universals with Special References to Feature Hierarchies* (1966) established certain universal principles of language structure and attracted significant attention. His notion of the "implicational universal" influenced the work of many scholars in his field. His work on language families, however, sparked controversy. *The Languages of Africa* (1963), in which Greenberg determined that there were four basic groups of African languages, was considered speculative, though its premise was later accepted by many scholars. A similar theory

presented in *Language in the Americas* (1987) found many in disagreement. Some critics took issue with Greenberg's data and methodology and dismissed this area of his research, though some contend that later discoveries of genetic similarities support Greenberg's groupings. In his last research, which he pursued until his death in 2001, Greenberg sought to prove links among what he called the "Eurasianic" languages, claiming that most of the languages of Europe and Asia had commonalities.

Greenberg was a fellow of the National Academy of Sciences, the American Academy of the Arts and Sciences, and the American Philosophical Society. He served as president of the African Studies Association in 1964 and 1965, as president of the West African Linguistic Society from 1955 to 1970, and as president of the Linguistic Society of America in 1976. He was the recipient of many awards, including the Haile Selassie Prize for African Research in 1967 and the Talcott Parsons Prize for Social Science from the Academy of Arts and Sciences in 1977.

[Dorothy Bauhoff (2nd ed.)]

GREENBERG, LEOPOLD (1885–1964), South African judge, born in Calvinia, Cape Province. Raised to the bench at the age of 39, he became judge president of the Transvaal in 1938 and was elevated in 1943 to the Appellate Division of the Supreme Court, the highest judicial body in South Africa. He was acting chief justice in 1953 and served as officer administering the government in the absence of the governor-general. Known for his erudition, humanity, and caustic wit, he was acknowledged to be among South Africa's ablest judges. After his retirement in 1955, he sat on a judicial commission of inquiry into African disturbances in Johannesburg in 1957.

In Jewish life he was associated mainly with Zionist causes; for many years was honorary president of the Keren Hayesod, the Israel United Appeal, and the South African Friends of the Hebrew University. He was the first South African on the board of governors of the Hebrew University of Jerusalem, whose institute of forensic medicine, established from funds raised by South African Jewry, was named after him.

[Lewis Sowden]

GREENBERG, LEOPOLD JACOB (1861–1931), editor of the *Jewish Chronicle* and one of the first Zionists in Britain. Born in Birmingham, Greenberg was at first active in the non-Jewish press as a publisher and owner of a news agency. He became involved in Jewish affairs and began to attract notice as one of Herzl's first adherents in Britain. He promoted Herzl's ideas before the general and Jewish public, and it was he who arranged for Herzl to appear before the Royal Commission on Alien Immigration in London in 1902 (through his close ties with Joseph Chamberlain, secretary for the colonies, who also came from Birmingham). Herzl entrusted him with various political missions in England, such as those connected with the El-Arish project and the Uganda Scheme, and eventu-

ally Greenberg served as Herzl's official representative vis-à-vis the British government. Although he had supported the Uganda project, Greenberg did not join the Territorialists. He became a leader of the British Zionist Federation and held various offices in the organization.

In 1907 he and his friends acquired the *Jewish Chronicle* in order to make it a Zionist organ and he was appointed editor in chief. He was a staunch fighter for Jewish rights and a particularly severe critic of the Czarist regime's attitude toward the Jews. Upon his appointment as editor, he gave up his official activities in the Zionist movement. Throughout the years, however, he persisted in his efforts to gain the support of various British circles for Zionism. After World War I, he opposed the official policy of the Zionist Organization, but his was a "loyal opposition." He was among the founders of *The Jewish Year Book* (1896–); *Young Israel*, a periodical for youth (1897); and other publications. Herzl described him as "the most able of all my helpers." In accordance with his last will, his ashes were taken to Deganyah and interred there (1932).

His son, IVAN MARION (1896–1966), joined the editorial board of the *Jewish Chronicle* in 1925 and served as its editor in chief from 1936 to 1946. During this period, he attacked the British government for its anti-Zionist policy in Palestine. He translated M. Begin's book *Revolt* into English (1951). He was a leader of the Revisionist Party in Britain.

[Getzel Kressel]

GREENBERG, LOUIS (1894–1946), U.S. Conservative rabbi and scholar. Born in Russia, Greenberg immigrated to New York in 1913 and taught Hebrew and Bible while pursuing an American education. He graduated from the City College of New York in 1924 and was ordained by the Jewish Theological Seminary two years later. He then took a pulpit position at Temple Beth El in New Rochelle (1926–28) and moved to New Haven, where he became rabbi of B'nai Jacob Congregation. The congregation was already moving to the liberal wing of Conservative Judaism, with mixed seating, and late Friday evening services as well as a mixed choir. Greenberg introduced an organ. He developed the schools and the physical facilities of the congregation. While in New Haven, Greenberg pursued his Ph.D. at Yale University and wrote a major work on *The Jews in Russia: The Struggle for Emancipation*, two volumes being published in 1944 and 1951.

BIBLIOGRAPHY: *Bnai Jacob: One Hundred Years 1882–1982*; N. Zilberberg, *The George Street Synagogue of B'nai Jacob* (1961); *American Jewish Year Book*, vol. 48 (1946–47).

[Michael Berenbaum (2nd ed.)]

GREENBERG, MAURICE R. (1925–), U.S. insurance executive. Born in New York City, Greenberg was six when he moved to a dairy farm after his father's death and his mother's remarriage. After fighting in Europe, Greenberg went to college under the G.I. bill, graduating from the University of Miami and then from New York Law School. Recalled to fight in Korea, he came out as a captain at age 27 and won the Bronze Star. He got a job in the New York office of the Continental Casualty Company and became the protégé of Milburn Smith, an important executive at Continental, who brought Greenberg with him when he joined a predecessor of the American International Group in 1960. From 1967 to 1989, Greenberg, known as Hank, after the Jewish baseball star, was president and chief executive officer of AIG, which became the world's leading global insurance and financial services organization, operating in 130 countries. In 1989 he became chairman and chief executive officer. In 10 years under Greenberg, operating profits grew at a compound rate of 25 percent a year. A key to Greenberg's immense success was his concentration on giant commercial deals rather than cyclical car and home insurance business. During his tenure, he increased AIG's share of the life insurance business and supplied coverage on unusual risks: kidnap insurance and protection from suits against officers and directors of corporations. Known for his aggressiveness, Greenberg rarely lost money on underwriting, knowing which risks can be insured at a profit, how much to charge, and spreading the risk among others called reinsurers. AIG used brokers primarily as go-betweens, merely bringing business to the company, where AIG technicians examined the risk factors more closely. The reinsurers paid AIG a commission for the business they got, thus helping pay the cost of underwriting the whole risk.

Greenberg, whose company was founded in Shanghai but has had headquarters in New York since 1939, courted the Chinese market and won a major contract with the People's Insurance Company of China in 1980. He was active in a number of trade and cultural organizations, including the Asia Society, the U.S.-Philippine Business Committee, the U.S.-Korea Business Council and the Council of Foreign Relations. He served on the board of directors of the New York Stock Exchange and was a past chairman of the Federal Reserve Bank of New York. In New York City, he served on several hospital boards and museum boards.

Greenberg and his wife had four children, two of whom, Evan (1955–) and Jeffrey (1952–), became leaders of important insurance companies after they left AIG. Jeffrey joined the Marsh & McLennan Companies, an industry giant, as a partner in its investment unit. In November 1999 Jeffrey became chief executive of Marsh & McLennan and he added the title of chairman in 2002. In October 2004, New York's attorney general, Eliot *Spitzer, filed a civil suit against the brokerage, charging that Marsh & McLennan was rigging bids and fixing prices in the sale of property and casualty insurance to businesses. Jeffrey submitted his resignation as part of an agreement negotiated by the company and its directors that would

keep Spitzer from bringing criminal charges against the company. At the time it was the largest insurance broker in the world. In 2004, Evan Greenberg became chief executive of Ace Ltd., a Bermuda-based insurer with worldwide reach. Ace did well in the insurance boom that followed the attacks on the World Trade Center. In November 2004 Ace was a subject of the New York attorney general's investigation into bid-rigging and price-fixing.

In March 2005, Maurice Greenberg stepped down as chief executive of AIG after a series of run-ins with regulators raised questions about the company's complex and often obscure operations. His exit appeared intended to avert a head-on collision with two regulators: the Securities and Exchange Commission and the New York attorney general, Spitzer. The departure of Greenberg after almost 40 years at the helm was a final chapter to one of corporate America's great rags-to-riches stories.

[Stewart Kampel (2nd ed.)]

GREENBERG, MOSHE (1928–), biblical scholar. Greenberg was born in Philadelphia, where after studying Bible and Assyriology with E.A. *Speiser, he obtained his Ph.D. in Oriental Studies from the University of Pennsylvania in 1954. The dissertation was published as *The Hab/piru* (1955). He received his rabbinical training at the Jewish Theological Seminary of America from which he also has a master's degree in Hebrew Literature.

He held various academic appointments at the University of Pennsylvania from 1954 to 1970, from assistant professor of Hebrew and Semitic languages and literature.

He became professor of Bible at the Hebrew University of Jerusalem in 1970. From 1971 to 1981 he served as academic advisor for Bible curriculum at the Israel Ministry of Education and Culture where he endeavored to place the study of Bible in the school system into a Jewish context.

Greenberg's grammar of Biblical Hebrew is widely used. In *The Religion of Israel* (1971) he made the work of Bible scholar Yehezkel *Kaufmann accessible to the international community in his one-volume abridgment and English translation of Kaufmann's monumental work. His holistic approach to biblical books, already seen in his commentary on Exodus (*Understanding Exodus*, 1969), was a harbinger of the "Bible as Literature" movement of the late 20th century. The same approach is evident in his commentaries on Ezekiel (Anchor Bible, *Ezekiel 1–20*; (1983), *Ezekiel 21–37* (1997)). A particular contribution of Greenberg's is to employ midrash in the service of plain-sense exegesis. He has sought to understand the value system underlying biblical literature and its relationship both to the Ancient Near East and Jewish thought.

Greenberg served as the divisional editor (law and society in the Bible) for the *Encyclopaedia Judaica*, 1968–71, and was a member of the Bible translation committee for the Jewish Publication Society of America (1966–82).

Greenberg was always committed to disseminating the results of professional scholarship to non-specialists. From

1982 he was a member of the academic council of the Open University of Israel and from 1985 served as editor for the critical but readable multi-volume Hebrew commentary series entitled *Mikra le-Yisrael* ("Bible for Israel"). The range of Greenberg's interest may be seen in the essays collected in M. Greenberg, *Studies in the Bible and Jewish Thought* (1995).

ADD. BIBLIOGRAPHY: J. Tigay, in: DBI, 1:464–65.

[Elaine Hoter / S. David Sperling (2nd ed.)]

GREENBERG, NOAH (1919–1966), U.S. conductor and musicologist. Born in New York, Greenberg organized the Pro Musica Antiqua group (1952) which became known for its performances of medieval liturgical music drama and was in effect the first U.S. "Collegium Musicum" ensemble to achieve an international reputation. He took the group to Europe in 1960 and 1963, and recorded many of its performances, including the first recording of a selection of the sacred and secular works of Salamone de' Rossi in musicologically valid versions. He also made arrangements of vocal works of the Renaissance period. The New York Pro Musica Antiqua continued its activities after his death.

GREENBERG, SAMUEL BERNARD (1893–1917), U.S. poet. Born in Vienna, Greenberg was taken to the U.S. in 1900; after a poverty-stricken life in New York City's ghetto he died from tuberculosis at the age of 24. Self-taught except for a few years in elementary school, he displayed remarkable precocity and power as a poet and was also a gifted artist. Influenced primarily by the American writers Emerson and Thoreau and by the English poets Keats, Shelley, and Browning, Greenberg wrote mystical poetry filled with vivid and strange imagery. His imperfect command of English grammar and vocabulary give his verse an unusual, surrealistic tone characteristic of some of the most sophisticated modernist poetry of the early 20th century. Greenberg might have remained unknown had not Hart Crane, the American poet, discovered his manuscripts in 1923. The poems had a profound effect on Crane and eventually, more than 20 years after Greenberg's death, a first selection (*Poems from the Greenberg Manuscripts*, 1939) was published, which helped to establish his important place in American literary history. A second selection, *Poems by Samuel Greenberg*, was published in 1947.

BIBLIOGRAPHY: M. Simon, *Samuel Greenberg, Hart Crane, and the Lost Manuscripts* (1978).

[Brom Weber]

GREENBERG, SIDNEY (1917–2002), U.S. Conservative rabbi, writer, and liturgist. Raised in New York, Greenberg was the product of Yeshiva elementary school and of the Talmudical Academy. He graduated cum laude from Yeshiva University in 1938 and then attended the Jewish Theological Seminary, where he was ordained in 1942 and subsequently earned his D.H.L. His first pulpit was also his last. He went to a small storefront synagogue in Philadelphia which was to remain his home for 53 years as Temple Sinai grew into a

prominent Conservative congregation. (He served as a U.S. Air Force chaplain from 1944–46.)

Greenberg conducted Sermon Seminars and Pastoral Care Workshops at national and regional rabbinic conferences for four decades, and published numerous books based on his own sermons and on his widely read newspaper columns in the Jewish and general press. He also compiled several popular anthologies drawn from Jewish and world literature, and wrote inspirational volumes for both Jewish and general audiences.

During the 1960s he collaborated with Rabbi Morris Silverman, editor of the Prayer Book Press, whose edition of the *siddur* and the *maḥzor* dominated Conservative Judaism for several decades, in compiling instructional and worship texts for children. When the Prayer Book Press became part of Media Judaica in 1971, Greenberg was invited to serve as co-editor (with Rabbi Jonathan D. Levine) of a new series of innovative liturgical works. The series began with *Likrat Shabbat* – the *Kabbalat Shabbat* service when Friday evening was still the most widely attended service in a Conservative Congregation, and eventually included *Mahzor Hadash* for the High Holidays, *Siddur Hadash* for Sabbaths and Festivals, and *A Minyan of Comfort*. The series combined Hebrew liturgy with new gender-sensitive translations, inspirational notes and meditations, new reading elaborating on the themes of the traditional liturgy, alternative texts, passages from classical and contemporary Jewish sources, and extensive transliteration. During the last quarter of the 20th century and the early 21st century as successive volumes in the series were issued (and achieved record levels of distribution for independently published Jewish liturgy), the content and form of Greenberg's work increasingly influenced the publications of others, issued under a variety of auspices and in various sectors of North American Jewry.

[Jonathan D. Levine (2nd ed.)]

GREENBERG, SIMON (1901–1993), U.S. rabbi and educator. Greenberg, who was born in Russia, moved with his parents to the U.S. in 1905. He attended the Teacher's Institute of the Jewish Theological Seminary (1919) and earned his B.A. at City College of New York (1922). He was ordained by the Jewish Theological Seminary in 1925. From 1925 to 1946 Greenberg was rabbi of Har Zion Temple, Philadelphia, Pa., building it into one of the leading synagogues of the Conservative movement, a legacy that has endured. It was a point of pride at Har Zion that the lay leaders were knowledgeable and could lead services. He was also a leader in the Philadelphia community, a founder and director of the Philadelphia Psychiatric Hospital, president of the Philadelphia Zionist Organization of America, and a founder of the Akiva Day School, a Hebrew-speaking Jewish high school. He was president of the Rabbinical Assembly of America (1937–39), where he linked the three branches of the Conservative movement – the congregations, the Seminary, and the Rabbinical Assembly in joint fundraising efforts, which led to the Joint Campaign for Conservative Judaism.

All the while he taught at the Jewish Theological Seminary (1932–68). He then returned to the Seminary to serve as provost (1946–51), executive director of the United Synagogue (1950–53). He was appointed professor of homiletics and education in 1948 and vice chancellor in 1957, and was sent on behalf of the Seminary to establish the West Coast campus of the Jewish Theological Seminary, the University of Judaism in Los Angeles where he was president (1955–63), chancellor, and then chancellor emeritus. One of Conservative Judaism's most articulate spokesmen, Greenberg stressed the centrality of the Jewish people, the importance of Zionism and Hebrew, the religious character of American civilization, and the importance of Hebrew in Jewish education. He was also one of the movement's most important educators, working to shape its thought and educational goals. Greenberg was a member of the Jewish Agency Executive, president of the Rabbinical Assembly of America, and a leader of the World Council on Jewish Education. Greenberg's numerous writings include *Living as a Jew Today* (1940), *Ideals and Values of the Prayer Book* (1940), *The First Year in the Hebrew School: A Teacher's Guide* (1946), *Foundations of a Faith* (1967), *Words of Poetry* (1970), and a series of brochures on the Conservative movement in Judaism. He also compiled the Harishon series of Hebrew textbooks. In his eighties he made *aliyah* and served as the first executive director of the Conservative (Masorati) movement in Israel.

[Jack Reimer / Michael Berenbaum (2nd ed.)]

GREENBERG, URI ZEVI (pseudonym **Tur Malka**; 1894–1981), Hebrew poet. He was born in Bialykiemien, eastern Galicia, and was descended from ḥasidic leaders (Meir Przemyslany on his father's side and the *Saraf*, Uri Strelisk, on his mother's). In his infancy his parents moved to Lvov where Greenberg received a traditional ḥasidic upbringing and education. His earliest poems, both in Hebrew and Yiddish, were published in 1912 in leading periodicals of the day. In 1915 he was drafted into the Austrian army and, after serving on the Serbian front, he deserted in 1917, returning to Lvov where he witnessed the Polish pogroms against the Jews in 1918 – an event which made an indelible impression on him. After the war he published poems in both Yiddish and Hebrew and soon became a leader of a group of Yiddish expressionist poets (including Perez *Markish) and the editor of a short-lived avant-garde periodical, *Albatros* (1922–23). He spent a year in Berlin (1923) and then immigrated to Erez Israel (1924).

In Erez Israel, Greenberg stopped writing in Yiddish and published in Hebrew exclusively. When *Davar*, the Labor daily, was founded in 1925, he participated as one of its regular columnists. His columns were headed *Mi-Megillat ha-Yamim ha-Hem* and *Shomer Mah mi-Leyl* and expressed strong views against Zionist sloganeering and calling for self-realization through pioneering. Between 1925 and 1927 he edited

the booklets *Sadan* and *Sadna Dar'ah* in which he contended that Hebrew artists must abandon “the fixed confines of art, join the Jewish collective, and wrestle with and think out the complex of problems of Jewish national life.” Although during this period he was committed to the Labor Zionist movement, he already began to express extreme ultranationalistic ideas which contradicted the official line. In the wake of the Arab riots of 1929, he broke with the Labor movement, joined the ranks of the nationalist Zionist Revisionist Party, and denounced both the British government and the Zionist leadership of the *yishuv* for betraying the Zionist dream. He became active in political life and was elected as a Revisionist delegate to the *Asefat ha-Nivḥarim* (the legislative body of the *yishuv*) and to several Zionist Congresses. Between 1931 and 1934 he lived in Warsaw where he was sent by the Revisionist movement to edit its Yiddish weekly *Di Velt*. Returning to Erez Israel in 1936, in his poetry and articles he attacked the moderate socialist Zionist leadership and warned of the imminent danger to European Jewry. During the final struggle against Great Britain for national independence, he identified with the *Irgun Zeva'i Le'ummi and following the establishment of the State of Israel was elected to Israel's Knesset as a member for the Herut Party, serving from 1949 to 1951. He was awarded the Israel Prize for Hebrew literature in 1957. His 80th birthday was marked by a series of celebrations, most of which were held in 1976. He was awarded a doctorate *honoris causa* by Tel Aviv University in April 1976 and by Bar-Ilan University in June 1977. He was made a freeman of the cities of Tel Aviv and Ramat Gan, and a special session of the Knesset was held in his honor on November 1, 1977. In December he was awarded the Bialik Prize for the third time.

In contrast to most Hebrew writers who were committed to a secularist-humanist Zionism, Greenberg asserts a religious mystical view of Zionism as the fulfillment of the Jewish historical destiny. The Jew is, in his view, wholly other than the non-Jew, having been elected by God at the beginning of time as a holy instrument of His will. The covenant made with the Jewish Patriarch, Abraham, and renewed at Sinai, is a meta-historical event which cannot be altered by time nor ignored by Jew or gentile. The Jew exists outside of history in an eternal dimension in which mere rationality has no validity. “What shall be in the future, has already occurred in the past and what was not, shall never be. Therefore I put my trust in the future, for I hold the shape of the past before me: this is the vision and the melody. Selah, Hallelujah, and Amen” (*Reḥovot ha-Nahar*, 1951, p. 37). In Greenberg's scheme the future shall bring about the fulfillment of God's promise to establish Jewish sovereignty and the Messianic redemption. Any attempt by the Jew to shirk his cosmic role, either by default or by an attempt to imitate the value system of the unelected (Europe, the gentiles), leads him to disaster. The secular nationalism or socialism of most contemporary Jews is a superficial reading of the meaning of the Jewish destiny and can only lead to a holocaust. The call for the renewal of Jewish sovereignty is an imperative of the eternal myths of

Judaism. It is neither a sociological nor historical solution of practical human needs, but an absolute value which may exact any price which its realization requires. Halfhearted attempts at Zionist fulfillment are doomed to failure whether they are inhibited by moral niceties, which are derived from alien value systems, or are diffused by human selfishness.

In his Yiddish phase, *In Malkhus fun Tselem* ("In the Kingdom of the Cross," 1922) Greenberg already foresaw the European Holocaust. His poetry from then on is obsessed with this vision of horror (*Migdal ha-Geviyot*, "The Tower of Corpses," in *Sefer ha-Kitrug ve-ha-Emunah*, 1936). Greenberg in *Rehovot ha-Nahar* wrote one of the most moving dirges composed about the Nazi Holocaust. The tragedy, in his view, is the logical culmination of the 2,000-year confrontation between the cross and the star of David and the six million dead are an insuperable barrier which shall eternally separate Christian from Jew. For Greenberg the Holocaust puts into question not only God's theodicy but appears as a horrible practical joke which God and history have played on the Jew: "You promised to come one day to gather and lead them proudly to Zion and to renew their kingdom, raise their king. But, behold you did not come, O God; the enemy came and gathered them all, an ingathering of exiles for annihilation. Now there is no need for redemption. Sit, sit, God, in your heavens" (*Rehovot ha-Nahar*, p. 249). God, the Redeemer of Israel, has become "the keeper of the Jewish cemetery" (p. 250).

Greenberg's God however moves outside the rational dimension and in a sudden leap of faith the poet reasserts the vision of redemption: "Will the Messiah yet come? Amen, he shall surely come." Divine history, of which Jewish history is a part, is based on an irrational paradox. Thus, out of the ashes of the crematoria, redemption will come, and out of despair faith. The Holocaust and the vision of Jewish sovereignty are two sides of the same coin of history. Greenberg's personal poetry often sings of his agony as the suffering prophet-priest of the mythos of Jewish catastrophe and redemption. In the years preceding the Holocaust, he laments the tragic fact that the multitude did not heed his terrible message of the imminent massacres, reviling him as they had always spurned their prophets in the past. He is filled with revulsion at their obstinacy and their blind concern for material trivialities in the face of disaster: "God how did I ever get here, inside the swamps – a man of vision befouled by their mud?"

He associates his national poetry with his personal history which also turns into mythos. The Jewish home in Poland, its Eden-like security of faith, his mother and father, assume archetypal dimensions. His love poetry, too, is inhabited by these primordial symbols: mother and father, Adam and Eve, Eden, primeval forests, the sea, the moon, lakes, rivers; they form a mythical landscape not very different from that of much of his national verse.

In an age when poets were concerned with formal and aesthetic problems, Greenberg's poetry is one of engagement, his poetic energy is fired by his all-consuming ideological commitment. Often in his poetry the poetic line surrenders to

the overwhelming force of his rhetoric with which he pounds his readers mercilessly. At other times his verse is terse and brilliantly lyrical. While philosophically he rejects European aesthetics and the European poetic tradition, in practice he sometimes uses its devices and forms. More frequently his formal resources are indigenously Jewish: the Bible, medieval dirges, and concepts and statements drawn from kabbalistic literature. His early commitment to expressionism is retained throughout and is evidenced by his rhetorical flourishes, changing rhythms within the poem and sometimes even in one single line, wild metaphors, free verse, and his frequently irregular rhyme patterns.

His anti-humanist approach and ultranationalism, although mitigated by a commitment to Jewish ethical values, are not representative of contemporary Jewish thought. But Hebrew literary criticism has recognized the poetic genius of Greenberg though it rarely shares his ideology. Not that Greenberg's views lack a genuine Jewish basis; they are often deeply rooted in the Jewish subconscious and when expressed expose the raw nerve of the Jewish historical experience. But Greenberg's ideology reflects only one aspect of the Jewish soul – the particularistic, aristocratic sense of election – and often ignores its universalistic humanist character.

U.Z. Greenberg's main works include:

In Yiddish: *Ergetz oyf Felder* (1915), *In Zaytens Roysh* (1919), *Krig oyf der Erd* (1921), *Farnakhtengold* (1921), *Mefisto* (1921, 1922²).

In Hebrew: *Eimah Gedolah ve-Yare'ah* (1925), *Ha-Gavrut ha-Olah* (1926), *Hazon Aḥad ha-Ligyonot* (1928), *Anacreon al Kotev ha-Izzavon* (1928), *Kelappei Tishim ve-Tishah* (1928), *Kelev Bayit* (1919), *Ezor Magen u-Ne'um Ben ha-Dam* (1930), *Sefer ha-Kitrug ve-ha-Emunah* (1937), *Min ha-Hakhlil ve-El ha-Kaḥol* (in *Lu'ah Haaretz*, 1949), *Al Da'at ha-Nes ha-Nikhsaf* (1951), *Mi-Tokh Sefer he-Agol* (in *Lu'ah Haaretz*, 1950), *Meno-fim Reḥokei Mahut* (*ibid.*, 1951, 1952), *Rehovot ha-Nahar – Sefer ha-Ilyot ve-ha-Ko'ah* (1951), *Massa ve-Nevel* (in *Lu'ah Haaretz*, 1953), *Shirei Aspaklar be-Hai Alma* (*ibid.*, 1955), *Massekhet ha-Matkonet ve-ha-Demut* (in *Moznayim*, 1954), *Be-Fisat ha-Arig u-ve-Ḥelkat ha-Ḥevel* (*ibid.*, 1965). Seventeen volumes of the *Collected Works of U.Z. Greenberg (Kol Kitvei)* were published up to 2004. A bibliography of his works is available in J. Arnon, *U.Z. Greenberg: Bibliografyah shel Mifalo ha-Sifrut u-Mah she-Nikhtav Alav*, 1980.

Poems by Greenberg have been translated into various languages. English translations are included, for instance, in T. Carmi (ed.) *The Penguin Book of Hebrew Verse* (1981) and in *The Modern Hebrew Poem Itself* (2003). For English translations, see Goell, *Bibliography*, 776–825, and ITHL at www.ithl.org.il.

[Ezra Spicehandler]

GREENBLATT, ALIZA WAITZMAN (1885–1975), U.S. Yiddish poet and Zionist leader. Born in Azarenits, Bessarabia, Greenblatt received a traditional *heder* education. She came to the United States in 1900 and settled with her family in Philadelphia, where she was a garment worker. She married Isidor Greenblatt in 1907; the couple had five children. An active participant in Jewish organizations, Greenblatt became a successful fundraiser for the *Jewish National Fund, national president of *Pioneer Women, and an active member of *Hadassah. After a brief sojourn in Palestine in 1920, where Isidor attempted to establish a business, the Greenblatts settled in New York City, the center of Yiddish culture in the United States.

In her later years, Greenblatt collected five volumes of her poems which were widely published in the Yiddish press in the United States and Israel. These included *Ikh un Du* ("You and I," 1951); *Ikh Zing* ("I Sing," 1947); *In Sigate baym Yam* ("In

Seagate by the Ocean," 1957); *Lebn Mayns* ("My Life," 1935); and *Tsen Lider mit Musik* ("Ten Poems with Music," 1939). Many of the poems were set to music and recorded. Greenblatt also wrote an autobiography, *Baym Fenster fun a Lebn* ("At the Window of a Life," 1966). She was a popular speaker at Jewish women's organizations across North America.

Greenblatt's collection of Yiddish books was donated by her daughter, dancer and medical activist Marjorie Mazia Guthrie, to the National Yiddish Book Center in Amherst, Mass., where the reading room was named in Greenblatt's memory.

[Judith R. Baskin (2nd ed.)]

GREENBLATT, ELIYAHU (1933–), *hazzan*. Born in Jerusalem, Greenblatt studied music at the Jerusalem Conservatory and trained as a *hazzan* under Shelomo Zalman *Rivlin. He conducted the Shirat Israel choir in Jerusalem and sang with the choir of Leib Glanz in Tel Aviv. He was *hazzan* of Tel Aviv's Bet El and Tiferet Zvi synagogues and of the Sydenham synagogue in Johannesburg. He is the possessor of a dramatic tenor voice and has performed on stage and synagogue worldwide. As a composer, he set many sections of the prayer services to music and arranged and re-edited compositions and recitatives of the *hazzanim* of earlier generations. This includes the compositions of Yehuda Srebnick, and his own working knowledge of the accentuation in Yossele *Rosenblatt's Hebrew singing has enabled him to revive a number of Rosenblatt's unpublished and unrecorded recitatives left in manuscript form at the time of Rosenblatt's untimely death. A cassette of Greenblatt's original compositions, among the last orchestrations done by Chanan Winternitz, is available on cassette (Musique Internationale).

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

GREENE, HAROLD H. (1923–2000), U.S. federal judge. Greene was born in Frankfurt, Germany. In 1939 the family fled, making their way to Belgium, Vichy France, Spain, and Portugal before arriving in New York in 1943. Greene already spoke fluent English; he entered the army and was sent back to Europe, where he was assigned to interrogate German prisoners. At the end of the war, Greene joined his parents in Washington, D.C., where he studied law and spent the rest of his life as a lawyer and judge. He was an active member of Congregation Beth El in Bethesda.

He earned his B.A. at George Washington University and after he graduated from GWU School of Law in 1952, he clerked for Circuit Judge Bennett Champ Clark in the U.S. Court of Appeals for the D.C. Circuit. His work as a lawyer was in the government: in the U.S. Attorney's office (1953–57) and then in the Justice Department, serving as the first head of the appeals and research section of the Civil Rights Division (1957–65). Greene is credited with being the principal legal architect of

the two most significant statutes of 20th-century America, the Civil Rights Act of 1964 and the Voting Rights Act of 1965.

Greene's career as a trial judge in the nation's capital was equally distinguished. In 1965 President Lyndon B. Johnson nominated Greene to the D.C. Court of General Sessions, which dealt with essentially minor offenses and lesser civil matters. In 1966, Greene was named chief judge.

In 1968, after the assassination of the Rev. Martin Luther King, Jr., major rioting broke out in Washington. Hundreds of people were swept up and detained. In other cities, defendants were arraigned en masse. Greene refused to countenance that: to secure due process for each one who was arrested, he kept the judges of his court at work round-the-clock. Greene's administrative skills included not just efficiency, but also compassion for those accused.

In 1978 President Jimmy Carter nominated Judge Greene to serve on the U.S. District Court for the District of Columbia, where one of the first group of cases assigned to him was one of the most far-reaching cases in American history: the antitrust suit that broke up American Telephone & Telegraph Co. The Department of Justice view was that AT&T used profits from its monopoly on local telephone service to suppress competition in the emerging long-distance and telephone equipment industries. Greene took firm command of the litigation that broke the world's largest corporation into pieces. He thereby helped to reshape the entire telecommunications industry by creating the "Baby Bells" and ushering in a new world of competition.

In 1990 Judge Greene also presided over the criminal trial of Admiral John M. Poindexter, who was sentenced to six months in prison for his role in the "Iran-Contra" scandal. In 1991 the Court of Appeal for the D.C. Circuit reversed the convictions.

Greene became one of the best-known federal judges of his time and enhanced his reputation for fairness and hard work. A champion of equal dignity for citizens of all races and both genders, Greene was renowned for his commitment to due process and the independence of the judiciary. He stopped hearing cases in 1998, and died in 2000.

GREENE, LORNE (1915–1987), actor. Born in Ottawa, Canada, Greene attended Queen's University in Kingston, Ontario. After he graduated, he began to work in radio broadcasting, rising to prominence as an accomplished newscaster. As chief radio announcer on the CBC during World War II (1939–42), he was known as the "Voice of Doom" because of his deep, resonant voice and the grim news it conveyed. In the late 1940s Greene formed the Academy of Radio Arts and the Jupiter

Theatre in Toronto. For more than a dozen years, his school was a haven for Canadian actors.

In 1953 he left his native land and headed for Hollywood. Although he was best known for his long-standing starring role as the venerable Ben Cartwright on the popular TV western series *Bonanza* (1959–73), Greene performed on Broadway, on radio, in films, and on many other TV shows as well. In addition to his work in the U.S., he returned to Canada to participate in various projects.

On Broadway, Greene appeared in *The Prescott Proposals* (1954); *Speaking of Murder* (1957); and *Edwin Booth* (1958). His film roles include *The Silver Chalice* (1954); *Tight Spot* (1955); *Autumn Leaves* (1956); *Peyton Place* (1957); *The Hard Man* (1957); *The Last of the Fast Guns* (1958); *The Gift of Love* (1958); *The Buccaneer* (1958); and *Earthquake* (1974).

Greene's television credits include the title role in *Othello* (1953); the TV series *Sailor of Fortune* (1955); host of the series *To the Wild Country* (1972–75); the lead role in the series *Griff* (1973–74); host of *Lorne Greene's Last of the Wild* (1974); the lead roles in the series *Battlestar Galactica* (1978 and 1980) and *Code Red* (1981–82); and host of *Lorne Greene's New Wilderness* (1981–86). Greene's final film appearance was in the TV movie *The Alamo: Thirteen Days to Glory* (1987).

In 1980 he published *The Lorne Greene Book of Remarkable Animals*.

[Ruth Beloff (2nd ed.)]

GREENE, SHECKY (1926–), U.S. comedian-actor. Greene is known as the top of Las Vegas' tuxedo-wearing, rim-shot comedians, often compared to Don *Rickles and Buddy *Hackett. Born Fred Sheldon Greenfield in Chicago, Ill., Greene served in the Navy and was discharged in 1944. He enrolled in Wright Junior College and planned to become a gym teacher. Over the summer he took a job as social director at a resort near Milwaukee called Oakton Manor. With no budget for performers, Greene began developing a stand-up act to entertain guests. When he returned to college, he continued his act in Chicago nightclubs. By the late 1940s, he was working at a club in New Orleans and then opened for Martha Raye in Miami Beach, making \$500 a week. In 1953, after signing to play Chez Patee in Chicago as Ann Sothern's opening act, Greene took an offer from the Golden Hotel in Reno, Nevada. Before long he was playing Las Vegas and his career as a stand-up comedian grew with the city. His comic style was as wild as the city he played in, using ad-libbing, barbs, impressions, and song parodies. His drinking and violent outbursts on the casino floor were tolerated, even encouraged, and became the stuff of legend. Greene played wisecracking Pvt. Braddock in the television series *Combat!* (1962–63) and appeared on such television shows as *Laverne and Shirley*, *The A-Team*, and *Northern Exposure*. His film roles include *History of the World: Part 1* and *Splash*. He stopped drinking in the 1990s and his stand-up career was only slowed by throat surgery, cancer surgery, and a hip transplant.

[Adam Wills (2nd ed.)]

GREENEBAUM, Chicago family in second half of the 19th–20th centuries, originating in Eppelsheim, Germany; among the early Jewish settlers in Chicago. The brothers Michael and Jacob Greenebaum went to Chicago in 1846; the first of the family to arrive. Two other brothers, Elias and Henry, arrived in 1848. A few members of the family joined the California gold rush in 1849. However, the majority remained in Chicago and became involved in Jewish and civic affairs there.

Elias Greenebaum (1822–1919) worked for two years in a dry goods store after coming to Chicago and then became a clerk in the banking house of Richard K. Swift. In 1855 he and Henry founded the Greenebaum Brothers Banking House. In 1877 Elias organized the banking house under the firm name of Greenebaum Sons, which subsequently was incorporated as a state bank in 1911 under the name Greenebaum Sons Bank & Trust Company. The name was changed to Greenebaum Sons Investment Co. in 1921. Through consolidation with other companies it became successively the Bank of America, Central Trust Co. of Illinois, and Central-Republic Bank & Trust Co. Greenebaum and Associates and the Greenebaum Mortgage Co. still existed in 1970. Elias Greenebaum led the adherents of the Reform group when Chicago's only (at the time) congregation Kehilath Anshe Maarav split into Orthodox and Reform factions. He was a founder of the Juedischer Reformverein (1858), which founded Congregation Sinai, the first Reform congregation in Chicago (1861). He was director, treasurer, and vice president of this congregation at various times.

Michael Greenebaum (1824–94) became a tinner and plumber after his arrival in Chicago. Active in the Abolitionist movement, he led a crowd that freed a slave held prisoner by a U.S. marshal (1853). He founded and was the first president of the Hebrew Benevolent Society (1854), and a founder of the Chicago Public Library, the Chicago Historical Society, the Astronomical Society, the 82nd Illinois Volunteer Regiment of Veterans, and the Ramah Lodge of B'nai B'rith. Later, he was the first president of the District Grand Lodge 6 of B'nai B'rith. He also founded and served as first president of the Zion Literary Society (1877).

Henry Greenebaum (1833–1914) was a hardware salesman, and then a clerk in Richard K. Swift's banking house before founding the Greenebaum Brothers Banking House with Elias. He later became president of the German Savings Bank. Henry served as secretary and honorary member of Orthodox Congregation B'nai Sholom, was a founder and first president of the United Hebrew Relief Association in 1859, a founder of Congregation Sinai, first president of Congregation Zion (Reform), and later first president of Isaiah Congregation. He was the first Jew to serve on the City Council, as alderman from the Sixth Ward (1856), was a presidential elector on the Douglas ticket (1860), represented Cook County on the first Equalization Board (1856), and was a member of the West Chicago Park Commission. He was also a patron of the arts, the first president of the Beethoven Society (1876), and the first president of the Orpheus Maennerchor.

Henry Everett Greenebaum, Elias' elder son, was born in Chicago. A partner in the family banking business, he became treasurer of the first Chicago Home for Aged Jews, in 1893. Moses Ernst Greenebaum, Elias' second son, was also a partner in the family banking business. He was chairman of the Chicago Community branch of the Jewish Welfare Board, vice president of Michael Reese Hospital, treasurer of the Jewish Historical Society of Illinois, treasurer of the Citizens Association of Chicago, and president of Sinai Congregation (1906–29). JAMES E. GREENEBAUM (b. 1866) was treasurer of the Chicago Home for Jewish Orphans in 1893. EDGAR N. GREENEBAUM (b. 1890) served on the Chicago Board of Education.

[Morris A. Gutstein]

GREENFIELD, ALBERT MONROE (1887–1967), U.S. financier and civic leader. Greenfield, who was born in Kiev, Ukraine, was taken to the U.S. at the age of five. He worked at several jobs before he entered the real estate field, founding Albert M. Greenfield and Company. By the time he was 30, Greenfield had amassed a multi-million dollar fortune. Upon his retirement in 1956, his company was one of the largest real estate firms in the U.S. Greenfield lost much of his first fortune when his Bankers Trust Company was compelled to close in the early days of the Depression of the 1930s, and subsequently made another. In the 1950s and 1960s he took pride in his designation as "Mr. Philadelphia," because the Greenfield interests controlled so many department stores, hotels, and specialty shops, through his City Stores holding company, and because his participation was solicited for every conceivable philanthropic and civic cause. Greenfield was also extremely active politically and was considered a power in Philadelphia politics. He was a member of the Philadelphia Common Council (1917–20), and was extremely close to William S. Vare, the boss of the Philadelphia Republican machine. Although he seconded Herbert Hoover's nomination in 1928, from 1934 on he was identified with the Democratic Party (while continuing to give financial and other support to occasional Republican candidates). He served as a delegate to all the Democratic national conventions from 1948 through 1964. Greenfield was a member of the influential Jewish delegation which waited upon President Harry S. *Truman the night/morning he granted U.S. recognition to Israel. Greenfield was close to President Lyndon B. *Johnson, because he had been a member of the small group that supported Johnson for president in 1960. Greenfield was never wholly committed to a single Jewish cause or institution; he accepted the usual board memberships and honors, took pride in his early service as a trustee of the Jewish Institute of Religion, and in the decisive role which he played in the merger of three Jewish hospitals in Philadelphia in 1951. At one time, the National Conference of Christians and Jews briefly stimulated his interest, and through its agency he endowed a Center for Human Relations at the University of Pennsylvania.

[Bertram Wallace Korn]

GREENFIELD, JONAS CARL (1926–1995), U.S. Bible scholar, specializing in the languages and culture of the Ancient Near East. Born in New York, he received his early education from both public school and yeshivot. Greenfield showed early interest in Semitic Near Eastern Languages, learning both Arabic and Aramaic in his youth. He received his bachelor's degree from CCNY in English literature in 1949. In that same year he was ordained rabbi at Metivta Torah Vadaath. He entered the graduate school at Yale to study English, where he was required to study an early Indo-European language. Choosing Hittite taught by Albrecht Goetze the great cuneiformist, Greenfield soon realized that his heart was in the study of the ancient Near East. He received his doctorate from Yale University (1956) for his thesis "The Lexical Status of Mishnaic Hebrew," in which he applied his newer skills in Semitics to the texts originally learned in yeshivah.

Starting his teaching career in 1954 as instructor in Semitics at Brandeis University, he became assistant and later associate professor of Semitics at the University of California at Los Angeles (1956–65) and then professor of Semitics at the University of California at Berkeley (1965–71).

In 1971 Greenfield moved to Jerusalem where he became professor of Ancient Semitic languages at the Hebrew University. He also taught during the 1970s and early 1980s at Bar-Ilan University.

His interests within the field of Ancient Semitic languages were diverse. He was a known authority on comparative Semitic philology, Aramaic dialectology and lexicography, Ugaritic language and literature, Northwest Semitic epigraphy, and Canaanite and Aramaic religion, and was also interested in the social history of the period, legal matters, and Iranian studies.

He was a member of the publication supervisory committee for the Dead Sea Scrolls and was engaged in the publication of the papyri from Nahal Hever and Nahal Ze'elim.

From 1967 Greenfield was editor of the *Israel Exploration Journal* and associate editor of the *Bulletin of the American School of Oriental Research*. He was a member of the editorial committee of the Jewish Publication society of America and on the committee for the new JPS translation of the Hagiographia.

His works include *Jews of Elephantine and Arameans of Syene* (with B. Porten, 1974) and *The Bisitun Inscription* (with B. Porten, 1982). Most of his numerous English articles can be found in the two volumes edited by Paul (bibliography), and a full bibliography and biographical sketch in the Festschrift edited by Zevit (bibliography).

ADD. BIBLIOGRAPHY: Z. Zevit et al.(eds.), *Solving Riddles and Untying Knots...Studies...Greenfield* (1995); S. Paul et al. (eds.), *Al Kanfei Yonah: Collected Studies...Greenfield...Semitic Philology* (2001).

[Elaine Hoter]

GREENGARD, PAUL (1925–), U.S. neuroscientist and Nobel laureate. Greengard was born in New York City, where

he received his primary education. After World War II service in the Navy, he graduated in mathematics and physics from Hamilton College (1948) and gained his Ph.D. (1953) from Johns Hopkins University, Baltimore, under the guidance of Frank Brink and Sidney Colowick. After postdoctoral studies at the universities of London, Cambridge, and Amsterdam, with Wilhelm Feldberg at the National Institute for Medical Research in Mill Hill, London, and with Sidney Udenfriend at the National Institutes of Health, Bethesda (1953–59), he became director of the Department of Biochemistry in Geigy's Research Laboratories in Ardsley, New York (1959–67). After one year as visiting professor during which he worked with Alfred Gilman and Earl Sutherland, he was appointed professor of pharmacology and psychiatry at Yale University (1968–83). In 1983 he became professor and head of the Laboratory of Molecular and Cellular Neuroscience at the Rockefeller University, New York. Greengard's research interest in neuroscience was inspired by Allen Hodgkin's lecture on nerve conduction at Johns Hopkins, where Greengard was a graduate student. Greengard's work addressed the process whereby signals are transmitted between nerve cells across the synapses which separate them and the role of fast and slow chemical neurotransmitters in neurotransmission. Novel findings were largely built on his entirely vindicated conviction that biochemical and biophysical events in the transmission across the synapses between nerve cells have to be analyzed in tandem. He and his colleagues concentrated on slow transmission by dopamine to analyze biochemical and physiological events on both sides of the synapse during neurotransmission and thereby discovered a key molecule in dopamine signaling called DARPP-32. These and other observations helped to build up a detailed picture of the mediators, structures, and signaling involved in trans-synaptic transmission whereby slow neurotransmitters serve to modulate fast transmission. His work has major implications for diseases involving the dopamine system such as Parkinson's disease, the adverse effects of drug abuse, and the design of therapeutic agents. He received the Nobel Prize in physiology or medicine jointly with Arvid Carlsson and Eric Kandel (1980). He continued to work on neurotransmission and the broader implications of his findings for other systems, diseases, and drug design. His many awards include the National Academy of Sciences Award in the Neurosciences (1991), the Goodman and Gilman Award in Receptor Pharmacology (1992), and the Lieber Prize for Outstanding Achievement in Schizophrenia Research (1996).

[Michael Denman (2nd ed.)]

GREENSPAN, ALAN (1926–), U.S. economist. Born in New York City, Greenspan received a B.S. in economics (summa cum laude) in 1948, an M.A. in economics in 1950, and a Ph.D. in economics in 1977, all from New York University. For many years Greenspan headed an independent economic consulting firm in New York, mainly for major corporations

and institutions, including the United States Treasury and the Board of Governors of the Federal Reserve System. He also served as a senior adviser to the Brookings Institution Panel on Economic Activity. In 1974 he was appointed by President Nixon to succeed Herbert Stein as chairman of the President's Council of Economic Advisers. He was chairman of the National Commission on Social Security Reform from 1981 to 1983. He also served as a member of President Reagan's Economic Policy Advisory Board, a member of *Time* magazine's Board of Economists, and a consultant to the Congressional Budget Office. Greenspan was known for his conservative economic views, which he developed partly under the influence of Ayn Rand.

[Joachim O. Ronall]

Greenspan also served as a corporate director for Aluminum Company of America (Alcoa); Automatic Data Processing, Inc.; Capital Cities/ABC, Inc; General Foods, Inc; J.P. Morgan & Co, Inc; Morgan Guaranty Trust Company of New York; Mobil Corporation; and The Pittston Company.

In 1987 he was nominated to the position of chairman of the Federal Reserve Board. Given the U.S.'s large budget deficit, which prevented the presidential and legislative arms of the administration from effectively utilizing tax and spending policies to influence the economy, this made him the most important economic policy-maker in the government, since he was able to exert a considerable influence over interest rates by controlling the money supply. Declaring his intention to "try to maintain the maximum sustainable long-term economic growth that is possible," he presided over a period of slow but steady economic growth until the summer of 1990, at which time recession hit the American economy. Despite critics' complaints that he first retarded economic expansion by keeping interest rates too high and then moved too slowly to end the recession, he was nominated to a second term by President George Bush in August 1991, and shortly thereafter he was also confirmed to his first full fourteen-year term on the Federal Reserve Board. In 1996 his third four-year term was confirmed. In 2004 he took office for a fifth term.

Greenspan also served as chairman of the Conference of Business Economists; president and fellow of the National Association of Business Economists; and director of the National Economists Club.

He received the Thomas Jefferson Award for the greatest public service performed by an elected or appointed official, presented by the American Institute for Public Service (1976); was elected a fellow of the American Statistical Association (1989); was decorated Legion of Honor (Commander) France (2000); was made honorary Knight Commander of the British Empire (2002); and was the first recipient of the Gerald R. Ford Medal for Distinguished Public Service (2003).

Among Greenspan's publications are *Income Inequality: Issues and Policy Options* (1998), *Changing Capital Markets: Implications for Monetary Policy* (2001), and *Achieving Price Stability* (2001).

[Rohan Saxena and Ruth Beloff (2nd ed.)]

ADD. BIBLIOGRAPHY: B. Woodward, *Maestro: Greenspan's Fed and the American Boom* (2000); J. Martin, *Greenspan: The Man behind Money* (2000); D. Jones, *The Politics of Money: The Fed under Alan Greenspan* (1991).

GREENSPAN, BUD (1926–), preeminent producer, writer and director of sports films, one of the world's leading sports historians, member of the U.S. Olympic Committee Hall of Fame. Born in New York City, Greenspan broke into sports at 16 as a radio announcer, and at 21 was promoted to sports director for station WMGM (WGN) in New York City, then the largest sports station in the country. Greenspan broadcast the pre- and post-game coverage of the Brooklyn Dodgers, and also covered hockey, basketball, track, and tennis events from Madison Square Garden. Greenspan went to the 1952 Olympic Games and made a documentary on weightlifter John Davis, and after selling the film for a huge profit decided there was a future in sports documentaries. In 1964 Greenspan took Jesse Owens to Berlin to shoot a one-hour film called *Jesse Owens Returns to Berlin*. It was an immediate success, playing in over 120 countries and earned Greenspan three Emmy Awards. The film was revolutionary, the beginning of telling the human story of sports instead of just the standard athletic story.

Greenspan was producer of the official films of the Olympic Games in 1984, 1988, 1992, and 1996, with his five-hour film on the '84 Olympics, *16 Days of Glory*, considered a classic. Greenspan produced numerous other Olympic-related films, including *Triumph and Tragedy: The 1972 Olympics*, *The Measure of Greatness*, *An Olympic Dream*, the television series *For the Honor of Their Country*, the two-hour docudrama, *Time Capsule: The 1936 Berlin Olympic Games*, and the 22-part TV series *The Olympiad* (1976–77), seen in more than 80 countries and which got him an Emmy Award. He also won Emmys for his *16 Days of Glory* films of the Winter Olympics at Calgary (1988) and Lillehammer (1994).

"There are some people who are very stylistic," Greenspan wrote. "They make films that are difficult to understand; yet some people find them genius. My approach is very simple. My stories have a beginning, a middle, and an end. The dumbest person in the world can understand my films."

Greenspan was awarded the Olympic Order in 1985, the 17th American to receive such an honor; the Directors Guild of America Lifetime Achievement Award in 1995; and the Peabody Award in 1996 for his outstanding service in chronicling the Olympic Games. He is the author of numerous books, including *Play It Again Bud* (1973), *We Wuz Robbed!* (1976), *Numero Uno* (1982), *100 Greatest Moments in Olympic History*

(1995), *Frozen in Time: The Greatest Moments at the Winter Olympics* (1997), and *The Olympians' Guide to Winning the Game of Life* (1997). Greenspan was elected to the U.S. Olympic Committee Hall of Fame in 2004.

[Elli Wohlgeleerter (2nd ed.)]

GREENSTEIN, HARRY (1896–1971), U.S. social worker. Greenstein was born in Baltimore, Maryland. From 1928 until his retirement he served as executive director of the Associated Jewish Charities of Baltimore. Greenstein also served as State Relief administrator during 1933–36. He was director of welfare in the Middle East for the United Nations Relief and Rehabilitation Agency (UNRRA) from 1944–45 and in 1949 was the advisor to the American military governor on Jewish affairs in Germany. In the latter position, Greenstein was instrumental in the passage of the General Claims Law, which applied to reparations in the American zone and served as a basis for the 1952 Federal Supplementing and Coordinating Law in West Germany. He also helped to arrange for the care and resettlement of displaced persons. He was elected to the presidencies of the Baltimore Council of Social Agencies (1935–39), National Conference of Jewish Community Service (1937–38), and American Association of Social Workers (1939–40).

[Kenneth D. Roseman]

GREENSTEIN, JESSE PHILIP (1902–1959), U.S. biochemist. Born in New York, Greenstein worked at Harvard, Kaiser Wilhelm Institute in Berlin, and the University of California before joining the National Cancer Institute, where from 1946 he was head of the biochemical laboratory. His most important fields of research were polypeptides and the biochemistry of cancer.

GREENSTONE, JULIUS HILLEL (1873–1955), U.S. educator and author. Greenstone was born in Mariampol, Lithuania, and immigrated to the United States in 1894. He studied at the City College of New York and the Jewish Theological Seminary of America, where he was ordained in 1900. In 1905 he joined the faculty of Gratz College, where he taught Jewish education and religion. He was principal of the college from 1933 to 1948. From 1902 on he maintained a modest Jewish bookshop in his home, toward which rabbis and everyone else interested in Jewish education gravitated to obtain books as well as advice and guidance. Greenstone was among the first American Jews to produce books of popular Jewish scholarship in English. His *The Religion of Israel* (1902) was later rewritten and expanded into *The Jewish Religion* (1920). *The Messiah Idea in Jewish History* (1906) was the first work in English to examine historically the messianic idea in Jewish literature. His commentaries on the biblical books Numbers and Proverbs appeared in the series *Holy Scriptures with Com-*

mentary, published by the Jewish Publication Society (1939). He contributed articles to the *Jewish Encyclopedia* (1901). For some twenty years he contributed a popular though scholarly column to the Philadelphia weekly *Jewish Exponent*. Some of these essays were collected and republished in *Jewish Feasts and Fasts* (1945).

[Shulamith Catane]

GREENWALD (Grunwald), JEKUTHIEL JUDAH (Yekusiel Yehudah; Leopold; 1889–1955), U.S. rabbi and scholar. Greenwald, born in Hungary, studied in yeshivot in that country and in Frankfurt on the Main under Nehemiah *Nobel. In 1924 he settled in the United States, where he was the rabbi of Orthodox congregations in New York and of Congregation Beth Jacob in Columbus, Ohio, where he served for the last three decades of his life. Neither a great orator nor skilled pastor, Greenwald was a prolific writer and regarded as an authority on Jewish law and history. He wrote numerous monographs and articles in Hungarian, Yiddish, and Hebrew, was especially interested in rabbinic authorities and Jewish communities of Hungary, on which he wrote *Ha-Yehudim be-Ungarya* (1913) and *Toyznt Yor Idish Lebn in Ungarn* (1945). His work *Le-Toledot ha-Reformazyon ha-Datit be-Germanyah u-ve-Ungarya* (1948) is a history of the Reform movement in Germany and Hungary (this work contains a bibliography of Greenwald's work up to 1948 and an evaluation by C. Bloch, 1–28, second pagination). He also wrote works on the history of the Sanhedrin and biographies of leading rabbis, such as Joseph Caro and Moses Sofer. In the latter category are *Beit Yehonatan* (1908) about Jonathan *Eybeschutz, and *Toledot Mishpaḥat Rosenthal* (1920) about the Rosenthal family, which included several rabbis. Greenwald compiled an important manual of traditional laws and rites of mourning, *Kol-Bo Avelut* (3 vols., 1947–52).

GREETINGS AND CONGRATULATIONS. Although Jews have adopted the languages of the countries in which they live, they have always tended to retain traditional forms of greetings and congratulations either in Hebrew or Yiddish and occasionally in Aramaic, and some of these forms of greetings are adaptations of biblical verses while others are taken from the liturgy. Many are merely the expression of an emotion in Hebrew or Yiddish without any literary source. In the list below the most common forms of greetings are given; the list does not include the many variations which sometimes exist nor does it include simple translations such as *boker tov* (= good morning). (See Table: Greetings and Congratulations.)

Jewish Forms of Greetings and Congratulations

	Hebrew	Literal meaning	Occasions when said	Origin and/or reference	
GREETINGS AND CONGRATULATIONS – GENERAL FORMS OF					
1.	Shalom or Shalom lekha	שָׁלוֹם שָׁלוֹם לְךָ	Peace. Peace to you.	As a common greeting equivalent to “hello” or “goodbye” “Good day”	Gen. 29:6; 43:27; Ex. 18:7 Judg. 6:24 I Sam. 16:4
2.	Shalom aleikhem	שָׁלוֹם עֲלֵיכֶם	Peace to you.	Same as above	
3.	Aleikhem shalom	עֲלֵיכֶם שָׁלוֹם	To you, peace.	Response to greeting No. 2	
4.	Barukh ha-ba	בָּרוּךְ הַבָּא	Blessed be the one who comes.	A common greeting, equivalent to “welcome.” A child brought to the circumcision ceremony and a bride and groom approaching the wedding canopy are also greeted thus. The response to the greeting is No. 5 or 6.	
5.	Barukh ha-nimza	בָּרוּךְ הַנִּמְצָא	Blessed be the one (already) present.	Response to greeting No. 4	Ps. 118:26
6.	Barukh ha-yoshev	בָּרוּךְ הַיּוֹשֵׁב	Blessed be the one who is sitting.	Response to greeting No. 4. Used by a guest to the host sitting at the head of the table.	
7.	Shalom berakhah ve-tovah	שָׁלוֹם בְּרָכָה וְטוֹבָה	Peace, blessing and (all) good (to you).	General blessing used by Sephardi Jews.	
8.	Hazak u-varukh	חֲזַק וּבָרוּךְ	Be strong and blessed.	Same as above Also used in Sephardi synagogues to a person who returns to his seat after having performed liturgical functions.	
9.	Yishar koḥakha or Yasher ko'akh	יִישַׁר כֹּחֲךָ	May your strength (increase) go straight.	Congratulations for success and achievement. In traditional synagogues also extended to a person who has been called up to the Torah reading.	
10.	Hazak ve-emaz	חֲזַק וְאַמֵּץ	Be strong and of good courage.	Congratulations for success and achievement. Also extended to a bar mitzvah boy after he has finished reading the haftarah.	e.g., Deut 31:23
11.	Biz hundred un tsvantsik	(Yiddish)	(May you live) until the age of 120.	A wish for long life.	
12.	Tsu gezunt	(Yiddish)	Good health.	To a person who has sneezed; also to someone convalescing.	
13.	a. Li-veri'ut b. Asuta	לְבִרְיאוֹת אַסוּתָא (Aramaic)	Good health. Good health.	Same as above Same as above	
14.	Refu'ah shelemah	רְפוּאָה שְׁלֵמָה	(May you have) a complete recovery.	Wish to a sick person.	
SABBATH AND HOLIDAY GREETINGS					
15.	a. Shabbat shalom Gut shabes b. Shabbat hi milizok u-refu'ah kerovah lavo	שַׁבַּת שָׁלוֹם (Yiddish) שַׁבַּת הִיא מְלִיצֵק וּרְפוּאָה קְרוּבָה לְבוֹא	Good Sabbath. It is Sabbath and forbidden to make supplications but may you soon get well.	The Sabbath greeting When visiting the sick on the Sabbath	Shab. 12a
16.	a. Shavu'a tov A gute vokh	שָׁבוּעַ טוֹב (Yiddish)	A good week.	Saturday night at the end of the Sabbath	
17.	Gut khoydesh	(Yiddish)	A good new month.	On new moons	
18.	Gut Yontev	(Yiddish) corrupted from the Hebrew Yom Tov	A good holiday (to you).	On holidays and festivals	
19.	a. Mo'adim le-simḥah b. Hag same'ah	מוֹעֲדִים לְשִׂמְחָה חַג שְׂמֵחָה	Joyous holidays. Joyous holiday.	On festivals. The response to which is No. 20.	

Jewish Forms of Greetings and Congratulations (continued)

	Hebrew	Literal meaning	Occasions when said	Origin and/or reference
20. Haggim u-zemannim lesason	הגים וזמנים לששון	Holidays and festivals for joy and gladness.	Response to No. 19a and 19b	This wording is from the prayer for the three festivals.
21. Ve-hayita akh same'ah	והיית אך שמח	You shall have nothing but joy.	On Sukkot, when visiting a person in his sukkah	Deut. 16:15
NEW YEAR AND DAY OF ATONEMENT				
22. a. Shanah tovah	שנה טובה	A good year (to you), or its more ample version:	During the Days of Penitence	The wording is from the prayers *Amidah and *Avinu Malkenu
b. Le-shanah tovah tikkatevu (ve-tehatemu)	לשנה טובה תקתבו (ותחתמו)	May you be inscribed (and sealed) for a good year (i.e. in the Book of Life), or its shorter form:		
c. Ketivah tovah	כתיבה טובה	A good inscription (in the Book of Life).		
23. Gam le-mar	גם למר	To you too.	Greetings in Nos. 22a, b, and c, as well as 24a and b On the Day of Atonement, the day of "Sealing the book."	Wording from the prayer book.
24. a. Hatimah tovah	חתימה טובה	A sealing for good (to you), or its more ample version:		As above. This form can be used until Hoshana Rabba.
b. Gemar hatimah tovah	גמר חתימה טובה	A propitious final sealing (to you) (in the Book of Life).		
ON JOYOUS OCCASIONS AND FAMILY EVENTS				
25. a. Mazzal tov	מזל טוב	Good luck (i.e., may you enjoy a favorable zodiac constellation).	For joyous occasions, especially childbirth, betrothal, wedding, bar-mitzvah, etc....	Ashkenazi custom.
b. Be-siman tov	בסימן טוב	Same as above	Same as above	Sephardi custom.
26. Barukh tihyeh	ברוך תהיה	Be you blessed (too), (i.e., the same to you).	Response to Mazzal tov wish	
27. Le-hayyim or	להיים	To life.	On taking a drink, usually alcoholic.	Shab. 67b.
28. Le-hayyim tovim u-le-shalom	להיים טובים ולשלום	Good life and peace (to you).	More ample form of No. 27.	
DURING MOURNING				
29. Ha-Makom yenahem etkhem be-tokh avelei Ziyon vi-Yrushalayim	המקום ינחם אתכם בתוך אבלי ציון וירושלים	May the Lord comfort you among all mourners for Zion and Jerusalem.	To a mourner during the week of mourning.	See: *Mourning
ON YAHRZEIT				
30. Ad bi'at ha-go'el	עד ביאת הגואל	(May you live) until the coming of the Messiah.	On the yearly anniversary of the death of a relative.	Among German Jews.
IN WRITTEN FORM ONLY				
31. Ad me'ah shanah	עד מאה שנה (עמ"ש)	Until a hundred years.	In the heading of a private letter, after the addressee's name	
32. Zekhuto yagen aleinu	זכותו יגן עלינו (זי"ע)	May his merit protect us.	After name of distinguished deceased; usually ḥasidic.	

Jewish Forms of Greetings and Congratulations (continued)

	Hebrew	Literal meaning	Occasions when said	Origin and/or reference
33. Zikhrono li-verakhah or Zekher zaddik li-verakhah	זְכוֹרֵנוּ לְבִרְכָה (ז"ל) זְכוֹר צַדִּיק לְבִרְכָה (זצ"ל)	May his memory be for a blessing. May the memory of the pious be for a blessing.	After name of deceased; also in speech.	
34. Alav ha-shalom	עָלָיו הַשְּׁלוֹם (ע"ה)	Peace be on him.	As above.	
35. Natreih Raḥamana u-varkhei	נְטִייה רַחֲמָנָא וּבְרַכֵּיה (Aramaic) (נר"ו)	May God guard and bless him (you).	Written form of address.	
36. She-yihyeh le-orekh yamim tovim amen	שִׂיחִיָּה לְאַרְךָ יָמִים טוֹבִים אָמֵן (שליטי"א)	May he (you) live for many good days, Amen.	As above.	

°GRÉGOIRE, HENRI BAPTISTE (Abbé Grégoire; 1750–1831), Catholic clergyman, one of the activists of the *French Revolution. Grégoire led the campaign for the civic emancipation of the Jews before and during the Revolution. In the secular field, he held enlightened-revolutionary opinions, while in the religious field his outlook was neo-Jansenist. It was one of the principal expectations of the Jansenists that the Revolution would bring about the reform of the universe at the millennium and with it the return of Jews to the Christian religion and the Land of Israel. Grégoire adhered to these expectations, and the Jewish problem thus at first became the focal point upon which his secular activities and religious hopes converged. In 1785, Grégoire took part in a competition held by the Société Royale des Arts et Sciences of Metz on the question: "Are there possibilities of making the Jews more useful and happier in France?" His work, which shared the first prize, was published in 1789 under the title *Essai sur la régénération physique, morale, et politique des Juifs* (Essay on the Physical, Moral and Political Reformation of the Jews, London, c. 1791). In it Grégoire suggests that the Jews should be westernized and integrated within French society. He repeats the claim, which had already been voiced before him, that the main social and moral shortcomings of the Jews were due to the servitude to which they had been subjected. Amelioration of their status would also achieve reform of their character. Grégoire was, however, more extreme than C.W. *Dohm or *Mirabeau in pressing for the abolition of the fundamental causes of Jewish social and political separatism: communal autonomy, the Jewish quarters, Yiddish, and the "superstitious beliefs" to which the Jews adhered because they were misled by their rabbis. Grégoire however dismissed the traditional Christian claim that the Jews must suffer because of their sins as deicides. On this subject he said: "The oracles which announced the destruction of Jerusalem point out the distant moment at which the consequences of it are to end. The Deity directs every event in a manner agreeable to His supreme views; and perhaps He reserves for us the glory of realizing His designs

in preparing by our humanity the revolution by which these people are to be reformed."

The opinions expressed in his work were the basis for his political and publicistic activities concerning the Jews from 1789 to 1806. Grégoire played an active and energetic role in raising the question of the Jews in the French National Assembly until emancipation was granted to them in September 1791. Among his other activities, he presented the delegation of Alsace-Lorraine Jews to the National Assembly on October 14, 1789, in connection with which he published a *Motion en faveur des Juifs*, which was a summary of his *Essai* drafted in a more revolutionary spirit. In 1802, while on a tour of Europe, he preached, advocating the emancipation of the Jews. In 1806, he published a pamphlet in answer to *Bonald's objections to the civic emancipation of French Jews. After *Napoleon Bonaparte's rise to power, Grégoire gradually withdrew from political activity and became increasingly engrossed in his religious and eschatological hopes, which centered on the expectation of the fall of Rome and the renewed establishment of a Jewish Jerusalem as the capital of a reconstituted Christian world. He organized a Franco-Italian circle which propagated these expectations. One of the members of this circle was A. Manzoni, a father of the Italian national movement. Later publications of his include *Observations nouvelles sur les Juifs, et spécialement sur ceux d'Allemagne* (2 vols., 1806), and *Histoire des sectes religieuses* (2 vols., 1810).

Hertzberg, *French Enlightenment and the Jews* (1968), index.

[Baruch Mevorah]

°GREGORY, name of 16 popes.

GREGORY I (the Great), pope 590–604; the most important of the earlier popes from the point of view of Jewish history. It was he who formulated the Jewish policy of the pa-

pany, faithfully followed in subsequent generations in both its favorable and its unfavorable aspects. Complaining bitterly in his sermons of the obduracy of the Jews and their stony hearts, he took care that the canonical restrictions against them should be obeyed in all their rigor. Twenty-eight of his 800 extant letters deal with Jewish matters. He strongly objected to the observance of any ceremonies that savored of Judaism or tended to obscure the boundaries between Church and Synagogue. Although approving of the initial stages of the reactions against the Jews in Spain under the Visigoths, nevertheless he insisted that the Jews should be treated with humanity and endeavored to have their legal rights confirmed and respected. The Jews of Italy and other countries frequently appealed to Gregory for protection. He was indignant when synagogues were destroyed and ordered them to be rebuilt. While condemning forced baptisms, he did not object to the offering of material benefits to prospective converts; although such actual converts might be insincere, their children would be brought up as faithful Christians. One of his epistles, beginning with the words *Sicut Judaeis*, emphasized that the Jews must be protected in the enjoyment of those rights guaranteed to them by law, and this phrase was prefixed (from the 12th century onward) to the traditional protective *bull generally issued by every pope on his accession.

[Cecil Roth]

GREGORY IX, pope 1227–41. Shortly after his election, Gregory granted the crusaders against the *Albigenses a moratorium on their debts to Jews and canceled the interest due. In 1229, he laid down that a Jewish child who had been baptized by his converted father was to be entrusted to the father and not to the mother, if she remained Jewish. During the same year, he also ordered that strong measures be taken against Jews who refused to pay the church tithes (which were due on houses acquired from Christians). Although the collection of decretals drawn up by *Raymond of Peñafort (as a continuation of the decree of Gratian) in 1230 and promulgated by Gregory in 1234 includes Gregory the Great's letter on the protection of synagogues, it also contains two texts from the Third Lateran Council which are unfavorable to the Jews (see *Church Councils). Intervening against the Jews of Hungary, Castile, and Portugal in 1231, he insisted on the observation of the canons relating to the Jewish *badge and the prohibition on the appointment of Jews to public office. In 1233, in Germany, he also condemned the employment of Christian servants by the Jews. However, during the same year, he issued the protective bull *Etsi Judaeorum* and in 1235 reminded all Christians of the terms of the bull *Sicut Judaeis*. Similarly, on Sept. 5, 1236, he issued orders to several archbishops and bishops of southwestern and western France to compel the crusaders to make good the losses the Jews had suffered at their hands. On several occasions from 1237 on Gregory replied to the anxieties expressed by King Louis IX of France over the use which should be made of the money paid by the Jews, inevitably derived from usury; the pope advised the king to employ

this money for the relief of Constantinople or the Holy Land. Nicholas *Donin turned to Gregory with his denunciation of the Talmud; however, although he issued the order impounding the Talmud for an examination of its contents, its actual condemnation was pronounced by Pope *Innocent IV.

GREGORY X, pope 1271–76; one of the popes most kindly disposed toward the Jews. Renewing the bull of protection *Sicut Judaeis* in 1272, he added an important clause: an accusation against Jews based solely on the testimony of Christians was invalid; Jewish witnesses must also appear. Gregory vigorously combated the *blood libel, declaring that it was no more than an invention propagated in order to extort money from the Jews. He ordered that tribunals were not even to take such accusations into consideration: Jews who had been imprisoned on this charge were to be set free immediately, and in future a Jew was only to be arrested if actually caught in the act. At the Council of Lyons, in the summer of 1274, Gregory met Nathan b. Joseph *Official, with whom he had a lengthy discussion. In a memorandum drawn up for this council by Humbert of Romans in support of Gregory's policy, a long passage comes to the defense of the Jews against future attacks by crusaders. It should be noted, however, that Gregory also renewed the bull of Clement IV, *Turbato Corde*, which delivered the Jews (relapsed converts and their accomplices) into the hands of the Inquisition.

GREGORY XIII, pope 1572–85. It may be common knowledge that this pope reformed the calendar, but it is less well-known that Jews most probably contributed to this. Gregory's policy toward the Jews cannot be distinctly characterized, since it swayed between relative favor and severity. Soon after his election, he protected the Jews in the ghetto of Rome who were in danger of being attacked by the soldiers. Further, an order issued by his notary threatened with hanging any non-Jew found in the ghetto or its vicinity without a valid reason. Gregory authorized once more moneylending with a maximum interest rate of 24%. A warrant of June 10, 1577, confirmed the statutes of the Jewish community and permitted the collection of taxes. In 1581, he guaranteed the safe-conduct of Jews coming into Italy or passing through the country. Although Marranos were also able to benefit from this concession, Gregory nevertheless allowed the Marrano Joseph Saralbo, who had returned to Judaism in Ferrara, to be condemned to the stake in 1583. Gregory was also responsible for organizing regular compulsory missionary sermons, often with the collaboration of apostate preachers (see *Sermons to Jews). The Jewish community was compelled to defray the costs of this institution, as well as the expenses of the House of *Catechumens. In order that converts should not be defrauded of their share in the family fortune, Gregory ordered that an inventory of a family's belongings be drawn up immediately after the baptism of one of its members. The bull *Antiqua Judaeorum improbitas*, of June 1, 1581, authorized the Inquisition directly to handle cases involving Jews, especially those concerning blasphemies against Jesus or Mary, incitement to heresy or assistance to heretics, possession of

forbidden books, or the employment of Christian wet nurses. During the same year, however, following the intervention by Avtalion *Modena, Gregory suspended the order which he had just issued confiscating the books of several Jewish communities of Italy. In 1581, he also exempted the Jews from wearing the badge on certain occasions (journeys, visits to fairs). The new prohibitions against Jewish physicians treating Christian patients contributed to the decline of medical science among Italian Jews. However, shortly before his death, Gregory intervened with the Knights of Malta to obtain the release of Jewish prisoners in their hands, even though the ransom he offered was lower than the sum demanded.

GREGORY, SIR THEODORE (1890–1971), British economist. Gregory, who was born in London, taught at the London School of Economics from 1913 to 1919. He was professor of economics at the University of London from 1917 to 1937 and from 1929 to 1930 was dean of the faculty. In addition to his teaching activities, Gregory served from 1929 to 1931 on the Macmillan Committee on Industry and Finance which laid the basis for the renewal of Britain's financial system. At various times he also acted as an adviser to the governments of Australia, New Zealand, Greece, and the Irish Free State, and was the first economics adviser to the government of India. His main fields were general and monetary economics, and his numerous publications include *Gold, Unemployment, and Capitalism* (1933), *The Gold Standard and Its Future* (1932, 1935³), *India on the Eve of the Third Five-Year Plan* (1961), and *Ernest Oppenheimer and the Economic Development of Southern Africa* (1962). He was knighted in 1942.

[Joachim O. Ronall]

°GREGORY OF TOURS (Georgius Florentius; 538–594), bishop of Tours from 573. Most of the information on the Jews in Merovingian France during the second half of the sixth century comes from Gregory. He was present at – and later participated – in the disputation held between King Chilperic and the Jew *Priscus in 581, which he describes in his *Historia Francorum*. This same work contains a report on the forced conversion of Jews in *Clermont-Ferrand in 576 and Chilperic's forcible attempt to impose conversion throughout his whole kingdom in 582. Gregory is also the source testifying to the ancient presence of Jews in Tours, Marseilles, Orléans,

Bourges, and other places. His works contain invaluable information on the economic and social conditions of the Jews. The manner in which he often introduces Jews into his tales of miracles is curious: their function is in a sense a guarantee to the authenticity of his narrative. It was Gregory who introduced into the West two legends of Oriental origin, concerning “the Jewish child of the blazing furnace” (who had taken communion and been punished by his father, but saved by the virgin Mary) and the desecrated icon (a painting representing Jesus, lacerated by the Jews, which had supposedly begun to bleed); these two legends are of grave significance because one was the distant source of the *blood libel and the other of the *Host desecration accusation.

[Bernhard Blumenkranz]

GRENOBLE, capital of the Isère department, France, formerly capital of Dauphiné. A lamentation on the martyrdom of ten Jews from Grenoble was incorporated in the Burguignon *mahzor* in the second half of the 13th century. After the Jews were expelled from France in 1306, Dauphin Humbert I allowed a number of them to settle in Grenoble, offering them relatively favorable privileges. However, at the time of the *Black Death in 1348, 74 Jews were arrested and, after a trial lasting three months, were burned at the stake. After the general expulsion of Jews from France in 1394, there were no Jews living in Grenoble until after the Revolution. In 1717, a group from Comtat Venaissin attempted to settle there, but the city *parlement* drove them out. A new community was formed after the Revolution. The arrival of Jews from Alsace in 1874 significantly increased the size and importance of the Grenoble community.

Holocaust and Postwar Periods

During World War II, Grenoble was first occupied by the Italians, and then later by the Germans. It was an important center for various forms of Jewish resistance, including armed struggle, the rescue of children, and the hiding and “camouflage” of adults. The *Gestapo became especially active in the area from 1943 on, arresting, torturing, and deporting hundreds of Jews and members of the Resistance. Marc Haguenu (for whom a Jewish group of the French underground was named) was tortured and killed in Grenoble. Léonce Bernheim, a noted Zionist leader, and his wife were arrested in the vicinity of Grenoble. In 1943 at a secret meeting in the city, Isaac *Schneersohn helped lay the groundwork for the creation of the *Centre de Documentation Juive Contemporaine to collect material on the Nazi genocide. After the war, many refugees stayed in Grenoble, and by 1960 the Jewish population numbered over 1,000. Beginning in 1962, the Jewish population increased rapidly, thanks to the influx of immigrants from North Africa. By the late 1960s, it numbered 5,000; by 1971, it had reached about 8,000, but by the turn of the century it had dropped to somewhat less than 7,000. The community has

both an Ashkenazi and a Sephardi synagogue, and maintains a range of institutions, including kosher butchers, a *talmud torah*, various youth groups, and a community center. A Jewish radio station, Kol Hachalom (Voice of Peace), has been in operation in Grenoble since 1983.

[Georges Levitte / David Weinberg (2nd ed.)]

GRESH, ALAIN (1948–), French Egyptian-born historian, journalist, and political activist. Gresh was born in Cairo to a Coptic-Catholic father and a Jewish mother. Though an Egyptian citizen, he was raised and educated in French and studied at the French High School in Cairo. He remembers the war of 1956, after the nationalization of the Suez Canal by Nasser, when as a young boy he could not understand why French planes were bombing Egypt. After his high school was in turn nationalized, Gresh became aware of the growing anti-Jewish feeling in Egypt. Himself a declared atheist, he moved to France towards the end of the Algerian war of Independence, in 1962, and met in Paris Henri Curiel, who led a network of “*porteurs the valise*” – the French militants who provided help and weapons to supporters of Algerian independence. A left-wing, anti-colonialist militant, he grew closer to the left-wing Catholic activists of the CCFD and Témoignage Chrétien and to the *Monde Diplomatique* newspaper, a forerunner of the movement against globalization, and he eventually became one of the paper’s chief editors together with fellow left-wing Jews Dominique Vidal and Serge Halimi. Still committed to atheism, he nevertheless advocated a dialogue between left-wing and grassroots religious movements, whether Christian (CCFD), Islamic, or Jewish. His sympathetic view of Islam is expressed in *L’Islam, la République et le monde* (2004), Gresh’s contribution to the heated and passionate debate about Islam and French laicism. A relatively moderate anti-Zionist, accepting Israel as a given fact and advocating a two-state solution, Gresh got from his Egyptian childhood an understanding of the Arab cause, which he assimilated into his sincere adherence to French Republican values; his position on the Israeli-Palestinian conflict is summarized in a 2001 book, *Israël – Palestine, Vérités sur un conflit*.

[Dror Franck Sullaper (2nd ed.)]

GRESSMANN, HUGO (1877–1927), German Protestant theologian, student of the Bible and the ancient Orient. His teachers included J. *Wellhausen, A. Eichhorn, and M. *Lidzbarski. Gressmann received his doctorate at Goettingen in 1900. In 1902–07 he taught in Kiel; from 1907 until his death he was professor of Bible at the University of Berlin. His main scholarly work was on the history of Israel’s religion. A disciple of Gunkel, his approach was based on the analysis of literary genres and motifs. He acquired an interest in Palestin-

ian archaeology after working with G. Dalman in Jerusalem and Petra. This led him to attempt to discover the influence of the Palestinian geographic milieu on the world view of Israel and on the way of life of the early inhabitants of Palestine. The same interest in realia led to the production of a monumental volume of translated ancient Near Eastern texts and an accompanying volume of illustrations relevant to biblical studies. Gressmann also created a scholarly institute in Berlin for research on post-biblical Judaism. His principal works are: *Der Ursprung der israelitisch-jüdischen Eschatologie* (1905), *Die älteste Geschichtsschreibung und Prophetie Israels* (1910, 1921²), *Mose und seine Zeit* (1913), *Das Weihnachtsevangelium* (1914), and *Der Messias* (1929). He edited the *Altorientalische Texte zum Alten Testament* (1926²) and the *Altorientalische Bilder zum Alten Testament* (1927²); Gressman also edited the third edition of Bousset’s *Die Religion des Judentums im spathellenistischen Zeitalter* (1926³).

ADD. BIBLIOGRAPHY: W. Thiel, in: *DBI*, 1:467–68.

[Moshe Zevi (Moses Hirsch) Segal / S. David Sperling (2nd ed.)]

GREY, JOEL (**Joel Katz**, 1932–), U.S. musical-comedy actor. Born in Cleveland, Ohio, Grey went into vaudeville with his father, the bandleader Mickey Katz, and was helped by Eddie Cantor to secure nightclub engagements. He made his New York debut in *The Littlest Revue* (1956). He won critical acclaim for his Broadway performance in *Stop the World – I Want to Get Off* (1962) and gained further success in the role of Master of Ceremonies in *Cabaret* (1966), for which he won a Tony Award, and as George M. Cohan in *George M* (1968). Grey’s other Broadway appearances include *Borscht Capades* (1951); *Come Blow Your Horn* (1961–62); *Goodtime Charlie* (1975); *The Grand Tour* (1979); and *Chicago* (1996). In 2003 he began his run as the Wizard of Oz in the musical *Wicked*.

Grey appeared in films as well, starting with *About Face* in 1952. His other films include *Come September* (1961); *Cabaret* (1972), for which he won an Academy Award for Best Supporting Actor; *Man on a Swing* (1974); *Buffalo Bill and the Indians* (1976); *The Seven Percent Solution* (1976); *Remo Williams* (1985); *Kafka* (1991); *The Music of Chance* (1993); *The Dangerous* (1994); *Venus Rising* (1995); *The Empty Mirror* (1996); *Reaching Normal* (1999); *Dancer in the Dark* (2000); and *The Fantasticks* (2000).

Grey is one of a handful of performers to win both a Tony and an Oscar for having portrayed the same role on stage and screen (in *Cabaret*). Others among that handful include Yul Brynner for *The King and I*; Rex Harrison for *My Fair Lady*; and Patty Duke for *The Miracle Worker*. He is the father of actress Jennifer Grey.

Grey published *Pictures I Had to Take* (2003), a book of photographs that he had taken over a span of 25 years during his travels to Southeast Asia, Europe, South and Central America, and throughout the United States.

[Ruth Beloff (2nd ed.)]

GRILICHES, AVENIR (1822–1905), Russian engraver. Griliches was born in Vilna. He was self-taught and attracted attention by engraving a striking resemblance of the czar. In 1871 he became one of the few Jews permitted to stay in St. Petersburg, where he was employed by the Imperial Mint. In 1889 and 1898 Griliches was listed officially as mint engraver at St. Petersburg. He is credited with engraving the state seals of Alexander III and Nicholas II, as well as the five ruble, one ruble, half ruble, and twenty kopeck coins. He produced some of the most distinguished Russian commemorative medals of the 1880s and 1890s. His son ABRAHAM (1852–c. 1916), also born in Vilna, graduated from the rabbinical school and painters studio there, and then from the St. Petersburg Academy of Fine Arts in 1876. He was employed as an engraver at the Imperial Mint. Raised to the position of senior engraver, he is credited with striking some dies of the coinage of Nicholas II, as well as the 1912 Alexander III commemorative medal. Abraham Griliches was even more noted for his medals, for which he received awards at the Paris Exposition in 1889 and 1900. He was also an excellent gem engraver. Many of his works are kept in the State Hermitage Museum and other museums in Russia.

[Daniel M. Friedenberg]

GRINBERG, ALEKSANDER ABRAMOVICH (1898–1966), Russian chemist. Grinberg graduated from the University of Leningrad and was appointed professor of chemistry at the Lensovet Leningrad Technological Institute (1936). He was an authority on the chemistry of complex compounds and especially platinum chemistry. He was awarded a Stalin Prize (1946) and was an academician of the U.S.S.R. Academy of Sciences (1958).

GRINKER, ROY RICHARD SR. (1900–1993), U.S. neuropsychiatrist and psychoanalyst. Born in Chicago, Grinker taught at the University of Chicago from 1927. During World War II he rose to the rank of colonel in the U.S. Army Medical Corps. From 1946 Grinker was director of the institute for psychosomatic and psychiatric research and training at the Michael Reese Hospital in Chicago, and supervisory analyst at the Chicago Institute for Psychoanalysis. From 1951 he was clinical professor of psychiatry at the University of Illinois and in 1969 became professor of psychiatry at the University of Chicago's medical school.

Grinker was chief editor of the *Archives of General Psychiatry* from 1956. He also wrote many books and articles in his professional field. After publishing the textbook *Neurology* (1934, 1966⁶), Grinker collaborated with J.P. Spiegel in writing *Men under Stress* (1945), an account of the treatment of war neuroses based on military personnel's experiences in North Africa. The two men developed the treatment of the emotionally traumatized soldier with a drug to promote a "catharsis" of his battle experiences. Grinker outlined the results of his research and therapeutic treatment of psychosomatic disturbances in two books: *Psychosomatic Research* (1953) and (with

F.P. Robbins) *Psychosomatic Case Book* (1954). He also devoted much attention to the theory of an integrated approach to normal and disturbed human behavior. He tried to elicit the relations between the intrapersonal physical and psychological systems and those with which the person interacts in his environment. Grinker's views were elaborated in two published symposia: *Toward a Unified Theory of Human Behavior* (1956), which he edited, and *Integrating the Approaches to Mental Disease* (ed. by H.D. Kruse, 1957).

He was awarded the Distinguished Service Award by the American Psychiatric Association in 1972 and by the University of Chicago's Medical and Biological Sciences Alumni Association in 1974.

Other books by Grinker include *The Borderline Syndrome: A Behavioral Study of Ego Functions* (with B. Werble and R. Drye, 1968), *Psychosomatic Concepts* (1973), *Psychiatry in Broad Perspective* (1975), and *Fifty Years in Psychiatry: A Living History* (1979).

[Louis Miller / Ruth Beloff (2nd ed.)]

GRINSPUN, BERNARDO (1926–), Argentinian economist and statesman, specializing in international economic and foreign debt. He belongs to the outstanding Argentinian circle of economists of our time (Aldo Ferrer, Guido Di Tella, etc.) and was linked with the group that controlled economic affairs during the former Radical party's government of President Illia (1963–66) on whose staff Grinspun held the post of secretary of commerce. He is also connected with the enterprise group which led the Federation Economica de Buenos Aires and especially the medium-size entrepreneurs. When democratic rule was restored to Argentina in 1983, Grinspun was appointed minister of finance in the cabinet of President Raul Alfonsin, in which capacity he sought to extract the country from the serious economic plight in which it had been left by the military junta.

[José Luis Nachenson and Noemi Hervits de Najenson]

GRISHABER, ISAAC (d. 1815), Hungarian rabbi. Born in Cracow, Grishaber went in 1782 to Hungary and was appointed rabbi of Paks. For an unknown reason he left this community and went to serve the community of Baja, but toward the end of his life he returned to Paks. He was in halakhic correspondence with Ezekiel *Landau, author of the *Noda bi-Yehudah*, and studied under him for a while in Prague, as well as with Moses *Sofer. Grishaber was resolute in his views and fought for them stubbornly and courageously. He was involved in a violent controversy in 1798–99 because of his dispute with Rabbi Aaron *Chorin over whether sturgeon is *kasher*. He published a pamphlet on the subject, *Makel No'am* (Vienna 1799), giving his reasons for forbidding this fish, with supporting letters from contemporary rabbis in Hungary and elsewhere.

BIBLIOGRAPHY: P.Z. Schwartz, *Shem ha-Gedolim me-Erez Hagar*, 1 (1913), 506 no. 227; A. Stern, *Melizei Esh al Hodshei Kislev-Adar* (1962²), 206 no. 67; D. Sofer, *Mazkeret Paks*, 1 (1962), 3–91.

[Samuel Weingarten-Hakohen]

GROBART, FABIO (Avraham Simchovich; 1905–1994), Cuban Communist leader. Grobart was born in Trzciany (Poland) as Avraham Moishe Grobart to an Orthodox family. His father cleaned hogs' skins and his mother was a servant. He was sent to school to Goniondz, where his uncle trained him to become a tailor. Attracted by Marxist ideals, he became an active member of the Communist Youth League in Bialystok. In 1922 he had to flee from the police and changed his name to Avraham Simchovich.

He reached Cuba in 1924, where he joined the small Sección Hebrea de la Agrupación Comunista de la Habana (Jewish Section of the Communist Organization of Havana), which had been founded shortly before. On August 16, 1925, he was one of the ten founders of the Cuban Communist Party, and was active in diffusing its doctrines among Jewish workers. After his arrest and deportation (1930) he reached Moscow, where he was probably trained to return to Cuba under a covert identity (as Otto Modley). He became a central figure in the Cuban Communist Party, although he acted mostly behind the scenes. From 1952 to 1960 he represented the Cuban workers in the World Labor Organization in Vienna and Prague.

In 1960, shortly after the outbreak of the Castro Revolution, he returned to Cuba, and in 1965 he was appointed director of the journal *Cuba Socialista*. He was considered the ideologist of the Cuban Communist Party. He founded the Institute of History of the Cuban Communist Party (1973) and was a deputy of the Cuban Parliament.

BIBLIOGRAPHY: M. Corrales, *The Chosen Island: Jews in Cuba* (2005).

[Margalit Bejarano (2nd ed.)]

GROCK (Charles Adrien Wettach; 1880–1959), Swiss clown. Born at Moulin de Loveresse, the son of a Jewish father and non-Jewish mother, Grock was first attached to a traveling circus. He performed on the stage in England from 1911 to 1924, and afterward throughout Europe. He specialized as a musical clown, playing a tiny violin at a grand piano and getting into trouble with both. He built his act into the world's most famous comic display. His German autobiography appeared in English in 1957 as *Grock, King of Clowns*.

GRODNO (Horodno), city in Belarus, formerly Poland-Lithuania. One of the oldest Jewish communities in the former grand duchy of *Lithuania (see *Poland-Lithuania), the Grodno community received a charter from Grand Duke Witold in 1389. This indicates the existence of a synagogue and cemetery and shows that Jews owned real property in the city and its environs and engaged in commerce, crafts, and agriculture. They were banished by the general decree of expulsion of the Jews from Lithuania in 1495 and their property was sequestered, but they were permitted to return and to claim their possessions in 1503. During the 16th century the townsmen of Grodno were consistently hostile to the Jews, the artisans in particular. Grodno, however, became noted as a center of Jewish learning. By the end of the century a number of *bat-*

tei midrash and yeshivot had been established and Horodno was written by the Jews as though it were *Har-Adonai* ("the holy mount" in Hebrew). The community was spared during the *Chmielnicki massacres in 1648–49 and gave asylum to fugitives from the south, but later suffered from the Russian invasions of 1655–57 and subsequent invasions by the Swedes. The fanaticism of the Jesuits was from 1616 an additional spur to frequent calumnies against the Jews, and the kidnapping of Jewish children for forced conversion. The community became heavily involved in debt to pay for the defense and ransom of those victims. A *blood libel in 1790 resulted in the death of R. Eleazar b. Solomon of Virbalis (Verzhbolow). Another ritual murder accusation was made in 1816. One of the three principal communities in Lithuania, Grodno was represented on the Council of Lithuania (see *Councils of the Lands). It thus assumed responsibility for the care of Jewish affairs in general, while undertaking Jewish defense in libel cases in particular, since it was the seat of the Lithuanian court of appeal. The first Hebrew book to be published in Lithuania was printed in Grodno in 1788 in the Royal press. A second Hebrew press, established in Grodno in 1793, formed the kernel of the celebrated publishing and printing house owned by the *Romm family, whose early publications were in "Vilna and Grodno" (subsequently in Vilna).

Population Figures

In 1549 the Jewish population formed 17% of the total; in 1560 it numbered 1,000 according to one estimate, in 1764, 2,418 and in 1793, some 4,000. When Grodno passed to Russia with the third partition of Poland in 1795, the Jewish community was the largest in Lithuania after Vilna. The Jewish population numbered 8,422 in 1816 (85.3% of the total); approximately 10,300 in 1856–57 (63.3%); 27,343 in 1887 (68.7%); 27,874 in 1904 (64.1%); 34,461 in 1912 (c. 60%); 15,504 in 1916 (64.4%); 18,697 in 1921 (53.4%); and 21,159 in 1931 (42.6%). The decrease in the Jewish population during World War I was partly due to their expulsion to inner Russia by the Russian military authorities in 1915. The decrease relative to the general population after the war was due both to Jewish emigration from Grodno and to the official encouragement given to Poles to settle there after its conquest by the Poles in 1919.

Occupations

The principal traditional sources of income of Grodno Jews were commerce (principally in agricultural and timber products) and crafts, and more recently, industry. In 1887, 88% of commercial undertakings, 76% of factories and workshops, and 65.2% of real estate in Grodno were Jewish owned. The situation did not alter appreciably before World War I, but after Grodno's reversion to Poland the Jews were systematically ousted from their economic positions and from the middle of the 1930s a stringent anti-Jewish economic boycott was imposed. In 1921 there were 1,273 industrial enterprises and workshops in Jewish ownership, employing 3,719 persons (2,341 of them hired workers, of whom 83.2% were Jews), 34.6% for food processing (and tobacco), and 29% garment manufacturing. In

the 1930s there were 938 Jewish artisans: 364 were tailors and 168 cobblers. Jewish doctors and lawyers constituted half the professional people in Grodno. In 1937 there were 65 Jewish-owned large or medium-sized factories employing 2,181 workers, of whom 895 (41%) were Jews, as against 51 state-owned or non-Jewish enterprises employing 2,262 workers. Among the other main enterprises then owned by Jews were a large bicycle factory, a factory for artistic leather products, a glass factory, a lithographic plant, foundries, and breweries. Some of the plants proved good training grounds for potential immigrants to Palestine during the 1930s. The huge Y. Shereshevsky tobacco factory in Grodno employed, before World War I, some 1,800 workers and provided a livelihood for hundreds of families in subsidiary activities, nearly all Jewish. Work stopped on the Sabbath and Jewish festivals and it maintained a school for the children of the employees. The Polish government nationalized it in the 1920s, making it conform to the official pattern and the majority of the Jewish workers were forced out.

Rabbis and Authors

Among the notable rabbis serving in Grodno were Mordecai *Jaffe (16th century); Jonah b. Isaiah Te'omim, author of *Kikayon de-Yonah* (1630); Moses b. Abraham, author of *Tiferet le-Moshe* (1776); Joshua b. Joseph, author of *Meginnei Shelomo* (1715); Mordecai Suesskind of Rothenburg (17th century); and Simḥah b. Naḥman Rapoport of Dubno. The last to hold office was Benjamin Braudo (d. 1818). The dispute over the succession to the rabbinate after his death led to its abolition in Grodno and the appointment of *morei hora'ah* (decisors on law). The kabbalist and ethical pietist Alexander *Susskind, author of *Yesod ve-Shoresh ha-Avodah* and *Zavva'ah*, was a citizen of Grodno. Also renowned beyond Grodno in the 19th century was Nahum b. Uzziel – R. Noḥumke – a scholar who was famous for his devoted care of the poor.

Communal Institutions

In the 19th century, the Grodno community supported numerous *battei midrash* and societies formed by the **Mitnaggedim* for religious studies, which were attended regularly by people from all classes of the community. The famous scholar R. Shimon *Shkop headed the great "Sha'arei Hatorah" yeshivah in Grodno (1920–39). The Hebrew poet Abba Asher Constantin *Shapiro originated from Grodno. The Hebrew author Abraham Shalom *Friedberg and the Yiddish poet Leib Naidus lived there. The Jewish community made outstanding provision for benevolent and welfare institutions. From the 18th century there existed the society for care of the sick (*Bikkur Ḥolim*). Some wealthy members of the community contributed lavishly toward establishing orphanages, hospitals, old-age homes, and an excellent trade school. One of the first loan and savings cooperative funds in Russia was opened in 1900.

Labor and Socialist Movements

A Jewish Socialist circle already existed in Grodno in 1875–76 where the first Jewish Socialists turned their attention to the

working man. From the end of the 1890s the various trends of Jewish labor movements became increasingly active in Grodno, in particular in the tobacco factory. Central to the movement was the *Bund. The labor movements played an important part in organizing Jewish self-defense in Grodno in 1903 and 1907, and some Jewish youngsters there also avenged the bloodshed that resulted from the pogroms at *Bialystok. In the years between the two world wars the working movement fought for the rights of the Jewish worker to obtain employment and against anti-Jewish discrimination by the Polish government.

Zionism

A legal document of 1539 which deals with a Jewish couple who intended to leave Grodno for Jerusalem is almost a symbol of the strong roots later struck by the *Ḥibbat Zion* and Zionist movements in Grodno. Among Grodno Jews joining the early settlements in Erez Israel in the 19th century was Fischel *Lapin, who settled in Jerusalem in 1863 and was a prominent communal worker. A society for settling in Erez Israel was founded in Grodno in 1872, and a second acquired land in *Petah Tikvah on its foundation in 1880, where a pioneer settler from Grodno was Mordecai *Diskin. The society of *Ḥovevei Zion in Grodno in 1890 gave generous support in building the Girls' Hebrew school in Jaffa. Grodno was one of the most active centers of Ḥovevei Zion, as also subsequently of the Zionist movement in Russia, in which the two brothers Bezalel and Leib *Jaffe were prominent. Zionist shekels were printed clandestinely in Grodno. Grodno remained one of the important centers of the Zionist movement and its constituent parties and youth movements between 1916 and 1939. During World War II, when Grodno was under Soviet rule (1939–41), a clandestine Zionist center there transferred intending immigrants to Erez Israel via Vilna, then the capital of Soviet Lithuania. In the educational sphere, the reformed *heder* (*heder metukkan*), founded in Grodno in 1900 and providing instruction in Hebrew, was among the first and most successful of its type in Russia. Hebrew teachers' preparatory groups were introduced in 1901 and the famous "Pedagogic Courses" which trained numerous pioneer Hebrew teachers in 1907. After World War I the Grodno Zionists, headed by Noah Bas, instituted the Hebrew educational system *Tarbut. Jewish pioneers from Grodno emigrated in the successive *aliyyot* from the beginning of the *Bilu movement, and Grodno youth were among the first to join the Second Aliyah. The Grodno *He-Ḥalutz association was among the first founded in Lithuania, and the Third Aliyah from Poland was initiated by Grodno pioneers.

Holocaust Period

Under Polish rule there were pogroms in Grodno as early as 1935. A large-scale pogrom took place between Sept. 18 and 20, 1939, during the Polish army's withdrawal from the town prior to the entry of the Soviet Army. The Nazis occupied Grodno on June 22, 1941, the day on which Germany attacked the Soviet Union. On July 7, around 100 Jews in the profes-

sions were arrested and executed by the Nazi authorities. Jews were banned from public transportation, from places of entertainment, and from using the sidewalks. A *Judenrat* was organized and forced labor was imposed. While Jews were evicted from their apartments, German soldiers looted Jewish homes. On Nov. 1, 1941, the Jews of Grodno were segregated into two ghettos: one for “skilled workers” housed 15,000 in the small, overcrowded “synagogue quarter” (*Shulhof*) and the fish market; the other, which was smaller and reserved for the “unproductive,” held 10,000 in the suburb of Slobodka. On Nov. 2, 1942, the ghettos were surrounded and sealed off, and their liquidation began. The liquidation took place in several stages. On Nov. 14–22, the Slobodka ghetto was destroyed and its inhabitants were taken “to work places” but in fact to their death in Auschwitz. That same month 4,000 people were expelled from the ghetto in the *Shulhof* to the transit camp of Kelbasin, 4 mi. (6 km.) from Grodno. Some of them died there as a result of the inhuman conditions, and the rest were expelled after a short period together with the Jewish population of the villages in the Grodno region, who were then sent to either Auschwitz or Treblinka. In a big Nazi *Aktion* on Jan. 17–22, 1943, 11,600 Jews were sent to Auschwitz, where 9,851 were gassed immediately and 1,799 put to work. Another 5,000 from the skilled-worker ghetto remained in the city. In February 1943, 4,000 were deported to the Treblinka death camp, and the remaining 1,000 skilled workers were deported on March 12 to Bialystok. According to a Nazi source, 44,049 Grodno Jews were sent to the extermination camps, 20,577 Jews from Grodno itself, and 23,472 from neighboring townlets. Some 180 Jews remained in Grodno and the district, hidden among gentiles or otherwise concealed until the town was liberated by the Soviet Army on July 14, 1944. Early in 1942, a Jewish underground resistance and defense movement was formed; members of Zionist youth movements, like Bela Hazzan, set up a communications center in Grodno for contact with the ghettos in *Vilna, *Bialystok, and *Warsaw; there was also a workshop for forging “Aryan” papers and travel permits for members of the movement engaged in rescuing Jews and in armed defense. Before the big “*Aktion*,” an unsuccessful attempt was made to assassinate Streblov, a chief executioner of Grodno Jewry. There was also an attempt to organize a mass escape from the Great Synagogue, which served as a collection center for deportation, and to assassinate Kurt Wiese, the other chief executioner of Grodno Jewry.

After World War II

Groups of Grodno Jewish partisans were active in forests. Some 2,000 Jews resettled in Grodno over a period of years following its liberation. By the 1960s Grodno had no synagogue. The “old” synagogue was a storehouse; the “new” one was used as a sports hall. In the mid-1950s the Jewish cemetery was plowed up. Tombstones were taken away and used for building a monument to Lenin. There are four mass graves of Jews near the city, on which monuments were erected after World War II. One of them was repeatedly desecrated and

damaged and there were several cases of graves being similarly treated. In the 1990s the revived community started renovating the synagogue and in the early 2000s had a resident rabbi.

GRODZINSKI, HAYYIM OZER (1863–1940), talmudic scholar and one of the spiritual leaders of Lithuanian Orthodox Jewry, son of the talmudic scholar, Solomon David Grodzinski (1831–c. 1908). Grodzinski studied in the yeshivot of Eisheshok and Volozhin, where he was known as an *illui* (prodigy). In 1887 he was appointed one of the *dayyanim* of the *bet din* of Vilna, and he came to be regarded as its leading *dayyan*. Grodzinski was one of the initiators of the Vilna Conference of 1909, which resulted in the formation of the Orthodox Keneset Israel organization. He also participated in the founding conference of the Agudat Israel at Katowice in 1914, served as a leading member of that party's Council of Sages, and was the prime force for spreading its influence in and around Vilna. An initiator of the conference of rabbis at Grodno in 1924 which founded the Va'ad ha-Yeshivot (“Council of the Yeshivot”) for the spiritual and material support of yeshivot and their students, he was the moving spirit behind the Council.

Grodzinski was a vehement opponent of Zionism and of secular education for Jews, his aim being to preserve the Torah milieu of the Lithuanian yeshivot and townlets intact. In 1934 he prevented the transfer of the Hildesheimer rabbinical seminary from Berlin to Tel Aviv. Asked by an Agudat Israel kibbutz whether it was permitted to settle on Jewish National Fund land, he advised its members “Let him who is firm in spirit stay steadfast in his place and not hurry to join the swelling stream... until God has mercy on His people and hastens his redemption.” In 1929, when Isaac Rubinstein was chosen as chief rabbi of Vilna, Grodzinski's supporters sparked a violent controversy in the community.

Grodzinski's responsa were published in three volumes under the title of *Aḥi'ezer* (1922, 1925, 1939). In the introduction to the last volume, written on the eve of the Holocaust, he spoke of the fear and dismay that was rapidly descending upon the entire Jewish people, both in the Diaspora and (in a reference to the 1936–39 riots) in Erez Israel. He wrote about the spiritual disintegration of the Jewish community, and its laxity in the observance of the Sabbath, *kashrut*, and the laws of marital purity. All this he blamed on the Reform movement in the West and on secular education in the East. His sole consolation was in “the important work of preserving and strengthening Torah education” and in the fact that “the large and small yeshivot were the strongholds of Judaism... in Poland and Lithuania.”

[Haim Hillel Ben-Sasson]

GRODZINSKY, ZVI HIRSCH (1857/8–1947), Lithuanian-born U.S. rabbi and scholar. Grodzinsky, who served as chief rabbi of Omaha, Neb. (1891–1947), was a prolific rabbinic scholar and a leading organizer and framer of Orthodox Jewry and its rabbinate in America. Many of his works have become standard texts.

Born in Taurage, Lithuania, Grodzinsky received his early education in Ivye. In 1888, he came to Vilna to study in a *kollel* and probably received part of his education at the yeshivah of *Volozhin. By then, he had received *semikhah*, either from the rabbi of Taurage, Gershon Mendel Ziv, or Rabbi Isaac Elhanan *Spektor.

Grodzinsky gained an international reputation through his scholarly contributions. His published works include *Mikveh Yisrael*, a digest of the laws of *mikva'ot*; *Likutei Zvi* (1916), a reference work on the whole of *Orah Hayyim*; *Milei de-Berakhot* (1923, 1945) a commentary on the first 34 pages of Tractate *Berakhot*; and *Mikraei Kodesh* (1936, 1937, 1941), a three-volume examination of the laws of reading, writing, and qualifying Torah scrolls. He also authored articles in such leading rabbinic journals as *Ha-Meassef*, *Ha-Pardes*, and *Ha-Mesilah*.

Grodzinsky's published works comprise only a fraction of his written works. The bulk of his output remains in manuscripts, many in publishable form, housed at Oẓar ha-Poskim in Israel. They include *Tiferet Zvi*, 64 responsa; alphabetically arranged comments on Talmudic topics; a multi-volume commentary on Shulḥan Arukh, *Yoreh De'ah*; discussions of the laws of *stam yenam* and *niddah*; indexed comments on the responsa of R. *Asher Ben Jehiel (the Rosh); an alphabetical summary of the major Talmudic expressions and phrases; indexed sermons on the Babylonian Talmud and calendrical occasions; manuscripts of Grodzinsky's published works with corrections and addenda; loose responsa; and correspondence with American rabbinic leaders.

Arriving in Omaha in 1891, Grodzinsky sought to fulfill two roles: the communal responsibilities of the developing American rabbi and the halakhic duties of the East European *av beit din*. A founder of the *Agudat ha-Rabbonim, the first Orthodox rabbinical organization in North America, Grodzinsky personally encountered the pressure confronting European, Yiddish-speaking Orthodox rabbis in America. In 1916, before he had reached 60, the rise of Modern Orthodoxy and the Conservative movement compelled the two largest congregations he led in Omaha to seek an English-speaking rabbi.

Uncompromised by his Americanized congregants, Grodzinsky continued to serve as the halakhic decisor of his community and to write prolifically until his death. Yet, he also cautioned European Orthodoxy and its extensions in America to see the rabbi as an activist leader and halakhic authority rather than simply as a great scholar.

[Jonathan Rosenbaum (2nd ed.)]

GRODZISK MAZOWIECKI, small town in Poland. It had 157 Jewish inhabitants in 1765, 790 in 1856, 2,154 in 1897, 2,756 in 1921 (out of 11,254), and 3,600 in September 1939. Grodzisk was the seat of a ḥasidic dynasty, founded by Elimelech of Grodzisk (d. 1892). His grandson R. Israel Shapiro, a scholar and writer of songs, who after World War I settled in Warsaw, perished in the Holocaust, as did Eliezer b. Abraham Ḥayyim of Falancz, rabbi in Grodzisk from 1913 to 1919. Members of the Grodzisk dynasty settled in Erez Israel. During World War II, refugees swelled the local Jewish population to 6,000. In February 1941, the Germans transferred the Jews of Grodzisk to the Warsaw Ghetto, and subsequently to the death camp of Treblinka.

GRODZISK WIELKOPOLSKI (Ger. Graetz; Yid. גרודזיץ), town in W. Poland, formerly in the province of Posen (Prussia). Jewish merchants frequented the town in the middle of 16th century and settled there at the end of the century. The Jewish population numbered 374 in 1663, 812 in 1765, 1,156 (half the total population) in 1793, and 1,634 in 1820. In 1820 the existing synagogue collapsed and a new one was opened in 1822. Rabbis of Grodzisk include Judah Loeb b. Solomon of Prague, who had to flee during the Northern War (1700–21); Gershon b. Jehiel Landsberger (c. 1726–40); Zevi Hirsch b. Benjamin (c. 1768–70), author of *Tiferet Zevi* and rabbi in Brody and Hamburg; and Benjamin Schreiber (c. 1820–39). In the second half of the 19th century the noted talmudist and *zaddik* Elijah *Guttmacher, among the founders of Hovevei Zion, forerunner of Zionism, lived in Grodzisk and was famous as an *admor*. Many ḥasidim, mainly from Congress Poland, used to visit him and get his blessing. Kibbutz Sedeh Eliyahu is named for him. In 1898 a society for the study of Jewish history and literature was founded there. Toward the end of the 17th century Jews from Grodzisk visited the Leipzig fairs. Beginning from the 19th century Jewish merchants contributed to the economic development of the town, establishing business connections with various towns in Germany.

Toward the end of the 19th century the Jewish population declined, numbering 240 in 1905, and 61 in 1921 (out of a total population of 5,604), and 71 in neighboring Buk (out of 3,408). In 1922 the community ceased to exist. On the eve of World War II there were around 50 Jews in the town. Many fled, and on September 7, 1939, the last 13 Jews were expelled to Buk and from there to the General Gouvernement. In 1940 the synagogue and Jewish cemetery were destroyed.

and the site became a public garden. The communal archives (including Guttmacher's correspondence) were transferred to Jerusalem. Rudolph *Mosse, the well-known publisher of the *Berliner Tageblatt*, who was born in Grodzisk, founded a hospital there in the name of his father who practiced as physician in the town.

[Shlomo Netzer (2nd ed.)]

GROJEC (Yid. *Gritse*), small town in Warsaw district. The privilege granted to the town in 1744 prohibited Jewish settlement there; nevertheless Jews began to settle there in the 18th century; they are mentioned there in 1754. The community numbered 1,719 in 1856 (68.7% of the total population), 3,737 in 1897 (61.9%), and 4,922 in 1921 (56.3%). On the eve of World War II there were approximately 5,200 Jews living in Grojec.

Holocaust Period

With the entry of the German army on Sept. 8, 1939, terrorization of the Jewish population began. The synagogue was burned. On Sept. 12, 1939, all men between the ages of 15 and 55 were forced to assemble at the market, and from there were marched on foot to Rawa Mazowiecka, about 37 mi. (60 km.) away. Many were shot on the way. During the spring of 1940 about 500 Jews from Lodz and the vicinity were forced to settle in Grojec. In July 1940 a ghetto was established and the plight of the Jewish inhabitants drastically deteriorated. They suffered from hunger, epidemics, and lack of fuel during the winter of 1940–41. About 1,000 fled to Bialobrzegi and were murdered there or deported to Treblinka in the fall of 1942. The Grojec ghetto was liquidated on February 28, 1942, when most of the remaining Jews were deported to the Warsaw ghetto to share the fate of the Jews there. Of those still in Grojec, 83 were deported after some time to a slave labor camp in Russia near Smolensk, where almost all were murdered. The last 250 Jews were executed in the summer of 1943 in a forest near Gora Kalwaria. After the war the Jewish community in Grojec was not reconstituted. Organizations of former Jewish residents of Grojec were established in Israel, France, the U.S., Canada, and Argentina.

GRONEMANN, SAMUEL (Sammy; 1875–1952), German author and Zionist leader. Gronemann, who was born in Strasburg, West Prussia, was the son of Selig Gronemann (1845–1918), a rabbi and scholar who refused to endorse the anti-Zionist stand of the German "Protestrabbiner" in 1898.

After studying at the Klaus in Halberstadt, the Hildesheimer Rabbinical Seminary, and the University of Berlin, Gronemann qualified as a lawyer and then embarked on a career as a journalist, playwright, and novelist. While serving on the eastern front in World War I, Gronemann came in touch with Jewish communities in the occupied territories, and after the war ended he personally helped many Jewish refugees. He also helped bring the Yiddish Theater from Vilna to Berlin. Gronemann served as legal adviser to the Union of German Actors and Playwrights. His novels include *Tohuwabohu* (1920); *Hawdolah und Zapfenstreich* (1924), in which the East European milieu is prominently featured; and *Schalet* (1927). He also wrote a Purim play entitled *Haman's Flucht* (1926). A noted wit, Gronemann's most successful works were his comedies which were adapted for the Hebrew stage after he settled in Tel Aviv in 1936. These include *Jakob und Christian* (1936), which mocked Nazi race theories; *Der Prozess um des Esels Schatten* (1945), a political satire; *Heinrich Heine und sein Onkel* (1947), dealing with a debate about baptism in a Jewish family; and *Die Koenigin von Saba* (1951). He is perhaps best remembered, however, for *Der Weise und der Narr: Koenig Salomo und der Schuster* ("The King and the Cobbler," 1942), a comedy in a legendary biblical setting. The Hebrew version by Nathan *Alterman, *Shelomo ha-Melekh ve-Shalmay ha-Sandelar* (1942), was performed by the *Ohel Theater in Tel Aviv. In 1965 it was set to music by Alexander Argov and performed by the *Cameri theater. It became the first successful Hebrew musical comedy and was performed in various countries. A pioneer German Zionist, Gronemann was a delegate to the Zionist congresses from 1901 onward and was for many years a member of the Zionist Actions Committee. His reputation for political impartiality brought him the presidency of the Zionist Congress court. Gronemann's memoirs, *Erinnerungen eines Jecken* (published in Hebrew translation in 1947 and only in 2002/2004 in the original German), are an important contribution to the history of the Zionist Movement in Germany. A traditionally observant Jew, he was an outspoken critic of Diaspora assimilationism and also attacked certain aspects of ultra-Orthodoxy.

GRONER, DOVID YITZCHOK (1925–), Australian rabbi; leader of the Chabad movement in Australia. Groner was born in New York and settled in Melbourne in 1958. He had previously visited Australia as a student rabbi in 1947. He was probably the most important Lubavitcher rabbi in Australia, and was the principal of Yeshivah College, a Lubavitcher day

school in Melbourne, from 1963. Under his leadership the Lubavitcher movement greatly expanded in Australia.

[William D. Rubinstein (2nd ed.)]

GROPER, JACOB (1890–1966), Yiddish poet. Born in Mihaileni, Romania, Groper was active in furthering Yiddish culture while studying law at the University of Jassy. After spending most of his life in Romania, mainly in Bucharest, he settled in Haifa in 1964. A participant in the 1908 *Czerowitz Yiddish Conference, he began to write in Romanian, German, and Yiddish, but from 1908 concentrated on Yiddish, his poems appearing from 1914 in periodicals in Vilna, Lemberg (Lvov), Jassy, Bucharest, and London, as well as in anthologies and in the volume *In Shotn fun a Shteyn* ("In the Shadow of a Stone," 1934). Some of his lyrics were printed in the Roman alphabet and in translation in various Romanian Jewish publications. While he was not a prolific writer, Groper's lyrics, romantic in tone, were orally transmitted among Jewish youth and contributed to raising the prestige of Yiddish in Romania. He was widely known and admired by Jews and Gentiles for his vast culture and brilliant mind as revealed in his improvised talks. By the terms of his will, his collected works were published in Yiddish in Israel with a parallel Hebrew translation (1975); another bilingual volume, of tributes to him, appeared the following year.

[Sol Liptzin]

GROPPER, WILLIAM (1897–1977), U.S. cartoonist, painter, and printmaker. New York-born Gropper grew up in poverty on the Lower East Side. This early existence heightened Gropper's sensitivity to social inequality, and indeed he used his art to comment on the human condition. His studies with Robert Henri and George Bellows at the Ferrer School (1912–15) cemented the artist's desire to make art focusing on contemporary life, and by 1917 he regularly contributed incisive cartoons to the *New York Tribune*. He also created political satire for such left-wing publications as *The Liberator*, *New Masses*, and the Yiddish *Morning Freiheit* in the 1920s. Throughout these years Gropper also painted, but he did not have his first one-person show of oils until 1936. Paintings such as *The Senate* (1935, Museum of Modern Art) and *Hostages* (c. 1937, Newark Museum) address similar themes as Gropper's cartoons.

During the Depression, he was employed by the Works Progress Administration, for which he executed several murals, including one for the Department of the Interior in Washington, D.C. During the war he made cartoons, pamphlets, and war bond posters, often with overt anti-Nazi themes, as well as a few paintings expressing his horror at the incoming

news of Nazi barbarism. In *De Profundis* (1943, collection unknown) he presents the Jew of Eastern Europe as the epitome of all human suffering. Gropper's 1948 visit to the ruins of the Warsaw Jewish Ghetto made a deep impression on him, and from that year on he made one painting annually in memory of those who died in the Warsaw Ghetto. Gropper also designed stained-glass windows for a Temple Har Zion in River Forest, Illinois (1965–67) and illustrated several books.

[Samantha Baskind (2nd ed.)]

GROSMAN, LADISLAV (1921–1981), Slovak writer and scriptwriter. Born in Humenn, Slovakia, Grosman was deported to a forced labor camp during World War II. In 1945, he settled in Prague. He worked as an editor in Prague and Slovakia until 1963. From 1965 to 1968 he worked as a scriptwriter. In 1968 he immigrated to Israel, where he taught at Bar-Ilan University. Before then, more than 40 of his short stories and articles had been published in Czech cultural reviews and magazines. He rewrote his story *Past* ("The Trap," 1962), retitling it *Obchod na korze* ("The Shop on Main Street," 1965). The screen version of the story (directed by Jan Kadar and Elmar Klos) won an Academy Award in 1966 for Best Foreign Language Film. (The main protagonist of the story, the old shop owner played by Ida Kaminska, who is being "Aryanized," lives under the delusion that she cannot be harmed. The new owner respects her, and a special bond of esteem develops between the two.) A collection of stories *Nevěsta* ("The Bride," 1969) appeared just after Grosman left for Israel. It is comprised of seven stories from Slovakia's Jewish milieu. In Israel, Grosman wrote a screenplay for the TV movie *Dod David Holech Lirot Kala* (1972) and for an American TV movie *The Seventeenth Bride* (1986), based on his stories from the *Bride*. A new series of stories appeared in Zurich in Czech, entitled *Hlavou proti zdi* ("With a Head against the Wall," 1976); it was also published in Hebrew. His last work, a novel entitled *Z pekla těst* ("To Be a Lucky Dog," 1994), tells the story of a Jewish boy who was sent from Slovakia to Hungary to escape the Holocaust.

BIBLIOGRAPHY: *Slovník českých spisovatelů* (*Dictionary of Czech Writers*, 1982).

[Avigdor Dagan / Milos Pojar (2nd ed.)]

GROSS, ADOLF (1862–1937), lawyer, communal worker, and delegate in the Austrian parliament. Gross founded the Jewish Independent Party in Cracow, with the objectives of attaining equality of rights and a communal organization which would concern itself with the needs of the Jewish masses. In his profession Gross won a reputation as a jurist, and in public life as a political journalist and democratic mediator. He established a public company for the construction of cheap lodgings and founded consumer cooperatives. He achieved wide popularity as one of the most prominent members of the Cracow municipal council, on which he was active until 1897.

In the electoral campaign for the Austrian parliament of 1907 his opponent was Ḥayyim Hilfstein, a Zionist who exercised particular influence in assimilationist circles. However, Gross defeated him in the struggle for the Jewish vote. As a delegate, he joined the Polish Parliamentary Club in Vienna and collaborated with the Polish Socialist Party (PPS). Gross was a member of the public committee for the relief of poor Jews in Galicia founded on the initiative of philanthropic societies in England, Germany, and Austria. In the various institutions he upheld his opposition to Zionism and also opposed an attempt to establish a Jewish secondary school in Cracow.

[Moshe Landau]

GROSS, CHAIM (1904–1991), U.S. sculptor. A native of Kolomea, Galicia, Gross went to the United States in 1921. Supporting himself by selling fruits and vegetables, he attended night classes at the Educational Alliance Art School in Manhattan, and then went on to study for four years at the Beaux-Arts Institute of Design. He supported himself by his art from the time he joined the New York Public Works of Art Project in 1933. Gross taught at the New School of Social Research for 40 years and at the Educational Alliance Art School for 68 years.

Gross made sculptures for public institutions, including the Hadassah Medical Center in Jerusalem. He wrote the book: *The Technique of Wood Sculpture* (1957). He produced a large number of works in different media – wood, stone, bronze, pen and ink, and water color – but his contributions to wood sculpture are the most outstanding. The forests of the Carpathian mountains near his birthplace first taught him the qualities and potentialities of wood. Gross used more than 80 exotic hardwoods in his work, his favorite being lignum vitae, an exceptionally hard South American wood. He never camouflaged or overpolished its surfaces and never disguised its colors but respected its texture and grain. Among his favorite themes were female acrobats and mothers playing with small children.

[Alfred Werner / Rohan Saxena (2nd ed.)]

GROSS, CHARLES (1857–1909), U.S. historian. Born and educated in Troy, N.Y., Gross continued his studies in Europe. His doctoral dissertation was expanded into a classic two-volume work, *The Gild Merchant* (1890). In 1888 he was appointed an instructor at Harvard, and he was made a full professor in 1901. Gross took an active part in Jewish life. At the Anglo-Jewish Exhibition in London in 1887, he lectured on “The Exchequer of the Jews in England in the Middle Ages.” In 1893 he translated into English Kayserling’s volume on Christopher Columbus and the Jews. He was also vice presi-

dent and a charter member of the American Jewish Historical Society. Among his most important works: *Select Cases from the Coroner’s Rolls, 1265–1413* (1896), and *Select Cases Concerning the Law Merchant, A.D. 1270–1638* (1908–32), both of which he edited for the Selden Society; *Bibliography of British Municipal History* (1897); and *The Sources and Literature of English History from the Earliest Time to about 1485* (1900, 1915², 1951).

BIBLIOGRAPHY: Jacobs, in: *AJHSP*, 19 (1910), 189–93.

[Howard L. Adelson]

GROSS, DAVID J. (1941–), U.S. physicist and Nobel laureate. Gross was born in Washington, D.C. and educated in Jerusalem where his father established the School of Business Administration at the Hebrew University. He graduated B.Sc. in physics and mathematics from the Hebrew University of Jerusalem (1962). He returned to the U.S. and gained his Ph.D. in particle physics (1966) from the University of California at Berkeley under the direction of Geoffrey Chew. He was a research fellow of the Harvard Society of Fellows at Harvard University and visiting professor to CERN (1966–69) before joining Princeton University in 1969 where he became professor in 1973, Eugene Higgins Professor of Physics (1986–95), and Jones Professor of Physics (1995–97). From 1997 he was director of the Institute for Theoretical Physics and Frederick W. Gluck Professor of Theoretical Physics at the University of California at Santa Barbara. His research career was devoted to devising theoretical models to account for the accruing puzzling observations in particle physics. A particular problem is the observation that the force which attract quarks, the fundamental particles which comprise protons and neutrons, increases when quarks are separated and diminishes when they get closer to each other, a phenomenon termed “asymptotic freedom.” With his colleagues H. David Politzer and Franz Wilczek, Gross devised the standard theoretical model of the strong interactive force between quarks and the gluons mediating this force and explaining this phenomenon. Because these particles carry a “color” charge, this field of study is termed “quantum chromodynamics.” Their theory has been substantially validated experimentally. Gross, Politzer, and Wilczek shared the Nobel Prize in Physics (2004) for these discoveries. Gross was a major contributor to many key national and international organizations concerned with scientific policy and education. His many honors include election to the American Physical Society (1974), the American Academy of Arts and Sciences (1985), and the U.S. National Academy of Sciences (1986), the Dirac Medal (2000), and the Harvey Prize of the Haifa Technion (2000). He was visiting professor at the Hebrew University of Jerusalem (1984) and Weizmann lecturer at the Weizmann Institute (1996). He was director of the Jerusalem Winter School since 1999. He has two daughters, both academics, from his first marriage to Shulamith Toaff. He is now married to Jacquelyn Savani.

[Michael Denman (2nd ed.)]

GROSS, HEINRICH (Henri; 1835–1910), rabbi and scholar. Gross, who was born in Szenicze, Hungary, received his traditional rabbinical education as a student of Judah *Aszod, at the Breslau Jewish Theological Seminary, at Halle, at Berlin, and also with L. *Zunz. For a time, he was private tutor in the home of Baron Guenzburg in Paris. Gross served as rabbi in Gross-Strelitz (Strzelce, Poland), and from 1870 in Augsburg, Bavaria. He specialized in the study of the lives of leading French rabbis and their communities in the Middle Ages and published his researches in learned journals. Gross's lasting contribution to Jewish scholarship is his *Gallia Judaica* (1897), "a geographic dictionary of France according to rabbinic sources," which was translated into French from the German manuscript by M. Bloch and published by the Société des Etudes Juives. This standard work was reproduced in 1969 with additional notes by S. Schwarzfuchs.

[Georges Weill]

GROSS, JOHN JACOB (1935–), English author and literary critic. Gross was born in London and studied at Cambridge, becoming a Fellow of King's College. After a distinguished literary career he was appointed literary editor of the *New Statesman* in 1972, and in 1974 became editor of the *Times Literary Supplement*, the authoritative and prestigious weekly magazine of literary criticism. He held this post for more than 15 years. He wrote widely on Jewish writers and Jewish themes in literature, and published *The Rise and Fall of the Man of Letters* (1973) and *James Joyce* (1970). Subsequently, Gross was theater critic of the London *Daily Telegraph*. Later works include an autobiography, *A Double Thread: Growing Up English and Jewish in London* (2002) and a study of *Shylock: Four Hundred Years in the Life of a Legend* (2002).

[Michael Wallach / William D. Rubinstein (2nd ed.)]

GROSS, MICHAEL (1920–2004), Israeli painter and sculptor. Born in Tiberias to a sixth generation Galilean family, the son of Leah Levi and Chaim Gross, Michael Gross had a very lonely childhood, as his father, a romantic pioneer, chose to live with his family in an isolated area near the shore of the Kinneret (Sea of Galilee). Surrounded by Arab villages, the family was in a precarious situation and Gross did not go to school until he was ten. In the 1936 riots, the family's house was burned down and they moved back to Tiberias. Three years later, in 1939, when the family returned to the ruined house, his father was stabbed to death by Arabs.

Gross studied art in Jerusalem at the Mizrahi Teacher's Seminar, followed by architectural studies at the Technion in Haifa. In 1951–54, he studied in Paris at the Ecole National Supérieur des Beaux-Arts. When he returned he settled in Haifa and set up his studio at the artist's village of Ein Hod. Gross also taught art from 1960 to 1985 at the Oranim Kibbutz Teacher's Seminar. His artwork represented Israel in international exhibitions such as the Venice Biennial, the Sao

Paulo Biennial, and the Documenta 9 in Kassel, and was very favorably received.

Many of Gross' works are an integral part of well-known collections such as at the Museum of Modern Art and the Guggenheim Museum in New York. In 2000 Gross received the Israel Prize.

The style of Gross' art is unique. He did not attach himself to any of the artist groups in Israel. His childhood loneliness was reflected in his solitary life as an artist, though many artists, such as Micha *Ullman and Belu Simon Fainaru, spoke of his great influence on them. His style is rooted in Minimalism and its various international languages. On the other hand, the style could be said to owe something to the local Israeli environment. His art always focuses on a certain landscape or a certain figure but its abstraction makes it difficult to identify. For example, Jerusalem is repeatedly symbolized with building motifs such as gates or windows. Later these became lines on a bright white background that suggested the sunlight typical of the Jerusalem area (*Untitled – Jerusalem*, 1975, Tel Aviv Museum of Art).

In the portrait genre Gross increasingly returned to his father. One of his first paintings was created shortly after he heard about his father's death and ever since then there was a bond between his art and his private feelings and perceptions of absence.

The motif of the house was repeatedly used in Gross' art. Over the years it became fragmented, so that only doors, walls, and shutters remained. Most of these fragments are readymade, and as the wooden constructions were painted and leaned against the museum's walls it seemed as if they had been left there by mistake (*Occurrence II*, 1980, Israel Museum, Jerusalem). His public sculptures were also minimalist and in spite of their height they are almost invisible (*Tremor*, 1983, Independence Park, Jerusalem).

[Ronit Steinberg (2nd ed.)]

GROSS, NAPHTALI (1896–1956), Yiddish poet, short story writer, essayist, and translator. Born in Kolomea (Galicia), he emigrated to the U.S. in 1913 and worked as a typesetter and as a teacher in Yiddish schools. His first published poems appeared in the Montreal daily, *Der Keneder Odler*. Gross was a talented translator of poetry from numerous languages into Yiddish. He published his works in Yiddish newspapers, such as *Der Yidisher Kemfer*, *Fraye Arbeter Shtime*, and *Der Tog*, and periodicals founded by Di Yunge, such as *Velt Oys-Velt Ayn*, *Der Groyser Kundes*, *Shriftn*. From 1946, he wrote a weekly column, "Mayslekh un Mesholim" ("Little Stories and Parables"), based on stories from readers for the New York *Forverts*, which appeared in book form (*Mayslekh un Mesholim*, 1955), illustrated by his brother, the artist Chaim *Gross. Naphtali Gross's major poetic works are *Psalmen* ("Psalms," 1919), *Der Vayser Rayter* ("The White Horseman," 1925), and

Yidn ("Jews," 2 vols., 1929 and 1938). In the 1920s, his neo-Romantic works deviated from the literary norm, and he was criticized by many for his preoccupation with religious motifs and with the idealization of the *shtetl* at a time of revolution. With Abraham Rejzen, he translated the poems of Solomon ibn *Gabirol. Gross's collected poems, *Lider* ("Poems," 1958), include a bibliography by E.H. Jeshurin.

ADD. BIBLIOGRAPHY: Rejzen, *Leksikon*, 1 (1927), 612–14; LNYL, 1 (1963), 349–52; Y. Botoshanski, *Portretn fun Yidishe Shrayber* (1933), 270–77; Z. Weinper, *Yidishe Shriftshetler*, 1 (1933), 40–45; Sh. Bickel, *Detaln un Sakhaklen* (1943), 242–44

[Shlomo Bickel / Marc Miller (2nd ed.)]

GROSS, NATHAN (1874–1922), a founder of *Po'alei Zion and general secretary of the *Jewish National Fund Head Office. Born in Tarnopol, Galicia, Gross moved to Vienna in his youth and worked as a clerk. At first he joined the Social Democrats, but when he became aware of the hostile attitude to Jews shown by the party's leaders (particularly those who were themselves Jews), he left the party. With the publication of Herzl's ideas of a Jewish state, Gross became a Zionist. He was among the organizers of the clerical union in Austria and in this manner contributed to the establishment of a Zionist labor movement. The first cells that he established in various places gradually coalesced into the Po'alei Zion movement, of which he and S. *Kaplansky became the chief spokesmen at Zionist Congresses and in the Zionist Movement. (As a consequence of new activities, *Merhavayah was founded, thereby realizing Franz *Oppenheimer's plan for the establishment of agricultural cooperatives in Erez Israel.) In 1908 Gross was appointed general secretary of the head office of the Jewish National Fund situated first in Cologne and, in 1914, moving to The Hague. He retained this post until his death.

[Getzel Kressel]

GROSSBERG, MENASSEH (c. 1860–1927), rabbinical scholar. Born in Trestina, Russia, Grossberg led a wandering life, copying and publishing Hebrew manuscripts from libraries in Berlin, Paris, London, Amsterdam, Munich, and other cities. In the first decade of the 20th century he settled in London, copying manuscripts for European scholars at the British Museum and at Oxford. His many publications included a Pentateuch commentary by Jacob of Vienna (*Peshatim u-Ferushim*, 1888, repr. 1967) from a Munich manuscript; Meshullam b. Moses' *Sefer ha-Hashlamah* on tractates *Berakhot*, *Ta'anit*, and *Megillah* (from a Hamburg manuscript, the first with an introduction by H. Brody (1893, repr. 1967), and the last as an appendix to *Peshatim u-Ferushim*); *Hizzei Menasheh* (1901), a manuscript commentary on the Pentateuch by various medieval scholars also containing Jonathan of Lunel's novellae on *Horayot* (1901); *Sefer Yezirah* (1902); David b. Levi's

Sefer ha-Mikhtam on Megillah (1904); *Megillat Ta'anit* (with an extensive introduction, 1906); and *Seder Olam Zuta* (also with introduction, 1910). Grossberg also published responsa and various halakhic treatises.

GROSSER, BRONISLAW (pseudonyms: **Slawek**; **Zelcer**; 1883–1912), lawyer born in Miechow, Poland; one of the second generation of *Bund leaders. The son of a lawyer, he became a leader of the Warsaw socialist youth while still at secondary school. His experience of antisemitism made him conscious of his Jewish identity, and influenced by Bundists from Lithuania, he joined the Bund. Grosser was among those who in 1906 consistently supported the independence of the Bund, being against its return to the Russian Social Democratic party. He was a member of the advisory committee of the Social Democratic group in the Fourth Duma (1912) and was elected to the central committee of the Bund. An incisive writer and fluent speaker, Grosser was outstanding among the relatively few intellectuals who joined the Bund in Poland at that time. He defined his task as "defense of the interests of the Jewish workers in Poland, and within this framework defense of the interests of the country."

BIBLIOGRAPHY: Rejzen, *Leksikon*, 1 (1926), 620–3; J.S. Hertz (ed.), *Doyres Bundistn*, 1 (1956), 319; *Polski Słownik Biograficzny*, 9 (1960–61), 6.

[Moshe Mishkinsky]

GROSSFELD, ABRAHAM ISRAEL ("Abie"; 1934–), U.S. gymnastic and coach; two-time Olympic competitor and five-time coach, World Championships and Pan American Games champion, winner of 17 medals at the Maccabiah, including 13 gold; member of the National Gymnastics Hall of Fame. Born on the Lower East Side of New York City to immigrant parents – his father was a window washer – Grossfeld spoke Yiddish until he was four. He began gymnastics at the age of 15 while at Samuel Gompers High School, training at the West Side YMCA. His first international competition was the 1953 Maccabiah, where he won six gold medals; four years later he won seven gold.

Grossfeld graduated from the University of Illinois in 1960, after finishing second in the individual all-around at the 1957 NCAA meet and first in 1958. He was also AAU national champion in the horizontal bars from 1955 to 1957.

Grossfeld competed internationally for the United States for 13 years, including in the 1956 and 1960 Olympic Games; the World Championships of 1958 and 1962; and the Pan American Games of 1955, 1959, and 1963. At the Pan Am Games he won 15 medals, including eight gold, and his record score in the 1955 Horizontal Bar stood until 1987. Grossfeld also won 17 medals at the Maccabiah Games of 1953, 1957, and 1965.

After retiring from competition, Grossfeld turned to coaching and became a legend. He was head coach of the U.S. Men's Olympic gymnastics teams of 1972, 1984, and 1988, with the 1984 squad winning the Combined Exercises cham-

pionship. He was also assistant coach of the 1964 U.S. men's Olympic team, and the 1968 U.S. women's Olympic team. Grossfeld served as head coach of the U.S. men's gymnastics team at five World Championships (1966, 1981, 1983, 1985, and 1987); the U.S. men's team at the 1983 and 1987 Pan American Games; the U.S. men's team at the 1982 World Cup; the men's team at the 1986 Goodwill Games; and coached the U.S. gymnasts at the 1973, 1977 (men and women), 1981, and 1983 Maccabiah Games. During this time Grossfeld was head coach at Southern Connecticut State University for 40 years, helping the program become one of the best in the country.

Grossfeld was chosen NCAA National Coach of the Year three times, Gymnastics Federation Coach of the Year in 1984, was elected to the National Gymnastics Hall of Fame in 1979, and was named one of the 50 greatest New York sports figures by *Sports Illustrated* in 2004.

[Elli Wohlgeleinter (2nd ed.)]

GROSSINGER, JENNIE (1892–1972), U.S. resort owner and manager. Grossinger, born in a small town in Galicia, was taken to America by her parents at the turn of the century. The Grossingers lived in extreme poverty on New York's Lower East Side, and Jennie went to work in a sweatshop after several years of public school. In 1912 she married her cousin Harry Grossinger (1890–1964), and the following year the entire family moved to a farm in the Catskill Mountains near Liberty, New York. The farm was converted into a kosher boardinghouse in 1914, and Grossinger's eventually grew under Jennie Grossinger's management into a giant resort of more than 1,000 acres, whose 800 employees served some 150,000 guests a year.

The grounds of Grossinger's Resort and Country Club included 35 buildings, a 27-hole golf course, a shopping arcade, bridle paths, a ski slope, indoor and outdoor swimming pools, tennis courts, a post office, two kosher kitchens, and a nightclub. Grossinger's attracted a host of well-known entertainers, who thrived in this area of the Catskills that was known as the "Borscht Belt." In addition to ordinary guests from all across the U.S. and Canada, the Grossinger roster included political figures, world-renowned scientists, movie stars, radio personalities, and sports figures.

Active in charities and dedicated to good causes, Grossinger received many awards for her philanthropy. During World War II she raised millions of dollars in war bonds at the hotel, and an Army airplane was named "Grossinger's" in her honor. On June 16, 1968, Governor Nelson Rockefeller made an official proclamation designating June 16 as Jennie Grossinger Day in New York State. That birthday tribute was the first time such a proclamation was issued to honor a living woman in New York State.

After her death, her son Paul and daughter Elaine took over the hotel, bringing the resort to even greater success and popularity. However, in 1985, Grossinger's was sold to a group of investors from New York City.

Jennie Grossinger wrote a cookbook entitled *The Art of Jewish Cooking* (1958).

BIBLIOGRAPHY: J. Pomerantz, *Jennie and the Story of Grossinger's* (1970).

[Hillel Halkin /Ruth Beloff (2nd ed.)]

GROSSMAN, ALLAN (1910–1991) and **LARRY** (1944–1997), Canadian father-and-son political team that, one after the other, represented a heavily Jewish inner-city Toronto riding in the provincial legislature for 32 consecutive years.

Allan Grossman was born in Toronto. His father, Morris, arrived in Canada from Poland in 1907 and two years later brought his wife, Sarah, and their six children to join him. Allan was their seventh child. As a young man Grossman developed an interest in Conservative Party politics. At 16 he was founder of the Junior Conservative Association. While he went into business and became a successful insurance agent he remained active in local politics. In 1951, Grossman entered municipal politics and won election to Toronto's municipal council and was reelected in the three following elections. In 1955 he shifted to provincial politics, running for the Progressive Conservatives. He won a hard-fought campaign against Communist Party incumbent Joseph Salsberg, taking the inner-city St. Andrews riding. Grossman was reelected in 1959 and in 1960 he was appointed to the provincial cabinet as minister without portfolio, becoming the first Jew appointed to a provincial cabinet. During 20 years in cabinet, Grossman often spoke out for stronger anti-discrimination and human rights legislation. He also went on to be the minister responsible for liquor sales in Ontario, a provincial government monopoly, then minister of reform institutions, overseeing administration of provincial correctional institutions. Under his leadership, Ontario initiated a long-overdue reform of the penal system. Before he retired from political life in 1971 Grossman held several other provincial cabinet posts, including minister of trade and development. In this capacity he led the first western trade mission to China.

Grossman was also active in many Jewish organizations, including the Jewish Immigrant Aid Society, the Canadian Jewish Congress, and the Zionist Organization of Canada.

Allan Grossman's son, Larry, was born in Toronto and studied law there. When his father retired from electoral politics, he gave up law for politics and ran in the same riding for the Progressive Conservatives and was elected. He held the seat through the next three elections. Considered among the more progressive members of his party – "a Tory with conscience" – he was appointed to the provincial Cabinet and held a number of different portfolios including Consumer and Corporate Relations, Education, Health, and Provincial Treasurer. In 1985, when then Premier William Davis announced his retirement, Grossman ran to replace him but lost to the much more conservative Frank Miller. Miller resigned after being soundly defeated by the Liberal Party in the 1985 provincial election and Grossman was chosen to lead a much divided provincial Progressive Conservative Party. The

still popular Liberals went to the polls again in 1987 and the results relegated the Conservatives to third party in the legislature behind the NDP. Grossman lost his own seat and resigned. He returned to private legal practice but fell ill with brain cancer and died at 53.

[Harold Troper (2nd ed.)]

GROSSMAN, ALLEN (1932–), U.S. poet. Grossman was born in Minneapolis and educated at Harvard and Brandeis, from which he received his Ph.D. in 1959. He received, among other awards, a MacArthur Fellowship and the Witter Bynner Prize. His poems often concern themselves not only with establishing the authority of the poet as the heir of perennial questions (such as the meaning and shaping powers of language and tradition), but also with reinvigorating the prophetic voice (as in seeking intimacy with, and invoking, the divine). His poetry is notable for its biblical resonance and moral aspiration. In this fashion, both individual and poetic situation are often liberated from sheer contingency. Among his works are *The Ether Dome and Other Poems: New and Selected, 1979–1991* (1991); *The Sighted Singer: Two Works on Poetry for Readers and Writers* (with Mark Halliday (1992); *The Long Schoolroom: Lessons in the Bitter Logic of the Poetic Principle* (1997); *How to Do Things With Tears* (2001); and *Sweet Youth: Poems by a Young Man and an Old Man, Old and New, 1953–2001* (2002).

BIBLIOGRAPHY: D. Morris, *Poetry's Poet: Essays on the Poetry, Pedagogy, and Poetics of Allen Grossman* (2004).

[Lewis Fried (2nd ed.)]

GROSSMAN, AVRAHAM (1936–), Israeli historian. Grossman focuses on the cultural, intellectual, and social world of the Ashkenazi and French rabbinical sages in the early Middle Ages. He was born in the moshavah of Mishmar ha-Yarden. In 1966 he graduated in Jewish history and Talmud from the Hebrew University of Jerusalem, receiving his M.A. in 1967 and his Ph.D. in 1974; he did postdoctoral work in London and Oxford in 1975. From 1969 to 1972 he taught Jewish history at the University of the Negev (now Ben-Gurion University) and in 1973–74 taught at the Hebrew University. In 1976 he became a lecturer there and in 1986 a professor. From 1991 to 1992 he was the head of the Department of Jewish History. Grossman was visiting professor at Harvard, Yale, and Ohio Universities. He was a member of numerous academic committees and editorial boards. He published more than 100 articles and books, among them, *The First Ashkenazi Wise Men* (1981); *The Jewish Community during the Middle Ages* (1988); *The First French Wise Men* (1995) and *Pious and Rebellious – Jewish Women in Medieval Europe* (2001). He received various awards for his work, including the Bialik Award. In 2003 he was awarded the Israel Prize for Jewish history.

[Shaked Gilboa (2nd ed.)]

GROSSMAN, DAVID (1954–), Israeli writer. Born in Jerusalem, Grossman studied philosophy and theater at the Hebrew University. He began a 25-year career at Kol Israel (Israel Broadcasting Authority) at the age of ten, as a correspondent for youth programs. He published his first book of prose, a collection of stories entitled *Raz* (“The Jogger”), in 1983. This was followed by the novel *Hiyukh ha-Gedi* (1983; *Smile of the Lamb*, 1990); *Ayen Erekh Ahavah* (1986; *See Under Love*, 1989); a non-fiction, politically oriented work *Ha-Zeman ha-Zahov* (1987; *Yellow Wind*, 1988); *Sefer ha-Dikduk ha-Penimi* (1991; *The Book of Intimate Grammar*, 1994); *Yesh Yeladim Zig Zag* (1994; *The Zigzag Kid*, 1997); *She-Tihiyi Li Sakkin* (1998; *You Shall be my Knife*, 2002); *Ba-Guf Ani Mevinah* (2002; *Her Body Knows*, 2005). One of the most prominent writers of his generation, Grossman also wrote a number of books for children and young readers, including *Du Krav* (1982; *Duel*, 1998) and *Itamar Mikhtav* (“The Itamar Letter,” 1986). Among his works are also the play *Gan Riki* (1988; *Riki's Playground*) and non-fiction books such as *Mavet ke-Derekh Hayyim* (2003; “Death as a Way of Life”).

Grossman is one of the leading heirs of the so-called “New Wave” in Israeli literature, whose oeuvre marks a turning point in Hebrew fiction. His writing correlates historically with the change in the political climate after the rise to power of the Likud Party. It addresses political and social issues, protesting time and again against the occupation of the territories, the use of violence, and the mentality of the new establishment.

His first novel, *Smile of the Lamb*, attempts to shed light on Israeli society following the Six-Day War and the Yom Kippur War. The story unfolds through a dual perspective, that of the Israeli Uri Leniado and, alternately, that of Hilmi, an old Arab. Interwoven in the narrative are essayistic sections, which give vent to Grossman's feelings about the occupation and the humiliation of the Arab population. Following this highly political prose work, Grossman published his most ambitious work of fiction, *Ayen Erekh Ahavah*. Bordering often on the grotesque, Grossman addresses the Holocaust while reflecting on the very (im-)possibility of writing about it. Grossman uses sophisticated techniques: the first part of the novel is related from the point of view of Momik, a sensitive, imaginative child growing up in Jerusalem amid Holocaust survivors. Momik creates his own private myth about the Nazi beast, which he attempts to understand better and fight in his own little kingdom, in the cellar. The second part handles in a poetic-fantastic manner the fate of the well-known Polish-Jewish author Bruno *Schulz, who was murdered by the Germans. The third part relates Anshel Wasserman's (Momik's grandfather) strategy of survival in the camp, by telling the Nazi commander in charge stories after stories and keeping him in suspense. The fourth part, fragmentary and postmodernistic, is structured as an encyclopedia, listing and explaining a variety of words or concepts and omitting deliberately the entry “Love.” Grossman attempts to blur the distinction between reality and fantasy and shatter the reader's illusion of certainty and knowledge.

The following novel, *The Book of Intimate Grammar*, is far more modest in its artistic aims: it does not seek to handle the metahistorical issues of a generation, neither the Holocaust nor the Arab-Israeli conflict. Grossman focuses on the childhood of Israelis who grew up in Jerusalem in the 1950s through an atypical but also typical Israeli family. The father survived the labor camp in Russia; the mother is an orphan who attended to the needs of her siblings. This historical-biographical background shaped their lives; Grossman is interested in the psychological effect of the past on their present lives, not – as in the previous novel – in a historiosophical account of a collective issue. From this point of view, the novel is closer to the earlier prose works of Yehoshua *Kenaz (for instance, *After the Holidays*) or to Yeshayahu Koren's novella *Levayah ba-Zohorayim* ("Funeral at Noon"). The familial context is seen through the eyes of Aharon, a 14-year-old boy, and it is his story of adolescence and growing up, oscillating between pain and humor, reality and fantasy.

She-Tihyi Li Sakkin depicts a universal theme, that of a man's love for a woman whom he never meets. This epistolary novel deals, as it were, with the second phase of growing up, with the midlife crisis. The correspondence between Yair and Miriam pointedly disregards political-historical subjects. What matters more are the changes observed in nature, the blossoms of spring, the first rain. The letters exchanged by the protagonists, both belonging to the Ashkenazi elite, shed light on their lives, their dreams and passions, though ending in a rather anti-romantic manner. Grossman suggests that truth, art, and beauty exist in writing only. The protagonists prefer the narcissistic expedient of self-expression in writing to a physical encounter. The novel is an important milestone in Grossman's development as a writer; it is a highly introverted novel which is far from offering the reader shallow entertainment.

Grossman's novella *Ba-Guf Ani Mevinah* takes this process of introversion further: published during the second Intifada, when Israeli readers were expecting yet another political book from Grossman, author of the highly topical *Yellow Wind* (1987) and *Sleeping on a Wire* (1992), the story again deals with the relationship between imagination and reality, showing that the life of fantasy is perhaps more intense and rewarding than actual life. Sitting by the bedside of her dying mother, the daughter relates the mother's life-story: When you read it out to me, I have the feeling that these things really happened, says the mother. Many questions remain unanswered, others have the aura of mystery, suggesting that much in human existence remains inexplicable and perhaps unutterable.

Grossman's books have been translated into many languages, and he is undoubtedly one of the best known Israeli authors abroad.

[Gershon Shaked (2nd ed.)]

GROSSMAN, LEONID PETROVICH (1888–1965), Russian literary historian and theater critic. Grossman was born in Odessa, graduated from Kiev university, and studied law in Sorbonne. He started writing criticism from 1903 and contributed to the *Jewish Encyclopedia* in the field of law. From 1910 to 1920 he produced poetry, mostly on biblical themes. From 1921 he lectured in various institutes in Moscow on the theory and history of literature, from 1945 as a professor. His works range from studies of Russo-Western cultural relations (e.g., on Balzac in Russia, 1937) to monographs on Russian literary masters such as Dostoyevski (1963). He also wrote comparative studies of literature and other creative arts, such as theater and painting. In *Ispoved yevreya* ("A Jew's Confession," 1925) Grossman dealt with A.U. Kovner, a picturesque Jewish convict, whose letters to Dostoyevski, published in 1903 some 30 years after their dispatch, accused the novelist of slandering the Jews in his *Diary of a Writer*.

[Shmuel Spector (2nd ed.)]

GROSSMAN, MEIR (1888–1964), Zionist leader. Born in Temryuk in the Krasnodar Territory, Russia, Grossman at an early age became a contributor to the Russian press. For a while he lived in Warsaw, where he began contributing to the Yiddish press. In 1913 he went to Berlin to study, becoming a member of the central committee of *He-Ḥaver, the Zionist students' society, and editing its Russian and Hebrew organs.

On the day that World War I broke out, Grossman left for Copenhagen, and worked there as a correspondent for the Russian daily *Russkoye Slovo*. A few months after his arrival he began the publication of a Yiddish daily, *Kopenhagener Togblat* (later renamed *Yidische Folksdaytung*). At *Jabotinsky's suggestion he published a Yiddish fortnightly, *Di Tribune*, dedicated to publicizing the cause of a Jewish Legion, a World Jewish Congress, and equal rights for Jews. Jabotinsky also persuaded him to move to London, which he did in the fall of 1916, publishing *Di Tribune* there as a daily. The campaign for a Jewish Legion did not, however, yield immediate results, and when the paper closed, Grossman returned to Copenhagen.

After the February 1917 Revolution in Russia, Grossman returned to Petrograd, where he became a contributor to *Petrograder Togblat*, the daily founded by Yizhak *Gruenbaum. After the October Revolution he was asked to move to Kiev and there edited several periodicals: *Der Telegraf*, a daily, together with Naḥman *Syrkin; *Oyf der Vakh*, Zionist weekly; and *Die Velt*, another daily. He was a member of the executive committee of Ukrainian Zionists, took part in the National Jewish Assembly and in the work of the Provisional National Council, and was a deputy of the Rada, the national council of the independent Ukraine. When hostilities broke out and the Bolsheviks invaded the Ukraine, Grossman, together with Abraham Coralnik, was sent abroad to inform the world of the situation and appeal for help. In London and in the United

States, Grossman and Coralnik created aid organizations for Ukrainian Jews (1919).

At the end of 1919, Grossman joined Jacob *Landau, in establishing the Jewish Correspondence Bureau for the dissemination of news of Jewish interest. This bureau eventually became the *Jewish Telegraphic Agency (JTA). Grossman left the JTA in 1928 as a result of differences with Landau. In 1925 he had founded the *Palestine Bulletin*, an English-language daily in Jerusalem, which in 1932 became the *Palestine Post* (later the *Jerusalem Post*). After the 1920 riots in Palestine, Grossman criticized Weizmann's policies and called for his resignation. When Jabotinsky left the Zionist Executive and eventually founded the *Revisionist Party (in 1925), Grossman became one of his early supporters and was appointed deputy chairman of the new party's world center. In 1933 the party split on the issue of secession from the Zionist Organization; Grossman headed the minority, which opposed Jabotinsky and which was in favor of remaining in the *Zionist Organization. He then established the *Jewish State Party.

In 1934 he settled in Palestine, where he became the manager of Bank le-Hityashevut Amamit. In 1937 he caused a sensation at the Zionist Congress by reading from its rostrum confidential minutes of Weizmann's talks with the British colonial secretary, Ormsby-Gore, in which Weizmann promised to influence the Zionist movement in favor of the partition plan of Palestine, though the Zionist General Council had adopted a resolution against the plan. Grossman's "suspension from membership in the Zionist General Council" by the Zionist court, for having disclosed confidential Zionist documents, caused a stir in the Jewish press the world over, particularly in the London *Jewish Chronicle*. He spent the World War II years in the United States. After the war the two factions of the Revisionist Party were reunited, and Grossman attended the Zionist Congress as a representative of the united party. He did not, however, join the *Herut Party, and preferred to join the *General Zionists, becoming one of its representatives in the Executive of the Zionist Organization (1954–60). When the General Zionist Party merged with the Progressive Party to form the Liberal Party, Grossman again did not follow his party's decision and resigned from the Zionist Executive. He continued his journalistic work and also participated in the activities of various public institutions. He took special interest in the situation of Soviet Jews and promoted the publication of Russian-language periodicals in Israel (*Vestnik Izraila*, and *Shalom*).

[Israel Klausner]

GROSSMAN, MORTON IRVIN (1919–1981), U.S. gastroenterologist. Born and educated in Ohio, he received his M.D. and Ph.D. in 1944 from Northwestern University. Grossman first served as assistant biochemist (1939–41) at Ohio State University Medical School and from 1950 to 1951 as professor of physiology in the Department of Clinical Sciences. From 1951 to 1955 he was chief of physiology in the Division of Medi-

cal Nutrition first in Chicago and then at Fitzsimons Army Hospital in Denver. In 1955 he joined the faculty of the University of California School of Medicine and was appointed chairman of the Department of Medicine in 1965. Grossman was consultant to the National Institutes of Health (1960–65) and a member of many professional societies. He was the father of modern gastrointestinal endocrine physiology. His most important contributions lay in defining the secretory mechanisms of the stomach and pancreas actions and of regulatory gastrointestinal peptides. He served as editor of *Gastroenterology* (1960–65) and wrote many papers on the physiology of the alimentary tract, gastrointestinal hormones, and the physiology of nutrition.

[Fred Rosner / Bracha Rager (2nd ed.)]

GROSSMAN, STEVEN, chair of national Democratic Party. Grossman was active in the American Jewish community and within Democratic politics. A graduate of Princeton and Harvard Business schools, he headed the Massachusetts Envelope Company that had been in his family since 1910. A leader of the Boston Jewish community, he served on the boards of Brandeis University, Beth Israel Hospital, and the Combined Jewish Philanthropies.

As a leader of the Democratic Party Grossman began his career within Massachusetts politics and was chairman of the Democratic Party in the state during the early 1990s, spearheading Bill Clinton's 20 point victory in 1992 and capturing enough Senate and House seats in Massachusetts to override the Republican governor's veto. His close association with Democratic politics and his relationship with the president was essential to his rise to leadership in the American Israel Public Affairs Committee (AIPAC), which had been increasingly moving to the right during the Reagan and George H.W. Bush presidencies and during Likud leadership in Israel. A Democratic and a strong supporter of the peace process, Grossman was named to head AIPAC, after his predecessor had committed the ultimate sin of American politics; he had been caught telling the truth about AIPAC's power, too directly and for attribution. Moderate but forceful, Grossman was a good choice, most especially during the Clinton-Rabin years where the organized Jewish community and their political supporters had to turn around their positions on the Palestinians and the Peace Process after the Oslo Accords.

He left AIPAC to serve as chair of the Democratic Party where his ties to the Clinton administration and his fundraising prowess served him in good stead. He made the transition successfully and seamlessly from Jewish leadership to national leadership of the Democratic Party, where Jewish support is a pillar of fundraising efforts.

Grossman was unsuccessful in his bid for the Democratic nomination for governor of Massachusetts in 2002 but became prominent again as chairman of the Howard Dean campaign for the U.S. presidency in 2004; Dean went from obscurity to front-runner status in near record time. Grossman was also in-

strumental in causing Dean to withdraw from actively pursuing the nomination when after deep losses, John Kerry's nomination became a foregone conclusion and Dean's chances were nil. Grossman held a press conference endorsing his home state candidate Kerry before Dean had formally withdrawn.

GROSSMAN, VASILI SEMYONOVICH (Joseph Solomonovich; 1905–1964), Soviet Russian writer. Born to a traditional Yiddish-speaking family in the intensely Jewish town of Berdichev, he moved to Moscow as a young man and, after graduating from the university, worked for a time as a chemical engineer in the coal mines of Donbas. His short story *V gorode Berdicheve* ("In the Town of Berdichev," 1934), which described the Civil War in and around his home town, earned the praise of Maxim Gorki. Grossman's most important early work is *Stepan Kolchugin* (1937–40), a three-volume novel describing the Communist underground before the Revolution. He became famous as the author of *Narod bessmertn* ("The People Is Immortal," 1942), the first important Soviet novel inspired by World War II. It was published in the Soviet army gazette *Red Star*, where he served as a war correspondent. The Holocaust of Soviet Jewry finds expression in the novels: *Staryi Uchitel* ("Old Teacher," 1943) and *Treblinskii Ad* ("The Inferno of Treblinka," 1945). His second war novel, *Za pravoye delo*, ("For the Just Cause"), the first part of which appeared in 1952, was never completed. It was found ideologically objectionable because of its underestimation of the Communist Party's role in the forging of victory over Nazism. Another cause of official displeasure probably was Grossman's emphasis on such "minor" traits of Nazism as the mass extermination of the Jews and its strong nationalism. Coming as they did at the height of Soviet antisemitic campaigns and the wave of glorification of everything Russian, Grossman's observations were against the official line. Somewhat earlier, fragments of the manuscript confiscated by the KGB were published in the West under the name *Zhizn I Sudba* ("Life and Fate," 1980). From 1956 until his death he worked on a book about the tragic Stalinist period, the anti-Jewish campaign, the persecution of intellectuals by the party apparatus, and the repression of any free thinking. It was published as *Vsio Tschot* ("Everything Is Flawed") in the Samizdat in the 1960s and in Germany in 1970. Grossman and Ilya Ehrenburg had tried to publish a "Black Book" of documentary evidence of Nazi crimes committed against the Jews on Soviet territory. The book was already set in type, but, as Ehrenburg pointed out in his memoirs, its publication was banned by the Soviet authorities, and the KGB destroyed the type frames. One volume was eventually published in Bucharest (1947) under the title *Cartea Neagr*, with a foreword by Grossman. A copy of the original manuscript is in the archive of Yad Vashem, Jerusalem and was published there in 1980.

[Maurice Friedberg / Shmuel Spector (2nd ed.)]

GROSSMAN, YIZHAK-DAVID (1946–), Israeli rabbi known for his unique activities in education and welfare, such as assistance to criminal youth and adults, immigration absorption, and the advancement of religious-secular relations. The crowning glory of his work is the Migdal Or educational system, with schools and dormitories in Israel and abroad. Grossman was born in Jerusalem, a sixth-generation Israeli. In 1966 he received his rabbinic ordination from R. Isser Yehuda Unterman and R. Isaac Nissim. In 1967 he was active in Jerusalem's slums, setting up three educational institutes there. In 1968 he moved to Migdal ha-Emek, a development town in northern Israel, and in 1970 he became its chief rabbi. In 1971 he founded the Or la-No'ar youth movement. In 1972 he established the Migdal Or educational complex in Migdal ha-Emek, which later became a national system. In 1991 he began to absorb immigrants from Ethiopia and the Former Soviet Union in Migdal Or. In the same year he founded Migdal Or institutes in Moscow and Leningrad. In 1993 he began to absorb new Yemenite immigrants at the institution. In 1995 he worked with French youth. Grossman received a number of awards, including the Aryeh Levin Father of Prisoners Award (1980), and the Love of Israel Award given by President Chaim Herzog and Prime Minister Menahem Begin (1983). In 2004 he was awarded the Israel Prize for his special contribution to Israeli society.

[Shaked Gilboa (2nd ed.)]

GROSSMANN, KURT RICHARD (1897–1972), German journalist. A pacifist after World War I, Grossmann became general secretary of the *Deutsche Liga fuer Menschenrechte* (German League for Human Rights) in his home town, Berlin (1926), and organized its fight against injustice in German law courts, which followed reactionary tendencies. Grossmann was active in cases such as that of the Russian war prisoner, Jacobowsky (executed and then adjudged innocent), and that of Walter Bullerjahn who had been imprisoned as the result of false witness. He wrote *Dreizehn Jahre "Republikanische" Justiz* (1932). Warned that the Nazis were about to arrest him, Grossmann escaped to Prague in 1933. There he established and directed the *Demokratische Fluechtlingsfuersorge* (Relief for Refugees by Democrats) and wrote brochures against Nazism. In 1938 he went to Paris and in 1939 to New York. In 1943 the World Jewish Congress entrusted Grossman with dealing with the European refugee problem. After World War II, Grossmann became a recognized spokesman on problems concerning Jewish refugees and restitution and compensation. He was also involved in the Jewish-German process of reconciliation and lectured in Germany. Among the books written during his American years are *Die Unbesungenen Helden: Menschen in Deutschlands dunklen Tagen* (1957); *Ossietzky: ein deutscher Patriot* (1963), which won the Albert Schweitzer Prize; and a history of restitution, *Die Ehrenschild: Kurzgeschichte der Wiedergutmachung* (1967); *Emigration, Geschichte der Hitler-Fluechtlinge 1933–45* (1969).

[Frederick R. Lachman / Monika Halbinger (2nd ed.)]

GROSS-ZIMMERMANN, MOSHE (Gross; 1891–1974), Yiddish essayist. Born in Boryslav, Galicia, Gross-Zimmermann lived in Vienna from 1908 and there wrote German impressionistic lyrics, one-act plays, and aphorisms, and edited a Yiddish newspaper *Yidische Morgenpost* (1918–20). His essays on Yiddish, French, and German writers appeared in the Viennese Yiddish monthly *Kritik*, as well as in leading periodicals in Warsaw and New York. In 1938 he settled in Palestine, joined the staff of the Hebrew daily *Davar*, and continued publishing literary essays in the Yiddish press in Israel and New York. From 1950 he headed the Yiddish department of Israel's overseas broadcasts program, and his weekly feuilletons were widely listened to. In his essays, collected in the volumes *Yidn Tsvishn Yidn* ("Jews among Jews," 1956), *Intimer Videranand* ("Intimate Contradiction," 1964), and *Dos Vort Vos Mir Shraybn* ("The Word We Write," 1971), he displayed a personal style with a Galician idiomatic flavor.

[Israel Ch. Biletzky]

GROTIUS, HUGO (Huig de Groot; 1583–1645), Dutch statesman, jurist, theologian, and historian. Grotius' contacts with Jews and Judaism were concerned with both political and spiritual matters. As a result of the flight of Marranos from Spain and Portugal to the Netherlands in the late 16th and early 17th century, and the consequent formation, without a firm legal basis, of sizable Jewish communities in Amsterdam and other cities, the estates of Holland appointed Grotius to a commission "to amend the regulations for protecting Jews living in these lands from all scandals, anxieties, and sanctions." Grotius' report, known as *Remonstrantie*, appeared in 1615, but was not published in full until 1949. In the report Grotius posed three questions: whether it is desirable to allow Jews to settle in the country; whether it is advisable to permit them to follow their religious traditions; and in what ways it is possible to prevent difficulties affecting either Christianity or the state, through the presence in the land of Jews observing their religion. Grotius answered the first question in the affirmative. On the second point, he advised that the Jews be granted freedom of worship subject to limitations to prevent certain religious and political hazards.

Though some of his replies were noteworthy for their tolerance, others were hardly agreeable to Jews. Grotius ruled that all Jews who entered the state should be obliged to register with the city authorities, declaring that they believed in one God and that the words of Moses and the prophets were

true. They were to be allowed to live in urban areas only, and their number was to be limited to 200 families in the provinces of Holland and Friesland and to 300 families in Amsterdam. They were to be granted the privilege of engaging in commerce and industry. Mixed marriages between Jews and Christians were to be prohibited. Yet the Jews were neither to be compelled to conform to a particular style of dress nor to be separated from the rest of the residents in any other way. They must not be coerced to violate their Sabbath, nor should they desecrate Sundays and Christian holidays. Different penalties were fixed for those who might transgress these regulations. The *Remonstrantie* were accepted by the estates of Holland but were not adopted as a general law for the entire country.

Even more interesting are Grotius' intellectual contacts with Judaism. His conceptions of, and attacks on, Judaism were formed within the framework of Christian apologetics. He confesses his obligation to the Hebrew authors who, through their knowledge of the literature, language, and customs of their people, have revealed a special understanding of the Scriptures. Similar statements are found in the *Annotata ad Vetus Testamentum* (Paris, 1664). In his legal works Grotius quotes, in addition to the writings of Jewish authors who wrote in Greek (Philo and Josephus), the medieval Jewish commentators, as well as the Targum, Talmud, and Midrash. Occasionally his compositions contain Hebrew words and verses, and there can be no doubt that he had some knowledge of Hebrew and Aramaic; for example, he says in the *Annotata* that the beauty of the Song of Songs is marred in translations. His reported wide familiarity with Semitic languages nevertheless appears exaggerated. Many of his letters, especially to his friend Gerhard Johannes Vossius as well as to *Manasseh Ben Israel, indicate that he gained much of his information about Jews from the latter, whom he admired greatly. Because of the Jewish thread running through his works, which grew stronger in the course of time, Grotius was accused of leaning toward Judaism and of preferring Jewish to Christian biblical exegesis, accusations which, however, overlooked the spiritual ties between Protestantism and the Old Testament.

[Shabtai Rosenne]

GROVE, ANDREW STEPHEN (Andros Grof; 1936–), U.S. engineer, technology executive. Born in Budapest, Hungary, to a middle-class secular family (his father was a dairy man), Grove almost died at four of scarlet fever, but he eventually

become a founding father of the personal computer industry. Through foresight and good fortune, the family avoided the fate of many of their fellow Jews by successfully fleeing the Nazis, thanks to young Andris (as he was called) and his mother finding refuge with a Christian family on the outskirts of Budapest. They lived in a dark cellar in which “the sound of artillery was a continuous backdrop,” Grove wrote in his memoir, as Russian bombs hit the area. Under the Communist regime that followed World War II, as his family rebuilt its business, Grove distinguished himself as a student of chemistry and was seemingly destined for a comfortable position in academia or industry, until revolution broke out in 1956 and he found himself in that cellar again. In June 1956 the popular Hungarian uprising was put down at gunpoint. Soviet troops occupied Budapest and randomly began rounding up young people. Grove and 200,000 others escaped to the West. In *Swimming Across*, his 2001 memoir, Grove re-created a Europe that has since disappeared, exploring the ways in which persecution and struggle helped shape his life. Grove went to the United States in 1957 knowing little English and with only a few dollars in his pocket. He earned a bachelor’s degree in chemical engineering in 1960 from the City College of New York and a Ph.D. from the University of California, Berkeley, in 1963. He worked at Fairchild Semiconductor before participating in the founding of the Intel Corporation in 1968. In 1979 he was named president and in 1987, chief executive. Intel’s microprocessor chips serve as the silicon “brains” in more than 90 percent of the world’s personal computers. In 1987, the year Grove became chief executive, Intel reported profits of \$248 million on sales of \$1.9 billion. In 1998, the year he stepped down, Intel’s profits reached nearly \$6.95 billion on sales of \$25 billion. Intel’s popular Pentium II computer chip was developed at Intel’s plant in Haifa, Israel.

Grove, who has written more than 40 technical papers and holds several patents on semiconductor devices and technology, was elected a fellow of the IEEE and a member of the National Academy of Engineering. In 1994 Grove was elected a fellow of the Academy of Arts and Sciences in the United States and *Time* magazine named him Man of the Year in 1997. His first book, *Physics and Technology of Semiconductor Devices*, published in 1967, has been used at leading universities in the United States. His *High Output Management* (1983) was translated into 11 languages. *One-on-One With Andy Grove* was published in 1987 and *Only the Paranoid Survive*, the blunt credo for which he was known, was issued in 1996.

Under Grove’s stewardship, Intel thrived in the face of challenges, including up-and-down cycles in the technology industry, clone chip makers, and rival microprocessor designs. None proved an obstacle to Intel’s progressive domination of the computer industry.

[Stewart Kampel (2nd ed.)]

GROVES, SACRED. The concept of sacred groves arose out of the traditional mistranslation of the Asherah as a sa-

cred grove near the altar. The Asherah is now known to have been a man-made cult object that was placed near the altar. (For a fuller discussion see *Asherah.) There were, however, sacred *trees.

[Tikva S. Frymer]

GROZNY, capital of the Chechen Republic in Russia, formerly in S.W. European R.S.F.S.R. Situated on the Rostov-Baku railroad, it has been an oil-producing center since 1893. Until 1917 the city was outside the Pale of Settlement, but a community of *mountain (Tat) Jews existed there, which in 1866 numbered 928 persons living in 197 houses. In 1897 the Jewish population numbered 1,711 (11% of the total population) divided into two communities: mountain Jews and “Ashkenazim.” In 1900 a synagogue built in Oriental style was opened. The community suffered heavily during the civil war of 1918–21 and many Jews left the city. There remained 1,274 in 1926 (1.7% of the population), but the Jewish population grew to 3,992 in 1939 (2.3% of the total), in 1939. In World War II, during the summer of 1942, the German advance was halted just before reaching Grozny and the Jews of the city were saved from annihilation. The Jewish population according to the 1959 census numbered 4,981 in the towns of the then Chechen-Ingush Autonomous Soviet Socialist Republic; it may be assumed that the majority lived in Grozny. By 1970 the number of Jews in Grozny was estimated at about 10,000. The only synagogue serving the “Tat” Jews, who reside in a Jewish quarter, was confiscated in 1962. In the 1990s almost all the Jews left, mostly for Israel.

[Yehuda Slutsky]

GRUBER, RUTH (1911–), U.S. journalist and writer on Jewish causes. Born in Brooklyn, Gruber completed her B.A. at New York University, an M.A. in German and English literature at the University of Wisconsin, and a Ph.D. from the University of Cologne in 1931, at the age of 20. Her prescient thesis, first published in Leipzig in 1935, was republished with additional material in 2005 (*Virginia Woolf: The Will to Create as a Woman*).

Returning to the U.S. during the Depression, Gruber found her academic ambitions thwarted and turned to journalism. In 1935, she returned to Europe with a Guggenheim Foundation Fellowship to study women’s position under socialism, communism, and democracy. She was the first foreign correspondent allowed into Siberia, where she interviewed many of those living in the Gulag. U.S. Secretary of the Interior Harold I. Ickes hired her to do a social and economic study of Alaska in 1941 to determine its suitability for settlement of returning veterans.

In 1944, Ickes invited Gruber to participate in a secret mission to bring a thousand Jewish refugees from Italy to Oswego, N.Y. She was given the honorary rank of general so that, if captured, she would be treated as a prisoner of war rather than as a civilian spy. Gruber recorded the stories of the refugees, who called her “Mother Ruth,” and was instrumental in persuading the U.S. government to allow them to apply for

American citizenship at war's end. This experience convinced her to devote her energies to Jewish causes.

Gruber's accomplishments include covering the Anglo-American Joint Committee of Inquiry on Palestine for the *New York Post*, where she encountered the Jews in Europe's displaced persons camps. She visited Palestine and the Arab countries as well. She also covered the UN Special Commission on Palestine for the *New York Herald*. While in Jerusalem, she learned that the ship *Exodus*, overflowing with 4,500 Jewish refugees, was illegally on its way to Haifa. As the only reporter permitted by the British to accompany the ship back to Germany, her articles furthered international support for Israel's foundation.

Gruber covered the Israeli War of Independence, immigration of Jews to Israel from Yemen, Iraq, North Africa, Romania, and the Former Soviet Union, as well as both mass *aliyot* of Ethiopian Jews to Israel. She also traveled to Korea and Vietnam to write about adopting Asian orphans.

Gruber's extraordinary life is chronicled in her many books, particularly a three-part autobiography, of which two volumes had appeared by 2005: *Ahead of Time* (2001) and *Inside of Time* (2004). *Haven* (2000), the story of the Jewish refugees in Oswego, was made into a television mini-series.

[Anne Lapidus Lerner (2nd ed.)]

GRUBY, DAVID (1810–1898), physician, born in Novi Sad, then Hungary; one of the pioneers of modern microbiology and parasitology. Gruby left home while young and moved to Budapest, where he worked in a Jewish restaurant. As a Jew, he could not be accepted in a high school, so he stood outside the classroom door and listened to lessons. Eventually one of the teachers took pity on him, and arranged his admittance. Gruby studied medicine in Vienna and received his degree in 1834. Despite his being a Jew, he was appointed a surgeon at the university medical school. The university proposed that he be made a professor, on condition that he would become converted to Christianity. Gruby rejected this proposal, left Vienna, and settled in Paris (1839). He was given a post at the Museum of Nature, and lectured there on normal and morbid pathology. From 1841 to 1852 he made a number of discoveries, from which evolved the new branch of mycology in both human and veterinary medicine, advancing the development of microbiology and parasitology. Gruby was the first to prove experimentally that a fungus was likely to be the cause of a specific disease in man. He was also one of the first to investigate parasitic worms and their life cycles. One of his most important discoveries, made in 1843, which represented a turning point in the history of microbiology, was the first description of the flagellate parasites of frogs' blood and tissues. Gruby called these parasites "trepanosomes." In the same year, working with the French veterinarian Delafond, he discovered microfilaria in the circulating blood of infested frogs, thus opening a new avenue for the investigation of filaria worms which constitute a widespread disease agent for man in tropical climates. He also did research on comparative anat-

omy, experimental physiology, experiments with chloroform and ether in anesthesia immediately after its introduction in Europe. In addition he investigated the composition of the lymph, the microscopic structure of the intestinal epithelium, and the treatment of war wounds. He was also one of the first to prepare microscopic photographs. From 1852 onward, he devoted his time to his large private practice. He was the private physician of Chopin, Liszt, Heine, and Dumas.

[Saul Aaron Adler]

GRUEBER, HEINRICH (1891–1975), German pastor who saved Christians of Jewish extraction from Nazi persecution. Imprisoned in 1937 because of Christian religious opposition, he founded, after his release, the "Buero Grueber" for victims of the *Nuremberg Laws. The Buero aided non-Aryan Christians financially and helped them to emigrate. As a result of his protests in 1940 against the first deportations, Grueber was sent to the Sachsenhausen and later to the Dachau concentration camps. After his release in 1943, he secretly carried on with his work and at the end of the war set up an Evangelical Aid Society for Victims of Racial Persecution. In 1945 he became mayor of Berlin-Karlshorst and from 1949 was the representative of the Evangelical Church in the GDR, until he was forced to resign in 1958. He denounced all efforts to "whitewash" former Nazis and was a witness at the Eichmann trial held in Jerusalem in 1961. On his 70th birthday, the Grueber Grove was planted in Jerusalem. He wrote *Dona Nobis Pacem* (1957), *Leben an der Todeslinie: Dachauer Predigten* (1965²), and *Erinnerungen aus sieben Jahrzehnten* (1968).

Winkler, *Heinrich Grueber – Protestierender Christ* (1993); J. Hildebrandt, *Bevollmächtigt zum Brueckenbau – Heinrich Grueber* (1991).

[C.C. Aronsfeld / Bjoern Siegel (2nd ed.)]

GRUEN, ADOLF (1877–1947), Austrian industrial organic chemist, born in Vienna. Gruen became chief chemist of Schicht Konzern at Aussig (Usti nad Labem), Bohemia, which eventually became part of Basle company, Hoffmann-La Roche A.G. His many patents and scientific publications were concerned mostly with fats, but he also did research in pharmaceuticals. His books include *Analyse der Fette, Wachse und Erzeugnisse der Fettindustrie* (2 vols., 1925–28), *Fette, Wachse und aus diesen erzeugte Produkte* (1933), and *Synthese der Glyceride und Phosphatide* (1936).

GRUENBAUM, HENRY (1911–2006), Danish economist and politician. The son of a shoemaker, Gruenbaum was trained as an engraver but obtained a degree in economics. He joined the Labor Party, where he was active as an economist and statistician, and as editor of the party's paper *Socialdemokraten*.

During World War II Gruenbaum was a leading member of the Danish Resistance. After the war he was principally concerned with price control and vocational training. In 1964 he became minister of economics and Nordic affairs and from 1965 to 1968 finance minister, in which capacity he deputized for the prime minister in the latter's absence. His publications include *Industrielt demokrati* (1947).

[Joachim O. Ronall]

GRUENBAUM, MAX (1817–1898), German researcher in Jewish folklore and the popular languages of the Jews, one of the founders of Yiddish philology. He was born in Seligenstadt. In 1858 Gruenbaum was appointed director of the Hebrew Orphan Asylum in New York. In 1870 he returned to Europe, settled in Munich, and devoted himself to research. In the field of folklore, Gruenbaum investigated the history of aggadic themes and their influence on Islam. In the field of linguistics and literature Gruenbaum published his *Juedisch-deutsche Chrestomathie* (1882) and a selection from Yiddish literature. He was the first linguist to make a study of the structure and evolution of the Yiddish language. When he was 80 years old Gruenbaum published a chrestomathy of Judeo-Spanish which is important for the general research of Romance languages. Among his books were *Beitraege zur vergleichenden Mythologie aus der Haggadah* (1877); *Neue Beitrage zur semitischen Sagenkunde* (1893); *Die juedisch-deutsche Litteratur in Deutschland, Polen und Amerika* (1894) and *Juedisch-Spanische Chrestomathie* (1896).

BIBLIOGRAPHY: F. Perles, in: AZDJ (Dec. 25, 1898); idem, in: M. Gruenbaum, *Gesammelte Aufsaezte* (1901), introduction (repr. in: *Juedische Skizzen* (1912), 61–64); ADB, 49 (1904), 589–94; Rejzen, *Leksikon*, 1 (1926), 635.

[Martin Meir Plessner]

GRUENBAUM, YIZHAK (1879–1970), General Zionist leader, spokesman of Polish Jewry between the two World Wars, first minister of the interior in the Provisional Government of the State of Israel, and signatory of Israel's Declaration of Independence. Born in Warsaw, Gruenbaum grew up in Plonsk, and studied first in a *heder*, then in a Jewish government school, and later a government gymnasium in Plotzk. He learned Hebrew from private teachers. Gruenbaum went to university in Warsaw, starting in medicine, but then switching to law. He became involved in Zionist activity and in publicist writing during his student days, frequenting the home of the writer Isaac Leib *Peretz; he later edited several newspapers in Polish, Yiddish, and Hebrew, inter alia serving on the editorial board of *Ha-Olam* and *Ha-Zefirah*. In later years he fought to close down the Jewish press in languages other than Yiddish and Hebrew. Gruenbaum was active in promoting Hebrew culture in Poland and in the *Tarbut organization. He tried to ensure that the struggle of the Jews in the Diaspora for their rights should be led by Zionists, and was a central figure at the conference of Russian Zionists at Helsingfors in 1906 (see *Helsingfors Program). In the years 1908–10 he lived in Vilna and was appointed secretary gen-

eral of the Zionist Center in Russia. He participated in most of the Zionist Congresses from the Seventh Congress in 1905. Gruenbaum was politically active in Poland, struggling for the rights of the Jews there. In the elections to the Fourth Duma in 1912, he rallied support for the socialist candidate Jagiello, who supported equal rights for the Jews, and promised to fight against the antisemitic Polish nationalists. After the outbreak of World War I Gruenbaum settled in Petrograd, and upon the outbreak of the October Revolution became the editor of the Zionist daily *Petraograder Tageblatt*, advocating a secular community and official status for Yiddish in government institutions. In September 1918 he returned to Warsaw, becoming active in Zionist work while also participating in the establishment of the Polish Provisional National Council, which played an important role in the campaign for equal rights for the Jews during the first years of independent Poland. In 1919 Gruenbaum was elected to the Sejm (the Polish parliament) and was a member of the commission that prepared the Polish Constitution, advocating the inclusion of articles guaranteeing the rights of the national minorities. In order to overcome the distorted election regulations that sought to prejudice the chances of national minorities of being elected, he played an active role in the formation of a "National Minorities Bloc." In the 1922 elections this bloc, which included the Jews, obtained a considerable number of mandates. The policy of fighting for Jewish interests within the framework of the general struggle for minorities rights in Poland was controversial among the Polish Jews and was resented by many non-Jewish Poles. In the following elections the strength of the Minorities Bloc declined and in the course of the 1930s, upon the increase of overt antisemitism in Poland, it was abandoned. Gruenbaum remained a member of the Sejm until he left Poland in 1932. For much of time, he also served as the chairman of the Sejm's Jewish members club.

Gruenbaum first visited Palestine in 1925. Within the Zionist movement Gruenbaum opposed the enlargement of the Jewish Agency in 1929 through the cooperation of non-Zionists, and headed the radical Zionist faction known in Poland as Al ha-Mishmar. In 1932 he left for Paris. At the Zionist Congress of 1933 he was elected a member of the Jewish Agency Executive, following which he settled in Palestine. In the executive he headed the Aliyah Department in the years 1933–35 and the Labor Department 1935–48, and was also a member of the Organization Department (1935–46). In 1935–48 he headed the Mossad Bialik publishing house.

Gruenbaum was arrested by the British on "Black Saturday" in June 1946, and remained interned in Latrun until November. After the establishment of the State he was treasurer of the Jewish Agency until 1950 and served as its commissioner in 1950–51. On the eve of the establishment of the State of Israel, Gruenbaum was a member of the People's Administration, in charge of internal affairs, and in this capacity signed the Declaration of Independence. In the Provisional Government he was minister of the interior, in which position he was in charge of the elections to the Constituent As-

sembly in 1949. He ran in these elections in a personal list, but failed to pass the 1% qualifying threshold. In subsequent years Gruenbaum wrote on Zionist affairs and was a frequent contributor to the Mapam daily *Al ha-Mishmar*. He spent the last ten years of his life in kibbutz Gan Shemuel.

Gruenbaum's radical positions earned both admirers and enemies.

His principal writings are *Ha-Tenu'ah ha-Ziyyonit be-Hitpattehutah* (4 vols., 1942–54); *Milhamot Yehudei Polin* (1922, 1941²); *Bi-Ymei Hurban ve-Sho'ah* (1940–46); *Materjalny w sprawie zydowskiej w Polsce* (2 vols., 1919–22); *Dor be-Mivhan* (1951); *Penei ha-Dor* (2 vols., 1957–60); and *Ne'umim ba-Seim ha-Polani* (1963); he edited the first and sixth volumes of *Enziklopedyah shel Galuyyot* (1953, 1959).

[Haim Hillel Ben-Sasson / Susan Hattis Rolef (2nd ed.)]

GRUENBERG, KARL (1861–1940), economic and social historian. Gruenberg, who was born in Focsani, Romania, studied and practiced law from 1885. In 1900 he became an associate professor of economics and in 1909 full professor at the University of Vienna. He was director of the Institute of Social Research at the University of Frankfurt from 1924 until 1927 when he resigned because of ill health. Gruenberg wrote extensively on the agrarian history of the Austrian monarchy and the history of Socialism. Beginning in 1910 he published the *Archiv fuer die Geschichte des Sozialismus und der Arbeiterbewegung*, or *Episoden – Sechs Jahrzehnte Kampf um den Sozialismus*. Gruenberg was murdered by a Nazi in Frankfurt on the Main.

BIBLIOGRAPHY: *Oesterreichisches biographisches Lexikon*, 2 (1959), 88. **ADD. BIBLIOGRAPHY:** G. Nening, *Carl Gruenberg und die Anfaenge des Austromarxismus* (1965).

GRUENBERG, LOUIS (1884–1964), U.S. composer. Born in Poland, near Brest Litovsk, Gruenberg was taken to the U.S. at the age of two. He studied in Berlin with Busoni, and made his debut as a pianist in 1912 at a concert of the Berlin Philharmonic, under Busoni's baton. In that year he composed a children's opera called *The Witch of the Brocken* which was followed by *The Bride of the Gods* (1913). After winning a prize for *The Hill of Dreams* (New York Symphony Society, 1919), Gruenberg devoted himself entirely to composition.

The League of Composers performed his *Daniel Jazz* in 1925. This was followed by *The Creation* (1923), into which he introduced Negro spirituals. In 1931 the Juilliard School of Music commissioned and produced his opera "Jack and the Beanstalk."

Gruenberg's most important work was his opera *Emperor Jones*, based on Eugene O'Neill's play of that name. Gruenberg was one of the first American composers to use elements of Negro spirituals and jazz in serious music. His opera *Green Mansions*, based on W.H. Hudson's novel, was commissioned by the Columbia Broadcasting System and broadcast in 1937. Moving to California, Gruenberg wrote background music for films, and composed two other operas, *Queen Hel-*

ena (1936) and *Volpone* (1945), five symphonies, and various chamber works. He was one of the organizers of the League of Composers.

[John W. Gassner]

GRUENBERG, SAMUEL (1879–1959), biblical scholar and communal worker. Gruenberg was born in Romania and in 1920 was appointed lecturer in Bible exegesis, history and geography of Palestine, and modern Hebrew at the Berlin rabbinical seminary. He was active in the Mizrahi movement and founded the Welt-Verband Shomre Shabbos, presiding over its founding congress in 1930. Gruenberg immigrated to Palestine in 1936 and then served as the chairman of the Mo'azah Datit ("religious council") of Tel Aviv.

With A.M. Silbermann he edited the "Menorah"-*Woerterbuch*, a modern Hebrew-German, German-modern Hebrew dictionary (1920). Gruenberg's exegetical work appeared mainly as articles in German (collected under the title *Exegetische Beitrage*, 5 vols., 1924–33) and Hebrew (collected under the title *Li-Feshuto shel Mikra*, 1945). He also wrote *Zur Geschichte der Bibelexegese I, Nordfranzoesische Klassiker der Bibelexegese* (1928). Among his Hebrew works is *Nizzanim* (1906), a book of poetry. Gruenberg was the editor of the Hebrew section of Joseph *Wohlgemuth's *Jeschurun*, to which he contributed many studies.

BIBLIOGRAPHY: I. Eisner, in: YLBI, 12 (1967), 46; Tidhar, 4 (1950), 1624–25.

GRUENBERG, SIDONIE MATSNER (1881–1974), U.S. educator, who exercised a dominant influence in advancing the study of guidance methods for parents and children. Sidonie Gruenberg was born in Austria and was educated in Germany and New York. In 1906 she joined the Child Study Association of America, became director (1923–1950), and served as consultant from 1950. Gruenberg wrote extensively for children and parents, and her books were translated into many languages. She was regarded as an authority on child-parent relationships and lectured in parent education, and was a member of the editorial boards of *Parents Magazine* and *Child Study*. She was chairman of the subcommittee of the White House Conference on Child Health and Protection (1930); a member of The White House Conference (1940) and The Mid-Century White House Conference (1950); director of the Public Affairs Commission (1947) and the Social Legislation Information Service (1947–61).

[Ronald E. Ohl]

GRUENEWALD, MAX (1899–1992), German rabbi and professor. Born in Koenigshuette, Upper Silesia, Germany, his father was a Jewish educator in the region. After service in World War I, he was ordained at the Breslau Rabbinical Seminary and received his doctorate in philosophy at the University of Breslau.

By 1938, Gruenewald served at the “Haupt” or “main” synagogue in Manheim for 12 years and had been elected president of the Jewish community (1933), the only rabbi to hold both offices in Germany. Owing to the rising tide of antisemitic legislation, he resigned these posts to accept a position in Berlin to work as a member of the inner council of all German Jewry. After several detentions and interrogations by the Gestapo, in discussion with Dr. Leo Baeck, he left for Palestine in late 1938 because “he saw and felt that no essential change could be effected in the fate of German Jews.”

In 1939 Gruenewald accepted an invitation to teach at the Jewish Theological Seminary. The beginning of World War II left him stranded in New York and he accepted a weekend pulpit at Congregation Bnai Israel in Millburn, N.J. On May 13, 1945, Gruenewald left for Palestine to rejoin family, returning that December to accept what became a full time position in Millburn. Although offered other posts, both academic and congregational, his decision to stay in Millburn was in part prompted by his wish to build a new community fashioned with the values of his rabbinate in Manheim, rather than enter a more established congregation.

With the growth of the Millburn congregation, Gruenewald commissioned Percival Goodman to create a new form of synagogue architecture, highlighted by works of art from three “advance-guard U.S. abstractionists,” according to *Time* magazine. Herbert Ferber designed an external burning bush sculpture, Robert Motherwell designed the lobby painting, and Adolph Gottlieb created the ark curtain, the original of which hangs at the Jewish Museum. Throughout his life Gruenewald dedicated himself to the preservation of the German Jewish cultural heritage. He died in Millburn.

[Steve Bayar (2nd ed.)]

GRUENFELD, JUDAH (1837–1907), Hungarian rabbi. Gruenfeld was born in Satoraljaiújhely. He was one of the most important pupils of Abraham Judah Ha-Kohen Schwartz, rabbi of Beregszász-Mad, and like his teacher frequented the court of the Ḥasidic rabbi of Zanz. He lived for a time in Huszt, where Moses *Schick often consulted him on important problems. In 1883 he was appointed rabbi of Büdszentmihály, serving there until his death. His writings were not collected, but a substantial part of them were published by Joseph Schwartz in *Va-Yelakket Yosef* (1899–1917). Twenty-six important responsa were published in *Responsa Maharshag* (1961) by his son SIMEON (1881–1930), who served first as *dayyan* of Munkacs and then succeeded his father at Büdszentmihály. Simeon was the author of *Responsa Maharshag*, Pt. 1 (1931) on both *Orah Ḥayyim* and *Yoreh De'ah*, Pt. 2 (1939) on *Orah Ḥayyim* alone. In 1961 the work was republished in Jerusalem with his additional responsa on *Ḥoshen Mishpat* and *Even ha-Ezer*. His responsa are distinguished by their clarity, their penetration, and their great erudition. He also wrote *Zehav Sheva* (1933) on the

Pentateuch. He left more than 2,000 responsa in manuscript, novellae on several tractates, a large work on the *halakhot of mikva'ot*, and a work on *ta'arovot* (mixtures containing forbidden food). It is doubtful if these works have survived.

[Naphtali Ben-Menahem]

GRUENHUT, DAVID BEN NATHAN (17th–18th centuries), German talmudist and kabbalist. In 1682 he printed Ḥayyim Vital's *Sefer ha-Gilgulim* (“On the Transmigration of Souls”), but was prevented from distributing it by the rabbinate of Frankfurt, which opposed kabbalistic works because of the danger of Shabbateanism. Two years later, however, while at Heimerdingen, he published it again, this time through a Christian printer in Frankfurt. After serving as rabbi for several years in neighboring towns (Idstein, Aue, and perhaps also Heimerdingen), he returned to Frankfurt, becoming one of the scholars in the *bet ha-midrash* founded by David *Oppenheim. Gruenhut published *Tov Ro'i* (Frankfurt, 1702), Jacob *Weil's work on the laws of ritual slaughter, to which he added his *Migdol David*, consisting of homilies and comments on Genesis. He published the *Sefer Hasidim* of *Judah he-Ḥasid with his own commentary (Frankfurt, 1712) and in the following year Samuel *Uceda's *Midrash Shemu'el* (Frankfurt, 1713). On friendly terms with *Eisenmenger and *Schudt before they published their antisemitic works, he wrote an adulatory preface to the former's edition of the Bible.

[David Tamar]

GRUENHUT, ELEAZAR (Lazar; 1850–1913), rabbi and author. Gruenhut was born in Gerenda, Hungary, and in 1883 he was appointed rabbi of Temesvár. Impressed by the Haskalah and taking up the challenge he saw in it, he decided to augment his general education and acquire a scientific foundation for his Jewish studies. At the age of 40 he resigned his rabbinical post, left Temesvár, and moved to Berlin, where he studied at the Hildesheimer seminary and at the University of Berlin. He was especially influenced by Azriel *Hildesheimer and Abraham *Berliner. In 1892 he emigrated to Palestine and became head of the German-Jewish Orphanage. His introduction of secular studies there and his openly proclaimed Zionist views aroused the opposition of ultra-Orthodox circles in Jerusalem. Gruenhut was a prominent figure in the early Mizrahi. In addition to his communal and educational activities, Gruenhut continued his scholarly endeavors, mainly in Midrash and in Palestinian geography.

[Jacob Haberman]

GRUENHUT, MAX (1893–1964), criminologist and penal reformer. Gruenhut, who was born in Magdeburg, Germany, taught at Hamburg until 1922, when he went to Jena University. Later he went to Bonn as professor ordinarius. After the

Nazi accession to power he emigrated to Britain where he was appointed reader in criminology at Oxford. In 1948 he published his widely acclaimed work, *Penal Reform*. Gruenhut, who became a practicing Lutheran, took a special interest in the development of the probation system. He devoted several publications to this subject, stressing the extramural method of peno-correctional treatment as a possible alternative to imprisonment in many cases. The United Nations asked Gruenhut to undertake an investigation of certain problems relating to the efficacy of probation. The results were issued by the UN Social Affairs Department in 1964.

[Zvi Hermon]

GRUENING, ERNEST HENRY (1887–1974), U.S. journalist, administrator, and politician. Gruening was born in New York City to parents of German origin. He received a medical degree from Harvard in 1912, but decided on a career in journalism and joined the staff of the Boston *Evening Herald*. After serving as an artillery officer and on the War Trade Board's Bureau of Imports during World War I, Gruening edited *The Nation* from 1920 to 1923, winning fame for his crusades against U.S. economic exploitation of Latin America. In 1927 he moved to Maine and founded the muckraking Portland *Evening News*, which specialized in attacks on the power utilities. Gruening abandoned journalism as a profession in 1934 when he was appointed director of the Division of Territories and Island Possessions of the Department of the Interior, a post he held until 1939. From 1935 to 1937 he also served as relief and reconstruction administrator in Puerto Rico. Gruening became territorial governor of Alaska (1939–53), in which capacity he was a strong proponent of Alaskan statehood. When Alaska was admitted to the Union, Gruening was elected a U.S. senator (1958) and was reelected in 1962. He was defeated in his bid for a third term in the 1968 Democratic primary. Gruening's Senate career was marked by his vigorous opposition to American military intervention in Latin America and Vietnam and by his support for federal birth control programs and public power projects. His publications include: *Mexico and Its Heritage* (1928); *Public Pays and Still Pays* (1931, 1964); *State of Alaska* (1954); and *Vietnam Folly* (1968).

[Henry Sosland]

GRUENSTEIN, NATHAN (1877–1932?), German organic chemist. Gruenstein was born in Lithuania. Working for a chemical firm in Frankfurt on the Main, he developed a method of converting acetylene into acetaldehyde, with mercury salts as a catalyst, and thence into acetic acid, acetic anhydride, acetone, etc. His process, first used industrially in 1916, remained the chief method of producing these chemicals for nearly 50 years. Gruenstein was an active Zionist.

GRUENWALD, MORITZ (1853–1895), Czech rabbi and scholar. Gruenwald was born in Ungarisch-Hradisch, Moravia. He studied at the Breslau rabbinical seminary and served as rabbi in various cities, among them Pisek, Bohemia, 1887–93, before becoming chief rabbi of Bulgaria, residing in Sofia, in 1893. He also directed and taught at the Sofia rabbinical seminary.

In 1881 Gruenwald founded and edited until 1885 *Das Juedische Zentralblatt Zugleich Archiv... Boehmen* (1882–85), a periodical intended for the congregations in which he served. He published a number of books, including *Einfluss der Bibel auf die Bildung von Redensarten in europaeischen Sprachen* (1883); *Zur romanischen Dialektologie*, on Ladino and Rashi's *Loazim* (1883), and works on Czech Jewish history.

GRULĚV, MIKHAIL VLADIMIROVICH (1857–?), Russian general, publicist, and military historian. In 1878 he volunteered for the Krasnoyarsk regiment and the following year converted to Russian Orthodoxy, after which he enrolled in the Warsaw Military Academy, from which he emerged as an officer in 1882. In 1889 he became a member of the General Staff. He served on missions to India, Egypt, China, and Japan and headed a scientific expedition to Manchuria which recommended a site for establishing the city of Harbin. During the Russo-Japanese War (1904–05) GrulĚv commanded a regiment (and subsequently a division) during battles at the Shakhe River. A liberal by conviction, he refused to take part in the suppression of the revolutionary uprisings in 1905–07. From 1907 to 1909, when he had already attained the rank of general, he worked with the military-historical commission attached to the main directorate of the general staff in compiling the official history of the Russo-Japanese War (he was responsible for the two volumes on the operations at the Shakhe River). From 1910 he was commander of the Brest-Litovsk fortress. In 1912, following threats from the authorities, he was removed from his post in a disciplinary measure for the expression of radical views in the press. GrulĚv handed in his resignation on grounds of "health" and retired to Nice (France), where he died.

His over 20 books and writings began with a poem written in Hebrew in the late 1870s and published in the newspaper *Ha-Zefirah* and included articles about the Dreyfus Affair, and a series of articles (1905–07) which revealed his interest in the position of the Jewish people. In the book *Zapiski generala- evreya* ("Notes of a Jewish General," Paris, 1930), GrulĚv castigated antisemitism, and expressed his love and sympathy for the "long-suffering Jewish people." He donated the proceeds from this book to the *Jewish National Fund.

GRUMBACH, ANTOINE (1942–), French architect and town planner. Born in Oran, Algeria, Grumbach, a graduate of the Paris Ecole des Beaux-Arts (1967), focused mainly on public housing projects and public transportation (the Bib-

liothèque subway station of the Meteor line in Paris, transformation of the peripheral Paris boulevards for the creation of a new trolley line). Grumbach devoted his formative years mainly to writing, developing a theory of the influence of collective memory on urban landscape, leading to his social and humanistic approach to urbanism. His participation in the Roma Interrota exhibition in 1977 following his detailed study of the traditional urban fabric of Paris was a turning point in his theoretical development; from that time on he advocated the integration of new buildings in the existing urban matrix, as he views this integration as the unique means of connecting what is new to the social and collective memory of the city.

GRUMBACH, SALOMON (1884–1952), French socialist. Born in an Alsatian village, Grumbach went to Paris as a young man to become editor of *L'Humanité* under Jean Jaurès. During World War I he was Swiss correspondent of the paper and wrote French propaganda tracts on such subjects as *Le Destin de l'Alsace-Lorraine* (Lausanne, 1916) and *Germany's Annexionist Aims* (Engl., 1918) in both German and French. Elected a member of the central committee of the French Socialist Party (SFIO), he represented it at the Third Socialist International and was elected on the Socialist ticket to the French Chamber of Deputies in 1928. Grumbach was a member of the Chamber almost continually until 1948 and was successively vice-chairman and then chairman of its Foreign Affairs Committee. Following the fall of France in 1940, he was imprisoned and later assigned a place of forced residence but escaped in 1942 and joined the French resistance movement. After the war, Grumbach was reelected to the Chamber of Deputies and concerned himself with aid for refugees. He exercised influence on France's recognition of the State of Israel. He was also active in the World Jewish Congress, especially on behalf of the Jews of North Africa and was secretary-general of the world executive of *ORT.

GRUMBERG, JEAN-CLAUDE (1939–), French actor and playwright. When Jean-Claude Grumberg was three, his father was deported to Germany and never came back. Working first as a tailor after the war, Grumberg soon began acting, and wrote his first play, *Demain une fenêtre sur la rue*, in 1968. In 1974, he used some autobiographical material from his childhood and postwar memories to create *L'Atelier*, a tragi-comedy about women working in a Jewish-owned cloth factory immediately after the war, with the trauma of the Holocaust exposed in a very subtle manner. Other plays include *Rixe*, *Les Vacan-*

ces, *Amorphe d'Ottentburg*, *Dreyfus*, *Chez Pierrot*, *En r'venant d'l'Expo*, *L'Indien sous Babylone*, *Zone libre*. Grumberg was awarded numerous prizes, including the Theater Prize of the French Academy for *Zone Libre*, two "Molière" awards (best actor for *Zone libre* and best playwright for *L'Atelier*) and in 2000 the SACD Award for lifetime achievement. Grumberg also worked as a screenwriter for TV and film, assisting directors like Marcel Bluwal, François Truffaut, and Costa-Gavras.

[Dror Franck Sullaper (2nd ed.)]

GRÜNBAUM, ADOLF (1923–), U.S. philosopher of science. Grünbaum was born in Cologne, Germany, and immigrated to the United States in 1938. He received his M.S. in physics (1948) and his Ph.D. in philosophy (1951), both from Yale University. After rising through the ranks to an endowed chair at Lehigh University (1950–1960), he was appointed Andrew Mellon Professor of Philosophy in 1960 at the University of Pittsburgh, where he founded its leading Center for Philosophy of Science, of which he served as chairman. He also had an appointment there as research professor of psychiatry. Grünbaum's thorough knowledge of physical and mathematical problems enabled him to analyze some of the basic philosophical questions that arose in connection with space and time. His more than 375 publications range over the philosophy of physics, the theory of scientific rationality, the critique of Freudian psychoanalysis, and the discrediting of theism. His major books include *Philosophical Problems of Space and Time* (1973²), *The Foundations of Psychoanalysis: A Philosophical Critique* (1984), and *Philosophy of Science in Action* (2 vols., 2005). Grünbaum served as president of the American Philosophical Association, and president (twice) of the Philosophy of Science Association. He is a fellow of the American Academy of Arts and Sciences and a laureate of the International Academy of Humanism. His prestigious lectureships include the Gifford Lectures in Scotland, the Werner Heisenberg Lecture to the Bavarian Academy of Sciences in Munich, and the Leibniz Lectures in Hanover, Germany. He is the recipient of the Fregene Prize for science from the Italian Parliament, all four of whose prior recipients were Nobel laureates in one of the natural sciences. Yale University awarded him the Wilbur Lucius Cross Medal "for outstanding achievement." He received the Silver Medal from the venerable Italian University of Parma in recognition of his "prestigious career." His scholarship has also been recognized by the publication of three separate *Festschrift* (celebratory) volumes: (1) *Physics, Philosophy and Psychoanalysis: Essays in Honor of Adolf Grünbaum*, ed. R.S. Cohen and L. Laudan (1983, 1992); (2) *Philosophical Problems of the Internal and External Worlds: Essays on the Philosophy of Adolf Grünbaum*, ed. J. Earman et al. (1993); and (3) *Philosophy of Physics and Psychology: Essays in Honor of Adolf Grünbaum*, ed. A. Jokic (2005). Most recently, he was elected president (for 2006–7) of the International Union for History and Philosophy of Science, the worldwide umbrella organization of the various national societies in the philosophy of science and of history of science.

[Bracha Rager (2nd ed.)]

GRUNBERG (Grinberg), ABRAHAM (1841–1906), *Hibbat Zion leader. Born in Kishinev, Grunberg became a merchant and estate owner and one of the first wealthy Jews to join the Hibbat Zion movement. He lent his support to L. *Pinsker in Odessa. In 1889, at the Hovevei Zion Conference at Vilna, he was elected to the committee of trustees (the other members of which were S. *Mohilever and S.J. *Fuenn), which replaced Pinsker at the head of the movement. In 1890 he helped obtain from the Czarist authorities the authorization for the Society for the Support of Jewish Agriculturists and Artisans in Syria and Palestine (the official name of the Odessa Committee of Hovevei Zion), and upon Pinsker's death (1892) he was elected president of the society, a post which he retained until a few months before his death. Grunberg also headed a delegation that discussed with Baron *Rothschild in Paris the methods of agricultural settlement in Erez Israel (1901). He frequently served as a Jewish representative before the Russian authorities.

[Yehuda Slutsky]

GRÜNBERG, CARLOS MOISÉS (1903–1968), Argentine poet born in Buenos Aires. He was among the most important and influential of Jewish authors of his generation in Argentina. Grünberg received his formal education from the University of Buenos Aires, earning advanced degrees in philosophy and law. In his early volumes of poetry – *Las cámaras del rey* (1922) and *El libro del tiempo* (1924) – Grünberg showed a close affiliation with the group of the 1920s avant-garde writers known as the *martínfierristas*, for their association with the literary journal *Martín Fierro*. He was also known for his translations of Heinrich Heine and H.N. Bialik into Spanish. He was active in the Zionist movement and was named a liaison between the State of Israel and Argentina in 1948.

Carlos Grünberg was unapologetic in his poetic expression of Jewish identity, which he especially sought to incorporate into his latter works. Much like his contemporary César Tiempo (Israel Zeitlin), Grünberg strove to define Argentine-Jewish identity in his poetry, a sometimes painful but always sincere project. His *Mester de juglaría* (1940) carried a laudatory preface by Jorge Luis Borges and consecrated him as a poet. Throughout the volume, emphasis is placed on forging a Jewish-Argentine identity. While many of the poems speak directly to the precarious and often dangerous situation for Jews in Argentina, Grünberg clearly posits his faith in the country as a hopeful new homeland. Since his perspective as a Jew was a secular one, in this book he rather forcefully and consistently denounces religiosity and declares his atheism. *Junto a un río de Babel* (1965), Grünberg's next volume of poetry, is marked by the significant historical events since the publication of *Mester*. The volume expresses the poet's frustration as a Diaspora Jew as he tries to negotiate his support for the formation of the State of Israel with his Argentine identity.

Grünberg's complete works, along with a biography and critical study, are collected in Eliahu Toker (ed.), *Un diferente y su diferencia: vida y obra de Carlos M. Grünberg*. Carlos Grünberg continues to be considered one of the foremost of early Jewish poets in Argentina. His work has had a lasting impact on subsequent generations and remains as a testament to the poetic imagination as a foundry of cultural identity.

[Darrell B. Lockhart (2nd ed.)]

GRUNDIG, LEA (1906–1977) and **HANS** (1901–1958), German painters and graphic artists. Both were born in Dresden. Lea Grundig, born Lea Langer, began to study at the Dresden Academy of Arts in 1922. Already involved with the association of Communist students, she became a member of the German Communist Party (KPD) in 1926. Two years later, she married Hans Grundig, also a member of the Communist Party, and they both began to create posters and illustrations for Communist purposes. Lea Grundig focused on linocuts, etchings, and drawings in a late-expressionist style describing the milieu of the lower classes, as in *Mutter und Kind vor der Fabrik* of 1933 ("Mother and Child in Front of the Factory"). Hans Grundig was recognized first for painted group portraits, like KPD – *Versammlung* ("Meeting of the German Communist Party," 1932, Neue Nationalgalerie, Berlin) in the neorealist style of the *Neue Sachlichkeit*, but soon turned to expressionist etching. In the mid-1930s, he created a series of allegories, human and brutish monsters in etching in which he denounced the National Socialist system as based on all-embracing terror. Both Hans und Lea Grundig were persecuted by the National Socialist authorities and had to give up working as artists. Lea was deported but managed to flee to Palestine in 1940, where she created several series of etchings related to the Holocaust. Hans Grundig was incarcerated and sent to the concentration camp of Sachsenhausen in 1940. He survived and met his wife again in 1949, when she returned to Dresden. She became a professor at the local Academy of Fine Arts. From the 1950s, they both adapted the style of socialist realism and took an active part in visualizing the ideology of the German Democratic Republic.

[Philipp Zschommler (2nd ed.)]

GRUNDMAN, ZWI (1917–), Israel artist. Grundman was born in Poland into a family of artists (his father decorated synagogues and Holy Arks and painted biblical themes). In 1949 he settled in Israel. Much of his work is derived from Jewish philosophy. Grundman made series of oil paintings, gouaches, and lithographs based on the thought of the *Hasidim and of great East European rabbis. He also pub-

lished an album of stoneblocks illustrating the hasidic story “The Seven Beggars” by R. Nahman of Bratslav.

GRUNER, DOV (1912–1946), Jew executed by the British in Palestine. Gruner was born in Kisvarda and was one of a group of “illegal” Betar immigrants who came to Erez Israel in 1940, when he joined IZL. A year later he enlisted as a volunteer in the British army in which he served for five years. On April 23, 1946 he participated in an attack by IZL on the Ramat Gan police station, and was wounded and captured. The desperate attempts of the *yishuv* to save his life extended over a year and were still in progress, when suddenly he was hanged together with Drezner and his two companions.

GRUNFELD, ERNIE (1955–), U.S. basketball player and administrator; considered one of the league’s top general managers. Grunfeld was born to Holocaust survivors Alex and Livia (Samuel) in Satu Mare, Romania. During the war, Grunfeld’s father – later a champion table tennis player, ranked 16th in the world in 1952 – spent time in a Romanian labor camp while his mother spent a year and a half hiding in basements in Budapest before obtaining false papers provided by Raoul *Wallenberg. Her parents and relatives were killed in Auschwitz. After waiting six years – and six months in Rome – they arrived in New York 11 days before Grunfeld’s ninth birthday. Growing up in Forest Hills, New York, Grunfeld went to Hebrew school, was bar mitzvahed, went to synagogue with his parents on the holidays, and fasted on Yom Kippur, learning basketball in the schoolyard and playground courts. Grunfeld was a legend wherever he played, first at Russell Sage Junior High School and then Forest Hills High School, where he was All-American and All-City player his senior year, when he averaged 25.4 points and 16.6 rebounds per game. He was also named the outstanding student-athlete in New York City.

Grunfeld was picked to play on the 1973 U.S. Maccabiah team, the first high school player ever to play on a U.S. Maccabiah team. Grunfeld led the team – coached by Harry *Litwack – with 20 points per game and was named tournament MVP, though the team lost to Israel 86–80 in the final.

Grunfeld’s star continued to shine as a celebrated guard at the University of Tennessee from 1973 to 1977, when he was featured on the cover of *Sports Illustrated* as a co-star of the “Bernie and Ernie Show” with his teammate Bernard King, a future NBA star. As a sophomore in 1975, Ernie was the second-leading scorer in the Southeast Conference with 23.8 points per game. He then played for the gold medal-winning basketball team in the 1975 Pan American Games. The following year, he led the conference in scoring with 25.3 points per game, and his 683 points was then a single-season record for Tennessee. Named captain his senior year, Grunfeld led them to a 22–6 record and the SEC championship, averaging 23.8. He was named Converse, Helms, and Sporting News (second team) All-America.

Grunfeld obtained his American citizenship in July 1976, in time to play for the U.S. at the Montreal Olympics, which netted Grunfeld a gold medal.

Grunfeld finished his career at Tennessee with 2,249 points, which set the school record, and 22.3 points per game, second in school history to Bernard King. Grunfeld was picked 11th by Milwaukee in the 1977 NBA draft, and enjoyed a nine-season career: two years with Milwaukee, three years with Kansas City, and four years with New York. Grunfeld retired following the 1985–86 season with 5,124 points, an average of 7.4 points per game in 693 career games played.

Grunfeld then worked as the Knicks radio analyst for the MSG Network from 1986 to 1989 before becoming assistant coach, vice president of player personnel, and president and general manager of the team. He led New York into the playoffs in all eight seasons of his tenure. In August 1999, Grunfeld became general manager of the Milwaukee Bucks, guiding that franchise to the postseason three times in four years. On June 29, 2003, Grunfeld was released from the final year of his contract with the Bucks, and the next day he was named president of Basketball Operations for the Washington Wizards, replacing Michael Jordan.

Grunfeld is a member of the New York City Basketball Hall of Fame.

[Elli Wohlgeleinter (2nd ed.)]

GRUNFELD, ISIDOR (1900–1975), rabbi and author. Born in Tauberertersheim, Bavaria, Grunfeld studied law and philosophy at the universities of Frankfurt and Hamburg, and rabbinics at yeshivot there. After practicing law at Wuerzburg, Bavaria, he settled in England in 1933, where he studied for the rabbinate and was ordained in 1938. He was minister of the Finsbury Park synagogue (1936–38), and served first as registrar and later (from 1939) as *dayyan* of the London Beth Din, from which office he retired owing to ill health in 1965. Among his numerous communal activities were those for the Jewish War Orphans in Europe, and the British Council for Jewish Relief and Rehabilitation. He was also active in Amnesty International and various peace movements. Grunfeld’s literary work is chiefly concerned with S.R. *Hirsch’s writings, editing English translations of his work with extensive introductions and notes (*Judaism Eternal*, 2 vols., 1956; *Horeb*, 2 vols., 1962; introduction to I. Levy’s English translation of S.R. Hirsch’s Pentateuch commentary, 1959). He also wrote *The Sabbath* (1954) and *Three Generations* (on the history of neo-Orthodoxy, 1958). His wife Judith (née Rosenbaum) was active in the Beth Jacob movement (religious girls’ schools) and in the Jewish secondary schools movement in England.

GRÜNVALD, PHILIP (Fülöp); 1887–1964), Hungarian historian. Grünvald was born in Sopron, the son of Mano Grünvald, rabbi of the Orthodox congregation there. In 1913 he started his teaching career at the Jewish secondary school in Budapest.

From 1919 to 1948 he taught at the Jewish High School and from 1948 to 1958 he was its principal. From the early 1950s until his death he taught Jewish history at the Jewish Theological Seminary in Budapest. As a teacher he was held in great esteem, especially because of his absolute integrity and deep religious commitment. Grünwald also served the Jewish Museum of that city for 30 years, first as curator and later as director.

In 1927 he presented an outline for a history of the Jews in Hungary (in: *A Zsidó Gimnázium Értesítője*, 8 (1927), 12–29). Later, he dealt with the history of the Jews in Buda, *A zsidók története Budán* (1938). His other works dealt with aspects of the history of Jews in Hungary. His major work was the continuation of *Monumenta Hungariae Judaica*, with A. *Scheiber, he edited volumes 5–7 (1959–63) of this important historical work.

BIBLIOGRAPHY: A. Scheiber, in: *Soproni Szemle*, 18 (1964), 187–8; idem, in: *MHJ*, 8 (1965), 11–17, incl. list of his works.

[Alexander Scheiber]

GRÜNWARD, AMRAM (d. 1870), Hungarian talmudist. Although he published no works he is extensively mentioned in the works of his contemporaries who referred difficult problems to him, e.g., Abraham S.B. Sofer in *Ketav Sofer* (OH, nos. 3, 94); Judah Aszod in *Teshuvot Maharia*, Pt. 2 (no. 236); David Neumann, in *Nir le-David* (nos. 105, 118). His ethical testament was published in the *Keren le-David* (1929) of his son Eliezer David Grünwald. Grünwald died in Csorna, Hungary.

[Naphtali Ben-Menahem]

His other son, MOSES (1853–1910), was a scholar and rabbi. He studied under Abraham Samuel *Sofer in Pressburg, but leaned to Ḥasidism and often visited R. Issachar Dov of *Belz. He served as rabbi in Homonna, Slovakia and Kisvarda, Hungary and from 1893 in Huszt, Carpatho-Russia, where he established one of the major Hungarian yeshivot. Grünwald wrote three works all with the title *Arugot ha-Bosem*: (1) responsa (1912); (2) a study of the talmudic principle of *Issur Ḥal al Issur* (more than one prohibition can apply to the same act; 1928); and (3) a commentary on the Pentateuch (1913). He also wrote *Mikveh Tohorah* on the laws of *mikveh* (1931). His will was published (1911) under the title *Hakhanah de-Rabbah*.

GRUNWALD, HENRY ANATOLE (1922–2005), U.S. journalist and editor. Grunwald was born in Vienna, but immigrated to the U.S. at the age of 17. He studied at New York University and graduated in 1944. In the same year he began his career with Time Inc. as a copy boy and the following year as a writer for the publication, editing most of the sections of the news magazine. In 1968 he was appointed managing editor.

According to Grunwald, his most important contribution to *Time* was that of generating more original reporting. To that end, he introduced new departments and features, including guest essays by celebrated writers or experts; he added sections on the environment, behavior, and energy; and he created special issues devoted to a particular topic. He also introduced color photography to the magazine and granted bylines to the magazine's hitherto unnamed writers.

Grunwald relinquished the managing editor position in 1977 and in 1979 was appointed editor-in-chief in succession to Hedley Donovan. His appointment carried with it editorial responsibility for the journals *Time*, *Fortune*, *Life*, *Sports Illustrated*, *Money*, and *People*, in addition the international editions of *Time* and Time-Life Books Inc. He served in that capacity until he retired in 1987. In 1988 President *Reagan appointed Grunwald U.S. ambassador to Austria. Reappointed by President Bush, he maintained this post until 1990.

Among his many honors, Grunwald received the American Society of Magazine Editors Hall of Fame Award; the New York University Distinguished Alumni Award; and the International Rescue Committee Medallion. Among his published works, Grunwald wrote his autobiography, *One Man's America: A Journalist's Search for the Heart of His Country* (1998), and *Twilight: Losing Sight, Gaining Insight* (1999). His first novel, *A Saint, More or Less*, was published in 2003. He also compiled *Sex in America* (1964).

[Ruth Beloff (2nd ed.)]

GRÜNWARD, JUDAH (1845–1920), Hungarian rabbi. Grünwald was born in Brez0, and served as rabbi of Szobotisz for seven years, of Bonyhad a further seven years, of Surany for two and a half years, and of Sztatmar (Satu-Mare) for 22 years. In Sztatmar he founded a large yeshiva which achieved a wide reputation. After his death several of his works were published. The most important of them is the responsa *Zikhron Yehudah* (*Budapest-Satoraljaihely*, 1923–28) in two parts. In part 1 (no. 187) he discusses whether one may associate with Zionists and expresses the fear that through Zionism “an opportunity will be given for us to be attacked and to make us disliked by the gentile countries.” Another responsum (no. 200) to Joseph Ḥayyim Sonnenfeld in Jerusalem, dated 1913, on whether it is permitted to associate with the *Agudat Israel, was removed from the volume and replaced by a responsum on whether it is permitted to handle food and drink on the Day of Atonement in order to give it to children. Others of his published works are (1) *Shevet mi-Yhudah* (2 pts., 1922), on the Pentateuch; (2) *Ḥasdei Avot* (1925), on the tractate *Avot*; (3) *Olelot Yehudah*, a commentary on Psalms (1927); and (4) *She'erit Yehudah* (1938), on the Pentateuch.

[Naphtali Ben-Menahem]

GRUNWALD, MAX (1871–1953), rabbi, historian, and folklorist. Born at Hindenburg (now Zabrze, Silesia), Grunwald served as rabbi in Hamburg (1895–1903) and Vienna (1905–35). He settled in Jerusalem in 1938. Grunwald was a many-sided and productive scholar. He wrote on the history of the communities which he served (*Hamburgs deutsche Juden–1811*, 1904; *Portugiesengraeber auf deutscher Erde; Juden als Reeder und Seefahrer*, 1902; and on Vienna: *Geschichte der Juden in Wien* (for schools, 1926); *Wiener Hevra Kaddisha*, 1910; *Vienna*, 1936 (in the Jewish Communities series of the Jewish Publication Society of America)). Grunwald also wrote on such famous Viennese Jews as S. Oppenheimer (*Samuel Oppenheimer und sein Kreis*, 1913) and S. Wertheimer and his descendants (in: *Juedische Familienforschung*, 1926). Of more general historical interest is his anthology of the accounts of Jewish participants in Napoleon's campaigns (*Die Feldzuege Napoleons...*, 1913).

Grunwald's main interest, however, was Jewish folklore, and his contribution in this field is of lasting importance. In 1897 he founded the *Gesellschaft fuer juedische Volkskunde* and edited and largely wrote its organ, the *Mittheilungen* (1897–1922), which was succeeded by the *Jahrbuecher fuer juedische Volkskunde* (1923–25). In this area he contributed also to other periodicals as well as to a number of Festschriften (J. Lewy, 1911; *Gaster Anniversary Volume...*) and published important studies such as *Hebraeische Frauennamen* (1894–), *Eigennamen des alten Testaments* (1895), and in the related field of Jewish art *Holzsynagogen in Polen* (with others, 1934). Among Grunwald's other interests were Spinoza, on whom he had written his dissertation (1892) and a prize-winning *Spinoza in Deutschland* (1897). On the occasion of the international exhibition on hygiene in Dresden in 1911 he published a book on that subject, *Hygiene der Juden* (1912). He also edited a German prayer book for women (*Beruria*, 1913²) and one for serving soldiers (*Gebetbuch fuer israelitische Soldaten im Kriege*, 1914). On the occasion of Grunwald's 70th birthday *Omanut*, the publication of the Bezalel Museum in Jerusalem, issued his bibliography (1941).

His son, KURT (1901–1990), was a banker, economist, and public figure in Jerusalem. He wrote on aspects of Jewish economic history including *Tuerkenhirsch* (1966), a study of Baron de *Hirsch.

[Eliyahu Feldman]

GRUSENBERG, OSCAR OSIPOVICH (1866–1940), advocate in Russia also active in Jewish communal affairs, born in Yekaterinoslav. After completing his legal studies at the University of Kiev in 1889, he was invited to prepare for a professorship at the university on the condition, which he rejected, that he convert to Christianity. He settled in St. Petersburg and began to practice law, but as a Jew was only permitted to practice as an "assistant advocate." Although he soon won a reputation throughout Russia as a brilliant lawyer, it was only in 1905 that he was granted the title of a "certified lawyer." Grusenberg specialized in criminal cases and his appearance in political

trials as the defender of liberals, revolutionaries, or representatives of minority groups always received wide publicity. He defended the writers Maxim Gorki, V. *Korolenko, and such political figures as P. Milyukov, and Leon *Trotzky as well as the group of representatives of the First *Duma after the Vyborg proclamation of 1906 protesting against the dissolution of the Duma by the government.

Grusenberg gained greatest renown, however, in specifically Jewish trials. Inspired with a national Jewish consciousness, and pride in the history of his people, he displayed great ability in defending the persecuted and obtaining justice for fellow Jews. In defending unjustly accused Jews, he was not content merely to obtain redress of wrongs done to them as individuals, but also tried to vindicate Jewish honor; and was called by Jews "the national defender." He disagreed with Jewish leaders who preferred that Jewish causes of public interest should be defended in court by Russian lawyers. Grusenberg appeared in the trials following the pogroms of *Kishinev and *Minsk; P. *Dashevski, who had made an attempt on the life of P. *Krushevan, the instigator of the Kishinev pogrom, and D. *Blondes in Vilna (1900–02) were defended by Grusenberg. In the Blondes case some Jews were inclined to accept the relatively light penalty imposed on the defendant by the lower court, but Grusenberg insisted on bringing the case before a higher court in order to clear the name of the Jews absolutely. The high point in his life and in his career as a lawyer was his appearance in the *Beilis trial in 1913, which he considered similar to the stand of the martyrs in the trials of the Inquisition. His success was the result not only of his brilliant forensic talents, his profound knowledge of criminal law, and mastery of court procedure, but also of his knowledge of the psychology of the common Russian, an important factor since the fate of the defendant in criminal cases was decided by a jury consisting, as a rule, of people from all walks of life.

As a member of the Russian Constitutional Democratic Party, Grusenberg was also active in Russian political life. In the elections to the Second *Duma he was a candidate in Vilna province, but was defeated by the Poles. He was later a member of the advisory council to the Jewish representatives in the Third and Fourth Dumas. After the *Balfour Declaration Grusenberg drew closer to Zionism and in 1917 joined the "Jewish Bloc" organized by the Zionists. That year he was made a senator by Kerensky's Provisional Government. In 1918–19 during the Russian civil war Grusenberg headed the Jewish Council for Self-Defense and the Council for Aiding the Victims of Pogroms. In 1919 he was chosen as one of the representatives of Ukrainian Jewry to the *Comité des Délégations Juives in Paris. After the Soviets came to power, Grusenberg left Russia. He stayed from 1921 to 1923 in Berlin and from 1926 to 1932 in Riga. In 1929 he served as the representative of the Jews of Latvia at the founding of the enlarged *Jewish Agency and was chosen a member of its council. Grusenberg spent the last years of his life in France.

Besides legal articles published in Russian professional journals, Grusenberg also wrote on Jewish subjects in *Voskhod*

and in *Budushchnost*, edited by his brother Samuel. He wrote a book on his experiences as an advocate, and in 1938 his memoirs appeared under the title *Vchera* ("Yesterday"). A collection of his essays and speeches in Russian, including some critical appreciations, was published posthumously in 1944.

In 1950 his remains were brought to Israel in accordance with his will.

[Simha Katz]

GRYDZEWSKI (Grytzhendler), MIECZYSLAW (1894–1970), Polish literary editor. Grydzewski played an important part in Polish literary and intellectual life between the world wars as editor of the weekly *Wiadomości Literackie* (1924–39) and of the monthly *Skamander* (1935–39). He also ran the French-language monthly *La Pologne littéraire* (1926–?). An exile after 1939, he edited (in London) the Polish émigré weekly *Wiadomości* and published literary essays such as *Henryk Dąbrowski* (1945).

GRYN, HUGO (1930–1996), British rabbi. Born in Berehovo, Czechoslovakia, Gryn was deported to Auschwitz at the age of 14. After the Holocaust he was taken to Britain and studied mathematics and biochemistry at Cambridge. Under the influence of Leo *Baeck, he studied for the Reform rabbinate at Hebrew Union College, Cincinnati. His first congregation was in Bombay. Returning to the U.S., he served as executive director of the World Union of Progressive Judaism and from 1962 to 1964 was a senior executive in the American Jewish Joint Distribution Committee. From 1964 he was rabbi at the West London synagogue. In 1990 he became president of the Reform Synagogues of Great Britain and from 1980 to 1991 was chairman of the European board of the World Union for Progressive Judaism. He became widely known throughout Britain among Jews and non-Jews for his frequent appearances and especially for his broadcasts. He was a leading figure in interfaith activities.

GRYNBERG, BERL (1906–1961), Yiddish writer. Grynberg grew up in Warsaw and emigrated to Argentina in 1923. He worked in Cordoba and Buenos Aires as a printer and, for decades, as linotypist for the Yiddish daily *Di Prese*, where his earliest stories appeared, arousing critical attention with their original combination of realistic and romantic characteristics. The stories often begin with actual happenings but soon become mystical and symbolic. The themes, landscapes, and characters of his six narrative volumes are both Argentinian and Jewish: *Morgnvint* ("Morning Wind," 1934), *Di Eybike Vokh* ("The Eternal Week," 1938), *Blut un Vayn* ("Blood and Wine," 1944), *Dos Bloe Shifele* ("The Blue Boat," 1948), *Libshaft* ("Love," 1952), *Dos Goldene Feygele* ("The Golden Bird," 1948). He was profoundly influenced by Sholem Asch and David Bergelson. He committed suicide in 1961.

[M. Rav / Tamar Lewinsky (2nd ed.)]

GRYNBERG, HENRYK (1936–), Polish author and actor. World War II memories and the European Holocaust dominate his *Ekipa "Antygonia"* ("The Crew of the *Antigone*," 1963), collected stories, and the haunting *Żydowska wojna* (1965; *Child of the Shadows*, 1969). Grynberg's novella *Buszujący po drogach* ("The Catcher on the Roads," 1967) denounced officially inspired postwar antisemitism. A member of the Warsaw State Jewish Theater, he remained in the West after the company's 1967 season in New York.

GRYNSZPAN (Gruenspan), HERSCHEL (1921–?), assassin of a German diplomat in Paris. Grynszpan, who was born in Hanover, Germany, into a family of Polish Jews, moved to Paris early in 1938. When he learned that Polish Jews, including his parents, were being deported from Germany (Oct. 28, 1938), he decided to assault the German ambassador in Paris in order to arouse public opinion in the West regarding the Nazi persecution of Jews. Grynszpan shot at a German embassy official, Ernst vom Rath, who, mortally wounded, died two days later. His death served as a pretext for the November pogroms against Jews throughout Germany and Austria, termed **Kristallnacht*. Grynszpan was held for questioning by the French authorities, and the Germans accused him of being a tool of "world Jewry." When France capitulated, Grynszpan escaped to the Free Zone. However, he later returned to the Occupied Zone, where he was arrested and handed over to the Germans, who made elaborate preparations for a show trial. In the end, the whole affair was hushed up and Grynszpan disappeared without trace.

[Shaul Esh]

GUADALAJARA, city in Castile, central Spain. A Jewish community already existed there at the time of the *Visigoths, for the Jews are said to have been entrusted, by Tāriq ibn-Ziyād, with the defense of the town after the Arab conquest in 714. Joseph *Ferrizuel (Cidellus), the physician of Alfonso VI, was active on behalf of the Jews there after the Christian reconquest in 1085. Judah Halevi dedicated a poem to Ferrizuel on the occasion of the latter's visit in Guadalajara between 1091 and 1095. Further information on the Jews of Guadalajara is found in the charter granted to the Jews of the city by Alfonso VII in 1133. The Jews seemed to have occupied an important position there. One of the synagogues of the community was given to the monastery of Santa Clara in the 13th century. We have no information on the fate of the

Jewish community during the 1391 massacres. In 1414 a mass conversion of 122 Jews occurred after supposedly a cross appeared in the skies during the sermon of a Franciscan. In 1444 Juan II ordered that the New Christians be allowed to occupy public positions in the city. Most of the Guadalajara Jews earned their living from weaving, shoemaking, and tailoring. A tax of 11,000 maravedis, levied from the community as late as 1439, attests to its well-established financial situation. After the anti-Jewish persecutions of 1391, the order to confine the Jews and the Moors in separate sections of the city was rigorously enforced. Several Jews of Guadalajara acted as tax farmers even in the 15th century. The tax levied from the Jews of Guadalajara during the war against Granada was one of the highest paid by any Jewish community, amounting to 104,220 maravedis in 1488 and 90,620 maravedis in 1491.

Guadalajara was a foremost cultural center of Sephardi Jewry and the birthplace of the *Kabbalah in Castile. *Moses de León and other important scholars of the 13th century were active in Guadalajara. *Isaac ibn Sahula, author of the *Meshal ha-Kadmoni* and mystical commentaries on Job, Song of Songs and Psalms, was in practice there as a physician. In *Meshal ha-Kadmoni* we find for the first time a quotation from the Zohar. Moses de León lived 50 years in Guadalajara. Another Jewish resident of the city in the 13th century was Solomon ben Abraham ben Yaish who wrote on Ibn Ezra's commentary on the Torah. In the 15th century, Guadalajara continued to be an important Jewish cultural center. In Guadalajara between 1422 and 1430 Moses Arragel translated the Bible into Castilian at the request of Luiz de Guzmán, the Great Master of Calatrava. The translation and the notes show the high level of learning that the rabbi from Guadalajara had achieved. This Bible, known as *The Alba Bible*, is of great artistic, exegetical, and linguistic value. The earliest-recorded Hebrew printing press in Spain was established in 1482 in Guadalajara by Solomon *Alkabez, famous for his poem *Lekha Dodi*, who produced there in that year the commentary of David *Kimhi on the later prophets and the *Tur Even ha-Ezer* of *Jacob b. Asher (1480–82). During the years before the expulsion of the Jews from Spain, residents included Isaac *Abrabanel and Isaac *Aboab II who directed one of the most important yeshivot in Castile. A document of 1499, concerning Jewish property in Guadalajara at the time of the expulsion, lists three synagogues and 36 Jewish homeowners. The exiles from Guadalajara established their own synagogue in Algiers in the early 16th century.

Until 1412 the Jews of Guadalajara lived outside the walls, in what was known as *Castil de judíos*. From 1412 onwards, the Jews lived near San Adrés, the commercial center of the city, and near San Gil, Santa María de la Fuente, and San Miguel. The *judería* was not exclusively inhabited by Jews. Following the decision to segregate the Jews in 1480, attempts were made to move the Jews into an area where they could be isolated from the Christian inhabitants. On the eve of the Expulsion, four synagogues are mentioned: *Sinagoga mayor*,

Sinagoga de los Malutes, *Sinoga del Midras*, and *Sinagoga de los Toledanos*.

[Haim Beinart]

GUADALUPE, town in Castile, W. Spain. Jewish landowners are recorded there in the second half of the 14th century. The community was annihilated in the wave of anti-Jewish riots which swept Spain in 1391, but was revived during the 15th century. In 1485, however, Jews were forbidden to live in Guadalupe by order of Nuño de Arévalo, the local inquisitor. In 1492, prior to the expulsion of the Jews from Spain, *veedores* (leaders) of the community sold the land of the old cemetery to the local bishop for 400 reals; a clause in the deed of sale states that the price was so low because of the kindnesses shown to the Jewish community by the bishop. The *Conversos in Guadalupe lived on a special street in the former Jewish quarter. Jews from Trujillo would stay at the homes of these Conversos, which became important centers for fulfilling the Jewish observances. Forty-six dossiers, almost all of 1485, are preserved concerning persons arraigned before a special tribunal sent by the Toledo Inquisition to uncover relapsed Conversos. Several Conversos who had entered the monastery of San Bartholomé de Lupiana near Guadalupe were tried there in 1489–90. The monks Diego de Marchena and García Çapata, whose conversion to Judaism caused a furor in the church in Spain, belonged to this monastery. They were burned at the stake as Jews.

[Haim Beinart]

GUASTALLA, ENRICO (1828–1903), Italian soldier and patriot. Born in Guastalla, central Italy, Guastalla gave up his career as a businessman in 1848 to volunteer for the Piedmontese army in the struggle for the unification of Italy. He fought against Austria in 1848 and participated in the abortive capture of Rome from the pope in the following year. For several years he was editor of *Libertà e Associazione*, but his radical views came into conflict with the authorities and in 1858 he fled to England, where he joined the radical patriot Giuseppe Mazzini. Guastalla returned to Italy in 1859 and joined Garibaldi in his campaigns of 1860, 1862, and 1866, being promoted major. In 1867 he married Sofia Weill-Schott and began to

work in the bank of his father-in-law in Florence. In 1869 he moved finally to Milan where he was elected a member of the city council. He tried to be elected to the Italian parliament without success. He devoted the last years of his life to studies of the Italian Risorgimento, and in 1884 he founded and was president of the Museo del Risorgimento di Milano.

[Mordechai Kaplan / Federica Francesconi (2nd ed.)]

GUATEMALA, Central American republic, population 14,280,596 (2004); Jewish population 833 (1999).

Community History

Documents in the archives of the Mexican Inquisition attest to the presence of *Crypto-Jews in Guatemala during the colonial period. The first known immigrants to the country were German-speaking Jews entering Guatemala at the end of the 19th century. Most of them settled in Quetzaltenango and engaged in the sale of clothes and textiles in the coffee plantations. Following the earthquake of 1902 and the fall of coffee prices, the German Jews moved to Guatemala City, where they established in 1913 the Sociedad Israelita de Guatemala in order to provide for their religious and social needs. The community formed by these immigrants was small and isolated from the Jewish world, and its descendants are no longer Jews.

The origins of the present-day Jewish community date from the second decade of the 20th century. According to the data collected in the census survey made in 1999, the Jewish immigrants to Guatemala came from Syria, Iraq, Jerusalem, Panama, Jamaica (originally from England), and Turkey. The list extends also to Jews from Lebanon, Egypt, Poland, Russia, and the United States. The Sephardi Jews settled in Guatemala during the first and second decades of the 20th century. They started as poor peddlers in the provincial towns, and gradually moved to Guatemala City, where in 1923 they founded the Sociedad Israelita Maguén David. The East European Jews arrived in the 1920s following the restrictions on immigration imposed by the United States. Most of them were poor artisans, and they were assisted by the local Jews, particularly by the Maguén David. Jewish immigration in the 1930s consisted of Czechs and Germans as well as Jews from Jerusalem, Panama, and Poland.

At the beginning of the 20th century the liberal Guatemalan governments favored the immigration of foreigners who wished to settle in the country, allowing them to develop economically, socially, and culturally. This motivated the first groups of Jewish immigrants to Guatemala. Policy took a negative turn in 1944, when the president of the Republic, General Jorge Ubico, promulgated Decree No. 1241 of the Law of Foreigners, whose First Article prohibited "the entrance and permanent settlement in the country of foreigners occupied as peddlers" (para. 21–22), this being the trade of many of the Jews who had just arrived in the country.

Centers of Jewish settlement in Guatemala.

Laws limiting immigration were rarely enforced after World War II, when Polish, Czech, and German Holocaust survivors entered the country. From the 1950s (through to the early 21st century) the Jews who immigrated to the country arrived from the most varied areas of the globe, with the main reason being marriage to members of the Jewish community of Guatemala or occupational mobility.

Demography

In 1999, there were 833 Jews in the country (400 women and 433 men), with a fertility rate of 2.7 children. The number of Jews in Guatemala never exceeded 1,200 (data calculated by the members of the community in the 1950s).

A singular characteristic is that 36% of Guatemalan Jews between 18 and 45 years live abroad (mainly in the United States). This is caused by two factors: (1) most of those who lived abroad for many years embarked on their professional careers in the country where they received their higher education, settling there permanently (66% of those who emigrated pointed to the lack of economic opportunity as the main cause of their emigration); (2) marriage: 38% of marriages with Jews from other countries resulted in immigration of the Guatemalan Jew to the country of residence of his or her spouse.

According to the 1965 census, the community had 74 mixed marriages, accounting for 27.2% of the Jewish population. In the 1999 census, only 6% of the members were married to non-Jews, while 12% were married to men and women who had converted to Judaism.

Communal Life

The first synagogue, inaugurated on August 11, 1938, was constructed by the Sephardi community Maguén David and provided for the religious needs of Sephardi and Ashkenazi Jews alike. In 1941 the Ashkenazi Jews founded their own organiza-

tion, the Asociacion Centro Hebreo, which opened its Shaaré Biniamin synagogue (Orthodox) in 1968. Between 1969 and 1989 the Bet-El Synagogue (Conservative) operated, with a majority of members of West European origin. Centro Hebreo and Bet-El merged in 1989 under the name of the former.

The first organization that represented the Guatemalan Jews vis-à-vis the national and international authorities was the Sociedad Israelita de Guatemala (founded 1913). In 1968 it was replaced by the Comité Central de la Comunidad Judía de Guatemala. In 1981 the Comunidad Judía de Guatemala (called since 1994 Comunidad Judía Guatemalteca) or Guatemalan Jewish Community (GJC) was founded as the representative organ and the Jewish umbrella organization, responsible for the Jewish educational institutions (Gan Hillel, Tarbut, Talmud Torah, Mechon Noar, Maccabi ha-Za'ir), social, sports, and cultural activities, the organization of groups of all the ages, the cemeteries, relations with local and international institutions (Jewish and general), and every matter related to the communal life of Guatemalan Jews.

Education, Culture, and Zionism

Between 1958 and 1976 there was a Jewish day school called the Albert Einstein (later Salomón Blenkitny). In the early 21st century there was a daily kindergarten, Gan Hillel, and supplementary schools that are open from one to three times a week. These are Tarbut, Talmud Torah, Mechon Noar, and the Machon leMadrijim.

A youth organization was founded in 1943 under the name of Young Centro Hebreo, and two years later it affiliated with the Maccabi World Union, creating Maccabi Ha-Zair Guatemala, active until the present.

Between 1994 and 2004 the GJC developed large building projects: the construction of a Jewish Community Center (finalized in 1995), which united all the educational, social, religious, and Zionist organizations, and the Har Carmel project, being an enormous stretch of land with 200 lots earmarked for housing for members of the GJC.

Most Zionist organizations have a representative in the country as well as in some of the international ones: Keren Hayesod, Keren Kayemet, WIZO, Zionist Federation, Maccabi World Union, B'nai B'rith, and others.

It should be emphasized that 69% of Guatemalan Jews declare themselves Zionists, and that all the members of the GJC are affiliated with the above-mentioned institutions.

The following periodicals were published by the community organizations: *Abucah* ("Torch"), 1943–45; *The Maccabee*, 1959–60; *Mabat*, 1978–86; *Kadima*, 1992–99; and *Beyajad*, from 1999.

GJC'S RELATIONS WITH GUATEMALAN ORGANIZATIONS. The number of affiliations of the Jewish community, as much on the individual level as on the institutional level, is very large. Guatemalan Jews are members, leaders, or cooperate in institutions such as Junkabal (Edgar Heinemann, chairman), the Guatemalan Red Cross (Max Russ, director), children's day

care (Samuel Camhi, founder and benefactor; Enriqueta Engel, president), League against Cancer (Margot Halfon, deputy chairperson; Rosa Luchtan, director; Eduardo Halfon, director), volunteer and municipal fire departments (Max Russ, president; Max Trachtenberg, president; Moises Russ, director; Isaac Farchi, deputy chairman), Santa Lucia Orphanage (Sara Dreiffus, president), CACIF (Alberto Habie, president), Roosevelt Hospital (Irene Neumann and Sol Berkowitz, directors), Rotary Club (Tomas Rybar, president; Marcel Ruff, president), Municipality of Guatemala City (Roberto Stein, deputy mayor), Guatemalan Association of Journalism (Isidoro Zarco, president), Chamber of Commerce (Jaime Camhi, vice president; Moris Farchi, director), Chamber of Industry (Moises Russ, director; Alberto Habie, president; Joe Habie, director), National Congress (congressmen Isaac Farchi, Roberto Stein, Dr. Julio Sultán, Manfredo Lippman), ministries (Dr. Julio Sultán), embassies (Dr. Gert Rosenthal, ambassador at the UN; Moises Russ, ambassador in Israel), INCAP (Dr. Benjamin Torun, scientist, director of Research), Bricks for Guatemala City of Sanarate Reconstruction Committee (Margot Halfon, president; Marcel Ruff, general secretary), National Social Welfare Committee (Bella Russ, chairperson), YPO (Roberto Tenenbaum, president), Garden Club of Guatemala (Brenda de Rich, president), FUNDAP (Jaime Camhi, director), universities, volunteer groups in hospitals, FUNDESA (Manuel Yarhi, president; Jaime Camhi, president; Edgar Heinemann, president; Mario Nathusius, president), Cepal (Dr. Gert Rosenthal, secretary general), primary and secondary schools (Mario Nathusius, president; Saul Mishaan, president; Victor Cohen, director), National Bicycle Federation (Jaime Russ, president), as well as representing Guatemala in sports, science, chess, and more.

Four members of the Jewish community have been awarded the Vatican Order of Pope St. Sylvester: Moises Russ, Bella Russ, Margot Halfon, and Dr. Jacobo Sabbaj.

Relations with Israel

Guatemala had a crucial role in the vote on the partition of Palestine. The Guatemalan ambassador to the United Nations in 1947, Jorge García Granados, was a member of the UN Special Commission for Palestine (UNSCOP). Backed by the president of Guatemala, Dr. Juan José Arevalo, he worked tirelessly for the establishment of a Jewish state in a part of Palestine. His book *The Birth of Israel* was published in 1949. The two governments have engaged in various projects cooperatively. Guatemala demonstrated its support of the Jewish State in numerous votes in favor of Israel within the framework of the United Nations.

GUBER, (Howard) PETER (1942–), U.S. film producer. Guber was born and raised in Boston, Massachusetts. His father, Samuel, operated a junk metal business in nearby Somerville. After receiving his B.A. from Syracuse and both business and law degrees from NYU, he was hired by Columbia Pictures in 1968. In a few short years, Guber ascended to head of worldwide production, one of the youngest studio chiefs, generating record-breaking profits with such films as *The Way We Were* (1973), *Shampoo* (1975), and *Taxi Driver* (1976). In 1976, Guber left Columbia to start producing films independently, winning critical and box office successes with *Midnight Express* (1978). Guber teamed with Jon Peters to form one of the most successful teams in Hollywood, producing such hits as *Flashdance* (1983), *The Color Purple* (1988), *Rain Man* (1988), and *Batman* (1989). In 1989, Guber and Peters became co-heads of Columbia Pictures Studio, which had been purchased by Sony. The rollercoaster ride of their free-spending ways and Sony's expensive education in the movie business is chronicled in detail in the book *Hit and Run* by Nancy Griffin and Kim Masters. Peters resigned in 1991. Nonetheless, Guber continued to deliver hits such as *Terminator 2* (1991) and *Groundhog Day* (1993) and developed Sony into a modern film and television studio powerhouse. In 1995, Guber left Sony and launched Mandalay, a multimedia entertainment company specializing in movies, television, and sports entertainment. The films Guber directly produced earned over \$3 billion and 50 Academy Award nominations. In addition to producing, Guber taught at UCLA School of Theater, Film and Television for over 30 years. He appeared regularly on his own show, AMC's *Sunday Morning Shootout*, opposite Peter Bart, editor-in-chief of *Variety*.

[Max Joseph (2nd ed.)]

GUBER, RIVKA (1902–1981), Israel Prize winner for services in the absorption of immigrants, known as “the mother of sons.” Born in Russia, Guber immigrated with her husband Mordecai in 1925. She lost her two sons in the War of Independence, and from then on devoted herself, together with her husband, to the absorption of immigrants. She organized the education system in the Kastina transit camp (*ma'abarah*), which later became Kiryat Malakhi, and assisted in immigrant absorption in the Lachish area. In her last years she devoted herself to writing and keeping up with her many “sons” all over the country. She received the Israel Prize in 1976. In 1979, she was part of the official Israeli delegation accompanying Prime Minister Menahem Begin to the United States to sign the Camp David Peace Treaty with Egypt.

GUEBWILLER, town in the Haut-Rhin department, E. France. In 1270 there was a community of at least 10 families in the town; from 1330 or earlier they owned a synagogue. However the community ceased to exist after the *Black Death persecutions (1348–49). Jews did not reappear in Guebwiller until the beginning of the 17th century. Their numbers did not grow to any extent until the 19th century (about 80 families

in 1870), but subsequently declined once more. Several Jews from Guebwiller were deported by the Nazis. In 1969 a small community again existed. The present Rue des Tonneliers was formerly known as Rue des Juifs.

[Bernhard Blumenkranz]

GUEDALLA, HAIM (1815–1904), philanthropist and supporter of Jewish settlement in Erez Israel. Born in London, Guedalla was descended from Moses Vita Montefiore and was a great-nephew of Sir Moses *Montefiore, whose niece he married. The Guedallas were originally Moroccan. Through his association with the Montefiore family he became interested in Erez Israel. In the period 1876–80, he was the chairman of the Turkish Bondholders of the General Debt of Turkey, and in view of the size of the debt – £250,000,000 – he proposed that Erez Israel be purchased from the Turks in exchange for the debt. George *Eliot, who was then taken up with the idea of the return of the Jews to their ancestral home, inspired this idea in him. There was considerable reaction to Guedalla's proposal in the Jewish world: some people treated it with amusement, while others (such as Y.M. *Pines) thought it worthy of consideration. Guedalla did in fact negotiate with Midhat Pasha, the grand vizier, but nothing came of the proposal. In 1863 Guedalla accompanied Moses Montefiore on a trip to Morocco to bring aid to its Jewish community, and on the way back he visited Spain. This trip was the beginning of his campaign designed to persuade the Spanish government to permit the return of the Jews, an aim which was in fact achieved in 1869. He also joined Montefiore on his fourth trip to Erez Israel in 1855 and extended help to various institutions there. He published articles, pamphlets, and books dealing with Jewish affairs and supplied the funds for the English translation of *The Jewish Question of Russia* by Demidoff San Donato (1884). In the 1840s Guedalla was influential in establishing *The Voice of Jacob*, one of the earliest Anglo-Jewish newspapers.

GUEDALLA, PHILIP (1889–1944), English biographer, historian, and essayist. A member of an old Sephardi family, and the son of David Guedalla, a pioneer English Zionist, Philip Guedalla was born in London and educated at Rugby school and at Oxford, where he excelled as a debater and actor, and later became a barrister. During World War I he was legal adviser to the ministry of munitions and the contracts department of the British War Office. After ten years at the bar, he retired in 1923 to devote himself to literature and politics. Guedalla's five attempts to secure election to Parliament as a Liberal MP failed; but his books on historical personalities and events, mostly of the 19th century, were an outstanding success. A witty speaker and writer, he developed a brilliant and

highly individual style, often tinged with irony, in his works. These include *The Second Empire* (1922), on Napoleon III; *Palmerston* (1926); *Gladstone and Palmerston* (1928); a study of Wellington entitled *The Duke* (1931); *The Queen and Mr. Gladstone* (1933); *The Hundred Days* (1934), on Napoleon I's last campaign; *The Hundred Years* (1936), covering 1837–1936; *The Liberators* (1942); and *Middle East, 1940–42; A Study in Axis Power* (1944). He also wrote studies of famous personalities such as *Supers and Supermen* (1920) and *Masters and Men* (1923); two books of American interest, *Independence Day* (1926), which appeared in the U.S. as *Fathers of the Revolution* (1926), and *Conquistador* (1927); and published the works of Disraeli, to which he added his own introductory notes (1927). He was president of the British Zionist Federation, 1924–28, and in 1925 delivered his presidential address to the Jewish Historical Society of England on *Napoleon and Palestine*. Philip Guedalla was noted for his aphorisms, such as “Any stigma to beat a dogma,” “History is the study of other people's mistakes,” and “An Englishman is a man who lives on an island in the North Sea governed by Scotsmen.” During World War II, at the age of 54, he became a squadron leader in the Royal Air Force. One of his last works was *Mr. Churchill: A Portrait* (1941).

GUEDEMANN, MORITZ (1835–1918), Austrian rabbi, historian, and apologete. Guedemann was born in Hildesheim, Prussia; he was ordained at the Breslau Jewish Theological Seminary, in 1862. Guedemann was appointed rabbi in Magdeburg in 1862. Four years later he went to Vienna as a *maggid* and in 1868 became a rabbi there. In matters of Jewish law and practice he took a conservative position, opposing, for example, the introduction of the organ and the omission of prayers relating to Zion, which contrasted with his liberal outlook in scholarly matters. In 1869 he was appointed head of the Vienna *bet din* and in 1891 became chief rabbi with Adolf *Jellinek and sole chief rabbi on the latter's death in 1894.

This period was one of rapid growth for the Vienna Jewish community and also of intensified political antisemitism. Guedemann played an active role in developing communal institutions. With Joseph Bloch he organized the Oesterreichisch-Israelitische Union (1886) and also helped found the *Israelitisch-Theologische Lehranstalt in 1893. Though Guedemann had not been trained as a historian, most of his numerous contributions to scholarship were in that field. His major work was *Die Geschichte des Erziehungswesens und der Cultur der abendlaendischen Juden* (3 vols., 1880–88), the first systematic attempt to examine some of the underlying trends and institutions of medieval Jewish life in terms of their non-Jewish milieu. Other works include *Das juedische Unterrichtswesen waehrend der spanisch-arabischen Periode* (1873) and *Quellenschriften zur Geschichte des Unterrichts und der Erziehung bei den deutschen Juden* (1892). During the final decades

of his life Guedemann devoted an increasing amount of his scholarly output to the refutation of academic antisemitism. His *Juedische Apologetik* appeared in 1906.

[Ismar Schorsch]

Attitude to Zionism

When *Herzl was engaged in writing *Der Judenstaat*, he thought of three personages who would assist him in turning his idea into reality: Baron de *Hirsch, Baron *Rothschild, and Guedemann. It was to Guedemann that Herzl addressed one of his first letters (June 11, 1895) and his name appears frequently in Herzl's diary for the period in which Herzl began his preoccupation with political Zionism. In Herzl's eyes, Guedemann was not only Vienna's chief rabbi but one of the greatest authorities on Judaism, of which Herzl possessed only a very limited knowledge. But although opposed to the extreme Reform movement, Guedemann was in agreement with its attitude on the contemporary problem of the Jewish people. He could not understand why a Jew who had grown up among the German people and in the realm of its culture “should uproot himself by his own hands from the soil upon which he had grown,” or, as he formulated it on one occasion, “Should I go from here, where the word Jew and all who bear that name are held up to shame, and leave the field to our enemies in order to form a majority in Palestine? No! A hundred thousand horses will not drag me from here, until I achieve revenge over the antisemites and joy over their downfall.”

Over a period of many months, Herzl held meetings with Guedemann and exchanged letters with him. At the beginning, Guedemann was impressed by the idea of the *Judenstaat* and by its author; when the book came out, however, and caused a storm among the assimilationists, Guedemann's attitude underwent a decided change. For a while he wavered between support for Zionism and opposition to it; in the end, he published a book, *Nationaljudentum* (1897) in which he attacked Herzl's *Judenstaat*. In his book he sought to prove that not only was there no such thing as a Jewish people, but that it was the main task of the Jews to bring about the abolishment of nationalism. Both Herzl and *Nordau came out with sharp reactions to Guedemann's book.

GUENZBURG (also **Guensburg, Guenzberg, Ginzburg, Ginsburg, Ginzberg, Ginsberg, Ginzburger, Ginsburger**), family name common among East European Jews, especially in Russia. The first known Jews to call themselves by this name (after the beginning of the 16th century) came from the town of Guenzburg in Bavaria. Relatives of this family from neighboring Ulm who settled in Guenzburg used the name Ulma-Guenzburg, or simply Ulma. Abbreviated forms of Guenzberg, such as Guenz or Gaunz were also used. Some branches of the

Guenzburg family later added Oettingen or Kliachko to form hyphenated names. When, early in the 19th century, the Russian authorities ordered the Jews to select family names, many in Poland, Lithuania, and Volhynia adopted the name Ginsburg, or a similar name, but these were not related to the emigrants from Guenzburg and their descendants in Bavaria.

The genealogy of the Guenzburg family has been traced back to Simeon Guenzburg (1506–1586), the grandson of Jehiel of Porto. The Guenzburg family produced numerous rabbis of note, including Aryeh *Guenzburg, author of *Sha'agat Aryeh*, in the 18th century, who, according to the family genealogy, was of the 11th generation to bear the name, and also the writer Mordecai Aaron *Guenzburg. The most celebrated branch of the family was that of the barons *Guenzburg.

[Simha Katz]

GUENZBURG, distinguished Russian family of bankers, philanthropists, and communal workers, of whom three generations were active during the second half of the 19th and early 20th centuries in Russia and Paris. They gained a place in modern Jewish history for their efforts on behalf of Russian Jewry as semiofficial representatives before the czarist authorities as well as for their Jewish and general philanthropic activities. HORACE GUENZBURG was granted a baronetcy in 1871 by the archduke of Hesse-Darmstadt. In 1874 this title was also awarded to his father, JOSEPH YOZEL GUENZBURG. The title was made hereditary by Czar Alexander II. The most outstanding members of the family were: BARON JOSEPH YOZEL (YEVEL) GUENZBURG (1812–1878), son of GABRIEL JACOB (1793–1853), who, according to the family genealogists, was of the 15th generation of the Guenzburg family. Born in Vitebsk, he received a traditional education, and acquired wealth in the 1840s as a lessee of the liquor monopoly and later as an army contractor. In 1857 he settled with his family in Paris but retained his enterprises in Russia. In 1859 he founded the Joseph Yevsel Guenzburg Bank, in St. Petersburg, which rapidly became one of the chief financial institutions in Russia and contributed significantly to the development of credit financing in that country. He participated in financing railroad construction and the development of gold mines in the Urals, Altai, and Trans-Baikal Siberia.

Guenzburg tried to utilize his contacts with influential Russian circles to improve the situation of the Jews, and especially to win rights of permanent Jewish residence outside the *Pale of Settlement for specific categories of Jews, such as merchants, craftsmen, or demobilized soldiers. In this he was successful. The first synagogue in St. Petersburg was built as a result of his efforts. He was one of the founders of the *Society for the Promotion of Culture among the Jews of Russia in 1863 and supported its activities. Guenzburg provided scholarships for Jewish youth to encourage higher education, especially in medicine, and donated substantial sums to en-

courage Jews to engage in agriculture, which he regarded as an important step toward improving their situation. In addition to awarding prizes for agriculture, he devoted the income from his extensive estates in southern Russia to settling Jews on these lands. He died in Paris and was buried in the family sepulcher there. He had one daughter and four sons, some of whom engaged in his enterprises.

His second son, the best known, was BARON HORACE (NAPHTALI HERZ) GUENZBURG (1833–1909), born in Zvenigorodka, in the province of Kiev. In addition to a general education, Horace received a Jewish education in his father's house. Among his teachers was the Hebrew writer Mordecai Sukhostaver, who for many years served as Joseph Yozel Guenzburg's secretary. Through him Horace became closely acquainted with the Hebrew poet Jacob *Eichenbaum who profoundly influenced him. While still a young man, Horace became his father's aide and principal partner in his financial enterprises as well as in his public activities. When his father established his bank in St. Petersburg, Horace became its acting director. His talents as well as his manners contributed to its success as one of the central financial institutions of Russia. His personal qualities gained him the respect and confidence of court circles. Among other activities he managed the financial affairs of the archduke of Hesse-Darmstadt, who appointed him consul-general in Russia (1868–72), the only instance when the Russian government consented to the appointment of a Jew as consul in its domains. The Russian government also showed its appreciation of Guenzburg's services by appointing him state councilor and awarding him orders of merit. Until 1892 he served as alderman in the St. Petersburg municipality. He was director of financial institutions, as well as a supporter and member of many non-Jewish social welfare institutions. In 1892 the Guenzburg bank suspended operations as a result of a crisis that was brought about by the suspension of credits by the Russian government.

Guenzburg's home in St. Petersburg was a meeting place for liberal scholars, authors, artists, and other intellectuals in the Russian capital. As well as a philanthropist, Horace was a generous patron of scientific, cultural, and social institutions, and of promising writers, artists, and musicians. Among others the sculptor Mark *Antokolski benefited from Guenzburg's assistance early in his career.

In Russian society Horace's position and his contacts with the authorities helped him continue with greater effect the activities of his father on behalf of Russian Jewry and as patron of its communal affairs. During the period of reaction in Russia, he had to keep vigilant watch to prevent the promulgation of an ever-increasing number of anti-Jewish decrees and to counteract the accusations against the Jews. When the new military service law was about to be passed in 1874, he succeeded in preventing the inclusion of special provisions directed against Jews. During the blood libel case in Kutais in 1878 he encouraged the celebrated scholar, the convert Daniel *Chwolson, to write a book tracing the history of the blood libel, which he subsidized. In 1881–82 he attempted to establish

a countrywide organization of Russian Jews, and he convened and headed conferences of representatives of Jewish communities in St. Petersburg to plan action against the pogroms then taking place in southern Russia. Guenzburg also urged the government to rescind the “Temporary Regulations” of 1882 (*May Laws), which had been promulgated by the minister of the interior, *Ignatyev, and he actively participated in the work of the Pahlen Commission (1883–88) which had been empowered to review the laws pertaining to Jews.

After his father’s death, Horace headed the Jewish community in St. Petersburg, and also the Society for the Promotion of Culture among the Jews of Russia. After the 1905 pogroms he organized and headed a committee to aid the victims. He opposed the emigration of Jews from Russia, and as chairman of the ICA (*Jewish Colonization Association) committee in Russia, he urged that the funds donated by Baron Hirsch be spent in Russia to encourage agriculture and crafts among Jews. He supported publications of historical interest, including the collection of Russian laws pertaining to Jews edited by V. Levanda, and other studies. Horace had 11 children.

His son, BARON DAVID GUENZBURG (1857–1910), was born in Kamenets-Podolski. He continued the family tradition of public and communal activity and philanthropy, but is mainly noted for his scholarly work in Judaic and Oriental studies. He specialized in Oriental subjects and linguistics, and medieval Arabic poetry, in the universities of St. Petersburg, Greifswald (Germany; 1879–80), and in Paris, and was a pupil of the Hebrew writer Z. ha-Cohen *Rabinowitz, of A. *Neubauer, and of Senior *Sachs. The last, who was a tutor in the Guenzburg home in Paris, influenced David to study medieval Hebrew poetry. David gained a knowledge of most Semitic languages, and published a number of works. These include: the physician Isaac b. Todros of Avignon’s *Be’er le-Hai* from the sole manuscript (1884); the first edition of *Sefer ha-Anak (Ha-Tarshish)* of Moses Ibn Ezra (1886); the diwan of the Spanish-Arab poet, Ibn Guzman (1896); studies of the foundations of Arabic poetry (in publications of the Oriental department of the Royal Archeological Society, 1892–97); a comprehensive work on ancient Jewish ornamentation, *L’Ornement Hébreu*, in collaboration with the Russian art critic, V.V. Stasov (1903), which contained examples of Jewish illuminations from medieval Hebrew manuscripts, among them illuminated Bible manuscripts of Oriental origin in a style which combined Byzantine and Arabic elements; a catalog and description of Arabic, Greek, and Coptic manuscripts in the Institute of Oriental Languages of the Russian Foreign Office; a book on the poetry of Lermontov (published posthumously in 1915; as a connoisseur of Russian poetry, Guenzburg was especially attracted by the Jewish and Oriental elements in Lermontov’s works); a number of studies published in Russian, French, German, and Hebrew periodicals and in jubilee volumes honoring scholars of his day. He also coedited the jubilee volume honoring A. *Harkavy. His library, which had one of the most important collections of Judaica, was one of the largest in pri-

vate ownership in the world, and contained a valuable collection of manuscripts and books, including incunabula (presently in the Lenin State Library in Moscow).

Although more interested in scholarly than public activity, David was active in the St. Petersburg community, which he headed after his father’s death, in the Society for the Promotion of Culture among the Jews in Russia, in ICA, and in the society to encourage crafts and agriculture among Russian Jews. In 1910 he headed a conference of Russian Jews to solve religious problems. He was also active in areas that related to his academic interests, and was chairman of the Hovevei Sefat Ever (“Society of Lovers of Hebrew”), a member of the committee of *Mekize Nirdamim, a founder of the Society for Oriental Studies, a member of the scientific council of the Ministry of Education, as well as a Founder member of other academic institutions in Russia and abroad, including the Société Asiatique of Paris. With Judah Leib Benjamin *Katzenelson (Buki ben Yogli) he was one of the editors in chief of the *Yevreyskaya Entsiklopediya* (Russian Jewish Encyclopedia), and responsible for the section dealing with geonic literature and the Arab period in Jewish history. The crowning achievement of his academic work was the creation of the Jewish Academy, officially named Higher Courses on Oriental Studies, which he established in St. Petersburg in 1908. This was a one-man project, for Guenzburg not only supported these courses with his funds, but was also its rector and lectured on Talmud, rabbinic literature, Semitic languages, Arabic literature, and medieval Jewish philosophy. Its lecturers included S. *Dubnow and J.L.B. Katzenelson, who headed it after Guenzburg’s death. The academy, which continued until 1916, created a Russian school of Judaic scholarship, and was attended by Z. *Shazar, Joshua *Guttman, Y. *Kaufmann, and S. *Zeitlin, among other distinguished scholars and writers.

David’s brother PIERRE (d. 1948), an industrialist living in Paris, left for the United States in 1940. His wife Yvonne de la Meurthe (d. 1969) served for 20 years as honorary president of ORT. Their daughter married Sir Isaiah *Berlin.

[Simha Katz]

GUENZBURG, ILYA YAKOVLEVICH (1860?–1939), Russian sculptor. Born into a traditional family in Vilna, Guenzburg attracted the attention of Mark *Antokolski at the age of 11, and went with him to St. Petersburg where he studied under Antokolski himself. The art historian V.V. Stasov took an interest in his career. In 1878 he entered the St. Petersburg Academy of Arts where he received a gold medal for his “Lament of Jeremiah.” After graduation in 1886, he traveled abroad for a year on a scholarship provided by Baron H. *Guenzburg, and returned to St. Petersburg, to continue his work. After the Russian Revolution he founded a Jewish Society at Petrograd for fostering art.

His work falls into three main groups: (1) scenes of children; (2) contemporary writers, artists, and scientists, e.g., Tolstoy, Tchaikovsky, Pasternak, and Mendeleev; (3) abstract subjects, busts, and memorials (noted among them were those of Antokolski (in the Jewish cemetery of Leningrad) and that of V.V. Stasov). His sculptures were portrayed with realism, and included *A Child Before Bathing* and *The String* (depicting a child playing); both are in the Leningrad Museum. He published his memoirs, *Iz moyey zhizni* ("From My Life," 1908), which is also of historical value on Jewish life in Russia.

BIBLIOGRAPHY: *Ost und West* (March, 1904); YE, 6 (c. 1910), 534–6.

GUENZBURG, MORDECAI AARON (1795–1846), Hebrew author and founder of the first modern Jewish school in Lithuania. Guenzburg was born in Salantai and earned a living as an itinerant tutor until 1835 when he settled permanently in Vilna. In 1841 he and the poet Solomon *Salkind founded a modern Jewish school, which he directed as headmaster until his death. Guenzburg became one of the leading spokesmen for the Vilna Haskalah, though he was a moderate who opposed radical change. He observed the practical *mitzvot* which, under Moses *Mendelssohn's influence, he viewed as social regulations for the benefit of the Jewish community. He opposed the extremism of both the Orthodox and the secularists. When Max *Lilienthal was invited to Russia by the authorities, Guenzburg joined the Vilna *maskilim* in attacking Lilienthal's attempts to win over the Orthodox and ridiculed his German ways and superficiality.

Guenzburg's books in the area of French and Russian history enjoyed wide circulation and helped improve his financial condition. In 1844 and 1862 he published *Devir* (2 vols.), an anthology of letters, essays, and short stories, containing, among others, letters by Goethe, *Heine, and *Boerne, and a translation of the letters of Moses Montefiore's personal secretary, Eliezer Halevi (Louis *Loewe), who accompanied Montefiore on his first trip to Palestine. *Devir* also contained essays about the neglected Jewish communities in the Arab lands, China, and Ethiopia. *Devir* aroused in its readers a love for Palestine and influenced Abraham *Mapu and Kalman Shullmann. His autobiography *Avi'ezzer*, his most original work, appeared in 1864 (reprint 1966). Written in the style of Rousseau's confessions, it portrays the inner world of the Jewish child, and is a ringing attack on the *heder* system of education. Stylistically, Guenzburg surpasses his contemporaries by far. For the sake of accuracy he resorted to mishnaic Hebrew, introducing talmudic phrases and neologisms, many of which became commonly accepted and are still in use, for example, *milhemet magen* ("defensive war"), *milhemet tigrāh* ("offensive war"), *rahitim* ("furniture"), *beit-do'ar* ("post office"), etc. Guenzburg was the literary forerunner of P. *Smolenskin, J.L. *Gordon, M.L. *Lilienblum, and R.A. *Broides. His other works include *Ittotei Rusyah Ha-Zarefatim be Rusyah* (1843), on the Franco-Russian War of 1812; *Pi-hahiroth* (1843), a history of the wars of 1813–1815.

[Abba Ahimeir]

GUENZIG, EZRIEL (1868–1931), rabbi and scholar. Guenzig, who was born in Cracow, received the traditional talmudic education there. He later studied secular subjects in Berlin and philosophy and Semitics at Berne University. He served as rabbi in the Moravian communities of Dresnitz and Loschitz until 1918. After World War I, he settled in Antwerp, where he became head of the Taḥkemoni School and later was active as a bookseller. Guenzig's scholarly work was mainly concerned with the history of Haskalah in Galicia. However, he dealt with other subjects as well. He wrote on F. *Mieses (*Ozar ha-Sifrut*, 3 pt. 5 (1890), 1–54), whose writing he prepared for publication. His other published works include *Der Commentar des Karaers Jepheth ben Ali* (1898); *Der Pessimismus im Judenthume* (1899); *Die Wundermaenner im juedischen Volke* (1921); and *Das juedische Schrifttum ueber den Wert des Lebens* (1924). Guenzig served as assistant editor of *Ha-Maggid, and edited the seven volumes of the literary journal *Ha-Eshkol* (1898–1913). The first two volumes of the latter were edited with J.S. Fuchs.

[Getzel Kressel]

GUENZLER, ABRAHAM (1840–1910), Hungarian rabbinical publicist and polemicist. Born in Satoraljaujhely, Guenzler was gifted from youth with a talent for writing which he employed in defense of traditional Judaism. In 1868, he published a pamphlet, *Tokhaḥat Megullah*, in which he attacked Isaac Friedlieber's compilation *Divrei Shalom* and defended traditional Jewry against the Reform movement, then on the ascendant in Hungary.

Subsequently Guenzler moved to Sziget, a community of Ḥasidim and *maskilim*, where he began to publish a Hebrew weekly, *Ha-Tor*. It was the first Hebrew journal published in Hungary and exerted considerable influence. The revival of the Hebrew language was his main ambition, and in 1876 he published in Sziget a booklet, *Das Meter Moss*, most of which was in Hebrew because "there are people who understand Hebrew better than Yiddish." The journal was published in Sziget for three years (1874–76), but it seems that he could not maintain it there and moved with it to Kolomyia in Galicia and from

there to Cracow. Meanwhile the pogroms against the Russian Jews broke out (1881). Guenzler accurately described them in *Ha-Tor*, with the result that the Russian government banned it from Russia. Since most of the journal's subscribers lived there (he had nearly 300 subscribers in Russia, and about 250 in Austria-Hungary), *Ha-Tor* ceased publication. Guenzler could not refrain, however, from commenting on contemporary and local issues. He published his articles in *Kol Maḥazike Hadas*, published fortnightly in Lemberg. Meanwhile R. Simeon Sofer of Cracow founded the weekly *Maḥazike Hadas* and Guenzler was appointed editor. The publishers of *Kol Maḥazike Hadas* sued Guenzler; eventually it was agreed that *Maḥazike Hadas* would stop publication and Guenzler would edit *Kol Maḥazike Hadas*, but he was later forced to resign.

[Naphtali Ben-Menahem]

GUÉRIN, VICTOR (1821–1891), French explorer of the Near East. Guérin was professor of rhetoric at various French universities and finally at Paris. In 1852 he traveled extensively in Greece, Egypt, Tunisia, and Erez Israel. His works include a seven-volume *Description géographique, historique et archéologique de la Palestine* (1869–80), containing three volumes on Judea and two each on Samaria and Galilee. Guérin's work combines historical information (especially from the church fathers and crusader authors) with topographical descriptions; although his work preceded the age of scientific archaeology, he noted many monuments which have since disappeared. He also wrote *La Terre sainte, son histoire, ses souvenirs* (2 vols., 1881–83) and *Jérusalem, son histoire, sa description, ses établissements religieux* (1889).

[Michael Avi-Yonah]

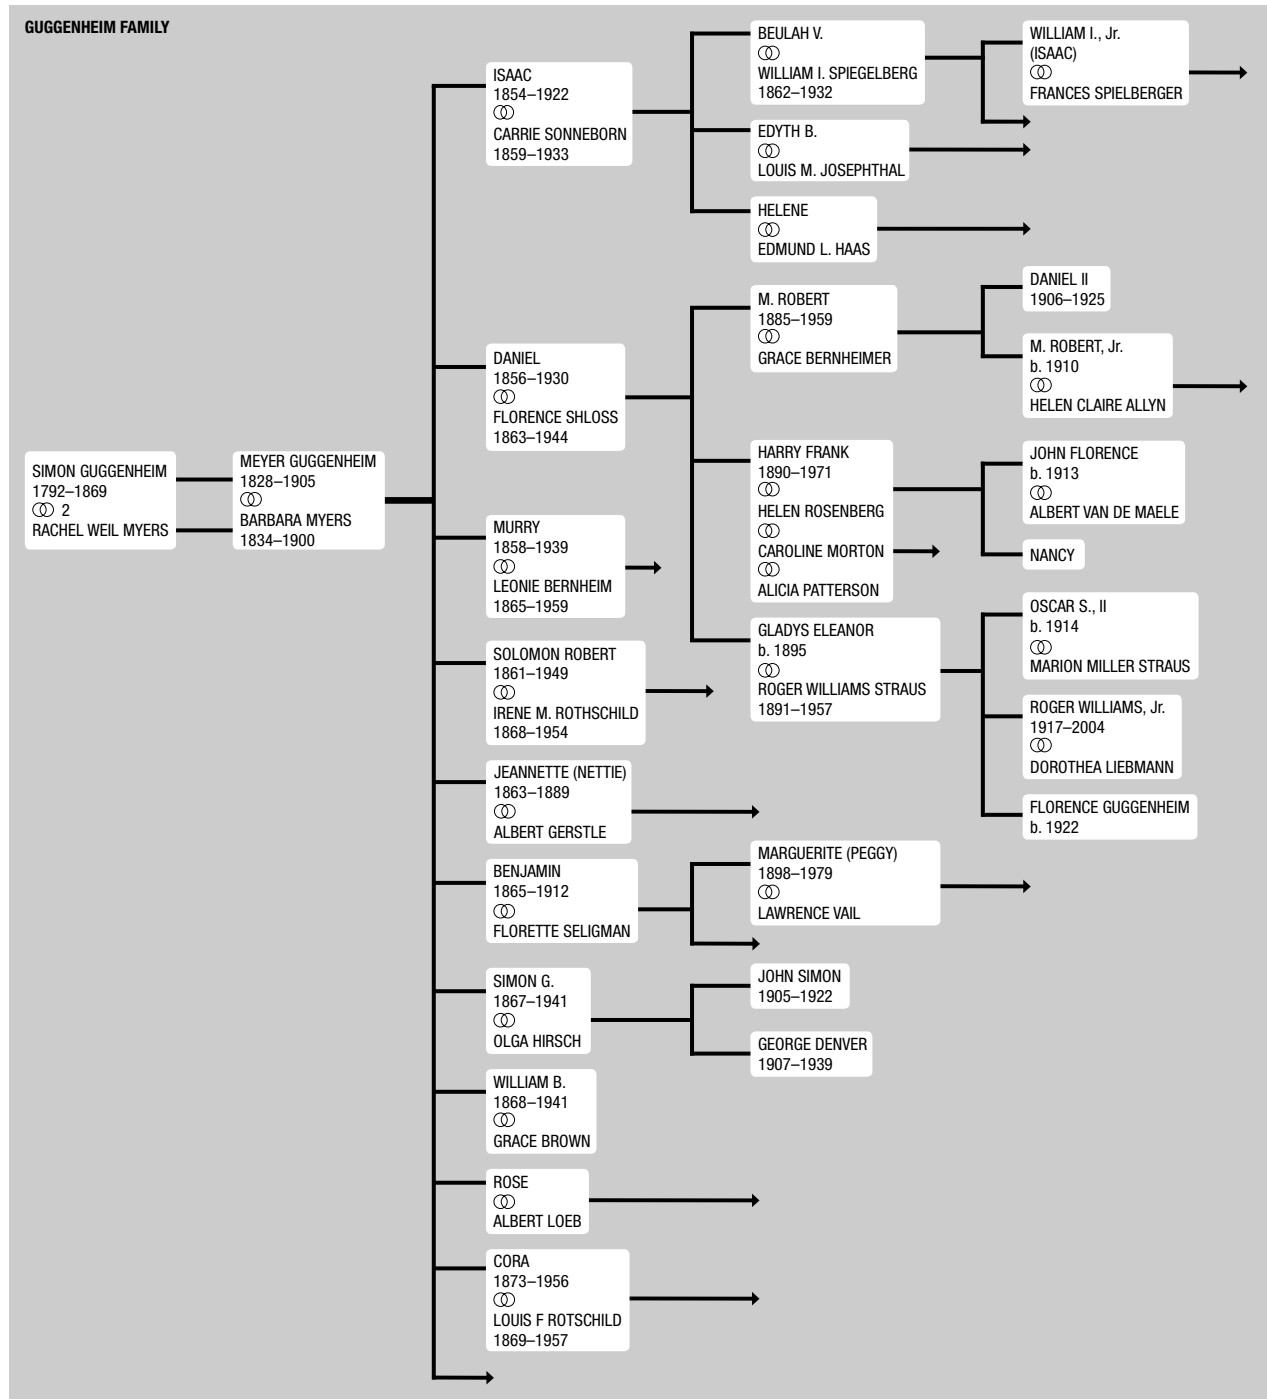

GUGGENHEIM, U.S. family. MEYER GUGGENHEIM (1828–1905), merchant and industrialist, was the progenitor of the American branch of the family. He was born in Lengnau, Switzerland, and immigrated to the United States in 1848 with his father Simon, settling in Philadelphia. After a period of peddling, Meyer established successful stove polish, lye, and lace-embroidery businesses. In the late 1870s he purchased an interest in the Leadville mines in Colorado. Leaving the embroidery business, the firm of M. Guggenheim's Sons rapidly acquired and built silver, lead, and copper mines and smelters in the western United States, Mexico, and other countries. In 1901 the firm merged with the American Smelting and Refining Company, in which the Guggenheims played a dominant role. At the height of the family's fortune, the company was estimated to be worth over \$500,000,000. Meyer's seven sons continued the family's business operations as Guggenheim Brothers, expanding their holdings from Alaska to the Congo.

His eldest son, ISAAC (1854–1922), was born in Philadelphia. He promoted the family's enterprises, including the Guggenheim Exploration Company. He was a contributor to the

New York Federation of Jewish Charities, Jewish Theological Seminary, and Hebrew Union College. Meyer's second son, DANIEL (1856–1930), became the leader of the Guggenheim Brothers' far-flung enterprises and was responsible for expansion and modernization. As president of American Smelting and Refining Company for nearly 20 years, he developed tin mines in Bolivia, diamonds in Africa, and nitrates in Chile. A progressive in labor relations, Daniel favored unionization and government economic legislation. With his brother Murry he endowed free music concerts in New York's Central Park; the Daniel and Florence Guggenheim Foundation; and the Daniel Guggenheim Fund for the Promotion of Aeronautics. He was a trustee of New York's Temple Emanu-El and one of the founders of the Jewish Theological Seminary. Meyer's third son, MURRY (1858–1939), participated actively in managing Guggenheim Brothers and the American Smelting and Refining Company. His philanthropies included a free dental clinic in New York. The fourth son, SOLOMON ROBERT (1861–1949), developed the family's interests in Mexican and Chilean mining. A benefactor of New York's Mt. Sinai and Montefiore Hospitals and the New York Public School Athletic League, he formed the Solomon R. Guggenheim Foundation, which encouraged nonobjective art. The Guggenheim Museum in New York, designed by Frank Lloyd Wright, commemorates this interest. A fifth son, BENJAMIN (1865–1912), entered the family mining business and then withdrew from the partnership in 1900 to head International Steam Pump. He died in the sinking of the *Titanic*. Meyer's sixth son, SIMON (1867–1941), was associated with the family's mining interests and, from 1907 to 1913, served as U.S. senator from Colorado. In 1925 he established the John Simon Guggenheim Foundation, which has provided fellowships to thousands of scholars, scientists, and artists. The seventh son, WILLIAM (1868–1941), managed company property until 1900, and then withdrew from the family firm. His subsequent activities were public affairs, writing, and philanthropy.

Daniel's son HARRY FRANK (1890–1971) served the family's mining enterprises and was senior partner of Guggenheim Brothers. As president of the Daniel Guggenheim Fund for the Promotion of Aeronautics from its inception in 1926, he did much to advance aviation. He established the Harry Frank Guggenheim Foundation, which supports scholarly research on problems of aggression, and violence. From 1929 to 1933 he served as United States ambassador to Cuba, and later founded and was president of the Long Island daily *Newsday*. Benjamin's daughter, MARGUERITE (Peggy; 1898–1979), spent most of her life in Europe, aiding the modern art movement, especially American abstract expressionism. Her home in Venice was a center for art display. In 1979 her memoir, *Out of This Century: Confessions of an Art Addict*, was published.

[Uri Kaufmann (2nd ed.)]

GUGGENHEIM, CHARLES (1924–2002), U.S. documentary film producer. Guggenheim was born in Cincinnati, Ohio, to German Jewish parents. His father and grandfather were furniture manufacturers. Guggenheim studied agriculture at the Colorado State College of Agriculture and Mechanical Arts before joining the U.S. Army in 1943. A foot infection kept him from shipping out overseas with his division, which took heavy losses during the Battle of the Bulge. After World War II, Guggenheim completed his undergraduate studies at the University of Iowa in 1948. After working for CBS Radio in New York, he moved to Chicago and worked behind the scenes for CBS children's shows and then to St. Louis, Missouri, to work in public television. In 1954, he founded his documentary production company, Charles Guggenheim and Associates. After producing the first political commercial aired on television for Democratic presidential candidate Adlai Stevenson in 1956, Guggenheim moved his company to Washington, D.C. He produced a variety of campaign ads for political figures, including the Kennedy brothers. The first documentary he directed, *A City Decides* (1956), earned Guggenheim the first of the 12 Oscar nominations he would receive throughout his career. Guggenheim's Oscar-winning documentaries are *Nine from Little Rock* (1964), about school desegregation in Arkansas; *Robert Kennedy Remembered* (1968), shown at the Democratic National Convention weeks after the senator was killed; *The Johnstown Flood* (1989); and *A Time for Justice* (1994). Guggenheim's final project was the documentary *Berga: Soldiers of Another War* (2002), about 350 American soldiers captured in the Battle of the Bulge who were sent to labor camps instead of POW camps because they were Jewish or thought to be Jewish. Guggenheim finished the film a few months before he died of pancreatic cancer in Washington, D.C.

[Adam Wills (2nd ed.)]

GUGGENHEIM, PAUL (1899–1977), Swiss jurist and authority on international law. Born in Zurich, Guggenheim became head of the Institute of International Law at the University of Kiel in 1927. Guggenheim became a member of the Permanent Court of Arbitration at The Hague in 1951 and judge ad hoc of the International Court of Justice in 1955. He represented a number of countries before The Hague court and also acted as arbitrator in many international disputes. He wrote extensively on subjects relating to international law. His books include *Lehrbuch des Voelkerrechts* (2 vols., 1948–51) and *Traité de Droit international public* (2 vols., 1953–54; second edition of the first volume, 1967). Guggenheim was president of the Central Committee of the Swiss community from 1944 to 1950. He wrote many scholarly articles on matters of Jewish interest such as Zionism, Palestine, Jewish postwar problems, minority rights, Swiss Jewish history (the first short history published), heirless property left in Switzerland, and the Jewish refugee problem. In 1960, he was elected president of the World Federation of the United Nations Association and in 1964 became its honorary president.

[Veit Wylar / Uri Kaufmann (2nd ed.)]

GUGGENHEIM-GRUENBERG, FLORENCE (1898–1989), pharmacist and historian, born in Berne, Switzerland. During the 1930s and 1940s she was active in Swiss Jewish national and international organizations, and from 1950 was president of the Juedische Vereinigung in Zurich. She was the editor of *Beitraege zur Geschichte und Volkskunde der Juden in der Schweiz*, a series devoted to the history and folklore of the Jews in Switzerland. She edited the typescript of Augusta Weldler-Steinberg and added chapters on the history of the communities of Lengnau and *Eendingen in the two-volume *Geschichte der Juden in der Schweiz* (1966/1970), a history of the Jews in Switzerland from the 16th century to the period after emancipation. She was one of the first researchers of western Yiddish after 1945, providing ample oral documentation of a then nearly extinct dialect, and she fought for women's rights in Switzerland.

[Uri Kaufmann (2nd ed.)]

GUGLIELMO DA PESARO (known as **Guglielmo Ebreo**; 15th century), Italian dance master. He was a pupil of Domenico da Piacenza, founder of the new school of dancing at the court of Ferrara, and taught in Florence, where he was apparently attached to the court of the Medici. Here he compiled (c. 1463) his "Treatise on the Art of Dancing," one of the most memorable works of the sort produced in Renaissance Italy. It includes two dances composed by the young Lorenzo de' Medici. In 1475 Guglielmo supervised the pageantry at a resplendent ducal wedding in Pesaro. After this he was apparently converted to Christianity under the name of Giovanni Ambrogio. He was then in the service of the Duchess of Milan who sent him to teach dancing at the Court of Naples. In 1481 he was dancing master to seven-year-old Isabella d'Este at Ferrara. Guglielmo introduced the fashion of the *moresche*, embodying both dance and mimicry, before the grand spectacle. He composed many *balletti* that were revolutionary for his time. His writing makes clear that he did not see as his final aim the mere compilation of dances. He attempted to explain the fundamentals of dancing, giving considerable thought to the relationship between dance and music. Guglielmo outlined six prerequisites for all dancers of which the first three were of enduring importance: *misura*, the dancer's ability to keep time to the musical rhythm; *memoria*, the

ability to recollect steps in correct sequence; *partire del terreno*, the ability to do the right movement in space. Though he intended only to compose dances for courtly balls, Guglielmo outlined the requirements for the artistic dancer for all times.

[Cecil Roth, Walter Sorell]

GUIANA (formerly **British Guiana**), state in N.E. South America, population: 650,000 (est. 2000); Jewish population: 40 persons (1990 estimate) living in the capital Georgetown. The earliest Jewish settlers in Guiana arrived during the Dutch rule which began in 1613. In 1657 an agreement was reached between Paulo Jacomo Pinto, acting on behalf of the Jews of Leghorn, and Phillipe de Fuentes, acting on behalf of the Jewish refugees from Dutch Brazil and Dutch cities of Middleburgh, Flushing, and Vere on the settling of Spanish-speaking Jews in the colony called Nova Zeelandia. Jews arrived from Amsterdam and Leghorn and were later joined by Jews from Hamburg and Salé (Morocco). The Jews settled in the town of New Middleburgh on the Pomerom (Pauroma) river, and numbered 50 to 60 families, specializing in sugar cane plantations and vanilla. In 1666 an English attack destroyed the settlement, and the Jews dispersed in the Caribbean, mainly to Curaçao.

Before the outbreak of World War II there were a handful of Jews in the capital, Georgetown, but there was neither an organized community nor a synagogue. Early in 1939, 165 Jewish refugees from Europe, who arrived on the s.s. *Koenigstein*, were not permitted to disembark, and shortly thereafter the government barred immigration. However, 130 Jews found refuge in the country during the war years but most of these eventually emigrated.

In 1939, in the wake of the failure of the *Evian Conference on the German refugee problem and in view of Britain's intention to severely restrict Jewish immigration to Palestine (see *White Paper), Britain proposed her crown colony Guiana as a site for Jewish immigration and settlement. Thus, in February 1939, an international investigating committee under the auspices of the Inter-Governmental Commission on Refugees, formed at Evian, arrived in the country to explore the proposed area. The land under consideration consisted of approximately 42,000 sq. mi. in the forest and swamp region of the interior. Neither the coastal region, which comprises 4% of the area of British Guiana but holds 90% of the country's population, nor the open region adjacent to it, were included in the proposed area.

The committee stated that although the region was not ideal for the settlement of European immigrants, the quality of the soil, the availability of important minerals, and the climatic and health conditions did not preclude their settlement.

The committee proposed a two-year trial period during which 3,000–5,000 sturdy young people with professional training would be sent to the region to test the practicality and the advisability of large-scale investment and development.

Many considered the British plan for Jewish settlement in British Guiana to be a political stratagem. They pointed out that the same region was investigated in 1935 by an international commission and found unsuitable for the settlement of 20,000 Assyrians suffering persecution in Iraq. Not only had the commission stated unanimously that the region was unsuitable for settlement, but also its conclusion had been accepted by the British government itself.

However, in May 1939, before British policy on Palestine was officially proclaimed in the White Paper, the British government published the report of its own investigating committee which found British Guiana to be a place for possible settlement. Prime Minister Neville Chamberlain announced that Jewish settlement in British Guiana would bring the establishment of a new community which would enjoy a large measure of autonomy and representation in the government of the colony. The program was described in government circles as a "New Balfour Declaration" and as a plausible alternative to the Jewish National Home in Palestine.

The only Jewish organization which was seriously involved in the British Guiana scheme was the *American Jewish Joint Distribution Committee on whose behalf Joseph A. *Rosen participated in the inquiry commission.

Relations with Israel

Since April 1967 Israel's ambassador to Colombia has also been non-resident ambassador to Guiana. Out of a desire to mobilize the Arab and Soviet blocs in the international arena, for support of its own conflicts, Guiana formerly adopted a hostile line toward Israel. However, from 1969 relations between the two countries improved substantially. Israel has extended a certain amount of technical assistance to Guiana.

°**GUIDACERIO, AGACIO** (**Agathius Guidacerius**; 1477–1540), Italian Hebraist. A priest from Calabria, Guidacerio began studying Hebrew at Rome under Jacob Gabbai, who was apparently a Portuguese refugee. Under the patronage of Pope Leo X, Guidacerio served as first professor of Hebrew at the University of Rome from 1514 onward. He published a pioneering *Grammatica hebraicae linguae* (Rome, c. 1514) and an annotated edition of Song of Songs (Rome, 1524; Paris, 1531). During the sack of Rome (1527), Guidacerio lost his library and subsequently fled to Avignon, from where he was called to Paris to become a royal reader at the College of the Three Languages. His other works include another Hebrew grammar, *Peculium Agathii-Mikneh Agathii* (Paris, 1537), and *Sefer*

ha-Diqduq – Grammaticae in sanctam Christi linguam institutiones (Paris, 1539).

[Godfrey Edmond Silverman]

GUILDS.

In Antiquity

There is evidence in the Bible of a certain unity among craftsmen. This appears to have played a role similar to that of the unions of artisans which assisted their members in the economic and social spheres in ancient Babylonia at the time of Hammurapi. In this period, association among the artisans was confined to the framework of the family, most of whose members were employed in the same profession over the generations, and took the form of concentration of a given group of craftsmen in a certain site in the town for residence and work. The Bible mentions a valley of craftsmen (1 Chron. 4:14). In Jerusalem, there was “the bakers’ street” (Jer. 37:21). During the period of the Return to Zion, after the Babylonian Exile, the social cells of the professions had consolidated and were acknowledged to the extent that some are mentioned as a group when the walls of Jerusalem were rebuilt: “between the upper chamber of the corner and the sheep gate repaired the goldsmiths and the merchants” (Neh. 3:32). Distinctive indications of the existence of craftsmen’s unions according to families, and their concentration in particular streets, are found during both the Second Temple era and the talmudic period in Erez Israel, Egypt, and Babylonia. However, the forms of professional organization prevailing in the Hellenistic world gradually gained in influence and appear to have obscured the unifying role of the family in many professions. This was replaced by a special association (*havurah*) of the members of a given profession for defined purposes: the synagogue was a unifying factor for these associations. The place of the hereditary craft is still evident in the tradition recorded in the Mishnah concerning the families of craftsmen in the Temple (Shek. 5:1; Yoma 3:11; 38a).

From the period preceding the Bar Kokhba revolt there is evidence on the organization of the Tarsians (weavers of flax, so called after the industry of Tarsus, the capital of Cilicia) around special synagogues in Tiberias and Lydda (Meg. 26a; Naz. 52a; TJ, Shek. 2:6, 27a), while during the period which followed the revolt there appeared the “master” of the Tarsians (Av. Zar. 17b) and the chief of the slaughterers in Sepphoris during the days of Judah ha-Nasi (Tosef., Ḥcýö 3:2). From the period of the *amoraim* there is mention of the studies of the “apprentice of the carpenter” (Mak. 8b) and the “apprentice of the smith” and his relations with “his master,” the craftsman, who issues orders which he is expected to obey (BK 32b, see Shab. 96b). In a later Midrash there emerges the “company of donkey drivers” which, in partnership, engages in transportation; “they had a chief over the company” who directed its activities (Mid. Ps. 12:1). In Hierapolis, Phrygia, there were unions of dyers of purple stuff and carpet weavers,

to whom someone bequeathed a sum of money in order to adorn his tomb on the festivals of Passover and Shavuot; presumably all, or the majority of, the members of these unions were Jews. In Alexandria there were found “the goldsmiths by themselves, the silversmiths by themselves, the weavers by themselves, and the Tarsians by themselves, so that a visitor could come and join his profession and thus earn his livelihood” (Tosef., Suk. 4:6).

Mutual assistance was then one of the declared objectives of the companies of craftsmen and there is a specification how “the woolworkers and dyers ... the bakers ... the donkey drivers ... the sailors are authorized” to act and reach agreement among themselves for the benefit of their fellow craftsmen; they purchased their requirements in partnership; it was accepted to “observe a period of relaxation,” i.e., an agreement to refrain from competition in the market and reduction of prices (see Tosef. BM, 11:24ff.; *Sefer ha-Shetarot* of Judah b. Barzillai al-Bargeloni, no. 57). Those whose work took them on the highways introduced a mutual insurance of their animals and implements employed in transportation (Tosef., *ibid.*). It is also known that Jews belonged to the general unions of craftsmen, though presumably they did not participate in their religious cults.

[Haim Hillel Ben-Sasson]

Middle Ages and Early Modern Era

The guilds of the Middle Ages in Europe were thoroughly Christian in character and the Jew had no place in them. Since few Jews in Ashkenaz practiced crafts, they did not organize their own guilds, while the Jewish merchants were restricted in their professions and arranged their affairs through the general communal regulations. In the Byzantine Empire, in the 12th century, an authorization was granted to Jewish craftsmen by Manuel I (1143–1180) to establish guilds in their towns. In Sicily there were Jewish guilds of silk weavers, dyers, and carpenters during the 12th to 15th centuries. In 1541 the tailors’ guild of Rome reached an agreement with the Christian guild of the city. In Christian Spain the occupations of the Jews were highly diversified and many engaged in crafts. They established associations (*havurot*) active in the economic, social, and religious spheres. Solomon b. Abraham *Adret clearly formulated the legal character of the guilds: “every company which has a common interest is to be regarded as a town apart ... this was customary in all the holy communities and no one ever raised any doubts as to this” (Rashba, Resp., vol. 4, no. 185). The responsa of R. *Asher b. Jehiel, Solomon *Adret, and *Isaac b. Sheshet Perfet provide information on the structure and activities of the “companies” in Spain. The regulations presented to the king by the company of Jewish shoemakers in Saragossa in 1336 for ratification include arrangements for financial assistance to colleagues in times of sickness, a compulsory arrangement for the visiting of the sick and participation in the rejoicing and mourning of members modeled on the arrangements of the Christian guilds. Also recorded are institutions for charitable purposes and special prayer designed for craftsmen (such as in Perpignan and Saragossa) and

the (*bet*) “*midrash* of the weavers” (in Calatayud) “which were set aside ... for the individuals of the company, and were not consecrated for everyone that comes” (Ribash, Resp., no. 331). A main development in Jewish guilds among Ashkenazi Jewry took place in Eastern Europe, in Bohemia-Moravia, and in Poland-Lithuania, with the increasing number of Jewish craftsmen in those countries. The earliest information on these goes back to the 16th century. Despite the violent opposition of the Christian guilds, the number of Jewish artisans increased considerably and they organized themselves in guilds during the 16th to 18th centuries after the pattern of the Christian guilds, and in order to protect themselves from them. In Prague, there were Jewish guilds of butchers, tailors, furriers, embroiderers, shoemakers, goldsmiths, hairdressers, and pharmacists. In several towns of Poland and Lithuania, such as Brody, Cracow, Lublin, Lvov, Lissa (Leszno), and Vilna, there were numerous Jewish guilds, with up to ten in one community.

The regulations of the Jewish guilds in Eastern Europe followed the spirit of the general guilds, but their social-religious content was influenced by Jewish customs and modes of life. Since they were essentially economic organizations, the Jewish guilds established rules on the relations between their members, the status of the craftsmen, the trainees and the apprentices, and the standards and quotas of production authorized to every craftsman. The guilds were concerned to prevent unfair competition between their members and to protect them from local craftsmen who were not organized in a guild or from craftsmen not living in the town. They cared for their members’ welfare, assisted those in difficulties, and provided relief to the widows and orphans of guild members. They developed organized activity for the religious education of members and their children. All the craftsmen, trainees, and apprentices were compelled to take part in public prayers and to observe the Sabbath and festivals. The guilds also formulated detailed rules for the election of committee members. Even though many guilds were first formed through the initiative of the communal administration, the relations between the two bodies gradually deteriorated until open clashes occurred during the 18th century between the guilds and the community leadership in Berdichev, Minsk, and Vitebsk. With the political and economic decline of Poland-Lithuania, the guilds lost their importance. In Russia, Austria, and Prussia, among which Poland was partitioned in the latter part of the 18th century, the guilds with their typical medieval structure were already on the verge of extinction. They ceded their place to modern forms of economic organization. Associations (*havurot*) of craftsmen existing in many communities during the 19th century had slight economic influence and their function was confined to religious, cultural, and social activities. They continued until the 1930s. In Poland between the two world wars the *cechy* (guilds) legislation which limited the Jewish craftsmen was revived. As a result, the debate was renewed on the role and organization of the Jews in this modern reincarnation of the guilds.

GUINZBURG, HAROLD KLEINERT (1899–1961), U.S. publisher. Guinzburg, who was born in New York City, worked briefly as a journalist in Bridgeport and Boston. He later worked for the publishing house Simon & Schuster as a talent scout for new authors. In 1925 he and his friend George Oppenheim founded Viking Press, whose initial success resulted from the sale of quiz and “boner” books, though the firm later sponsored many prominent authors. A consistent innovator in the publishing field, Guinzburg founded the Literary Guild, one of America’s first book clubs, in 1927; he sold his share in it in 1933, the same year that Viking again pioneered by establishing a special children’s book department. During World War II he served both as chief of the Office of War Information’s domestic bureau of publications (1943) and as head of its London publications division (1944). His armed forces anthology *As You Were* (1943), which was edited by Alexander Woollcott, was the start of the immensely popular Viking Portable Library series. After the war, Guinzburg launched Viking’s own paperback line, Compass Books. A staunch civil libertarian and member of the New York Chapter Board of the American Civil Liberties Union, he strongly opposed literary censorship and contended that any limitation of free expression was incompatible with democracy. He also served as a director of the American Book Publishers Council and as its president from 1956 to 1958, and as vice president of the Jewish Telegraphic Agency. He contributed to *Books and the Mass Market* (1953).

GUKOVSKY, GRIGORY ALEKSANDROVICH (1902–1950), Russian literary scholar. Born in St. Petersburg into a Jewish family which had converted to Lutheranism, he graduated from the faculty of social sciences of Petrograd University in 1923. He worked at the Leningrad Institute of the History of Arts from the mid-1920s until 1929 and at the Institute of the Comparative History of Literature and Languages of the West and East associated with Leningrad University. In his scientific interests Gukovsky was close to the so-called “formal method.” His works established the bases for the contemporary study of Russian literature of the 18th century. He wrote on the ideas of the Enlightenment and sentimentalism (*Orcherki po istorii russkoy literatury i obshchestvennoy mysli 18 veka* [“Essays on the History of Russian Literature and Social Thought of the 18th Century,” 1938]), on romanticism (*Pushkin i russkie romantiki* [“Pushkin and Russian Romantics,”

1946]), and on realism (*Pushkin i problemy realisticheskogo stilya* ["Pushkin and Problems of Realistic Style," 1979]), *Realizm Gogolya* ["The Realism of Gogol," 1959]). Gukovsky was a pioneer of contemporary structural typology. While professor at Leningrad University (1936–49), he educated a whole constellation of Soviet literary scholars (Yu. M. Lotman, I.Z. Serman, and many others). In July 1949 Gukovsky and his brother Matvey (1898–1971), a historian of the Italian Renaissance and professor at Leningrad University, were arrested as "cosmopolitans." Gukovsky died under investigations in the KGB Lubyanka prison in Moscow.

Gukovsky's daughter, DOLININA NATAL'YA GRIGOR'EVNA (1928–1980), was a Russian writer. Her long story "Otets" ("Father," 1974) is devoted to the fate of her father.

GULAK, ASHER (1881–1940), historian of Jewish law. Gulak, who was born in Dackira, Latvia, obtained a diploma in law at Dorpat University in 1911, and pursued further legal study in Germany (1919–24). He returned briefly to Latvia, where he taught at government-sponsored courses for Jewish teachers, before settling in Palestine in 1925. Gulak was appointed lecturer (1926) and subsequently professor (1936) of Jewish law at the Hebrew University. He published books and numerous articles on talmudic and Jewish law, which were comparative studies on the Jewish, Greek, and Roman legal systems, as well as articles on current problems, particularly in the field of education. Gulak's pioneering four-volume work *Yesodei ha-Mishpat ha-Ivri* ("Foundations of Hebrew Law," 1922) was the first to present Jewish law systematically. This was followed in 1926 by an anthology of Jewish legal formularies and documents, *Ozar ha-Shetarot ha-Nehugim be-Yisrael* (1926), later enlarged by his *Urkundenwesen im Talmud* (1935), *Le-Hefer Toledot ha-Mishpat ha-Ivri bi-Tekufat ha-Talmud* ("Research in the History of the Talmudic Law of Property," 1929), and *Toledot ha-Mishpat be-Yisrael bi-Tekufat ha-Talmud* (1939), a similar study of the law of obligations.

GULF WAR (1991).

Introduction

The Iraqi conquest of Kuwait on August 2, 1990, constituted an act of naked military aggression which, although distant from Israel, raised serious concern in Jerusalem. Since the Baghdad Arab Summit in 1978, through the enormous military build-up in the 1980s during the war with Iran, Iraq was seen as the linchpin of the threatening Eastern Front of Arab states dedicated to military confrontation with Israel, as opposed to Egypt's approach of political accommodation. There was a residue of deep acrimony between Iraq and Israel that went back to Israel's War of Independence of 1948 and the fact that Iraq, unlike other belligerent Arab states, had refused to

sign an armistice agreement with Israel in 1949. Beyond Iraq's role in subsequent Arab-Israeli wars, Israel's air strike against the Iraqi nuclear reactor outside Baghdad on June 7, 1981, left its own mark on the animosity and conflict between the two countries. In April, just a few months prior to Iraq's invasion of Kuwait, Saddam Hussein had broadcast his vicious intention, minimally his blatant threat, "to burn half of Israel with chemical weapons."

Israel and the Gulf Crisis

Although Iraq had chosen in August to occupy a fellow-Arab state, and this for reasons of economic greed along with grandiose hegemonic aspirations in the Arab World as a whole, Israel had cause for caution and suspicion. Exactly a week after the Gulf crisis began, Prime Minister Yitzhak Shamir addressed the army's National Defense College on the subject of aggression – that in the 1930s in Europe and that in the Middle East in 1990. He said:

The great difference between those dark days of the 1930s and ours, is that this time the Jewish nation has the ability and means to deter, face, and defend itself from the threat, and if need be, to overthrow and defeat it.

The following day Defense Minister Moshe Arens reiterated the prime minister's confidence and warning. "Saddam Hussein," he remarked, "knows whom he will be dealing with if he starts anything with Israel." Relying specifically on the deterrent capacity of the Israel Defense Forces (IDF), its proven military strength and reputation for ingenious and determined strategic reach, the defense minister concluded that Saddam's threats would not materialize.

The Gulf crisis opened up possibilities to serve Israeli national interests in a fortuitous and dramatic fashion. Firstly, it deflected global attention away from the politically damaging Palestinian uprising (*Intifada*) that had besmirched Israel's standing in the world. Reduced coverage of Judea, Samaria, and Gaza could marginalize the Arab insurrection as a media scoop.

Secondly, the Gulf crisis diverted American attention from its focus on regional peace-making generally and the inauguration of a Palestinian-Israeli dialogue in particular. Secretary of State James Baker had exerted persistent efforts for many months to induce Israel's government to agree to America's formula for a Palestinian delegation that would negotiate with Jerusalem. The specifics of Baker's formula were unacceptable to Prime Minister Shamir and his markedly nationalist, and narrow, coalition government formed in the spring.

Thirdly, and most critically, the crisis evoked an immediate and resolute American response that portended military confrontation against Iraq. That reaction had the acceptable possibility, not necessarily explicit in the diplomatic language of official Jerusalem, that U.S. forces would defeat Israel's enemy to the east.

The United States moved with diplomatic and military alacrity to react to Iraq's occupation of Kuwait. The United

Nations Security Council convened on the very day of the invasion to condemn Iraqi aggression and demand an unconditional and immediate withdrawal. Under America's leadership, a coalition of military forces began to be organized to protect the Persian Gulf countries, Saudi Arabia particularly, from further aggressive moves that might emanate from Baghdad. President George H.W. Bush was explicit in identifying America's concerns and motives when he affirmed that Saudi independence "is of vital interest to the United States."

During subsequent months, an American-Arab alliance was fashioned that embodied the capacity and determination to impose the status quo ante in Kuwait and the Gulf. While the anti-Iraq purpose was fully compatible with Israeli interests, Operation Desert Storm reflected new political alignments and developments in the Middle East which could impinge negatively on Israel's future strategic standing and prospects. The crisis in the Gulf was an opportunity for Israel, but it was also a potential crisis as well.

America and Israel's Low Profile

The American-led Allied military coalition revolved specifically around three important Arab states. Egypt, a partner with the United States in the Camp David Accords, was a primary legitimizer for American intervention in the Gulf and against the Arab state of Iraq. In due course Washington not only coordinated its strategic planning with Egypt, but in October also canceled a \$7.1 billion Egyptian debt to the United States. Saudi Arabia, stubbornly rejecting repeated American requests during the 1980s for the stationing of its troops or the establishment of bases on Saudi soil, was now not averse to the welcome protection by the U.S.-led coalition. In August the Saudis received \$2 billion of American military assistance, including tanks, planes, and missiles. In November, following an initial Saudi request for a \$21 billion arms sale, which apparently was supported – perhaps initiated – by the Bush administration, a first \$7.5 billion deal was approved. The U.S. Congress expressed its opposition to a third installment in the arms deal, to the tune of \$14 billion, that included AWACS, F-15s, Apache helicopters, Maverick missiles, and more. Yet that did not necessarily imply that the administration had capitulated to Capitol Hill.

Syria, erstwhile Soviet client and intrepid American foe, was a new Arab addition to the United States political network in the Middle East. Beyond lining up with Washington and against Baghdad, Syrian president Hafiz al-Assad actually flew to meet President Bush in Geneva in December, as the crisis slid closer to war. Syrian self-interest in rivalry with fellow-Ba'athist Iraq conformed effortlessly with America's search for a New Political Order in the region, in the wake of Iraqi aggression and the challenge to Saudi and Gulf integrity.

Israel's response to the crisis was bedeviled by the conflict between its desire to see Iraq stopped and defeated and by the constraint exercised by America to deny the Israeli army participation in this campaign. Israeli passivity would not enhance its regional reputation and strategic deterrence, but

it could facilitate or uncomplicate an Allied triumph against Iraq. It was not unreasonable, though perhaps not necessarily correct, that Israeli involvement might upset the U.S.-Arab coalition. The Arab participants – Egypt, Saudi Arabia, Syria, Morocco, and others – would conceivably balk at fighting on the same side as Jewish troops against other Arab, viz. Iraqi, troops. Remaining on the military margins in the face of overt Iraqi threats was a painful political dilemma for Israel during the crisis period from August 1990 until January 1991, and then during the war itself from January 16 until the cease-fire on February 27.

Foreign Minister David Levy provided an early indication of his country's policy when he stated on September 6, that "Israel is maintaining a low profile." He would repeat this position throughout the succeeding months. In the heat of war, and just prior to the ground offensive in late February, he again articulated the policy of Israeli non-intervention, so as not to hamper the American-led coalition against Iraq.

Certainly the policy of a low profile became the hallmark of Israel's rhetorical and political quandary for the entire period of crisis and war. While the IDF was galvanized into military preparedness, it effectively carried out no offensive operations at all. The threats of painful punishment to Saddam Hussein, as in Shamir's statement of September 19, were left as a reminder of Israeli resolve although restraint actually colored policy-making. This was so even after Iraq's Scud missiles hit Israel beginning on January 17.

At that time, just a day after the attack, Army Chief-of-Staff Dan Shomron was forthright:

First of all, I would like to state that the fact that missiles were fired at our civilian population is a very serious event, and, as all Israeli leaders have repeatedly said in the past, such an event demands a reaction.

Eliyahu Ben-Elissar, chairman of the Knesset Foreign Affairs and Defense Committee, conveyed a similar determination on January 25 after more Iraqi missiles had struck Israeli population centers. He said: "Our decision to respond was made as soon as the first missile fell on the Israeli population or entered our air space..." But a growing and pervasive credibility gap clouded the rhetorical flourish reflected in such Israeli declarations. Saddam's threats from 1990 materialized, but Israeli policy statements did not.

Prime Minister Shamir gave voice to the cautionary element that intruded into Israel's traditionally activist military practice. In October he referred to the need not to be dragged into the maelstrom by Iraq and thereby derail the U.S.-Arab coalition. Even after more than 30 Scud missiles had hit Israel, having exacted a significant human and material toll, the prime minister stated laconically in an interview on Israeli television, on February 21, that "[t]here is no [state] interest that calls for automatic reaction always."

Problematics in Israeli-American Relations

The importance and sensitivity at the root of American-Israeli relations were severely tested during the period of crisis and

war in the Persian Gulf. At the start, Jerusalem would have been satisfied to see the United States fulfill Israeli interests as Washington pursued its own global and regional goals against Iraq. Later, however, divergences surfaced in the pursuit of American and Israeli interests, and signs of tension seemed to grow over the months.

On August 10, just a few days after the Gulf crisis began, Foreign Minister Levy was questioned concerning U.S.-Israeli coordination. His rhetorical response – “Can anyone think for a second that we would be completely out of the circle of consultations and briefings?” – may have seemed reasonable at the time. After all, the two countries had engaged in an official strategic alliance since 1981 and had cooperated in a variety of military, weapons, and intelligence fields. The United States and Israel were moreover preoccupied on a nearly permanent basis in the search for a mechanism to consolidate and advance regional peace efforts. However, when tension arose, it went beyond the immediate question of Israel’s role in the anti-Iraq military coalition. On that issue Israel was initially willing, as noted earlier, to maintain a low profile.

On September 6, it was reported that America had agreed to lease to Israel several Patriot missile batteries to provide air-defense capabilities, in the light of Saddam’s blatant threats and Iraq’s military capabilities. An agreement to this effect was signed in Washington, Israel represented by David Ivri, the Ministry of Defense director-general. But Patriot missiles were not delivered to Israel during the crisis period, and only arrived following two devastating Scud missile attacks against the region of Tel Aviv, on January 17 and 19.

In October 1990, an incident occurred on the Temple Mount in Jerusalem which strained relations between Israel and the United States. Near the Dome of the Rock and the Aqsa Mosque, Muslim rioters attacked Jewish worshipers praying below at the Western Wall during the Sukkot holiday festival. This precipitated the active intervention of the Israeli security forces who ended up killing 21 Arabs. This incident, alleged by some to be Arab provocation to catalyze an Israeli military response against Iraq, turned into a diplomatic imbroglio at the United Nations. The United States played an active role in supporting the Arab position which demanded censuring Israeli behavior, considered brutal and without due cause. The Security Council called for denouncing Israel and recommended sending an investigative commission to Jerusalem and the territories to examine Israeli policy, while providing security for the local Palestinian inhabitants. The Likud government was irrevocably unwilling to accede to the UN position and rejected the charges leveled against Israel regarding the Temple Mount incident itself. Throughout October and until December relations between America and Israel were sullied by this event in Jerusalem and its international repercussions emanating from United Nations headquarters in New York.

In an interview on October 19, Prime Minister Shamir took issue with the Bush administration on the general ques-

tion of Jerusalem. Not only had the United States agreed that a United Nations delegation intervene in local Israeli affairs, but the very right of Jews to live in East Jerusalem was being challenged by Washington. The background to this lay in the delay of the State Department to grant approval for a \$400,000,000 housing loan that Israel had requested for settling Soviet immigrants flooding into the country. The American administration had been pressuring Israel to commit in writing its formal agreement that no Soviet Jews would be settled anywhere across the 1967 “Green Line” borders, including East Jerusalem. The prime minister gave vent to his concern as follows:

We cannot ignore this administration’s attitude toward Israel. We are witnessing a process; the attitude toward us in the Temple Mount event is nothing but an illustration of this process. They want to teach us a lesson, to put it [Israel] in its place. I believe they have taken a mistaken approach...

The Israeli government felt virtually betrayed by the United States, for it considered the Temple Mount incident an act of Israeli self-defense against a violent Arab mob. In further violence perpetrated against innocent civilians, three Jews were stabbed to death in the Jerusalem Bakka neighborhood on October 21. There was no global outcry and no United Nations response. The reticence of the Security Council did little to enhance the status of the international organization in Israel’s eyes. This point was confirmed when, as the world remained silent, Syria took advantage of the Gulf crisis to impose its will on Lebanon, removing General Aoun from power and killing some 700 people.

In late December, Foreign Minister Levy stated that Washington had shown weakness (perhaps rather than vindictiveness) in supporting the United Nations resolution. The Israeli government was by this time unconvinced that the Gulf military coalition would have collapsed had America adopted a different approach in the Security Council. The call by UN Secretary-General Javier Perez de Cuellar for the Security Council to protect the Palestinians in the Israeli-held areas was a transparent ruse, Israel considered, to undermine its authority without any political peace process in operation at all. Behind this development was an attempt by Saddam, Arafat, and others to link the withdrawal of Iraq from Kuwait with that of Israel from the territories. The United States officially and publicly rejected this linkage from the start of the crisis until the end of the war.

Nonetheless, despite the stressful U.S.-Israel relationship, or perhaps because of it, Secretary of State James Baker conveyed a desire, as in November, for political coordination with Jerusalem on the issue of the peace process in the Arab-Israeli conflict. Whether this was a calming measure or one likely to arouse Israel’s nervousness could be debated. But Yitzhak Shamir told the Likud Knesset faction on January 8, that “Once the Gulf crisis is over, we will have to face political threats.” Military threats from the Iraqis and political threats from the Americans would, as suggested in Shamir’s

own words, provide Israel with more than enough problems once the war – not yet begun – was over.

From Crisis to War

On the domestic front, the crisis period beginning in August exacted a heavy price from the Israeli public. The possibility of war, in which Israel would somehow be involved, was considered likely by a majority of the population. The specific threat of chemical warfare became a weighty concern and, following a mini-national debate and some government hesitancy, the distribution of gas masks to the domestic population was begun in October. Other civil defense measures were undertaken and police readiness was maintained. In all, Israel wanted to be prepared for the possibility of war, but it did not want to convey the impression that its local defensive operations were a prelude to a preemptive tactical strike against Iraq. In the tense situation in the Gulf and beyond, Jerusalem had to act and speak with caution in order that it not inadvertently light the match in the explosive situation that Baghdad had prepared for the inevitable conflagration.

After Iraq's invasion of Kuwait, tourism to Israel fell by over 40 percent. Non-citizens in Israel began to leave the country as did foreign students and visitors. The State Department in Washington ordered United States citizens to leave the Middle East, Israel included. Later in January, Jewish solidarity missions from abroad offered compensation to the somewhat demoralized and economically suffering home front.

In contrast, the most satisfying and durable feature of 1990 was the astounding immigration from the Soviet Union: a monumental figure of 200,000 Jews arrived in Israel, despite Saddam's threats and the atmosphere of uncertainty in Israel that suggested the approach of war. Nonetheless, while an average of 1,000 Soviet immigrants had been arriving daily at the end of 1990, the figure dropped to 500 a day in the critical month of January 1991.

The United Nations had set January 15 as the final date for a complete Iraqi withdrawal from Kuwait. If not, then all measures including force would be employed to achieve this objective which international diplomacy, a remarkably tight embargo, and Arab censure could not achieve. The ultimatum date portended the start of war in the Persian Gulf. Israel was comforted by the fact that Iraqi aggression had been universally condemned and that America had stood firm – as in the Baker-Aziz Geneva meeting of January 9 – in rejecting the insidious attempt to link the Kuwaiti and Palestinian issues. In Israel it was felt that Washington had also come to realize more than before that, in essence, the broader Arab aspects of the conflict with Israel were more central than the Palestinian one.

Operation Desert Storm terminated the waiting period when Allied military forces led by the United States began operations on the night between January 16 and 17, with 1,200 air missions into Iraq and Kuwait in the first 36 hours of fighting. On the 17th Saddam carried out his word, and from the areas known as H2 and H3 in western Iraq, eight Scud missiles were

fired at Israel and struck civilian centers in the Tel Aviv metropolitan district. A state of alert was declared throughout Israel as the nation began to face the damage and disorder. Apartment buildings were hit, their inhabitants were evacuated, and people were injured. Warning sirens, gas masks, and huddling in sealed rooms designed to provide protection from chemical attack became part of daily life. An evening curfew brought social life, entertainment activities, sports events, and parts of the economy to a virtual standstill.

During the initial three-week period of the war, many Tel Avivians abandoned their city which was Saddam's primary, though not sole, target. From the Mediterranean seashore they chose the safer environs of Jerusalem, the Dead Sea, and Elath. Local patriotism gave way to personal security. Meanwhile, all Israelis were advised to carry their gas mask with them all day long.

The final war tally on the civilian population, from January 17 until the last Scud attack in February, read as follows: 39 missiles hit Israel from Haifa in the North to the area of Beersheba in the South; 1,644 families were evacuated; and 4,095 buildings were damaged. Although only one person was killed due to a direct missile hit, several died resulting from misuse of their gas masks and from heart attacks. Considering the potential for havoc and ruin and death that the Scuds represented, many Israelis felt that the Jewish people had experienced a miracle. Saddam had been considerably less successful than his threats against Israel implied, while America, Britain, even Saudis, were fighting the war that defeated Israel's enemy.

The Israeli Cost-Benefit Ledger

The Gulf War witnessed two innovations in the chronicles of military confrontations that Israel has faced since 1948. At one and the same time, Israel suffered the danger and indignity of its civil population being victims of enemy attack, while unlike previous Arab-Israeli wars, the IDF this time remained outside the military fray.

The lack of an operative response by Israel in the face of Iraq's Scud missiles was tied directly to the exertion of American pressure. Jerusalem was brought to the point of acceding to Washington's request not to act, and thus leaving the Allied coalition to pursue the war without political complications. Prime Minister Shamir could not have been more explicit when he stated on January 28, that without consultations with the United States, Israel would not act. On the same occasion he commented that relations with Washington had improved.

It was the visit to Jerusalem by Deputy Secretary of State Lawrence Eagleburger following the initial missile attacks, and his remaining in the country for about a week, that dramatized Washington's grave concern regarding Israeli behavior. His mission was undoubtedly to restrain Jerusalem, assure that U.S. military forces would continue to search and destroy the Scud missile launchers in western Iraq, and offer sufficient aid and assistance to mollify Israel. A report from

January 21 divulged that President Bush was calling Prime Minister Shamir regularly (as was British Prime Minister John Major). Secretary Baker declared his appreciation on February 6 for Israel's restraint.

Yet the cost of Israel's restraint, in contrast to the praise earned, was cause for worry according to Israel's ambassador to Washington, Zalman Shoval. In a news report from February 11, Shoval suggested that the United States would not provide Israel with aid in the wake of the Gulf War on the pretext that Israel "is not part of it."

Three particularly irksome problems strained Israeli-U.S. relations during the war period. Intelligence information on the area of H₃ in Iraq was apparently not generously supplied by the Americans to the Israelis. Warning time on incoming Scuds was initially very brief, though later extended to about five minutes due to a United States agreement to improve the transfer of needed data. Moreover, throughout the weeks of war, the Pentagon refused to provide Israel with the Friend-Or-Foe Code required to facilitate an Israeli aerial attack against Iraqi missile launchers. No air corridor was opened for the Israeli air force and no time slot was set aside by the Allied forces to allow Israel the opportunity to send its forces into action. The memory of the U.S. *Liberty* navy surveillance ship that was mistakenly attacked by Israel on June 7, 1967, during the Six-Day War, could not have been far from people's thoughts in January 1991. Certainly Israel would not want another accident to occur, and held its fire.

While suffering from Iraqi attacks and yet choosing to accommodate American wishes, or succumb to its enormous leverage, Israel became the beneficiary of global sympathy and support. The aggression and bellicosity of Saddam contrasted blatantly with Israel's peaceful and defensive demeanor. Patriot missile batteries arrived from Holland and German Foreign Minister Hans-Dietrich Genscher, during a visit to Israel on January 24, promised extensive assistance that would include Patriot missiles, German-financed Dolphin submarines, and other military equipment. Meanwhile, the European Economic Community announced on January 25, that it was revoking sanctions that had been imposed on Israel for its policies in the territories and would renew scientific cooperation between Israel and the Common Market countries. On January 28 a French Socialist Party delegation visited Israel to express its solidarity. However, the fact that French weapons and German chemicals had been sold to Iraq in the 1980s lent an air of coolness, perhaps hypocrisy, to the European gestures.

By the time the war ended in Israel, bombed-out streets in Tel Aviv and destroyed housing blocks in Ramat Gan became the visual symbols that this war, unlike most Arab wars against Israel, was conducted on Israel's own home front. Overall, from the start of the crisis to the termination of hostilities, Israel had suffered a \$4 billion loss, in damages, tourism, sinking production, etc. The Patriot missile, originally designed basically as an anti-aircraft weapon, performed with only partial effectiveness against Iraq's Scuds. More often than

not, the Patriot hit the Scud's engine and destroyed it, but the warhead continued on its trajectory on the path toward Israeli civilian targets. In this war unlike earlier ones, the skies over Israel were not clean of enemy activity, though on the ground Iraq was 340 kilometers from Israel's border.

Postwar Assessment

From Israel's perspective, the political balance-sheet by the end of the war in late February was mixed. A total American victory on the battlefield would serve Israel's immediate security concerns, yet provide Washington with the self-esteem and international acclaim to then pursue its version of peacemaking in the Middle East. Israel did not necessarily see eye-to-eye with America on the modalities of conflict-resolution, as when Jerusalem had for example questioned Baker's Five Point Plan of November 1989.

Another paradox inherent in Israel's strategic calculations related to Iraq's condition at the conclusion of the war. It would seem obvious that Jerusalem wanted Iraq totally defeated and militarily devastated, lacking any major conventional and certainly nonconventional lethal capabilities. Prime Minister Shamir added on February 26, that Israel is interested "in having this person, Saddam Hussein, disappear from the international arena." Nonetheless, a less than fully flattened Iraq, and one that expressed no regret or remorse for its illegalities and aggressions, would deny it the benefits of international assistance for national rehabilitation. A defeated Iraq – yes, but an absolutely destroyed Iraq was not necessarily the optimal solution for Israel.

During the course of the crisis and until the war's end, Jordan and the PLO were among the most dedicated and enthusiastic supporters of Saddam Hussein. The streets of Amman rocked with pro-Iraqi sentiments and mass vituperation against America and Israel. Yasser Arafat already early in August had gone on a political pilgrimage to Baghdad to embrace Saddam and line up the PLO behind his anti-Kuwait and pan-Arab ventures. In Judea and Samaria, and elsewhere, the Palestinians hailed Saddam as their savior and rejoiced on the roofs of their houses when Scud missiles tore apart buildings and terrified Jewish civilians in Tel Aviv.

But the war served to discredit Jordan's political reputation and to delegitimize the PLO's peace image. Support for Iraq was seen as advocacy of aggression and conquest by the sword. The United States would no doubt later be challenged to resurrect the role of these two Arab elements in the comprehensive approach to regional peace. In fact, it might be concluded that Washington's own decision to accord recognition of the PLO in December 1988, and then to open an official dialogue with it, was a discredited policy.

The implication of these developments for Israel under its Likud-led government was an affirmation of the policy of territorial retention of Judea and Samaria. The status quo based on Israeli control and Jewish settlement would presumably continue, a side gain from Arab misjudgments and Israeli good fortune. Although Israelis might endlessly debate the

relationship between territories and missiles in the military sphere, the persistence of Israeli rule was the dominant theme in the political sphere.

Israelis would also debate whether the non-activation of the IDF irreparably harmed the army's deterrent capability, thereby contributing adversely to Israel's pre-eminent strategic standing in the Middle East. It was reasonable to conclude that while that question was subject to varied interpretation, the formidable loss to Arab esteem and dreams of glory and victory was a definite and glaring result of the crisis and Gulf War. Whether the Israelis had won was unclear, but the Arab nation had certainly lost. Another Arab myth, the Saddam myth like the earlier Nasser one, burst like a bubble in the fantasizing Orient.

The Gulf War represented an occasion when the United States would again attempt to mold a New Order in the Middle East. Its Arab partners would be Egypt and Saudi Arabia, and others. Its dynamic would be military success against Iraq and its purpose generating momentum for peace in the Arab-Israeli conflict. Secretary of State Baker declared before the United States House Foreign Affairs Committee on February 2, that it was important "to resume the search for a just peace and real reconciliation for Israel, the Arab states, and the Palestinians." In the same spirit, signs were visible or audible that some Arab spokesmen now considered that the time for peace with Israel had arrived. Prince Bandar, the Saudi ambassador to Washington, made unusually conciliatory statements about Israel during the crisis and war months.

It might seem that the Arab-Israeli framework had now been exposed as one of various alternative political frameworks or alignments in the Mideast. Certain unexpected developments had transpired in the region. Arabs had fought Arabs, Saudis against Iraqis, and this after one Arab country, Iraq, had brazenly gone ahead and swallowed up another Arab country, Kuwait. Then, Arabs had surprisingly agreed to cooperate openly with the United States and pursue their interest in conjunction with Islamically vilified America, traditionally portrayed in satanic colors in the religiously seething Muslim world. However, an American-Arab alliance formed in the sands of the Gulf and fought to victory.

In the aftermath of all this, it was perhaps possible to imagine the unimaginable: Arab-Israeli peace. Israel would be open to future political opportunities, aware as always of the dangers and risks, yet hopeful that a new realism and spirit of accommodation would come to the Middle East.

[Mordechai Nisan]

For the 2003 invasion of Iraq by the U.S. and its coalition partners, see *Arab World. For its part, Israel was content to sit on the sidelines. Gas masks were replenished among the civilian population and in what proved to be a very costly miscalculation the Israeli public was instructed to unseal the masks in anticipation of possible Iraqi action, thus shortening their shelf life. Otherwise Israel was not directly affected.

GULL (Heb. חַמְצוֹ; AV "cuckow," JPS "sea-mew"), bird mentioned in the Bible as prohibited as food (Lev. 11:16; Deut. 14:15), the Hebrew name means "thin" or "swift of movement" and, on the basis of its rendering as *λάρος* in the Septuagint, refers to the gull. Eight species of the genus *Larus* are found in Israel. Feeding on sea fish and scraps of food, they follow ships for the offal thrown overboard. The gull also penetrates to inland regions of the country (even to the Negev) where it lives on worms and snails. To the family of the gull (*Laridae*) belong the *Sterna*, a genus of which two species are found in Israel, distinguished from the gull by being web-footed along the entire length of their toes.

GUMPERT, MARTIN (1897–1955), German author and physician. The son of a medical practitioner, Gumpert was born in Berlin and, after serving in the German Army Medical Corps during World War I, he began his medical studies at the university of Berlin, specializing in venereal and skin diseases. In 1927, he became the head of a Berlin clinic for the treatment of these complaints and the director of a center for the study of deformities, on which he published a manual, *Die gesamte Kosmetik* (1931). Between 1933 and 1936, when the Nazis forced him out of medical practice, Gumpert began to write the first of a series of works that were to make him famous: a biography of Samuel Hahnemann, the originator of homeopathy (1934); and *Das Leben fuer die Idee* (1935; *Trail-Blazers of Science*, 1936), portraits of outstanding scientists. Gumpert emigrated to New York in 1936, resumed his career as a dermatologist and became an American citizen in 1942. He soon moved to a new specialization, geriatrics, strongly maintaining that society was frittering away millions of useful lives through compulsory retirement at the age of 65. Gumpert rapidly achieved medical distinction, heading the geriatric clinic in New York's Jewish Memorial Hospital from 1951 and gaining many professional honors. Two medical works in English advocating a new approach to the treatment of the aged were *You Are Younger Than You Think* (1944) and *The Anatomy of Happiness* (1951).

In his youth, Gumpert had written two collections of lyrics, *Verkettung* (1916) and *Heimkehr des Herzens* (1921). Other literary works in German written after his move to the U.S. include *Berichte aus der Fremde* (1937), poems; *Dunant: Der Roman des Roten Kreuzes* (1938); *Dunant: The Story of the Red Cross*, 1938); *Hoelle im Paradies* (1939), an autobiography; and a novel, *Der Geburtstag* (1948). He also contributed a short article on his friend and fellow exile, Thomas *Mann, *The Stature of Thomas Mann* (1946). From 1952 until his death, Gumpert edited a New York medical journal, *Lifetime Living*.

BIBLIOGRAPHY: *Science Illustrated* (June 1946), 637–40; *New Yorker* (June 10 and 17, 1950); *Current Biography* (1951), 250–1; *New York Times* (April 19, 1955). **ADD. BIBLIOGRAPHY:** J. Ittner, "Merkwürdig unjüdisch' – Identität und Antisemitismus in Martin Gum-

berts Autobiographien," in: *Exil*, 19:1 (1999), 5–22; D. Rosenberg, *Martin Gumpert – Arzt und Schriftsteller* (2000).

[Rudolf Kayser]

GUMFLOWICZ, LUDWIG (1838–1909), Austrian jurist and sociologist. He was born in Cracow, in Austrian Galicia (now Poland), and studied law at the University of Vienna. An ardent Polish patriot, he participated in the Polish insurrection against Russia in 1863, and as a consequence of the failure both of the rebellion and of subsequent nationalistic activities Gumpłowicz had to leave Cracow and availed himself of an opportunity to become a *Privatdozent* in political science at the University of Graz. In 1862 he was appointed adjunct professor in political science, and 11 years later, in 1893, he received his full professorship. Gumpłowicz was baptized, but retained a lively interest in Jewish affairs. Gumpłowicz was a proponent of Jewish assimilation. He thought that the Jews, having no territorial basis and no common language, were lacking the prerequisite of a nationality. In a letter directed to Theodor Herzl and dated Dec. 12, 1899, he expressed this view in highly emotional language.

Academically, Gumpłowicz remained isolated at a provincial university, but he had brilliant students, such as Franco Savorgnan and Franz Oppenheimer, and found himself recognized by early American sociologists. Gumpłowicz was one of the first to achieve full emancipation for sociology from the nonsocial sciences by insisting that social phenomena and evolution are distinctive and can be understood only by reference to social causes. That which is unique about social phenomena arises from human groups in interaction rather than from the behavior of individuals abstracted from the influence of association and dissociation. According to Gumpłowicz, social and cultural evolution is a product of the struggle between social groups. This struggle replaces individual struggle in his theory of evolution. Gumpłowicz offers two basic hypotheses. One, the polygenetic hypothesis, asserting that the species man evolved from various older types at many different times and in many different places, so that between the races there is no blood bond; and two, the hypothesis that an unsurmountable antagonism exists between different groups and races. For Gumpłowicz society was the sum total of conflicting ethnic groups, each group being centered around one or more common interests. Thus the struggle between these ethnic groups, which he called races, is relentless. Gumpłowicz was pessimistic about progress. His polygenetic view precluded the possibility of unitary evolution. In every society and state partial evolution and progress have taken place; but in every society and state there have also been destruction and setbacks. Therefore, Gumpłowicz holds that progress can be observed only in particular periods and particular countries.

Another important aspect of Gumpłowicz's work includes the distinction he made between simple, limited groupings organized on the basis of consanguinity and community of culture, on the one hand, and compound groupings, such as the state, formed in the process of amalgamation of originally

separate groups, such as masters and slaves or ethnic groups. In the state, ethnic groups merge into social classes, a common body of rights and obligations is developed, and internal conflict is toned down and possibly even composed. External conflict between states takes then the place of internal ethnic and class conflicts. Therefore, although Gumpłowicz is classified often as a social Darwinist, he was actually one of the first social determinists. In his system, the individual and his motives were useless abstractions. The individual was the product of group experiences; his morals derived from his relations in the particular groups to whom he belonged, whereas his notions of rights could be traced to the accommodative norms developed by the struggle of interest groups in his society.

Gumpłowicz's most important works include *Rasse und Staat* (1875), *Der Rassenkampf* (1893), and *Grundriss der Sociologie* (1885); the latter is his only work that has been translated into English by Frederick W. Moore, as *Outlines of Sociology* (1889) and reissued by Irving L. Horowitz (1962). An edition of all of Gumpłowicz's writings, under the title *Ausgewählte Werke*, appeared in 1926. An evaluation of Gumpłowicz as a Jew is contained in "Scholar and Visionary: the correspondence between Herzl and Ludwig Gumpłowicz" (*Herzl Yearbook*, 1 (1958), 165–80).

[Werner J. Cahnman and Alvin Boskoff]

GUNDOLF, FRIEDRICH (pseudonym of **Friedrich Gundelfinger**, 1880–1931), German literary historian. Following Karl Wolfskehl, Gundolf was one of the earlier disciples of Stefan George and participated in his literary movement. Together with Wolfskehl, with whom he exchanged many letters from 1899 (published in 1977 in 2 vols.), Gundolf belonged to a group of Jewish intellectuals and writers who were strongly attracted by George's integrative cultural concept trying to unify Greek, Jewish, and German culture. But unlike Wolfskehl, Gundolf explicitly distanced himself from Judaism. Prior to his career as a university teacher he published poetry in the *Blaetter fuer die Kunst* (later also *Gedichte*, 1930) and worked from 1907 on the 10-volume German translation of Shakespeare's works which appeared under his editorship (1908–18). With his dissertation on Shakespeare in 1911 at the University of Heidelberg, Gundolf turned to an academic career. His scholarly studies covered a wide range. Starting with Shakespeare (*Shakespeare und der deutsche Geist*, 1911; *Shakespeare*, 2 vols., 1928), he published books on Goethe (1916), George (1920), Kleist (1922), Opitz (1923), Caesar (1924), Paracelsus (1927), Gryphius (1927), and the Romanticists (*Romantiker*, 2 vols., 1930–31), violating more and more the narrow normative canon of George, with whom he broke after his book on Kleist. In his decisive anti-positivist biographies of literary figures, Gundolf was not interested so much in the details of their daily lives as in the "spirit" revealed in their creative masterpieces, and he interpreted their unique *Gestalt* with a reverential awe. His publications still serve as examples of hu-

manistic scholarship and literary style while Gundolf himself is understood as one of the important German-Jewish intellectuals of the beginning of the 20th century.

[Andreas Kilcher (2nd ed.)]

GUNKEL, HERMANN (1862–1932), German Bible scholar. Gunkel taught at the universities of Halle from 1888 to 1894 and 1920 to 1927, Berlin from 1894 to 1907, and Giessen from 1907 to 1920. The work of Gunkel has been a learned stimulant in biblical scholarship. His conviction that historical criticism, which seeks an ideal history of Israel based on the chronological and biographical terms and exemplified classically by the J. Wellhausen school, was inadequate in writing a history of Israel's literature led him to discover the importance of determining the oral prehistory of the written sources, and of classifying the source material into the appropriate categories of literary "forms." He thus pioneered the methods of form criticism to biblical studies, and introduced the traditional historical point of view in writing Israel's history. His first major work, *Schöpfung und Chaos in Urzeit und Endzeit* (1895, 1921), was a study into the mythology underlying the biblical ideas concerning the beginning and the end of the present world order. By piecing together the existing variants of the surviving texts, mainly in the poetic sections of the Bible, he made the first scholarly attempt to reconstruct the original myth of creation. His commentary on Genesis (1901, 1963⁶) argued for the great antiquity of the sagas, legends, and traditions of the first book of the Bible. The introduction, published separately and translated into English as *The Legends of Genesis* (1901, 1964⁵), was primarily interested in the characteristics of the story (German "Sagen" is better translated as "stories" than as "legends") as a genre and its historical development. His most successful attempt at a literary history of Israel, based primarily on an analysis of the types and forms of Israel's speech, appeared in the volume on *Die orientalischen Literaturen* (1906) in Hinneberg's series *Die Kultur der Gegenwart*. His approach has proved most fruitful in his studies on the Psalms: *Ausgewählte Psalmen* (1917⁴); *Die Psalmen uebersetzt und erklärt* (1926); and *Einleitung in die Psalmen* (published posthumously and under the joint authorship of J. Begrich, 1933), where the Psalms are classified according to their principle types (*Gattungen*) and each type is related to a characteristic life setting (*Sitz im Leben*). Gunkel's book on Esther (1916, 1958²) is fundamental for understanding the literary character of the book. A number of crucial studies related to form criticism are found in two series of published essays: *Reden und Aufsätze* (1913) and *Was bleibt vom Alten Testament* (1916; *What Remains of*

the Old Testament? and Other Essays, 1928). His *Das Maerchen im Alten Testament* (1917) historically traces the genre of the folktale in the Bible in light of Near Eastern culture. In addition to his many writings he served as an editor of *Die Religion in Geschichte und Gegenwart* (1909–13 and 1927–32²), and, with W. Bousset, of the series *Forschungen zur Religion und Literatur des Alten und Neuen Testaments*.

Hahn, *The Old Testament in Modern Research* (1956), 119–28. **ADD. BIBLIOGRAPHY:** J. Scullion, in: DBI, 1:472–73.

[Zev Garber]

GUNZBERG, ISIDOR (1854–1930), British chess master and journalist. Gunsberg was born in Hungary and taken to England as a child. He was known as a master of attack and his name was particularly associated with the Allgaier gambit. Gunsberg defeated Bird and Blackburne, and drew with Tchigorin. In 1889 he lost the world championship match against *Steinitz by the surprisingly narrow score of 6–4 with 9 draws. He wrote *Chess Openings* (1896) and famous chess columns in the *Morning Post*. One of the strongest players of his time, by his death in 1930 he was one of the last survivors of the Victorian chess world, but has remained surprisingly neglected by chess historians since.

[William D. Rubinstein (2nd ed.)]

GUNZBERG, ARYEH LEIB (Loeb) BEN ASHER (1695–1785), talmudist. Born in Lithuania, Aryeh became assistant to his father on his appointment about 1720 as rabbi of the upper district in Minsk, comprising at the time 40 small communities. In 1733 he founded a yeshivah, which soon attracted students from Belorussia and Lithuania. Differences over methods of instruction between Aryeh Leib and Jehiel Heilprin, author of *Seder ha-Dorot* and head of another yeshivah in Minsk, led to much friction between both the teachers and students, Heilprin being opposed to the pilpulistic method used by Aryeh Leib to stimulate the minds of his students. In the introduction to his famous volume of responsa, *Sha'agat Aryeh*, however, Aryeh Leib himself is critical of the role of *pilpul* in establishing the "truth of the Torah." Finally compelled in 1742 to leave Minsk, he settled in one of the nearby towns where he continued to help his aged father. In 1750 he was appointed rabbi in *Volozhin, where among some of his notable disciples were Ḥayyim *Volozhiner and his brother Simḥah. Here he prepared his halakhic work, *Sha'agat Aryeh* (Frankfurt on the Oder, 1755). He lived in poverty, became involved in disputes with the community leaders, and at the age of 69 wandered from city to city. He reached Germany and eventually accepted the position of *av bet din* in Metz (1765), becoming also head of a large yeshivah there. He remained in Metz until his death. Besides his *Sha'agat Aryeh*, Aryeh Leib pub-

lished in his lifetime *Turei Even*, novellae on the tractates *Rosh Ha-Shanah*, *Hagigah*, and *Megillah* (Metz, 1781). His posthumously published works are *She'elot u-Teshuvot Sha'agat Aryeh ha-Hadashot* (1874); *Gevurot Ari*, novellae on *Taanit* (1862); and *Gevurot Ari*, on *Yoma* and *Makkot* (1907).

[Moshe Nahum Zobel]

GUNZBURG, NIKO (1882–1984), Belgian jurist and criminologist. Born in Riga, Latvia, his family settled in Belgium when he was a boy. In 1923 he was appointed lecturer in law at the University of Ghent where he later became the first Jew to be made a professor. He founded its Institute of Criminology in 1937 and headed it until 1952 except during World War II when he was attached to the Belgian embassy in Washington. From 1953 to 1956, he was professor of law at the University of Djakarta, Indonesia. His works on penal law and criminology earned him an international reputation. They include *Les transformations récentes du droit pénal* (1933) and *La trajectoire du crime; études sur le nouveau code Pénal du Brésil* (1941). A prominent figure in the Belgian Jewish community, Gunzburg was founder and president of the Central Committee for Jewish Welfare in Antwerp. He participated in the inaugural conference of the World Jewish Congress in 1936 and was chairman of the Council of Jewish Associations (1947–50). Gunzburg was also a passionate advocate of the use of the Flemish language and he was head of the society of Flemish Jurists.

[Zvi Hermon]

GUNZENHAUSER (Ashkenazi), JOSEPH BEN JACOB (d. 1490) and **AZRIEL**, his son, pioneers in Hebrew printing. The Gunzenhausers went to Naples from Gunzenhausen in southern Germany and set up a Hebrew press, which from 1487 to 1492 produced an impressive range of books (see *Incunabula), in all about 12 volumes. Among them were the Hagiographa with various rabbinical commentaries (1487); Avicenna's medical *Canon*, the first and only edition of the work in Hebrew (*Ha-Kanon*); and the first edition of Abraham Ibn Ezra's Pentateuch commentary (1488). After Joseph Gunzenhauser's death his wife (or daughter) and son continued his work. The Gunzenhausers assembled a team of distinguished typesetters and correctors from Italy. Joshua Solomon Soncino, who began printing at Naples about this time, issued a prayer book of the Spanish rite for Gunzenhauser in May 1490.

BIBLIOGRAPHY: D.W. Amram, *Makers of Hebrew Books in Italy* (1909), 63, 66; B. Friedberg, *Ha-Defus ha-Ivri be-Italyah...* (1956), 40ff.; A. Freimann (ed.), *Thesaurus Typographiae Hebraicae...* (1931), A57, 1ff.

GUR, BATYA (1947–2005), Israeli writer and literary critic. Gur was born in Tel Aviv, studied Hebrew literature and his-

tory at the Hebrew University of Jerusalem, and completed her M.A. in comparative studies. She worked as a high school teacher before moving to the United States and subsequently lived in Jerusalem, writing reviews and essays for the literary supplement of *Ha-arets* and internationally known for her detective novels. The central figure in these novels is police detective Michael Ohayon, and the cases which he investigates lead to rather unusual domains such as literature, music, or psychotherapy while probing social and political aspects of current Israeli life. In *Ha-Merhak ha-Nakhon* (1996; *Murder Duet: A Musical Case*, 1999), detective Ohayon investigates two murders in the world of classical music in Jerusalem, following the discovery of a requiem by Vivaldi; in *Rezah, Mezalmim* (2004), Gur focuses on intrigues among the staff members of Israeli television. While her earlier thrillers seem to focus on social circles to be found anywhere in the world (a university department, the psychoanalytic society), her later novels consciously address local issues, turning the allegedly inferior genre of the detective story into a vehicle for reflecting on the erosion of the Zionist ethos and the maladies of Israeli society. Among her other books are *Rezah be-Shabbat ba-Boker* (1988; *The Saturday Morning Murder: A Psychoanalytic Case*, 1991), *Mavet ba-Hug le-Sifrut* (1989; *Literary Murder: A Critical Case*, 1993), *Linah Meshutefet* (1991; *Murder on a Kibbutz: A Communal Case*, 1994), and *Even Tahat Even* ("Stone under Stone," 1998). Gur's novels have been translated into many languages.

Hirschfeld, in: *Haaretz* (June 17, 2005).

[Anat Feinberg (2nd ed.)]

GUR (Gorban), MORDECAI (Motta; 1930–1995), Tenth Israeli chief of staff and politician; member of the Tenth and Thirteenth Knessets. Gur was born and grew up in Jerusalem. He joined the Haganah at an early age and held various positions of command. During the War of Independence he served in the ninth motorized special services battalion of the Negev Brigade of the Palmah. After the War of Independence, he served for two years in *Naḥal, later joining the paratroops and commanding numerous reprisal operations. In 1955 he was commended for his part in an operation across the border with Egypt in Khan Yunis, in the course of which he was wounded. During the 1956 Sinai Campaign he commanded an airborne Naḥal unit and in 1957 became deputy commander of the paratroops. In 1959–60 Gur studied at a military academy in Paris, and in 1961 was appointed commander of the Golani Brigade. In 1963 he was appointed to a senior post on the Gen-

eral Staff, and in 1966, after a year as commander of the Staff College, took charge of a brigade of airborne infantry. During the Six-Day War, Gur commanded the paratrooper brigade that captured the Old City of Jerusalem, and after the war was appointed commander of the forces in the Gaza Strip and Sinai Peninsula. In 1969 he was promoted to the rank of major general, and was appointed commander of the Northern Command, and in 1972–73 served as military attaché in Washington. After the Yom Kippur War, he was once again appointed commander of the Northern Command. In 1974, he succeeded Lieutenant General David *Elazar as chief of staff, serving in this capacity until 1978. As chief of staff he was responsible for the 1976 Entebbe Operation, in which the IDF freed Israeli and Jewish hostages hijacked to Uganda by terrorists, and for the 1978 Litani Operation, in which the IDF attacked Palestinian terrorist bases in Southern Lebanon. When Egyptian president Anwar *Sadat declared his intention to visit Jerusalem in November 1977, Gur reacted with suspicion.

After retiring from the IDF Gur, who had taken Oriental Studies at the Hebrew University of Jerusalem, attended Harvard Business School for a year, in 1979. He returned to Israel after being appointed director of the Histadrut-owned industrial enterprise of Koor Mechanics, a position he held until 1984. In these years he also became active in the *Israel Labor Party. In 1981 Gur was elected to the Tenth Knesset on the Alignment ticket. Reelected to the Eleventh Knesset he served as minister of health in the National Unity Government in 1984–86, when Shimon *Peres was prime minister. He resigned in 1986, refusing to serve under Yitzhak *Shamir of the Likud after the rotation in the premiership. After his resignation from the government he continued to serve in the Knesset, but also became chairman of the Board of Directors of Solel Boneh, the Histadrut-owned construction company. He rejoined the government half a year before the elections to the Twelfth Knesset in 1988 as minister without portfolio. In the National Unity Government formed after the elections Gur continued to serve as minister without portfolio. In the course of these years Gur frequently met with Palestinian personalities in the West Bank, and even made an attempt to meet with PLO leader Yasser *Arafat. When Arafat expressed willingness to recognize Security Council Resolution 242 towards the end of 1988, Gur was inclined to admit that a certain change had taken place in the Palestinian position, but the following year he was disappointed by the positions of the Palestinians and adopted a more hawkish approach to the conflict with the Palestinians within the Labor Party.

Gur had planned to contend in the leadership contest in the Labor Party in 1992, and did not hide his ambition to be prime minister, but he finally withdrew when he was diagnosed with cancer. In the contest he supported Yitzhak *Rabin, and in the government formed by Rabin after the elections to the Thirteenth Knesset was appointed deputy minister of defense, with Rabin serving as minister. In July 1995, less than four months before the assassination of Rabin, when a turn for the worse occurred in his illness, he took his own life.

His *Azeet, Paratrooper Dog* became a successful series of children's books and he also wrote *The Battle for Jerusalem (Har ha-Bayit be-Yadeinu, 1974)* on the Six-Day War.

[Misha Louvish / Rohan Saxen and Susan Hattis Rolef (2nd ed.)]

GURA-HUMORULUI, town in N. Romania, in the historic region of Bukovina. Frescos with a tableau of the "Day of Judgment" painted between 1547 and 1550 depicting among others Turkish and Jewish figures are found in the Voronet monastery there. A lone Jew lived in the town in 1788. Jewish settlement began in Gura-Humorului under Austrian rule in 1835, with five Jewish families (in a total population of 700). They increased to 20 by 1848 and formed an organized community. Prayers were first held in a private house. The first synagogue was erected in 1869, and the Great Synagogue in 1871. As in the other communities of Bukovina, the influence of Hasidism was strong. At first occupied as craftsmen, merchants, and purveyors to the Austrian army, Jews later established workshops for wood processing and lumber mills. At the close of the 19th century, they played an important role in the industrialization of the town. The community numbered 130 persons in 1856, 190 in 1867, 800 in 1869, 1,206 in 1890, 2,050 in 1910, and 1,951 in 1927. In 1880 it became possible to elect a community council and an executive board in accordance with Austrian law. The first rabbi, Meshulam Gebirer, was hired in 1860. Other rabbis were Menachem Mendel Babad and Meshulam Ginzberg. The cemetery was established in 1857. Many of the Jews were Sadagura *hasidim*; others were Vizhnitz *hasidim*. In 1894–1990, the *admor* of Vizhnitz, Moses Hager, lived in Gura-Humorului.

After the town passed to Romania at the end of World War I, and throughout the period between the two world wars, the authorities endeavored to restrict the Jews in their economic activities while there were also occasional antisemitic outbreaks. The Zionist movement, formed locally at the beginning of the 20th century, had a large following. *Aliyah* to Erez Israel began during the 1930s. At the time of the persecutions by the Romanian Fascists, 2,954 local Jews and others who had gathered there from the surrounding area were deported in a single day (Oct. 10, 1941) to *Transnistria. In March 1944 around 1,500 were allowed to return. After the end of World War II, the survivors were joined by other Jewish inhabitants of the region who returned from their places of deportation, and numbered 1,158 in 1948. Nearly all the Jews there immigrated to Israel between 1948 and 1951. In 1997 only 10 Jews lived in Gura-Humorului, with a synagogue.

[Yehouda Marton / Lucian-Zeev Herscovici (2nd ed.)]

GURALNIK, DAVID B. (1920–2000), U.S. lexicographer, one of the most influential figures in the 20th century in shap-

ing the English language. Guralnik was the editor of the authoritative Webster's New World line of dictionaries from 1948 to 1985. He was born in Cleveland and had a passion for Yiddish, which he learned as a child. He intended to become a teacher but after graduating from Western Reserve University in 1941, he took the advice of one of his teachers and took a dictionary writing job at the World Publishing Company of Cleveland. After three years in the Army during World War II, where he was a translator, he said he could "manage" French, German, Russian, Greek, Latin, and Hebrew, languages he learned as a child and young man. He was the interpreter for his battalion, which called on him to speak four languages the day it liberated a German camp holding Russian and French soldiers as prisoners.

After the war, Guralnik returned to the publishing company and became editor in chief of its New World family of dictionaries. He was 28. Over the next 37 years he supervised works that carried his view of American English around the world. As the gatekeeper for words seeking admission to the literary mainstream, his definitions guided tens of millions of people who thumbed through the dictionaries he edited, and he wrote many of the definitions of new words himself. Among the works he edited, the best known is the College Edition of Webster's *New World Dictionary of the American Language*, a one-volume desktop popular not only among students but also with writers and other professionals. "Our emphasis is on the English language as spoken in America," he said, "and for that reason we chose to call it the dictionary of the American language. It does for the American language what the *Oxford English Dictionary* does for the language as a whole." The dictionary rules as the standard reference for the Associated Press, United Press International, *The New York Times*, and nearly every major news organization in the United States. The line has sold 85 million copies. The first edition appeared in 1953 and over the next decades the staff struggled to keep up with "not only a population explosion, but an information explosion of unprecedented proportions," Guralnik said in the foreword to the second edition. New words, new pronunciations, and new meanings were being born without the customary time for incubation.

He invariably had to answer questions as society's norms changed about which words, if any, to bar. He decided to eliminate racial epithets and to omit some common vulgar words. Some of these words were restored in the third edition, after his retirement. He later engaged in a war of words with the publisher of the 13-volume Oxford dictionary over parts of its treatment of the word "Jew," with a definition that referred to old stereotypes of usurious moneylenders.

Guralnik was a leader in the Jewish community of Cleveland, delivering a weekly radio commentary on words called *A Yiddish Vort*. And he spoke and wrote often on the subject. He was president of the Jewish Community Center, vice president of *The Cleveland Jewish News*, and a trustee of the Jewish Community Federation of Cleveland.

[Stewart Kampel (2nd ed.)]

GUREVICH, MIKHAIL IOSIFOVICH (1893–1976), Soviet aviation constructor. Gurevich was born in 1893 in the village of Rubanshchina which is in today's Kursk district, Russia. He graduated from the airplane construction faculty of the Khar'kov Technological Institute in 1925. In 1929 he began working in the aviation industry and from 1938 to 1957 held the rank of deputy chief constructor and from 1957–1964 chief constructor. He received the degree of doctor of technological sciences in 1964. Together with Ar. I. Mikoyan in 1940 he planned and built the high-speed fighter plane the MiG-1 (the name being an abbreviation of Mikoyan and Gurevich). After being upgraded, as the MiG-3, this plane was widely employed during World War II. After the war, the same duo designed the first Soviet supersonic jet fighters (also part of the MiG series). Gurevich was awarded the order of the U.S.S.R., the Stalin Prize (in 1941, 1947, 1948, and 1953), and the Lenin Prize (in 1962). He was designated a Hero of Socialist Labor in 1957.

[*The Shorter Jewish Encyclopaedia in Russian*]

GUREVICH, MOSHE (1874–1944), Bundist in Russia. Born in St. Petersburg, he came from a wealthy religious family. His grandfather Elhanan Cohen of Salant, a railroad contractor, carried on an independent struggle in St. Petersburg against the anti-Jewish czarist legislation. Many members of his family became revolutionaries. Gurevich studied at the universities of St. Petersburg and Berlin, joined the Social Democrats, and was active in St. Petersburg and Gomel. He later headed the *Bund in Vilna, and between 1901 and 1903 took a leading part in the Hirsh *Lekert affair and in opposing the *Independent Jewish Workers' Party. He was imprisoned for his socialist activities. After his release Gurevich went to the United States as an emissary of the Bund in 1905. He stayed there until his death and was a member of the educational committee of the *Workmen's Circle from 1920 to 1922.

[Moshe Mishkinsky]

GURFEIN, RIVKA (1908–1983), Israeli author and literary critic. Born in Sanok, Poland, Gurfein graduated from the Cracow University. She joined Kibbutz Ein Shemer in 1932 and was appointed counselor of Youth Aliyah groups, and later cultural officer in the IDF. She was a lecturer in general literature and Hebrew poetry in the Haderah Community College and in the Institute for Supplementary Education for Teachers in Haifa. As a member of the editorial board of *Devor ha-Po'et*, she contributed articles on literature, culture, and society, and published essays and articles on general and Hebrew literature in various journals such as *Orlogin*, *Al ha-Mishmar*, and *Sedemot*.

Gurfein literary essays include "Mi-karov u-me-Rahok" (1964), "Im Shir" (1967), "Bi-Keriah Kashuvah" (1969), and "Le-Or ha-Katuv" (1972). She is also the author of novels: *Ne'urim ba-Shemesh* (1954), *Kokhavim me-al ha-Gan* (1964) – for which she was awarded the Ussishkin Prize, and *Ta'am shel Behirah*

(1975). She received the Histadrut Y. Aharonovitch Prize and the Ḥayyim Greenberg Prize for her literary achievements and for her educational activities.

GURIAN (Gurfinckel), SORANA (1913–1956), Romanian novelist and journalist who later wrote in French. Sorana Gurian was born in Komrat, Bessarabia. After her university studies she spent three years in France, then returned to Bucharest on the eve of World War II and joined the anti-Fascist underground. After the war she became a journalist, but in 1947 her article calling for freedom of expression led to the suppression of her work. Early in 1949 she escaped from Romania and settled in Paris. Except for a two-year stay in Israel (1949–51), she spent the rest of her life in France, where she quickly established herself as a newspaper and radio political commentator as well as an author. Sorana Gurian's first novel, which made her famous, *Zilele nu se întorc niciodată* ("Never Do the Days Return," 1946), was the largely autobiographical story of an intellectual family in a Bessarabian town. *Intâmplări dintre amurg și noapte* ("Events Between Dawn and Night," 1946), a collection of stories, dealt with the sexual obsessions of lonely women. Her first book in French, *Les mailles du filet* (1950), a diary of the years 1947–49, had a factual authenticity which made it an important political document. She translated her first Romanian novel as *Les jours ne reviennent jamais* (1952), and wrote a sequel to it: *Les amours impitoyables*, which appeared in 1953, and which dealt with the political scene in pre-World War II Romania. Her last book, *Récit d'un combat* (1956), a record of her desperate search for treatment of the cancer from which she was dying, was enlivened by her thirst for life, her courage, and the support of her friends.

[Dora Litani-Littman]

GURLAND, ḤAYYIM JONAH (1843–1890), Russian rabbi and scholar. Gurland was born in Kletsk, Belorussia, and was educated at the Vilna rabbinical seminary and at the University of St. Petersburg, where he studied Oriental languages with D. *Chwolson. He wrote his dissertation on the influence of Islamic philosophy, in particular the Mutakallimūn, Mu'atazilites, and Ash'arians, on Maimonides. While employed at the Imperial Library of St. Petersburg, Gurland worked on the *Firkovich manuscripts, being one of the first to discover his forgeries; he published the results of this research as *Ginzei Yisrael be – St. Petersburg* (1865–67). In 1873 he was appointed inspector of the Jewish teachers' seminary in Zhitomir; there he published a Yiddish and Russian calendar, entitled in Hebrew *Lu'ah Yisrael* (1878–81), which also contained scholarly articles. After three years in Western Europe, he returned to Russia and founded a Jewish high school in Odessa. In 1888 the government appointed him rabbi of

Odessa. In addition to contributing articles to the leading Hebrew periodicals, Gurland published a Hebrew version of D. Chwolson's work on the Tammuz cult in ancient Babylonia, *Ma'amar ha-Tammuz* (1864), and a seven-volume work on the persecutions of Jews in Russia during the 17th and 18th centuries, *Le-Korot ha-Gezerot al Yisrael* (1887–89), with a posthumous addendum (1893) to the last volume containing a biography of the author by D. Cahana.

GURS (near Pau, Basses-Pyrénées), one of France's largest concentration camps during World War II. Situated in southwestern France in what would later be the Unoccupied Zone, it was first used to intern Republican Spanish refugees, and then, later, refugees from Austria and Germany. After the Franco-German armistice in June 1940, Jews were brought to the camp. Food supply and sanitary conditions in Gurs were worse than in the camps of the Occupied Zone. Some 800 Jews died there in the winter of 1940. In 1941 there were 15,000 internees, including 7,200 Jews who had been deported from the Palatinate and Baden in western Germany, and about 3,000 Jewish refugees who had been arrested in Belgium on May 10, 1940, and had been sent first to the French concentration camp Saint-Cyprien on the Spanish border. In the second half of July 1942, Theodor Dannecker, Adolf Eichmann's representative in France, inspected the Gurs camp. Shortly afterwards, most of the internees were sent to *Drancy, and from there to death camps. Deportations ended in the summer of 1943. Only 735 women, 250 men, and 215 children remained in Gurs when it was finally closed down. The cemetery near the camp contains the graves of 1,200 Jews.

GURSHTEIN, AARON (1895–1941), Soviet Yiddish literary historian, critic, and editor. Born in Krolevets (Ukraine), Gurshtein attended a Jewish secondary school in Vilna and later studied Hebrew literature at the University of Petrograd. In 1920, he enlisted in the Red Army, in which he served for several years. In 1923, he published his first essay in *Emes*, the Yiddish organ of the Communist Party. He wrote Marxist treatments of 19th century Yiddish authors such as Sholem Yankev *Abramovitsh, I.L. *Peretz, and *Shalom Aleichem, and also analyzed the works of his contemporaries such as David *Bergelson, Der *Nister, Ezra *Finenberg and Shmuel *Halkin. During the thaw of the New Economic Policy (NEP), he welcomed the more liberal tendency to evaluate art aesthetically and not politically. His study *Vegn Undzer Kritik* ("About Our Criticism," 1925) was tolerant even of symbolism. By 1933, however, when with M. *Viner he wrote *Prob-*

lemes fun Kritik ("Problems of Criticism"), he retreated from his earlier tolerance and accepted socialist realism as the only desirable artistic approach. Gurshtein enlisted for service in World War II and in 1941 died in combat.

GURVITCH, GEORGES (1894–1966), French sociologist. Born in Russia, Gurvitch was educated at the universities of Petrograd and Paris. Gurvitch taught at the universities of Petrograd and Strasbourg, and from 1948 until his death at the University of Paris. He also was editor of the *Cahiers Internationaux de Sociologie* and the *Journal of Legal and Political Sociology*. He was profoundly influenced by the philosophers Hegel and Bergson, the socialists Petrajizhky and P.A. Sorokin, and especially by the phenomenological school in philosophy. Gurvitch worked on a highly analytical level, dealing particularly with the sociology of law, the nature of groups and social classes, and later the character of social time. Among his major sociological writings are *The Sociology of Law* (1942), *Essais de Sociologie* (1938), *Éléments de sociologie juridique* (1940), *La déclaration des droits sociaux* (1940), *La vocation actuelle de la sociologie* (1950), *Twentieth Century Sociology* (edited with W.E. More, 1945), *Traité de sociologie* (2 vols., 1958), *Industrialisation et technocratie* (edited with G. Friedmann, 1949), *Déterminismes sociaux et liberté humaine* (1955), *Dialectique et sociologie* (1962), and *The Spectrum of Social Time* (1964). He tried to increase awareness of (1) symbolic nuances in social life; (2) a series of conceptually distinct levels in human experience; (3) the importance of dialectical and oppositional mechanism in society; and (4) the relation between conceptions of time and human behavior. Gurvitch's distinction between microsociology and macrosociology has been widely accepted among sociologists, but his assertion that each uses distinct methods of investigation has been opposed by neopositivists and functionalists.

[Alvin Boskoff]

GURWITSCH, AARON (1901–1973), U.S. philosopher and psychologist. Born in Vilna, he lectured at the Sorbonne from 1933. In 1940 he went to the U.S., where he taught at Brandeis University, Johns Hopkins University, and the New School for Social Research in New York. Gurwitsch was distinguished for his special philosophical approach to the problems of psychology. He sought to show the mutual relations which exist between the psychological image pattern, conceived in consciousness as an entity, and the conscious content which consciousness aims at when it knows or remembers it as conceived. He distinguished between the pattern and the content at which consciousness is aimed. This latter conception he called, after Husserl, "noema." The unity of the pattern and the

noema are for Gurwitsch a "theme" (*thema*). The conscious horizon which surrounds the theme and which is liable to influence the shaping of its form in consciousness at every moment is called by him "the theoretical field." He tried to find phenomenological interpretations of other psychological theories such as those of W. James, J. Piaget, and Kurt *Goldstein. His writings include: "On the Intentionality of Consciousness," in *Philosophical Essays in Memory of E. Husserl* (1940), 65–83; *Théorie du champ de la conscience* (1957; *Field of Consciousness*, 1964); "Phenomenological and Psychological Approach to Consciousness," in *Philosophy and Phenomenological Research*, 15 (1955), 303–19; "Der Begriff des Bewusstseins bei Kant und Husserl," in: *Kantstudien*, 55 (1964), 410–27.

BIBLIOGRAPHY: H. Spiegelberg: *The Phenomenological Movement*, 2 (1960), 630.

[Aaron Gruenhut]

GURWITSCH (Gurvich), ALEXANDER GAVRILOVICH (1874–1954), Soviet Russian biologist. Gurwitsch was born in Poltava, Ukraine. After studying and teaching abroad he returned to Russia in 1906, and from 1907 until 1918 taught at the women's higher education courses in St. Petersburg. He was a professor at Simferopol University from 1918 to 1925 and at Moscow University from 1925 to 1930. For the next 18 years he worked at the All-Union Institute of Experimental Medicine in Leningrad. He was awarded a Stalin Prize in 1941.

Gurwitsch was one of the first scientists to study the effects of certain types of drugs on development. His concern with the problem of organization of embryonic growth led him to study the mechanics of cell division. In 1923 he began to publish a series of papers which aroused intense controversy. He claimed to have detected what he called "mitogenetic rays," a form of energy emitted by living cells, which he believed stimulated growth in other tissues. His original experiments were performed with onion roots. In a book published in 1937, *Mitogenetic Analysis of the Excitation of the Nervous System*, Gurwitsch attempted to extend his concept to explain the activity of the nervous system. The evidence on which these ideas were based was generally regarded as equivocal, and most biologists rejected his theories.

[Norman Levin]

GUSEV, SERGEI IVANOVICH (formerly **Yakov Davidovich Drabkin**; 1874–1933), Soviet party and government official. Gusev was born in the settlement of Sapozhok, Riazan district, Russia. In 1896 he entered the St. Petersburg Technological Institute and in the same year joined the revolutionary movement. He was one of the leaders of the workers' uprisings in Rostov in 1902–03. At the second congress of the Russian Social Democratic Revolutionary Party he joined the Bolsheviks and was secretary of the bureau of the St. Petersburg committee of the Party (1904–05), of the Odessa committee (1906),

and from 1906 to 1917 was engaged in Party work in Moscow and St. Petersburg. In 1917 he was secretary of the Petrograd military-revolutionary committee which organized the October armed uprising. From 1918 to 1920 Gusev was a member of the Revolutionary Military Soviet (RVS) of the 2nd and 5th Armies of the Eastern, Southeastern, and Southern Fronts, Commander of the Moscow defense sector, and member of the RVS of the republic. In 1921 he became head of the political directorate of the Red Army and in 1922 chairman of the Turkestan bureau of the Russian Communist Party. From 1923 he was secretary of the Party's Central Control Commission. In 1925–26 he headed the press department of the Control Committee of the All-Union Communist Party (Bolsheviks). From 1928 to 1933 Gusev was a member of the Comintern.

Gusev's daughter, ELIZAVETA YAKOVLEVNA DRABKINA (1901–1974) was a writer, who spent the years 1934–56 in forced labor camps and exile. She wrote novels and literary memoirs devoted to the revolution and civil war periods (written after her rehabilitation).

[*The Shorter Jewish Encyclopaedia in Russian*]

GUSH EMUNIM (“The Bloc of the Faithful”), a spiritual-political movement established for the purpose of implementing its belief that the establishment of the State of Israel constitutes the “Beginning of the Redemption” which will lead to the ultimate complete Redemption by settling the entire area west of the Jordan. Although their program included Zionist education, political propaganda, *aliyah*, settlement, and social aims, in practice they confined themselves to the question of settlement in the areas liberated in the Six-Day War. Gush Emunim was formally founded in Kefar Etzyon at the beginning of 1974.

Its founders came from the *National Religious Party, the Land of Israel Movement, the religious settlements, the pupils of the Mercaz ha-Rav Yeshivah, the *Bnei Akiva yeshivot, and Orthodox academicians and the young Orthodox generation.

Their first practical step was taken in May 1974 to protest the intended return of Quneitra to Syria. They proceeded to establish a new settlement (Keshet) to serve as a barrier against withdrawal. During 1974 various attempts were made by the Elon Moreh group of Gush Emunim to establish a settlement in Samaria. At the first attempt, near the army camp at Ḥoron, Rabbi Zevi Judah Kook, whom they regard as their spiritual father, General Arik Sharon, and MKs Zevulun Hammer, Judah Ben Meir, and Geulah Cohen participated, but on the orders of the prime minister they were forcibly removed by the army. The same fate met six subsequent attempts. An eighth attempt to settle at the old railway station of Sebaste on Hanukkah of 1975 was attended by thousands of sympathizers who remained there for eight days. As a result of negotiations they were permitted to settle in the military camp at Kaddum near Sebaste.

At the same time, settlements were established at Ophra in May 1975 in an abandoned Jordanian military camp near

Mt. Ba'al Ḥazor, which was declared a work camp, with the permission of the then Defense Minister Shimon Peres.

Immediately after his election victory in May 1977, Menahem Begin announced that henceforth there would be “many Kaddums,” and it was officially declared a settlement. As a result Gush Emunim urged that 12 new settlements in Judea and Samaria – which had been approved in principle by the previous government – be established simultaneously.

The prime minister, however, postponed implementation of the plan after his visit with President Carter, and when on his return permission was not granted, Gush Emunim decided to act on their own on Sukkot 1977. As a result tension developed between the Gush and the new government. An agreement was subsequently reached whereby two sites would be established immediately and the other ten within five months, and from then until 1981, over 20 settlements were established by them. Some were established without government permission. The establishment of a settlement in the vicinity of Shechem was the subject of an appeal to the Supreme Court by Arabs as owners of the land and they won the case. The settlers were ordered to vacate the site. After heated discussions Gush Emunim decided to comply with the order and the settlement moved to Mt. Kabir, northeast of Shechem.

In order to further their aims the Gush established in 1980 an organization of all the settlements in Judea and Samaria, called Amanah.

During the visit of President Carter to Jerusalem in March 1979 the Gush mounted demonstrations and a number were arrested and held in detention until his departure.

Gush Emunim cooperated with the Tehiyah party founded in October 1979.

[Zvi Shiloah]

Developments in the 1980s and Early 1990s

Gush Emunim played a significant role in Israeli political life from 1977. Although the declared ideology of the movement continues to emphasize Zionist renewal in all spheres of life, in practice the Gush was concerned with the implementation of policies which will make impossible the return of any of the West Bank (Judea and Samaria) as a result of future peace treaties or negotiations. The retention of Israeli (Jewish) control over this region was viewed as being divinely ordained, and thus not to be negated by human or democratic decision, even if it is the elected government of the State of Israel. This element of fundamentalist belief underlies all of Gush Emunim's activities. However the activities themselves – the creation of irreversible settlement facts – were implemented through the most pragmatic of means.

Following the coming to power of the Likud government in 1977, the Gush presented a short-term “emergency” settlement plan to the new government, the objective of which was the establishment of 12 new settlements throughout the West Bank at locations previously rejected by the Labor government. The majority of these locations were indeed settled during the subsequent 18 months. In October 1978, Gush Emunim presented a more comprehensive blueprint for settlement in

the region. This plan focused on the establishment of a widespread network of both rural and urban settlements as a means through which Israeli sovereignty over the region could be emphasized. This plan was similar in nature to parallel blueprints proposed by the joint head of the Settlement Department of the Jewish Agency, Herut appointee Matityahu Drobles, and the minister of agriculture, Ariel Sharon. Despite the lack of any formal government or cabinet decision in favor of these plans, public resources were nevertheless made available for their gradual implementation.

The implementation of Gush Emunim settlement policy was carried out by its operational arm, the Amanah settlement movement. Formal government recognition of this movement, enabling it to become the recipient of government aid and funds, together with the legalization of the two existing Gush settlements at Ofrah and Camp Kaddum afforded legitimization to the Gush Emunim settlement objectives. Amanah included well over 50 settlements, of which nearly all are located in the West Bank (the minority were in *Gush Katif). The majority of these settlements were of the *yishuv kehillati* (community settlement) type, these being largely dormitory settlements wherein the settlers commute to the Israeli metropolitan centers for their employment. Despite their lack of domestic economic base, these settlements maintained a closed social unit and new or potential candidates must be approved by general vote. They ranged in size from around 15 to 20 families in the smaller newer settlements to over 500 families in the larger, more veteran units such as Kedumim, Bet Aryeh, and Elkanah.

Gush Emunim as such did not have any formal membership and it was therefore difficult to estimate its size or actual support. While the settlers themselves constituted the grass roots of power of the movement, the Gush also succeeded in obtaining support from a variety of Knesset members in the right-of-center political parties. Although the Gush did not transform itself into a political party as such, many of its members and activists became leading figures in other parties. Knesset members of the Tehiyah Party from 1981 and of the Matzad faction (a breakaway from the National Religious Party) between 1984 and 1986 were Gush Emunim activists. Such personalities included Gush Emunim founder Hanan Porat of Kefar Etzyon, Rabbi Chaim Druckman – a leading figure in the Bnei Akiva national religious youth movement – and Rabbi Eliezer Waldman, a head of the Kiryat Arba yeshivah.

Other leading activists became the administrators of the regional councils set up to provide municipal services to the new settlements. These regional councils received their budgets through Ministry of Interior grants as well as by means of local taxes. Thus the administrators became, de facto, public service workers, in a position to advance their political objectives through the control and allocation of municipal funds. Additional organizations, such as the Council of Settlements in Judea, Samaria, and Gaza (Mo'ezet Yesha) and the Sheva finance company, established to promote Jewish settlement activity in the West Bank, were largely manned by Gush Emunim

personalities. This gradual process of institutionalization did not include the charismatic figure of Rabbi Moshe Levinger, who continued to propound the mystical fundamental tenets of the Gush Emunim ideology. His position as the unofficial leader of Gush Emunim received a setback in 1984, following the appointment of an official general secretary for the movement, Daniella Weiss – a resident of Kedumim.

The Gush attempted to promote a populist image by means of an annual Independence Day Rally and hike through the West Bank as well as through organizing occasional demonstrations. The most significant rallying of ranks took place in the wake of the Camp David Accords and the subsequent withdrawal from Sinai. Gush Emunim and its leaders provided a focus for the Movement to Stop the Withdrawal from Sinai. Gush Emunim viewed the withdrawal from Sinai in general, and the destruction of Jewish settlements in particular, as a dangerous precedent for the West Bank. Many of their supporters remained in Yamit as a final protest before being forcibly removed by the Israeli army.

The discovery of a Jewish underground in the West Bank and its terrorist activities in 1984, and the subsequent arrest, trial, and imprisonment of 20 Jewish settlers, three of them for life terms, caused an ideological crisis amongst the Gush Emunim ranks. Their supporters were split into two, with one camp openly denouncing the underground activity as being outside the legitimate field of play, the other camp supporting the actions as being legitimate in the face of what they saw as non-action on the part of the Israeli government to safeguard their interests. The former viewpoint was put forward by many of the Gush Emunim founders and focused around the personality of Yoel Bin-Nun from the Ofrah settlement. In time, these two camps became largely reconciled around the question of clemency for the Jewish prisoners.

Opposition to Gush Emunim and their ideology remained intense, in both secular and religious sectors of the population. The *Peace Now Movement continued to protest against the establishment of settlements in the West Bank, which it viewed as obstacles in the achievement of any peace agreement between Israel and Palestinians. Religious opposition groups, Oz Ve Shalom and Netivot Shalom, which stress religious values of peace and the need for interethnic mutual respect, rather than the territorialism and nationalism preached by the Gush, have remained small and without influence, owing to the general identification of the religious population with the Gush Emunim viewpoint. The Gush derided the opposition movements as “speakers” only and points to their “doing” as proof of their commitment to their cause. Opponents tended to be labeled as “*yefei nefesh*” (“genteel souls”) and as traitors to the cause of “Greater Israel.”

The Gush Emunim ideology is expounded in the monthly magazine *Nekudah* (and its occasional English version, *Counterpoint*), published by Mo'ezet Yesha. Recent years have witnessed a surprising amount of academic research into Gush Emunim, focusing on the group's origins, ideological viewpoints, and the functioning of the settlement network.

The change in government in 1992 had a major impact on the West Bank settler population. On the one hand, much of the Gush Emunim political lobby was lost when the Teḥiyyah party failed to gain any seats in the new Knesset.

The Teḥiyyah failure was attributed, by many, to the decision of Rabbi Levinger and Daniela Weiss to run as a separate party list. This resulted in a split in the traditional Gush Emunim vote, with neither party obtaining any seats.

With the intensification of the peace talks under the Rabin government, new groups were established among the West Bank settlers to replace the now defunct Gush Emunim. These included the “Emunim” movement, supposed to represent the next generation of ideologically inspired settlers, but free of the traditional Gush leadership. In addition, national-religious rabbis of the West Bank settlements formed their own organization, aimed at providing “halakhically” inspired answers to the new political dilemmas facing the settlers. Their basic message was uncompromising, returning to the traditional national-religious argument that the Divine Right to the Land of Israel cannot be voted away by government. They provided religious backing for opposition to the Rabin government peace initiatives.

By 1992, the West Bank settler population (excluding East Jerusalem) had increased to beyond 100,000. Most of these continued to live in the communities and townships of Western Samaria, close to the metropolitan center of Israel. Particular emphasis was placed along the new west-east highway connecting Tel Aviv to the Jordan Valley. Along this route lies the expanding town of Ariel, as well as the ultra Orthodox township of Emanuel. The *Gush Etzyon region, to the south of Jerusalem, also underwent internal growth, centered around the township of Efrat. The West Bank settlement network itself was greatly affected by the change in government. The new planning priorities redirected resources out of the Administered Territories and back into Israel itself – especially into the Negev and Galilee. Settlers who had previously been beneficiaries of tax concessions, easy-term mortgages, low-priced land, by virtue of their living beyond the green line, now found themselves facing conditions equal to any other region in the country. In the Gaza Strip, *Gush Katif formed a network of settlements that would become the focus of Israel’s disengagement in 2005.

For subsequent political events, see *Israel, State of: Historical Survey.

GUSH ETZYON (Heb. גוש עציון; Etzyon Bloc), group of 15 settlements in the Judean hills, located between Jerusalem and Hebron. The population of Gush Etzyon was about 17,000 in 2004.

In 1947, at the outset of Israel’s *War of Independence, Gush Etzyon consisted of four settlements: *Kefar Etzyon (the first settlement in the area, founded in 1943), *Massu’ot Yitzḥak, *Ein Tzurim, and *Revadim. From the end of 1947, Gush defenders were able to fight off frequent Arab attacks. A unit of 35 *Haganah and *Palmaḥ fighters (known to posterity as the “Lamed-He”) sent from Jerusalem as reinforcements was intercepted and wiped out by the Arabs on January 17, 1948, and a relief convoy suffered heavy losses on March 27. The Arab Legion and large numbers of Arab irregulars began the final assault on May 12. Many of the 500 defenders, men and women, were massacred by an Arab mob after surrendering to the Legion and the Gush was razed.

Jewish settlement in Gush Etzyon was renewed in 1967 after the *Six-Day War. In September 1967 Kefar Etzyon was reestablished by a *Ha-Kibbutz ha-Dati group that included children of former settlers. A year later, in 1968, Har Gilo was founded, in 1970 Allon Shevut and Rosh Tzurim were added, and the rest were established over the next 20 years. There has been a general consensus in Israel that Gush Etzyon will remain part of Israel in any peace settlement.

The settlements of Gush Etzyon are as follows:

ALLON SHEVUT (Heb. אֵלּוֹן שְׁבוּת), established in 1970 near the lone oak tree for which the settlement is named. The nucleus of the community was the Har Etzyon Yeshivah. In 2002 the population of Allon Shevut was 3,030.

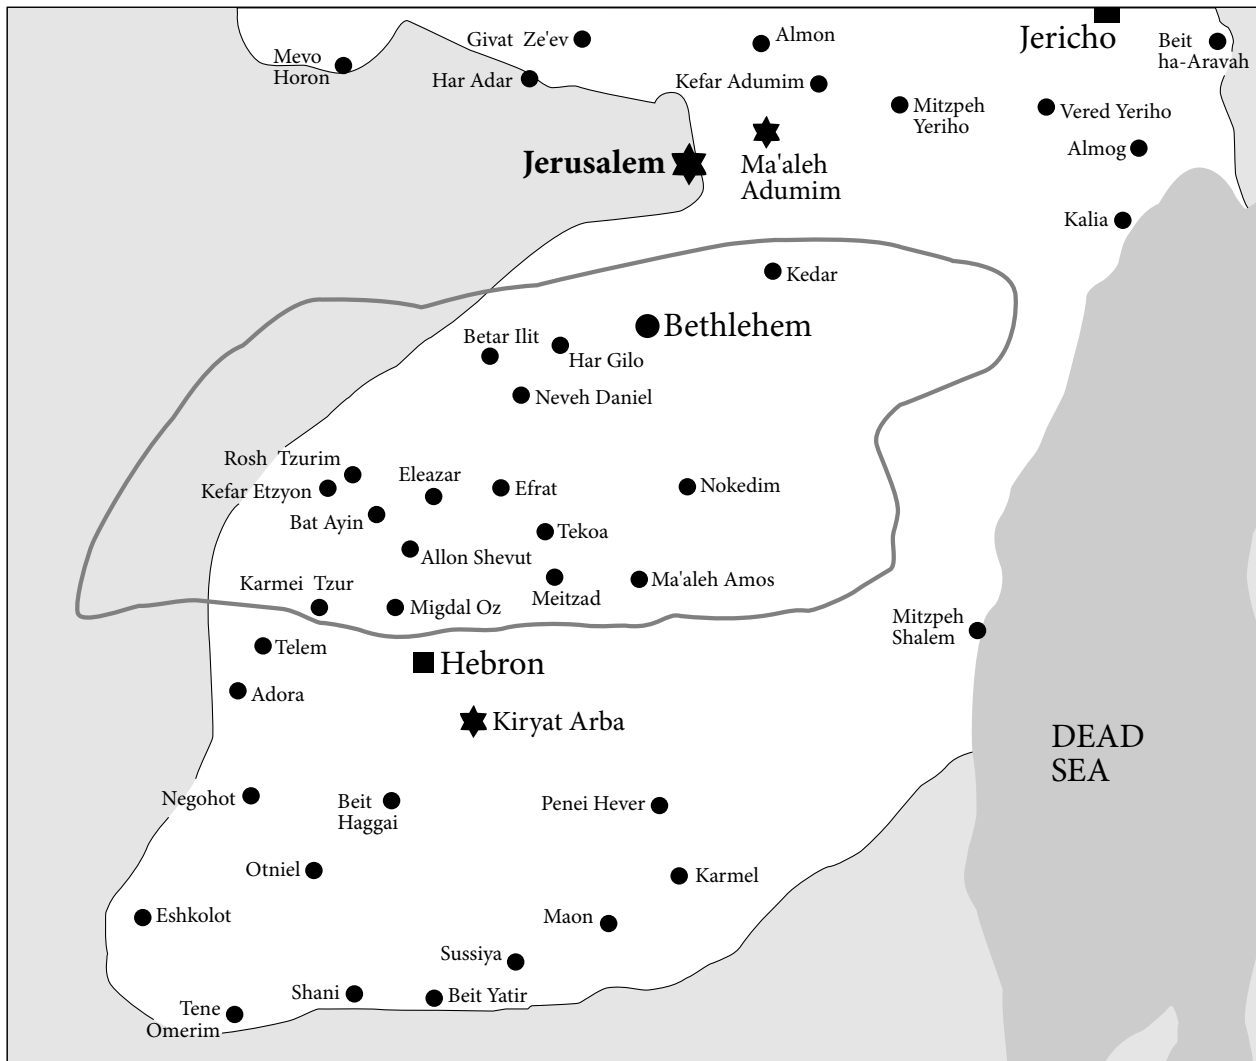

BAT AYIN (Heb. בַּת עַיִן), established in 1989. In 2002 the population was 685. Residents earned their livelihoods in a variety of ways: raising sheep, organic farming, computers, etc. The settlement was home to many artists.

EFRAT (Heb. אֶפְרַת), urban community with municipal council, established in 1983. In 2002 the population was 6,810, mainly religious.

ELEAZAR (Heb. אֵלְעָזָר), established in 1976 by a group of American immigrants. The settlement began as a *moshav shittufi, but became an ordinary community. In 2002 the population was 796. The name commemorates *Eleazar ben Mattathias, brother of *Judah Maccabi, who was killed during the war with the Greeks in nearby Bet Zekharyah.

HAR GILO (Heb. הַר גִּילָה), established in 1968, and located on a hill overlooking Bethlehem, 3,027 ft. (923 m.) above sea level. The nucleus of the settlement was a field school run by the Nature Preservation Authority, around which the community developed. The settlement had a hostel with 400 beds, an information center for the birds and plants of Eretz Israel, and a school for army commanders. The population in 2002 was 357, religious and secular. Residents worked in Jerusalem.

KADAR (Heb. קָדָר), established in 1985 by a group from the *Betar movement. The settlement is located on the north-

Gush Etzyon

eastern edge of the Gush, not far from *Ma'aleh Adumim. In 2002 the population was 585.

KARMEI TZUR (Heb. כרמי צור), established in 1984 by a group of Har Ezion yeshiva students. In 2002 the population was 579. The name of the settlement derives from the vineyards in its area and from nearby Tel Tzur, where the Hasmoneans fought against the Greeks.

KEFAR ETZYON (Heb. כפר עצינן), religious kibbutz, reestablished in 1967. The kibbutz economy was based on farming and industry. In 2002 the population was 408.

MA'ALEH AMOS (Heb. מעלה עמוס), ultra-Orthodox community, established in 1982 by Esh ha-Torah yeshiva students. In 2002 the population was 258, mainly yeshivah students.

MEITZAD (Heb. מיצד) ultra-Orthodox community, established in 1984 with assistance from *Po'alei Agudat Israel. In 2002 the population was 218, many of them immigrants from the U.S., South Africa, France, and England. The men

were mainly yeshivah students and the women worked in education.

MIGDAL OZ (Heb. מגדל עוז): religious kibbutz, established in 1977. In 2002 the population was 268. The kibbutz raised turkeys, dairy cattle, and field crops (together with the two other kibbutzim in Gush Etzyon) and had a packing house and a factory producing parts for airplanes.

NEVEH DANIEL (Heb. נווה דניאל), established in 1982. The settlement is located on the highest hill of the region, 3,254 ft. (992 m.) above sea level. In 2002 the population was 1,020. The majority of the population was employed outside the settlement.

NOKEDIM (Heb. נוקדים), established in 1982 by a group from nearby Tekoa. The settlement is located at the foot of *Herodium. In 2002 the population was 615. The name of the settlement derives from Amos 1:1 (*nokedim* = "herdsman"). Nearby there is an unauthorized settlement called Kefar Eldad (Heb. כפר אלדד), numbering 35 families.

ROSH TZURIM (Heb. רֹאשׁ צְוּרִים), religious kibbutz, established in 1970 on the original site of Ein Tzurim (which was rebuilt in different location). In 2002 the population was 247. The main economic branches were field crops (together with the two other kibbutzim located in Gush Etzyon), dairy cattle, turkeys, and fruit orchards. The kibbutz owned the Mei Tzurim plant, which produced water filters.

TEKOA (Heb. תְּקוּעַ), established in 1977 by a group of settlers affiliated with *Gush Emunim. In the 2002 the population was 1,040, religious and secular. Some residents worked outside the settlement, while others were employed in agriculture (mushrooms, dairy) inside Tekoa.

[Shaked Gilboa (2nd ed.)]

GUSH KATIF (Heb. גּוּשׁ קַטִּיף; Katif Bloc), group of 18 settlements in the *Gaza Strip. Their combined population in 2004 was about 7,800.

The Jewish settlement of Gush Katif aimed at creating a buffer zone in the face of terrorist attacks originating in the Gaza Strip following the *Six-Day War and at tactically controlling communications between the densely populated Arab sections of the Strip. The plan called for five “fingers” extending into the Strip. The first was located in northern Gaza and aimed at creating a belt of Jewish settlement from Ashkelon to the outskirts of Gaza city. The settlements Nisanit and Elei Sinai were established there. The second was located between Gaza city and Deir al-Balah and included Netzarim. The third was located between Deir al-Balah and Khan Yunis, and included the settlements Netzer H̄azani, Katif, Kefar Darom, and Ganei Tal. The fourth “finger” was located between Khan Yunis and Rafa and included the settlements Gan Or, Gadid, Bedolah, Atzmonah, Morag, Pe’at Sadeh, and Rafiah Yam. The fifth finger, which was planned to connect the Rafa region with Sinai was not implemented. The plan was approved by the government and on October 11, 1970, Kefar Darom was established by a *Nah̄al group. In February 1972 another Nah̄al settlement was founded in Netzarim, and in September 1972 a third was established in Morag. Eight months later a fourth Nah̄al settlement was founded in Katif. In 1976 Katif became a civilian moshav. A year later, the name Katif was changed to Netzer H̄azani, to commemorate Michael H̄azani, the father of religious settlement. In 1978 a group of settlers established a new moshav, also called Katif. In 1979 Atzmonah and Ganei Tal were established. The remaining settlements were established in the 1980s, with Dugit the last in 1990. Netzarim became a civilian settlement in 1984, Bedolah in 1986. Most residents earned their livelihoods from farming, with the area gaining fame for its hydroponically grown vegetables. Near Neveh Dekalim, an industrial area was established which included a garage, carpentry shop, press, etc.

During the years 1987–92, the years of the first Intifada, Gush Katif settlers suffered from Arab attacks, mainly stone throwing on the roads. Two Kefar Darom residents were killed. During these years all the settlements were expanded

Gush Katif

and absorbed new residents. From October 2000, the start of the second, “al-Aqsa” Intifada, the settlements of Gush Katif came under constant terrorist attacks: gunfire, suicide bombers, and Kassam rockets. In this period, 4,000 shells hit the settlements and 12 people were killed. In 2003 Prime Minister Ariel *Sharon announced his intention to evacuate the settlements in the Gaza Strip, perceived by many as a drain on Israel’s defense resources and serving no ostensible purpose. Following his declaration, the settlers began an intensive campaign to reverse the decision but to no avail. All Gush Katif settlements were evacuated in August 2005 and subsequently dismantled.

The Gush Katif settlements were as follows:

ATZMONAH (Benei Atzmon) (Heb. עֲצְמוֹנָה), religious agricultural community, established in 1978. In the 2002 the population was 566. The main farming branches were dairy cattle, poultry, field crops, and plant nurseries.

BEDOLAH (Heb. בְּדוּלָה), religious moshav, established in 1986 in affiliation with *Ha-Po’el ha-Mizrachi. In 2002 the population was 189, earning its livelihood in advanced greenhouse farming.

DUGIT (Heb. דּוּגִית), established in 1990 in the northern Gaza strip, near the seashore. In 2002 the population was 65 inhabitants. Residents earned their livelihoods in various occupations connected with the sea.

ELEI SINAI (Heb. אֵלֵי סִינַי), established in 1983 by former *Yammit residents. Located in the northern Gaza Strip, 9 mi. (15 km.) south of Ashkelon, near the seashore. In 2002

the population was 347. Most of the residents were professional people.

GADID (Heb. גדיד), religious moshav, established in 1982. In 2002 the population was 298. Farming was mainly of the greenhouse variety.

GAN OR (Heb. גן אור), religious moshav, established in 1983 in affiliation with Ha-Po'el ha-Mizrachi. In 2002 the population was 274. Farming was based on greenhouses.

GANEI TAL (Heb. גני טל), religious moshav, established in 1979. In 2002 the population was 273. The main farming branches were organic and nonorganic vegetables, flowers, nursery plants, and herbs.

KATIF (Heb. קטיף), religious moshav, established in 1985. In 2002 the population was 338. The main farming branches were nursery plants, dairy, and organic vegetables.

KEFAR DAROM (Heb. כפר דרום), established in 1970. In 2002 the population was 324. Residents earned a living in farming, education, and various professions.

KEFAR YAM (Heb. כפר ים), established in 1983 on the remains of a holiday village operated by the Egyptian army. The settlement numbered just four families, who earned their living as greenhouse farmers and professionals.

MORAG (Heb. מורג), religious moshav, established in 1972 as a Naḥal settlement, became a civilian settlement in 1983. Affiliated with Ha-Po'el ha-Mizrachi. In 2002 the population was 170. Farming was mainly of the greenhouse variety.

NEVEH DEKALIM (Heb. נווה דקלים), religious community, established in 1983. Neveh Dekalim was the largest settlement in Gush Katif and served as an urban center for the rest of the settlements. In 2002 its population was 2,470.

NETZER ḤAZANI (Heb. נצר חזני), religious moshav, established in 1973. In 2002 the population was 316. Farming mainly took place in greenhouses.

NETZARIM (Heb. נצרים), established in 1972 as a Naḥal settlement, became a civilian community in 1984. Located in the center of the Gaza Strip. In 2002 the population was 409 inhabitants. Residents earned their livelihoods in farming, education, and the professions.

NISANIT (Heb. ניסנית), established in 1980 as a Naḥal settlement, became a civilian community in 1993. In 2002 the population was 1,000, working in the region's settlements.

PE'AT SADEH (Heb. פאת שדה), established in 1989. In 2002 the population was 110, religious and secular, most employed in farming.

RAFIAH YAM (Heb. רפיח ים), established in 1984. In 2002 the population was 128 inhabitants, most employed in advanced greenhouse farming.

SHALEV (Heb. שליי), established in 1980 as a Naḥal settlement. In 2002 the population was composed of ten families of former Yammit residents.

In addition there were a number of unauthorized settlements in Gush Katif: Tel Katifa (Heb. תל קטיפא), established 1992, 15 families; Shirat ha-Yam (Heb. שירת הים), established 2001, six families; Kerem Atzmonah (Heb. כרם עצמונה), established 2001; five families.

GUSIKOW, JOSEPH MICHAEL (1802–1837), musician. Descendant of a long line of *klezmerim*, Gusikow, who was born in Shklov, Belorussia, first took up the flute but had to abandon it because of incipient consumption. He then constructed an improved xylophone consisting of 15 (later 29) tuned wooden staves, with a chromatic range of two-and-a-half octaves laid upon supports of tied straw and beaten with two thin sticks, which he called "Holz und Stroh." With this instrument he began to tour Russia and in the mid-1830s Austria, when he appeared before the emperor. His repertoire by now included many virtuoso and salon pieces originally written for the piano (including concertos), operatic arias, and – his specialty – extempore variations on arias, Jewish and gentile folk tunes, and even national anthems, all without having had a single music lesson. Society lionized him, and his orthodox earlocks became a ladies' fashion – the coiffure à la Gusikow. Concerts in Germany, France, and Belgium followed. In Leipzig, a Hebrew ode was published in his praise (1836). In Brussels his instrument and manner of playing were analyzed by the musicologist Fétis. Gusikow's illness had in the meantime grown worse. He died at Aachen. Lamartine, Félix *Mendelssohn-Bartholdy and his sister Fanny, as well as numerous other musicians of discernment, all attested to his virtuosity and creative power. The English writer Sacheverell Sitwell was therefore not exaggerating when he described Gusikow as "the greatest untaught or impromptu musician there had ever been." One of his tunes was published by Abraham Moses *Bernstein in *Muzikalisher Pinkes* (1927), p. 114.

[Bathja Bayer]

GUSINSKY, VLADIMIR ALEXANDROVICH (1952–), Russian businessman and Jewish communal figure. Gusinsky's grandfather was a victim of Stalinist terror (executed in 1937) and his grandmother spent nine years in Stalinist camps. Gusinsky graduated from the Gubkin Institute of the Oil and Gas Industry and the A. Lunacharsky State Institute of Theatrical Art. He then worked as a theater director in Tula and other cities. In the early 1980s he moved to Moscow, where he founded his first company in 1986. In 1988 Gusinsky created the Infax consulting firm, specializing in legal and financial counseling as well as providing political analysis to mostly foreign clients. In 1989 Infax and the Arnold and Potter law firm became partners, starting up the Most Bank in 1989 and the Most Group (Gruppa Most) holding company in 1992. In 1994 Gusinsky became vice president of the Russian Bank Association and in 1995 a member of the presid-

ium of the Coordinating Council of the All-Russian Business Roundtable Union.

Gusinsky took an active part in the revival of Jewish communal life in post-Communist Russia. In January 1996 he was elected president of Russia's Jewish Congress (see *Russia) and in 2000 he became vice president of the World Jewish Congress for Eastern Europe and Russia.

In 1997 Gusinsky resigned as president of the Most Bank and became head of Media Most, embracing several TV companies (including NTV, the country's first privately owned station), the *Segodnia* newspaper, and some magazines. The media controlled by Gusinsky took an opposition stand during Putin's election campaign, vigorously criticizing his policy in the Chechnya conflict and his authoritarian tendencies. Gusinsky was promptly accused of economic crimes and in June 2000 was arrested, but he was released within a month and left for Spain. There he was placed under house arrest after the Russians requested his extradition, but was released in February 2001. Gusinsky resigned from the presidency of Russia's Jewish Congress and sold his shares in NTV to foreign investors (including Ted Turner). In August 2003, again accused of laundering money by the Russians, Gusinsky was arrested at Athens airport, but was released after a court hearing. The prolonged legal embroilments of the former media tycoon are typical of the misadventures of Russia's new "oligarchs."

[Naftali Prat (2nd ed.)]

GUSTON, PHILIP (1913–1980), U.S. painter. Born Philip Goldstein in Montreal, Canada, Guston moved with his Russian immigrant parents to Los Angeles when he was seven years old. At 14 he became interested in art and by 17 he began formal art training at the Otis Art Institute (1930), where he remained for three months.

Amalgamating the influences of the Mexican muralists, Italian Renaissance painters, and ultimately Cubism, Guston executed several murals for the Works Progress Administration's Federal Art Project. His murals include works for the 1939 World's Fair, the Queensbridge Housing Project in New York City (1940), and the Social Security Building in Washington, D.C. (1942).

In 1941–45 Guston was artist-in-residence at the State University of Iowa in Iowa City, followed by two years teaching at the School of Fine Arts at Washington University at Saint Louis. During this time, Guston assimilated aspects of abstraction and mythology, making gestural paintings comprised of short brushstrokes often in hatched configurations. By the 1950s Guston's entirely non-objective paintings were characterized by critics as "Abstract Impressionist" based on his heavily laid paint and lyrical use of color. After retrospectives at the Guggenheim (1962) and New York's Jewish Museum (1966), Guston boldly returned to figuration. Expressing a desire "to tell stories," Guston made blocky, cartoon-inspired narratives using a limited palette of pale colors, particularly salmon pink, white, black, and gray. In several of these paint-

ings Guston included a hooded figure, often employed as a surrogate self-portrait. While he painted hooded Ku Klux Klan members in social realist works of the 1930s, the hooded figures that emerged in the late 1960s were influenced by the legend of the clay-sculpted Golem. Guston's noted body of work as both an abstract and a figurative artist makes him unique among 20th century painters.

[Samantha Baskind (2nd ed.)]

GUTENBERG, BENO (1889–1960), geophysicist. Born in Darmstadt, from 1912 to 1923 Gutenberg was assistant at the International Seismological Bureau at Strasbourg. He was then appointed teacher at Frankfurt University, where he became professor in 1926. In 1930 he emigrated to the U.S. to take up the position of professor of geophysics and meteorology at the California Institute of Technology, Pasadena, where in 1946 he became director of the Seismological Laboratory. Gutenberg was the president of the International Association for Seismology (1951–54) and a member of the National Academy of Sciences in Washington. As one of the outstanding seismologists of the last decades, he confirmed the occurrence of earthquakes down to depths of 375 mi. (600 km.) and was the originator of the hypothesis of continental spreading (Fliess theory). He carefully analyzed the available information on the earth's interior and made the first exact determination of the earth's core at 1812 mi. (2,900 km.) below the surface and detected the "asthenosphere channel" at a depth of 62–124 mi. (100–200 km.). This discovery had a critical influence on identifying elastic waves produced by large artificial explosions. He also investigated the nature of the atmosphere. On the basis of the research of Lindemann and Dobson, Gutenberg revolutionized existing conceptions. He maintained that at the height of 31 mi. (50 km.) the temperature was probably as high as on the earth's surface, and that the composition of the atmosphere remained unchanged up to a height of 94 mi. (150 km.). He contributed a lot to modern geophysical ideas on the earth's crust and mantle. Among his works are *Seismische Bodenunruhe* (1924), *Der Aufbau der Erde* (1925), *Grundlagen der Erdbebenkunde* (1927), *Lehrbuch der Geophysik* (1929), the important *Handbuch der Geophysik* (1930), *Seismicity of the Earth* (with C.F. Richter, 1941), *Internal Constitution of the Earth* (1939), and *Physics of the Earth's Interior* (1959).

GUTFREUND, OTTO (1889–1927), Czech sculptor. Born in eastern Bohemia, Gutfreund was sent in his youth to study in Paris, and became a pioneer of cubism in sculpture. During World War I he joined the French Foreign Legion. His war experiences left a deep impression on his human and artistic development. Returning to Prague in 1920, he abandoned

all earlier formalism and turned to simplified, stylized reality, choosing scenes from everyday life. Among his best work from the cubist period are *Anxiety* (1911), *Don Quixote* (1911), and *Hamlet* (1912). The period of his artistic maturity is best represented by the monumental group *Grandmother* (1922), the allegoric groups *Industry and Commerce* (1923), and the life-size statue of President Masaryk in Hradec Králové, which was removed when the Communists came to power in 1948. Gutfreund had probably a more profound influence on modern Czech sculpture than any other of his contemporaries.

[Avigdor Dagan]

°GUTHE, HERMANN (1849–1936), German Old Testament scholar and researcher of Palestine. Born in May 1849 in Westerlinde (Braunschweig), he conducted his gymnasium studies at Wolfenbuettel, with theology studies between 1867 and 1870 at the universities of Goettingen and Erlangen. First working as a tutor, in 1877 he began his academic teaching at Leipzig, where he lived until his death. He served as the professor for Old Testament at the university from 1884 until his retirement in 1922.

Guthe was one of the most important and influential figures within German Palestine studies for more than 50 years. In 1877 he was one of the founders of the *Deutscher Verein zur Erforschung Palaestinas* (DPV), together with Albert Socin, Emil Kautzsch, Otto Kersten, and Conrad Fuerrer, serving from the beginning as its secretary and librarian. He was the founder and first editor of its periodical, the *Zeitschrift des deutschen Palaestina-Vereins* (ZDPV), until 1896, when he started editing for ten more years the Society's second publication, the *Mittheilungen und Nachrichten des Deutschen Palaestina-Vereins*. Always a member of the committee, he served between 1911 and 1925 as chairman. He was also responsible for recruiting some of the other prominent figures in the society, notably Peter Thomsen, a student of his who undertook the difficult bibliographical work.

Guthe gave the society its archaeological direction and he initiated most of its excavations. He visited Palestine three times, in 1881, 1904, and 1912, and there he made the acquaintance of the leading resident German scholars, Conrad Schick and Gottlieb Schumacher, recruiting them into the service of the Society. As a first step in a long partnership, Schick drew a map which was added to Guthe's first paper on Palestine dealing with the ruins of Ascalon, which was published in the first volume of the ZDPV. On his first visit he participated in excavations, mainly those in the Ophel. The 1904 visit gave him the opportunity to observe the works in Megiddo and to visit Madaba and copy the mosaic map.

His studies dealt mainly with questions and places of antiquity, concerning historical, geographic-topographical, and archaeological themes. He also wrote highly critical book re-

views. Many of his papers were devoted to the results of new research. He was also lucky to be a witness to the sensational discovery of the Siloam inscription and was the only one to prepare a gypsum (plaster?) cast and to make a good drawing of it before it was removed, broken, and then taken to Constantinople.

Guthe published a number of geographical books, among them *Palaestina in Wort und Bild* (with Georg Ebers, 1883) and a monograph titled *Palaestina* (1908). He was also involved in the production of many maps of the country, historical as well as recent, mainly with Hans Fischer, the cartographer of the Society. Many of his contributions described processes, events, organizations, etc., existing in the country at that time. He wrote exegeses on various books of the Bible, issued a biblical atlas, and cooperated with Kautzsch on a biblical dictionary.

[Haim Goren (2nd ed.)]

GUTHEIM, JAMES KOPPEL (1817–1886), U.S. Reform rabbi. Gutheim, trained in his native Westphalia as a teacher, immigrated to the United States around 1843. In 1846 he went to Cincinnati to become rabbi of B'nai Yeshurun Congregation (today the Isaac M. Wise Temple), then in 1850 accepted an invitation to become the leader of Shaare Chesed Congregation of New Orleans. In 1853 he became *hazzan* of the New Orleans Spanish-Portuguese Congregation, the Dispersed of Judah. After New Orleans was captured from the Confederacy, Gutheim refused to take the oath of allegiance to the Union and went into voluntary exile, serving the Jews of Montgomery, Alabama, and Columbus, Georgia, from 1863 to 1865. He returned to New Orleans after the war, and from 1868 preached in English at Temple Emanu-El of New York City. He was highly regarded as a pulpiteer in New York, and many of his sermons and addresses were printed in the *Jewish Times*, which published a volume of his efforts entitled *Temple Pulpit* (1872). Gutheim was the author of many hymns in English. He also prepared a translation of the fourth volume of Heinrich *Graetz's *History of the Jews*, of which the first five chapters were printed in the *Jewish Times* as early as 1869. The volume itself was published by the American Jewish Publication Society in 1874, marking the first appearance in America of Graetz's epoch-making book. Meanwhile, Gutheim had decided to return to New Orleans in 1872 to serve a new Reform congregation, Temple Sinai, which had been organized in 1870 and had already built a new synagogue, probably in order to attract Gutheim back to the city. Gutheim became the acknowledged leader of the Jews of New Orleans, and held important civic posts as well. He was a close friend and faithful supporter of Isaac Mayer *Wise in the development

of the Union of American Hebrew Congregations and Hebrew Union College.

[Bertram Wallace Korn]

GUTHRIE, ARLO DAVY (1947–), U.S. folk singer. Guthrie was born in Coney Island, New York, to legendary songwriter and singer Woody Guthrie and Marjorie (Mazia), a professional dancer with the Martha Graham Company whose parents were Isidore and Aliza Greenblatt. Aliza was a Yiddish poet and songwriter, and took to her new son-in-law and became close with her grandson Arlo. “We would go to her home on Friday night for Shabbat dinner and she was a great cook,” Guthrie said in a 2004 interview. “Nobody ever came close to her blintzes.” In preparation for Guthrie’s “hootenanny bar mitzvah” in 1960, his parents hired a “sweet young rabbi” as a tutor, Guthrie recalled, named Meir *Kahane, later the founder of the Jewish Defense League and the Kach political party in Israel.

Surrounded by his father’s musician friends, including Pete Seeger, Leadbelly, and Jewish folk musician Ramblin’ Jack Elliott (Elliot Adnopoz), and then by the burgeoning New York folk-rock crowd of Bob *Dylan, Joan Baez, and Phil *Ochs, Guthrie learned to play the guitar at age six and grew up naturally influenced toward a musical career. In December 1967, two months after his father died, Guthrie released the album *Alice’s Restaurant Massacre*, an 18-minute 20-second narrative song about his getting arrested for littering on Thanksgiving Day two years earlier, and how his police record and court appearance for dumping garbage in Great Barrington, Massachusetts, prevented him from being drafted by the army. The album was the only one of 19 he produced that went gold. Guthrie went on to star in the 1969 film version of *Alice’s Restaurant*, which was released a week after he appeared at the Woodstock Music Festival on August 15. At Woodstock, he sang and subsequently released a recording of “Coming into Los Angeles,” about smuggling marijuana, which became another hit. His other noteworthy songs were a 1972 cover version of Jewish country-folksinger Steve Goodman’s song “City of New Orleans,” Guthrie’s only hit single, and “The Motorcycle Song.”

Like his father, Guthrie carved out a career as a folk-singer and songwriter with a social conscience, touring 10 months of the year and working for causes such as environmentalism. Guthrie launched his own record label, Rising Son Records, in 1983. He has also acted, and wrote successful children’s books.

In 1991, Guthrie bought the church building that served as the centerpiece of *Alice’s Restaurant* and converted it to the

Guthrie Center and the Guthrie Foundation, named for his parents. It is an interfaith foundation and meeting place that provides a wide range of local and international services.

Guthrie also performed Hanukkah, Holocaust, and Jewish children’s songs that were written by his father and discovered after his death, and were set to music by the Klezmatics.

[Elli Wohlgeleitner (2nd ed.)]

GUTMAN, ALEXANDER B. (1902–1973), U.S. physician. Born in New York City, he was educated in the U.S. and Austria. From 1951 he served as director of the department of medicine and physician in chief of New York’s Mount Sinai Hospital. On his retirement in 1968 he was appointed professor of medicine at the Mount Sinai School of Medicine. Gutman was editor in chief of the *American Journal of Medicine* which he founded in 1946. He was also associate editor of the classic Cecil-Loeb *Textbook of Medicine* (1950–60). He served on many advisory boards and professional societies.

Gutman introduced the acid phosphatase test for prostatic cancer. He became one of the world’s authorities on gout and his research into its cause and treatment resulted in new insights into this disease and brought him many honors, prizes, and awards. He made major contributions toward the understanding of the pathophysiology of purine metabolism.

[Fred Rosner]

GUTMAN, CHAIM (“Der Lebediker”/“The Lively One”; 1887–1961), Yiddish humorist and theater critic. Born in Petrikov (Belorussia), he immigrated to the U.S. in 1905, where he became successful as a writer of epigrams and sketches for numerous periodicals, particularly the humorous journals *Der Kibetser* and *Der Kundes* (which he later edited), and wrote humor columns, as well as theater reviews, for New York Yiddish dailies. His language was rich, vivid, and colloquial, an American East-Side Yiddish employing some Anglicisms for local color. His sketches *Azoy hot geret Pompadur* (“Thus Spake Pompadour,” 1918), were followed by seven more humorous collections. A two-act comedy *Meshiekh oyf Ist Brodvey* (“Messiah on East Broadway”) was occasionally staged. His sketches enriched the repertoire of Yiddish comedians for several decades.

[M.Rav./ Jerold C. Frakes (2nd ed.)]

GUTMAN, ISRAEL (1923–), historian of the Holocaust. Gutman was born in Warsaw, Poland. He was a member of the Ha-Shomer ha-Za’ir Zionist youth movement, active in the Jewish underground in the Warsaw ghetto, and fought in the Warsaw Ghetto Uprising. In the aftermath of the uprising he was imprisoned in Majdanek and then in Auschwitz-Birkenau

and Mauthausen. He immigrated to Palestine in 1947, where he settled on kibbutz Lehavot ha-Bashan. In 1961 he testified at the trial of Adolf Eichmann in Jerusalem. Gutman studied at the Hebrew University of Jerusalem, receiving his Ph.D. in 1975 with a dissertation on the Warsaw ghetto. He served as director of research at Yad Vashem (1975–83), and headed its Academic Committee for many years. He is professor emeritus of the Institute of Contemporary Jewry of the Hebrew University, where he also served as head (1983–85). Gutman was a founder of Moreshet, Anielewicz Memorial Center, academic advisor to the United States Holocaust Memorial Council, a member of the Academic Committee of the United States Holocaust Memorial Museum, founding head of the International Institute for Holocaust Research at Yad Vashem (1993–96), chief historian of Yad Vashem (1996–2002), academic advisor to Yad Vashem (2002–), a member of the International Auschwitz Council (2000–), the initiator and editor of the *Encyclopedia of the Holocaust* (1990), and chief historical consultant to the new Holocaust History Museum at Yad Vashem. In 2002 Gutman received the prestigious Landau Award for Science and Research for his work in the field of the Holocaust and Israeli history.

Gutman was one of the most influential historians of the Holocaust in the world. He was part of the small group of survivor historians of the subject, but stood out as one of the most prominent and significant among them. His meticulous and thorough research, sharp analytical skills, deep insight, and lucid writing made him one of the most sought-after scholars to participate actively in advisory committees, editorial boards, research groups, and conferences. He played a seminal role in laying the foundations and building the edifice for Holocaust studies in Israel. It can be said that Gutman had a major influence in the articulation of what might be called the “Jerusalem School” of Holocaust scholarship, which sees the Jews as a subject of history and not only as a victim of Nazi actions, and therefore sets out to identify, find, and utilize Jewish documentation in order to tell the story of the Jews during the Holocaust. His research reflects this approach, and indeed, his book, *The Jews of Warsaw 1939–1943*, is a prime example of this historical school’s approach. The book is the standard text for anyone wishing to study or teach about the Jews of Warsaw during the Holocaust.

Gutman had a profound influence on the study of the day-to-day lives of the Jews under Nazi rule; the ghettos; the Judenraete and their varied policies regarding the Jewish communities and labor under the Nazis; the concept of *Amidah*, which might be loosely translated as resilience and unarmed resistance; understanding the changes in roles between the traditional Jewish leadership and the youth movement activists in many places, and hence the significant role of youth movements in Jewish underground activity; the understanding of the centrality of antisemitism to the Nazis and to Nazi planning of anti-Jewish policy; and more.

One of Gutman’s contributions to Holocaust scholarship was to articulate the uniqueness of the Holocaust, which he

saw in the singular combination of factors that enabled the Holocaust to happen: historical antisemitism; the demonic view of the Jews in Europe; the Jews’ prolonged exilic existence and their protracted and persistent persecution by Christianity; the biological racial view the Nazis had of the Jews, which saw the Jews as an immutable danger of cosmic significance; and Germany’s defeated and weak status in the aftermath of World War I.

Gutman has advocated and taught meticulous empirical research in all relevant languages, both of official German documentation and of Jewish documents from the period and later, as well as documentation from local non-Jewish populations. According to Gutman, oral history is an important source which, although it needs to be read carefully and critically as well as corroborated in the same way as other documentation, is integral to trying to gain a fuller picture and understanding of events. Many scholars who began as his students have gained prominence in their own right in various universities and research institutes.

After the collapse of communism in Poland, Gutman became a celebrity there, sought after for advice, articles, conferences, committees, public lectures, and awards. In 1995 he received an honorary doctorate from Warsaw University, an event that he saw as bearing great symbolic significance, as this was a place, as he put it, into whose hallowed halls he could not have wished to enter when he was a Jewish citizen of Poland.

Gutman published numerous books and articles. Among his major books are *The Jews of Warsaw 1939–1943: Ghetto, Underground, Revolt* (1977; Eng., 1982); *The Catastrophe of European Jewry* (edited with Livia Rothkirchen, 1976); *Documents on the Holocaust* (edited with Yitzhak Arad and Avraham Margalio, 1978; Eng., 1981); *The Nazi Concentration Camps* (edited with Avital Saf, 1984); *The Jews in Poland After the Second World War* (Heb., 1985); *Unequal Victims: Poles and Jews During World War Two* (with Shmuel Krakowski, 1986); *Encyclopedia of the Holocaust* (editor, 1990); Emanuel Ringelblum’s *Diary and Notes from the Warsaw Ghetto: September 1939–December 1942* and *Last Writings: Polish-Jewish Relations; January 1943–April 1944* (Heb.; edited with Joseph Kermish and Israel Shaham, 1992 and 1994); *Anatomy of the Auschwitz Death Camp* (edited with Michael Berenbaum, 1994); *Resistance: The Warsaw Ghetto Uprising* (1994); and *Holocaust and Memory*, a textbook (Heb., 1999).

[David Silberklang (2nd ed.)]

GUTMAN, NAHUM (1898–1980), Israeli painter and sculptor. Gutman was born in Telenshty, Bessarabia. In 1905 the Gutman family immigrated to Erez Israel, settling in Aḥuzat Bayit (on the site of modern Tel Aviv). He began his art studies in 1913 at the Bezalel School of Arts and Crafts in Jeru-

salem and in 1920 continued in Vienna at the School of Arts and Crafts. In 1926–28 Gutman participated in two exhibitions that were of great significance in Israeli art history: the Tower of David exhibition, which expressed the Bezalel spirit, and the Modern Artists' Exhibition at the Ohel Theater in Tel Aviv, which proclaimed a new direction in art.

Gutman was one of Israel's best-known artists and a well-known writer. In 1939 he began to publish his own books, which he wrote as well as illustrated. He was chosen to represent Israel in the Venice Biennial and participated in many exhibitions all over the world. Gutman had a great influence on Israeli children through his books and the articles he published in the children's newspaper *Davar Li-Yeladim*. In 1962 one of his books, *Path of Orange Peels*, was awarded the Hans Christian Andersen Literary Prize on behalf of UNESCO. The link between his art and the child's world can be seen in his art style, which integrates a Naive method of drawing with colorful compositions. Gutman made a great impression on the city of Tel Aviv. Many of the monumental buildings of the city are decorated with his mosaic walls (*Homage to Tel Aviv*, Shalom Tower, Tel Aviv).

Gutman was among those artists who painted the Arab figures that peopled their surroundings in the 1920s. In some of his paintings he depicted scenes of daily life in a rural landscape or in Jaffa's orchards, painting Arabs in their daily occupations, as in *The Goatherd* (1926, Israel Museum, Jerusalem) or *The Bearer of Sheaves* (1927, Israel Museum, Jerusalem). In these paintings the Arab workers were greatly magnified: their bodies extended over the entire canvas, their postures recalled old Egyptian figures, their clothes were painted in graceful colors, and they came off looking very admirable. It is clear that Gutman saw them as models for the new pioneer immigrants who were novice farmers in their old-new land. After the riots of 1929, his manner of depiction changed and the drawings became more realistic.

Gutman's small clay sculptures look as if they stepped out of his paintings. Although in sculpture it is difficult to capture the look of a moment or create a living expression, Gutman succeeded in this, producing humoristic figures (*Neighbor's Quarrel*, 1970, Gutman Museum, Tel Aviv).

[Ronit Steinberg (2nd ed.)]

GUTMANN, AMY (1949–), political philosopher and educator. Gutmann was born in Brooklyn, New York, and earned her bachelor's degree from Harvard University (Radcliffe College, 1971), her master's degree from the London School of Economics and Political Science (1972), and her doctorate from Harvard (1976). She taught at Princeton University from 1976, entering as an assistant professor; she became an associate professor in 1981 and professor of politics in 1987. She was the Laurance S. Rockefeller University Professor of Politics and the University Center for Human Values from 1990 to 2004, and she was provost at Princeton from 2001 until

2004. Her appointment as provost under Princeton president Shirley Tilghman marked the second time in the history of the Ivy League that two women had served simultaneously as president and provost. Gutmann was the founding director of the University Center for Human Values at Princeton, and she chaired the executive committee of Princeton University Press. In 2004 she was named president of the University of Pennsylvania.

Gutmann's scholarly work centers on moral and political philosophy, practical ethics, liberalism, and the moral challenges of democracy. Her widely cited *Democratic Education* (1987) discusses the potential incompatibilities of the principles of democracy with a belief in the rights of the individual. Her other works include *Liberal Equality* (1980), *Color Conscious: The Political Morality of Race* (with Anthony Appiah, 1996), *Democracy and Disagreement* (with Dennis Thompson, 1996), and *Identity in Democracy: A Humanist View* (2003). *Color Conscious*, which explores ethnic and cultural pluralism, was praised as a significant contribution to social philosophy. In *Democracy and Disagreement*, Gutmann and Thompson present the concept of "deliberative democracy" as a moral alternative to discord. Her books have been translated into numerous languages, including French, Italian, Japanese, Swedish, and Hebrew. Her many essays have appeared in such journals as *Ethics*, *Philosophy and Public Affairs*, and *Political Theory*.

Gutmann served as president of the American Society of Political and Legal Philosophy from 2001 to 2004. She was a fellow of the American Academy of Arts and Sciences, the W.E.B. DuBois Fellow of the American Academy of Political and Social Science, and a fellow of the National Academy of Education. In 2000 she received the President's Distinguished Teaching Award from Princeton University, and in 2003 she was awarded Harvard's Centennial Medal for "exceptional contributions to society." Her numerous awards and honors also include the Ralph J. Bunche Award and the North American Society for Social Philosophy Book Award (both in 1997, for *Color Conscious*), the Gustavus Myers Human Rights Award (1997), and the Bertram Mott Award from the American Association of University Professors (1998).

[Dorothy Bauhoff (2nd ed.)]

GUTMANN, DAVID MEIR (1827–1894), Erez Israel pioneer. Born in Hungary in 1827, Gutmann fought in the Hungarian War of Independence in 1848, but was disillusioned by the Hungarian attitude toward Jews. In 1876 he sold his property and settled with his wife in Erez Israel. In Jerusalem he was influenced by the visionary ideas of his friend Akiva Yosef *Schlesinger, gave large donations to charitable institutions, took part in land purchase and the establishment of new quarters outside the walls of the Old City, and also searched for land for agricultural settlement, despite the objection of several rabbis. He joined a group of Jerusalemites who, when they failed in attempts to purchase land near Jericho, acquired the Mullabis lands by the Yarkon River in 1878 and established

Petaḥ Tikvah there. Gutmann was one of the founders of the settlement and suffered greatly on its behalf. He sold all his property in Jerusalem to pay the settlement's debts and conduct its law cases with the previous landowners. In his old age he was greatly impoverished. He died in Jaffa and was buried in Jerusalem.

BIBLIOGRAPHY: Tidhar, 1 (1947), 304; EZD, 1 (1958), 457–9; G. Kressel, *Em ha-Moshavot Petaḥ Tikvah* (1953), ch. 5.

[Galia Yardeni-Agmon]

GUTMANN, EUGEN (1840–1925), German banker. Born in Dresden, the son of an old-established banking family, Gutmann, together with several partners, took over the banking house of Michael *Kaskel and formed the Dresdner Bank. After initial difficulties a branch which had been opened in Berlin came under Gutmann's guidance. He developed it into a leading national and international financial institution with worldwide interests that included railways in Turkey, mining in Bohemia, and banking in Latin America. Gutmann directed the bank for more than 40 years. Germany's defeat in 1918 and the subsequent economic collapse broke Gutmann's health, and in 1920 he retired.

BIBLIOGRAPHY: S. Kaznelson, *Juden im deutschen Kulturbereich* (1959), 743–5; NDB, 7 (1966).

[Joachim O. Ronall]

GUTMANN, JOSEPH (1923–2004), U.S. art historian. Gutmann, who was born in Wuerzburg, Germany, immigrated to Philadelphia with his parents in 1936 after the rise of the Nazis. He served in the army as a chaplain and interpreter from 1943 to 1946. Gutmann earned a B.A. from Temple University and an M.A. from New York University's Institute of Fine Arts. At Hebrew Union College in Cincinnati he received a doctorate in Jewish history and a rabbinical degree.

After teaching at Hebrew Union College and the University of Cincinnati, he was appointed professor of art history at Wayne State University, Detroit, in 1969. A pioneer in the field of Jewish art, he wrote or edited 19 books, including *Images of the Jewish Past: An Introduction to Medieval Hebrew Miniatures* (1965), *Beauty in Holiness: Studies in Jewish Customs and Ceremonial Art* (1970), and *Hebrew Manuscript Painting* (1978).

[Samantha Baskind (2nd ed.)]

GUTMANN, JOSHUA (1890–1963), scholar of Jewish Hellenism. Born in Belorussia, Gutmann studied with Chaim *Tchernowitz (Rav Zā'ir) in Odessa at the Slobodka Yeshivah, at Baron Guenzburg's Institute of Oriental (i.e., Jewish) Studies, and at the universities of St. Petersburg, Odessa, and Berlin. From 1916 to 1921 he taught in Odessa, and from 1921 to 1923 he was principal of the Hebrew Teachers' Seminary in Vilna. He settled in Berlin in 1923 and in 1925 joined the editorial board of the German *Encyclopaedia Judaica* and that of the Hebrew encyclopedia *Eshkol*, contributing hundreds of articles in a wide range of Jewish subjects; he also lectured at

the Hochschule (Lehranstalt) fuer die Wissenschaft des Judentums. Gutmann emigrated to Palestine in 1933, at first teaching in the Reali school in Haifa and later becoming head of the Hebrew Teachers' Seminary in Jerusalem. From 1942 to 1953 Gutmann served on the editorial staff of the biblical encyclopedia *Enziklopedyah Mikra'it* and from 1946 to 1961 on that of the *Encyclopaedia Hebraica*. In 1949 he began teaching Jewish-Hellenistic studies at the Hebrew University. In 1954 with M. *Schwabe he founded *Eshkolot*, a periodical for classical studies, serving as its sole editor from 1956.

Gutmann's main work in Jewish Hellenism was the first two volumes of *Ha-Sifrut ha-Yehudit ha-Hellenistit* (1958, 1963), which deal with the beginnings of that literature. He also contributed to Hebrew, Russian, and English periodicals and to several Festschriften; he edited with M. Schwabe the Hans Lewy memorial volume, *Sefer Yohanan Levi* (1949). Gutmann's wide-ranging scholarship in both Judaism and the classics enabled him to make significant contributions to the understanding of the Hellenistic period in Jewish history and literature. He gave fresh insight into the Greek philosophers' interest in Judaism, which was an important element in the growth of Jewish Hellenism.

BIBLIOGRAPHY: A. Fuks, S. Safrai, and M. Stern, *Al Profesor Yehoshu'a Gutmann* (1964), includes bibliography.

[Moshe David Herr]

GUTMANN, WILHELM, RITTER VON (1825–1895), Austrian industrialist and philanthropist. Born in Lipnik (Leipnik, Moravia) and a pupil of the yeshivah there, he began his career as a commission agent in the coal business. Subsequently, in partnership with his brother DAVID (1834–1912), he founded the firm of Gebrueder Gutmann (1853) which eventually controlled the bulk of the Austro-Hungarian coal trade, at first selling imported coal and later acquiring and developing coal seams in the Ostrava basin and in Galicia, thereby improving considerably the monarchy's trade balance. The Witkowitz Steel Works, which they established, developed into one of the outstanding firms on the continent, numbering the Viennese *Rothschilds and members of the nobility among its partners; after 1918 it became a joint-stock company. Following the Munich agreement (1938), lengthy negotiations took place between the Nazis and the Gutmann and Rothschild families; a price of £10,000,000 was offered but the deal was never concluded. The company became part of the Hermann Goering concern without being owned by it. After World War II, it became a Czechoslovakian state-owned enterprise.

Founder of the Oesterreichischer Industriellenklub and a member of the board of the Creditanstalt, Wilhelm was a member of the Lower Austrian Diet, where he supported German liberalism. Both brothers were knighted, Wilhelm in 1878 and David a year later. The Gutmanns were also active in Jewish affairs, Wilhelm as president of the Vienna Jewish community (1891–92) and David as head of the Israelitische Allianz in Vienna and the Baron de *Hirsch school fund for Galicia. They were cofounders of the *Israelitisch-The-

ologische Lehranstalt. Both gave generous support to Jewish and non-Jewish philanthropic institutions: among the Jewish foundations they established and supported were an orphanage for girls at Doebeling, a childrens' hospital in Vienna, an institution for the crippled at Krems, and an old-age home in Lipnik. They defrayed Joseph *Bloch's expenses in the Bloch-*Rohling trial. In 1891 Ritter published his autobiography, *Aus meinem Leben*.

MAX GUTMANN (1857–1930), Wilhelm's son, studied mining engineering at Leoben Academy (Austria), gaining a worldwide reputation in the field and publishing several books on it. He was also an authority on labor relations and a pioneer in social insurance.

[Meir Lamed]

GUTNICK, family of Australian rabbis. Rabbi CHAIM GUTNICK (1921–2003) was probably the best-known Orthodox rabbi in Australia during the last third of the 20th century. Born in Palestine, Gutnick's family fled to England after the 1929 riots, and then lived in Eastern Europe, managing to escape to Australia during World War II. Gutnick was for many years head of the Elwood Orthodox synagogue in Melbourne and was president of the Orthodox Rabbinical Association of Australia. He was close to the Lubavitcher movement, although never directly associated with a Lubavitcher synagogue. Several of his relatives became well-known Australian rabbis, including Sholem Gutnick, head of the Caulfield Hebrew Congregation in Melbourne. Gutnick's last years were marked by a dispute over the Melbourne Orthodox *Beth Din* and demands for its reconstitution. Chaim Gutnick's younger son JOSEPH (1953–), also an Orthodox rabbi, became internationally prominent in the 1990s after amassing a fortune in diamond mining. Joseph Gutnick appeared in the annual Australian "Rich Lists" from the 1990s, being credited with a fortune of A\$100 million (U.S. \$60 million) in 2000. He became noted for his generous donations to Israel's *Likud political party and, most unusually, was also president of the Melbourne Australian Rules Football club. In the early 2000s he was widely publicized in the Australian Jewish and general press when he sued his sister and brother-in-law, the heads of Sydney's Yeshiva College, to recover funds he allegedly lent them.

[William D. Rubinstein (2nd ed.)]

GUTT, CAMILLE (1884–1971), Belgian statesman. Born in Brussels, Gutt qualified as a lawyer and joined the Liberal Party. At the end of World War I he was appointed secretary-general to the Belgian delegation to the Reparations Commission and from 1920 to 1924 was chief secretary to the minister

of finance. Gutt himself was minister of finance from 1934 to 1935 and from 1939 to 1940 when Belgium was overrun by the Germans. He escaped with the rest of the Belgian cabinet to Britain and held various ministerial posts in the Belgian government in exile until the Liberation. From 1946 to 1951 he was managing director of the International Monetary Fund.

GUTTMACHER, ALAN F. (1898–1974), U.S. professor of obstetrics and proponent of world population control. Born and educated in Baltimore, Maryland, he served as clinical professor of obstetrics and gynecology at Columbia University's College of Physicians and director of the department of obstetrics and gynecology at New York's Mount Sinai Hospital until 1962 when he became president of the Planned Parenthood Federation of America, and in 1964 chairman of the medical committee of the International Planned Parenthood Federation (1964–68).

Guttmacher lectured and wrote extensively on the subject of world population control. His later books on the subject include *Babies by Choice or by Chance* (1959); *Pregnancy and Birth* (1962); *Planning your Family* (1965); and *Birth Control and Love* (1969).

[Fred Rosner]

GUTTMACHER, ELIJAH (1795–1874), rabbi and forerunner of the Ḥibbat Zion movement. Born in Borek, district of Posen, Guttmacher studied at various yeshivot, the most outstanding of which was that of R. Akiva *Eger in Posen. He also studied Kabbalah and acquired a good knowledge of German and general subjects. From 1822 he was the rabbi of Pleschen, and from 1841 until his death he served as rabbi in Grodzisk Wielkopolski (Graetz). His great erudition and his way of life, which was akin to that of the Ḥasidim in Eastern Europe, made his name famous in the Jewish world, and a stream of visitors made their pilgrimage to him, as to a ḥasidic *rebbe*, to obtain amulets for the cure of diseases and the solution of personal problems. To end this kind of veneration, he published a request asking people to refrain from approaching him on such matters; these appeals, however, were of no avail and he acquired the unsought position of the *rebbe* of West European Ḥasidim.

Guttmacher's inclination to mysticism and his preoccupation with problems affecting the Jews of his time led him to ponder the idea of redemption and its practical realization as a solution to the misery of the Jews. He was one of a small minority of rabbis who, despite their belief in the Messiah, did not think that the Jewish people should wait for the coming of redemption passively, but rather should do all in their power to hasten redemption by engaging in constructive work in Erez Israel. Thus Guttmacher lent his support to Z.H. *Kalischer's efforts to organize potential settlers for Erez Israel and propagated the idea in his letters and articles. He wrote,

It is an error to believe that everyone will live his life in the usual manner and suddenly, one day, the gates of mercy will open, miracles will happen on heaven and earth, all the proph-

ecies will be fulfilled, and all will be called from their dwelling places. This is not so, I say, and I add, that settling in the Holy Land – making a beginning, redeeming the sleeping land from the Arabs, observing there the commandments that can be observed in our day – making the land bear fruit, purchasing land in Erez Israel to settle the poor of our people there – this is an indispensable foundation stone for complete redemption.

He reiterated this theme, or variations thereof, repeatedly and this provided invaluable support to the budding Hibbat Zion movement, which was opposed by both Orthodox and assimilationist rabbis. Guttmacher left behind many works on talmudic and kabbalistic subjects, only a small portion of which have appeared in print (many of the manuscripts are stored in Jerusalem archives). Among his works are novellae on the *mishnayot* and the *Gemara* contained in the Talmud edition published by Romm; *Zafanat Pa'ne'ah* (1875), a book devoted to the tales of Rabbah b. Hana as told in *Bava Batra*; *Sukkat Shalom* (1883); and *Shenot Eliyahu* (1879); the latter two books are linked to the study groups established in Jerusalem at his inspiration.

[Getzel Kressel]

GUTTMACHER, MANFRED (1898–1966), U.S. criminologist and psychiatrist. His career was devoted to the study of the mentally disturbed, maladjusted offender. Born in Baltimore, he graduated from Johns Hopkins University in 1923. From 1930 to 1960 he was chief medical officer of the Supreme Court of Baltimore. He held the rank of colonel in the U.S. Army Medical Corps during World War II (1942–46), and served as chief psychiatric consultant to the Second Army. During 1948 he served as scientific adviser to the United Nations Social Commission dealing with the causes and prevention of crime and the treatment of offenders. He taught at Johns Hopkins University, the University of Maryland, and at a number of other universities. His works include *Sex Offenses* (1961), *Psychiatry and the Law* (1952), and *Mind of the Murderer* (1960).

[Zvi Hermon]

GUTTMAN, LOUIS (Eliahu; 1916–1987), sociologist. Born in New York, he was educated at the University of Minnesota, where he taught from 1936 to 1940. From 1941 to 1950 he taught at Cornell University; during the years 1941–45 he also served as an expert consultant to the U.S. War Department in the information and education division. A member of the Labor Zionist movement from his early youth, Guttman moved to Israel in 1947, where he founded and became the director of the Israel Institute of Applied Social Research, a position he held throughout his life. The institute was later renamed the Louis Guttman Institute of Applied Social Research. He was appointed professor at the Hebrew University in 1954, where he taught social and psychological assessment. Guttman's reputation rests on his work in methodology. The

Guttman scale, which is described in “A Revision of Chapin's Social Status Scale,” *American Sociological Review* (1942), ranks items in such a way that the statements appearing at the top of the scale must also check all the preceding ones. This is done by taking a number of random samples of population and then ranking the statements in the order in which they are consistently chosen by the respondents. Other contributions by Guttman appeared in P. Horst (ed.), *Prediction of Personal Adjustment* (1941); S.A. Stouffer (ed.), *Measurement and Prediction* (1949); and in P.L. Lazarsfeld (ed.), *Mathematical Thinking in the Social Sciences* (1954). The last contains Guttman's original approach to testing-factor analysis, the radex. The major difference between the radex and older forms of factor analysis is that it deals with the order of the factors, not just the common factors. The radex involves the notion that there is a difference in kind and a difference in degree between the tests used for analysis.

In 1971, Guttman was listed in the journal *Science* as one of the 62 most important contributors to scientific research in the social sciences since the beginning of the 20th century. He was a fellow of the Center for Advanced Study in the Behavioral Sciences (Stanford, 1955–56). Awards he received include the Rothschild Prize (1962); the Outstanding Achievement Award from the Regents of the University of Minnesota (1974); the Israel Prize in the social sciences (1978); and the Educational Testing Service Measurement Award from Princeton (1984).

Guttman wrote *What Is Not in Statistics* (1976); *The Impact of Sadat in Jerusalem on the Israeli Jew* (1977); and *Theory Construction and Data Analysis in the Behavioral Sciences* (with S. Shye, 1978).

ADD. BIBLIOGRAPHY: *Louis Guttman on Theory and Methodology: Selected Writings* (1994); *Louis Guttman in Memoriam: Chapters from an Unfinished Textbook on Facet Theory* (1997).

[Werner J. Cahnman / Ruth Beloff (2nd ed.)]

GUTTMANN, ALEXANDER (1904–1994), talmudic scholar, son of Michael *Guttman. Guttman was born in Budapest. He received both his rabbinical diploma and his doctorate in Breslau. Guttman taught Talmud and was the rabbi authorized to grant ordination at the Hochschule fuer die Wissenschaft des Judentums in Berlin (1935–40). From 1940 he taught Talmud at the Hebrew Union College in Cincinnati, Ohio. Guttman published several works and numerous scholarly articles, including *Das redaktionelle und sachliche Verhaeltnis zwischen Mischna und Tosephta* (1928) and *Rabbinic Judaism in the Making* (1970).

[Eugene Mihaly]

GUTTMANN, JACOB (1845–1919), historian of Jewish philosophy. Born in Beuther (Bytom), Silesia, Guttman studied at the University of Breslau, and at the Jewish Theological Seminary of that city. His doctoral thesis dealt with the relation between Spinoza and Descartes (*De Cartesii Spinozaeque philosophiis*, 1868). He served as a rabbi in Hildesheim from

1874 to 1892, and in Breslau from 1892 until his death. From 1910 he was president of the German Rabbinical Assembly (*Rabbinerverband*). Guttman published a number of monographs, each of which gives a detailed exposition of the doctrine and sometimes of the sources of some medieval Jewish philosophers. These monographs are *Die Religionsphilosophie des Abraham Ibn Daud aus Toledo* (1879); *Die Religionsphilosophie des Saadja* (1882); and *Die Philosophie des Salomo Ibn Gabirol* (1889). His study of Isaac Israeli appeared in Baumker's *Beitraege zur Geschichte der Philosophie des Mittelalters* (vol. 10 no. 4, 1991). He also published important works dealing with the relation between Christian scholasticism and medieval Jewish philosophy. One of these, entitled *Das Verhaeltnis des Thomas zum Judentum und zur juedischen Literatur* (1891), studies the extent of the influence of Maimonides on Thomas Aquinas. In *Die Scholastik des 13. Jahrhunderts in ihrem Beziehungen zum Judentum und zur juedischen Literatur* (1902), Guttman discussed the influence of Maimonides, Gabirol, and Isaac Israeli upon William of Aurenge, Albertus Magnus, Duns Scotus, Roger Bacon, and others. Maimonides' influence on Christian thought is also discussed in "Der Einfluss der maimonidischen Philosophie auf das christliche Abendland," one of the two articles contributed by Guttman to the volume *Moses ben Maimon* (1914), of which he was coeditor; the other one, entitled "Die Beziehungen des Religionsphilosophie des Maimonides zu den Lehren seiner juedischen Vorgaenger," dealt with the relation between Maimonides and earlier Jewish philosophers.

[Shlomo Pines / Yehoyada Amir (2nd ed.)]

GUTTMANN, JULIUS (Yitzhak; 1880–1950), philosopher of religion and historian of Jewish philosophy; son of *Jacob Guttman. In 1903 he received his Ph.D. at the University of Breslau and in 1906 he was ordained as rabbi by the Juedisch-Theologisches Seminar of that town. From 1911 he lectured as *Privatdozent* in general philosophy at the University of Breslau. In 1919, a year after the death of Hermann *Cohen, he received a call from the Hochschule fuer die Wissenschaft des Judentums in Berlin to serve as Cohen's successor. He was a professor of Jewish philosophy at that institute until 1934. In 1922 he was also nominated as the principal of the Akademie fuer die Wissenschaft des Judentums in that city. A year after National Socialism took power in Germany, Guttman fled from the country and immigrated to Jerusalem, where he became professor of Jewish philosophy at the Hebrew University. In Jerusalem Guttman could shape the philosophical and

scholarly groundings for the research of Jewish philosophy in the new Zionist, Hebrew environment and worked hand in hand with Gershom *Scholem, the founder of modern research in Kabbalah and Jewish mysticism.

Guttman's literary activity focused solely almost from its very first steps on the philosophy of monotheism in general and the philosophy of Jewish religion in particular. Guttman was a close student of Hermann Cohen and his neo-Kantian school, though he never studied with him personally. Some of his early works deal directly with the Kantian philosophy (among others: *Der Gottesbegriff Kants* (dissertation), Breslau, 1903; "Kant und das Judentum," in: *Schriften*, Hrsg. Gesellschaft zur Forderung der Wissenschaft des Judentums, Leipzig, 1908, pp. 41–61 (Hebrew: "Kant ve-ha-Yahadut," in: *Dat u-Madda* [see below], pp. 218–29); *Kants Begriff der objektiven Erkenntnis*, 1911). Guttman's attachment to the philosophy of Cohen is evident in all his writing. He followed his master's philosophy of religion and ethics in his early stages (see for example his: "Hermann Cohens Ethik," *MGWJ*, Jahrg. 29, Neue Folge 13 (1905), pp. 385–404) and was heavily influenced by the new notions developed by Cohen in his *Religion der Vernunft aus den Quellen des Judentums* (1919; *Religion of Reason out of the Sources of Judaism*). These notions and the new discourse they open are at the bases of Guttman's fundamental article *Religion und Wissenschaft im mittelalterlichen und im modernen Denken* (Berlin, 1922; English: "Religion and Science in Medieval and Modern Thought," in: A. Jospe [ed.], *Studies in Jewish Thought* (1981), pp. 281–339). In that article Guttman formulated explicitly the task of the philosophy of religion and its rootedness in the medieval encounter between monotheistic religions and Greek philosophy: "These religions, by the virtue of the strength of their claims to truth and to the profundity of their spiritual content, confront philosophy as an autonomous spiritual power. They believe that they possess the ultimate and unconditional truth that needs no validation by science, and that they provide a consistent and conclusive answer to the questions with whose solution philosophy is wrestling. The meeting between these two spiritual worlds that differ so completely in their origins creates the philosophy of religion." The examination of the philosophic account of religion and its truth-claims was Guttman's main object in his research and philosophy, foremost in regards to Jewish religion. Guttman's approach rests on two basic presuppositions: (a) philosophy and religion, especially philosophy and Jewish religion, are anchored in two – totally different and alien – spiritual environments. Philosophy of religion is hence an expression of the encounter between these two and is, therefore, apologetic in nature; (b) the philosopher of religion – in particular, the Jewish philosopher of Judaism – must have a clear well established notion, not only of the philosophy he adheres to, but also of the nature and content of (Jewish) religion. This notion is rooted in the non-philosophic reading of the formative writings of (Jewish) religion as well as in the personal evidence of religion that the philosopher shares as a religious person. This notion of religion serves as

a methodological basis for the philosophical analysis of (Jewish) religion and the defense of religion from philosophic conceptions that counter its nature and teachings. These two presuppositions dominate Guttman's entire work and especially his magnum opus *Die Philosophie des Judentums* (1933; Heb. trans. with corrections and additions by the author, *Ha-Filosofiyah shel ha-Yahadut*, 1951; English: *Philosophies of Judaism* (from Heb. version), 1964; *The Philosophy of Judaism*, 1988). In this as yet unrivaled book Guttman attempts to give an account of the various ways Jewish philosophers – from Philo to modern times – tried to deal with that fundamental question. The book opens with an analysis of formative biblical (and to a lesser extent rabbinic) religious notions. The diversity of such efforts – grounded in the diversity of philosophical and cultural contexts in which those Jewish philosophers worked – does not contradict, in Guttman's eyes, the fact that all those attempts are stages in one coherent journey of a "Jewish philosophy" that will serve as a theoretical grounding and defense of those biblical notions.

Though Guttman's entire work is anchored in a clear notion of the nature and content of religion, it is important to note that throughout his life this notion was gradually developed. At his early stage he fully adopted Kant's and the young Cohen's notion that religion was no more than popular ethics and that its uniqueness is only of a psychological-sociological nature. Following Cohen's late philosophy Guttman started in the early 1920s (see above: *Religion und Wissenschaft*) to search for a deeper understanding of religion and its particularity. Under the influence of Schleiermacher's philosophy, that can easily also be traced to Cohen's late work, he gradually moved in the last 30 years of his life towards a dialogical notion of God and His relationship with the human as the center of the teaching of religion. Though ethics remained a highly important component in Guttman's account of religion, it was seen now only as one sphere of the religious being, accompanied by the notion of holiness and mystery. This new notion reaches its full expression in Guttman's *Devarim al ha-Filosofiyah shel ha-Dat* (1959, ed. by Nathan Rotenstreich; English: *On Philosophy of Religion*, 1976), where he examines a wide range of borderlines between religion and various philosophic dimensions. Such an examination could not cover, to his mind, religion in its full meaning, but could only locate the question of religion from an external point of view.

In the early 1940s Guttman was active in the "religious circle," an intellectual group that aimed at a renewal of religious Jewish life in Israel in line with the notions of Liberal Judaism in Central Europe. Among the lectures he gave in this framework are "Al Yesodot ha-Yahadut" (*Dat u-Madda*, pp. 259–280; English trans. in *Conservative Judaism*, 14:4 (1960), pp. 1–23) and "Ha-Muḥlat ve-ha-Yaḥasi be-Ḥayyenu" (1942). A full account of his critique of (Heidigerian) existentialism is given in his "Existenzia ve-Idéah" (*Dat u-Madda*, pp. 281–304). A close analysis of this article reveals, that though Guttman wishes to stick to idealistic notions, he basically adopts not only the semi-idealistic notions of the late Cohen but also some clear

dialogical notions, that place him in a close relationship with the philosophy of Franz *Rosenzweig.

Guttman's *Philosophie des Judentums* was heavily criticized, from a fundamentally different approach, by *Leo Strauss in his *Philosophie und Gesetz* (1933; *Philosophy and Law*, 1987). Guttman responded to this critique in an article titled, "Philosophie der Religion oder Philosophie des Gesetzes." It is not clear why he never published this article, which appeared posthumously (in: *Proceedings of the Israeli Academy of Science and Humanities*, 5 (1971–76), pp. 146–173; Hebrew: "Filosofiya shel ha-Dat o filosofiya shel ha-Hok," *Divrei ha-Akademya ha-Le'ummit ha-Yisra'elit le-Madda'im*, 5, pp. 190–207).

[Yehoyada Amir (2nd ed.)]

GUTTMANN, SIR LUDWIG (1899–1980), founder and former director of the National Spinal Injuries Centre at Stoke Mandeville in Buckinghamshire, England. Born in Upper Silesia, Germany, Guttman was an accomplished neurosurgeon and medical director of the Jewish Hospital in Breslau when he was invited in 1939 to do research work at Oxford on his highly original – and at the time controversial – ideas on rehabilitating persons suffering from irreversible spinal injuries that resulted in paraplegia. He made England his home and acquired world fame with his treatment and rehabilitation of paraplegics.

In 1944, when the impending Allied invasion of Hitler's Europe was expected to lead to large numbers of serious injuries, Guttman was invited by the British government to put his ideas into practice at Stoke Mandeville. His single-minded determination produced remarkable results; through his methods of treatment, coupled with a deep humanity and understanding (he was known by his patients as "Poppa Guttman"), many of the wounded were able to live useful lives, which previously would have been denied them. He reduced the death rate of paraplegics from over 80% to under 10% within three years of injury, and after an average stay at Stoke Mandeville of less than one year, 75% of those released were gainfully employed. His establishment of the increasingly successful annual Stoke Mandeville Games was a practical expression of his determination that paraplegics lead normal lives in all respects. Guttman was consulted by many coun-

tries throughout the world on the establishment of paraplegic centers, and as a result of his visit to Israel in 1949 the paraplegic center at Tel Ha-Shomer was opened in 1953. Probably his most lasting legacy was the establishment of the Paralympic Games, which grew out of his Stoke Mandeville games. These began as an international event in 1948 to coincide with the Olympic Games held that year in London. These are now a major, mainstream international event.

The many honors bestowed upon him include the Rehabilitation Prize of the World Veterans' Association in 1953 (he was the first recipient). He was awarded successively the O.B.E., the C.B.E., and in 1966 a Knighthood by Britain, and the minister of pensions said in 1945: "Thank you, Hitler, for sending us men like these." In 1972 President Heinemann bestowed upon him the Star of the Grand Cross of the Order of Merit of the Federal Republic, West Germany's highest award, at the 21st international Stoke Mandeville Games for the paralyzed held in Heidelberg, Germany.

Both Sir Ludwig and Lady Guttmann were active in the local Jewish community and supported Israel's cause in many ways.

ADD. BIBLIOGRAPHY: ODNB online.

[Michael Wallach]

GUTTMANN, MICHAEL (1872–1942), Hungarian talmudic scholar. Guttmann was born in Hungary and studied at the Budapest rabbinical seminary and at the University of Budapest. From 1903, the year of his ordination at the Budapest rabbinical seminary, to 1907 he was rabbi at Csongrád. He lectured on Jewish law from 1907 to 1921 at the Budapest seminary. From 1921 to 1933 he was rabbi and professor of Talmud and *halakhah* at the Breslau Jewish theological seminary and in 1925 he was visiting professor of Talmud at the Hebrew University of Jerusalem. In 1933 he was appointed head of the Budapest seminary. Guttmann combined a wide knowledge of the sources with an acute modern, critical approach. Among his publications in this field were *Einleitung in die Halacha* (Budapest Seminary *Jahresberichte*, 1909, 1913); *Asmakhta* (Breslau Seminary *Jahresberichte*, 1924), on talmudic methodology; and *Behinat ha-Mitzvot* (*ibid.*, 1928) and *Behinat Kiyum ha-Mitzvot* (*ibid.*, 1931), on the reasons for the observance of the commandments. He edited *Abraham b. Hiyya's textbook of geometry, *Hibbur ha-Meshihah ve-ha Tishboret* (introduction, 1903; the work itself 1912–13). Guttmann was one of the editors of *Ha-Zofeh le-Hokhmat Yisrael* (1911–14), editor of *Ha-Soker* (from 1933), and of *Magyar Zsidó Szemle* and published articles in these and other periodicals in Hebrew, Hungarian, French, and German. He was also an editor of and contributor to the *Ozar Yisrael* encyclopedia and the Eshkol *Encyclopedia Judaica*, in both the German and Hebrew editions. His *Das Judentum und seine Umwelt* (part 1, 1927) deals with the attitude of Judaism to the non-Jewish world. Written against the background of rising nationalism and antisemitism in Germany in the 1920s, when everything Jewish, and the Talmud in particular, was under virulent at-

tack, it is completely apologetic. Guttmann planned as his major life work a vast talmudic encyclopedia, which would have been beyond the talents of most other scholars working alone. Only four volumes of Guttmann's *Maftēah ha-Talmud*, covering the letter *alef*, appeared (1910–30); the rest of the material was lost after his death when the Nazis occupied Hungary in 1944. Even this small installment is of major importance as a talmudic reference work.

[Moshe David Herr]

GUTTMANN, ROBERT (1880–1942), Czech primitive painter. During his life, Guttmann was better known for his unusual personality than for his paintings. He was a familiar figure of the Jewish scene in Prague as he walked from one coffeehouse to another, his work rolled up under his arm, arranging impromptu exhibitions of his drawings and watercolor paintings. His subjects were mainly people, landscapes, and street scenes. However, his work was not taken seriously until after his death in the Lodz ghetto in 1942. It was only when his work was exhibited after World War II, that he was recognized as an original, genuine Naive artist whose works – most of them now in the Jewish Museum in Prague – were widely admired at a number of posthumous exhibitions. He was a lifelong Zionist. At the age of 17 he walked from Prague to Basle to attend the First Zionist Congress, and he made his way on foot to all subsequent Congresses held during his lifetime.

[Avigdor Dagan]

GUTZKOW, KARL FERDINAND (1811–1878), German nationalist author. Gutzkow, born in Berlin, was a prominent figure in the "Young Germany" literary movement where he led the reactionary wing, in contrast to the liberal trend influenced by Rahel Varnhagen von *Ense, *Heine, and *Boerne. Like *Goethe, Schlegel, and Brentano, Gutzkow expanded the theme of the *Wandering Jew in German literature, as for instance in his "Julius Moses Ahasver" (in: *Vermischte Schriften*, 2, 1842). His books, such as *Wally, die Zweiflerin* (1835), *Zopf und Schwert* (1844), and *Urbild des Tartueff* (1844) brought him fame but criticism as well. Gutzkow also wrote a historical drama, *Uriel Acosta* (1846), in which the author's own emotional experiences and inner conflicts are echoed. Gutzkow had already treated this story in a tale, *Der Sadduzaeer von Amsterdam* (1833). Discrepancies between the drama and Acosta's actual life roused protests from H. *Jellinek and induced him to write a monograph on Spinoza's forerunner, *Uriel Acosta's Leben und Lehre* (1847).

GUY, PHILIP LANGSTAFFE ORD (1885–1952), archaeologist. Born in Scotland, he joined the excavations at Carchemish and el-Amarna after World War I. From 1922 to 1925 he was chief inspector of antiquities in Palestine and excavated an Iron Age cemetery in Haifa. He directed the excavations at Megiddo (1925–35) where he introduced a method of balloon photography and cleared the mound to stratum v (Iron Age). As director of the British School of Archaeology in Jerusalem from 1938 to 1939 he began a survey of the Negev. He served in the British Army in World War II and rejoined the department of antiquities in 1947. He remained in Israel as chief of its division of excavations and survey until his death. He directed excavations at Bet Yerah, Jaffa, and Ayyelet ha-Shaḥar. His publications include excavation reports of Tell el-Amarna and Megiddo, including the large volume *Megiddo Tombs* (1938). He married a daughter of Eliezer *Ben-Yehuda.

[Michael Avi-Yonah]

GUZIK, HANNA (1909–), actress. She began to act in 1924 in the theatrical group of her father, Jacob Guzik. She played in Yiddish in the plays of Goldfaden, Shalom Aleichem and others. In 1932–1933 she played in musical comedies in the Russian theaters in the big cities of the Soviet Union, and afterwards she performed with a Jewish theatrical ensemble in many cities. Her particular talent was in playing various roles on stage, even in the same play, and to sing in various styles. In 1973 she immigrated to Israel.

[Shmuel Spector (2nd ed.)]

GUZIK, JACOB (Jack, Jake, "Greasy Thumb"); 1886–1956), U.S. gangster, the trusted treasurer, financial wizard, and legal advisor to Al Capone. He was born in Moscow to Max and Fannie, an Orthodox couple who raised 10 children. The family immigrated to the U.S. when Guzik was a year old and settled in Chicago, where Max supported the family by running a small cigar store. Guzik became a bartender and pimp in the whorehouse run by his older brother, Harry. In the early 1920s Guzik supposedly overheard a plan to murder Capone, informed him, and the two became lifelong allies. Guzik became a powerful political "fixer" operating out of a restaurant, where he received district police captains and sergeants who collected graft for themselves and their superiors. Also stopping by were bagmen sent over from City Hall. His nickname "Greasy Thumb" derived from the green stain earned from counting the money of mobster kingpin Capone, who

once called Guzik "the only friend I can really trust." Guzik was convicted of tax evasion and went to prison in 1932, serving three years of his five-year sentence. Upon his release, Guzik assumed total control over the finances of Capone's Chicago Outfit for the next 20 years. Guzik brought numerous lawsuits against newspapers for portraying him as a gangster, dismissing the wisdom of such suits saying, "I'm paying these judges, so why shouldn't I use them." Guzik received an Orthodox Jewish funeral, and a lavish one, his bronze coffin alone costing \$5,000. Rabbi Noah Ganz of the Chicago Loop Synagogue eulogized Guzik as a man "who never lost faith in his God. Hundreds benefited by his kindness and generosity. His charities were performed quietly. And he made frequent and vast contributions to my congregation."

[Elli Wohlgelernter (2nd ed.)]

GVATI, CHAIM (1901–1990), Israeli pioneer and politician. Chaim Gvati was born in Poland and immigrated to Eretz Israel in 1924. One of the founders of kibbutz Gevat in 1926, he later helped found kibbutz Yifat where he remained. Gvati was minister of agriculture from 1964 to 1974 in Labor governments. In 1982 he was awarded the Israel Prize for his contribution to the development of the state as a *ḥalutz* ("pioneer") and for his role in the establishment and development of agricultural settlements.

[Fern Lee Seckbach (2nd ed.)]

GYMNASIUM, ancient Greek institution devoted to physical education and development of the body (γυμνός, "naked"). Although originally established for functions of a purely athletic and competitive nature, the gymnasium eventually became dedicated to the furthering of intellectual, as well as physical, aspects of Greek culture. During the Hellenistic period attendance at the gymnasium was recognized as the standard educational prerequisite for Greek youths wishing to attain citizenship in the *polis*. Thus, with the establishment of a Hellenistic administration in Jerusalem during the reign of *Antiochus IV Epiphanes, the high priest *Jason was given permission "to set up a gymnasium and ephebeum" (II Macc. 4:9). This act was abhorred by the vast majority of Palestinian Jews, who rightly considered the gymnasium a symbol of the Greek heathen culture chosen to supplant ancient Jewish law in Jerusalem (cf. I Macc. 1:13–15). The author of II Maccabees stresses that the gymnasium was erected adjacent to the Temple, and describes the priests abandoning their service at the altar "to participate in the unlawful exercises of the palaestra as soon as the summons came for the discus throwing" (I Macc. 4:14). Opposition to participation in the gymnasium was not as vehement among the Jews of Ptolemaic Egypt, and it may be assumed that the upper classes of Alexandrian Jewry were interested in obtaining this training for their youth. This interest was enhanced with the Roman conquest of Egypt, for Roman policy identified the graduates of the gymnasium as legitimate Greek "citizens," and only these might serve as the basis for local administration. It is therefore understandable

that the Greek population of Alexandria was violently opposed to the enrollment of “non-Greeks” (i.e., Egyptians and Jews) among the *epheboi* (cf. the “Boule Papyrus,” Tcherikover, *Corpus* 2 (1960), 25–29 no. 150). The Greek demands were eventually supported by the emperor Claudius (41 C.E.), who decreed, according to another papyrus (*ibid.*, no. 153), that the Jews “are not to intrude themselves into the games presided over by the gymnasiarchs.”

[Isaiah Gafni]

GYONGYOS (Hung. **Gyöngyös**), city in N. Hungary. Jews are first recorded there in the 15th century, and in 1735 there was an organized community. The synagogue, built before the end of the 18th century, was destroyed in the great fire which devastated the city in 1917. The community always remained a *status quo ante community, though a separate Orthodox community was established in 1870. The first rabbi of the community was Feivel b. Asher Boskovitz; he was succeeded by Wolf Lippe (officiated 1840–50), a noted bibliophile. Eleazar Fuerst (1853–1893) founded a yeshivah in the town. The Jewish population numbered 2,250 in 1920, and 2,429 in 1941. In June 1944 they were deported to Auschwitz; of these only 461 survived the Holocaust. There were 300 Jews in Gyongyos in 1946 and 414 in 1949. Most left in 1956.

[Baruch Yaron]

GYÖR (Ger. **Raab**), city in northwest Hungary, near the Austrian border. The earliest information on Jewish settlement there dates from the last third of the 14th century, though it is probable that an organized community had existed earlier. A Jews' Street is recorded in the municipal land register of 1567, and a synagogue is mentioned in the municipality's accounts. The Church, which would permit only Catholics to reside in the city, compelled the Jews to settle on the nearby Györ-Sziget Island on the Danube River. A community was organized there in 1791 and a synagogue established in 1795. Jews did not settle in the city proper until 1840. In 1851 they formed a single community with the island Jews. A new synagogue was built in 1870. In 1871 a separate Orthodox community was organized. Noted rabbis of Györ were S. Ranschburg, J. Fischer, and E. Roth. The last stimulated the ideology of Jewish nationalism in the community; he was deported to Auschwitz in 1944.

The Jews of Györ, mainly manufacturers, artisans, and merchants, numbered 5,904 in 1920, and 4,688 in 1941. Between 1942 and 1944 the majority of male Jews were sent to labor camps. The Nazis occupied Hungary in March 1944, and on June 11, they were deported to Auschwitz. After the war 700 survivors returned. In 1946 there were 950 Jews in Györ but in 1970 only 200 remained. The synagogue was sold in 1969.

HA-HEP

HAAN, JACOB ISRAËL DE (1881–1924), Dutch poet and novelist, international jurist, and journalist, politically active in Palestine during the early years of the Mandate until assassinated. Born in Smilde, De Haan was the son of a cantor and the younger brother of the authoress Carry van *Bruggen. Marked by a complex personality, his life was full of contradictions: extreme generosity opposing cruelty and downright meanness, a lucid rationality versus a strong inclination towards mysticism. A remarkable constancy in his life on the other hand lies in an emotional and at the same time practical sense of justice. A further complicating factor was De Haan's homosexuality.

De Haan started his career as a teacher and editor of the children's page of *Het Volk*, the leading Dutch Socialist newspaper. Having abandoned the Jewish faith he became active in the Socialist movement. In 1904 he published the novel *Pijpelijntjes*, which depicted candidly and without apology the homosexual relationship between two young men. Its publication led to a scandal and to his dismissal as teacher and

editor. Although the turmoil caused a severe physical and psychological crisis, he published another novel, *Pathologieën* (1908), in which the homosexual theme was extended into an essentially sadomasochistic relationship. This novel is still considered the only Dutch work in the genre of Decadent Symbolism. In the meantime he began to study law and married a non-Jewish woman. A few years after his marriage he returned to the Orthodox faith and Judaism became the main theme in his poetry. At a time when the Jewish contribution to Dutch literature was significant, De Haan became its main protagonist as a self-styled Poet of the Jewish Song. Meanwhile, social and political abuses remained uppermost in his mind. When international indignation about the fate of political prisoners in Czarist Russia was strong, De Haan visited extensively both political and criminal prisons in Russia and published a moving account of his experiences (*In Russische gevangenis*, 1913). He was successful in interceding with the Russian authorities in favor of some political prisoners. In the course of his law studies he associated himself

with the new international school of Significs, which dedicated itself to probing the meaning of words and terms. According to the Significs, analyzing language and purifying it from false meanings could solve many social problems. De Haan specialized in legal terminology and in 1916 published his thesis *Rechtskundige significa en hare toepassing op de begrippen: "aansprakelijk, verantwoordelijk, toerekeningsvatbaar."* Though he surprised the Dutch legal world by his original, intelligent analysis and by the colorful style of his articles, in the end he failed through an apparent inability to formulate a consistent theory of significs. In 1917 he was passed over for an appointment as professor in criminal law at the Municipal University of Amsterdam.

During these years, as De Haan developed his Jewish poetry, he took to Zionism and became a member of the Mizrahi movement. Disappointment in his legal career, compounded by the spiritual conflict into which his marriage to a non-Jewish woman had brought him, and his growing Jewish-national consciousness persuaded him to go to Palestine to witness and take part in the Zionist experiment. He was appointed Palestinian correspondent for the leading Dutch newspaper *Het Algemeen Handelsblad*, receiving a handsome salary. Covering thousands of pages, he wrote perhaps the most vivid, humorous and moving chronicle of life in Palestine in the years following World War I. In January 1919 he arrived in Jerusalem an ardent Zionist, watched by the Mandatory government because of his anti-Arab utterances. He also played a part in the legal defense of Zionists who were prosecuted for defending themselves in the anti-Zionist riots in the spring of 1920. Together with *Jabotinsky he became lector at the Law School that had been established by the British. But in about a year and a half he became appalled at what he considered the aggressive and tactless nationalism of the young Zionist movement. De Haan often expressed his sympathy for the Arab-Palestinian cause. Yet his main grievance was the subordination of non-Zionist orthodoxy to a Zionist, partly layman, rabbinical organization. He became the most formidable spokesman for the Jerusalem Agudat Israel, led by Rabbi Chaim *Sonnenfeld. He acquired for this Orthodox group access to leading non-Jewish politicians and opinion leaders, e.g., the press magnate Lord Northcliffe, who appointed him correspondent for *The Daily Express*. He also led an Agudist delegation to King Hussein of the Hejaz on the occasion of the latter's visit to his son Abdallah, king of Trans-Jordan in 1924.

However, the question remains as to how effective De Haan's actions were: At the end of his life he was considered deranged by friends and enemies alike. His diplomatic success lay mainly in the fact that he – though only for the time while – had a part in thwarting Herbert Samuel's efforts to establish a kind of public legal status for Palestine Jewry, including the authority to raise taxes in religious matters. The still vulnerable Zionist movement felt discredited by De Haan's criticism, which was shared by a number of Zionists but never systematically brought to the non-Jewish world as he did. Be-

sides, in exposing misleading Zionist pretensions, De Haan was a master in ridiculing his opponents. In the last two years of his life he was repeatedly menaced by death threats. It is still not clear if these were merely meant to frighten him away from the Palestinian scene. What prompted the actual murder is not known. Evidently, at the end of his life De Haan was planning to expose more embarrassing failings in the National Home, e.g., the embezzlement of Zionist funds by Chaim *Kalvarisky, who administered a program for Arab-Jewish rapprochement. Whatever the real reasons, the highest echelons of militant Palestine Zionism had decided to eliminate him and on June 30, 1924, he was shot to death on the orders of the Haganah, the first known political assassination in the Zionist movement. The news of his death drew worldwide attention, including in the Arab countries. After the hate-campaign against De Haan, his murder deeply embarrassed the Zionist organization, but at the time it could divert suspicion to the Arabs because of the well-known fondness of the deceased for Arab boys. Only in the 1960s was the Zionist responsibility gradually revealed. The enigmas in De Haan's life can be perceived to resonate posthumously. At present he is still regarded as the champion of both Dutch homosexual liberation and international anti-Zionist Jewish Orthodoxy.

HAAN, MEIJER DE (also **Meijer Jacob**, **Meijer Isaac**; 1852–1895), Dutch painter. De Haan was born in Amsterdam, where his father ran a flourishing biscuit factory. After having initially joined his two brothers in the family business, Meijer started studying painting under the Dutch academician Petrus Franciscus Greive from 1870 on. Because of his poor health, he was not able to complete his artistic education. During this period he worked in a somewhat academic style, painting portraits and choosing some Jewish subjects as well, as in *The Talmudic Dispute* (1878) and *Dietary Laws* (1880; also referred to as *Is This Chicken Kosher?*). Deeply disappointed by the poor response to his major opus, *Uriel d'Acosta*, on which he struggled for 10 years, he left for Paris in 1888 together with his student J.J. Isaacson. Through Vincent van Gogh's brother, Theo, Meijer de Haan met Gauguin, whom he accompanied to Brittany in 1889, where they worked together for almost two years in Le Pouldu and Pont Aven. De Haan became Gauguin's faithful student, making it possible for his idol to carry out his artistic experiments without disturbance by supporting him financially. Although he himself was influenced by Gauguin's

synthetic style and incorporated some of his motifs and arrangements, De Haan adhered to his own inclination towards contrast of light and darkness and true-to-nature colors. When Gauguin wanted to take his friend on a journey of adventure to Tahiti, De Haan's family intervened and threatened to stop his allowance if he continued his association with Gauguin. In 1890 De Haan returned to Amsterdam and, after a short stay in Paris eventually settled in Hattem, Netherlands, in 1891. Until recently little attention was paid to De Haan beyond noting that his pathetic likeness appears in several of Gauguin's works, but research has revealed De Haan as one of Gauguin's most talented disciples. His works figure in several museum collections, e.g., the Jewish Historical Museum, Amsterdam; the Van Gogh Museum, Amsterdam; The Kröller Möller Museum, Otterlo, Netherlands; Musée de Beaux-Arts, Quimper, France; and several important private collections.

[Jelka Kröger (2nd ed.)]

HA'ANAKAH (Heb. הַאֲנָקָה), the gratuity which the master was enjoined to pay his Hebrew bound servant when the latter was set free. This institution is the source, in Jewish law, of the laws of severance pay, i.e., payment of compensation to employees on their dismissal. The term *ha'anakah* has been interpreted as deriving from the word *anak* (אָנָק) in the sense of an ornament (around the neck, Prov. 1:9), i.e., that the bondsman must be "ornamented" with the gratuity, or in the sense of "loading on his neck" (Rashi and Ibn Ezra to Deut. 15:14).

Scriptural References

The duty of *ha'anakah* is enjoined in the Bible as both a negative and a positive precept – "when thou lettest him go free from thee, thou shalt not let him go empty," and "thou shalt furnish him liberally out of thy flock, and out of thy threshing floor, and out of thy winepress of that wherewith the Lord thy God hath blessed thee" (Deut. 15:13, 14) – and in this twofold manner has been included in the enumeration of the precepts (Maim., *Sefer ha-Mitzvot*, pos. comm. 196 and neg. comm. 233; *Semag, lavin* 178 and *asayin* 84; *Sefer ha-Hinnukh*, nos. 450, 484). The duty of *ha'anakah* arose upon completion of the six-year period of service (Deut. 15:12) and the grant was to be made out of the things with which the master's house had been blessed by virtue of the bondsman's service (Deut. 15:14; Kid. 17b; see statement of Eleazar b. Azariah). The duty of *ha'anakah* was enjoined as a reminder of the bondage in Egypt and exodus to freedom (Deut. 15:15), when the Israelites were "furnished" with property of their Egyptian masters (Sif. Deut. 120; Rashi and Rashbam, ad loc.). The institution of *ha'anakah*, unique to Jewish law as opposed to other ancient legal systems, was rooted in the special attitude toward a Hebrew bondsman, whose position was compared to that of a worker hired for a fixed term: "... for to the double of the hire of a hireling hath he served thee six years" (Deut. 15:18).

The Right to the Gratuity

It was laid down that the servant became entitled to the gratuity upon expiry of his term of service, or termination thereof on account of the Jubilee or his master's death, but not for reasons attributable to the servant himself, as, for example, when he gained his freedom by "deduction from the purchase price" (i.e., by refunding his master part of the price paid for himself, pro rata to the uncompleted term of his service): "You shall furnish to whomever you set free, but not to anyone who sets himself free" (Sif. Deut. 119; Kid. 16b). For this reason, the gratuity right was forfeited by a runaway, notwithstanding intervention of the Jubilee. In the opinion of R. Meir, one who was freed by deduction from the purchase price remained entitled to the gratuity since it took place with the master's approval (Kid. 16b); on the other hand, some of the *tannaim* denied the gratuity right to one who was set free on account of his master's death (TJ, Kid. 1:2, 59c).

In the *Midrash Halakhah* the gratuity right was extended both to the one sold into bondage through the court on account of his theft (Ex. 22:2) and to one who sold himself into bondage on account of utter poverty (Lev. 25:39), nor were these cases distinguished in the Mishnah (see H. Albeck, *Shishah Sidrei Mishnah, Seder Nashim*, 409f.). In a *baraita* disputing opinions were expressed on this matter, some scholars holding that only one sold into bondage through the court and not one selling himself was entitled to gratuity, with R. Eliezer (Kid. 14b) holding that both were entitled thereto; this dispute was carried over into the codes (Yad, Avadim, 3:12; Tos. Kid. 15a, s.v. *idakh*; and commentaries). One of the grounds for the view that one who sold himself into bondage was not entitled to the gratuity was that in doing so voluntarily, he transgressed the prohibition, "For unto Me the children of Israel are servants; they are My servants" (Lev. 25:55) "and not the servants of servants" (Kid. 22b; *Yam shel Shelomo*, Kid. 1:22).

Substance of the Gratuity Right

In tannaitic times the gratuity was looked upon as a personal right of the freed servant which was not transferable on death (Sif. Deut. 119), but the *amoraim* held it to be part of his remuneration and therefore transmissible "... just as the wages of a hired servant belong to his heirs, so here too..." (Kid. 15a; cf. also the version of Elijah Gaon, loc. cit. and see *Minhat Hinnukh* no. 482). Contrary to the principle of "R. Nathan's Lien" (see *Shi'buda de-Rabbi Natan) with regard to the general right to recover a claim from a third party indebted to the debtor, the gratuity right was not attachable by the servant's creditor (Kid. 15a–16b) and, according to the majority of the *posekim*, the creditor could not recover his debt from the amount of the gratuity – not even when the servant was already released and in possession of the gratuity payment (Maim. comm. to Kid. 1:2; cf. Nov. *Penei Yehoshua* Kid., final collection).

The duty of furnishing a gratuity was, according to the majority view of the scholars, independent of the measure of gain derived by the master from his servant's labor (Sif. *ibid.*;

Kid. 17a/b and cf. contrary opinion of Eleazar b. Azariah), but all the scholars accepted that a minimum was payable (although disagreeing on the amount: Kid. 17a), together with an increment according to the measure with which the master has been “blessed,” such increment being payable by the master with a “generous hand” (Sif. Deut., 119–20).

Two opposing views concerning the legal substance of the gratuity were expressed in the codes. According to some scholars it was not part of the servant’s remuneration for his labor but derived from the institution of charity (*zedakah*; Shakh. to ḤM 86:3) or of waiver and gift (*Sema*, ḤM, 86:2 and see *Giddulei Terumah* to *Sefer ha-Terumot*, 51:1:5); other *posekim*, following the *halakhah* of the *amoraim* concerning transmissibility at death, of the gratuity took the view that the gratuity was mainly to reward the servant for services rendered “beyond his wages” (Beit ha-Behirah, Kid. 15a) and therefore it had to be considered as part of his remuneration (*Peni Yehoshu'a* Kid. 16b; *Mishneh la-Melekh*, to Yad. *ibid.*).

Severance Pay

Adaptation of the gratuity institution to one of general compensation for employees upon dismissal was first mentioned toward the end of the 13th century, when it was stated that notwithstanding the abolition of Hebrew bound service, which was linked with observance of the Jubilee year, the employer still had to pay a gratuity to his departing worker regardless of the period of service (*Sefer ha-Hinnukh*, 450). Although this was phrased at that time as a moral obligation only, later scholars found it possible to recognize this duty of the employer as legally binding. In recent times this development has been acknowledged in the decisions of various scholars, and particularly in the judgments of the rabbinical courts in Israel, in three different ways:

(a) In accordance with the principle of the bound servant’s gratuity, in pursuance of the statements in the *Sefer ha-Hinnukh* (*ibid.*), it was held that “... the intention of the Torah was to make it the employer’s duty to be concerned about the worker’s future so that the latter should not depart from his work empty-handed” (PDR, 3:286f.). Because Jewish law compared the position of a bound servant to that of a hired worker, it was concluded that the latter “certainly enjoys all the former’s privileges... the more so since he does not transgress a prohibition” (i.e., that of selling himself into bondage – see above; resp. Maharam of Rothenburg, ed. Prague, no. 85; see also *Yam ha-Gadol*, no. 22).

(b) A different approach was adopted by Benzion *Ouziel (see his responsum quoted in *Tehukat Avodah* (see bibl.) 132f.). Holding that the law of the gratuity could not properly be relied upon to support the existence of a full legal duty to compensate an employee upon his dismissal, he preferred to base this duty on the scriptural admonition, “That thou mayest walk in the way of good men, and keep the paths of the righteous” (Prov. 2:20) in the same way as it was relied upon in the Talmud with reference to exempting the hired worker in certain circumstances from liability for damage negligently

caused to his employer (BM 83a). Although conceding that this talmudic principle was a matter of equity (*li-fenim mi-shurat ha-din*) rather than binding law, R. Ouziel followed the opinion of numerous *posekim* that it was nevertheless enforceable by the court (*Mordekhai* BM 257; Sh. Ar., ḤM 12:2, and *Rema* in loc.; also *Bah* ḤM 12), and therefore decided that the court, “having due regard to the respective positions of the parties and reasons for the worker’s dismissal or for his own departure,” was empowered to order an employer to compensate his worker.

(c) Since it was not generally accepted that an obligation solely *li-fenim mi-shurat ha-din* is enforceable by the court, some scholars preferred to base the principle of severance pay on the Jewish legal source of custom (see **Minhag*; PDR, 1:330f.). Thus the rabbinical courts, applying the rule that “custom overrides the law” has special reference to labor law (TJ, BM 7:1; 11b) and recognizing “the spread in our time of a usage to pay severance pay,” have laid down that severance pay “is not a matter of grace but a claim under law” which is payable even if the employer be a charitable institution. In arriving at this decision the rabbinical courts incorporate also the principle of the gratuity, holding that particular significance attaches to custom in this instance, since “we find a basis for it in the Torah and *halakhah*,” and since this custom is founded on the Torah, “the gratuity payable to the Hebrew bound servant is therefore fit and proper” (PDR, 1:330f., 3:286f.; 4:120).

It may be noted that R. Ouziel, in giving his above-mentioned decision (in 1945), specifically refrained from basing the severance pay obligation on custom – for the reason that such a usage was not yet sufficiently known and widespread. A mere 10 years later the court, seeking a basis for full legal recognition of the severance pay duty, had reason to find as follows: “Now that the custom has spread and become accepted in the whole country, and is common and practiced daily, it must be followed and the above-mentioned statements [of R. Ouziel] no longer apply.” This is an illustration of great flexibility in recognizing the establishment of a custom.

In the years since the establishment of the State of Israel, the rabbinical courts have laid down a number of rules concerning the matter of severance pay, including the following provisions: compensation is to be paid at the customarily accepted rate, or if this be uncertain, as determined by the court (PDR, 1:332f.); it is payable also to a temporary employee – if he has worked for a period approximating two years (*ibid.*), and also to a part-time employee (4: 129), but an independent contractor is not entitled to severance pay (3:272). An innovation was the rule that the employer is obliged to provide his worker with one month’s prior notice of dismissal, or a month’s remuneration in lieu thereof. This was deduced by the analogy of the landlord’s duty, in Jewish law, to provide the tenant with a month’s notice of eviction, in order that the latter be not deprived of a roof over his head; *a fortiori* in the case of a worker, so that he be given an opportunity to find an alternative source of livelihood. (Sh. Ar., ḤM 312:5; PDR, 4:130

and 3:281–3, where disputing opinions are quoted on the aptness of the analogy.)

In the State of Israel

In Mandatory times the obligation of severance pay was upheld in numerous judgments of the Mishpat ha-Shalom ha-Ivri. This fact contributed toward entrenchment of the usage, which came to be recognized as legally binding in a decision of the Mandatory High Court (Cohen v. Capun, in: *Palestine Law Reports* 7 (1940), 80, 88) and until 1963, custom alone formed the legal basis for the payment of severance pay under the general law. Thus the Supreme Court of Israel, in considering the antiquity of the above custom, stated: “It is common cause that the principle of severance pay is rooted in the scriptural duty of *ha'anakah*” (PDR, 5:275; 17, pt. 2:1255). The lack of statutory guidance led to many difficulties in the application of the custom. In 1963 the Severance Pay Law was enacted by the Knesset, with emphasis on the fact that the fundamental idea of this law derived from traditional Jewish law. The following are some of the law's main provisions:

A person dismissed by his employer after having been continuously employed for one year or – in the case of a seasonal employee – for two seasons in two consecutive years, is entitled to severance pay at the rate of a month's wages per year of employment for a “salaried employee” and two week's wages per year for employment for a “wage earner” (i.e., one whose remuneration is paid on the basis of a lesser period than one month; secs. 1, 12); in certain circumstances the employee is entitled to severance pay following his own resignation, i.e., by reason of an appreciable deterioration of his conditions of employment, or on account of his or a member of his family's state of health, or the transfer of his residence (secs. 6–8, 11). The employee is also entitled to severance pay if his employment has ceased owing to the death of his employer, and for certain other reasons (sec. 4) and upon the employee's own death, severance pay is payable to his survivors (sec. 5). A person employed under a contract for a fixed period is entitled to severance pay at the end of the period, as if dismissed, unless the employer has offered to renew the contract (sec. 9). Severance pay is deemed to be wages payable in precedence to all other debts (sec. 27) and a composition and acknowledgment of discharge as to severance pay are invalid unless reduced to writing and expressly state that they relate to severance pay (sec. 29).

[Menachem Elon]

SEVERANCE PAY – SOCIAL OBLIGATION, NOT SALARY The question of how to characterize severance pay – whether as a social right given to an employee who has been dismissed, irrespective of his salary, or as part of the salary – arose in the Israel Supreme Court in the case of *Ben Moshe* (CA 293/73, *Ben Moshe v. Ben Moshe*, 28(2) PD 29). In that case, the question arose in the context of divorce proceedings, regarding the scope of the husband's obligation to pay maintenance to the wife. The woman was entitled to receive a certain amount of money as severance pay from her employer. Classifying that severance pay as salary would result in it being regarded as

money earned through her handiwork (*ma'asei yadeha*); consequently, her husband would be entitled to deduct the sum received as severance pay from his obligation to pay maintenance, inasmuch as her maintenance was offset by her income earned through her own handiwork (see *Maintenance). If, on the other hand, severance pay is classified as a social right unrelated to salary, it would not affect the husband's obligation to make maintenance payments.

The Court (Justice Kister) examined the one-time grant of severance pay by analogy to the laws of *ha'anakah* paid to a Jewish slave under Jewish law, in accordance with the aforementioned explanation of *Sefer ha-Hinukh*, (§482), on the basis of which he drew his conclusion regarding the nature of severance pay. Rambam rules that *ha'anakah* is given to the slave himself and not to his creditor (Yad, Avad. 3.15; p. 33 of the decision). *Me'irat Einayim* stresses that, unlike salary, which may be subject to a lien, *ha'anakah* is not subject to lien because “*ha'anakah* is not given to the Jewish slave under the rubric of a debt, but rather under the rubric of waiver and gift, according to the principles of amnesty” (*Me'irat Einayim*, Sh. Ar, חמ, 86.2), while the *Shakh* rules that “it is known that *ha'anakah* is derived from the laws of *zedakah* (alms) (*Shakh*, ad loc., 3; p.34 of decision).

This was the basis for the Court's conclusion that severance pay is in the order of a social obligation imposed on the employer who fired his employee and is not a component of the employee's salary. (The Court noted that the term “laws of *zedakah*” does not imply that this is a purely moral obligation that cannot be imposed through coercion, inasmuch as the term *zedakah* derives from the same root as *zedek* (justice) and there are cases in which the giving of *zedakah* may be legally coerced. The term “laws of *zedakah*” should therefore be imputed the same meaning as the modern term “social obligations,” which are also imposed by coercion). Accordingly, severance pay is not viewed as the wife's “handiwork” and should not be offset against the maintenance payments (decision, *supra*, pp. 33–35).

The Jerusalem Rabbinical Court (File 51/569, 18 PDR 346) dealt with a similar case, in which the provisions of a divorce agreement compelled the husband to pay his wife a specified percentage of his salary. The husband was fired from his job, and the question was whether his severance payment should be regarded as salary, in which case the husband would be obligated to pay his wife part of it pursuant to the agreement, or whether it should be regarded as a grant that is not regarded as salary. The minority opinion (Rav Kilav) was that, as law of the state requires severance payment, the employment contract between the employee and the employer was concluded in reliance upon the existence of this obligation, and therefore it should be viewed as part of the salary. On the other hand, if the employee and employer had agreed upon severance pay in excess of the statutorily mandated sum prior to the employee's dismissal, then the balance in excess of the statutory requirement should be viewed as a grant that is not part of the salary.

However, the majority opinion (Rabbi S. Fisher) was that severance pay is to be regarded as additional payment for years of service, similar to manager's insurance, and therefore should not be regarded as part of the salary but rather as a separate grant. Nonetheless, the majority concurred that severance pay not be regarded as "*ha'anakah*" within the meaning of that term in Jewish law, but rather as money paid by force of custom.

For a further discussion of the obligation to pay severance pay as a matter of the custom of the State and not as an obligation derived from the law of *ha-anaka*, see the opinion of the High Rabbinical Court in Case 59/734, PDR 21 188.

THE LEGAL POSITION IN THE STATE OF ISRAEL. As stated, the Rabbinical Court held that there are halakhic grounds for the duty of giving advance notice prior to an employee's dismissal or, alternatively, to provide compensation for dismissing an employee without prior notice (19/2535, 3 PDR 272; 4 PDR 126). In 2001, the Prior Notice of Dismissal or Resignation Law 2001, was enacted. This law establishes the employer's duty to give an employee prior notice of his/her impending dismissal within a certain prescribed period of time, as well as the employee's duty to give his employer prior notice a certain period of time prior to resigning. The law also provides that an employer dismissing an employee without prior notice is required to pay the employee an amount equivalent to his regular salary for the period of time prescribed, and that an employee who resigned without prior notice must pay his employer a penalty for the period during which the notice was not given.

HAARETZ (Heb. **הארץ**), Israeli daily newspaper published in Tel Aviv. Established on June 18, 1919, by a group of businessmen headed by Isaac Leib *Goldberg and S. Salzman, it was originally named *Hadashot Haaretz*. Edited by N. *Tourof, the contributors were Hebrew writers and journalists, recent immigrants from Russia. Its name was subsequently changed to *Haaretz*. The newspaper has since then had four editors. Dr. Moshe Gluecksohn was appointed editor in 1922, serving until 1939, a period during which the paper moved from Jerusalem to Tel Aviv. Gluecksohn's influence as editor was paramount, and during his editorship the paper acquired its liberal orientation. It was noted for its quality of writing, including its

literary supplement. Its weak financial base made the newspaper dependent partly on philanthropists, including subsidies from Zionist institutions. In 1939 Salman *Schocken, a German immigrant, acquired the paper, appointing his son Gershon *Schocken as editor and publisher, a post he held for 51 years, and one characterized by absolute freedom of expression. Becoming an elitist highbrow newspaper, *Haaretz* was identified with the liberal wing of the Zionist movement. Its editorial policy was characterized by a minimalist stance on the Arab-Israeli conflict, and supported territorial withdrawal from territories captured in the 1967 war. Economically, the newspaper championed free enterprise in the face of the country's socialist ethos. It saw human rights as a supreme value. It supported separation of religion and state. While he saw the newspaper as an ideological vehicle, Schocken succeeded in strengthening its weak economic base, partly through establishing a chain of local newspapers in the 1980s. Upon his death in 1990, his son, Amos, became publisher, and Hanoch Marmor, editor. A graphic artist, and previously editor of *Ha-Ir*, the Schocken chain's local Tel Aviv newspaper, Marmor shook off the stuffy German heritage of the newspaper and attracted younger and non-Ashkenazi readers. In addition to the two main sections for news and for features and editorial comment, Marmor introduced a lifestyle section called "Galley," featuring culture and entertainment pieces, and a midweek Books Supplement. Noteworthy was its coverage of developments in the Palestinian Authority created after the 1993 Oslo Accords. The Palestinian Intifada beginning in 2000 brought to the surface sharp divisions inside the editorial board between a left of center stance, identified with Marmor, and the more extreme left-wing position of other editorial board members and the publisher, Amos Schocken, whose views reflected a "post-Zionism" outlook. Marmor resigned in 2004 after Schocken separated the newspaper's economic section from the main paper and made it an editorially independent supplement called "The Marker." David *Landau was appointed as Marmor's replacement. In 2005 the newspaper's circulation was 70,000 daily and 90,000 on weekends. *Haaretz's* influence broadened with the establishment in 1997 of an English edition, of which Landau was the founding editor, which included the local printing of the *International Herald Tribune* and which had a daily circulation in 2005 of 12,000 and 20,000 on weekends. According to *Haaretz*, the newspaper's Internet websites in Hebrew and English had, respectively 700,000 and 1 million monthly users in 2005.

[Yoel Cohen (2nd ed.)]

HAAS, FRITZ (1886–1969), German zoologist. Born in Frankfurt, Haas was the youngest of four children in a banker's family. His early interest in zoology was focused on mol-

lusk, and his entire scientific career was devoted to a study of these animals. In 1911 he was appointed assistant keeper of invertebrate zoology at the Naturmuseum Senckenberg, Frankfurt. In 1914 Haas was on a collecting visit to the Pyrenees and was stranded in Spain for the duration of World War I. He put these years to productive use, and did extensive investigations with Spanish mollusks, which resulted in more than a score of papers on the molluscan fauna of Spain. On returning to Germany after the war, he became editor of the *Archiv fuer Molluskenkunde* and in 1922 was promoted to keeper of invertebrate zoology. With the advent of the Nazi regime, Haas was removed from his posts in 1936, and fled to the U.S. In 1938 he was appointed curator of lower invertebrates at the Field Museum of Natural History, Chicago. Though officially retired, from 1959 Haas continued his scientific activity with vigor, publishing a number of important monographs during the following decade, including the definitive monograph on freshwater clams in *Das Tierreich*.

HAAS, GEORG (1905–1981), Israel zoologist. Born in Vienna, Haas studied zoology and paleontology. From 1931 to 1932 he was a visiting investigator at the Kaiser Wilhelm Institute in Berlin, where he did research on protozoan cytology. In 1933 he immigrated to Israel and joined the staff of the Hebrew University of Jerusalem. He was appointed professor in 1954.

Although Haas chief interest was the functional anatomy and evolution of reptiles, he also published extensively on the mollusks of Israel and on fossil reptiles and mammals of the region. A dedicated teacher, he had a seminal influence on the growth of zoological science in Israel, and many of Israel's outstanding zoologists were trained in his laboratory.

[Mordecai L. Gabriel]

HAAS, HUGO (1901–1968), Czechoslovakian actor and film director. Haas was with the National Theater in Prague before World War II and also acted in many Czech films. In 1939 he escaped from Nazi-occupied Prague and went to the United States. On Broadway, he appeared in Čapek's *R.U.R.* and in a dramatization of Tolstoy's *War and Peace*. He eventually formed his own company in Hollywood. Among his pictures were *Pick-up* (1951) and *Edge of Hell* (1956). He also played the title role in the TV series *Rabbi on Wheels*. In 1963, Haas settled in Vienna.

HAAS, LEO (1901–1983), Czech painter and cartoonist. His most important works were his drawings in the concentration camps of Nisko and Theresienstadt (Terezin) during World War II. In tortured lines and a grotesque expressionism, they captured the squalor and misery of human beings awaiting death. He hid the drawings in Terezin, but later recovered them, having survived Auschwitz, Sachsenhausen, and Mau-

thausen. Haas studied in Berlin and Vienna, and became director of a lithographic printing house in his birthplace, Opava. After the war, he returned to Czechoslovakia to become one of the leading political cartoonists of the Communist press. In 1955 he left for East Germany. He is represented in museums in Prague and East Berlin.

[Avigdor Dagan]

HAAS, LUDWIG (1875–1930), German politician. Born in Freiburg, Baden, Haas practiced law in Karlsruhe, where he was a city councilor from 1908 to 1919. In 1912 he entered the Reichstag as a member of the Progressive People's (later Democratic) Party. On the outbreak of World War I Haas volunteered for the army and was decorated for distinguished service on the Western front. At the end of 1915 he was seconded to the German military government of occupied Poland as head of the Jewish department, where he worked in close contact with Emanuel Carlebach and Pinchas *Kohn in an attempt to reorganize Polish Jewry. The Jewish community statute, which was the fruit of this collaboration, regulated the life of Polish Jewry until the end of the Polish republic in 1939. During the war he protested against the census of the Jewish soldiers in the German army (1916) because of its antisemitic connotation. After the 1918 revolution in Germany, Haas became minister of the interior in the first republican government of Baden. He continued to represent his party in the Reichstag, and became its chairman in 1929. Haas founded the *K-C Jewish student society at Freiburg, supported the Reichsbanner Schwarz-Rot-Gold (1924), and was active in the *Central-Verein deutscher Staatsbuerger juedischen Glaubens (Central Union of German Citizens of the Jewish Faith).

Schulz (ed.), *Kritische Solidaritaet – Betrachtungen zum deutsch-juedischen Selbstverstaendnis* (1971), 119–74.

HAAS, SOLOMON BEN JEKUTHIEL KAUFMANN (d. 1847), Moravian rabbi and author. Haas studied under Benjamin Wolf Loew, rabbi of Kolin, then became a member of the *bet din* of Holleschau and later rabbi of Strassnitz (Moravia). Haas is the author of glosses to all four parts of the Shulhan Arukh. Those to *Yoreh De'ah*, *Orah Hayyim*, and *Even ha-Ezer* were published under the title *Kerem Shelomo* (Pressburg, 1840, 1843, and 1846 respectively), which was highly praised by Moses *Sofer, Nehemiah *Trebitch, and Haas's teacher Benjamin Wolf Loew. He later made extensive additions to it. Those to *Hoshen Mishpat* were published in the *Likkutei Haver ben Hayyim* of F. Plaut (Munkács, 1855). Other works, still in manuscript, include a volume of sermons of considerable interest for the cultural history of the time, and a collection of poems, *Benot ha-Shir* (completed in 1820),

consisting of secular songs and plays, some of them translated from German into Hebrew.

[Joseph Elijah Heller]

HAAS, WILLY (1891–1973), German essayist, critic, and translator. Born in Prague, where he studied law, Haas belonged to the literary circle of Franz *Werfel, Paul *Kornfeld, Max *Brod, and Franz *Kafka. While still a student he published in the *Herder-Blaetter* (1911–12), which was an early organ of the young German-Jewish poets of Prague. Moving to Berlin after the war, in which he served as officer, Haas pursued his career as a journalist, writing film reviews and screenplays and publishing among other things an essay in 1922 on his spiritual teacher Hugo von *Hofmannsthal emphasizing his Jewishness (in: *Juden in der deutschen Literatur*, ed. G. Krojanker), for which he was criticized by Hofmannsthal himself. Haas founded and edited the weekly, *Die literarische Welt*, from 1925 to 1933, which soon turned out to be one of the most important intellectual platforms in the Weimar Republic. With the rise of Nazism Haas went back to Prague trying to continue his weekly under the title *Die Welt im Wort*, and in 1939 to India working for a British film company. He returned to Germany in 1947 and joined the editorial staff of *Die Welt* in Hamburg. Haas dealt with the more profound problems of contemporary literary and cultural life and became one of postwar Germany's leading critics and essayists. He published books on Brecht (1958), Hofmannsthal (1964), the Belle Époque (1967), and his autobiography, *Die literarische Welt* (1957), where he gives a detailed account of his life in three countries.

[Rudolf Kayser / Andreas Kilcher (2nd ed.)]

HAASE, HUGO (1863–1919), German socialist leader. Born in Allenstein, East Prussia, and a lawyer by profession, Haase became a socialist with a deeply humanitarian approach. He was first elected to the Reichstag as a Social Democrat in 1897 and after August Bebel's death in 1912 led the socialist faction. As a lawyer and attorney he defended the Social Democrats Karl Liebknecht and Otto Braun. At the second Socialist International, Haase worked for Franco-German friendship and the prevention of a European war. On the outbreak of World War I in August 1914 he was persuaded by the majority of the party that this was a war of self-defense and supported the German government, saying: "In the hour of danger we will not leave the Fatherland in the lurch." In 1915, however, he joined Karl Kautski and Eduard *Bernstein in a plea to stop the war, and left the Social Democrats to form the Independent Social Democrat Party which fought against the government's annexationist policies. In 1918, on the defeat of Germany and the outbreak of revolution, Haase became one of six mem-

bers of the provisional government and for a time shared the presidency of the Council of the People's Deputies. He soon resigned, on the ground that the majority Socialist Party had deviated from the strict socialist line toward the bourgeois democratic establishment, and he formed his own left-wing opposition group in the Weimar National Assembly. After the foundation of the Communist Party he supported the reunion of the left-wing opposition with the Social Democratic Party. Haase was attacked by a German nationalist in October 1919 and died later as a result of his injuries.

HA-ASIF (Heb. הַאֲסִיף), six literary annuals, published in Warsaw intermittently from 1884 to 1894 and edited by Nahum *Sokolow. *Ha-Asif* was the first attempt to bring Hebrew literature to the masses at a popular price: volume 1 reached a circulation of 12,000, an unusual achievement for the period. Editorial policy, which favored cultural Zionism, considered Erez Israel as one of the solutions to the Jewish problem, "however, to put all our trust in one suggestion is a great danger." Consequently *Ha-Asif* favored constructive action on behalf of Diaspora Jewry mainly in the cultural and intellectual realms. *Ha-Asif*'s ample volumes were filled with a variety of materials. The earlier volumes featured a practical, almanac-type section, which was dropped in the later issues, completely literary in content. Sokolow wrote the annual review in which literary matters were stressed. Among his colleagues were D. Frischmann, M. Weber, and I.H. Zagorodski. The contributors to the literary section included the leading authors of the period. Shalom Aleichem first published his original stories in Hebrew in *Ha-Asif*. In the Jewish studies section, which also occupied a prominent position, almost all Jewish scholars of note participated. Some published complete books (S. Bernfeld, translation of M. Kayserling's book on the Spanish and Portuguese Jews; *Ha-Asif* 4 (1887)). Others published ancient manuscripts. Sokolow's detailed reviews of new books and journals in Jewish studies dominated the criticism section. E. Atlas, another critic, published a series of sharp critical articles which are still of some relevance to contemporary criticism. Criticism of rabbinical literature – which, in general, was ignored by Hebrew periodicals – was published by I. Suwalski (vol. 4). *Ha-Asif* also contained articles about the Jews of Erez Israel in the 19th century (J. Goldman, vols. 1–4 and Z. Wisotsky, vols. 4 and 7). J.D. Eisenstein published a survey of Jewish life in the United States (vol. 2). It also contained a section devoted to general sciences, including medical, scientific, and technical materials. The first Hebrew article on the flora of Erez Israel also appeared in *Ha-Asif*. The success of *Ha-Asif* brought about the appearance of similar annuals. According

to Sokolow, the mass circulation of *Ha-Asif* was a main cause of the creation of the Hebrew press (1886).

[Getzel Kressel]

HAAVARA, a company for the transfer of Jewish property from Nazi Germany to Palestine. The Trust and Transfer Office Haavara Ltd., was established in Tel Aviv, following an agreement with the German government in August 1933, to facilitate the emigration of Jews to Palestine by allowing the transfer of their capital in the form of German export goods. The Haavara Agreement is an instance where the question of Jewish rights, Zionist needs and individual rescue were in deep tension. Jewish organizations outside of Germany had declared a boycott against German goods and hoped to delegitimize the Nazi regime. The Zionists saw this agreement as a way of attracting Jews to Palestine and thus rescuing them from the Nazi universe even if that meant cooperation with Hitler. For a time the Nazi program of making Germany Judenrein and the Zionist policy of seeking *olim* coincided. The amounts to be transferred were paid by prospective emigrants into the account of a Jewish trust company (PALTREU – Palestina Treuhandstelle zur Beratung deutscher Juden) in Germany and used for the purchase of goods, which the Haavara then sold in Palestine. The proceeds, in Palestine currency, were paid to the emigrants living in Palestine. The rate of exchange was adjusted from time to time by the Haavara according to the disagio, necessitated by the subsidy which the Haavara granted the Palestinian importers, to make up for the steadily deteriorating value of the Reich mark, so the German goods could compete with other imports. The ensuing disagio, borne by the emigrants, accordingly increased from 6% in 1934 to 50% in 1938. The major part of the transfer proceeds provided the 1,000 Palestine Pounds (then \$4,990) necessary for a “capitalist” immigration certificate of the Mandatory administration, but also for other categories of immigration, such as Youth Aliyah, students, and artisans as well as for the transfer of public funds. The transfer weakened the boycott of German goods declared by many Jewish organizations around the world, and thus met with considerable opposition. The controversy was settled at the Zionist Congress in Lucerne (1935) which decided by a vast majority in favor of the transfer and placed the Haavara under the supervision of the *Jewish Agency. The Zionists sought to attract immigrants to Palestine, most especially the affluent German Jewish immigrants and the Germans sought to get rid of their Jews, increase their exports and a propaganda victory by dividing the Jews regarding the boycott. The Haavara continued to function until World War II, in spite of vigorous attempts by the Nazi Party to stop or curtail its activities. The total transfer amounted to LP 8,100,000 (Palestine Pounds; then \$40,419,000) including LP 2,600,000 (then \$13,774,000) provided by the German Reichsbank in coordination with Haavara. The Haavara transfer was a major factor in making possible the immigration of approximately

60,000 German Jews to Palestine in the years 1933–1939, and together with the money invested by the immigrants themselves, in providing an incentive for the expansion of agricultural settlement and for general economic development. It also served as a model for a similar arrangement with the Czech government and the immigration of several thousand Jews on the eve of World War II.

[Ludwig Pinner]

HABAKKUK (Heb. חֲבַקְקִי; cf. Akk. *ḥambaququ* or *ḥabbaququ*, a fragrant herb), prophet at the time of the *Chaldeans' ascent to power in the early seventh century B.C.E. (Hab. 1:6), a time apparently after the Egyptian defeat at Carchemish (Jer. 46:2) and Hamath, when the Babylonian forces under Nebuchadnezzar occupied the area. The Book of Habakkuk is the eighth unit within the book of *tere'asar*, “the twelve,” and consistently follows *Nahum in all textual witnesses. Habakkuk contains only three chapters (totaling 56 verses) and is traditionally divided into two parts according to content: narrative (chapters 1 and 2) and prayer (chapter 3). In many places the text is either enigmatic or corrupt. The Peshar Habakkuk from Qumran comments only on the first two chapters of our biblical book, thus supporting the view that the third chapter was not part of the original book (see below). The narrative consists of a series of five short prophetic utterances. The first (1:2–4) is a complaint (reminiscent of Jeremiah 12:1–2 and much of the book of Job) against God for allowing violence and injustice to prevail unchecked in the land, one of the great theological problems in biblical thought. The second utterance (1:5–12) is a divine oracle prophesying that the instrument of judgment – the Chaldeans – is near at hand. The depiction of the Chaldeans is ambivalent and its precise sense is debated. On the one hand, the Chaldeans are God's instrument; on the other hand, their description fits the typical biblical description of “the enemy” (e.g., Deut. 28:49–53; Isa. 5:26–30; Jer. 4:13; 5:15–17; 6:22–23). In 1:10 the prophet speaks of the Chaldeans' power in language usually reserved for describing the power of God: “And they scoff at kings, and princes are a derision to them” (cf. “who brings princes to nought, and makes the rulers of the earth as nothing” Isa. 40:23) and in the last words of verse 11: “guilty men, whose own might is their god” (in 1QpHab it is written “he makes his own might to be his god”). Thus, the instrument of justice is none other than the wicked enemy. The ambivalent description of the Chaldeans and the reiteration of the original question about divine justice have brought scholars to conclude that the Chaldeans are not the answer to the prophet's complaint but a heightened form of that complaint. When he speaks of the injustice in the world, Habakkuk is referring to the Chaldeans and their deeds. Like others who asked why the unjust thrive, Habak-

kuk relates the question to a specific historical situation. The third utterance (1:13–17) asks why God allows the wicked to devour the righteous, to which the fourth utterance (2:1–5) responds: eventually the wicked shall fail, but the righteous shall live by their faithfulness. The first biblical appearance of *qez* (“end”) in its apocalyptic sense is in Habakkuk, and subsequently in the Bible this usage is found exclusively in Daniel (8:19; 11:13, 27, 35; 12:4–13). Indeed, Dan. 10:14 looks like a “fulfillment” of Hab. 2:3.

The fifth utterance (2:6 ff.) takes the form of five parables that begin with “woe to him” and stresses the punishment that the wicked will receive (some of the parables are found differently phrased in other books of the Bible, e.g., Isa. 14, 51; Jer. 22:13, which indicates their popularity among the people of Judah). The fifth parable contrasts idols – brilliantly ornamented, but utterly lifeless and dumb – to the divine glory of God, which strikes the whole world dumb.

The prayer comprising chapter 3 is divided into four sections (3:1–2, 3–7, 8–15, 16–19), the second and third sections recalling God’s deeds, and the first and fourth constituting the essence of the prayer. Most scholars hold that chapter 3 was not part of the original Book of Habakkuk and bears no connection to the first two chapters. Other scholars, however, believe the entire book to be a single, continuous literary piece, and view chapter 3, which describes the punishment of the wicked, as a response to the questions raised in chapter 1. The prayer opens with “Upon Shigionoth” (3:1). The term *šiggāyôn* also occurs in the rubric of Ps. 7:1, and is probably borrowed from Akkadian *šigû* (“lamentation,” “type of prayer”). The closing, in the manner of the Psalms with “For the Leader with string music” (*la-menazze’ah bi-neginotai*; 3:19), seems to be the introduction to another composition, now lost. In a spirit similar to that found in the beginning of the Blessing of *Moses, the Song of *Deborah, and Psalm 77 (17 ff.), the prophet entreats the return of God’s compassion. The prayer cites as precedent God’s actions at the time of the Creation (Isa. 51:9; Hab. 3:2). Just as in other poetry in the Bible and in Ugaritic and Mesopotamian sources, the creator god had to fight off the forces of chaos such as the sea (Hab. 3:8, 9). References to historical battles combine with mythic ones. The sun and moon are personified and the ancient plague god *Resheph (3:5) brings pestilence. There may be a reference to the horned god Haby known from Ugaritic texts in Habakkuk 3:4. In the historical past, God delivered His people and His anointed one, smiting the wicked and “laying him bare from thigh to the neck” (Hab. 3:13). After recounting the past, the prophet looks to the future and prays: “May I be relieved on the day of trouble, when the [Chaldean?] people invade with their troops” (3:16). Habakkuk concludes by describing the effects of drought (3:17), a symbol of evil, but nevertheless his hope and faith: “yet I will rejoice in the Lord, I will exult in the God of my salvation” (verse 18).

The language of Habakkuk in general, and especially in the two middle sections of the prayer, is vigorous and rich, and abounds in ancient poetic and rhetorical forms,

of which analogous examples appear in early biblical poetry (Blessing of Moses, Song of Deborah, etc.). It occasionally resembles Ugaritic poetry in construction, and at times also in the use of rhetoric (as in the use of climactic parallelism, 3:2, 8, 13), and archaic diction. Linguistic features that once argued for a late dating of the book (such as the absence of the definite article) might also be taken as signs of antiquity.

According to *Seder Olam Rabbah* 20, Habakkuk lived at the time of Manasseh (698–642 B.C.E.). Critical scholars now contend that he lived in the time of Jehoiakim (608–598 B.C.E.), and some place him earlier, at the end of Josiah’s reign (639–609 B.C.E.), when the Assyrian kingdom was destroyed. However, Y. Kaufmann dates the prayer to the brief reign of Jehoiachin (597 B.C.E.). The hypothesis of B. Duhm that the word *Kasdim* (Chaldeans, 1:6) is to be emended to Kittim (Heb. כִּיְתִים), and that it refers to the campaigns of Alexander the Great, has not been found acceptable. The *Dead Sea Scrolls show that as early as the time of the Second Temple the word “Chaldeans” was interpreted as referring to the Roman campaigns in the Orient in the sixties of the first century B.C.E. (see *Peshar).

According to legend, Habakkuk was the son of the Shunammite woman (Zohar, 1:7; 2:44–45). This identification is apparently based on his name, for the verb *hbq* (“to embrace”) is employed in connection with the annunciation of the birth of the woman’s son in II Kings 4:16. In the apocryphal story of Bel and the Dragon, which tells of Daniel’s exploits against Babylonian idolatry, Habakkuk is presented as a contemporary of Daniel, probably because both mention the arrival of the Chaldeans (Hab. 1:6; Dan. 1:1). In the same story he is considered to be the son of Jeshua the Levite (Bel, 1). This reference is apparently to a levite family called Jeshua, which is mentioned in Ezra 2:40, et al. According to Rabbi Simlai (2nd generation *amora*), Habakkuk based all the 613 commandments received by Moses on the single principle that “the righteous shall live by his faith” (Hab. 2:4; Mak. 23b–24a). This may be a response to the Christian use of the verse by Paul as a proof-text for the doctrine of justification by faith rather than by works (Rom. 1:17; Gal. 3:11).

[Yehoshua M. Grintz and Dvora Briskin-Nadiv /
S. David Sperling (2nd ed.)]

In the Arts

The prophet Habakkuk has inspired no literary works of major importance but is of some significance in art and music. He is identified with the prophet brought by an angel to nourish Daniel in the lions’ den, and thus his attributes are an angel and a basket of bread. In Christian typography he is one of the prophets who foresaw the Nativity. He appears alone on the wooden doors of Santa Sabina, Rome (fifth century); in the 12th-century *Christian Typography* of Kosmas Indicopleustes (Vatican); and on the door of the Vierge Dorée (Amiens Cathedral, 13th century). The famous 15th-century statue by Donatello known as *Lo Zuccone* (“The Bald One”) represents

Habakkuk. Formerly in the Florence Campanile, it is now in the Museo dell' Opera del Duomo, Florence. A 17th-century statue by Bernini in the Chigi Chapel at Santa Maria del Popolo, Rome, shows the angel lifting Habakkuk by his hair. He is frequently seen in company with Daniel. There are examples on fourth-century sarcophagi; on a sixth-century Coptic textile; again in the Kosmas Indicopleustes manuscripts; on a 13th-century bas-relief from the portal of the Virgin, Laon Cathedral; and on stained-glass windows in Auch (16th century) and Cambridge (17th century).

The psalm-like third chapter of Habakkuk is included among the *cantica* in the liturgy of all Christian denominations, and is generally sung to a simple psalmodic formula. There are a few art-music settings of this section, such as F. Giroust's *Domine quidivi auditionem* for chorus (1779) and, in the 20th century, cantatas entitled *Habakkuk* by György Kósa (1954) and Jacques Berlinski (b. 1913).

HABAKKUK, PROPHECY OF, book attributed to Habakkuk, in an appendix to the sixth-century lists of Apocrypha, the Stichometry of Nicephorus and that of Pseudo-Athanasius. It is mentioned together with works of Baruch, Ezekiel, and Daniel. Further, the title of **Bel and the Dragon* in the Septuagint (but not Theodotion) reads: “From the prophecy of Habakkuk son of Jesus of the tribe of Levi.” This story tells how Daniel was cast into a lion’s den. On the sixth day of his imprisonment Habakkuk was taking food to the reapers in the field in Judea, when he was seized by the hair and miraculously transported to Babylon, where he gave the food to Daniel. This story appears in the *Life of Habakkuk* in the Pseudo-Epiphonian *Lives of the Prophets* (ed. Torrey, 28ff.) in a somewhat different version. The *Life* also ascribes to Habakkuk inter alia visions of the destruction, restoration, and subsequent destruction of the Temple. These might perhaps also reflect the Habakkuk apocryphon. The story is also known (apparently from Christian sources) in later Jewish works such as *Josippon*, *Chronicle of Jerahmeel* (ed. Gaster, 220ff.), and *Sefer Yuhasin* (1925), 238.

[Michael E. Stone]

HABAS, BRACHA (1900–1968), Hebrew writer and editor; wife of David *Hacohen. Born in Alytus, Lithuania, she was taken to Palestine in 1907. After a period of teaching she turned to journalism, serving on the editorial board of the newspaper *Davar* (1935–53) and of the Am Oved publishing house. Among other publications she edited *Davar li-Yladim* and *Devar ha-Shavu'a*. Her books include: *Ḥomah u-Migdal* (“Stockade and Tower,” 1939); *Korot Ma'pil Za'ir* (“Story of a Young Immigrant,” 1942); *Derakhim Avelot* (“Paths of Mourning,” on the DP camps and the Jewish Brigade, 1946); *David Ben-Gurion ve-Doro* (1952); *Pagodot ha-Zahav* (“Golden Pagodas,” Burmese legends, 1959); *Benot Ḥayil* (on Palestinian ATS volunteers, 1964); *Ḥayyav u-Moto shel Joop Westerweel* (“The Life and Death of Joop Westerweel,” 1964); *Tenu'ah le-Lo Shem* (“Movement without a Name,” on volunteer work by veteran settlers among new immigrants, 1965); *He-Ḥazer ve-ha-Givah* (“The Yard and the Hill,” the story of kevuzaṭ *Kinneret, 1968). A list of her works translated into English appears in Goell, *Bibliography*, 28, 88, 96.

[Getzel Kressel]

HABBĀN, a town on the western border of *Ḥaḍramawt, formerly in the Wāḥidī Sultanate, an important junction and post on the incense way. It was the extreme southeastern settlement with a Jewish community. During the last generation of their life in *Yemen the Jews of Ḥabbān lived under the protection of Sulṭān Nāṣir ibn 'Abd Allah ibn Muḥsin. The community of Ḥabbān was the religious and social center for the Jewish communities around it. It numbered about 450 people, most of them divided into five main families: Ma'ṭūf, Hillel, Shammākh, Maifa'i, and 'Adanī. All of them were silversmiths and goldsmiths who wandered from one place to another to provide the Muslims with weapons and jewelry. In their wanderings they reached as far to the east at Mukallā, moving all over Ḥaḍramawt where Jews had not been allowed to dwell since the end of the 16th century. Some of them used to come home only for the High Holidays and Passover. With their leaving the country in 1949, however, the Jews of Ḥabbān carried with them the knowledge of working silver and gold which they had made their specialty.

Ḥabbāni Jews, like their Bayḍani coreligionists, lived in their own quarter (Ḥārat al-Yahūd), located on the down slopes of a hill. The sultan's palace separated the Jewish quarter from the Muslim quarter. The Jews lived in tall houses, two to five stories high, a situation against the ruling regulations throughout Yemen and other Muslim countries. There were two synagogues practicing a combination of the local old rite (*baladī*) and the newly imported Sephardi rite (*shāmī*). The synagogues also functioned as religious courts. The Jews of Ḥabbān were very different in their appearance and behavior from most other Yemenite Jews, as most of the discriminatory anti-Jewish Muslim regulations were not in force there.

They had long hair reaching down over their shoulders but no sidelocks, and did not wear black dresses but covered their bodies with multi-colored fabrics with a decorated belt, just like their Muslim tribal neighbors. The women tied nets decorated with silver jewelry around their heads and also wore wide silver belts. A few generations ago they apparently even used to carry weapons and took part in inter-tribal battles of the Muslims. There were no priests (Kohanim) and Levites among them. They were distinctive as well in terms of Jewish daily life. A few of them had already immigrated to the land of Israel in the 1940s, but it was only after the establishment of the State of Israel that the community as a whole submitted their house keys to the local sultan and prepared themselves to immigrate to the new-born Jewish state. But the sultan did not give them permission and only after his unexpected death and the messengers of the State of Israel having paid a ransom for each of them were they allowed to leave for the British colony of *Aden and from there to fly to Israel. Most of them settled in their own settlement – moshav Bareket – where they could preserve their distinctive communal and religious life. Since their immigration they have attracted scholars in various fields and were the subject of many studies on communal life, folklore, music, health, and liturgy.

[Yosef Tobi (2nd ed.)]

ḤABBAR, ḤABBAREI, persecutors of the Jews in Babylon, mentioned in the Babylonian Talmud. They created hardships for Jews, forbidding them to light lamps on their (the Ḥabbareis') festive days (Shab. 45a; Git. 17a), to perform burials and slaughter of animals (Yev. 63b) in accordance with Jewish law, and interfering with the proper observance of the festivals by the Jews (Beṣah 6a; see Rashi *ibid.*). The rise of the Ḥabbareei in Babylon may be established as occurring between the death of R. Ḥiyya the Great and that of Rabbah Bar Bar Ḥana, i.e., at the end of the first quarter of the third century C.E. (Yev. 63b). It is possible that the Ḥabbareei were Zoroastrian priests, fire worshipers, whose influence increased in Babylon in the course of that century after the rise to power of the Sassanid dynasty.

[Moshe Beer]

HABE, HANS (pseudonym of **János Békessy**; 1911–1977), Budapest-born German novelist whose works reflect fierce opposition to the Nazis. Habe became the League of Nations correspondent of the *Prager Tagblatt* in 1935. On the outbreak

of World War II he enlisted in the French army. He escaped from a German POW camp in 1940, and served in the U.S. forces for the rest of the war. In 1945 he founded the American-backed Munich *Neue Zeitung*. Habe's novels include *Drei ueber die Grenze* (1937; *Three over the Frontier*, 1939), *Weg ins Dunkel* (1951; first published as *Walk in Darkness*, 1949), and *Im Namen des Teufels* (1956; *Agent of the Devil*, 1959). The autobiographical *Ob Tausend Fallen* (1943; first published as *A Thousand Shall Fall*, 1941) describes the ordeal of foreign volunteers and loyal French troops deprived of arms and encouragement by the incompetent and defeatist French high command. His book on the assassination of President John F. Kennedy, *Der Tod in Texas* (1964), appeared in the U.S. as *The Wounded Land*. Habe also wrote an autobiography, *All My Sins* (1957); *Die Mission* (1965; *The Mission*, 1966), based on the *Evian Conference of 1938; and *Christopher and His Father* (1967), which deals with the question of Federal Germany's remorse. His autobiography was published under the title *Ich stelle mich – Meine Lebensgeschichte*.

ADD. BIBLIOGRAPHY: R.K. Zachau, "Hans Habe als Herausgeber der 'Neuen Zeitung,'" in: W. Benz and M. Neiss, *Deutsch-Juedisches Exil – Das Ende der Assimilation?* (1994), 151–64.

HABER, family of German bankers. SALOMON (SAMUEL) HABER (1764–1839), born in Breslau, moved to Karlsruhe toward the end of the 18th century, and set up a banking and finance house. He and his sons were prominent in the early industrial development of Baden and Wuerttemberg, and from about 1820 S. Haber and Sons became one of Europe's leading bankers. In 1829 hereditary nobility was bestowed on Salomon's son LOUIS (LUDWIG; 1804–1892). Frequent marriages with other Jewish moneyed families fortified the Habers' financial and social status, but when in 1847 the bank experienced difficulties it was the government of Baden which came to the rescue, and not the family connections. Louis' brother MORITZ (1798–1874) took part in the formation of the Bank fuer Handel und Industrie in Darmstadt, the forerunner of the Darmstaedter Bank. Together with his brother Louis he was also among the founders of the Vienna Kreditanstalt (1855), and in 1863 of the Bodenkreditanstalt. The youngest of the brothers, SAMUEL (1812–1892), settled in Paris where Moritz had to take refuge after he had killed his opponent in a duel in Karlsruhe.

[Joachim O. Ronall]

HABER, FRITZ (1868–1934), German physical chemist and Nobel laureate. Haber was born in Breslau, the son of a prosperous chemical and dye merchant and an alderman of the city. After a period in industry and business, he went in 1893 to the Technische Hochschule at Karlsruhe, and in 1906 became professor of physical and electrochemistry. His work on carbon bonds led to a rule bearing his name. Turning to electrochemistry, he wrote *Grundriss der technischen Electroche-*

mie auf theoretische Grundlage (1898) and was a co-developer of the glass electrode. In 1905 he wrote *Thermodynamics of Technical Gas Reactions*. His most important work, started in 1904, was the synthesis of ammonia from hydrogen and nitrogen. His laboratory demonstration interested Bosch, Bergius, and the Badische Anilin-und Sodafabrik companies, and they eventually developed the process into a commercial operation. Haber was awarded the Nobel Prize in chemistry in 1918 "for the synthesis of ammonia from its elements"; this work of Haber was to be invaluable to the German military effort in World War I. In 1911 he was made director of the new Kaiser Wilhelm Research Institute in Berlin-Dahlem, and in 1914 this was turned over to war work, particularly gas warfare, starting with chlorine and ending with mustard gas. After Germany's defeat, he reconstituted his Institute, and in the 1920s it became probably the leading center of physical chemistry in the world. Haber was president of the German Chemical Society, and of the Verband deutscher chemischer Vereine (which he created), and after some months spent in Japan he created the Japan Institute in Berlin and Tokyo.

Haber left the Jewish faith, and with the Nazi accession to power in 1933 was not immediately threatened but he was ordered to dismiss all the Jews on the staff of his institute. He refused and resigned. His health, already poor, deteriorated. He went to a sanatorium in Switzerland, where he died. In 1952 a tablet was unveiled in Haber's memory at the Kaiser Wilhelm Institute.

[Samuel Aaron Miller]

HABER, SAMUEL L. (1903–1984), U.S. economist and organization executive. Haber, who was born in Harlau, Romania, was taken to the U.S. in 1911. He received a B.A. from the University of Wisconsin in 1924. He worked as a researcher on labor and economic problems (1925–43), and then served in the U.S. Army, 1943–46. In 1947 Haber became director for Germany of the American Jewish Joint Distribution Committee, where he headed an extensive program for approximately 200,000 displaced persons (DPS). He developed and directed programs to assist in their rehabilitation and immigration to Israel, the United States, and other amenable countries. In 1954 Haber was sent to Morocco to organize a comprehensive Jewish welfare program for more than 50,000 of the country's 240,000 Jews. In 1957 he established a welfare program for Jews in Poland, becoming the first JDC representative permitted to function in that country since 1950. After serving as assistant director general of JDC's European headquarters in Geneva (1958–64) and assistant executive vice-chairman in New York (1964–67), Haber was appointed to succeed the murdered Charles *Jordan as Joint executive vice-chairman in 1967. Although Haber retired from the JDC at the end of 1975, his co-workers honored him by electing him honorary executive vice president of the organization.

From the 1960s to the early 1980s Haber was also a frequent speaker at fundraising campaigns in American Jewish communities; he served as vice chairman of the American Council of Agencies; vice president of the Israel Education Fund of the United Jewish Agency; national chairman of the Associates Division of the American Friends of Hebrew University; chairman of the executive committee of the Institute of Contemporary Jewry of Hebrew University; consultant for the Jewish Studies program of Columbia University; and trustee of the interfaith Hunger Appeal, which he helped establish in 1978.

[Ruth Beloff (2nd ed.)]

HABER, SHAMAI (1922–1995), Israel sculptor. He was born in Lodz, Poland, and in 1935 emigrated to Palestine where he studied in Tel Aviv and fought in the War of Independence. From 1949 he lived in Paris. He worked close to nature, and created portraits under the influence of such French masters as Charles Despiau. In 1954 he turned to abstraction. In 1962 he produced his first monumental work for the atomic reactor building at Naḥal Sorek (Nebi Rubin) in Israel. In 1965, together with Yitshak *Danziger, he created a monumental composition for the Israel Museum, Jerusalem. When he turned to abstraction Haber worked in stone. He used large blocks and assembled them in such a manner as to create a static relationship between the volumes and the spaces between them. The solitary presence of his sculpture in its surroundings has an archaic quality which is increased by his method of working the stone.

[Yona Fischer]

HABER, WILLIAM (1899–1988), economist and communal worker. Haber was born in Romania but immigrated to the U.S. in 1909. In 1937 he was appointed professor of economics at the University of Michigan in Ann Arbor, was chairman of the Department of Economics in 1962–63, and from 1963 to 1968 was dean of the College of Literature, Science, and the Arts.

Haber held important posts in U.S. government bodies, including that of chairman of the National Committee on Long Range Work and Relief Policy (1941); chief of the Planning Division of the Conference on Post War Relief Readjustment (1942); adviser on Manpower to the Director of War Mobilization (1945–46); and chairman of the Federal Advisory Council on Employment Security (1948–58). He was adviser on Jewish Affairs to Gen. Lucius Clay, Commander in Chief in Germany (1948–49).

Haber played a prominent role in Jewish organizations. He was chairman of the National Hillel Commission of B'nai Brith (1955–63) and of the Academic Council of the American Friends of the Hebrew University (1967). His main interest, however, was the *ORT organization. He was appointed president of the American ORT Federation in 1950, and continued in that office after his appointment as president of the Central Board of the World ORT Union in 1955. He retired from

the ORT presidency in 1980, although he remained honorary president of the federation and the international group until his death. ORT created an award in Haber's honor in 1984, presented annually to people who have contributed to the federation's work or aims.

The University of Michigan also established an award in his honor. The William Haber Award is bestowed upon applicants who have created high-quality programs for the Jewish campus community.

Haber published some 20 books, including *Unemployment Relief and Economic Security* (1936), *The Michigan Economy* (1960), *Social Security: Programs, Problems and Policies* (1954, reprinted 1966), and *Unemployment Insurance in the American Economy* (with Merrill G. Murray, 1966). He also edited the book *Labor in a Changing America* (1966).

[Rohan Saxena (2nd ed.)]

HABERLANDT, GOTTLIEB (1854–1945), German plant physiologist. Born in Ungarisch-Altenberg, Hungary, Haberlandt rose to a professorship first at the University of Graz (Austria) and later at the University of Berlin. His contributions in the field of plant responses to environmental stimuli helped to establish plant physiology as a significant separate discipline within the biological sciences. In 1884 Haberlandt described the important relationship between the anatomy of plants and their physiological capacities in a classic volume, *Physiologische Pflanzenanatomie* (1884; *Physiological Plant Anatomy*, 1914). In utilizing function as a basis for establishing structural categories he anticipated 20th-century interest in physiological plant ecology. Later works include *Das Reizleitende Gewebesystem der Sinnpflanze* ("Stimuli Transmitting Tissue System of the Mimosa," 1890) and *Sinnesorgane im Pflanzenreich* ("Sense Organs of the Plant Kingdom," 1901) as well as numerous research reports dealing with the mechanism of plant tropisms, the significance of transpiration in the migration of nutrients, and the general functions of the vascular system.

BIBLIOGRAPHY: *Neue Deutsche Biographie*, 7 (1966), includes bibliography.

[George H. Fried]

HABERMAN, JOSHUA O. (1919–), U.S. Reform rabbi. Haberman was born in Vienna, where his education was interrupted by the German invasion of Austria in 1938. Fleeing to the United States, he earned his B.A. from the University of Cincinnati (1940) and M.H.L. from Hebrew Union College-Jewish Institute of Religion, where he was ordained in 1945. HUC-JIR awarded him an honorary Doctor of Divinity in 1970. His first pulpit was in Mobile, Alabama (1944–46), where he worked to bring the Reform and Conservative communities closer together as rabbi of Congregation Shaarei Shamayim (the Government Street Temple). While serving as rabbi of Temple Beth Zion in Buffalo, New York (1946–51), Haberman founded the *Hillel Center at the University of Buffalo, acting as its first director (1946–47). In 1951, he became rabbi of

Har Sinai Temple in Trenton, New Jersey, whose membership quadrupled under his leadership. Haberman chaired both the Trenton Board of Rabbis and the local Israel Bonds Drive; co-authored *Encounter for Reconciliation: Guidelines for Inter-religious Dialogue*, published jointly by the *Union of American Hebrew Congregations and the United Presbyterian Church of America; and continued to foster mutual understanding within the Jewish community. He also lectured at Rutgers University and served on the Executive Committee of the Central Conference of American Rabbis (1967–69).

In 1969, Haberman was appointed rabbi of Washington Hebrew Congregation. His predecessor had been a classical Reform rabbi who was the son of an Orthodox *rosh yeshivah*. Haberman was far more traditional and far more oriented toward Israel. He developed a dialogue with the Roman Catholic diocese of Washington, D.C., with evangelical Christian leaders, and with Imam Wallace D. Muhammad of the World Community of Islam in the West. He served as president of the Washington Board of Rabbis (1982–84), as well as on the Advisory Committee on Ethical Values of the United States Information Agency (1982–83) and on the boards of directors of the Ethics and Public Policy Center (1983–89) and the Jewish Institute for National Security Affairs (1985). In 1984, in anticipation of retiring from the pulpit, he founded the Foundation for Jewish Studies, which sponsors cultural and educational programs for the entire Washington Jewish community as well as interested adherents of other faiths. In 1986, Haberman became rabbi emeritus of Washington Hebrew Congregation and assumed the active presidency of the FJS. On a national level, he was a member of the board of alumni overseers of the HUC-JIR and served as president of the National Association of Retired Reform Rabbis (NAORR, 1999–2000). In 2001, he was the representative of Jewish participation in the National Cathedral's memorial service marking 9/11.

Haberman contributed articles to English and German publications and wrote three books, *Philosopher of Revelation: The Life and Thought of S.L. Steinheim* (1990); *The God I Believe In: Conversations about Judaism with 14 Prominent Jewish Intellectuals* (1994), and *Healing Psalms: The Dialogues with God that Help You Cope with Life* (2000). In addition, he taught at Georgetown University, Wesley Theological Seminary, and American University. He received the Brotherhood Award of the National Conference of Christians and Jews (1978) and the Elie Wiesel Holocaust Remembrance Award, conferred by the State of Israel Bonds (1992). Haberman's son is an Orthodox rabbi.

[Bezalel Gordon (2nd ed.)]

HABERMANN, ABRAHAM MEIR (1901–1980), bibliographer and scholar of medieval Hebrew literature. Born at Zurawno (Galicia), Habermann from 1928 was librarian at the Schocken Library in Berlin. He immigrated to Palestine in 1934 and served as director of the Schocken Library in Jerusalem until 1967. From 1957 he taught medieval literature at Tel Aviv University (professor, 1969) and taught at the

Graduate Library School of the Hebrew University. He was editor of the department of bibliography (Jewish printers) for the *Encyclopaedia Hebraica* and the department of medieval Hebrew poetry for the first edition of the *Encyclopaedia Judaica*. Habermann began his study of medieval literature in 1925, specializing in the Ashkenazi *piyyut* from the time of R. Ephraim ben Jacob of Bonn. A prolific writer, his books include *Ha-Madpisim Benei Soncino* (1933); *Gevilim*; *Me'ah Sip-purei Aggadah* (1942); *Ha-Genizah* (1944); *Toledot ha-Sefer ha-Ivri* (1945); *Ha-Piyyut* (1946); *Ateret Renanim, piyyutim* and songs for Sabbath and festivals (1967); *Ha-Sefer ha-Ivri be-Hitpattehuto* (1968); *Sha'arei Sefarim Ivriyyim* (1969); and *Toledot ha-Piyyut ve-ha-Shirah* (1970), which is the first attempt at a survey of the history of Hebrew *piyyut* and poetry and its development in various cultural centers from post-biblical times to the Haskalah period. Habermann edited and compiled such diverse medieval works as: *Piyyutei Rashi* (1941); *Selihot u-Fizmonim* of R. Gershom Me'or ha-Golah (1944; new printing, 2004); *Gezerot Ashkenaz ve-Zarefat* (1946); *Niẓozot Ge'ullah*, an anthology of redemption and messianism (1949); *Maḥberot Immanu'el ha-Romi* (1950); *Even Boḥan* of Kalonymus ben Kalonymus (1956); *Studies of the Dead Sea Scrolls, Edah ve-Edut* (1952), and *Megillot Midbar Yehudah* (1959). Shortly after his death, the Habermann Institute for Literary Research was created in Lod (Lydda), Israel. In 1983 Z. Malachi published *Yad le-Heman*, a memorial volume in his honor.

[Yehoshua Horowitz]

ḤABIB, ḤAYYIM BEN MOSES BEN SHEM TOV (16th century), rabbinical author. Among the Jews exiled from Portugal in 1497, he escaped to Fez. In 1505 he compiled over 3,000 responsa of Solomon b. Abraham *Adret, in *Sefer ha-Battim*. H.J.D. *Azulai heard of the existence of the manuscript in Fez. Joseph Samon, the author of *Edut Bi-Yhosef*, eventually took it to Jerusalem, where it came into the possession of Sussman Jawitz (1813–1881), father of the historian Ze'ev *Jawitz who had emigrated to Jerusalem from Warsaw (see introduction to *Berakhah Meshulleshet*, Warsaw, 1863). *Sefer ha-Battim* was published by Sussman's son Abraham, together with the glosses of Isaac Goldman who had also published Adret's novellae on tractate *Menaḥot*. Ḥabib's characteristic signature: "Ḥayyim b. Moses ibn Ḥabib whose knees did not kneel to Baal, nor to fire and wood," is probably an allusion to his flight from Portugal.

[Simon Marcus]

ḤABIB, MOSES BEN SOLOMON IBN (c. 1654–1696), Turkish rabbi and author. He was born in *Salonika, a descendant of *Levi ben Ḥabib, and went to Jerusalem in his youth. He studied in the yeshivah of Jacob *Ḥagiz and from c. 1677 to 1679 he traveled as an emissary of Jerusalem, reaching as far as

Budapest. In 1688 Ḥabib was appointed head of the yeshivah in Jerusalem maintained by the philanthropist Moses ibn Ya'ish, of Constantinople. In the following year, on the death of Moses Galante, Ḥabib was appointed to succeed him as chief rabbi of Jerusalem (1689). His grandson, Jacob *Culi, who published most of his grandfather's works, also had in his possession a number of other manuscripts which he used in his own work *Me-Am Lo'ez* (Constantinople, 1733). A manuscript of his sermons is in the National Library in Jerusalem. The ascription to him of the *Ez ha-Da'at* (printed in *Or Zaddikim*, Salonika, 1799) has been questioned by S. Ḥazzan.

He wrote the following works: *Get Pashut* (Ortakoi, 1719), on the laws of divorce and *ḥalīzah*; *Shammot ba-Arez* (Constantinople, 1727), consisting of "Yom Teru'ah," on the tractate *Rosh Ha-Shanah*, "Tosafot Yom ha-Kippurim," on the tractate *Yoma*, and "Kappot Temarim," on the tractate *Sukkah* (Constantinople, 1731); and *Ezrat Nashim* (*ibid.*, 1731), on the laws of *agunah*. H.J.D. *Azulai states that most of Ḥabib's responsa were lost at sea; however some have survived, and have been published, part in *Kol Gadol* (Jerusalem, 1907), and part in the works of contemporary scholars (*Devar Sha'ul*, 1927). Moses also wrote a commentary on the Jerusalem Talmud entitled *Penei Moshe* of which tractates *Berakhot*, *Pe'ah*, and *Demai* are extant in manuscript (Sassoon Ms. 592).

[Simon Marcus]

HABIBA, JOSEPH (beginning of the 15th century), Spanish talmudic scholar. Virtually no biographical details are known of Ḥabiba. His teachers were *Nissim b. Reuben (the Ran) and Ḥasdai *Crescas. Author of novellae to the Talmud and a commentary on Isaac *Alfasi known as the *Nimmukei Yosef*, he is regarded as the last of the *rishonim to comment on the Talmud and the *Hilkhot ha-Rif*. It was previously thought that Ḥabiba wrote commentaries only to those tractates of Alfasi on which Nissim b. Reuben did not comment, but it is now believed that his commentary covered the whole work. Only his commentaries to tractates *Mo'ed Katan*, *Yevamot*, *Bava Kamma*, *Bava Me'zia*, *Bava Batra*, *Sanhedrin*, and *Makkot* have been published in editions of the Talmud, but his commentaries to the tractates *Megillah* and *Pesaḥim* (1960) and to *Gittin* (1963) and *Avodah Zarah* in M.J. Blau (ed.), *Shitat ha-Kadmonim al Massekhet Avodah Zarah* (1969) have been published. His commentaries on *Berakhot*, *Shabbat*, *Tàanit*, and *Hullin*, are still in manuscript. Of his novellae to the Talmud there have been published *Shevuot* (in *Beit ha-Behirah* of Menahem ha-Meiri; Leghorn, 1795), and *Ketubbot* and *Nedarim* (in the *Ishei ha-Shem*, *ibid.*, 1795, new ed. 1960).

In his commentary Ḥabiba usually quotes the *geonim*, the

Spanish *posekim until *Jacob b. Asher, and Yom Tov *Vidal of Tolosa. According to Malachi ha-Kohen (in his *Yad Malakhi*), Ḥabiba differs from Nissim in that he quotes the aforementioned authors and Yom Tov b. Abraham *Ishbili, and in that he commences each of the novellae with “the author says” and concludes with “thus far the words of the author,” something not found in the works of other *rishonim*. It is this characteristic, as well as the numerous quotations from the works of Yom Tov Ishbili and Asher b. Jehiel, which serve as indubitable indications of the author of the *Nimmukei Yosef*. Ḥabiba’s style is direct and succinct. Some see his commentaries as aimed at encouraging the study of Talmud rather than the *Hilkhot ha-Rif*, which, through its wide circulation, tended to displace the study of the Talmud. Consequently *Nimmukei Yosef* is regarded as a supplement rather than a commentary, the addition of passages of the Talmud omitted by Alfasi making the talmudic text readily available to the student. The *Nimmukei Yosef* is a valuable source for clarifying the opinions and approach of various *rishonim*, since in addition to quoting from their actual works he also gives oral traditions handed down by their pupils. He was highly regarded in later generations as an authoritative *posek*.

[Yehoshua Horowitz]

ḤABIBI, EMIL (1922–1996), Israeli Arab poet and Knesset member. A Christian Arab born in Haifa, after 1948 he was a founder of the Israel Communist Party and a Knesset member on its behalf. He left the Knesset in 1972 to devote himself to editing *Al-Ittihad* and to his literary work. In 1983 he founded the Committee of Israeli and Palestinian Writers, Artists and Academics, on which he served as chairman until he died. In 1990 he founded the Arabesque Publishing House. In 1991 he withdrew from active political life. In 1992 he received the Israel Prize for literature and poetry. In 1995 he began publishing *Masharef*, a periodical of Palestinian literature. He wrote several novels as well as shorter items, many of which have been translated from Arabic into Hebrew. His writings, which opened a window to the Palestinian experience in general and in Israel in particular, express his special feeling for Haifa, the city of his birth, where he also chose to be buried. The inscription on his tombstone sums up this emotional and political connection: “I Stayed in Haifa.”

[Shaked Gilboa (2nd ed.)]

ḤABIL, the name of four places inhabited by Jews at the time of their emigration from Yemen (1948–49). All four are located in the southernmost regions of present-day Yemen, or close to its border. Among the *genizah* fragments there is a letter of appointment from a *gaon* to a person, whose name has not been

preserved, requesting that the latter undertake the collection of funds for the Babylonian Academy. A letter was sent to the inhabitants of al-Ṣawil and al-Ḥabil, which was to be read to them so that they would make their contributions; these were to be sent to the head of the academy in Saṅa or the emissaries of the academies in Yaman and Yamāma.

HABILLO, DAVID (d. 1661), kabbalist of Safed and Jerusalem and emissary from Jerusalem. Habillo was the outstanding pupil of the kabbalist Benjamin b. Meir ha-Levi of Safed, whom he accompanied when he moved to Jerusalem. H.J.D. Azulai relates that the veteran rabbis of Jerusalem told him that Habillo lived there in 1652 and had a heavenly mentor (*maggid*). Habillo wrote a commentary on *Sefer Yezirah* which has remained in manuscript. During the 1650s he went to Turkey as an emissary from Jerusalem. He met Abraham Yakhini in Constantinople before 1660 and also the youthful *Shabbetai Zevi, who almost certainly learned Kabbalah from Habillo. When Shabbetai Zevi was subsequently compelled to leave Constantinople, he proceeded to Smyrna with Habillo, who died there on the ninth of Av. After his death a dispute arose between his son, JUDAH HABILLO, who claimed the inheritance left in Smyrna by his father, and the heads of the Jerusalem community, who claimed the money as the proceeds of the mission on their behalf. Ḥayyim *Benveniste, the *av bet din* of Smyrna, decided in favor of the son.

[Avraham Yaari]

HABILLO (Xabillo), ELIJAH BEN JOSEPH (Maestro Ma-noel; second half 15th cent.), Spanish philosopher and translator of philosophical writings. Habillo was an admirer of Christian scholasticism, and translated some of the works of the Christian scholastics from Latin into Hebrew, including: Thomas *Aquinas’ *Quaestiones disputatae, Quaestio de anima* (“*She’elot ba-Nefesh*”), *De animae facultatibus* (“*Ma’amar be-Koḥot ha-Nefesh*,” published by A. Jellinek in *Philosophie und Kabbala*, 1854), *De universalibus* (“*Be-Inyan ha-Kolel*”), and questions on Aquinas’ treatise *De ente de essentia* (“*She’elot Ma’amar be-Nimza u-ve-Mahut*”); William of Occam’s three treatises entitled *Summa totius logicae* (“*Perakim be-Kolel*”), to which he added an appendix, and *Quaestiones Philosophicae*; and the pseudo-Aristotelian *Liber de causis* (“*Sefer ha-Sibbot*”). It is also supposed that Habillo translated anonymously Vincenz of Beauvais’ *De universalibus* under the title *Ma’amar Nikhbad be-’Kelal* (see M. Steinschneider, Parma Ms. no. 457⁷).

HABILLO, ELISHA (called **Mercado**; 1719–1792), rabbi of Sarajevo. Habillo studied under David *Pardo, author of *Shoshannim le-David*. He wrote *Avodat ha-Tamid* (Sarajevo, 1788), a commentary on the Sephardi liturgy for the whole year, together with the order of service for weekdays, with brief laws and explanations. In this work the author at times cites the explanations of Nehemiah *Hayon, only to dissociate himself from them at the end. He published his teacher's book of prayers for festivals, *Shifat Revivim* (Leghorn, 1787), including in the original his elegy on the ill-treatment by the Turks of the Sarajevo Jews who fled from the Austrians, and added a number of his poems. Habillo also wrote a commentary on the Passover *Haggadah* and on the Grace after Meals.

[Simon Marcus]

HABIMAH (Heb. הַבִּימָה; "the Stage"), repertory theater company; founded in Moscow in 1917 as the first professional Hebrew theater in the world, and now the National Theater of Israel. Its initiator was Nahum David *Zemach, who was joined by Menahem Gnessin and the actress Hannah *Rovina in Warsaw, but World War I halted their efforts. They met again in Moscow in 1917 and were soon joined by a number of young Jewish actors. Their idea was not simply to found a theater but to give expression to the revolutionary change in the situation of the Jewish people and especially to the revival of Hebrew. Zemach turned to the great Russian theater director Konstantin Stanislavski and adopted his famous "method." It was, in fact, their idealism which enabled the Habimah actors to overcome the great initial difficulties, first of all the economic problem of the revolutionary period. David Vardi, one of its founding members, wrote in his diary in September, 1918: "Today we held a meeting... On the agenda was the food problem. It was decided to send two members out to the country, to look for potatoes and flour... We were each allotted a [role]. Mine was to bring potatoes from the he-Ḥalutz farm to the Habimah cooperative kitchen..."

There were also political problems. The Yevseksiya, the Jewish section of the Communist Party, lodged a protest with Stalin, the People's Commissar of Nationalities, against Habimah's very existence. Stalin, however, overruled their intervention (1920). In this struggle Zemach succeeded in enlisting the support of leading artists, writers, and political personalities, such as Lunacharski, the commissar for education and culture, who proved a true friend of Habimah. Maxim *Gorki was also an enthusiastic supporter. Habimah introduced plays of a type that had never been staged by Jewish troupes, and they were directed by great teachers, all of them non-Jewish disciples of Stanislavski.

Habimah first performed in 1918, presenting four one-act plays by Jewish writers. It became one of the four studios of the Moscow Art Theater. Habimah scored its greatest triumph with S. *An-Ski's *The Dybbuk*, which was the third play

it staged. Bialik translated it into Hebrew and Joel Engel composed its musical score. Its first performance took place on Jan. 31, 1922, and it established Habimah's reputation, as well as that of Yevgeni Vakhtangov, a young director of Armenian origin who had been delegated to Habimah by Stanislavski.

The Dybbuk owed its triumph to its outstanding orchestration, its forceful symbolism, and its glaring contrasts, but mainly to the boundless enthusiasm of the company in its acting and singing. Even in the mass scenes, every person on the stage gave his individual, distinct contribution; every Ḥasid and every beggar stood for something different, and yet together they formed a team. Vakhtangov's method, which was an endless process of refining, came to its perfect expression in the beggars' dance in Act II. In 1926 Habimah left Soviet Russia and went on a tour abroad. *The Dybbuk* was hailed as an unusual phenomenon. In 1927, when Habimah arrived in the United States, the company split. Zemach and several actors decided to stay in the country. According to David Vardi, "differences arose between Zemach and some of the younger actors, who had taken a giant step forward, of which Zemach hardly took note."

Habimah visited Palestine in 1928–29 and presented two productions, *Ha-Ozar* ("The Treasure") by *Shalom Aleichem and *Keter David* ("David's Crown") by Calderon, both under the direction of the Russian Alexander Diki. In 1930 the company went to Berlin, where it performed *Twelfth Night*, directed by Michael Chekhov, and *Uriel da Costa*, under the direction of Alexander Granovski. It finally settled in Palestine in 1931. In the course of time it added to its repertoire a great variety of plays derived both from Jewish literature (of messianic and biblical content) and from world literature. It sought to foster dramas depicting Jewish life in the Diaspora, which it succeeded in presenting with extraordinary authenticity. Its aim was to present all phases of Jewish historical experience.

For the next 17 years Habimah was under the direction of its own members, mainly Barukh Chemerinsky and Zevi Friedland, the former concentrating on Diaspora dramas and original Hebrew plays, and the latter on world drama. Eventually Habimah also invited foreign directors, such as Leopold Lindberg, Leopold Jessner, and Tyrone Guthrie. It was Guthrie's 1948 production of *Oedipus Rex* which inaugurated a new era in the life of the company.

In the period in which Habimah relied mainly on its own directors, progress was slow. Each new performance became a festive occasion and Habimah had its admirers, a Habimah "circle," and a youth studio, as well as its own periodical (*Bamah*); but the company failed to keep pace with the cultural and social transformation of the *yishuv*. It did not rid itself of expressionistic oddities, and young people, as well as immigrants from the West, kept away. It also did not absorb the young talent which was crying out for a chance to prove its mettle. The graduates of the company's school for the most part joined the *Cameri, whose founding caused a crisis for Habimah.

In April 1948, Habimah went on a tour of the United States, presenting four productions (*The Dybbuk*, *The Golem*, *Keter David*, and *Oedipus Rex*). Although acclaimed by the critics, Habimah failed to attract audiences. When the company returned to Israel in July, it had nothing in its repertoire to express the heroic period of the national struggle. There was also conflict over the company's organization. For years there had been opposition to the continued existence of Habimah as a "collective," for it was argued that such a structure had become an obstacle to the company's progress because of the undue protection that it provided to members who had failed to attain the required artistic standard. This conflict was to remain unresolved for another two decades. Relief came from an unexpected quarter, the "generation of 1948." Yigal Mossinsohn's play *Be-Arvot ha-Negev* ("In the Negev Desert") had its premiere in February 1949 and met with an enthusiastic response. It expressed the spirit of the times, the highlights being Aharon Meskin's masterful acting and the play's portrayal of the new Israel-born generation.

In the following years Habimah enlisted directors of world renown: André Barsac from France, Alexander Bardini from Poland, Sven Malmquist from Sweden, John Hirsch from Canada, and Lee Strasberg and Harold Clurman from the United States. Under their direction, Habimah successfully mounted high-quality productions. At the same time, it continued to employ its own directors – Zevi Friedland, Israel Becker, Shimon Finkel, Shraga Friedman, and Avraham Ninio.

In 1958, on the 40th anniversary of its first performance in Moscow, Habimah was awarded the title of "National Theater of Israel." The honorific award could not, however, conceal the company's shortcomings. There was neither an artistic authority nor a true collective, and conflicts between various factions, as well as financial difficulties, threatened the theater's very existence. Finally, in 1969, the members decided to dissolve the "collective." The Ministry of Education and Culture appointed its representatives to the management of Habimah, and a new administering director, Gavriel Zifroni, took over. In 1970 Habimah dedicated its beautiful renovated hall in the center of Tel Aviv. In the same year the veteran actor Shimon Finkel was appointed artistic director. In 1972 it opened the Bamartef small hall for experimental productions. In 1975, Yossi Yisraeli was named artistic director. In 1976, Hannah Rovina played her last role as the queen mother in Shakespeare's *Richard III*. In the same year, Shlomo Bar Shavit became artistic director. In 1978, Shmuel Omer was named general director and David Levin artistic director, replaced in 1985 by Omri Nizan. In 1986 Habimah went on tour to Moscow. In 1992, Shmuel Omer became both general and artistic director. In 1995 Yaakov Agmon replaced him, remaining at the helm until 2004. In 1995 Ilan Ronen established the Habimah's youth group, which aimed at advancing young actors. In 1997 Habimah produced *The Dybbuk*, its most popular play, to celebrate the theater's 80th birthday. Under Agmon's management, the theater began to produce successful musicals, such as *Bustan Sefaradi* ("Span-

ish Orchard") and *Mary Lou* (based on songs of the pop composer-singer Zvika Pick). In 2004 Habimah employed 80 actors performing in 33 productions.

HABIRU (or better: **Hapiru**), an element of society in the Fertile Crescent during the greater part of the second millennium B.C.E. They are mentioned in more than 250 texts. From their earliest appearance in documents of the 18th century B.C.E., the Hapiru constitute a class of dependents, displaced people who originated from both urban and tribal sedentary populations, not from nomadic groups. In the early Assyrian and Babylonian period (18th–17th centuries) they appear in Cappadocia and in the kingdoms of Larsa, Babylon, Mari and the surrounding areas as bands of warriors attached to, and maintained by, the local rulers. Fifteenth-century documents of Alalakh (northern Syria) list the members of the Hapiru military units belonging to the adjacent towns. Nuzi documents of the same periods mention Hapiru units and individuals as receiving protection from the state. However, what is unique in these Nuzi documents is the number of contracts entered into between individual Hapiru men and women and wealthy citizens in which the relationship partakes of the character of both slavery and adoption. Hittite documents of the 14th and 13th centuries B.C.E. list the gods of the Hapiru among others who are signatories to international alliances. Hittite cult documents place the Hapiru (Hapiri) at the head of a list of subject and enslaved peoples or classes. Akkadian documents from Ugarit mention "the Hapiru [= SA. GAZ] of the Sun [= king of Heth]" and in Ugaritic alphabetic script *Hlb 'prm* i.e., the Hapiru quarter of the city of Halbu (not identical with the great city of Halab). From the 15th to the 12th centuries the *'pr.w* appear in Egyptian documents as captives from Palestine-Syria, and as slaves of the state.

Along with their appearance as dependents and protégés in lands of stable government, independent groups of Hapiru appear in times of disintegrating rule and lack of central control. In the Mari period of clashes between nations and cities, the Hapiru appear as robber bands, which attacked and plundered settlements, either on their own or together with residents of nearby settlements. Similarly in Palestine-Syria during the *el-Amarna period (15th–14th centuries B.C.E.), the confusion that resulted from the clashes between the local princes and the Egyptian governors provided an opportune time for the bands of Hapiru to run wild. On their own, together with local people, or as mercenaries helping either the city princes or the Egyptians they contributed greatly to the general confusion that was characteristic of the period.

The Hapiru were of varied origin. In Mari, a band of auxiliary soldiers was called Iamutbalian Hapiru ("iamutbalāju

Ḥa-bi-ru”), the former being the name of a western Semitic tribe and of the territory west of Baghdad. Documents from Mari and Alalakh cite cities as the origin of most of the Ḥabiru listed. Some of the Ḥabiru in Nuzi came from Akkad, Assyria, etc. A significant element among the Ḥabiru of the El-Amarna period was mutineers against the local kinglets. Their names also testify to a varied ethnic makeup: an early Babylonian list includes Akkadian and Western Semitic names; in Alalakh the names are principally non-Semitic (which corresponds with the surroundings); and in Nuzi there is a mixture of Akkadian and non-Semitic names. The ease with which they absorbed everyone who wished “to be a Ḥabiru” (in the language of the documents) indicates that they were not distinguished by ethnic unity.

All those called Ḥabiru shared a common inferior status. Almost all were fugitives from their original societies, and, as strangers without rights, they made themselves dependent on lords. For a few it is specifically noted that they were fugitives from authority or from personal calamities, or ordinary scoundrels (cf. similar bands in Israel during the biblical period: Judg. 9:4, 26 ff.; 11:3; and especially David’s band, 1 Sam. 22:2). The circumstances in which the Ḥabiru emerged are unclear. There are vague indications of a western-Semitic origin: their name; a settlement of Amorite (= MAR.TU; see *Amorites) soldiers of the early Babylonian period, named Ḥa-bi-ri (KI); the fact that the documents about them begin to appear at the height of Amorite migration to Mesopotamia. It is possible that Amorite unfortunates, stripped of land and possessions, formed the original core to which a rabble of paupers, refugees, and criminals was attracted in the course of time, without consideration of ethnic origin.

Ugaritic and Egyptian writings indicate that the root of the word Ḥabiru is *ʾapiru* (noun form). The existence of the *ʾayin* in the cuneiform, in the sign ḤA, points to a western-Semitic origin, since ordinarily the initial *ʾayin* becomes an *ʾalef* in Akkadian which is not the present case. These writings also establish the pronunciation of the second syllable – BI in cuneiform must in this case represent *pi*, which makes it highly unlikely that the word is to be derived from *BR*.

In many sources the ideogram SA.GAZ is interchangeable with the term “Ḥabiru.” This ideogram is translated in late lexicographical lists by the word *ḥa-ba-tu*, meaning “robber,” but also migratory workers, who in El-Amarna letter no. 318:11–12 are kept apart from the Ḥabiru. (The later lexical identifications are not conclusive evidence.) It is probable that in many places the ideogram was pronounced Ḥabiru, but there is no definite proof for this. Some read the ideogram as *ša-ga-šu* based on the variants SA.GA.AZ, SAG.GAZ, meaning “murderer” (as in Akkadian) or “restless, foul” (as in Aramaic and Arabic). In any event, it is clear that both SA.GAZ and Ḥabiru had a negative connotation, to the extent that at times (and many such instances appear in the El-Amarna letters) the terms were used as synonyms for mutineers and paupers.

[Moshe Greenberg]

Habiru and the Hebrews

The problem of the connection between the Ḥabiru and the Hebrews has been discussed for almost 150 years. The earlier stages of the problem are summarized by M. Greenberg (in bibl., 4–12, esp., 91–96; see R. de Vaux, W.F. Albright, M.P. Gray, J. Weingreen, J. Bottéro and E.F. Campbell in bibl.; see also *el-Amarna). For more recent discussion, see Additional Bibliography.

One cannot simply equate Ḥabiru with the “Hebrews” because it is clear that the Ḥabiru are always a social element, while “Hebrew” is at least sometimes equivalent to the ethnonym “Israel” (Gen. 40:15; 43:32; Ex. 1:18; 2:11; 3:18; 5:3) if not always (1 Sam. 14:21; Naʾaman 1986). Abraham was called *ʾivri* (Gen. 14:13) because he is a descendant of Eber (Gen. 10:25). Yet as a leader of an armed band able to form local alliances he fits certain social structural identifications with the Ḥabiru; other parts of the Israelites also could fulfill, for a short time, this traditional identification based on this structure (cf. Campbell, in bibl., 14). It is possible that a reminiscence of the negative connotation of Ḥabiru survives in the designation *eved ivri* (Ex. 21:2) or in the *ʾivrim* mentioned in connection with Saul in 1 Samuel 13–14 (although they may not be Israelites at all; see above).

HA-BOKER (Heb. הַבֹּקֶר “The Morning”).

(1) Daily Hebrew newspaper, published in Warsaw under the editorship of David *Frischmann from Jan. 14, 1909, until Aug. 20, 1909 (180 editions). Published with the Yiddish daily *Haynt*, to which Frischmann was a regular contributor, *Ha-Boker* was politically non-aligned. The editor was very exacting in the stylistic standard of the paper and intent upon attracting as contributors the best Hebrew writers and intellectuals of the day. Translations from world literature were also published in *Ha-Boker*. The paper had regular writers in London (Asher *Beilin), and in the United States (A. Fleishman), and occasional contributors elsewhere. Two current events filled up entire editions: the discovery of the *agent provocateur*, *Azeff, and the rebellion of the Young Turks in Turkey. Especially through the treatment of the latter, *Ha-Boker* took the stand, opposed to the official Zionist opinion, namely that the Young Turks would aggravate the already negative Turkish position on the Zionist undertaking (which indeed

proved the case). Extensive debates were conducted, too, on the topic of Yiddish-Hebrew, and the “Hebrew in Hebrew” teaching method.

(2) Daily Hebrew newspaper published in Tel Aviv, 1935–65. Right-wing circles of the *yishuv* founded *Ha-Boker* as their organ for General Zionism. The orientation of the paper was formulated in the first edition by M. *Dizengoff. A brief period of groping was followed by consolidation in the editorial staff, especially after J.H. Heftman became editor in chief (he served intermittently as sole editor or as coeditor with Perez *Bernstein). *Ha-Boker* is credited with several journalistic innovations in the country, especially with vivid reporting, then in its pioneering stages. The literary supplement was edited for years by Baruch *Karu (Krupnik). After Heftman’s death, Y. Gruman served as the paper’s editor, followed by P. Bernstein and G. Zifroni. With the formation of the Liberal Party (1961), which consolidated the two branches of General Zionism, this paper served as its organ, and as a forum for publicists and writers in sympathy with the party. Finally, with the formation of the Herut Liberal Party bloc (*Gaḥal) in 1965, the two party newspapers, *Herut* and *Ha-Boker*, were replaced by a new paper, *Ha-Yom*.

[Getzel Kressel]

HA-BONIM (Heb. הַבּוֹנִים), moshav shittufi in central Israel, by the seacoast, 6 mi. (10 km.) northwest of *Zikhron Ya’akov, affiliated with Tenu’at ha-Moshavim, founded in 1949 by graduates of the Iḥud Habonim youth movement from South Africa and other English-speaking countries. They were later joined by Israeli-born youth and new immigrants from other countries. The economy was based on citriculture, livestock, etc. Ha-Bonim beach, a nature resort with marine species and unique plants, lies near the moshav. In 1968 Ha-Bonim had 150 inhabitants, rising to 249 in 2002.

[Efraim Orni /Shaked Gilboa (2nd ed.)]

HABOR (Heb. הַבּוֹר), a river flowing through Mesopotamia for 218 mi. (350 km.) from north to south in the region of el-Jazira, the area between the Euphrates and Tigris rivers. It rises from Mt. Kharagah, and is joined by five tributary streams, emptying into the Euphrates north of Mari. The surrounding region was productive in antiquity; grain was raised mainly in the north while in the southern Habor Valley sheep and cattle, and later also horses, were raised. Beyond the northern Habor lay an important trade route, which started at Nineveh, the Assyrian metropolis, and ran by way of Nisibis, Gozan, and Haran to Carchemish on the Euphrates. This route was apparently used in the days of Abraham and even before. On the evidence of the remains excavated at Chagar Bazar, the Habor Valley was first settled in the Neolithic period. In the 18th century B.C.E., many attempts were made to channel the river’s waters by means of dams and canals, as is known from the Mari letters of that period. In the 16th–14th centuries B.C.E.

the region of the Habor was in the center of the mighty kingdom of Mitanni, and the area was reduced to ruins until it was revived in the 10th century B.C.E. The city of Gozan (Tell Halaf) became especially important, and according to the Bible the river was apparently named after it. The Assyrian conquest of the Habor district began in the ninth and eighth centuries. When insurrections in the conquered cities increased, one city after another was destroyed and the inhabitants deported. In their place Tiglath-Pileser III settled the Israelite exiles from Transjordan (I Chron. 5:26), and later Sargon II settled the exiles from Samaria there (II Kings 17:6; 18:11; cf. Pritchard, *Texts*, 284–5). Documents found in the excavations of Gozan prove the presence of Israelite exiles in this city (see *Gozan and Assyrian *Exile).

[Michael Avi-Yonah]

HABSHUSH, SHALOM BEN YAḤYA (c. 1825–1905), head of a yeshivah in San’a, Yemen, *dayyan*, and author. A goldsmith by profession, he kept aloof from public office and communal affairs, and devoted himself to the study of the Torah. He was the last head of the San’a yeshivah, which closed down in 1905 during a siege and famine. He wrote two works, which were published together (Aden, 1893): *Korban Todah*, explanations and novellae on the *Mekor Ḥayyim* of R. Yaḥyā Ṣāliḥ b. Jacob, dealing with the laws of ritual slaughter and *terefot*; and *Shoshannat ha-Melekh*, an abridged version of the responsa *Pe’ulat Zaddik* of R. Yaḥyā Ṣāliḥ. It was written and possibly copied by the author himself in 1862. The abridged responsa are presented in the form of *halakhot* and verdicts. In the margins he added the *Gan Shoshannim*, which indicates the source of the *halakhah*. The part on *Orah Ḥayyim* and *Yoreh De’ah* was published together with R. David Mizraḥi’s commentary on the Shulḥan Arukh, *Shetilei Zeitim* (2 vols. 1886–96).

BIBLIOGRAPHY: S. Gridi (ed.), *Shoshannat ha-Melekh* (1967), introduction.

[Yehuda Ratzaby]

HACKENBURG, WILLIAM BOWER (1837–1918), U.S. silk manufacturer and philanthropist. After becoming secretary of the Hebrew Relief Society in 1858, Hackenburg devoted a great deal of his time to doing philanthropic work in his native Philadelphia. He was a founder of the Jewish Hospital, being largely responsible for its development into a major public institution, a trustee of both the Baron de Hirsch Fund and Dropsie College, and a vice president of the Board of Delegates of American Israelites. In 1878 he supervised the latter organization’s compilation of a statistical survey of American Jewry. He was also active in Russo-Jewish refugee relief work.

[Sefton D. Temkin]

HACKETT, BUDDY (**Leonard Hacker**; 1924–2003), U.S. comedian. Born in Brooklyn, New York, Hackett's wit and story-telling ability won him success on television in the 1960s. Previously he had performed in nightclubs and appeared in the Broadway farce *Lunatics and Lovers* (1954) and the comedy *I Had a Ball* (1965). In 1960 he won attention in David Susskind's television program *Open End*. This was followed by roles in such films as *All Hands on Deck* (1961); *Everything's Ducky* (1961); *The Music Man* (1962); *The Wonderful World of the Brothers Grimm* (1962); *It's a Mad, Mad, Mad, Mad World* (1963); and *The Love Bug* (1968). His distinctive voice also earned him a variety of vocal roles in animated films, such as the TV movie *Jack Frost* (1979); *The Little Mermaid* (1989); *Mouse Soup* (1992); and *The Little Mermaid II* (2000), as well as the 1992 TV series *Fish Police*.

Hackett's TV career encompassed frequent appearances on such shows as *What's My Line?*; *The Dean Martin Show*; *Rowan and Martin's Laugh-In*; and *The Tonight Show Starring Johnny Carson*, as well as a recurring role in the 1999 sitcom *Action*. He also played Lou Costello in the 1978 TV movie *Bud and Lou*.

Despite his success in movies and on television, Hackett preferred his nightclub work. He performed in clubs around the country, particularly in Las Vegas, where he ultimately became one of the top headliners in Vegas history. One of the pioneers of "blue" comedy, Hackett was noted for his risqué material and off-color language. But among his fellow comedians, he was regarded as an ingenious ad-libber and a comic who knew just how long to keep a joke or a routine in his act before it became stale.

Hackett devoted much time to a foundation combating Tay-Sachs disease, a malady that occurs mostly among Jewish children of Middle European background. He wrote *The Truth about Golf, and Other Lies* (1968) and *The Naked Mind of Buddy Hackett* (1974).

[Ruth Beloff (2nd ed.)]

HACOHEN, DAVID (1898–1984), Israeli politician and diplomat; member of the First to Sixth Knessets. Hacoheh was born in Gomel, Russia, the son of Mordecai ben Hillel *Hacohen, who immigrated to Erez Israel with his family in 1907. In Gomel he went to a reformed *heder*, and in Tel Aviv went to the Herzlia Gymnasium. Hacoheh enlisted to the Turkish Army in 1916 and served in Anatolia. In 1919–23 he studied economics at the London School of Economics. Upon his return to Palestine in 1923 he was appointed manager of the Office for Public Works and Planning in the *Histadrut, which eventually became *Solel Boneh. During World War II he was *Haganah liaison officer to the British Army and British Intelligence. His house in Haifa served as the center of Free French Forces radio transmission to the Vichy-occupied Levant. For many years during the British Mandate, Hacoheh served as a member of the mixed Arab-Jewish Haifa Municipality. Together with other *yishuv* leaders, he was arrested by the British on "Black Saturday," June 29, 1946, and interned at Latrun.

After being a member of *Aḥdut ha-Avodah, Hacoheh was elected to the First Knesset on the *Mapai list, and remained a member of the Knesset for 20 years until 1969, with a break in 1953–55, when he served as Israel's first ambassador to Burma. In the Second to Sixth Knessets he was chairman of the Knesset Foreign Affairs and Defense Committee. He led many of the Knesset delegations to the Inter-Parliamentary Union in Geneva, and was twice a member of its Executive.

David Hacoheh's second wife was Bracha *Habas.

[Benjamin Jaffe / Susan Hattis Rolef (2nd ed.)]

HACOHEN, MORDECAI (1906–1972), rabbi and scholar. Born in the old city of Jerusalem, where his father, Rabbi Ḥaim, a well-known kabbalist who immigrated to Erez Israel at the turn of the century, was leader of the service at the Western Wall for more than 50 years.

Rabbi Hacoheh was educated at Jerusalem yeshivot and was ordained by Rabbis Abraham Isaac Kook, Joseph Ḥayyim Sonnenfeld and Abraham Zvi Schorr, head of the Ḥasidic Beth Din, whose daughter he married. With the establishment of the Hebrew University in Jerusalem in 1925 he enrolled as one of its first students.

He spearheaded and directed the Maḥzike Hadas network of institutions in Jerusalem with the aim of "bringing back" from among the secular population the "children who strayed away" – especially in the kibbutzim – to a renewed positive relationship with Jewish tradition. In line with these efforts, he published and edited (1943–49) a biweekly, *Nerot Shabbat* ("The Lights of Shabbat"), which was dedicated solely to the Shabbat, its content, meaning and beauty.

His literary works, which cover a wide range of topics, deal not only with academic subjects and theoretical halakhic problems, but also with relevant contemporary issues, and include *Al ha-Torah* (5 vols., 1956) and *Min ha-Torah* (5 vols., 1973), the popular and oft-reprinted collection of his original commentaries on the weekly portions of the Torah; *Midrash Bereshit Zuta* (1957); *Erke Midot be-Torat ha-Rambam* (1956; "Ethical Values in the Teachings of Maimonides"); *Kotel Ma'aravi* (1968); *Me'arat ha-Makhpelah* (1970).

After his death, Yad Ramah – a research and publication institute, commemorating his name and ideas – was established. Among the Yad Ramah publications are the following volumes of his collected essays: *Halakhot ve-Halikhot* ("Contemporary Issues in Halakhah"), *Mikdash Me'at* ("On Synagogue and Prayer"), *Ḥiddush va-Heker* ("Talmudic Studies"), *Ishim u-Tekufot* ("Historical and Biographical Studies"), *Be-Einei Ḥazal* ("The World of the Sages"), and *Ha-Bayit ve-ha-Aliyah* ("Studies Concerning the Temple and Pilgrimage").

BIBLIOGRAPHY: Tidhar, 3, 1229; Kressel, *Leksikon*, 2 (1967), 123; Y.Z. Wasserman, *Mi-Yekirei Yerushalayim* (1973), 99.

HACOHEN, MORDECAI BEN HILLEL (1856–1936), Hebrew writer and Zionist. At the age of 18 he began publishing in Hebrew periodicals, such as *Ha-Levanon*, *Ha-Zefirah*, and *Ha-Kol*, and, from 1876, was on the editorial staff of *Ha-*

Shahar. In 1878–9 Hacoheh, who was influenced by *Smolenskin's nationalism, published a long article sharply criticizing the Haskalah movement for having caused a spiritual crisis among the Jewish youth of Eastern Europe. No less effective was his article in **Ha-Meliz* (1879), depicting the dire economic plight of Russian Jewry. In 1878 he moved to St. Petersburg. In 1880 he wrote a comprehensive survey of Jewish agriculturalists in modern Russia for the Russo-Jewish periodicals. Hacoheh joined the **Hibbat Zion* movement in 1881 and, in the same year, published in **Ha-Maggid* his article “*Kumu ve-Na'aleh Ziyon*” (“Arise and Let Us Go to Zion”), the first of a series on the new movement. In 1886 he wrote from a Jewish nationalist standpoint the first comprehensive survey of Smolenskin's career. He visited Palestine at the end of 1889 and published his impressions in *Ha-Meliz*. In 1891, in his native town of Mogilev, Hacoheh founded two societies for promoting settlement in Palestine, visiting the country again on their behalf in that year. He reported on his journey in *Lu'ah Ahi'asaf* 9 (1901) and 11 (1903) criticizing the colonizing activities of the Hovevei Zion and of their agent, Ze'ev Tiomkin. A delegate to the first Zionist Congress (1897), he was the first to deliver a speech in Hebrew. In 1907 he settled in Palestine. Hacoheh, who was one of the founders of Tel Aviv, played an active part in the economic and cultural life of the *yishuv*. He helped to start the monthly youth magazine *Moledet*, of which he later became an editor. He was also one of the organizers of the Association of Hebrew Writers. Hacoheh's articles are characterized by their practical approach to contemporary problems, as exemplified by his demand that Jewish nationalism be given a sound economic basis. Especially noteworthy is his essay on “The Literary Vision of Israel and Its Land,” as expressed in the works of Smolenskin, George Eliot, Disraeli, and Baharav (*Ha-Shilo'ah*, vols. 2, 6, 11). His memoirs and diaries are also of historical and cultural importance.

His Hebrew works include a collection of articles and stories (2 vols., 1904); *Kevar*, memoirs (1923); *Olami*, memoirs (5 vols., 1927–29); *Milhemet ha-'Ammim*, a diary of World War I (5 vols., 1929–30); *Athalta* (2 vols., 1931–42), a collection of articles on Erez Israel in the years 1917–20; *Hayyim Nahman Bialik* (1933); *Be-Sivkhei ha-Ya'ar ve-'od Sippurim* (1934); and *Sefer Shemot*, biographical sketches of Hebrew writers and Zionist workers (1938). A selection of Hacoheh's Yiddish writings was published in the miscellany *In Mame Loshen* (1935). Two of Hacoheh's articles in Russian, “Jerusalem and its Region” (1909) and “On the Balance of Trade of Jaffa Harbor” (1913), were reprinted in pamphlet form. On the 50th and 60th anniversaries of the beginning of his literary work, miscellanies were published in his honor, *Me-Erev ad Erev* (2 vols., 1904) and *Mi-Boker ad Erev* (1925), which also contain biographical and bibliographical material about him.

[Gedalyah Elkoshi]

HACOHEN, RAPHAEL HAYYIM (1883–1954), rabbi and communal leader. Born in Shiraz, Persia, he was taken by his parents to Jerusalem in 1890. After a thorough rabbinical edu-

cation, he began to take an active part in all communal affairs of the *yishuv* and the then small settlement of Persian Jews. He founded an organization, Agudat Ohavei Zion, which aimed to improve the economic and cultural situation of the Persian Jews in Jerusalem. A devoted Zionist, he was a delegate to the Convention (Kenesiyah) in Zikhron Ya'akov, organized by M. *Ussishkin in 1903. In 1922 he signed a memorandum to the Zionist Congress, outlining the conditions and requirements of the Persian Jewish colony in Jerusalem. In 1912 he established a Hebrew printing press in Jerusalem, which published many works of *Judeo-Persian literature. He himself was the author of *Shir u-Shevahah* (1905; 1921²), a collection of songs and *pizmonim* of his family and of the Jews of Shiraz, and of an *Autobiography*.

[Walter Joseph Fischel]

HADAD, an early Semitic god, first appears in texts written in the Old Akkadian dialect and in Eblaite (third millennium). He was one of the chief gods of the *Amorites and, later, the *Canaanites and Arameans. In Akkadian documents Hadad appears as Adad / Addu and in Ugaritic as “Hd.” He also appears at *Emar in Syria. The name Hadad probably means “thunderer,” and as god of the storm he is responsible for fertility as well as destruction. He appears together with the sun goddess as guarantor of the treaty between Ebla and Abarsal. A letter found at Mari (A. Roberts, 1968, 166–68, 18th century B.C.E.) refers to a prophet of Adad, reminding King Zimri-Lim of Mari that it was Adad who returned Zimri-Lim to his ancestral throne and who gave the king the divine weapons with which he had defeated the sea god. This ancient myth is echoed in Ugaritic sources in which Baal, also called Hd, defeats Yam the sea god, as well as in Ps. 89:21–6. The cult of Hadad persisted in Syria from the earliest period up to Roman times. By the ninth century B.C.E. Baal and Hadad had bifurcated, with Baal, the biblical rival of Yahweh, worshipped in Israel, the Phoenician homeland in Lebanon, and the Phoenician diaspora, and Hadad among the Arameans, where he headed the pantheon. The bullock was sacred to him, and the sheaf of wheat, symbol of fertility, was one of his symbols. His consort was Atar'ata (called Atargatis, “the Syrian goddess,” in Greek sources).

The centers of the Hadad cult were Damascus and Baalbek, where he was identified with the sun god. There were temples of Hadad in Gozan-Sikanu, Sefire, Aleppo, Sam'al, and elsewhere. He was depicted on Syrian reliefs as a bearded man standing astride a bullock, holding shafts of lightning in his hands. In a later period he was depicted as a tall man wrapped in a tight garment decorated with emblems of the heavenly bodies, holding a threshing board in one hand and ears of grain in the other; next to him stand two bullocks. The Baal-Hadad cult was denounced by Elijah the prophet (1 Kings 18) and by *Hosea. In Palestine Hadad was known by the epithet Rimmon (properly, Ramman, “thunderer”), and was wor-

shipped in the Valley of Megiddo (cf. "...as the mourning of Hadadrimmon in the plain of Megiddon," Zech. 12:11). In the Aramaic Tel Dan Inscription (COS II, 162–63) the victorious Aramean king credits Hadad with preceding him and giving him victory over Israel.

In the Hellenistic period an altar was erected to Hadad near Acre. He and Atar'ata were also the chief gods of Hierapolis in Syria, but during the Hellenistic-Roman period the cult of the goddess gained in importance. When the Syrian cult spread west to the Greek and Roman cities, Hadad played only a secondary role.

Hadad appears in the Bible as the name of Edomite kings (Gen. 36:35; I Kings 11:14–25; I Chron. 1:46, 50) and is also a component of the names of Aramean kings Bar-Hadad, i.e., "Son of Hadad," hebraized as *Ben-Hadad (I Kgs. 20:1) and Hadadezer (II Sam. 8:3).

[Michael Avi-Yonah / S. David Sperling (2nd ed.)]

HADAMARD, JACQUES SALOMON (1865–1963), French mathematician. Born in Versailles, Hadamard held chairs of mathematics at the Collège de France from 1897 and the Ecole Polytechnique from 1912 until his retirement in 1935. He was elected a member of the Academy of Sciences in 1912 and was the first to be awarded the Feltrinelli Prize founded by the Italians in 1955 to compensate for the absence of a Nobel Prize for mathematicians. A brother-in-law of Alfred *Dreyfus, Hadamard took an active interest in the Dreyfus case, and for 60 years was a member of the central committee of the Ligue des Droits de l'Homme founded at the time of the Zola trial in 1898. The dangers of Hitlerism were recognized by Hadamard at an early stage. He was a free-thinker, but worked to alleviate the plight of German Jewry. He was a member of the French Palestine Committee and of the administrative board of the Hebrew University of Jerusalem. He escaped from France in 1941 to the United States, and moved to England to engage in operational research with the Royal Air Force. Hadamard produced important work in analysis, number theory, differential geometry, calculus of variations, functional analysis, partial differential equations, and hydrodynamics, and inspired research among successive generations of mathematicians. He published numerous papers and books. His *An Essay on the Psychology of Invention in the Mathematical Field* (1945; *Essai sur la psychologie de l'invention dans le domaine mathématique*, 1959) was published many years after his retirement.

[Barry Spain]

HADAS, MOSES (1900–1966), U.S. classical scholar and humanist. After graduating from Emory University, Hadas proceeded to Columbia University, at the same time pursuing studies at the Jewish Theological Seminary of America, from which he received his rabbinical diploma. Appointed instructor in Greek at the former institution in 1925, he became associate professor in 1946 and full professor in 1953. Three years later he was elected to the prestigious John Jay Chair in Greek, which he occupied until his death. During World War II he served with the Office of Strategic Services in North Africa and Greece.

Hadas' cardinal contribution to classical studies in the United States was to bring them out of the narrower confines of textual criticism into the broad area of general humanistic interest. This he did through a series of spirited and elegant renderings of the Greek dramatists and romances (e.g., Heliodorus) and of Caesar, Tacitus, Seneca, and other writers. He also wrote popular histories of Greek and Latin literature (1950, 1952); a broad, if sometimes controversial, survey of the Greco-Roman age, entitled *Hellenistic Culture: Fusion and Diffusion* (1959); a study (with Morton Smith) of classical aretalogy; and, in a lighter vein, an entertaining ancilla to classical reading. Many of these works appeared in inexpensive paperback editions, and thus introduced the ancient masterpieces to the general reader.

Hadas was a major figure at Columbia University. Through the humanity of his writings and the urbane temper of his character and outlook, he left an indelible impression on several generations of students and readers alike, and he was among the foremost to remove the traditional fustian from classical studies.

Outside of the classical field, Hadas produced, among other works, a delightful rendering of Joseph ben Meir *Ibn Zabara's *Book of Delight* (1932) and *Fables of a Jewish Aesop* (1966), a translation of the fox fables of the 12th century *Berechiah ha-Nakdan. In his earlier years he was prominently identified with the Menorah movement in American universities.

[Theodor H. Gaster]

HADASSAH, THE WOMEN'S ZIONIST ORGANIZATION OF AMERICA, largest Zionist, Jewish, and women's organization in the United States, with 300,000 members. Hadassah first sent public health nurses to Palestine in 1912 and in the decades following played a leading role in developing the social welfare infrastructure of pre-State Israel. With a program budget of \$125 million by 2005, Hadassah now provides vital funding for Israel's medical facilities and supports many health, educational, and vocational programs in Israel and the United States. Hadassah also offers its medical expertise and assistance in countries throughout the developing world.

Early History

Hadassah has its origins in a turn-of-the-century visit to Palestine by two American Jewish women. In 1909, soon after joining a New York City "Daughters of Zion" study group, the

writer and editor Henrietta *Szold, along with her mother, visited the Holy Land for the first time. They were both shocked by what Szold described as the “misery, poverty, filth, disease” they saw there. Upon returning to New York, Szold proposed to her study group that they take up the practical work of relieving Jewish suffering in Palestine.

In 1912, 30 women attended a meeting at New York City's Temple Emanu-El to discuss this idea and agreed to form a new organization called “Daughters of Zion, Hadassah Chapter.” The group elected Szold as president, drew up a constitution, and adopted a motto: “The healing of the daughter of my people.” The group's first priority would be to provide health care to women and children in the *yishuv* (Jewish community of Palestine). Less than a year later, Hadassah's Alice *Seligsberg accompanied the first two Hadassah nurses, Rose Kaplan and Rachel Landy, on their voyage to Palestine. In 1913, the nurses opened a small clinic in Jerusalem, called a Nurse's Settlement, to deal primarily with maternity care and trachoma cases. The model for this project was the system of visiting nurses set up by Lillian *Wald at the Henry Street Settlement House in New York City's impoverished Lower East Side neighborhood.

The new organization changed its name to “Hadassah, the Women's Zionist Organization of America” at its first annual convention in 1914, declaring that its mandate was “to promote Jewish institutions and enterprises in Palestine and to foster Zionist ideals in America.” Policy would be decided at future annual conventions with a central committee making decisions between conventions. Hadassah pledged to develop modern, American-style health and social welfare services in the *yishuv*, and promised members that their donations would go directly to support projects in Palestine.

After the outbreak of World War I, the Nurse's Settlement in Jerusalem was forced to close down in 1915. But the World Zionist Organization issued an urgent appeal for an emergency medical force to be sent to war-stricken Palestine. In 1918, Hadassah sent a 45-member medical team, the American Zionist Medical Unit (AZMU), to establish hospitals and clinics across Palestine. Hadassah established a Nurses Training School in Jerusalem and a School Hygiene Department and launched campaigns to eradicate malaria, cholera, trachoma, and other infectious diseases. Szold herself moved to Palestine in 1920 to administer Hadassah's ever-expanding network of health facilities and social welfare programs. The following year, the AZMU was renamed the Hadassah Medical Organization or HMO.

At a time when most Zionist organizations concentrated on political lobbying and land development to advance the Zionist cause, Hadassah's focus on health care, and on women and children, was sometimes criticized as frivolous charity work. But Hadassah's leaders replied that they were doing the nation-building work of creating a public health system. Indeed, Hadassah regarded its social welfare activities as women's distinctive contribution to the Zionist state-building effort. “It is the woman's part in constructive national work

that Hadassah seeks to stress – the mother tasks,” explained the organization.

Hadassah adopted a succession of projects pioneered by Progressive activists in the United States and adapted them for local use in the *yishuv*. First, Hadassah created a system of visiting nurses, infant welfare stations, pasteurized milk depots, and the *Tippat Halav* or Drop of Milk program, which used donkeys to deliver containers of pasteurized milk to mothers and babies. Other projects included school hygiene programs, maternity education, nutrition education, domestic science programs, school lunches, and supervised playgrounds.

These types of community-based public health initiatives emphasizing the role of health education in preventive medicine had a measurable effect. Hadassah helped reduce maternal deaths as well as infant mortality rates, prevented the spread of infectious disease, and taught adults and children the importance of hygiene, sanitation, recreation, and nutrition.

Among Zionist organizations working in Palestine, Hadassah was also distinguished by its interest in creating a pluralistic and tolerant Jewish society in which Arabs and Jews lived harmoniously. A strictly nonsectarian policy meant that from the start Hadassah's services were available to all residents of Palestine regardless of nationality or religion. Hadassah leaders often claimed that this helped to reduce tensions between Arabs and Jews.

Women's equality was also central to Hadassah's Zionist vision. In the 1920s, as Jewish women in the *yishuv* organized to fight for their social and political rights, including property rights and the right to vote in local elections, Hadassah supported their cause.

The services and institutions that Hadassah established in Palestine were designed to promote the development of a modern, egalitarian, and cohesive Jewish society. But Hadassah's larger goal was the creation of an independent Jewish state which could survive without Diaspora assistance. Thus Szold and Hadassah demanded that Hadassah-initiated projects be transferred to local control and management as soon as it was feasible.

In the United States, Hadassah resisted enormous pressure from the Zionist federations to join in national fundraising campaigns and pool its donations with those of other organizations. Persevering through acrimonious and well-publicized clashes with other Zionist organizations, Hadassah fought to preserve its organizational autonomy and the right to fund and administer its own projects. These battles cemented Hadassah's reputation for organizational and financial integrity and won it the loyalty of growing numbers of American Jewish women. An expanding membership base made Hadassah – with 66,000 members in 1939 – the largest single Zionist organization in the United States in the interwar period. This support, in conjunction with a well-developed fundraising apparatus, allowed Hadassah to accomplish its goals in the *yishuv*.

The needs of American Jewish women were also high on Hadassah's agenda. The organization aimed to educate these women "not only to Judaism but to a realization of their civic and national responsibilities." Szold insisted that Hadassah establish only one chapter in each city so that it could include both immigrant and native-born women from all social and educational backgrounds. In an era when few women had access to higher education or professional opportunities, Hadassah membership gave women a chance to learn new skills and an opportunity to participate in public life. Many women were transformed by their Hadassah work, taking up public speaking, organizing and running chapters of the organization, writing publicity materials and, for some, getting involved at the national and even international level.

Szold formally resigned as Hadassah president in 1926 when the World Zionist Congress asked her to join its Palestine Executive with responsibility for the health and welfare portfolio. Nevertheless, Szold remained in close contact with Hadassah's leadership over the years, effectively giving the organization a supporting role in the Jewish self-government of pre-State Israel. At the same time, Szold left her imprint on Hadassah for the future: an emphasis on health, social welfare, and education; a concern with organizational efficiency and financial transparency; faith in women's abilities; and a commitment to developing Jewish community life in the United States as well as in Palestine (later Israel).

Throughout the 1920s and 1930s, Hadassah continued to expand its programs in the *yishuv*. With Jewish immigrants constantly arriving from all over the world, Hadassah's health care workers tried to inculcate modern, Western ideas of health and preventive medicine. These immigrants, wherever they came from, were considered superstitious and backward. Hadassah's workers combated poor nutrition, high rates of illiteracy, patriarchal (and in some cases polygamous) family structures, child labor, and child marriage.

By the 1930s, Hadassah had created a countrywide network of maternity and child welfare programs, as well as many hospitals and clinics. In keeping with its policy of devolution, Hadassah handed over many of its programs to local authorities, and was soon looking for a new focus. When Recha *Freier, a German Jewish Zionist, asked for Szold's help to get Jewish youth out of Germany, Hadassah found its new purpose. In 1935, Hadassah became the sole American sponsor of the Youth Aliyah movement which rescued Jewish children from Nazi Europe and brought them to Palestine to be raised communally on kibbutzim. During World War II and in the years following, Hadassah helped Youth Aliyah to rescue, house, and educate thousands of young European Jewish refugees. This work, in turn, prepared Hadassah for its later role in helping the new State of Israel absorb the children of the Middle Eastern and North African Jews who arrived, en masse, during the first decade of statehood.

Despite wartime stresses, and the burden of helping to care for Youth Aliyah children, Hadassah's attention to building facilities for health and education never flagged. In

1939, the Rothschild-Hadassah University Hospital, the first teaching hospital and medical center in the country, opened on Mount Scopus. In 1942, Hadassah established the Alice L. Seligsberg Trade School for Girls, the first such school in Palestine, followed in 1944 by a Vocational Guidance Bureau in Jerusalem, the forerunner of the still active Hadassah Career Counseling Institute.

In 1948, after an ambush killed 77 of its medical staff, Hadassah evacuated its medical facilities on Mount Scopus, and set up five temporary hospitals around Jerusalem. The new Hadassah-Hebrew University Medical Center in Ein Kerem was dedicated in 1960. In 1962, as part of Hadassah's Golden Anniversary celebration, a synagogue was dedicated at the Ein Kerem facility. The synagogue's 12 stunning stained glass windows depicting the 12 tribes of Israel were designed by artist Marc *Chagall and draw visitors from all over the world.

In 1967, after the Six-Day War, Hadassah returned to Mount Scopus and began to rebuild. Hailed as a milestone event for Hadassah as well as for Israel, thousands of people attended the rededication ceremony in 1975 when the new Hadassah-Mount Scopus Hospital was finally reopened.

In 1983 Hadassah jettisoned the unwritten agreement limiting its membership to the United States, and promptly began setting up Hadassah affiliates worldwide. The Hadassah International Medical Relief Association (now called Hadassah International) opened membership to all who wished to fundraise for, and otherwise support, Hadassah's medical work. Hadassah International groups in more than 30 countries are generating support for the Hadassah Medical Organization, as well as coordinating international professional exchanges and symposiums.

Modern Challenges

In the 1980s and 1990s Hadassah faced fresh challenges at home. While the economic pressure of supporting programs in Israel was mounting, Hadassah's membership was aging. With career and family pressures competing for their attention, fewer young women were joining the organization. To appeal to this younger generation, Hadassah developed new and expanded domestic programming, including more involvement in American social policy issues. The organization is now deeply engaged in advocacy at the state and national levels in the areas of health care, education, equality, and social justice, including everything from reproductive choice to gun control, environmental protection, immigration policy, and stem-cell research.

On other fronts, Hadassah training programs cultivate women's leadership and organizational skills. Groups like Educators' Councils, Nurses' Councils, and Attorneys' Councils give professional women both a forum for networking and a vehicle for contributing their professional skills to Hadassah. Organized "missions" or trips to Israel for Hadassah members show them what the organization has accomplished on the ground and make connections between American Jewish women and Israelis. On the local level, hands-on programs

such as helping a women's shelter, or literacy tutoring, offer tangible results as well as a sense of community and connection with other Jewish women. Hadassah's Department of Women's Health promotes self-education to detect and prevent diseases which affect women and raises awareness of other pertinent health issues like genetics testing and counseling, and organ and tissue donation.

Young people are drawn into the orbit of Jewish community through Hadassah programs like the Training Wheels-*Al Galgalim* program which teaches parents and toddlers about Jewish traditions. Other programs for American Jewish youngsters include Young Judea clubs, summer camps, summer and year abroad programs in Israel, and campus-based programs.

In 1997, Hadassah established the first university-based research center devoted to the study of Jewish women – the International Research Institute on Jewish Women at Brandeis University – now renamed the Hadassah-Brandeis Institute.

In Israel, new immigrants and native-born Israelis alike still rely on many Hadassah-initiated and supported services. Hadassah's vocational education and career counseling programs help tens of thousands of adults each year to retrain and find employment. With Hadassah's continued financial and logistical support, Youth Aliyah has helped more than 300,000 children since 1935 and now serves over 12,000 youngsters yearly.

The Hadassah Medical Organization (HMO) is now a state-of-the-art diagnostic, research, and teaching center serving nearly a million patients from Israel, across the Middle East, and around the world each year. Cutting-edge medical research has led to breakthroughs and medical advances in areas such as Alzheimer's disease, cancer, cystic fibrosis, "cold" laser eye surgery, Post Traumatic Stress Disorder, Mad Cow disease, and more. The HMO also runs an extensive network of community-based health care programs and specialized outpatient clinics in locales across Israel.

The Hadassah University Medical Center – a tertiary care referral facility, teaching hospital, and research center where new medical techniques have been pioneered – consists of two hospitals in Jerusalem, one on Mount Scopus and the other in Ein Kerem, and five schools of the medical professions. All these institutions are run jointly by Hadassah and the Hebrew University. In 2004, a Center for Emergency Medicine was added to the hospital in Ein Kerem with the capacity to treat up to 120,000 trauma patients annually.

Hadassah's international programs have expanded dramatically over the years. Since 1980, more than 500 people from 70 countries have received an International Masters Degree in Public Health from Hadassah's Braun School of Public Health and Community Medicine – the newest of the HMO's five schools of professional medicine in Israel. The Hadassah Medical Organization runs cooperative projects in 112 countries throughout the developing world, including Asia, Africa, and Latin America, sending doctors and nurses to build and staff clinics, and offering medical training. Hadassah's medi-

cal personnel also offer emergency relief and assistance in response to catastrophes all over the world.

Hadassah's humanitarian work and commitment to the United Nations was recognized in 2001 when the United Nations Economic and Social Council (ECOSOC) conferred on Hadassah special consultative status as a non-governmental organization (NGO). In 2005, the Hadassah Medical Organization, described as "an example to the world that hatred and suspicion can be overcome by people of goodwill," was nominated for the Nobel Peace Prize.

HADASSI, JUDAH (ha-Avel) BEN ELIJAH (12th century), *Karaitic scholar of Constantinople. His greatest work is the *Eshkol ha-Kofer* (or *Sefer ha-Peles*), which according to his own testimony he began in 1148. The work is arranged according to the Ten Commandments and alphabetically. Written partly in verse, it explains the *mitzvot* and the *halakhot* and the reasons for their observance in accordance with the specific commandment on which they depend. It represents an encyclopedic corpus of Karaite belief and knowledge as it existed in the author's time. According to Hadassi, Karaite doctrine derives and may be learned from the Torah and the Prophets by way of a complete system of homiletical exposition, which he specifies in detail. The discussion on the *mitzvot* is preceded by a comprehensive treatment of the rules of vocalization and grammar in the Bible. Hadassi believed in man's free will in matters of faith and methods of Torah study. The rationalist trend in Karaism is recognizable in his attacks on the legends in the Talmud and the customs and interpretations of the *Rabbanites. There is also a certain measure of social criticism in his argument that the Rabbanites circumvent the prohibition against lending money on interest. Hadassi sharply attacked Christianity and Islam, but, like his Karaite predecessors, he attributed the corruption of Christianity to the Apostles, especially St. Paul; he stated that "Jesus was an exemplary, wise, and righteous man from the first ... the scholars encompassed him ... and killed him as they killed other pious men who criticized them."

The description given of the world and nature by Hadassi evidently reflected the current beliefs of the Jews living in the Byzantine Empire. He had an unqualified belief in astronomy and accepted demons and sorcerers. He knew of strange creatures in distant lands – a mixture of images from rabbinic legends, ancient mythology, and Eastern tales – and also of "the tribes of Jeshurun hidden beyond the Sambatyon River."

Hadassi was thus a compiler rather than an original thinker, and in spite of his anti-Rabbanite bias he drew much of his material from Rabbanite sources. His Hebrew style, however, unlike that of his Rabbanite contemporaries, is awkward and not easily understandable and the rhymed arrangement often makes it obscure. *Eshkol ha-Kofer* was published by the Karaite press in Eupatoria, Crimea (1836). A few hymns by Hadassi are included in the official Karaite prayer book.

[Haim Hillel Ben-Sasson]

HADAYAH, OVADIAH (1893–1969), rabbi. Hadayah was born in *Aleppo, Syria. In 1898 he was brought to Erez Israel and settled in Jerusalem. He studied in Sephardi schools and yeshivot, including Yeshivat Porat Yosef, where from 1923 he taught both Talmud and Kabbalah. He was a member of the *bet din* of the Sephardi community of Jerusalem. From 1939 to 1950 he was chief rabbi of the Sephardi community in Petaḥ Tikvah, and from 1951 chairman of the rabbinical high court of appeals and a member of the chief rabbinate council. He revived the kabbalist yeshivah Kehal Ḥasidim Bet El in Jerusalem, previously housed in the Old City but destroyed in 1948 during the War of Independence. Attached to the yeshivah was a department for the training of rabbis, His works include *'Eved ha-Melekh* on Maimonides; *'Avda de-Rabbanan*, on the Mishnah and Talmud; and the responsa *Va-Yikaḥ Ovadyahu*, *Yisrael 'Avdi*, and *De'ah ve-Haskel*. He was awarded the Israel Prize for Rabbinical Literature in 1968.

ḤADDAD, EZRA (1903–1972), educator, author, and journalist. Ḥaddad mastered several languages, including Hebrew. He published Hebrew poems in the Jewish weekly *Yeshurun* (Baghdad, 1920) and from 1926 to 1951 he directed the Jewish schools al-Waṭaniyya and Shammāsh in Baghdad. After his immigration to Israel in 1951, he held leading executive positions in the Histadrut. In addition to his Hebrew poems, Ḥaddad published an Arabic translation of the *Travels of Benjamin of Tudela* (1945) together with notes and an introduction. He also wrote a textbook for the study of Hebrew.

HADDAD, SARIT (1978–), Israeli pop singer. When Haddad first made a name for herself in the mid-1990s with her first album, *Nizoḥ ha-Ḥayyim* (“Spark of Life”), she was on the well-trodden path of so-called Mediterranean, or Eastern, pop music. She did not offer anything new in terms of musical style, but her vocals set a new standard which numerous singers have since tried to emulate.

Haddad was born in Afulah as the youngest of eight children. When she was eight years old she taught herself to

play the guitar, organ, and various percussion instruments, and, without her parents' knowledge soon began performing at local clubs. When she was 16 Haddad was discovered by impresario Avi Gaute when she performed in a beach show. Gaute took Haddad under his wing and began to develop her career, initially targeting the Sephardi community. On *Nizoḥ ha-Ḥayyim* Haddad joined forces with well-known young Druze male vocalist Sharif and the album sold well. By now Haddad had become a star on the national Eastern music club circuit.

In 1997, Haddad broke into the international market after a Jordanian television director caught her act. A tour of Jordan was soon arranged, with Haddad performing under the assumed identity of a Palestinian singer. The tour was a success and was followed by the release of *Sarit Haddad Shara be-Aravit* (“Sarit Haddad Sings in Arabic”), which was also sold in Arabic-speaking countries.

In the same year Haddad's Israeli market presence grew significantly when she teamed up with top ethnorock group Teapacks (Tipex), and with her 1998 record *Ḥok ha-Ḥayyim* (“The Law of Life”) she broke into mainstream Israeli culture.

Since then Haddad has achieved, and maintains, megastar status in Israel, and has performed in Europe and the United States. Every record she released was an immediate success; she was voted Singer of the Year several times and represented Israel at the Eurovision Song Contest in 2002, placing 12th.

[Barry Davis (2nd ed.)]

ḤADERAH (Heb. הַדְרָה), town in central Israel, in the northern Sharon, founded in 1890 by members of Ḥovevei Zion from Vilna, Kovno, and Riga who had bought the land a few months earlier. The area was swampy and infested with malaria, and the settlers underwent great suffering, with more than half dying of malaria in the first 20 years of Ḥaderah's existence. In 1895 Baron Edmond de *Rothschild began aiding the village, sending Egyptian workers to lay out the first drainage network and planting large eucalyptus groves; the eucalyptus tree soon became Ḥaderah's symbol. Dr. Hillel *Joffe worked indefatigably in combating the malaria in Ḥaderah. Although the disease ceased to constitute a problem from the late 1920s, the last vestiges of the swamps disappeared only in 1945, when a larger canal leading to the sea was dug. Whereas field and vegetable garden crops initially constituted main farm branches, citrus groves began to be planted before World War I and were greatly enlarged in the 1920s and 1930s. With the construction of the Lydda-Haifa railway in 1918–19, Ḥaderah became a railway station, and with the completion of the Ḥaderah–Petaḥ Tikvah highway in 1937, it also became an important crossroads, connected with Haifa in the north and the Jezreel Valley in the east. The number of inhabitants increased from 152 in 1898 to 320 in 1914, 450 in 1922, 3,372 in 1931, and 11,819 in 1948. Ḥaderah became a regional center, receiving municipal council status in 1936 and municipal status

in 1952. During the first years of Israel's independence, after 1948, Ḥaderah doubled its population. In 1961 it had 26,000 and, in 1968, 31,100 inhabitants; of the latter, 40% were Israeli-born, 33% hailed from Europe and America, and 27% from Asia and Africa. In the mid-1990s, the population was approximately 56,100 and by the end of 2002 it was already 74,000. Although agriculture (carp ponds, bananas, cattle, poultry, beehives, flowers, etc., in addition to citrus and various field and garden crops) continued to develop, industry became the main element in the town's economy. Concentrated on a dune area in the northwest, it included the American Israel Paper Mills and Alliance Tire and Rubber Company (each with over 1,000 employed in 1970), food-preserve plants, and other enterprises. Near the estuary of the Haderah River there is a large electric power station run by Israel's Electric Company. As the center of a sub-district, Ḥaderah fulfills administrative functions and has the Hillel Joffe hospital and educational institutions. The large municipal area of 20 sq. mi. (50 sq. km.), extending over the sand dunes west to the seashore, provides ample space for expansion of residential and industrial quarters. During the al-Aqsa Intifada, commencing in 2001, Ḥaderah came under a number of terrorist attacks, including a suicide bombing at a bar mitzvah, which killed six and wounded 35.

The name Ḥaderah is derived from the Arabic *al-Khaḍrā'* ("the Green"), referring to the color of the former swamp vegetation and to the algae-covered water of Naḥal Ḥaderah. The area around Ḥaderah was first settled in the Chalcolithic period; house-shaped pottery ossuaries with painted decorations from this time were found in excavations there in 1936. Bronze Age remains, as well as ruins of buildings, mosaics, and a Roman bridge, were also discovered. In the Crusader period the city was called Lictera after the Arabic name al-Khuḍayra. Because of the many swamps in its vicinity, the site was abandoned after the Crusades.

[Shlomo Hasson / Shaked Gilboa (2nd ed.)]

ḤAD GADYA (Aram. ܚܕ ܓܕܝܐ; "An Only Kid"), initial phrase and name of a popular Aramaic song chanted at the conclusion of the Passover *seder. Composed of ten stanzas, the verse runs as follows: A father bought a kid for two *zuzim*; a cat came and ate the kid; a dog then bit the cat; the dog was beaten by a stick; the stick was burned by fire; water quenched the fire; an ox drank the water; a *shoḥet* slaughtered the ox; the *shoḥet* was killed by the Angel of Death who in punishment was destroyed by God. Each stanza repeats the previous verses closing with the refrain: "*ḥad gadya, ḥad gadya*." Jewish commentators have invested "*Ḥad Gadya*" with a hidden allegorical meaning in which the kid symbolizes the oppressed Jewish people. It was bought by the father (God) for two coins

(Moses and Aaron). The devouring cat stands for Assyria; the dog is Babylon; the stick represents Persia; the fire Macedonia; the water is Rome; the ox, the Saracens; the *shoḥet*, the Crusaders; and the Angel of Death, the Turks who in those days ruled Palestine. The end of the song expresses the hope for messianic redemption: God destroys the foreign rulers of the Holy Land and vindicates Israel, "the only kid." Other commentators have tried to interpret "*Ḥad Gadya*" as an allegorization of the *Joseph legend or of the relationship between body and soul as reflected in Jewish mysticism. The best-known Jewish interpretations of "*Ḥad Gadya*" are (1) *Kerem Ein Gedi*, by Judah b. Mordecai Horowitz (Koenigsberg, 1764); (2) a commentary by Jonathan *Eybeschutz (Neubauer Cat Bodl. 1 (1886), no. 2246); (3) two commentaries by the Gaon of Vilna (e.g., in the *Haggadah Migdal Eder*, Vilna, 1923); (4) and a commentary by R. Moses *Sofer (*ibid.*). Most scholars agree, however, that the song was borrowed from a German folk song of the Hobelbanklied type ("*Der Herr der schickt den Jodel aus*") which, in turn, is based on an old French nursery song. Joseph *Jacobs (in notes to his *English Fairy Tales*, London, 1893) points to the analogy of "*Ḥad Gadya*" with Don Quixote and with certain Persian and Indian poems. The riddle of the motif and meaning of "*Ḥad Gadya*" was also dealt with by Christian writers, notably by Hermann von der Hardt, in his *Ḥad Gadia Historia Universalis Judaeorum in aenigmate* (Helmstadt, n.d.) and also by J.C. *Wagenseil, and by J.C.G. *Bodenschatz. The song seems to have originated in the 16th century and appears for the first time in a *Haggadah* printed in Prague (1590). It was never part of the Sephardi and the Yemenite rituals. It was incorporated into the *Haggadah (like the other concluding songs; see "*Eḥad Mi *Yode'a*") for the amusement of the children so that they might not fall asleep before the end of the *seder*.

HADID (Heb. ܗܕܝܕ), city in the northern Shephelah, in the western part of the territory of *Benjamin. It is mentioned together with *Lydda and *Ono among the cities to which the Babylonian exiles returned (Ezra 2:33; Neh. 7:37; 11:34). The city had strategic importance; it was fortified by the Hasmonean *Simeon who camped nearby during Tryphon's invasion (1 Macc. 12:38; 13:13 – Adida). The battle between the Nabatean King Aretas and Alexander *Yannai took place near Hadid, and Vespasian later conquered it (Jos., Ant. 13:392; Wars 4:486). According to the Mishnah, it was already fortified in Joshua's time (Ar. 9:6). Eusebius describes it as being east of Lydda (Onom. 24:24 – Aditha) and it also appears on the *Madaba Map (no. 59). A mosaic pavement with figurative nilotic scenes was found there in 1940. The ancient town was situated on a hill northwest of the abandoned Arab village of

al-Ḥaditha, 3½ mi. (6 km.) east of Lydda. In 1951, 60 Yemenite immigrant families founded a settlement called Ḥadid near the village. They were joined later on by immigrants from Romania. In the mid-1990s, the population was approximately 480 and in 2002 it numbered 555.

[Michael Avi-Yonah]

HADITH, the science of Islamic tradition, applying particularly to the *sunna* (actions, sayings, virtues, opinions, and ways of life of *Muhammad). The hadith is one of the four fundamentals which form the background of **fiqh* (Islamic jurisprudence). It encompasses all the relationships between man and God and between man and man, including methods of prayer, fasting, pilgrimage, marital laws, and commercial affairs. The believer must be acquainted with the *sunna* of the Prophet and model his life in accordance with it; any deviation from the traditional path is a *bid'a* (“a harmful innovation”).

The first to hand down the hadith were the companions (*ṣaḥāba*) of Muhammad, who followed the course of Muhammad's life and heeded his words. After his death, masses of believers went to the companions in order to hear the *sunna* of the Prophet. The men of the second generation continued to propagate the tradition which they had received from the *ṣaḥāba*, handing it down to their followers. Thus, a chain of traditionalists was formed, the *isnād* (“support”), which preceded the texts (*matn*) themselves or the main part (of the teaching). At first, the hadith was handed down orally. A few of the traditionalists, however, wrote down the traditions for their personal use; these lists (*ṣaḥīfa*, “sheet”) aided subsequent traditionalists, as well as the editors of the hadith. The editing of collections of the hadith began at the end of the *Umayyad period; the editors adopted two different methods: *musnad*, the classification of traditions according to the names of the traditionalists and *muṣannaḥ*, their classification according to subject, and editing according to the content. The oldest extant documents are a fragment on papyrus of the *ṣaḥīfa* by Ibn Lahī'a (d. 790), found in Egypt and containing traditions which are mainly of an eschatological nature; the collection by Mālik ibn Anas (d. 795), *al-Muwatta'*: a section of the collection of 'Abdallah ibn Wahb (d. 812), also written on papyrus, which contains the sayings of the Prophet, the first caliphs, and the men of the second generation, mainly on ways of behavior and virtues; and the *musnad* of Aḥmad ibn Ḥanbal, which contains about 30,000 hadiths.

From the beginning of *Islam the believers attributed great importance to the hadiths as complementary and explanatory material to the *Koran. The principle that certain traditions of the Prophet were nullified by later sayings of the Prophet was accepted; many works were written on the sub-

ject. The most eminent Muslim scholars dedicated their efforts to the clarification of the unusual words which are found in the hadith.

The struggle between social movements, political parties, and various religious trends within Islam gave rise to an abundance of hadiths which were attributed to the Prophet. Some contradicted others, thus confusing the Muslim scholars of tradition. A special science was established which is concerned with meticulous investigation into the reliability of the men of the *isnād*, as to character, talent, propriety, and ideological attachment to the various social and political groups. The hadiths were classified as “genuine” (*ṣaḥīḥ*, the best category), “fair” (*ḥasan*, the middle category), and “weak” (*dā'if*) and were divided accurately and systematically according to their frequency, the number of authorities in the *isnād*, the relationship which existed among them (oral or written tradition), etc. During the ninth century six collections of hadiths (*muṣannaḥ*, see above) were written and accepted as reliable by Muslims: al-Bukhārī (d. 870), Muslim (d. 875), Abu Dā'ūd (d. 888), al-Tirmidhī (d. 892), al-Nasa'ī (d. 915), and Ibn Māja (d. 886). The works of al-Bukhārī and Muslim were particularly esteemed: the former contains 7,275 hadiths selected by the author from about 200,000 hadiths after a most meticulous examination. In the course of time many collections of hadiths were compiled; some are more comprehensive but not as esteemed as the six aforementioned works, which have been edited and commented upon in detail by Muslim scholars. The great interest in the hadith gave rise to a special movement of “searchers of knowledge” (*ṭullūb al-'ilm*), who wandered around the world in search of the scholars of the hadith in order to listen to their teachings. The influence of Judaism on the development of the *ḥadith* is evident not only in their content (see *Qīṣaṣ al-Anbiyā'* (“The Legends of the Prophets”) and *Bible in Islam) but also in the form in which they have been handed down. There is a striking similarity between the *isnād* and the chain of masoretes in tannaitic and amoraic literature in the *halakhah* and the *aggadah* (cf. also the concept of “a ruling received by Moses at Sinai” and the opening of the tractate *Avot*: “Moses received the Torah at Sinai and handed it down to Joshua, Joshua to the Elders, the Elders to the prophets,...”). Judaism has also influenced the hadiths which deal with the daily conduct of man, man's relationship to God, ethics, piety, various customs, as well as legal affairs, marital laws, and rites. The influence of Christianity on the hadith is not as apparent.

[Meir Jacob Kister and Haïm Z'ew Hirschberg]

While the Jews and their religion, and the Israelites and their history, receive relatively scant attention in the hadith literature proper (especially in the aforementioned six canonical collections), other Islamo-classical genres composed primarily of hadith reports – including *sīra* (prophetic biography), *maghāzī* (chronicles of military campaigns) and above all *tafsīr* (Koran commentary) – devote considerable space to subjects Jewish. This distinction may be attributed to the cen-

tral purpose of the *muṣannaḥ* hadith compilations – namely, to inculcate legal and behavioral norms as opposed to relating anecdotes of solely historical or anthropological interest – as well as to an increasing distaste on the part of medieval Muslim purists for the reservoir of Jewish material (known as *Isrāʾīliyyāt*) that had infiltrated Islamic discourse since the faith's inception. Hadith reports as expressed in these various other frameworks (*sīra*, *maghāzī*, *tafsīr*) dwell at length on matters pertaining to the Jews, who are referred to with a certain rough interchangeability as *Yahūd*, *Banū Isrāʾīl* or *ahl al-kitāb* (people of the book). They delve into issues such as ancient Israelite history; tales of the biblical prophets; the rocky relationship between the Children of Israel and their God (Allāh); Arabian Jews and their interaction with the fledgling Muslim community; Jewish theology, law, custom and ritual; the role and fate of the Jewish community in the Eschaton; the character of the Jews and the correct Muslim attitudes toward them; and more.

The information obtained by Muslims concerning Jewish norms and historiography and reflected in the hadith ranges from the impressively accurate (including near verbatim recapitulations of biblical and midrashic passages and relatively sophisticated rehearsals of Talmudic *sugyot*) to the confused, propagandistic and fantastic: Jews excise urine-splattered flesh, pluck each other's eyes out in retribution, are enjoined by the Torah to forego booty in war, and believe Ezra is the son of God as the Christians believe Jesus is the son of God; Jewish law forbids the consumption of geese and ducks, prohibits the use of sand for purification if water cannot be found, commands its adherents to slaughter a yellow heifer if an unidentified corpse is found in a field, etc. While ancient Israelites are on some rare occasions portrayed positively in the hadith literature, for the most part Jews of all periods are presented in a highly negative light. They are *Muḥammad's (as they were Jesus', as well as their own prophets') most intractable adversaries, who lost no opportunity to try and trip up the Arabian apostle and mock his message. They are conceived as the historical epitome of excess and evil and – having been abandoned by God as a result of such noxious traits – now also the model of misery. The Jews may be said to function as the emblem of all that Muslims should not be, a kind of *sunna* (exemplary tradition) in reverse.

Newby, *The Making of the Last Prophet: A Reconstruction of the Earliest Biography of Muhammad* (1989).

HADRACH (Heb. הדרח), city in Syria. Its identification is established by the biblical reference to the “land of Hadrach” in context with Damascus, Hamath, Tyre, and Sidon (Zech. 9:1). Some scholars also emend Ezekiel's description of the country's northern border from “the way of [Heb. *ha-derekh*] Hethlon” to “Hadrach-Hethlon,” and accordingly locate it between the Mediterranean and Zedad (Ezek. 47:15). The city Hazrak is mentioned in an inscription of Zakir, king of Hamath and Lu'at (L's; c. 780 B.C.E.), who captured the city and resisted its invasion by a coalition of kings from northern Syria and southern Anatolia. In the eighth century, the Assyrians stormed the city three times before Tiglath-Pileser III succeeded in conquering it in c. 738 B.C.E. He reduced it to an Assyrian province, bearing its name; an Assyrian governor is still found there in 689 B.C.E.

Since Hadrach appears in Assyrian documents together with Mt. Saua (apparently Mt. al-Zāwiya), scholars locate the land of Hadrach between the valley of Unqi (Antiochia) in the north, Hamath in the south, and the Orontes in the west. The location of the city Hadrach, however, is disputed; it is most likely Kharake, near Mu'arat e-Nu'aman.

A note from R. Joseph b. Dormaskit to R. Judah indicates that in talmudic times Hadrach was thought to be located in the vicinity of Damascus (Sif. Deut. 1). In the Middle Ages, the seat of Gaon Solomon b. Elijah and his yeshivah was called Hadrach; this is possibly the city Javbar, two miles (3 km.) northeast of Damascus, where remains of an ancient synagogue have been found. Hadrach was still mentioned by the travelers of the 16th and 17th centuries, as the place where the “Synagogue of the Prophet Elijah” whose ruins subsist to this day, was situated.

ḤADRAMAWT. A province of *Yemen, a coastal region of the south Arabian peninsula on the Gulf of Aden in the Arabian Sea, extending eastward from Yemen to Oman. Historically, the name refers to the Ḥadramawt sultanates, a collective term for the Qu'aitī and Kāthirī sultanates, which were loosely under a British protectorate of South Arabia, guided by the British resident at *Aden, until 1957. Society is still highly tribal, with the old Sayyid aristocracy descended from *Muḥammad, traditionally educated and strict in their Shāfi'i Islamic observance. Though Bible dictionaries derive Ḥadramawt

from Hazarmaweth, a son of Joktan (Genesis 10:26–8), it actually derives from Greek *hudreumata* or enclosed watering stations at wadis. The frankincense trees that supplied the “Incense Road” grew to the east of the Ḥaḍramawt, in the Dhofar. Ḥaḍramawt was the country of two separate pre-Islamic kingdoms in south Arabia: Kathabān and Ḥaḍramawt. In pre-Islamic time Ḥaḍramawt was almost completely Jewish as local tribes such as the Kindah judaized, but most of them became Muslim after the country was conquered by the army sent by Muḥammad. Jews, however, continued to live there under the end of the 15th century, when they were killed or expelled as a result of a Jewish messianic uprising. Since then the country was considered as a holy land where the tomb of the mythological prophet Hūd was found, so Jews were not permitted to reside there. Only in the western part were there in modern times some Jewish settlements, such as *Ḥabbān and Bayḥān. But the Jewish silversmiths and goldsmiths were allowed to wander all over the country to make a living. Some of them converted to Islam, probably at the end of the 19th century.

[Yosef Tobi (2nd ed.)]

HADRAN (Heb. הָדְרָן; Aram. “we returned”), a term indicating both the celebration held on the completion of the study of a tractate of the Talmud (*siyyum*) and the type of discourse delivered on that occasion. The origin of the term is the formula found at the end of the chapters of the tractates of the Talmud – “*hadran alakh* chapter so-and-so” (at a later date the words “*ve-hadrakh alan*” were added). Two explanations of the term have been given: “We shall return to thee”; and indicating “beauty” or “splendor,” a form of farewell salutation to the tractate comparable to “Homage to thee, O Altar!” (Suk. 4:5; see Lieberman, in: *Alei Ayin, Minhag Devarim... S. Schocken* (1948–52), 81 n.33). The celebration and feasting held on such an occasion are mentioned in the Talmud (Shab. 118b–119a), and it is laid down that the meal ranks as a religious one (Sh. Ar., YD 246:26). As a result it can exempt a person from the obligation of fasting, as for instance on the Fast of the *First-born on the eve of Passover (*Mishnah Berurah*, OḤ 470:10), or exempt those who have adopted the custom of fasting on the anniversary of their parents’ death. On it one may partake of meat and wine during the days of mourning between the First of *Av until the Ninth of Av (Isserles to Sh. Ar., OḤ 551:10). The essential elements of prayer recited at the conclusion of the study of a tractate (printed at the end of each tractate in most editions of the Talmud), which includes the enumeration of the ten sons of Rav Papa as a kind of incantation, is already mentioned by *Abraham b. Isaac of Narbonne in the *Sefer ha-Eshkol* (Z.B. Auerbach’s edition, 2 (1968), 49, *Sefer Torah* no. 14; = S. Albeck’s edition, 1 (1935), 159) in the name of *Hai Gaon, who observes that they refer to scholars from different eras and that they were not all the sons of the same

Rav Papa. It also includes the expanded version of the *Kaddish de-Rabbanan*. The discourse delivered at this celebration took on a special character. By recourse to ingenious *pilpul* it aimed at connecting the end of the tractate with its beginning or with the beginning of the next tractate to be studied. A special literature of this type thus developed, which began to appear mainly at the beginning of the 18th century (the first discourse of this class is perhaps the one at the end of the novellae on *Bava Kamma* (1631) of Meir *Schiff (published Hamburg, 1747)). Because of their pilpulistic character they gave rise to opposition and criticism.

[Shlomoh Zalman Havlin]

°**HADRIAN (Adrian) I**, pope (772–95). Under Hadrian’s papacy the Second Council of Nicaea, which condemned iconoclasm, was held in 787. On several occasions when Hadrian intervened personally in the controversy over graven images, and again in letters to Empress Irene and to Charlemagne, he fulminated against the Jewish respect for the biblical command against images; finally he compared the iconoclasts – whom the Council of Nicaea eventually declared heretics – with the Jews. In several edicts attempting to regulate relations between Christians and Jews he forbade Christians to celebrate Passover with the Jews, to accept unleavened bread from the Jews, and to rest on the Sabbath “after the Jewish fashion.” In a letter addressed in 794 to the bishops of Spain, Hadrian complained in passing that he had learned that “many people who claim to be Catholics live freely with Jews and unbaptized pagans, sharing both food and drink with them.” He urged the bishops to see that nothing of the sort occurred again and that the regulations laid down by Church Fathers were followed.

[Bernhard Blumenkranz]

°**HADRIAN, PUBLIUS AELIUS**, Roman emperor, 117–138 C.E. According to all the indications, Hadrian did not entertain any hostility toward the Jews at the beginning of his reign. On the contrary, it would appear that the Jews hoped for an improvement in their situation. Hadrian’s first act, the execution of Lusius *Quietus, the governor of Judea, certainly appealed to the Jews. There is apparently an echo of the hopes raised by Hadrian’s accession in the *Sibylline Oracles, which state that the man whose name is like that of the sea (H-adrian–Adriatic) will act favorably toward the Jews (5:46–50). There may also have been contacts between the Jews and the Roman government. Although there is no explicit information to that effect, it would appear that rumors began to spread that the Temple was to be rebuilt (cf. Gen. R. 64:10), but nothing practical resulted. It is not certain whether Hadrian issued decrees against Jewish observance before the

*Bar-Kokhba War (132–135). One opinion holds that the Jews were affected, even if unintentionally, by a decree issued by Hadrian forbidding castration, which was interpreted as including a prohibition of circumcision. Others reject any connection between this decree and circumcision, and are of the opinion that the decrees against circumcision and other observances were enacted after the war.

The emperor also decided to erect a gentile city on the site of destroyed Jerusalem to be named *Aelia Capitolina after himself. According to Dio Cassius this decision was made about two years before the Bar-Kokhba War and it is regarded by many as one of the chief causes of the Jewish revolt, even though the project was implemented only after the revolt had been crushed. Hadrian frequently visited parts of the empire. He visited Judea in 130 C.E., but there is no knowledge of any contact between him and the Jews during this visit, although in talmudic literature many conversations of Hadrian with R. *Joshua b. Ḥananiah are reported. According to those who date Hadrian's anti-Jewish decrees, especially with regard to Aelia Capitolina, before the revolt, the visit resulted in fanning the flames of discontent. A reference to the visit has been preserved in a coin which shows the province of Judea, in the guise of a woman, greeting the emperor on his arrival. It should be borne in mind, however, that the official view represented on the coin in no way reflects the attitude of the Jews. From Judea Hadrian proceeded to Egypt, returning in 131. During his sojourn in Judea and the neighboring countries the Jews outwardly kept the peace, but in 132 the revolt broke out in full force. Despite some initial successes of the rebels, Hadrian's commander, Julius Severus, succeeded eventually in crushing the revolt (see *Bar Kokhba). It was then, most probably, that Hadrian issued the harsh restrictive edicts against the study of the Torah and the practice of Judaism, including circumcision, making their observance capital offenses. Presumably it was in the subsequent persecutions that R. *Akiva and other rabbis were martyred (see the *Ten Martyrs). It was then also that Aelia Capitolina was constructed on the ruins of Jerusalem. A temple to Jupiter Capitolinus and an equestrian statue of the emperor were erected on the site of the Temple. These edicts of Hadrian remained in force until the time of his heir, Antoninus Pius, and in cruelty and scope they recall the decrees of Antiochus 300 years earlier. Hadrian's decrees give eloquent expression to the detestation felt by the emperor, "the friend of culture and enlightenment," for Judaism and his complete inability to understand it, as well as to the gulf between Judaism and the world of the Roman Empire.

[Uriel Rappaport]

In the Aggadah

To the rabbis, Hadrian was a symbol of wickedness and cruelty. His name is usually accompanied by the epithet "the wicked" or by the imprecation "may his bones rot" in Hebrew or Aramaic. In addition the appellation "the wicked kingdom" refers very frequently to Rome in the days of Hadrian. All manner of stories are related about the murder of Jews at the command

of Hadrian after the fall of *Bethar. On the verse "the voice is the voice of Jacob" (Gen. 27:22) R. Johanan states that it refers to the voice of Emperor Hadrian, who "killed 80,000 myriads of people in Bethar" (Gen. R. 65:21; Lam. R. 1:16; 45). Nevertheless Hadrian appears in the *aggadah* in a more genial role which tends to emphasize his contacts with Jews, both scholars and the common people. He is said to have had discussions with Joshua ben Ḥananiah on the creation of the world (Gen. R. 10:3), and on resurrection, in which there appears the legend of the *luz, the indestructible nut (coccyx) of the spinal column (*ibid.*, 28:3). Similarly, stories are told of him walking through Erez Israel before the Bar Kokhba War and conversing with farmers. One of them describes him asking a centenarian who was planting fig trees whether he expected to eat of its fruits. The old man answered that as he had found fruit trees when he was born, so he was planting them for his children. Three years later, after the war, the man presented him with a basket of figs from that planting and Hadrian filled the basket with gold pieces (Lev. R. 25:5). These stories seem to be connected with the devastation caused by the war and the subsequent restoration of the previous fertility of the land, a fact specifically mentioned in connection with the aftermath of the war (TJ, Pe'ah 7:1, 20a).

Radin, *Jews among the Greeks and Romans* (1915), 343–4. **ADD. BIBLIOGRAPHY:** S. Perowne, *Hadrian* (1960); G. Foerster, "A Cuirassed Bronze Statue of Hadrian," in: *Atiqot*, 17 (1985), 139–60.

HADUTA (also known as **Hedvata**) **BEN ABRAHAM** (c. 6th century), one of the early *paytanim* in Erez Israel. His *piyyutim form a distinct group in *piyyut* literature because of their special subject material: a series of hymns commemorating the 24 watches (*mishmarot) of priests (cf. 1 Chron. 24:7–18), practiced in the time of the Second Temple. One *kerovah* is dedicated to each watch. A prayer commemorating the watches dated 1034, found in the Cairo *Genizah*, gives evidence of the custom of the Palestinian Jews, whereby on each Sabbath the name of the division belonging to that Sabbath was proclaimed. It thus emerged that Haduta's *kerovot* were not *kinot* ("dirges") for the Ninth of *Av, as had been supposed, but were recited in the Palestinian synagogues each Sabbath.

The hymns mention many details concerning the names and the dwelling places of the watches. They are thus an important source of information for research of Palestinian topography. Possibly the priests were still concentrated in certain defined localities in Haduta's time.

Haduta (הַדוּתָא, הַדוּתָא) sometimes signed his name הַדוּתָא, הַדוּתָא (with ה and ה instead of ה and א), and it is unlikely that there were two or three hymnologists of the same name.

HA-EFRATI (Troplowitz), JOSEPH (c. 1770–1804), Hebrew poet and dramatist. Born in Troplowitz, Silesia, he was a tutor for several years, during which he wrote the first acts of *Melukhat Sha'ul* (“Saul’s Kingdom”), a drama that was completed in Prague in 1793. Although many of his poems were published in the first issues of *Ha-Me’assef*, his principal work remains *Melukhat Sha'ul*. The Yiddish translation became part of the traditional *Purimshpil (“Purim play”) in many Lithuanian and Polish towns. *Melukhat Sha'ul*, the first modern Hebrew drama of the Haskalah period, is noteworthy for its new egalitarian and humanistic ideas. Evidently influenced by Shakespeare, Goethe, Schiller, and von Haller, as well as M.H. *Luzzatto, Ha-Efrati was particularly successful in his depiction of a man in the grip of irrational forces. Yet critics have argued that the play’s weakness lies in its flat characterizations of all personages except Saul. David, Jonathan, and Michal represent abstract ideas rather than lifelike characters. Ha-Efrati, however, improved upon all the numerous attempts throughout the Middle Ages to dramatize the tragedy of Saul. He portrayed the pathos of a suffering hero, ridden with envy and guilt, torn by fears and loneliness, and not merely a proud and jealous king. The drama very likely influenced J.L. *Gordon’s *David u-Varzillai* and *Ahavat David u-Mikhal* (1857). Parts of a newly discovered book of Ha-Efrati’s Hebrew poems were published by A.Z. Ben-Yishai (*Behinot*, 11 (Fall 1957), 59–71).

HA-EMET (Heb. אמת, “The Truth”), the first Hebrew socialist periodical, published in Vienna during the summer of 1877. The idea of issuing a socialist organ for Jews originated in the revolutionary circles of Vilna. The editor and publisher (under the pseudonym Arthur Freeman) was Aaron Samuel *Liebermann. After he fled from Russia in 1875, Liebermann had at first attempted, unsuccessfully, to establish a bilingual periodical, *Ha-Pattish* (“The Hammer”), in Yiddish and in Hebrew, for both the Jewish masses and the *maskilim*. He received the support of the Jewish students’ circle in Berlin, as well as Jewish revolutionaries such as Lazar *Goldenberg, Aaron *Zundelevich, and non-Jewish revolutionary leaders like P. Lavrov and V. Smirnov, editors of the periodical *Vperyod*. In its prospectus Liebermann announced that *Ha-Emet* would not concern itself with “religious and national issues” but with “the necessities of life” – “bread and work” and “the spoon and the

fork question,” which “took precedence over all other contemporary problems.” The publication of the newspaper was motivated by “our love for our people solely in their capacity of human beings” and by a particular responsibility felt toward them “being conscious of their lives and their afflictions.” As a newspaper issued legally, *Ha-Emet* maintained a cautious tone. Liebermann himself wrote almost all the articles (which were unsigned). It included poems by J.L. *Levin (Yahalal), who with M. Kamyonski actively promoted the newspaper in Russia. Its agent in Galicia and Ukraine was Rabbi A. Eisner. The publication of *Ha-Emet* provoked wide controversy in the Jewish press. The newspaper closed down after three issues through lack of funds and the prohibition on its entry into Russia. Its direct successor was **Asefat Hakhamim*, whose editor M. *Winchevsky was influenced by Liebermann. Photographic editions of *Ha-Emet* were published by Z. Krol with appendixes (1938), and in Jerusalem (1967).

[Moshe Mishkinsky]

HAENDEL, IDA (1928–), violinist. Born in Chelm, Haendel studied as a child prodigy with Michaelowicz in Warsaw, and in 1933 won the conservatory gold medal and the first Huberman Prize with Beethoven’s Violin Concerto. She then pursued her training in Paris and London with Flesch and Enesco, making her London debut in 1937. Her wartime activities included many concerts for Allied troops, National Gallery appearances, and a performance of Dvořák’s Concerto at the composer’s centenary Prom. She began her international concert career after World War II and came to be regarded as one of the leading soloists of her generation. She made tours in America, Russia, Europe, South America, and Asia. In 1973 she was the first Western soloist (with the London Philharmonic) invited to perform in China. Haendel’s virtuoso technique won her admirers in both the concerto and recital repertoires. Among her first performances were Dallapiccola’s *Tartiniana seconda*, (1957) and Alan Pettersson’s Violin Concerto no.2 (1980), which was dedicated to her. Haendel was awarded the Sibelius Medal (1982), created a CBE (1991), and appointed Fellow of the Royal College of Music (2000). She published her autobiography, *Woman with Violin* (1970), and her career was the subject of a CBC-TV documentary (1988).

[Naama Ramot (2nd ed.)]

HAEZRAHI (originally **Brisker**), **YEHUDA** (1920–1974), Hebrew novelist and playwright. Born in Jerusalem, he served in the British Army during World War II. He wrote several novels and plays, as well as numerous articles and sketches. Haezrahi’s works include *Ke-Zel Over* (1946), a novel; *Ananim ba-Sa'ar* (1947), a collection of stories; *Im Shaḥar* (1959), two novellas; a collection of three plays (1960) – *Ha-Te'omim*, *Ha-Mishtammet*, and *Ha-Seruv*; a novel, *Panim u-Massekhah* (1963); *Beit ha-Sefarim ha-Le'ummi ve-ha-Universita'i* (1967), a history of the national library at the Hebrew University;

and *Ir Even ve-Shamayim* (1968), a belletristic description of Jerusalem. He edited albums of the paintings of *Alva (1954), Nahum *Gutman (1965), and Yossi Stern (1965). (A list of his works translated into English appears in Goell, *Bibliography*, 67.)

His wife, PEPITA HAEZRAHI (1921–1963), taught philosophy at the Hebrew University of Jerusalem. She published works in English and in Hebrew in the fields of philosophy, aesthetics, and ethics.

[Getzel Kressel]

Following the reunification of Jerusalem after the Six-Day War, Haezrahi played a leading part in the campaign to preserve the beauty of Jerusalem. He founded and became chairman of the Jerusalem Committee of the Council for a Beautiful Israel, and the works he published after 1967 reflected his absorption with this subject. They include *Yerushalayim Asher Baharti* (caricatures by S. Katz, 1970) and the text of the Sound and Light Program on the Tower of David, “A Stone in David’s Tower.”

Avishai, “*Olamot shel Y. Haezrahi*,” in: *Al ha-Mishmar* (Elul 12, 1974); G. Shaked, *Ha-Sipporet ha-Ivrit*, 3 (1988), 240.

HAFEZ HAYYIM (Heb. הַפֶּזֶז הַיַּיִם), kibbutz in the southern Coastal Plain of Israel, 3 mi. (5 km.) S.E. of Gederah, affiliated with *Po’alei Agudat Israel. In 1937 Ha-Kibbutz ha-Me’uḥad members founded a village there, Sha’ar ha-Negev, but later moved north to establish their permanent settlement, *Kefar Szold. Afterward an Orthodox group, graduates of the Ezra youth movement in Germany, who previously worked on land near *Afulah, took over the site (1944). The kibbutz has intensive farming and also developed hydroponics to permit the literal observance of the *shemittah precepts. Hafez Hayyim runs a guest house, recreation home, and water park geared to the needs of Orthodox Jews. Its farming includes field crops, citrus groves, dairy cattle, and poultry. The kibbutz used to own a towel factory, now in private hands. The kibbutz is named after Rabbi Israel Meir *ha-Kohen (Hafez Hayyim). In 1968 its population was 360, and in the mid-1990s it grew to approximately 585. However, by 2002 it had dropped sharply to 382, as many of the young left the kibbutz.

[Efraim Orni]

HAFFKINE, WALDEMAR MORDECAI (1860–1930), bacteriologist. Born and educated in Odessa, Haffkine studied under the Nobel prizewinner Elie *Metchnikoff. He was offered a teaching post provided he converted to the Russian Orthodox Church, which he refused to do. Invited in 1889 by Metchnikoff, then at the Pasteur Institute, Paris, to become its librarian, he was later made assistant to the director. In 1892 Haffkine developed the first effective vaccine against cholera. Lord Dufferin, British ambassador to France, formerly

viceroy in India, persuaded him to substitute India for Siam as the field-test area to combat cholera. In 1893, with a group of doctors and laboratory workers, Haffkine went through India inoculating, with excellent results, villagers who had volunteered for treatment. In 1896, when plague struck Bombay, the government sent him there to develop a vaccine against the plague. He succeeded within three months. Germany, Russia, China, and France sent scientists to study his methods and demands for his vaccine flooded his laboratory. In 1897, Queen Victoria named him Companion of the Order of the Indian Empire and in 1899 he was granted British citizenship.

In 1902 plague struck the Punjab, which received large quantities of vaccine. Nineteen of the tens of thousands inoculated contracted tetanus and died. Haffkine was charged with sending contaminated vaccine. An inquiry was launched as a result of which Haffkine was suspended and his pay forfeited. In 1904 he presented evidence in his defense at the Lister Institute, London, and the Pasteur Institute. Although Haffkine defended himself in the official inquiry and, subsequently, in scientific circles, it was only after the *London Times*, on July 29, 1907, published a long scientific defense of Haffkine that the government exonerated him. Haffkine returned to Calcutta with neither the promotion nor the salary increase he had been promised, to continue laboratory research until compulsory retirement at the age of 55.

Later Haffkine settled in Paris, where he participated actively in various Jewish organizations’ efforts to create an independent Jewish state in Palestine. In 1919, with others, he presented a petition to the Peace Conference in Versailles, stressing minority rights for Jews in Eastern Europe.

In 1925 the Plague Research Laboratory he had founded in Bombay was renamed the Haffkine Institute in his honor. An observant Jew most of his life, in 1929 he created the Haffkine Foundation in Lausanne, bequeathing to it his fortune of \$500,000, and stipulating that the interest be used to foster religious, scientific, and vocational education in yeshivot in Eastern Europe.

[Edythe Lutzker]

On August 17, 1971, V.V. Giri, president of India, unveiled a plaque at the entrance to the Petit Laboratory, Bombay, in memory of Haffkine. Another plaque in his honor was unveiled on September 21, 1972, at the Pasteur Institute in Paris.

HAFKA’AT SHE’ARIM (Heb. הַפְּקַעַת שְׁעָרִים), raising the price of a commodity beyond the accepted level, or that fixed by a competent authority.

Profiteering and Overreaching

The law of *Hafka'at She'arim* (“profiteering”) is analogous to that of overreaching (**ona'ah*, “misrepresentation”), it being the object of the law in both cases to preserve a fair and just price. However, the law of overreaching – fraudulent or innocent (i.e., mistaken) – stems from a biblical prohibition (Lev. 25:14): the law was fixed that if the price exceeded the value by one-sixth, the seller must return this part to the purchaser; if the price was higher yet, the purchaser might demand cancellation of the transaction; conversely, if the price was too low, the law applies *mutatis mutandis* in favor of the seller. The law of profiteering on the other hand has its source in rabbinic enactment designed to prohibit the setting of prices in excess of the customarily accepted ones, even if the purchaser is aware of and agrees to the inflated price; “... even when he [the seller] says ‘it cost me one *sela* and I want to earn two on it,’ he has not transgressed the law of *ona'ah* but he is prohibited by rabbinic enactment from making a profit of more than one-sixth in essential commodities” (*Beit ha-Be'irah*, BM 51b).

Price-fixing and Control; Prohibition against Profiteering

It would seem that in the mishnaic period there were fixed prices, apparently determined by a competent authority (BM 4:12, 5:7). There is evidence that in Jerusalem – prior to the destruction of the Temple – the market commissioners “did not supervise prices but measures only” (Tosef., BM 6:14); in Babylonia (at the commencement of the third century C.E.) there was supervision of prices at the instigation of the **exilarch* (TJ, BB 5:11, 15a; TB, BB 89a). The sages of that period were divided, however, on this matter. Some expressed the opinion that “price inspectors do not need to be appointed” and that competition between merchants would suffice to stabilize the price while others were of the opinion that it was incumbent on the court to supervise the prices because of the “swindlers” who hoarded commodities toward a time when they might be in short supply in order to sell them at a high price (TJ and TB, BB 89a). Over the course of time the view favoring price supervision apparently became generally accepted (BB 89a; Yoma 9a) and thus it was decided in the codes: “But the court is obliged to determine prices and to appoint commissioners for this purpose, to prevent everyone from charging what he likes ...” (Yad, Mekhirah 14:1; Tur and Sh. Ar., HM 231:20).

The scholars compared profiteering to the transgressions of “giving short measure of the ephah” (deceit with regard to **weights and measures*) and to that of charging interest on loans (BB 90b; and see **Usury*). In their opinion, the profiteer transgresses the biblical injunction “that thy brother may live with thee” (Lev. 25:36; *Sma* HM 231:43) and they regarded profiteers as “bandits who prey on the poor ... on whom they concentrate their attention” (Meg. 17b and Rashi, *ibid.*). The prescribed punishment for them: “flagellation and they are compelled to sell at the market price” (Yad, Genevah, 8:20; Tur and Sh. Ar., HM 231:21). Authority to determine prices was given not only to the court, but also to local communal representatives: “and the townspeople are authorized to fix prices”

(of wheat and wine, so as to maintain the price in a particular year – Rashi) “and measures and workers’ wages, which they may enforce by means of punishment” (i.e., fines; cf. BB 89a and Rashi; Tosef. BM 11:23; BB 8b; see also **takkanot ha-Kahal*). It appears that already in the talmudic period, the law of profiteering was only applied to essential commodities such as wheat, oil, and wine, and this was confirmed in the codes: “Prices [of nonessentials] are not determined but everyone may charge what he likes” (Yad, Mekhirah 14:2 and standard commentaries ad loc.; Tur and Sh. Ar., HM 231:20).

The maximum profit generally permitted to the seller was one-sixth (BB 90a). Some of the authorities took the view that this rate applied to one selling his merchandise in bulk, without toil (a wholesaler); a shopkeeper, however, “selling his merchandise little by little, might have his toil and overheads accounted for in addition to a profit of one-sixth” (Tur and Sh. Ar., HM 231:20). They also decided that the rules concerning profiteering were only to take effect if imposed as measures of general application to all vendors, otherwise the individual could not be obliged to adhere to the permitted maximum rate of profit (*ibid.*).

Stringent Supervision in Erez Israel

Particular care was taken to maintain a cheap supply of essential products in Erez Israel, where no middleman between producer and consumer was tolerated: “It is forbidden to speculate in essential commodities in Erez Israel but everyone shall bring from his barn and sell so that these [commodities] may be sold cheaply” (Tosef. Av. Zar. 4:1; BB 91a, Yad, Mekhirah 14:4; Sh. Ar. HM 231:23); however, it was decided that in the case of a commodity in free supply or where a middleman worked to prepare and process the product, such as baking bread from wheat, profit-making was permitted, even in Erez Israel (Tosef. Av. Zar. 4:1; BB 91a and *Rashbam*, *Yad Ramah* and *Beit ha-Be'irah ibid.*; Yad, Mekhirah 14:4; Sh. Ar., HM 231:23).

Measures to Prevent Profiteering

The sages sought in various ways to eliminate the factors which made for a climate for profiteering. Thus it was forbidden to hoard produce bought on the market, lest this cause prices to rise and bring losses to the poor, and in a year of famine no hoarding at all was permitted (not as much as a “cab of carobs”), not even of the produce harvested from one’s own field (BB 90b; Yad, Mekhirah 14:5–7). In later *halakhah* storing of produce from the producer’s own field was permitted, even in a famine year, for the sustenance of his family (Tur., HM 231:29) for a period of one year (Sh. Ar., HM 231:24). Produce hoarders, like profiteers, were compared to those who charged interest on loans (BB, 90b). In order to prevent profiteering, it was not permitted to export essential products from Erez Israel, since this might cause a shortage and a consequent rise in prices (BB 90b–91a, Yad, Mekhirah 14:8; Sh. Ar., HM 231:26). With the same object in mind the rabbis laid down that the proclamation of a public fast (on account of drought)

should not be announced for the first time on a Thursday as this would cause panic (out of fear of famine) at a time when everyone was preparing for the Sabbath, and this might lead to profiteering (Ta'an. 2:9).

In their war against profiteers the scholars made use of a deliberate *interpretation of the law. At a time when the numerous sacrifices required to be brought by a woman who had given birth caused the price of a pair of sacrificial birds (two doves) to be raised to a golden dinar (25 silver dinars), Simeon b. Gamaliel the Elder vowed: "I shall not sleep this night until a pair sells for a dinar" (i.e., silver; Ker. 1:7). He entered the court and taught that a woman who had had five definite births (and thus should bring five sacrifices) need bring one sacrifice only and might eat of the *zevaḥim* ("sacrificial animals"), i.e. is ritually pure, and that "the remainder is not obligatory upon her; that same day the price of sacrificial birds stood at a quarter [of a silver dinar per pair]." (*ibid.*); Rashi (Ker. 8a) comments: "though he interpreted the word of the law leniently, it was a time to campaign for the Lord (*et la'asot la-shem*) for if no remedy had been found, not even one [sacrifice] would have been brought." Some 1,600 years later, when the fishmongers of Nikolsburg, Moravia, greatly raised the price of fish, "having seen that the Jews were not deterred by expensive prices from buying fish for the Sabbath," the Nikolsburg community enacted a *takkanah* which prohibited everyone from buying fish for a period of two months. Asked whether this *takkanah* did not in some measure slight the honor of the Sabbath, M.M. *Krochmal, chief rabbi of Moravia, replied that in order to enable also the poor "to honor the Sabbath by [eating] fish" it were better not to buy fish for a few Sabbaths so as to bring down the prices, and he quoted the statements of Simeon b. Gamaliel (above), as a clear practical illustration of the saying: "It is well to desecrate one Sabbath, so that many Sabbaths be observed" (*Zemah Zedek*, no. 28).

In the State of Israel

In the State of Israel there are a number of laws designed to combat profiteering in essential commodities. The Commodities and Services (Control) Law, 5718 – 1957, provides for various means of supervision over commodities declared to be subject to control by the minister charged with implementation of the law, enforceable on pain of imprisonment, fine, and closing down of a business, etc. The Tenants' Protection Laws, 5714 – 1954 and 5715 – 1955, control maximum rentals for residential and business premises and also limit the right of ejection to grounds specified in these laws only. These laws are supplemented by the provisions of the Key Money Law, 5718 – 1958. The Restrictive Trade Practices Law, 5719 – 1959, restricts, among others, the artificial manipulation of price levels at the hands of a monopoly or cartel. In the Knesset debates preceding the passing of these laws, some members relied on Jewish law in support of their arguments (*Divrei ha-Keneset* vol. 7, p. 564; vol. 14, p. 1822; vol. 18, p. 2176; vol. 21, p. 169; vols. 23, pp. 372, 374, 383; vol. 24, pp. 2478, 2514).

[Menachem Elon]

HAFSIDS (also known as **Banu Hafs**), *Berber dynasty of the 13th through 16th centuries in Ifriqiyah (*Tunisia and eastern Algeria of today), founded by the *Almohad leader Abu Zakariyya Yaḥya in 1230. Under his rule local Berber tribal disputes and unrest were pacified and economic activity through trade accords with Spain and Italy brought on prosperity. One of his sons, al-Mustansir, assumed the title of caliph in the 1250s, increasing the power of the dynasty to its zenith. By then the Hafsids had extended their influence to the borders of northern Morocco and Spain. Hafsids' unity was interrupted by dissension under several of al-Mustansir's successors but was largely restored under the leadership of Uthmān in the 1430s. The dynasty came to an end when the *Ottoman Turks occupied parts of *Algeria and transformed Tunis into a *paşalık* in 1574.

With minor exceptions, the Jews under Hafsids' domination benefited from the prevalence of cultural and commercial florescence. They traded in the Mediterranean with their co-religionists, notably in Italy, as well as with local merchants who constituted part of the Christian minority. Ifriqiyah's Jewry had been reinforced in the late 15th and early 16th centuries by an influx of Jews who were expelled from Spain. The military incursion of the Spaniards and Portuguese – the former oppressors of the Jews – into Ifriqiyah in the mid-16th century sowed panic among the members of the Jewish community, prompting many of them to flee from the larger cities into the desert. Their anxieties were short-lived, however. The conquest of the region by the Ottoman Turks in the latter half of the 16th century significantly improved their socio-economic and political status once again.

[Michael M. Laskier (2nd ed.)]

HAFTARAH (Heb. הַפְּטָרָה), a portion from the Prophets read after the reading from the Torah (see Torah, Reading of) on Sabbaths, festivals, and fast days. On Sabbaths and festivals it is read during the morning service, on fast days at the *Minḥah service only (with the exception of the Day of *Atonement and the Ninth of *Av when there is a *haftarah* after the Torah reading in both the morning and the afternoon service). There is, however, evidence that during the talmudic period a *haftarah* was read at *Minḥah* on Sabbaths (see Shab. 116b and 24a, and Rashi and Tos. ad loc.) and in some places the custom continued until the end of the geonic period (Sefer ha-Ittim, para. 181), but it is unknown today.

Unlike the Sabbath reading from the Pentateuch, which consists of a continuous reading of successive portions of the Five Books of Moses without any omission, the *haftarah* is a portion from a book of the Former or Latter Prophets. Only two prophetic books are read completely as *haftarot*: the Book of Obadiah, which consists of only 21 verses (for the portion *Va-Yishlah* (Gen. 32:4–36:43), according to the Sephardi custom and that of Frankfurt on the Main), and the Book of Jonah, which is the *haftarah* for the *Minḥah* service of the Day of Atonement. There were two criteria which determined the selection of a particular *haftarah*. When no other considerations prevailed, the choice was determined by the similarity of the contents of the prophetic portion to those of the portion of the Pentateuch read. Thus the *haftarah* to the portion *Be-Shallah* (Ex. 13:17–17:16), containing the Song of Moses, includes the Song of Deborah (Judg. 4:4–5:31); and to *Shelah* (Num. 13:1–15:41), describing the incident of the 12 spies sent by Moses, it is Joshua 2:1–24, concerning the spies sent by Joshua; and so on.

For about one-third of the *haftarot*, however, this criterion is abandoned, and the choice for those Sabbaths is determined either by the calendar or by historical circumstances. For ten successive weeks, from the Sabbath before the 17th of Tammuz until the Sabbath before Rosh Ha-Shanah, the *haftarot* consist of the three *haftarot* of tribulation (*pur'anut*) and the seven of consolation (those from Isaiah 40–66). Special *haftarot* are read on a Sabbath which is also Rosh Ḥodesh, on the Sabbath which falls on the day before Rosh Ḥodesh, on the Sabbath before Passover, on the Sabbath of the *Ten Days of Penitence, and on the Sabbath (or Sabbaths) of Ḥanukkah. The choice of the *haftarot* for the Four Special *Sabbaths depends on the special additional portion read on these days, and not on the ordinary Sabbath portion.

On festivals and fast days the *haftarah*, like the Torah reading, consists of a portion appropriate to the festival. For *Minḥah* on fast days (apart from the Day of Atonement) it is always Isaiah 55:6–56:7. In a few cases the *haftarah* is not a continuous portion (cf. Meg. 4:4).

History

The origin of the custom of reading a portion of the prophets after the Torah reading is unknown. The most plausible suggestion (dating from not earlier than the 14th century) is that the custom was instituted during the persecutions by *Antiochus Epiphanes which preceded the Hasmonean revolt. According to this theory, when the reading of the Torah was proscribed, a substitute was found by reading a corresponding portion from the Prophets; and the custom was retained after the decree was repealed (Abudarham; see also *David in the Liturgy). Buechler, however, was of the opinion that it was instituted against the Samaritans, who denied the canonicity of the Prophets (except for Joshua), and later against the Sadducees.

The earliest reference to the actual reading of a *haftarah* is found in the New Testament. Acts 13:15 states that “after the

reading of the law and the prophets” Paul was invited to deliver an exhortation. Another reference (Luke 4:17) states that during the Sabbath service in Nazareth the Book of Isaiah was handed to Jesus, “and when he had opened the book, he found the place where it was written,” the passage being Isaiah 61:1–2. Unfortunately, the Greek word used there meaning “found” does not make it clear whether the passage read was fixed beforehand or whether it was chosen at random.

The earliest reference in talmudic literature to the specific selection of a *haftarah* is in Tosefta, *Megillah*, 4 (3): 1, which gives the *haftarot* for the Four Special Sabbaths. A *baraita* in *Megillah* 31a, which has later additions by the Babylonian *amoraim* who add the *haftarot* for the second days of the festivals (and who sometimes change the order of the *haftarot* as a result) – gives the *haftarot* for every one of the festivals, including their intermediate Sabbaths, as well as a Sabbath which is also Rosh Ḥodesh, the Sabbath which immediately precedes Rosh Ḥodesh, and Ḥanukkah. However, nowhere in the Talmud are the *haftarot* given for ordinary Sabbaths, which were not fixed until after the talmudic period. The only other mention of the matter in tannaitic literature is the prohibition against the reading of certain prophetic passages: the *haftarah* on the *Merkavah* (Ezekiel 1) according to the anonymous Mishnah (but permitted by R. Judah, and in fact it is at present the *haftarah* for Shavuot; cf. Meg. 31a), and Ezekiel 16:1ff. according to R. Eliezer (Meg. 4:10), which, despite his strong disapproval, was read in his presence (Meg. 25b). The same Mishnah (Meg. 4:10) permits the reading of 11 Sam. 11:1–17 (“the story of David,” i.e., and Bath-Sheba), and the “story of Amnon” (*ibid.* 13:1ff.) providing the Targum is not read (see below). These passages would seem to indicate that in mishnaic times the choice of the *haftarah* was generally not determined, and as late as geonic times different *haftarot* were in vogue in different localities. Even some of the *haftarot* mentioned in the Talmud are not those established at the present time, and to this day there are certain variations of choice, mostly between Sephardim and Ashkenazim, but also between different Ashkenazi rites (particularly that of Frankfurt on the Main).

The most interesting is the *haftarah* for *Simḥat Torah. According to the above-quoted passage in *Megillah* 31a, the *haftarah* for Shemini Azeret (which in Israel is also Simḥat Torah) was 1 Kings 8:54ff. and for the next day (Simḥat Torah in the Diaspora) 1 Kings 8:22. The universal custom today, to read Joshua 1 on Simḥat Torah, is attributed either to Hai Gaon (Tos. ad loc.) or the *savoraim (Or Zaru'a, 11 293). When the *Triennial cycle was in vogue in Erez Israel, there was naturally a *haftarah* to each portion, and the number must therefore have been about 150. They are, to some extent, reflected in the **Pesikta Midrashim*. Similarly, there are *haftarot* for the second day of each festival in the Diaspora which are not read in Erez Israel, where the second day is not observed.

Various suggestions have been made as to the connotation of the word *haftarah*. One opinion is that it corresponds

to the Latin word *demissio*, since in Temple times the service ended with the *haftarah*. Abudarham regards it as meaning “taking leave of,” i.e., of *Shaharit, when one, so to speak, “takes one’s leave” of the scriptural reading.

Regulations and Customs

The person who reads the *haftarah* is called the *maftir* since he is also called to the reading of the last part of the weekly portion from the Torah. As he is not included in the minimum obligatory number of seven persons who have to be called up on the Sabbath (Meg. 32a), the custom later arose for the concluding passage of the portion to be read a second time for the *maftir* (see Tos. ad loc.). On festivals, Rosh Ḥodesh, and the Four Special Sabbaths, however, the *maftir* is called to the reading of the special additional portion for those days from the second scroll. With the completion of that reading, the *Sefer Torah* is raised and rolled up (see *Hagbahah and Gelilah) and only then the *maftir* reads the *haftarah*, preceding it with two blessings and concluding the reading with three blessings, to which, on Sabbaths and festivals, a fourth blessing is added, the formula of which is changed according to the nature of the day. The text is given in *Soferim* 13:9–14, with slight variations from the text as established today. The *haftarah* is sung with a special cantillation, and the custom has developed for the introductory blessings to be chanted with the same cantillation. The Sabbath *haftarah* has to consist of a minimum of 21 verses (Meg. 23a), but for the festivals 15 suffice (Rema, Oḥ 284:1).

It is not obligatory for the *haftarah* to be read from a manuscript scroll, but may be read from a printed book. In some congregations, however, especially in Israel, the *haftarah* is read from a scroll of the Prophets. Despite the general prohibition against committing to scroll writing only sections of the Prophets, in contrast to the complete Book of the Prophets, an exception was made in the case of a book containing only the *haftarot*; such a book is, in fact, mentioned in the Talmud (Git. 60a). Since the *maftir* was not included in the seven called to the reading of the Torah, a minor is permitted to be called to that portion (Meg. 4:5). The custom has become almost universal, however, to reserve the reading of the *haftarah* for a *bar mitzvah boy, but this is largely in order to provide him with an opportunity to show his prowess. Some *haftarot*, however, are regarded as being of such importance that a minor, and in some places even a bar mitzvah, is precluded from reading them. They include the *Merkavah* (Ezek. 1) on Shavuot, the Song of David on the seventh day of Passover, the *haftarah* on the Sabbath of the Ten Days of Penitence, and the *haftarah* of *Shabbat Zakhor* (see Special *Sabbaths), in this last case because the Torah reading of the *maftir* is considered obligatory by biblical law.

During the talmudic period, when the biblical reading was accompanied by its translation into Aramaic, the translation of the Torah reading was given verse by verse, but that of the *haftarah* after every three verses (Meg. 4:4), unless each

verse constituted a separate “paragraph.” Isaiah 52:3, 4, 5 is quoted as an example (Meg. 24a). The person who read the *haftarah* was invited to “*pores al shema*” (Meg. 4:5), a phrase to which different interpretations are given, but in the context it appears to mean to continue as the reader of the service which follows.

[Note: The order of chapters three and four in the Mishnah Megillah is reversed in the Babylonian Talmud. The mishnaic references given are therefore to be changed accordingly when their discussion in the Talmud is given.

HAGAI, BARUCH (1944–), Israeli athlete in handicapped sports. Hagai is the only athlete in the world to win four consecutive gold medals in the Paralympic Games. He was born in Tripoli, Libya, and immigrated to Israel in 1951 at the age of seven. At the age of two he was stricken by polio. He began his career in 1960 in two sports: basketball and table tennis. In the 1964 Handicapped Olympics held in Tokyo he won a gold medal in table tennis and in the 50 meter breast stroke in swimming, as well as in the slalom race. In 1971 he won a gold medal in basketball in the World and European Championships for the handicapped. In 1972 he won a gold medal in table tennis in the Handicapped Olympics held in Heidelberg. In 1975 he won a gold medal in basketball in the World Championship for the handicapped. In 1976 he won a gold medal in table tennis in the Handicapped Olympics held in Toronto. In 1978 he won a gold medal in basketball in the European Championship. In 1980 he won a gold medal in basketball in the Handicapped Olympics held in Arnhem, The Netherlands. In 1981 he won a gold medal in basketball in the European Championship. In 1997 he received a special gold medal for his special contribution to national and international sport. He was named Sportsman of the Year in Israel on the 40th and 50th anniversaries of its independence. In 2001 he was awarded the Israel Prize for his contribution to handicapped sports in Israel. From the 1980s he coached other handicapped athletes.

HAGANAH (Heb. הַגָּנָה), the underground military organization of the *yishuv* in Erez Israel from 1920 to 1948. The idea of establishing a defense organization that would protect the *yishuv* throughout Erez Israel was born during the Ottoman period. The head of *Ha-Shomer, Israel *Shohat, sent a memorandum to the Executive of the Zionist Organization at the end of 1912, suggesting the establishment of a country-wide organization for self-defense around Ha-Shomer.

Initial Organization

With the British conquest of Erez Israel, it seemed that there would be no need for a Jewish defense organization, for a European power had assumed responsibility for the preservation of civil order with the aid of legally constituted forces from the *yishuv*. Especially in favor of this position was Vladimir *Jabotinsky. He viewed the perpetuation of the *Jewish Legion, which was established in the framework of the British army during World War I as a garrison in Palestine, as the best assurance of the peace and security of the *yishuv*. The Arab assault on the Jewish settlements in Upper Galilee in March 1920 (see *Tel Hai), the imminent danger to the settlements in Lower Galilee in the summer of 1920, and, above all, the failure of the self-defense activities openly organized by Jabotinsky during the Passover riots in Jerusalem in 1920 destroyed these illusions. Those who regarded themselves responsible for the defense of the *yishuv*, members of Ha-Shomer and soldiers of the Jewish Legion, came to realize that it was impossible to depend upon the British authorities and that the *yishuv* must create an independent defense force, completely free of foreign authority – in a word, an underground – for both security and political considerations. In contrast to Ha-Shomer, this organization should encompass masses of people and be subordinate to a public Jewish authority. The *Ahdut ha-Avodah (A) conference at Kinneret in June 1920 accepted Ha-Shomer's resolution to disband and declared its own responsibility "to concern itself with the arrangement of defense matters." A committee was chosen "to organize a defense organization," and among its members were Shoḥat and Eliahu *Golomb. In September 1920 the *Gedud ha-Avodah (the "Joseph Trumpeldor Labor and Defense Legion") was established with the participation of ex-members of Ha-Shomer. In addition to their tasks as workers and guards, the members of the Gedud were to serve as a reserve force for the Haganah. In December 1920, the *Histadrut accepted responsibility for guard and defense matters at its founding convention, and at the first Histadrut council in March 1921, a defense committee was set up, consisting of Israel Shoḥat, Eliahu Golomb, Joseph *Baratz, Ḥayyim *Sturmann, and Levi Shkolnik (*Eshkol), and the first steps were taken toward training members and purchasing arms.

The riots of May 1921 caught the new defense organization unprepared, but they proved the necessity for its existence. Members were sent to Vienna to begin organizing the consignment of arms (revolvers and ammunition) to Palestine by various means (in beehives, refrigerators, steamrollers, etc.). In addition, the first course for Haganah instructors was run under the command of an ex-Legionnaire, Elimelech Zelikovich ("Avner"). On Nov. 2, 1921 ("Balfour Day"), an organized group of defenders repelled an attack of an Arab mob on the Jewish quarter of the Old City of Jerusalem and prevented the slaughter of its inhabitants.

During the 1920s

At the outset of Haganah activities, there was friction in the organization's leadership, originating in disagreement over de-

fense systems between ex-Ha-Shomer people and Golomb's group. The Histadrut leadership supported Golomb's group, and the friction finally led to the disassociation of the Ha-Shomer people from the activities of the Haganah and their concentration in the Gedud ha-Avodah, in which they created an underground within an underground by developing an independent network to acquire arms, providing training courses, and pursuing an unsuccessful attempt to develop ties with the Soviet Union (1926). Their major achievement was the arms' cache at Kefar Giladi.

When the ex-Ha-Shomer members left the Haganah framework, the leadership of defense affairs remained, in effect, in the hands of an ex-Legionnaire, Yosef Hecht, who received his salary from the Histadrut Executive and maintained loose contact with the secretary of the Histadrut, David *Ben-Gurion. He was aided in his work, especially in the northern areas, by Shaul Meirov (*Avigur) of kevuḏat Kinneret. In the 1920s the Haganah was composed of separate branches in the major cities, a few moshavot, and a few kevuḏot and kibbutzim. In the cities there were also local committees composed of people who collected money for defense purposes. Each city had a Haganah commander who received a salary from the local Haganah committee. All the rest of the members, whose number did not exceed a few hundred, served as volunteers, training on Saturdays and in the evenings – mostly with revolvers and hand grenades – and being mobilized for guard duty on the border line between the *yishuv* and the Arab population during critical days (the anniversary of the *Balfour Declaration – November 2, the Ninth of Av, the festival of al-Nabī Mūsā in Jerusalem, etc.). A national officers' course, which was held on Mount Carmel near Haifa (1925), strengthened the contact among the handful of commanders. From time to time, meetings were held among the chief commanders, who formulated the "Constitution of the Haganah" in 1924. Primitive arms caches were set up in Shekhunat Borochov near Tel Aviv, in Geva, Kinneret, and Ayyelet ha-Shaḥar. In reality, the Haganah in the 1920s was an underground of such limited scope that it was not necessary to subject its activities to civilian control. Characteristic of the spirit of this period were activities such as the assassination of Jacob Israel de *Haan in June 1924 or the blowing up of a house near the Western Wall in September 1927 in response to Arab provocation of Jewish worshippers.

The riots of August 1929 brought about a complete change in the Haganah position. During the first days of the riots, when there were almost no British security forces in the country and the Arab police force did not carry out its tasks, the meager number of Haganah volunteers with their limited supply of arms filled the gap and saved the Jewish communities of Jerusalem, Tel Aviv, and Haifa from mass slaughter. In contrast, massacre and destruction of property were rampant in those places in which the Haganah was absent or in which its organization was deficient (Hebron, Safed, Moza). A deep impression was made by the defense of Huldah, in which a handful of Haganah members fought against thou-

sands of Arab attackers until British forces evacuated them. Old rivalries were forgotten during the riots, and ex-members of Ha-Shomer joined the Haganah fighters and took part in organizing the defense of the cities and the settlements. They also turned their central arms cache in Kefar Giladi over to the Haganah.

1931–1935

After 1929, the need to maintain, expand, and strengthen the Haganah was recognized by all parts of the *yishuv*. Its central command, i.e., Hecht, was ordered to broaden the framework of the Haganah and facilitate greater public control over the organization and its activities, and the civil institutions of the *yishuv* were also called upon to provide full cooperation with the Haganah command. Hecht, who objected to these changes because they went against his concept of the clandestine nature of the Haganah, was relieved of his command. The crisis of command led to the secession of a group of commanders in Jerusalem, led by Avraham Tehomi, that joined together with Revisionist groups to form the *Irgun Zeva'i Le'ummi (IẒL) in 1931. In the same year civil institutions of the *yishuv* arrived at an agreement, by which the national command of the Haganah was established on the basis of equal representation – three representatives of the Histadrut (Golomb, Dov *Hos, and Meir Rutberg) and three non-labor representatives (Dov Gefen, Issachar Sitkov, and Sa'adyah Shoshani). The moving spirit in the command was Golomb, whose personal influence was greater than his position as one of the six members of the command and whose modest apartment on Rothschild Boulevard in Tel Aviv was open night and day to people of the Haganah and served as a kind of headquarters of the organization.

The years 1931–35 were a period of quiet development for the Haganah. The structure of the organization hardly changed, and the major administrative work was centered in the three urban branches, whose commanders were Ya'akov Pat (Jerusalem), Elimelekh Zelikovich (alias Avner, Tel Aviv), and Ya'akov Dostrovsky (*Dori, Haifa). These branches constituted the mainstay of the organization, and the membership in each branch numbered in the hundreds. Training methods, however, did not change and were concentrated, as before, in the study of the revolver and hand grenade in the cities and the use of the rifle in the villages. The influence of the national command strengthened with the institution of systematic annual officers' courses (in Huldah and Gevat) and the development of the communications branch (consisting basically of visual communication – flags, lanterns, heliographs) and intelligence. The national command also handled the acquisition of arms, especially from abroad. In 1935 rifles and rifle ammunition began to be sent in barrels of white cement from Belgium. On Nov. 18, 1935, the British authorities confiscated 537 barrels containing arms in Jaffa port, and the incident aroused substantial excitement among the Arabs of Palestine. The Haganah also began to develop workshops to produce hand grenades. The rural settlements began to organize into "blocs,"

and by 1936 about 20 of these blocs were in existence. At the head of each was a bloc commander who was responsible for the training of its members, acquiring arms and protecting them, and gathering intelligence on the security situation in the area. The position of the Haganah in each bloc was largely dependent upon the initiative of its commander.

During this period, the basic principles of the Haganah consolidated as follows: to maintain complete independence of any non-Jewish factor; to accept the authority of the Jewish national institutions – especially the Political Department of the *Jewish Agency; to maintain a national framework independent of political parties; and to shun militarism for its own sake. The organization was built upon the devotion and voluntary service of thousands of members. The British authorities were aware of the existence of the Haganah, but initially took no serious steps to follow its activities, arrest its commanders or members, or find its arms caches.

The Policy of Restraint

The years 1936–39, those of Arab rebellion, in which the *yishuv* in both the cities and the countryside was under a perpetual siege and was attacked by Arab guerilla bands, were the years in which the Haganah matured and developed from a militia into a military body. It confronted riots by using methods learned from the previous disturbances. The Jewish quarters and settlements in the cities and countryside were surrounded by defense devices: wire fences, concrete positions, trenches, communication trenches, and floodlights. The Arabs made practically no attempts to attack these fortified areas, but they destroyed the harvests in the fields, chopped down orchards and forests, tried to disrupt Jewish transportation on the roads, and set out on a terrorist campaign that affected casual passersby, women, and children.

With the outbreak of the riots, the Jewish Agency declared that the *yishuv's* response to Arab acts of terror would be "restraint" (*havlagah*). In addition to the moral side of the question, the Jewish Agency believed that a policy of restraint would lead to a positive response from the British authorities who would provide the beleaguered Jews with arms. In fact, the authorities cooperated with the Jewish Agency by establishing a broad formation of Jewish auxiliary police (*ghafirs*) dressed in special police uniforms and provided with arms (rifles, and, after a time, light machine guns). During the period of the riots, this formation developed, and its members were formed into the Jewish Settlement Police (JSP), whose stations were placed in all agricultural settlements and in many urban quarters in the country. This force served as a cover for the activities and training of members of the Haganah. Later the members of the Haganah began to "go beyond the fence" and to develop forms of active fighting; escorts and reconnaissance units went into the fields and roads and other groups set ambushes for Arab terrorists. In 1937 field squads (Peluggot Sadeh) were established under the command of Yizhak *Sadeh and Elijah Ben-Ḥur, trained specifically for war against terrorist gangs. These units gained battle experience with the es-

establishment of the Special Night Squads (SNS) under the command of Orde Wingate, a British captain who was a proven friend of the Jewish cause. During the years of the riots, the Haganah protected the establishment of over 50 new settlements in new areas of the country (the Stockade and Watchtower settlements). All attacks of Arab gangs that came to uproot these settlements (the largest of these were the attacks on Tirat Zevi, Hanitah, and Ma'oz) were repulsed.

In 1937 IZL split and part of its members, together with its commander, Tehomi, returned to the Haganah. Only the Revisionist members continued the independent existence of the organization. It did not engage particularly in defending the *yishuv*, but in 1937–38 it carried out counter-terrorist acts against Arab civilians on the roads and in markets, from which the Haganah disassociated itself for moral and political reasons. Unofficial cooperation with the British authorities did not deflect the Haganah from its independent course. The demand of the authorities that the Haganah be disbanded and its arms be turned in was rejected, and the Haganah even increased its efforts to enlarge its supply of arms. The underground industry for the production of arms was enlarged. In 1937 an agreement was reached between the emissary of the Haganah, Yehudah Arazi, and the Polish government whereby the Poles would supply the Haganah with arms (rifles, ammunition, and machine guns) that would be transported to Palestine in steamrollers and various types of machinery. Haganah instructors in Poland were also allowed to utilize Polish arms in training young Jews who were going to settle in Palestine. The Haganah was active in organizing the clandestine emigration of Zionist youth from Europe that began in 1934, and until the outbreak of World War II, it assisted the landing of close to 6,000 “illegal” immigrants on the shores of Palestine.

At the end of the riots in Palestine, the number of men and women in the 20 branches of the Haganah reached 25,000. Its arms stores contained about 6,000 rifles and more than 220 machine guns (in addition to the arms of the JSF). Changes were made in its high command. In 1937, Yoḥanan Ratner was appointed head of the national command by the Executive of the Jewish Agency, and at the end of 1939 a general staff was established, headed by Ya'akov Dostrovsky (Dori). To finance the activities of the Haganah, a special system of donations and taxes, called *Kofer ha-Yishuv*, was organized, which continued to exist until the establishment of the State of Israel.

During World War II

With the anti-Zionist turn in British policy (White Paper of May 1939), a clash of opinion broke out in the *yishuv* in relation to the Haganah's main task. Non-labor circles wished to limit its activities to guarding settlements and urban quarters against Arab attackers. The Jewish Agency, however, wanted to turn the Haganah into the military arm of the *yishuv's* struggle against the British White Paper policy, which was also the desire of most members of the Haganah. In 1941 the crisis was settled with the establishment of a security committee com-

posed of representatives of all circles in the *yishuv* and given control over the Haganah.

With the outbreak of World War II, the Haganah was faced with new problems. On the one hand, it actively supported the volunteering to the Jewish units that were established in the framework of the British army. Many of the founders and members of the Haganah joined these units and did much to foster Jewish leadership in them and preserve their Zionist character. The members of the Haganah also developed networks for the clandestine acquisition of arms within the British army, and they cared for Jewish survivors and refugees in the countries of Europe in which they were stationed at the close of the war.

At the same time, the general staff continued its activities in Palestine and developed the defense forces of the Haganah itself. Its members were divided into a “Guard Force,” based on older members, for the static defense of the settlements, and a “Field Force,” based on younger members (up to the age of 35), who were trained for active defense activities. A special paramilitary youth movement (*Gadna) was established to train youth between the ages of 14 and 18. In addition, courses were held for commanders of all ranks, among which the most important was the annual course for platoon leaders at Ju'ara near Ein ha-Shofet. The secret arms industry also expanded and produced mortars, shells, and submachine guns. National general defense programs were formulated in the *yishuv* (Program A in 1941, Program B in 1945). Finally the intelligence service of the Haganah (Shay – short for *sherut yedi'ot*) was developed and reached a very high level of effectiveness.

In 1941, a mobilized formation of the Haganah – the *Palmaḥ (short for *Peluggot Maḥaz* – “crack units”) – was established. It was a regular underground army whose units were located in kibbutzim in all parts of the country. The members of the Palmaḥ earned a substantial amount of their living expenses by agricultural labor (14 days a month), and they received excellent training. When the German army stood at the gates of Egypt, contact was reestablished between the Haganah and the British military authorities and joint efforts were carried out in which hundreds of Palmaḥ members received commando training by British officers. At a later time, a paratroop unit was established in this cooperative framework, and 32 of its members parachuted in Europe into enemy territory to organize Jewish youth in Nazi-occupied territory for resistance against the Nazis. From the end of 1939, the Haganah legally published a monthly entitled *Ma'arakhot* that was devoted to military thought and studies of military planning.

In general, however, the British authorities were hostile to the Haganah and saw it as an obstacle to their anti-Jewish policy. In 1939–40 many members of the Haganah were imprisoned and searches were carried out to locate the arms caches. The British military forces met with opposition that gradually reached the stage of bloodshed (Ramat ha-Kovesh, 1943), and show trials were held against Haganah members accused of stealing arms from British military depots. In 1944 the dissident underground organizations (IZL and *Loḥamei

Herut Israel – Lehi) began attacking the British, against the established policy of the Jewish Agency. The Haganah was charged with stopping the activities of IZL after the latter refused to heed the warnings of the Jewish Agency. This task (called the “saison”) was carried out mainly by volunteers from the Palmah. This mission aroused bitter feelings, even in the ranks of those who carried it out, mainly because some of the imprisoned members of IZL were turned over to the British authorities.

The Policy of Resistance

A short time after the end of World War II, when it became clear that the British government would not abandon its anti-Zionist policy of the 1939 White Paper, the Jewish Agency charged the Haganah with leading the “Jewish resistance movement” against this policy. A special committee (Committee X) was established to control the activities of this movement. The implementation of the resistance plan was entrusted to Moshe *Sneh, then head of the national command, and Yizhak Sadeh, acting chief of staff. In order to coordinate all underground activities, an agreement was arrived at with IZL and Lehi. The insurgent activities in this common framework began on Nov. 1–2, 1945, with the coordinated attack on rail lines and equipment. At the center of the resistance activities was the “illegal” mass immigration from Europe and North Africa, whose organization on land and sea devolved on the Haganah and its various arms: the *Berihah and the Organization (“Mosad”) for “Illegal *Immigration.” In Palestine, units of the Palmah destroyed army and police equipment, and the Haganah organized mass demonstrations that clashed with the British police and army. In addition to these, IZL and Lehi carried out their activities with the approval of the Haganah. The activities were accompanied by illegal written and oral propaganda (the *Homah* wall newspaper and the clandestine broadcasts of the “*Kol ha-Haganah*”). On June 17, 1946, these activities reached their height with the blowing up of all the bridges on the borders of Palestine by the Haganah forces. About two weeks later, on June 29 (“Black Saturday”), the British authorities responded by imprisoning the members of the Jewish Agency Executive and the Va’ad Le’ummi and by vigorous searches in the kibbutzim in order to catch members of the Palmah and uncover the arms caches of the Haganah (a large store was uncovered at Yagur).

After “Black Saturday,” the Executive of the Jewish Agency called for a pause in the resistance, but IZL and Lehi refused to obey this order and continued their armed attacks. The Haganah limited its armed struggle to attempts to score direct hits against the operational devices installed to interfere with “illegal” immigration (radar devices, boats that deported immigrants to Cyprus, etc.). The “illegal” immigration also increased and reached new heights with the refugee ship *Exodus 1947* (summer 1947) and the two giant ships, *Pan Crescent* and *Pan York*, which set sail at the end of 1947 with 15,000 immigrants on their decks. These actions were greatly aided by the Haganah delegation to Europe, headed by Nahum

Kramer (Shadmi), that organized Haganah units in the Jewish DP camps in Central Europe and Italy and in other Jewish population centers (France, Romania, Hungary, etc.). In Palestine the Haganah concerned itself with the security of settlements in new areas of the country, such as the northern Negev (11 settlements were established simultaneously at the close of the Day of Atonement, 1946), the Judean Mountains, and Upper Galilee. A substantial number of these settlers received military training in the Palmah.

The commissions of inquiry that visited Palestine at the time (the Anglo-American Commission and the UN Special Commission on Palestine) met with representatives of the Haganah and drew conclusions that substantially affected the formulation of policy in 1947, namely, that in the event that a political solution desired by the Jews was arrived at, the Haganah would be able to withstand any attack, whether by the Arabs of Palestine or those of the neighboring states, without outside aid. In the spring of 1947, when a political solution began to be worked out (namely the UN plan for the partition of Palestine), David Ben-Gurion took it upon himself to direct the general policy of the Haganah, especially its preparation for the impending Arab attack, and appointed Israel *Galili head of the national command. The Haganah budget was substantially increased, and the purchase of arms was expanded by the emissary of the Haganah, Hayyim Slavin, who concentrated upon the acquisition of machinery to manufacture arms and ammunition from the United States. Preparations were made for the formation of new services and first and foremost an air force, which was initiated in the framework of the Haganah before the outbreak of World War II. By the eve of the War of Independence there were 45,000 members in the Haganah, about 10,000 of whom were in the Field Force and more than 3,000 in the Palmah.

The War of Independence

At the outbreak of the War of Independence, the Haganah was prepared for its defense tasks. The Jewish settlements were fortified, and in accordance with a Haganah tradition from the days of Tel Hai, even settlements completely cut off from the main areas of Jewish settlement were not abandoned (such as the Ezyon Bloc, the settlements of the Negev, and Yehi’am), although holding them cost the Haganah great efforts. The Haganah also increased its retaliatory actions against the attacks of Arab gangs on Jewish traffic, and the movement of vehicles was guarded by armed escorts. A general mobilization was declared in the *yishuv*, but the first major blows of the war fell on the mobilized formations of the Haganah, the JSP, and units of the Palmah, which in a short period of time comprised three brigades (Yiftah, Harel, and Negev). At the same time the quick mobilization and training of the Field Force began, and it was divided into seven brigades (Golani, Karmeli, Alexandroni, Kiryati, Givati, Ezyoni, and the Seventh Brigade). Superhuman efforts were made to purchase arms of every type, including heavy arms and planes in America and Europe.

In the first four months of the war the Haganah engaged mainly in defending the positions of the *yishuv*. One of the reasons for its defensive stance was the presence of the British army, which, during its evacuation from the country, interfered in battles, usually to the advantage of the Arabs. Great achievements were made in these defensive actions, such as repulsing an attack on Tirat Zevi, the Ezyon Bloc, and convoys to Jerusalem and other places, but losses were very heavy (about 1,200 civilians and soldiers, including the 35 fighters, called the “Lamed He,” on a mission to the Ezyon Bloc and 42 people in a convoy to Yehi’am). The feeling in the *yishuv* and in the world at large was that the Haganah had overrated its ability to withstand the attacking forces, and this feeling made itself felt in the international attitude to the Jewish prospects in the Palestine conflict.

In the beginning of April 1948, however, a great change took place in the activity of the Haganah, that was connected with the completion of the organization of the new brigades and the first large shipments of arms that had arrived from Europe. The beginning of this turn came with Operation Nahshon, in which the road to besieged Jerusalem was broken through and the major fortifications on the hills on both sides of the road were captured. During the same period, the attacks of semi-regular Arab forces on Mishmar ha-Emek and Ramat Yoḥanan, whose purpose was to break through to Haifa, were repulsed. A series of conquests began, starting with the capture of Tiberias (April 18) and followed by the battle for Haifa, which ended with Haganah forces holding the entire city. Safed was captured on May 12, and the next day Arab Jaffa surrendered to the Haganah command. With the evacuation of British forces from Jerusalem, Haganah forces controlled the new city, but the Jewish quarter of the Old City was forced to surrender to the Arab Legion of Transjordan on May 28. The Ezyon Bloc also fell to the Arab Legion.

On May 15, 1948, Haganah forces faced the armies of the surrounding Arab states that had invaded Palestine. These were large armies whose equipment, including cannons and tanks, outweighed that of the Haganah. The assault of the Syrian army on the northern Jordan Valley was halted in a series of desperate battles, in which the Haganah used its first cannons. Forces of the Iraqi army were stopped at the borders of the hills of Samaria. The assault of the Arab Legion and the Egyptian army on Jerusalem, accompanied by indiscriminate cannon bombardment on the city, was repulsed. Heavy battles were waged in the Latrun area on the highway to Jerusalem. When the Haganah proved unable to occupy the Latrun area it paved a temporary road to the city, south of Latrun (the “Burma Road”), and thus ensured communication with Jerusalem. In the south, the advance of the Egyptian army was halted by the Palmah, the Givati Brigade, and members of the settlements in the area, including Yad Mordekhai and Negbah.

In the midst of these battles, the provisional government of Israel decided to turn the Haganah into the army of the state. The transition was basically a formality, but it sym-

bolized the end of an era. In the Order of the Day of May 31, 1948, the minister of defense, David Ben-Gurion, announced that with the establishment of the State of Israel, the Haganah abandoned its underground character and became the regular army of the state. The name of the Haganah was incorporated into the official name of the army of the new state: Zeva Haganah le-Israel (Israel Defense Forces).

HAGAR (Heb. חַגָּר), Egyptian maidservant of *Sarah (Sarai). The tradition involving Hagar is preserved in two narrative cycles. The passage in Genesis 16:1–16 records how Hagar was given to Sarai’s husband Abram as a concubine (1–13). When Hagar conceived, she became contemptuous of Sarai, who, in turn, abused her until she fled into the desert (4–6). There, by a spring, Hagar encountered an angel, who exhorted her to return (7–9) and gave her a favorable oracle concerning her future son to be named *Ishmael (10–12). Hagar named the place in honor of the event (13–14). Finally, she bore Ishmael (15). The second tradition (Gen. 21:8–21) records that after Sarai – now Sarah – had borne Isaac, she demanded the expulsion of Hagar and her son. According to the Septuagint, she was distressed to see Ishmael playing “with her son Isaac.” Upon receiving divine reassurance (12–13), Abraham reluctantly banished Hagar (14 ff.) to the desert, where she and Ishmael were saved from death by divine intervention (17 ff.).

The problem of surrogate motherhood arises elsewhere in the Bible (Gen. 30:3) as well as in Hammurapi’s code and in legal documents from the ancient Near East and Egypt spanning over a millennium. While there is as yet no exact parallel to the Hagar stories, these documents attest to the possibility of a slave’s son becoming an heir, the slave woman’s lack of deference to her mistress after bearing children (Hammurapi, 146), and the mistreatment of the slave by the mistress.

Contemporary critical scholarship regards the first tradition about Hagar as predominantly J (Jahwist), with P (Priestly) inserts comprising verses 1a, 3, 15–16; the second is agreed to be entirely E (Elohist). As a whole, however, the literary transmission of these narratives has long presented difficulties. The problems are both literary and chronological. The literary problems arise from the fact that both accounts involve the banishment of Hagar (16:6; 21:14), the encountering of an angel who provided an oracle (16:7–12; 21:17–18), and the presence of a well (16:14; 21:19). It has been suggested that two independent versions of Hagar’s banishment originally existed, the first referring to her pregnancy and the second to the time after Isaac’s birth. Consequently, some scholars resolve the assumed conflation by judging 16:9 to be a late redaction whose purpose was to give sequence to the nar-

ratives; others assume that the naming of Ishmael was deleted in the second tradition. These difficulties are lessened if the narratives are considered separate crystallizations of the Hagar-Ishmael saga, each one limited and both integrated by the root *šmʿ* (שמע; 16:2, 11; 21:12, 17). Each would serve both as an independent version of the etiology of the Ishmaelite-Hagarite tribes and a literary foil for the Isaac theme interwoven through it. However, the combination has introduced a chronological problem which did not exist when these traditions stood alone. According to Genesis 16:16, Abraham was 86 years old when Ishmael was born and 100 when Isaac was born (21:5), which would make Ishmael more than 14 years old at the time of his banishment (21:10 ff.). This difficulty has resulted in various attempts to account for the conflation, as, e.g., the view that an account of the banishment of Hagar and her young son was combined with an account of the birth of Isaac in Abraham's old age.

As a female name Hagar is well attested in ancient Arabia in Palmyrene and Safaitic. There is probably no connection between Hagar and the Hagrites (Knauf), an ethnic group named in Chronicles (I Chr. 5:10, 19, 20; II Chr. 5:20). The etymology of Hagar is obscure, but some scholars have connected it with an Old South Arabic word meaning "city, area."

[Maurice Friedberg / S. David Sperling (2nd ed.)]

In the Aggadāh

Hagar was the daughter of Pharaoh. When "Pharaoh saw the deeds performed on Sarah's behalf in his house, he gave Hagar to Sarah, saying; 'Better let my daughter be a handmaid in this house than a mistress in another's'" (Gen. R. 45:1). According to Philo (Abr., 251), Sarah testified about Hagar her handmaid, not only that she was a free woman of noble disposition, but also that she was a Hebrew in her way of life. Hagar was given to Abraham after he had dwelt ten years in the land of Canaan (Gen. 16:3) since a man having no children from his wife for ten years may not abstain any longer from the duty of propagation (Yev. 6:6). As soon as Hagar was with child she began to slander Sarah, saying to the ladies who came to visit her mistress, "My mistress Sarah is not inwardly as she appears outwardly. She pretends to be a woman of piety, but she is not, as she has prevented conception in order to preserve her beauty" (Gen. R. 45:4). When this came to the notice of Sarah she took Abraham to task for remaining silent at these taunts and she also made Hagar do servile work despite the fact that Abraham objected to any burden being added to that of childbearing (Gen. R. 45:6). Four or five angels visited her after she fled from Sarah but Hagar, who was quite accustomed to the appearance of these celestial beings in Abraham's household, was not at all startled (Gen. R. 45:7). When Hagar came to the wilderness, she took up the idol-worship of the house of her father Pharaoh (*ibid.*; PDRE. 30). However, she gave it up when it proved worthless (Targ. Yer. Gen. 21:16). Hagar is identical with Keturah, whom Abraham married after the death of Sarah (Gen. 25:1). She was so called, because after having gone astray after idols, she again attached herself

to a life of virtue (*keturah*, lit. "attached"; Zohar, Gen. 133b; Gen. R. 61:4).

For the figure of Hagar in Islam see *Abraham; *Ishmael, sections on Islam.

HA-GASHASH HA-ḤIVER (Heb. הגשש החיור), Israeli comedy trio, including SHAIKE LEVI (1948–); GAVRI BANAI (1940–); and ISRAEL POLIAKOV (1941–). Ha-Gashash is the longest-running and most successful comedy team in the history of Israeli entertainment. Over the years the threesome have built up an audience from across the entire spectrum of Israeli society and all age groups. Their vast range of material, sketches, and songs has appealed to the highbrow and the lowbrow, and their language has spawned numerous expressions that have found their way into everyday speech.

Ha-Gashash was created in 1963 by promoter Avraham "Pashanel" *Desheh. Levi, Banai, and Poliakov had previously worked under Desheh as part of the *Tarnegolim* ("Roosters") singing troupe and when it disbanded Desheh suggested that they form a trio performing comic sketches and songs. Ha-Gashash's first show, entitled *Simḥat Zekinti*, premiered in 1964 with material written by actor-comedian Shaike *Ophir. The show was a great success and Levi, Banai, and Poliakov decided to keep the team together. Ophir also wrote material for the next production, *Tokhnit Dalet* ("Plan D"), which came out in 1966 and included songs written and arranged by Aryeh Levanon, some of which became hits.

In 1969 the threesome decided to try their luck in the mainstream music arena by entering that year's Israel Song Festival with a song called *Mayim le-David ha-Melekh* ("Water for King David"). True to their comic bent, Levi, Banai, and Poliakov added a comic visual effect to their singing by wearing overly short biblical-style tunics. By now Ha-Gashash ha-Ḥiver had become the most popular comedy team in the country.

In the early 1970s the group used material written by Yossi *Banai, who doubled as director, as well as sketches derived from the works of world-renowned satirist Ephraim *Kishon. The group also furthered its across-the-board musical appeal with a string of hits, such as Naomi *Shemer's *Yesh Li Ḥag* ("I Have A Holiday"). Ha-Gashash later released an entire album of Shemer numbers, including *Lu Yehi* ("If Only") and *Orḥim La-Kayiz* ("Summer Guests"), which sold well.

In 1984 the threesome contributed sketches to the Labor Party's political broadcasts for that year's general elections, some of which formed the basis of subsequent productions, such as 1985's *For a Fistful of Dollars* directed by Motti *Kirschenbaum. In 1990 Levi, Banai, and Poliakov decided

to further their solo careers but temporarily regrouped after being awarded the 2000 Israel Prize. All three continued to work separately, both as actors and singers, but periodically appeared with new Ha-Gashash material.

[Barry Davis (2nd ed.)]

HAGBAHAH, GELILAH (Heb. הַגְבָּהָה וְגִלְיָה; “lifting and rolling” of the Torah scroll), the elevation and subsequent rolling together of the Scroll of the Law in the synagogue. *Hagbahah* is the raising of the open Torah scroll, so that the congregation may see the writing and testify: “And this is the Law which Moses set before the children of Israel” (Deut. 4:44); “According to the word of the Lord by Moses” (Num. 9:23). In the Sephardi ritual, Deuteronomy 4:24, 33:4 is immediately followed by Psalms 18:31. In the Reform ritual, “This Torah is a tree of life to those who hold fast to it; and of them that uphold it everyone is rendered happy” (Prov. 3:18) is recited instead. In the Ashkenazi ritual, this rite is performed after the reading from the Pentateuch and before the reading from the Prophets (*haftarah*). One person lifts up the Torah scroll in such a way that the congregation can see three columns of the writing. He then sits down and another person rolls the scroll, binds it, dresses it with a mantle, and replaces its various ornaments. This part of the rite is called *gelilah* (“rolling together”). In many ḥasidic synagogues *hagbahah* is made with an open scroll before the reading from the Torah and again after the reading, with a closed scroll which is then bound. In the Sephardi ritual, *hagbahah* is performed before the reading from the Pentateuch. The person who takes the Torah scroll from the ark opens it and carries it open to the reading platform. According to the Talmud, the person who performs the *gelilah* ceremony is honored even more than those who are called to the actual reading of the Pentateuch (Meg. 32a, see also: Sh. Ar., OH 134). In some places, it has become the custom to let the *gelilah* be performed even by minors (under the age of bar mitzvah) who are not qualified to be called to the Pentateuch reading. In the Western Sephardi rite, however, *hagbahah* is performed only by an honorary official or members of an honorary brotherhood (*levantadores*).

HAGEN, town in North Rhine-Westphalia, Germany. A small Jewish community came into existence in Hagen during the early years of the 18th century. Among the town's 675 inhabitants in 1722 were four Jewish families, two of them glassmakers and two animal butchers. Little is known of the community in the following decades, but in 1799 there is evidence of a significant settlement of 23 Jews, mostly engaged in peddling. During the 19th century their numbers increased, and they were particularly prominent in the development of the textile industry. In this period they established a school and finally built a synagogue in 1859. By 1897 there were 470 Jews among the population. On the eve of the Nazi regime in 1930, there were 679 Jews in Hagen. The synagogue was set on fire in 1938,

Jewish stores and homes were destroyed, and all Jewish men were deported to Sachsenhausen-Oranienberg and Dachau. Over the next year emigration intensified, with around 300 managing to leave during the entire Nazi period. The remaining Jews were deported between 1942 and 1943 via Dortmund to Theresienstadt and Zamosc and from there to Belzec, and later to Auschwitz directly. In all, 153 perished. By 1956 there were again 20 Jews living in Hagen. The synagogue in Hagen-Hohenlimburg (Hohenlimburg was incorporated into Hagen in 1975), which was damaged in 1938, was bought and restored by the city of Hagen in 1960. In 1986 it was opened as a memorial site (Alte Synagoge Hohenlimburg). The Jewish community numbered 38 in 1989 and 338 in 2004. Most of the members are immigrants from the former Soviet Union, who came to Germany after 1990.

HAGENBACH, village in Bavaria, Germany. The existence of a Jewish community in Hagenbach was first noted through its suffering during the *Rindfleisch massacres (1298). Nothing more is known of it until 1478, when the expulsion of Jews from nearby *Bamberg increased the numbers and importance of the Jewish communities in Hagenbach and the neighboring villages. The various communities lived under the protection of the country gentry and formed an association to provide common rabbinic leadership and to represent their shared interests before the governmental authorities. The local *Memorbuch, an important historical document, records that a synagogue and cemetery were consecrated in 1737. In 1813 an independent rabbinate was established, with its seat in Hagenbach, embracing 14 other small communities. In 1867 the community (totaling 126 persons) was united with that of *Baiersdorf, while in 1894 both were included in the rabbinate of Bamberg. The Jewish population numbered 88 in 1900 and only 24 in 1933. All left by November 1938. The community was not reestablished after World War II.

HAGGADAH, PASSOVER (Heb. הַגְדָּלָה; “telling”), a set form of benedictions, prayers, midrashic comments and psalms recited at the **seder* ritual on the eve of *Passover.

INTRODUCTION

The *Haggadah* is based on the *seder* service prescribed by the Mishnah (Pes. 10), which had apparently been conducted in the form of a banquet. The observance of the precepts at the *seder* – the eating of the *pesah* (the *paschal sacrifice), *matzah (“unleavened bread”), and *maror (“bitter herbs”); the drinking of arba *kosot (“four cups of wine”); and the recital of the story of the exodus from Egypt (the narrative of the *Haggadah*) were integrated into this banquet celebration. Essentially, the *Haggadah* is an account of the Egyptian bondage, a thanksgiving to God for the redemption, and, in Temple times, a thanksgiving for the acquisition of the Land of Israel. After the destruction of the Second Temple, the latter was replaced by a prayer for the ultimate redemption. The purpose of the *Haggadah* (“*Ve-higgadta le-vinkha*” – “And thou shalt tell thy son,” Ex. 13:8), one of the central commandments of the day, is represented by the narrative itself. Not written by any particular author, or group of authors, the *Haggadah* is not a “literary composition” in the accepted sense of the term. Its narrative is a collection of excerpts from the Bible, Mishnah, and Midrash, interpolated with the ritual performances: the *Kiddush, the benedictions recited on the performance of precepts, and for food, *Grace after Meals, and the *Hallel. Gradually, stories, psalms, and songs were added. Many recensions of the *Haggadah*, differing from one another to a greater or lesser degree, have been preserved in various manuscripts, mostly dating from the 13th to the 15th century, and also in fragments from the Cairo *Genizah. Some halakhic works also contain the text of, and commentaries on, the *Haggadah* (see below: Manuscripts and Editions). In keeping with its compilatory character and the varied nature of its sources, the literary or logical nexus between the different sections of the *Haggadah* is not always discernible. The quotations, derived from a multiplicity of sources, have mostly been adapted to the needs of the *seder* service.

COMPONENT PARTS

(1) The *Kiddush. It is not specific to the *seder* service but is prescribed for all the festivals.

(2) *Ha Lahma Anya (“This is the bread of affliction”) are the opening words of a declaration in Aramaic, designating the *matzah* as the bread of affliction and inviting the needy to join the meal. It ends with “This year we are here, next year may we be in the Land of Israel. This year we are slaves, next year may we be free men.” There seems to be no clear connection between the three statements of the declaration. It appears to be a folk composition which was added to the *seder* liturgy after the destruction of the Temple.

(3) *Mah Nishtannah (“How is this night different”), popularly known as “the four questions,” is according to the Mishnah (Pes. 10:4) apparently a formula with which the father can instruct his son. This formula passed through a number of stages till it assumed the forms which are to be found in the different recensions that are in use today.

(4) *Avadim Hayinu* (“We were bondmen”) is an introduc-

tion to the formal narration of the exodus from Egypt, based on the views of Samuel (Pes. 116a). Passages of unknown origin supplement the narration stressing its importance.

(5) *Ma'aseh be-Rabbi Eliezer... Amar Rabbi Elazar* (“It is told of R. Eliezer... R. Eleazar b. Azariah said”) is a story concerning the leading *tannaim*, followed by a discussion between them, whose purpose it is to emphasize the importance of the narration. While the story is preserved only in the *Haggadah*, the debate is cited in the Mishnah (Ber. 1:5) and in halakhic Midrashim (Sif. Deut. 130; Mekh., Pisha 16).

(6) The *baraita* of the Four Sons, also preserved in a halakhic Midrash (Mekh., Pisha 18) and in the Talmud (T, Pes. 10:4, 37d), but in a recension differing considerably from *Haggadot* in use today, incorporates all the biblical verses enjoining the narration of the exodus (Deut. 6:20; Ex. 12:26; 13:8; 13:14). It adapts them to four different types of “sons”: the wise, the wicked, the simple, and the disinterested, who should be instructed according to the *halakhah* “that according to the understanding of the son the father instructs him” (Pes. 10:4).

(7) *Yakhol me-Rosh Hodesh* (“It might be thought that [this exposition should begin] from the New Moon [of Nisan]”) is a tannaitic commentary on Exodus 13:8 (Mekh., Pisha 17), adducing exegetical proof that the narration of the exodus story is obligatory on the eve of Passover.

(8) *Mi-Tehillah Ovedei Avodah Zarah Hayu Avoteinu* (“In the beginning, our fathers worshiped idols”) is an introduction to the narration of the exodus story based on Rav as opposed to Samuel’s view (see above *Avadim Hayinu*).

(9) A tannaitic Midrash on *Arami oved avi* (Deut. 26:5–8) – “An Aramean would have destroyed my father” (usually rendered: “A wandering Aramean was my father”) which, according to the Mishnah (Pes. 10:4), everyone is obliged “to expound.” This commentary, also preserved in the Midrashim based on the *Sifrei* (Sif. Deut. 26:5 (301), especially Mid. Lek. Tov, and Mid. Hag., ad loc.), is a haphazard selection of aggadic interpretations. In the *seder* ritual, it is prefaced with “Blessed be He who observes His promise... Go and learn what Laban the Aramean sought...,” a passage not found in the Midrashim and apparently composed in the post-talmudic period.

(10) Commentaries of the *tannaim* on the miracle of the plagues and the division of the Red Sea during the exodus from Egypt are recited. In most Jewish communities these have been seen as a continuation of the preceding Midrash; their source is the *Mekhilta* (*Va-Yehi be-Shallah* 6).

(11) *Kammah Ma'lot Tovot la-Makom Aleinu* (“How many goodly favors has the Almighty bestowed upon us”) is a poem in two versions which is preserved only in the Passover *Haggadah*. The poem was composed during the Second Temple period and seems to have no direct connection with the *seder* service.

(12) The Mishnah of Rabban Gamaliel. It explains the significance of the Passover sacrifice, the unleavened bread, and the bitter herbs. Taken from the Mishnah (Pes. 10:5), it

was reworded (in a question-and-answer form) during the post-talmudic period.

(13) *Be-Khol Dor va-Dor* (“In every single generation”) is a passage from the Mishnah (Pes. 10:5), or from an expanded Mishnah (*baraita*), which had been supplemented by a statement of Rava (Pes. 116b).

(14) The first two chapters of *Hallel* are recited, as prescribed in the Mishnah following Bet Hillel (Pes. 10:6).

(15) The benediction for redemption “Who redeemed us” is based on the ruling of R. Tarfon and R. Akiva in the Mishnah. After observing the commandments to eat unleavened bread and bitter herbs, the meal is eaten, followed by Grace after Meals. (According to the opinion of scholars such as Elbogen, Ginzberg, and Finkelstein, etc. it is obvious from the text of the *Mah Nishtannah* that at some stage in the development of the *seder* service this part of the ritual followed rather than preceded the meal.) The company then continues with the second part of the *Haggadah*.

(16) *Shefokh Hamatkha* (“Pour out Thy wrath”) is a collection of verses whose theme is a supplication for vengeance on the nations that have oppressed Israel. The custom to recite these verses is attested since medieval times; their number and order differ according to the various rites.

(17) The last part of the *Hallel* is recited, as specified in the Mishnah (Pes. 10:7).

(18) *Yehallelukha Adonai Eloheinu al Kol Ma'asekha* (“All Thy works shall praise Thee”) is a benediction of praise (*Birkat ha-Shir*) in accordance with R. Judah's view (Pes. 118a).

(19) The Great *Hallel* (Ps. 136). Its recital became obligatory at a later date. (It is based on the *baraita* of R. Tarfon (*ibid.*)).

(20) *Nishmat Kol Hai* (“The breath of all that lives”), another version of the *Birkat ha-Shir* (“Benediction over the Song”) is recited, in accordance with the view of R. Johanan (*ibid.*).

RITUAL ACTS

The text of the *Haggadah* is also divided according to the prescribed ritualistic acts of the *seder* service. Each textual section is headed by a descriptive phrase which, in some rites, is chanted as a separate litany. The sections are *kaddesh* (the *Kiddush*), *u-rehaz* (“washing” of the hands), *karpas* (eating the “herbs” dipped in saltwater), *ya'hoz* (“dividing” the middle *matzah*), *maggid* (the “narration”), *rahaz* (“washing” the hands for the meal), *mozi-matzah* (the “benediction” over the *matzah*), *maror* (eating the “bitter herbs”), *korekh* (eating “bitter herbs with *matzah*”), *shulhan orekh* (the “meal”), *zafun* (eating of the *fikoman* – the “last *mazzah*”), *barekh* (“Grace after Meals”), *hallel* (recitation of the second part of *Hallel*), and *nirzah* (the closing formula). This Passover *Haggadah* and *seder* ritual follows the practice of the Pumbedita and Sura academies of Babylonia and was adopted by all the Jewish communities in the Diaspora. It completely superseded the ancient Palestinian recension which differed from it in certain respects (such as the omission of sections 4–7 listed above).

TEXTUAL ELABORATIONS

A tendency, however, existed to elaborate on the text of the *Haggadah* with midrashic and poetic sections. These additions are neither obligatory nor universally accepted: e.g., the tannaitic exposition *Ani Adonai ve-lo Aher* (“I the Lord and no other”; *Maḥzor Vitry*, 293) and an interpretation of *ve-natan lanu et mamonam* (“and gave us their substance”; the *siddur* of Saadiah Gaon, 143), the latter is derived from the *Mekhilta de-R. Simeon b. Yoḥai*, and was adapted to the *seder* ritual. Similarly, certain benedictions were expanded through the interpolation of *piyyutim* (e.g., in the *siddur* of Saadiah Gaon, 144). Among Oriental communities it is customary to recite in the first part of the *seder* service the hymn “And ye shall say: This is the offering of the Passover.” In later times, hymns and roundelays were gradually incorporated into the *Haggadah*, and sung at the end of the *seder*: **Az Rov Nissim* (“Of old, Thou didst Perform most Miracles at Night”; from a *kerovah* by *Yannai); *Omez Gevurotekha* (“The Strength of Thy Might”; from a *kerovah* by R. Eleazar *Kallir); *Ki Lo Na'eh* (“For to Him Is it Becoming”; by an anonymous *paytan*); and *Hasal Seder Pesah* (“Accomplished is the Order of the Passover”; from a *kerovah* by R. Joseph Tov Elem *Bonfils). Other hymns introduced are just folk songs composed for the entertainment of children, e.g., **Addir Hu* (“Strong is He”); **Ehad Mi *Yode'a* (“Who Knows One?”); **Had Gadya* (“One Only Kid”). In other communities different *piyyutim* have been adopted: e.g., “On Passover in Egypt my Captives went forth Free”; “From the House of Iniquity, Seat of my Strifes” or “Home of my Medanite [captors]” (both are in the *Maḥzor Carpentras*); or “Who Wrought Wonders in Egypt” (*Maḥzor Romania*, Constantinople, 1510). In northern France it was customary to sing at the end of the *seder* “The Lovers Sing with Ringing Voice” (*Maḥzor Vitry*, 298).

COMMENTARIES

Textual difficulties in the *Haggadah* called for the annotation of the text. The earliest commentaries were written in a talmudic style and can be found in the halakhic works of the school of Rashi and his disciples (e.g., in *Maḥzor Vitry*; *Ha-Orah*, ed. by S. Buber, 1905; *Siddur Rashi*, ed. by S. Buber and J. Freimann, 1911; *Ha-Pardes*, ed. by D. Ehrenreich, 1824). The commentary attributed to R. *Samuel b. Meir is written in the same style. A more comprehensive and profound exposition is found in *Shibbolei ha-Leket* by R. Zedekiah b. Abraham *Anav (13th century; ed. by S. Buber, 1886), in which are incorporated some annotations by Isaiah di *Trani, as well as interesting novellae, by the author's brother. The two important commentaries composed in the 14th century were by R. Aaron b. Jacob ha-Kohen of *Lunel (in *Orhot Hayyim*; it also appeared in Kol *bo) and by R. David b. Joseph *Abudarham (in his commentary on the prayer book; Venice, 1566). These early commentators merely annotated the text. They were not concerned with the investigation of the historical aspect of the *Haggadah* and did not refer to the sources of its different texts. This simple explanatory type of commentary came to a

close in the 15th century with *Afikoman* by R. Simeon b. Zemah *Duran, which until that time was the only commentary published as a separate book. After the 15th century, the commentators included material of their own in their expositions, both as an elaboration on the narrative and as a discussion of philosophical and theological concepts. R. Isaac *Abrabanel in *Zevah Pesah* (Venice, 1545; figure 3) poses 100 questions which he answers at length. With reference to the verse “Know thou of a surety...” (Gen. 15:13), he asks: “What benefit have we derived from the exodus from Egypt, in view of the fact that we are once again in exile?” In his reply he discusses the significance of the exile and the ways of Providence at great length, without establishing any direct connection with the text. The commentary thus becomes a separate discourse. Subsequent commentators, who followed his style, mostly annotated in an aggadic vein, while a few gave mystical interpretations, e.g., R. Eliezer *Ashkenazi in *Maasei Adonai* (Venice, 1583); R. *Judah Loew b. Bezalel (the Maharal) of Prague in *Gevurot Adonai* (Cracow, 1582), in which he also expounds halakhic matters; and the kabbalists R. Moses *Alshekh and R. Isaiah *Horowitz. The best known later commentators are: R. Jacob *Emden, R. *Elijah b. Solomon Zalman of Vilna, *Jacob of Dubno, Jacob b. Jacob Moses *Lorberbaum (of Lissa), and Moses *Sofer (Schreiber) who wove their homiletic compositions round and into the Passover *Haggadah*. R. Hayyim Joseph David *Azulai (18th century), known for his critical approach, also follows the above method in his commentaries on the *Haggadah*, though occasionally the critical view is discernible. Only in the 19th century did scholars begin to analyze the text, to clarify its sources, and to determine the original wording. This method was adopted by H. Edelman, E. *Landshuth, D. *Cassel, M. Friedmann, and D. Goldschmidt, whose commentaries were published in articles or in book form.

MANUSCRIPTS AND EDITIONS

Through the generations the Passover *Haggadah* has been one of the most popular works – perhaps the most popular – in Jewish religious literature. Many recensions, differing from one another to a greater or lesser degree, have been preserved in various manuscripts mostly dating from the 13th to the 15th century, and also in fragments from the Cairo *Genizah*. These manuscripts originate from all countries in which Jews have lived. Some halakhic works also contain the text of and commentaries on the *Haggadah*. Others are found in daily or festival prayer books; the majority, however, are separate works for use on the eve of Passover only. These manuscripts have not yet been adequately investigated; only a selected few, particularly the illuminated copies, have engaged the attention of scholars. In the seventh or eighth century the *Haggadah* was apparently compiled as a separate work by the *geonim*. The oldest extant version however is in the prayer book (*siddur*) of Saadiah Gaon (10th century; ed. by I. Davidson, S. Assaf and B.I. Joel, 1941); other early versions are found in Maimonides’ *Mishneh Torah* (12th century) and in *Mahzor Vitry* (11th century). Since the 15th century, the *Haggadah* has had more

than 2,700 editions, either with or without commentaries. Later editions have included as many as 200 commentaries. The *Haggadah* has been translated into vernaculars used by Jews, e.g., Yiddish, Ladino, Judeo-Greek, Judeo-Arabic (in its various dialects), and Judeo-Persian, which are often printed together with the *Haggadah*. Oral vernacular renderings are traditional in those communities which have no printed literature in their spoken idiom (e.g., in modern Aramaic). The *Haggadah* has been rendered into a number of languages, and the translation, whether with or without commentary, is often included in the editions. “Emended” editions, which do not give the traditional but a substitute version, are customary in certain communities, e.g., the *Haggadah* of S. *Maybaum (1891), Caesar *Seligmann (Frankfurt, 1913), Guggenheim (Offenbach, 1927), the Central Conference of American *Rabbis (from 1905 onward), the Union of Liberal and Progressive Synagogues in London (1953), and the *Reconstructionist movement in the U.S. The tendency to “reform” the *Haggadah* exists also in Israel, especially in nonreligious kibbutzim which tend to emend the text of the *Haggadah* from year to year; as a rule, these editions do not appear in print, but in cyclostyled form only. The Karaites have composed a Passover *Haggadah* of their own, which is completely different from that of the Rabbanites, and consists of biblical verses and a few benedictions. It has been printed several times (Pressburg, 1879; Odessa, 1883; Vilna, 1900; Ramleh, 1953). *Haggadah* editions based on scientific analysis and research are by: H. Edelman (1845); E.L. Landshuth (*Maggid me-Reshit*, with an introduction, 1855); J.D. *Eisenstein (*Ozar Perushim ve-Ziyyurim al Haggadah shel Pesah*, 1920); C. *Roth (in English, 1939); D. Goldschmidt (with a commentary in Hebrew; 1947) and with an introduction on the history of the *Haggadah* and the texts of all the midrashic and paytanic additions in 1960; and M.M. *Kasher (containing Mss. recensions, *genizah* fragments, and a collection of commentaries, as well as a lengthy introduction, 1955).

[Ernst Daniel Goldschmidt]

ILLUMINATED MANUSCRIPTS

Introduction

During the 13th to 15th centuries the Passover *Haggadah* was one of the most popular Hebrew illuminated manuscripts in Sephardi as well as Ashkenazi or Italian communities.

The popularity of the *Haggadah* for embellishment at that time was the result of the fusion of several factors. To begin with, the crystallization of its text into a single received and authoritative version made it easier to extract the Passover *Haggadah* from the complete annual cycle of prayers contained in the *siddur* and to copy it as a separate book. Such a book, the record of the most important private, domestic ritual, performed with the entire family gathered around the Passover table, was a much more personal object, less subject to communal prescription and prohibition, and so lent itself to the expression of personal taste in enrichment more than any other sacred codex. Being instructive in nature, the illus-

trations may have served as a means of holding the interest of the children through the long Passover eve ceremony. Because of its comparatively small size, it was not too expensive for the head of a family to commission or purchase, nor too laborious for scribe to write and artist to illuminate. Nor is it a coincidence that, just at the time when illuminated *Haggadah* manuscripts began to appear as separate books, that is to say during the 13th century, new developments were coming to the fore in European manuscript production. The social and economic growth of town life at this period fostered an increase in the number of secular workshops concerned with the manufacture of books. Interest in learning and need for the written means of its transmission coincided with a feeling of freedom and security in the more established towns. At the same time, new techniques in the preparation of parchment, inks, colors, gold leaf, and other materials brought the acquisition of illuminated manuscripts within the reach of many citizens.

Even so, not every household in the Jewish community could afford to possess an illuminated *Haggadah*. Only the richer Jews, who, especially in Spain, were employed by princes or their courtiers and were therefore better acquainted with beautifully illuminated codices, would have the means to attempt the imitation of the fashion for such objects by commissioning the illumination of Hebrew books. Such commissions would present the artist with the problem of a subject matter which was new to him, and the problem was met by the fusion of traditional Jewish themes, motifs, and iconography, with the more fashionable styles and layout of contemporary Christian illumination, according to the style of the artist and the taste of his patron. In the 14th and 15th centuries, especially in Germany, a more popular type of illuminated *Haggadah* was developed which could reach many more patrons and more easily satisfy the growing demand. The pattern, system, and choice of subject in the illuminated *Haggadot* were influenced by Greek and Latin illuminated manuscripts, chiefly psalters, of a type common in the princely courts of Europe.

Types of Illustration

The range of *Haggadah* illumination was obviously dependent in the first place on the contents of the book, which can be roughly divided into four categories: textual, ritual, biblical, and eschatological. These four categories may be applied to all illuminated *Haggadot* of the 13th to the 15th centuries, whether Ashkenazi, Sephardi, or Italian. The most common textual illustrations are of the main elements of the Passover ritual according to Rabban *Gamaliel: *pesah* (paschal lamb), *matzah* (unleavened bread), and *maror* (bitter herb). In fact, the *matzah* and *maror* may have been the earliest textual illustrations in the *Haggadot* of the ninth and tenth centuries and, judging from the fact that an example was found in the Cairo *Genizha, may have derived from Egypt, Palestine, or Mesopotamia. Decorated initial words were common to most Hebrew illuminated manuscripts, though some were peculiar to the *Haggadot*. One example is the decorative construction of

bold initial words, written one under the other on either side of the page, for the poem *Dayyeinu* ("It would have sufficed us"). This construction exists in eastern *Haggadot*, as well as in those included in the prayer book. In some *Haggadot* Rabban Gamaliel himself and his pupils are illustrated, as well as other rabbis mentioned in the text. Other textual illustrations include the "four sons," described in the narrative; the wise son was depicted as a rabbi, the wicked son as a soldier, the simple one as a boy, and the one who "does not know how to ask" as a jester. Some of the decorations are pictorial witticisms, such as the one of the man pointing at his wife while reciting *maror zeh* – "this bitter herb" or literal representations of the text, like the man leaving prison as an illustration to Psalm 118:3–7 in the *Sassoon Spanish Haggadah*. In Italian and Ashkenazi *Haggadot* there are even more literal illustrations of the Hebrew text, such as that of a man dressed for travel coming out of a town gate placed beside the text which begins, "Come out and learn what Laban the Aramite sought to do to Jacob"; or the picture of a naked woman to illustrate Ezekiel 16:7 as in the *Joel b. Simeon *Haggadah* in the British Museum.

The ritual illustrations are for the most part didactic, beginning with the preparations for Passover – the baking of the *matzot*, the killing of the paschal lamb, and the cleansing of the house and the dishes. Other illustrations show people reciting the *Haggadah* in the synagogue – a custom which was known in Spain – or leaving the synagogue; the family sitting round the *seder* table; the washing of the hands; the pouring, lifting, or drinking of the four cups of wine; the hiding and finding of the *afikoman*; and the eating of the various herbs. These genre scenes of medieval Jewish life depict the customs of various European communities by portraying their daily and festive dress, household utensils, furniture, and buildings and may have been invented at the time by the Jewish artists themselves for use in the *Haggadah*. Most interesting of all the categories are the biblical pictures. They begin as illustrations of the biblical and midrashic texts contained in the *Haggadah*, with the chief emphasis on the story of the Exodus, preceded by the history of the Patriarchs. The cycle was sometimes broadened to include other episodes ranging from the Creation, as in the Spanish *Sarajevo Haggadah* (see below), to Jonah under his gourd in the *Yahuda Haggadah* (Israel Museum, Jerusalem) and the *Second Nuremberg Haggadah* (Schocken Library, Jerusalem. Sometimes these biblical illustrations and the ritual pictures are intermingled. For example, the smearing of the lintel with blood is incorporated into a cycle of the preparations for Passover in the *Rylands Spanish Haggadah* (John Rylands Library, Manchester, England); and the baking of *matzot* is introduced into the Exodus story in the *Birds' Head Haggadah* (see below).

Many legendary episodes from early Midrashim are depicted along with the biblical illustrations, some being found in Sephardi as well as Ashkenazi *Haggadot*. Only a few can be mentioned here: Abraham cast into the fire by Nimrod; Joseph's meeting with the angel on his way to his brothers in Dothan, as in the *Golden Haggadah* (see below); Joseph's

coffin thrown into the Nile by the Egyptians in the *Sarajevo Haggadah*; the testing of Moses by means of gold and a live coal in the *Kaufmann Haggadah* (see below); Zipporah feeding Moses in prison for seven years in the *Yahudah Haggadah*; and Moses receiving two tablets of the Law and passing on five – the Pentateuch – in the *Birds' Head Haggadah*. Some biblical illustrations are quite literal, such as a tongueless dog barking at the Israelites coming out of Egypt to illustrate Exodus 11:7 in the *Kaufmann Haggadah*.

The eschatological illustrations refer to the ultimate destiny of the Jewish nation and the fate of the individual Jew. One such representation is the entry of the righteous into paradise (Psalm 118:19), which is depicted in the *Birds' Head Haggadah*, for example, as the three Patriarchs led by an angel. In many *Haggadot* the passage “Pour out Thy wrath upon the nations that know Thee not” (Psalm 79:6) is an invitation to eschatological illustration. In the *Kaufmann Haggadah* an angel is seen pouring the contents of a cup over a group of people.

More common in Ashkenazi *Haggadot* is an illustration associated with the prophet Elijah, the traditional harbinger of the Messiah, who is to come riding on an ass, bringing vengeance on the unbelievers who have destroyed Israel and redeeming the Jewish nation. The custom of opening the door to Elijah during the recital of “Pour out Thy wrath” is illustrated in the *Washington Haggadah*. The final verse of the *Haggadah*, “Next year in Jerusalem,” is illustrated in the *Birds' Head Haggadah* by a rendering of the newly built Jerusalem and its Temple, with Jews adoring it, while in the *Sarajevo Haggadah* the facade of the Temple is depicted. In the *Second Nuremberg Haggadah* the prophet Elijah is seen riding a donkey with the Israelites following him to Jerusalem.

Regional Schools

Three types of *Haggadot* are distinguishable on the basis of their illustrations and the way these are placed: Ashkenazi, Sephardi, and Italian. While some features are common to all schools, each regional school has some local trait peculiar to its *Haggadah*.

The rich Spanish *Haggadah* is usually composed of three parts: the text; full-page biblical miniatures; and a collection of the *piyyutim* recited in the synagogue during Passover week and on the Sabbath before Passover. The text of the Spanish *Haggadah* is very sparsely illustrated, mainly with textual and ritual representations, and the *piyyutim* section is barely decorated. The most significant artistic section is that of the full-page miniatures. The best known of about a dozen surviving specimens of this rich type of Spanish *Haggadah* are the *Sarajevo*, the *Kaufmann*, and the *Golden Haggadah*.

The full-page biblical miniatures that preceded the Spanish *Haggadot* may have been derived from the manner of illuminating the Latin psalter in England and France during the later Middle Ages, which in its turn was based on the “aristocratic” type of Greek psalter illumination of earlier Byzantine schools.

The Ashkenazi *Haggadot*, from France and Germany, are all decorated with illustrations in the margins surrounding the text. There are two main groups; the earlier one places ritual and biblical illustrations, literal representations of the text, adjoining the passages they interpret. Good examples are the 13th-century *Dragon Haggadah* from France, now in Hamburg, Germany, and the *Birds' Head Haggadah* of about 1300. The later group contains a consecutive cycle of pictures from any of the books of the Bible, placed with no direct relation to the *Haggadah* text. Examples of this decoration can be found in Jerusalem in the Schocken Library and in the *Yahuda Haggadah*. The famous *Darmstadt Haggadah*, of the first half of the 15th century, has very few textual and ritual illustrations, and none is biblical. Equally few appear in the *Erna Michael Haggadah* in the Israel Museum. Joel b. Simeon of Bonn was responsible for many illuminated *Haggadot*, both in Germany and in Italy; his best in the German style is the one in the British Museum. A crude but expressive example of his transition period is the *First Nuremberg Haggadah* in the Schocken Library. The *Washington Haggadah* illuminated in the Florentine style is one of his best.

The third type of *Haggadah*, the Italian, may have been the earliest of the three and the model for the others. Since no early Italian *Haggadah* has survived, however, the type must be reconstructed from later examples which have already been subject to other influences. In the 15th century, the Italian *Haggadot* must have been influenced mainly by the Ashkenazi type, since they contain marginal illustrations only. In the first half of the century the Ashkenazi influence is apparent chiefly in the general overall design. Following an influx of Jews expelled from Germany, a new group of Italo-Ashkenazi *Haggadot* emerged in which, though the style is Italian, the script and layout are Ashkenazi. In this group are the numerous manuscripts executed in the workshops of Joel b. Simeon, and those influenced by him. The *Haggadah* in the sumptuous *Rothschild Miscellany* in the Israel Museum is illustrated on traditional Ashkenazi lines in the Ferrarese style of about 1470.

The most outstanding examples of the illuminated *Haggadot* are discussed in greater detail below.

[Bezalel Narkiss]

Examples of Illuminated Haggadot

BIRDS' HEAD HAGGADAH (Israel Museum, Jerusalem, Ms. 180/57). So named because many of the human figures are depicted with birds' heads, this is probably the oldest surviving Ashkenazi illuminated *Haggadah* manuscript. It was discovered in 1946 by Mordekhai *Narkiss. It was copied in the south of Germany late in the 13th century by a scribe named Isaac who also copied the first volume of the *Leipzig Mahzor*. Its illumination consists mainly of marginal text illustrations, depicting historical scenes from Exodus, and ritual as well as eschatological scenes. The style of the illumination, the bright colors, and the decorative motifs, though somewhat primitive, indicate its Upper Rhenish origin. Its name is imprecise

because the artist uses other methods of human distortion, such as a boy with a bulbous nose, angels with blank faces, and Egyptians in helmets with lowered visors. The manuscript was reproduced in facsimile in 1967 accompanied by an introductory volume of essays.

[Bezalel Narkiss]

CINCINNATI HAGGADAH is a 15th-century illuminated script in the library of the Hebrew Union College, Cincinnati. It was copied in square Ashkenazi script on 69 vellum leaves by the scribe Meir b. Israel Jaffe of Heidelberg. It is decorated with painted initial-word panels, a decorative border, and miniatures in the margin illustrating the Passover ceremony and the text. The style of the miniatures and decorations indicate that the manuscript was executed in the late 15th century in southern Germany. Landsberger suggested that the scribe was also the artist of the *Haggadah*. This theory however has been challenged on the grounds that more than one artist seems to have worked on this manuscript. Moreover, it is unlikely that a scribe-artist would paint miniatures which obliterate his own script, as happens on several folios.

[Joseph Gutmann]

DARMSTADT HAGGADAH is an early 15th-century manuscript preserved in the Darmstadt Landesbibliothek (Cod. Or. 8). Its richly decorated folios are unusual for *Haggadot*. It was copied about 1430 by Israel b. Meir of Heidelberg in two full-page miniatures. The illustrations consist mainly of teachers, with male and female students, some in small frames and others in many-storied gothic frames, an unusual iconographic feature. The origin of these types must have been on contemporary "Heroes and square Ashkenazi script. Its decoration contained initial-word panels, a few fully framed borders, and Heroines tapestries" or frescoes showing Hebrew, pagan, and Christian worthies. The miniatures depict a hunting scene and a spring of youth. Little room is left in the manuscript for the text. Though the artist of the miniatures is unknown, the fact that the 15th-century art was not wholly dependent on church and court workshops made the emergence of an outstanding Jewish illustrator among the expert Jewish calligraphers possible. A facsimile reproduction was produced in 1927 in Leipzig.

[Robert Weltsch]

GOLDEN HAGGADAH (British Museum Add. Ms. 27210) is the earliest and most sumptuous of the illuminated Sephardi *Haggadot*. It contains the text of the *Haggadah*, a collection of 100 *piyyutim*, and 15 full-page miniatures illustrating the biblical story from Adam naming the animals up to the exodus from Egypt. The style of the miniatures and the text illustrations suggest that it was executed in Barcelona in the first quarter of the 14th century. It is based on the northern French gothic style of the late 13th century. The full-page miniatures, divided into four compartments each painted on a burnished gold background, were executed by two artists. The iconography of the scenes derives from the illustrations

of contemporary Latin manuscripts and from Jewish aggadic iconography which may go back to early Jewish Bible illumination. There is a companion manuscript of the second half of the 14th century in the British Museum (Or. Ms. 2884). A facsimile reproduction was produced in 1970 in London and New York (figure 7).

KAUFMANN HAGGADAH (Budapest, Library of the Hungarian Academy of Sciences, Kaufmann Collection, Ms. A422) is a 14th-century Spanish manuscript composed of two parts: 14 full page miniatures (fols. 1v–10, 57v–60) and an illustrated *Haggadah* (fols. 11v–56). The *Kaufmann Haggadah* has an incomplete miniature cycle of Exodus. The manuscript is incorrectly bound, as the entire group of full-page miniatures is dispersed, with some attached to the beginning of the manuscript (fols. 1v–10) and others to the end (fols. 57v–60). The facsimile edition of the manuscript, by the Hungarian Academy of Sciences in 1954, did even more to hinder an understanding of the cycle by printing the miniatures on both sides of the pages and omitting alternate blank pages, thus preventing a correct reconstruction of the sequence. The episodes represented in the extant miniatures begin with the discovery of the infant Moses and end with Miriam's song after crossing the Red Sea, with one miniature of the preparations for Passover eve (fol. 2). Among the biblical illustrations are many midrashic ones such as Moses removing Pharaoh's crown from his head. In most cases these illustrations are within the large, painted, initial-word panels, but sometimes they appear in the margins between the extended foliage scrolls. The *Haggadah* also contains some red, green, and purple filigree-work panels. The text illustrations are elaborate and contain, besides the usual rabbis, four sons, *matzah*, and *maror*, some repetitions of the biblical episodes depicted in the full-page miniatures, such as the labor of the Israelites (fol. 15v), the throwing of the male children into the river (fol. 27v), and the Israelites coming out of Egypt (fol. 43).

The Italianate style of the illumination is pronounced. In describing this *Haggadah* in the introductory volume of *Die Haggadah von Sarajevo*, J. von Schlosser attributed the style to northern Italy. In fact, it is Castilian of the late 14th century, characterized by many Italian stylistic elements. The Byzantine-Bolognese figure style and the very colorful, fleshy leaves support this assumption, as does the triple-towered castle – the emblem of the Kingdom of Castile – which is depicted in the center of the round, decorated *matzah* surrounded by four naked personifications of the winds blowing trumpets.

Sarajevo Haggadah (Sarajevo National Museum) is a 14th-century Spanish illuminated manuscript composed of the traditional three parts: 34 full-page miniatures (fols. 1v–34); illuminated *Haggadah* text (fols. 1*–50*); and *piyyutim* and Torah readings for Passover week (fols. 53*–131*). It is by far the best-known Hebrew illuminated manuscript, and has been reproduced in part twice during the last 70 years with scholarly introductions by H. Mueller and J. von Schlosser, and by C. Roth. The full-page miniatures in the *Sarajevo Haggadah* display the widest range of subjects even among the rich

Spanish *Haggadot*, from the Creation of the World to Moses blessing the Israelites and Joshua before his death, followed by illustrations of the Temple, preparations for Passover, and the interior of a Spanish synagogue. There are few full-page miniatures; most are divided horizontally into two framed sections, with some in four sections. Although the greater part of the iconography of the miniatures is derived from Latin Bible illumination of the Franco-Spanish school, some Jewish elements can be detected, as in the abstention from representation of God or any heavenly beings. Other Jewish aspects can be found in the text illustrations of the *Haggadah*, such as a miniature of Rabban Gamaliel and his students, and the *matzah* and *maror*. Stylistically, the illuminations are related to the Italian-gothic school prevailing in Catalonia in the 14th century. That the *Sarajevo Haggadah* originates from the Kingdom of Aragon can be inferred from three coats of arms displayed in the manuscript. The *Haggadah* reached the Sarajevo Museum when in 1894 a child of the city's Sephardi Jewish community brought it to school to be sold, after his father had died leaving the family destitute.

[Bezalel Narkiss]

WASHINGTON HAGGADAH (Library of Congress in Washington, D.C.) consists of 39 vellum leaves, 6 by 9 in. (15 × 22.5 cm.), written in square Ashkenazi script, completed by Joel b. Simeon in 1478. It has painted initial-word panels, and many marginal illustrations of the Passover ceremonies and the Exodus story. Although the illustrations depict German customs, their stylistic features and decorative elements indicate a late 15th-century northern Italian origin. The illustrations are closely related to those in other manuscripts believed to have been executed in the northern Italian workshop of the same scribe-illustrator. A facsimile was produced in 1965 with a preface by Lawrence Marwick.

[Joseph Gutmann]

PRINTED EDITIONS OF ILLUSTRATED HAGGADOT

Introduction

The earliest known edition of the *Haggadah* to be printed separately was produced in Spain at Guadalajara about 1482, on 12 pages in double column. Only a single copy is known to exist, and it may well be that other, perhaps earlier, editions have disappeared. The bibliography of the Passover *Haggadot* published by A. Yaari in 1960 includes 2,717 entries, but taking into account omissions and later editions, there can be no doubt that the total to the present date is at least 3,000. In the text of the *Haggadah* included in the prayer book according to the Italian rite (Casalmaggiore, 1486), there is a conventional representation of the *mazzah*, as in some of the earliest *Haggadah* manuscripts, and these may be considered the earliest known illustrations to the printed *Haggadah*. The crudely executed but by no means ignorant illustrations in the Latin *Ritus et celebratio Paschae* (Frankfurt, 1512) by the Christian Hebraist Thomas Murner, drawn by his brother Beatus, may have been inspired by a Jewish model. In the extremely rare

Seder Zemiroth u-Virkat ha-Mazon (Prague, 1514) there are figure woodcuts on the same subjects which appear later in illustrated *Haggadot*, and may derive from some lost edition. Of the earliest known illustrated edition, hypothetically attributed to Constantinople about 1515, only fragments remain. From the worn state of some of the blocks it may have been a reprint. From these fragments it is obvious that the whole work must have been lavishly illustrated.

Prague Edition (1526)

The continuous record of the illustrated printed *Haggadah* begins with the *Prague edition of 1526. This magnificent work, with its profuse marginal cuts and decorations and its superb borders, is among the finest productions of the 16th-century press. The beauty of the work lies above all in the disposition of the type and the exquisite balance of the pages. Its most remarkable feature is three pages with engraved borders in monumental gothic style. The printers and publishers were Gershom Solomon Kohen Katz and his brother Gronem (Geronim). The artistic work was apparently executed partly by Hayyim Shaḥor (Schwartz), Gershom Kohen's collaborator, who sometimes signed his initials, and partly by a gentile assistant. Some of the decorative features were derived from non-Jewish works, including the Nuremberg chronicle of 1484. In recent years the Prague *Haggadah* has been reproduced repeatedly in facsimile. The cuts and illustrations in the publication were long imitated, deteriorating progressively as the years went by. The Prague edition of 1556 retained some of the original elements but this was not the case with the one published in 1590 or with other commonplace editions that continued to appear in Prague and elsewhere down to the mid-18th century. An interesting new edition, apparently by Hayyim Shaḥor, appeared in Augsburg in 1534. This, however, had little influence and only one complete copy is preserved.

Mantua Edition (1560, 1568)

The next important step in the record of the illustrated *Haggadah* was the Mantua edition of 1560, published by the *shammash*, Isaac b. Samuel. This reproduced the text of the Prague edition page for page and letter for letter in facsimile, but introduced new illustrations and marginal decorations which had already been used in non-Jewish publications and were in conformity with Italian taste. The format was repeated with remarkable success in another edition published in Mantua in 1568 by a non-Jewish firm which concealed its identity under the name Filipponi. The marginal decorations were specially recut for this production, which rivals the Prague edition of 1526.

Venice Editions

The Mantua editions served as precise models for a group of illustrated *Haggadot* in smaller format produced in rapid succession at the turn of the century (1599, 1601, 1603, and 1604) in Venice, which had become the great center of Jewish publishing. These converted the hybrid but impressive Mantua editions into a cohesive but unimpressive unity, reproduc-

ing every accidental decoration and copying every accidental marginal detail. The major illustrations at the foot of the pages were expanded into an entirely fresh series of 17 engravings, some of them appearing more than once. These illustrated the *seder* service, the subject matter, and the story of the Exodus. Thus, this is the first *Haggadah* which is consistently and systematically illustrated.

In 1609 the veteran printer Israel ha-Zifroni of Guastalla planned an edition with completely new illustrations. Printed for him by Giovanni da Gara, it was set in bold type, each page within an engraved architectural border. The illustrations were placed at the top or foot of almost every page in the early part of the volume, and more sparsely toward the end. There was one important innovation in this edition: in a series of small panels on an introductory page, the various stages in the Passover celebration are illustrated with men and women dressed in contemporary fashion; a later page similarly illustrates the ten plagues. These features were henceforth to become usual in illustrated *Haggadot*.

The illustrations of the first part of the service (before the meal) are almost wholly devoted to the exodus, while those in the second part (after the meal) deal with the biblical story in general and with the messianic deliverance. In 1629 a further edition based on ha-Zifroni's with a similar format was published in Venice by the Bragadini press. This continued to be reproduced, without any basic change but with increasingly worn types and indistinct blocks, until late in the 18th century. The illustrations continued to be copied in *Haggadot* printed in the Mediterranean area, especially in Leghorn, almost to the present day. Thus the pattern of the traditional illustrated *Haggadah* was established.

Amsterdam Editions

In 1695 there appeared in Amsterdam a new edition of the illustrated *Haggadah* which followed closely, in its general layout as well as in detail, the example of the now accepted Venetian prototype. The illustrations were, however, much improved by being engraved on copper. The artist was *Abraham b. Jacob, a former Protestant preacher. He chose many of the same incidental scenes as had appeared in the Venice *Haggadot*, but he drew them afresh, basing his work on the biblical pictures in the *Icones Biblicae* by Matthew Merian the Elder; he probably used the second edition of the work which had appeared in Amsterdam in c. 1655–62. Abraham b. Jacob also used miscellaneous scenes taken from other works by Merian. Thus the four sons of the *Haggadah* text (depicted together for the first time in one illustration) are miscellaneous figures brought together from various publications of Merian, without any attempt at grouping. The "wise son" and the "son who could not ask," for example, come from an engraving of Hannibal sacrificing before the altar, while the scene of the sages celebrating at Bene-Berak is reproduced – with some alterations – from Merian's picture of the feast given by Joseph to his brethren. The first map of Erez Israel known in a Jewish publication was added on a folding page at the end

of the book. A further edition of the work was produced in Amsterdam in 1712, with minor differences, and the name of the artist was omitted from the title page.

As the Venice *Haggadah* of 1609/29 was widely imitated in southern Europe, so the Amsterdam editions had an enduring influence on the *Haggadot* produced in the Ashkenazi world. The pictures were imitated, if not copied, time after time with increasing indistinctness in innumerable editions illustrated with woodcuts or steel engravings. Such editions appeared in Frankfurt in 1710 and 1775, in Offenbach in 1721, and in Amsterdam in 1765 and 1781. Throughout the 19th century and down to the present day the illustrations, including the four sons and the Passover at Bene-Berak, continued to be reproduced in ever-decreasing quality in hundreds of cheap *Haggadot* published on both sides of the Atlantic. The Amsterdam editions also inspired a number of illustrated *Haggadot* by 18th-century German Jewish manuscript artists, some of whom even improved on the original.

Some Later Editions

A few independently conceived *Haggadot* of the later period may be mentioned: the Trieste edition of 1864 with 58 original copper engravings of considerable artistic merit by K. Kirchmayer; the Prague edition of 1889 with illustrations by the Slovak artist Cyril Kulik; and the curious lithograph edition published in Poona in 1874 for the benefit of the Bene *Israel community. In the 20th century, editions have appeared illustrated (or in some cases entirely executed) by artists of the caliber of Joseph *Budko, Jakob Steinhardt, Arthur *Szyk, Albert Rothenstein, and Ben *Shahn, and in Israel by J. Zimmerknopf and David Gilboa (d. 1976), the last being written in scroll form. The modified *Haggadot* produced for the kibbutzim are also almost always illustrated, sometimes by local artists.

[Cecil Roth]

MUSICAL RENDITION

Chanting and singing the texts of the *Haggadah* is generally observed in all Jewish communities, each one according to its peculiar style and custom. Although the celebration of the *seder* night is a family affair in which nobody is obliged to sing, it is customary to do so according to the example set by one's parents. From a musical point of view, the *Haggadah* text offers opportunities for solo chant as well as for responsorial and community singing. The scope of singing styles encompasses the simple chant (of the narrative and didactic sections), a more developed and melodious recitation that blends well with the responses of the company (for psalms and the old-style hymns), and melodies sung by all those present (for the more recent songs). The melodic recitations often come close to the simpler forms of synagogue chant; the Ashkenazi reader, for instance, largely uses the *Adonai Malakh Shteyger*, while the Jews of Iraq employ their *Tefillah* mode for some chapters. The psalms of the *Hallel are usually intoned to the ancient patterns of psalmody (see Jewish *Music), and sung with great enthusiasm; already in the *Gemara* a proverb is

quoted which says that singing the *Hallel* “cracks the ceiling” (TJ and TB, Pes. 7:12). The stanzas of the medieval poems that conclude the *Haggadah*, however, are given veritable song tunes in contemporary and past popular styles. These tunes vary from family to family and constitute a still unexplored treasure of folklore. Melodies in the folk style are normally attached to the poems *Addir Hu, Ki Lo Na'eh* (*Addir bi-Melukhah*), *Ehad Mi Yode'a*, belonging to the widely disseminated category of “counting songs,” and *Had Gadya*. Less frequent are *Hasal Seder Pesah* and the two acrostical hymns following it, as well as certain psalm verses and responsorial refrains in the earlier sections. The homelike atmosphere of *Haggadah* reading also permitted singing these poems in the vernacular. In the Ashkenazi community, this custom is not attested later than the 18th century, when it appears to have been abandoned. The Sephardim, however, not only continue singing the poems in the Ladino vernacular, but extend this even to more formal chapters such as *Ha Lahma Anya*. There is an example from Bulgaria in which every Ladino verse is repeated immediately in Bulgarian and Turkish; the Bulgarian version was to serve the young generation, the Turkish text was meant for the older one, while Ladino was for all.

At some places it is regarded as a merit and even a duty to extend the celebration of the *seder* night by joyful singing, eventually accompanied by dance steps, for as long as possible. This custom, of course, has its roots in mystical concepts, but it did not remain confined to such circles and is honored by eastern and western communities as well. Hasidic *niggunim* (“melodies”) are most often inserted by Ashkenazi celebrants. The *Haggadah* was also adapted by the Reform tendencies; there were several additions of music in rather dull style, but the substance was not touched. Kibbutzim in Israel have either designed their own tunes out of old and new elements or embellished tradition by additional songs and melodies. Israel songs (in the “classical” style of the 1940s and 1950s) are largely employed for stressing the national and seasonal aspects of Passover, and these tunes display their full charm in the traditional setting. A widely used “Kibbutz *Haggadah*” setting is that by Yehudah *Sharett. Another side-development was the use of the *Haggadah* for an oratorio, jointly undertaken by Max *Brod and the composer Paul *Dessau in 1933–35. There the traditional text has been expanded by selected scenes from the Bible and Midrash, and the music combines a declamatory style with the harsh harmonies of that period and full orchestral accompaniment.

FEMINIST HAGGADOT

Feminist *Haggadot* create a format for women’s communal celebration of Passover by giving prominence to the experiences of women in the narrative of the exodus from Egypt and by acknowledging women’s efforts to achieve full participation in Jewish communal and religious life. Inspired by the liberation and exodus imagery used by Civil Rights and New Left political activists, American Jewish women designed

the first feminist *Haggadah* in 1971 for use in private women-only Passover *seders*. The growth of Jewish feminism and new forms of religious expression during the 1970s and 1980s fostered the production of innovative rituals and liturgy among non-Orthodox religious Jews. A number of feminist *Haggadot* circulated and were adapted to fit the distinct concerns of each *seder*’s attendees. These *Haggadot* share many features in structure and content. Relying on classical midrashic texts, they give significant attention to female leadership in the exodus narrative. Miriam takes a central role in the *magid* and other sections of the *seder*, supplanting Elijah in portending redemption. The *Haggadot* present girls and women with historic Jewish female role models who struggled against oppression, including sexism within the Jewish community. Feminine or gender-neutral God language and feminine liturgical language are the norm.

In these *Haggadot*, the rituals and symbols of the traditional *seder* are revised or reinterpreted to relate to women’s lives. Common features include: (1) modifications of the Four Questions to fit a *seder* consisting only of women and inclusion of questions about the need for female separatism, the reasons for the bitterness of women’s oppression, and the potential for liberation; (2) the Four Sons are transformed into Four Daughters; (3) the Four Cups are presented as stages in women’s emancipation or as representative of Jewish heroines; (4) the Ten Plagues are re-named as the plagues cast upon women in Jewish life, for example, blood represents the myriad ways that women’s menses and reproductive capacity are blamed for excluding women from Torah study and communal privileges; (5) the *Dayyenu* song is altered to acknowledge advances in women’s status and to voice dissatisfaction with incomplete emancipation; and (6) the *seder* foods and rituals are given multiple symbolic meanings relating to women’s lives. New features include the Passover-themed songs of Debbie *Friedman; the use of *Kos Miryam* (Miriam’s Cup), a goblet of water signifying Miriam’s sustaining guidance in the wilderness; and the placing of an orange on the *seder* plate to acknowledge the contributions of gays and lesbians in the Jewish community. Most feminist *Haggadot* exist only in photocopied form. Hebrew Union College Library and Ma’yan: The Jewish Women’s Project have archived many for research purposes.

HAGGAHOT (Heb. הַגְּהוֹת “glosses”; “corrections”), a term used both to mean the examination of manuscript and printed works in order to correct errors and in the sense of “glosses,” i.e., notes and brief comments on the text.

This entry is arranged according to the following outline:

Correction of Errors

CORRECTION IN THE CONTENT
 CORRECTION OF STYLISTIC OR GRAPHIC ERRORS
 INFLUENCE OF HAGGAHOT ON TEXT
 PROOFREADERS

Haggahot Literature

GLOSSES ON THE CODES
 TEXTUAL NOTES AND EMENDATIONS

In the Bible, the verb, *haggiha* means to enlighten (cf. Ps. 18:29), and Kutscher conjectures that originally it had the same meaning when applied to books, since the main task of the *maggiha* (person making the *haggahah*) in the early period was to go over faded writing in order to “brighten” it.

Correction of Errors

Haggahah has been an integral element of writing and printing from the beginning since it is humanly impossible to avoid error. The types of error (both the authors' and the copyists') and correspondingly the categories of *haggahot* can be classified in two main groups.

CORRECTION IN THE CONTENT. This type of correction was mostly done by the author himself. In early literature with a large circulation the *haggahah* was done by scholars and experts. It was reported of Isaac Ruba, a *tanna* in the school of Judah ha-Nasi, that he had a corrected text of the Mishnah (TJ, Ma'as. Sh. 5:1, 55d). At a later period the *amora* Zeira complained that contemporary scholars did not correct the Mishnah in their possession in accordance with the version of R. Isaac (*ibid*). *Haggahot* of this type were done both on the basis of original and established texts, but at times they were also made at the discretion of the *maggiha*. Various scholars have pointed out *haggahot* of this later type which have found their way into the text of the Mishnah. Fragments of the *Mishneh Torah* of Maimonides in the author's own handwriting were discovered in the Cairo *Genizah* by M. Lutzki (d. 1976), who published them at the end of the Schulsinger edition (1947), and from them it is possible to trace the process of corrections and emendations whereby the final work was created. Manuscripts of Maimonides' commentary to the Mishnah, likewise thought to be in his own hand, have also been discovered and contain many of the author's *haggahot*; in some of them he changes his mind and gives a different opinion. The text of the *Ba'alei ha-Nefesh* of Abraham b. David of Posquière in the edition of Y. Kafah (1965), a text emended by the author following the *hassagot* (“criticisms”) of Zerachiah b. Isaac ha-Levi Gerondi, is a similar example. From this type of correction the “*Haggahot* literature” (see below) later developed.

CORRECTION OF STYLISTIC OR GRAPHIC ERRORS. This category consists essentially of technical mistakes resulting from such common copyists' errors as repeating the same word twice (dittography), omitting one of two similar adjacent letters or words (haplography), and missing words or lines because the same word occurs further on in a passage (homoio-teleuton). In early times (and in Yemen until quite recently) there was also a class of errors which resulted from the practice of the “publishers” of those days of appointing a group of people (mainly slaves), skilled writers who wrote from dictation exactly what they heard (to this type belong such errors as *eilav*, “unto him,” for *el av*, “unto father”). This type of error was obviated in copying the text of the Bible because of the prohibition against copying from dictation. The correction of such errors, made by others than the author himself, was done by comparing the text with an early or authoritative copy which adhered closely to the original text.

In early days a checked, original copy was deposited in the Temple, library, or archives, and whenever necessary the correct text was determined by it. The Midrash (Deut. R. 9:9) reports a tradition of a special **Sefer Torah* written by Moses and placed in the ark so that the correct text could be established (see S. Lieberman, *Hellenism in Jewish Palestine* (1950), 85f.). There are also reports of *Sifrei Torah* that were preserved in the Temple for the same purpose, and from them the *Sefer Torah* of the king was checked by the supreme *bet din*. The

scroll was called “the Temple scroll,” and texts were examined by a group of “book correctors” in the Temple, whose wages were paid from the public funds of the Temple treasury (Ket. 106a, Lieberman op. cit., 22); according to some commentators these correctors also examined the scrolls belonging to individuals and were also paid from the communal treasury. Similar scrolls were known which were regarded as especially accurate because they had been written by an expert scribe and had been meticulously checked; such a scroll was called “a checked (*muggah*) scroll.” Examples were those written by Assi (Lieberman op. cit., 25). A medieval manuscript of the *Mishneh Torah* exists (Neubauer, Bod. Cat, no. 577) which was corrected on the basis of the author’s text, and Maimonides confirms this by his signature at the end of the manuscript. Later this manuscript was kept at the *bet din*, and it was forbidden to use it for any purpose other than correcting later copies (according to the instructions in the colophon).

Uncorrected Torah scrolls were regarded as unauthoritative, and it was forbidden not only to use them but even to keep them (Ket. 19b); at a later period this prohibition was extended to include halakhic works (Sh. Ar., YD, 279). A complete set of halakhic rules was laid down for the correction of *Sifrei Torah* – their fitness for public reading being conditional on many details, including accurate *haggahah*. A scroll containing a certain number of errors was disqualified, and it was forbidden to correct it since the *haggahah* would spoil its appearance. If the errors were less numerous, an added letter could be erased or a missing one inserted. In the event of an error in the Divine Name, which it is forbidden to erase, it was sometimes the practice to peel off a layer from the parchment (Pithei Teshuvah to Sh. Ar., YD 276:2). The *haggahah* of *Sifrei Torah* is a purely technical task, as the text itself is naturally never emended and no discussion on the text of the Bible is found in talmudic literature (Lieberman, op. cit. 47). In some places, the scribe was made responsible for the *haggahah* (Resp. Rashba, pt. 1. no. 1056). There is evidence of the existence of corrected manuscripts of the Mishnah, such as “in an accurate Mishnah corrected from that of R. Ephraim” (*Maḥzor Vitry*, ed. by S. Hurwitz (1923³), 536). The following correctors of the Mishnah are known from the era of printing: Joseph Ashkenazi; the “*tanna* of Safed,” Samuel Lerma; Soliman Oḥana; Menahem de Lonzano; Bezalel Ashkenazi; and his pupil Solomon Adani.

INFLUENCE OF HAGGAHOT ON TEXT. The failure to distinguish between the two types of *haggahah*, as well as between corrections based on accurate texts and sources and those based on the judgment of the scribe, together with an exceptional caution against changing the actual text, caused the *haggahot* to be relegated to the margin instead of the text itself being corrected. As various copyists failed to appreciate this, the *haggahot* were subsequently incorporated into the body of the text. A critical examination in later ages revealed and indicated places where external *haggahot* had been arbitrarily and artificially included in the text (the question of the differ-

ent sources of the material of the Babylonian Talmud and its transmission, which are known to have influenced the text, belongs to a different category). The *geonim* already pointed out this phenomenon (see M.M. Kasher, in *Gemara Shelemah*, Pesahim pt. 1 (1960), introd.). Despite this, it should be noted that in the main the text of the authoritative halakhic literature was meticulously preserved because of its importance in legal decisions and in leading a life in accordance with *halakhah*. The Jerusalem Talmud and the various halakhic and aggadic Midrashim were not preserved in a sufficiently corrected form, however, because the attitude to them was less punctilious. An example of how such *haggahot* creep into a text is found in the following story. Rabbi Ḥayyim of Volozhin once asked his teacher, the Gaon of Vilna, about the word, *hesed*, that appeared in a particular line of the *Zohar. The word seemed out of place. The Vilna Gaon answered that a number of lines were missing in the manuscript on which Rabbi Ḥayyim’s printed edition was based. In the manuscript, the word, *haser*, appears, implying that some lines were missing. The typesetter misread the word, replacing the letter, *resh*, with a *dalet* and inserting the word into the text. (see Y.D. Rubin (ed.), *Nefesh ha-Ḥayyim*, 1989, 461).

The *haggahot* of various scholars affected the text of the Talmud, and this custom apparently became so widespread that *Gershom b. Judah of Mainz (who is stated to have copied books, among them the Bible) found it necessary to impose a ban on those who emended books, although it seems that this step was unsuccessful in completely eradicating the practice. A few generations later Jacob *Tam came out sharply against the emendation of books (introduction to *Sefer ha-Yashar*). He described the method of his grandfather, Rashi, stating that he did not emend the text itself but noted his emendations in the margin. It was Rashi’s pupils who corrected the text in conformity with these notes, and Tam criticizes them for it. He also differentiates between *haggahah* which consisted of erasing words and that which was merely addition. Among other things he reveals that his brother Samuel b. Meir (Rashbam) also frequently made *haggahot* in the body of the text. It is important to note that the present text of the Babylonian Talmud is considerably influenced by Rashi’s emendations, in contrast to the *haggahot* of the tosafists and other scholars. Perhaps this fact is to be attributed to the attitude of Tam. In the age of printing this same process is encountered. Many of the *haggahot* of Solomon Luria have been introduced into the printed text of the Talmud, though he noted them in a special book and they were originally published in this form. In later editions of the Talmud, however, the text was already emended according to his notes (see below). The *haggahot* of Samuel Edels (the Maharsha), who was opposed to *haggahot* of the text (see his introduction), were nevertheless incorporated in the text.

PROOFREADERS. During the age of printing the influence of proofreaders and printers on the texts of books became increasingly important, and today it is occasionally possible to trace the methods of different proofreaders. After it had been

established beyond doubt that the Leiden manuscript of the Jerusalem Talmud is the one from which the first edition was published in Venice (1523, by Bomberg), Lieberman showed in his essay on the tractate *Horayot* in the Jerusalem Talmud how great a share the proofreader – Cornelius Adelkind – had in establishing the present text (*Sefer ha-Yovel*... C. Albeck, 1963, 283–305). The research of R.N.N. Rabbinovicz on the text of the Babylonian Talmud provides a great deal of information on the activities of its first proofreaders. The most prominent of them was Hiyya Meir b. David, one of the rabbis of Venice, who was given the responsibility of correcting the whole Talmud edition by Bomberg in the course of three years (1520–23), as well as the commentary of Asher b. Jehiel. The proofreader of the first tractates of the Soncino Talmud (1484) was Gabriel b. Aaron Strasburg, and Rabbinovicz shows that his work is very faulty.

Gradually notes and corrections in the margins of books increased until they at times assumed the character of a textual apparatus. Still later these notes were even collected and issued in the form of independent works in which the word *haggahot* generally appeared in the title. The word is applied to many books, though their contents and character differ from one another.

Haggahot Literature

In the *haggahot* literature which developed, two main groups can be distinguished, the first constituting additions and supplements to the contents of the work – glosses – and the other consisting of emendations and notes to the text. The most prominent and best known of the first group were compiled on works of codification. An additional characteristic common to books of this category is that they lack formal structure and, since they were not authoritative, they were subjected to later adaptation and editing.

GLOSSES ON THE CODES. Such glosses were added to the great halakhic code, *Hilkhot ha-Rif*, of Isaac *Alfasi. Only fragments remain of the earliest gloss, the *haggahot* of his pupil, Ephraim (Abraham b. David, *Temim De'im* no. 68 and citations in the *Ha-Ma'or* of Zerayah ha-Levi). One of the important motives for such works is the tendency to make the code reflect the views of the scholars of a particular country, and also apply to other spheres of the *halakhah*. It was with this aim that the great halakhic compilation, the *Mordekhai* of Mordecai b. Hillel, consisting of the rulings and responsa of German and French scholars, was compiled on the *Hilkhot ha-Rif*. In the manuscripts, however, the *Mordekhai* appears as a gloss to the work itself. The *Mordekhai* was not edited by its compiler and there are different versions and editions. In the 13th century Meir ha-Kohen, Mordecai's colleague and according to some his brother-in-law (both were pupils of Meir b. Baruch of Rothenburg), wrote his *haggahot*, called **Haggahot Maimuniyyot*, on the *Mishneh Torah*. It attempted to add to Maimonides' rulings the opinions and decisions of the scholars of Germany and France, and the views and responsa

of Meir of Rothenburg occupy a prominent part of the work. As a result of this amalgamation of halakhic rulings there emerged a work which could serve as an authoritative halakhic code in different centers.

The *haggahot* of the tosafist *Perez b. Elijah of Corbeil to the *Tashbez* of Samson b. Zadok was written for a similar purpose. Perez noted the customs and halakhic decisions of his teacher, Meir of Rothenburg, and added the customs and rulings of the French scholars. He also wrote *haggahot* to the *Sefer Mitzvot Katan (Semak)* of *Isaac b. Joseph of Corbeil, which are mainly a summation of the views of the early scholars. Because of the succinctness and brevity of the *Semak*, *haggahot* were added to it by many scholars from different localities. The best known are the as yet unpublished *haggahot* of Moses of Zurich (see Urbach, *Tosafot*, 450). To the comprehensive *Piskei ha-Rosh* of Asher b. Jehiel, who moved from Germany to Spain at the beginning of the 14th century, was added the *Haggahot Asheri* of Israel of Krems (14th century). In the main this consists of summarized quotations from the *Or Zaru'a* of Isaac b. Moses of Vienna and of the rulings of Hezekiah b. Jacob of Magdeburg (13th century) from whom he collected the rulings of Isaac b. Samuel.

The best-known *haggahot*, which had a decisive influence on the establishment of the *halakhah*, are those of Moses *Isserles of Cracow to the Shulḥan Arukh. Their purpose was both to supplement the rulings of Joseph Caro, who based himself upon the three *posekim*, Isaac Alfasi, Maimonides, and Asher b. Jehiel, with the rulings of the scholars of Germany, France, and Poland, and also to note the customs and decisions which were accepted by Ashkenazi Jewry where they differed from those accepted by the Sephardim. The *haggahot* of Isserles were noted on the margins of the Shulḥan Arukh and are based upon his *Darkhei Moshe* (Resp. Rema 131:3), and were copied and circularized by his pupils (on Sh. Ar. Oḥ, *Hilkhot Niddah*, Cracow, 1570, on the whole Sh. Ar., *ibid.*, 1578). The notes and source references to the *Haggahot ha-Rema* were added later by others (first in the Cracow, 1607 edition). Isserles also compiled *haggahot* to other works such as *The Guide of the Perplexed* of Maimonides and the *Mordekhai*. With a similar purpose, Jacob Castro, chief rabbi of Egypt, also wrote *haggahot* to the Shulḥan Arukh – *Erekh Lehem* (Constantinople, 1718) – which reveal many similarities with those of Isserles, but were not widely used.

This category of *haggahot* had several consequences, both positive and negative. On the one hand, they preserved fragments of large works which have been lost, apparently because of their size and the difficulties of transporting and copying them, or because they were superseded by the codes. On the other hand, it is possible that the abridgments and summaries actually contributed to the original works being forgotten (some were later rediscovered, e.g., the *Or Zaru'a*, *Ravyah*, and others).

TEXTUAL NOTES AND EMENDATIONS. In the *haggahot* literature of the second category, those of Solomon b. Jehiel *Luria

of Lublin to the Babylonian Talmud are outstanding in their scope and importance. According to his sons, who published them separately under the title *Hokhmat Shelomo* (Cracow, 1581–82), he had no intention of committing his *haggahot* and comments to book form, but they served him as “notes and a prolegomenon to his major work, the *Yam shel Shelomo*.” These *haggahot* were written in the margin to the Bomberg edition of the Talmud in which he studied. Although the proofreaders of this publishing house were noted scholars (see above), this edition contains many mistakes and errors. The *haggahot* were made by comparing the text with sources and parallels, and according to his sons, Luria made use of manuscripts of the Talmud, of Rashi, and of the *tosafot* in his possession. In the Talmud published at that time in Constantinople by the brothers Yavetz, these *haggahot* were appended to the various tractates, and sometimes corrections were made according to the *haggahot* in the body of the work and indicated in the margin. In the later editions they were incorporated into the text and cannot be detected without special investigation (numerous examples are to be found in the *Dikdukei Soferim* of R.N.N. Rabinovicz). Luria also wrote *haggahot* to many other halakhic works. A. Berliner saw his *haggahot* to Maimonides in the town of Sokol (see Assaf in bibl.).

Also known are the *Haggahot ha-Baḥ* of Joel *Sirkes of Cracow, which he also inscribed on the margins of the first editions of the Talmud in which he studied. They were first published in Warsaw in 1824 as a separate work and thenceforth in the later editions of the Talmud. Like those of Luria, these *haggahot* greatly affect the understanding of the text of the Talmud and its commentaries, but in contrast to those *haggahot* which in many cases were based upon manuscripts, Sirkes’ corrections were mainly according to linguistic considerations and internal comparisons within the Talmud itself. Among the outstanding scholars who devoted themselves to *haggahot* and emendations in this sense was *Elijah the Gaon of Vilna. According to tradition, his corrections and amendments covered the whole range of talmudic, midrashic, and kabbalistic literature. Although he himself published none of his *haggahot*, some were printed later, but not all have survived in an accurate and original form. Among his published *haggahot* are some of those on the Babylonian Talmud (in late editions starting Vienna, 1816–26), on the *Mekhilta* (Vilna, 1844), the order *Zera’im* of the Jerusalem Talmud (Koenigsberg, 1858), *Sifrei* (1866), *Tosefta* (firstly independently and later in the Vilna edition of the Talmud), and the *Sifra* (1959). Scholars have concerned themselves with the question whether Elijah of Vilna’s *haggahot* are also based upon manuscripts and early versions or are the outcome of his own discretion. With regard to the *Tosefta*, S. Lieberman (*Tosefet Rishonim*, 3 (1939), introd.) has established that in essence they are derived from quotations of the text in the works of the *rishonim*, and apparently those on the Jerusalem Talmud also belong to this category.

In this category of *haggahot* are works which are less well known but of considerable importance, since through

them the original readings of manuscripts and early printed works, from which the *haggahot* were taken, have been preserved. This phenomenon is especially notable in the works of Sephardi rabbis of recent centuries, who had access to manuscripts which they used frequently. Among them are *Haggahot Tummat Yesharim* (Venice, 1622) on *Avot de-Rabbi Nathan*, the *Sifra*, Alfasi, etc. Many such *haggahot* are also enshrined in the works of H.J.D. Azulai, who saw and used more manuscripts and early printed editions than any other author. In his first work, compiled in his youth, the *Sha’ar Yosef* (Leghorn, 1757) on *Horayot*, he made extensive use for the first time of the well-known manuscript of the Babylonian Talmud (now Ms. Munich no. 95, issued in photographed facsimile by H.L. Strack in Leiden in 1912), from which he corrected texts of the Talmud. His other works (see Benayahu’s lists, p. 185–252) constitute a rich source of knowledge on the nature and existence of manuscripts in talmudic literature and of *haggahot* from them. This category of *haggahot* contained in the works of the Oriental scholars, which has scarcely been investigated, contains a considerable amount of material both on texts and contents of the works and is a fruitful field for historical and literary research into the history of talmudic literature.

[Shlomo Zalman Havlin]

HAGGAHOT MAIMUNIYYOT, a comprehensive halakhic work which is one of the most important sources for the halakhic rulings of the scholars of Germany and France. The author, Meir ha-Kohen of Rothenburg (end of the 13th century), was the distinguished pupil of *Meir b. Baruch of Rothenburg. He compiled it as a supplement and notes (see **Haggahot*) to the *Mishneh Torah* of Maimonides, and its first part was published in the Constantinople edition of the *Mishneh Torah* (1509), and has appeared in all subsequent editions. Of it, Levi ibn Habib writes (Responsa, ed. Lemberg No. 130): “If the author of the *Haggahot* is a small man in your eyes, he is great in the eyes of all Israel.” It may originally have been written on the margins of the *Mishneh Torah*, as it appears in early manuscripts, and as seems to be the case from the passages to which the words “written in the margin” are appended. Of the 14 books of the *Mishneh Torah*, the only books to which there are no *Haggahot* are *Hafla'ah*, *Zera'im* (save for a fragment at its end), *Avodah*, *Korbanot*, and *Tohorah*. The chief aim of the author was to attach the rulings of the scholars of Germany and France to the work of Maimonides, whose decisions and conclusions are in the main based upon the traditions and rulings of the scholars of Spain. This aim was the result of the great preoccupation with Maimonides' work in the school of Meir of Rothenburg (who also compiled works connected with Maimonides – see Urbach, 434ff.), as well as the need felt to adapt the work of Maimonides, which was spreading more and more as a comprehensive halakhic work, for use also in Germany and France.

The work is divided into two sections, one of glosses and notes attached to the *Mishneh Torah*, and the other – also called *Teshuvot Maimuniyyot* (first published in the Venice ed. of 1524) – appended at the end of each book of the *Mishneh Torah* and containing responsa by German and French scholars relevant to the topics dealt with in the body of the work. It is difficult to determine whether this division is the work of the author himself or was the work of a later editor, although it is early and already appears in early manuscripts of the work. This division is not absolute, however, and in the section of glosses one can still find responsa which, apparently in view of their brevity and direct connection with the *halakhah* under discussion, were not given separately (for examples see Urbach, 436 n. 20). On the other hand, the

section of responsa contains non-responsa material (*ibid.*, n. 21).

There are differences between the editions of 1509 and 1524, some of which are material. The wording of the glosses in the Venice edition (from which the later editions were printed) is more original and the author generally speaks in the first person, while the wording of the 1509 edition shows signs of being a later version, and has obviously passed through adaptation and abbreviation at the hands of a later editor. In many places in the 1509 edition the passages end with the words: “thus far the language of R.M.K.” (= R. Meir ha-Kohen); the editor even comments on the words of Meir ha-Kohen (see *Hilkhot Zekhiyyah u-Mattanah* 11:19; “however may the All-Merciful pardon Meir ha-Kohen...”). Certain passages appear in the Constantinople version which are absent from the Venice version, and vice versa. The Constantinople edition contains additions that may have been added by the editor, most of them taken from the *Sefer Mitzvot Gadol* (*Semag*) of Moses of Coucy, the *Sefer Mitzvot Katan* (*Semak*) of Isaac of Corbeil, the *Sefer ha-Terumah* of Baruch b. Samuel of Mainz, the *Ha-Roke'ah* of Eleazar of Worms, the *Seder Olam* of Simḥah of Speyer, etc.

From Urbach's comparison of the two editions there can be no doubt about the identification of Meir ha-Kohen as the author of the glosses, nor is there any reason to assume that other authors participated in it, as was assumed by S. Cohen and J. Wellesz. The close connection between the sections of the book is also beyond doubt, and there is no need to assume that Meir ha-Kohen made use of a preexisting collection of responsa. The section of glosses (Venice edition) contains references in many places to the section of responsa (see the list in Wellesz, p. 52, to which many additions can be made). It is difficult to determine whether these references are the author's own or the editor's. They do not, however, seem to replace responsa included in the glosses of the original work, which when taken out were left as mere references (see, e.g., the *Haggahot Sheluḥin ve-Shutafin*, 5 no. 6). The section of responsa is on the books *Nashim* (37 items), *Kedushah* (27), *Hafla'ah* (7), *Nezikin* (22), *Kinyan* (40), *Mishpatim* (71), and *Shofetim* (20), and contains a valuable collection of the responsa of the author's teacher Meir of Rothenburg, which in some cases gives a reading of greater value than other sources, while others are unknown from any other source. Also cited in it are responsa by Jacob Tam, Isaac b. Samuel ha-Zaken, Samson of Sens (copied from the *Nimmukim* of his pupil Jacob of Courson, who collected them into a book – see Resp. to Ma'akhalot Asurot, no. 13), and his brother Isaac b. Abraham, Simḥah b. Samuel of Speyer, Baruch b. Samuel of Mainz, etc.

No biographical details of Meir ha-Kohen are known other than that he was the pupil of Meir of Rothenburg; Mordecai b. Hillel ha-Kohen was his colleague and, according to some, his brother-in-law and colleague (*Ishut* 9, no. 1); and he lived in Rothenburg (Responsa to *Shofetim*, no. 16, where the reading should be “here Rothenburg” and not “in it, in Rothenburg”; see *Sefer ha-Parnas* (1891), no. 269). He attended

upon his teacher when the latter was imprisoned in Wasserburg (Shab. 6 n. 6) and later in the fortress of Ensisheim (to Tefillah 14:5, according to the Constantinople ed.), and there discussed halakhic matters with him. His teacher sent halakhic responsa to him (Sefer Torah 7 n. 7; Tefillah 15 n. 1; Ishut 3 n. 15). In one responsum (Resp. Maharam of Rothenburg, ed. Prague, no. 78) he addressed him thus: “the lips of the priest preserve decisive Torah opinion [cf. Mal. 2:7], my intimate associate R. Meir ha-Kohen.”

The supplements and variants of the Constantinople edition, which is now rare, were published in the El ha-Mekorot edition of the *Mishneh Torah* (1954–56), and in the Po’alei Agudat Israel edition (1944) to the books *Madda* through *Nashim*. A substantial number of manuscripts are known (in Jerusalem, Oxford, British Museum, Cambridge, Sassoon, and other libraries), but they have not yet been investigated and examined. The attempt of Allony to fix the date of the writing of the Cambridge manuscript (13.1) of the *Mishneh Torah* as 1230 instead of 1170 is a mistake, for he did not notice that it contains the *Haggahot Maimuniyyot*. I.Z. Kahana, who began to issue a critical edition of the rulings and responsa of Meir of Rothenburg (vols. 1–3, 1957–63), drew a great deal from the *Haggahot Maimuniyyot*, utilizing four manuscripts of the work.

[Shlomoh Zalman Havlin]

HAGGAI (Heb. חַגַּי; “born on a festival”), prophet who lived in the post-Exilic period and whose book is the tenth in the Minor Prophets. The book of Haggai and chapters 1–8 of Zechariah appear to be part of the same redactional effort. Considering the small size of Haggai, there are numerous differences between the received Hebrew text and the Septuagint. Haggai’s extant prophecies, never narrated in the first person, consist altogether of 38 verses, dating from the second year of the reign of Darius I, king of Persia, i.e., 520 B.C.E., between the first of Elul and the 24th of Kislev. It appears, however, that the prophet was previously well-known to the people and that his words carried weight (1:12). He is referred to (Hag. 1:13) as *malak YHWH*, often used of non-human messengers of YHWH. The author of Ezra-Nehemiah notes the important role he played in the rebuilding of the Temple (Ezra 5:1; 6:14).

His prophecies deal mainly with the construction of the Temple, and with the great events that the nation will experience in the future as a result. Haggai turns first to *Zerubbabel, son of Shealtiel, governor of Judah, and to Joshua, son of Jehozadak, the high priest (1:1–2), and then to the people (1:3–11), encouraging them not to postpone the construction of the Temple, but to begin immediately. He claimed that all the mishaps of poverty, famine, and drought which befell the nation were caused by the delay in the work. The people lis-

tened to Haggai’s words despite their fears (1:13) and, led by Zerubbabel and Joshua, they began work on the temple. Although the new temple seemed poor in their eyes (2:3) Haggai assured the people that the second temple would be more richly adorned than the first temple (2:7–9; see below).

Three months later, on the 24th of Kislev (2:10–19), when the Temple’s foundations were laid, Haggai proclaimed two new prophecies. He turned to the priests to seek guidance from them (cf. Jer. 18:18 “instruction from the priest”). He asked what the law is concerning a man who carries hallowed meat in the skirt of his garment which touches any food. They replied that the food does not become holy, but if a man made unclean by a dead body touches the food, the food does become unclean. From the fact that holiness is far less contagious than impurity, Haggai deduces that the achievement of holiness demands hard work: as long as the Temple was not built, despite the fact that sacrifices were being offered on the altar, the people were unclean. Only when the Temple is rebuilt will the Lord’s blessing (Hag. 2:19) return. That very day (2:20 ff.) the prophet uttered an oracle about Zerubbabel. He announced that God was about to shake the heavens and earth and overthrow the “throne of kingdoms and destroy the strength of the nations, overthrow the chariot and those who ride in it. The horses and their riders will come down, everyone by the sword of his brother” (Hag. 3:22). Haggai’s words probably reflect the great disturbances that shook the Persian Empire in 522–21 until Darius I took full control as successor to Cambyses. As for Zerubbabel, says Haggai, his time will come. Whereas Jeremiah had prophesied about Jehoiakim (22:24), “though Coniah the son of Jehoiakim king of Judah were the signet ring on My right hand, yet I would pluck thee thence,” Haggai turned the curse into a blessing for his grandson Zerubbabel: “I will take you... and make you like a signet ring” (2:23). With Talshir, it is probably inaccurate to regard this vision as messianic in any utopian sense. It is rather about the restoration of the earthly Davidic monarchy and the rebuilding of the Jerusalem temple, for both of which there were still living eyewitnesses (Hag. 2:3). Haggai agrees with Isaiah 60:5 that “the wealth (*hayil*) of nations” will come to the temple (Hag. 2:7–9; the terms *hayil*, *kavod* and *hemdah* all mean “wealth”). But in contrast to Isaiah 60 and Zechariah 8:20–23, the nations themselves will not come to the Jewish temple. Israel’s earthly kingdom will be renewed, the second temple will be richer than the first, but the gentiles will not be converted. The language of the book is difficult to classify as either prose or poetry (see e.g. 1:5–11; 2:6–9, 21–23). It is apparent that Haggai had recourse to earlier writings that would become “biblical.” The prophet uses phrases from the Torah (cf. Haggai 2:5 with Ex. 24:8; Haggai 2:12 with Lev. 6:20; etc.). He alludes to Jeremiah’s words (Jer. 22:24) which he reinterprets; and to the prophecies of Ezekiel (Ezek. 37:27) about the holy spirit resting upon the new Temple. He is similar to Zechariah, his contemporary, with regard to the greatness of Zerubbabel (*ibid.*, 3:8). The prophecies of Haggai were probably assembled not long after they were delivered. Fragments of Haggai are

found in the *tere asar* (book of the 12 minor prophets) scroll written probably in the second century C.E. and unearthed in cave 5 at Wadi Murabbat. Probably encouraged by Haggai's legal questions to the priests (Hag. 2:12–13), rabbinic tradition credited Haggai with halakhic (legal) decisions (Yev. 16a; Kid. 43a). The sages (BB 15a) attributed the editing of the book to the elders of the Great Assembly.

[Yehoshua M. Grintz / S. David Sperling (2nd ed.)]

HAGGAI (or **Hagga**; fl. c. 300 C.E.), Palestinian *amora*. Probably born in Babylon (TJ, Or 3:1, 63a; TJ, Av. Zar. 3:14, 43c), he went to Palestine, where after initial difficulties (Av. Zar. 68a) he became a prominent member of the academy of Tiberias and one of the principal pupils of *Zeira whom he often accompanied (TJ, Dem. 3:2, 23b) and in whose name he transmitted sayings (TJ, Kid. 3:2, 63d). In a dispute with *Hanina in a case of marital law, Haggai was praised by R. Hilla as a scholar of sound judgment (*ibid.*). Because of his important position in the academy he opened each study session while *Yose and Jonah closed them (TJ, RH 2:6, 58b). Haggai was also the pupil (according to Frankel, *Mevo ha-Yerushalmi*, 79b–80b, the associate) of Yose (BB 19b; TJ, Pes. 4:3, 31a; TJ, Kid. 3:3, 64a; see TJ, Shab. 1:5, 4a, where Yose calls him “rabbi”; cf. TJ, RH 2:6, 58b). In a case brought before *Aha he supported the view of his teacher Yose by an oath “By Moses,” a formula often employed by him (TJ, Naz. 5:1, 54a; TJ, 4:3, 24a, etc.). Like Yose he held the view that the reason for the interdiction against looking at the kohanim while they are reciting the Priestly Benedictions is because it may distract them from proper concentration (TJ, Ta’an. 4:1, 67b).

His close pupil and associate was *Mana, the head of the academy in Sepphoris, who participated in Haggai's scholarly discussions (*ibid.*). Once Mana visited his sick teacher on the Day of Atonement and gave him permission to drink, but Haggai declined to avail himself of it (TJ, Yoma 6:4, 43d). His daughter was involved in lawsuits because she squandered her property (TJ, BB 10:15, 17d). His son Eleazar was a pupil of Mana's academy in Sepphoris (TJ, Shek. 7:3, 50c). Haggai appears to have lived for a while in Tyre (TJ, Ket. 2:6, 4a) and some sources hint at the fact that he migrated to Babylonia in the days of *Abbaye and *Rabbah since he is quoted in the

Babylonian Talmud as having had discussions with them (e.g., BM 113b but see Dik. Sof. BM 169b, n. 100). The Haggai who ordered Jacob of Kefar Nibburaya to be punished by flagellation for falsely interpreting Scripture to the effect that fish must be slaughtered in the same way as animals and that the son of a gentile mother may be circumcised on the Sabbath is probably this Haggai and not *Haggai of Sepphoris.

BIBLIOGRAPHY: Bacher, Pal Amor, 3; Hyman, Toledot, s.v.; J.L. Maimon, *Yihusei Tanna'im ve-Amora'im* (1963), 229–30; H. Albeck, *Mavo la-Talmudim* (1969), 323–5.

HAGGAI OF SEPPHORIS (third century C.E.), Palestinian *amora*. Born in Babylonia, one of the principle pupils of *Huna (the exilarch), he emigrated to Palestine where he joined the pupils of R. *Johanan. There is considerable confusion between him and another *amora* of the same name (see preceding entry). In fact, most authorities, including the classical ones (*Yihusei Tanna'im ve-Amora'im*, s.v. *Haggai*), do not distinguish between the two. Even accepting that there were two distinct men called Haggai (and there were more, see Albeck, *Mavo la-Talmudim*, 391), it remains difficult to determine which events recorded apply to the one and which to the other. Haggai transmitted halakhic rules in the names of Abba b. Avda, Abbahu, Isaac, Johanan b. Lakhish, Joshua b. Levi, Samuel b. Naḥamani, etc. When the coffin of his teacher Huna (probably the exilarch mentioned above, see Tos. to MK 25a; and TJ, Kil. 9:4, 32b–c) was brought (in 297 C.E.) to Palestine to be placed in a cave (sepulcher) at the side of *Ḥiyya's remains, Haggai was chosen to place his teacher's coffin there, a special honor and privilege (MK 25a). According to another version (TJ, Ket. 12:3, 35a) he was at that time an old man of over 80 and people suspected that he wished to enter the cave only to die at that chosen spot. Thus he asked that a rope be attached to his feet so that he might be pulled out from the cave after the burial of Huna.

In *Genesis Rabbah* (9:3) he quotes, in R. Isaac's name, an interpretation of 1 Chronicles 28:9 to teach that “even before thought is born in a man's heart, it is already revealed to God.” Further (Gen. R. 60:2), based upon Genesis 24:12, he states that everybody needs God's grace, since even Abraham, in whose merit favor is granted to the whole world, was in need of divine grace for the success of the choice of a bride for Isaac. It is stated that when he appointed officials (*parnasim*) he handed them a Torah scroll to symbolize that authority comes only from the Law, as it is written, “By me kings reign... by me princes rule” (Prov. 8:15–16).

BIBLIOGRAPHY: Bacher, Pal Amor; Hyman, Toledot, s.v.; J.L. Maimon, *Yihusei Tanna'im ve-Amora'im* (1963), 229–30; H. Albeck, *Mavo la-Talmudim* (1969), 287.

HAGIGAH (Heb. הִגִּיחַ); the last tractate – according to the customary arrangement – of the order **Mo'ed* in the Mishnah, Tosefta, and the Babylonian and Jerusalem Talmuds. It is also called *Re'iyah* (so in the Zuckerman edition of the Tosefta). The Mishnah contains three chapters. Chapters

1:1–2:4 deal with the laws of peace-offerings which were offered during the festivals (hence the name of the tractate) and with kindred subjects such as the duty of *pilgrimage (*re'iyah*, “appearance,” hence the alternative name of the tractate), and the laws of sacrifices during the festival in general. From 2:5 until the end of the tractate it deals with the laws of ritual purity and impurity connected with sacred objects and the Temple. The *mishnayot* 1:8–2:1 are entirely different from the rest of the tractate and have a character of their own. Nachman *Krochmal suggested that the original tractate *Hagigah* may have commenced with these two *mishnayot* (cf. Epstein, Tannaim, 46–47), which are a kind of introduction to the different categories of *halakhah* (which include laws of *Hagigah*) whose purpose is to emphasize the relationship of the Midrash to the *halakhah* and the tendency to depart from the previous method of deriving *halakhot* from direct exposition of Scripture (see **Midreshei Halakhah*). Chapter 1:7 is an addition from the Tosefta (Epstein, Tannaim, 48). Mishnah *Hagigah* preserves many traditions deriving from the Temple period and most of the scholars mentioned in it belong to that period. The Tosefta similarly contains three chapters and deals with similar themes, and the same applies to the two Talmuds. The Tosefta contains a series of aggadic traditions (2: 1–7) – including the famous story of the four “who entered *pardes*” – which expand upon the *ma'aseh bereshit* and Merkabah themes already mentioned in the Mishnah (2:1). These themes are further expanded and elaborated in the Babylonian (*Hag.* 11b–16a) and Jerusalem Talmuds (TJ *Hag.* 2:1, 77a–77d). This material, which forms a continuous and self-contained “mystical midrash” (cf. Weiss, *Literary*, 260–261), provided the foundation for much of the later literature of the *Merkabah mysticism, and the four “who entered paradise” (TJ, *Hag.* 2:1; *Hag.* 13b–15a) and even the medieval Kabbalah. *Hagigah* is currently available in various translations and editions.

HAGIOGRAPHY. Although hagiographies, embellished accounts of biblical worthies, are not unknown in previous ages, particularly in the apocrypha (e.g., Lives of the *Prophets and Martyrdom of *Isaiah), in the Middle Ages they developed as a specific genre of literature, of which they constitute a major type (see *Fiction, Hebrew). These may be divided into two main categories according to the protagonist portrayed: (a) hagiographies whose heroes are ancient Jewish sages and martyrs (biblical and talmudic characters); (b) hagiographies whose heroes are medieval scholars, rabbis, and martyrs.

Different fields of medieval literature have adapted the hagiography to their specific needs. Ethical literature used it to exhort in the footsteps of the hero (see *Exemplum); Hebrew historical writings usually substituted the hagiography for the biography of medieval and ancient Jewish scholars. Medieval

collections of Hebrew stories abound with hagiographic material; while in kabbalistic and ḥasidic literature, the hagiography was a formal literary device to convince the reader of the veracity of the Jewish mystics' visions.

Use of Biblical and Talmudic Material

Biblical and talmudic stories were freely adapted. In **Midrash Va-Yissa'u* (in A. Jellinek, *Beit ha-Midrash*, 3 (1938²), 1–5), a narrative about Jacob and his sons, the characters are portrayed as medieval knights who fight over Shechem and other cities, in the same way as the Crusaders had fought in the capture of a city. Abraham and Moses were also subjects of individual works, embellished by hagiographic additions. So were the lives of talmudic sages; the medieval Midrash *Pirkei Rabbi Eliezer*, for instance, opens with a hagiographic account of *Eliezer b. Hyrkanus. One of the most typical examples of medieval hagiography is the story of the *Ten Martyrs, known also as *Midrash Elleh Ezkerah* (ed. by A. Jellinek, 1853). Some of the material is drawn from talmudic sources, but most of its treatment is within the framework of medieval themes and literary conventions. It is an account of the tortures inflicted by the Romans on 10 martyrs, most of them *tannaim* (the 10 martyrs had not been contemporaries and could not have been executed together); the story also inspired the composition of prayers and *piyyutim*, and became the cornerstone of Hebrew medieval martyrologic hagiography.

Use of Contemporary Stories and Personages

Hagiography of the Middle Ages which centered around medieval characters contains historical and biographical details, as well as fiction. Some of the legends included are entirely original, while others thematically belong to international hagiographic motifs. The miracle associated with Rashi when still in his mother's womb (that a wall opened to let his pregnant mother hide from a group of soldiers) is told about many other sages, and has nothing whatsoever to do with Rashi's personality or biography. Sometimes the heroes of such legends are purely fictional, and the hagiography thus is not even related to a historical personality.

The development of the hagiography in the Middle Ages is perhaps best exemplified by the evolvment of cycles of hagiographies centered around the leaders of the Ḥasidei Askhenaz: *Samuel he-Ḥasid, R. *Judah he-Ḥasid, his son, and *Eleazar ben Judah of Worms. The earliest known versions were found (in manuscript) and published by N. *Bruell (*Jahrbuecher fuer Juedische Geschichte und Literatur*, 9 (1889), 1–71). Different versions are extant in many later Hebrew and Yiddish collections. There are no hagiographies about these rabbis from their own time (12th and 13th centuries); the stories begin to appear in the 14th and 15th centuries. However, many of the hagiographies from these cycles point to the fact that the elaborate narrative about one of these rabbis sprang from a much simpler story that was told and written by that writer himself. In the simple narrative, the hero's name is not mentioned nor did he see himself as the hero. In one of his theological works, R. Judah he-Ḥasid has a five-line story

about a rabbi who miraculously discovered some clothes that had been stolen from one of his pupils. A hagiography written in the 15th century, about R. Judah, contains a long and well-developed legend about the rabbi's discovery of a treasure which had been entrusted to a Jew and stolen from him, thus endangering the lives of a whole Jewish community. The core of the narrative is the same, but the plot was elaborated upon, many details were added, and the anonymous hero became R. Judah he-Ḥasid himself. Short descriptions, such as the one by R. Judah he-Ḥasid in Ḥasidei Ashkenaz literature of sorcerers and demons, were later expanded into hagiographies describing contests between the pietist sages and gentile sorcerers in the working of miracles and sorcery. While these early theological works receded into oblivion, the stories to which they gave birth survived and evolved into the fully developed genre of hagiography.

IBN EZRA AND OTHER SPANISH JEWISH SCHOLARS. One of the most prominent heroes of medieval Hebrew hagiography was R. Abraham *Ibn Ezra. Nothing in his actual biography justifies the stories told about him, except that he was a traveler, and visited many countries in the East and in the West. Abraham ibn Ezra became the "traveling hero" of a cycle of hagiographic legends. Disguised so that nobody would recognize him, in a dramatic moment he would reveal his true identity. In these tales, Ibn Ezra pokes fun at proud rich men, helps Jews in danger, and is the hero of both popular jokes and tragic legends. Ibn Ezra was a hero of fiction up to modern times, and in the 19th century, stories describing his miraculous adventures were still being printed.

Other Spanish Jewish scholars also became central figures of hagiographies. The beginnings of the Jewish center of learning in Spain were described by Abraham *Ibn Daud in his *Seder ha-Kabbalah* by means of the hagiographical story "The Four Captives." *Judah Halevi's pilgrimage to Jerusalem was the focus of a cycle of hagiographical stories; and this most rationalistic of Spanish Jewish scholars did not escape legends which told about his later adherence to the Kabbalah.

MARTYROLOGIC HAGIOGRAPHY. The martyrologic hagiography developed especially in Germany during the Crusades of the 11th–13th centuries. Thousands of Jewish martyrs became subjects of legends. The best known revolves about R. *Amnon, the alleged author of the prayer *U-Netanneh Tokef. Many other martyrs were described in a similar hagiographic manner in collections of historical writings and stories.

HAGIOGRAPHY AND KABBALAH. The most powerful creative force of Jewish hagiography in the Middle Ages was the Kabbalah. Kabbalists of the 12th and 13th centuries told legends about their teachers and mystical mentors. The first kabbalistic scholar in Provence, head of a school of kabbalists, Rabbi *Isaac Sagi Nahor ("the blind"), was described by his disciples as capable of distinguishing between a "new" and an "old" soul, i.e., between persons whose souls had entered the human form for the first time and souls that had transmi-

grated from previous existences (see **Gilgul*). In Spain, there were kabbalists who wove wonderful tales about the mystics of Germany. R. Isaac ha-Kohen of Segovia (the second half of the 13th century) told about the powers of Eleazar of Worms who, according to him, traveled on a cloud whenever he had an urgent trip to make.

THE ZOHAR AND LATER KABBALISTIC WRITINGS. The Zohar is full of hagiographic references to R. *Simeon b. Yoḥai, his son *Eleazar, and his disciples. Their wondrous deeds are incorporated into the homiletics that make up the whole work. When R. Simeon b. Yoḥai studied, for example, birds stopped flying all around, fire encircled him, and wonderful events happened to people in his vicinity. Among the many miracles attributed to him and his disciples by the author of the Zohar, some are founded solely on myth, e.g., the legends about his contradicting God's will and his prevalence, or his fight with the powers of darkness, the *Sitra Ahra* ("The Other Side," i.e., Satan). The Zohar influenced later kabbalistic writings in which the same approach toward the mystics is adopted. Two anonymous 14th-century Spanish works, *Sefer ha-Kaneh* (Prague, 1610) and *Sefer ha-Peli'ah* (Korets, 1784), have for their central characters members of the family of the *tanna* R. *Neḥuna b. ha-Kaneh. A whole set of hagiographical stories is woven around each member of the family. Many of these stories describe a meeting of the heroes with heavenly powers.

The deterioration of the situation of the Jews in Spain (at the end of the 14th and during the 15th century) gave birth to a new kind of hagiography, also associated with the Kabbalah: stories about sages who had attempted to hasten the redemption in one way or the other. Some of these include much historical data, like the stories about the martyr Solomon *Molcho; others are purely fictional, like the story about *Joseph Della Reina, who almost succeeded in overcoming and enslaving Satan and *Lilith, but at the last moment, failed and became enslaved by them instead. From this period onward, Jewish hagiography is mostly concerned with messianic expectations and activity.

ISAAC LURIA AND OTHER SAGES OF SAFED. The hagiographic cycle of stories about Isaac *Luria, who lived in Safed in the years 1570–72, were the first to be compiled into a book. His disciples preserved and wrote legends describing his superhuman powers. There are two main versions of the cycle of stories about him: *Shivhei ha-Ari*, a collection of letters written by R. Solomon Shlumil of Dreznitz, who described not only Luria, but other sages in Safed, and a later work, **Toledot ha-Ari* which was dedicated to Luria almost exclusively. It includes more than 50 stories. Some of them describe mostly his supernatural knowledge, his ability to know the past and the future, what was happening at great distances and in heaven, and his power to read the thoughts and the hearts of other people. The other stories, which seem to be later additions to the original cycle, describe miracles which he was said to have performed. Even when taking into consideration these later

additions, the dominant hagiographic motif in these cycles is the supernatural knowledge of Luria, and not the miracles he performed. Luria's greatest pupil, R. Ḥayyim *Vital, unlike his teacher, did not leave it to later generations to write and to compile the hagiographic stories about him. He did it himself. He kept a diary which was published under the title *Sefer ha-Hezyonot* (1866) and previously, in a shorter version, as *Shivḥei Rav Ḥayyim Vital* (1826). Like his teacher Luria, Vital also had messianic aspirations. Basing himself on the conjurations of witches, sorcerers, his own visionary dreams and his teacher's sayings, he saw himself destined for great deeds. Luria and Vital are also connected with the first famous version of "The Dibbuk" story (told in different versions in *Sefer ha-Hezyonot* and in *Shivḥei Rav Ḥayyim Vital*). The theme of the *dibbuk later became one of the standard motifs in Jewish hagiography: the ability to drive out evil powers or strange souls which had taken hold of a human body.

The stories about the great sages of Safed spread throughout the Jewish world. Their development varied in form and according to geographic locales. In the east, hagiographic cycles had for their central figures especially R. Ḥayyim Joseph David *Azulai and R. Ḥayyim b. Moses *Attar; in the west and in Eastern Europe R. *Judah b. Bezalel Loew and R. Joel Ba'al Shem became the heroes of such legends. In the 18th and 19th centuries up to the beginning of the 20th century hagiographic stories about sages of later ages (after Luria) were still being collected and published.

Modern Jewish Hagiography

Modern Jewish hagiography is connected with the ḥasidic movement which began in Eastern Europe in the second half of the 18th century. With the publication of *Shivḥei ha-Besht* (Berdichev, 1815) the genre was brought to its highest artistic expression. The book is a compilation of hagiographic stories about the founder of the ḥasidic movement and his disciples, collected from manuscripts. The stories, written both in Hebrew and in Yiddish (since the 16th century, Yiddish being the main medium of expression for hagiographic stories in Eastern Europe), had circulated among the Ḥasidim since the *Baal Shem Tov's death in 1760.

Later ḥasidic leaders and their followers used the *Shivḥei ha-Besht* as a model for the writing of hagiographic stories about later ḥasidic sages. Consequently, there are hagiographic collections about almost every major ḥasidic rabbi, even those who lived in the early 20th century. The stories in these compilations are often about several sages and may be arranged according to a main theme, e.g., *The Revelation of the Zaddikim*, a collection of stories about the ways in which the greatness of the ḥasidic sages was revealed (see, e.g., S. Gavriel, *Hitgallut ha-Zaddikim* (1905)).

Side by side with the development of ḥasidic hagiography, another kind of hagiography came into being. These were hagiographies about the **Lamed-Vav Zaddikim*, the thirty-six anonymous and mysterious holy men, because of whose humble manner, just deeds, and virtue the world continues to exist.

Many of the motifs of this cycle of legends are taken from older tales and hagiographies. Together with the ḥasidic stories, they take Hebrew hagiography into the 20th century.

[Joseph Dan]

ḤAGIZ, family of Spanish origin which immigrated to Morocco after the expulsion decrees of 1492, and settled in Fez, where some of its representatives were at the head of the Castilian community of *Megorashim* ("the exiled"). ABRAHAM ḤAGIZ (I) (d. before 1563) arrived in Fez with the Spanish exiles when still very young. He was brought up and educated there and is the signatory of a *takkanah* of 1545. SAMUEL ḤAGIZ (I) (d. c. 1570) was probably the younger brother of Abraham; his grandson, Samuel Ḥagiz (II), in his *Mevakkesh ha-Shem* mentions some of his grandfather's biblical commentaries and credits him with directing an important yeshivah, as is also confirmed by his disciple, Samuel b. Saadiah ibn Danan. In the *takkanot* of Fez, Samuel's signature is almost always found together with those of the other Castilian rabbis and it also appears on ordinances and decisions of the years 1545, 1559, and 1568. JACOB ḤAGIZ (d. 1634), a signatory of the Castilian *takkanot* of Fez between 1588 and 1608 (cf. *Kerem Ḥemed*; s.v. *Malkhei Rabbanan*), is probably the son of Samuel Ḥagiz (I) and not the grandfather of Jacob *Ḥagiz, the author of *Halakhot Ketannot*. There is a controversy about this relationship which has not been resolved (J. Ben-Naim in his *Malkhei Rabbanan* completely confuses the two). SAMUEL ḤAGIZ (II) left Fez, his birthplace, about 1590, remained for some time in Tripoli, North Africa, then traveled to Venice where, in 1597, he published *Mevakkesh ha-Shem*, sermons on the Pentateuch, and *Devar Shemu'el*, a homiletic commentary on Deuteronomy. He then immigrated to Erez Israel and settled in Jerusalem. ABRAHAM ḤAGIZ (II), signatory of decisions in Fez dated 1638, 1640, and 1647, remained in Morocco after the departure of Samuel (II), probably his older brother. Members of the family also settled in Erez Israel.

[Haim Zafrani]

ḤAGIZ, JACOB (Israel; 1620–1674), Jerusalem scholar. He was the son of Samuel Ḥagiz, who was rabbi of Fez, and son-in-law of Moses *Galante. During his youth he resided in various communities in Italy. In 1658 he emigrated to Jerusalem, where he headed a yeshivah founded and maintained by the Vega brothers of Leghorn, in which secular subjects and Spanish were also studied. Jacob himself, in addition to his Torah study, occupied himself with philosophy, astronomy, medicine, and grammar. He instituted several **takkanot* in Jerusalem, mainly in the field of divorce procedure. In con-

trast to his father-in-law, Jacob was a vehement opponent of *Shabbetai Zevi from the beginning, being one of the first to regard him as a false messiah, and he was one of those who excommunicated him in 1665. In 1673, he went to Constantinople, in order to publish his *Lehem ha-Panim* but died before achieving this.

He was also the author of *Ez ha-Hayyim*, a commentary to the Mishnah (*Mishnayot*, Leghorn, 1652–56); *Halakhot Ketannot* (Venice, 1704), responsa; *Tehillat Hokhmah*, a talmudic methodology, published with the *Sefer Keritot* of *Samson of Chinon (Verona, 1647); *Ein Yisrael*, an adapted edition of the *Ein Ya'akov* of Jacob ibn Habib with the additions of Leone Modena (Verona, 1645); *Petil Tekhelet* (Venice, 1652) a commentary on the *azharot* of Solomon ibn Gabirol; *Dinei Birkat ha-Shaḥar, Keritot Shema u-Tefillah*, laws of the morning blessings, of the reading of the *shema* and of the *amidah* (Verona, 1648); *Almenara de la Luz* (Leghorn, 1656), a Spanish translation of the *Menorat ha-Ma'or* of Isaac *Aboab.

[David Tamar]

HAGIZ, MOSES (1672–c. 1751), scholar, kabbalist, and opponent of Shabbateanism; son of Jacob *Hagiz. He was born in Jerusalem and studied with his grandfather, Moses *Galante. He appears to have quarreled in his youth with the rabbis and lay leaders of Jerusalem, for when in 1694 he left Ereẓ Israel to collect money to found a yeshivah in Jerusalem, damaging letters were sent after him to the communities to which he turned. Moses visited Egypt and then Italy, where in 1704 he published his father's *Halakhot Ketannot*. He traveled by way of Prague to Amsterdam where he made contact with Zevi Hirsch *Ashkenazi, then rabbi of the Ashkenazi community, and collaborated with him in an energetic struggle against Shabbateanism and its secret adherents. When in 1713 Ashkenazi and Moses refused to retract the excommunication of the Shabbatean Nehemiah *Hayon, a fierce quarrel broke out between them and the elders of the Portuguese community. In 1714 when Ashkenazi resigned his rabbinical office and left Amsterdam, Moses was compelled to leave with him. He went first to London with Ashkenazi, there continuing the fight against Hayon and his allies, and then to Altona, home of Jacob *Emden, Ashkenazi's son, where he resumed the struggle against Shabbateanism. Among those he attacked were Michael Abraham *Cardoso and even Jonathan *Eybeschuetz, and he took the offensive against Moses Hayyim *Luzzatto, inducing the rabbis of Venice to excommunicate him. In 1738 Moses returned to Ereẓ Israel and settled in Safed. He died in Beirut and was taken to Sidon for burial.

A talmudic scholar of the first rank and a prolific writer, Moses was assisted by a good grounding in secular knowledge and by a command of several foreign languages. In Altona he was friendly with Johann Christopher *Wolf, who mentions him in his *Bibliotheca Hebraica*.

His works include *Leket ha-Kemaḥ*, novellae on the Shulḥan Arukh, *Oraḥ Hayyim* and *Yoreh De'ah* (Amsterdam, 1697), and *Even ha-Ezer* (Hamburg, 1711); responsa *Shetei ha-Lehem* (Wandsbeck, 1733); the ethical treatises *Zerror ha-Hayyim* and *Mishnat Hakhamim* (*ibid.*, 1728–31 and 1733 respectively); *Elleh ha-Mitzvot* (Amsterdam, 1713), on the numeration of precepts in Maimonides' *Sefer ha-Mitzvot*, on the Oral Law, and on Kabbalah; *Sefat Emet* (Amsterdam, 1697); and *Parashat Elleh Masei* (Altona, 1738), on the sanctity of the land of Israel. His literary activity also included the editing of many early books.

[David Tamar]

HA-GOSHERIM (Heb. הַגּוֹשְׁרִים), kibbutz in the Huleh Valley, Israel, affiliated with Ha-Kibbutz ha-Me'uḥad, first founded in 1943 as a Ha-Po'el ha-Mizrachi moshav called Neḥalim, the fourth of the "Ussishkin Fortresses" (see *Stockade and Watchtower). It was taken over in the summer of 1948 by the present group, whose nucleus is composed of settlers from Turkey. The settlers of Neḥalim meanwhile established themselves at the former *Templer colony of Wilhelma near Lydda. The 1951–52 split in Ha-Kibbutz ha-Me'uḥad brought new settlers – veteran members of *Kefar Giladi and other kibbutzim – to Ha-Gosherim in order to remain within their movement's framework. The kibbutz developed intensive farming (fruit plantations, field crops, and poultry) and operated a guest house. In the late 1980s it developed a depilatory device for women called Soft and Easy (later marketed as Epilady), selling over 25 million throughout the world, but the local company subsequently ran into financial difficulties and passed into private hands. Ha-Gosherim's population was 412 in 1968 and 526 in 2002. It is located near the Hurshat Tal Nature Reserve with its giant Tabor oaks, lawns, and pools fed by the Dan River. Ha-Gosherim, meaning "Bridge Builders," refers to the local topography – the Jordan headstreams, Iyyon (*Ijon), Senir, and Dan, spanned by a number of bridges.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

HAGOZER, JACOB and GERSHOM (first half of the 13th century), father and son, *mohalim* (practitioners of circumcision, hence the name *Gozer*, a synonym for *mohel*) in Germany. Little is known of Jacob except that he composed a book on the laws of circumcision which served as the basis for a more comprehensive work on the same subject by Gershom, who also made use of the work of his uncle *Jacob b. Yakar of Worms. Gershom's works covered every aspect of the subject. Large sections from it were copied word for word and incor-

porated into two works by two anonymous *mohalim*. All that is known of the author of the first is that he was a nephew of *Ephraim of *Bonn and that he knew Jacob personally, received oral traditions from him, and quoted his customs and conduct. This author added many aggadic passages in praise of the precept of circumcision and its virtues, many local customs and medical details concerning circumcision, and various sermons delivered at such ceremonies. The book is of considerable value for its picture of the life of the Jews of Germany at that time and also contains important quotations from earlier literature for which there is no other source.

This *mohel*, like Gershom, introduced hygienic improvements into the circumcision ceremony and brought about the abolition of many unsound practices of ultra-conservative *mohalim*. The author of the second work was a pupil of *Eliezer b. Joel ha-Levi, himself a *mohel*, and quotes him and Gershom freely. At the end of the book is appended a collection of relevant passages from other works. The two books were published by Jacob Glassberg in his *Zikhron Berit la-Rishonim* (1892). They were the first books in the rabbinic literature of Germany wholly devoted to the laws of circumcision, and probably the first works in the whole of German rabbinic literature dealing with one specific subject.

[Israel Moses Ta-Shma]

HAGRONIA (Lat. **Agranium**), town on the Euphrates. It served as a kind of citadel for the town of *Nehardea, as its name Akra ("fort") di Hagronia (BB 73b) testifies. After Nahardea declined as a religious center following its partial destruction by Papa bar Nazar in 259 C.E. (see *Odenathus), most of its Jews settled in Hagronia. Its Jewish community, though not large (BB 73b), was of considerable importance. Rava, head of the Pumbedita academy from 338 to 52, went from Maḥoza to Hagronia to proclaim a public fast (Ta'an. 24b) and it is reported that the exilarch lectured there during the second half of the fourth century (Yoma 78a). Its scholars were termed "the elders of Hagronia" (Shab. 11a). Many talmudic scholars are known to have been born there – Avimi (BM 77b), Judah (Av. Zar. 39a), Samuel b. Abba (BK 88a), Hilkiah (Yev. 9a), Eleazar (Ta'an. 24b), and Mordecai (Sot. 46b).

[Moshe Beer]

HAGUE, THE (Dutch: 's **Gravenhage**, **Den Haag**), seat of the government of the Netherlands and capital of South Holland province. Jewish settlement in The Hague dates to the last decades of the 17th century. By that time two Portuguese Jewish congregations, Beth Jacob and Honen Dal, had been founded

in The Hague. The two congregations joined together in 1743 under the latter and used the synagogue on the Princessegracht dating from 1726. The Ashkenazi community opened its own synagogue on the Voldersgracht in 1723. In 1694, Ashkenazi Jews purchased land for a cemetery on the present-day Scheveningseweg, where Portuguese Jews also buried their dead. By 1710 the cemetery was divided into two separate burial grounds. By the 18th century, growing wealth and international connections gave local Portuguese Jews a large measure of influence in all segments of Dutch society. The Portuguese community of The Hague also produced several important rabbis. By the late 18th century, however, general economic conditions worsened and reduced many members of the Portuguese community to penury.

Over the course of the 18th century, the Ashkenazi population of The Hague grew to surpass that of the Portuguese. Most Ashkenazi Jews still resided in the poor Jewish neighborhood near the center of the city.

The Emancipation Decree of 1796 totally transformed the legal and social status of Jews and the structure of the communities. As a result many Dutch Jews from the provinces migrated to The Hague, attracted by the importance of The Hague as the country's center of government.

The Jewish population of The Hague continued to increase throughout the 19th and early 20th centuries. Despite social changes, most of the Jews in The Hague continued to live in poverty in the large Jewish neighborhood. The relatively small population of well-off Jews, however, produced a steady stream of bankers, parliamentarians, painters, poets, and writers, as well as the first Jew to become a minister in the national government. The community also continued to produce prominent rabbis.

In 1844, a new Ashkenazi synagogue was consecrated at the Wagenstraat. Another Ashkenazi synagogue, located at the Voldersgracht, was completed in 1887. Smaller synagogues were scattered throughout the city. Despite the emancipation Jews continued to prefer Jewish schools for their children. Yiddish remained the language of instruction in Ashkenazi schools until the mid-19th century. Following the educational reform of 1857, The Hague's Jewish schools continued to operate as purely religious institutions. In 1920, all independent Jewish schools were closed and replaced by secular schools with optional religious instruction.

In 1836, a council was established to administer aid to the poor. The community maintained an old age home, orphanage, and hospital. Community members also formed all kinds of voluntary charitable organizations.

From the end of the 19th century until the eve of the World War II, the Jewish population of The Hague grew threefold. Jews settled throughout the growing city, leading to the establishment of additional prayer houses and voluntary organizations. A vibrant Jewish community also arose in The Hague's fishing village, Scheveningen, in part due to its popularity as a seaside vacation resort amongst the Jews of Antwerp. Polish Jews who settled in Scheveningen dur-

ing and after World War I formed their own community and consecrated a synagogue on the Harstenhoekweg in 1926. In the same year, the Jewish community of the wealthy suburb of Wassenaar merged with that of The Hague.

The secularization of The Hague community, begun in the 19th century, continued in the 20th. New Jewish social, cultural, and sports organizations arose. In addition organizations aimed at Jewish youth were founded to counter a rising trend towards assimilation. Between the two world wars, Zionist and anti-Zionist organizations came to play a central role in Jewish life in The Hague. The wave of East European Jews who settled in Scheveningen following their expulsion from Germany after the Nazi takeover in 1933 became enthusiastic participants in local cultural, religious, and Zionist activities.

The 1930s saw the rise of Liberal (Reform) Judaism in The Hague, aided in part by the arrival of Liberal Jewish refugees from Germany. Despite strong opposition from the local Orthodox Jewish establishment, a Liberal Jewish community was founded in The Hague on the very eve of World War II.

Holocaust Period

The wartime occupation of the Netherlands by the Germans affected the Jews of The Hague just as it did Jews elsewhere. In May of 1940, the Germans established their central occupational administration for the Netherlands in The Hague. A significant number of Jews committed suicide.

In September 1940 all Jews not holding Dutch nationality were forced to leave the coastal regions of the Netherlands. Almost 2,000 Jews were expelled from The Hague and Scheveningen as a result. The Jews who remained in The Hague were subject to registration of person and property, dismissal from the civil service, and a ban on the practice of professions.

Late in 1940, the Jewish Coordination Commission was founded to represent Jewish interests. It was superseded a year later by the German-controlled Jewish Council (*Joodse Raad*). After the expulsion of Jewish children from public education in September 1941, a number of Jewish elementary schools, high schools, and vocational schools were established. These functioned until the very last deportations of Jews from The Hague in September 1943.

Between May 1940 and August 1942, anti-Jewish measures were implemented one after another. The situation worsened when a member of the Dutch Nazi Party (NSB) was appointed mayor of The Hague.

During the early months of the deportations, which began in August 1942, Jews were confined at the Scheveningen prison prior to being transported out of the city. The former Jewish orphanage on the Paviljoensgracht later fulfilled this function. Despite protests from the Council of Churches and, sometimes, aid from several quarters of the population, deportations continued until the last day of September 1943, the eve of Rosh ha-Shanah, the Jewish New Year. Approximately 80% of the 10,000 Jews of The Hague were deported. Most were murdered. Of the remaining 2,000, most survived the war in hiding.

During the war, almost all of The Hague's many synagogues were plundered, heavily damaged, or destroyed. Only the Portuguese synagogue survived the war undamaged.

Following the war, religious services were resumed at several locations. Eventually, the synagogues on the Wagenstraat and De Carpentierstraat were closed and their buildings sold. The former synagogue on the Wagenstraat today serves as a mosque. The present-day synagogue of The Hague's Orthodox Jewish Community is located on the Cornelis Houtmanstraat.

The Portuguese Jewish Community of The Hague was officially dissolved in the aftermath of the war and its synagogue on the Princessegracht sold to the Liberal Jewish Community, which has used the building since 1976. An extensive restoration of the building was completed in 1997.

The Jewish cemetery on the Scheveningseweg was restored during the late 1980s.

Today, almost all of the Netherlands' Jewish organizations have branches or offices in The Hague. The Hague is the seat of the Embassy of the State of Israel and of the Dutch-Jewish CIDI organization (Center for Information and Documentation Israel).

Throughout The Hague, plaques, monuments, and names of streets and institutions commemorate aspects of the Jewish past. In 1994, the L.E. Visserhuis Jewish old age home was opened on the Doorniksestraat in Scheveningen. The home commemorates *Visser, a famed Dutch Jewish jurist who, during the war, was expelled from his position as minister of justice.

In 2003 the remains of the archive of The Hague's Jewish community was returned to The Hague from Russia. The documents are now kept at The Hague's Municipal Archive.

[Jelka Kröger (2nd ed.)]

HAGUENAU, Alsatian town in the Bas-Rhin department, E. France. The earliest information on the presence of Jews in Haguenau dates from 1235; in that year a blood libel was perpetrated against the Jews of the town, but thanks to the protection of the emperor, whose *servi camerae they were, they escaped harm. The Jews had to pay taxes to both the emperor and the municipality. The latter also protected them effectively, especially in 1338 against the *Armleder bands, but unsuccessfully at the time of the *Black Death: by February 16, 1349, the Jewish community had been destroyed. The first synagogue (the courtyard of which was used in 1352 for the wheat market) stood on the former Rathausplaetzel, later the Place de la République; the *mikveh* was situated on the bank of the Moder, on the site of the present municipal hospital. In 1354, the Jews returned to Haguenau and formed a new community. A house (number 8 of the present Rue du Sel) was then used as a synagogue. A good deal of Hebrew type was used in books printed in Haguenau between 1517 and 1520, among them works by

*Reuchlin and *Melanchthon. In 1528, *Joseph (Josel) b. Gershon of Rosheim obtained from the emperor the abrogation of an expulsion order issued by the town. Hagenau subsequently became a refuge for the Jews of the surrounding district on various occasions. During the second half of the 17th century, several Jews who had fled from Poland settled there. From 1660, there has been a rabbi in Hagenau. Notable rabbis included Meyer Jaïs, later chief rabbi of Paris, who held office in Hagenau between 1933 and 1938.

The community of Hagenau consisted of 34 families in 1735, 64 in 1784, and 600 souls on the eve of World War II. Of these, 148 persons died in deportation or on the battlefield. In 1968, the community numbered about 300 and at the outset of the 21st century around 700. The present synagogue on the Rue des Juifs (plundered by the Nazis and later renovated) was erected in 1821. The cemetery is known to have existed from the 16th century, but it was probably established during the Middle Ages. For a long time, it also served all the Jews of the region. The oldest epitaph preserved there dates from 1654.

[Bernhard Blumenkranz]

HA-ḤINNUKH (Heb. חֵן חֵן; “the Education”), an anonymous work on the 613 precepts (see *Commandments, 613) in the order of their appearance in Scripture, giving their reasons and their laws in detail. The various attempts to identify the author have proved unsuccessful; the most widely held view is that he was *Aaron b. Joseph ha-Levi of Barcelona, the identification being based on an obscure allusion in the introduction: “A Jew of the house of Levi of Barcelona.” From certain references in the book (precept 400) it has been concluded that the author was a pupil of Solomon b. Abraham *Adret. The first edition (Venice, 1523) gives “Rabbi Aaron” as the author. In the opinion of S.H. Kook the basis for this identification lies in the introduction to precept 95: “out of fear of drawing near to the tabernacle of the Lord, the levites my brethren [*aḥai*] were purified and Aaron offered them.” The proofreader of the second edition (*ibid.*, 1600–01) in fact based himself on this passage but he is mistaken because it is the biblical Aaron who is referred to and the text should read: “and the levites after [*aḥar*] being purified” (cf. Num. 8:21). This identification was already questioned by Ḥ.J.D. Azulai and other scholars, who have shown it to be completely without foundation. Elsewhere the name of the author is given as Baruch (David ibn Zimra, *Mezudat David*, precept 206). The book was compiled at the end of the 13th century. Some deduced the date of its composition from the date 1257 mentioned in precept 326 with reference to the sabbatical years, but the passage in question is taken from the novella of Solomon b. Abraham Adret to

Avodah Zarah 9a. The Vatican library contains a manuscript written in 1313.

The name of the book is taken by some as referring to its educational aim, to which in fact the author alludes at the end of the introduction: “To touch the heart of my young son and his companions in that each week they will learn the precepts that are included in the weekly portion of the Law” (see also *Mezudat David*, precept 397). This is the reason both for the order in which the commandments are given, and its contents, which are mainly for the purpose of study and not to give the *halakhah*. The work follows a definite pattern: (1) a definition of the essence of the precept; (2) its source in the Written Law and the connection with its development in the Oral Law; (3) the principles of the precept and its reasons; (4) its main details.

The book is mainly based on the *Sefer ha-Mitzvot* and the *Mishneh Torah* of Maimonides, at times whole sections being copied verbatim (precepts 173, 485). The author used Ibn Ḥasdai’s Hebrew translation of the *Sefer ha-Mitzvot*. He also used the works of other authors, including those of Alfasi and chiefly of Adret and Naḥmanides. The uniqueness of the work lies in the section dealing with the explanation of the principles of the precepts, especially “the simple description” (precept 98). His explanations are based on common sense. His style and presentation are clear and understandable befitting its educational aim for youth and ordinary people. Many editions of the work have appeared. The best known is that containing the commentary *Minḥat Ḥinnukh* of Joseph *Babad. Other well-known authors to devote compositions to it include Judah *Rosanes and Isaiah *Pick. It has been issued according to the first edition with notes, variant readings, and an introduction by C.B. Chavel (1962⁵).

[Shlomoh Zalman Havlin]

HAHN, ALBERT L. (1889–1968), German banker and economist. Hahn was born in Frankfurt and during the 1920s joined the Deutsche Effekten-und Wechselbank, in which his family had a sizable interest. In 1929 he became professor of economics at the University of Frankfurt. In 1939 he went to the U.S. and taught at the New School for Social Research in New York. He left the U.S. in 1950 and eventually returned to his teaching career at Frankfurt University. Hahn’s main concern was the theory of money and credit. He consistently advocated a stable currency as a prime social safeguard. His many publications include *Volkswirtschaftliche Theorie des Bankkredits* (1920), *Common Sense Economics* (1956), *Fuenfzig Jahre zwischen Inflation und Deflation* (1963), *Ein Traktat ueber Waeh-*

rungsreform (1964), and *Nationale und internationale Aspekte der amerikanischen Währungspolitik* (1966).

[Joachim O. Ronall]

HAHN, JOSEPH BEN MOSES (c. 1730–1803), German talmudic scholar. Hahn was *dayyan* of the *bet din* of the combined communities of Hamburg, Altona, and Wandsbeck and was beloved as the preacher in the old as well as in the new *klaus* in Hamburg which was renamed after him. In the *Emden-*Eybeschutz controversy he sided with the latter. In 1789, Saul *Berlin, the ill-famed son of R. Zevi Hirsch Berlin, published under the nom de plume Obadiah b. Baruch, *Mizpeh Yokte'el*, a criticism of the *Torat Yekuti'el* (Berlin, 1772) of Raphael *Kohen, the famous rabbi of the three communities. Hahn presided over the *bet din* which excommunicated the author on the grounds of his having libeled ha-Kohen. In another case he ruled that the body of a Jewish woman, executed by the civil authorities for poisoning her mother-in-law and sister-in-law, should be reburied in a Jewish cemetery without religious qualification or restriction, as she had been mentally disturbed at the time. He was said to have had an encyclopedic mind and memory.

[Marvin Tokayer]

HAHN (Nordlingen), JOSEPH YUSPA BEN PHINEHAS SELIGMANN (1570–1637), German rabbi and author. Hahn spent all his life in Frankfurt. He was present during the *Fettmilch riots, the subsequent expulsion of the Jews from the city in 1614, and their triumphant return two years later after Fettmilch was hanged. Hahn was head of the Frankfurt *bet din* and of the local yeshivah. When there was no other incumbent, he also filled the office of communal rabbi. Hahn was a contemporary and colleague of Isaiah *Horowitz (Shelah). Hahn is best known for his book *Yosif Omez* (Frankfurt, 1723). In 1718, Joseph Kosman, one of Hahn's descendants, published his own *Noheg Ka-Zon Yosef* in Hanau, in which he quoted freely from his kinsman's work, sometimes without indicating his source. Hahn's *Yosif Omez* deals mainly with the laws and customs of the Jewish calendar and liturgy, particularly those prevalent in contemporary Frankfurt. He quotes the custom of reciting the hymn "Lekhah Dodi" on Friday evenings as a "new" one, recently introduced. Hahn deliberately substitutes his own phrases for those which, in the original, refer to "going out" to meet the Sabbath, since this custom obtained only in Erez Israel, where the hymn was composed; the words he substituted retain the acrostic of the author's name. Hahn also voiced his displeasure at the new custom of delaying the commencement of the evening service on the first night of *Shavuot until a late hour.

The *Yosif Omez* is a valuable source book for the history of the contemporary Frankfurt Jewish community. Hahn mentions, for instance, the local Purim (Adar 20), instituted

to commemorate the hanging of Fettmilch (no. 1107–09). He also records the comparatively slight damage suffered by the community as a result of the passage of soldiers through the area during the Thirty Years' War. The *Yosif Omez* is written in a pious vein, and the concluding chapters are devoted to ethics. In the sections on pedagogy, Hahn deplored the ignorance of the Bible prevalent among rabbis of his day. He suggested that a boy who showed no sign of progress in the study of the Talmud by the age of 13 be withdrawn from its study and taught Bible instead.

[Alexander Tobias]

HAHN, KURT (1886–1974), German-British educator. Hahn was born in Berlin and educated at both German universities and Oxford. While in Germany he conceived the idea of a coeducational boarding school which would emphasise self-discipline, enterprise, and physical fitness. In the 1920s Hahn founded Salem school, in Germany near Lake Constance, to put his ideas into practice. Hahn was a conservative close to monarchist circles in Weimar Germany; through them, Hahn met relatives of the boy who would later become Britain's Prince Philip. Arrested by the Nazis just after they came to power, as a Jew Hahn quickly emigrated to Britain and, with influential backing, founded Gordonstoun school in Scotland, run along lines similar to Salem school. Prince Philip (b. 1923) and, later, Prince Charles (b. 1948) and his two brothers received parts of their education at Gordonstoun. Hahn's influence on British public (i.e., exclusive private) schools was considerable. After 1953 Hahn returned to Germany, where he died.

BIBLIOGRAPHY: ODNB online; D.A. Byatt (ed.), *Kurt Hahn, 1886–1974, An Appreciation of His Life and Work* (1976).

[William D. Rubinstein (2nd ed.)]

HAHN, MICHAEL (1830–1886), governor of the state of Louisiana. Born in Bavaria, Germany, Hahn was brought to New Orleans, La., as a child and was admitted to the bar in 1851. During the Civil War he supported the Unionist cause and was elected to Congress in 1863. He became governor of Louisiana in the following year – the first Jewish governor in the U.S. Hahn resigned the governorship in 1865 following his election to the Senate but never took his seat. He returned to Congress as a Republican in 1884 and served until his death.

HAHN, REYNALDO (1875–1947), composer and conductor. Born in Caracas, Venezuela, Hahn studied under Massenet at the Paris Conservatory. He wrote several light operas and songs which recall Massenet's melodic charm. His compositions include eight operas and light operas, incidental music to plays, pantomimes, ballets (notably *Le Dieu bleu* (1912) for the Diaghilev Ballet), two symphonic poems, chamber mu-

sic, songs, an oratorio *La Reine de Sheba* (1926), and a Christmas mystery *Pastorale de Noël* (1908). From 1935 Hahn was music critic of *Le Figaro*. In 1945 he was appointed director of the Paris Opera. His book of recollections, *Thèmes variés*, appeared in 1946.

HAI BAR RAV DAVID GAON, head of the *Pumbedita academy from 890 to 898. Hai was *dayyan* in Baghdad for many years before he became *gaon*; he transferred the academy of Pumbedita to Baghdad (*Sha'arei Simḥah* of R. Isaac *Ibn Ghayyat, 1 (1861), 63–64). None of his responsa has been preserved, but some of those attributed to R. "Hai" without further definition, may be his. Harkavy attributes the *Sefer ha-Shetarot* ("Book of Documents") to him, but Wertheimer, L. Ginzberg, and Assaf hold more plausibly that the author of the *Sefer ha-Shetarot* was the famous *Hai b. Sherira. Several early Karaite scholars attributed to Hai a book of polemics against the Karaites on the subject of the intercalation of the month and the arrangement of the calendar; many scholars believe that this was Hai b. David.

[Mordecai Margaliot]

HAI BEN NAHSHON, *gaon* of *Sura from 885–896. Both Hai's father and paternal grandfather, Zadok, had preceded him as *geonim* of Sura. In one of the few of his responsa which have been preserved he opposes the recitation of *Kol Nidrei on the eve of the Day of Atonement, since in his opinion authority for the granting of absolution from vows is no longer to be obtained. It seems that the Karaite al-*Kirkisani was referring to Hai b. Nahshon when he wrote that the *gaon* Hai and his father translated the *Sefer ha-Mitzvot* of Anan from Aramaic to Hebrew. If any credence can be given to this statement it can only mean that they subjected the work to a critical examination, or that they translated it in order to dispute with him and challenge his views.

[Mordecai Margaliot]

HAI BEN SHERIRA (939–1038), *gaon* of Pumbedita and molder of the *halakhah* and the most prominent figure of his time. Of his youth nothing is known. From 986 he was the *av bet din* in the academy of *Pumbedita, acting as the deputy to his father Sherira *gaon*; in this role he left his mark upon the mode of studies and general orientation of the academy. According to some, he had a share in composing the *Iggeret Rav Sherira* (see *Sherira). Some time after he and his father had been released from prison, where they had been kept on a false charge, he became the *gaon* of Pumbedita, while his father was still alive, a position which he held for 40 years (998–1038). Although his position had been vied for by Samuel b. Hophni

the latter withdrew his claim to the gaonate when Hai married his daughter. Students came to Hai's academy from Byzantium and from western Christian countries, from where queries were also sent to Hai. His ties with Spain and his influence upon *Samuel ha-Nagid in particular are well known.

Aside from his preeminence in rabbinic knowledge, he was well acquainted with the Persian and Arabic languages and with Arabic literature. While he permitted children to be taught Arabic writing and arithmetic, he warned against the study of philosophy (from a letter ascribed to him and addressed to Samuel ha-Nagid). He criticized his father-in-law, Samuel b. Hophni, "and others like him, who frequently read the works of non-Jews."

Hai occupies a central position in the history of the **halakhah*. Later generations regarded him as the supreme authority, declaring that "he, more than all the *geonim*, propagated the Torah in Israel ... both in the east and in the west... No one among his predecessors can be compared to him, who was the last of the *geonim*" (Abraham *Ibn Daud, *Sefer ha-Kabbalah*). The measure of his influence and the volume of his responsa, decisions, and comments can be gauged from the fact that approximately a third of all extant geonic responsa are his (some of them in conjunction with his father).

In his writings Hai set out in detail his approach to the principles of faith and to the requirements of community leadership. In his *piyyutim* he expressed with much bitterness his sense of living in exile from Erez Israel. He was a mystic, who ascribed sanctity to the **heikhalot* literature, believing that whoever studied it in holiness and purity could ascend to the world of the angels and of the divine chariot (*merkavah*). Contrary to the view of his father-in-law, he believed "that God performs signs and awe-inspiring acts through the righteous, even as He did through the prophets." But he vigorously opposed those who believed that the divine names and charms were efficacious in changing the course of nature, declaring emphatically that its laws cannot be modified by such means. Vehemently antagonistic to any tendency toward anthropomorphism, he maintained that anthropomorphic passages in the *aggadah* were to be interpreted metaphorically. In his formulation of the ideals and values of the complete Jew, he described the rewards for observing divine precepts. These rewards greet the righteous and form "groups that go to meet the Divine Presence" and say to the righteous: "Ascend to your grade, stand in your division (in heaven), you who have conquered your evil inclination ... who have borne the yoke of the commandments, and in your fear of Him have endured suffering."

Hai drew special attention to the duty of the *dayyanim* to guide and admonish the people, to take responsibility for people's conduct and to be accountable for their sins. He demanded that strong measures be taken against dissenters and thieves, and under certain circumstances even permitted recourse to Jewish courts of law. He was opposed to the absolute annulment of vows on the eve of the Day of Atonement, his formulation of the **Kol Nidrei* prayer being: "Of all vows...

which we have vowed... and have omitted to fulfill either through neglect or under constraint we pray that the Lord of heaven may absolve and pardon us.” He adopted a tolerant attitude towards traditional local liturgical practices, but was opposed to delving into the reasons for them, insisting on “the observance of institutions introduced by those superior to our generations in learning and in caliber” (lit. “number”). He retained his physical and mental energies to the end. At the age of 99, a few months before his death, he replied with remarkable vigor to questions submitted to him. After his death, Samuel ha-Nagid eulogized him, saying: “During his lifetime he acquired all the choicest wisdom,” and though “he left no child, he has, in every land, both east and west, children whom he reared in the Torah” (*Ben Tehillim*, 11).

[Haim Hillel Ben-Sasson]

Of Hai’s works the following are extant: (1) fragments of the Arabic original of *Sefer Shevu’ot* (*Kitāb al-Aymān*; “A Treatise on Oaths”), and a Hebrew rendering by an unknown translator of the entire work entitled *Mishpetei Shevu’ot* (Venice, 1602; Hamburg, 1782); (2) fragments of the Arabic original of *Sefer ha-Mikkah ve-ha-Mimkar* (*Kitāb al-Shirā wa-al-Baye*; “Treatise on Commercial Transactions”). This, his chief literary production, was translated into Hebrew by Isaac *Al-Bargeloni (Venice, 1602; Vienna, 1800), and another version is extant in manuscript; (3) *Sefer ha-Shetarot* (“Treatise on Documents”), containing the texts of various documents, such as a *ketubbah*, a *get*, etc. (published by Assaf in *Tarbiz*, 1 (1930), supplement). Fragments of Hai’s commentary on several tracts of the Babylonian Talmud have also been preserved. The ascription of certain other works to Hai has, in recent years, been rejected. (4) Hai wrote numerous responsa. In 1986, T. Groner published a complete bibliography of Hai’s responsa and his other works as well (see *Alei Sefer* 13, 1986). (5) To aid the study of Arabic, Hai wrote *Kitab Al-Hawi*, a comprehensive Hebrew/Aramaic-Arabic anagrammatic dictionary. It was very popular and in use through the end of the 13th century. A. Maman published 10 of the 32 folios of the dictionary. Only three folios had been previously published. The rest was extant only in manuscript (see *Tarbiz* 69, 3 (2000), 341–422).

To Hai are ascribed some 25 poems, most of which are prayers, *seliḥot*, and *piyyutim*, a few of them didactic poems on laws and etiquette and eulogies of contemporary personalities. Most of these are in meter and rhyme, but in form and content reveal very little similarity to Arabic poetry. For poetic power, pride of place should be given to a group of five *seliḥot* (not *kinot*) for the Ninth of *Av; these are without meter and rhyme and voice a bitter and vehement complaint in the manner of Job against the suffering endured by the Jewish people in exile in the face of its great faith in God. Hai’s authorship of several poems, and even the fact of his having written poetry at all, which was questioned in modern times (from the beginning of research into the poetry of the Middle Ages) has now been confirmed.

HAIDAMACKS, paramilitary bands that disrupted the social order in Polish Ukraine during the 18th century. The name originated from the Turkish word *haida* meaning “move on!” The Haidamack movement was mainly the outcome of the social ferment which had already developed in the Ukraine toward the end of the 16th century and reached a peak in the Cossack uprising led by *Chmielnicki in 1648. The Haidamacks were mainly peasant serfs who had fled from the Polish landowners to the steppes beyond the River Dnieper. They were joined by poorer elements among the townsmen, sons of the impoverished nobility and clergy, members of heretical sects who had fled from Russia, and even Jewish renegades. The Haidamacks ambushed travelers or attacked small settlements, not for political reasons but principally for robbery accompanied by murder. However, they unwittingly served the political ends of the Russian administrators and the Russian Orthodox clergy since their persistent attacks helped to erode the position of the Polish kingdom in this period.

The Haidamack bands are first mentioned in documents dating from the beginning of the 18th century, but received a strong impetus in 1734, when dissensions broke out among the Polish nobility over the election of a new king. In 1768 the most violent Haidamack outbreak took place, known as Koliivshchina or (in Polish) Koliwczynna, headed by Maxim Zhelesnyak (see below), in which religious, national, and social elements combined. The expulsion of the Jews or their destruction had long been the avowed purpose of insurgents in the Ukraine in the period of Chmielnicki and even earlier. The monks, who were the chroniclers of the period and the recorders of popular tales, glorified murder of the Jews and confiscation of their property as if they were deeds of piety. In addition, the Jews were a convenient target to attack because the competition in trade and commerce with the townsmen was so keen that the latter showed no disposition to defend Jews and would even divulge the movements of Jewish merchants to the Haidamacks. Most of the Jews were helpless against the brigands, and the Polish state authorities were not always able to defend them. The propaganda of the Russian Orthodox priests only intensified the hatred against the Jews. In this area the rivalry between the clergy of the Orthodox and Catholic churches accounts for the sharp rise in the

number of *blood libels against the Jews from the fourth to sixth decades of the 18th century precisely in the region where the Haidamacks were active.

Most of the attacks made by the Haidamacks against the Jews took the form of robbery and murder of merchants traveling on the highway and assaults on Jewish tenant farmers living in isolated places and on inhabitants of small defenseless towns. During the years when the revolts increased (1734, 1750, 1768) even heavily fortified places were attacked, claiming large numbers of Jewish victims: 27 Jews were slaughtered in Korsun in 1734; 35 were murdered in Pavoloch in 1736. In the same year the Haidamacks captured the town of Pogrebishche and murdered 14 Jews; many others were wounded and their property stolen. Massacres of Jews took place in various towns in 1738 and 1742. A wave of attacks was perpetrated in 1750: Jews were killed in Vinnitsa, Volodarka, and in other cities. But these calamities were overshadowed by the wholesale massacres that took place in 1768 (known as the persecutions of Ukraine or of *Uman). Initially, about 700 people were killed in the city of Fastov including many scores of Jews. In the townlet of Lysyanka a Jew, a Polish priest, and a dog were hanged side by side to indicate the equality of their respective religions.

Zheleznyak, an active leader of the gangs, massacred the Jews who had been unable to escape from Zhabotin, Kanyev, and Korsun before going on to the fortified city of Uman, to which many thousands of Poles and Jews had streamed from other places out of terror of the Haidamacks. The treachery of the Cossack commander Gonta led to the surrender of the city on June 19, 1768, and there ensued a frightful massacre of its inhabitants. The Jews attempted to hide but were unsuccessful. Some fought heroically until slain by the enemy. The majority of Jews were murdered in the synagogue. A number of prominent Jews, required to pay a ransom, were brutally murdered after they had complied. The number of Jewish victims ran into thousands, the slayers sparing neither women nor children. The synagogues were razed and the Torah scrolls desecrated and burned. According to some records the number of victims reached 20,000, both Poles and Jews. Some of the Jews in the surrounding districts who attempted to flee to the border city of Balta, half of which was situated in Turkish territory, were caught by brigands, who laid waste to the city. The Jews in the entire southeastern portion of Poland were seized with terror. They placed their hopes on the commander of the Polish army, Branicki, and a special prayer was composed in his honor. Although Branicki himself did not take part in the war against the Haidamacks, he had severely punished their leaders and was for this reason regarded by the Jews as the savior of Polish Jewry. The revolt was suppressed by the Russian and Polish troops. The rebels were tried by Polish punitive units and the Haidamack movement came to an end. The memory of the Haidamacks lingered in Ukrainian lore and entered the national literature (*Haydamaky* (1841), by Taras Shevchenko). It became a legacy of the Ukrainian national movement, and the Ukrainian partisan bands that

perpetrated pogroms on the Jewish population in 1919–20 and 1941–44 were referred to as Haidamacks.

[Shmuel Ettinger]

HAIFA (Heb. הַיְפָה), port in Israel and commercial and administrative center of the north of the country. The city extends over the northwest side of Mt. Carmel and the coastal strip at its northern slope, and over the southern end of the Zebulun Valley and the northern edge of the Carmel Coast. Its total area is about 23 sq. mi. (60 sq. km.).

Early History

The earliest settlement in Haifa's vicinity was located at Tell Abu Hawam, a small port town founded at the beginning of the 14th century B.C.E. (Late Bronze Age) and was in existence until the Hellenistic period. The city was not a part of the area regarded as sanctified by the exiles returning from Babylon (see *Israel, Historical Boundaries). Haifa is possibly mentioned in the Persian period in the list of cities attributed to the geographer Scylax, between the bay and the "Promontory of Zeus," i.e., the Carmel. In the Hellenistic period the city moved to a new site, south of Bat Gallim (the old port had apparently become blocked by sand). Tombs from the Roman period, including Jewish burial caves, have been found in the vicinity. The major city in the region was Shikmonah, which Eusebius even identifies with Haifa (*Onomastikon*, ed. by E. Klostermann (1904), 108:31). Haifa is mentioned in Jewish sources as the home of R. Avdimos (Avdimi, Dimi) and other scholars (Tosef., Yev. 6:8). It was a fishing village whose inhabitants, like the people of Beth-Shean and Tivon, could not distinguish between the pronunciation of the gutturals *het* and *ayin* (ט, Ber. 2:4). According to the Talmud, the murex (shellfish yielding purple dye used for the *tallit*) was caught along the coast from Haifa to the Ladder of Tyre (Shab. 26a). Politically Haifa throughout this period belonged to the district of *Acre. Its Jewish inhabitants were on hostile terms with the Samaritans in neighboring Castra, a fortress built by the Romans. A *kinah* speaks of the destruction of the Jewish community, along with other communities, when the Byzantines reconquered the country from the Persians in 628. Haifa is not mentioned in the sources dealing with the first 400 years of Muslim rule in Erez Israel. It appears again only in the mid-11th century: in 1046 the Persian traveler Nasir-i Khusrau relates that large sailing ships were built there. He also mentions date palms that he found there and the sand used by goldsmiths. In 1084, the *gaon* *Elijah ben Solomon ha-Kohen went from Tyre to Haifa to proclaim the New Year on the soil of Erez Israel and to renew the ordination of rabbis and the *gaonate* there.

On the eve of the First Crusade Haifa is described as an important and well-fortified city. The Crusaders pushing

southward initially spared the city but later laid siege and conquered it with the help of the Venetian navy (summer 1100). All Haifa's Jewish defenders (who comprised the majority of the city's population) and its Egyptian garrison were slaughtered, bringing to an end another brief but flourishing chapter in Haifa's history. During the Crusader era Jews apparently did not resettle in Haifa. The city remained a small fortress and an insignificant port under the shadow of its mighty neighbors, *Acre and *Caesarea; during this period it was the capital of a seigniorship held by a Crusader family, Garcia Alvarez. The fortress of Haifa was destroyed in 1187 when Saladin dealt a crushing blow to Crusader rule. It was returned under the peace treaty of 1192 to the Franks during the Third Crusade (1192–1265). In the mid-13th century the city's fortifications were rebuilt by Louis IX, king of France, but in 1265 Haifa again fell, this time to the Mamluk Sultan Baybars who drove the remaining Crusaders from the country. During Baybars' systematic destruction of the coastal cities of Erez Israel and Syria (to prevent their reoccupation by the Franks), Haifa was also razed (1291) and did not revive throughout the period of *Mamluk rule. The Carmelite Order was founded on Mt. Carmel in 1156, but the monastery was destroyed by the Muslims in 1291. From the time of its conquest by the Muslims until the 15th century, Haifa was either uninhabited or an unfortified small village. At various times there were a few Jews living there, and both Jews and Christians made pilgrimages to Elijah's cave on Mt. Carmel.

Ottoman Rule

Haifa was apparently deserted at the time of the *Ottoman conquest (1516). The first indication of its resettlement is contained in a description by the German traveler Raowulf who visited Erez Israel in 1575. Haifa is subsequently mentioned in accounts of travelers as a half-ruined, impoverished village with few inhabitants. The expansion of commercial trade between Europe and Erez Israel from the beginning of the 17th century improved Haifa's position. More and more boats began anchoring at the safer Haifa port in preference to the plugged-up bay at Acre. Haifa's revival as a flourishing port city is also to be credited to the emirs of the Turabay family, who ruled part of Erez Israel at that time, and also Haifa. These local rulers also gave permission to the Carmelite monks to reestablish themselves in 1631, but only four years later the Muslims turned their church into a mosque. Later the monastery was rebuilt; in 1775 it was ransacked, and in 1821 it was destroyed by Abdullah, pasha of Acre. It was reestablished in 1828 and exists to this day.

At the beginning of the 18th century a new local ruler Zahir al-'Umar gained control of northern Erez Israel and set up his capital in Acre. In 1742 Haifa again came into existence as a village or a small town located at the foot of Mt. Carmel near the present-day Bat Gallim quarter. It had a small Jewish community and a synagogue. In the middle of the century Zahir annexed Haifa as well. Unfortified and spread over a wide and vulnerable plain, Haifa was almost captured in 1761 by

the Turks. To prevent its falling into his enemies' hands, Zahir ordered his soldiers to raze the city to the ground and scatter boulders in the anchorage; thus the ancient city of Haifa was demolished. Zahir provided his growing capital with a safe alternative port of call 1½ mi. (2 km.) southeast of ancient Haifa, on a strip of coast at the foot of the Carmel at an easily defensible point. Unlike the ancient city of Haifa, the new port was situated on the crossroad from Acre to *Jaffa. Zahir walled in the area and built another fortress on the slope above (known as the Burj, located on the site of *Castrum Samaritanorum*). The new city of Haifa grew up within these walls – retaining its old name.

18th–19th Centuries

Haifa gradually recovered and increased from an estimated 250 settlers in old Haifa at the beginning of the 18th century to 4,000 a century later. R. Nahman of Bratslav spent Rosh Ha-Shanah of 5559 (1798) with the small Jewish community of Haifa. The composition of the population changed, mainly due to the growing influence of the Carmelite monks, so that in 1840 about 40% of the city's inhabitants were Christian Arabs living alongside the Muslim majority. Despite severe difficulties and opposition from the local inhabitants and the authorities, the Carmelite monks, with the aid of France, managed to hold on to the dark crypts above "Elijah's Cave" and also erected nearby the Stella Maris monastery. Its cornerstone was laid in 1827 and construction was carried out without incident under the Egyptian rule in force in Erez Israel at that time (1831–40) which was well-disposed to Christians in general and especially to those under French protection.

The Egyptian conquest of Erez Israel lent much impetus to Haifa's development, which was especially to the disadvantage of its rival Acre. The steamboats, which made their appearance at this time in eastern Mediterranean ports and contributed to the economic rebirth of Erez Israel, used Haifa rather than Acre as their port of call. The consular representatives therefore began leaving Acre (which was also dominated by Muslim extremism) to settle in Haifa, with its large Christian population and better climate; the latter took over more and more of Acre's export trade, which had consisted largely of grain, cotton, and sesame seeds. In 1858 the walled city of Haifa was already overcrowded and the first houses began to be built outside the ancient city on the mountain slope. Ten years later the first German Templers arrived in the country from Wuerttemberg and built a colony, which became a model residential suburb, just west of Haifa. The members of this sect made important contributions to Haifa's development – they introduced the stagecoach, paved roads, and set up a regular coach service to Acre and Nazareth. The Templers also established Haifa's first industrial enterprises and applied modern methods in agriculture, crafts, and commerce. Toward the end of the century the Germans enlarged their settlement and built the first residential quarter on the top of the Carmel (near the present-day Merkaz ha-Carmel). In 1905 Haifa's position and importance was further strengthened when it was

connected up with the Hejaz railroad which was then being laid between Damascus and the Arabian Peninsula; most of the exports from the fertile lands of the Hauran now passed through Haifa.

Revival of Jewish Settlement

Haifa's Jewish community expanded gradually. Very few Jews had apparently settled there when the ancient city was rebuilt at the beginning of Turkish rule. In 1742 it contained a small Jewish community, composed mainly of immigrants from Morocco and Algeria. In 1839 there were 124 Jews in Haifa; in 1864, 384; in 1871, 760; and in 1901, 1,041. Up to this time North African Jews still comprised the majority of the community, which also contained some Sephardi Jews from Turkey and a few Ashkenazim. (In 1917 the number of Jews rose to 1,400 of whom a third were of North African origin, a third Sephardi, and a third Ashkenazi.) In the last quarter of the century, the Jews comprised about one-eighth of the total population. They lived in the *Ḥarat al-Yahūd* ("Jewish quarter") inside the poor Muslim district in the eastern part of the lower city. Most of them barely subsisted by petty trade and peddling in Haifa or nearby villages. The importance of the Jewish community in the city increased with the arrival of members of the First and Second Aliyah from Eastern Europe, mostly from Russia. From the 1880s onward, and especially in the early 20th century, extensive Jewish commercial and industrial activity sprang up. During his visit to Erez Israel in 1898–99, Theodor Herzl recognized Haifa's numerous potentialities as the future chief port and an important inland road junction. In his *Altneuland* (1902), the description of Haifa occupies a central place in his vision of rebuilt Israel. The laying of the cornerstone of the *Technion in 1912 marked the high point of the intensified Jewish activities and was a signal for further development projects.

On the eve of World War I, Haifa, with more than 20,000 inhabitants and a constantly expanding export-import trade, was the key city of northern Erez Israel. A progressive European minority added to its cosmopolitan character and an extensive network of schools, most of them Catholic, provided a high standard of education. New residential quarters were added in the east and west and on the southern slopes of the Carmel and eventually embraced the ancient site of the city.

British Mandate Period

On September 23, 1918, after four centuries of Ottoman rule, Haifa was captured in fierce battles by the British forces. During the British Mandate, Haifa rapidly grew into a large modern city in which the Jewish population played an increasingly predominant role. In 1919 the Haifa-Lyddā railroad was added to the narrow gauge Haifa-Zemah-Dara line. In the 1920s and 1930s the road network which linked up the various parts of Haifa was greatly improved and extended.

The 1922 census recorded a population of 25,000 in Haifa, of whom more than 9,000 were Muslims, slightly fewer Christian Arabs, and more than 6,000 Jews. According to the 1931 census, it contained 50,403 residents, including about 20,000

Muslims, 15,923 Jews, and about 14,000 Christians. By 1944 the number of inhabitants had grown to 128,000 of whom 66,000 were Jewish, 35,940 Muslim, 26,570 Christian, and 3,000 Bahais. At the end of the Mandate (1948) the Jews comprised nearly two-thirds of the population (about 100,000 out of 150,000). The completion of the large harbor in 1934 produced a great burst of prosperity and Haifa became the main and practically only port of international repute in Erez Israel, taking precedence over Jaffa. Haifa's economy was further strengthened by the completion in 1939 of the oil pipeline from Iraq to its Mediterranean terminus at Haifa and the large oil refineries near the city. At this time the port facilities encouraged many new industries, some of them the largest in the country (textiles, glass, bricks, petroleum products, cement, metal, ceramics, etc.), in Haifa and the vicinity, especially in the Zebulun Valley. Tension between the city's Arab and Jewish residents, in the Mandate period, however, impeded Haifa's development. The riots of 1936–39 in particular adversely affected the city's economy and business dwindled between the conflicting sides as well as trade with Syria and Lebanon. The Arab population, mainly concentrated in the lower city, obstructed the Jews on their way to the adjoining industrial areas and to the port and services adjacent to it (marine shipping companies, banks, transport, insurance, etc.), as more and more Jews from the 1920s onward settled in the Hadar ha-Carmel section (the continuation of the Herzliyyah district founded before World War I). Hadar ha-Carmel developed rapidly around the Technion, which was inaugurated in 1925. The Mandate authorities granted some municipal autonomy to the new Jewish quarter. The Jewish settlement in this period also climbed higher up the slope around Merkaz ha-Carmel, in the Aḥuzzat Herbert Samuel quarter, and in Neveh Sha'anān. When the land in the Zebulun Valley on the coast of the bay was purchased in 1928, the Zionist movement made its first venture into comprehensive urban planning, for which it engaged the British city planner Patrick Abercrombie. The area stretching from the southeast corner of the bay up to Acre was divided into functional regions – an industrial zone in the south near the port; a residential area in the center in which from 1930 onward the Kerayot were built (Kiryat Ḥayyim, Kiryat Bialik, Kiryat Motzkin, Kiryat Yam); and an agricultural belt in the north.

Toward the end of the British Mandate, both the Jews and the Arabs attempted to gain control over the city. The hostilities which broke out at the end of 1947 reached a peak on April 21–22, 1948, when the British suddenly decided to evacuate the city. In a lightning military action, the Haganah captured the Arab quarters and took over the city. Only about 3,000 of Haifa's 50,000 Arab residents chose to remain in the city; the rest, in response to the Arab High Command's orders, refused to accept Jewish rule and abandoned their homes.

In the State of Israel

Late in 1948 Haifa's population numbered 97,544, of whom 96% were Jews. At the end of 1950 there were 140,000 inhab-

itants; at the end of 1952, 150,600; at the end of 1955, 158,700; in 1961, 183,021; and at the end of 1967, 209,900. In the mid-1990s, the population was approximately 246,500, including 35,000 new immigrants. At the end of 2002 the population of Haifa was 270,800, making it the third largest city in Israel after Jerusalem and Tel Aviv. Of Haifa's non-Jewish population, 10% are Arabs, 60% of them Christian and 30% Muslim.

The built-up area of Haifa continued to expand along the shore area and on the slopes and ridges of the Carmel. The lower city (whose former nucleus had been largely left in ruins in 1948) was rebuilt as the "City" – Haifa's main business section. The population density on Hadar ha-Carmel (also a center for retail trade, services, and entertainment) increased until residents started moving to the upper Carmel. Housing projects on a large scale were erected, including extensive suburbs such as Kiryat Eliezer on the coast and southern Romemah on a ridge of the Carmel. Later, other neighborhoods sprung up on the upper Carmel, including Ahuza, Carmelia, Vardia, and Denia (private homes on the southern slopes of the Carmel).

In the 1950s and 1960s a number of changes were made in the functional arrangement of the city with Haifa and Acre being conceived as the axes of a comprehensive regional scheme. In the Haifa Bay area the industrial zone extended north along the coastal dune strip up to Acre and included "Steel City." Residential quarters were built east of this zone. On Mt. Carmel the crest and narrow spurs branching off to the west and east were reserved for building and parks and orchards fill the gorges. Downtown Haifa extended westward, spilling over southward into the Carmel Coast area. After the establishment of the State of Israel, the port was greatly expanded and modernized and became the home port of Israel's fast-growing navy. The piers were tripled in number, the water level deepened, and many port facilities added, such as the Dagon storage silos with a 75,000 ton capacity. In 1954 an auxiliary port was built at the Kishon River outlet, its pier was lengthened in 1964 to 2,099 ft. (640 m.). A shipyard for building and repairing ships, a floating dock, and a jetty for Israel's fishing fleet were also built in the Kishon area (1959). Haifa continued to be almost the exclusive embarkation and debarkation sea point in Israel.

Haifa's industry continued expanding in this period, especially in the bay area. Two factories in Israel for the production and assembly of cars were set up there, as well as large chemical and petrochemical industries, an industrial and craft center, a plant for producing organic fertilizers from waste, a plant for purifying sewage water, and numerous other industrial enterprises. Also located in Haifa are the national offices of the Israel Railways (including their large workshops), the Israel Electric Company, Solel Boneh (Israel's largest contracting company), Zim (the largest shipping company), and others. Employment in the port area, which provided work for a tenth of the city's population, and in Haifa's varied industry, drew a very large labor force to the city, which is the best organized in the country. From the 1980s, the southern outskirts

of the city began to be developed as an economic center for hi-tech companies, including branches of some of the world's largest corporations, such as Intel, Microsoft, and Elbit (an Israeli firm manufacturing weapons systems). Nearby there is a transportation center, including both a railroad station and main bus terminal. From 1951 until his death in 1969, the mayor of Haifa was Abba *Khoushi, formerly the secretary of the Haifa labor council. He did much to develop and beautify the city.

The *Bahai sect, with its world center in Haifa, built a gold-domed sanctuary and cultivated one of the finest and largest gardens in the country. In 1987 the Bahais begin to enlarge the gardens, added 18 hanging gardens running for a kilometer along the slopes of the mountain and thus linking the upper part of the mountain with the lower part. In addition, the Bahais built other buildings, among them a library and administrative building. Another unique feature of the city is the Carmelit, Israel's only subway, which was set up in 1959.

The educational system has received particular attention. Haifa University College (see *Haifa, University of) was founded in 1963 by the municipality under the academic supervision of the *Hebrew University. It was granted independent status and in 1970 it offered courses in the humanities and social sciences and had a department for training high school teachers. Enrollment in 1969/70 totaled 3,600 and the academic staff numbered 340. In 1967 the college was transferred to the university campus (designed by the architect Oscar Niemeyer) on the summit of the Carmel. In the early years of the 21st century Haifa University had approximately 13,000 students. The university is under continuous expansion, adding new departments each year. The *Technion has another 13,000 students, studying engineering and the exact and life sciences. Various cultural and social centers, public buildings, and museums have been built to house among other things the National Science Museum, the Railroad Museum, the Naval Museum, the Museum of Modern Art, the Japanese Art Pavilion, the *Haifa Municipal Theater, and the Haifa Symphony Orchestra. In addition, Haifa has a zoo and nature and prehistoric museum. One of the best-known community centers is the James de Rothschild Center. In 1963 a Jewish-Arab youth center, Bet Gefen, was opened through the efforts of Abba Khoushi, to help integrate the minority youth. The city of Haifa hosts three yearly festivals: an international film festival during the Sukkot holiday, a children's theater festival on Passover, and the Holiday of Holidays in December corresponding to the three religions holidays of the season: the Jewish Hanukkah, the Muslim Ramadan, and the Christian Christmas.

Haifa has not been immune to terrorist attacks. Four suicide bombings in 2001–2003 claimed dozens of lives and injured nearly 200 people.

HAIFA, UNIVERSITY OF. In 1970, the name of Haifa University College, founded in 1963, was officially changed to “University of Haifa” and in 1972 the Council for Higher Education granted the university full academic accreditation, including the right to award a B.A. degree in 24 departments and an M.A. in 12. The university, which is located on the Carmel Mountains, high above the city of Haifa, has faculties of Humanities and Social Sciences, Law, Science and Science Education, Social Welfare and Health Studies, Education, a graduate school for Business Administration, and a Center for Maritime Studies. It has about 13,000 students and 40 research centers in various fields. The Oranim Teachers’ College and the Ohel Sarah College of the Emek became branches of the university. Subsequently the Ohel Sarah College became the independent Emek Jezreel College while the Oranim Teachers College continued partially to cooperate with the university in various fields of study. In 1984 the Hecht Museum, named for Reuven and Edith Hecht, was established on the campus. The museum exhibits Reuven Hecht’s collections of Erez Israel archeology and modern art. The university also runs an overseas study program for students from all over the world who wish to study in Israel. The library, which is situated in a specially designed modernistic unit, includes 700,000 volumes and has pioneered the use of computers for preparation of bibliographies and bibliographic data. It also includes material for psychological tests and audio-visual material. The Haifa campus houses the IBM building, thus enabling the university to cooperate with the high-tech industry.

[Shaked Gilboa (2nd ed.)]

HAIFA MUNICIPAL THEATER, Haifa repertory company, founded in 1961 by the Haifa Municipality. It was the first theater in Israel to be initiated by a public body, as well as the first with a paying membership (subscribers were guaranteed five new productions each season). The theater was warmly welcomed by residents of Haifa, and from its inception had 12,000 subscribers. Unlike other theaters in Israel, the Haifa Municipal Theater began in a magnificent building with up-to-date stage equipment and a municipal subsidy which guaranteed its solvency. Its budget in 1967 was IL2 million, of which IL420,000 was subsidy. However, since there had never been a theater in Haifa before, it had difficulty in recruiting actors. Despite this handicap, it succeeded in presenting several excellent productions, among them Berthold Brecht’s *The Caucasian Chalk Circle*, which was performed with great success in Israel in 1962 and at the Venice Festival in 1963, and Shake-

speare’s *Richard III* (1966), both staged by the Haifa Municipal Theater’s first artistic director, Yosef *Millo. The repertoire of the Haifa Municipal Theater consists of classical, contemporary, and original Hebrew plays. In 1970 it recruited the avant-garde group of young actors and directors, led by Oded Kotler, who constituted *Bimat ha-Sahkanim*. The 1970s were the golden age of Israeli theater, and the theater preformed plays by Yehosuha *Sobol, Hanoch *Levin, Hillel *Mittelpunkt, Yosef Bar-Yosef, Yaakov *Shabtai, and others. During these years Nola Chelton and a group of actors called the Project Group joined the theater and preformed several major plays. After Kotler, the theater was led by Amnon Maskin and later by Omri Nizzan and Noam Semel. Under their management the theater focused on Jewish-Israeli plays, the best-known being Sobol’s *Ghetto* and *Jewish Soul*. *Jewish Soul* was the first Israeli play to participate in the Edinburgh Festival. *Ghetto* was shown at the Berlin Festival in the presence of the president of Germany. Later, both plays were shown at other international festivals. In 1987 the theater established a stage for plays in Arabic. In 1988 the theater found itself in the midst of public controversy over Sobol’s politically charged *Jerusalem Syndrome*, a play written for Israel’s 40th anniversary. The controversy led to the resignation of Sobol and Gedaliah Besser, the artistic directors. In 1990 Oded Kotler was reappointed to head the theater, a position he held until 1997. The theater continued to perform Israeli plays alongside foreign ones, but later faced financial problems, lost many subscribers, and failed to perform significant plays.

HAILPERIN, HERMAN (1899–1973). U.S. Conservative rabbi and author. Hailperin was born in Newark, New Jersey, and educated in New York City, where he earned his B.A. from New York University (1919) and was ordained at the *Jewish Theological Seminary (1922). In 1933, he received his Ph.D. from the University of Pittsburgh, where he had arrived in 1922 to become the rabbi of the Tree of Life Congregation. Hailperin transformed the venerable synagogue (founded in the 1860s) into a model Conservative synagogue-center, while instituting a number of innovations more in line with Reform practice, such as the playing of an organ during worship services and abolishing the observance of the second day of festivals. His actions – which were rewarded by his congregation with a life contract – represented a challenge to the authority of the *Rabbinical Assembly, which had decreed that Conservative Judaism would attempt to revitalize the custom of *Yom Tov Sheni* (observing two days of major festivals in the Diaspora). Faced with the alternatives of either disciplining Hailperin – a former member of the RA’s Executive Committee and Committee on Jewish Law and Standards – or abandoning its policy that decisions were binding on all members, the RA elected to relax its policy of binding decisions.

A scholar in the field of medieval philosophy and theol-

ogy, Hailperin also taught Jewish history at the University of Pittsburgh and Duquesne University. He wrote three books: *A Rabbi Teaches: A Collection of Addresses and Sermons* (1939, commemorating the octocentennial of the birth of Maimonides); *Rashi and the Christian Scholars* (1963), an analysis of the influence of the Jewish sage's biblical commentary on medieval Christian scholars; and *The Three Great Religions: Their Theological and Cultural Affinities* (1978, posthumously).

HAIMOVICI, MENDEL (1906–1973), Romanian mathematician. Born in Jassy, he completed his mathematical studies at the University in Jassy (1930). In 1932–33 he studied for his doctorate at the University of Rome, completing his thesis in 1933 in the field of the mechanics of fluids: “Sur l'écoulement des liquides pesants dans un plan vertical,” presented in French to a committee headed by Tulio Levi-Civita. Upon his return to Jassy, Haimovici was appointed assistant lecturer at the Mathematical Seminary of the local university headed by Alexandru Myller, in the field of analytical geometry (1933–40). Excluded from the university by the racial laws during the Holocaust period, he returned to his position only after the collapse of the pro-Nazi regime, on August 23, 1944. In 1945 he became assistant professor, in 1946 full professor, and in 1948 chairman of the theoretical mechanics department at the university. In 1949 he became a corresponding member and in 1963 a full member of the Romanian Academy of Sciences, mathematical sciences section. In 1949 he became the director of the Mathematical Institute of the Jassy branch of the Romanian Academy of Sciences. Haimovici was a specialist in differential geometry and mathematical analysis. He made contributions to Finsler spaces, mechanics, theory of outer differential systems, and Pfaff systems of equations. He published numerous studies – books and articles – in these fields. His brother, ADOLF HAIMOVICI (1912–1993), was also a well-known mathematician, a specialist in geometry and professor of mathematical analysis at Jassy University.

HAIMOWITZ, MORRIS JONAH (1881–1958), Yiddish writer. Born in Mir (Belorussia), where he studied at the yeshivah, he immigrated to the United States in 1902, spending the rest of his life in New York. He published his first story, “Blondzhendik” (“Erring,” 1905) in the *Fraye Arbeter Shtime*, joined the literary group, Di *Yunge, and coedited their anthology *Yugend* (1907–8), in which he published his stories and essays. Later, he co-edited the miscellany *Literatur* (1910) and the almanac *Di Naye Heym* (1914). His novels about Jewish life in the U.S., and historical novels about Jesus and Shab-

betai Zevi (*Yor 1666/426: Shabtay Tsvi in Shtambul*, “The Year 1666: Shabbetai Zevi in Istanbul,” 1946), display a deep understanding of human nature and of historical events. In *Arum dem Man fun Natseres* (“Concerning the Man from Nazareth,” 1924), he presented a novel interpretation and characterization of the early Christian movement and its leading personalities. He portrayed himself in the character of Levin in the novel *Oyfn Veg* (“En route,” 1914).

HAINDORF, ALEXANDER (Zwi Hirsch ben Nessanel; 1784–1862), German educator and physician. In 1825 he founded at Muenster, Westphalia, an institution for the advancement of crafts among Jews and the training of teachers for Jewish elementary schools. An endowment by Haindorf's father-in-law enabled the school to train about 350 artisans in 50 years. The school had such an excellent reputation that the Prussian government permitted Christian pupils to attend it; in 1830 they outnumbered the Jews. One of Haindorf's aims was to promote the amalgamation of Judaism and Christianity, and in “slow and cautious imparting of Christian education” he saw a step in this direction.

HAINOVITZ, ASHER (1939–), *hazzan*. Hainovitz was born in Jerusalem and studied *hazzanut* under Shelomo Zalman *Rivlin. He studied at the Jerusalem Rubin Academy of Music and later received his L.R.S.M. degree from the Royal Academy of Music of London. After serving as cantor in Bulawayo, Zimbabwe, Pretoria, and London he was appointed to the Central Yeshurun Synagogue in Jerusalem. He is the possessor of a sweet lyric tenor voice and has made the performance of Yiddish *lid* a specialty. Hainovitz is equally at home on stage and at the pulpit, both in Israel and abroad. He prides himself on being a *ba'al tefillah* (“master of prayer”) at the pulpit. For the Rennanot Institute for Sacred Liturgical Music, he has recorded the entire *Ha-Yamim Ha-Nora'im nusah* with organ accompaniment by Raymond *Goldstein. Other recordings include Yiddish song in *Hazzonim Zingt Yiddish*.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

HAITI, republic on the Caribbean island of Hispaniola, with a Jewish population of less than 30 persons (2002). Columbus landed there during his first voyage in 1492. In the second half of the 17th century the French gained control of the western part of the island of Hispaniola. By the treaty of Ryswich

in 1607, Spain officially ceded this part of the Hispaniola to France which named it Saint Domingue or Haiti.

Individual Jews who left Dutch Brazil in 1654 used their expertise in sugar growing and settled on French plantations but never founded a congregation. The “Black Code” of 1685 ordering the expulsion of the Jews from the French islands caused them to leave Hispaniola. Only Jews holding special “Lettres patentes” could settle there. Most prominent were the members of the Jewish Gradis company, which had offices in Cap Francois (today’s Cap Haitien), Sain Louis, Fond de l’isle a Vache, and Leogan. With the required permission, Jews arrived from Bayonne and Bordeaux (including the distinguished Mendes France family). They were joined by Jews from Curaçao, who settled mainly in Cap Francois (where they employed a cantor and a circumciser), Jeremie, Les Cayes, and in smaller numbers in Port au Prince. Jews also came from Jamaica and St. Thomas of the Virgin Islands. All of them were either Dutch, English, or Danish citizens. With the nomination of Jean Baptiste Charles Henry Hector Comte d’Estaing as governor of the French Windward Islands (Isles de Vent), the tolerable, semi-legal existence of the Jews in Haiti was put under the yoke of heavy taxation. Jews had to pay for the financing of infrastructure projects and for the maintenance of the army. An attempt was made to expel the Jews from Cap Francois.

In day-to-day life there was no real discrimination. Dr. Michel Lopez de Pas of Leogan was nominated as “Medecin du Roy” (Royal Physician), others were named as judges and to other public functions. Moron, a town of 12,000 inhabitants, is named after the Curaçao Jew Simon Isaac Henriquez Moron, who owned a plantation there.

The Haitian slave rebellion at the end of the 18th century caused the exodus of the Jews to New Orleans, to other Caribbean islands, or to France. It is almost impossible to estimate the exact number of Jews residing legally or illegally in Haiti in the 18th century.

In the 1920s Jews from Syria and Lebanon, later joined by Jews from Germany and Eastern Europe, settled in Haiti. In time they numbered some 30 to 40 families, but no congregation was formed. With the unstable political and economic situation, in the 1990s only five or six families remained.

Relations of Haiti with Israel are usually friendly. In the 1970s Israel maintained an embassy in Port au Prince, which was later closed for financial reasons. In the early 21st century relations between the two countries were governed by non-resident ambassadors.

Israel’s technical cooperation with Haiti is fruitful; Israel helped develop several regions in Haiti.

[Mordechai Arbell (2nd ed.)]

HAJDU, ANDRÉ (1932–), Israeli composer, pianist, and ethnomusicologist. Born in Budapest, Hajdu studied composition and ethnomusicology with Kódyaly at the Franz Liszt Academy. He spent two years among Hungarian gypsies collecting their songs. After the failure of the Hungarian uprising in 1956 he escaped to Paris, where he studied with *Milhaud and Messiaen. In the 1950s, Hajdu became acquainted with avant-garde music at the Darmstadt festivals, but preferred to compose in more traditional styles. In 1966, he immigrated to Israel, where he conducted research into ḥasidic music and taught composition at the Jerusalem Academy of Music and Dance, and later in the Department of Musicology at Bar-Ilan University, where he became a professor. In 2000 Hajdu was awarded the Israel Prize for his achievements in composition.

Hajdu composed in all major genres, including orchestral, chamber, and vocal music. His output includes many educational works, such as *The Milky Way* (1975–76), *Merry Feet* (1977), and *The Book of Challenges* (1991–99). Hajdu’s style is pluralistic, and combines various tonal, modal, and post-tonal influences, with frequent use of humor and wit. This pluralism reflects Hajdu’s personality, which he himself describes as full of contradictions, and his diverse background, as a religious Jew who grew up in an assimilated family.

Many of Hajdu’s works are based on Jewish themes or texts, e.g. *Mishnayot* (“The Floating Tower”; 56 songs and choral pieces, 1971–73); *Teru’at Melekh* (for clarinet and strings, 1974) composed for Giora *Feldman; *The Prophet of Truth and the Prophet of Deceit* (for narrator and string orchestra, 1977); *Jonas* (“biblical opera,” 1985–87); *Dreams of Spain* (cantata, 1991); *Kohelet* (for cello solo with three cellos, 1994). Among his other works are *Ludus Paschalis* (miniature opera, 1970), *Stories about Mischievous Children* (orchestra, 1976), *Instants suspendus* (for violin, 1978), *On Light and Depth* (for chamber orchestra, 1983–84), and *B.A.C.H.D.I.E.S.* (for instrumental ensemble, 2000). Hajdu published with M. Zakai, *Dialogue* (1999); and an essay: “Le théâtre intérieur: Eléments de mise en scène dans ma musique,” in *Perspectives* (2003).

HAJDU, MIKLÓS (1879–1956), Hungarian journalist and author. Born in Gölle, Hajdu studied in Budapest. From 1897, he was on the editorial boards of *Budapesti Napló* (“Budapest Daily”) and *A Nap* (“The Day”), later becoming editor of the latter. Bright in style, *A Nap* was the first “boulevard” type paper in Hungary. Hajdu had a keen interest in Jewish communal life and was one of the leaders of the liberal Isaiah Religious Society. He supported the Zionist cause before World War I and after the revolution of 1918 continued the struggle against assimilation within the framework of the Pest Neolog community. His literary works describe Jewish village life in western Hungary, and include *Gilead* (1914) and *Szeniczsei Savuot* (“The Shavuot of Szenice,” 1939). In 1939 he emigrated to Erez Israel and settled in Tel Aviv.

HAJEK, MARKUS (1861–1941), laryngologist. Hajek, who was born in Yugoslavia, served in Vienna as assistant in the Rudolf Hospital and the University Polyclinic, and then became professor of laryngology at the University of Vienna. Hajek made fundamental contributions to anatomic, pathological, and clinical subjects in rhinolaryngology. He developed a systematic and scientific approach in the diagnosis and therapy of sinus ailments based on anatomical and pathological studies. He conducted studies on tuberculosis of the upper respiratory tract. He devised many practical instruments, suggested a new method of operation on frontal sinusitis, and improved the technique of extralaryngeal operations for cancer of the larynx. Hajek had to emigrate when the Nazis annexed Austria and died a destitute refugee in London. Among his publications are *Pathologie und Therapie der entzündlichen Erkrankungen der Nebenhöhlen der Nase* (1899) which was translated into English in 1926, and *Syphilis of the Oral Cavity, Pharynx and Nasopharyngeal Cavity* (1928).

HAJIM, JISRAEL (Bohor, also known as Davico; 1800–1880), author and printer; scion of a Sephardi family in Belgrade. Hajim lived in Vienna as well as Belgrade, where he belonged to the “Turkish” (i.e., Sephardi) Synagogue as *gab-bai* and was also employed in the printing shops of Holzinger and Schmid, writing, editing, and typesetting Hebrew prayer books along with his own Ladino translations of the Psalms and other Biblical texts. He also produced an alphabetical guide for Jewish students called *Hinukh le-No’ar*. In the late 1830s he returned to Belgrade and worked for some 20 years as a Hebrew printer and editor in the print shop of the Serbian Prince Milosh. Hajim composed Judeo-Spanish or Ladino (sometimes referred to as Judesmo) introductions, translations, and commentaries on Hebrew texts. He is considered a pioneer in the literary usage of Ladino. He is credited with having declared: “*Byen avinturado sira il ki travajera nil ladinu*” (“Happy is he who writes in Ladino”).

[Zvi Loker (2nd ed.)]

HAJJĀJ (Hagège), DANIEL (1892–?), *Tunis-born publicist and Judeo-Arabic writer who immigrated to Paris in 1959. Hajjāj published, translated, adapted, and edited over 30 novels and worked on several local papers, while at the same time

being employed in a series of professions – including pharmacist and typographer. Among his writings in Judeo-Arabic are “The Barber’s Assistant” (1930), a short story followed by a collection of 1,000 Tunisian, Judeo-Arabic proverbs (*Mille proverbes tunisiens*), arranged in alphabetical order and “Tunisian Judeo-Arabic Literature” (1939), a survey of Judeo-Arabic literature and writers. He also founded and edited the scientific and artistic periodical *La Gaieté Tunisienne* (1913–15, 1933).

[Robert Attal]

HAJNAL, ANNA (1907–1978), Hungarian poetess, writer, and translator, wife of I. *Keszi. Hajnal was born in Gyepűfűzes. In 1937–38 she was one of the editors of the literary journal *Argonauták* (“Argonaut”). Her poems are marked by perfection of form and metaphysical feeling. Her lyrical poems cover a wide area and include Jewish, especially biblical, themes, such as “*Tánc a frigyáda körül*” (“Dance Around the Ark of the Covenant”) and “Job.” The greatest of her Jewish poems, if not of all her poems, is certainly her long poem “Tiszta, tiszta, tiszta” (“Pure, Pure, Pure”), which she terms “a Jewish Dirge.” It is a paraphrase of the ritual of **tohorah* (the traditional washing of the dead before burial). Both in form and in translation the poem is a masterpiece; the lyrical elements of the text, particularly of the Song of Songs and the thoughts of the mourners, are interwoven with unconventional inner dialogue. Among her published works mention should be made of her collected poems (1948); *Ébredj fel bennem álom* (“Wake Up My Innermost Dreams,” 1935–48), and *Eső esik-versek gyermekeknek* (“It Is Raining – Poems for Children,” 1954).

[Baruch Yaron]

HAJÓS, ALFRÉD (1878–1955), architect and first Hungarian Olympic swimming champion (1896), designer of sports stadiums. His main project was the roofed swimming pool (1930) on Margaret Island in Budapest. Hajós was a convert to Christianity.

[Eva Kondor]

HAKAM AL, Baghdad family, members of which were rabbis of the community from the 18th to the 20th centuries. Moses Ḥayyim (1756–1837), rabbi and halakhic authority, was born in Baghdad. He served as rabbi of Basra for several years, and then—from 1787 until his death – as rabbi of Baghdad. The Jews of Baghdad continued to follow his decisions and takkanot. His novellae and sermons are scattered in the works of his contemporaries. ELIJAH BEN ḤAYYIM MOSES (1807–1859) was a rabbi, preacher, and kabbalist, and the author of *Midrash Eliyahu* (1862), a work on kabbalistic explanations of biblical and talmudic passages. He was also a wealthy and generous merchant. His son, JOSEPH ḤAYYIM (1833 (or 1835)–1909) was an outstanding scholar. His son JACOB (1854–1920), rabbi, kabbalist and preacher, succeeded his father (1909). He wrote: *Zizim u-Ferahim* (1904), homilies on the Pentateuch and Ze-

khut Avot, which he appended to his father's work *Hasdei Avot* (1904). Several of his works, including responsa, and novellae on *aggadah*, are still in manuscript. Many of his novellae are scattered throughout his father's works. He was succeeded in turn by his son, DAVID.

[Avraham David]

HA-KARMEL (Heb. הַכַּרְמֶל), Hebrew periodical published in Vilna under the editorship of S.J. *Fuenn. It first appeared as a weekly (1860–70) and later as a monthly (1871–80). *Ha-Karmel* was required by terms of its license to publish a Russian supplement. This supplement was a more extreme advocate of the enlightenment than its Hebrew equivalent. Fuenn was a moderate *maskil* who tried to bridge the gap between the traditionalist and liberal elements. He supported the policy of the Russian government toward the Jews, closer association of the Jews with the Russian nation and its culture, and advocated the transition to labor, especially agriculture. Among the contributors to *Ha-Karmel* were A.B. Lebensohn, Z.H. Katzenellenbogen, M. Plungian, E. Zweifel, J. Eichenbaum, A.B. Gottlober, J.L. Gordon, Kalman Schulmann, J. Reifmann, A. Harkavy, Solomon Buber, S. Rubin, R.A. Braudes, and J.M. Pines. For a short time (1866–68), *Ha-Karmel's* editorial policy became more liberal and a number of articles by more radical authors appeared (A.U. Kovner, A.J. Paperna, and L. Kantor). Editorials came out in support of M.L. Lilienblum who also began to contribute to it. However, it soon resumed its more moderate course. The number of subscribers fluctuated between 300 and 500. *Hevrat Mefizei ha-Haskalah*, to which the periodical devoted much space from the time of the founding of that society (1863), supported *Ha-Karmel*, although not pleased with its moderate position. The literary level of the periodical was generally low, its language flowery, the poems (with the exception of those of J.L. Gordon) and stories few and poor, and the articles written in a cumbersome style. Permeated with a spirit of Russian patriotism, *Ha-Karmel* supported the Russification policy in the regions of Lithuania and Poland. The paper devoted much space to news of Jewish life in Vilna and its surroundings.

[Yehuda Slutsky]

HAKDAMAH (Heb. הַקְדָּמָה), introduction to a book. The first known *hakdamah* is the introduction to the **Halakhot Gedolot*. In effect it is a sermon in praise of the Torah which its author saw fit to place at the beginning of his book as a preface. In medieval literature the *hakdamah* served as a literary genre and halakhic authors regarded themselves duty bound to attach a *hakdamah* to their works. Generally speaking the author in his *hakdamah* gives his motives for writing the book, and says something about its contents, but very often the *hak-*

damah has important literary value of its own. Spanish and Italian authors also gave their *hakdamot* an aesthetic form by means of rhyme, meter, and even verses and complete poems, and some of them are literary gems. Especially noteworthy are those of Nahmanides who wrote many fine *hakdamot*, of especial merit being those to his *Milhamot ha-Shem* and his *Torat ha-Adam*. Some *hakdamot* are complete works, both in scope and in quality, and of these the introduction of Menahem b. Solomon *Meiri to his commentary *Beit ha-Behirah* on *Avot* is especially noteworthy. Occasionally the contents, purpose, and scope of the book cannot be fathomed without the *hakdamah*. Because the ordinary reader usually omits the reading of the *hakdamah*, some authors literally adjured copyists not to copy their works without the introduction, as did, for example, the author of **Ha-Hinukh*. So important was the *hakdamah* regarded that a popular proverb has it that “a book without a *hakdamah* is like a body without a *neshamah*” (“soul”).

[Israel Moses Ta-Shma]

The *hakdamah* attained full development with Saadiah Gaon, in the tenth century. A systematic thinker, he found it necessary to explain what had motivated him to treat the particular subject he had chosen, thus laying the foundation of his thesis as well as apprising the reader of the content of the book he was presenting. He followed this pattern in his *siddur* and particularly in his philosophical work, the *Sefer ha-Emunot ve-ha-De'ot*. In his rather lengthy introduction he states that he wrote this book in order to resolve the doubts and confusions of his contemporaries concerning their traditional faith. The method followed by Saadiah Gaon was further developed and perfected by Moses Maimonides. He used his prefaces to certain orders, tractates, and chapters of the Mishnah, to sections of his great code, the *Mishneh Torah*, to expound his own philosophical ideas, in addition to elucidating such recondite subjects as the various degrees of ritual impurity dealt with in the order of *Tohorot* or the plants mentioned in the order of *Zera'im*. Thus, in the “Eight Chapters” prefacing his commentary on the tractate *Avot*, he unfolds a complete system of ethics, while in his introduction to the tenth chapter of the tractate *Sanhedrin*, where the afterlife is mentioned, he discusses resurrection, listing what he regards as the fundamentals of Jewish belief, the 13 “principles” of Judaism. Maimonides' philosophical magnum opus, the *Guide of the Perplexed*, has both a short dedicatory preface addressed to his favorite pupil for whom it was written, as well as a fairly extensive general introduction, outlining his understanding of the text of Scripture, which, according to him, cannot always be taken literally. He also cautions the reader not to judge the merit of his book by a few isolated statements but to consider it in its totality and with the same seriousness with which it was written. Among the medieval Jewish scholars whose prefaces to their works are worthy of note, Abraham ibn Ezra stands high on the list. In a rhymed introduction to his commentary on the Pentateuch, after dismissing as worthless four other methods of interpretation, he summarizes his own approach, namely that of

a critical understanding of the biblical text, making use of all the aids of philology available, regardless of the conclusions to which such an approach may lead.

The prefaces of books by medieval Jewish authors started out, like those of the Muslim writers of the time, with praise of God. With the introduction of printing it became customary for publishers, editors, and even proofreaders to write prefaces asking the indulgence of the readers for typographical errors and mistakes due to other causes.

[Samuel Rosenblatt]

ḤAKETÍA, the Judeo-Spanish of North Africa. The Judeo-Spanish dialect spoken until two or three generations ago in the Jewish North African communities of *Morocco and *Algeria, and also the city Gibraltar, is known as Ḥaketía, Jaquetía, or Ḥakitíya. It is based on the language spoken by the Jews in *Spain before their expulsion. Ḥaketía is distinct from Judesmo, spoken in *Turkey and in the Balkans, hence its distinct name, the etymology of which is unknown – the root may be Arabic *ḥky* or *ḥkt* in the sense of speaking or conversing. The term thus applies only to the spoken dialect, which has borrowed many words from the neighboring Maghreb dialects, both Jewish and Muslim, and even from Spanish Arabic. This use of Arabic decreases with the rise in register, and may become negligible. So while the term Ḥaketía may be applied for convenience to the dialect as a whole, it must be remembered that the dialect also contains literary registers which use the general Judeo-Spanish koiné, namely Ladino, although Ḥaketía has its own distinct features. The most prominent is the high incidence of a velar-fricative realization [x] of the phoneme spelled in Hispanic Spanish with the letter “j” (*jota*) alongside the alternants characteristic of Judeo-Spanish, namely a voiced or voiceless post-alveolar sibilant [z] or [s].

In contrast with the Eastern Judesmo, Ḥaketía retained links with the Spanish of the Iberian Peninsula throughout the ages following the Expulsion because of its geographical proximity as well as Spanish and Portuguese presence in various North African coast cities: Ceuta, Melilla, Oran, Tangier, Arcila, and Larache. Its decline was greatly accelerated by the massive Spanish presence in Northern Morocco since 1860 when the city of Tetuan was conquered by Spain for two years, and more so since the establishment of the Protectorate in 1912. The intensive daily interaction between the entire Jewish population (not just merchants and the like) and the Spaniards greatly accelerated the transition from a “Hispanicized” form of Ḥaketía to almost pure Spanish. Sons of Ḥaketía speakers began to restrict their dialect to domestic circles (home and community) and to defined functions. In the resulting diglossia, Ḥaketía was the Low variety. This state of affairs was due to the threat, perceived by the young generation, of Ḥaketía to their linguistic image, as they were aspiring for education, progress, and cultural emancipation. Most of them did indeed achieve this goal, and modern Spanish, with all its assets, became their primary language. Today

Ḥaketía remains in partial usage, limited to certain registers in the speech of these community members, most of whom have since emigrated from Morocco to Israel or to various Western countries. At this distance it seems Ḥaketía no longer poses a threat; it is no longer regarded as broken Spanish but rather as a language in its own right, with its own merits and history. Now people have begun to relive it, reconstruct some of its usages, and compose and act plays in it, albeit restricted to humoristic genres; Ḥaketía will probably never again be used in serious contexts.

The first to write a detailed, scientific account of the dialect was Joseph Benoliel in the 1920s. Most of what we know about Ḥaketía today is based on this account. Benoliel has salvaged much material belonging to the cultural tradition (oral texts, proverbs, etc.), grammar (phonology and morphology), and lexicon. He remembered the dialect as he had heard it in the second half of the 19th century, when it was still in current, spontaneous use. Respanification was already in progress, as was later verified with the discovery of the 1861–1875 protocols of the Tangier community committee, which showed many influences from Standard Spanish. Admittedly, these protocols represent an official register, but Spanish influence was also found in manuscripts of folktales and chronicles from the beginning of the 19th century.

Judeo-Arabic was also current in these communities. Judeo-Spanish/Judeo-Arabic bilingualism may explain the high portion of Arabic words in Ḥaketía. Further research could ascertain whether bilingualism was a communal or individual phenomenon, whether it was limited to men or included women, to what extent and what purposes each dialect served, whether a certain kind of diglossia emerged, and what part was played by *forasteros* (“strangers,” i.e., immigrants from other Moroccan communities). The massive shift to modern Spanish in these communities can only be explained if we assume that the Arabic element was secondary in their speech. Further proof of that is the suppression of any Arabic elements as soon as the register was raised. High-register Ḥaketía is not represented in literary works, which are nonexistent in this dialect; it occurs rather in religious sermons, miscellaneous manuscripts, and prescriptive essays, such as *Dat Yehudit* (“Jewish Religion”), introducing women to their specific observance practices, by Abraham Laredo and Isaac Halevy, first printed in Livorno in 1827.

Scholars of both Spanish and non-Spanish origin have shown an interest in Ḥaketía (see bibliography). Important research has been conducted in academic institutions such as the Arias Montano Institute in Madrid, subsequently the CSIC (Consejo Superior de Investigaciones Científicas). Most of the researchers, of cultural-historical orientation, were keen to collect documentation of the oral-literary tradition, romances, coplas, elegies, wedding songs, etc. These collections represent a high linguistic register, inclining towards “pure” Spanish, both old and new. Therefore the picture they supply of vernacular Ḥaketía is only partial. Most of the dialectal research conducted so far has concentrated on its description

as a Romance language. The Arabic element is still unexplored, and the Hebrew element only partially studied. One major advantage of Benoliel's works is his concept of the dialect as a living vernacular, not just a literary language. Similarly, Jacob Hassan, who has dedicated a large number of studies to revision and analysis of literary texts, shows a keen interest in aspects of the vernacular. Both these scholars are also distinguished in their study of the Hebrew element in Ḥaketía.

Noteworthy fieldwork has been conducted by Alegria Bendelac, who interviewed and recorded hundreds of informants, publishing her studies in three volumes. Bendelac's *Los Nuestrros...* (1987) is a book aspiring to sketch a portrait of the Ḥaketiphonic community in its native land by means of scores of transcribed texts acquired at recorded interviews. These texts reflect the spoken, everyday dialect in its diversity and registers. Bendelac's *Voces Jaquetiescas* (1990) is a kind of glossary of Ḥaketian expressions, where the writer notes that, despite its far-reaching overlap with Standard Spanish, it is still "alive and kicking," especially by virtue of its distinct intonation, phraseology, and connotations. In 1995 Bendelac published a dictionary that comprises not only what the writer found in Benoliel's book, but also material she collected in her recordings, including authentic quotations that demonstrate actual linguistic usage.

As stated, some of the current scholarly activity in the domain of Ḥaketía is conducted by both scholars and laymen who thereby express their longing for the past of the community, a past which looms up in the distance and projects its glory over the present. Of note is "Centro de estudios sefardíes de Caracas," which publishes books and a periodical called *Maghen*. Some individuals took the initiative to actively collect texts, such as Benazeraf's 1978 collection of Ḥaketía proverbs, while others continue to do so. This endeavor is most prominent in the field of modern artistic creativity: humorous sketches, such as those written and performed by Solly Levy and the tapes recorded by the brothers Esther Aflalo and Mozi Cohen. These writers display an impressive mastery of the dialect. Although the Ḥaketía in their writings is reconstructed, their memory and praiseworthy talent can be relied upon, and the authenticity of their materials is convincing. The protocols of the Tangier community committee and other written documents may now be found on scholars' desks. As this work progresses, so will our state of knowledge in this field.

[Yaakov Bentolila (2nd ed.)]

HAKHAM (Heb. חָכָם; lit. “wise” or “sage”), title given to rabbinic scholars. Originally, it was inferior to the title “rabbi” since a scholar who possessed *semikhah* was called “rabbi” while the lesser savant was called *hakham*, or “sage” (BM 67bf.). Afterward it was also utilized for ordained scholars (Tosef., Yev. 4:6). Another talmudic distinction was between *hakham* and *talmid* (“disciple”). The disciple was only expected to answer inquiries that pertained directly to his studies, while the sage was required to respond to questions in all areas of rabbinic scholarship (Kid. 49b). The title *hakham* was also used as a formal designation of the third in rank after the *nasi* and *av bet din* of the Sanhedrin (Hor. 13b).

Sephardi Jews later used the title *hakham* for their local rabbis (in London and Amsterdam, applied to the rabbi of the Spanish and Portuguese congregations, it is written Haham), and reserved the more honorable designation of rabbi for pre-eminent scholars (David Messer Leon, *Kevod Hakhamim*, ed. by S. Bernfeld (1899), 63f.). Turkish Jewry designated its chief rabbi as **hakham bashi*.

HAKHAM, SIMON (1843–1910), author and Bible translator. Hakham was born in Bukhara, the son of a scholarly Baghdad emissary. He emigrated to Jerusalem in 1890. During his years in Jerusalem, he was active as editor, publisher, translator, and author. Among his major publications are *Shir ha-Shirim* (1904²), *Midrash Petirat Moshe* (1897), prayers and *piyyutim* for holidays (1902), *Pitron Halomot* (1901), the Passover *Haggadah* (1904), and *Targum Sheni to Megillat Esther* (1905). He edited and published *Sefer Shahzadeh we-Sufi ve-hu Sharh al ha-Sefer *Ben ha-Melekh ve-ha-Nazir* (1907) by Abraham ben Samuel ha-Levi (ibn) *Ḥasdai, which Elijah b. Samuel had translated into Judeo-Persian in 1684. He also published a Judeo-Persian translation of parts of the Shulḥan Arukh under the title *Likutei Dinim* (1901–03), prepared by Abraham Aminoff, the leading rabbi of the Jerusalem Bukharan colony. He translated Abraham Mapu’s biblical novel *Ahavat Ziyyon* (1912²), and brought out part of the famous *Sefer Sharh Shahin al ha-Torah* (1902–4) by the 14th-century Judeo-Persian epic poet Maulana *Shahin of Shiraz, along with some of his own poetry.

His translation of the Bible into the Judeo-Persian of the Bukharan Jews was a monumental achievement which ranks him with the great Bible translators. He began his *tafsir* in 1906, and it appeared in successive volumes along with the Hebrew text, *Targum Onkelos*, and Rashi. By the time of his death he had completed the Pentateuch and the Prophets up to Isaiah 41:9; his collaborators completed the translation of the whole Bible.

[Walter Joseph Fischel]

HAKHAM BASHI, the title of chief rabbi in the *Ottoman Empire, composed of the Hebrew work *hakham* (“sage,” “wise

man”) and the Turkish word *bashi* (“head,” or “chief”). At the end of 1836 or the beginning of 1837 the Ottoman authorities confirmed the first *hakham bashi*, Rabbi Abraham Levi, in Constantinople (see *Istanbul). According to a report in the official gazette of the empire this gesture was made at the request of those members of the community in the capital who were subjects of the sultan. They had no Christian-European powers behind them and were jealous of the honor of official confirmation that the government accorded to the Greek and Armenian patriarchs. Current research attributes the Ottoman authorities with imposing the *hakham bashi* on the Jewish community. The motivation for such a change in their policy regarding the Jews was the recent Greek war of independence that resulted in the establishment of a Greek state in 1832. As a result, the Ottoman Empire began a series of reforms that changed their relationship with various minority communities. Another factor was the improved relations with Great Britain, which was expressing increased interest in “Jewish Emancipation.” Since European intervention assisted the Greeks in their war of independence, the Ottoman authorities were careful not to alienate other minority communities. This interpretation of events explains the fact that for over 30 years, the Ottoman Jewish communities regarded the *hakham bashi* with suspicion, to a great extent ignoring the rabbis who occupied the office. Thus, the *rav ha-kolel* was regarded as the religious leader. In 1864, when Rabbi Jacob Avigdor was appointed *hakham bashi*, his prestige as an esteemed scholar finally won over the Jewish community. His successor, also a scholar of great repute, Rabbi Yakir Geron (*hakham bashi* from 1863 to 1872), helped cement the communities positive attitude toward the *hakham bashi*. In any event, this was in fact a turning point in the policy of the Ottoman authorities, who hitherto had not interfered in the internal affairs of the Jewish community and for centuries past had given no official status to its representatives. The original copies or authentic texts of the *berat hümayun* (imperial confirmation of appointments) occurring from 1836 onward, which were also granted to chief rabbis in *Adrianople, *Salonika, *Izmir (Smyrna), Broussa (now *Bursa), and *Jerusalem, show that there was indeed a policy, the significance and consequences of which went beyond mere confirmation or appointments. Implicitly contained was an official recognition of the Jewish *millet (a religious communal organization of non-Muslims in the Ottoman Empire).

A *berat* was concerned with three interrelated matters: the religious powers of the *hakham bashi*, his powers as representative of the government, and the permission to read the Torah. Within his area of jurisdiction the *hakham bashi* was the supreme authority in all religious matters and in charge of all *hakhamim* and heads of the community. He alone was authorized to ban and excommunicate offenders and to prohibit their religious burial. The person and official residence of the *hakham bashi* enjoyed immunity which extended also to the *hakhamim* and officials subordinate to him. Disagreements on religious questions between *hakhamim* and the local

Muslim authorities were to be settled before the supreme authorities of the empire in Constantinople. As representative of the government the *ḥakham bashi* was responsible for the collection of government taxes. Government officials had to lend the *ḥakham bashi's* officials every assistance in performing this task and place guards at their disposal. To protect his officials from molestation and restrictions when traveling, they were excused from wearing distinctive Jewish clothing and permitted to carry arms. They were thus exempt from two important provisions of the Covenant of *Omar. By an order of 1850 the religious heads of the four millets were required to collect the poll tax. Regarding the permission to read the Torah, the intention to grant rights to the community as a whole is conspicuous in a clause figuring in all *berat* texts; it declared that the reading of the Torah in the *ḥakham's* house and in other houses is permitted in the Jewish religion, as is hanging veils and candelabra where such reading takes place. This declaration was tantamount to the permission to establish permanent synagogues, and it constituted an ingenious circumvention of a prohibition contained in the Covenant of Omar, which was a source of many difficulties and an occasion for incessant extortion. The *berats* issued in provincial towns to the *ḥakham bashi* state expressly that they were granted upon the recommendation of the *ḥakham bashi* of Constantinople, who was thus the head of all the rabbis in the empire. This was why, in the event of a disagreement among the members of a community concerning the appointment of the local *ḥakham bashi*, the disputants would try to influence the *ḥakham bashi* of Constantinople. His decision not infrequently was based on other than objective considerations. From certain (especially Tripolitanian and Iraqi) sources it appears that a *ḥakham bashi* was sometimes sent from the capital without the local community having been consulted. The provincial *ḥakham bashis* were technically on an equal footing with the *ḥakham bashi* in Constantinople. However, the central Ottoman authorities viewed the *ḥakham bashi* in Constantinople as the leader of the Jews throughout the empire.

It is clear that while the *ḥakham bashi's* official functions enhanced his importance and prestige, they were not in themselves sufficient to grant him supremacy in the field of *halakhah* and religious jurisdiction. In fact, this post was sometimes assigned to a simple schoolteacher. Besides the *ḥakham bashi* who was described in French as temporal head (a translation of the Arabic-Turkish term *shaykh zamani*), there were *ḥakhamim* bearing the designation *rav ha-kolel* (chief rabbi) or spiritual head (*shaykh rūḥī*). It happened sometimes that a *ḥakham bashi* who had resigned or been deposed subsequently served as *rav ha-kolel*, just as *rav ha-kolel* (see *Kolel) was occasionally appointed *ḥakham bashi*. The powers vested in the *ḥakham bashi* show that he was regarded by the Ottoman authorities as their representative vis-à-vis the Jewish population, performing official functions on behalf of the Jews, and he was so regarded by the Jews themselves. His situation was further complicated by dissension between strictly traditionalist, anti-modernist members of

the community and those favoring a general education and reforms in communal affairs. This situation accounts for the fact that of the five such chief rabbis officiating in the years 1836–63, three were deposed by the community and one was dismissed by the government because of his non-Turkish nationality. Three continued in office in the post of *rav ha-kolel*, which seems to indicate that they had been deposed as a result of clashes between the different factions within the community.

The first *ḥakham bashi* in Jerusalem was appointed by imperial firman in 1841. His Hebrew title **rishon le-Zion* was used by the Sephardi chief rabbis of Jerusalem. The "Organizational Regulations of the Rabbinate," confirmed by imperial firman in 1865 (see *Millet and *Community), describe in the first 15 clauses the status and powers of the *ḥakham bashi* as the head of the Jewish millet in the empire. The powers of the provincial chief rabbis have always been defined in the firmans issued on their appointment. In 1835 *Tripolitania again came under the direct rule of the Sublime Porte who introduced there the same order that existed throughout the empire. The first *ḥakham bashi* was appointed by imperial firman in 1874 and therefore Tripoli is not mentioned in the "Organizational Regulations of the Rabbinate" of 1865. The title became so common that it referred to the head of every small community. The title *ḥakham bashi* is still in use in the Turkish republic, which has in Istanbul the largest Jewish community of the territories which once belonged to the empire, except Israel. After *Iraq's separation from the *Ottoman Empire and the establishment of the British Mandate, *Baghdad Jewry was presided over by the deputy *ḥakham bashi* and spiritual head of Baghdad. This title was abolished in Iraq in 1932 and the title *ra'īs al ḥakhāmim* came into use.

Holders of the office of ḥakham bashi

Abraham Levi Pasha	1836–1839
Samuel Hayim	1839–1841
Moiz Fresko	1841–1854
Jacob Avigdor	1854–1870
Yakir Geron	1870–1872
Moses Levi	1872–1909
Chaim Nahum Effendi	1909–1920
Shabbetai Levi	1920–1922
Isaac Ariel	1922–1926
Chaim Bejerano	1926–1931
Chaim Isaac Saki	1931–1940
Raphael David Saban	1940–1960
David Asseo	1961–2002
Isak Haleva	2002–

[Haïm Z'ew Hirschberg / David Derovan (2nd ed.)]

HAKHEL (Heb. הַקְהֵל; “assemble”). The Bible enjoins that “At the end of every seven years, at the time of the year of release, at the Feast of Tabernacles” there is to take place an assembly of the whole people, “men, women, children, and the stranger that is within your gates.” The purpose of this assembly is “that they may hear and so learn to revere the Lord your God and to observe faithfully every word of this Teaching” (Deut. 31:10–13). This ceremony, called *Hakhel* (“assemble”) after the opening word of verse 12, is mentioned only once in the Talmud (Sot. 7:8), but in great detail and includes an interesting historical incident. The Mishnah lays it down (*ibid.*) that the date referred to is on the first day of the festival of Sukkot after the close of the seven-year period of *shemittah, i.e., on the 15th day of the first month of the eighth year.

The Mishnah connects this ceremony with another passage which deals with an entirely different subject, namely the duties of the king as laid down in Deuteronomy 17:14–20 and which it calls “the Chapter of the King.” According to the Mishnah it was at the *Hakhel* ceremony that the king read that and other passages. It is possible that the coalescing of these passages is due to the similarity of wording between the two, the passage quoted above, and the passage with regard to the king “that he may learn to fear the Lord his God to keep all the words of this law and these statutes to do them” (*ibid.*, 17:19).

The Mishnah states that a wooden platform was set up in the Temple court upon which the king sat. “The minister (*hazzan*) of the synagogue used to take a scroll of the Torah and hand it to the chief of the synagogue, and the chief of the synagogue gave it to the deputy high priest who handed it to the high priest who handed it to the king. The king received it standing and read it while seated.” The passages read were not “all the words of the Torah” but selected passages from Deuteronomy; from the beginning to 6:19, the last verses of which are the first paragraph of the *Shema, the second paragraph of the *Shema* (11:13–21), 14; 22–27; 26:12–15; 17:14–20 (“the Chapter of the King”), and 27:15–26. He concluded the reading with eight benedictions, of which seven were identical with those pronounced by the high priest on the Day of Atonement (see Sot. 7:6) and the eighth (the fourth in number) for the festival instead of the one for pardon of sin pronounced by the high priest.

The continuity of the description of the ceremony in the Mishnah is interrupted by the information that despite the rule that the king read the passages while seated, “King Agrippa read it standing, for which he was praised by the rabbis,” and continues with the moving story of the king, conscious of his mixed descent, bursting into tears when he read “thou mayest not put a foreigner over thee who is not thy

brother” (Deut. 17:15) and the assembled people called out “thou art our brother.” Most scholars identify this Agrippa who was so beloved of the people with *Agrippa I, who reigned from 41–44 C.E., the first of which years coincides with the year of *shemittah*. Others, however, ascribe it to *Agrippa II. In recent years in Israel an attempt has been made to revive a symbolical form of the *Hakhel* ceremony.

[Louis Isaac Rabinowitz]

HAKHNASAT KALLAH (Heb. הַקְנִסַת כַּלָּה; “bringing in the bride,” i.e., under the wedding canopy), a rabbinic commandment to provide a dowry for brides and to rejoice at their weddings (Maim. Yad., Avelim 14:1). The term is popularly applied to the provision of dowry for the poor brides. The precept is of such importance that it is permissible to interrupt even the (public) study of Torah in order to fulfill it (Meg. 3b and Tos. ad loc.). It is reckoned in the prayer book as among those deeds “for which a man enjoys the fruits in this world, while the stock remains for him for the world to come.” (Hertz, Prayer, 17, version of Pe’ah 1:1 and Shab. 127a). A man who raises an orphan and enables her to marry is considered as continually doing acts of righteousness and justice (Ps. 106:3; Ket. 50a).

Communal charity collectors are permitted to use the funds they collected for other purposes for the dowry of poor brides (Sh. Ar., YD 249:15, and Sifteï Kohen ad loc.). The Mishnah specified the minimum sum of 50 *zuz* to be given to a bride, but “if there was more in the poor funds they should provide for her according to the honor due to her” (Ket. 6:5). This minimal sum of “50 *zuz*” must be reassessed in every generation in accordance with its own economic conditions (Turei Zahav to Sh. Ar. YD 250:2). As in other aspects of communal Jewish charity, specific organizations were formed to supervise the collection and distribution of funds for the dowries and trousseaux of poor girls and orphans. These groups were often called *Hakhnasat Kallah* societies. In the ghetto of Rome, during the 17th century, for example such a society functioned actively (Roth, Italy, 364). Samuel Portaleone, an Italian preacher, in his description of seven charity boxes which existed in Mantua, Italy, in 1630, lists among them *hakhnasat kallah* (JQR, 5 (1893), 510). *Hakhnasat Kallah* societies have continued to function throughout the Jewish world.

In addition to aiding poor brides, the precept also demands that a person attend and rejoice at the marriage of any bride. It was considered meritorious to accompany the bride from her father’s home to where the wedding ceremony was to take place (Rashi to Meg. 29a). This aspect of *hakhnasat kallah* may also be fulfilled by accompanying the bridegroom to the *bedekin* (“covering” the face) of the bride (Beit Shemu’el to Sh. Ar. EH 65:1). While it is also customary to dance before the bride and to praise her, Bet Shammai held that the virtues

of the bride are not to be exaggerated, and that she is only to be praised “as she truly is.” Bet Hillel, on the other hand, ruled that every bride should be regarded and praised as “beautiful and graceful” (Ket. 16b–17a).

The fulfillment of the precept of *hakhnasat kallah* should be performed humbly, modestly and in privacy, thus complying with the dictum “to walk humbly with thy God” (Micah 6:8; Suk. 49b).

HA-KIBBUTZ HA-ARZI HA-SHOMER HA-ZA'IR, a union of kibbutzim in Israel, founded in 1927 by the first collective settlements of *Ha-Shomer ha-Za'ir pioneers. It regards itself as an avant-garde nucleus of the future socialist society in Israel and adheres strictly to the principles of collective life of its members and the collective education of their children. The first settlers arrived in Israel in 1919, and in 1922 established Bet Alfa, the first kibbutz of the movement. In 1936 the movement joined forces with the Socialist League and the two founded Mifletet Po'alim-Ha-Shomer ha-Zair in 1946. In 1948 the new party united with *Aḥdut ha-Avodah-Po'alei Zion to form *Mapam. New kibbutzim continued to be established into the statehood period. In 1970, Ha-Kibbutz ha-Arzi comprised 75 kibbutzim with a population of about 30,000, while in the mid-1990s it numbered 85 kibbutzim. In 2000 it united with the second secular kibbutz movement, Ha-Tenu'ah ha-Kibbutzit ha-Me'uhedet (Takam) to create the *Kibbutz Movement, now comprising 244 kibbutzim with a population of 115,600. Ha-Kibbutz ha-Arzi ha-Shomer ha-Za'ir emphasized ideological unity and mutual economic aid among its member kibbutzim. It established the Kibbutz Arzi Choir, the Sifriat Hapoalim press, and the daily *Mishmar*, which later became **Al-ha-Mishmar* and continued to appear until 1995.

For further details see *Kibbutz Movement, Ha-Kibbutz ha-Arzi ha-Shomer ha-Za'ir.

[Shaked Gilboa (2nd ed.)]

HA-KIBBUTZ HA-DATI, a union of 16 religious kibbutzim in Israel, established in 1935 by members of *Ha-Po'el ha-Mizrachi. It combines religious practice with collective life and labor and exerted a political influence in the *National Religious Party by strengthening its left-wing faction, “La-Mifneh.” The movement saw itself as a bridge between religious and secular people in Israel, and initiated projects to enhance understanding between these two groups. Eleven of the kibbutzim were founded before the establishment of the State of Israel, of which five were destroyed during the War of Independence (those of the *Ezyon Bloc were overrun and destroyed by Arab forces) and were reestablished later. Three other kibbutzim became moshavim shitufiyyim, and left the movement, while eight additional kibbutzim were founded after 1948. Many of the religious kibbutzim are located in

dangerous border areas, in settlements clusters aimed to assist one another. The founders of the kibbutzim were mainly Europeans, while over the years Bnei Akiva graduates from Israel and abroad joined them. In 1970 Ha-Kibbutz ha-Dati comprised 13 settlements with a population of about 4,000, while in 2004 it included 16 kibbutzim with a population of 8,000. The kibbutzim of Ha-Kibbutz Ha-dati base their economy on agriculture, industry, and tourism. The organizational structure of the movement is based on a council with 100 representatives from all the kibbutzim. The council, as the highest institution of the movement, meets every few years to discuss important issues. It appoints a secretariat with authority to make decisions between the council meetings. The secretariat, composed of 35 members, meets a few times a year. Day-to-day affairs are in the hands of an executive committee under a secretary-general chosen every four years.

For further details see *Kibbutz Movement, Ha-Kibbutz ha-Dati.

[Shaked Gilboa (2nd ed.)]

HA-KIBBUTZ HA-ME'UHAD, a union of kibbutzim in Israel founded at a conference in Petaḥ Tikvah in 1927 by the first “large” kevuḏot, established primarily by pioneers of the Third Aliyah, including previous groups of *Gedud ha-Avodah (“Labor Legion”). In 1951 a split occurred in its ranks due to political and ideological tensions between *Mapai and the left-wing *Aḥdut ha-Avodah. The split led to the breakup of kibbutzim, the establishment of new kibbutzim, and large-scale population movement between kibbutzim. The Mapai-oriented members seceded, eventually founding the *Iḥud ha-Kevuḏot ve-ha-Kibbutzim. During the 1960s and the 1970s, the two movements became politically closer, until their reunion in “Takam” (the united kibbutz movement) in 1980. In 1970, Ha-Kibbutz ha-Me'uhad numbered about 60 kibbutzim with a population of about 25,000–30,000. In 1980, Takam included 154 settlements with a population of 73,370. Its kibbutzim owned 206 industries and accounted for 40% of agricultural production in Israel. In 1996 the movement numbered 173 settlements with a population of 80,000. In 2000 it united with Kibbutz ha-Arzi ha-Shomer ha-Za'ir to form the *Kibbutz Movement. The movement had close connections with two youth movements – Ha-Maḥanot ha-Olim and *Ha-No'ar ha-Oved ve-ha-Lomed. Day-to-day activity in Takam was in the hands of an executive committee. The highest institution of the movement is the general assembly, where each kibbutz has at least one representative. The movement sponsored a wide range of social and cultural activities.

For further details see *Kibbutz Movement, Ha-Kibbutz Ha-Me'uhad.

[Shaked Gilboa (2nd ed.)]

ḤAKIM, ELIAHU (1925–1945), Jew executed in *Egypt in the Mandate Period. Ḥakim was born in *Beirut, and was brought to Erez Israel by his parents at the age of seven. At

the age of 17 he joined Leḥi. Together with Eliahu Bet-Zuri he was sent by his organization to *Cairo to assassinate Lord Moyne, then British Minister of State for the Middle East, whose seat was in Cairo. The attempt was successful, but Bet-Zuri and Ḥakim were apprehended. They were sentenced to death by a military court in Cairo on Jan. 1, 1945, and executed on Mar. 22. Their remains were interred in the Jewish cemetery of Cairo.

ḤAKIM, SAMUEL BEN MOSES HA-LEVI IBN (?1480–after 1547), rabbi in *Egypt and *Turkey. Samuel came from a distinguished family of Spanish origin which had settled in Egypt. His father, Moses, was a personal friend of the governor of Egypt and, when difficulties arose, intervened on behalf of the Jews. Samuel studied in Egypt under the **nagid*, Jonathan ha-Kohen *Sholal, and at the beginning of the 16th century he was already regarded as one of the eminent Egyptian rabbis. He later left Egypt for Constantinople, where he also occupied an important position in the Jewish community, but it is difficult to ascertain in which year he made this move. According to a responsum it was c. 1517, but this seems to be a mistake for c. 1527, since there is extant a *haskamah* signed by Samuel and R. *David b. Solomon ibn Abi Zimra in Egypt in the year 1527 (Neubauer, *Chronicles*, 1 (1887), 158), a date confirmed by two manuscripts. His departure for Constantinople could not therefore have taken place before 1527, unless it be supposed that two scholars of the same name lived in Cairo at the same time, which is very difficult to accept. The problem of two Samuel b. Moses ha-Levi ibn Ḥakim (Hakam) is further complicated by the existence of Samuel Hakan who is definitely not identical with Samuel Ḥakim. Samuel was a friend of Moses *Hamon, physician to Sultan *Suleiman. He frequently engaged in sharp polemics with the important rabbis of his time and even strongly criticized a halakhic ruling made by Shalom *Shakhna b. Joseph of Lublin on the laws of *shivlonot* (the gifts given by the bridegroom to his bride on the occasion of their engagement) which appeared at the end of the novellae of *Aaron ha-Levi of Barcelona (?) to *Kiddushin* (1904), which perhaps points to contacts between the rabbis of Constantinople and Poland. In 1547 he published a collection of responsa of *Isaac b. Sheshet Perfet (Ribash) in Constantinople. The book was published in sections and Samuel followed the accepted Constantinople custom of distributing the sections to purchasers on the Sabbath, in the synagogue. Isaac ibn Lev complained that this custom was tantamount to engaging in business on the Sabbath. Samuel pointed to the precedent of the similar sale of such books as *Toledot Adam ve-Havvah* (1516) of *Jeroham b. Meshullam and *Toledot Yizḥak* (1518) of Isaac *Caro. Furthermore, he said, the greatest rabbis had not protested against it.

Only a small number of Samuel's many responsa have survived; some are preserved in the works of his contemporaries such as the responsa of Joseph *Caro and *Levi ibn

Ḥabib, and a few responsa are still extant in manuscript. He is frequently mentioned in contemporary and later responsa. Ḥakim was on friendly terms with the *Karaites of Constantinople and was well acquainted with their customs. In one of his responsa written before 1533 (still in manuscript) he expresses the opinion that they sin inadvertently, not deliberately, and should not be treated as apostates or the illegitimate offspring of forbidden marriages. It is therefore permitted to intermarry with them, to drink their wine, to eat of their *sheḥitah*, and to accept them as witnesses in matters of personal status. This original opinion, for which no parallel or supporting view could be found either in his own or in succeeding generations, aroused the most vehement opposition of the other authorities. Among them were David b. Solomon ibn Abi Zimra (Responsa, pt. 2, no. 796), Moses di *Trani (Responsa, pt. 1, no. 37), and Bezalel Ashkenazi (Responsa, no. 3). There are extant glosses by Ḥakim to the novellae of Solomon b. Abraham *Adret on the tractate *Shabbat*, as well as a short introduction to the *Masoret Seyag la-Torah* of Meir ha-Levi *Abulafia. The place and date of Ḥakim's death are unknown.

[Abraham David]

ḤĀKIM BI-AMR ALLAH, AL-, the sixth caliph (996–1021) of the Ismā'īlī *Fatimid dynasty, which ruled in North Africa, Egypt, Palestine, Syria, and wide areas of the Arabian Peninsula. In the year 400 A.H. (1009–10 C.E.) a major change took place in al-Ḥakim's attitude toward the Muslim and Ismā'īlī traditions and he issued proclamations which were decisive for the development of the *Druze faith and community, of which he was the founder. The harassment of Christians, which had begun several years previously, was intensified, and the Church of the Holy Sepulcher in Jerusalem was burned down. According to Christian and Muslim sources these persecutions also included the Jews, but these reports should be treated with caution. A *Megillat Mizrayim* ("Egyptian Scroll") from 1012, which is extant in two versions, mentions al-Ḥakim as the protector of the Jews, who allegedly assembled in the Great Synagogue of Fustat to thank God that the caliph had saved them from a rioting mob. This favorable appraisal is confirmed in letters written by the heads of the Palestinian and the Fustat yeshivot which mention that al-Ḥakim subsidized their institutions. After 1012 the persecution also included the Jews; synagogues were burned, and there were instances of forced conversion to Islam. The difficulties ceased only in the last years of al-Ḥakim (1017–20). Christians and Jews were permitted to rebuild their places of worship and forced converts were allowed to return to their former religion. At that time al-Ḥakim openly presented himself as the incarnation of the deity. The two above-mentioned

events undoubtedly were related. Early in 1021 al-Ḥākim disappeared, and it is believed that he was murdered. A rumor spread among his followers that he was hiding on Mount al-Muqaṭṭam (near Cairo) and would appear again in the fullness of time (after a thousand years). The first article of the Druze faith is that al-Ḥākim was the last incarnation of the deity; he cannot have died, and his followers, therefore, are awaiting his return (*rajʿā*). Al-Ḥākim's personality and Druze doctrines influenced later Jewish mystic movements. Joseph *Sambari (17th cent.) recounts in his chronicle *Divrei Yosef* (Paris, Alliance Israélite Universelle, Hebrew manuscript no. 22–23) the story of al-Ḥākim's persecutions. According to this version, the persecution of the Jews was caused by the Arabic translation of the Passover *Haggadah*, which tells of the drowning of the Egyptian king. Al-Ḥākim thought that this referred to him and forbade further translations of the *Haggadah*. Sambari further states that al-Ḥākim was murdered by his sister in the year 411 A.H., i.e., 1021.

[Haim Zew Hirschberg]

HAKKAFOT (Heb. הַקָּפּוֹת), term used to designate ceremonial processional circuits both in the synagogue and outside it, on various occasions.

Such circuits are mentioned in the Bible. There were, for instance, seven circuits around Jericho (once a day for six days, and seven times on the seventh day; Josh. 6:14–15). The Mishnah records that the *lulav* was carried around the Temple altar during the seven days of *Sukkot (Suk. 3:12). Although the *Gemara* makes no mention of similar circuits during Sukkot in the post-Temple period, both Hai Gaon (B.M. Lewin, *Ozar ha-Ge'onim* (1934), Sukkah, 60, no. 151), and Saadia Gaon (in his *Siddur*) mention the custom of making a circuit around the synagogue with the *lulav* and *etrog* on Sukkot. Nowadays a single circuit is made around the *bimah* on each of the first six days of Sukkot (except for the Sabbath) during the chanting of **hoshanot* at the close of the *Musaf* service. On *Hoshana Rabba, the seventh day of Sukkot, the procession around the *bimah* is repeated seven times. It is related that on this day, Hai Gaon used to make a pilgrimage to Jerusalem, and there make seven processional circuits around the Mount of Olives (*Sefer Ḥasidim*, ed. by J. Wistinetzki (1924²), no. 630). The Torah scrolls are carried around the synagogue in processional circuits during both the *Ma'ariv* and *Shaharit* services on *Simḥat Torah (a custom first mentioned by Rabbi Isaac Tyrnau, 14th–15th century; *Minhagim* (Lunéville (1806), 51a). The Ḥasidim perform these *hakkafot* also at the conclusion of the *Ma'ariv* service on *Shemini Azeret. In Reform congregations, these *hakkafot* are performed on Shemini Azeret. In Israel where Simḥat Torah coincides with Shemini Azeret,

many congregations perform *hakkafot* again after *Ma'ariv* at the completion of the festival. With the advent of the Jewish women's movement in the 1970s, particularly in the United States, there was an on-going attempt to include women above the age of bat mitzvah in traditional synagogue ritual. This effort has had an impact across the spectrum of contemporary Jewish life. By the beginning of the 21st century, it was not unusual in modern/centrist Orthodox circles to give women one or more of the congregational Torah scrolls with which to make *hakkafot* and with which to dance. In most Conservative/masorti and in all Reconstructionist and Reform congregations, women and men participate in the same *hakkafot* and dance together with the Torah scrolls.

Hakkafot are also performed on a number of other occasions. For instance, Torah scrolls are carried around in a processional circuit during the dedication of both synagogues and cemeteries. In a number of communities, it is customary for the bride to make either three or seven *hakkafot* around the bridegroom during the wedding ceremony. The Sephardim and Ḥasidim walk around a coffin seven times prior to burial. It is also customary to walk around the cemetery when praying for the sick.

On all of these occasions one may note the juxtaposition of the "magic circle" with the mystical figure of seven, and the implied attempt to dissuade *shedim* ("evil spirits") from intruding upon the object of attention. With regard to the funerary *hakkafot* it has been suggested that the purpose is to ward off the spirits of the dead man's unborn children and to appease them with symbolic gifts of money. It is also significant that *Ḥoni ha-Me'aggel's miracles were performed after he had made a circuit (in the form of a drawn circle), around the place on which he stood (Ta'an. 19a, 23a).

[Harry Rabinowicz / Rela M. Geffen (2nd ed.)]

ḤALAFTA (early second century C.E.), *tanna*, father of the well-known *tanna* *Yose. Ḥalafta lived in *Sepphoris where he was a leader of the community (Tosef., Ta'an. 1:14; RH 27a). His colleague was *Johanan b. Nuri who discussed *halakhah* with him; seemingly among his associates were also *Akiva (BB 56b, where Ḥalafta is called Abba Ḥalafta as also in Shab. 115a; Tosef., BB 2:10; Tosef., Kelim, BM 1:5), *Ḥanina b. Teradyon (Ta'an. 2:5), and *Eleazar b. Azariah (Tosef., Kelim, BB 2:2). It is possible that in the last years of the Temple he was living in Jerusalem since he transmitted an incident about Gamaliel the Elder (Tosef., Shab. 13:2). Several statements by him in *halakhah* and *aggadah* have been preserved, some by his son Yose (Kelim 26:6; Tosef., Bek. 2:19, et al.).

[Zvi Kaplan]

ḤALAFTA BEN SAUL (early third century C.E.), Palestinian *amora*. Ḥalafta taught *beraitot* which are cited both in the Jerusalem Talmud (Ber. 1:8, 3c; Pe'ah 2:6, 17a; Shev. 2:7, 34a;

Hag. 3:7, 79d, et al.) and in the Babylonian (Zev. 93b; MK 10a; see Dik. Sof. *ibid.*). It is possible that he is to be identified with the Ṭahlifa b. Saul who taught a *baraita* quoted in the Babylonian Talmud (Men. 7b, et al.). An *aggadah* is also cited in his name (Ber. 29a). It has been suggested by some that he was the brother of Johanan b. Saul, and Yose b. Saul, a pupil of *Judah ha-Nasi.

[Zvi Kaplan]

HA LAḤMA ANYA (Aram. ܠܗܡܐ ܐܢܝܐ; lit. “Behold the poor bread”), opening words of an introductory paragraph of the Passover **Haggadah*. The announcement is in Aramaic, and is proclaimed at the **seder* service immediately after the conclusion of the *karpas* ceremony (in which greens are dipped in salt water; see **Passover seder*).

The announcement is composed of three unrelated sentences. The first reads, “Behold this poor bread (or, ‘bread of poverty’), which our fathers ate in the land of Egypt.” This points to the centrality of the *mazzah* (“the unleavened bread”) in the Festival of Passover. The second sentence invites the poor to the Passover meal: “Let anyone who is hungry come in and eat; let anyone who is needy come in and make Passover.” The third sentence reads, “This year we are here; next year we shall be in the land of Israel; this year we are slaves, next year we shall be free men.”

The origins and exact purport of the *Ha Laḥma Anya* are obscure. Most early portions of the *Haggadah* were written in Hebrew and are mentioned in the Mishnah. The language and content of this announcement, however, suggest that it was composed in Babylon after the destruction of the Temple. The second sentence does find an almost exact analogy in the Talmud (Ta’an., 20b), where R. Huna is said to have exclaimed before his meals “Let every needy person come and eat.” Mattathias Gaon, in the ninth century, claimed that this sentence of *Ha Laḥma Anya* had always been a *minhag avoteinu* (“custom of our fathers”; B.M. Lewin, *Ozar ha-Geonim*, 3 (1930), *Pesaḥim* 112). Had this sentence been the central feature of the announcement, however, the *Ha Laḥma Anya* would be expected to open the *Haggadah*, and to precede the **kiddush* and *karpas*.

The present version of the announcement is probably a combination of several texts which date from the talmudic and post-talmudic periods. It has undergone several modifications. *Maimonides (Yad, appendix to *Hamez u-Matzah*) cites the present version with minor changes and a small addition. *Saadia Gaon’s text opens with the third sentence, and is followed by the second. He omits the first sentence altogether. In certain late medieval manuscripts, the first sentence reads, “Behold like this poor bread...” Most texts, including those of Maimonides and *Judah Loew b. Bezalel, have the simple version in use today, “Behold the poor bread.”

HALAKHAH.

DEFINITION

The word “*halakhah*” (from the root *halakh*, “to go”), the legal side of Judaism (as distinct from *aggadah*, the name given to the nonlegal material, particularly of the rabbinic literature), embraces personal, social, national, and international relationships, and all the other practices and observances of Judaism. In the Bible the good life is frequently spoken of as a way in which men are “to go,” e.g., “and shalt show them the way wherein they are to go and the work that they must do” (Ex. 18:20). Originally the term *halakhah* (pl. *halakhot*) had the meaning of the particular law or decision in a given instance, as in the frequent expression “this is a law given to Moses on Sinai” (**Halakhah le-Moshe mi-Sinai*). This usage persisted, but side by side with it there developed the use of *halakhah* as a generic term for the whole legal system of Judaism, embracing all the detailed laws and observances. For instance, the Talmud (Shab. 138b) comments on “the word of the Lord” (Amos 8:12) that this means the *halakhah*.

The study of the *halakhah* in the rabbinic period and beyond it became the supreme religious duty. Because of its difficult subject matter and its importance for practical Judaism this study took precedence over that of any other aspect of Jewish teaching. Typical is the rabbinic saying that after the destruction of the Temple, God has nothing else in His world than the four cubits of the *halakhah* (Ber. 8a). The superiority of halakhic study over aggadic was expressed in the parable of the two merchants, one selling precious stones, the other small ware. Only the connoisseur comes to buy from the former (Sot. 40a).

The general assumption in the classical Jewish sources is that the *halakhah* in its entirety goes back to Moses, except for various later elaborations, extensions, applications, and innovations in accordance with new circumstances. Thus Maimonides (Yad, intro.) counts 40 generations backward from R. Ashi, the traditional editor of the Babylonian Talmud, to Moses and concludes: “In the two Talmuds and the Tosefta, the *Sifra* and the *Sifrei*, in all these are explained the permitted and the forbidden, the clean and the unclean, the liabilities and lack of liability, the unfit and the fit, as handed down from person to person from the mouth of Moses our teacher at Sinai.” But the verdict of modern scholarship is that the *halakhah* has had a history and that it is possible to trace the stages in its development with a considerable degree of success (see below).

[Louis Jacobs]

DOGMATICS OF THE HALAKHAH

Sources of Authority

Like other legal systems, the *halakhah* is composed of different elements, not all of equal value, since some are regarded

as of Sinaitic origin and others of rabbinical. Five sources can be differentiated:

THE WRITTEN LAW. According to the traditional concept of halakhic Judaism, the Written Law is not a collection of legal, religious, ethical statutes and the like deriving from separate sources, but a law uniform in nature and content and a revelation of the will of God – a revelation that was a single non-recurring historical event (at Sinai). This law is considered to be a book of commandments, positive and negative, numbering 613 (see *Commandments, the 613).

STATEMENTS HANDED DOWN BY TRADITION (KABBALAH). On the verse “These are the commandments” (Lev. 27:34), the *Sifra* (*Be-Hukkotai*, 13:7) comments, “Henceforth no prophet may make innovations.” Thus such commandments or injunctions the source of which is in the words of the prophets or the Hagiographa (referred to as Kabbalah) are generally regarded as of Sinaitic force, on the assumption that the prophets received them as an interpretation or as a *halakhah* given to Moses at Sinai. Thus, e.g., it is inferred from Jeremiah 32:44; “and subscribe the deeds, and seal them, and call witnesses,” that the signature by witnesses to a document is a Sinaitic law (Git. 36a). At times, however, the *amoraim* conclude that the verse is to be regarded as a mere support (**asmakhta*), and the matter does not come within the definition of Torah law. An ambivalent attitude on their part toward traditional statements can be discerned; there is even in the Babylonian Talmud a rule: inferences concerning statements of the Torah may not be drawn from statements contained in Kabbalah (Ḥag. 10b; BK 2b; Nid. 23a).

From the dogmatic point of view, however, the statement of Naḥmanides (on principle 2 of Maimonides’ *Sefer ha-Mitzvot*) and his differentiation seem correct; namely that wherever in the prophets and Hagiographa statements are made as commands and injunctions, they are merely an explanation of the Torah and have the same authority as the Oral Law, as tradition, while where statements are made by way of narrative, as “relating some event” (e.g., the case of sale in the Book of Jeremiah) they are of rabbinic status. The same applies to those laws designated in the Talmud as **takkanot* (“regulations”) of the prophets, even if attributed to Moses himself. For the concept *de-rabbanan* (“of rabbinical authority”) is not chronological but qualitative, so that such statements can be *de-orayta* (of Sinaitic authority) even if first revealed in the words of a late prophet, and *de-rabbanan* even if attributed to Moses, if they were transmitted as a *takkanah* or the confirmation of an ancient custom (e.g., the seven days of bridal festivity, the seven days of mourning).

THE ORAL LAW. The *Oral Law includes: the interpretation of the Written Law transmitted, according to the sages, in its entirety with its details and minutiae at Sinai; *halakhah*, e.g., given to Moses at Sinai in the restricted sense; and logical deduction.

Interpretation of the Written Law. This interpretation consists of two elements: that regarded as certainly handed down at

Sinai; that intrinsically inherent in the written word, but made manifest through the interpretation of Scripture by means of the accepted hermeneutical rules (see *hermeneutics). According to talmudic tradition anything transmitted directly by tradition counts as *de-orayta* and is in every way equivalent to the Written Law, while difference of opinion is found with regard to *halakhah* inferred only by means of interpretation since the Talmud itself has no systematic dogma on the subject.

Maimonides and Naḥmanides differ on this. According to the former (*Sefer ha-Mitzvot*, principle 2), anything inferred by interpretation is *de-orayta* only if supported by a tradition. If the Talmud does not clearly testify to its having been transmitted, then it is “the words of the *soferim*” or *de-rabbanan*.

On the other hand Naḥmanides holds (gloss, ad loc.) that anything derived by interpretation is also *de-orayta* whether or not supported by a talmudic tradition, unless the Talmud states explicitly that this is *de-rabbanan* (in the language of the Babylonian Talmud: “It is *de-rabbanan*, the verse being a mere support”). Both from the statements of Maimonides, as well as from those of Naḥmanides, it follows that *halakhot* inferred by interpretation of Scripture may be divided into three categories: *halakhah* received from Sinai where the purpose of the interpretation is to explain it and to connect it with the scriptural verse; in these cases there is no dispute as to the content of the *halakhah* since the interpretation at times merely serves a mnemotechnical purpose; *halakhah* not received from Sinai, but deduced by the sages from the scriptural verse, where the interpretation is in most cases to the point and included in the meaning of the verse; *halakhah* which all agree to be an innovation and *de-rabbanan*, the purpose of the interpretation being to find a support for it in Scripture (e.g., the rabbinic injunction against marrying relatives of the second degree, derived from Lev. 18:30: “Therefore shall ye keep My charge” (Yev. 21a)).

Halakhah Given to Moses at Sinai. This designation is given to ancient *halakhot* for which there is no scriptural support (or at the most very faint support). Examples are quantities (in connection with **issur ve-hetter* and things ritually unclean and clean, such as an olive’s bulk, a quarter of a log, etc., Er. 4a), or that **tefillin* must be square (Meg. 24b) and written on parchment (Shab. 79b). It is difficult to decide whether in the early tannaitic period they actually regarded such *halakhot* as having been given at Sinai or whether the term “at Sinai” is employed merely to indicate their antiquity in order to increase their holiness and thus to immunize them against challenge (see the commentaries of Samson of Sens and Asher b. Jehiel to Yad. 4:3; Jair Ḥayyim Bacharach, in his *Ḥavvot Ya’ir* (no. 192) enumerates about 70 such *halakhot*). See also *Halakhah le-Moshe mi-Sinai.

Logical Deduction. Sometimes the authors of the Talmud say of a certain *halakhah*, “it is self-evident,” and as such it does not require scriptural proof since it is regarded as axiomatic; such as “whoever wishes to claim anything in the possession of his fellow must bring proof.” To this category belong, strictly

speaking, also fundamental concepts such as **hazakah*, the majority **rule*, etc., since the scriptural verse adduced is only intended to provide a support for the *halakhah*. It is not the verse which is the source but logical reasoning and analogy.

SAYINGS OF THE SCRIBES (ELDERS). In talmudic literature, the expression *mi-divrei soferim* (of scribal origin) has two meanings: a statement in principle from the Torah but whose explanation is of scribal origin (see above, and e.g., Sanh. 88b); a statement decreed or enacted originally by the *soferim*, like “the second degrees of forbidden marriages are of scribal origin” (Yev. 2:4). What follows applies to the second meaning. Everything whose source is in statements of the scholars throughout the generations, from Moses to the present time, is called *de-rabbanan*. These teachings include: positive enactments (*takkanot*) made to protect the principles of religion and Torah, and negative enactments (*gezerot*) decreed to prevent breaches. From the verse “According to the law which they shall teach thee... thou shalt not turn aside from the sentence which they shall declare unto thee, to the right hand, nor to the left” (Deut. 17:11) it was inferred that it is a positive precept to obey the great *bet din* not only in everything applying to the text of the Torah, but also in everything that they found necessary to enact, and a warning is issued to anyone disregarding it.

The Authority of the Sages. In the Talmud the authority of the sages was defined as follows:

The sages have the power to abolish a biblical injunction (Yev. 89b–90b) in certain circumstances, such as: in monetary matters, on the basis of the rule that “deprivation of ownership by the *bet din* is valid”; in cases of the passive act of “refraining from an action” (*shev ve-al ta'aseh*), in which they forbade the **lulav* and **shofar* to be handled and used on the Sabbath, lest they be carried in a public domain (thus the rabbinic prohibition is the cause of the biblical precept being ignored!).

The *bet din* has the power to temporarily disregard a biblical precept in order to reinforce observance. Similarly the court “may inflict flagellation and other punishment not in accordance with Torah law, in order to erect a protective fence round the Torah,” but such acts may not be defined as *halakhah* – which would imply that the ruling is of a permanent character. So too, if it saw a temporary need to suspend a positive precept, or to transgress an injunction, in order to bring many back to religion, or to save the community from being ensnared in a transgression, all in accordance with the need of the time but not for future generations (Maim. Yad, Sanhedrin 24:4; Mamrim 2:4). The classical example is Elijah offering sacrifice on Mt. Carmel at the time when the Temple existed (and sacrifice outside it was prohibited, Zev. 4b).

No restriction may be imposed upon the congregation if the majority cannot abide by it (BB 60b). So too no restriction may be imposed that would cause substantial loss (see, e.g., MK 2a) or excessive trouble. “It is preferable for them to transgress inadvertently rather than deliberately” (Bezah 30a).

No court can abolish the decision of another contemporary court unless it be greater in wisdom and in number. The possibility of abolishing a restriction thus depends upon an important limitation: “It must be greater in wisdom and number” (Eduy. 1:5; for the meaning of this rule, which apparently prevents all possibility of abolishing a *bet din* ruling, see Weiss, Dor, pt. 2, sec. 7 and Albeck in the supplements to Mishnah *Nezikin*).

At times the sages gave their pronouncements the same, and at times even greater, validity than those of the Torah. For example: “These days, enumerated in Megillat Ta'anit, are forbidden [for fasting], along with both the preceding and the following day. As to Sabbaths and New Moons, fasting on them is forbidden, but it is permitted on the preceding and following days. What is the difference between them? The latter are of biblical origin and words of the Torah require no reinforcement, whereas the former are of scribal authority and the words of the scribes require reinforcement” (RH 19a). Thus they were more stringent about the fulfillment of their *takkanot* than about the enactment of the Torah itself, because for the latter no danger of negligence was anticipated, as it was with their regulations. Many of the edicts and *takkanot* are anonymous, just as the early *halakhah* in general is anonymous: according to dogmatic conception they were all enacted and accepted by a vote of the great *bet din* in which, too, all disputed matters were decided. The modern historical approach, too, is close to this view, even though the concept “the great *bet din*” was not identical in all periods (see H. Albeck, in: *Zion*, 8 (1942–43), 85–93, 165–78; L. Finkelstein, *The Pharisees*, 1962³). Notwithstanding, many *takkanot* and edicts are mentioned that are connected with the names of definite persons or places, such as Joshua b. Gamla, Simeon b. Shetaḥ, Bet Shammai and Bet Hillel, Gamaliel the Elder, Johanan b. Zakkai, Gamaliel of Jabneh, the scholars of Usha, Judah ha-Nasi, etc. There are also many *halakhot* that are attributed to biblical personalities such as Moses, Joshua, Samuel, David, Solomon, Hezekiah, Daniel, the prophets (and the men of the **Great Synagogue*). The individuals enumerated appear as heads of *batei din*.

The distinction between the concepts *de-orayta* and *de-rabbanan* in the whole field of *halakhah* actually derives from the *amoraim*, but it already existed in the time of the *tannaim* and is recognizable by the penalties fixed for transgressions of the different categories, and there is also found the explicit expression “statements of the scribes” in contrast to “statements of the Torah” (e.g., Yev. 2:4; Par. 11:5–6; Yad. 3:2; Zev. 99b). But the views of the *tannaim* and *amoraim* on this matter do not completely coincide, and at times a matter which according to tannaitic sources appears to be *de-orayta* becomes in the era of the *amoraim de-rabbanan*. The difference between the two concepts *de-orayta* and *de-rabbanan* not only expresses itself in penalties (thus, e.g., the sacrifices which one who transgresses the words of the Torah must bring as an atonement for his iniquity are not imposed as an obligation on one transgressing a prohibition of the sages, but on the other hand

the sages have the right to flog one transgressing their words with “stripes of correction” in order to punish and reform him); there is also a difference in the halakhic consideration: “In the case of doubt with regard to a biblical injunction the stringent view is accepted, in the case of rabbinical, the lenient” (Beṣah 3b; TJ, Er. 3:4).

CUSTOM. The word custom (Heb. *minhag*) has various meanings in talmudic literature, and not all have the same force, even though all serve as sources of *halakhah*.

Religious custom which can be relied upon where the *halakhah* is unclear: “Every *halakhah* that is unclear in the *bet din* and you do not know its nature, go and see how the community conducts itself and conduct yourself accordingly” (TJ, Pe’ah 7:5). Here the concept of custom is close to the concept of “consensus” in Muslim law in its original stage: the people as a whole do not err, and therefore custom decides the matter; its nature is as the nature of the *halakhah*. In the Babylonian Talmud this idea is expressed in the words “Go and see how the public are accustomed to act” (Ber. 45a), and this too is certainly what Hillel meant when he said: “Leave it to Israel; if they are not prophets, they are the children of prophets” (Pes. 66a).

Religious custom that is not publicly proclaimed as the official *halakhah* (see Ta’an 26b): here too, as in the previous section, the reference is not to a new custom but to fixing the norm in a *halakhah* concerning which there is a dispute, in accordance with the existing custom.

A custom that is in contradiction to the theoretical *halakhah* but by virtue of being a public custom, and that of conscientious people, has the power to cancel the *halakhah* (TJ, Yev. 12:1; Sof. 14, ed. Higger, 270f.): in these cases, the custom replaces the *halakhah*.

A custom introduced by a definite group – such as the citizens of a town, a group of pious men, women, professional groups, etc. – in some area of religious, social, or legal life, additional to the existing *halakhah*: such a custom serves as a source of *halakhah* which may not be altered and has the same authority as the words of the sages (see, e.g., Pes. 4:1; BM 7:1; et al.).

DEVELOPMENT OF HALAKHAH

The Early Period

Codes of law are found in the Pentateuch (Ex. 21–23:19; Lev. 19; Deut. 21–25) together with smaller collections and numerous individual laws. Biblical criticism explains the differences in style and the contradictions between one collection and another on the grounds that these groups of laws were produced in different circles at diverse times, e.g., in one collection the tithe is given to the levite (Num. 18:20–32) whereas in Deuteronomy it is retained by the farmer himself to be eaten in the place of the central sanctuary (Deut. 14:22–26). This kind of solution was not open to the Pharisaic teachers so that the

early *halakhah* reconciles the two passages by postulating two tithes, the first (*ma’aser rishon*) to be given to the Levite and the second (*ma’aser sheni*) to be eaten in the place of the central sanctuary. Moreover, according to the traditional view, God conveyed to Moses together with the Written Law (*torah she-bi-khetav*) an Oral Law (*torah she be-al peh*). This latter embraced both the specific “laws given to Moses at Sinai” and the many interpretations of the written text now found in the rabbinic literature.

One of the main points at issue between the Sadducees and the Pharisees was the validity of this doctrine of the Oral Law, the Pharisees affirming and the Sadducees denying it. But this is to oversimplify the problem. It is obvious that some process of interpretation of the written texts must have begun at the earliest period since many of the texts are unintelligible as they stand (though this is very different from the affirmation that the interpretation was uniform and handed down unimpaired from generation to generation). Buying and selling, for example, are mentioned in the Pentateuch without any indication of how the transfer of property was to be effected. The law of divorce (Deut. 24:1–4) speaks of a “bill of divorcement,” but gives no information on how this is to be written. Ezekiel 44:31 would seem to be an interpretation of the laws found in Exodus 22:30 and Deuteronomy 14:21 (Weiss, Dor, 1 (1904⁴), 44–45). Jeremiah 17:21 is an interpretation of what is involved in Sabbath “work.” It would appear certain that by about 400 B.C.E., after the return from Babylon and the establishment of the Second Temple, the Pentateuch had become the Torah (the Written Law) and there had begun to develop an oral interpretation of the Pentateuchal texts.

The identity of the men of the Great Synagogue, who are said to have flourished immediately after the return, is still a major problem, as is the relationship of this body to the “Scribes” (*soferim*; according to Frankel, *Darkhei ha-Mishnah* (1923), 3–7 et al.). The men of the Great Synagogue were the executive of a movement of Pentateuchal interpretation of which the “Scribes” formed the general body. However, more recent studies have demonstrated that the *soferim* were simply a class of biblical exegetes inferior in status to the “sages” so that it is illegitimate to speak of the period of the “Scribes” (Kaufmann, Y., *Toledot*, 4 (1960), 481–5; E. Urbach, in: *Tarbiz*, 27 (1957/58), 166–82). The Midrash process, in which the texts were carefully examined for their wider meaning and application, no doubt had its origin in this period. Another vexed question is whether the Midrash of a particular text is the real source of the law said to be derived from it or whether the law came first with the Midrash no more than a peg on which to hang it. The most convincing way of coping with the evidence on this matter is to suggest that the earliest Midrashim were in the nature of a real derivative process by means of which the deeper meaning and wider application of the texts were uncovered (although this must not be taken to exclude the existence of actual traditions for which texts were subsequently found). In the later Midrash the process is reversed.

The whole period down to the age of the Maccabees – on any showing the formative period in the history of the *halakhah* – is shrouded in obscurity. Y. Baer (in *Zion*, 17 (1951–52), 1–55) has argued that there was little pure academic legal activity at this period and that many of the laws originating at this time were produced by a kind of rule of thumb in which pious farmers in a comparatively simple form of society worked out basic rules of neighborly conduct, much in the same way as this was done among the Greeks in the age of Solon. Some of these rules can possibly still be detected among the earliest strata of the Mishnah, e.g., in the first chapter of *Bava Kamma*, which includes a formulation of the law of torts worded in the first person.

There are references in the sources to five pairs of teachers – the *zugot* (“pairs,” *duumviri*) – beginning with Yose b. Joezer and Yose b. Johanan in the time of the Maccabees and ending with Hillel and Shammai in the time of Herod. The ethical maxims of these teachers are recorded in the Mishnah (Avot 1:4–5) but little legal material has been transmitted in their name. At this time, it was said, there was no legal debate in Israel (Tosef., *Hil'vot* 2:9), i.e., the law was known or where in doubt was decided by the “great court” in Jerusalem.

Historically considered there is no question, however, of a uniform *halakhah*, even at this early period, handed down from generation to generation in the form the *halakhah* assumes in the tannaitic period. Apart from the great debates on legal matters between the Sadducees and the Pharisees, the *halakhah* in the books of the Apocrypha (and the writings of the Qumran sect) is not infrequently at variance with the *halakhah* as recorded in the Mishnah and the other tannaitic sources (e.g., the law of false witnesses in Susannah conflicts with the Pharisaic law as recorded in the Mishnah, Mak. 1:4). Even in the Pharisaic party itself the schools of Hillel and Shammai at the beginning of the present era differed on hundreds of laws, so that it was said that there was a danger of the Torah becoming two *torot* (Sanh. 88b).

A major problem here is the motivation behind the approaches of the two rival schools. The theory associated with L. Ginzberg (*On Jewish Law and Lore* (1955), 102–18) and L. Finkelstein (op. cit.) finds the differences in the different social strata to which the schools belonged. The school of Shammai, it is argued, was legislating for the upper classes, the wealthy landowners and aristocrats, while the school of Hillel was legislating for the poorer urban workers and artisans. Thus according to the school of Hillel the legal definition of a “meal” is one dish, whereas according to the school of Shammai it is at least two dishes (Bezah 2:1). In most societies the woman has a much more significant role among the upper classes than among the lower. Hence the school of Hillel rules that a valid marriage can be effected by the delivery to the woman of the smallest coin – a *perutah* – whereas the school of Shammai demands the much larger minimum amount of a *dinar* (Kid. 1:1). The school of Shammai only permits the divorce of a wife if she is unfaithful whereas the school of Hillel permits it on other grounds (Git. 9:10). While there is undoubtedly

some truth in the theory of social motivation it is too sweeping to be entirely adequate. Other motives, such as different exegetical methods, were also at work (see Alon, *Mehkarim*, 2 (1958), 181–222).

The Tannaitic Period (c. 1–220 C.E.).

The debates between the schools of Hillel and Shammai set in motion new debating processes among the rabbinic teachers of first- and second-century Palestine, the *tannaim*. Prominent in the second century were the rival schools of R. Akiva and R. Ishmael, who differed in their concept of the Torah revelation and, as a result, in their attitude toward the scope of the *halakhah* (see A.J. Heschel, *Torah min ha-Shamayim* (first 2 vols., 1962, 1965). According to R. Ishmael's school “the Torah speaks in the language of men” (Sif. Num. 15:31) and it is therefore not permissible to derive new laws from such linguistic usages as the infinitive absolute before the verb. According to the school of R. Akiva it is legitimate to do this and to derive laws from the use of the particles *gam* (“also”) and *et* (the sign of the accusative), for example in Pesaḥim 22b, since in the view of this school no word or letter of the Torah can be considered superfluous or merely for the purpose of literary effect. A later teacher characterized the methods of the Akiva school by telling of Moses on high asking God why He had affixed the decorative “crowns” to some of the letters of the Torah. God replies that after many generations there will arise a man, Akiva b. Joseph by name, “who will expound upon each tittle heaps and heaps of laws.” Moses then asks permission to see Akiva and is transported across time to enter Akiva's academy where he is unable to follow the arguments! Moses is distressed but is later comforted when Akiva replies to the question of his disciples: “Whence do you know this?” by stating: “It is a law given to Moses at Sinai” (Men. 29b).

At the end of the second century R. Judah ha-Nasi edited the Mishnah, in which were summarized all the legal debates and decisions of the *tannaim*. Judah ha-Nasi is better spoken of as the editor of the Mishnah, not its author, since it is clear that his compilation is based on earlier formulations, particularly those of R. Akiva and his disciple R. Meir. Indeed it is possible to detect various early strata embedded in the final form the Mishnah has assumed. For instance, the Mishnah (Pes. 1:1) records a rule that a wine cellar requires to be searched for leaven on the eve of Passover and then records a debate between the schools of Hillel and Shammai on how this rule is to be defined.

The Amoraic Period (c. 220–470 C.E.)

Once the Mishnah had been compiled it became a sacred text second only to the Bible. The word of the post-mishnaic teachers in both Palestine and Babylon (the *amoraim*) was confined chiefly to discussion and comment on the Mishnah and to the application of its laws (and those found in the other tannaitic sources). It became axiomatic that no *amora* had the right to disagree with a *tanna* in matters of law unless he was able to adduce tannaitic support for his view. It must not be thought, however, that the *amoraim* were only concerned with practi-

cal application of the *halakhah*. A good deal of their work was in the field of abstract legal theory in which purely academic questions were examined and debated (see M. Guttmann, in *Devir*, 1 (1923), 38–87; 2 (1923), 101–64).

The *halakhah* of the Palestinian *amoraim* was eventually collected in the Jerusalem Talmud, that of the Babylonian *amoraim* in the Babylonian Talmud. With the “closing” of the Talmud this work virtually became the infallible source of the *halakhah*. Occasionally in the Middle Ages, as Weiss (Dor, 3 (1904⁴) 216–30) has demonstrated, authorities would disagree with talmudic rulings. Maimonides, for example, disregards in his code any laws based on a belief in the efficacy of magic even though the laws are found in the Talmud and are not disputed there. Some of the *geonim* tended to adopt a more lenient attitude toward the talmudic laws governing the relations between Jews and gentiles on the grounds that the gentiles in their milieu (the Muslims) were not idolaters. But such exceptions were few. The history of post-talmudic *halakhah* is founded on the appeal to the Talmud as the final and overriding authority. “To it [the Talmud] one must not add and from it one must not subtract” (Maim., Comm. to Mishnah, intro.). Of the two Talmuds the Babylonian became the more authoritative for a number of reasons. The *halakhah* of the Babylonian Talmud is more highly developed and more comprehensive; the Babylonian Talmud is later than the Jerusalem and hence able to override the decisions of the latter; the textual condition of the Babylonian Talmud is in a more satisfactory state; the Babylonian *geonim* at Sura and Pumbedita were in direct succession to the Babylonian *amoraim* (so that the Babylonian Talmud became “our Talmud”) and the hegemony of the teachings of Babylonia was considerably strengthened as a result of political developments, including the emergence of Baghdad as the seat of the caliphate. Maimonides (Yad, intro.) states the accepted view: “All Israel is obliged to follow the matters stated in the Babylonian Talmud. Every city and every province are to be coerced to follow all the customs which the sages of the Talmud followed and to obey their decisions and follow their enactments since all the matters in the Talmud have been accepted by all Israel. And those sages who made the enactments or introduced the decrees or ordained the customs or decided the laws, teaching that the decision was so, were all the sages of Israel or the majority of them. And they heard by tradition the main principles of the whole Torah generation after generation reaching back to the generation of Moses our teacher on whom be peace.”

Rules for determining the actual decision in law from the labyrinth of legal debate and discussion that is the Talmud are provided by the Talmud itself and by the *savoraic* additions to the Talmud, and other rules were widely accepted by the post-talmudic authorities. The following, in addition to those mentioned above, are some of the more important of these rules which enabled the Talmud to serve as the final authority in *halakhah* even though it is not itself a code of law.

Where there is a debate between an individual sage and his colleagues the view of the majority is adopted (Ber. 9a). The school of Hillel is always followed against the school of Shammai (Er. 6b). In the many matters debated by Rav and Samuel the view of Rav is followed in religious matters and that of Samuel in civil law (Bek. 49b). Except in three specified cases the opinion of R. Johanan is followed against that of R. Simeon b. Lakish (Yev. 36a). Similarly, except in three specified cases the opinion of Rabbah is followed against that of R. Joseph (BB 114b). The decision of Rava is followed against that of Abbaye except in six specified cases (Kid. 52a). Whenever a talmudic debate concludes with the statement “the law is...” (*ve-hilkheta*) this ruling is adopted. The lenient opinion is adopted when there is a debate regarding the laws of mourning for near relatives (MK 26b). The rulings of later authorities are generally preferred to those of earlier ones (from Rava onward) on the grounds that the later scholars, though aware of the opinions of the others, still saw fit to disagree with them (*Sefer Keritut*, 4:3, 6). It is generally accepted that where a ruling is conveyed in a talmudic passage anonymously (*setama*) this implies unanimity among the final editors and is to be followed even if elsewhere in the Talmud the matter is a subject of debate (see Tos. to Ber. 20b and Yev. 116a). Halakhic decisions are not generally to be derived from aggadic statements (based on TJ, Pe‘ah 2:4; see ET, 1 (1951³), 62). This rule was not applied consistently and was occasionally departed from, particularly in the French and German schools in the Middle Ages for whom the entire talmudic material, including the *aggadah*, tended to be invested with infallible authority.

In spite of the “closing” of the Talmud (occasioned chiefly by the disturbed conditions at the end of the fifth century when the great Babylonian schools were closed for a fairly long period) and its acceptance as the final authority, new legislation could still be introduced under the heading of *takkanah* (“enactment”), of which there are many examples in the Talmud itself. By means of the *takkanah* it was possible to cope with new circumstances not covered by the talmudic law. From time to time the principle, found in the Talmud, was resorted to that “a court can inflict penalties even when these run counter to the Torah” if the times require it (Yev. 90b; see above). In Spain, for example, in the Middle Ages, the courts assumed the power to inflict capital and corporal punishment even though this right had long been taken from them according to the strict letter of the law (see Baron, Community, 1 (1942), 168–9 and notes).

Codification of the Halakhah

Teachers of the *halakhah* in the Middle Ages and afterward were of two main types. Firstly there were the legal theoreticians such as Rashi and the *tosafists*, whose main activity consisted of exposition of the classical legal texts of the Talmud and other early rabbinic works. These were known as the *mefarshim* (“commentators”) and their writings were naturally utilized to determine the practical law even though this was not their own province. Secondly there were the *posekim*

(“decision-makers”) whose opinions in practical legal matters were accepted because of their acknowledged expertise in this field. The activity of the *posekim* was of two kinds: responsa and codification. Questions of law on which direct guidance from the Talmud was not forthcoming were addressed to the great legal luminaries and from time to time these responsa were collected, helping to form the basis for new codifications of the *halakhah*. Both the new and older laws were frequently classified and codified. The process of responsa and subsequent *codification has continued down to the present.

One of the earliest codes was the **Halakhot Gedolot* of Simeon Kayyara (ninth century). Isaac *Alfasi compiled an abbreviated, and with regard to some texts an expanded, version of the Babylonian Talmud in which only the conclusions of the talmudic discussions were recorded so as to provide a digest of talmudic *halakhah* in its practical application. Where the Babylonian Talmud has no rulings Alfasi followed decisions found in the Jerusalem Talmud. *Maimonides compiled his gigantic code, the *Mishneh Torah* (called, after his death, the *Yad ha-Ḥazakah*), in which he presented the final decisions in all matters of *halakhah*, including those laws which no longer obtained in his day, such as the laws of the sacrificial cult. *Asher b. Jehiel, known as the Rosh (Rabbenu Asher), compiled a code in which due weight was given to the opinions of the French and German authorities which frequently differed from those of the Spanish authorities as recorded by Maimonides. Asher's son, *Jacob b. Asher, followed in his father's footsteps in his code known as the *Tur* (“row,” pl. *Turim*, properly the “Four Rows,” so called because the work is divided into four parts).

By the time of Joseph *Caro there was much confusion in the whole realm of practical *halakhah*. In addition to the many differences between the codes, Jewish communities tended to differ in their application of the laws so that, as Caro remarks (*Beit Yosef*, Intro.), the Torah had become not two *torot* but many *torot*. In his great commentary to the *Tur*, called *Beit Yosef*, Caro sought to remedy the situation by working out a practical guide for a uniform application of the *halakhah*. His method was to follow a majority opinion whenever the three earlier codes of Alfasi, Maimonides, and the *Tur* disagreed and to rely on other authorities whenever this method of deciding was not possible. Caro's *Shulḥan Arukh contains the gist of his decisions as worked out in the *Beit Yosef*. Unfortunately, however, Caro's method weighted the scales in favor of the Spanish schools, since these were generally in accord with the views of Alfasi and Maimonides, against the German views as represented by Asher b. Jehiel and the *Tur*. The Shulḥan Arukh was thus incapable of serving as a practical guide to the German Jews and their followers in Poland, which from the 16th century became a foremost center of Jewish life. The remedy was provided by Moses *Isserles of Cracow who added notes to the Shulḥan Arukh, known as the *MAPPAH*, in which the German-Polish practices were recorded where these differed from the opinions of the Shulḥan Arukh. The Shulḥan Arukh, together with the *Mappah*, became the most authoritative code

in the history of the *halakhah*, partly, at least, because it was the first code to be compiled after the invention of printing and was therefore sure of the widest dissemination.

The Shulḥan Arukh marked a turning point in the history of the *halakhah*. Even when later authorities departed from its rulings they did so reluctantly. Adherence to the Shulḥan Arukh became the test of Jewish fidelity. The “Shulḥan Arukh Jew” became the supreme type of Jewish piety. Earlier rabbinical authorities were known as **rishonim* while later ones were known as **aḥaronim*. Rabbinic authority even in modern times is much more reluctant to disagree with the *rishonim* than the *aḥaronim*.

The Authority of the Halakhah

Halakhah is the distinctive feature of Judaism as a religion of obedience to the word of God. It united Jews of many different temperaments, origins, and theological opinions, though the view (“pan-halakhism” as A.J. Heschel called it) that submission to the *halakhah* is all that is demanded of the Jew is a travesty of traditional Judaism. The major practical differences between Orthodox and Reform Judaism depend on the different attitudes of these groups to the *halakhah*. Orthodoxy considers the *halakhah*, in its traditional form, to be absolutely binding, whereas Reform, while prepared to be guided by the legal decisions of the past in some areas, rejects the absolute binding force of the traditional *halakhah*. Conservative Judaism adopts a midway position, treating the traditional *halakhah* as binding but feeling freer to interpret it and attempting to preserve the dynamic principle of legal development which, it claims, is typical of the talmudic period. The Orthodox rabbi, when faced with new halakhic problems raised, for instance, by the invention of printing and the use of electricity, will try to arrive at a decision by applying directly the ancient halakhic principles in the new circumstances. The Reform rabbi will be more inclined to consider the religious demands of the new age and will tend to operate within non-halakhic categories. The Conservative rabbi will try to utilize these latter in working out a fresh interpretation of the traditional *halakhah*.

HALAKHAH LE-MOSHE MI-SINAI (Heb. הלכה למשה מסיני, “a law given to Moses at Sinai”). As part of the *Oral Law, a number of laws, possessing biblical authority but neither stated in Scripture nor derived by hermeneutical principles, are stated in rabbinic literature to be “laws given to Moses at Sinai.” The term occurs only three times in the Mishnah (Pe’ah 2:6; Eduy. 8:7; Yad. 4:3) but is found frequently together with terms of similar import, in the other sources of rabbinic Judaism, particularly in the Talmud (such as – “there is a received *halakhah*”; “there is a received tradition”; or simply “received”). Similarly, according to the Jerusalem Talmud (Shab. 1:4, 3b) the expression “in truth they said” also belongs to this category (however, see BM 60a and Rashi s.v. *be-emet*).

Among the laws said to have been given to Moses at Sinai are the 18 defects which render an animal *terefah (Hul. 42a); the duty of walking round the altar with willows and the feast of water drawing, both on the festival of Tabernacles (Suk. 34a); the underside and duct of the *tefillin*, the parchment of the *tefillin*, that the straps of the *tefillin* be black and the *tefillin* themselves square (Men. 35a), and that they should have a knot (Er. 97a); the minimum quantities of forbidden foods to constitute an offense and the rules regarding interpositions on the body which invalidate a ritual immersion (Er. 4a); that only half the damage is to be paid when damage is done by pebbles flying from under an animal’s feet (BK 3b); and that doubtful cases of levitical defilement, if occurring in the public domain, are to be treated as pure (Hul. 9b). It will be seen that all these refer to long-established rules which could not have been known without a tradition to that effect. The medieval commentators point out that on occasion the

term, *halakhah le-Moshe mi-Sinai*, is used of much later enactments and is not always to be taken literally, but refers to a *halakhah* which is so certain and beyond doubt that it is as though it were a *halakhah* given to Moses at Sinai (Asher ben Jehiel *Hilkhot Mikva’ot*, 1 (at the end of his *Piskei ha-Rosh* to *Niddah*) and his *Commentary to Mishnah*, Yad. 4:3). In most cases, however, they explain it literally, i.e., that these *halakhot* were transmitted by God to Moses at Sinai. Modern scholarship is skeptical about the whole question, but it is clear that the rabbis themselves did believe in the existence of laws transmitted verbally to Moses.

[Louis Jacobs]

HALAKHIC PERIODICALS. The first Jewish periodical to appear was the **Peri Ez-Ḥayyim* which first appeared in 1691. This journal consisted primarily of responsa to halakhic queries sent from all parts of the Dutch empire of its day; 13 volumes were published during the 116 years of its existence, until 1807.

Halakhic periodical literature continued to develop through the years. Noteworthy is the *Shomer Ziyon ha-Ne’eman*, which appeared in Germany during the years 1846–56, under the guidance of Rabbi Jacob Ettlinger, containing, *inter alia*, responsa. The turn of the 20th century saw the growth of rabbinic halakhic periodicals in Eastern Europe, and eventually in America; e.g., *Ha-Pardes* which was originally founded in Poland in 1913, still appears in New York. Among the European periodicals, *Tel Talpiot* (Vac, Hungary), appeared from 1812–1938, and *Yagdil Torah* (Slutsk, Belorussia, 1908–28) are especially worthy of mention.

After World War II the center of halakhic activity naturally shifted to Israel, with the United States taking second place. *Sinai*, which was founded even before the war (Jerusalem, 1937–) includes contemporary and historical responsa.

The establishment of the State of Israel has generated an intensification of activity in applying *halakhah* to all facets of modern life – its technology, society and economy have all been the subject of halakhic research. It gave rise to *Ha-Torah ve-ha-Medinah*, published by the Rabbinical Association of Ha-Po’el Ha-Mizrachi (1949–62), which dealt with such topics as security, medical ethics, legislation, law applying to the Land of Israel and Family Law. Thus, among topics discussed in vol. 1 are: the right to grant clemency to those sentenced by the courts of Israel, the authority of the president and the institutions of elected government, and the legal status of spoils of war. Vol. 4 (1952) included articles on the rights of women according to the *halakhah*, and women’s service in the armed forces; vols. 5–6, security measures in the State on the Sabbath and Festivals; vols. 7–8, the powers of municipal authorities

according to the *halakhah*; vols. 11–13 (1960–62), the religious duty of *aliyah*, the prohibition against leaving Israel, and the liability of rabbis to taxation. *Or ha-Mizrah* (1959–), issued by the Ha-Po'el Ha-Mizrachi of the United States, is essentially a Diaspora equivalent of *Ha-Torah ve-ha-Medinah*.

Unlike the above two works, which appear under the aegis of a public body, *No'am* (1959–), “A platform for the clarification of halakhic problems,” is a venture of the Torah Shelemah Institute of Jerusalem, and its scope is much wider. Among the practical problems dealt with are the use of the birth control pill (11:167), heart transplants (13:1), the transplanting of kidneys and artificial kidneys (14:308), artificial insemination (10:314), and even whether the laws of the Torah are applicable to a Jew on the moon (13:196). Among the other contemporary Israeli journals containing responsa, noteworthy are *Assia*, published in Jerusalem by the Dr. F. Schlesinger Institute for Medical Halakhic Research at Shaare Zedek Hospital (1969–), which acts as a forum for modern medical ethical problems; *Ha-Ma'yan*, published in Jerusalem by the Y. Breuer Institute (1952–); *Kol Torah* (Jerusalem, 1930–); *Torah She-be-al Peh*, published in Jerusalem by Mosad Ha-Rav Kook, consisting of the proceedings of the annual Oral Law Conferences devoted to various fields of current interest (1958–); *Moriah*, published in Jerusalem (1969–), and *Shma'atin* (1964–), a forum for dealing with problems in religious education. Devoted to Jewish Law (*Mishpat Ivri*) are *Diné Israel* (1969–), an annual published by the Faculty of Law of Tel Aviv University, and *Shenaton ha-Mishpat ha-Ivri* (1974–), published by the Institute for Research in Jewish Law at the Hebrew University Law School.

In America, *Ha-Darom* (1957–), published in New York by the Rabbinical Council of America, discusses a broad spectrum of modern halakhic questions. The English language *Tradition* (1958–), also published in New York by the RCA, includes a section, a “Survey of Recent Halakhic Periodical Literature” as well as halakhic articles and essays. *Talpiot* (1943–63), which was published in New York by Yeshiva University, is also worthy of mention.

[Menahem Slae]

HALAKHOT GEDOLOT (Heb. הַלְּכוּת גְּדוּלוֹת), halakhic code belonging to the geonic period.

Nature of the Code

The *Halakhot Gedolot* gives a systematic and comprehensive summary of all the talmudic laws. Although in general it follows the order of the tractates of the Talmud, it groups together the various *halakhot* scattered in the Talmud according to their logical order, and, contrary to the procedure adopted in the Mishnah and *Gemara*, first states the general principle before giving the details. It also assigns new names to certain groups of *halakhot*, and embodies laws (such as those dealing with sacrifices and some of those applicable to the priests) which were no longer observed after the destruction of the Temple. The decisions are founded on those of the Talmud

and on the halakhic principles laid down by its sages. The work is based on the Babylonian Talmud but the author also makes use to some extent of the Jerusalem Talmud, which he refers to as “the Talmud of the West.” Other sources are the responsa of Babylonian *geonim* and the halakhic work of the same period *Sefer ha-Ma'asim shel Benei Erez Yisrael. Halakhot Gedolot* spread throughout Jewry, and in the course of time decisions of *Yehudai Gaon and those of a later date were incorporated into it. The earlier authorities often quote excerpts from it which are different, or entirely absent, from the extant work.

The *Halakhot Gedolot* has an introduction – it is the first rabbinic work to have one – and it is generally held that it was directed against the *Karaites and others who rejected the Oral Law. It is in two parts, the one comprising aggadic statements in praise of the Torah and its students; the other enumerating, for the first time, the 613 *commandments mentioned in the Talmud (Mak. 23b). They are classified according to the degree of punishment incurred in transgressing them and according to their common character. This list of 365 negative and 248 positive commandments, which provided the basis for similar elaborations in various *azharot, was severely criticized by Maimonides in his *Sefer ha-Mitzvot*, and defended by Nahmanides.

Recensions of the Work

The work is extant in two recensions. The one (*Halakhot Gedolot 1*), published in Venice in 1548, is the Babylonian recension, which is the earlier and which preserves the original version. It was this recension that was used by the French and German scholars. The other (*Halakhot Gedolot 2*) was published by A. Hildesheimer on the basis of the Vatican manuscript (1892) and is, in the opinion of scholars, identical with *Halakhot Gedolot shel Ispamiya* (“Spain”; Tos. to Yev. 48a, see below), the version used by the scholars of Spain, southern France, and Italy. Various excerpts from this Spanish recension are not found in *Halakhot Gedolot 1*, having been omitted by copyists. Moreover, the former contains later additions, commentaries, and supercommentaries, and also the names of *geonim* who lived after Simeon Kayyara (see below), the last *gaon* to be mentioned in it being Zemaḥ b. Paltoi (890 C.E.). This recension, which may have been compiled in North Africa (Kairouan), was called by the northern French scholars *Halakhot Gedolot shel Ispamiya*, having reached them from Spain by way of southern France. There may also have been other recensions of the work, for a southern French author mentions “our *halakhot* of Simeon Kayyara that came from Erez Israel” (*Ha-Ittur*, pt. 2 (1874), 22c), while various excerpts from *Halakhot Gedolot*, not contained in the other recensions, have been found in the Cairo *Genizah*.

Date and Authorship

The authorship and date of the *Halakhot Gedolot* have been the subject of many studies and given rise to conflicting views. The work has been variously ascribed to Sherira Gaon (A.E.

Harkavy (ed.), *Teshuvot ha-Ge'onim*, no. 376; *Zikkaron la-Rishonim ve-gam la-Aharonim*, 1/4 (1887)), Hai Gaon (D. Cassel (ed.) *Teshuvot Ge'onim Kadmonim* (1848) no. 87, et al.), by the scholars of Spain and Provence to Simeon Kayyara and to Yehudai Gaon by those of northern France and Germany. In his *Sefer ha-Kabbalah*, Abraham ibn Daud states that Simeon Kayyara lived before Yehudai Gaon and that the latter was the author of *Halakhot Pesukot, written in 741 C.E., which "he compiled from *Halakhot Gedolot*" (Ibn Daud, *Tradition*, 47f., see also 127, n. 18–19). S.J. Rapoport, following Abraham ibn Daud, held that *Halakhot Gedolot* is composed of two parts: the original *Halakhot Gedolot* of Simeon Kayyara and *Halakhot Pesukot* of Yehudai Gaon, which the latter's pupils incorporated into the former work. According to Rapoport, Yehudai Gaon's statements in *Halakhot Gedolot* can be recognized in two ways: by the Aramaic in which various passages are written, and by the word *pesak* ("legal decision"), which is associated with several statements and which, according to him, derive from *Halakhot Pesukot*. This, however, has been controverted by S.D. Luzzatto (*Beit ha-Ozar*, 1 (1847), 53af.). Graetz maintained that the work was written by Simeon Kayyara who lived at the end of the ninth or the beginning of the 10th century, some 150 years after Yehudai Gaon had composed *Halakhot Pesukot*. I. Halevy held that the author of *Halakhot Gedolot* was a younger contemporary of the writer of *Halakhot Pesukot*, the latter work being a compilation of Yehudai Gaon's practical decisions, while the former, more theoretical work has its source in the Talmud. A. Epstein contended that *Halakhot Gedolot* was written in Sura by Simeon Kayyara about 825 and that its main sources were Aḥa of Shabḥa's *She'eltot* and Yehudai Gaon's *Halakhot Pesukot*. Seventy years later there was compiled the second recension of the work, the *Halakhot Gedolot shel Ispamyā*, the first recension being ascribed by them to Yehudai Gaon.

Simeon Kayyara came from Bozrah in Babylonia, as is attested by Hai Gaon. The city of Bozrah is mentioned twice in *Halakhot Gedolot* (in *Hilkhot Hallah* and in *Hilkhot Eruvin*) and was under the spiritual authority of Sura. Indeed, many of the laws and customs mentioned in the work conform to those of Sura, and several of its legal decisions are cited in the name of *geonim* of Sura.

The work has been reprinted several times: Venice (1548), Lemberg (1804), Vienna (1811), Berlin (1888–92, ed. by A. Hildesheimer). The various editions include comments by Solomon Salem (Amsterdam, 1764), notes by S.A. Traub (1875), and the commentary *Sefat Emet* by A. Margalioth (1894).

Halakhot Gedolot-Halakhot Pesukot

A new edition of the *Halakhot Gedolot* is being published by Azriel Hildesheimer through the Mekizei Nirdamim publishers, Jerusalem, two parts of which have already appeared (part 1, 1972; part 2, 1980). This edition is based on manuscripts found in the Ambrosiana Library in Milan (henceforth M). Besides this manuscript there are two others which include the entire *Halakhot Gedolot* or most of it, both in the Vatican

Library: the first (Ebr. 142) served as the basis of the edition of the *Halakhot Gedolot* (Berlin 1888–92), published by Azriel Hildesheimer, grandfather of the current editor, the other is (Ebr. 136, referred to as R). The *Halakhot Gedolot* published in Warsaw (1875) is based upon the Venice (V) ms. and the Paris (P). Other manuscripts from the *Genizah* are incomplete. Part of this latest Hildesheimer edition includes *halakhot* for the Seder Moed; part 2, Seder Nashim and the three Bavot of the order Nezikin.

Rabbi Isaac *Ibn Ghayyat and *Judah ben Barzillai, author of *Sefer ha-Ittim*, are among the first Spanish sages who quote extensively from the *Halakhot Gedolot* using the text B and the early Ashkenazi sages also rely on it and only rarely cite *halakhot* and variant readings from M.

According to Hildesheimer the author of the *Halakhot Gedolot* wrote only one edition and the many textual variants resulted from adaptations by various other parties, and it is difficult to determine which version is the original one. The M edition was not written in Kairouan and is not identical to the *Halakhot Gedolot shel Ispamyā* as A. Epstein thought (*Kitvei A. Epstein*, 2 (1968), 399) though his opinion has been accepted by scholars dealing with the Geonic period. *Halakhot Gedolot* includes many citations from the Talmud which are of importance for the study of the talmudical text itself, since they include many textual variants, some of which, however, are derived from the explanations and commentaries of the author of *Halakhot Gedolot* which he interwove into the text of the Talmud. Hildesheimer's edition gives cross references to the Talmud which were missing in edition B. He has also noted the variances between the text of M and all the other versions of *Halakhot Gedolot*.

THE RELATION OF HALAKHOT GEDOLOL TO HALAKHOT PESUKOT. In contrast to the opinion of various scholars that Rabbi Yehudai Gaon was the author of the *Halakhot Pesukot* published by Sassoon from a manuscript entitled *Halakhot Pesukot of Rabbi Yehudai* (Jerusalem, 1951), Hildesheimer is convinced that *Halakhot Pesukot* is one of the versions of *Halakhot Gedolot* and that it is not identical with the *Halakhot Pesukot* of Rabbi Yehudai; the *Halakhot Pesukot* of the Sassoon manuscript was not written by Rabbi Yehudai Gaon but in a later period, making it impossible for the *Halakhot Pesukot* of the Sassoon manuscript to have served as the source of the *Halakhot Gedolot*. On the contrary, it is based on the *Halakhot Gedolot*. He reached this conclusion on the basis of the following: (1) the arrangement of the *Halakhot Pesukot* as a book divided into chapters according to subjects and topics in contrast to that of the *Halakhot Gedolot* which is based on the order of occurrence the *Halakhot* on the pages of the *Gemara* (especially in the three *Bavot* of *Nezikin*); (2) the citation of *halakhot* in the *Halakhot Pesukot* without noting their source and the deletion of long passages of the *Gemara* which are given in the *Halakhot Gedolot*. In addition to this, *halakhot* are written out in full in the *Halakhot Gedolot*. In the introduction to the second part of the *Halakhot Gedolot* Hildesheimer cites

other proofs to buttress his argument about the connection of the *Halakhot Gedolot* to the *Halakhot Pesukot*. S. Morell, on the other hand, maintains “that the *Halakhot Pesukot* is not an abridged edition of the *Halakhot Gedolot* but an independent work relying on early sources. The two works drew upon the same material and not from each other, the result being that the *Halakhot Pesukot* and *Halakhot Gedolot* are neither an abridgment or expansion but rather the same items arranged according to different systems.” Morell is of the opinion that the *Halakhot Pesukot* of the Sassoon manuscript is one of the editions of the *Halakhot* of Rabbi Yehudai which served as a source for the author of the *Halakhot Gedolot*.

With regard to the talmudic topics (*sugyot*) in the *Halakhot Pesukot*, Morell tries to prove that there were other *beraitot* and statements available to the Talmudic sages which were not available to the author of the *Halakhot Pesukot* and vice versa. There are topics in the *Halakhot Pesukot* which are missing in the Talmud and there are intricate discussions in the Talmud which are missing prior to the *Halakhot Pesukot*. There is even an instance in which the Talmudic version is an abridgment of a longer original version retained in the *Halakhot Pesukot*. The sages of the talmudic *sugyot* and those of the *Halakhot Pesukot* used the same raw material which included *beraitot* and received texts of questions and answers, and they edited this material in different ways.

Note should also be taken of the linguistic research concerning the Babylonian Aramaic forms of language as evidenced by the *Halakhot Gedolot* (the Paris manuscript of 1402) which includes words vocalized according to the Babylonian system. Kutscher established the fact that the *Halakhot Pesukot* is the prototype of Babylonian Aramaic, the Aramaic of which is remarkably precise. In the *Halakhot Pesukot* examples of various Aramaic dialects are found: (1) the Aramaic of the texts of contracts in the *Halakhot Pesukot*, (2) Babylonian Aramaic of the quotations from the Babylonian Talmud, (3) Gaonic Aramaic. Some scholars feel that there is linguistic similarity between Babylonian Aramaic and Mandaic.

[Yehoshua Horowitz]

HALAKHOT KEZUVOT (Heb. הַלְקוֹת קְזוּבוֹת), a collection of *halakhot* belonging to the geonic era, attributed to *Yehudai Gaon. *Halakhot Kezuvot* contains *halakhot* pertaining to the mishnaic order *Mo'ed* and also laws of divorce, wine of gentiles, mourning, *tefillin*, *zizit*, *mezuzah*, *terefot*, and a special chapter entitled *Shimmush Bet Din* dealing with legislation coming within the jurisdiction of the *bet din*, such as matrimonial and civil laws. The work, written for the most part in fluent simple Hebrew, does not give the sources of the *halakhah* and confines itself to laws of practical application. It is clear now that the *Halakhot Kezuvot* is not by Yehudai. Some suppose the book to have been written in Erez Israel, but in the opinion of M. Margalioth, it was composed in southern Italy during the second half of the ninth century, shortly before 863. The author draws on the one hand on *Halakhot Pesukot* (as he did not have in his possession the **Halakhot Gedolot*), and on the other on a Palestinian halakhic work similar to *Sefer ha-Ma'asim*. Many of the customs cited in the work are contrary to those of the *geonim* but conform with those prevailing in Italy, and the redemption money of a firstborn (see **Pidyon ha-Ben*) is given in Italian currency. Likewise, many of its linguistic forms are found only in the works of Italian scholars and the book was known and accepted in Italy for centuries, Italian scholars making extensive use of it. Differences in traditional *halakhot* are attributable to special traditions existing in the place of composition.

Although the book was hardly recognized in Babylonia, the *geonim* paying no attention to it and ignoring it as a source in their decisions, in the European countries it came to be regarded as authoritative. Among those making use of it are **Gershom b. Judah*, **Hananel*, *Judah al-Bargeloni*, and *Melchizedek of Siponto*, and whole sections from it are quoted in works emanating from the school of *Rashi*, e.g., *Sefer ha-Pardes*, *Sefer ha-Orah*, *Siddur Rashi*, *Maḥzor Vitry*, *Ma'aseh ha-Geonim*, and others. The chief importance of the book is historical, since it is the first halakhic work composed in Europe, and reflects the customs, methods of study, and style of the Jews of southern Italy, the first Torah center in the West. *Halakhot Kezuvot* was first published by C.M. Horowitz in the collection *Beit Nekhot ha-Halakhot* (*Toratan shel Rishonim*, 1881).

[Mordecai Margalioth]

HALAKHOT PESUKOT (Heb. הַלְכוֹת פְּסוּקוֹת; “Decided Laws”), the first known halakhic work of the *geonim*, written in the eighth century and attributed to *Yehudai Gaon or to his pupils. It confines itself to those *halakhot* which are of practical application, arranging them according to subject matter: laws of *eruvim*, Sabbath, Passover, etc. Its language is the Aramaic of the Talmud (for the most part giving the actual wording of the Talmud) and it generally follows the order of the Talmud, only occasionally combining isolated or scattered *halakhot*. The author makes use of the halakhic Midrashim and the Tosefta and there are a few quotations from the Jerusalem Talmud and the *Sefer ha-Ma'asim*. In addition there are cited many explanations and traditions of the *savoraim* handed down by the *geonim*, and mention is made of some of the scholars belonging to the period of the *savoraim*.

Although much of the material in the *Pesukot Halakhot* corresponds to that of the *She'iltot* of R. *Aḥa and it is therefore probable that the author utilized it, it is also possible that both drew upon a common source, a collection of early interpretations available in the academy. Although the *geonim* ascribe the work to Yehudai Gaon, it should not be assumed that he compiled it himself. To explain away the fact that many of the *halakhot* in the *Halakhot Pesukot* differed from the accepted *halakhah*, the *geonim* and *rishonim* propagated the tradition that Yehudai was blind and that his disciples wrote the work ascribed to him. Yehudai is in fact frequently mentioned in the work, generally as *rosh metivta*, and his son, Joseph, is also mentioned once in the *Hilkhot Re'u*, the Hebrew translation of the work. Further evidence of the work not being wholly that of Yehudai may be seen in its inclusion of *Terefot de-Erez Yisrael*, to which Yehudai was vehemently opposed (see Margalioth, in *Talpioth*, 8, 1963), although it may be that an early copyist added to the Babylonian work a section dealing with the *halakhot* in Erez Israel to provide a parallel between the Babylonian and the Erez Israel laws.

In consequence of this work, Yehudai achieved a reputation enjoyed by few in his time. *Pirkoi b. Baboi, his pupil, says of his master, “for many years there has been none like him... and he never said anything that he had not heard from his teacher... and Mar Yehudai of blessed memory added, ‘I have never given any answer to a question for which there was no proof from the Talmud and I learned the law from my teacher, who had it from his own teacher.’” The intent of the above is apparently to emphasize the fact that the work is based on the two pillars of Talmud and tradition and, indeed, it contains no independent views, giving only the words of the talmudic sages or the traditions of the *savoraim* and early *geonim*.

Halakhot Pesukot filled a great need. Yehudai was in constant contact with the communities outside Babylon which turned to him with halakhic problems, and his realization that not everyone could find his way in the Talmud, and that it was impossible to turn to the *geonim* with every problem, led him to take on himself the task of giving the essence of the Talmud, the halakhic conclusion without the involved discussion. The work became indispensable almost as soon as it appeared, “most people turning to the digested *halakhot* saying, ‘what concern have we with the Talmud?’” Paltai, the *gaon* of Pumbedita, opposed this practice, fearing it would cause people to abandon the study of Torah (*Hemdah Genuzah*, no. 110).

Many adaptations and abridgments of the book were made, of which fragments have been found in the *genizah*. The scholars who published them gave them the names which were common among the *rishonim*, e.g., *Halakhot Ketu'ot*, *Halakhot Ketannot*, etc. One of these adaptations is the *Halakhot Kezuvot, compiled in southern Italy during the first half of the ninth century.

The most important adaptation, which became even more widespread than the original, eventually displacing it, is the *Halakhot Gedolot (Venice, 1548) which absorbed most of the *Halakhot Pesukot*, and added to it a great deal of material from the sources. The *Halakhot Pesukot* was translated into Hebrew and Arabic shortly after it was written. The Hebrew translation (published from an Oxford Ms. by A.L. Schlossberg with an introduction by S.Z.H. Halberstamm in Versailles in 1886) was given the name *Hilkhot Re'u*, since it begins with Exodus 16:29, of which “*Re'u*” is the first word. The translation, executed in Erez Israel, is the first of halakhic material from Aramaic into Hebrew to survive. Its literary standard is not high and many passages which it was difficult to translate were left in the original Aramaic. The translation contains many of the peculiarities of the style and script characteristic of the Jerusalem Talmud and the *Sefer ha-Ma'asim*. The beginning and end of the manuscript are defective, although the Cairo *Genizah* contains many excerpts from which the missing portions could be restored. In general, there is a need for a new scientific edition, since that of Schlossberg is defective and full of errors.

Many fragments of the Arabic translation have also come down, most containing a section of the Aramaic original, followed by the translation, although there are also fragments of a consecutive translation. In all probability there were a number of Arabic translations, testimony to the great popularity of this first halakhic code after the compilation of the Talmud.

Until 1911 *Halakhot Pesukot* was known only through quotations in the books of the early scholars. In that year, however, a manuscript of the work was found by David Sassoon in San'a, the capital of Yemen, and was published by his son Solomon (1951). This unique manuscript is in a fragmentary state; both the beginning and the end are lacking, as well as portions in the body of the text. (Many individual pages of the missing section, however, have been found in the Cairo

Genizah.) *Hilkhot Terefot* from the *Halakhot Pesukot* have been published recently from several remnants.

[Mordecai Margalioth]

HALBERSTADT, city in Germany. The earliest document testifying to the presence of Jews in Halberstadt dates from 1261; in it the city promises its protection to the Jews “as in the past.” It is probable that Jews were already settled in the city in 1189. A Jewish community (*Judendorf*) possessing a synagogue was first mentioned in 1364; it comprised 11 families in 1456, mainly occupied in moneylending. The Jews were expelled from Halberstadt in 1493; although some returned in the 16th century, they were expelled once more in 1595. Shortly afterward, several Jews again settled in the city and built a synagogue, which was destroyed during the Thirty Years War. In 1650 ten Jewish families were granted privileges allowing them to engage in business and moneylending, but forbidding them to build a synagogue. They were permitted to elect a rabbi in 1661. The authorities protected the Jews from the jealousy of Christian merchants and as a result the community had grown to 118 families (639 persons) by 1699. In 1689 Behrend *Lehmann, the powerful *Court Jew of Saxony and protector of the community, established a *bet midrash*, the renowned *klaus* (1707), and in 1712 permission was granted to build a new synagogue. Halberstadt then served as a center for the smaller communities in its environs (e.g., *Halle and *Magdeburg) and was the largest Jewish community in Prussia. Occupations of Jews in this period ranged from simple handicraft to finance and industry. The community was world renowned as a center for Torah study and philanthropy in the 17th and 18th centuries. In 1795 a school for children of poor families, called *Hazkarat Zevi*, was opened. It existed until shortly before the destruction of German Jewry. In the 1850s and 1860s some Hebrew works were printed in Halberstadt. A beautiful *maḥzor* was issued by H. Meyer: *J.Z. *Jolles' Melo ha-Ro'im* was edited by Y.F. Hirsch and printed at the press of J. Hoerling's widow (1859); B.H. *Auerbach's controversial *Sefer ha-Eshkol* appeared in 1867–79; and Elijah of Vilna's *Aderet Eliyahu* was published there. In the 19th and early 20th century the Hirsch family was outstanding in the industrial sphere and for its philanthropic activities.

Halberstadt was the center of Orthodox Jewry in Germany and until 1930 the central organizations of German Orthodox congregations and other Orthodox bodies were situated there. Several famous rabbis served in Halberstadt, including *Zevi* Hirsch *Bialeh, Hirschel *Levin, and members

of the *Auerbach family. In 1933 there were 706 Jews in Halberstadt (1.4% of the total population). With the rise of Nazism, and its consequent economic and social pressure, many Jews began to leave. The community reacted to persecution by developing a complex of cultural and educational institutions, and formal relationships were retained with the governmental authorities. In October 1938, some 100 Polish Jews were expelled. On Nov. 10, 1938 the synagogue was first set on fire. Ninety Torah scrolls were desecrated in the streets; the synagogue was subsequently demolished. Some 40 Jewish men were arrested and sent to Buchenwald. Stores were looted and homes were wrecked. The Jewish school was closed in 1941. Between 1939 and 1942, 186 persons were deported; none returned. The only Jews who remained were intermarried.

In 1995 the Moses Mendessohn Academy was founded which is financed by the Federal State of Saxony-Anhalt, the city of Halberstadt, and private donors. It is located in a complex of buildings: the renovated former Klaus synagogue, the site of the former baroque synagogue, the former house of the cantor, and the renovated former bathhouse. The latter houses the Berend Lehmann Museum on Jewish history and culture, which was opened in 2001. It focused on the history of the Jews in Halberstadt as a model for Jewish history in Prussia. In 2005, 30 Jewish families from the former Soviet Union founded a new Jewish community.

[Zvi Avneri / Larissa Daemmig (2nd ed.)]

HALBERSTADT, ABRAHAM BEN MENAHEM MENKE (d. 1782), German rabbi. Halberstadt studied under his father who was *daiyan* of Halberstadt, as well as under Jonathan *Eybeschutz. In 1733 he published the *Shulḥan Arukh, Yoreh De'ah* in Amsterdam. In addition to his talmudic learning he acquired a profound knowledge of grammar, mathematics,

and astronomy. In his interesting correspondence with his Berlin friend Jeremiah (who has been identified either with Jeremiah b. Naphtali Hirsch of Halberstadt or with Jeremiah b. Ephraim Segal who died in 1788), he expresses his views on the problems of contemporary German Jewry. In a letter written in 1774 he stresses the importance of the study of grammar and the Bible, and in another letter the next year he expresses his admiration for Moses *Mendelssohn and N.H. *Wessely, and suggests that the latter's *Yein Levanon* be used by rabbis as a basis for their sermons. He affirmed that the ignorance of grammar and secular subjects by many rabbis was the cause for their inability to understand correctly certain passages of the Talmud. In a letter in 1770, while emphasizing that all the accusations against Eybeschuetz were baseless, he nevertheless severely censured Eybeschuetz' careless conduct, and condemned the negative character of many of his pupils. His glosses to the Talmud, *Penei Avraham*, have remained in manuscript. He published the *Ba'alei Nefesh* (Berlin 1762) of *Abraham b. David (Rabad), adding to it glosses published in Venice (1741). He died in Berlin.

[Yehoshua Horowitz]

HALBERSTADT, MORDECAI (also known as Mordecai of Duesseldorf; d. 1770), rabbi and grammarian. Born in the town of Halberstadt at the beginning of the 18th century, Mordecai studied under Abraham b. Judah Berlin, the local rabbi, and Zevi Hirsch Ashkenazi, the head of its yeshivah. He proceeded to Frankfurt in 1730 where he studied under Jacob ha-Kohen, author of *Shav Ya'akov*, whose rulings and responsa he quotes in his *Ma'amar Mordekhai* (nos. 10, 69, 70, et al.). He taught at the Halberstadt yeshivah and, on the recommendation of Jacob ha-Kohen, was appointed *av bet din* of Griesheim near Frankfurt (*Ma'amar Mordekhai*, nos. 2, 8, 14). He later served as rabbi of Darmstadt, and then at Duesseldorf (no. 23), where he remained until the end of his life. Requested by Samuel Heilmann of Metz and Joshua *Falk of Frankfurt to join in the ban against Jonathan *Eybeschuetz and to give his opinion about the amulets, Halberstadt was reluctant to attack Eybeschuetz personally and instead recommended that they content themselves with adverse criticism of the activities of the circles close to Shabbateanism. He was the author of the responsa, *Ma'amar Mordekhai* (Bruenn, 1790). Responsum no. 30 deals with the case of an animal in whose stomach was found a needle adhering to the midriff. The scholars of the Rhineland regarded such an animal *kasher* on the basis of responsa by Ephraim Solomon *Luntschitz and Isaiah *Horowitz (*ibid.*, 41b). Halberstadt proved with profound acumen that these alleged responsa were forgeries by the Bonn informer, Krauss, "who forged and testified falsely in the names of those great scholars." *Lehem Eden*, a pamphlet containing the glosses of Halberstadt's son, MENAHEM MENDEL HALBERSTADT, is appended to the book. Mordecai Halberstadt also compiled a work on

grammar that has remained in manuscript. His grandson, who published the *Ma'amar Mordekhai*, refers to him as "Mordecai *Balshan* [the 'linguist'], because of his profound knowledge of the holy tongue and Hebrew grammar."

[Yehoshua Horowitz]

HALBERSTAEDTER, LUDWIG (1876–1949), Israel radiologist. Born at Beuthen (Bytom), Silesia, he was appointed head of the department of radiotherapy at the Cancer Institute at the University of Berlin in 1919, becoming professor there in 1929. When the Nazis came to power in 1933, he settled in Erez Israel, where two years later he was made professor of radiology and radiotherapy at the Hebrew University, Jerusalem. He was also head of the radiobiology department of the university and director of the cancer department at the Hadassah University Hospital.

Halberstaedter was a radiobiologist and radiotherapist of international reputation. A pioneer in several fields, he investigated the nature of monkey malaria and together with von Prowazek discovered the Halberstaedter-Prowazek bodies widely believed to present a stage in the life history of the causal virus of trachoma.

HALBERSTAM, ḥasidic dynasty, originating in western Galicia in the mid-19th century. The most important personality in the dynasty was its founder, ḤAYYIM BEN LEIBUSH (1793–1876). Born in Tarnograd, on his mother's side Ḥayyim was a descendant of Ḥakham Zevi (Zevi Hirsch *Ashkenazi). Ḥayyim's father directed a *heder*. In 1830 he was appointed rabbi of Nowy Sacz (Zanz). As a youth Ḥayyim was brought to *Jacob Isaac the ḥozeh ("seer") of *Lublin who strongly influenced him and he became a Ḥasid; he studied under Naphtali of *Ropczyce and Zevi Hirsch of *Zhidachov. Ḥayyim also studied with Zevi Hirsch of *Rymanow, Shalom Rokeaḥ of *Belz, and Israel of *Ruzhin. Ḥayyim administered his yeshivah in the best scholarly tradition of the old-style yeshivot in Poland. He would not permit his pupils to cultivate Ḥasidism until a late stage. Thus both Ḥasidim and *mitnaggedim* were attracted to his yeshivah. Known as strict in matters of learning and observance, he conducted his "court" modestly and discreetly and avoided the splendor and luxury customary at the "courts" of other *zaddikim* in that period. The main event in his public life was the dispute between the Ḥasidim of Zanz and Sadagora, which aroused a controversy that spread beyond Galicia and also involved the leading non-ḥasidic rabbis. The principal cause of the dispute lay in the basic difference between the Zanz pattern of Ḥasidism with its stress on traditional learning and ecstatic expression in religious life and the manner of life adopted by Israel of Ruzhin and followed by his descendants. They lived in almost literally royal style, in the utmost luxury and

splendor, which aroused resentment and opposition particularly of the Ḥasidim of Zanz, and also of the conservative Ḥasidim of Galicia generally. The publication of Dov Baer of Lyova, the youngest son of Israel of Ruzhin, in which he renounced Ḥasidism and expressed his support of the Haskalah, gave the Ḥasidim of Zanz a weapon against the dynasty of Ruzhin. Ḥayyim issued a letter in which he openly expressed his strong reservations about the way of life of the Sadagora Ḥasidim. It was circulated throughout Galicia, and a stormy debate between the two ḥasidic groups ensued. A rabbinical convention in the Ukraine called for Ḥayyim's excommunication and even demanded that he should be handed over to the authorities. The dispute reached Erez Israel, where it took on an added dimension in affecting the financial arrangements of the *ḥalukkah*, and apportionment of the money from Poland, to support the community in Erez Israel. A number of rabbis, including Joseph Saul *Nathanson of Lvov and Dov Berush *Meisels, rabbi of Warsaw, Ḥayyim's brother-in-law, attempted to reconcile the opposing parties. The Hungarian rabbis intervened without success. After several months the dispute died down, but Ḥayyim remained consistent in his opinions on the matter. Ḥayyim wrote: *Divrei Ḥayyim* (Zolkiew, 1864), on ritual purity and divorce laws; responsa *Divrei Ḥayyim* (Lemberg, 1875), and *Divrei Ḥayyim* (Munkacz, 1877), ḥasidic sermons on Torah and the festivals. His works reveal a profound knowledge of the Talmud and commentaries, the *midrashim*, and medieval philosophical literature. He quotes widely from Judah Halevi's *Kuzari*, Maimonides, Naḥmanides, and Abraham ibn Daud. From later literature, he cites Isaiah Horowitz, Judah Loew of Prague, the prayer book of Jacob Emden, and his teachers in Kabbalah and Ḥasidism. An opponent of asceticism, Ḥayyim was an exponent of the ecstatic mode of prayer and developed the ḥasidic melody. In his writings he emphasized the duty of charity and criticized *zaddikim* who lived luxuriously.

Ḥayyim had eight sons. The most important was EZEKIEL SHRAGA OF SIENIAWA (1811–1899), considered a scholar and strict in matters of *halakhah*. He was responsible for the transcription and publication of Abraham b. Mordecai *Azulai's commentaries on the *Zohar, *Or ha-Ḥammah* (1896–98) and *Zoherei Ḥammah* (1881–82), and Ḥayyim *Vital's *Sefer ha-Gilgulim* (1875). In 1878 Akiva ha-Kohen Lieber of Yasiencia studied with him and edited his posthumous work *Divrei Yehezkel* (Sieniawa, 1906), novellae, sermons on the Torah and for the holidays, and a few responsa. Other influential sons were BARUCH of Gorlice (1826–1906), DAVID of Kshanol (1821–1894), AARON of Zanz (d. 1906), *zaddik* and rabbi of Zanz and later of the region. SOLOMON BEN MEYER NATHAN OF BOBOVA (1847–1906), grandson of Ḥayyim, founded a large yeshivah, attracting youth and many Ḥasidim. His son BEN ZION (1873–1941) became celebrated for the beautiful melodies he composed and also attracted many Ḥasidim. He perished in the Holocaust. Ben Zion's son, SOLOMON (d. 2000), found refuge in the United States where he established a ḥasidic center in the Boro Park section of Brook-

lyn. In December 1959 he also founded the small settlement of Bobova, near Bat Yam, which has subsequently become a center for Bobova Ḥasidim in Israel. Solomon was replaced by his son NAFTALI, who died in 2005. Several descendants of Ḥayyim Halberstam moved to Slovakia where they served as rabbis. One of them, JACOB SAMSON OF CZHOW, settled in Klausenburg (Cluj), Transylvania, in 1917. Another descendant is JEKUTHIEL JUDAH (1904–1994), who later became the Klausenburg Rebbe. Although his wife and 11 children perished in the Holocaust, Jekuthiel survived and reestablished his court in the Williamsburg section of Brooklyn. In 1956 he founded Kiryat Zanz near *Netanyah in Israel. He later permanently settled in Kiryat Zanz, along with many of his Ḥasidim. His two sons succeeded him.

[Pnina Meislich]

HALBERSTAM, DAVID (1934–), U.S. writer. Halberstam was the younger of two sons born in the Bronx to Charles, a military surgeon whose parents had immigrated from Poland, and Blanche (Levy), a schoolteacher whose parents had come from Lithuania. His father's work took him to Winsted, Connecticut, El Paso and Austin, Texas, and Rochester, Minn. In 1951 Halberstam graduated from Roosevelt High School in Yonkers, N.Y., where he wrote for the school newspaper, and he then attended Harvard College, where he became managing editor of the *Crimson*. Upon graduation in 1955, Halberstam chose to work in the South, his first job coming at *The Daily Times Leader* in West Point, Mississippi, the state's smallest daily newspaper, and seven months later he moved to *The Tennessean* in Nashville, where he covered the early Civil Rights movement. Halberstam joined the *New York Times* in 1960, working first in Washington before being assigned to the Congo, and then in September 1962 to the paper's bureau in Saigon. It was there that Halberstam became a legend as one of a small group of reporters who began to question and speak out against the official administration version of the war in Vietnam, which led U.S. president John F. Kennedy to request that Halberstam be transferred to another bureau. Halberstam's reporting earned him the George Polk Award in 1963 and the Pulitzer Prize in 1964 for international reporting. In January 1965 he was sent to Poland, where his reporting on the repressive and antisemitic policies of the Communist regime led to his being ordered to leave the country. Halberstam then reported from Paris, and in 1967 he left the *Times* to become a contributing editor for *Harper's*. He started writing books, including *The Making of a Quagmire: America and Vietnam During the Kennedy Era* (1965), *The Unfinished Od-*

yssey of Robert Kennedy (1969); and *Ho* (1971), a biography of Vietnamese revolutionary leader Ho Chi Minh. But it was his bestselling book, *The Best and the Brightest* (1972), a critical history of America's involvement in the Vietnamese conflict, which established Halberstam as an important commentator on American politics and power.

The enormous success of *The Best and the Brightest* led to a career in writing on a wide range of topics filled with anecdotes, metaphors, and a narrative tone usually seen in fiction. It included *The Powers That Be* (1979), which examined the influence of the news media on American society; *The Reckoning: The Challenge to America's Greatness* (1986), a comparative history of the Japanese and U.S. automobile industry; *The Next Century* (1991), on the diminishing educational standards and decline in economic productivity in the U.S.; *The Fifties* (1993), a look at the decade, embracing social change, politics, and technology and their impact on each other and the world, which was made into an eight-part television series; *The Children* (1998), about the youth who were part of the Civil Rights movement; *War in the Time of Peace: Bush, Clinton, and the Generals* (2001), a look at how U.S. domestic politics came to dictate foreign policy, which was a runner-up for the Pulitzer Prize; and *Firehouse* (2002), the story of the firefighters who sacrificed their lives on September 11, 2001. Halberstam also wrote fiction: *The Noblest Roman* (1961) and *One Very Hot Day* (1968).

Halberstam is also a leading sportswriter, beginning with *The Breaks of the Game* (1981), an account of his year spent with the Portland Trailblazers, considered among the best books ever written on professional basketball. He also wrote *The Amateurs: The Story of Four Young Men and Their Quest for an Olympic Gold Medal* (1985), a study of the world of sculling; *Summer of '49* (1989), a look at the drama of the 1949 pennant race; *October 1964* (1994), chronicling the season and World Series that was to become the last year of the New York Yankees dynasty; *Playing for Keeps: Michael Jordan and the World That He Made* (1999), documenting the making of a legend; *The Teammates: A Portrait of Friendship* (2003), about the 60-year friendships of baseball players Ted Williams, Dominic DiMaggio, Johnny Pesky, and Bobby Doerr; and *The Education of a Coach* (2005), an in-depth look at the life and career of NFL coach Bill Belichick of the New England Patriots. Halberstam also edited the anthology *Best American Sports Writing of the Century* (1999).

[Elli Wohlgerlinter (2nd ed.)]

HALBERSTAM, ISAAC BEN ḤAYYIM (1810–1880), talmudist and author. Halberstam was born in Brody and belonged to a distinguished rabbinical family. He was a brother-in-law of Dov Berush *Meisels, rabbi in Cracow and Warsaw, in partnership with whom he directed a banking establishment in Cracow. After losing his fortune, Halberstam devoted himself exclusively to study. His novella to the Pentateuch, arranged in the order of the weekly portions, were published by his son, Solomon Zalman Ḥayyim, under the title *Si'ah Yizhak* (1882).

HALBERSTAM, SOLOMON (Zalman) ḤAYYIM (known from his acronym as **ShaZHaH**; 1832–1900), Polish scholar and bibliophile. Halberstam was born in Cracow and studied with his father, Isaac Halberstam, an eminent talmudist. During his years as a successful merchant in Bielsko (Bielitz), Poland, he collected rare books and manuscripts. He studied some and lent others to Jewish scholars. Halberstam was one of the founders of the *Mekize Nirdamim society. In addition to scholarly articles and notes to the works of other scholars, he published with introductions and notes some of the manuscripts from his library, among them being *Yom Tov b. Abraham's novellae on tractate *Niddah*, *Ḥiddushei ha-Ritba* (1868); Abraham *Ibn Ezra's *Sefer ha-Ibbur* (1874); and *Judah b. Barzillai's *Sefer ha-Shetarot* (1898) and *Perush Sefer Yezi'rah* (1885). In 1890 he published *Kohelet Shelomo*, a catalog of his manuscripts which listed 411 items. After Halberstam's death most of his manuscripts were sold to the Judith Montefiore College in Ramsgate, England, and are now at Jews' College, London. The majority of the printed books in his library and a small part of his manuscript collection were acquired by the Jewish Theological Seminary in New York and the library of the Vienna community. Most of his correspondence is preserved in the library of the Jewish Theological Seminary. Halberstam also wrote notes to H. Michael's bibliographical work *Or ha-Hayyim* (in the Mosad ha-Rav Kook edition, 1965).

[Abraham Meir Habermann]

HALBWACHS, MAURICE (1877–1945), French sociologist. In social psychology he investigated the problems of memory considered as a social fact and the influence of collective memory and tradition on beliefs, and traced the delicate interconnections between psychology and sociology. He combined an avid concern with sociographic investigation in various fields with his strong bent for theorizing in works on demographical statistics, on which subject he contributed to the *Encyclopédie Française*. He taught at the universities of Caen, Strasbourg, and Paris (after 1935), and a few months before his deportation and murder by the Nazis he was nominated to occupy the chair of social psychology at the College de France. He perished in the Buchenwald concentration camp. Among his works were *La théorie de l'homme moyen: Essai sur Quetelet et la statistique morale* (1913), *Les cadres sociaux de la mémoire* (1925, 1952²), *L'évolution des besoins dans les classes ouvrières* (1933), *Morphologie sociale* (1934), *Esquisse d'une psychologie des classes sociales* (in *Enquêtes Sociologiques...*, 1938; repub. posthum., 1955; *The Psychology of Social Class*, 1958), *La topographie légendaire des Évangiles en Terre Sainte* (1941),

Psychologie collective (1942), and *Mémoire et Société* (1949), posthumous.

[Ephraim Fischhoff]

HALEVA, ISAK (1940–), chief rabbi of Turkey from October 2002. Born in Istanbul, Haleva graduated from the Jewish high school there and continued his higher education at Jerusalem's Porat Yosef Yeshivah, from which he graduated with the title of rabbi in 1961. He served as a member of the Bet Din of Turkey's Chief Rabbinate and taught religion and ethics at the Jewish high school from 1963 until 2000. He also taught Hebrew and Jewish religion at Marmara and Sakarya universities in the faculty of theology. He was a member of the European Rabbis Conference. His son Naftali Haleva was a rabbi and member of the Bet Din.

[Rifat Bali (2nd ed.)]

HA-LEVANON (Heb. הַלְבָנוֹן, “Lebanon”), the first Hebrew newspaper in Erez Israel. *Ha-Levanon*, edited by Jehiel *Brill, Joel Moses *Salomon, and Michael Cohen, first appeared in Jerusalem in March 1863. The paper was established as the organ of the *ḥalukkah trustees at a time of strife within the Jerusalem Ashkenazi community.

Throughout the paper's career, Brill, the editor in chief and the paper's moving spirit, consistently held that Jews living in the old city of Jerusalem should found suburbs outside the city's walls in which to live. Further, the *yishuv* living on the *ḥalukkah* should turn to productive occupations, particularly farming. At the same time, however, Brill objected to Ḥovevei Zion's fervent advocacy of the settlement of Erez Israel, claiming that the movement's plans were impracticable, fired as they were by imagination rather than by a thorough knowledge of conditions in the country. He did approve of feasible programs of settlement and throughout the years urged Ḥovevei Zion to adopt a realistic attitude. Among the settlement programs supported by *Ha-Levanon* were *Moza and Petaḥ Tikvah.

Contributors to the paper included journalists and scholars from abroad as well as from Jerusalem. *Ha-Levanon* engaged in a bitter controversy with the rival paper, *Ḥavazzelet*, established in Jerusalem during the summer of 1863. As a result both papers closed down in 1864. After a year's interval, Brill revived *Ha-Levanon* in Paris, where it appeared as a biweekly until 1868 when it became a weekly. Although published in Europe, the paper appeared in Jerusalem on a monthly basis and continued to print much news of Erez Israel, most of its articles, in fact, being devoted to *yishuv* affairs. The paper, especially in its literary supplement (*Kevod*

ha-Levanon), printed diverse studies on Judaism and belles lettres (mostly translations), with leading local and foreign writers as contributors. Trapped in the siege of Paris during the Franco-Prussian War (1870–71) and the Commune, Brill depicted the latter for *Ha-Levanon*, and eventually he left for Germany where he revived *Ha-Levanon* in Mainz (1872) as a supplement of the German Orthodox paper *Israelit*. Becoming the Hebrew organ of Orthodoxy, it provided the forum for a bitter controversy with the religious Reform movement of M.L. *Lilienblum, J.L. *Gordon, and others. Concurrently, Brill continued to support every constructive plan relating to the *yishuv*. The Russian pogroms of the early 1880s brought about an ideological reorientation in *Ha-Levanon*. Brill severed his connection with the Orthodox circles and became a zealous advocate of the settlement of Erez Israel. He conducted propaganda campaigns in Russia, and was responsible for the immigration to Erez Israel of Jewish farmers who later founded the village of Ekron. At the end of 1882 *Ha-Levanon* ceased publication. In 1884 Brill settled in London, where he revived *Ha-Levanon* in 1886, but the paper closed on Brill's death that same year. A pioneer of the modern press in Erez Israel, *Ha-Levanon* provided during its 20 years of existence the first opportunity for Hebrew journalists in Erez Israel.

[Getzel Kressel]

HALEVI, EZEKIEL EZRA BEN JOSHUA (1852–1942), one of the most prominent scholars and poets of Iraqi Jewry in recent generations; born in Baghdad and died in Jerusalem. In 1897 Halevi emigrated to Erez Israel and settled in Jerusalem. He earned his livelihood as a preacher; he was also a communal worker, president of the committee of the Iraqi community, and one of the founders of the yeshivah Shoshanim le-David. Of the more than 10 books which he wrote, five were published, including *Arugat ha-Bosem* (1905), on the *aggadah*; *Tehillah ve-Tiferet* (1914), a commentary on the Book of Psalms; and also his *Simḥat Yom Tov* (c. 1934), which was a commentary on the Passover *Haggadah*.

[Abraham Ben-Yacob]

HALEVI, ḤAYYIM DAVID (1924–1998), Israeli rabbi and halakhist. Born in Jerusalem, Halevi studied in the Porat Yosef Yeshivah. He received his rabbinic ordination from the head of Porat Yosef, Rabbi Atiah, and from Chief Rabbi Ben-Zion Meir Ḥai Ouziel. During the War of Independence, he served in the “yeshivah” brigade, Tuvia. In 1948 he was appointed a neighborhood rabbi in Jerusalem and was Rabbi Ouziel's personal secretary. At the same time, he taught in Yeshivat

Sha'arei Zion. In 1951 Halevi became the Sephardi chief rabbi of Rishon Le-Zion. He served on the Rabbinic Council of the Israeli Chief Rabbinate and the Rabbinic Council of the Mizrahi Party from the mid-1960s. From 1974 to 1997 he served as the chief rabbi and head of the rabbinical court of Tel Aviv-Jaffa. In 1992 he campaigned for the post of chief rabbi of Israel, but lost. In 1996 he received the Israel Prize for Torah literature.

Throughout his life, Halevi's main concern was Jewish law. His numerous halakhic works are free of arcane terminology and rely more on straightforward logic than numerous quotes from halakhic literature. His works include *Bein Yisrael la-Ammim*, a treatise on the spiritual and political stature of Israel among the nations (1954); *Devar Mishpat*, three volumes on the laws of the Sanhedrin in Maimonides' code (1963–65); *Mekor Hayyim ha-Shalem*, a five-volume synopsis of Jewish law (1967–74); *Dat u-Medinah*, religion in modern Israel (1969); *Mekor Hayyim le-Ḥatan, le-Kallah u-le-Mishpaha* (1972) on marriage law; *Kizzur Shulḥan Arukh Mevor Hayyim*, a summary of Jewish law widely used in schools in Israel; *Mekor Hayyim le-Banot* (1977); *She'elot u-Teshuvot Aseh Lekha Rav*, responsa, many of which deal with modern issues (1976–89); *Mayim Hayyim*, responsa (1991–98). Halevi also published a three-volume work on the weekly Torah readings, *Torat Hayyim* (1992–93), as well as a topical index to the Zohar, *Maftēhot ha-Zohar ve-Ra'ayonotav* (1971).

Halevi was a courageous halakhist. He tackled many modern-day issues and was the first to issue a rabbinic prohibition against smoking.

[David Derovan (2nd ed.)]

HALEVI, JOSEPH ZĒVI BEN ABRAHAM (1874–1960), Israeli rabbi and halakhic authority. Halevi was born in Slobodka and studied in its famous yeshivah. In 1891 he settled in Erez Israel, where in 1897 he was appointed *dayyan* and assistant to his father-in-law, Naphtali Herz ha-Levi, the first Ashkenazi rabbi of Jaffa. In 1902 on the death of his father-in-law, he served for a time as rabbi of Jaffa, but when A.I. *Kook was appointed rabbi of Jaffa, Halevi was appointed head of the first permanent *bet din* established there. During Kook's absence from Erez Israel in World War I he took over his functions as rabbi of the Ashkenazi community and together with Ben Zion *Ouziel represented the Jewish community of Jaffa-Tel Aviv before the Turkish government. Following the expulsion of Jews from Jaffa-Tel Aviv by the Turks, Halevi went to Petaḥ Tikvah and to Rishon le-Zion, returning to Jaffa after the entry of the British into Erez Israel. He continued to fill the office of *av bet din* also during the rabbinates of Aaronson (1923–1935), Amiel (1936–1945), and Unterman (from 1947).

Halevi was a prolific author. Most of the 17 books he wrote deal with the *halakhot* and precepts applying to the land of Israel, maintaining that with the beginning of the “ingathering of the exiles” attention should again be paid to these laws. The following are some of his works: *Hora'at Sha'ah* (1909), an exposition of the principles permitting the work-

ing of the land in the Sabbatical year by selling it to a gentile; *Hashkafah li-Verakhah* (1930), on the laws of the separation of the tithes; *Aser Te'asser* (1935), on *terumot and ma'aserot (“tithes”); *Neta ha-Arez* (1939), *Zera ha-Arez* (1941), *Kerem ha-Arez* (1943), *Lehem ha-Arez* (1950); *Ḥovat Giddulei ha-Arez* (1953), dealing with the laws of **orlah*, **kilayim* (mixed species) of seeds and trees, *kilayim* of the vineyard, the law of **hallah* and the laws of **leket*, *shikhḥah* and *pēah*; *Amirah Ne'imah* (1948; second series 1955 in two parts), halakhic expositions and novella; *Va-Tomer Ziyyon*, 2 pts. (1950–58), homilies on the Pentateuch; *Torat ha-Korbanot* (1959), an exposition of 288 *halakhot* in Maimonides' laws of the sacrifices. Most of his works follow a standard pattern. The basis is the text from Maimonides' *Mishneh Torah*, to which he adds the decisions of *rishonim* and the decisions based upon new developments. Although there is an element of casuistry in his works, in the main he aims at giving the practical *halakhah*. In 1958 he was awarded the Israel Prize.

[Yehoshua Horowitz]

HA-LEVI, SASSON BEN ELIJAH BEN MOSES (also known as R. Sasson Smuha; 1820–1910), Baghdad rabbi and disciple of R. Abdullah *Somekh. Ha-Levi held the position of *dayyan* from 1841 to 1876. In 1860 he intervened to prevent the expropriation from Jewish hands of the traditional tomb of the prophet Ezekiel in the village of Kifl. From 1876 to 1879 he was *hakham bashi* of Baghdad. A controversy then broke out between him and several members of the community, who deposed him and appointed R. Elisha Dangoor in his place. A dispute ensued between the two during the years 1880 to 1885. The majority of the rabbis supported Dangoor, while some of the wealthy sided with Ha-Levi. The matter reached the chief rabbi of Constantinople, who decided in favor of the former. Ha-Levi composed two *piyyutim*, which have been included in books of liturgical hymns.

[Abraham Ben-Yaacob]

HALÉVY (19th–20th centuries), French family of authors. LÉON HALÉVY (1802–1883) was born in Paris. He was the younger son of Elie Halfon *Halévy and younger brother of the composer Jacques François Fromental *Halévy. A scholar of distinction, Léon Halévy became assistant professor of French literature at the Ecole Polytechnique in 1831 and head of the antiquities department in the Ministry of Education six years later. Although his connection with the community was intermittent and he married a non-Jewess, he never abandoned Judaism. He evidently found official prejudice strong enough to prevent his advancement, and in 1853 retired from public life and became a writer. Doctrinally a Saint-Simonian, he was critical of the development of post-biblical Judaism, favoring

a reformist return to the “primitive faith” on semi-Christian lines. Halévy’s works include *Résumé de l’histoire des juifs anciens* (1825) and its sequel, *Résumé de l’histoire des juifs modernes* (1828). He also wrote two volumes of verse, rhymed translations and plays, which included tragedies and dramas such as *Luther* (1834) and *Electre* (1864) and some popular vaudeville comedies.

Léon’s son, LUDOVIC HALÉVY (1834–1908), was a writer whose comedies, librettos, novels, and stories dealt with the gay life of the French during the Second Empire. In collaboration with Henri Meilhac he wrote the text for Bizet’s opera *Carmen* (1875), and librettos for several operettas by Jacques *Offenbach, including *La belle Hélène* (1865), *La Vie parisienne* (1866), *La Grande-Duchesse de Gérolstein* (1867), and *La Périchole* (1868). Their play *Le Réveillon* (1872), based on a German drama, was later adapted for Johann Strauss’ *Die Fledermaus*. Their greatest success was the comedy *Frou-Frou* (1870). With H. Crémieux, Halévy wrote the libretto for Offenbach’s *Orphée aux enfers* (1858). His other works include the novels *Un Mariage d’amour* (1881) and *L’Abbé Constantin* (1882), and several volumes of memoirs, notably *L’Invasion* (1872). He was elected to the Académie Française in 1884. In his later years he revealed a consciousness of his Jewish heritage. Ludovic Halévy’s two sons were the philosopher and historian Elie *Halévy (1870–1937), and the historian and essayist DANIEL HALÉVY (1872–1962). Although the latter graduated in Semitics and at first supported *Dreyfus, he became a reactionary and a convert to Catholicism. In later years Daniel Halévy even betrayed antisemitic tendencies, defending Marshal Pétain and the arch-antisemite Charles *Maurras. His ideological break with his old Dreyfusard friend Charles *Péguy provoked the latter’s indignant criticism in *Notre jeunesse* (1910). Daniel Halévy’s works include *Apologie pour notre passé* (1910), polemics with Péguy; *Charles Péguy et les cahiers de la quinzaine* (1918, 1941); *Cahiers verts* (1921–27); *La Fin des notables*, a history of the Third Republic (2 vols., 1930–37); and *Nietzsche* (1944).

[Moshe Catane]

HALEVY, ABRAHAM H. (1927–), Israeli botanist. Halevy, a 10th-generation Israeli, was born in Tel Aviv and completed his undergraduate and graduate studies in biology and agriculture at the Hebrew University of Jerusalem. After receiving his Ph.D. at the university in 1958, he went on to teach there, establishing the Department of Ornamental Horticulture in 1964 and serving as its chairman until 1985. He became a full professor in 1970 and was named Wolfson Family Professor of Ornamental Horticulture in 1982. He retired officially in 1995 but continued his research and supervision of doctoral and postdoctoral candidates as professor emeritus.

Halevy was a research fellow at the Plant Industry Station in Beltsville, Maryland, and served as visiting professor

at Michigan State University in East Lansing and, on a regular basis, at the University of California at Davis. He is a renowned international expert on floriculture and horticulture. His research has contributed significantly to the advancement of commercial floriculture in Israel and throughout the world. The department he founded and developed has long been considered one of the leading horticultural research and teaching groups in the world. The research has centered on the growth, development, and physiology of florist crops, with specific interest in the physiology of flowering (including the development of ways to control and time flowering), senescence and post-harvest physiology of flowering, and the development of new floriculture crops.

Halevy was named a fellow of the American Society of Horticultural Science in 1983. In 1986 he founded the International Working Group on Flowering and its publication, *Flowering Newsletter*, and in 1999 he was elected to the Norwegian Academy of Science and Letters.

He received numerous citations and awards during his career. In 1990 the president of Israel honored him with the title “Maker of a Beautiful Israel.” He was also the recipient of the Israel Prize for agriculture (2002). He was a prolific writer, with over 350 publications appearing in international refereed journals. His six-volume *Handbook of Flowering* is considered the most comprehensive treatise published to date on the topic.

[Ruth Rossing (2nd ed.)]

HALÉVY, ÉLIE (1870–1937), French philosopher and historian. He was the son of Ludovic and brother of Daniel (see *Halévy family). He was raised as a Protestant (his mother’s religion). He became professor at the Ecole libre des Sciences politiques where he taught English history and European socialism. A Dreyfusard and a secular rationalist, he was a founder of the *Revue de Métaphysique et de Morale* and the Société française de Philosophie. His first work, *La Théorie platonicienne des sciences* (1896), dealt with Plato’s negative dialectic as a way to positive construction. He applied this theory in a basic study of the Benthamite movement, *La formation du radicalisme philosophique*, 3 vols. (1901–04; *The Growth of Philosophic Radicalism*, 1928). His important *Histoire du peuple anglais au XIX^e siècle*, 5 vols. (1912–32; *A History of the English People in the 19th Century*, 1924–34) covering the periods 1815–41, and 1895–1914 (he died before completing the rest), was an anti-Marxist interpretation of English history, stressing the role of religious factors in English political stability. He also wrote *The World Crisis of 1914–18* (1930), *L’ère des tyrannies* (1938) against fascism and communism, and *Histoire du socialisme européen* (1948; from his notes). Halévy favored transforming collective belief through compromise rather than fanaticism as the means to international peace. At the end of his life he was pessimistic, convinced that war was inevitable and that the fascist and communist tyrannies would be perpetuated. He played an important role in English as well as in French intellectual life.

[Richard H. Popkin]

HALÉVY, ELIE HALFON (1760–1826), writer and poet in Hebrew and French. Born into an illustrious Jewish family in Fuerth, Bavaria, he received an Orthodox upbringing. As a young man he moved to Paris where he served as cantor, secretary of the community, and teacher. In Paris he acquired a broad general education and was greatly influenced by classical French literature. From 1817 to 1819 he edited and published a weekly journal in French, *L'Israélite Français*, which called for “Jewish enlightenment,” and was animated by strong French patriotism. His only published book, *Limmudei Dat u-Musar* (“Teachings of Religion and Ethics,” 1829), was a catechism for Jewish religious instruction. The tract is written in the spirit of the Haskalah and includes the decisions of the *Sanhedrin convened by Napoleon in 1807. His most important literary work, the poem “*Ha-Shalom*” (“Peace”), commemorated the cease-fire between France and England in 1802, when it was sung as a hymn, in both Hebrew and French, in the Great Synagogue of Paris. The poem was printed with a French and German translation by the imperial printing press in Paris, and reprinted in R. Fuerstenthal’s *Ha-Me’assef* (1829, pp. 216–26). Written in the form of a classic Greco-Roman ode, it reflects the stormy period of the French Revolution and the subsequent wars and mirrors both the patriotic mood and the atmosphere of fear prevalent at the time. It remains a classic of the early period of modern Hebrew literature. Halévy was the father of the composer Jacques François Fromental *Halévy and the author and playwright Léon *Halévy.

[Gedalyah Elkoshi]

HALEVY (Rabinowitz), ISAAC (1847–1914), Polish rabbinical scholar and historian. Halevy was born in Ivenets, now Belorussia. After studying at the Volozhin yeshivah, he settled in Vilna as a businessman, later turning to scholarship. Interested in Jewish education, he tried to find a way to reconcile the character of religious schools with the demands of the Russian government for reform. He lived in various cities, including Pressburg (Bratislava), Homburg, and Hamburg, in the last serving as *Klausrabbiner*. It was Halevy’s idea of a world organization for Orthodox Jewry that led to the founding of *Agudat Israel in 1912. He took the initiative in founding the Juedisch-Literarisch Gesellschaft in Frankfurt, whose yearbook (JJLG) appeared from 1903 to 1933. Halevy’s major work, *Dorot ha-Rishonim* (6 vols., 1897–1939; repr. 1967), is a grandly conceived history of the Oral Law, the talmudic-rabbinic tradition from biblical times to the *geonim*. Halevy brought a vast talmudic erudition, ingenuity, and originality to his work, but in extra-rabbinic studies he was self-taught;

he knew neither Latin nor Greek and quoted classical sources from their translations into German. Halevy worked “backward.” Commencing with the savoraic and geonic period, he proceeded to that of the *amoraim* and the *tannaim*, and then to that of the *soferim* and the “men of the Great *Synagogue.” The last volume deals with the biblical period and is a sustained attack on the critical school and attempts, following D.Z. *Hoffmann, to prove the validity of the traditional view. The main purpose of the work was to demolish the historical theories advanced by such scholars as N. *Krochmal, S.J. *Rapoport, Z. *Frankel, H. *Graetz, and I.H. Weiss on the development of *halakhah* from earliest times. For Halevy, trained as he was in the old school, the Oral Law was revealed on Mount Sinai and was handed down unchanged; rabbinic controversies and the Palestinian-Babylonian differences in law and custom concern only the details of rabbinic enactments and extensions of the laws of the Torah. In his criticism of the historical school, which he accuses of tendentious misinterpretation, he writes with animosity and invective, and critics were not slow to point to the obvious shortcomings, both scholarly and literary, of *Dorot ha-Rishonim*. Nevertheless, it remains a major contribution to Jewish historical research.

[Yehoshua Horowitz]

O. Asher Reichel has now published the letters of Halevy, *Igrot R. Yizhak Aizik Halevi* (Heb., 1972). The letters throw new light on Halevy. They reveal that he was not opposed to Haskalah or rabbis having secular knowledge and that he took an active part in halakhic questions of his time.

HALÉVY, JACQUES (François) FROMENTAL ÉLIE (1799–1862), French operatic composer. He was born in Paris, the son of Elie Halfon *Halévy. He entered the Paris Conservatory at the age of ten, studied composition with Cherubini, and won the Rome Prize in 1819 for his cantata “*Herminie*.” He taught at the conservatory from 1816, becoming professor of counterpoint and fugue in 1833, and of composition in 1840. His students included Bizet (who later became his son-in-law) and Gounod. Halévy’s fame rests primarily on his grand opera *La Juive* (1835), and his comic opera *L’Eclair* of the same year, achievements which he never equaled. He composed about 20 operas (among them *Le Juif errant*; 1852), five cantatas, and ballets. His writings include memoirs of his activity in the Académie des Beaux Arts, of which he became permanent secretary in 1854.

Halévy’s operatic style was greatly influenced by Meyerbeer, especially in the dazzling orchestration that was much in favor at the time. In *La Juive*, a renaissance story of a prince in love with a Jewess (libretto by Scribe), he portrayed effective characters in situations of dramatic tension: Eleazar’s aria “Ra-

chel, quand du Seigneur” has remained one of the star items in the repertoire of dramatic tenors.

Halévy's attitude to Judaism seems to have been consciously neutral. In 1820 he composed a “Marche Funèbre et De Profundis” for three voices (text: Ps. 130 in Hebrew), for the memorial service to the Duc de Berry in the synagogue in the Rue Saint-Avoye, now Rue du Temple. His cantata “Noé” (Noah) was completed post-humously by Bizet. Richard Wagner wrote in praise of Halévy's works, and also arranged a pot-pourri for two violins from his *La Reine de Chypre* (1841).

Halévy's brother Léon (*Halévy family) wrote one of the first biographies of Halévy, *F. Halévy, ses œuvres* (1863).

[Josef Tal]

HALÉVY, JOSEPH (1827–1917), French Orientalist and Hebrew writer. Halévy began his career as a Hebrew teacher in his native Adrianople, Turkey, and later taught in Bucharest, Romania. In 1868 he visited Ethiopia under the auspices of the Alliance Israélite Universelle to study the Falashas (*Beta Israel). His report (not published), affirming the Jewishness of that forgotten tribe, led to a widespread philanthropic campaign on their behalf. The scientific results of his journey on the Beta Israel's language, literature, and customs, important in themselves, interested the French Académie des Inscriptions et Belles Lettres, which subsequently commissioned Halévy to explore Southern Arabia for Sabeian inscriptions. For self-protection he traveled in the guise of a Jerusalem rabbi collecting alms for the poor. Ḥayyim *Ḥabshush, a Yemenite Jew who acted as Halévy's guide, described this expedition in *Travels in Yemen* (Arabic text, ed. and summarized in Eng. by S.D. Goitein, 1941; Heb. tr., *Mas'ot Ḥabshush*, 1939).

The rich scientific harvest was 686 inscriptions, which were partly in Minean, a sister language of Sabeian. Halévy published them under the title *Études Sabéennes* (1875; = *Journal Asiatique*, 1 (1873), 305–365; 2 (1874), 497–585). He also wrote reports of his journeys, *Rapport sur une Mission Archéologique dans le Yémen* (1872), and *Voyage au Nadjran* (1873). The researches were of importance not only for the knowledge of Sabeian language and culture but for biblical studies as well. In 1879 Halévy began teaching Ethiopic at the Ecole Pratique des Hautes Etudes in Paris and became the librarian of the Société Asiatique. In 1893 he founded the *Revue Sémitique d'Épigraphique et d'Histoire Ancienne*, to which he contributed a great many articles on Semitic epigraphy and Bible studies. In the latter, published separately as *Recherches Bibliques* (5 vols., 1895–1914), he interpreted the first 25 chapters of Genesis on the basis of Babylonian-Assyrian discoveries, rejecting the Graf-Wellhausen documentary hypothesis (see *Bible: biblical criticism). He also discussed problems in the Bible in the *Revue des Études Juives*, *Revue Critique*, and *Revue de l'Histoire des Religions*. Halévy dealt with recently discovered parts of the Hebrew texts of Ben Sira in *Le nouveau fragment hébreu de l'Éclésiastique* (1902); with the origins of

Christianity in *Études évangéliques* (1903); and with Ethiopian, particularly Beta Israel, literature in *Seder Tefillot ha-Falashim* (1876), *Te'ezaza Sanbat* (“Sabbath laws”; 1902), *La guerre de Sarsa-Dengel contre les Falachas* (1907), and others.

Prompted by his “Semitic” pride, Halévy argued obstinately against the view that Sumerian was a non-Semitic language, which with Sumerian culture and cuneiform scripts preceded its Semitic successors. Halévy rejected this now accepted view, believing Sumerian to be not a language but a hieratic, artificial script invented by the Assyrian-Babylonian priesthood for its own purposes. One of his works on this subject is his *Le Sumérisme et l'histoire babylonienne* (1900). In contrast to the assimilationist trend among French Jewry, Halévy was an ardent Hebraist and *Ḥovev Zion*. In his youth he was a regular contributor to Hebrew periodicals, such as *Ha-Maggid*, *Ha-Levanon*, and *Yerushalayim*, both in prose and in poetry, which were later collected and published under the title *Maḥberet Melizah va-Shir* (1894). The titles of his poems, such as “*Admat Avotai*” (“Land of My Fathers”), “*Al ha-Yarden*” (“By the Jordan,”) and “*Tikvati*” (“My Hope”) revealed his strong attachment to Erez Israel. Halévy translated into Hebrew poems by Schiller, Byron, Victor Hugo, and others. In an article in *Ha-Maggid* of 1861 he proposed the establishment of a society, Marpei Lashon, for the development of the Hebrew language, an idea later realized in the Va'ad ha-Lashon ha-Ivrit and its successor, the Academy of Hebrew Language.

[Hans Jacob Polotsky]

HALEVY, MEYER ABRAHAM (1900–1972), Romanian and French rabbi and scholar. Halevy was born in Piatra Neamt, Romania and studied at the Sorbonne, receiving his doctorate and his rabbinical diploma from the Séminaire Israélite de France in 1925. He was also a Diplomate at the Ecole des Hautes Etudes. In the same year he was appointed rabbi of Jassy, and in the following year to the Sephardi Community of Bucharest, and subsequently to the following congregations in the capital: Great Synagogue Jewish Center, 1925–35; Holy Unity Temple, 1935–40; Choral Temple, 1940–45; and Spiritual Union Congregation, 1946–63. From 1950 to 1963 he was Research Professor of Oriental, Classical and Numismatic Studies at the Romanian Academy and Lecturer on the History of Medicine at the Romanian Society of History of Medicine from 1955 to 1963.

During World War II he was continuously harassed by the authorities and arrested on a number of occasions because of the sympathy and spiritual care he extended to political prisoners during the German occupation. After the intervention of a number of important personalities, including

Pastor Martin Niemöller, and the payment of a ransom, he was permitted to leave Romania and settled in Paris, where he acquired French citizenship. He was appointed professor of Jewish history at the *Seminaire Israelite de France*, and Consistorial Grand Rabbi at the Tournelles Jewish Center, Paris. Halevy wrote numerous works in French and Romanian, including the Commentary of Joseph Bekhor-Schor on *Leviticus* (1924), *Le problème des Khazares* (1935), *Science et Conscience dans l'Histoire de la Médecine juive au XV^e Siècle* (1957), and *La Médecine des Rabbins-thaumaturges au XVIII^e Siècle* (1955).

HALEVY, MOSHE (1895–1974), Israeli theatrical director and founder of the *Ohel Theater. He studied engineering in Moscow before joining the newly formed Habimah Studio as assistant director (1917). He left the company early, however, to found his own theater in Palestine and in 1925 established Ohel, a workers' theater under the auspices of the Histadrut. His first production, based on stories by I.L. *Peretz, was a great success, especially in the kibbutzim which, for many years, were to provide Ohel's main audiences. In his production of *Fishermen (Op Hoop van Zegen)* by Heijermans, he demonstrated his belief in the theater as an instrument for social betterment. For 25 years he directed almost all Ohel's productions, but left the company after disagreements in 1951. He engaged in other ventures, among them a small traveling Moshe Halevy Theater (1960), which continued until 1967. His autobiography *Darki Alei Bamot* ("My Stage Career") appeared in 1954.

BIBLIOGRAPHY: Tidhar, 2 (1947), 953–4.

[Mendel Kohansky]

HALEVY, YOSEF (1924–), Israeli painter. Halevy was born in Tel Aviv and graduated from the Painting Teachers' School there. Of Yemenite origin and deeply imbued with Yemenite folklore, he chose as subjects for his early paintings his memories and his inner world, and in this period one sees wide brushstrokes, forming color planes and contoured patterns, with a clear development toward abstraction. In his second stage, the Yemenite background almost entirely disappears, and his painting is based more on color and form, the colors on the canvas being more spontaneous and expressive. In his third phase, the forms become smaller and Halevy gives expression to mythological and lyrical forms, suggesting figures that intermingle with each other, sometimes creating almost completely abstract patterns.

[Judith Spitzer]

HALFAN, ELIJAH MENAHEM (16th century), Italian physician, rabbi, and kabbalist. Elijah was the son of the astronomer Abba Mari Halfan and grandson of Joseph *Colon. He was one of the Italian rabbis approached to express his view of Henry VIII's divorce from Catherine of Aragon, on which he gave an affirmative opinion. He was also a supporter of Solomon *Molcho. Both these facts aroused the opposition

of the physician Jacob *Mantino who feared that the close relationship with the English king as well as with the messianic agitation of Molcho would render the pope unfavorably disposed toward the Jews. Halfan wrote responsa (including one in which he favored instructing non-Jews in the Torah; Ms. Kaufmann, no. 156:1 from 1545) and Hebrew poems (several verses are extant in Ms.; Neubauer, Cat, no. 948: 1, 6). In a halakhic decision dated 1550, Elijah's name appears together with that of Meir Katzenellenbogen of Padua among others (Resp. Rema 56). He owned a valuable library in Venice, a catalog of which was published by A.Z. Schwarz (*Die Hebraeischen Handschriften der Nationalbibliothek in Wien* (1925), 145ff.).

An important epistle has been preserved in Ms. New York, JTS 1822, where Halfan describes the history of Kabbalah and the openness to this lore among Christians in the Renaissance. He envisioned this openness as a sign of messianism.

[Umberto (Moses David) Cassuto]

HALFANUS (Halfan, Chalfan), family that migrated from Provence to Italy after 1394 and later moved to Prague and Vienna. The family was linked with the famous *Kalonymus family which was prominent in the Middle Ages. Most of its members were physicians and were well known for their scholarship in science and literature. ABBA MARI, a son-in-law of Joseph *Colon, lived in Italy and published in 1490 an elegy and a work on astronomy. His son was Elijah Menahem *Halfan. Another ABBA MARI (d. 1586) was a physician in Prague. His son ELIAS (1561–1624) lived first in Prague and was granted his licence as a physician by Rudolph II (1598). With Aaron *Maor Katan (Lucerna) he later achieved prominence as a physician and *dayyan* in Vienna, and was also known as a book collector. He was even proposed as an army surgeon.

A second Halfan family living in Vienna later changed its name to Wechsler. Its members included ELIEZER BEN URI SHRAGA PHOEBUS (d. 1670), who was head of the community and was apparently the last person to be buried before the 1670 expulsion. His son URI SHRAGA PHOEBUS (c. 1640–1707) headed a yeshivah in Prague. His *Dat Esh*, responsa and novellae on Maimonides' *Yad Hilkhohot Kilayim*, was published in Berlin in 1743.

[Meir Lamed]

ḤALFON (Khalfon), ABRAHAM (late 18th century), rabbi in *Tripoli. Information about Ḥalfon is limited to the fact that his book, *Ḥayyei Avraham* (Leghorn, 1826), was published posthumously by his son Raḥamim. The *haskamot* (recommendations) for the book were written by two emissaries from Tiberias, Joseph ibn Samon and Samuel Shoshannah, indicating Ḥalfon's ties to that town. The book contains traditional explanations of the commandments in the Shulḥan Arukh (*Orah Ḥayyim* and *Yoreh De'ah*). The explanations, based on the Talmud, the *Zohar*, *Ketem Paz* (a commentary on the *Zohar*), *Sefer Ḥasidim*, and *Penei David* by Ḥayyim Joseph David *Azulai, are lucidly and attractively presented and avoid wearying casuistry. The book was published in several succeeding editions: 1844, 1857, 1861. Several other works by him, halakhic and homiletical, are still in manuscript.

ḤALFON BEN NETHANEL HA-LEVI ABU SAĪ'D (12th century), wealthy businessman in Egypt. Ḥalfon's affairs extended from India and Yemen to Spain. Numerous letters, addressed to him from furthest parts of the Jewish Diaspora, which bear evidence of his generosity and wealth, have been found in the Cairo **Genizah*. He was a close friend of *Judah Halevi, who also appears to have been his relative. Some of the letters which were sent by the latter to Ḥalfon have been preserved. It seems that the contacts between them dated from the time of Ḥalfon's visit to Spain in order to arrange personal affairs. Halevi then wrote poems and letters in the former's honor which were published by H. *Brody. When on his way to Erez Israel, Halevi stayed at Ḥalfon's home in Cairo from 1140 to 1141. One of Ḥalfon's brothers was R. Moses b. Nethanel, the *av bet din* of the tribunal of the *gaon* *Mazli'ah b. Solomon Ha-Kohen.

[Abraham David]

HALHUL (Heb. חַלְחֻל), town in the territory of Judah mentioned once in the Bible together with Beth-Zur and Gedor (Josh. 15:58). An Idumean village called Aluros (identical with Halhul) is referred to by Josephus (Wars, 4:522) as a fortified city which was destroyed by Simeon b. Giora along with Hebron during the Jewish War (66–70/73). Jerome mentions the city Alula belonging to Jerusalem near Hebron (Eusebius, Onom., 87:11–12). The “tomb of Jonah” was shown there. In the 14th century Jews were living in Halhul and according to tombstone lists compiled by medieval Jewish travelers, the grave of the prophet Gad was located there. Today, the Muslim Arab village Ḥalḥūl is located at the highest spot of the Judean Hills about 3,347 ft. (1020 m.) above sea level, 2.5 mi. (4 km.) north of Hebron. As a result of the proximity of Hebron, Ḥalḥūl ex-

panded in the 1950s and 1960s; in 1968 the village had over 6,000 inhabitants. Fruit orchards and particularly vineyards constituted its principal farming branch. In 2005, including the surrounding villages, the population exceeded 50,000.

[Michael Avi-Yonah]

HALICZ (Russ. **Galich**), small town formerly in Poland, now in Stanislaw district, Ukraine. The earliest information relating to Jews in Halicz dates from 1488. In 1506, the Jews there were granted a remission of their taxes because of hardship caused by war. Halicz had one of the few organized *Karaitic communities to exist continuously in Eastern Europe. It was founded by Karaites from Lvov. They were accorded the same rights “as other Jews” by the Polish monarch in 1578. Until the close of the 18th century the Karaites formed the majority of the Halicz community. Records of 1627 show that 24 houses there were owned by Karaites and only a few by Rabbanites. Subsequently the Rabbanite community increased. In 1765 it numbered 258, while there were 99 Karaites, and in 1900 there were 1,450 Rabbanites and 160 Karaites. By 1921 the combined population was only 582 as a result of emigration. The Karaites lived in a separate street and worshipped in their own synagogue, built at the end of the 16th century.

The Karaite community looked for cultural guidance to their spiritual center in the East, since the forefathers of the founders came from Crimea and their native language was Tatar. When the links with the parent center became attenuated, the cultural level of the Karaites in Halicz became so poor that by the first half of the 17th century there was no one in the community qualified to serve as *hakham* (or *hazzan*). The situation improved with the arrival of an emissary from Jerusalem, David Ḥazzan, around 1640. He was followed (c. 1670) by two brothers, Joseph and Joshua. Joseph, who earned the encomium “Ha-Mashbir” (“the provider”), discharged the duties of *hakham* and composed *piyyutim* which were included in the Karaite prayer book. His descendants served as *hakhamim-hazzanim* of the Halicz Karaite congregation until the beginning of the 19th century, when the office was held by members of the Leonovich family. Karaite autonomy was recognized by the Austrian government during the period when Halicz was administered by Austria. Abraham, the first of the Leonovich *hakhamim*, was one of the Karaites to be influenced by the ideas of *Haskalah. He corresponded with some of the luminaries of the movement, including Naḥman *Krochmal and Abraham *Geiger, who on their part took an interest in Karaism. Later, around the beginning of the 20th century, with the strengthening of the Polish cultural influence, most of the Karaites tended toward assimilation while a few drew closer to the Rabbanites.

The community was destroyed by the Germans in 1942, when the Jews were deported to Stanislawow and Belzec.

HALICZ (Heb. הלִיצ, **Helicz, Halic, Helic**), family of printers in Cracow in the 16th century. Three brothers, Samuel, Asher, and Elyakim, sons of Ḥayyim Halicz, established Poland's first Jewish press there in about 1530. Their name indicates that the family originally came from the small town of Halicz on the Dniester in eastern Galicia. Their type and page arrangements show they learned their craft (and probably obtained type and equipment) in Prague. It is likely that they left Prague because a royal order of 1527 designated Gershom Kohen as Bohemia's sole Hebrew printer; all other Hebrew print shops closed, and the brothers probably could find no further work there. The decorative borders for their opening pages were certainly brought by them from Prague. Three works listed by *Zunz as being from Cracow in 1530 were probably the earliest products of their press. These were a Pentateuch; Tur, *Yoreh De'ah*; and a Passover *Haggadah* (all otherwise unknown). Their earliest surviving works, both dating from 1534, were *Issur ve-Hetter* by R. Isaac Dueren and *Mirkevet ha-Mishneh*, a Hebrew-Yiddish Bible dictionary by a R. Anshel. Yet evidently they did not prosper, and Asher dropped out.

In 1535 Samuel and Elyakim produced R. David Cohen's *Azharot Nashim* in Yiddish, a work dealing with religious laws for women. Then Elyakim alone issued a Yiddish version of Asher b. Jehiel's *Orah Ḥayyim*. Samuel spent 1536 in Oels, Silesia, where he and his brother-in-law printed a book of *Tefillot mi-Kol ha-Shanah* (Prayers for All Year) in large type. However, his books and equipment were destroyed in a fire and he returned to Cracow.

It was probably economic misery or possibly excessive pressure from the Polish church that made the three undergo baptism in 1537; they became Andreas (Samuel), Johannes (Elyakim), and Paul (Asher; or perhaps Asher became Andreas, and Samuel was Paul). Repelled by their act, the Jews boycotted them and would not even pay their debts. At the brothers' plea, King Sigismund I issued a decree dated March 28, 1537, commanding that Poland's Jews might buy only their books; no others were to print or sell Jewish works, and none might be brought in from other countries, on pain of a stiff fine. Yet, under tacit excommunication by the Jews, their plight only worsened. Believing, though, that the royal decree must improve matters, Johannes resumed printing in 1538–39, issuing mainly books for popular use.

Through their bishop, the desperate Halicz brothers sought and obtained a new royal decree on December 31, 1539, ordering the Jews of Cracow and Posen to buy their entire stock of some 3,350 volumes, valued at 1,600 florins. Pleading poverty, the two Jewish communities had their coreligionists in Lemberg (Lvov) included in the order. The complete stock of books was paid for in three years and destroyed. The Halicz firm went out of existence. In 1540 Johannes began printing Latin and Polish theological works. Paul, who be-

came a Catholic missionary among the Polish Jews, printed a New Testament (Cracow, 1540–41), in a Judeo-German transcription of Luther's translation. He also produced *Elemental oder Lesebuechlein* (Hundsfield, 1543), an instruction book in Hebrew for gentiles. Lukasz Halicz, a printer in Posen (1578–93), was apparently his son. Samuel returned to Judaism. After working as a bookbinder in Breslau, he went to Constantinople (c. 1550) and resumed Hebrew printing. He subsequently printed the Scriptures (1551–52; repenting of his conversion in the colophon); the "Story of Judith" (1552–53); and R. Isaac Dueren's *Issur ve-Hetter*, retitled *Shàarei Dura* (1553). In 1561–62, when Samuel was no longer living, the name of Ḥayyim b. Samuel Ashkenazi, apparently his son, appears as the printer of the responsa of R. Joseph ibn Lev in part 2.

[Charles Wengrov]

HALIVNI, DAVID WEISS (1927–), U.S. talmud scholar. Born in Poljana Kobilecka, Czechoslovakia (now Ukraine), Halivni was raised in Sighet, Romania, by his mother and his maternal grandfather, Isaiah Weiss, a prominent rabbinic scholar. Recognized as a talmudic prodigy (*ilui*), Halivni was ordained a rabbi in Sighet before reaching the age of 17. Upon the occupation of the Carpathian region by Germany, the family was confined to the ghetto of Sighet, and thence deported to Auschwitz, Halivni being transferred to forced labor in Silesia. The sole survivor of his family, Halivni was liberated from the concentration camp of Ebensee, in Upper Austria, in May 1945, and came to the U.S. in 1947. Through the coincidence of a relative of Saul *Lieberman being employed in the Bronx orphanage where Halivni was billeted, he soon met that scholar, and so was taken under the wing of the leading academician in the field of rabbinic literature. Following undergraduate studies at Brooklyn College, in tandem with residence in the Yeshivat Rav Chaim Berlin, and graduate study at New York University, Halivni pursued a doctorate of Hebrew letters under Lieberman at the *Jewish Theological Seminary of America (JTSA) where he joined the faculty as professor of Talmud and Rabbinics.

Halivni's early work included a study of the pseudo-Rashi commentary on the Babylonian Talmud's tractate *Tàanit*, the misattribution of whose opening segment he first suggested on the basis of literary comparison and then confirmed by means of an early manuscript that he identified in the Seminary's library collection. In 1968, Halivni completed the first volume of his ongoing talmudic commentary, *Mekorot u-Mesorot* ("Sources and Traditions"). In the first stages of this work, often starting with difficulties noted by traditional commentators, Halivni developed a source-critical approach to the talmudic page, aiming to uncover earlier, variant readings and textual substrates altered in transmission. (This methodology,

and aspects of Halivni's personality, provided a basis for characters and for a paradigm of critical talmudic study dramatized in the first two novels of Chaim *Potok.)

Halivni's great achievement was a complete re-conceptualization of the redaction of the Babylonian Talmud.

Appointed to the American Academy of Arts and Sciences, Halivni was awarded Israel's Bialik Prize in 1985 for his ongoing talmudic research; he also received honorary doctorates from a number of Israeli universities, as well as the University of Lund, Sweden, and JTSA. Halivni was also a charter participant in the Institute for Advanced Studies of Tel Aviv University.

In the mid-1980s, Halivni left the Seminary for a professorship at Columbia University and also participated in the founding of the *Union for Traditional Judaism and its rabbinical academy, the Institute of Traditional Judaism, where he served as rector. He also became the de facto and then official rabbinic adviser of a small group, which initially met for Sabbath services in the home of the infirm Louis Finkelstein and subsequently burgeoned into a large community on Manhattan's Upper West Side.

Halivni's books in English include *Midrash, Mishnah and Gemara: The Jewish Predilection for Justified Law* (1986), *Peshat and Derash: Plain and Applied Meaning in Rabbinic Exegesis* (1991), and *Revelation Restored: Divine Writ and Critical Responses* (1996).

In his later years, Halivni confessed something of a return to the mysticism of the ḥasidic milieu of his youth, expressed through a certain ecstasy in prayer (especially on days including memorial prayers), and also, most notably with regard to his scholarship, in terms of the doctrine of *zimzum* – that is, divine contraction or withdrawal from the world.

Halivni is also the author of a memoir, *The Book and the Sword: A Life of Learning in the Shadow of Destruction* (1996). Reticent for decades about his personal experience of the Holocaust, Halivni had said, with reference to Sighet ḥeder-mate, fellow survivor, and long-time friend, Elie Wiesel, "He speaks [about the Holocaust], and I am silent; but when we are together, I shout, and he listens." With his often poignant and thoroughly frank autobiography, Halivni broke his silence to speak of the transfiguring impact of the devastation on the course of his life.

[Jonah C. Steinberg (2nd ed.)]

HALKIN, ABRAHAM SOLOMON (1903–1990), Orientalist and educator; brother of Simon *Halkin. Born in Novo-Bykhov, Russia, Halkin was taken to the U.S. in 1914. He was lecturer in Semitic languages from 1928 to 1950, and from 1950 to 1970 professor of Hebrew at the City College of New York. He also taught at the Jewish Theological Seminary from 1929 to 1970. In 1970 he settled in Jerusalem. Halkin edited part two of al-Baghdādī's *Muslim Schisms and Sects (al-Farq bayna al-Firaq, 1935)*; the Arabic original and three Hebrew versions of Maimonides' *Iggeret Teiman* (1952); Ibn Aknin's Arabic commentary on the Song of Songs with a Hebrew translation, *Hit-*

gallut ha-Sodot (1964); and *Zion in Jewish Literature* (1964). He also worked on a new critical edition and Hebrew translation of Moses Ibn Ezra's *Kitāb al-Muḥādara wa-al-Mudhākara*, a classic work on Hebrew poetics, and wrote the introduction to a new edition of J.A. Montgomery's *The Samaritans: The Earliest Jewish Sect* (1968). He was editor of the *Encyclopaedia Judaica's* department of Judeo-Arabic literature and medieval translations. He also compiled *201 Hebrew Verbs* (1970) and translated *Crisis and Leadership: Epistles of Maimonides* (with D. Hartman, 1985).

ADD. BIBLIOGRAPHY: L. Schwarz (ed.), *Great Ages and Ideas of the Jewish People* (1956).

[Jacob Lassner / Ruth Beloff (2nd ed.)]

HALKIN, SHMUEL (1897–1960), Soviet Yiddish poet. Born in Rogachev, Belorussia, Halkin grew up in a ḥasidic home and early came under the influence of Hebrew poetry and wrote Hebrew lyrics. He dreamed of becoming an artist, but ultimately turned to Yiddish poetry and was encouraged by Peretz *Markish in Ekaterinoslav (now Dnepropetrovsk, Ukraine) and by David *Hofstein in Moscow. His first book of lyrics, *Lider* ("Poems"), appeared in 1922. Other volumes of poems and plays followed between 1929 and 1948. Until 1924, Halkin belonged to a Zionist circle and contemplated settling in Palestine, as is evident from a Hebrew song, *Shir ha-Ḥaluzah*, written at this time and published in Israel after his death. In his autobiography, he acknowledged the influence of Judah Halevi and Solomon ibn Gabirol in the shaping of his lyric personality. Attacked for his Jewish nationalism, his nostalgic despair, and his deviation from the Communist party line on literature, he was compelled to recant his literary heresies. Thereafter, he avoided controversial themes and, in his 1932 poetic collection *Far dem Nayem Fundament* ("For the New Foundation"), formulated the Soviet writers' credo: "We write what we want to-/we write what we have to." He fruitfully worked with Yiddish theater: *Shulamis* (1940), a dramatic poem, based on *Goldfaden, and a verse drama, *Bar Kokhva* (1939), were staged in Moscow and by other theater troupes. In the latter he describes in a communist-ideological spirit the social and class differences between Bar Kokhba and R. Akiva on the one hand and the rich classes of Judea on the other. In 1939 he was decorated with the Order of the Sign of Honor. He translated some of Shakespeare's plays (most notably *King Lear*) and some of the works of Pushkin, Gorki, and other Russian authors into Yiddish.

His dramatic poem *Ghettograd* on the Warsaw Ghetto Uprising was scheduled for the Moscow Yiddish Theater in 1948, but the theater was closed when the Jewish *Anti-Fascist Committee was liquidated that year and Halkin was arrested as one of its prominent members and sent to a labor camp. He was released in 1955, rehabilitated, and, in 1958, decorated with the Order of the Red Banner. After his death in 1960, his native city named a street after him, and in 1966 a selection of his Yiddish lyrics was issued in Moscow. He was a cousin of Simon and Abraham S. *Halkin. His *Lider fun Tfise un La-*

ger ("Poems from Prison and Camp") was published in Tel Aviv in 1988.

[Sol Liptzin / Gennady Estraiakh (2nd ed.)]

HALKIN, SIMON (1898–1987), Hebrew poet, novelist, and educator. Born in Dobsk near Mohilev, Russia, he immigrated to the United States in 1914. He taught at the Hebrew Union College School for Teachers in New York City (1925–32), and after settling in Erez Israel in 1932, he taught English at a Tel Aviv high school. In 1939, he returned to America and became professor of Hebrew literature at the Jewish Institute of Religion in New York. He was appointed professor of Modern Hebrew Literature at the Hebrew University in 1949.

In Halkin's works, metaphysical flights coalesce with earthly desires. This dichotomy already appears in his first novel *Yeḥi'el ha-Hagri* (1928) whose main character is torn between love of God and love of woman. It receives a more mature expression in *Be-Yamim Shishah ve-Leilot Shivah* (1929), a cycle of 36 sonnets; in "Al Hof Santa Barbara" (1928); and in "Tarshishah." These and other poems were collected in *Al ha-I* ("On the Island," 1945). Other motifs in Halkin's poetry are the tension between the death wish and the will to live, the loss of religious faith and the consolation which comes with the acceptance of the agony of living. In *Ma'avar Yabbok* ("The Ford of the Jabbok," 1965), Halkin deals in depth with the death motif. The speaker, obsessed with the love of his dead lover, discovers that the memory of love alone is able to sustain him through the agony of living. "Ya'akov Rabinowitz be-Yarmouth" is Halkin's maturest treatment of this theme. The poem depicts an encounter with a dead friend and writer and the ensuing dialogue across the chasm of death is punctuated by the knowledgeable irony of two men who have lived long and have learned the secret of resignation.

Halkin's works in literary criticism include *Arai va-Keva* ("Transient and Permanent," 1942), his unedited lectures on the history of modern Hebrew literature (mimeographed), and his English *Trends in Modern Hebrew Literature* (1950; 1970). The latter is a socio-historical appraisal of Hebrew writing during the last 200 years. Halkin also wrote *Zeramim ve-Zurot ba-Sifrut ha-Ivrit ha-Hadashah* (1984) and a volume of essays entitled *Ziyyonut le-lo Tenai* (1985). Though a long-time resident of the United States, he expresses a negative attitude toward American Judaism and insists that its spiritual resources are limited, a view which permeates his unfinished novel *Ad Mashber* (1945) and his monograph *Yehudim ve-Yahadut ba-Amerikah* (1946).

Of his numerous translations, that of Walt Whitman's *Leaves of Grass* (1952) is outstanding. He also translated Shake-

speare's *Merchant of Venice* (1929) and *King John* (1947); Jack London's *Before Adam* (1921) and *The Sea Wolf* (1924); and Shelley's *A Defense of Poetry* (1928).

Nekhar, a collection of 11 short stories written over 40 years, appeared in 1972, and in 1981 the volume of poems *Ulai*. In 1975 Halkin was awarded the Israel Prize for Hebrew literature, and in 1977 there appeared his *Shirim*, consisting of his collected works. He has also translated George Seferis' early verse into Hebrew. In 1984 there appeared three volumes of his collected poems. A volume entitled *Sefer ha-Yovel*, with essays on Halkin on the occasion of his 75th birthday, was edited by B. Shahevitch. R. Weiser prepared a bibliography of Halkin's works (1975).

A list of English translations of his work appears in Goell, *Bibliography*, index.

[Eisig Silberschlag]

HALL, MONTY (Maurice Halperin; 1924–), Canadian game-show host, producer. The son of a poor butcher, Hall was born in Winnipeg, Manitoba. Receiving a loan from a local businessman, he was able to attend the University of Manitoba, where he exhibited talent in both musical and dramatic productions and was elected president of the student body. After earning his B.S. in 1945, Hall served in the Canadian Army during World War II, where he emceed a number of army shows. In 1955, he moved to New York, where he worked as an anchor on NBC's radio and television program *Monitor*. In 1960, CBS brought Hall to Hollywood to become the emcee of their show *Video Village* and in 1963 Hall partnered with writer-producer Stefan Hatots to create *Let's Make a Deal*. The show turned out to be a wild success and ran for the next 23 years on all three major American networks, evolving into a pop-culture phenomenon and rendering Hall one of the most famous persons of his era. Throughout the 1970s, Hall emceed his own variety show specials and appeared as a guest on countless television shows such as *The Odd Couple* and *Love Boat*. On August 24th, 1973, Hall was immortalized when he received his own star on Hollywood's Walk of Fame. Beyond his television career, Hall's work in philanthropy has earned him over 500 awards, the most prestigious being the Order of Canada Award (the highest award Canada offers) bestowed upon him in 1988 for his humanitarian endeavors. For years, Hall was among the most, if not the most, prominent Hollywood entertainer to be directly involved in the organized Jewish community, contributing generously to the Jewish Federation and participating in synagogue life. Many attributed

his unique participation to the education he had received in the close-knit Jewish community of Manitoba.

[Max Joseph (2nd ed.)]

HALL, OWEN (**James Davis**; 1848–1907), English playwright and journalist. Owner-editor of *The Bat* (1885–87), he chose his pen name as a result of gambling losses which led to his “owing all.” Davis is mainly remembered as the writer of successful musical comedies, notably *A Gaiety Girl* (1894), *The Geisha* (1897), and *Florodora* (1899). He later edited a weekly, *The Phoenix*.

HALLAH (Heb. הלל), a form of bread (11 Sam. 6:19). The term also applies to the portion of dough set aside and given to the priest (Num. 15:19–20). The etymology of the word is traced either to the Hebrew root for “hollow” and “pierce” (Heb. ללל, *hll*), suggesting a perforated and/or rounded loaf, or to the Akkadian *ellu* (“pure”), referring to the bread’s sacral use. Until new evidence allows more precision, however, *hallah* must be rendered “loaf” (parallel to the Hebrew word *kikkar*, cf. Ex. 29:23; Lev. 8:26). In the Bible, *hallah* is a bread offering subsumed under *minḥah*, the grain sacrifice. Commonly used in an unleavened form, and only rarely in a leavened form (Lev. 7:13; probably Num. 15:20), the bread is made with or without oil (Ex. 29:2, 23; Lev. 2:4; 7:12; 8:26; 24:5; Num. 6:15, 19).

[Jacob Milgrom]

Post-Biblical

According to the rabbis, the precept of setting aside *hallah* applies to dough kneaded from one of the *five species of grain (Ḥal. 1:1), since only from them can the bread (referred to in Num. 15:19: “when you eat of the bread of the land” etc.) be made, although Philo (Spec. 132) limits it to wheat and barley alone. The time of setting aside the *hallah* was derived by the sages from the words, “Of the first of your dough” – which they interpreted as meaning “as soon as it becomes dough” – hence one may eat casually of dough before it forms a ball in the case of wheat, and a lump in the case of barley (Sif. Num. 110), i.e., when the kneading is finished. If, however, it had not been set aside from the dough it must be set aside from the baked bread (*ibid.*). The Septuagint translates the word *hallah* as baked bread, and both Philo and Josephus (Ant. 4:71) also imply that the precept of setting aside the *hallah* applies to baked bread. The quantity of dough from which *hallah* must be taken is not explicitly stated in the Bible, and Shammai and Hillel already differed on the quantity (Eduy. 1:2). In later generations, however, the quantity was fixed, based on the words “Of the first of your dough,” which was taken to mean “as much as your dough was,” viz, “the dough of the wilderness.” How much was this? It is written (Ex. 16:36): “Now an *omer* is the tenth part of an *ephah*” (Er. 83a–b). It was accordingly laid down that dough is liable for *hallah* if it is kneaded from a bulk of at least 43½ medium-size eggs (approximately 1¾ kg.; Maim. Yad, Bikkurim 6:15; Sh. Ar., YD 324:1), and as a mnemonic the sages pointed out that the numerical value

of the word *hallah* is 43. Since the Bible does not specify the amount of *hallah* to be given, according to the letter of the law even a single barley corn exempts the whole dough, but the sages fixed a quantity in accordance with the size of the whole dough: “a householder whose dough is usually small sets aside ¼; a baker sets aside ⅛.” According to biblical law the obligation to separate *hallah* applies only to Erez Israel, and “even in Israel there is no Torah obligation except when all Israel [i.e., the majority] are there” (cf. Ket. 25a). So that the obligation of *hallah* should not be forgotten, however, the rabbis made it obligatory to separate it nowadays too, and even outside Erez Israel.

Hallah is one of the 24 perquisites of the priest (cf. Ezek. 44:30): “in order that the priests, who are always occupied with Divine service, should live without any exertion” (*Sefer ha-Hinnukh*, no. 385). *Hallah* must be eaten by priests in a state of ritual purity; the commoner who eats it deliberately is liable to the penalty of **karet*, and if eaten inadvertently must pay its value plus an added fifth to the priest, in the same way as a commoner who eats **terumah*. Nowadays since the obligation to give *hallah* is rabbinic and the priests are unable to eat it because of ritual uncleanness, it is customary to set aside an olive’s bulk from any dough liable for *hallah* and to burn it. The precept of *hallah* is the subject of a special tractate of the Mishnah in the order *Zera’im* that bears its name and the Jerusalem Talmud also has a *Gemara* to it. The word *hallah* is popularly employed for the special Sabbath loaves.

[Israel Burgansky]

Women and Hallah

Domestic bread production has always been a largely female task. From the early rabbinic period, “taking *hallah*” was considered one of three *mitzvot* (commandments), together with *hadlakah* (kindling Sabbath *candles) and **niddah*, which women were obligated to perform. These three commandments are known as the *HaNaH* mitzvot, an acronym of *Hallah*, *Niddah*, and *Hadlakat ha-Ner*, which, in a play on words also evokes Hannah, the mother of the biblical Samuel, considered a model of female piety. A number of midrashic sources declare that these obligations are female punishments or atonement for the disobedience of the first woman in the Garden of Eden and her responsibility for human mortality (e. g. ARN² 9, 42; Gen. R. 17:8; TJ, Shab. 2:6, 8b). According to the Mishnah (Shab. 2:6), women who neglect these commandments risk death in childbirth (also ARN² 42). Popular vernacular *tehinnot* or **tkhines*, supplicatory prayers for women from the early modern period, offer positive interpretations of this tradition. *Tkhines* to be recited while separating *hallah* recalled the ancient bringing of tithes, thus making women participants in ancient Temple worship and invoking the messianic era when the Temple rites would be restored.

HALLAH (Heb. הָלַח), the name of a tractate in the Mishnah, Tosefta, and Jerusalem Talmud dealing with portions that are to be removed from bread for the support of the priesthood. Although the original meanings of some key terms in Numbers 15:17–21, including *hallah* itself, are not entirely certain, the Jewish oral tradition interpreted the passage as a requirement to set aside a portion of the bread or dough to be consumed by the priests under conditions similar to the *terumah* that is taken from other produce, and which is commanded in similar phrasing. Nehemiah 10:38 demonstrates that the Torah's formula, “a portion for a gift unto the Lord,” was understood as a stipulation that the *hallah* is directed to the priests, and is not a sacrificial offering.

An early tradition, attested in the Septuagint, rendered *arisoteikhem* in Numbers 15:20 as “your kneading troughs,” implying that the obligation of *hallah* falls on the unbaked dough; however, the verse also makes reference to the “bread of the land,” leading some early authorities (including Philo, Josephus, and Rabbi Akiva) to apply the precept to baked bread. The developed tannaitic *halakhah* determined that the *hallah* should initially be separated from the dough, but if one has not done so, the obligation remains in force after baking.

Out of the laconic and ambiguous biblical sources, the rabbinic treatises formulated an elaborate framework of precise rules and measures governing the separation of *hallah*. Several of the laws for *hallah* were derived through analogies with comparable areas of religious law, especially *terumah*. The definition of “bread” is equated with *five species of grain, employing the same criteria that apply to the leavened or unleavened bread for purposes of Passover, *eruv*, or vows. In most matters, the restrictions arising from *hallah's* sacred status are derived from those of standard *terumah*; i.e., it must be kept in a state of purity, and can be consumed only by priests and their household members when they themselves are in a state of purity. As with *terumah*, consumption of the *hallah* by a non-priest incurs a divinely executed death penalty or (if done inadvertently) restoration with an additional fifth. Also like *terumah*, *hallah* is not incumbent upon dough that is ownerless or that is part of the Torah's entitlement to the poor. The fact that the Torah introduces the precept with the words “When ye come into the land whither I bring you” was understood to imply that *hallah* is required only from bread from the Land of Israel; and the Mishnah discusses the halakhic borders of the land, instances where the grain crossed the borders during the process, etc.

The rabbis discuss several types of dough products whose function as bread is questionable or borderline. An ancient

mishnah in *Eduyot* (1:2) records a disagreement between Shammai, Hillel, and the sages over the minimum quantity of dough that is subject to *hallah*. The Mishnah presupposes the view of the sages, as adapted by Rabbi Yosé: five quarter-kavs. Although it was understood that (as with *terumah*) the Torah stipulated no minimum proportion for the *hallah* vis à vis the whole loaf, the rabbis determined that it should be one twenty-fourth (or one twenty-eighth for professional bakers).

Because the bread was usually *hallah* by women in their homes, the sources dealing with *hallah* provide some valuable glimpses into the domestic lives of Jewish women in antiquity. From the halakhic discussions, we learn that they often prepared bread in shared facilities, about their state of dress during the process, about difficulties in maintaining the requisite purity standards during their menstrual periods and the stratagems that were adopted to avoid defilement (e.g., by working with amounts smaller than the legal minimum).

[Stephen G. Wald (2nd ed.)]

HALLE, city in Germany. Although Jews may well have been present in Halle at the end of the 11th century, the first definite information on their settlement in the city comes from the second half of the 12th century. Then under the protection of the archbishop of Magdeburg, they were hated by the burghers: in 1206 their houses were burned or looted – some Jews were killed and the rest expelled from the city. However, in the mid-13th century there were again Jews in Halle, living in a special quarter, and mainly engaged in moneylending. In 1261, most of their property was confiscated by the archbishop, serving as a cause for a two-year war between the archbishop and the burghers. During persecutions accompanying the *Black Death (1350) the community was destroyed, but in the 14th and 15th centuries Jews returned once more to Halle. The renewed community existed until 1493, when the expulsion of the Jews was decreed. It possessed both a synagogue and a *mikveh*, and a cemetery existed long before 1350. Toward the end of the 17th century the elector of Brandenburg allowed several Jews to settle in Halle, to the dismay of the burghers. In 1693 a Jewish cemetery was officially designated and a synagogue dedicated in 1700. The government recognized the community in 1704. About 1708 a Hebrew printing press was set up in Halle by J.H. Michaelis, for whom the wandering proselyte printer Moses b. Abraham and his son Israel (of Amsterdam) printed a Hebrew Bible (1720). With the help of generous patrons, in 1709 Moses himself began to print some Talmud tractates.

The number of Jews in Halle increased from 12 families in 1700 to 50 in the middle of the 18th century. They were emancipated in 1808 and the community, numbering 150 persons,

was given a constitution. In 1840 there were 167 members of the community, 443 in 1864, 660 in 1900, 1,902 in 1920, and 1,300 in 1933 (0.5% of the total population). The April 7, 1933, expulsion of Jews from the civil service resulted in the dismissal of 6 Jewish professors, 13 lawyers, and 41 Jews in public service. Zionist activities increased. After the Nazi rise to power; they won 4 of 10 seats on the community council. On Nov. 10, 1938, the synagogue and communal center were demolished. Two hundred men were arrested and sent to *Buchenwald; three of them lost their lives. In all, 584 Jews emigrated; 17 committed suicide. The rest were concentrated in "Jew houses" and used for forced labor. In 1942, 262 Jews were deported to the East; only 43 survived. On July 1, 1944, 92 were still living there protected by their non-Jewish spouses. The community was renewed after World War II and numbered 50 in 1966 (.02% of the population). A new synagogue was consecrated in 1953. Between 1953 and 1962 Halle was the seat of the Association of Jewish Communities in the GDR. After 1990 the membership, which had fallen to just five in 1989, increased due to the immigration of Jews from the former Soviet Union. In 2004 it numbered 731. In 1996 a liberal Jewish community was founded in Halle. It numbered 32 in 1996 and 200 in 2005. It is a member of the Union of Progressive Jews in Germany.

HALLE, MORRIS (Pinkowitz; 1923–), U.S. linguist. Born in Liepaja, Latvia, Halle was educated in American universities, receiving his M.A. in linguistics from the University of Chicago in 1948 and his Ph.D. from Harvard in 1955. He began his teaching career as an instructor of Russian at North Park College, Chicago. Thereafter he lectured at Chicago and at Harvard. In 1951 he joined the faculty of the Massachusetts Institute of Technology, where he became professor of modern languages in 1961. In the same year, he founded the university's doctoral program in linguistics. Halle taught linguistics, phonology, morphology, phonetics, and Slavic languages. Over the years he held positions at MIT ranging from assistant professor and department head to institute professor. He retired from MIT in 1996 and became institute professor emeritus.

Halle was renowned for his research in linguistic science. Russian, Slavic, and English were the languages most often involved in his linguistic studies. He also focused on the linguistic aspects of Swedish, Arabic, German, Polish, Old and American English, the dialects of southern Russia, and – in one case – Hebrew ("The Term *Canaan* in Medieval Hebrew," by R. Jakobson and M. Halle, in *For Max Weinreich on his 70th Birthday* (1964), pages 147–172). Halle noted the implications of the computer for linguistics, and co-authored "On the Recognition of Speech by Machine" (in *Proceedings of the International Conference on Information Processing 1959* (1960), 252–6). He received recognition for his book *The Sound Pattern of Russian* (1959), and for two books he co-authored, *The Sound Pattern of English* (with N. Chomsky, 1968) and *Preliminaries to Speech Analysis* (1952, 5th repr. 1963).

Regarded by many as the father of the modern study of speech sounds (phonological and phonetic theory), Halle also wrote *Fundamentals of Language* (with R. Jakobson, 1956), *English Stress* (with S. Keyser, 1971), *Problem Book in Phonology* (with G. Clements, 1983), *Language Sound and Structure* (1984), *Handbook of Phonological Theory* (with W. Idsardi, 1994), and *From Memory to Speech and Back* (2002). He edited, among other books, *Roman Jakobson: What He Taught Us* (1983).

Halle served as vice president of the Linguistic Society of America in 1973 and as president in 1974. For decades he was a member of the Linguistic Society of America, a fellow of the American Academy of Arts and Sciences, and a member of the National Academy of Sciences.

[Ruth Beloff (2nd ed.)]

HALLEGUA, family of White Jews in *Cochin. Originally from Aleppo, Syria, the family provided communal leaders from the 17th century until the present day. One of the first recorded members was MOSES HALLEGUA (Aleguo), whose tombstone is dated 1666. The title and office of the *mudaliar* (head of the autonomous Jewish community in Cochin) fell to the Hallegua family when this hereditary position became vacant. When Anquetil-Duperron visited Cochin in 1757, JOSEPH HALLEGUA held the office. HAYYIM JOSEPH HALLEGUA, who moved to Bombay, was instrumental in publishing in 1846 the Marathi translation of the Passover *Haggadah* of the *Bene Israel.

[Walter Joseph Fischel]

HALLEL (Heb. הלל), the general term designating Psalms 113–118 when these form a unit in the liturgy. These psalms are essentially expressions of thanksgiving and joy for divine redemption. *Hallel* is recited in two forms: (a) The "full" *Hallel*, consisting of Psalms 113–118. It is chanted in the synagogue on *Sukkot, *Hanukkah, the first day of *Passover (the first two

days in the Diaspora), *Shavuot (Tosef., Suk. 3:2, Ta'an. 28b), and (in many synagogues) *Israel Independence Day. *Hallel* is also recited during the Passover *seder service (Tosef., Suk. 3:2), when it is known as *Hallel Mizri* ("Egyptian *Hallel*") because of the exodus from Egypt which the *seder* commemorates (Ber. 56a; cf. Rashi ad loc.). On this occasion it is recited in two parts (Pes. 10:5–7; Maim. Yad, Hamez u-Mazzah 8:5). (b) The "half" *Hallel*, consisting of the "full" *Hallel*, excepting Psalms 115:1–11, and 116:1–11. According to the Yemenite rite, the order is slightly different, based on Maimonides (Yad, Hānukkah 3:8). It is recited in the synagogue on the *New Moon (Ta'an. 28b; but see also Ar. 10a–b) and on the last six days of Passover (Ar. 10b).

The term *Hallel ha-Gadol* ("Great *Hallel*") refers only to Psalm 136 (Tosef. Ta'an. 3:5) which is recited during *Pesukei de-Zimra at the morning service on Sabbaths and on festivals (Tos. to Ta'an 26a). It is the daily psalm on the last day of Passover (Sof. 18:2), and is added to the *seder Hallel* (Pes. 118a; TJ, Pes. 5:7, 32c). According to the Mishnah (Ta'an 3:9), this psalm was sung on joyous communal occasions, e.g., the long-awaited rain after a period of severe drought.

In the Talmud, various origins are attributed to the custom of chanting *Hallel*. R. Eleazar claims that it was Moses and the people of Israel who first recited *Hallel*; R. Judah states that it was the Prophets who instituted its recitation for every occasion that the people of Israel should be redeemed from potential misfortune (Pes. 117a). The Talmud relates that *Hallel* was recited by the levites in the Temple (Tos. to Pes. 95b), and it was also chanted on Passover eve while the paschal lambs were being slaughtered (Pes. 5:7). *Hallel* became part of the synagogue service at an early stage, and in talmudic times, communities in Ereẓ Israel added it to the end of the evening service for Passover (TJ, Pes. 10:1, 37c). This practice later spread to the Diaspora (Sof. 20:9), and is still the custom among Oriental Jews and Ḥasidim (Sh. Ar., OḤ 487:4; but see Isserles ad loc.) and in most synagogues in Israel.

Hallel is recited on all major biblical festivals, with the exception of *Rosh ha-Shanah and the Day of Atonement; the solemnity of those occasions, when each mortal's destiny and fate is being decided, is deemed unsuitable for psalms of joy (Ar. 10b). Similar considerations caused these psalms to be omitted in a house of mourning on the New Moon and Hānukkah (Magen Avraham to Sh. Ar., OḤ 131:4). *Hallel* is not recited on *Purim, since the scroll of Esther is considered the festival's *Hallel* (Ar. 10b; Meg. 14a). One rabbinic tradition is that only the "half" *Hallel* is recited on the last six days of Passover because joy is mitigated by the calamity that then befell the Egyptian host when pursuing the Israelites (see Meg. 10b); another reason given is because no different sacrifice was offered each day (At. 10b). On Sukkot the *lulav* is waved during the refrains of Psalm 118:1–4, 25, and 29 (Suk. 3:9). *Hallel* may be recited at any time during the day (Meg. 2:5), although in the synagogue it is recited immediately after the morning service (RH 4:7). Special benedictions are recited before and

after *Hallel* except at the *seder* service when no benediction is recited before it.

There is a difference of opinion among the early authorities as to whether the obligation to recite the *Hallel* is to be considered biblical or rabbinical (see *Sefer Mitzvot Katan* 146, *Yere'im ha-Shalem* 262; Maim. Yad, Hānukkah 3:6; *Sefer ha-Mitzvot*, ch. 1). The recitation on the New Moon is considered to be a custom (Ta'an. 28b), and there are some opinions that it is only recited in congregational prayers on that day. Similarly there are authorities who ruled that for the full *Hallel* the benediction should read "Blessed art Thou... who hast commanded us to finish (*lignor*) the *Hallel*" instead of the customary "to read (*likro*) the *Hallel*." According to the *tosafot* (Sot. 32a, s.v. *Keri'at Shema*), *Hallel* may be recited in any language (see also Tosef., Sot. 7:7). It should be read standing (*Shibbolei ha-Leket* 173; Sh. Ar., OḤ 322:7), except at the *seder* service. Various traditions are related to the manner in which the *Hallel* is chanted. In some communities, it was sung antiphonally (Tosef., Sot. 6:2); in others (as is still the practice among Yemenite Jews) the congregation responded with *hallelujah* after each half of a verse (Suk. 3:10; TJ, Shab. 16:1, 16c). Among Ashkenazi Jews, it is customary to repeat Psalm 118:1, 21–29 (see Suk. 3:10 and 39a). Opinions and customs differ regarding the recital of *Hallel* on Israel Independence Day.

For musical rendition see *Psalms.

BIBLIOGRAPHY: Abrahams, Companion, 184ff.; Zeitlin, in: JQR, 53 (1962/63), 22–29; Finkelstein, in: HUCA, 23 (1950–51), part 2, 319–37; E. Levy, *Yesodot ha-Tefillah* (1952²), 209–13; ET, 9 (1959), 390–432; Idelsohn, Liturgy, 134, 158–9.

HALLELUJAH (Heb. הַלְלִיָּהּ), liturgical expression occurring 23 times, exclusively in the Book of Psalms. Apart from 135:3, it invariably appears as either the opening (106, 111–3, 135, 146–50) or closing word of a psalm (104–6, 113, 115–7, 135, 146–50) or in both positions (106, 113, 135, 146–50). In all cases, with the exception of 135:3 and 147:1, the term is not part of the body of the psalm. This fact, together with its total nonappearance in those psalms cited in other biblical books (cf. Ps. 106:48 with I Chron. 16:36) and its restriction to the last divisions of the Psalter (cf. Ber. 9b), suggest a late coinage.

It is generally agreed that Hallelujah means, "praise [ye] the Lord." The plural imperative form of the verb would indicate that the term was a directive to the worshiping congregation in the Temple by the presiding functionary which was meant to evoke a public response. In the course of time it became an independent cultic exclamation so that the Greek-speaking Jews simply transliterated it (70, Ἀλληλοῦῖα). On the other hand, a consciousness of its composite nature is preserved in amoraic discussions as to whether the Hebrew should be rendered by the scribes as one word or two. (Pes. 117a; Sof. 5:10, TJ, Suk. 3:12, 53d; TJ, Meg. 1:11, 72a). A novel explanation is given by Joshua b. Levi who regards the final syllable as a superlative suffix and who translates the term, "praise Him with many praises" (Pes. 117a).

[Nahum M. Sarna]

In Music.

The tradition of rendering the word Hallelujah at the beginning and/or end of a psalm, by a special melodic phrase is certainly very old, judging by its survival in the usages of many Jewish communities. In some of them, the word is even added at the end of each verse on some occasions. The Yemenites prefix “Hallelujah” or “Ve-Hallelujah” to certain festive *piyyutim*, which are therefore called *Halleluyot*. Christian tradition attests the practice of “Hallelujah-singing” from the earliest periods, especially in a form which may or may not have been taken over from Jewish practice: songs on the single word, in which the “lu” and “jah” syllables were drawn out as long flourishes, until they became the so-called *Jubilus* – a wordless ecstatic outpouring. In the Middle Ages these long Hallelujahs began to serve as the basis, in the lower or middle voice, of elaborate compositions in which the upper voices uttered a poetic expression of praise. Sometimes the word itself was split – as in the 13th-century three-voiced “Alle-psallite-cum-luja” (see A.T. Davison and W. Apel (eds.). *Historical Anthology of Music*, I (19642), 35). During the Renaissance and Baroque periods the *Jubilus*-like setting of the word *Alleluia* is found again, of course in the form of elaborate polyphonic compositions. The word also became a favorite vehicle for canons. The tradition continues until today, for example: the “Hallelujah chorus” in Handel’s *Messiah*, Mozart’s *Alleluja* for soprano and orchestra (actually the second part of his motet *Exsultate, jubilate*, K. 165), and the great *Alleluja* pieces in William Walton’s *Belshazzar’s Feast* (1929–31) and Arthur Honegger’s *Le Roi David* (1921).

HALLER’S ARMY (“Blue Army”), force of Polish volunteers organized in France during the last year of World War I, responsible for the murder of Jews and anti-Jewish pogroms in Galicia and the Ukraine. The group was organized on the initiative of the Polish National Council (KNP), achieved French recognition in June 1917, and with the appearance in Paris in July 1918 of General Józef Haller (1873–1960) known for his struggles for Polish freedom within the framework of the Polish legions, command was transferred to him. The political direction lent by the National Council in Paris, headed by Roman *Dmowski, gave the group an extreme nationalistic character. The army had about 50,000 men who moved to the southeast front in Poland during the months of April, May, and June 1919. The addition of Haller’s substantial forces to the regular Polish army enabled the Poles to conquer eastern Galicia. Foreign officers and the ties with France kept Haller’s forces independent of the official Polish command, a fact exploited by Haller’s soldiers (called the “Hallerczycy”) for undisciplined and unbridled excesses against Jewish communities in Galicia. Attacks on individual Jews on the streets and highways, murderous pogroms on Jewish settlements, and

deliberate provocative acts became commonplace. While these may have been on the initiative of individual soldiers, they were known to their officers, if not openly supported by them. In 1920, during the Polish offensive toward Kiev resulting from the Pilsudski-Petlyura alliance, anti-Jewish pogroms occurred in the region.

Haller, who was a member of the Sejm (parliament) in 1922–23, became a member of the Polish government-in-exile during World War II.

HALLGARTEN, family of U.S. bankers. LAZARUS HALLGARTEN (d. 1875), a native of Frankfurt, Germany, arrived in New York in 1848 and in 1850 opened an office for exchanging immigrants’ currency. By establishing connections with Frankfurt and other European banking centers, he and his partners developed a successful foreign exchange business. During the 1860s the firm became prominent as one of the largest gold bullion dealers in the United States. For its role on “Black Friday” (September 24, 1869) in stabilizing the price of gold that had been skyrocketed by the speculations of Jay Gould, the firm received official recognition by the United States Treasury. During the latter part of the 19th century the firm was engaged in the reorganization of the country’s major railroads, and expanded its trading in bonds and stocks. In 1881 it became a member of the New York Stock Exchange. Meanwhile, Lazarus’ sons CHARLES (1838–1908) and JULIUS (d. 1884) had joined the firm, and the financing of industrial combines became a major field for Hallgarten & Co. World War I saw an intensification of the firm’s domestic business, and between the two world wars the firm acted as fiscal agents for many foreign governments, and established offices and representations in almost all the European financial centers. With the passing of the 1934 Securities and Exchange Act it limited itself to underwriting and general brokerage business. As late as 1950 the majority of the firm’s active members were direct descendants of a partner of Lazarus Hallgarten. Most of the Hallgartens were interested in community activities as well as in the arts. Lazarus’ son, Charles, who moved to Frankfurt and conducted the firm’s banking affairs there, was especially active in philanthropic work. He held a leading position in the *Alliance Israélite Universelle, the Hilfsverein der Deutschen Juden, and the Jewish Colonization Association, and helped to organize efforts for the relief and emigration of the Jewish victims of the Russian pogroms. He was the founder of the Gesellschaft zur Erforschung Juedischer Kunstdenkmaeler (Society for Research of Monuments of Jewish Art). He also helped to found an association for public education and a legal aid office for women.

[Joachim O. Ronall]

HALLO, RUDOLF (1896–1933), German art historian, friend and successor of Franz Rosenzweig as head of the Freies Juedisches Lehrhaus in Frankfurt. Hallo was born in Kassel to a prominent family of court Jews and artisans, which included Israel Aron Hammerschlag of Prague and his grandson and namesake, who was made a Court Jew in 1657 by Frederick William of Brandenburg. The family tradition of painting, gilding, and synagogue decoration began in 1816, when Simon Hallo became an apprentice housepainter, the medieval painters' guild having opened to Jews in the wake of the Emancipation. The firm Gebrueder Hallo was founded in 1891 and moved to Tel Aviv in 1935.

Trained in classical art at the University of Goettingen, Rudolf Hallo contributed significantly to the founding of Jewish art history as a discipline and also wrote on biblical and archaeological subjects. His interest in art history, especially Jewish and Hessian provincial art and handiwork, carried on the family tradition on an academic level.

Franz Rosenzweig was the son of his mother's closest friend. Hallo married Gertrude Rubensohn, also a friend of Rosenzweig and one of his circle (see Rosenzweig's *Briefe*, 285, 288). Upon his incapacitation Rosenzweig designated Hallo to succeed him as head of the Lehrhaus (*Briefe*, 354). Because of differences between the two men concerning educational policy, which stemmed from deeper disagreements in philosophical outlook (cf. *Briefe*, 364, 365), Hallo resigned at the end of the summer trimester of 1923 (*Briefe*, 373). He returned to his native Kassel, and there became curator at a state museum, where he created a department of Jewish art. He continued writing and lecturing. Among Hallo's works are *Juedische Kunst aus Hessen und Nassau* (1933), *Juedische Volkskunst in Hessen* (1928), *Rudolph Erich Raspe* (1934, posthumously), *Geschichte der juedischen Gemeinde Kassel* (1931), and *Judaica* (1932, separate printing from *Religioese Kunst aus Hessen und Nassau*).

His son, WILLIAM W. HALLO, Assyriologist, was born in Kassel in 1928. He immigrated to the United States in 1940. Hallo taught Bible and Semitic languages at Hebrew Union College in Cincinnati (1956–62), and from 1962 taught Assyriology at Yale University, serving as curator of the Babylonian collection there. He published extensively on ancient Near Eastern and biblical subjects.

ADD. BIBLIOGRAPHY: G. Schweikhart (ed.), *Rudolf Hallo. Schriften zur Kunstgeschichte Kassel. Sammlungen Denkmaeler Judaica* (1983).

[Joel Kraemer]

HALLO, WILLIAM (1928–), Assyriologist and Bible scholar. Hallo was born into a prominent Jewish family in Kassel, Germany. His father Rudolf *Hallo was one of the founders of the discipline of Jewish art history, and successor to Franz *Rosenzweig at the Frankfurt Lehrhaus. His mother was Dr.

Gertrude Rubensohn Hallo. William Hallo and his sisters were among a group of Jewish children who were sent out of Nazi Germany and other Nazi-held areas in 1939 to England as part of the *Kindertransport* program. Rejoined by their mother (his father had died in 1933), Hallo and his sisters came to the United States in 1940. He earned his B.A. at Harvard in 1950 and spent 1950–51 at Leiden University, Netherlands, on a Fulbright scholarship studying the languages of ancient Mesopotamia with F.R. Kraus, among others. He came to the Oriental Institute of the University of Chicago, where he earned his Ph.D. in 1955 under Ignace *Gelb. He was also an assistant to Benno *Landsberger. Between 1956 and 1962, Hallo taught at Hebrew Union College in Cincinnati. He left for Yale in 1962, where he was appointed curator of the Yale Babylonian Collection and professor of Assyriology, and spent the next 40 years at Yale. Within Assyriology, Hallo specialized in Sumerian literature, history, and language. Applying his work in Assyriology to biblical studies, Hallo pioneered in a "contextual" approach that shows the importance of comparing and contrasting the respective literatures. With K.L. Younger, Hallo edited the three-volume *The Context of Scripture* (1997–2002), a collection of ancient Near Eastern documents. A highly prolific professional scholar, Hallo brought some of the results of his scholarship before larger audiences through his contributions to the Torah Commentaries published by the Reform movement. He also translated Rosenzweig's *Star of Redemption* (1990).

Pearce, bibliography of Hallo's publications, *ibid.*, 11–16; W. Hallo, in: *Vergegenwaertigen des zerstoerten juedischen Erbes* (1997), 147–57.

[S. David Sperling (2nd ed.)]

HALMI, ROBERT (1924–), U.S. executive producer. The legendary and prolific television producer Robert Halmi was born in Budapest, Hungary, the son of a playwright and a photographer. In 1944, he joined the Hungarian Resistance to hold off the Nazis in Poland. He was captured and sentenced to death but released when the Russians liberated Poland in 1945. In 1952 he emigrated to the U.S. and became a writer-photographer for *Life* magazine, specializing in exotic and dangerous places. His exploits included being stranded for three days on an Alaskan glacier, spending three months with a tribe of African pygmies, and flying hot-air balloons professionally. Halmi's film career began in 1962 when he started producing documentaries on outdoor subjects. By the mid-1970s Halmi had crossed over to producing feature films but he soon shifted his attention to television. He quickly established himself as the king of the mini-series, producing lavish, star-studded productions of classics. Halmi's credits include *Svengali* (1983), *Gulliver's Travels* (1996 Emmy Award), *20,000 Leagues Under The Sea* (1997), *The Odyssey* (1997), *Robinson Crusoe* (1997), *Moby Dick* (1998), *Merlin* (1998) and perhaps his most acclaimed achievement, *Lonesome Dove* (1989),

which received seven Emmy Awards. In 1994 Hallmark Entertainment purchased Halmi's production company, RH1 Entertainment, and promoted Halmi to chairman of the board. He went on to work with his son, Robert Halmi, Jr., who became president and CEO of Hallmark. Halmi, Sr. continued to produce two or more projects a season, such as *Animal Farm* (1999), *The Lion in Winter* (2003), and *The Five People You Meet in Heaven* (2004).

[Max Joseph (2nd ed.)]

HALPER, ALBERT (1904–1984), U.S. novelist. His first novel, *Union Square* (1933), on a radical theme, was an immediate success. His experiences in a mail order house in his native Chicago and in the Chicago central post office found expression in his novels *The Chute* (1937), *The Little People* (1942), and *The Golden Watch* (1953), a story of a West Side Chicago Jewish family. *The Chute* showed Halper in retreat from the Jewishness of his immigrant parents, presenting a wholly negative picture of American Jewish life. In *Sons of the Fathers* (1940), however, he portrayed Jewish customs and ceremonies with objectivity and even sympathy. *Atlantic Avenue* (1956) is a story of violence in New York City. He recounted his struggle as a writer in *Good-bye, Union Square, A Writer's Memoir of the Thirties* (1970).

BIBLIOGRAPHY: F. Champney, in: *Antioch Review*, 2 (1942), 628–34; S. Liptzin, *Jew in American Literature* (1966), 183–6. **ADD. BIBLIOGRAPHY:** J. Hart, *Albert Halper* (1980).

[Sol Liptzin]

HALPER, BENZION (1884–1924), Hebraist, Arabist, and editor. Halper was born in Zhosli (Zasliai), Lithuania. He emigrated to Germany and from there to England. In 1907 he began studying Semitics at the University of London. While at the university he also studied at Jews' College. In 1910 he spent a year in Egypt under university auspices. During this period he contributed regularly to the Hebrew periodical *Ha-Yehudi*. In 1911 Halper went to New York and worked as classifier and copyist of *genizah* fragments in the library of the Jewish Theological Seminary of America. In 1912 he became a Fellow at Dropsie College in Philadelphia, and from 1913 taught there in the departments of rabbinics and cognate (Semitic) languages. In 1923 he was advanced to the rank of associate professor of cognate languages. He also served the college as custodian of manuscripts. From 1916 to 1924 Halper was editor of the Jewish Publication Society of America.

Among the *genizah* fragments brought to Dropsie College by Cyrus Adler, Halper discovered a portion of *Sefer ha-Mitzvot* ("Book of Precepts") by the 10th-century halakhist and philosopher *Ḥefez b. Yazli'ah. He translated it into Hebrew and published both the original Arabic text and the translation with an introduction and critical notes as *The Book of Precepts* (1915). His scholarly and at the same time popular anthology, *Post-Biblical Hebrew Literature* (Hebrew and English, 2 vols., 1921), presented some previously unpublished texts as well as critical notes and a glossary. Under the title *Shirat Yis-*

rael (1924), he published an edition and Hebrew translation of *Kitab al-Muḥadara wal-Mudhakara* (Book of Discussions and Remembrances) by the 12th-century Hebrew poet, Moses *Ibn Ezra, dealing with Hebrew prosody and, more generally, with Jewish life and literature. Halper's last important work was the *Descriptive Catalogue of Geniza Fragments in Philadelphia* (1924), which identifies and describes in detail nearly 500 fragments. Halper's first major essay, entitled "The Participle Formations of Geminat Verbs" (in *ZAW*, 30 (1910), 42–57, 99–126, 201–28), discussed Hebrew roots from כִּנְחַת וְפָתַח. His major studies included "The Scansion of Medieval Hebrew Poetry" (in *JQR*, 4 (1914), 153–224), "An Autograph Responsum of Maimonides" (*ibid.*, 6 (1916), 225–9), "A Dirge on the Death of Daniel Gaon" (*ibid.*, 10 (1920), 411–20), and analyses of *genizah* discoveries and Jewish literature in Arabic (in *Ha-Tekufah*, 1923, 1924, 1928).

BIBLIOGRAPHY: C. Adler, in: *AJYB*, 26 (1924), 459–71; J.N. Simchoni, in: *Ha-Tekufah*, 23 (1927), 490–500; I.M. Elbogen, *ibid.*, 24 (1928), 541–2.

[Meir Ben-Horin]

HALPERIN, HAIM (1895–1973), agronomist. Halperin was born in Russia and studied agriculture at the University of Kharkov, immigrating to Erez Israel in 1924. He was a delegate to several Zionist congresses and founded the Ruppin Agricultural College and the Israel Agricultural Bank. On the foundation of the State he was appointed the first director-general of the Ministry of Agriculture. He was professor of agricultural economics at the Hebrew University and was for a time dean of the faculty. His *Agrendum* was translated into Japanese, among other languages. Halperin was the husband of Beba *Idelson. He was awarded the Israel Prize in 1973 and died shortly after.

HALPERIN, YEḤIEL (1880–1942), Hebrew educator. Born in Priluki, Ukraine, Halperin taught in Y. Adler's "progressive *heder*" in Gomel and later in S.L. *Gordon's in Warsaw. In 1909 he established the first Hebrew kindergarten in Warsaw, and, in 1910, a Hebrew seminary for kindergarten teachers. At the outbreak of World War I (1914) Halperin moved to Odessa where he established a similar seminary. Emigrating to Palestine in 1920, he served as a supervisor of Hebrew kindergartens from 1922 to 1925, and was appointed head of the Kindergarten Department of the Lewinsky Teachers' Seminary in Tel Aviv (1926). In 1936 he founded a special college for kindergarten teaching in Tel Aviv, which continued to function until 1941. Halperin published a journal devoted to the Hebrew kindergarten, *Ha-Ginnah* (in Odessa, from 1918; then in Jerusalem from 1922). His collected works were published in three volumes: *Shi'urim be-Torat Hinnukh ha-Tinokot* (1944); *Be-Keren Zaviv* (1945), kindergarten play songs; and *Mah Sipper Yare'ah Li* (1952), eight legends. His sons were the poet Yonathan *Ratosh and the philologist Uzzi Ornan.

[Gedalyah Elkoshi]

HALPERN, BENJAMIN (Ben, 1912–1990), U.S. sociologist, educator, and Zionist. Halpern, who was born in Boston, Massachusetts, was active in the Zionist movement and Jewish affairs from his youth. He served as national secretary of the He-Halutz Organization of America (1936–37), managing editor of the *Jewish Frontier* magazine (1943–49), and associate director of the departments of culture, education, and publications of the Jewish Agency (1949–56). In 1956 Halpern became research associate in Middle Eastern studies at Harvard University. He began his association with Brandeis University in 1962 and was subsequently appointed professor of Near Eastern studies there, retiring in 1981. He was a member of the Jewish Agency Executive from 1968 to 1972. Halpern's scholarly work was closely associated with his Jewish and Labor Zionist commitments and interests. His numerous publications, many of which were published in *Jewish Frontier* and *Midstream* magazines, deal chiefly with problems of Zionism, Israeli society, and the role of the Jews in U.S. society. In his *The American Jew: A Zionist Analysis* (1956), which deals with both the implications and realities of assimilation and differences and similarities between U.S. Jews and other Jewish communities, Halpern contends that Jews will never be completely accepted into U.S. life as long as they remain Jews. Halpern's most important book is *The Idea of the Jewish State* (1969²), which traces the development of Zionism both as an ideology and a movement. He also wrote *Clash of Heroes: Brandeis, Weizmann, and American Zionism* (1987).

[Werner J. Cahnman]

HALPERN, GEORG GAD (1878–1962), economist and leading figure in the economic activities of the Zionist Organization. Born in Pinsk, Halpern studied economics in Germany (his doctoral dissertation was entitled *Die juedischen Arbeiter in London*, 1903). He became active in Zionist affairs in his youth and, beginning in 1903, he attended all Zionist Congresses. During the period of the *Democratic Fraction, he became a close associate of Chaim Weizmann and throughout the years served as an adviser for and administrator of the financial affairs and economic institutions of the Zionist Organization. He also wrote on economic affairs for the German press and was the director of an oil company. From 1921 to 1928 he was a director of the *Jewish Colonial Trust in London. Halpern was the moving force behind various economic institutions sponsored by the Zionist Organization: the Anglo-Palestine Bank, the Palestine Electric Corporation, *Keren Hayesod, the Land Development Co., etc. He settled in Palestine in 1933, founded the Migdal Insurance Co. (1934), and was a member of the board of Bank Leumi.

BIBLIOGRAPHY: Tidhar, 10 (1959), 3613; *Sefer Pinsk* (1966), 508–9.

[Getzel Kressel]

HALPERN, HARRY (1899–1981), U.S. Conservative rabbi. Halpern was born in New York City and earned his B.A. at City College (1919) and his Orthodox ordination from Yeshiva

University's Rabbi Yitzhak Elchanan Theological Seminary (1922). While serving as rabbi of the Jewish Communal Center of Flatbush (1922–29), he earned his L.L.B. (1925) and J.D. from Brooklyn Law School (1926). He was ordained a second time, in 1929, at the *Jewish Theological Seminary, where he earned a D.H.L. in 1951. That year, he became rabbi of the East Midwood Jewish Center, one of the largest synagogue-centers in Brooklyn, where he was to spend his entire 48-year career. An early champion of intensive Jewish day school education, he founded the Rabbi Harry Halpern Day School, housed in his congregation's building, and was a guiding force behind the expansion of the Yeshiva of Flatbush, chairing its Board of Education. He was also president of the Brooklyn region of the *Zionist Organization of America (1947–49) and a member of its National Executive (1954–56).

Halpern rose to the highest positions of rabbinic leadership in metropolitan New York and nationally. He was a director of the Rabbinic Cabinet of the United Jewish Appeal of Greater New York, a founder and life trustee of the Commission on Synagogue Relations of the Federation of Jewish Philanthropies, and president of the New York Board of Rabbis (1961). He also served on the executive committee of the New York Division of the National Conference of Christians and Jews and was instrumental in organizing the Metropolitan New York Region of the *Rabbinical Assembly. His efforts led to his election as national president of the RA (1945–6), where he revived the quarterly *Conservative Judaism*, oversaw the publication of the Rabbinical Assembly *ketubbah* (as amended by Saul *Lieberman), and established a Committee on Tenure and Related Matters. His ambitious attempt at establishing a national *bet din* together with the Orthodox Rabbinical Council of America was rebuffed, however. Upon leaving office, Halpern became an activist chairman of the Joint Commission on Social Action of the Rabbinical Assembly and the United Synagogue (1956–61), lobbying against federal aid to private and parochial schools.

Halpern remained deeply connected with the Jewish Theological Seminary, as chairman of the Rabbinic Cabinet (1951–53), co-chairman of the Seminary Planning Commission, and a member of the Seminary's Board of Directors (1951–53). One of the founders of the institution's pastoral counseling program, he taught pastoral psychology and homiletics at the Seminary. In 1974, Halpern published *From Where I Stand*, a collection of columns he had written for the synagogue bulletin.

[Bezalel Gordon (2nd ed.)]

HALPERN (Halperin), ISRAEL (1910–1971), Israel historian. Halpern was born in Bialystok, Poland, emigrated to Erez Israel in 1934, began his teaching career at the Hebrew University in 1949, and became professor in 1963. His main interest was the history of East European Jewry, particularly *pinkasim* ("registers"). His publications include *Pinkas Va'ad Arba Arazot*

("Minutes of the Council of the Four Lands," 1945); *Ha-Aliyyot ha-Rishonot shel ha-Hasidim le-Erez Israel* ("Early Hasidic Immigration to Palestine," 1956); and *Takkanot Medinat Mehrin* ("Moravian Community Enactments," 1952). He also edited *Sefer ha-Gevurah* (3 vols., 1941, 1951²), a historical-literary anthology of Jewish self-defense and martyrdom, and *Beit Yisrael be-Polin* (2 vols., 1948–54), a collection of essays on Polish-Jewish history. Halpern took a leading part in the work of the Israel Historical Society, and was coeditor of the journals *Zion* and *Shivat Ziyon*, publications devoted to the history of Zionism. He was the brother of Lipman *Halpern, the neurologist.

HALPERN, JACK (1925–), Canadian inorganic and physical chemist. Born in Poland, he received his B.S. in 1946 and his Ph.D. in 1949 from McGill University. He joined the University of British Columbia (1950) and became professor of chemistry there in 1956, and later at University of Chicago (1962). Throughout his long and distinguished career, he conducted research on kinetics and mechanisms of inorganic reactions, catalysis, fast reactions, electron transfer processes, and coordination and organometallic chemistry. Among his many awards, he was named co-recipient of the 1994 Robert Welch Award in chemistry, which recognizes outstanding contributions to the field of chemistry for the betterment of mankind.

[Bracha Rager (2nd ed.)]

HALPERN, LIPMAN (1902–1968), Israeli neurologist, brother of the historian Israel *Halpern. Born in Bialystok, Poland, Halpern settled in Erez Israel in 1934. In 1938 he was invited to start a neuropsychic outpatient clinic at the Hadassah University Hospital, Jerusalem and became head of the newly formed department of neurology in 1941. He was appointed to the faculty of medicine being formed at the Hebrew University-Hadassah Medical School in 1946, becoming dean of the faculty in 1965 and playing an active part in the development of medical education in Israel. In 1953 he was awarded the Israel Prize for medicine. Halpern won an international reputation for his research on extrapyramidal diseases, the sensory functions, functions of the frontal brain, and the dynamics of aphasia of polyglots. His major work was a study of posture and its relations to the functions of the organism and the influence of sensory stimuli on posture. He also drew attention to the influence of color on the organism. Among his publications is *Le Syndrome d'induction sensorimotrice* (1951).

HALPERN, MOYSHE-LEYB (1886–1932), Yiddish poet. Born in Galicia, Halpern emigrated to the United States in 1908, after participating in the Czernowitz Yiddish Language Conference, and lived mainly in New York. He associated with *Di Yunge*, but his style was at odds with their aestheticism. Early influenced by German literature, especially Heine and Expressionism, his first collection of poems, *In Nyu York* ("In New York," 1919) brought him recognition as a major Yiddish poet, followed by *Di Goldene Pave* ("The Golden

Peacock," 1924). Two volumes entitled *Moyshe-Leyb Halpern* were published posthumously in 1934. Halpern was a rebel who, refusing to compromise his art, lived in poverty, earning some money by writing for satirical and left-wing Yiddish journals. In his poetry, Halpern invented a series of personae through which he expresses the conflicting ideas inherent in his work: social engagement and political skepticism, nostalgia for his heritage and brutal rejection of it, a tormented relationship to America, lyricism juxtaposed with self-mockery and disturbing language and imagery. His writing expresses his rejection of social injustice, his sympathy for the underprivileged, and his horror of war.

[Sol Liptzin and Shlomo Bickel / Heather Valencia (2nd ed.)]

HALPHEN, family of Alsatian origin. They included ACHILLE-EDMOND HALPHEN, who compiled the standard collection of documents on French Jewish history *Recueil des lois, décrets, ordonnances... concernant les Israélites depuis la Révolution de 1789* (1851); FERNAND HALPHEN (1872–1918), Parisian composer, who was a pupil of Massenet and Fauré, and composed several orchestral pieces and songs, a one-act opera, and a sonata for violin and piano; GEORGES-HENRI HALPHEN (1844–1889), mathematician, born in Rouen, who taught at the Ecole Polytechnique in Paris and became a member of the Académie des Sciences: in 1881 his work on the classification of curves was granted an award by the Berlin Academy; ALICE FERNAND-HALPHEN (d. 1963) author of a monograph on Gracia Mendes *Nasi (1929); and LOUIS *HALPHEN, historian.

BIBLIOGRAPHY: Sendrey, *Music*, nos. 7889–90 (on F. Halphen); H. Poincaré, *Savants et écrivains* (1910), 125–40; E. Picard, *Mélanges de mathématiques et de physiques* (1924), 1–11.

HALPHEN, LOUIS (1880–1950), French historian. Born in Paris, he taught medieval history at the University of Bordeaux from 1910 until 1928 when he became a lecturer in the Paris Ecole des Hautes Etudes and later professor of medieval history at the University of Paris. In 1940 he fled to unoccupied France and taught at the University of Grenoble from 1941 until 1943, after which the Nazis took the city and he went into hiding. In 1944 he returned to Paris and resumed his teaching career at the Sorbonne. Halphen first gained importance as a medieval historian through two publications, *Le Comté d'Anjou au XI^e siècle* (1906) and *Etudes sur l'administration de Rome au Moyen Age 751–1252* (1907). He adhered strictly to the sources, of which he had full command. In his *Initiation aux études d'histoire du Moyen Age* (1940, 1952³), he provided an exposition of his methodology as a guide for young scholars. Among his works of broader scope are *Lessor de l'Europe*,

XI^e–XIII^e siècles (1932, 1948³), and *Les Barbares* (1926; 1948⁵) which he wrote for the series *Peuples et Civilisations*. In these books he emphasized the importance of relating European history to Asian and Islamic history. He also wrote *Charlemagne et l'empire Carolingien* (1947).

BIBLIOGRAPHY: *Mélanges d'histoire du Moyen Age dédiés à la mémoire de Louis Halphen* (1951), xv–xxiii (list of his publications).

[Joseph Baruch Sermoneta]

HALPRIN, ANN (Anna; 1920–), U.S. dancer, choreographer, and teacher. Halprin distinguished herself as an exponent of dance related to environment. She founded and ran the Dancers' Workshop in San Francisco (1948–55). Her first "environmental" work, *Birds of America* (1960), led to *Four-Legged Stool* (1961), *Esposizione* (1963), and *Parades and Changes* (1964). From the late 1970s Halprin organized events conceived as "rituals" in which males and females from the audience as well as performers are united in a single process. Her *Circle the Earth* (1981) was a call for peace and also served as a healing ritual; her *Planetary Dance: A Prayer for Peace*, performed in Berlin (1995) in commemoration of the 50th anniversary of the end of World War II, involved hundreds of participants. In 1997, she received the Samuel H. Scripps/American Dance Festival Award, honoring lifetime achievement in modern dance.

ADD. BIBLIOGRAPHY: IED, 3, 336.

[Amnon Shiloah (2nd ed.)]

HALPRIN, ROSE LURIA (c. 1895–1978), U.S. Zionist leader, born in New York City of a traditional Jewish family. She studied Hebrew and attended the Teachers' Institute of the Jewish Theological Seminary of America, Hunter College, and Columbia University. Rose Halprin served as president of Hadasah during 1932–34 and 1947–51. During 1934–39 she lived in Palestine, where she was Hadasah's Palestine correspondent. She was Hadasah's first representative to the Zionist General Council from 1939 to 1946. In 1946 she was elected to the Executive of the Jewish Agency for Palestine and continued in that office for more than 20 years. In 1955 she became acting chairman and from 1960 to 1968 she was chairman of the American Section of the Jewish Agency. During her Hadasah career, Rose Halprin served in many capacities. She was a member of the Board of Governors of the United Jewish Appeal and of the Hebrew University in Jerusalem.

[Gladys Rosen]

HALSMAN, PHILIPPE (1906–1979), U.S. photographer. Born in Riga, Latvia, Halsman became interested in photography at 15 when his father, a dentist, gave him an old camera. He studied engineering but gave it up and moved to Paris. When German troops were approaching in 1940, Halsman, after a decade as a successful portraitist, left for New York with an emergency visa, obtained through the intervention of Albert *Einstein, whom he photographed frequently. The first picture Halsman made in the United States, of an unknown

model, Connie Ford, lying on an American flag fashioned from paper, was bought by the cosmetics company Elizabeth Arden for display, making the model, and photographer, famous. Halsman made a photograph of Salvador Dali with a ballerina on a city rooftop. It became the Picture of the Week for *Life* magazine. The two men became close friends, working together on a number of surreal images. Their successful collaboration resulted in 1954 in a book entitled *Dali's Mustache*, a light-hearted look at the artist's famous mustache. Halsman was responsible for more than 100 covers for *Life* magazine, then a weekly picture magazine. He achieved international acclaim for his portraits of Churchill and John F. Kennedy and the actresses Ingrid Bergman, Elizabeth *Taylor, and Marilyn *Monroe. In 1966 the United States engraved two of Halsman's portraits, of Adlai E. Stevenson and of Einstein, on postage stamps. One of Halsman's most famous series shows the rich and famous jumping for the camera. Marilyn Monroe jumps exuberantly, the Duke and Duchess of Windsor do so demurely and Richard M. Nixon does it rather prudishly. The *Jump Book* was published in 1959. Halsman was the first president of the American Society of Magazine Photographers.

[Stewart Kampel (2nd ed.)]

HALTER, MAREK (1934–), painter and writer. Halter was born in Warsaw but during World War II was exiled to Uzbekistan. After returning to Poland in 1945, he decided to study art in Paris. After a short period at the Ecole des Beaux-Arts, he preferred to study alone and undertook a long series of journeys in Latin America, the Middle East, Israel, and the United States. Halter was a particularly gifted draftsman, working in a free, speedy manner, linking delicate linear definitions with heavy areas of black paint. He illustrated a number of publications, including *Proverbs* and *Song of Songs* issued by Oved, Tel Aviv, and the poems of Perl Halter, edited by Massada, Tel Aviv. Albums of his drawings and screenprints were published in Paris, where a film was also made about his work. Halter also worked for the theater, in France and Spain, and designed stained-glass windows for the Great Neck Synagogue, New York. In addition to these diverse talents, Halter paints principally in oils. Much of his life and art is motivated by political ideals, not of a revolutionary nature, but idealistic objectives of a moralistic and democratic nature. His first one-man exhibition was at the Galerie Cimaize, Paris (1953); he also held exhibitions throughout Europe, in Argentina, Canada, and the United States, and at both the Tchemerinski and Gordon galleries in Tel Aviv. In 1976, Halter published his first book, *Le fou et les rois* (*The Jester and the Kings*, 1989), an autobiography with a marked political dimension. Then began a rich literary career, mainly consisting of historical sagas combining reflections on the fate of the Jewish people with a humanistic outlook: *La mémoire d'Abraham* (1983; *The Book of Abraham*, 1986) and its contemporarily focused sequel *Les fils d'Abraham* (1989; *The Children of Abraham*, 1986); *Le Messie* (1996); *Les mystères de Jérusalem* (1999); and *Le vent des Khazars* (2001; *The Wind of the Khazars*, 2003). In 1994, he directed a docu-

mentary on the *Righteous Among the Nations, *Tzedek*, whose principal interviews were collected in his 1995 book *La force du bien (Stories of Deliverance: Speaking with Men and Women Who Rescued Jews from the Holocaust, 1998)*.

In 2003 Halter began publishing a trilogy devoted to biblical women: *La Bible au féminin: Sarah* (tr. 2004), *Tsippora* (tr. 2005), and *Lilah* (tr. 2006).

Besides his artistic activities, Halter was very active in promoting human rights, the fight against racism, and peace in the Middle East. He was chairman of the Andrei Sakharov Institute and the International Institute for Jewish Culture, co-founder of the French anti-racist movement "S.O.S. racismisme," and involved in the first encounters between Israelis and PLO representatives.

[Charles Samuel Spencer / Dror Franck Sullaper (2nd ed.)]

HALUKKAH (Heb. הַלֻּקָּה), financial allowance for the support of the inhabitants of Erez Israel from the contributions of their coreligionists in the Diaspora. In a wider sense, *halukkah* denotes the organized method of this support and the institutions responsible for it, especially after the end of the 18th century. The support given by the Jews of the Diaspora to their brothers in Erez Israel was customary even in ancient times and there are references to it in the periods of the Mishnah and the Talmud. Rabbis left Erez Israel to seek contributions abroad for the support of Torah scholars. During the Middle Ages and especially during the following centuries, this method of support for the inhabitants of Palestine became widespread and encompassed the whole of the Jewish world. The fundamental idea on which the *halukkah* is based is the conviction that Erez Israel held the central position in the religious and national consciousness of the people, hence the special importance accorded to the population residing there. This population is not to be considered as any other entity of Jews, but rather as the representative of the whole Jewish people, the guardian of all that is sacred in the Holy Land; in this role it merits the support of the whole people. The Jews, in the lands of their dispersion, both communities and individuals, were conscious of their duty toward the *yishuv* and considered their support of it as an act of identification with it.

In the 16th century organized methods for the collection of contributions were established in large Jewish centers; the charity-boxes named for R. Meir Ba'al ha-Nes ("The Miracle-Worker") were a popular instrument for the collection of contributions. Communities and national communal organizations urged the public to fulfill its duty and contribute toward the *yishuv*. The communal organizations of Poland, Lithuania, Moravia, and elsewhere included special clauses in their regulations concerning the Palestinian funds and their collection, and even appointed officials for this purpose. The contributions were usually transferred to Palestine through commercial centers and harbor towns which maintained relations with the Orient. From the beginning of the 17th century, Venice was such a center and funds from Poland and Germany passed through there. In the 17th–18th centuries Leghorn also served

this purpose. Amsterdam became a center for the contributions of Western Europe from the 17th century onwards. The most important center for the Palestinian funds was Constantinople; it was near Palestine and the capital of the Turkish government. There was also a spiritual affinity between its rabbis and those of Palestine. Contributions from Eastern Europe also passed through there. The Constantinople center not only handled contributions but also intensively encouraged their collection. During the first quarter of the 18th century, the community in Constantinople undertook the improvement of the financial position of the Jerusalem community and tried to extricate it from its heavy debts. A special tax was levied for this purpose and the expenses of Jerusalem were subject to the control of Constantinople.

From the beginning of the 19th century, Vilna attained a special importance as the center for the collection of contributions from Russia, and the Ashkenazi *Perushim* (followers of the Gaon R. Elijah of Vilna) community in Jerusalem depended on this center. In accordance with the (internal) Jewish regulations of 1823, this center had exclusive authority for the collection of all contributions in Russia; its decisions on the distribution of funds to beneficiaries and general expenses were binding. The Amsterdam center, which was reorganized at the beginning of the 19th century under the leadership of Zevi Hirsch *Lehren (1784–1853), was also of great importance. It appointed collectors in the important communities of Western Europe and received annual pledges from them. These funds were then distributed between the various communities of Palestine, according to a fixed scale and with the consent of the leaders of the *yishuv*. Besides these centers, which in their time served several countries, there were similar national centers at Frankfurt, Vienna, Prague, Pressburg, etc. The collection of contributions was made more efficient by special emissaries who left Palestine for the Diaspora and who described the difficulties in Erez Israel in order to encourage the public in their duty toward the *yishuv*. These missions from Palestine, together with the support of the *yishuv*, were an ancient institution and played an important part in the mutual relationship and binding ties between the Diaspora and the Holy Land. The emissaries of Palestine reached the most far-flung areas of the Jewish world. Apart from this main object, they also gave religious and spiritual guidance, some of these emissaries being prominent scholars.

After the beginning of the 17th century, objections were raised against these missions in order to reduce the expenses involved in them. It was suggested that the collection of funds and their transfer be carried out by the communities themselves. The leaders of the *yishuv* opposed this plan for fear that the living relationship between Palestine and the Diaspora would be ruined, and with the absence of personal contacts, the needs of Palestine Jewry would not be satisfied. In spite of the objections, emissaries continued to visit the Oriental countries. On the other hand, the objections of the Amsterdam center were more determined and these missions were stopped in 1824. The leaders of the *yishuv* agreed to this ar-

rangement but tried to circumvent it periodically by sending emissaries to Western Europe for special needs. Lehen was, however, adamant in his decision. At first, the contributions collected were destined for the scholars and the needy, without any distinction as to their land of origin. With time, however, especially during the last third of the 18th century, a tendency to allocate contributions to a defined section of the *yishuv* came into existence. This development was connected with the new Ashkenazi settlement in the country, and from then onward became a characteristic of the *ḥalukkah*. The first *Ḥasidim to emigrate to Palestine during the last quarter of the 18th century regularly received support from their colleagues in their country of origin. Similar arrangements existed for the *Perushim* who emigrated to Palestine and formed their own community at the beginning of the 19th century. As the Ashkenazim were a small minority and the funds contributed, according to prolonged tradition, were remitted to the Sephardi community, the former felt the necessity to assign the incomes from Eastern Europe for themselves alone. Once their numbers increased, the Ashkenazim requested that a portion of the contributions from the rest of Europe also be given to them. After the 1820s these demands were accepted and from that time regular arrangements were made between the two communities concerning ratios for dividing the income from Western Europe and other countries where Ashkenazi and Sephardi communities existed.

Until the end of the first third of the 19th century, there were two principal sections within the Ashkenazi community, the Ḥasidim and the *Perushim*. In the late 1830s, the Ashkenazi community began to break up into organizations based on the countries and regions of origin in Europe. One such organization, known as **kolel*, was characteristic and exclusively confined to the Ashkenazi *yishuv* in Palestine of the 19th and early 20th centuries. This sub-division into *kolelim* was due to economic factors, especially the desire of the emigrants of a given country to ensure themselves the incomes from their country of origin. The sub-division into *kolelim* was almost nonexistent among the Sephardim because they were not dependent on the *ḥalukkah* to the same extent as the Ashkenazim. However, even among them there were some who considered themselves to be discriminated against. Thus, the Georgians and the North Africans broke away from the general Sephardi community. The breaking-up process began in the 1830s when the immigrants from Germany and Holland formed their own *kolel*, the *kolel Hod* (abbreviation for Holland ve-Deutschland). In 1845 the *kolel Varsha* (Warsaw) was established and consisted of members of Polish origin who were dissatisfied with the leadership of the *Perushim* and who felt themselves discriminated against.

The fragmentation process was especially intensified in the 1850s when six *kolelim* were founded by emigrants of Eastern and Central European countries and regions. In 1858 the *kolel Hungaryah* (Hungary; *Kolel Shomerei ha-Ḥomot*, "Kolel of the Guardians of the Walls"), the most important one of the period, was established. The pupils of R. Moses

Sofer, who had immigrated to Palestine, and those immigrants who had come from the countries of the Austro-Hungarian Empire during the 19th century belonged to this *kolel*. It was one of the largest *kolelim*, both numerically (about 2,500 souls in 1913), and in its real estate holdings; as such it was an influential factor in Jerusalem's communal life. Many of the members of this *kolel* stood out because of their religious zealotry and their opposition to any innovation. The *Neturei Karta* ("Guardians of the City"), the zealous faction of Jerusalem's religious Jews, emerged from this group. On the other hand, the first agricultural pioneers also came from this *kolel*. A further wave of subdivisions occurred in the 1870s, when another five *kolelim* were established. All of these, except one, separated themselves from the ḥasidic *kolel*, whereas those of the 1840s and 1850s had broken away from the old Ashkenazi community. In 1913 there were 26 Ashkenazi *kolelim* in Jerusalem.

The leadership of the *kolelim* was composed of rabbinical personalities. Abroad, a president, who was generally the most prominent rabbi of that country, was the head of the *kolel*. With the ḥasidic *kolelim*, it was the *rebbe* of that trend. Wealthy volunteers worked under the guidance of the president; the *kolel* leaders in Palestine, also prominent rabbis, were appointed by the leaders abroad, as were the communal workers and officials. The *kolel*, which functioned according to set regulations, was in close relationship with the country of origin of its members. The Sephardi *kolel* was led by the Sephardi chief rabbi, assisted by a council of rabbis.

The *ḥalukkah* arrangements were different with the Sephardim and the Ashkenazim. With the former *ḥalukkah* was only distributed to such scholars whose study was their profession, in accordance with the principle that the purpose of *ḥalukkah* was to support those who studied the Torah. The poor of the community only benefited from the *ḥalukkah* indirectly. The justification for this system was that the Sephardim were integrated in the country. They could earn their livelihood and were not dependent solely on *ḥalukkah*. In practice, with the absence of regular support, there were many poor in the community. In addition to the *ḥalukkah* for individuals, the Sephardi *kolel* also set aside a part of its income for general community expenditure. The *ḥalukkah* of the Ashkenazim was divided on the basis of a fixed sum per head. In addition to this, scholars received an additional allocation in accordance with their status. Occasionally, there were supplementary allocations derived from special contributions which the *kolel* received apart from its regular income. The *ḥalukkah* allocations differed from *kolel* to *kolel*, according to the income and the number of members. In 1913 the *ḥalukkah* of the Hungarian *kolel* was 100 francs for every person each year, while that of the Holland-German *kolel* was 360 francs for a couple with a further 80 francs for a child. These were the two most firmly established *kolelim*. Generally, the *ḥalukkah* allocation was far from sufficient to provide for the requirements of those who received it, and as the possibilities of gaining a livelihood were extremely limited in Jerusalem, most of the *ḥalukkah* beneficiaries lived in poverty. They and their *kolelim* were gener-

ally in debt. In light of this, there was a great deal of friction between the individual members of *kolelim* and between the *kolelim* themselves. Furthermore, the *kolel* leaders were targets for attack. The echoes of these *kolel* and *halukkah* controversies were also heard abroad; there were many discussions in halakhic literature over these questions.

The division within the Ashkenazi community required the establishment of a body which would concern itself with the general interests of the community and deal with such matters the *kolelim* were not involved in. Consequently, the Va'ad ha-Kelali ("General Committee") of the Ashkenazi *kolelim*, on which each *kolel* had a representative, was established in 1866. The committee preoccupied itself with the general requirements of the community, such as the rabbinate, religious education, welfare, taxes, payments to the government, and the support of scholars. The committee also distributed *halukkah* to persons who were not members of any *kolel*. Later its income came principally from America but also from other regions in accordance with arrangements made with various *kolelim*, though these were not always honored by the *kolelim*, who generally gave preference to their own particular interests.

The *halukkah* was a decisive factor in the existence and the development of the Jewish population in Palestine. Its importance grew during the 19th century, when immigration reached serious proportions. At that time Palestine was economically poor and was ruled by a backward and corrupt government. Under these circumstances the *yishuv* could not have existed, much less have grown, had it not been organized within the framework of the *kolelim*, who provided for their people and gathered money from abroad. (The other non-Muslim communities in Palestine were also supported to a large extent from abroad.) The *kolelim*, which were responsible for the *halukkah* distributions, played an important role in the development of urban settlement, especially outside the walls of the Old City in Jerusalem. The Jewish quarters, which were built after 1869 on the initiative of the *kolel* leaders, were an important factor in the territorial expansion of the Jewish population of Jerusalem. The Jewish population in the other three "holy cities" – Hebron, Safed, and Tiberias – also was essentially reliant on the *halukkah*.

From the middle of the 18th century, criticism of the way and manners of life of the *yishuv* increased in the Jewish world of Western Europe. The *halukkah* and its arrangements were the center of criticism in the writings of L.A. *Frankl, who visited Palestine in 1856, the historian *Graetz (1872), and Samuel *Montagu, in his report in 1875. The principal objection was that the *halukkah* was also distributed to those who were neither scholars nor needy.

The criticism of the *halukkah* intensified when the Hibbat Zion movement, which sought to build a society based on its own labor, was established. It challenged the very system of *halukkah* and belittled its importance. The heads of the *kolelim* rejected this criticism and explained the necessity of the *halukkah* in the prevailing social and economical situation.

They also stressed its merits for the maintenance of the *yishuv*, the integration of immigrants, and the construction of new quarters. Even so, the deficiencies of the *halukkah* were not unknown to members of the old *yishuv*, and calls for reform were voiced. The public discussion of this matter became one of the principal topics of the Hebrew writers in Palestine and abroad. The negative attitude toward *halukkah* held by the Hovevei Zion was passed on to Zionist ideology, which regarded the old *yishuv* unfavorably. Current historical literature has been more favorable toward the old *yishuv* in light of its place as an important link in the renewal and revival of Erez Israel. Consequently, the *halukkah* is also looked upon with less criticism. With the beginning of the new *yishuv*, the importance of the *halukkah* decreased continually, and after World War I it was limited to the circles of the old *yishuv*. In these circles, some *kolelim* still exist, but they have lost their former public importance. In practice, they have become charitable societies and their principal income is derived from their property and contributions given out of traditional sympathy.

[Nathaniel Katzburg]

Halukkah and Women

Halukkah payments were originally intended to enable Jewish men in the old *yishuv* to devote their lives to Torah study and prayer. Yet demographic data demonstrate that women, who were the majority of the Jewish population of Jerusalem (by far the largest Jewish community in the Holy Land) in the 19th century, also benefited significantly from *halukkah*. Many of the Jewish women in the old *yishuv* were widows, poor and wealthy, who had come to the Holy Land to spend their remaining days visiting sacred sites and preparing themselves for the next world.

Halukkah was distributed separately by the Ashkenazi and Sephardi authorities. All members of the Ashkenazi community, men and women, infants and children, received *halukkah*; men who devoted themselves to Torah study were entitled to an extra allowance. In the Sephardi community *halukkah* was distributed only to learned men and the impoverished. Thus, poor Ashkenazi women who had immigrated to the Holy Land could rely on this income.

In the course of the 19th century, an effort was made to link *halukkah* to pious behavior by the enforcement of bylaws (*Takkanot Yerushalayim*) that applied to men and women alike. Transgressions meant loss of *halukkah*. A number of these bylaws were directed at women; they prescribed certain forms of dress and forbade unchaperoned women from using the communal oven. Women were forbidden to attend synagogue at night and were forbidden to stay in synagogue courtyards after the Sabbath morning prayers. Any mingling between men and women was looked upon as a sin. A betrothed girl was forbidden to meet her fiancé, and a woman was not allowed to sell anything to gentile men. Husbands and fathers were expected to supervise the women of the family to preserve the sanctity of the community and to ensure that the family received its allotted share of *halukkah*. Accord-

ing to these regulations every grown male was instructed to marry, and, if not, he was expelled from the city. Thus, *ḥalukkah* money not only provided for the material existence of the community, it was also used to regiment the behavior of all Jewish residents of the Holy Cities who relied on it for their daily needs.

HAM (Heb. חַם), biblical city in Transjordan where Chedorlaomer, king of Elam, and his allies defeated the Zuzim in their campaign against the rebellious Canaanite kings (Gen. 14:5). In this biblical reference, Ham appears between Ashteroth-Karnaim and Kiriathaim, both of which are located in Transjordan, and it has therefore been identified with Tel Ham, 4½ mi. (7 km.) south of Arbel (Irbid) in Gilead. The identification of Ham with a place of the same name in the list of Thutmose III (no. 118) is doubtful. At Tel Ham three megalithic walls and pottery from the Early Canaanite period have been found but no remains from the Patriarchal (Middle Bronze) Age have been uncovered there so far.

[Michael Avi-Yonah]

HAM (Heb. חַם), one of the three sons of Noah. Although he is always placed between Shem and Japheth (Gen. 5:32; 6:10, et al.), he appears to have been the youngest of the three (9:24). The Bible relates how Ham observed Noah drunk and naked in his tent. He “saw his father’s nakedness,” implying in the biblical Hebrew a sexual act or even rape, i.e., sodomized him (cf. “see the nakedness” in Lev. 20:17, and see Sanh. 70a). In contrast, when he told his brothers of the incident, they at once covered Noah, doing so with the utmost delicacy (9:22–23). When Noah became aware of what had transpired, he cursed Canaan for his action: “Cursed be Canaan; the lowest of slaves to his brothers” (9:24–25). The reason for Noah cursing Canaan, and not Ham, is not clear. Actually “Ham the

father of” in verses 18b and 22 seems to be a somewhat crude link between verses 18–19 and 20ff., in which Noah’s sons are Shem, Japheth, and Canaan. Ugaritic epic poetry makes it clear that a son had the obligation to take special care of his drunken father, and not to disgrace him (cf. Isa. 51:17–18). Accordingly, the biblical depiction of Ham-Canaan’s depravity is probably to be taken as an ethnic slur rather than as a reflection of Canaanite reality (see *Canaan, Curse of), a tendency continued in Jewish Midrash (see below). Ham had four sons, Cush, Mizraim, Put, and Canaan, who became the progenitors of numerous nations (Gen. 10:6–20). As the home of the most important nation descended from Ham, Egypt is poetically called “Ham” in one psalm whose date is controversial (Ps. 78:51), and “the land of Ham” in two late psalms (Ps. 105:23, 27; 106:22; cf. Genesis Apocryphon, 19:13). Egypt is apparently the nucleus of the Hamite genealogy, the others having been added because of geographical proximity or political ties.

[Max Wurmbrand / S. David Sperling (2nd ed.)]

In the Aggadah

Ham’s descendant (Cush) is black skinned as a punishment for Ham’s having had sexual intercourse in the ark (Sanh. 108b). When Ham saw his drunken father exposed, he emasculated him, saying, “Adam had but two sons, and one slew the other; this man Noah has three sons, yet he desires to beget a fourth” (Gen. R. 36:5). Noah therefore cursed Canaan (Gen. 9:25), Ham’s fourth son, since through this act he was deprived of a fourth son (Gen. R. 36:7). According to another opinion, Ham committed sodomy with his father (Sanh. 70a) and Noah cursed Canaan because Ham, together with his father and two brothers, had previously been blessed by God (Gen. R. loc. cit.). Another tradition attributes the curse to the fact that it was Canaan who castrated Noah. Ham was nevertheless to blame because he informed his brothers of their father’s nakedness (P̄DRE 23). Canaan was so wicked that his last will and testament to his children was: “Love one another, love robbery, love lewdness, hate your masters, and do not speak the truth” (Pes. 113b). Ham was also punished in that his descendants, the Egyptians and Ethiopians, were taken captive and led into exile with their buttocks uncovered (Isa. 20:4; Gen. R. 36:6). Ham was responsible for the ultimate transfer to Nimrod of the garments which God had made for Adam and Eve before their expulsion from the Garden of Eden. From Adam and Eve these garments went to Enoch, and from him to Methuselah, and finally to Noah, who took them into the ark with him. When the inmates of the ark were about to leave their refuge, Ham stole the garments and kept them concealed for many years. Finally, he passed them on to his firstborn son, Cush, who eventually gave them to his son, Nimrod, when he reached his 20th year (P̄DRE 24; *Sefer ha-Yashar*, Noah, 22).

HAMA (of *Nehardea*; fourth century), Babylonian *amora* and head of the *Pumbedita academy from 356–377 C.E., in succession to *Naḥman b. Isaac. Ḥama was a native of *Nehardea (BB 7b and Rashi *ibid.*) and the term “*amora* of Nehardea” is stated to apply specifically to him (Sanh. 17b). He was evidently a disciple of Rabbah, whose teachings he transmitted (Ket. 86a). Ḥama’s teachings and practices are referred to in several places in the Talmud (Ber. 22b; MK 12a, et al.). His legal decisions were approved by later generations as the authoritative law (BB 7b; Shevu. 48b). Ḥama made a living by selling goods where they were cheap at the higher cost prevailing in other markets, the purchaser transporting the goods there at Ḥama’s risk (BM 65a; cf. 69b). It is stated that King Shapur of Persia asked Ḥama about the biblical source of Jewish burial rites (Sanh. 46b), which being quite different from those of the Persians seemed strange to him. Ḥama did not know. When Aḥa b. Jacob heard of this, he said “The world is run by fools! Why did he not cite the verse [Deut. 21:23] ‘Thou shalt surely bury him the same day?’” However, since Shapur I – it is unlikely that Shapur II (310–379) is being referred to, since he was not on close terms with the Jews – reigned from 241 to 272, the reference is probably to another, earlier, Ḥama.

[Zvi Kaplan]

HAMA BAR BISA (end of second century C.E. to third century), Palestinian scholar, contemporary of *Judah ha-Nasi. He was the father of Oshaiah, and at times is referred to simply as “Father of Oshaiah” (MK 24a). He lived in the southern part of the country (TJ, Nid. 3:2). Judah ha-Nasi praised him before Ishmael b. Yose b. Ḥalafta (Nid. 14b; TJ, Nid. 2:1). Ḥama b. Bisa was a judge, and his halakhic teachings are mentioned in the Jerusalem Talmud in his name, as they were transmitted by Yose b. Ḥanina (TJ, Shev. 2:2, 33d.) and Judah b. Pazzi (TJ, Suk. 1:1, 52b), and there is also a reference to a question Ḥama posed before Ḥiyya pertaining to a halakhic matter (TJ, Nid. 3:2). In the Babylonian Talmud too, there is a quotation in his name on a question of *halakhah* (MK 24a). It is related that he had left his home and city for 12 years in order to devote his time to the study of Torah. Upon his return he did not wish to startle his family by his sudden reappearance. He stopped at the *bet ha-midrash* and sent word to his family, informing them of his arrival. His son Oshaiah came to welcome him but was unrecognized by the father. They engaged in scholarly discourse, and R. Ḥama was deeply impressed with the young man’s erudition, regretting his failure to give his son an adequate education because of his long absence from home. To his great surprise he finally learned the identity of his son (Ket. 62b). Bisa, Ḥama’s father, was also a prominent

scholar. To these three generations of scholars, Bisa, Ḥama, and Oshaiah, Rami b. Ḥama applied the verse (Eccles. 4:12): “A threefold cord is not quickly burst asunder” (Ket. 62b; BB 59a). Opinion is divided as to whether this Oshaiah is identical with *Oshaiah Rabbah, the compiler of the *beraitot* (cf. Tos. to BB. 59a).

[Zvi Kaplan]

HAMA BAR ḤANINA (third century), Palestinian *amora*. He lived in the period of Judah Nesi’ah (Shab. 38a), the grandson of Judah Ha-Nasi (but cf. TJ, Shab. 3:1, 5d for a different reading), and may have headed an academy at *Sepphoris as his father *Ḥanina b. *Ḥama had done (TJ, Shab. 6:2, 8a). Like his ancestors Ḥama was wealthy and built a synagogue in Sepphoris (TJ, Pe’ah 8:9, 21b). One of his close friends was *Oshaiah, and once, while visiting the synagogues of Lydda with him, Ḥama exclaimed: “What vast treasures have my ancestors sunk here [in erecting the synagogue].” Oshaiah responded: “How many lives have your ancestors sunk here! For were there not many needy people here who studied Torah in great poverty?” (TJ, Pe’ah 8:9, 21b; Shek. 21a). Although often mentioned as participating in halakhic discussions (Shab. 147b; TJ, Shab. 5:3,7c et al.), he distinguished himself particularly in the field of *aggadah*. Many of his homilies are quoted in his name by the aggadist R. Levi II, especially in *Midrash *Tanḥuma*. He explained the curtailed form of the Divine name and the word for “throne” in Exodus 17:16 to teach that as long as Amalek’s offspring exist, God’s name and throne are not complete (Tanḥ. B., Deut. 45), and Psalms 29:4, to the effect that at the Revelation at Mount Sinai, God spoke to the young and strong with power, whereas to the old and weak with majesty (Song R. 5:16).

Commenting on Deuteronomy 13:5, “Ye shall walk after the Lord your God,” he asked: “How can man walk after God, of whom it is written ‘The Lord thy God is a consuming fire?’” (Deut. 4:24) and explained that it comes to teach that “as God clothed the naked [i.e., Adam], visited the sick [i.e., Abraham after his circumcision], comforted the mourning [i.e., Isaac after the death of his father], and buried the dead [i.e., Moses], so should man pursue similar deeds of lovingkindness in imitation of God’s ways” (Sot. 14a). Among his many other beautiful statements in the *aggadah* may be mentioned, “If a man sees that he prays and is not answered, he should pray again” (Ber. 32b) and “Great is penitence for it brings healing to the world” (Yoma 86a). He expounded Proverbs 18:21, “death and life are in the power of the tongue,” to teach that by the power of speech a man can kill another man even at a distance (Ar. 15b). Hyman distinguishes between two scholars by the same name, the second one being the pupil of R. *Ḥiyya b. Abba (an *amora* of the third generation, c. 290–320).

HAMADAN, a city situated in the western part of *Iran. Hamadan is Ahmatha of the Bible (Ezra 6:2) which was the capital city of the Medes (708–550 B.C.E.). It is probable that Jews who were deported from Samaria to Media (II Kings 18:11) in about 722 B.C.E. by the Assyrian king Shalmaneser also settled in Hamadan. The city was called by the Achemenian kings, who replaced the Medes around 550 B.C.E., Hangmatana, Agbatana or Akbatana – probably meaning “gathering place.” The biblical name “Ahmatha” does not occur in the Talmud, instead we find there the name as HMDN (Kid. 72a). The Persian Jews identify Hamadan with “Shushan ha-Bira,” which obviously is a mistake.

The 10th-century *Karaitic historian, Qirqisani (Kirkisani), mentions a rebellious Jewish individual by the name of Yudghan (perhaps Yehuda) of Hamadan who headed a movement in the eighth century against the Arab authorities of his time. In about 1167, Benjamin of Tudela estimated the number of Jews in Hamadan from 30,000 to 50,000. Around that time there probably existed there a yeshivah which functioned in connection with the Jewish authorities in Baghdad (see *Iggerot* of Samuel ben Ali).

Benjamin’s travelogue (p. 57) is, so far, the earliest Jewish record which mentions the tradition held by the Persian Jews regarding the tombs of Esther and Mordecai in Hamadan. The tombs are also mentioned by the Judeo-Persian poet of the 14th century, Shāhīn, and about 300 years later by *Bābāi ben Lutf. The archeologist Ernst Herzfeld (pp. 104–107) suggested that the Queen Shushandokht, the wife of the Sasanian king Yazdegerd I (399–420), is buried under the mausoleum. However, Jews and Muslims alike regard these tombs as a holy site. The tombs are visited especially during Purim, in the month of Adar, by Jews from all over *Persia (Netzer, 1984, 177–184).

Rashid al-Dawlah, a great Jewish scholar, historian, and the first vizier to the Ilkhanids, was born in Hamadan (about 1247). He was accused of plotting to murder the Ilkhan and executed in 1318. The Jews of Hamadan, like Jews of many towns all over Iran, suffered mortal persecutions and forced conversions during the Safavid period (1501–1736). Their suffering is recorded in the Chronicle of Bābāi ben Lutf (JTs Ms 401, fols 55–60).

According to David de-Beth Hillel (pp. 102–103), who visited Hamadan around 1827, there were 200 Jewish families living among 100,000 Muslim inhabitants. Some Jews were physicians, others goldsmiths or wealthy merchants. The city also had about 1,000 Armenian families. Benjamin II was in Hamadan in 1850 and reported that the city had 500 Jewish families that had three synagogues and three rabbis (pp. 248–253). Two years later, the missionary Stern visited Hamadan for the purpose of converting its Jews to Christianity. He claimed that the Jews of Hamadan were enthusiastic to purchase and read the New Testament. He, too, reported that 500 Jewish families lived in the city in their own separate Mahalleh. He complained about the harsh treatment of the Jews by the Muslim clergy (244ff.). Rabbi Yehiel Fischel Castleman

visited Hamadan in 1860 and described most of the Jews of the city as wealthy but hated by the Muslims (71).

Ephraim Neumark visited Hamadan in 1884 and wrote of the Jewish poor. He also described the solicitous efforts of the Christian mission in Hamadan, which opened a school in the city that the Jewish children attended free of charge and also helped the poor families materially and financially. Then he says: “There is not a family [in Hamadan] that has not been touched by the blight of the Bahāis bearing the banner of their mission. And what will happen when the faithful [Jewish] boys grow up in the Missionary School? God alone knows!” (pp. 80–81). The beginning of this blight was evidenced among the Jews first in Hamadan from which it spread to *Teheran, Kashan, and elsewhere. “Those who left the Jewish faith for this creed found refuge from [the] wrath of the king, Nāser al-Dīn Shah, in the shadow of the Christian mission, which lay in wait for their souls, for in their terror of the king, it served as a [sheltering] wall” (80–81). According to Neumark, there were about 800 Jewish families in Hamadan, approximately 150 of whom were Jews who had converted to the Bahāi religion (p. 81).

In 1892 there rose a fanatic, Mulla ‘Abdallah, in Hamadan who issued a *fatwā* to kill the Jews of the city if they refused to abide by restrictions imposed upon Jews, such as wearing the “Jewish patch.” Later they were ordered to embrace *Islam or face the death penalty. For about 40 days Jews were afraid to leave their Mahalleh. The intervention of the central government together with the British consulate prevented a brutal massacre (BAIU, 18, (1892), 48; Levy, 756–762). Narrating the event, Levy argues that if one recalls the severe persecutions led by Mulla ‘Abdallah and the warm, friendly, supportive attitude of the Bahāi inhabitants towards the persecuted Jews, who were on the verge of annihilation, one can also understand the mutual affection evinced by believers of both these religions in Hamadan. Levy points out that during this time, about 30 Jews from the community’s elite in Hamadan were forced to convert to Islam. Later, some of the converts turned to the Bahāi religion. According to Levy, the positive approach demonstrated by some of Hamadan Jews toward the Bahāi religion also rubbed off on Teheran’s Jewish community and the other provincial towns.

Yehudah Kopeliovitz (Almog) visited Iran in 1928. Referring to the Jewish women’s organization in Hamadan, which was founded around 1910, Kopeliovitz mentions that one paragraph (#12) in the charter of the “Hadassah Society for Jewish Women in Iran – Hamadan” stated that the society endeavors to influence the Jewish women not to take part in Bahāi meetings (handwritten papers are kept in the Ben-Zvi Institute, Jerusalem).

The geographer Dr. Abraham Jacob Brawer visited Iran in 1935 and during his visit to Hamadan, he was given an estimated number of 8,000 Jews out of a total population of 100,000. He felt that because of the government’s closure of the city’s Bahāi schools, Bahāi children were attending Jewish schools. He writes:

As I was told, approximately one quarter of Hamadans Jews were converted to the Bahāi religion. The conversion movement was only halted 12 years ago during the new regime [of Reza Shah]. The return to Zion [Land of Israel] and the country's modernization put an end to the Jews' fascination with Bahāism. (p. 22).

According to the *Bulletin de Alliance Israélite Universelle* (BAIU, 1904, 169) there were about 5,900 Jews in Hamadan. This figure decreased to 3,000 in 1948, on the eve of the independence of Israel (Landshut, 63). It was reported that about 15 individual Jews lived in Hamadan at the end of the 20th century.

HAMADYAH (Heb. חַמַּדְיָה), kibbutz in the Beth-Shean Valley, affiliated with Iḥud ha-Kibbutzim. It was first founded as a *Stockade and Watchtower settlement by a moshav group in 1939, but was taken over by kibbutz Hermonim in 1942. Their initial difficulties were considerable due to the hot and dry climate and their proximity to the then Arab town Beth-Shean. A security problem again arose after the Six-Day *War (1967) when Hamadyah underwent frequent artillery barrages from Transjordan. The kibbutz developed various agricultural branches, and opened two industrial enterprises for furniture (mainly doors) and plastics. Hamadyah was also co-owner of Ganei Huga, a water and recreation park located nearby. Hamadyah's name, meaning "God-cherished," was adapted from an adjacent Arab village named after the Turkish sultan 'Abd al-Hamid. Its population was 260 in 1968 and 347 in 2002.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

HA-MAGGID (Heb. הַמַּגִּיד, "The Declarer"), the first Hebrew newspaper. *Ha-Maggid* began publication in 1856 in Lyck, eastern Prussia, under the editorship of Eliezer Lipmann Silbermann. Silbermann, whose writing talents were limited, was nevertheless a genuine pioneer in Hebrew journalism. Although periodicals had existed for a hundred years prior to the founding of *Ha-Maggid*, the problems of running

a newspaper were different from those of running a literary, scientific, and social journal. The paper lacked journalists, publishers, and a news agency. Because the rhetorical biblical Hebrew of the time was not adapted to reporting news and making comments on current affairs, a new journalistic idiom had to be developed.

Ha-Maggid appeared as a weekly (except during its first few months) until it ceased publication in 1903. Until 1890 it was published in Lyck, then in Berlin, and from 1892 in Cracow. The paper grew in importance under David *Gordon, editor from 1858 to 1886, who made the paper of interest to all Jews by reporting both Jewish and general news. *Ha-Maggid* became a fount of information on Jewish life throughout the world during the second half of the 19th century. In a series of articles in 1863 and 1869, a time when the Hebrew press was either opposed or indifferent to nationalist ideas, Gordon took a strong stand in favor of Jewish settlement in Palestine. After the 1881 pogroms in Russia, *Ha-Maggid* fervently advocated Jewish nationalism and settlement in Erez Israel. In this respect it served as a precedent for many of the Hebrew papers that followed.

Throughout the years the paper devoted a special section to Judaic studies, in which the greatest scholars of the day participated. Like most other papers of that period, *Ha-Maggid* espoused moderate Haskalah, i.e., accommodating the religious and traditional heritage to the needs of the time, insofar as the accommodation was not in violation of Jewish law. *Ha-Maggid's* contributors included representatives of all trends of thought. The paper also developed popular sections for science and technology (e.g., a medical section) thereby making Hebrew richer and more adaptable. After Gordon's death (1886) the paper began to decline, a process accelerated by the establishment that year of the Hebrew daily, **Ha-Yom*. In its later years *Ha-Maggid* was moved to Galicia and became the organ of the local Ḥovevei Zion movement. The paper's last editor, S.M. Laser, founded the weekly **Ha-Mizpeh* (1904) after *Ha-Maggid* ceased publication in 1903.

[Getzel Kressel]

HAMAN (Heb. חַמָּן), son of Hammedatha, the Agagite, according to the *Scroll of Esther, an official in the court of Ahasuerus who was superior to all the king's other officials. Resentful of *Mordecai the Jew, who was the only one among the servants of the king in the royal court who would not bow down to him, Haman decided to exterminate all the Jews, "the people of Mordecai" (3:6). To determine the day of the destruction he cast a lot (*pur*), and then received the consent of the king to publish a royal decree throughout the entire Persian kingdom proclaiming the extermination. Through Mordecai, however, the news reached Esther, who immediately set about saving her people. She invited Haman and the king to

feasts on two consecutive nights, and at the second feast revealed to the king, in Haman's presence, the evil designs that the latter harbored against her people. In his anger, the king ordered that Haman be hanged on "the tree which Haman has prepared for Mordecai" (Esth. 7:10), and that his hanging be followed by that of his sons. The king then issued a decree permitting the Jews "to gather and defend themselves" on the day that had been set aside for their extermination (Esth. 8:11). This decree and the victory of the Jews over their enemies were the reasons for the establishment of the holiday of *Purim.

Various explanations have been offered to explain the name and designation of the would-be exterminator of the Jews. Among other suggestions, the name has been connected to the Elamite high god Huban/Humman. The name of Haman's father is clearer, appearing in almost identical form in the Elephantine Papyri as Haumadatha, "Given-by-Haōma" (= [Sanskrit *soma*], the deified sacred drug) (מְהַמָּה; Cowley, Aramaic, 8:2 = TAD B2.3:2; Cowley, Aramaic 9:2 = TAD B2.4:2), the name of a Persian military commander in the Jewish colony at Elephantine. The author of Esther traces Mordecai's line back to the Benjaminite Kish, father of Saul (2:5). The clear implication of Esther 3:2–4 is that anyone who was told that Mordecai was a Jew would immediately understand that it would be degrading for him to do obeisance to Haman. As such, the author must have intended the designation of Haman as "the Agagite" to indicate descent from Saul's opponent *Agag, king of Amalek (Deut. 25:17–19; 1 Sam. 15; cf. Jos., Ant., 11:209). He was less interested in making ethnic connections between Persians and Amalekites than in connecting the present enemy with its traditional one. Although Saul displayed leniency toward Agag (1 Sam. 15:9), the latter's distant descendant was not only a personal rival of Mordecai but an inveterate "enemy of the Jews" (Esth. 3:10, 8:1, 9:10; cf. 7:6) who had to be destroyed along with his 10 sons (7:10, 9:6–10; cf. Ex. 17:8–16 and Deut. 25:17–19).

In the Septuagint and the apocryphal *Additions to Esther*, the designation Agagite is replaced by the inexplicable terms Bugaeon (LXX 3:1; 9:10; Add. Esth. 12:6) or Macedonian (LXX 9:24; Add. Esth. 16:10). The *Additions to Esther* describes Haman as bent upon delivering the Persian kingdom to the Macedonians (16:14).

[Bezalel Porten / S. David Sperling (2nd ed.)]

In the Aggadah

In the Midrashim (Esth. R. 7–8; *Targum Sheni*; *Midrash Abba Guryon* and others) Haman is depicted as a foe of Israel typical of the times in which these writers of the Midrashim lived. The enemies of Israel maintained that the Jews were ungrateful to their benefactors and mocked the faithful of the nations in whose midst they dwelt. The feast that Ahasuerus prepared at the beginning of his reign is attributed by these same Midrashim to the evil designs of Haman, whose purpose was to undermine Israel with exotic foods and incestuous orgies, so that the Jews who attended this feast, against Mordecai's advice, would bring down upon themselves the destruction or-

dained by Heaven (Esth. R. 7:13). However, the decree was annulled as a result of the cries of the schoolchildren who were studying with Mordecai because they also were involved in the decree of extermination. A humorous piece of folklore relates that Haman was a barber for 22 years in the town of Kefar Karzum (Kefar Karnayim in Transjordan, or Kerazim), and his father was a bath attendant in the town of Koranis and these professions stood them in good stead later when Mordecai had to be dressed and bathed after he had been weakened by fasting. There is an interesting *aggadah* to the effect that all the various trees put forward a claim, on the basis of their virtues, that Haman should be hanged on them. The thornbush was chosen, however, since because it had no virtues, the wicked Haman should be hanged on it (Esth. R. 9:2).

Haman continued to be regarded as the prototype of the enemy of the Jews throughout the ages. It became customary to make a loud noise in the synagogues to drown out his name whenever mentioned in the Purim reading of the Book of Esther. Ironically, the custom has served to perpetuate Haman's memory.

[Yehoshua M. Grintz]

In Islam

Hāmān, according to the Koran, was one of the foremost advisers of Pharaoh-Fir'awn. He built a tower for his master, who planned to climb up to the God of Moses (Sura 28:5, 7, 38; 40; 38; 51:38–39). In Suras 29:38 and 40:25–26 Hāmān appears together with Fir'awn and Qārūn (Korah), who was also Moses' enemy.

HA-MA'PIL (Heb. הַמְּעַפִּיל), kibbutz in central Israel in the Ḥefer Plain, affiliated with Ha-Kibbutz ha-Arzi Ha-Shomer ha-Za'ir, founded in 1945 by pioneers from Eastern and Central Europe, some of whom were veterans of World War II. It engaged in intensive farming, including field crops, citrus groves, fruit plantations, fishery, poultry, beehives, and dairy cattle. The kibbutz also operated a stocking and plastics factories. In 2002 the population was 465. The name, meaning "ascender," alludes to the *ha'palah* (see *Illegal Immigration).

[Efraim Orni / Shaked Gilboa (2nd ed.)]

HAMAS (Arab. "zeal"; abbreviation of *harakat muqawama al-islamiyya* – Islamic Resistance Movement), Palestinian Islamic movement engaged in community activity and armed struggle against Israel; from 2006 the majority party in the Palestinian parliament and government. Hamas was officially founded during the first *intifada* in 1988 under the leadership of Sheikh

Ahmad Yasin (later assassinated by Israel) as a branch of the Muslim Brotherhood, operating both in the Gaza Strip and the West Bank. From its establishment it remained the main opposition to the *Palestine Liberation Organization and, from 1993, to the peace process. Throughout this period it launched particularly violent terrorist attacks against Israeli civilians while expanding its civil base through wide-ranging social services to the Palestinian population, including schools, hospitals, mosques, family centers, and welfare. Establishing its political bureau abroad to protect it against Israeli crackdowns, it also sought legitimacy by running in Palestinian elections. With increasing popular support and charges of corruption being leveled against the *Palestinian Authority, it scored an upset victory in the January 2006 parliamentary elections and formed a new government replacing the Palestine Liberation Organization in power. Attacks against Israel continued, however, until Israel again entered Gaza in summer 2006. For a summary of the latter events, see *Israel, State of: Historical Survey; for a detailed review of Israel's war against terrorism, see *Israel, State of: Israel Defense Forces ("The War against Terrorism"). See also *Palestine Authority; *Palestine Liberation Organization.

HAMASHBIR HAMERKAZI, the main wholesale supplier for consumers' cooperatives and labor settlements in Israel; the first economic agency to be established by the labor movement in Erez Israel. It was founded (as Hamashbir) in 1916, during the economic crisis of World War I, to supply the working population with reasonably priced goods, and was reorganized as Hamashbir Hamerkazi in 1930. In addition to its wholesaling activities, it developed the consumers' cooperative movement all over the country, opened large stores in the main towns, and established factories, mainly in the textiles and food-processing industries, which were transferred to a separate company, Hamashbir Hamerkazi Le-Taasia. Hamashbir was affiliated to the *Histadrut, whose economic arm, *Hevrat ha-Ovedim*, was entitled to appoint a representative on its general management and intervene in matters of principle. Its general conference, consisting of delegates from collective and cooperative villages and of cooperative societies, elected a 71-member council, which appointed a general management of 21, which, in turn, chose the 10-man active management. Its turnover in 1968 was IL376 million (\$107 million) and it supplied 800 cooperative stores in town and country. In the 1990s, as the Histadrut sold off its assets, it passed into private hands. Hamashbir Hamerkazi Le-Taasia ceased to exist.

[Leon Aryeh Szeskin]

HA-MAVDIL (Heb. הַמַּבְדִּיל; "who distinguishes"), name of a hymn sung in the *Havdalah ceremony at the close of the Sabbath. The acrostic yields the name of the author Isaac

the Younger (probably Isaac b. Judah *Ibn Ghayyat of Spain (1030–1089)). There are two versions of the hymn; in both the refrain starts: "May He who maketh a distinction between holy and profane pardon our sins (in most versions: "and our wealth"); may he multiply our offspring as the sand and as the stars in the night." The hymn was probably composed for the concluding service (*Ne'ilah*) of the Day of Atonement. One version is still recited as a *selihah piyyut* in the *Ne'ilah* service of some of the Sephardi rites (e.g., Algeria); the other, and better known version, has become the standard hymn for the *Havdalah* service in all Jewish rites, including the Karaite one.

HAMBRO, JOSEPH (1780–1848), merchant and financier. Born in Copenhagen, the son of Joachim Hambro (1747–1806), a silk and cloth merchant, Joseph started his career as a peddler in the streets of his native city. At the age of 13 he went to Hamburg to be trained in a commercial firm and after his return prospered as a wholesale dealer. Hambro was the first in Denmark to run a steam mill, and he traded with the Danish West Indies. The government commissioned him to arrange a Danish-English public loan and to regulate economic relations between Denmark and Norway after the peace treaty of 1814. In 1820 Hambro was appointed court banker by the king of Denmark. At the age of 60 he settled in London, where later he was buried as a Jew in the presence of the chief rabbi although he had married a gentile. In his bequest Hambro left considerable sums to the community in Copenhagen. His son, CARL JOACHIM HAMBRO (1808–1877), was baptized with his father's consent at the age of 15. He established the great banking firm of Hambros (1839), which also negotiated public loans and was active in the financing of Danish railways and in the founding of the Great Northern Telegraphic Company. Neither father nor son forgot the community of Copenhagen although they remained aloof from the London Jewish community.

[Julius Margolinsky]

HAMBURG, city and state in Germany, including the cities of *Altona and *Wandsbek from 1937.

The Sephardi Community

The first Jews to settle in Hamburg were Portuguese and Spanish Marranos, who arrived via the Netherlands at the end of the 16th century and at first sought to conceal their religion. When it was discovered that they had been observing Jewish customs, some of the inhabitants demanded their expulsion, but the city council, pointing to the economic benefits accruing from their presence, opposed the measure. Among the Jews were financiers (some of whom took part in the founding of the Bank of Hamburg in 1619), shipbuilders, import-

ers (especially of *sugar, coffee, and *tobacco from the Spanish and Portuguese colonies), weavers, and goldsmiths. In 1612 the Jews of Hamburg paid an annual tax of 1,000 marks and by 1617 this sum was doubled. The kingdoms of Sweden, Poland, and Portugal appointed Jews as their ambassadors in Hamburg. Those who had come to Hamburg from Spain and Portugal continued to speak the languages of their native lands for two centuries and about 15 books in Portuguese and Spanish were printed in Hamburg from 1618 to 1756. (From 1586 Hebrew books, especially the books of the Bible, had been published in Hamburg by Christian printers, mostly with the help of Jewish personnel.)

As early as 1611 Hamburg had three synagogues, whose congregations jointly owned burial grounds in nearby Altona. In 1652 the three congregations combined under the name of Beth Israel. Uriel da *Costa lived in Hamburg in 1616–17; the local physician Samuel da *Silva wrote a pamphlet attacking him; the excommunication of da Costa by R. Leone *Modena was read publicly in the Hamburg synagogue. Shabbateanism swept the community in 1666; so certain were they of the imminence of the Messiah that the governing board of the community announced that the communal buildings were for sale. The rabbi, Jacob b. Aaron *Sasportas, was one of the few not carried away by the prevailing enthusiasm. At that time the Sephardi community, consisting of about 120 families, was still the only acknowledged Jewish community in Hamburg. When in 1697 the city unexpectedly raised the annual tax levied against the Jews to 6,000 marks, the majority of the rich Jews of Hamburg (most of whom belonged to the Spanish-Portuguese congregation) moved to Altona and Amsterdam.

Among the prominent Jews of Spanish and Portuguese origin who lived in Hamburg were the physician and author Rodrigo de Castro (1550–1627), R. Joseph Solomon *Delme-digo (1622–25 in Hamburg), the physician and lexicographer Benjamin *Mussafia (1609–1672), the grammarian and writer Moses Gideon Abudiente (1602–1688), the rabbi and writer Abraham de Fonseca (d. 1651), and the poet Joseph *Zarefati (d. 1680).

The Ashkenazi Community

From about 1600, German Jews were admitted to Wandsbek and in 1611 some of them settled in Altona, both cities under Danish rule. By 1627 German Jews began to settle in Hamburg itself, although on festivals they continued to worship at Altona, where the Danish king had permitted the official establishment of a congregation and the building of a synagogue in 1641. They submitted their disputes to the jurisdiction of the rabbi of the Altona congregation. Many Jews, fleeing from persecutions in Ukraine and Poland in 1648 arrived in Hamburg where they were helped by the resident Jews. However, most of these refugees soon left for Amsterdam since at that time the Christian clergy in Hamburg was inciting the inhabitants to expel the Ashkenazi Jews from the city, an expulsion which took place in 1649. Most went to Altona and a number to Wandsbek; only a few remained in Hamburg, re-

siding in the homes of the Spanish-Portuguese Jews. Within a few years many of those who had been driven out returned to Hamburg, and in 1656 a number of refugees from *Vilna also found asylum there.

Most Ashkenazi Jews in Hamburg at that time were Danish subjects and officially belonged to the Jewish community of either Altona or Wandsbek, while others had officially registered as servants in one of Hamburg's Sephardi households to obtain legal status in the city. These "*Tudescos*" formed a congregation of their own. In 1671 the three Ashkenazi congregations – Altona, Hamburg, and Wandsbek – united to form the AHW congregation, with the seat of their rabbinate in Altona. One of the most famous rabbis of the merged congregation was Jonathan *Eybeschutz who was appointed to the post in 1750. His equally famous adversary, Jacob *Emden, lived in Altona. R. Raphael b. Jekuthiel *Kohen, who served the community for 23 years, was one of the fiercest opponents of *Mendelssohn's translation of the Pentateuch (1783). The AHW congregation ceased to exist in 1811 when the French authorities imposed a single consistorial organization; the Ashkenazim and Sephardim united to form one congregation, the Altona community retaining its own rabbinate which was also recognized by the Jews of Wandsbek until 1864.

Around 1800, about 6,300 Ashkenazi and 130 Portuguese Jews lived in Hamburg, accounting for around 6 percent of the population. During the French occupation (1811–14), the Jews officially enjoyed full equality but suffered greatly under Marshal Davoust's reign of terror. In 1814, when the city had regained its independence, the Jews were again denied civil rights. The *Hep! Hep! riots of 1819 were especially severe in Hamburg, and similar outbreaks occurred in 1830 and 1835. While no ghetto or Jewish quarter existed in Hamburg, the Jews' right of residence was effectively limited to two areas until 1842, when large parts of the city were destroyed by fire. By 1850 they were granted citizenship, due in large measure to the efforts of Gabriel *Riesser, a native of Hamburg.

The Reform movement, which began in Berlin, eventually reached Hamburg. A Reform temple was dedicated in 1818, and in 1819 a new prayerbook was published to accord with the liturgical ritual of the new congregation. The rabbinate in Hamburg published the opinions of noted Jewish scholars to discredit the temple (titled *Elleh Divrei ha-Berit*, Altona, 1819) and prohibited the use of its prayer book. Isaac *Bernays, leader of the community from 1821 to 1849, espoused the cause of "modern Orthodoxy" and sought to endow the traditional divine service with greater beauty. In his day controversy flared up again when the Reform congregation occupied a new building and the more radically abridged and revised version of its prayerbook *Siddur ha-Tefillah* was issued (1844). At the time the Orthodox rabbi was Jacob *Ettlinger, founder of an anti-Reform journal.

Other German Jews who lived in Hamburg included Glueckel of *Hameln, the merchant and philanthropist Salomon *Heine (the uncle of Heinrich Heine), Moses Mendelssohn, the poets Naphtali Herz *Wessely and Shalom b. Jacob

ha-Kohen, Isaac *Halevy, the author of *Dorot ha-Rishonim*, the art historian A. *Warburg, the philosopher Ernst *Cassirer, the psychologist William *Stern, Albert *Ballin, and the financiers Max *Warburg and Karl *Melchior. Among Orthodox rabbis of recent times worthy of note is Nehemiah *Nobel and among the Reform, C. *Seligmann and P. *Rieger. In 1884 the fortnightly *Laubhuetten* and in 1900 the weekly **Israelitisches Familienblatt* began to be issued in Hamburg. The municipal library and the library of the University of Hamburg contain a large number of Hebrew manuscripts, listed by M. *Steinschneider. Nearly 400 Hebrew books were printed in Hamburg in the 17th–19th centuries. In the 19th century, the Jewish printers issued mainly prayer books, the Pentateuch, mystic lore, and popular literature.

The Jewish congregation of greater Hamburg was the fourth largest community in Germany. In 1866 there were 12,550 Jews at Hamburg and in 1933 about 19,900 (1.7% of the general population), including more than 2,000 at Altona. The last rabbi was Joseph *Carlebach, who was deported in 1942 and killed by the Nazis.

Holocaust Period

In the years 1933–37 more than 5,000 Jews emigrated; on Oct. 28, 1938, about 1,000 Polish citizens were expelled. The pogrom of *Kristallnacht* (Nov. 9–10, 1938), in which most synagogues were looted and closed down, caused an upsurge of emigration. In 1941, 3,148 Jews were deported to Riga, Lodz, and Minsk. In July 1942, 1,997 Jews were deported to *Auschwitz and *Theresienstadt. Nearly 8,900 Hamburg Jews lost their lives in the Nazi era (153 mentally ill were executed and 308 committed suicide), including those deported from places of refuge in Western Europe after the Nazi occupation. In this period the community was led by Max Plaut and Leo Lippmann (who committed suicide in 1943). A few hundred Jews, privileged or of mixed marriage, outlived the war. A concentration camp, Neuengamme, was situated near the city. A total of 106,000 inmates passed through its gates and more than half of them perished.

Since World War II

On May 3, 1945, Hamburg was liberated by British troops who offered aid to the few hundred Jewish survivors. On September 18 a Jewish community was organized, which reopened the cemetery, old age home, *mikveh*, and hospital soon after. By March 18, 1947 the community totaled 1,268, its numbers changing due to emigration, immigration, and a high mortality rate. In January 1970 there were 1,532 Jews in Hamburg, two-thirds of whom were above 40 years old. In 1960 a 190-bed hospital was opened and a large modern synagogue consecrated. Herbert Weichmann (b. 1896) was elected Buergermeister in 1965. An institute for German-Jewish history was founded in 1966. Within the Jewish community, several hundred Iranian Jews have formed a distinctive element during the last decades. As a result of the immigration of Jews from the former Soviet Union, the number of community members rose from 1,344 in 1989 to 5,019 in 2003.

[Zvi Avneri / Stefan Rohrbacher (2nd ed.)]

HAMBURG, ABRAHAM BENJAMIN (Wolf; 1770–1850), German talmudic scholar. Hamburg was born in Fuerth and studied at the yeshivah of R. Meshullam-Solomon Kohn, the chief rabbi of Fuerth. He succeeded his teacher as head of the yeshivah, and in 1820 was appointed *moreh-zedek* (“spiritual leader”) of the congregation, serving also as cantor and *mohel*. The appointment of a new chief rabbi, however, was indefinitely postponed and Hamburg was hard put to combat the inroads of the Reform movement into the community. In his correspondence with Moses *Sofer, who describes Hamburg as a “great man of high stature,” he talks of his difficulties in building a communal *mikveh* (see M. Sofer, *Ĥatam Sofer, Yoreh De’ah* (1958²), no. 214; *Even ha-Ezer*, 1 (1958²), no. 82). By 1830, the adherents of the Reform movement had obtained a majority in the communal administration and had him removed from all his positions, except from that in the Klaus synagogue in which he had vested rights (it had been founded by one of his ancestors, Baermann Fraenkel). His yeshivah was closed and his opponents enlisted the help of the police in expelling his students, who numbered more than 100, from Fuerth. Ultimately, Hamburg himself was driven from the city and died heartbroken.

Hamburg’s published works include sermons, responsa, talmudic novellae, and memorial addresses. *Sha’ar Zekenim* (Sulzbach, 1830) consists of sermons, eulogies, and ethical tracts. The latter half of the work also contains responsa ad-

dressed to former pupils and rabbinical contemporaries. *Simlat Binyamin* (Fuerth, 1840–41), Hamburg's other major work, is in three parts. The first contains responsa on *Orah Hayyim* and *Yoreh De'ah*, and the second under the title *Nahlat Binyamin* on *Even ha-Ezer* and *Hoshen Mishpat*, as well as *aggadot*; this section deals at length with the laws of circumcision. In the third section under the title *Sha'ar Binyamin* (unpublished) the author includes his own interpretations, additions, and novellae. One of his eulogies is in honor of his teacher, Solomon Kohn (*Kol Bokhim...*, Fuerth, 1820). He also paid homage to Sir Moses *Montefiore in a poem on his visit to Fuerth in 1841 together with Adolphe *Crémieux, on their return from the Orient. Hamburger taught and inspired a number of eminent disciples, among them Seligmann-Baer *Bamberger, and Moses Sofer.

HAMBURGER, JACOB (1826–1911), German rabbi and scholar. Hamburger, who was born in Loslaw (Wodzislaw, Poland), served as rabbi in Neustadt (near Pinne, Poland) and Mecklenburg-Strelitz (Prussia). His most important work was his two-volume *Real-Encyklopaedie fuer Bibel und Talmud*, the first such work ever published in the German language (1874–83) dealing with the Bible and Talmud respectively. This he later extended into a three-volume *Real-Encyklopaedie des Judentums* (1874–1900, 1904–05³), the third volume dealing with post-talmudic Judaism. Hamburger also began to write *Geist der Hagada*, an alphabetical anthology of talmudic and midrashic sayings, but only completed the letter A (1857). He also contributed the section on the Karaites and other matters to Winter and Wuensche's standard work on post-biblical literature, *Juedische Litteratur seit Abschluss des Kanons* (1894–96).

[Alexander Carlebach]

HAMBURGER, MICHAEL (1924–), German-born English poet, translator and critic. Hamburger was born in Berlin and, with his family, settled in London in 1933. He was educated at Westminster School and at Oxford. At the age of 19, he translated a volume of Hoelderlin's verse into English. Hamburger held a variety of academic posts in Britain and the United States. While lecturing in German (1952–64), Hamburger wrote poems that dealt with increasingly somber themes, such as the *Eichmann trial. Among them are *Poems 1950–1951* (1952), *The Dual Site* (1957), *Weather and Season* (1963), and *In Flashlight* (1965). His other works include critical studies: a bilingual edition of Hoelderlin's poems (1967) and some of the translations in *O The Chimneys* (1967), poems on the Holocaust by Nelly *Sachs. His *Collected Poems, 1941–1994* appeared in 1995.

[William D. Rubinstein (2nd ed.)]

HAMBURGER, SIR SIDNEY (1914–2001), British communal leader. Hamburger was probably the most prominent leader of the Jewish community in Manchester in the last decades of the 20th century. He served as mayor of Salford (a part of Greater Manchester) in 1968–69 and was concerned with a wide variety of Jewish and public causes in Manchester. For many London Jews, he was the public face of Jewish Manchester during the latter part of the 20th century. Hamburger was a member of British Mizrahi and was closely associated with fundraising for Bar-Ilan University. He was knighted in 1981. He was seen as perhaps the last in a long line of leading Jews resident in Manchester with a local power base independent of London Jewry.

[William D. Rubinstein (2nd ed.)]

ḤAMDĪ, LEVI BEN YESHU'AH (1861–1930), hymnologist, *hazzan*, and preacher. Ḥamdī was born in *San'a, Yemen, and emigrated to Palestine in 1891; he died in Jerusalem. In Yemen he was a Hebrew teacher, and his *heder* was renowned for its progressive educational methods. In Jerusalem he became a Torah scribe, and also wrote amulets, charms, and lots. Many came to him believing that he was a man of great powers and a miracle worker. His strange behavior, possibly connected to his chronic illness and the deaths of his children in infancy, included self-mortification and fasts. He even exiled himself to Egypt in order to achieve the remission of his sins. Ḥamdī is generally known as a poet and *hazzan*. As a kabbalist, he thought that the poetry of Yemen was mystical and holy. He assisted A.Z. *Idelsohn in his research into Jewish melodies, and sang many Yemenite melodies for the latter to record. Ḥamdī composed hymns and prayers of supplication on such themes as the exile, the redemption, and Erez Israel. In Yemen, he wrote prayers expressing his yearning for Erez Israel. *Kovez Shirim*, a collection of his hymns and prayers, was published in Jerusalem in 1966.

[Yehuda Ratzaby]

HAME'ASSEF (Heb. הַמְאָסֵף; lit. "the collector"), first Hebrew organ of the *Haskalah. Founded in 1783 in Koenigsberg by pupils of Moses Mendelssohn, *Hame'assef* was devoted to the education of youth, the increased use of the Hebrew language, and raising the general cultural level of the people. Although the organ was planned as a monthly, it actually appeared as a quarterly whose numbers were collected into annual volumes. The first three volumes were published in Koenigsberg from 1783 to 1786; the next three in Berlin, 1788–90; four issues of the seventh volume in Breslau, 1794–97; and three volumes of the renewed *Hame'assef* in Berlin, Altona, and Dessau (1809–11), after which it ceased publication. The editors in

Koenigsberg were Isaac *Euchel (who also participated during the first period in Berlin) and Mendel Bresslau; in Berlin and Breslau they were Aaron *Wolfsohn-Halle and Joel *Loewe (Brill). The renewed *Hame'assef* was edited by the poet, Shalom *Cohen. Many of the articles published in the periodical were unsigned. Mendelssohn's occasional contributions, for instance, do not bear his name. However, Naphtali Herz *Wessely, who was adviser to the organ, was an exception to this practice and signed his many poems and articles. In addition to Haskalah writers, a number of moderate rabbis also contributed to the periodical. The radicalism of Wolfsohn-Halle not only led religious Jews to shun *Hame'assef*, but also caused Wessely to cease writing for it. The organ's moderate Haskalah policy, which avoided breaking with tradition, was restored only when publication was renewed under Cohen. In the spirit of Haskalah, *Hame'assef*'s literary section published poems in praise of wisdom and nature, in denigration of obscurantism and idleness; festive poems, ethical parables, and hymns of praise to notable persons and kings. It also published linguistic articles, biblical exegesis, historical studies, biographies of famous Jews, reviews, news relevant to the Jewish world, translations of works from world literature, and supplements in German, which were occasionally printed in Hebrew letters. In its support of Hebrew, *Hame'assef* sometimes criticized East European Jews for their use of Yiddish. In its advocacy of pure language, the periodical sought to remain faithful to the language and metaphorical style of the Bible. Yet, despite this, it quoted rabbinical sayings and Aramaic expressions. Although its reportage of news and its educational articles were of immediate practical value, *Hame'assef* was mainly literary in character and somewhat detached from the concerns of daily life. The periodical hoped, perhaps naively, to prepare Jews for emancipation. Nevertheless, there occasionally appeared writings of a Jewish nationalist nature, such as Judah Halevi's *Ziyyon ha-Lo Tishali* printed in the 1789 volume, and the yearnings for Zion expressed in a number of the poems published in the renewed *Hame'assef*. *Hame'assef* became the symbol of the Haskalah movement, and Haskalah writers were called the "generation of *Me'assefim*." *Maskilim* of this time long lamented its demise and for many years the *Bikkurei ha-Ittim* (1821–32) of Vienna reprinted "the best of *Hame'assef*." Raphael Fuerstenthal's publication appeared in Breslau in 1829. Even beyond the borders of Germany, *Hame'assef*'s content and form were, for generations, the prototype for Haskalah organs.

[Tsemah Tsamriyon]

HAMEIRI (Feuerstein), AVIGDOR (1890–1970), Hebrew poet, novelist, and translator. Hameiri was born in Dávid-

háza, Carpatho-Ukraine (then Hungary). His first Hebrew poem "Ben he-Atid," which appeared in the weekly *Ha-Mizpeh* (1907), was followed by others in various Hebrew journals. His first volume of verse, entitled *Mi-Shirei Avigdor Feuerstein*, was published in 1912. In 1916 he was captured by the Russians while serving as an Austrian officer on the Russian front, imprisoned in Siberia, and released in 1917 after the October Revolution. In 1921 he immigrated to Palestine, joined the staff of the daily *Haaretz*, and edited several critical journals. In Tel Aviv, he founded the first Hebrew social satirical theater, *Ha-Kumkum* (1932). Hameiri published various novels, short stories, and poetry collections that gave literary expression to his war experiences, the Third Aliyah, and later, the Holocaust. He also translated into Hebrew works of Heine, Schiller, Arnold Zweig, Stefan Zweig, and others.

Hameiri belongs to the earliest exponents of expressionism in Hebrew poetry. Sustained pathos, and strained and occasional exaggerated figures of speech characterize his work. He attacked the stagnation of Jewish life, described the gruesomeness and the frenzy of hatred that engulfed all of humanity during World War I and particularly the vulnerability of Jews to its consequences. After he settled in Palestine, he castigated the new Jewish society for not realizing its declared ideals. The key figures in his poetry are his mother, whom he lost in his childhood, and his grandfather, who raised him; the former becomes the symbol of Jewish motherhood and the latter – age-old Israel. Hameiri's power as a storyteller is revealed mainly in his realistic war stories. Their central theme is the peculiarly tragic fate of the Jewish soldier fighting wars which are not his. He loathes the bloodshed and the bestiality of combat, and yet, since he is an outsider, is unable to find comfort in the companionship of his fellow soldiers. In 1968 he was awarded the Israel Prize.

Sefer ha-Shirim ("The Book of Poems," 1933) contains his complete poetry up to its publication. His subsequent works of poetry included *Ha-Moked ha-Ran* ("The Singing Pyre," 1944), collected poems from 1933 to 1944; *Halomot shel Beit-Rabban* ("Schoolboy Dreams," 1945), and *Be-Livnat ha-Sappir* ("In a Pavement of Sapphire," 1962). His works of fiction include the novel *Ha-Shigga'on ha-Gadol* (1950; *The Great Madness*, 1952; 1985; 1989); *Be-Geihinnom shel Mattah* ("In Lower Hell," novel, 1932; 1989); *Tenuvah* ("Produce," 1947²); *Ha-Mashi'ah ha-Lavan* ("The White Messiah," novel, 1948); *Bein Laylah le-Laylah* ("Between the Nights," short stories, 1944); and *Sodo shel Socrates* ("Socrates' Secret," historical novel, 1955). A list of his works translated into English appears in Goell, *Bibliography*, 861–81, 2123–34.

[Gedalyah Elkoshi]

HAMEIRI (Ostrovsky), MOSHE (1886–1947), rabbi and Mizrahi leader in Erez Israel. Born in Karlin, Belorussia, Hameiri settled in Erez Israel in 1897. He studied at yeshivot in Jerusalem and was ordained by Hayyim Berlin and A.I. Kook, becoming rabbi of the *Ekron settlement in 1912. Active from his youth in the Mizrahi movement, in 1919 he became one of the chief planners and organizers of the religious school system in Palestine. Hameiri taught Talmud at the Mizrahi Teachers' Seminary in Jerusalem. He was a member of the Va'ad Le'ummi executive, heading its department of local religious communities. Hameiri helped to organize the Chief Rabbinate in Palestine and was one of the founders of the Kiryat Moshe quarter in west Jerusalem. His books include *Ha-Middot she-ha-Torah Nidreshet Bahen* ("The Principles by Which the Torah is Expounded," 1924); *Mevo ha-Talmud* ("Introduction to the Talmud," 1935), a textbook for schools and teachers' seminaries; *Toledot ha-Mizrahi be-Erez Yisrael* ("The History of Mizrahi in Erez Israel," 1944); and *Irgun ha-Yishuv ha-Yehudi be-Erez Yisrael* ("The Organization of the Jewish Yishuv in Erez Israel," 1942).

HA-MELIZ (Heb. הַמְלִיץ, "The Advocate"), the first Hebrew paper in Russia. *Ha-Meliz* was founded in Odessa in 1860 by Alexander *Zederbaum with the assistance of his son-in-law, A.J. Goldenblum. Zederbaum obtained the license to publish the paper through his connections with the czarist authorities. *Ha-Meliz* was long the organ of the moderate Haskalah movement in Russia, although at times it served the extreme wing of the Haskalah, publishing the writings of M.L. *Lilienblum and J.L. *Gordon, advocates of religious reform. In the literary sphere, *Ha-Meliz* was involved in a bitter controversy concerning A.U. *Kovner and his destructive criticism of Hebrew literature (Kovner also sharply criticized *Ha-Meliz* in his *Zeror Peraḥim*, 1868). Appearing in Russia, where censorship was severe, *Ha-Meliz* defended the czarist regime, but also criticized it surreptitiously. Zederbaum introduced into *Ha-Meliz* the Hebrew journalistic article with all its virtues and defects and attracted contributors from among the best authors in Russia, such as *Mendele Mokher Seforim. After 10 years in Odessa, *Ha-Meliz* was transferred to St. Petersburg (1871) where it appeared until it ceased publication in 1904. As *Ha-Meliz* was pro-Russian, it advocated Haskalah, Jewish agricultural settlement in Russia, occupation in trades, and improving education while fostering traditional and religious values. Accordingly, it held a reserved attitude toward nationalist and Zionist ideals which were gaining impetus in the early 1880s. Only as Zionism grew stronger, and under the influence of A.S. *Friedberg, one of the paper's editorial assistants, did

Ha-Meliz become the organ of the Ḥibbat Zion movement in Russia. In response to the growing interest in Zionism in the 1880s, *Ha-Meliz*, which had been a weekly, became a semi-weekly in 1883 and a daily from 1886, until it ceased publication. For different reasons the paper did not appear for periods of various lengths, from a few months in 1871–72 and in 1879, to a few years, from 1874 to 1877. *Ha-Meliz* flourished in the 1880s and 1890s, particularly under the editorship of the poet Judah Leib *Gordon (1880–83, 1885–88). Promoting Hebrew literature in Russia during the second half of the 19th century, *Ha-Meliz* published the earliest writings of Aḥad Ha-Am, Bialik, and scores of other Hebrew authors and scholars in Russia and abroad. *Ha-Meliz* also published controversy which, descending to the personal level, bore negative consequences. When *Ha-Meliz* became the organ of the Ḥibbat Zion movement in Russia it published the best nationalist-Zionist journalism. For many years *Ha-Meliz* published various literary collections, introducing writers of all political and religious factions. On Zederbaum's death in 1893, the paper ceased to appear for a few months until it was taken over by Yehudah Leib *Rabinovich, who served as its last editor.

[Getzel Kressel]

HAMELN (Hamelin), city near Hanover, Germany. Jews are first mentioned in the privileges granted to the town in 1277. The formula of the Jewish oath of Hameln, almost identical with the earlier formula of Dortmund, was recorded in the municipal ledger. In the early years of Jewish settlement there were no more than about 10 Jewish families, engaged mostly in moneylending under the protection of the municipal authorities. By the middle of the 14th century the number of Jews had grown significantly, and in 1344 they opened a synagogue. Shortly thereafter however, during the *Black Death persecutions (1349–50), the community ceased to exist. For the next two centuries only individual Jews settled in Hameln. By the middle of the 16th century their members had increased and a "Jewish Street" is mentioned in 1552. In 1590 Duke Henry Julius banished all the Jews from his provinces, but the Hameln town council, claiming its traditional right to control the fate of the Jews in the town, determined to ignore the order. Nevertheless, most of the Jews left. In her memoirs, Glueckel of *Hameln indicates that only two Jewish families lived there in 1660.

By the end of the 17th century the Hameln community had increased and a number of its members were among those attending the Leipzig fairs (1691–1763). A new cemetery was consecrated in 1743. Resident rabbis were appointed in the city until 1782. The 12 Jewish families in Hameln in 1777 had declined to five families in 1814 and risen again to 10 only in 1830. In 1832 the community was put under the jurisdiction of the rabbinate of Hanover and a school was established. A

new synagogue was dedicated in 1879. The Jewish population numbered 86 in 1845; 149 in 1875; and 170 (0.6% of the total) in 1931. In 1933, when the Nazis took power, the Jewish population was 136. Jewish businesses were vandalized and the synagogue subject to arson. Jews emigrated or left for larger cities. There were only 86 Jews left by 1935. The synagogue was destroyed in 1938, the cemetery was desecrated and 10 Jews were sent to Buchenwald, two of them died there. The remainder of the community (44 in 1939) was deported in 1942. In 1963 a memorial to the Jews of Hameln was erected in the city. In 1997 a liberal Jewish community was founded. It is a member of the Union of Progressive Jews in Germany. It numbered 18 in 1997 and 200 in 2004. In 1998 another Jewish community was founded which is affiliated with the Central Council of Jewish Communities in Germany, the main Jewish organization in Germany. It numbered 331 in 2003. Almost all of the members of both communities are immigrants from the former Soviet Union. In 1999 the Jewish cemetery, desecrated during World War II, was reopened for use. In 2001 a new Jewish cemetery was opened.

HAMENAHEM, EZRA (1907–1993), Hebrew writer. Born in Skoplje, Serbia, he settled with his family in Erez Israel in 1914. After receiving a religious education in the Old City of Jerusalem, he worked in a Jerusalem bank and then at Mosad Bialik, the Am Oved publishing house, and as editor of literary programs on the Israel radio. In the late 1930s, he began writing about the old and new cities of Jerusalem, particularly about their Oriental Jewish community. His collections of short stories include *Bein ha-Homot* (1941), *Afar ha-Arez* (1948), *Be-Zel ha-Yamim* (1956), *Sippurei ha-Ir ha-Attikah* (1968), and *Mi-Sippurei Na'ar Yerushalmi* (1988).

HA-ME'ORER (Heb. הַמְעוֹרֵר; “the Awakener”), a Hebrew monthly published in London in 1906–07 and edited by J.H. *Brenner. *Ha-Me'orer* began publication after the failure of the Russian revolution of 1905. While living in London, Brenner was involved in the Jewish and general labor movements there.

Through this monthly, dominated by his sharp and nonconformist thinking, Brenner hoped to establish a Hebrew center in England at a time when there were few Hebrew papers in Russia. He was severely critical of complacency in Hebrew literature, which resisted original thought, and of the Jewish labor movement in Russia, which promoted Yiddish instead of Hebrew. In particular, Brenner denounced what he considered hollow verbiage current in the Jewish workers' movement on the one hand, and in the Zionist movement and its literature on the other.

Ha-Me'orer was the periodical in which Brenner first crystallized the approach characterizing the periodicals he later edited. His reactions to current affairs and to literature were a model of original, non-conventional thinking. In addition to printing stories and plays of his own and others, he also published poems, essays, and translations of Ibsen, Wilde, and Maeterlinck. Contributors to *Ha-Me'orer* were authors, old and young, who appreciated the editor's attempts to maintain a Hebrew paper single-handedly. After appearing for less than two years, however, the paper could no longer maintain itself and ceased publication. *Ha-Me'orer* greatly influenced young Jews and particularly the generation of the Second Aliyah.

HAMEROW, THEODORE STEPHEN (1920–), U.S. historian. Born in Warsaw, Hamerow spent his childhood in Poland, where his parents were members of the well-known Yiddish theater ensemble, the Vilna Company. He lived in Germany from 1921 to 1924 and then returned to Poland (1924–30). After emigrating to the United States in 1930, he studied at the City College of New York, Columbia University, and Yale University. He received his Ph.D. in 1951. He taught European, particularly German, history at the University of Illinois from 1952 to 1958 and was then appointed professor of history at the University of Wisconsin–Madison in 1958. He conducted research in Germany and was a Fulbright Research Scholar in 1962–63. From 1973 to 1976 he served as chairman of the history department at Wisconsin. Hamerow retired in 1991 as G.P. Gooch Professor of History.

His main studies, relating to 19th and 20th-century Germany, are *Restoration, Revolution, Reaction: Economics and Politics in Germany, 1815–1871* (1958); and *Otto von Bismarck, a Historical Assessment* (1962), which he edited. Other books by Hamerow include *The Birth of a New Europe* (1983), *Reflections on History and Historians* (1991), *On the Road to the Wolf's Lair: German Resistance to Hitler* (1997), and *Remembering a Vanished World: A Jewish Childhood in Interwar Poland* (2001).

[Ruth Beloff (2nd ed.)]

HAMEZ (Heb. חָמֵץ; “fermented dough”; cf. Ex. 12:39). *Hamez* is prohibited in Jewish religious usage in two instances, one

of which has a purely theoretical application at the present day, while the other is of topical application. The first was the prohibition against offering up *ḥamez* of any kind (or honey) on the altar as a concomitant of sacrifices (Lev. 2:11, where it is referred to as *se'or*). *Se'or* and *ḥamez* are by no means synonymous. *Se'or* refers to the leavening agent, while *ḥamez* is the new dough to which the *se'or* is added, and it is expressly called *lehem ḥamez* ("leavened bread"; Lev. 7: 13). This distinction is clearly shown by Exodus 12: 15: "Seven days you shall eat unleavened bread (*mazzot*); on the first day you shall remove leaven (*se'or*) from your houses, for whoever eats leavened bread (*ḥamez*) from the first day to the seventh day that person shall be cut off from Israel." Further corroboration of this distinction is furnished by a linguistic criterion: *se'or* is never used with the verb *akhal* ("eat"), since it is too sour to be edible. The leavened bread mentioned with regard to the sacrifices is given directly to the priest or is consumed by the worshiper (cf. Lev. 2: 12, 7: 13; 23: 17, 20). The instructions for the making of shewbread contain no prohibition of the use of leaven (Lev. 24:5–9) since it was not consumed but merely displayed. Post-biblical tradition, however, prohibits it (Jos., Ant. 3: 142, 255ff.; cf. Men. 5:1). It was permitted, however, as part of the sacrificial meal (Lev. 7: 13). The other is the complete prohibition of *ḥamez* (or anything containing it) during *Passover, which includes its consumption, deriving any benefit from it, and retaining it in one's possession (Ex. 12: 19). To this the rabbis added the prohibition after Passover of leaven which had been in one's possession during the festival (Pes. 2:2; 28b; Sh. Ar., Oḥ 448). However, the author of the "Passover Papyrus" of Elephantine (Cowley, Aramaic, 21, p. 60ff.) felt that it sufficed to keep the leaven out of sight, i.e., stored away. Nonetheless he did follow the *halakhah*, in opposition to the stricter Samaritan view (a restored text), in maintaining that only fermented grain but not fermented fruit (wine) was included under the definition of leaven (H.L. Ginsberg, in: Pritchard, Texts, 491, esp. n. 6).

The criterion for rendering grain *ḥamez* is that on decomposition it ferments. This characteristic was stated to apply only to the five species of grain, usually translated as "wheat, barley, spelt, rye, and oats" (but see *Five Species). Other grains which, instead of fermenting, "rotted," were not regarded as coming within the prohibition of *ḥamez*; in this class, as is specifically stated, belong rice and millet (Pes. 35a). Despite this fact, Ashkenazi authorities, in contrast to Sephardi, not only forbid the use of rice (and millet) on Passover, but extend the prohibition to include a whole additional range of products which they regard as belonging to the category of *kitniyyot* ("pulse") or even "doubtful *kitniyyot*," including such foods as beans, peas, maize, and peanuts, since flour is made from them and thus people might come to use ordinary flour in such a way as to make it *ḥamez*. In practice, among Ashkenazi Jews the only flour used on Passover is "*mazzah* meal" (i.e., ground *mazzah*) and potato flour, while the Sephardim use rice.

Prohibited *ḥamez* is divided into three categories of descending stringency: *ḥamez gamur*, that which is "completely"

ḥamez, i.e., one of the above fermented doughs and such derivatives as whisky; *ta'arovet ḥamez*, that which has in it an admixture of even the smallest amount of *ḥamez*; and *ḥamez nukshet*, roughly, *ḥamez* which is unsuitable for food, such as writer's paste (Pes. 3:1). It is only for the first that the penalty of *karet is involved, although Maimonides (Yad, introd., negative commandment no. 198) regards the word *maḥmezet* (Ex. 12:19) as referring to *ta'arovet* which is therefore, according to him, forbidden by the Bible. The penalty of *karet* is involved, and the minimum amount for which liability is incurred is an olive's bulk.

Whereas the prohibition of most forbidden food is nullified if it is accidentally mixed in more than 60 times its volume of permitted food and this applies even to leaven mixed in permitted food being prepared for Passover prior to the festival – during Passover *ḥamez* can never be nullified in this way; the most minute admixture renders everything with which it has been mixed forbidden as *ta'arovet*. As a result, practically every food product which has not been specially prepared under supervision in order to ensure the complete absence of *ḥamez* is regarded as belonging to this category. For the same reason all vessels which have been used during the year are forbidden for use during the festival, unless they have been cleansed in accordance with halakhic requirements (see *Passover).

The period which it takes for flour mixed with water to begin fermenting is stated as the time it takes to walk a (Roman) mile (Pes. 46a); the authorities have established this as 18 minutes. This, however, applies to normal conditions and varies according to the circumstances. Thus, on the one hand, if the temperature of the water is above normal the process is accelerated; on the other hand, the continuous manipulation of the dough delays, and even prevents, fermentation (Oḥ 459; for details see *Mazzah).

Hasidim, believing that there is a possibility that some of the flour in the *mazzah* may have remained unbaked, take up the extreme attitude of not eating *mazzah* or *mazzah* meal which has been soaked in water during the whole of the seven days of Passover; they permit it only on the eighth day (which obtains in the Diaspora).

The prohibition of *ḥamez* commences from the time that the paschal sacrifice used to be offered, at midday on the 14th of Nisan, but the period has been extended to two hours earlier (Pes. 28b).

Leaven in Jewish Thought

Leaven is regarded as the symbol of corruption and impurity. The "yeast in the dough" is one of the things which "prevents us from performing the will of God" (Ber. 17a). The idea was greatly developed in the Kabbalah. The New Testament also refers to "the leaven of malice and wickedness" which is contrasted with "the unleavened bread of sincerity and truth" (1 Cor. 5:8). Similarly the word is applied to what was regarded as the corrupt doctrine of the Pharisees and Sadducees (Matt. 16: 12; Mark 8: 15).

It was applied particularly to the admixture of elements of impure descent in a family. (Fermented) “dough” was contrasted in this context with “pure sifted flour.” Thus, with regard to purity of family descent, “All the countries are regarded as dough compared to Erez Israel, while Erez Israel is regarded as dough compared to Babylonia” (Kid. 71a). Ezra did not leave Babylonia until he had made its “Jewish population pure sifted flour” (by bringing up those of doubtful descent to Erez Israel, *ibid.* 69b). The widow of a man of doubtful descent is referred to as a “dough widow” (Ket. 14b).

[Louis Isaac Rabinowitz]

HAMEZ, SALE OF (Heb. מְכִירֵת הַמֵּץ). No **hamez* (leaven) may be present, or seen, in the house of a Jew during Passover. In addition to the prohibition against eating *hamez* or deriving any benefit from it, the Pentateuch explicitly states: “Seven days shall there be no leaven found in your houses” (Ex. 12: 19), “neither shall there be leaven seen with thee, in all thy borders” (Ex. 13:7). Any *hamez* which a Jew has kept over Passover becomes forbidden forever (Pes. 2:2 and 29a; Sh. Ar. OH, 448:3).

Disposal of Hamez

The disposal of all *hamez* which is in the possession of a Jew is carried out after the **bedikat hamez* (“search for leaven”) has taken place on the eve of the 14th of Nisan. According to the *halakhah*, the *hamez* may be disposed of in three ways. It may be burnt (which must be done before 10 o'clock on the morning of the 14th of Nisan). It may be annulled by declaring, “May all leaven in my possession, whether I have seen it or not, whether I have removed it or not, be annulled and considered as the dust of the earth.” It may also be sold. Since the first method might involve hardship, especially where large quantities of foodstuffs are involved, or where the *hamez* is used for business purposes, the *hamez* is sold to a non-Jew. This applies only to foodstuffs; utensils which have been used for *hamez* need only be washed and stored separately.

The Legal Character of the Sale

The transaction by which the *hamez* is sold must be of a legal character, carried out by means of a bill of sale. The purchaser must both lease the place in which the *hamez* is stored, and buy the *hamez* itself. The gentile thus becomes the legal owner of the *hamez* which the Jew, if he so desires, may buy back after Passover. The completion of the sale is effected by the signing of the contract and by the transfer of money, usually in the form of a down payment (see Modes of *Acquisition). The rabbinic insistence that such a bill of sale be in accordance with the requirements of the *halakhah*, and the inconvenience which would result were every Jew to attempt to sell his own *hamez* gave rise to the formal sale of the *hamez*. The Jewish vendor merely appends his signature to a composite document which grants power of attorney to sell his *hamez* to an agent (usually the local rabbi) who, in turn, arranges the contract

with the non-Jewish buyer. The agent buys the *hamez* back after Passover, and restores it to its original owners. All the contracts are written in Hebrew although it has been suggested that the vernacular be used for the bill of sale so as to ensure the Gentile's understanding of the contract.

Stages of Development of the Transaction

Four distinct stages in the evolution of the transaction whereby *hamez* is sold can be traced in rabbinic literature. The first sales, referred to in the Talmud (Pes. 2:1; Tosef., Pes. 1:7; Shab. 18b; Pes. 13a, 21a), were clearly of a simple nature. Although the *Gemara* does not discuss any details, such a sale presumably involved the physical transfer of *hamez* from Jew to non-Jew “in the market place” (Pes. 13a). The beginning of the second stage, by which it became common practice to sell *hamez* to a non-Jew with the mutual understanding that the Jew would buy it back after Passover, is hinted at in the Tosefta (Pes. 1:24, also in TJ, Pes. 2:2, 28d). Although the author of *Halakhot Gedolot* (ed. by I. Hildesheimer (1892), 136) stipulated that there must be no suggestion of such an intention, the practice had clearly earned rabbinic consent by the time of the compilation of the Shulhan Arukh (OH 448:3). The condition that the *hamez* must be physically transferred from the property of the Jew to that of the non-Jew still remained (*Magen Avraham*, Sh. Ar., OH 448:3). It was the observation of Joel *Sirkes (*Bayit Hadash*, OH 448) – that this caused considerable inconvenience to merchants – which initiated a new chapter in the history of the sale of *hamez*. He suggested that such inconvenience might be avoided by selling (or later leasing) the room in which the *hamez* was stored to the non-Jew, a transaction which involved a small down payment and the physical transfer only of the key to the room. In later times the official nature of the transaction was stressed by the writing of a bill of sale. A copy of such a document (in Judeo-German) written by R. Ezekiel *Landau of Prague is preserved in his son Samuel Landau's responsa (*Shivat Ziyon* 11); others were sometimes printed in *Haggadot*. The final stage in the evolution of the sale of *hamez* was introduced by R. *Shneur Zalman of Lyady. Objecting to the blatant legal fiction involved in Sirkes' method, he proposed the idea of a “general” sale, with an agent acting on behalf of the Jewish vendor. Despite the opposition of numerous rabbis, including Solomon b. Judah Aaron *Kluger of Brody and R. Joseph Saul *Nathanson, this proposal has generally been accepted as the form of the sale of *hamez*.

[Harry Rabinowicz]

HAMILTON, city in southern Ontario (total pop. 495,000 in 2001), with the eighth largest Jewish community in Canada (4,765). Hamilton Jewry comprised 1.3% of the Canadian Jewish population in 2001 compared with 1.4% in 1991, and 1.5% in 1981. Despite its small numbers, the community enjoyed an impressive array of institutions, including, for example, three active synagogues, a *mikveh* (ritual bath), a retirement and

nursing home for the Jewish elderly (Shalom Village), a community center, and day and afternoon schools.

The community's Jewish population has reflected the larger Canadian experience. By 1941, Jews in Hamilton numbered some 2,600, with half identifying Yiddish as their mother tongue; by 1951, the number had risen to 3,000. Little population expansion occurred over the following two decades. However, this changed in the late 1960s and 1970s when the expansion of McMaster University attracted Jewish academics and medical professionals. In addition, between 1975 and 1980, some 300 Russian Jews settled in Hamilton, though the vast majority eventually left for Toronto. By 1981, the Canadian census listed 4,250 Jews in the Hamilton area.

The Jewish presence in Hamilton reaches back more than 150 years. In 1853 the city record identified 13 Jewish families. They formed the Hebrew Benevolent Society *Anshe Sholom* Hamilton. They were soon renamed the Jewish Congregation *Anshe Sholom* of Hamilton, constituting the first Jewish congregation in Hamilton and the first Reform congregation in Canada. All charter members were of German origin and the records were recorded in German. In 1874 *Anshe Sholom* women formed the Deborah Ladies Aid Society, the first Jewish women's charity society in Canada. Initially Orthodox in orientation, it aligned with Reform following changes to traditional liturgical practices and rituals.

Finding these changes unacceptable, a number of Orthodox Jews who had immigrated to Hamilton in the 1870s established the Beth Jacob congregation in 1883. In 1901 the congregation organized its Talmud Torah, and in 1908 the women formed a Ladies Aid Society. Its Orthodox orientation changed to Conservative in 1954. Membership peaked in the 1960s and 1970s. The congregation later proclaimed that it offered a fully egalitarian religious service. Immigrants from central Poland and Galicia founded the *Adas Israel* that served as the community's Orthodox congregation. In 1914 they adopted the name "*Adas Israel Anshe Poilen*." Known informally by its street designation, Cannon Street shul, its members formed a Loan Society in 1930 followed by a Ladies Auxiliary two years later.

For the community's first 75 years, Jews concentrated around the city's core. This area housed the synagogues (a total of five at one time), other communal institutions, and the vast majority of Jewish-owned commercial enterprises. As the Jewish population moved into west and southwest Hamilton, and to neighboring Dundas and Ancaster, there remained hardly any trace of this former institutional presence. Ironically, but hardly unique to Hamilton, Jews now reside in areas from which they were formerly barred owing to the presence of restrictive covenant practices.

The need to look after its own being understood, the number of institutions established to service the Jewish community was both impressive and extensive. Four organizations – the Hamilton Hebrew Institute, the Hamilton Jewish Relief Society, the Hamilton Free Loan Society, and the Israelitish Benevolent Society – attended to matters of financial assistance,

immigration, and communal and civic affairs. They amalgamated in 1916 under the United Hebrew Association, which assumed responsibility for most philanthropic work. Other institutions helped shape the community's rich diversity. For example, the Grand Order of Israel Benefit Society was coordinated in 1907, and the Viceroy Reading Lodge of B'nai B'rith and the Council of Jewish Women were established in the city in 1921 and 1922, respectively. Formal participation in Zionist activity began with the formation of the Daughters of Zion in 1914 and the second Hadassah chapter in Canada in 1917. Shortly thereafter chapters of Pioneer Women and Mizrahi also organized. Organizations evolved and new ones were established to coordinate the integration of immigrants who arrived following World War II. The Council of Jewish Organizations was established in 1955 and represented the Jewish community locally and nationally, coordinating and overseeing matters pertaining to education, recreation, and culture. Renamed the Hamilton Jewish Federation in 1975, it served as the community's central Jewish organization.

While Jews in Hamilton endured antisemitism in the decades leading to and immediately following World War II, they successfully integrated into the mainstream. Several played prominent roles in the wider community as patrons of the arts and charitable campaigns. Their integration was also reflected in the community's changed occupational structure. While the earliest generations of immigrants were peddlers, storekeepers, and salespersons in the manufacturing trades (notably in steel, scrap, and auto parts), subsequent generations, university-educated, were active in various commercial enterprises and, not unexpectedly, proliferated the professions – accounting, education, law, dentistry, and medicine.

Demographically, the 2001 number of census-identified Jews in Hamilton represents a loss from the 5,165 recorded in 1991, the highest number ever. Indeed, the recent decrease reversed a trend of steady population growth during the preceding several decades. A closer examination of the available demographic figures reveals several features certain to impact on the community's ongoing organization, including the number of elderly, a decrease in school-age youth, and a steady increase in numbers living below the poverty line. In addition, with fewer family-based businesses where offspring are expected to succeed their parents, there is a greater tendency for younger persons to leave the community for larger urban centers. This out-migration will inevitably impact on the community's abilities to sustain the educational and cultural institutions it currently enjoys.

Despite the outflow of native Hamiltonians to larger centers, the community continued to support a vibrant institutional base and could experience growth in the foreseeable future. While university-age Jews may continue to leave, this movement could be more than offset by the arrival of newcomers attracted to the city for occupational opportunities, more affordable housing and other cost-of-living considerations, and the availability of a sound and potentially expand-

ing Jewish infrastructure to cater to their religious, ethnic, and other requirements.

[William Shaffir (2nd ed.)]

HAMIZ, JOSEPH BEN JUDAH (d. c. 1676), physician, philosopher, kabbalist, and communal leader. Born in Venice, from his youth Ḥamiz devoted himself to Torah and scholarship and was one of the outstanding pupils of Leone *Modena. In 1624 he received the degree of doctor of medicine and philosophy at the University of Padua. At the same time the rabbis of Venice decided to ordain him as rabbi. In honor of his graduation, his teacher and colleagues published a “collection of eulogies and poems” under the title *Belil Ḥamiz* (Venice, 1624; also in: *Seridim*, 1938). To Modena’s distress, Ḥamiz came under the influence of esoteric teachings and joined the kabbalistic circles of Moses *Zacuto and *Aaron Berechiah b. Moses of Modena. In 1658 he and Zacuto published an expanded edition of the *Zohar Ḥadash* with glosses on the *Zohar, titled *Derekh Emet*. During the same period Ḥamiz began to write a commentary on the Zohar but ceased this work because he decided to move to Jerusalem. Thereafter all traces of him are lost.

During recent years two collections of his works have been found. I. Tishby discovered that a manuscript in Oxford University Library (Ms. Bod. 2239) is a collection of Ḥamiz’s works written during the years 1667–75. From its contents it is clear that he was associated with Shabbatean circles and was active in the movement. E. Kupfer discovered that Ms. Parma 1283 was written by Ḥamiz in the town of Zante, where he stayed around 1666 on his way from Venice to Erez Israel with his family. Apparently he delayed there because of the troubles that befell him: His wife and many members of his family who had accompanied him from Venice died in Zante. While staying there, he practiced as a physician, devoted much of his time to Torah, and was active in the life of the Jewish community. In 1674 he promoted the conference for the union of the communities in Zante, and was chosen to introduce **takkanot* for the united community.

From his writings in the Parma manuscript, it is clear that despite his devotion to Kabbalah and his association with Shabbatean activists he continued to be in doubt and disturbed. Even in his later years, side by side with kabbalistic writings there are philosophical ideas and studies based on the school of Maimonides. Among the works in this collection is the *Pirkei ha-Musar u-Middot*, which he wrote as a kind of testament for his children.

Hamiz collected material from a variety of early kabbalistic material, including several books of Abraham *Abulafia and even earlier Kabbalah, and thus preserved material that is hardly known from other sources.

[Ephraim Kupfer]

HA-MIZPEH (Heb. הַמִּצְפֵּה; “the Watchtower”), a Hebrew weekly newspaper. Appearing in Cracow from 1904 to 1921 (with intervals during World War I), *Ha-Mizpeh* was edited by Simon Menahem Laser. Laser, the last editor of **Ha-Maggid*, which ceased publication in 1903, wanted to maintain the Hebrew press in Galicia. His new paper had a religious Zionist orientation and was the faithful organ, without official status, of the *Mizrachi movement. At the same time it fought the opponents of Zionism, including both Ḥasidim and assimilationists. *Ha-Mizpeh* reached its highest popularity at the time of the elections for the Austrian parliament, when it fought with extraordinary vigor the government-approved anti-Zionist pact between assimilationists and the ḥasidic rabbis. The paper also combated negative manifestations in the Zionist movement. Laser encouraged literary talents in Galicia. He discovered S.Y. *Agnon (then still known as Czaczkes), Avigdor *Hameiri, U.Z. *Greenberg, and many others who later became famous in Hebrew literature. Apart from Laser’s journalistic pieces, the paper published studies, poems, stories, essays, feuilletons, and a humorous section for Purim. It was maintained throughout the years by Laser’s efforts and without any subvention, even during World War I when he revived the paper after it had been forced to close. Laser was among the few who understood the nature of the Bolshevik regime’s attitude toward the Jews, the problematic nature of the Balfour Declaration, and other political issues.

[Getzel Kressel]

HAMLISCH, MARVIN (1944–), U.S. composer and arranger. Born in New York City, Hamlisch was the youngest student (at age seven) ever admitted to the Juilliard School of Music (which he attended until 1964). He is the composer and/or arranger of music scores for such films as *The Swimmer* (1968), *Take the Money and Run* (1969), *Bananas* (1971), *Save The Tiger* (1973) and *Kotch* (1971). In 1974 Hamlisch became the first individual to receive three Academy Awards in one night – one for best scoring of *The Sting*, one for best original dramatic score for the film *The Way We Were*, and one for best original song, “The Way We Were.” He also received four Grammys for his work on *The Sting*. Hamlisch also won a Pulitzer Prize and a Tony Award for writing the script and composing the score of the Broadway musical *A Chorus Line* (1975).

His musical scores for other Broadway productions include *They’re Playing Our Song* (1979), *Shirley Maclaine on Broadway* (1984), *Smile* (1987), *The Goodbye Girl* (1993), *Sweet Smell of Success* (2002), and *Imaginary Friends* (2003). Written by Neil Simon, *They’re Playing Our Song* was based on the personal and professional relationship between Hamlisch and his long-time collaborator, lyricist Carole Bayer Sager. It was nominated for four Tony Awards, among them Best Musical.

Hamlisch also wrote the music for such films as *The Prisoner of Second Avenue* (1975), *The Spy Who Loved Me*

(1977), *Ice Castles* (1978), *Starting Over* (1979), *Chapter Two* (1979), *Gilda Live* (1980), *Ordinary People* (1980), *Seems Like Old Times* (1980), *Pennies from Heaven* (1981), *Sophie's Choice* (1982), *Three Men and a Baby* (1987), *January Man* (1989), *Shirley Valentine* (1989), *Missing Pieces* (1991), *Open Season* (1996), and *The Mirror Has Two Faces* (1996).

In addition to his work as a composer, Hamlich is the principal pops conductor with the Pittsburgh Symphony Orchestra and the National Symphony Orchestra in Washington, D.C. He is the first person to hold such a position with either of those orchestras. In 1992 Hamlich published his memoirs, *The Way I Was* (with G. Gardner).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

HAMLYN, PAUL, BARON (1926–2001), British publisher. Born Paul Hamburger in Vienna, the son of a professor of pediatrics, Hamlyn came to England with his family in 1933. He left school at 15 and changed his name to “Hamlyn,” unlike his brother, the poet and translator Michael *Hamburger (1926–). After a series of odd jobs, including a period of work as a coal miner, Hamlyn became a book remainder merchant and then a publisher. By the late 1960s he was the head of a large-scale publishing conglomerate, IPC. He later became a partner with Rupert Murdoch in News International and Octopus Books. By the 1980s he had become one of the richest men in England, while his original firm, Paul Hamlyn Ltd., had absorbed such old-established publishers as Heinemann and Butterworth. A longstanding supporter of the Labour Party, Hamlyn was given a life peerage in 1998.

[William D. Rubinstein (2nd ed.)]

ḤAMMAT GADER (Heb. חַמַּת גַּדָּר; **Emmatha, El Hamme**), ancient site on the right bank of the Yarmuk Valley, north of *Gadara (Umm Qeis) and to the southeast of the Sea of Galilee. It was a Jewish town in the Roman and Byzantine periods. Ḥammat contained several hot springs and these attracted settlers from earliest times. In talmudic times it was included in the territory of *Gadara, and the Talmud thus refers to it as “Ḥammat of Gadara.” It was heavily populated in this period, and many visitors from the south, the Golan, and Galilee, including Judah ha-Nasi and his pupils, came to bathe in the springs. The Romans also used the springs during the bathing season. The ruins include a temple, a theater, a synagogue, and a large complex of baths.

[E. Cindof / Shimon Gibson (2nd ed.)]

In the Modern Period

The five thermal springs of Ḥammat Gader (the waters of the hottest and richest in minerals have a temperature of 124° F (51° C)) intermittently served local inhabitants for healing purposes. The place became a station on the narrow-gauge

railway branch that connected Haifa through Zemaḥ with the Hejaz railway (traffic on the line was finally halted in 1946 when the Palmaḥ blew up a bridge crossing the Yarmuk near Ḥammat Gader). The border of the British Mandate of Palestine protruded eastward into the narrow Yarmuk gorge for 3 mi. (5 km.), thus creating a wedge, including Ḥammat Gader, of a few hundred meters width only, between Transjordanian and Syrian territory. In Israel's War of Independence (1948), the Syrians occupied the place when advancing toward Lake Kinneret; in the 1949 Armistice Agreement, the Ḥammat Gader tongue returned to Israel sovereignty, although it was declared a demilitarized zone where only the previous (i.e., Arab) inhabitants were permitted to return. Nevertheless in 1951, Syrian forces occupied Ḥammat Gader and held it until 1967. The Syrians turned the spot into a rest center for their officers and officials, building a mosque, hotel, bathhouses, and other installations. In the Six-Day War (1967), Ḥammat Gader returned to Israeli control. In the ensuing years, it was repeatedly shelled from Jordanian positions on the steep slope directly above it, and mines planted by terrorists caused a number of losses to Israel civilians. Because of the security situation, plans for developing Ḥammat Gader as a farming, tourist, and recreation center had to be postponed, and the group preparing to settle there had to erect its collective village, Mevo Ḥammat, 3 mi. (5 km.) to the northwest on the Golan plateau. Subsequently, however, it was developed into one of Israel's leading tourist sites with water sports, a crocodile farm, and other attractions in addition to the baths.

Hirschfeld, *The Roman Baths of Hammat Gader* (1997).

HAMMATH (Heb. חַמַּת), city in the territory of Naphtali mentioned in the Bible together with Rakkath and Chinnereth (Josh. 19:35). Its name indicates the presence of hot springs. Most scholars identify Hammath with Hammath-Dor, a city of refuge and a levitical city (Josh. 21:32), which is generally located at Hammath Tiberias, south of Tiberias. No remains from the biblical period, however, have thus far been uncovered there, and the site of the ancient town should probably be identified with the early remains within the confines of Roman Tiberias. Hammath was famous for its hot baths in the Second Temple period (Jos., Wars 4:11; Jos., Ant. 18:36); when Tiberias rose to prominence in talmudic times, Hammath, one mile away and joined to Tiberias for halakhic purposes, also became well known (Meg. 2b; Tosef., Er. 7:2; TJ, Er. 6 (5); 13). After the destruction of the Second Temple, priests of the Maziah course settled there (*Baraita of the Twenty-Four Mishmarot*, 24); the Emmaus mentioned in the Mishnah *Arakhin* 2:4 may refer to the place. R. Meir was

one of the many talmudic scholars who lived there. A Jewish community is attested there up to the time of the Cairo Genizah.

During the excavation of the foundations of bathhouses, two synagogues were discovered; the first was excavated by N. Slouschz in 1920 and the other by M. Dothan in 1961–63. The first, belonging to the transitional type of synagogue, consisted of a basilica-shaped hall without an apse. The facade oriented to Jerusalem contained four small marble columns which apparently supported a marble lintel above the Ark of the Law. The synagogue was paved with mosaics; fragments of the “seat of Moses” (cathedra) were found there, as well as a stone seven-branched *menorah*, carved in relief and decorated with a “button and leaf” pattern in the form of pomegranates. In the second synagogue four building phases were distinguished. (1) The earliest structure consisted of a public building (probably not a synagogue) with rooms surrounding a central courtyard. (2) A synagogue from the third century C.E. (3) Directly above this synagogue and using its columns was another synagogue built in the form of a basilica with an outstanding mosaic pavement which contained (from north to south): a dedicatory inscription flanked by two lions; a zodiac of a high artistic standard with the sun god Helios on his chariot in the center and representations of the four seasons in the corners; the Ark of the Law with *menorot* and other ritual articles. Inscriptions in Greek and one in Aramaic commemorate several builders, especially a certain “Severus, the pupil of the most illustrious patriarchs.” The building, 47½ ft. (14½ m.) wide, contains a nave with two aisles east of it and to the west of it, an aisle, and a hall (women’s gallery?). The synagogue is attributed to the beginning of the fourth century C.E.; in a later period a stationary *bamah* (“platform”) was installed and the entrance was moved from the southern to the northern side. (4) Above the site of this synagogue another one was built in the sixth century with a slightly different orientation. It was basilica in shape, 62 × 49 ft. (19 × 15 m.) with an apse and a mosaic pavement with geometric designs.

Bathhouses have again been built at Hammath Tiberias in modern times. They are fed by five springs whose waters reach a temperature of 140°–144° F (60°–62° C) and contain graphite, iron, and magnesium chloride. Of curative value, they are widely used, especially in the winter seasons. The grave of R. *Meir Ba’al ha-Nes is reputed to be near Hammath Tiberias, and a large synagogue is situated on the site. The grave site became famous in the Jewish world beginning in the 18th century because of the collection boxes, named after R. Meir, widely distributed by emissaries of charitable institutions. It is an ancient custom to hold festivities and build bonfires near the grave on the 14th of Iyyar.

[Michael Avi-Yonah]

HAMMER, ARMAND (1898–1990), U.S. industrialist and art collector. When studying at Columbia Medical School in his native New York in 1918, he joined his father’s business, a chain of drug stores which was about to go bankrupt. Hammer demonstrated his business acumen when he bought quantities of medicine cheaply at the end of World War I and sold them as the price rose quickly, making \$1 million.

After graduating medical school in 1921, he took off six months before beginning his internship and went to the U.S.S.R. His father was a member of the Communist party of America and a strong supporter of the Russian Revolution. Hammer went to help set up medical clinics in Moscow and other Russian cities. In the aftermath of the Revolution, the health-care system no longer existed and he made a significant contribution.

A businessman by nature, Hammer began arranging business deals for the Soviet Union. The first major one was an American wheat purchase in exchange for Russian furs and caviar. When Lenin saw Hammer’s capabilities, the Russian leader gave the young man mining rights in Siberia. To show his appreciation, Hammer engineered deals involving Ford, U.S. Rubber, and other large companies with the Soviet Union.

Remaining in Russia for nine years until 1930, he and his brother, who had joined him, bought up Russian art treasures which were available for needed cash. He made another \$1 million when Lenin granted him the exclusive rights to manufacture wooden pencils in the Soviet Union.

On his return to the United States with an enormous horde of art treasures, many from the royal Romanov family, he had trouble selling the works because of the Depression. To be innovative, he merchandized the paintings and other art objects through major department stores such as Macy’s and Gimbels. His first book dealt with his adventures collecting art in Russia and was entitled *The Quest for the Romanoff Treasure*. During the next 25 years, he earned a major fortune buying and selling distilleries. He retired in California in 1956, but within a short time he bought the controlling interest in Occidental Petroleum Company, a company about to fail. He struck oil with several new leases, soon registering major profits amounting to \$300 million a year. This company, under his leadership, became the largest oil company in the world under private ownership.

In the early 1970s his close relationship with the Soviet government resulted in his negotiating a major fertilizer purchase by the Russians from an American company worth \$8 billion. His ties with Russia helped to reawaken his Jewish roots. Although secret at the time, it is now clear that Hammer intervened to seek to persuade Russian leaders to permit Soviet Jews to leave the U.S.S.R. in the 1970s – ultimately almost 200,000 then emigrated.

Although publicly non-committal about Israel and his Judaism until the 1980s, he visited the country secretly and also tried to help develop certain business ties for Israel with various countries, which had no relations with her. From the mid-1980s, he was active in getting refuseniks released and he flew Ida Nudel to Israel in his own plane when she was finally freed. He also invested in oil explorations in Israel and in offshore sites nearby, none of which produced any marketable finds. He died in his sleep only a few days before he was to have had a belated bar mitzvah.

[David Geffen (2nd ed.)]

HAMMER, REUVEN (Robert A.; 1933–), American-Israeli scholar, leader of Masorti/Conservative Judaism, and advocate for special needs students in Jewish schools.

Hammer received rabbinic ordination and a D.H.L. from the Jewish Theological Seminary and a Ph.D. in Communicative Disorders from Northwestern University. After serving as a chaplain in the U.S. Air Force and as a congregational rabbi, Hammer was prominent among the young Conservative rabbis and educators who made *aliyah* from North America in the early 1970s and created many of the institutions of what became Israel's Masorti (Conservative) movement.

He headed the Israel campus of the Jewish Theological Seminary in Jerusalem, and after taking part in the planning process that led to the creation of a Conservative seminary in Jerusalem, in 1984 he took on an additional role as director of the Seminary of Judaic Studies, which later grew into the Schechter Rabbinical Seminary and an academic institution, the Schechter Institute of Jewish Studies.

A decade later he served as his movement's representative on the Ne'eman Commission appointed to avert a crisis over "who is a Jew" in Israeli law after the courts insisted on government recognition of non-Orthodox conversions – the Conservative rabbi to serve in an official position vis-à-vis the government of Israel. He later represented the Masorti movement on the board of the Joint Conversion Institute whose establishment was sparked by the Ne'eman Commission's discussions.

In Israel's Masorti movement, Hammer served as the head of the Rabbinical Court for Conversion and chairman of the movement's Public Affairs Committee. Hammer also worked to further the interests of Masorti/Conservative Judaism in Israel and elsewhere through the Rabbinical Assembly, which he served as president of its Israel Region and later as president of the worldwide body.

Hammer's wide-ranging scholarly endeavors included teaching at the institutions mentioned above as well as the Hebrew University of Jerusalem, the David Yellin College of Education, and other academic institutions in Israel, Argentina, and Russia. His voluminous writings include *Sifre, A Tannaitic Commentary on Deuteronomy* (an English translation and commentary, 1986) and many works that brought Jewish scholarship to a wide audience: *Entering Jewish Prayer* (1994), *Entering the High Holy Days* (1998), and a collection of his own

annotated translations of passages from midrash, *The Classic Midrash* (1994). He edited *The Jerusalem Anthology* (1995), a collection of documents and belles-lettres about Jerusalem over the ages. His magnum opus on the literary and theological appreciation of Jewish liturgy, *Or Hadash* (2003), takes the form of a commentary to the Conservative *Sim Shalom* prayerbook. The first of two volumes appeared in 2003.

Hammer was among the first vocal proponents of providing instruction and support designed to take into account learning disabilities and differences of learning style in North American Jewish education. While still living in the U.S., he undertook his doctoral studies in that field in order to be able to start programs for special education in synagogue schools, which were then non-existent. His book, *The Other Child in Jewish Education*, enjoyed decades of use and influence.

[Peretz Rodman (2nd ed.)]

HAMMER, ZEVULUN (1936–1998), Israeli political leader; member of the Seventh to Fourteenth Knesset. Hammer was born in Haifa, studied at the religious Yavneh high school, and joined *Bnei Akiva in 1945, later becoming a member of its national council, and a leader in many of its branches. He served in the IDF within the framework of *Nahal, and attended the National Security College. Hammer graduated from Bar-Ilan University in Jewish and Bible studies. From 1961 he headed the Students Association, and was a member of the presidium of the National Students Association, in which capacity he was in charge of the World Union of Jewish Students. After graduation he entered the teaching profession.

In the course of the 1960s he became leader of the *National Religious Party young guard. After the Six-Day War he acted to transform the NRP from a party whose focus was on religious affairs to a movement whose main concern was the preservation of the integrity of Erez Israel and security. In 1974 he actively supported the establishment of the *Gush Emunim settlement movement. Hammer was first elected to the Seventh Knesset in 1969. From January 1973 to January 1974 he served as deputy minister of education and culture and in 1975–76 as minister of welfare in the first government formed by Yitzhak *Rabin. In 1976 he was largely responsible, with his colleague MK Dr. Judah Ben-Meir, for ending the "historical coalition" between the NRP and the *Israel Labor Party. In 1977–84 he served as minister of education and culture, introducing free education in high schools and pre-compulsory kindergartens. He introduced Holocaust studies in 10th grade, made an effort to enhance Jewish studies in non-religious schools, and established a Supreme Committee for Scientific and Technological Education. Despite sincere efforts, he failed to close the educational gap between the Ashkenazi and Sephardi Jewish sectors of the population, on the one hand, and between the Jewish and Arab sectors, on the other. In 1986–90 he served as minister for religious affairs, returning to the Ministry of Education and Culture after the Labor Party left the National Unity Government in March 1990. The

NRP did not join the government formed by Yitzhak *Rabin in 1992. After Joseph *Burg, whom he had helped get elected as leader of the NRP in 1977, resigned the leadership in 1986, Hammer was elected secretary general of the NRP. As leader of the NRP he tried to move away from extreme positions and acted to try to build bridges between the religious and secular communities in Israel. Following Rabin's assassination Hammer was one of the national religious leaders who called for serious soul searching in the national-religious movement. In the elections to the Fourteenth Knesset the NRP under Hammer's leadership managed to regain some of its lost strength, going up from its 4–6 seats in the Tenth to Thirteenth Knessets to nine.

In the government formed by Binyamin *Netanyahu in 1996 he was once again appointed minister of education and culture, as well as deputy prime minister, in which capacity he served until his death in 1998 after an illness.

[Susan Hattis Rolef (2nd ed.)]

HAMMERSTEIN, U.S. family closely associated with the development of opera and the popular musical theater in U.S. Its two most famous members were Oscar Hammerstein I (1847–1919) and his grandson, Oscar II (1895–1960). Born in Berlin, OSCAR HAMMERSTEIN I ran away from home, reached New York in 1863, and worked in a cigar factory. He soon became an important and wealthy figure in the industry. His passion, however, was for building opera houses. The Harlem Opera House, built in the 1880s, was his first. The Victoria (1899) was a successful vaudeville theater managed by his son WILLIAM. Altogether he built 10 opera houses and theaters in New York, in addition to an opera house in Philadelphia (1908) and one in London (1911). His Manhattan Opera House (1906), a venture in which his son ARTHUR (1873–1955) was closely involved, competed with the dominant Metropolitan Opera House until 1910, when the Metropolitan bought it out for \$1.2 million. In its time the Manhattan helped to make grand opera exciting by bringing new talent and works to American audiences. His later ventures were less successful. OSCAR HAMMERSTEIN II, librettist, was born in New York, the son of William Hammerstein. He played an important role in developing the “musical play” into an integrated dramatic form. He worked for his uncle Arthur as a stage manager. By 1920 he had produced the books for three musicals. *Wildflower* (1923) was his first real success. Subsequently he collaborated on such Broadway musicals as *Rose Marie* (1924), *Desert Song* (1926), and *Show Boat* (1927). After some years in Hollywood, he formed his partnership with the composer Richard *Rodgers in 1943. Together they produced a series of successful musicals with a style and form of their own. These included *Oklahoma* (1943), *Carousel* (1945), *South Pacific* (1949), which won a Pulitzer Prize, *The King and I* (1951), and *The Sound of Music* (1959). The Rodgers and Hammerstein Foundation, New York, established a fund for cancer research in 1963, at the Hebrew University Hadassah Medical School, Jerusalem.

[Harvey A. Cooper]

HAMMURAPI (the spelling of the name with a “p” rather than a “b” seems assured by the writing ‘*mrp*’ in Ugaritic apparently “the [divine] kinsman is a healer,” but interpreted by post-Kassite Babylonian tradition as *kimta rapaštu*, “widespread kinfolk”), the sixth king (1792–50 B.C.E.) of the first dynasty of Babylon, one of several Amorite kingdoms which rose in southern Babylonia in the aftermath of the fall of the third dynasty of Ur. Amorites spoke a West Semitic language with similarities to Aramaic and Hebrew. Because the cuneiform system lacks *ayin*, 𐎠𐎢 served as its approximation, the *hammu-*, corresponding to Hebrew ‘*am*, “people,” “kin.” As such the king's name is of the same type as Am-ram; Ammi-el etc. Sources for the reign of Hammurapi are his own inscriptions, including the lengthy prologue to the code which bears his name; year names in date formulas which, in keeping with established tradition, list an outstanding military, political, or domestic event by which the year is known; letters, both from Hammurapi's own chancellery, and from other centers, especially the large political archive from *Mari in the upper Euphrates valley; business documents; and legal texts. Since Hammurapi's Babylon has not been excavated, his own diplomatic archive has not been uncovered.

When Hammurapi assumed the throne, Babylon was a small city-state, his predecessors having limited themselves to maintaining their local rule against the ambitions of similar states in the vicinity and against the incursions of nomads. As seen from a document written in the generation before Hammurapi, and from the contemporaneous Mari letters, the situation in southern Babylonia during the early Old Babylonian period was such that each ruler managed to govern within the limited confines of his city-state, while the open interurban spaces were given over to the control of nomadic and seminomadic tribes who roamed the area. It was Hammurapi's accomplishment to weld these several city-states into a cohesive base from which to embark on the wider conquest of the rest of Mesopotamia.

To his contemporaries, Hammurapi was a somewhat lesser figure than he is thought to be today – a minor king in comparison to others, according to a Mari letter. Indeed, for the first 10 years or so of his reign, Babylon seems to have been at least partially subservient to Assyria, then ruled by Shamshi-Adad I. After the death of the latter during, or just after, Hammurapi's 10th year, Assyria began to decline, and a complicated political and military maze took form in Babylonia, expressing itself in a system of ephemeral alliances and counter alliances and reciprocal demands for military aid, each king continually jockeying for a more advantageous position. The serious rivals of Hammurapi were then Yarim-Lim of Yamhad (Aleppo), Zimri-Lim of Mari, Rim-Sin of Larsa,

Amut-pi-el of Qatana, and Ibal-pi-El of Eshnunna, together with his Elamite allies.

For the middle 20 years or so of Hammurapi's reign, nothing militarily or politically decisive occurred and the year names of this period reflect in the main a time of intensive civic building and canal making. By the 29th year of his reign Babylon must have been strong enough to take on its rivals. That year initiated 10 years of intensive campaigning, which gave Hammurapi control of all of Mesopotamia. After a long period of seemingly friendly relations, Rim-Sin of Larsa was defeated in the 30th year of Hammurapi's reign; a coalition of forces from Assyria, Eshnunna, and Elam was defeated in the 31st year; Mari, in the 32nd; and Assyria was finally subdued in the 36th and 38th years. This seems to be the limit of Hammurapi's conquests, and there is no reason to identify him with *Amraphel of Genesis 14.

Hammurapi is best known for the so-called Code of Hammurapi (see *Mesopotamia). This is a misnomer, at least to the extent that it is not comprehensive. Modern scholarship tends to view the code as an abstract formulation of actual precedents in the form of ad hoc decisions of the king gathered from the state archives, plus an undetermined smaller element of deliberate, reforming legislation, all this cast in the traditional form of law codes consisting of a prologue, body of law, and epilogue. The actual function, if any, of this code is unknown, and it is never referred to in contemporary legal texts. The code reflects a tripartite division of society: an upper level of free men (*awilum*), a class of state dependents (*muškēnum*, cf. Heb. *misken*, "poor"), and a slave caste (male *wardum*; female *amtum*), with no social mobility between classes. In other basic aspects, the code shows fundamental points of contact with the slightly older Eshnunna code, as well as with the Book of the *Covenant in Exodus 20ff.

The small amount of Old Babylonian literature preserved shows that this was a period of great and original creativity in Akkadian literature. It produced, furthermore, the last reliable formulation of the Sumerian traditions, and present knowledge of Sumerian language and literature is based, to a large extent, on the products of the contemporary scribal school. In religion, the rise of Marduk, the local god of Babylon, to the status of a great god, concomitant with the political rise of Babylon, should be noted.

[Aaron Shaffer]

HAMNUNA, the name of several Babylonian *amoraim*.

HAMNUNA SABA ("the elder"), a pupil of Rav (BK 106a), mid-third century C.E. He transmitted his teacher's sayings (Er. 16b;

et al.). Rav was fond of Hamnuna and taught him a number of apothegms (Er. 54a). He succeeded Rav as the head of the academy of Sura. According to the Talmud, statements of "the school of Rav" emanated from Hamnuna (Sanh. 17b). There are both halakhic and aggadic statements in his name, and many of the latter emphasize the duty of study of the Torah and the gravity of its neglect, e.g., "Jerusalem was destroyed only because they neglected the teaching of schoolchildren" (Shab. 119b); "Man is judged first in respect of study of Torah alone" (Kid. 40b). The Talmud also cites formulae of prayers uttered by him, some apparently composed by him (Ber. 11b; 17a; 58a; et al.). Hamnuna was an associate of Ḥisda (Shab. 97a; et al.) and Ḥisda once became so enthusiastic at his exposition that he said: "Would that we had feet of iron so that we could always run and listen to you" (see Ber. 41b and Rashi *ibid.*). It is stated that his body was transported for burial to Erez Israel where miraculous events occurred on that occasion (MK 25a–b).

HAMNUNA, an *amora* of the beginning of the fourth century C.E. A native of Harpania in Babylonia (Yev. 17a), he resided in Harta of Argiz in the vicinity of Baghdad where he taught (Er. 63a; Shab. 19b). He was a pupil and colleague of Ḥisda (Er. 63a) who praised him highly to *Huna (Kid. 29b). He also studied under R. Judah (Shevu. 34a) and Ulla (Yev. 17a).

HAMNUNA ZUTA ("the younger"), fourth century C.E. The formula of the Confession of Sin, which he was accustomed to recite on the Day of Atonement, the opening words of which are "O my God! Before I was formed, I was not worthy," is included in the liturgy of that day. When requested to sing a song at the wedding of Mar, the son of Ravina, he sang: "Woe to us, that we must die!" asking his colleagues to join in with the refrain: "Where is the Torah and where is the Commandment that they may shield us?" (Ber. 31a).

Other *amoraim* of the same name, some with and some without appellations, who lived in the third and fourth centuries and whom it is difficult to identify, are referred to in the talmudic sources.

[Zvi Kaplan]

HA-MODI'A (Heb. הַמּוֹדִיעַ), daily newspaper published in Jerusalem by the *Agudat Israel Party. Established in 1949 by Yitzhak Meir Levin, son-in-law of the Gur Rebbe, and edited by his son Yehudah Leib Levin, *Ha-Modi'a* ("The Herald") represented three streams in the **haredi* world. In addition to the Gur Rebbe's own ḥasidic or "central" stream, there was the so-called "young" Agudat Yisrael identified with the Lithuanian (or "Litvak") stream, and the Shomrei Emunim (Guardians of the Faith) or Jerusalem stream.

When Yehudah Leib Levin died in 1981 he was replaced by a troika of three editors, Ḥayyim Knopf, Moshe Akiva Druck, and Yisroel Spiegel, representing the ḥasidic, Shom-

rei Emunim, and Lithuanian streams, respectively. In practice, while Knopf formally had the title of editor he handled the newspaper's business side, the editing being done by Druck and Spiegel on a rotation basis.

During the Levin period, the newspaper included four pages daily and six–eight pages on Sabbath and holiday eves. Content comprised mostly political news, including the full texts of speeches by its Knesset representatives, as well as news about the ḥaredi community. Supplements occasionally appeared such as to mark the death of a famous sage. Under the “troika,” news coverage expanded to include national, financial, and foreign news.

The Lithuanian stream withdrew to form its own paper, **Yated Ne'eman*, in 1985 after Rabbi Eliezer *Shach resigned from the Council of Torah Sages over the question of the construction of a hotel in Tiberias on the site of Jewish graves. Shach was affronted by the newspaper's preference in 1982 for the Gur Rebbe's lenient ruling in the face of Shach's more stringent one in the matter. *Ha-Modi'a* subsequently became identified publicly with the ḥasidic stream of ḥaredim.

On Druck's death in 1992, he was replaced by Itzhak Tenenbaum. By 2000, Yisroel Schneider (of the ḥasidic or “central” stream) had become Knopf's right-hand man as acting editor. News coverage was expanded with special correspondents covering politics in addition to the Knesset, the military, economics, Jerusalem, and Bene Berak. A weekly economics supplement was introduced.

In addition to party journalism, *Ha-Modi'a* acts as an educational instrument in both an active and passive or filtering sense. The newspaper is controlled by a spiritual committee, whose censors examine the contents – editorial and advertisements – of each issue prior to publication. Sex-related matters and pictures of women are not printed in order to comply with ḥaredi strictures about modesty (*zeniyyut*). The names of women journalists on the newspaper are abbreviated. Crime is barely covered, entertainment and sport not at all. In aspiring to build the model Jewish society, the ḥaredi newspaper is also a channel for conditioning readers in the historical ḥaredi view of Zionism as premature vis-à-vis the arrival of the Messiah, and for attacking state institutions like the Knesset and the Supreme Court for making decisions regarded as running counter to Torah values.

In the face of competition from a commercial ḥaredi press in the 1980s and 1990s the newspaper expanded. On Sabbath eve the newspaper has two supplements: one for general news features and a religious section containing articles by rabbis on the week's Bible reading, halakhic issues, and Jewish history. The separate religious section allows the ḥaredi Jew to avoid reading about non-religious matters on the Sabbath. Also added was a 16-page children's supplement. *Ha-Modi'a's* layout was conservative, with small print and headlines, though it added color.

In 2005, 25% of ḥaredim saw *Ha-Modi'a* daily and 26% on weekends. A 1995 survey found that 65% of *Ha-Modi'a* readers were ḥasidim, 31% were “uncommitted” ḥaredim (only 9% of

Lithuanian ḥaredim saw the paper). Its influence was particularly wide given the fact that ḥaredim are not exposed to television or to secular newspapers. Economically, *Ha-Modi'a* was strapped financially, but the demographic trend toward large families in the ḥaredi community suggested that the newspaper's long-term chances for success were good.

Ha-Modi'a introduced three English-language daily and weekly editions, in Israel, the U.S., and Britain. The estimated circulation of the U.S. edition was 40,000. In accordance with the ḥaredi rabbinical ban on Internet, the newspaper does not maintain a website.

[Yoel Cohen (2nd ed.)]

HAMON, family of Spanish and Portuguese origin which lived in *Turkey. ISAAC HAMON (second half of 15th century) was a physician in the court of King Abdallah of Granada. Following the Spanish expulsion the family settled in the *Ottoman Empire, where its members rapidly achieved fame as physicians of considerable influence in the courts of the sultans. JOSEPH HAMON “THE ELDER” (c. 1450–1518), a native of Granada, was the son of Isaac Hamon and settled in *Istanbul in 1492/93, just after the expulsion from Spain. He was court physician to the sultans *Byazid II (1481–1512) and Selim I (1512–20), and it seems that he was also the latter's counselor. Hamon accompanied the latter in his military expedition to *Egypt from 1516 to 1517 and died of disease in *Damascus during the return journey in 1518. According to Rabbi Joseph Garcon, Joseph served the two sultans for 25 years. His influence at the court of the sultan enabled him to assist his coreligionists when they were in danger. The best known and most important member of the Hamon family was his son MOSES (c. 1490–1554), who succeeded his father as the physician of the sultan Selim I and was also physician to *Suleiman the Magnificent (1520–1566). Moses soon became the leading court physician. He also wielded extensive influence as a result of his connections with the powerful court party, led by Roxolana-Khūrram, the favorite wife of Suleiman, and her son-in-law, the chief vizier Rustum Pasha. Shortly before his death, he was dismissed as a result of court intrigues. In times of need Moses employed his influence to help his brother Jews. For example, he obtained a firman from Suleiman the Magnificent protecting the Jews from *blood libels. According to this decree, all such libels were to be brought by the accusers before the Royal Dīwān instead of before an ordinary judge. Hamon also intervened with Sultan Suleiman in the affair of the properties of Gracia Mendes *Nasi, which had been confiscated in *Venice. When the community of *Salonica appealed to him (between 1539 and 1545) for assistance in dealing with powerful members who had disturbed the communal discipline by

flouting new regulations, he had them brought to Constantinople where they were penalized by the government, which upon his request also sent a judge and an official to supervise the execution of the regulations.

Moses and his descendants (who are referred to as Ev-lad-i Musa, "children of Moses," in official documents) were exempted from the payment of certain taxes in recognition of their services to the country. Moses, who accompanied Suleiman in his campaign against *Persia in 1534, returned from *Baghdad with R. Jacob b. Joseph *Tavus, who, with the financial support of Moses, published the Torah, together with his own Persian translation and the Arabic translation of *Saadia Gaon in 1546. In the synagogue, which was named after him, Moses maintained a yeshivah which was headed by R. Joseph *Taitazak of Salonica. He owned a valuable and rare collection of manuscripts, which included the *Codex Dioscorides* (a famous pharmaceutical work) of the sixth century which is now in Vienna. He also wrote several works on medicine, including an important one on dental cure, which is to be found in the Istanbul University Library.

JUDAH HAMON (d. 1578) was a court physician who settled in Adrianople and died there when he was 74 years old.

ABRAHAM YESHA HAMON (17th century), a descendant of Moses Hamon, was one of the Istanbul community's wealthy figures. He was known as a philanthropist and traveled to Venice in order to help the captives there. His name is mentioned in a letter from Istanbul's rabbis to Venice in 1675.

JOSEPH (d. 1577) son of Moses, was the physician of Suleiman the Magnificent and Selim II (1566–74). From the latter, he obtained the renewal of the rights of the Jews of Salonica in 1568. It appears that between 1559 and 1560, he maintained relations with the renowned Jewish physician in Salonica, *Amatus Lusitanus. Joseph belonged to the literary circle of Istanbul, which was led by Gedaliah *Ibn Yahia and which included the poets Saadia Longo and Judah Zarko. Like his father, he also acted as a patron of Hebrew poets. His widow, Korshi, wrote a letter to Rabbi Judah *Abrabanel in 1578 in which she mentioned her children Judah and Av Hamon and her daughter and her son-in-law David.

JUDAH (d. 1644) was listed among the Jewish physicians serving Sultan Murad IV in 1618. He died childless and his will was discussed by the rabbis of Istanbul in 1644.

AV HAMON (d. c. 1650) was one of the renowned scholars of Istanbul in the 17th century who was involved in 1641 in the dispute about the rabbinate in the Sephardi congregation Neve Shalom. At that time he was old. In 1644 he requested the nullification of his brother Judah Hamon's will. His brother had bequeathed his property to scholars. The rabbis of Istanbul objected to Rabbi Av Hamon's request.

ISAAC (16th–17th century), another son of Joseph, also a physician. He declined a proposal of the Spanish government, which offered him a sum of money if he influenced the Ottoman government in negotiating a peace treaty with Spain. He was the father of the poet Aaron ben Isaac *Hamon.

In Istanbul there existed in the years 1603 and 1649 a so-called Hamon congregation.

HAMON, AARON BEN ISAAC (early 18th century), Hebrew poet. Hamon, who lived in Constantinople and Adrianople, wrote a preface to Reuben Mizrahi's *Ma'yan Gannim* (Constantinople, 1721): a poem published in Isaac Cheleby's *Semol Yisrael* (Constantinople, 1723), in which all the words begin with the letter *ש* (*sin*); and a considerable number of devotional poems. The latter are included in the poetry collections of Turkish Jews, and some of them even in the Karaitic liturgy. He was influenced by the poetry of Israel *Najara and the latter's contemporaries. Hamon's poetry was popular and widely read.

HAMON, LEO (Goldenberg; 1908–1993), French lawyer and politician. Born in Paris to a family of Polish immigrants, Hamon practiced as a lawyer and following the fall of France in 1940 joined the Resistance. He was a member of the French Provisional Assembly (1944–45) and sat as a senator for the Seine department from 1945 to 1958. Hamon was a founding member of the Movement Republicain Populaire (MRP) but in 1954 joined the pro-Gaullist Jeune République. He continued to support de Gaulle after the latter became president of France in 1958 and in June 1969 was appointed spokesman of the French cabinet. Hamon was a professor of law at the University of Dijon from 1959 to 1960 and for the next four years at the Institut des Hautes Etudes d'Outre-mer. He served as vice chairman of the national television planning committee

from 1965 to 1969 and was later a member of the Research Center in Constitutional Law of Paris 1 University. In June 1972 Hamon was appointed to a special post as secretary of state for “participation,” i.e., the process of the participation of workers in the running of factories, in the government of Chaban Delmas, but held the position for only seven weeks, ceasing to be a minister when a reshuffle took place in July. His writings include *Le Conseil d’Etat juge du fait* (thesis, 1932), *De Gaulle dans la République* (1958), *La France et la guerre de demain...* (1967), *Une République présidentielle?: institutions et vie politique de la France actuelle* (with X. Delcros, 1975), *Socialisme et pluralité* (1976), *Acteurs et données de l’Histoire* (1979), *Juges de la loi: naissance et rôle d’un contre-pouvoir: le Conseil Constitutionnel* (1987), and *Lettre au Président de la République nouvellement élu* (1988). In 1991 he published his autobiography, *Vivre ses choix*, and a year later, in collaboration with R. Poznanski, an historical work on the life of Parisian Jews during the first months of the Nazi occupation: *Avant les premières grandes rafle: les juifs à Paris sous l’Occupation, juin 1940–avril 1941*.

HAMOR (Heb. חָמוֹר; “ass”), the leading citizen of the town of Shechem in the time of the patriarch Jacob; his son was called Shechem (see *Dinah). Jacob bought a parcel of land from the sons of Hamor and built an altar upon it (Gen. 33:19–20). Joseph’s bones were buried on this ground by the children of Israel when they returned from Egypt (Josh. 24:32). There are mutually contradictory data on the ethnic character of Hamor. In Genesis 34:2 he is called a Hivite, prince of the land. In the Alexandrine Septuagint he is called the Horite; while Genesis 48:22 indicates that the Amorites ruled in Shechem.

Hamor and his son were killed by Simeon and Levi in revenge for Shechem’s dishonoring of their sister Dinah, after which the city was plundered and destroyed (Gen. 34). This deed aroused the anger of their father, Jacob (Gen. 34:30), and echoes of this linger in his deathbed blessings (Gen. 49:5–6). In S. Yeivin’s view, this story would appear to be an early description of the domination by two of the Israelite tribes over a region of the land; therefore there is no mention of wars of conquest in the region of the hills of Ephraim in connection with the settlement of the land by the tribes (but see Bibliography for *Dinah).

The name Hamor is associated with the dwellers of Shechem in the days of *Abimelech: “Who is Abimelech and who is Shechem that we should serve him? Did not the son of Jerubbaal and his officer, Zebul, once serve the men of Hamor, the father of Shechem?” (Judg. 9:28). W.F. Albright believed, on the basis of Mari documents in which the phrase “to kill an ass” means “to conclude an alliance,” that the phrase “the men of Hamor” as applied to the Shechemites during this period designates them as “allies.” F. Willeson found further evidence for this hypothesis in a South Arabian inscription in which the word *ḥmryn* seems to mean entering into an alliance. The temple of the Shechemites is called Beth-El-Berith (“house of the god of the covenant or alliance”; Judg. 9:46).

On the basis of the Arslan Tash (between Carchemish and Harran) plaques, Albright tried to identify the god bearing this epithet as the Canaanite Horon (see *Beth-Horon), god of treaties. The name Hamor (Himār) also occurs as a proper name among the early Arabs.

[Ephraim Stern]

ḤANA BAR ḤANILAI (end of the third century C.E.), Babylonian *amora*. Ḥana belonged to the circle of R. *Huna (Meg. 27a), for whom he showed great respect, regarding himself as his pupil. When he saw R. Huna carrying his tools on his shoulder, he took them from him to relieve him of his burden (Meg. 28a). Ḥana was, apparently, a leader of the community in his city (Meg. 27a). He was well known for his wealth and famed for his charity. R. *Ḥisda states that there were 60 bakers working in his house during the day and a similar number during the night to provide bread for the poor; that his hand was always in his purse, ready to extend help to any deserving poor, sparing them the embarrassment of waiting; that the house had entrances on all four sides to facilitate their entry and anyone who entered the house hungry left it sated; also, that when there was famine in the land, he left food outside, in order that the poor who were ashamed to take it during daylight could help themselves in the darkness (Ber. 58b). Very little is known of his halakhic views; only once is he mentioned in a discussion with Ḥisda.

ḤANA BEN BIZNA (third–fourth century C.E.), Babylonian *amora*. Ḥana was primarily an aggadist, most of his statements being quoted in the name of Simeon Ḥasida (Ber. 7a; 43b; Yoma 77a, et al.), whose name is otherwise unknown. One of them is, “Better that a man throw himself into a fiery furnace than put his neighbor to shame in public” (BM 59a, et al.). His contemporary, *Sheshet, admitted that Ḥana was his superior in the field of *aggadah* (Suk. 52b). Ḥana was judge in Pumbedita in *Naḥman b. Isaac’s time (Ket. 50b; BK 12a) but he is also mentioned as being in Nehardea where, in spite of criticism he allowed himself to frequent pagan barber shops (Av. Zar. 29a). The *amora* *Joseph relied on his judgment in matters of *halakhah* (Suk. 47a).

[Zvi Kaplan]

HANAMEL (or **Hananel**; Heb. הַנְּאֵל, הַנְּאֵל), high priest in 37/36 B.C.E., reappointed in 34. According to the Mishnah (Par. 3:5) Hanamel was an Egyptian. However, Josephus states that he was a Babylonian. He was appointed high priest by Herod, who deliberately disregarded the obvious choice, Aristobulus, the younger brother of Mariamne. Herod's choice was dictated by his desire to withhold this office from any member of the Hasmonean family. In face of the protests of Alexandra and Mariamne, Herod was obliged to depose Hanamel and appoint Aristobulus in his stead, but Hanamel was restored to office after the murder of Aristobulus on Herod's instructions. The Mishnah mentions Hanamel as one of the high priests during whose term of office the *red heifer was burned.

[Abraham Schalit]

HANAN THE EGYPTIAN (second century C.E.), *tanna*. He is mentioned in a *baraita* brought a number of times in the Babylonian Talmud (Yoma 63b, Zevahim 34b and 74a, Menahot 59b, Temurah 6b; cf. Tosefta Zevahim 3:6). The other two references to him in talmudic sources are contradictory, and one of them is uncertain. He is mentioned together with ben Azai and ben Zoma, as one of “those who argued before the sages” in *Jabneh (TB Sanh. 17b). On the other hand he is placed in Jerusalem before the destruction of the Second Temple, but only as an alternative reading in the text of a *baraita* in TB Ket. 105a.

BIBLIOGRAPHY: Hyman, *Toledot*, 471.

[Zvi Kaplan]

HANANEL BEN HUSHI'EL (d. 1055/56), scholar, *posek*, and commentator. Hananel was born in *Kairouan, the son of *Hushi'el b. Elhanan. The early authorities refer to him as “of Rome,” lending credence to the suggestion of Italian origin. Like his father, he was accorded the title *resh bei rabbanan* (“chief among the rabbis”) by the Babylonian academies. After his death in Kairouan the title passed to *Nissim Gaon, his pupil. Hananel's most important work, which has not been completely preserved, was his commentary on the Talmud. Unlike Rashi, he limited himself to the subject matter only and did not give a running commentary, his main intention being to sum up the discussion and decide the *halakhah*. He relied greatly on the *geonim*, and in particular upon *Hai Gaon to whom he refers as “the *gaon*” without further qualification. In many places the commentary of Hananel is simply a word for word copy of Hai's commentary, sometime without acknowledgment. When he writes “we have received” a certain explanation – which contradicts the opinion of the *geonim* – the reference is to traditions received from his father or earlier Italian scholars, upon whose teaching he drew. The commentary contains explanations of many difficult words, chiefly in Arabic or Greek, most of which found their way into the *Arukh* of *Nathan b. Jehiel of Rome. Hananel

was the first to make frequent use of the Jerusalem *Talmud, and he regularly compares it with discussions in the Babylonian Talmud. In consequence some scholars have exaggerated the importance of his influence upon the spreading of the study of the Jerusalem Talmud in particular. In addition to the Jerusalem Talmud, he also includes much from the Tosefta and the halakhic Midrashim in his commentary. It is not certain whether the commentary covered all the six orders of the Talmud, and in particular whether he wrote commentaries to those tractates whose subjects have no practical application. The following of his commentaries are extant: *Berakhot* (collected from published books and manuscripts in B. Lewin, *Ozar ha-Ge'onim*, 1 (1928), appendix; the whole of the order *Mo'ed* (published in the standard editions of the Talmud); most of the order *Nashim* (also in *Ozar ha-Ge'onim*, 7–11 (1936–42)); most of the order *Nezikin* (in the standard Talmud); and a fragment to tractate *Hullin* (ed. by B. Lewin, in: *Sefer ha-Yovel – J.L. Fishman* (1926), 72–79). The commentaries to *Horayot* (in standard Talmud edition) and *Zevahim* (the last three chapters, ed. by I.M. Ben-Menahem (1942)) attributed to him are not by him. This list shows that he also wrote commentaries to sections not of practical application (e.g., the second half of tractate *Pesaḥim* and the fragment of *Hullin* which includes chapter 11).

Hananel's commentary gained wide circulation soon after its appearance, and served as the main bridge between the teaching of the Babylonian *geonim* and the scholars of North Africa and that of the scholars of Europe and Ereẓ Israel. *Eliezer b. Nathan was the first of the scholars of France and Germany to make use of and disseminate it, and Nathan b. Jehiel of Rome was the first of the Italian scholars. In Ereẓ Israel it was used first by *Nathan (*Av ha-yeshivah*) and in Spain by the author of *Sha'arei Shavu'ot* (see Isaac b. Reuben). Among the scholars of North Africa, extensive use was made of it by Isaac *Alfasi who copied very many of his rulings, both in his name and anonymously; in fact, the whole of Alfasi's work is based upon it. From Alfasi it passed to the scholars of Spain after him, such as *Joseph ibn Migash, *Maimonides, Meir ha-Levi *Abulafia, and others. In Germany and France the tosafists based themselves to a considerable extent on Hananel, and he is frequently quoted by them. All the *rishonim* laid great store on the readings of the Talmud embedded in his commentary, and he himself several times emphasized his readings. In addition to his commentary he wrote a *Sefer Dinim* whose nature is not known (see S. Assaf, *Teshuvot ha-Ge'onim* (1942), 51), and there are a number of citations from a book in *Hilkhot Terefot*. The *rishonim* quote his commentary to the Pentateuch and fragments of it have been collected by A. Berliner (in *Migdal Hananel*, 1876) and by J. Gad (*Sheloshah Me'orot ha-Gedolim*, 1950). Some of the *rishonim* erroneously attributed to Hananel the anonymous *Sefer Mikzot*.

[Israel Moses Ta-Shma]

HANANEL BEN SAMUEL (first half of 13th century), Egyptian (?) talmudist. There are no biographical details of Hananel, but he is known to have composed commentaries, which H.J.D. Azulai saw in manuscript, to the *Halakhot* of Isaac *Alfasi on several tractates of the Talmud. The commentaries to *Eruvin* (Margoliouth, *Cat.*, no. 479) and *Kiddushin* (Neubauer, *Cat.*, no. 438/7) are extant, but they have not yet been published. S. Abramson in his *Rav Nissim Ga'on* (1965) excerpted from the commentary to *Eruvin* many of the quotations there from Nissim Ga'on's commentary on that tractate. According to one view Hananel was head of the academy of Fostat in Egypt and Perahyah b. Nissim was his pupil. According to Steinschneider, his father was the *nagid* Abu Manzur, Samuel b. Hananiah, but in the opinion of Mann this is impossible.

[Shlomo Zalman Havlin]

HANANI, ḤAIM (1912–1991), Israeli mathematician. Hanani was born in Slupca, Poland, and studied at the universities of Vienna (1929–31) and Warsaw (1931–34), where he received his M.A. Immigrating to Erez Israel in 1935, he obtained his doctorate in mathematics from the Hebrew University in 1938. On his arrival in Erez Israel, Hanani joined the Betar movement and later the Irgun Zeva'i Le'ummi, playing a central role in its activities in Jerusalem. As a result, he was arrested by the British in 1944 and, after a period of imprisonment at Latrun, was sent to detainee camps in Eritrea and Kenya. Returning to Israel after his release in 1948, he held various teaching posts, and was appointed associate professor of mathematics at the Technion, Israel Institute of Technology in 1955 and full professor in 1962. He was also dean of the faculty of mathematics. As adviser to the Ministry of Education from 1964 to 1967, Hanani urged the establishment of an institute of higher learning in the Negev, and when it became the University of the Negev in 1969 he was appointed its first rector. He has published numerous articles in the field of mathematics in Hebrew, German, French, and English.

HANANIAH (Hanina), nephew of Joshua b. Hananiah (second century C.E.), *tanna*. Some are of the opinion that Hananiah was the son of Judah b. Hananiah who is mentioned in a single source as the author of an aggadic statement (Sif. Deut. 306), but there is no doubt that his teacher was his uncle *Joshua b. Hananiah (Nid. 24b), and probably for this reason he is usually referred to as “Hananiah, nephew of Joshua b. Hananiah.” The Talmud tells that when in Simonia, he gave

a ruling without having authority to do so. R. Gamaliel expressed his displeasure until Joshua sent him a message, “It was on my instructions that Hananiah gave the ruling” (Nid. 24b). It also relates that on one occasion Hananiah went to Babylon during the lifetime of his uncle and then returned to Erez Israel (Suk. 20b). This tradition may be connected to the incident described in a tannaitic Midrash, which states that while on their journey: “they remembered Israel ... and they burst into tears and rent their garments... and returned to their place, saying: ‘Dwelling in Israel is equivalent to all the precepts of the Torah’” (Sif. Deut. 80). For a reason that is not clear (Eccles. R. 1:8, 4), it seems that he returned to Babylonia where he remained until his death. In the well-known *baraita* that enumerates those scholars to whose locality it is worth going to study, he is mentioned: “After Hananiah, the nephew of Joshua, to the exile” (Sanh. 32b). According to the Talmud, Hananiah was the greatest of the scholars in Erez Israel at the time of the Hadrianic persecutions which followed the failure of the Bar Kokhba revolt in 135, and with his departure the power of the Sanhedrin was diminished. As a result Hananiah permitted himself “to intercalate the years and to fix the new moons” in exile, in conformity with the *halakhah* that the greatest among the ordained scholars of the generation may do so outside Erez Israel if he has not left his equal in the land. He continued to do so after the persecutions abated and Erez Israel again became the center of Torah, because he regarded himself as the outstanding scholar of the generation and the scholars of Erez Israel as inferior to him. The Jews of Babylonia followed his calendar, and in consequence the scholars of Erez Israel took vigorous steps against him. Representatives were sent from Erez Israel to Babylonia, but even after *Judah b. Bathyra of Nisibis demanded that the authority of the center in Erez Israel be accepted, Hananiah refused to obey (TJ, Ned. 6:8; TB, Ber. 63a–b). Probably the most famous *halakhah* associated with the name Hananiah is the dictum quoted in TB Shab. 12a, 20a, et al. However, it has recently been questioned whether this *halakhah*, in the form in which it is brought in the Babylonian Talmud, can be of tannaitic origin (Friedman). In line with this, it has been suggested that behind this *halakhah*, ascribed in the Babylonian Talmud to the *tanna* Hananiah, lies a tradition ascribed in the Jerusalem Talmud to the *amora* Hananiah (Hanina) “comrade of the Rabbis” (Wald).

[Zvi Kaplan]

HANANIAH (Hanina) BEN ḤAKHINAI (sometimes referred to simply as **Ben Hakhinai**; middle of the second century C.E.), *tanna* in Erez Israel. Hananiah was “one of those who debated before the sages” in *Jabneh (Sanh. 17b). He was one of the distinguished pupils of *Akiva (Tosef. Ber. 4:18), who also taught him mystic lore (Tosef., Ḥag. 2:2; Ḥag. 14b).

He studied with Akiva in Bene-Berak for 12 years without once returning home (Ket. 62b), and his wife was held up as an example of a “helpmeet for him” because of her forbearance (Gen. R. 17:3). He then dwelt apparently in Sidon from where he sent a query to Akiva (Nid. 52b). He is quoted three times in the Mishnah, *Kilayim* 4:8, *Makkot* 3:9, and in *Avot* 3:4, where he states: “He who wakes up at night, or he who goes on his way alone, and turns his heart to idle thoughts, sins against himself.” He is also mentioned several times in the Tosefta, one of his dicta there being: “He who deals falsely with his fellow denies God” (Shevu. 3:6). He also knew many languages (TJ, Shek. 5:1, 48d). According to one version in a late Midrash he was one of the *Ten Martyrs.

BIBLIOGRAPHY: Hyman, *Toledot*, s.v.

[Zvi Kaplan]

HANANIAH (Hanina) BEN TERADYON (second century C.E.), *tanna* during the *Jabneh era, and martyr. Two halakhic precedents are brought in his name (Ta’an. 2:5; Tosef. Ta’anit 1:13), and a small number of explicit dicta in *halakhah* and *aggadah* are ascribed to him (Tosef. Mik. 6:3, cf. Men. 54a; Avot 3:2). A halakhic dispute between his son and his daughter is mentioned in the Tosefta (Kel. BK 4:17), and Sifre Deut. 307 briefly relates the story of his martyrdom, mentioning also his daughter. These traditions concerning his life, his family, and his martyrdom are further elaborated in the later talmudic *aggadah*. According to tradition, Hananiah was head of the yeshivah of *Sikhnin in Galilee (Sanh. 32b). When the news of the martyrdom of Akiva at Caesarea reached *Judah b. Bava and Hananiah, they said that his death was an omen that the land of Israel would soon be filled with corpses and the city councils (*Boule) of Judea abrogated (cf. Sem. 8:9, Higger’s edition p. 154–5). This was apparently a reference to the destruction of Judea which followed the crushing of the *Bar Kokhba revolt and to the ensuing religious persecution by Hadrian. Hananiah’s martyrdom was apparently also a part of these persecutions. He was sentenced to death for teaching the Torah and holding public gatherings in defiance of the prohibition against it, in order to foster Judaism. Unlike *Eleazar b. Parta who was arrested with him, Hananiah, when interrogated, admitted that he had been teaching Torah, since it was a divine command. He was sentenced to be burnt at the stake, his wife to be executed, and his daughter sold to a brothel. All three accepted their fate with equanimity, justifying the way of God, except that Hananiah was distressed that he had devoted himself only to study and not to philanthropic activity. He was burnt at the stake wrapped in the *Sefer Torah* (which he had been holding when arrested). To prolong his agony tufts of wool soaked in water were placed over his heart so that he should not die quickly. In answer to the wonder of his daughter at the fortitude with which he bore his sufferings, he answered, “He who will have regard for the plight of the *Sefer Torah*, will also have regard for my plight.” It is stated that the executioner (*quaestionarius*), moved by his sufferings, removed the tufts and increased the heat of the fire,

and when Hananiah expired he too jumped into the flames, whereupon a heavenly voice proclaimed that the two “are assigned to the world to come” (Av. Zar. 17b–18a; Sem. 8:12, D.T. Higger’s edition p. 157–9). His daughter, who had been consigned to a brothel, preserved her virtue, and was eventually ransomed by *Meir who had married her sister, the learned *Beruryah. It is also related that one of Hananiah’s sons associated with robbers (possibly the reference is to a group of political rebels) and when he was put to death, Hananiah would not permit him to be eulogized but applied to him censorious verses from the Bible (Lam. R. 3:16, No. 6; Sem. 12:13, Higger’s edition p. 199–200). In the stories of the *Ten Martyrs in the **heikhalot* literature, the account of Hananiah’s martyrdom is further embellished with mystical additions.

[Moshe David Herr]

HANANIAH (Hanina) OF SEPPHORIS, Palestinian *amora* (late fourth century. C.E.). Probably a disciple of R. Phinehas, many of whose teachings he transmitted (TJ, Ma’as. 3:3, 50c; TJ, Or. 1:8, 61c, et al.), he is mentioned frequently in halakhic and aggadic conflict with his friend and contemporary Mana b. Jonah (TJ, Ḥal. 2:2, 58c; TJ, Pes. 3:1, 30a, et al.; also, TJ, Ber. 3:1, 6a; TJ, Ket. 1:2, 25b) who may have been his brother (TJ, MK 3:5, 82d). After the death of R. Jonah, Hananiah was head of the academy of Sepphoris but later resigned from his post in favor of Mana, and assumed the position of student under him (TJ, Ma’as. Sh. 3:9, 54c; TJ, Yev. 3:4, 4d, et al.). Because of this R. Hananiah was listed among those “who have relinquished their crown in this world, to inherit the glory of the world to come” (TJ, Pes. 6:33a). There is a geonic tradition to the effect that Hananiah emigrated to Babylonia (*Teshuvot ha-Geonim* Harkavy, §248), where he joined the circle of Rav Ashi (BB 25b; Ḥul. 139b); however it is obvious that, for chronological reasons, it is necessary to differentiate between the two Hananiahs.

[Zvi Kaplan]

HANANIAH SON OF AZZUR (Heb. חַנְיָיָה בֶּן עֲזֻרָה), of Gibeon, prophet, contemporary of the prophet *Jeremiah (Jer. 28:1) and opposed to his teachings. Hananiah prophesied that Judah would be freed of the yoke of Babylon, that the Temple vessels would be returned, and that Jeconiah (i.e., Jehoiachin), the son of *Jehoiakim, king of Judah, would be restored as king in Jerusalem. The setting of his prophecy, as proclaimed in the fourth year of Zedekiah’s reign of Judah (593 B.C.E.; Jer. 28:2–4), was the gathering of the representatives of Edom, Moab, Ammon, Tyre, and Sidon in Jerusalem to plan a coordinated activity against *Nebuchadnezzar. Jeremiah argued against this treaty in the name of God, for it would not succeed. He put a yoke on his neck to symbolize the yoke of Nebuchadnezzar and the kingdom of Babylon im-

posed by God for three generations (*ibid.* 27:1ff.). Thus, the prophets in Judah who predicted that all the Temple vessels and Jeconiah would be returned from Babylon were speaking false prophecies. It is not known whether Hananiah prophesied together with those prophets, or separately, though his prophecy coincided with theirs. To Hananiah Jeremiah responded “Amen” in bitter irony, but he added that a true prophet can only be one whose prophecies for good are fulfilled (cf. Deut. 18:18–22). Thus, in two years they would know if Hananiah spoke the truth. Hananiah, to give credence to his words, broke the yoke off Jeremiah’s neck in public, as a sign of the breaking of the yoke of Nebuchadnezzar (Jer. 28:10–11). Jeremiah proclaimed that the act was, on the contrary, not a symbol of the breaking of the yoke, but of the replacement of the wooden yoke by an iron one. He also predicted that Hananiah would die in that same year, and three months later Hananiah died (28:16–17).

[Yehoshua M. Grintz]

In the Aggadah

Hananiah was one of the prophets who misused the gifts with which he had been divinely endowed (Sif. Deut. 84). He is particularly criticized for using Jeremiah’s prophecy of the defeat of Elam (Jer. 49:35) as the basis of his own forecast that a similar fate would befall the Babylonians (Jer. 28:2). He reached this conclusion, not as a result of prophecy, but by reasoning, arguing: “If Elam, which only came to assist Babylon, will be broken; how much more certain is it that Babylon itself will be destroyed” (Sanh. 89a). Jeremiah then challenged Hananiah to give some sign to indicate the validity of his prophecy that God would perform this miracle “within two full years” (Jer. 28:3). Hananiah retorted that Jeremiah first had to give some sign that his prophecies of gloom would be fulfilled. Initially reluctant to do so (because God’s evil decrees can always be averted by repentance), Jeremiah eventually prophesied that Hananiah would die that same year. This prophecy was fulfilled; the reference to his death in the “seventh month” (which commences a new year), indicates that he died on the eve of Rosh Ha-Shanah, but commanded his family to keep the death secret for a few days in an attempt to discredit Jeremiah (TJ, Sanh. 11:5).

HANAU, city near Frankfurt, Germany. The earliest documentary evidence for the presence of Jews in Hanau dates from 1313. During the *Black Death persecutions in 1349 the Jewish community of Hanau was destroyed and its synagogue confiscated. There were no more Jews in the city until 1429 when there were again two Jewish families living there. In 1603 Count Philip Ludwig II granted 10 Jewish families a privilege (*Judenstaettigkeit*) allowing them to settle in Hanau, build a special quarter (*Judengasse*), and erect a synagogue, which

was dedicated in 1608. Previously, Jewish families had brought their dead to Frankfurt and then Windecken for burial, but a cemetery was consecrated in Hanau itself in 1603. By 1607 the community had grown to 159; 100 years later there were 111 families, or 600 to 700 individuals, resident in the city. In 1659 a conference of notables representing five Jewish communities took place in Hanau. Among the many talmudic scholars active in Hanau in the 17th and 18th centuries, best known was R. Tuviah Sontheim (1755–1830), *Landrabbiner* from 1798, and chief rabbi for the whole province of Hanau from 1824 to 1830. He was followed in office by Samson Felsenstein (1835–82).

In the 17th and 18th centuries Hanau developed into an important center of Hebrew printing. From Hans Jacob Hen’s press, which was established in 1610, issued such important works as responsa by Jacob *Weil, Solomon b. Abraham *Adret, and Judah *Minz as well as Jacob b. Asher’s *Arba’ah Turim*. Employing both Jews and gentiles, this press produced a great number of rabbinic, kabbalistic, and liturgical items within about 20 years. A hundred years later Hebrew printing was resumed in the city by H.J. Bashuysen, who published Isaac Abrabanel’s Pentateuch commentary (1709). In 1714 Bashuysen’s press was taken over by J.J. Beausang and was active until 1797.

During the last quarter of the 18th century several Court Jews lived in Hanau, mainly occupied as suppliers of the army. From 1806 the Jews were allowed to live in any part of the town, but full emancipation was not granted until 1866. The community numbered 540 persons in 1805, 80 families in 1830, 447 persons in 1871, and 657 at the turn of the century. In 1925 there were 568 Jews in Hanau and 447 in 1933. At that time there existed a synagogue, a cemetery, three charitable societies, and a religious school attended by 75 children.

Jews were active in many aspects of the commercial and industrial life of the town. However, Nazi economic boycotts had a telling effect so that the number of Jews had dwindled by May 1939 to 107. On Nov. 9/10, 1938, the synagogue was burned to the ground; the site was later cleared and title to it transferred to the city. The teachers’ quarters owned by the community were demolished and many gravestones at the Jewish cemetery were overturned. The last 26 Jews of Hanau were deported in 1942 to Auschwitz and Theresienstadt. Another five Jews, partners of mixed marriages, remained in the town. In 1968, a few Jews resided in Hanau. In 2005 a Jewish community with about 130 members was refounded. The majority of the members were immigrants from the former Soviet Union.

HANAU, SOLOMON ZALMAN BEN JUDAH LOEB HA-KOHEN (1687–1746), Hebrew grammarian. Born in *Hanau where his father served as cantor, Solomon Hanau taught at Frankfurt. There, in 1708, he published *Binyan Shelomo*, a Hebrew grammar written in the form of casuistic criticism of earlier grammarians. The criticism led to resentment, and the leaders of the Frankfurt community demanded that he add to his work an apology to those whom he had “offended.” Hanau moved to Hamburg. There he taught for a number of years and continued his linguistic research. He published *Sha'arei Torah* (Hamburg, 1718). The book was based on “natural inquiry” (i.e., on independent investigation of the language, deviating from traditional grammar wherever the author deemed it necessary). A brief essay on the scriptural accents, “*Sha'arei Zimrah*,” was added to the book. *Yesod ha-Nikkud* (Amsterdam, 1730) is another minor work on the subject. His most famous work, *Zohar ha-Tevah* (Berlin, 1733), published in at least 12 editions, includes all his grammatical innovations. It influenced numerous grammarians of the Haskalah and the Revival period of the Hebrew language and was the book which set *Ben Yehuda (according to the latter's own statement) on the course which made him revive spoken Hebrew. Hanau answered the attacks of his adversaries in *Kurei Akkavish* (Fuerth, 1744).

In *Binyan Shelomo*, Hanau had already mentioned the linguistic “errors” (i.e., non-biblical-forms) contained in contemporaneous prayer books, and in *Sha'arei Tefillah* (Jessnitz, 1725, and three other editions) he recorded a number of these errors with his corrections. Apparently the book aroused the anger of the conservatives, and Hanau was compelled to leave Hamburg. He went to Amsterdam; a few years later he returned to Germany where he wandered from city to city (among others, Fuerth and Berlin), and died in Hanover. In 1735, while in Copenhagen, Hanau was engaged as a private tutor to Naphtali Herz *Wessely, then aged 10; Hanau, it seems instilled in his pupil an affection for the Bible and the study of the Hebrew language. Several essays by Hanau have survived in manuscript form, including *Ma'aseh Oreg*, an explanation of the grammatical passages in Rashi's commentary on the Torah, *Mishpat Leshon ha-Kodesh*, philosophical writings and commentaries on the Bible, and *Shivah Kokhevei Lekhet*, a work in Yiddish on the calendar.

[Chaim M. Rabin]

HANBURY, LILY (1874–1908), British actress, member of the Davis family which also included Julia *Neilson. She made her debut at the Savoy Theatre, London, in 1888, in a revival of W.S. Gilbert's *Pygmalion and Galatea*. Thereafter she acted under the management of Wilson Barrett and later Beerbohm Tree at His Majesty's Theatre, appearing in Shakespeare, Sheridan, and Ibsen. Her most successful roles were Ophelia, Portia, and Calpurnia. She married Herbert Guedalla in 1905.

HANDALI, ESTHER (d. ca. 1590), most famous among several Jewish women, known as **kieras*, who performed various services for the women of the royal harems in Istanbul. Handali, of Sephardi origin, worked with her merchant husband, Elijah Handali, as an intermediary with the royal harem, buying and selling cosmetics, clothing, and jewelry. After her husband's death, and probably after the death of a previous *kiera*, the Karaite Strongilah, she began her independent activities in the harem of Sultan *Suleiman the Magnificent (1520–66). After the accession of Sultan Selim II to the throne Esther became the *kiera* of Nur Banu, Selim's beloved Venetian consort. This powerful and influential lady trusted and relied on her *kiera*, even when she became mother of a reigning sultan, following the accession of her son, Murad III (1574–95). Besides her services as supplier of luxury goods, Handali acted as a reliable intermediary, personal emissary, translator, and trustee at the highest levels, accumulating, during her many years at the court, a great fortune. Esther took part in Nur Banu's correspondence with the doge and senate of Venice. In a letter of December 18, 1582, written in Spanish, she mentioned some of her negotiating skills and discreet services on behalf of both sides. Nur Banu's two letters of September 1583 requested the Venetians to grant her *kiera*'s son, Salamon, a permit to conduct a lottery in Venice of “certain jewels which are suitable for Franks” (Skilliter, *The Letters*, p. 526).

Hebrew sources emphasize Esther's generosity and her acts of charity both covert and public. She used her money and connections to assist the needy in the Jewish community of *Istanbul, supporting widows and orphans as well as destitute merchants, sponsoring scholars, and subsidizing publications of Hebrew books. Following the great fire in Istanbul (1569) many refugees found shelter in her house. Esther Handali probably died around the year 1590, at a time when another well-known *kiera*, *Esperanza Malchi, was at the peak of her power. Due to the inconsistency of the sources and the fact that *kieras* were not always mentioned by name, Malchi's murder in 1600 has been wrongly connected with Handali.

Marazzi (eds.), *Studia Turcologica Memoriae Alexii Bombaci Dicata* (1982), 515–36; M. Rozen, *A History of the Jewish Community in Istanbul: The Formative Years (1453–1566)* (2002), 205–7.

[Ruth Lamdan (2nd ed.)]

HANDALI, JOSHUA BEN JOSEPH (17th century), Turkish rabbi. Handali was born in Skopje in Yugoslavia. In his youth he moved to Salonika, where he studied under Ḥayyim Shabbetai. His first work, written in 1613, was a pamphlet on the laws pertaining to gifts from a groom to his bride (*sivlonot*). He was recognized as a halakhic authority and various Balkan communities turned to him with their problems. In 1621 he moved to Safed, where he was one of the pioneers of the Jewish resettlement. He later settled in Jerusalem where he is mentioned as being involved in the Shabbetai Zevi controversy. Toward the end of his life he interested himself in Kab-

balah. Some of his responsa are included in his *Penei Yehoshua* (included in the collection *Me'orot ha-Gedolim*, Constantino-ple, 1739), and others in the *Benei Aharon* by Aaron Lapapa (Smyrna, 1674).

[Simon Marcus]

HANDELSMAN, MARCELI (1882–1945), Polish historiographer. Born in Warsaw, Handelsman served as professor of general history at Warsaw University from 1915. He was head of the Warsaw Institute for History, and a member of the Académie des Sciences Morales et Politiques in Paris. Handelsman's historical research covered several fields. His first study dealt with punishment in early Polish law (*Kara w najdawniejszym prawie polskim*, 1907). His main areas of interest were the history of Poland from the time of its first partition in 1772, the Napoleonic era, and Franco-Polish relations. In these fields he published the following books: *Napoléon et la Pologne, 1806–07* (1909); *Francja-Polska 1795–1845* (1926); *Les Idées françaises et la mentalité politique en Pologne au XIX^e siècle* (1927). Handelsman also wrote essays of general historiographical importance, on the development of the present-day nationalism, and on methodology and the interpretation of history. He had a progressive-realistic attitude to historical research and opposed the romantic-conservative school. Although he had converted to Christianity Handelsman was sent by the Germans to the Nordhausen concentration camp where he died.

HANDLER, MILTON (1903–1998), U.S. attorney. Handler was born in New York City. He graduated from Columbia Law School (1926) and served on its faculty from 1927. A specialist in trademarks and antitrust law in both private and public practice, Handler held posts on the National Labor Board, serving as special adviser to the Department of Agriculture (1933–34), U.S. Treasury Department (1938–40), Lend-Lease Administration (1942–43), Foreign Economic Administration, of which he was special counsel, and the U.S. attorney general's national committee to study antitrust laws (1953–55). In 1955–56 he was the chairman of the Special Commission to Study N.Y. State Antitrust Legislation.

During the movement for Israel's independence, Handler was chairman of the American Jewish Conference's Palestine Committee, member of the American Zionist Emergency Council (1944–48), and co-author of a report on Palestine submitted to the United Nations in 1947. In 1969 he was appointed chairman of the American Friends of the Hebrew University.

He retired from teaching at Columbia in 1972 and was named professor emeritus. In his honor, the Milton Handler Chair in Trade Regulation was established in 1974 at the Columbia University School of Law. Other honors accorded Han-

dlar include the Scopus Award from the American Friends of the Hebrew University (1963), the Medal of Excellence awarded by Columbia Law Alumni (1976), the Outstanding Research in Law and Government Award from the Fellows of the American Bar Association (1977), the Human Relations Award of the Lawyers' Division of the Anti-Defamation League Appeal (1979), and the John Sherman Award from the Antitrust Division of the U.S. Justice Department (1988).

Handler's books and articles include *Antitrust in Perspective* (1957), *Cases and Materials on Trade Regulation* (ed., 1967⁴), and *Twenty-five Years of Antitrust* (1973).

His wife, MIRIAM HANDLER, was active in American Jewish support for Israel. She served on the U.S. Manpower Commission Training within Industry (1943–45), was a member of the Hadassah National Board from 1947, and held other leadership positions with the American Friends of the Hebrew University and the American-Israel Cultural Foundation. In 1975 the Handler Auditorium on Mount Scopus at the Hebrew University in Jerusalem was dedicated in their name.

[Ruth Beloff (2nd ed.)]

HANDLER, PHILIP (1917–1981), U.S. biochemist. Born on a New Jersey farm, Handler taught at Duke University, North Carolina, from 1939. He was a professor of biochemistry there from 1950 and in 1960 assumed the chair of biochemistry at the university. Handler's early research dealt with pellagra, a dietary deficiency disease. He and his collaborators showed that the vitamin nicotinic acid was a component of NAD and NADP, two coenzymes important in electron transfer in cells. Handler's later research was concerned with niacin and choline deficiency, purine metabolism, hypertension, and parathyroid tumors. Handler served at various times as president of the American Society of Biochemists and of the Federation of American Societies for Experimental Biology. He held leading positions in the National Science Foundation, including the chairmanship of the National Science Board, its policy-making body. In 1964 Handler was appointed to the President's Science Advisory Committee. In the same year he was elected to membership of the National Academy of Sciences and in 1969 became president of the Academy, a position he held until June 1981. In October 1981 he was awarded the National Medal of Science by President Reagan. He died in December of that year.

He was coauthor of *Principles of Biochemistry* (1954) and from 1957 was the editor of *Geriatrics*.

[Samuel Aaron Miller]

HANDLER, RUTH MOSKO (1916–2002), U.S. entrepreneur, toy manufacturer, inventor of the Barbie doll and the Nearly Me breast prosthesis. Handler was born in Denver to first generation Polish immigrants, Jacob Joseph Mosko and his wife, née Ida Rubenstein. She married her high school boyfriend, Elliott Handler, and the two moved to Los Angeles in 1938.

The Handlers started their first business, plastic furniture, in their garage and Ruth sold products to Douglas Aircraft. During World War II a partner, Harold "Matt" Matson, and Elliot combined letters in their names to form another company, Mattel. They originally sold miniature picture frames but found dollhouse furniture to be more profitable. After Matson sold out to his partner, Elliot and Ruth Handler concentrated on manufacturing toys. In 1955 the Handlers pioneered a new way to market products directly to children by buying a year's worth of advertising on the new *Mickey Mouse Club* television show for which they created "Mouseguitar." Still it was the Barbie doll that would be their most successful product. During a trip to Europe Ruth bought a German doll, Lilli, for her daughter, Barbara. After buying the rights to market Lilli, Ruth made a few changes and put the Barbie doll on the market in 1959. Although Ruth Handler believed it was important for girls' self-esteem to play with a doll with breasts, critics have said that the doll's unrealistic measurements, translated to human size, 39"-18"-33", could have the opposite effect. Mattel did adjust the doll's measurements over the years, but the proportions remained out of reach for most women. The enormous appeal of Barbie, her ever-changing wardrobe pieces and her entourage, including boyfriend Ken (named for the Handlers' son Kenneth), Midge, Barbie's best friend, and Allan, Ken's pal and Midge's beau, led Mattel to become a publicly owned company in 1960, and by 1965 Mattel was on the Fortune 500 list. Ruth Handler, who became Mattel's president in 1967, was indicted in 1978 for fraud and securities violations from the early 1970s. Handler, who was diagnosed with breast cancer and had a mastectomy in 1970, pled no contest, saying she wanted to work on her new business, based on the breast prosthesis she designed and called Nearly Me. She did public service to serve her sentence. Handler published an autobiography, *Dream Doll: The Ruth Handler Story* in 1995. She died in 2002 at the age of 86, at which time more than a billion Barbies had been sold in 250 countries. The phenomenal success of Barbie found the doll among items buried in the official Bicentennial time capsule.

HANDLIN, OSCAR (1915–), U.S. historian. Handlin, who was born in Brooklyn, New York, graduated from Brooklyn College in 1934 and a year later earned his master's degree at Harvard University. He received his Ph.D. from Harvard in 1940 and taught history there from 1939. He directed the Center for the Study of Liberty at Cambridge, Massachusetts (1958–66), and in 1966 assumed the directorship of the Charles Warren Center for the Study of American History. After his retirement, he became the Carl M. Loeb University Emeritus Professor of History at Harvard.

A prolific writer, Handlin produced almost a book a year during his prodigious career. His works include the Pulitzer Prize-winning study of American immigrants, *The Uprooted*

(1951), *Boston's Immigrants* (1941), *Chance or Destiny* (1955), *Al Smith and His America* (1958), *The Newcomers: Negroes and Puerto Ricans in a Changing Metropolis* (1959), *The Americans* (1963), *Children of the Uprooted* (1966), *Statue of Liberty* (1971), *A Pictorial History of Immigration* (1972), *The Wealth of the American People* (with his wife, Mary Handlin, 1975), *Truth in History* (1979), and *The Distortion of America* (1981).

By applying sociological insights to historical research, Handlin brought new evidence to bear on many controversial issues in American history, such as the nature of the Populists, the origins of antisemitism, the economic foundations of colonial slavery, and the conservatism of American immigrants. A vice president of the American Jewish Historical Society, his contributions to American Jewish history include *Danger in Discord: Origins of Anti-Semitism in the United States* (with M. Handlin, 1948); *Adventure in Freedom: Three Hundred Years of Jewish Life in America* (1954); "A Century of Jewish Immigration to the United States" (with M. Handlin), in *AJYB*, 50 (1948), 1–84; and *American Jews: Their Story* (1972).

[Hans L. Trefousse / Ruth Beloff (2nd ed.)]

HANFMANN, GEORGE MAXIM ANOSSOV (1911–1986), U.S. archaeologist. Hanfmann was born in St. Petersburg, Russia, and was educated at the University of Berlin. With the advent of the Nazis he was forced to leave Germany and went to Harvard. He became curator of classical art at the Fogg Art Museum in 1946 and professor of fine arts at Harvard in 1956. From 1958 he excavated at *Sardis as field director of the excavations in Turkey. He was largely responsible for the discoveries of the ruins and partial reconstruction of the Sardis synagogue. His earlier work specialized in Etruscan sculpture, but he extended his work by dealing with the interrelation between Greek and neighboring Near Eastern cultures in the Homeric and post-Homeric archaic age. Hanfmann's expertise ultimately encompassed Etruscan sculpture, Roman sarcophagi, Anatolian city planning, Hellenistic survivals in Byzantine art, Near Eastern narrative, and ancient technology, especially metallurgy.

In honor of Hanfmann and his contributions to classical archaeology and Greek and Roman art, the Hanfmann Lectureship was established in 1988 by the Archaeological Institute of America. Scholars who hold the position specialize in one or more of the subjects to which Hanfmann was dedicated.

Hanfmann's publications include *Season Sarcophagus in Dumbarton Oaks*, 2 vols. (1951), *Etruskische Plastik* (1956), *Roman Art* (1964), *Classical Sculpture* (1967), *Letters from Sardis* (1972), *From Croesus to Constantine* (1975), *Sculpture from Sardis* (1978), and *Sardis from Prehistoric to Roman Times* (with W. Mierse, 1983).

[Penuel P. Kahane / Ruth Beloff (2nd ed.)]

HANGCHOW, coastal capital of Chekiang province, E. China. It was the one of the largest cities in the world during the 14th century. At that time, it is generally believed, a Jewish

community with a synagogue existed there. The Arab traveler Ibn Baṭṭūṭa in the first half of the 14th century described Hangchow as consisting of six cities, each with its own wall, and an outer wall surrounding the whole. Ibn Baṭṭūṭa “entered the second city through a gate called the Jews’ Gate. In this city live the Jews, Christians, and sun-worshipping Turks, a large number in all.” The Chinese Jew, *Ai T’ien, during a visit to Peking (Beijing) in 1605, told Matteo Ricci, the Jesuit missionary, about the presence of numerous Jews and the existence of a synagogue in Hangchow. Nothing is known of the further history of the community.

[Rudolf Loewenthal]

HANĪF (pl. **Hunafā**), Arabic term which occurs many times in the *Koran in connection with true monotheism. The primary meaning and the origin of the word is still to be determined. In pre-Islamic times it seems to have been used for adherents of Hellenistic culture. *Muhammad uses it as a term for the God-fearing, righteous men in the pre-Islamic period, who followed the original and true religion. Abraham was one of them, Muhammad is his true follower, and Islam is the reappearance of the true faith distorted by Judaism and Christianity (e.g., Sura 10:105; 16:121, 124; 30:29). According to Muhammad’s biographers, many such God-seekers who lived in Arabia during his lifetime, such as *Umayya ibn Abī al-Ṣalt, did not accept his prophetic mission to the Arabs. In later usage *hanif* means Muslim.

[Haim Zew Hirschberg]

HANINA (Hananiah; Comrade of the Rabbis; end of the third-beginning of the fourth century), Palestinian *amora*. Hanina was born in Babylonia; in his youth he migrated to Erez Israel and studied under Johanan among others (Men. 79b; Ber. 5b; et al.). Johanan was greatly distressed because he was unable to ordain him, but Hanina comforted him, saying: “It is because we are descendants of Eli the Priest; we have a tradition that none of this family is destined to be ordained” (Sanh. 14a). For this reason he was called *haver* (“comrade”) of the rabbis. He is frequently mentioned together with Oshaya, who was also a priest of the family of Eli that emigrated to Erez Israel; they may have been brothers (*Yihusei Tanna'im re-Amora'im* (1963, 388)). Both earned their living by sandal-making. In illustration of their great piety, the Talmud relates that their workshop was in the market of the harlots for whom they made shoes, yet they never raised their eyes to look at them. The harlots, recognizing their piety, used to swear “by

the lives of the holy rabbis of Israel” (Pes. 113b). Hanina’s halakhic sayings are cited in the Talmud. Problems were directed to him (TJ, Ber., 1:1, 2b; MK 3:5, 82b), and in reply to a query about abolishing an accepted custom, he replied: “Since your ancestors were accustomed to forbid this, do not change the custom of your ancestors, that they may rest in peace” (TJ, Pes. 4:1, 30d). He sent *halakhot* in the name of Johanan from Erez Israel to Babylonia (Yev. 58b). He disputed with Ilai in *halakhah* (Shab. 84b), and had discussions with Zeira (RH 13a). He also had connections with Rabbah and repeated *beraitot* before him (BM 6b; et al.). Some are of the opinion that Rabbah (b. Naḥamani) was his brother (see *Yuḥasin*. s.v. Rabbah bar Naḥamani). It has recently been suggested that behind the well-known *halakhah* ascribed in the Bavli (Shab. 12a, 20a, et al) to the *tanna* Hananiah, lies a tradition properly ascribed in the Yerushalmi to Hanina (Hananiah) “comrade of the Rabbis” (Wald).

[Yitzhak Dov Gilat]

HANINA BAR HAMA (early third century C.E.), Palestinian scholar of the transitional generation from *tannaim* to *amoraim*. Hanina was born in Babylon (TJ, Pe’ah 7:4, 20a), and studied there under a scholar called Hamnuna (TJ, Ta’an. 4:2, 68a). He went to Erez Israel and lived in Sepphoris where he was a distinguished pupil of Judah ha-Nasi (TJ, Nid. 2:7, 50b). He transmitted information about the rulings and customs of his teacher (TJ, Ber. 3:5, 6d) who greatly admired him (Av. Zar. 10b). He was friendly with Ishmael b. Yose, with Bar Kappara, and with Ḥiyya, in whose presence Hanina boasted of the sharpness of his intellect, saying, “Were the Torah, God forbid, to be forgotten in Israel, I would restore it by means of my dialectics” (Ket. 103b; BM 85b). Hanina’s colleagues were Rav, Jonathan, and Joshua b. Levi, and he went with the last to visit the Roman proconsul in Sepphoris (TJ, Ber. 5:1, 9a). According to the Jerusalem Talmud Hanina was not ordained by Judah ha-Nasi during the latter’s lifetime, because he was vexed with him over a certain matter, but he ordered his son Gamaliel who succeeded him to ordain him (TJ, Ta’an. 4:2). According to a *baraita* quoted in the Babylonian Talmud, however (Ket. 103b), Judah ha-Nasi ordered before his death: “Hanina b. Hama shall preside,” which Rashi explains as meaning to preside over the college. This indeed seems to be the meaning of the phrase in its context which deals with the appointments to be made in the college after Judah’s death. Further it is stated that Hanina refused to accept this appointment “because R. Afes was two and a half years older than he.” Afes was appointed, and only after his death did Hanina accept the office. Among his most prominent pupils were Johanan and Simeon b. Lakish and also Eleazar, who frequently transmits in his name. Eleazar’s statement in the name of Hanina: “The disciples of the wise increase peace in the world, as it says [Isa. 54:13]: and all thy children shall be

taught of the Lord, and great shall be the peace of thy children. Read not *banayikh* ['thy children'] but *bonayikh* ['thy builders']" (Ber. 64a; et al.) has become famous and is incorporated in the daily prayer book.

Ḥanina lived to a very advanced age (Ḥul. 24b). He earned a living by trading in honey (TJ, Pe'ah 7:4, 20b) and also practiced medicine, in which he was regarded as an expert (Yoma 49a). He harshly rebuked his fellow citizens of Sepphoris and bemoaned their hardheartedness (TJ, Ta'an, 3:4, 66c). He emphasized the value of rebuke in his statement: "Jerusalem was destroyed only because they did not rebuke each other" (Shab. 119b). He frequently spoke in praise of Erez Israel (TJ, Pe'ah 7:4, 20b) and explained the description of Erez Israel as *erez zevi* (lit. "land of the hind," JPs "beauteous," AV "glorious"; Dan. 11:41) as follows: "Just as the skin of the hind cannot hold its flesh; so the land of Israel when it is inhabited can provide space for everyone, but when it is not inhabited it contracts" (Git. 57a). Ḥanina was strongly opposed to anyone leaving the land of Israel, and said of him, "He has abandoned the bosom of his mother, and embraced the bosom of a stranger" (TJ, MK 3:1, 81c). He was especially opposed to a priest leaving the country, even for religious reasons (*ibid.*).

Ḥanina's aggadic statements are numerous. He was of the opinion that the planets influence Israel too, and that "the constellation of the hour is the determining influence" (Shab. 156a). This influence, however, does not limit the activity of divine providence, since both witchcraft and constellations are subject to the providence of the creator "for if there be no decree from Him, they can do him no harm" (Rashi to Ḥul. 7b; cf. Sanh. 67b). The overall power of providence is stressed in his saying: "No man bruises his finger here on earth, unless it was so decreed against him in heaven" (Ḥul. 7b). But this emphasis does not nullify the value of man's freedom of will: "Everything is from heaven, excepting cold draughts, as it is written [Prov. 22:5]. Cold draughts [thus he understands the words usually rendered "thorns and snares"] are in the way of the froward; he that keepeth his soul holdeth himself far from them" (BM 107b). Moreover it is certain that no one should rely upon his constellation or upon providence in all that pertains to his character, since "Everything is in the hand of heaven except the fear of heaven" (Ber. 33b), but the attainment of the fear of heaven is not given to all men equally and for the same effort (*ibid.*). Ḥanina stressed the heinousness of profaning the Divine Name: "The Holy One was indulgent of idolatry – but He was not indulgent of the profanation of the Name" (Lev. R. 22:6); "It is better for a man to commit a transgression in secret – and not profane the Name of Heaven in public" (Kid. 40a). Among his other noteworthy sayings are, "He who lifts a hand against his fellow, even without smiting him, is called a sinner" (Sanh. 58b); "Let not the blessing of a common person be light in your eyes" (Meg. 15a); "The son of David will not come until the haughty in Israel are extinct" (Sanh. 98a).

[Zvi Kaplan]

ḤANINA (Hinena) BAR PAPA (Pappi; end of third and beginning of fourth century C.E.), Palestinian *amora*. Ḥanina belonged to the circle of R. Johanan's pupils, Abbahu, Isaac Nappaḥa, Ammi, etc., though he only once actually quotes R. Johanan himself (TJ, BK 10:2, 71b.). He was renowned in the field of *aggadah*, and was considered an excellent preacher (Sot. 9a, et al.). He may have learned his *aggadah* from Samuel b. Naḥman whom he calls "rabbi" (TJ, Shev. 4:3, 35b). He was considered a paradigm of holiness (Kid. 81a) and even the night spirits feared him. It is related of him that he distributed alms at night (TJ, Pe'ah 8:9, 21b). When the Angel of Death came to take him, he requested another 30 days in which to revise his learning. The Angel of Death, who respected him deeply, granted this request, and when he died a pillar of fire separated him from the people (Ket. 77b).

[Zvi Kaplan]

ḤANINA BEN ABBAHU (c. 300), Palestinian *amora*. Ḥanina was the son of the famous *Abbaḥu who lived in Caesarea. He studied under his father and transmitted teachings in his name, as well as about him (Kid. 33b; TJ, Bik. 3:7, 65d; et al.), but later his father sent him to study at the yeshivah of Tiberias. When his father heard that instead of devoting himself to study there he was engaging in works of benevolence, he sent him a message: "Is it because there are no graves in Caesarea [cf. Ex. 14:11; the reverential interment of the dead being one of the highest of benevolent activities] that I sent you to Tiberias? For it has already been decided that study takes precedence over good deeds" (TJ, Pes. 3:7, 30b). Ḥanina apparently returned to Caesarea (TJ, Ket. 4:15, 29b) where he was a *dayyan* (TJ, Yev. 2:4, 3d) and is referred to also as "Ḥanina of Caesarea" (Song R. 1:20, no. 3). In addition to *halakhah*, aggadic sayings were transmitted in his name (TJ, Shab. 6:9, 8d; Lam. R., Proem 34; *ibid.* 2:1, no. 2; et al.).

BIBLIOGRAPHY: Frankel, Mevo, 87b–88a; Hyman, Toledot, s.v.; Ḥ. Albeck, *Mavo la-Talmudim* (1969), 327–8.

[Zvi Kaplan]

ḤANINA BEN ANTIGONUS (first half of second century C.E.), *tanna*. According to the Talmud Ḥanina was a kohen (Bek. 30b), and it seems that in his youth he lived in Jerusalem before the destruction of the Temple and was able to report certain details of that period (Tosef., Ar. 1:15; see also Kid. 4:5). Similarly, many of the teachings quoted in his name are on the subject of the Temple and its vessels (Bek. 6:3, 4, 10; Tosef., Shek. 3:15; Tosef., Suk. 4:15; et al.), which is the main subject matter of his quoted statements. He also transmitted a halakhic tradition in the name of R. Eleazar Ḥisma (Tosef., Tem. 4:10). It is told of his son that R. Judah and R. Yose sought his judgment on questions of ritual purity (Bek. 30b).

BIBLIOGRAPHY: Hyman, Toledot, 479–80.

[Zvi Kaplan]

HANINA BEN DOSA (first century C.E.), *tanna*. Hanina lived in Arav in lower Galilee (north of the valley of Bet Netofah) and was a disciple-colleague of *Johanan b. Zakkai. More has been transmitted about his pious deeds and his wonders than about his dicta, and the little preserved is in the field of *aggadah*, confining itself to emphasis on the importance of good deeds: "He whose deeds exceed his wisdom, his wisdom shall endure; but he whose wisdom exceeds his deed, his wisdom will not endure. He in whom the spirit of his fellow creatures takes delight, in him the spirit of the All-present takes delight; and he in whom the spirit of his fellow creatures takes not delight, in him the spirit of the All-present takes not delight" (Avot 3:9–10). It was said of him "that he was praying when a scorpion bit him, but he did not interrupt his prayer. His pupils went and found it dead at the entrance to its hole. They said: Woe to the man bitten by a scorpion, but woe to the scorpion that bites Ben Dosa" (Tosef., Ber. 3:20; and cf. Ber. 5:5, TJ, Ber. 5:1 and Ber. 33a). Similarly it was said of him: "When Hanina b. Dosa died, men of deeds ceased and piety came to an end" (Sot. 9:15; cf. Tosef. Sot. 15:5). Of his wife too it was said that she resembled her husband in piety (BB 74b) and like him was "accustomed to miracles" (Ta'an. 25a). He was also praised for his integrity. The sages applied to him the phrase (Ex. 18:21) "men of truth" (Mekh., Malek 2). In the Talmud he was held up as an example of a completely righteous man (Ber. 61b), and described him as "one for whose sake God shows favor to his entire generation" (Ḥag. 14a). He refused to benefit from the property of others though he was destitute, and such remarkable things are related about this conduct that it was stated, "Every day a divine voice proclaims from Mt. Horeb: The whole world is sustained by the merit of my son Hanina, and Hanina my son subsists on a *kav* of carobs from one week to the next" (Ber. 17b). He was zealous in observing precepts: e.g., in the observance of the Sabbath, which he kept from midday on Friday (Gen. R. 10:8); in separating tithes (TJ, Dem. 1:3); and in returning lost property to its owner (Ta'an. 25a). His prayers were regarded as being specially accepted, and as a result he was frequently requested to pray for the sick and those in trouble (Ber. 34b; Yev. 121b). When the son of Johanan b. Zakkai fell ill, Hanina prayed for him and he recovered. Johanan b. Zakkai claimed that he himself would not have succeeded in achieving this and when his wife asked, "Is Hanina greater than you?" he replied, "No! but he is like a servant before the king, and I am like a courtier before the king" (Ber. 34b). The *aggadah* speaks extensively of the miracles that happened for him (Ta'an. 24b–25a; ARN¹ 8, 38). On one Sabbath eve at twilight he saw his daughter sad. He said to her: "Why are you sad?" She replied: "I exchanged my vinegar can for my oil can, and I kindled the Sabbath light with vinegar (and it will be extinguished)." He said to her: "My daughter, why should this trouble you? He who commanded the oil to burn will also command the vinegar to burn" (Ta'an. 25a).

[Zvi Kaplan]

HANINA BEN GAMALIEL (mid-second century C.E.), *tanna*. He was a son of Rabban *Gamaliel of Jabneh, and an older brother of the patriarch (*nasi*) *Simeon b. Gamaliel, who quotes his teachings (Tosef., Nid. 7:5). Hanina was apparently a disciple of *Tarfon (see Ned. 62a; Kid. 81b). He differed on *halakhah* with *Akiva (Nid. 8a) and with Yose ha-Gelili (Men. 5:8), and engaged in halakhic discussions with the disciples of Akiva (Tosef., Av. Zar. 4 (5): 12; Tosef., Nid. 4:5; et al.). He was also well-versed in the *aggadah* (MK 23a) and many *aggadot* are quoted in his name. He apparently died young, and because of this his younger brother was appointed to the position of *nasi*.

[Zvi Kaplan]

HANINA (Ahonai) KAHANA BEN HUNA (the second half eighth century), *gaon* of Sura (769–774). A priest belonging to a significant priestly family, he let his nails grow, saying "the Temple will soon be rebuilt and they will require a priest qualified for *melikah*" (slaughtering the sacrificial bird by pinching the back of its neck; Yev. 1:15). Hanina was a student of *Yehudai b. Naḥman Gaon. His interpretations and rulings, found in the *Halakhot Gedolot*, were highly regarded by succeeding *geonim*. The value of the *sela* coin as determined by him has been incorporated in the text of the Talmud (Bek. 50a). Hanina was the teacher of Jacob b. Mordecai ha-Kohen, who was known among the *geonim* for his independent views, and also of Samuel, the first portion of whose *Midrash Asefah* has been included in the *Halakhot Gedolot*, in collections of geonic responsa, and also in the Midrashim of Yemen. Some passages of Hanina's works have been included in the Yalkut Shimoni.

[Meir Havazelet]

HANINA SEGAN HA-KOHANIM (first century C.E.), *tanna* living in the last years of the Second Temple, the designation *Segan ha-Kohanim* referring to the fact that he was deputy high priest (cf. Yoma 39a). He transmitted details about the Temple service both from his knowledge of his father's customs (Zev. 9:3) and from those of the other priests (Pes. 1:6; Eduy. 2:1–2), and about other customs prevalent in Temple times (Eduy. 2:3; Men 10:1; et al.). On the basis of his testimony cited in *Pesahim* 1:6, an extensive and ramified discussion is developed in the Babylonian Talmud (Pes. 14a–21a). The Mishnah also gives information about the customs of his family in the Temple (Shek. 6:1). His intense love of the Temple is expressed by a remark in connection with the prohibition against bathing on the Ninth of Av: "The house of our God merits that for its sake a man should forego an immersion once a year" (Ta'an. 13a). Two *halakhot* in his name are found in the Tosefta (Ter. 9:10; Neg. 8:6), both dealing with

the laws of ritual purity. His aggadic sayings extol the virtue of peace: "Great is peace which is equal to the whole act of creation." He says that the word "peace" in the priestly blessing refers to domestic peace (Sif. Num. 42), and he enjoins, "Pray for the peace of the ruling power, since but for fear of it men would have swallowed up each other alive" (Avot 3:2), and in praise of Torah: "Everyone who takes the words of the Torah to heart... will have removed from him fear of the sword, fear of famine, foolish thoughts... fear of the yoke of human beings" (ARN¹ 20, 70). According to Maimonides (Commentary to Mishnah, introd.), Simeon b. ha-Segan (cf. Shek. 8:5; Ket. 2:8) was the son of Ḥanina.

ḤANITAH (Heb. חַנִּיתָה), kibbutz situated on the Israel-Lebanese frontier in western Upper Galilee, 4½ mi. (7 km.) E. of Rosh ha-Nikrah. Ḥanitah, affiliated with Iḥud ha-Kevuzot ve-ha-Kibbutzim, was founded in 1938, at the height of the Arab riots, as a stockade and watchtower outpost, with the aim of gaining a foothold in a region until then devoid of Jewish settlement, and of closing the border gap through which armed gangs used to infiltrate from Lebanon. Ḥanitah became the epitome of the defense settlement and its foundation was the subject of the Hebrew opera *Dan ha-Shomer* by Shin *Shalom and Marc *Lavry (1945). First established by a *Haganah unit at a site known as "lower Ḥanitah," the settlement had to repel incessant attacks, two defenders falling the very night it was founded. A month later, "upper Ḥanitah" was set up on the permanent site at the top of the ridge. In 1939, a group of settlers from Eastern Europe took over. Arduous reclamation work was required to carve cultivable land (mainly for deciduous fruit orchards and vineyards) out of the rocky terrain overgrown with wild brush. Forests were planted and ancient woodlands in the vicinity restored. Ḥanitah established a large rest resort, which went out of business though guest rooms were still rented, a lens-making factory, and a factory for coating, laminating and metallicizing polyester film. Farming included fruit plantations, citrus groves, and field crops. Its population in 1968 was 390, rising to 610 in the mid-1990s and then dropping to 465 by 2002. Its name dates back to the second and third centuries C.E. and is preserved in the form Ḥanita (חַנִּיתָה; Tosef., Shev. 4:9 and TJ, Dem. 2:1, 22b), today Khirbat Ḥanūtā at the site of the kibbutz.

[Efraim Orni]

HANKIN, YEHOSHUA (1864–1945), Erez Israel pioneer, instrumental in acquiring large tracts of land for Jewish settlement. Born in Kremenchug, Ukraine, Hankin went to Erez Israel in 1882 with his father, who was one of the founders of Rishon le-Zion. In 1887 the family moved to Gederah where he established friendly relations with the Arab *felaḥeen* and landowners, which helped him in negotiating for the purchase of land for the expansion of Jewish settlement. His first pur-

chase, in 1890, was of the lands on which Reḥovot was established, and a year later he bought the land on which Ḥaderah was founded; he also purchased the lands on which the *Jewish Colonization Association (ICA) settlements in the Galilee and elsewhere were set up. In 1908, when the Zionist Organization began to engage in practical work in Erez Israel and established the Palestine Land Development Corporation (for the purchase and cultivation of land for the *Jewish National Fund and private purchasers), Hankin joined this company. As early as 1897 he had negotiated for the purchase of the Jezreel Valley lands, but the first sale there was delayed until 1909, when Hankin at last succeeded in buying the lands of Kafr Fūla (10,000 dunams), on which Merḥavyah, the first Jewish settlement in the valley, was established. In 1915 he was exiled to Anatolia, Turkey, by the Turkish authorities, returning to Palestine three years later. In 1920 he purchased a large tract of land (51,000 dunams) in the Jezreel Valley, on which many agricultural settlements were later established (En-Harod, Tel Yosef, Nahalal, and others), and as a result he became known as "The Redeemer of the Valley." Seven years later he submitted to the Zionist leadership a daring 20-year plan for the acquisition of Palestinian lands; from 1932 he served as director of the Palestine Land Development Corporation. Hankin wrote *Jewish Colonization in Palestine* (1940, ed. and tr. by E. Koenig). He died in Tel Aviv and was buried on Mt. Gilboa opposite the land he redeemed in the Jezreel Valley, near the Harod spring. During his lifetime, he purchased more than 600,000 dunams of land, most of which passed into the possession of the Jewish National Fund. The moshav Kefar Yehoshu'a in the Jezreel Valley is named after him.

[Gedalyah Elkoshi]

HANNAH (Heb. חַנָּה; "graciousness, favor"), wife of Elkanah, of the family of Zuph from Ramathaim-Zophim in the hill country of Ephraim; mother of the prophet *Samuel. Hannah appears in the Bible in connection with the birth of Samuel. Together with Elkanah and her co-wife Peninnah, she used to make the pilgrimage annually to the Temple in Shiloh to offer sacrifices (1 Sam. 1:2–7; 2:19; the Septuagint and a fragment from Cave 4 at Qumran in 1:24). Though the favored wife of her husband, she was unhappy because she was childless for many years and taunted about it by her co-wife. As she once stood in the Temple, pouring out her bitter anguish inaudibly, with only her lips moving, and vowing to dedicate any son born to her to the Temple and the service of God, *Eli the high priest at Shiloh observed her and chided her for her apparently drunken behavior. On ascertaining its true cause, however, he added his blessing to her pleas. Hannah gave birth to a son, Samuel, and after weaning him brought him to the Temple, offered a sacrifice and a song of thanksgiving, and left him with Eli to serve in the Temple for life. Each year she would return

to bring him a small cloak, when she went up with her husband to offer the yearly sacrifice. Eli blessed her and Hannah bore three more sons and two daughters (1 Sam. 2:21).

The story of Hannah and the birth of Samuel is one of the most charming in the Bible. It is similar to other stories of barren mothers who late in life bore sons destined to be leaders of the nation, and to the story of *Rachel who was also the favored wife of her husband. Hannah's pledging her son before his birth is similar to the action of Samson's mother (Judg. 13), who pledged him as a *nazirite. This was a common practice of the period (although it was later forbidden – "a woman shall not pledge her son as a nazirite," Naz. 4:6). Amos 2:11–12 refers to prophets and nazirites jointly. It is worth noting that according to the Septuagint and the fragment from Qumran, 4QSama, Hannah dedicates her son specifically "as a nazirite for all time" who is forbidden to partake of wine and spirits (similarly in Ecclus. 46:13; Jos., Ant., 5:347). According to R. Nehorai (Naz. 9:5; Maim. Yad, Nezirut, 3:16) Samuel was a nazirite like Samson. Hannah's prayer served as the model for Mary's prayer in the New Testament (Luke 1:46–55), famously referred to as "Magnificat," its opening Latin word.

[Yehoshua M. Grintz]

In the Aggadah

Hannah was one of the seven prophetesses (Meg. 14a). It was at her instigation that Elkanah took a second wife after 10 years of marriage without children (PR 43, 181b). Once Peninnah had given birth, however, she ceaselessly taunted Hannah (cf. 1 Sam. 1:6), constantly reminding her of her childlessness (PR 43, 182a–b). The expression "O Lord of hosts" (1 Sam. 1:11), which she was the first to use, implies: "Of all the hosts You have created, is it so hard to give me one son" (Ber. 31b), and to have contained the suggested criticism of God: "To which host do I belong? If the heavenly, then I will never die; if the mortal, then I should be able to give birth" (PR 43, 179b). The triple repetition of the phrase "thy handmaid" refers to her contention that she had not transgressed any of the three transgressions for which women die in childbirth (Ber. *ibid.*, cf. Shab. 2:6). Hannah was so assured of the righteousness of her case that not only did she "hurl words at God" (*ibid.*) but she even volunteered to feign adultery, so that she would have to undergo the ordeal of water, after which, according to the Bible, "she will be cleansed and shall conceive seed" (Num. 5:28; Ber. *ibid.*).

HANNAH AND HER SEVEN SONS, a story told in 11 *Maccabees, Chapter 7, of seven brothers who were seized along with their mother by *Antiochus IV Epiphanes, presumably shortly after the beginning of the religious persecutions in 167/166 B.C.E., and commanded to prove their obedience to the king by partaking of swine's flesh. The brothers defiantly

refused to do so. Encouraged in their resolve by their mother, they were executed after being put to frightful tortures. When the mother was appealed to by the king to spare the youngest child's life by prevailing upon him to comply, she urged the child instead to follow in the path of his brothers, and she herself died shortly thereafter.

The accounts of the manner in which she met her death differ. According to 1V Maccabees, she threw herself into the fire. The Midrash states that she lost her reason and threw herself to her death from a roof, while according to **Josippon* she fell dead on the corpses of her children. The story, along with that of the martyrdom of the aged priest Eleazar (11 Macc. 6:18–31), became the subject of the book known as the Fourth Book of Maccabees. In rabbinic literature the story is recounted as an instance of martyrdom during the Hadrianic persecution (Lam. R. 1:16, no. 50; Git. 57b; PR 43:180; SER 30:151). The martyrs were venerated in the Roman Catholic calendar of saints (Aug. 1) as the "Seven Maccabee Brothers," although the mother is also mentioned with them, their martyrdom being considered a prefiguration of later Christian martyrdoms. According to Antiochene Christian tradition, the relics of the mother and sons were interred on the site of a synagogue (later converted into a church) in the Keraiteion quarter of Antioch. On this and other grounds, it has been suggested that the scene of the martyrdom was Antioch rather than Jerusalem.

Whatever its historical substratum, the story in 11 Maccabees and in all subsequent sources is doubtless an adaptation of a stock form of a terrible tragedy (cf. 1 Sam. 2:5 and Isaiah di Trani's commentary; Job 1:2, 19; Ass. Mos. 9; Jos., Ant., 14:429; BB 11a; Sem. 8:13). Drawing directly on 11 Maccabees, *Sefer Josippon* (c. 953) restored the story to its original Epiphanian setting. Although in 11 Maccabees and *Gittin* the name of the mother is not given, in other rabbinic accounts she is called Miriam bat Tanḥum, while in Syriac Christian accounts she is called Shamone and/or Maryam. However, the obvious association with 1 Samuel 2:5 impelled a Spanish reviser of the *Josippon* (ed. Constantinople, 1510, 4:19) to name the anonymous mother of 11 Maccabees "Hannah," by which name she has become famous, thanks to the dissemination of the longer (Spanish) version of *Josippon* and the medieval *piyyutim* in Hebrew, Arabic, and Judeo-Persian which are based on it. The shorter recension of the work (ed. Mantua, c. 1480, 126f.) and the literature based on it continued to refer to her anonymously. The story has inspired many legends on the place of the martyrs' burial, as well as works of art, poetry, and drama on their martyrdom, down to modern times.

[Gerson D. Cohen]

HANNATHON (Heb. חַנְתָּוֹן), city in the territory of Zebulun between Rimmon and Iphthahel (Wadi al-Malik) in Lower Galilee (Josh. 19:13–14). It is mentioned in two el-Amarna letters as Ḥinnatuni or Ḥinnatuna (ed. Knudtzon, 8, 245); in one it is referred to as the place where the kings of Shimron and Acre attacked a Babylonian caravan which was on its way to Egypt, and in the other, as the place where the king of Acre freed Labayu, king of Shechem, after he had been captured at Megiddo. Tiglath-Pileser III mentions Hannathon (Ḥinatuna) among the cities captured during his Galilean campaign in 733 B.C.E., together with Kanah and Jotbah. The site is generally identified with Tell al-Badaywiyya at the western end of the Bet Netofah Valley, on an important road near Rammun, Kanah, and Jotapata. Pottery dating from the Middle Bronze, Late Bronze, and Iron Ages has been found there. An alternative identification locates Hannathon at Khirbat al-Ḥarbaj in the southern end of the plain of Acre (but see *Achshaph).

[Michael Avi-Yonah]

ḤANNELES, JUDAH LEIB BEN MEIR (d. 1596), rabbi and author, probably from Posen; known by the initials of his name, as “Maharlah” (Morenu **ha-Rav Leib Ḥanneles**). Judah, the son of Meir of Tannhauser, was one of nine brothers, among them *Eliakim Goetz b. Meir, a leading scholar of Posen, Jacob *Temerls, and Akiva of Hotzenplatz. He is the author of *Va-Yiggash Yehudah*, a commentary on the *Arba'ah Turim* of *Jacob b. Asher, which he explains word by word, noting each halakhic ruling, giving its source and citing the various opinions. In his commentary Judah sought to complete the *Beit Yosef* of Joseph *Caro; he disagrees with Caro in several instances and also gives more accurate versions of the *Arba'ah Turim*, of which Caro was not aware. At times he even disagrees with Jacob b. Asher. He began the publication of his work toward the end of his life, and died before it was completed. His brother, Jacob Temerls, continued with the publication of *Orah Ḥayyim* (Lublin, 1596–99). In the later editions of the *Arba'ah Turim*, beginning with that of Dyhernfurth (1791–96), a second corrected edition of *Va-Yiggash Yehudah* on *Orah Ḥayyim* was published, in which the sources were omitted. Although the *Ḥiddushei ha-Ga'on Leib Ḥanneles* on *Orah Ḥayyim* printed in the standard text of the *Arba'ah Turim* have been wrongly ascribed to him (being a selection of glosses from commentators compiled by the brothers Michael Simon and Joseph Maya the sons of the printer, Jehiel Maya), they nevertheless include many selections from Hanneles' work.

Friedberg, *Toledot Mishpaḥat Shor* (1901), 14–15; S. Wiener, *Kohelet Moshe*, 5 (1904), 549, no. 4512; H. Tchernowitz, *Toledot ha-Posekim*, 2 (1947), 299–300.

HANNEMANN, PABLO (1906–?), Argentine sculptor. Born in Germany, Hannemann designed and illustrated several books for Jewish publishing companies before he immigrated to Argentina in 1937. In 1955 he founded an Argentine art school. He organized, together with two architects, the first Israeli industrial exhibition in Argentina. Besides carving in wood, he worked in concrete and made large sculptures, as he considered concrete to be the only true link with architecture. His sculpture is filled with Jewish content.

HANNOVER, ADOLPH (1814–1894), Danish scientist and physician, known for his experimental studies in histology and microscopic technique. Hannover's detection of a plant parasite on the salamander was of vital importance to medicine for it proved for the first time the significance of vegetative contagious matter in the transmission of infectious diseases. Hannover's use of chromium acid as a hardening agent contributed to microscopic technique. His treatises on the microscopy of the nervous system, on the construction of microscopes, on the retina, and on the nature of cancer were translated into many languages.

[Julius Margolinsky]

HANNOVER, NATHAN NATA (d. 1683), preacher, kabbalist, lexicographer, and chronicler. During the *Chmielnicki massacres which started at the end of 1648, he had to leave his birthplace in Volhynia and he wandered through Poland, Germany, and Holland for several years. His sermons, delivered during those years of wandering, were compiled into a book covering the entire Pentateuch. In 1653 he went to Italy. In the same year in Venice, he published *Yeven Mezulah* (Miry Pit), dealing with the Chmielnicki persecutions. He associated with the great kabbalists of the period: Samuel Aboab and Moses Zacuto of Italy; and those who had come from Erez Israel – Ḥayyim Cohen, Nathan Shapira, and Benjamin ha-Levi of Safed. He studied the Kabbalah doctrines of the school of Isaac Luria for a number of years and enjoyed the munificence of patrons in Leghorn in 1654 and in Venice in 1655–56.

In 1660 in Prague, Hannover published *Safah Berurah* (Clear Language), a Hebrew-German-Latin-Italian conversation lexicon, text, and guidebook for travelers, and in 1662, *Sha'arei Ziyon* (The Gates of Zion), a collection of prayers for *tikkun ḥazot* (midnight prayers), and for other kabbalistic rituals of the Lurianic school. These two books were the result of his studies in Italy. In 1662, he was appointed president of the *bet din* and head of the yeshivah in Jassy, Walachia, which was then a Turkish province. He was still in Jassy in 1666, the “year of redemption,” when the Messiah was due, according to the beliefs of the Shabbatean movement. He is mentioned among those who wrote to Lithuania to announce the event. He spent about ten years in Jassy, and according to tradition, in Pascani too. He then moved to Ungarisch Brod, Moravia, on the Hungarian border, where he was preacher and religious

judge. He was killed, while praying with the community, by Turkish soldiers who raided the town.

Hannover was a prolific writer, but most of his works, sermons and writings on the Kabbalah, were lost. Apart from the sermon *Ta'amei Sukkah*, printed in Amsterdam, 1652, and a kabbalistic writing on Purim, preserved in manuscript, only the three books published in his lifetime are extant. The subject matter and the style of these works are diverse, yet each had considerable influence for a long time. The prayer book, *Sha'arei Ziyon*, was reprinted over 50 times, chiefly in Italy, Holland, and Central and Eastern Europe. The book served as a channel for introducing into the ordinary prayer book certain elements of the Lurianic Kabbalah, such as the *Berikh Shemei* prayer. *Safah Berurah* also had several editions, being published both under its own title and other titles in its original form and in a modified version. Up to the 19th century, it was used for the study of foreign languages in Central and Eastern Europe. It is still an important source for research into the Yiddish and the Hebrew used in the author's time.

The small book *Yeven Mezulah*, on the Chmielnicki pogroms of 1648–52, has relatively few personal experiences of the author. It is mainly based on eyewitness accounts of others and hearsay evidence (including information Hannover found in print). This was the manner of writing of chroniclers of the period. Hannover's broader vision, lucid language, and simple and graceful manner of relating events gave the book an appeal it still retains. Among the Ashkenazi Jews, it was reprinted in the original version and in Yiddish translation, in almost every generation (including a Hebrew edition, 1945; a Yiddish edition, 1938). It was translated into French (1855), German (1863), Russian (1878), Polish (1912), and English (*Abyss of Despair*, 1950). The book has also been a source of information on the massacres of the Chmielnicki period to modern writers and poets like S. Asch and Minsky. Some historians have followed the narrative uncritically, without submitting it to historical analysis.

HANNOVER, RAPHAEL LEVI (1685–1779), mathematician and astronomer. Born in Weikersheim, he worked as a bookkeeper in the house of Oppenheimer in Hanover, where he met the philosopher Leibniz and became his devoted pupil, studying mathematics, astronomy, and natural philosophy. He wrote two books in Hebrew on astronomy: *Luhot ha-Ibbur*, astronomical tables for the Jewish calendar (Leiden-Hanover, 1756–7; Dessau, 1831) and *Tekhunat ha-Shamayim ve-Khol Zeva'am u-Mahalakham* (Amsterdam, 1756). He left several unpublished manuscripts.

[Getzel Kressel]

HA-NO'AR HA-IVRI-AKIBA, pioneering and scouting Zionist youth movement with special attachment to the traditional values of Judaism. The movement was founded in Cracow as an organization of Jewish students in non-Jewish high schools. In 1924 Akiba united with similar youth organizations in western Galicia and assumed the character of a pioneering Zionist youth movement. A group that left the movement constituted the nucleus of the youth movement of the *General Zionists, Ha-No'ar ha-Ziyyoni. Akiba was active in Poland and to a lesser degree in Austria, Czechoslovakia, Greece, Yugoslavia, Bulgaria, and Palestine between the two World Wars, during the Holocaust, and almost until the establishment of the State of Israel. Its pioneering members began to settle collectively in Palestine in 1930. They were among those who fought for Jewish labor in Petaḥ Tikvah, Be'er Ya'akov, Ekron, and Haderah and were among the founders of Neveh Eitan, Usha, Bet Yehoshu'a, Bustan ha-Galil, Benei Zion, and elsewhere.

Before the Holocaust, the membership of the movement reached 30,000. At the 21st Zionist Congress (1939), the last before the war, the movement was represented by six delegates. The ideological foundation of Akiba was based on the following principles: both assimilation – as a pragmatic means to solve the Jewish problem – and the leftist movements – especially Communism – lead to the destruction of Judaism. The efforts of assimilationists for generations have ended in failure, and the same is true of leftist movements, which denied Jewish national identity. Akiba advanced the desire to create an original Jewish experience through a pioneering way of life in Erez Israel and viewed Zionism as the perpetuation of Jewish history.

Akiba educated its members toward a positive attitude to the traditional Jewish way of life. This emphasis was important among semi-assimilated youth who had been drawn away from Judaism. Its guiding principle was that even those who doubted the values of faith must agree that the traditionally religious way of life embodies the original creation of the Jewish people and its unifying quality was still valid in the present. Therefore behavior in public and in Jewish institutions should not contradict the traditional way of life. During the Holocaust, the leaders of Akiba were among the heads of the Jewish fighting organizations and participated in the armed revolts in the Cracow ghetto (1942) and the Warsaw ghetto (1943). The ideological leader of the movement was Yoel Dreiblat.

[Moshe Singer]

HA-NO'AR HA-OVED VE-HA-LOMED (Heb. "Working and Student Youth"), Israel youth movement for boys and

girls aged 9–18. It is an integral part of the *Histadrut. It was founded as Ha-No'ar ha-Oved in 1926 to conduct educational activities among working youth aged 13–18 and improve their wages and working conditions. Its founder and mentor was David *Cohen (d. 1976). The movement ran evening classes, which were taken over by the state in 1955; labor exchanges, taken over by the State Employment Service in 1959; and youth groups for ages 10–12, 13–15, and 16–18. Most of the instructors came from the kibbutzim of *Ihud ha-Kevuzot ve-ha-Kibbutzim and *Ha-Kibbutz ha-Me-'uḥad. In 1933 a group of members founded its first kibbutz, *Na'an, and it has provided founding members for about 40 kibbutzim in all. In 1959 Ha-No'ar ha-Oved merged with Habonim-Ha-Tenu'ah ha-Me'uḥedet to form the present organization. In 1970 it had about 100,000 members; somewhat more than one-third were working boys and girls and belonged to the trade sections, and the rest, most of them still at school, belonged to the educational groups. While it had no formal party affiliation, most of its youth leaders belonged to the *Israel Labor Party. At the outset of the 21st century the movement had hundreds of branches, centers, and clubhouses throughout Israel, used by Jewish, Arab, and Druze youth; including young people who work and study in the cities, development towns, kibbutzim, and young immigrants. The movement runs the Labor Union for Youth, which is the organization that acts as the legal representative of young working people in Israel. The movement focuses on involvement in Israeli society and initiates such educational activities as seminars, camps, and daily meetings. The counselors are movement graduates who postpone their military service for one year and work voluntarily in the movement centers or live as a group in development towns. The movement also has activities in the former Soviet Union in order to encourage and prepare young people to immigrate to Israel. At the end of the 1980s, a group of graduates established Merḥav, a movement of people aged 22–30 who live cooperatively in cities and villages and are active in educational work. Members of Merḥav established two new kibbutzim: Ravid and Eshbal, located in Galilee.

[Shaked Gilboa (2nd ed.)]

HANOKH, SHALOM (1946–), Israeli rock singer-songwriter, among the most influential figures in Israeli rock since the 1970s. After teaming up with iconographic singer Arik *Einstein in 1967 he produced an extensive volume of work, ranging from blues-inflected songs to high-energy rock and gentle ballads.

Hanokh was born in kibbutz Mishmarot and spent much of his formative musical years writing songs with fellow kibbutz member singer-songwriter Meir Ariel. After being brought up on classical music, musicals, gospel, blues, folk music, and French chansons, Hanokh discovered the Beatles. When he was 18 a song he wrote called *Stav* (“Fall”) was recorded by top singing duo of the time, Hedva and David.

Hanokh joined the IDF at the age of 19 and was eventually accepted into the Naḥal army band, although not as a soloist. During his military service Hanokh also found time to appear in civilian shows with performers such as Ḥanan Yovel, Menaḥem Silverman, and Eli Magen. In 1967, Hanokh wrote a satirical number called *Jacques Aboutboul*, together with Yossi Pollak. It was this effort that brought him to the attention of Einstein, already an established star in the Israeli pop world. Shortly after hearing Hanokh perform *Jacques Aboutboul* Einstein recorded four Hanokh compositions and one of the important duos in the annals of Israeli rock was born.

After his release from the army in 1968, Hanokh left his kibbutz, moved to Tel Aviv, and began a highly productive period during which he wrote the music for hits by numerous top performers, such as Yossi *Banai, Ili Gurelitzki, and Ḥanan Yovel. More importantly, he also wrote the music for *Prague* with which Einstein won the 1969 Israeli Song Festival. Between 1969 and 1970 Hanokh collaborated with Einstein on two albums, *Shablul* and *Plastelina*, appeared in the movie *Shablul*, and took part alongside Einstein in two episodes of the satirical program *Lul*. Hanokh then spent three years trying to develop an international career in London but failed and returned to Israel in 1973. He resumed his partnership with Einstein before his Israeli rock career took off in earnest with the formation of the country's first rock band, Tammuz.

In 1977 Hanokh released a melancholy album called *Adam Betokh Atzmo*, before returning to his original high-energy rock style. Further collaborations with Einstein ensued and, by the end of the 1970s, Hanokh was the top rock performer in Israel. In 1984 Hanokh released *Mehakim le-Mashi'ah* (“Waiting for the Messiah”), his most successful album to date, and although his career had a few ups and downs in the interim, Hanokh remained the premier rock artist in Israel.

HANOKH BEN MOSES (d. 1014), Spanish talmudist. The biography of Ḥanokh the son of *Moses b. Ḥanokh, is told in Abraham *Ibn Daud's *Sefer ha-Kabbalah* (*The Book of Traditions*, ed. by G.D. Cohen (1967), 65–71). On the death of his father in about 965, Ḥanokh was appointed rabbi of Córdoba and as a result was virtually chief rabbi of the whole of Muslim Spain. Joseph *Ibn Abitur, who was his equal in knowledge of Torah and excelled him in secular knowledge, competed with him for the post, but Ḥ *Ḥisdai ibn Shaprut decided in Ḥanokh's favor. When Ḥisdai died, the struggle was renewed, and on this occasion the caliph, al-Ḥakam II al-Mustan'ir (961–76), confirmed the appointment of Ḥanokh; whereupon Ibn Abitur was put under the ban and left Spain. However, when the caliph died and the vizier al-*Manṣūr took control of the kingdom in Spain, a Jewish merchant, Jacob *Ibn Jau rose in power. The latter supported Ibn Abitur, Ḥanokh was dismissed from office, and Ibn Abitur was invited to return to

Spain. Ibn Abitur did not accept the invitation. Subsequently, Ibn Jau was imprisoned by al-Manṣūr and Ḥanokh was restored to office, serving until his death. From all the information that is available, it appears that Ḥanokh followed his father in all matters. He was an outstanding talmudic scholar, some of whose responsa were included in the contemporary gaonic responsa. Like his father, he worked to establish an independent Torah center in Spain. R. *Hai Gaon complains bitterly that Ḥanokh did not answer his letters. He had important disciples, the greatest of whom was *Samuel ha-Nagid.

[Eliyahu Ashtor]

HANOKH OF ALEKSANDROW (1798–1870), ḥasidic *zaddik* and leader; son of Phinehas ha-Kohen of Lutomirsk. He became a disciple of *Simḥah Bunim of Przysucha (Pshiskhah) and Menahem Mendel of *Kotsk, and served as rabbi in *Aleksandrow near Lodz, and later in Nowy Dwor, and in Pressnitz. Ḥanokh spent most of his life in the circles of the Ḥasidim of Przysucha and their successors in Kotsk and Gur, and in 1866 Ḥanokh succeeded Isaac Meir *Alter as leader of Gur Ḥasidism (see *Gora Kalwaria). He settled in Aleksandrow which had become a center for Kotsk-Gur Ḥasidism. Ḥanokh continued the Kotsk trend in a mystical religious interpretation. He emphasized the value of Torah study which he termed “internal worship.” Ḥanokh taught that every *mitzvah* must be performed from within and not merely externally. Man should dedicate his entire being to the performance of a *mitzvah* and in turn shall receive the strength of his being from the *mitzvah* he performs. His devotion effects a transformation in the world order and causes a divine emanation. Ḥanokh taught that while a man should occupy himself with the entire Torah and all the *mitzvot*, he should select one *mitzvah* for his particular attention. Of himself Ḥanokh states: “I have chosen the quality of humility.”

Ḥanokh believed that everyone could follow the path of Ḥasidism by his own efforts, and that the *zaddik* was merely a guide. However, a compelling attachment exists between the *zaddik* and his community: “The true leader successfully serves God with the aid of the Ḥasidim who gather round him.” Ḥanokh emphasized joy and happiness in life, but his joviality concealed a serious thinker. His teachings are distinguished by brevity and acuity. Only a few of his writings – responsa on halakhic questions, letters and sermons, poems and riddles – have survived in manuscript. Most of his teachings were recorded by his disciples and are published in *Ḥashavah le-Tovah* (1929); his stories and sayings are collected in *Si'ah Sarfei Kodesh* (1923).
