HANOKH ZUNDEL BEN JOSEPH (d. 1867), commentator on the Midrash. Ḥanokh lived in Bialystok (Poland), and devoted himself to writing commentaries on the Midrash. They are largely based upon the earlier commentators such as the *Mattenot Kehunnah* of Berman Ashkenazi, the *Yefeh To'ar* of Samuel Jaffe Ashkenazi, and the *Yedei Moshe* of Abraham Heller Ashkenazi, but he adds original comments. In the *Ez Yosef* he strives to give the plain meaning of the text and establish the correct readings, while the *Anaf Yosef* is largely homiletical (published together as *Yalkut al Petirat Aharon u-Moshe*, Warsaw, 1874). In addition to his commentaries on the classical Midrashim, the *Rabbah* (1829–34), and the *Tanḥuma* (1833), he also wrote commentaries on other midrashic works, such as the **Seder Olam Rabbah* (1845), *Midrash Shemu'el* (1860), *Aggadot Bereshit* (1876), and the *aggadot* in the *Ein Ya'akov* of Jacob ibn Ḥabib (1883). He also wrote a commentary on *Pirkei Avot* (1892), and *Olat ha-Hodesh* (1859), consisting of the prayers for the new moon, with a commentary. His commentaries on *Yalkut Shimoni* and the *Mekhilta* are still in manuscript.

HANOVER (Ger. **Hannover**), city in Germany. Sources dating from 1292 note the presence of Jews in Hanover's “old city” (Altstadt). The period was one of significant expansion for the city and, therefore, Jewish moneylenders were welcomed and promised protection by the city council. A municipal law of 1303 prohibited anyone from molesting the Jews “by word or deed.” The Jewish community grew significantly, and by 1340 ritual slaughter was permitted in the city. During the *Black Death persecutions the Jews were driven from the city. In 1369–71 only one Jew lived in Hanover until he, too, was expelled by the council, with the permission of the duke. In 1375 the dukes yielded to the city the privilege of admitting Jews and retaining their taxes. Shortly thereafter historical records again attest to the presence of Jews in the city. By 1500 several Jews also lived in the “new city” (in 1540, there were three families in the old city, and five in the new). During this period the Jews maintained a synagogue and a rabbi. In 1451 the bishop of Muenden forced the Jews of Hanover to wear the distinguishing *badge, and in 1553 the Jews were compelled to listen to the court preacher Urbanus Rhegius in the synagogue. Between 1553 and 1601 the dukes issued six orders of expulsion against the Jews, but they were either canceled or not carried out. Apparently the Jews who were under the protection of the city were not affected by these orders. In 1588 the council forbade all business connections with Jews, and for a long time Jews did not live in the “old city.”

In 1608 the residence of six Jewish families in the “new city” is mentioned, but when they opened a synagogue it was destroyed by the burghers (1613). In the 17th century the dukes permitted the settlement of several wealthy Jews in the “new

city.” At the request of the Court Jew Leffmann *Behrens, a resident of Hanover, a rabbinate was founded for the Duchy of Hanover. In 1704 a synagogue was established in Behrens’ home. In 1710 only seven Jewish families lived in the city, but subsequently their numbers increased considerably, reaching 537 in 1833. Hanover became an important center of Jewish learning and increasingly the residence for important Jewish figures in the financial world. A larger synagogue was built in 1870 and expanded in 1900. From 1848 to 1880 Solomon *Frensdorff, the masoretic scholar, headed a teachers seminary. Hebrew printing took place in Hanover during the 18th and 19th centuries. Among the more significant works produced was Jacob b. Asher’s commentary on the Pentateuch (1838). Prominent rabbis of Hanover include Nathan *Adler (1831–45) and Selig Gronemann (1844–1918). The Jewish population numbered 1,120 in 1861 (1.9% of the total population), 3,450 in 1880 (2.8%), 5,130 in 1910 (1.7%), 4,839 in 1933 (1.1%), and 2,271 in 1939 (0.5%). On the eve of World War II Hanover had one of the 10 largest Jewish communities in Germany, with over 20 cultural and welfare institutions. The anti-Jewish boycott started even before the nationwide boycott of April 1, 1933, when the Karstadt Department store fired all its Jewish employees. There was anti-Jewish rioting in May 1933 and the attacks continued the next year. Jews understood their perilous plight; many left and others closed their business and professional practices. By 1938, 552 Jewish business and legal and medical practices in Hanover were no longer operating. As their public life as Germans narrowed, Jewish communal life became more intense. In October 1938, 484 Jews of Polish origin were expelled to Poland. On *Kristallnacht* the synagogue was burned, Jewish stores were looted and homes ransacked. The mortuary was also destroyed and the *mikveh* was wrecked. Three hundred and thirty-four men were arrested and sent to Buchenwald. In a rapid operation on September 3–4, 1941, 1,200 Jews were evicted from their homes and consigned to 15 “Jew houses.” Deportations began in December 1941 and continued in March and July 1942, when the Jewish population was reduced to some 300. In February 1945 Jews married to non-Jews were deported. At least 2,200 Jews from Hanover died in the Holocaust. Some 100 survived within the city.

After the war 66 survivors of the prewar community returned. In 1963 a new synagogue was opened; in 1966 there were 450 Jews in Hanover (0.03% of the total population). In 1988 the European Center for Jewish Music was established at the University for Music and Theatre. It is devoted to the reconstruction and documentation of liturgical music. The Jewish community numbered 379 in 1989 and 3,898 in 2004. The membership increased due to the immigration of Jews from the former Soviet Union. Since 1997 the community has employed a rabbi. In 1995 a liberal community was established which had more than 450 members in 2005. It is a member of the Union of Progressive Jews in Germany. Hanover is the seat of two associations of Jewish communities in Lower Saxony: the association which is affiliated with the Central Council of Jews in Germany with nine communities (founded in 1953)

and the association of liberal Jewish communities (founded in 1997) with seven members (2005).

Former German State

The Duchy of Hanover was formed out of the former territories of *Brunswick and Lüneburg in the 17th century. Duke Ernst August (1679–98) obtained the title of elector through the services of Leffmann Behrens, whose descendants continued in the service of the crown till the middle of the 19th century. Other prominent families of Court Jews were David, Cohen, and Gans. The dukes established their rights of taxation and guardianship over the Jews, expressed in the *Judenordnung* of 1723, in force until 1842, which severely restricted the number of Jews there. In 1808 the Jews of Hanover received civil rights either through annexation of the territory to France or its incorporation in the newly created Kingdom of Westphalia. These rights were abolished in 1815, and the basic 1842 legislation concerning the Jews confirmed discrimination against them by expressly excluding Jews from state posts. The Jewish oath was rescinded only in 1850. The Jews finally achieved emancipation three years after Hanover passed to Prussia (1866).

[Zvi Avneri / Larissa Daemmig (2nd ed.)]

HANRAY, LAWRENCE (1874–1947), British actor. Born in London, Hanray directed the Liverpool Repertory Company from 1913 and took the company to London. In 1920 he joined

Everyman Theater, Hampstead, and played in the original production of *Loyalities*, 1922, and later revivals of this and other Galsworthy plays. He also acted in Chekhov, Ibsen, and Euripides and did a season in New York, 1927–28. From 1932 until his death he appeared in supporting roles in many British films, especially historical costume dramas produced by Sir Alexander Korda such as *The Private Life of Henry VIII* (1933) and *Nicholas Nickleby* (1946).

HANSON, NORMAN LEONARD (1909–), South African architect. Hanson made a major contribution to the town planning of Ashkelon in Israel, designed the national headquarters of the South African Zionist Federation in Johannesburg (his birthplace) and the mining and geology block at the Witwatersrand University. He served on its faculty of architecture for many years. Hanson was president of the Institute of South African Architects in 1947. In 1963, he left South Africa to take up the chair of architecture at Manchester University.

[Louis Hotz]

HANTKE, ARTHUR (Menahem; 1874–1955), Zionist leader. Born in Berlin, the son of a religious family from the district of Posen, Hantke was in 1893 a founding member of the Juedische Humanitaetsgesellschaft, a society of Jewish students in Berlin, which in the course of time adopted a Jewish national outlook. He joined the Zionist Organization soon after it was founded in 1897. In 1905 he became a member of the Zionist General Council of the World Zionist Organization and was appointed director of the office of the Zionist Federation in Germany. From 1910 to 1920 he served as president of this organization. At the Tenth Zionist Congress held in Basle (1911) he was elected to the Zionist Executive, a post in which he was responsible for financial and organizational affairs. During World War I he was charged with important political tasks, one of which was to establish contact with the German Foreign Ministry on behalf of the Zionist Organization. After the publication of the Balfour Declaration in London he attempted to obtain similar declarations from the Central Powers and succeeded in obtaining a pro-Zionist statement from the Austro-Hungarian foreign minister, Count Czernin (Nov. 17, 1917). After the war he lived for a time in London, where he continued to deal with organizational affairs of the Zionist Organization. In 1920 he was put in charge of the Central European department of the Keren Hayesod and of the Berlin office of the Zionist Organization. In 1926 Hantke settled in Palestine, and from then he served (with L. Jaffe until 1948) as the managing director of the head office of the Keren Hayesod in Jerusalem. The moshav Even Menahem on the Israel-Lebanese border is named after him.

[Michael Heymann]

HANUKKAH (Heb. חֲנֻכָּה; “dedication”), an annual eight-day festival commencing on the 25th of Kislev. According to a well-founded tradition it was instituted by *Judah Maccabee and his followers. The term *hanukkah* is found in Hebrew and in Aramaic (*hanukta*) in rabbinic literature, while in Greek it is ὁ ἐγκαίνισμός τοῦ θυσιαστηρίου, “dedication of the altar,” (1 Maccabees 4:59) and τὰ ἐγκαίνια, “feast of the dedication” (John 10:22, where it is an abbreviation of *hanukkat ha-mizbe’ah*, “dedication of the altar,” of 1 Maccabees, and of *hanukkat beit Hashmonai*, “dedication of the Hasmonean Temple” in rabbinic literature). The sources which refer to Hanukkah yield little information on the institution of the festival. They were composed long (perhaps even generations) after its establishment; legends seem to be inextricably interwoven with the historical traditions. 1 Maccabees (4:36–59) states that Judah Maccabee, after defeating Lysias, entered Jerusalem and purified the Temple. The altar that had been defiled was demolished and a new one was built. Judah then made new holy vessels (among them a candelabrum, an altar for incense, a table, and curtains) and set the 25th of Kislev as the date for the rededication of the Temple. The day coincided with the third anniversary of the proclamation of the restrictive edicts of Antiochus Epiphanes in which he had decreed that idolatrous sacrifices should be offered on a platform erected upon the altar. The altar was to be consecrated with the renewal of the daily sacrificial service, accompanied by song, the playing of musical instruments, the chanting of *Hallel, and the offering of sacrifices (no mention of any special festival customs is made). The celebrations lasted for eight days and Judah decreed that they be designated as days of rejoicing for future generations. Hanukkah, as the festival that commemorates the dedication of the altar, is also mentioned in the scholium of **Megillat Ta’anit*, as well as in the traditional **Al ha-Nissim* (“We thank Thee for the miracles”) prayer for Hanukkah.

In 11 Maccabees (1:8; 10:1–5), the main aspects of Hanukkah are related as in 1 Maccabees. The book adds, however, that the eight-day dedication ceremony was performed on an analogy with *Solomon’s consecration of the Temple (2:12). The eight days were celebrated “with gladness like the Feast of Tabernacles remembering how, not long before, during the Feast of Tabernacles, they had been wandering like wild beasts in the mountains and the caves. So, bearing wands wreathed with leaves and fair boughs and palms, they offered hymns of praise” (10:6–8). Hanukkah is, therefore, called *Tabernacles (1:9), or Tabernacles and Fire (1:18). Fire had descended from heaven at the dedication of the altar in the days of Moses and at the sanctification of the Temple of Solomon; at the consecration of the altar in the time of *Nehemiah there was also a miracle of fire, and so in the days of Judah Maccabee (1:18–36, 2:8–12, 14; 10:3).

Josephus, whose history of Hanukkah is based on 1 Maccabees, does not mention the term Hanukkah and concludes: “From that time onward unto this day we celebrate the festival, calling it ‘Lights’” (Φῶτα, Ant. 12:325). He explains that the fes-

tival acquired this name because the right to serve God came to the people unexpectedly, like a sudden light (*ibid.*).

None of these writings mentions the kindling of lights on Ḥanukkah. Reference is first made in a *baraita*: “The precept of light on Ḥanukkah requires that one light be kindled in each house; the zealous require one light for each person; the extremely zealous add a light for each person each night. According to Bet *Shammai: ‘On the first day, eight lights should be kindled, thereafter they should be progressively reduced’ while *Hillel held that: ‘On the first night one light should be kindled, thereafter they should be progressively increased’” (Scholium to *Megillat Ta’anit*; Shab. 21b). Another *baraita* states that the Hasmoneans could not use the candelabrum in the Temple since the Greeks had defiled it. They, therefore, took seven iron spits, covered them with zinc, and used them as a candelabrum (Scholium to *Megillat Ta’anit*). Indeed the sages of the second century C.E. observe that the candelabrum of the early Hasmoneans was not made of gold (Men. 28b; et al.). This tradition forms the core of the story, a later version of which relates that the Hasmoneans found in the Temple “eight iron bars, erected them, and kindled lights in them” (PR 2:5). Another *baraita* ascribes the eight-day celebration of Ḥanukkah to the kindling of the Temple candelabrum. It states that on entering the Temple, the Hasmoneans discovered that the Greeks had defiled all the oil, except for one cruse, which contained enough oil to keep the candelabrum burning for only one day. A miracle, however, happened and they kindled from it for eight days; in its commemoration a festival lasting eight days was instituted for future generations (Scholium to *Megillat Ta’anit*; Shab. 21b; cf. also *Scroll of Antiochus). All these stories seem to be nothing but legends, and the authenticity of the “oil cruse” story was already questioned in the Middle Ages.

Certain critics conjectured that the origin of Ḥanukkah was either a festival of the hellenized Jews or even an idolatrous festival that had occurred on the 25th of Kislev. Antiochus had, therefore, chosen the day to commence the idolatrous worship in the Temple. No allusion can be found in the sources to bear out this surmise. Ḥanukkah is also not connected in any way, except in calendrical coincidence, with the celebrations of the shortest day of the year (the birthday of the sun), or with the feasts of the Greek god Dionysius.

Most of the Ḥanukkah traditions complement one another, and what is lacking in one may be found in the other. Probably, during the eight-day dedication of the altar by Judah Maccabee, a second Tabernacles (analogous to the Second *Passover) was held because the festival had not been celebrated at its proper time. They observed the precept of taking the **lulav* in the Temple though not the precept of sitting in tents, for this was done at its proper time even by the partisans in the mountains. The custom of Simḥat Bet ha-Sho’evah (“the water-drawing festival”), with its kindling of torches and lamps in the courts of the Temple and the city of Jerusalem, seems likely to have been transferred as well from *Sukkot to Ḥanukkah. This was the general pattern of the festival as Judah

instituted it. Before long, however, the custom of taking the *lulav* during Ḥanukkah was abolished and forgotten in time. The author of I Maccabees, who lived in Alexander Yannai’s time, was unaware of the custom although it was still remembered in the Diaspora and is recorded by Jason of Cyrene and by the author of II Maccabees. Hints of a connection between Ḥanukkah and Sukkot are also preserved in rabbinic literature. The rejoicing with lights and illuminations in the Temple (after which Ḥanukkah came to be called *Urim*, “Lights”) also became less common after a time so that Josephus no longer knew why the name “Lights” was given to the festival. By then, however, the custom of kindling lights on Ḥanukkah had spread to places outside Jerusalem, lights being kindled in the streets or in the homes. This variety of customs associated with Ḥanukkah is reflected in the *baraita* which discusses the controversy between the schools of Shammai and Hillel (see above) seemingly about the second half of the first century C.E. The custom of kindling the Ḥanukkah lights was then fixed by the sages as a rule for each man; thus it spread throughout Israel, and when other festive days mentioned in *Megillat Ta’anit* were revoked, Ḥanukkah remained as a holiday (RH 18b–19b). Consequently, Ḥanukkah evolved from a distinct Temple festival into a popular family one.

The *halakhah* prescribes that lighting the Ḥanukkah lamp should take place between “sunset and until there is no wayfarer left in the street. The lamp should be placed outside the entrance of the house. If a person lives on an upper story, it should be set on the window, nearest to the street. If he is in fear of the gentiles, the lamp may be placed inside the inner entrance of the house, and in times of danger, the precept is fulfilled by setting it on the table” (Scholium to *Megillat Ta’anit*; Shab. 21b). “Danger” not only existed in Erez Israel during the Hadrianic persecution, but also in Babylonia, where Jews feared the *Habbarei who were fire worshipers (Shab. 45a). Perhaps because of the danger involved, Jews in Babylonia were most particular in the observance of the Ḥanukkah precepts; they decided that “because its purpose is to publicize the miracle,” it takes precedence over the purchase of wine for *Kiddush* on the Sabbath (Shab. 23b). “Women are also obliged to kindle the Ḥanukkah lamp since they were also included in the miracle” (Shab. 23a). The precept is best fulfilled by kindling with olive oil; however, any oil may be used (*ibid.*). The Ḥanukkah lamp and the Ḥanukkah light may not serve any practical purpose (Shab. 21b). On kindling the lights, two benedictions are recited, one is a blessing on the lights and the other for the miracle; on the first night, “*She-Heḥeyanu*” (the blessing for the season) is added. The kindling of the light is followed by a short prayer which begins with the words “*Ha-Nerot Hallalu*” (“these lamps”; Sof. 20:4). A summary of the event, i.e., *Al ha-Nissim... Bi-Ymei Mattityahu* (“In the days of Mattathias”) is recited in the **Amidah* prayer and in the Grace after Meals. The entire *Hallel* is said on each of the eight days. The reading of the law is from the portion of the Torah which describes the sacrifices brought by the princes at the dedication of the sanctuary, and the kindling of the candelabrum

(Num. 7:1–8:4); special **haftarot* are prescribed for the Sabbaths of Ḥanukkah. **Tahanun* is not said and it is forbidden to eulogize the dead or to fast.

In medieval times, Ḥanukkah became such a popular festival it was said “Even he who draws his sustenance from charity, should borrow, or sell his cloak to purchase oil and lamps, and kindle” the Ḥanukkah light (Maim. Yad, Megillah va-Ḥanukkah, 4:12). In some communities, women did not work while the lights were burning, and often even during the whole of Ḥanukkah. It became the custom to feast on Ḥanukkah and, relying upon late Midrashim which associate the story of **Judith* with Ḥanukkah, cheese was customarily eaten. Pancakes (*latkes*) are eaten in many Ashkenazi communities, and in Israel doughnuts (*sufganiyyot*) have become customary food for the festival. “**Māoz Zur Yeshu’ati*” (“Mighty Rock of my Salvation”), a hymn composed in Germany by a 13th-century poet about whom nothing is known except his name Mordecai, is usually sung in the Ashkenazi ritual after the kindling of the lights. The Sephardim recite Psalm 30. The origin of the custom to have an additional light, the *shammash* (“servant”) with which the Ḥanukkah lights are kindled, is based on two injunctions: not to kindle one Ḥanukkah light with another; and not to use the Ḥanukkah lights for illumination.

Ḥanukkah celebrations were also expressed in ways of which the halakhists disapproved, e.g., in card playing which became traditional from the end of the Middle Ages. On Ḥanukkah, children play with a *dreidel* or *sevivon* (“spinning top”), and also receive gifts of “Ḥanukkah money.” Among Sephardim, special feasts for the children and competitions for youths are arranged. In countries where Christmas became a popular family festival, Ḥanukkah, particularly among Reform Jews, assumed a similar form. In modern Israel, Ḥanukkah symbolizes mainly the victory of the few over the many, and the courage of the Jews to assert themselves as a people, which was the impetus of the national renaissance. This view found literary and artistic expression and is also reflected in such customs as the torch relay race which sets out from **Modi’in* where the revolt broke out and the Hasmoneans are buried.

In Israel giant Ḥanukkah lamps, visible for great distances, are kindled during the feast atop public buildings, such as the Knesset building in Jerusalem.

[Moshe David Herr]

HANUKKAH LAMP (also known as **hanukkiyyah** and Ḥanukkah **menorah**). The central ritual of the eight-day Festival of **Ḥanukkah* is the kindling of a lamp that has receptacles for eight lights, one for each night. A ninth receptacle, called the servitor or *shammash*, is often included in the lamp as well. The festival began in 164 B.C.E., when **Judah Maccabee* liberated the Jerusalem Temple from Greek control, re-sanctified it, and declared an eight-day celebration of “joy and gladness” (1 Macc. 4:26–59). Yet, there is no record of exactly how Jews commemorated the holiday in the years following the rededication of the Temple. By the late first or early second century C.E., it was already the custom to kindle eight lights, as recorded in the Talmud. There was a disagreement between two important rabbinic schools in ancient Israel over how to light the lamps. Bet Shammai argued that one should light eight lights on the first night and decrease each night to one, while **Bet Hillel*, which soon prevailed, preferred to light one lamp on the first night and increase it to eight (Shab. 21b).

No lamps survive from antiquity that can be identified definitively as Ḥanukkah lamps. It is likely that any of the secular oil lamp types known from the Greco-Roman and Byzantine Periods were used, including single- or multi-wick lamps of clay or metal, sometimes set on a stand, and hanging lamps. The Talmud describes two lamp types that could be used on Ḥanukkah: single dishes with eight wicks arranged around the edge (and covered with another vessel), and lamps with more than one spout (Shab. 23b).

It is not until the Middle Ages that the first lamps clearly designated for Ḥanukkah appear or are illustrated in Hebrew manuscripts. Many of these lamps were in bench form, characterized by a row of light receptacles on a strip or block, usually with an attached backplate. Among the earliest is a stone block with oil wells across the top, which bears the Hebrew inscription “For the commandment is a lamp, and the teaching is light” (Prov. 6:23). Found in Avignon, it has been variously dated between the 10th and 13th centuries. Metal lamps with triangular backplates for suspension on the wall and an openwork arcade of interlace arches, also with a Hebrew inscription, were made in Germany or northern France in the 13th century. Another type of wall lamp with a crenellated rectangular backplate is depicted in an Italian Hebrew manuscript of 1374 in the British Library.

While the form of the stone block lamp might have been derived from similar secular lighting devices called cresset stones, that of the sconce-form metal lamps seems to have been an innovation developed for Jewish ritual use. The secular sconces of the medieval period consisted of single brackets for candles that projected out from the wall; backplates were unknown until the 16th century. The development of a wall lamp for Ḥanukkah is based on the talmudic injunction to hang the lamp outside one’s home, since its purpose is to publicize the miracle commemorated on the holiday. If one lived on an upper floor, one could place it in the window, and in times of persecution, on a table (Shab. 21b, 23b). These exceptions led to the addition of feet to backplate lamps, so they

could stand on a table. Perhaps the earliest datable example of this custom is a German metal lamp created by Meir Heilprin in 1573–74.

The second basic form of the Ḥanukkah lamp is that of the candelabrum: a central shaft with four arms rising upward from each side, all in a single row. This shape is certainly based on that of the seven-branch candelabrum, or *menorah*, that was designed for the Tabernacle in the desert (Ex. 25:31–40); later versions illuminated the First and Second Temples. *Menorah*-form lamps probably were originally confined to synagogue use. The Rothschild Miscellany, written in Ferrara, Italy around 1470, contains the earliest depiction of a large standing synagogue lamp, consisting of a tall square column that widens at the top to hold eight candles. A 15th- to 16th-century synagogue lamp from Padua is in true *menorah* shape and has leaves projecting from the arms. Smaller *menorah*-form lamps probably for home use appeared in Frankfurt in the late 17th century.

A third lamp type kindled on Ḥanukkah in Europe during the medieval period consisted of a metal star-shaped oil receptacle with eight projecting spouts arranged in a circle. Suspended from the ceiling, it could serve as ordinary room illumination, Sabbath light, and Ḥanukkah lamp (if it had eight spouts). It continued in use for the festival at least until the 16th century, when it is mentioned in Moses *Isserles' notes to the Shulḥan Arukh, called the *Mappah*.

Rabbinic proscriptions governed certain developments in Ḥanukkah lamp form. One is the inclusion of a ninth light, the *shammash*. The basis for this light lies in the talmudic instruction that the lights of the Ḥanukkah lamp were sacred, and that one could not use them for ordinary illumination. Thus, in situations where there was no other light source, an additional lamp had to be kindled so one could see to perform other tasks. By the Middle Ages, Sephardi Jews developed the tradition of always placing a light next to the Ḥanukkah lamp. Ashkenazi Jews had a different custom, of kindling the eight lights with a ninth light, called a *shammash*, which they then set next to the Ḥanukkah lamp. This ninth light eventually became incorporated into the lamp itself, as exemplified by the 13th-century triangular metal lamps from Germany or northern France described above. This custom appears to have been widely adopted, since a *shammash* is found on the vast majority of lamps from subsequent periods and among all three traditions: Sephardi, Ashkenazi, or Mizrahi.

Another aspect of form dictated by rabbinical rulings is the placement of all eight lights in a single row and on the same level. Talmudic sages required that each light had to be perceived as distinct from the others, in order to count as one of the eight. Lights in the round, such as eight lights around the rim of a dish, were acceptable as long as the dish was covered and the lights did not appear to be a single bonfire. The tradition of lights in the round was accepted by later Sephardi rabbis, for example Joseph *Caro in his early 16th-century authoritative code, the Shulḥan Arukh. However, for medieval Ashkenazi rabbis, the lights had to be placed in a single row

and on the same level, with the exception of hanging star-shaped lamps. This position is reflected in Moses Isserles' Ashkenazi modification of the Shulḥan Arukh in the later 16th century. To judge from the Ḥanukkah lamps produced since then, Isserles' injunction was followed by most Jewish communities around the world. However, lamps in the round or with semi-circular lights continued in use in the Netherlands in the 17th to early 18th century, and in Iraq, Yemen, and India in the 19th and 20th centuries. In addition, *menorah*-form lamps with arms of uneven heights continued to be made sporadically in Eastern Europe, Germany, and France into the 18th and 19th centuries, primarily for synagogues.

Since the earliest documented examples, Ḥanukkah lamps have generally borne some form of decorative element or imagery, whether on the backplates of bench lamps, the arms and shafts of *menorah*-form lamps, or on bases and supporting legs. Motifs include floral designs and scrollwork, animal and human figures, and architectural elements.

The centrality of Judah Maccabee and his military victory in the events of Ḥanukkah would suggest that he would often be depicted on the lamps used for the festival. However, he appears rarely until the 20th century. Instead, one of the most common motifs on bench lamps is the seven-branch *menorah* (sometimes represented as a nine-branch Ḥanukkah lamp). Its popularity began at least by the 18th century, and it was especially favored in Germany, Italy, and Eastern Europe through the 19th century. The explanation for the preference of the seven-branch *menorah* on Ḥanukkah lamps lies in the Talmud. In answer to the question of why Ḥanukkah is celebrated, the sages related a story not included in the earlier apocryphal books of the Maccabees of how, when it came to rekindle the Temple *menorah*, only one vial of sanctified oil could be found, enough for one day. But a miracle occurred, and the oil burned for eight full days (Shab. 21b). It is this later story that is cited as the reason for the holiday, and is referred to as the miracle of Ḥanukkah. When the Jerusalem Temple was destroyed in 70 C.E. and the Jews came under Roman rule, it is possible that rabbinic leaders chose to emphasize the spiritual aspects of the holiday and the hope for divine redemption of Zion, symbolized since antiquity by the *menorah*.

Many Ḥanukkah lamp backplates take the form of an actual building, or are ornamented with such architectural elements as columns, gables, and arches. The explanation for this usage is more complex, lying both in the vocabulary of general decorative arts throughout time and place, and in Jewish religious iconography. The suggestion that the use of architectural imagery on Ḥanukkah lamps symbolizes the ancient Temple may have some merit, based on the popularity of images of the Temple *menorah*. More explicitly Jewish references are found in East European lamps of the 18th and 19th centuries, whose backplates take the form of Torah arks.

The use of human imagery on Ḥanukkah lamps is quite circumscribed. Biblical or mythological figures were favored in Western and Central Europe, and later in the United States and Israel, but human representations appear to be absent in

Eastern Europe, North Africa, and the Middle East. This is understandable in Islamic lands, where iconoclasm was often predominant on ritual objects. However, this pattern may also represent varying attitudes on the part of different Jewish communities toward depicting living things, as proscribed in the Second Commandment. One popular figure was the biblical heroine, *Judith, who was found on lamps from Italy, Germany, and the Netherlands through the 18th century (and on later copies). While the original story of Judith contained no connection to the events or personages of Hanukkah, medieval rabbinical sources recounted a different version, in which Judith lived many centuries later than the apocryphal account, and was a descendant of Judah Maccabee's Hasmonean family. Judith's inclusion on lamps may also be related to her popularity in European art in general, where she symbolized a number of positive and negative traits, including civic and religious virtue.

Many of these motifs continued throughout the 20th century alongside newer developments in lamp design. One was the appearance of Judah Maccabee. In the early part of the century, his military victory reflected the Zionists' call for Jews to return to farm the land of Israel and defend it. Later, in the mid-20th century, Israel's struggle for independence with its miraculous victories echoed those of Judah Maccabee, and representations of Judah and of modern soldiers on lamps intensified. A second 20th century development was the outgrowth of modern design movements such as the Bauhaus, which eschewed surface ornamentation in favor of the purity of functional form. European artists such as David Heinz Gumbel and Ludwig Y. Wolpert brought this modern aesthetic to Israel in the 1930s, where they taught in the New Bezalel School; Wolpert later served as a stimulus for modernism in the United States upon his immigration to New York in 1956. Subsequent art and design movements influenced Hanukkah lamp form and decoration as well, as exemplified by the Abstract Expressionist synagogue pieces by Ibram Lassaw, and the Memphis-style lamps of Peter Shire.

Geographically, a number of distinctions can be seen in the materials, techniques, or forms favored from country to country. Wall-hung bench lamps were predominant in the Netherlands, Italy, North Africa, Iraq, and India, and probably represent Sephardi and Mizrahi traditions. On the other hand, standing bench lamps were highly characteristic of Ashkenazi lands such as Germany, Austria, and Eastern Europe. Large *menorah*-form lamps were used in European synagogues, but were rare in Islamic lands and may be a late introduction. Smaller *menorah*-form lamps were used in homes primarily in Germany, the Netherlands, Austria, and Eastern Europe through the 19th century, becoming widespread during the course of the 20th century.

Silver, the most expensive material, was highly favored in Germany, Austria, and Eastern Europe, and rarer among other Jewish communities. Various rabbis over the centuries had recommended that Hanukkah lamps be made of gold and silver in order to celebrate the ritual in as magnificent way as

possible. For example, Moses Makhir in the Land of Israel advocated in the 15th century that one should have a silver lamp even if only one light holder each night was of that material, an opinion echoed by Joseph Yuspa Hahn Noerdingen of Germany in the 17th century. It is possible that economic circumstances and proximity to silversmithing centers influenced the ability of Jews to obtain silver lamps for Hanukkah.

Lamps of copper alloy (i.e., bronze or brass) are common in a number of countries, but can be distinguished from place to place by their materials and techniques. For example, sheet metal backplates were widely found in the Netherlands, Italy, and North Africa. However, Dutch backplates were executed in repoussé with reflective bosses, while those from North Africa were more often flat and covered with incised designs. In Italy, sheet metal backplates were flat with appliqué decoration. Bench-form lamps of copper alloy were also made by casting and were characteristic of Italy, Eastern Europe, the Netherlands, and North Africa. By contrast, cast *menorah*-form lamps for synagogue and home use were most common in Germany, the Netherlands, and Eastern Europe, but rare in Italy and absent in North Africa.

A large number of standing bench lamps of pewter were produced in southern Germany from c. 1750 to 1850, possibly as a less costly version of silver. Their forms resemble those of German inkstands of the same period. Wall-hung pewter lamps were also produced in the Netherlands in the 18th century. Lamps made of tin were characteristic of the Upper Rhine region of southern Germany, Alsace, and the Basel area.

Stone lamps are known from only three regions: France (where the unique medieval example was found), Morocco, and Yemen. Most are in block form with oil wells carved out along the top, although occasionally Yemenite Jews lit a star-shaped lamp more often used on the Sabbath.

A number of Jewish communities throughout the world did not use permanent lamps for Hanukkah. In Turkey, for example, Jews favored simple tin lamps that were discarded at the end of the festival. Jews in eastern lands such as Iran, Afghanistan, and Central Asia were known to use eight ordinary cups of metal or ceramic. Finally, in many countries the indigent would use more ephemeral materials such as egg shells, walnut shells, or even potatoes scooped out to hold the oil.

HA-OGEN (Heb. הָאָגֶן; “the anchor”), kibbutz in central Israel in the Hefer Plain, affiliated with Kibbutz Arzi Ha-Shomer ha-Za'ir, founded in 1947. The founding settlers from Czechoslovakia and Austria were later joined by new members from

other countries. In 1969 Ha-Ogen had 500 inhabitants and engaged in intensive farming, ran a plastic-tube factory, and was a partner in a rubber factory. The kibbutz also operated a recording studio, serving leading Israeli singers. In the mid-1990s, the population was approximately 600, dropping to 542 in 2002.

HAOLAM, the central organ of the World Zionist Organization, published as a weekly from 1907 to 1950 (except for short intervals). Established on the initiative of N. *Sokolow during his service as general secretary of the World Zionist Organization, *Haolam* was a Hebrew counterpart of *Die *Welt*, the German-language official organ of the Zionist Organization. Like *Die Welt*, for most of the years of its existence *Haolam* also had a yellow cover, which, according to *Herzl, symbolized the transformation of the shameful “yellow badge” to a color of pride and respect. At first *Haolam* was edited in Cologne – the residence of David *Wolffsohn, then president of the Zionist Organization – and printed in Berlin. Sokolow, who was preoccupied with other affairs, left most of the editing to his assistant, A. Ḥermoni. It soon became clear that Western Europe was not the appropriate place to publish a Hebrew paper; moreover, most of the members of the Zionist Executive regarded the paper as a burden upon the budget. As a result, at the end of its second year of publication (December 1908), the paper was moved to Vilna, where it became the organ of the Zionist Organization in Russia, under the editorship of A. *Druyanow. In the spring of 1912, upon the initiative of M.M. *Ussishkin, *Haolam* was moved to Odessa and continued its publication there until the outbreak of World War I.

Publication was resumed in 1919, in London, which had by then become the seat of the Zionist leadership, with Abraham *Idelson as editor (until 1921). Idelson planned to transfer the paper to Berlin, which had become a center of Hebrew literary activity in the early postwar period, but he died before achieving his aim. It was not until 1923 that Idelson’s plan was realized, and H. *Greenberg, S. *Perlman, and M. *Kleinmann became the new editors. The former two soon left the editorial board, leaving Kleinmann as the sole editor until his death in 1948. In 1924, when conditions in Germany took a turn for the worse, *Haolam’s* editorial offices were again moved to London. For several years the printing was done in Paris. Its final move took place in 1936, when the paper was transferred to Jerusalem, which by then had also become the headquarters of the World Zionist Organization. Upon Kleinmann’s death, his two assistants, M. Chartiner and M. Cohen, became its editors until February 1950, when the paper ceased to exist.

For two generations, *Haolam* served as a faithful reporter of events and developments in Zionist and Jewish affairs. It also had a literary section, which published articles and the complete works in installments of outstanding Hebrew authors and scholars (such as Sokolow’s book on *Spinoza, A.A. *Kabak’s work on Solomon *Molcho, S.L. *Zitron’s history of Hebrew journalism, stories by *Abramovitsh (Men-

dele Mokher Seforim), etc.). The paper carried excellent informational columns, and A. Litaï’s column on events taking place in the *yishuv* has retained its value as an important historical source.

BIBLIOGRAPHY: A. Ḥermoni, *Be-Ikkevot ha-Bilu’im* (1952), 128–66; *Haolam* (Feb. 21, 1950), last issue, includes its history.

HA-ON (Heb. הַאֲוֹן; “strength”), kibbutz on the eastern shore of Lake Kinneret, Israel, south of *Ein Gev, affiliated with Iḥud ha-Kevuẓot ve-ha-Kibbutzim, founded in 1949. Some of its members are Israel-born, and others came from Eastern Europe and other countries. Until the *Six-Day War (June 1967) the kibbutz was constantly exposed to the Syrian gun emplacements directly above it on the Golan Plateau. Its farming included bananas, date palms, fruit orchards, field crops, carp ponds, and dairy farming. Ha-On was also a partner in the Lake Kinneret fishing cooperative and ran a metal factory. One of its economic mainstays was a holiday village with 96 guest rooms, a private beach, and special attractions like an ostrich farm, bird center, and paintball. In 2002 its population was 191.

HA-OVED HA-ZIYYONI (Heb. הַעֹבֵד הַצִּיּוֹנִי “The Zionist Worker”), Israel labor movement founded as a *Histadrut faction at Ra’anannah on Nov. 22–23, 1935, by pioneer immigrants of General Zionist Youth from Eastern Europe, many of them members of kibbutzim. In Erez Israel, these pioneers belonged to the General Zionist Organization but opposed its policy of boycotting the Histadrut. They worked inside the General Zionist movement to ensure its classless character and inside the Histadrut, which they regarded as the home of all trends in Jewish labor, to oppose class tendencies and the adoption of socialist symbols. There was much controversy on this subject inside the General Zionist movement, especially during the five years between a first gathering at Petaḥ Tikvah in 1930 and the foundation conference in 1935. Ha-Oved ha-Ziyyoni worked for the implementation of the principle of Jewish labor as an essential element in the upbuilding of the nation but not as a matter for class conflict. It established and built kibbutzim and moshavim for the implementation of the pioneering Zionist idea but not as instruments for socialism and demanded the establishment of nonparty labor exchanges allocating work on the basis of individual rights and qualifications.

After 1948, Ha-Oved ha-Ziyyoni helped to establish the Progressive Party and became part of its successor, the *Independent Liberal Party. It established six kibbutzim (in the framework of the movement of Ha-No’ar ha-Ziyyoni), 13 moshavim, five moshavim shittufiyim, and five youth villages. In the Histadrut, it favored workers’ participation in management and profits. It supported the maintenance of a pluralistic economy, with encouragement for all sectors. In the

1969 Histadrut elections it received 5.69% of the vote. Later on the movement was united with *Ḥever ha-Kevuzut*.

[Moshe Kol]

HA-PARNAS, SEFER (Heb. סֵפֶר הַפְּרָנִס), work by Moses Parnas, one of the pupils of *Meir b. Baruch of Rothenburg, who lived in the first half of the 14th century. Almost nothing is known of its author. His work was well known to the scholars of Germany in the 15th century, such as Jacob *Moellin, Joseph *Colon, Israel *Isserlein, and Israel *Bruna. It was afterward lost, but was published in 1891 with notes by David *Luria as far as section 17, as well as those of its publisher, Moses Samuel Horowitz. This book is very typical of the works belonging to “the school of Meir of Rothenburg,” and its author cites traditions, customs, rulings, and teachings of his master based both upon what he himself had seen, as well as culled and abridged from other collections, such as *Tashbez* by Samson b. Zadok.

HAPAX LEGOMENA (Gr. “once said”), words which are only once recorded in a certain kind of literature. Since the interest in Middle Hebrew lexicography arose comparatively late, Middle Hebrew texts are frequently not well-established philologically and new texts are often discovered, the interest in hapax legomena in Hebrew is, for all practical purposes, limited to the Bible or, more precisely, to biblical Hebrew. There are in biblical Hebrew about 1,300 hapax legomena (yet their precise number cannot be stated, since the exact definition is not clear as to whether or not they include homonymic hapax legomena). Most of them (about 900) are not too difficult to interpret, being derived from well-known biblical roots (as *‘emdah*, Micah 1:11, *mo‘omad*, Ps. 69:3, both denoting “standing ground,” being derived from the well-known root עמד, “to stand”). About 400, however, cannot be derived from known biblical roots and are therefore more difficult to interpret. Occurring only once, their exact meaning is more difficult to establish from context than that of words attested more often. Except for this fact and the possibility that hapax legomena may have arisen through error in transmission, the philological treatment of hapax legomena does not differ from that of words occurring more often. The meaning of both is elucidated by comparison with other Semitic languages, which often makes it possible to establish the etymology of the word treated. Middle Hebrew has, of course, a special standing in this matter. Since the Bible, because of its small size and limited topics, has preserved only a small part of Hebrew vocabulary, it is often due to mere chance that a word occurs only once in the Bible, though there may be ample examples of it in Middle Hebrew (as in the case with *sullam* “ladder,” Gen. 28:12). Even the sages of the Mishnah did not understand the hapax legomenon *we-te’te’tiha*, “and I will sweep it” (Isa. 14:23), except with the help of vernacular speech, as used by Rabbi’s handmaid (RH 26b). Hapax legomena sometimes belong to removed subject matters (as Isa.

3:18ff., describing the ornaments of Zion’s daughters), and there are relatively many hapax legomena denoting animals, plants, and diseases (as *leta’ah* “lizard,” Lev. 11:30; *luz*, “almond tree,” Gen. 30:37; *harḥur*, “fever,” Deut. 28:22) and loan words (as *‘appiryon*, “litter,” Song 3:9). The Book of Job, with its special style and many Aramaisms, contains a relatively large proportion of hapax legomena, 145 in number, among them 60 without derivation from known biblical roots. The (much larger) Book of Isaiah has 201 hapax legomena, among them, again, 60 without derivation.

In Hebrew literature hapax legomena are called *‘en lo ‘ah*, *‘en lo ḥaver*, *‘en lo re‘a ba-Miqrā’*, “it has nothing alike, no brother, no fellow, no comrade in the Bible,” or *millim bod-edot*, “isolated words.” *Saadia Gaon wrote in Arabic *Kitāb al-Sab‘in Lafza min Mufradāt al-Qur‘an* (“The Book of Seventy Hapax Legomena in the Bible”), dealing with over 90 (!) hapax legomena, which he explains by means of mishnaic words. It stands to reason that this book originally contained 70 words, and was expanded later, either by Saadia himself or by others, yet preserving its original name. Although it is one of the oldest and most important philological works in the history of Hebrew linguistics, it is in its intention a polemic work against Karaites, endeavoring to prove the value of tradition from the linguistic point of view: without mishnaic Hebrew even the linguistic interpretation of the Bible is impossible.

[Joshua Blau]

HAPHARAIM (Heb. הַפְּרָיִם), town in the territory of Issachar (Josh. 19:19), located between Chesulloth and Shunem on one side and Shion and Anaharath on the other. A place with the same name is mentioned in the Mishnah (Men. 8:1) as the source of fine wheat supplied to the Second Temple. Eusebius (Onom. 28:26) identified it with Aphraia, 6 mi. (10 km.) north of Legio (al-Lajjūn near Megiddo), which may point to the vicinity of Afulah. Recent scholars, relying on the spelling Afarayim in talmudic literature (Tosef., Men. 9:2; TB, Men. 83b), have proposed its identification with *Ophrah of Gideon (Judg. 6:11), and perhaps the *fr* in the list of Thutmose III. The site of Hapharaim is possibly at al-Tayyiba in the hills north of the Jezreel Valley. Another suggested identification, with Khirbat al-Farriyya near Megiddo, is less probable.

[Michael Avi-Yonah]

HAPOEL (Heb. הַפּוֹעֵל “The Worker”), Israel workers’ sports organization, affiliated with the *Histadrut. It had its beginnings in a Haifa soccer team in 1924. The countrywide association was organized in 1926 with a twofold aim: to provide opportunities for physical education and sport for the masses of Palestinian youth and to involve them in the labor movement. Hapoel members pioneered in naval and other activities in order to assist “illegal” immigration into Palestine. They also helped to establish settlements and were active in the *Haganah, the pre-state Jewish defense organization. Through Hapoel’s efforts the number of swimming pools in the country increased and floodlit playing fields were opened making possible nighttime basketball and volleyball. Hapoel organized the Lake Kinneret swims in which some 10,000 swimmers participate annually, road marches, and long-distance foot races as well as sports conventions (*Poeliad*) with international participation. Hapoel’s teams and individual contestants won championships in most of the fields of Israel sport. The organization also encourages sports activities in various places of work, such as factories, shops, etc. From 1927 Hapoel was affiliated with the International Labor Sports Organization. After the establishment of the state it played an important role in encouraging and organizing sports activities in the underdeveloped African countries. In 1968 there were more than 85,000 members of Hapoel in 600 branches throughout the State of Israel. In 2004 Hapoel supported 980 youth groups, 325 adult groups, and 765 sports associations in 28 different competitive sports branches, among them successful athletes who represent Israel in the Olympic Games and other international competitions. In addition, Hapoel was also affiliated with workplace teams, competing in 15 sports in the framework of workplace leagues.

[Yehoshua Alouf / Shaked Gilboa (2nd ed.)]

HA-PO’EL HA-MIZRACHI, religious pioneering and labor movement in Erez Israel. Religious pioneers who settled in Erez Israel in 1920–21 banded together and in April 1922 founded Ha-Po’el ha-Mizrachi, whose program stated that it “aspires to build the land according to the Torah and tradition and on the basis of labor, to create a material and spiritual basis for its members, strengthen religious feeling among the workers, and enable them to live as religious workers.” The new framework was a product of the Third *Aliyah, which included many young people marked by their religious consciousness. They were pioneers and workers who viewed settling in Erez Israel as a *mitzvah*, a religious commandment and task, but did not find a place in the existing labor community, despite the fact that socially they belonged to it. They opposed the prevalent view among workers in the 1920s that regarded religion as obsolete and adherence to the *mitzvot* as an obstacle to the building of the land according to socialist principles. The ideology of the new religious labor group was developed for the most part by Shemuel Hayyim *Landau, Isaiah *Sha-

pira, Nehemiah Aminoah, Isaiah Bernstein, Shelomo Zalman *Shragai, and Shimon Geshuri. It was called Torah va-Avodah (Torah and Labor), after the saying: “The world stands on three things: Torah, divine service (*avodah* – literally, work), and deeds of loving-kindness” (Avot 1:2). The sources of this ideology also included ideas from Polish Ḥasidism and from the system of “Torah with *Derekh Erez*” of Samson Raphael *Hirsch.

The concept of Torah va-Avodah emphasized the demand for social justice and a productive life as an essential condition of the return to the homeland and as an integral part of a full religious life in Judaism. In view of the desiccation of Jewish life in the Diaspora, even greater emphasis should be placed on those elements which were practically excluded from Jewish existence outside Erez Israel. The ideology proclaimed that complete Judaism is a synthesis of religious, social, moral, national, and political elements, realized mainly through personal commitment and creativity. All these aspects of national life must be inspired by the Written and Oral Law. Special emphasis was placed on the demand for social justice. “Only he who earns his living by his own labor is certain that his livelihood is free from the labor of others, from exploitation and fraud.” “Morality and justice are links in a long chain of sanctification and purification of life, which originates in the acceptance of the rule of God.” This outlook led its followers along the path of productivization and especially toward cooperative and collective agricultural settlement.

From its earliest appearance there were conflicts between Ha-Po’el ha-Mizrachi and *Mizrachi because of the former’s socialist trends, though technically it was an organizational part of Mizrachi. On the other hand, it had differences with the *Histadrut, because of Ha-Po’el ha-Mizrachi’s religious concept of the Jewish people, its opposition to the class struggle, and its demand for obligatory arbitration in labor disputes. In practice, it appeared as an independent element in the labor market. After an unsuccessful attempt to join the Histadrut in the 1920s, Ha-Po’el ha-Mizrachi acted as a part of the world Mizrachi movement. In 1925, however, it created a special body of its own in the Diaspora called Ha-Berit ha-Olamit shel Tenu’at Torah va-Avodah, which included Mizrachi youth groups and the pioneering Mizrachi movements in different countries. Thus Ha-Po’el ha-Mizrachi united an ideological movement, a labor federation, and a political party in one body.

As an ideological movement, Ha-Po’el ha-Mizrachi propagated its ideas and opinions in its organ *Netivah* (edited by Geshuri), in pamphlets and books in the Torah va-Avodah Library, and later on in *Moreshet*. It attracted to its ranks the religious *kevuzot* united in *Ha-Kibbutz ha-Dati and established the pioneering youth movement *Bnei Akiva, which later on founded the yeshivah high school under the initiative of Moshe Zevi *Neria. As a labor federation, Ha-Po’el ha-Mizrachi was active in the same areas as the Histadrut. It established employment bureaus and welfare institutions and was active developing Jewish labor, the *Haganah, and the organization

of pioneering and “illegal” immigration. It founded economic enterprises such as Bank Ha-Po'el ha-Mizrachi; a mortgage bank, Adanim; the financial tool of the settlements, Yaniv; the construction company for housing, Mash'hav; and several cooperatives, united under one roof, Merkaz ha-Mosedot ve-ha-Mifalim ha-Kalkaliyyim shel ha-Po'el ha-Mizrachi. It also organized young religious workers in Ha-No'ar ha-Dati ha-Oved and established the sports organization, Elizur. In 1935 its women members organized the Women's League of Ha-Po'el ha-Mizrachi and later united with the Women's Mizrachi Organization of the *National Religious Party.

As early as the 1920s the movement started its settlement activity. At first, the common form was the *moshav ovedim, which seemed more suitable for the members of Ha-Po'el ha-Mizrachi than the *kevuza* or *kibbutz*. Sedeh Ya'akov, established in 1927 in the western Jezreel Valley, was the movement's first moshav. Ha-Po'el ha-Mizrachi had to overcome the opposition of the Histadrut and of the official Zionist institutions before it was recognized as an independent factor in settlement. Before 1948 eight *moshevei ovedim* were established, all in areas of regional settlement projects of the Zionist Organization. During the great immigration of the 1950s, Ha-Po'el ha-Mizrachi was allocated 20% of the settlement. In the course of five years, 40 *moshavim* of new immigrants, and later on, another 10, were added. In addition, four *moshavim shittufiyyim* were founded. All these were organized in the *Iggud ha-Moshavim shel Ha-Po'el ha-Mizrachi*, whose organ is *Ma'anit* (established in 1951).

From the early 1930s groups for collective settlement sprang up within Ha-Po'el ha-Mizrachi. These first religious *kevuza* or *kibbutzim* were formed by members of *Berit Halutzim Datiyyim* (Ba'had) in Germany, the trainees of the Mizrachi youth *hakhsharah* (“training”) in Poland, and later on, by the Ha-Shomer ha-Dati in Poland and in Galicia. They established Ha-Kibbutz ha-Dati in 1935. It established settlements from 1937, the first being *Tirat Zevi (after Zevi Hirsch *Kalischer) in the Beth-Shean Valley. Ha-Kibbutz ha-Dati followed a policy of *hityashevut gushit* (“bloc settlement”), concentrating a number of settlements in one area in order to develop fully its social-religious ideas and its strength as a religious factor in society. This policy forced it to go to the farthest frontiers of the existing settlement areas. A bloc of religious *kibbutzim* was created in the Beth-Shean Valley, the Ezyon bloc in the Hebron mountains, and another bloc in the vicinity of Gaza. Before the establishment of the state (1948) Ha-Kibbutz ha-Dati movement numbered 16 settlements, 10 already set up and the rest about to be settled. Because of their location on the borders of the *yishuv*, the *War of Independence dealt them a severe blow. The Ezyon bloc (including the three religious *kibbutzim* Kefar Ezyon, Massu'ot Yizhak, and Ein Zurim) was completely wiped out, most of the settlements at the approach to Gaza were destroyed (Be'erot Yizhak and Kefar Darom), and the movement lost seven percent of its adult population. After the war, 12 of these settlements remained, and three became *moshavim shittufiyyim*.

The relations of Ha-Po'el ha-Mizrachi with the Histadrut developed after some violent conflicts in the late 1920s and the early 1930s concerning labor, settlement, and cooperation. In 1928 an agreement was reached on the distribution of labor and participation in Kuppas Holim. The agreement did not fulfill the anticipated hopes, and Ha-Po'el ha-Mizrachi abrogated it in 1941. Despite the friction, more cooperation was achieved between the two federations after the establishment of general labor bureaus in the early 1940s. In the course of time, Ha-Po'el ha-Mizrachi joined the agricultural center of the Histadrut, its trade union department, and the teachers organization. However, the trend for a complete merger was never realized though its demand became even greater in light of the great religious *aliyah* after the establishment of the state. The majority in Ha-Po'el ha-Mizrachi preferred an independent framework. Ha-Kibbutz ha-Dati organized in the 1930s the religious sector of *Youth Aliyah. It directs the activities of Bnei Akiva, absorbs *Na'hal groups, and maintains *ulpanim* for new immigrants.

Ha-Po'el ha-Mizrachi entered politics almost from its inception, at first mostly as a function of its labor activity and of its affiliation with Mizrachi. In the Zionist Organization it acted as a part of Mizrachi. However, gradually Ha-Po'el ha-Mizrachi developed independent activity in the *yishuv* institutions and also in the Zionist Organization. From the 19th Congress in 1935, it was represented on the Zionist Executive by Moshe Hayyim *Shapira, who from that time served as head of Ha-Po'el ha-Mizrachi. It was represented on the Va'ad Le'ummi Executive by Shragai and later on by Zerah *Wahrhaftig. In the last elections of the Asefat ha-Nivharim in 1944, Ha-Po'el ha-Mizrachi received 9.5% of the total vote. It became a major factor in the religious community of the *yishuv*. The relations between Ha-Po'el ha-Mizrachi and Mizrachi were tense throughout their existence as separate organizations, while they were united only in the world center of the body called Mizrachi-Ha-Po'el ha-Mizrachi. The antagonism between the two was particularly bitter in Erez Israel, where Mizrachi belonged to the non-labor camp and Ha-Po'el ha-Mizrachi had an agreement with the Histadrut. But the increasing strength of Ha-Po'el ha-Mizrachi in Erez Israel led it more and more to a takeover of Mizrachi instead of separating from it. This trend eventually led to their merger and the establishment of the National Religious Party.

From the 1930s, when political activity began to occupy a prominent place in Ha-Po'el ha-Mizrachi, three main factions emerged in it. The El ha-Makor group leaned to the right, supporting the strengthening of ties with Mizrachi (as opposed to attachment to the labor movement) and advocating political activism against the Mandatory regime. La-Mifneh constituted the left wing, demanding the strengthening of links with the labor camp, joining the Histadrut, and seceding from the Mizrachi organization. It demanded political moderation, in the spirit of Chaim *Weizmann's policy, and more concern for settlement and movement activity. In the middle was the “centrist” faction, which took a compromising stand on political

questions in the *yishuv* and Zionist policy. The main struggle for leadership in Ha-Po'el ha-Mizrachi took place between the “centrist” faction and the faction of the left-wing La-Mifneh.

In 1937 Ha-Po'el ha-Mizrachi was among the opponents of the partition plan, though, on the whole, it was closer than Mizrahi to Weizmann's leadership, stressing its loyalty to the Zionist and *yishuv* institutions and supporting the unification of all the forces of the country, including the dissident underground organizations (*Irgun Zeva'i Le'ummi and *Loḥamei Ḥerut Israel). Though its demands concerning religious matters, such as observance of the Sabbath and *kashrut* in public institutions, etc., were its political *raison d'être*, it took also an active stand on general questions, such as labor problems, immigration, defense, settlement, and social matters. With the establishment of the state, political matters came to the fore. Despite the foundation of the United Religious Front in the First Knesset, in which all religious parties took part (with the exception of Ha-Oved ha-Dati, which was represented by *Mapai), Ha-Po'el ha-Mizrachi maintained a certain independence, as, e.g., on the question of the conscription of women who were released from military service for religious reasons. In 1949 it defined its position by demanding to change the law of compulsory conscription of religious women to that of compulsory national service for them, and, as long as the law was not changed, it called on every observant young woman to be drafted into the religious units of the Naḥal.

Ha-Po'el ha-Mizrachi emphasized the need for religious Jews to participate actively in public life and deal with the general objectives of the people and the state, thus preserving a live connection between the religious tradition and public life, especially in legislation. Hence its approach to topical political questions (as, e.g., the integrity of the area of Erez Israel after the *Six-Day War), appropriate legal arrangements affecting the entire nation (marriage and divorce), the public way of life (Sabbath law, observances of Sabbath and *kashrut* in the Israel Defense Forces), official religious institutions (the rabinate, religious councils), and especially the securing of religious education for all who wish it. In the Knesset and the government, Ha-Po'el ha-Mizrachi acted as a compromising and unifying element both on foreign and domestic policy. It participated in practically all governments, twice causing a government crisis, first regarding religious education in immigrant camps, and again on the question of the items “religion” and “nationality” in the registration of population (known colloquially as the “Who is a Jew?” problem).

In 1956 Ha-Po'el ha-Mizrachi decided to merge with Mizrahi, both in Israel and in the Zionist Organization, and in July 1956 the *National Religious Party was established. The unified party acted in accordance with Ha-Po'el ha-Mizrachi principles. Thus, it was an initiator of the Government of National Unity prior to the Six-Day War in 1967. It also demanded action on the Arab refugee problem by settling them in Judea and Samaria and flexibility in negotiations with Arab states.

[Moshe Unna]

HA-PO'EL HA-ZA'IR (Heb. הַפּוֹעֵל הַצֵּעִיר; “The Young Worker”), first newspaper of the labor movement in Erez Israel; founded in 1907. After five years as a biweekly, *Ha-Po'el ha-Za'ir* became a weekly, which it remained until it ceased publication in 1970. During its lifespan, the paper attained a continuity of publication enjoyed by no other Hebrew periodical. There were, however, periods during which the paper did not appear: it was discontinued in 1915 and renewed in the fall of 1918. *Ha-Po'el ha-Za'ir* was edited by Yosef *Aharonovitch until 1923, and then by Yizḥak *Laufbahn until his death in 1948, and finally by Israel *Cohen. It was the organ of the Ha-Po'el ha-Za'ir Party. When that party merged with *Aḥdut ha-Avodah to become Mifleget Po'alei Erez Israel (*Mapai), the paper became the organ of Mapai (1930), and from 1968 of Mifleget ha-Avodah ha-Yisre'elit (*Israel Labor Party). *Ha-Po'el ha-Za'ir* reflected the development of the Israel labor movement. The pioneers of this movement could not identify with the existing Hebrew papers, and established *Ha-Po'el ha-Za'ir* with the meager resources at their disposal. The paper's ideology, expressed in its motto: “An indispensable condition for the realization of Zionism is the conquest of all branches of labor in Erez Israel by the Jews,” attracted all Second Aliyah workers until the founding of the Po'alei Zion paper *Ha-Aḥdut* in 1910. *Ha-Po'el ha-Za'ir* expressed the party's persistent demand that the Zionist Organization implement practical Zionism, and also encouraged the use of Hebrew as the common language of the *yishuv*. *Ha-Po'el ha-Za'ir* became the most distinguished paper in Erez Israel during the Second Aliyah. Its contributors were among the best Hebrew authors and journalists, some of whom first appeared in print in this paper. Among the early regular contributors were: A.D. Gordon, J.Ḥ. Brenner, Ya'akov Rabinowitz, Rabbi Binyamin, S.Y. Agnon, Yizḥak Elazari-Volcani (then Wilkanski), and Moshe Smilanski. Its excellent literary supplement was edited during its first years by Devorah *Baron. A complete index of authors and subjects in *Ha-Po'el ha-Za'ir* during the 50 years 1907–57 was compiled by Isa and G. Kressel in 1968.

[Getzel Kressel]

HA-PO'EL HA-ZA'IR (Heb. הַפּוֹעֵל הַצֵּעִיר; “The Young Worker”), Erez Israel labor party founded by the first pioneers of the Second Aliyah. Its full name was Histadrut ha-Po'alim ha-Ze'irim be-Erez Israel – and it was called Ha-Po'el ha-Za'ir for short. Ha-Po'el ha-Za'ir was founded in Petaḥ Tikvah in the autumn of 1905 on the initiative of Shelomo *Zemaḥ and Eliezer *Shoḥat, who were among the first arrivals of the Sec-

ond Aliyah in 1904. Its name symbolized the new character of the Jewish worker of the Second Aliyah, to be distinguished from that of the earlier workers (who had been organized since the beginning of the 1890s) and from *Po'alei Zion (the first of whose members began to arrive in the country at the same time). The new idea was expressed in the words carried as a motto on its newspaper for years: "An indispensable condition for the realization of Zionism is the conquest of all branches of labor in Erez Israel by the Jews." Certain modifications were made in this definition after the revolution of the Young Turks (1908) because of the misunderstanding that might be aroused by the word "conquest." The wording was then changed to "the increase of Jewish workers in Erez Israel and their consolidation in all branches of labor."

The uniqueness of this party was in its being the first indigenous workers' party in Erez Israel. It groped to formulate an exact program for its activities, but its direction was clear to its founders and its members, and it was formulated a few years after the party's foundation by one of its first ideologists and the editor of its paper, Yosef *Aharonovitch. These were: to introduce the principle of labor into the official work program of Zionism; to spread the idea of the "conquest of labor" among the farmers and employers in Erez Israel; to win over Jewish youth and inspire them to join the ranks of the "conquerors of labor"; and to pave the way for and assist the workers in Erez Israel, who would set out to establish their place in labor.

From its foundation, Ha-Po'el ha-Za'ir opposed Po'alei Zion because of the latter's acceptance of international socialism and the theory of the class struggle, which Ha-Po'el ha-Za'ir felt were incongruous with the situation in Erez Israel. There were also disagreements between the two movements over the relationship to Yiddish; Po'alei Zion began to publish its paper, *Onfang*, in Yiddish in 1907 (but later changed over to Hebrew) and fought for the use of Yiddish abroad. Nonetheless, there was complete cooperation between the two parties in almost every sphere of practical activity, in spite of the perpetual polemics in their newspapers. The idea of labor, which was the fundamental principle of Ha-Po'el ha-Za'ir and its great innovation in Erez Israel, was exalted a few years later by A.D. *Gordon (who never formally joined the party, but maintained strong ties with it and its press throughout his life) as an absolute and cosmic value in the life of man and in his inner and spiritual worlds. Labor was transformed from a means of livelihood into a supreme value, as an answer to the moral demand of the Jews.

At the time, the "conquest of labor" meant basically the competition of Jewish workers in the Jewish villages with Arab laborers who were willing to accept lower wages. There were members of the party who wished to propose other means of rooting the Jewish worker in the soil of Erez Israel, e.g., by settlement on the land, and also requested the inclusion of city workers in the party's program. Eventually, a compromise was reached between the "conquest of labor" in the villages and the establishment of independent agricultural-

workers' settlements. The members of Ha-Po'el ha-Za'ir were among the founders of the "mother of kevuza," *Deganyah; among the initiators of the idea of the moshav ovedim (e.g., E.L. Joffe); and the founders of the first moshav, *Nahalal, after World War I. Politically the party was able to express its ideas only after the revolution of the Young Turks. It formulated them as "a Jewish majority, healthy in the economic and cultural sense." This political article was also connected with the "conquest of labor" and with rooting the Jewish laborer in Erez Israel by perpetual encouragement of immigration (the party even published a manifesto which called for *aliyah*). The constitutional freedom afforded by the Turkish revolution was not regarded as valuable in itself, except as a means of reaching a Jewish majority in Erez Israel.

The members of Ha-Po'el ha-Za'ir participated in guarding the settlements and self-defense activities, but their relationship to *Ha-Shomer, which was established by members of Po'alei Zion, was one of reserve. The same is true of participation in volunteering for the *Jewish Legion at the end of World War I. However, there were those who supported enlistment in the Legion, and when the supporters eventually constituted a majority, the minority (which included A.D. *Gordon and other leaders) continued to oppose it. The party participated in Zionist congresses, beginning with the Eighth Congress in 1907, and maintained ties with the Ze'irei *Zion movement abroad. Before World War I, the party took steps to establish a world organization, an aspiration that was realized after the war at the Prague Conference (1920), which created the *Hitahadut from Ha-Po'el ha-Za'ir in Palestine and Ze'irei Zion abroad.

Ha-Po'el ha-Za'ir did not join *Ahdut ha-Avodah (A) when it was formed in 1919 to unite all the workers of Erez Israel because it regarded Ahdut ha-Avodah as a branch of the world movement of Po'alei Zion. On the other hand, it participated in the establishment of the *Histadrut in 1920. In it Ha-Po'el ha-Za'ir was a minority party, facing an Ahdut ha-Avodah majority (26 delegates to 37 from Ahdut ha-Avodah at the first conference, 36 to 69 at the second conference, 54 to 108 at the third conference) and struggling against it. A representative of Ha-Po'el ha-Za'ir, Joseph *Sprinzak, was the first workers' representative from Erez Israel to become a member of the Zionist Executive (1921). Members of Ha-Po'el ha-Za'ir were also among the leaders of the Agricultural Workers' Organization in Galilee and Judea (Ha-Histadrut ha-Hakla'it ba-Galil u-vi-Yhudah) before World War I, which was the first nucleus of a roof organization for Second Aliyah workers, and were also the founders of the agricultural press in Hebrew, which reflected the agricultural experience of Jewish laborers (the editor was E.L. Joffe and among the first contributors was Berl *Katznelson).

The ideological evolution of Ha-Po'el ha-Za'ir did not cease after World War I, especially with the rise of Chaim *Arlosoroff, who coined the term "popular Socialism," as distinct from the class struggle. Arlosoroff was influenced by the ideas of Gustav *Landauer and Martin *Buber (also a member of

the party and among the participants in the Prague Conference) and the practical experience of his party in Erez Israel. With the first consolidation of the kibbutz federations in the 1920s (*Ha-Kibbutz ha-Me'uhad), the bloc of small kevuẓot was consolidated into Hever ha-Kevuẓot with ties to Ha-Po'el ha-Za'ir (see *Ihūd ha-Kevuẓot ve-ha-Kibbutzim). In the controversy over forms of collective settlement (between the kibbutz and moshav), the party's stand was equally in favor of both forms. Ha-Po'el ha-Za'ir adopted *Gordonia abroad, the first of whose members settled in Palestine in 1929 during the discussions over the merger with Aḥdut ha-Avodah. The pioneers of *Ha-Shomer ha-Za'ir who arrived in Palestine with the Third Aliyah were also close to Ha-Po'el ha-Za'ir, and only later did they part ways.

Ha-Po'el ha-Za'ir had extensions in a number of countries, the most outstanding of which was in Germany. This branch was created after World War I, and its outstanding figures were Martin Buber, Georg *Landauer, Arlosoroff, and others. Ha-Po'el ha-Za'ir's *aliyah* bureau in Vienna was a very impressive instrument after World War I; it was created by members of the party in Palestine and assisted and directed the first immigrants of the Third Aliyah. Ha-Po'el ha-Za'ir created the first labor newspaper in Erez Israel, called *Ha-Po'el ha-Za'ir* (1907 in stencil and printed from 1908). With the cessation of publication during World War I, it was replaced by several journals until it could resume publication in 1918 (until 1970). The party also had a publishing house during the Second Aliyah called La-Am, which published tens of popular scientific pamphlets (in Hebrew translation), and after the war it published a social-literary monthly, *Ma'abarot*, edited by Jacob *Fichmann (1919–21). Ha-Po'el ha-Za'ir laid the groundwork for the new Hebrew literature in Erez Israel, and the best of its authors contributed to the party's periodicals and publications.

During its existence, the party held 21 conferences. At the last one (1929), it was decided by a large majority to merge with Aḥdut ha-Avodah. The union was carried out in the following year through the creation of a common party: Mifleget Po'alei Erez Israel (Erez Israel Workers' Party) – *Mapai. The most outstanding personalities in Ha-Po'el ha-Za'ir, throughout its existence, were A.D. Gordon, Joseph *Vitkin, Joseph Aharonovitch, Yiẓḥak *Elazari-Volcani, E.L. Joffe, Joseph Sprinzak, Shelomo *Shiller, Eliezer *Kaplan, Shemuel *Dayan, Zevi Yehudah, Joseph *Baratz, and others.

[Getzel Kressel]

HAPSBURG (Habsburg) MONARCHY, multi-national empire in Central Europe under the rule of the Hapsburg dynasty from 1273 until 1918; from 1867 known as Austro-Hungary. Its nucleus was *Austria and it included at different times countries with considerable Jewish populations (*Bohemia and *Moravia, and *Hungary from 1526), parts of Italy

between 1713 and 1866. With the annexation of *Galicia (1772) and *Bukovina (1775) it became the state with the largest Jewish population in Europe. As the Hapsburgs were also Holy Roman Emperors, they were the supreme lords of the empire's *servi camerae regis (servants of the treasury), the Jews. The legal position of the Jewish communities varied, according to the differing legal status of the Hapsburgs in their hereditary lands (Austria, *Carinthia, *Syria, etc.), the countries of the Bohemian crown, the countries of the crown of St. Stephen (Hungary, *Transylvania, Croatia-Slavonia, and the Banat), Galicia, Bukovina, and from 1908 Bosnia and Herzegovina. However, it was based in principle on juridical and religious autonomy. After the marriage of *Maria Theresa to Francis Stephen, duke of Lorraine (1736), the Hapsburgs also bore the title of "King of Jerusalem."

During the period of the Counter-Reformation the Hapsburgs, protagonists of militant Catholicism, were influenced by the spirit of religious intolerance. Still, they tended to protect the Jews in their domains, in part because of Jewish fiscal contributions at a time of domestic and foreign war. They frequently sided with the Jews against the Estates, who were, as a rule, unfriendly to the Jews. However, it was the declared policy of the Hapsburgs to limit the number of Jews in their domains (see *Familiants Laws). Nevertheless Jewish communities often turned to the monarch with considerable success to annul decrees of banishment legislated by local authorities. The Hapsburg Empire was the first to conscript Jews for *military service, and *Joseph II's Toleranzpatents were the first laws to lift humiliating restrictions. From 1848 enjoyment of civil rights was made independent of religious affiliation, and from 1867 Jews enjoyed full civic equality in the empire. Jewish participation in the economic life of the empire was significant, particularly in its industrialization.

At the beginning of the 19th century developing nationalist ideologies of peoples within the empire were seeking expression with centrifugal effect. Jews were one of the elements, besides the army, bureaucracy, nobility, and the Catholic Church, to support the dynasty in preserving the empire's unity. Jews throughout the empire developed their own particular brand of patriotism and on the emperor's birthday synagogues were crowded. Both the emperor and the Jews recognized their mutual interest, with the Jews considering the sovereign to be their sole recourse against the antisemitic tendencies of nascent nationalisms. *Francis Joseph I in particular won the gratitude of the Jews for his frequent statements against antisemitism (see *Christian Social Party, Austria; Karl *Lueger; Georg von *Schoenerer; Karl Hermann Wolf; Ernst Schneider). Jewish politicians such as Adolf *Fischhof and Otto *Bauer were particularly aware of the danger to the monarchy in the conflicts between the nationalities, and they suggested remedies. Joseph Samuel *Bloch created an ideological foundation for Jewish patriotism. Theodor *Herzl's ideas were influenced by the monarchy's problem of contending with its competing nationalities. The dismemberment of the Hapsburg Empire brought into being successor states with

nationalistic policies that indeed often proved to be disadvantageous for their Jewish minorities.

Alleged Jewish Descent

Antisemitic propaganda claimed that the Hapsburgs were contaminated with Jewish blood, the protruding lower lip characteristic of many of them being considered a racial mark! The allegation was based on the assertion that Roger II of Sicily (1095–1154), whose offspring intermarried with the Hapsburgs, had married a *Pierleoni, a sister of the Jewish antipope *Anacletus II. The claim became notorious when the Austrian noble Adalbert von Sternberg declared around 1900 that he could have Jewish blood only through his kinship to the Hapsburgs. Modern research dismisses the allegation.

[Meir Lamed]

HARAN (Harran) (Heb. חָרָן; Akk. *Harrāni(m)*, “caravan station”).

Name and Location

Haran is located some 10 miles north of the Syrian border, at the confluence of the wadis which in winter join the Balikh River just below its source. It is strategically located about halfway between Guzana (Gozan) and Carchemish on the east-west road which links the Tigris and the Mediterranean, at the very point where the north-south route along the Balikh links the Euphrates to Anatolia. It is thus the traditional crossroads of the major routes from Mesopotamia to the west and the northwest (cf. Ezek. 27:23), and its very name in Akkadian (and Sumerian) implies as much. The biblical name Paddan-aram (Gen. 25:20 et al.), “the Aramean highway,” seems to identify the same site by a synonym reflecting its later role as a center of Aramean settlement.

In the “Patriarchal Age”

Written sources first mention Haran in an Old Babylonian itinerary as an important crossroads and in a letter addressed to Yasmah-Addu (= Adad), the Assyrian viceroy at Mari (c. 1790 B.C.E.). Another letter shows that Haran was an important center of the semi-nomadic “Benjamites.” It alerts the king of Mari to the conclusion of a formal alliance between Asdi-takim, who was then king of Haran, and the (other) kings of Zalmaqum on the one hand, and the sheikhs and elders of the “Benjamites” on the other hand. This alliance was concluded in the temple of the moon-god Sin at

Haran. The land of Zalmaqum was the object of an extended campaign by Šamši-Addu (= Shamshi-Adad) I of Assyria (c. 1815–1782 B.C.E.) and probably became subject to him together with Haran. With his death, however, the Old Assyrian Empire broke up and Haran was thus, apparently, an independent principality at the very time when, presumably, the biblical traditions reflect the sojourn of the Terahides in the area (Gen. 11:25). The migration of the Terahides parallels what appears to have been the movement of the moon cult from Ur to Haran, and the personal names of the Terahides reflect the geographical names of the Haran area. Specifically Serug, the grandfather of Terah, may be compared with the town of Sarugi (modern Seruj), some 35 miles west of Haran, and Nahor, his father (and second son) with the town of Nahur, probably located on the Upper Habor River due east of Haran. Terah’s own name has been identified with Til (-sha)-Turahi on the Balikh south of Haran and his third son, Haran, recalls the name of the town, although the two names are spelled differently in Hebrew. At all events, the Mari letters document a political, social, and economic state of affairs in the latitude of Haran which makes entirely plausible the settlement there of at least five generations of pastoral Terahides. Albright has further suggested that they took advantage of the strategic position of Haran to engage in a far-flung trade, based on donkey caravans, in conjunction with Abraham and Lot, the son of his brother Nahor, who, he suggests, journeyed onward to Damascus, Canaan, and Sinai.

In the Late Second Millennium

Haran is not mentioned in the cuneiform sources of the Mitannian period. However, it probably belonged to that Hurrian state and was captured by the Hittites along with other Mitannian centers when it is first heard of again in the 15th century. Matiwaza, son-in-law of Shuppiluliuma, conquered the legitimate Mitannian ruler, Shuttarna III, with the help of Shuppiluliuma’s son Piyashilli of Carchemish and presently had to cede Haran and his other conquests west of the Habor River to the latter. The first mention of Haran in Middle Assyrian documents occurs under Adad-Nirari I (c. 1304–1273 B.C.E.), who briefly conquered the Hittite vassal states as far as the Euphrates. His son Shalmaneser I (c. 1272–1243 B.C.E.) repeated these feats, as did his grandson Tukulti-Ninurta I (c. 1242–1206 B.C.E.), but in the 12th century newly entrenched waves of Aramean settlers began to make the region their own and the invasions of the Sea Peoples (c. 1200 B.C.E.) upset all of the traditional balance of power in the Near East. By the end of the 12th century, Haran was a center of Aramean settlement ruled by pretended or actual successors of the early Hittite royal houses. Hence the biblical names of this region, Aram Naharaim and Paddan-aram.

As Assyrian Crownland

While it is uncertain precisely when Haran passed under direct Assyrian rule, it is clear that it was one of the first of the more distant provinces to do so, for it always enjoyed a special status within the empire; was loyal to the king when

other provinces revolted; never the object of a recorded Assyrian campaign in the first millennium; and even harbored the last Assyrian defenders when the cities of Assyria proper had already collapsed. In the years 615–12 B.C.E., the last king of Assyria, Ashur-uballit II, made a final desperate attempt at Haran to save the empire, and it was not until he fled Haran in 609 B.C.E. that the fate of Assyria was finally sealed. In the Neo-Babylonian period Haran was one of the centers of Nabonidus' religious-political activity.

Haran is identified with Sultan Tepe. An important library from the Babylonian period has been uncovered nearby.

[William W. Hallo]

HARAN, MENAHEM (1924–), Bible scholar. Haran was born in Soviet Russia, where his father had him secretly taught the Bible by a tutor. Brought by his family to Palestine in 1933, Haran grew up in Tel Aviv and served in the Israeli army during the War of Independence. He earned his B.A., M.A., and Ph.D. at the Hebrew University of Jerusalem and, aside from visiting professorships in the United States and Europe, spent his entire academic career there. A student of Yehezkel *Kaufmann, much of Haran's work concentrates on biblical religion and cult, attempting to uncover the underlying conceptions of the Bible's detailed rituals. His studies of the cultic appurtenances, the cherubs, the ark, incense, and priestly garments compare the biblical material with the cultic realia of the larger ancient Near East. With Kaufmann, Haran dates the P(riestly) source of the Torah earlier than the D(euteronomic) source, but argues that P was made public at a later time. Against Kaufmann, Haran sees the E(lohistic) source as distinct, and views it as the inspiration of many of D's concepts. Haran believes that the four documentary sources identified by classical critics, J, E, P, and D extend beyond the Pentaetuch, through Joshua to Kings. Beginning in the 1980s Haran began to study the physical form of the Bible, including writing materials, scribal practices, and codicology. Yet another significant area of Haran's interest is study of canon and the process of canonization. His publications include *Libraries in Antiquity* (1996); *The Biblical Collection* (1996); and with M. Sæbø (eds.), *Hebrew Bible/Old Testament ... Interpretation* (1996).

[S. David Sperling (2nd ed.)]

HARARI, family of rabbis from *Aleppo. The founder of the family was MOSES (d. 1649). ISAAC BEN MOSES (d. 1810),

rabbi of Aleppo and author of *Zekhor le-Yizhak* (Leghorn, 1818), died in Safed. NISSIM BEN ISAIAH (d. 1830), referred to as Rafoul, was the author of *Alei Nahar* (Jerusalem, 1903). He died in Aleppo. MOSES BEN ISAAC (d. 1816) was *dayyan* in Aleppo, emigrated to Erez Israel, and died in Jerusalem. R. HAYYIM SOLOMON (d. 1888) held the position of **Hakham Bashi* in *Damascus at the end of the 19th century. During the 20th century SHALOM (SELIM; d. 1938), who was born in *Jaffa, achieved distinction. He studied law in Constantinople and after the revolution of the Young Turks, he was appointed judge in *Beirut and later was member of the Court of Appeals in Jerusalem. After the occupation of *Lebanon by the French, he lived there and practiced law. In the 1930s he became president of the Jewish community of Beirut, where he died.

[Haim J. Cohen]

HARARI (Blumberg), HAYYIM (1883–1940), educator and author in Erez Israel. Born in Dvinsk (then Russia), he began teaching at the Herzlia High School in Tel Aviv in 1906. One of the pioneers of the Hebrew theater, he established an amateur group called Hovevei ha-Bamah ha-Ivrit, in which he participated as a director, actor, and translator of plays. He contributed to the Hebrew press in Russia and Erez Israel and edited two volumes on the festivals entitled *Sefer ha-Hanukkah* (1937) and *Sefer Tevet, Shevat, Adar* (1941). His articles and stories were collected in an anthology entitled *Kitvei Hayyim Harari* (2 vols., 1941–42).

His wife, YEHUDIT (1885–1979), educator and public figure in Erez Israel, was the daughter of Aaron *Eisenberg, a founder of Rehovot. In 1903 she founded the second Hebrew kindergarten in Erez Israel in Rehovot. She also taught at the Herzlia High School and the Levinsky Teachers Training College in Tel Aviv and was headmistress of the model school attached to the college. She published articles in the Hebrew press, and her books include *Bein ha-Keramim* (1947) and *Ishah va-Em be-Yisrael* (1959).

Their son, IZHAR (1908–1978), parliamentarian and lawyer, was born in Jaffa. He was active in the *Haganah and Zahal (*Israel, State of: Defense Forces) and was a member of the Knesset for the Progressive (later Liberal and *Independent Liberal) Party from 1949. He joined the *Israel Labor Party in 1968. He was the founder and chairman of the Israel Foreign Policy Association.

HARARI, HAYYIM (1940–), physicist. Born in Jerusalem, Harari completed his doctorate at the Hebrew University in 1965. From 1970 he held the Annenberg Chair in High Energy Physics at the Weizmann Institute of Science in Rehovot, of which he served as president from 1988 until 2001. From 1978 he has been a member of the Israeli Academy of Sciences. He has published more than 100 articles on particle physics. In 1989 he was awarded the Israel Prize for exact sciences. He also

served (1979–85) as chairman of the Planning and Budgeting Committee (VATAT) of the Council for Higher Education and chairman of the Supreme Committee of Science and Technology Education in Israel (“MAHAR 98,” 1991–92). In 2001 he became chairman of the Davidson Institute of Science Education at the Weizmann Institute and chairman of the Management Committee of the Weizmann Global Endowment Management Trust (New York).

[Bracha Rager (2nd ed.)]

HARARI, OVADIAH (1943–), Israeli aeronautical engineer. Harari was born in Cairo and came with his family to Israel in 1957. He studied aeronautical engineering at the Technion in Haifa where he received his B.Sc. (1964) and his M.Sc. (1967). In 1966–70 he served as a project officer in the Israel Air Force in his profession. In 1978 he was appointed head of the Lavi fighter airplane project which employed about 1,800 people, half of whom were engineers. Subsequently he worked in executive and managerial capacities on various projects for Israel’s Aircraft Industry (IAI). From 1997 he was executive vice president and chief operations officer for IAI. Harari was twice the recipient of the Israel Defense Prize, in 1969 and 1975. In 1987 he received the Israel Prize for technology and engineering.

[Gali Rotstein (2nd ed.)]

HARARI, SIR VICTOR RAPHAEL (1857–1945), Egyptian Jewish financier from Cairo. He began his career at the Egyptian ministry of finance, where he rose to the position of director general of the accounts department. In 1929 he was elected to the board of directors of the Egyptian National Bank and headed the boards of directors of many economic enterprises. He was knighted by King George V in 1928.

HARBIN (Chinese: **Ha ěr l pīn**), the capital of Heilung Kiang Province, in N. Manchuria, China. The modern development of Harbin began at the close of the 19th century, with the beginning of the Russian penetration of Manchuria. When Russia was granted the concession to build the Chinese Eastern Railway under the Russo-Manchurian treaty of 1898, Harbin became its administrative center with a 30-mi. (50 km.)-wide zone along the railway. In the same year, a number of Russian Jewish families went to Harbin with the official consent of the czarist government, which was interested in speedily populating the area, and which, consequently, granted them a better status than that of the Jews in Russia. Among the first Jews were F.I. Rif, the brothers Samsonovich, and E.I. Dobisov. Along with other minority groups (such as Karaites), the Jews were granted plots of land on the outskirts of the town. Not being allowed to work directly on the railway, they were active as shopkeepers and contractors.

By 1903 a self-administered Jewish community existed in

Harbin, numbering 500 Jews. After the Russo-Japanese War of 1905, many demobilized Jewish soldiers settled in Harbin, followed by refugees from the 1905–07 pogroms. By 1908 there were 8,000 Jews in the city, and a central synagogue was built in 1909. Several institutions came into being within the community, including clubs, a home for the aged, and a hospital providing care for all other nationalities as well. A *heder* was established in Harbin in 1907 and a Jewish secondary school (Yevreyskaya Gimnaziya) in 1909, which had 100 pupils in 1910. However, 70% of the Jewish pupils attended non-Jewish schools, because a numerus clausus did not exist for Jews in Harbin. The influx of Jewish refugees during World War I, the Russian Revolution (1917), and the Russian civil war sharply increased the Jewish community, which reached its peak – 10,000–15,000 – in the early 1930s. It numbered about 5,000 in 1939. A Jewish National Bank was established in Harbin in 1923 as well as a Jewish library. Between 1918 and 1930 about 20 Jewish newspapers and periodicals were also established. All were in Russian except the Yiddish *Der Vayter Mizrekh*, appearing three times a week with a circulation of 300 in 1921–22. The Russian-language weekly *Yevreyskaya Zhizn* (“Jewish Life”, which until 1926 was called *Sibir-Palestina*) appeared from 1920 to 1940 with a circulation throughout Manchuria and North China. The Zionist movement, led by Abraham Kaufman, and several youth clubs played a major part in the life of the community. Until 1921 Harbin Zionists were affiliated to the Russian and Siberian Zionist Organization and participated in their conferences. When Zionism was outlawed in the Soviet Union, Harbin became an island of Russian-language Zionism. In the years from 1924 to 1931 the Soviet regime, largely preoccupied with internal problems, exercised only limited influence on Manchurian territory. During this time the Jews of Harbin enjoyed the same rights as all other foreigners, and were left alone to prosper. However, in 1928, when the Chinese Eastern Railway was handed over to the Chinese, an economic crisis broke out and many Jews left Harbin, some to the Soviet Union, others to Shanghai, Tientsin, etc. This situation changed drastically for the worse when Manchuria came under Japanese occupation (1931–45). The treatment of Jews became even more oppressive in World War II when the Japanese now allied with Nazi Germany and somewhat influenced by Russian right-wing emigrés adopted an antisemitic policy in some respects. Under Japanese rule, Jewish national life was kept alive by Zionist youth movements, particularly *Betar and *Maccabi, which organized Jewish cultural activities. Betar, which was the strongest Zionist youth organization, published a Russian-language magazine, *Ha-Degel* (“The Flag”). Until 1950 four synagogues existed in Harbin. Many Jews left Manchuria before the outbreak of World War II, for the U.S., Australia, Brazil, and other countries. During 1945–47, Harbin was under Soviet occupation, and Jewish community leaders were then arrested and sent to the Soviet interior. About 3,500 of the former “Chinese” Jews, most of them from Harbin, live in Israel, where they play an active role in all walks of life.

HARBURG, E.Y. (Edgar “Yip”; **Isidore Hochberg;** 1898–1981), U.S. songwriter. Born in New York to Orthodox Jewish parents, Harburg graduated from City College in 1921. After traveling through Latin America working for newspapers, Harburg turned to writing lyrics for Broadway musicals, such as *Walk a Little Faster* (1932), *Life Begins at 8:40* (1934), *The Show Is On* (1936), *Hold on to Your Hats* (1940), and *Bloomer Girl* (1944). His particular vein was the so-called “socially conscious,” and his “Brother Can You Spare a Dime?” which he wrote during the Depression of the 1930s became a classic. He wrote the lyrics and co-authored the book for the witty Broadway musical *Finian’s Rainbow* (1947) and wrote lyrics for *The Wizard of Oz* (1939), *Cabin in the Sky*, and other popular films. His songs “Over the Rainbow” and “Happiness Is a Thing Called Joe” won Academy Awards. A victim of the Hollywood blacklist, he returned to Broadway and wrote songs for such musicals as *Flaahooley* (1951), *Jamaica* (1957), and *The Happiest Girl in the World* (1961). Among his other well-known songs are “April in Paris,” “Home on the Range,” “It’s Only a Paper Moon,” and “That Old Devil Moon.” Harburg was inducted into the Songwriters’ Hall of Fame in 1972. He wrote *Rhymes for the Irreverent* (1965) and *At This Point in Rhyme* (1976).

ADD. BIBLIOGRAPHY: H. Meyerson, *Who Put the Rainbow in The Wizard of Oz?: Yip Harburg, Lyricist* (1995).

HARBY, ISAAC (1788–1828), U.S. author, journalist, teacher, and pioneer of Reform Judaism. Harby was born in Charleston, South Carolina. He became both teacher and journalist at the age of 16. He then began to study law, but the death of his father in 1805 left him the main support of a large family. He returned to teaching, opening a school at Edisto Island and then at Charleston. Finding journalism more profitable, Harby worked on various Charleston newspapers, editing several of his own not too successfully. A play, *Alberti*, was successful in Charleston in 1819, but Harby soon returned to teaching. After his wife’s death in 1827, he left Charleston to establish a school in the more prospering metropolis of New York, but died soon after. Many tributes were paid him, including the publication of a memorial volume by his friend Abraham *Moise. A man of rare literary taste, and author of excellent dramatic criticisms, Harby played an important role in the establishment of the Reformed Society of the Israelites, the pioneer effort of Jewish religious reform in the United States. In 1824 a group of 47 members of Charleston’s Congregation Beth Elohim

unsuccessfully petitioned the congregation’s board to modify the ritual, remove the Spanish and Portuguese archaisms and permit explanatory discourses in English. Later that year the Reformed Society of Israelites was organized. On its first anniversary, Harby delivered a discourse outlining the Society’s aims; in 1827 he was elected president. His departure for New York and subsequent death left a void. Other leaders left Charleston, also for economic reasons, and by 1833 the Society dissolved. A number of Harby’s literary, political, and religious essays appear in J. Blau and S. Baron (ed.), *Jews of the United States*, 3 (1963).

[Malcolm H. Stern]

HARBY, LEVI MYERS (1793–1870), U.S. naval officer. Born in Georgetown, South Carolina, Harby joined the navy as a boy and was captured by the British during the war of 1812. He was cashiered from the navy in 1836 for siding with the secessionist Texans but was later reinstated. Promoted to captain, he fought in the Mexican War (1846) and the Bolivian War of Independence. Harby fought on the Confederate side in the American Civil War and distinguished himself in the defense of Galveston.

HARDEN, MAXIMILIAN (originally **Felix Ernst Witkowski**; 1861–1927), German journalist and polemist. He edited his periodical *Die Zukunft*, founded in 1892, with vigor, erudition, and an eye for intrigue that often exposed society and government circles. Born Witkowski in Berlin, he reacted violently against his Jewish origin, was baptized at 16, and changed his name. But he could not escape his ancestry, and among his German contemporaries he was the symbol of Jewish arrogance which they said was undermining Prussian militarism. His political articles written under the pen name “Keut” revealed a talent for satire. Two collections were published, *Apostata* (1892) and *Literatur und Theater* (1896). With irony and courage, Harden attacked William II and the neo-Byzantinism which surrounded him, championing the cause of the aging ex-chancellor Bismarck. *Die Zukunft* became the most influential German weekly of its time and the mouthpiece of liberal opposition to the Kaiser. For subjecting the monarch to ridicule, Harden was twice imprisoned. In 1906–07 he brought about the downfall of Prince zu Eulenburg, the Kaiser’s most influential adviser, with revelations about his private life that scandalized the monarchy. During World War I he criticized the German high command and, after the abdication of the Kaiser, the revolutionary regime. In his later years he showed an interest in Jewish affairs. In 1900 he published Walter Rathenau’s article “*Hoere Israel*” in *Die Zukunft*, and later expressed appreciation of the Zionist movement. *Die Zukunft* ceased publication in 1922; and an attempt was made on Harden’s life that same year. Harden collected his articles in four volumes, *Koepfe* (1910–24). He also published in two volumes *Krieg und Friede* (1918). In 1983 an edition of

Harden's correspondence with Walter *Rathenau came out as *Briefwechsel 1897–1920*, ed. by H.D. Heilige. In 1984 another edition of his correspondence with Björnsterne Björnson *Briefwechsel*, ed. by A. Keel, appeared, and in 1996 an edition of *Briefwechsel mit Maximilian Harden* with Frank Wedekind and Thomas and Heinrich Mann, ed. by A. Martin.

GEORG WITKOWSKI (1863–1939), his younger brother, was a leading German literary historian. He also embraced Lutheranism, but his abandonment of Judaism did not protect him from Nazi persecution. Witkowski lectured at the University of Leipzig, specializing in literature of the era of Goethe. His works include the *Geschichte des literarischen Lebens in Leipzig* (1909), and *Das deutsche Drama des neunzehnten Jahrhunderts* (1923). Between 1909 and 1933 Witkowski edited the *Zeitschrift fuer Buecherfreunde*.

[Sol Liptzin / Konrad Feilchenfeldt (2nd ed.)]

°**HARDENBERG, KARL AUGUST VON** (1750–1822), Prussian chancellor from 1810, instrumental in enacting the edict concerning the civil status of the Jews (March 3, 1812). While administrating the principality of *Bayreuth-Ansbach for the Prussian king (1790/92–97), he had already dealt with the problem of Jewish rights and was in social contact with David *Friedlander and other members of the Berlin community. Considering that Jewish emancipation was a vital part of the general Prussian reforms, he stated that he was not prepared to approve any law which was based on more than four words: equal rights, equal duties. He did not, therefore, approve of the restrictions still contained in the edict. At the Congress of Vienna (1815) he once more advocated Jewish rights. While there, he was a frequent guest in Fanny von *Arnstein's house. He tried unsuccessfully to have Eduard *Gans appointed to Berlin University while Gans was still Jewish. D.F. *Koreff was his personal physician, adviser, and protégé. After 1815 Hardenberg continuously opposed the Prussian king and his reactionary ministers, who repudiated their promises of justice and equality for the Jews made during the Napoleonic wars, but since he remained in a minority in the cabinet his support was ineffectual. His diaries were published in 2000.

[Meir Lamed]

HARDMAN (Salutski), JACOB BENJAMIN (1882–1968), U.S. labor leader and writer. Hardman, born Jacob Benjamin Salutski in Vilna, joined the Marxist Social Democratic Party as a young man, working as an organizer in Vilna in 1906 and in Kiev in 1907. After several arrests, he was exiled in 1908 by the czarist government for illegal political activities. Arriving in the United States in 1909, Hardman was elected secretary of the Jewish Language Federation of the Socialist Party at its founding in 1912. From 1914 to 1920 he edited *Naye Welt*, the federation's Yiddish weekly. Hardman joined the national executive of the Communist Worker's Party in 1921, but was expelled in 1923 for his criticism of the Jewish left's pro-Bolshevik line and its nihilistic approach to Jewish problems. From 1925 to 1944 he edited *The Advance*, organ of the Amalgamated Clothing Workers Union, and was a member of the executive of the Conference for Progressive Labor Action (1927–34). During World War II Hardman helped organize the American Labor Press Association, of which he became president, and from 1945 to 1953 he was editor of the periodical *Labor and Nation*. He was also editor of *American Labor Dynamics in the Light of Post-War Developments* (1928), *Clothing Workers in Philadelphia* (1940), and *House of Labor* (1951), and during the 1950s was director of research of the Columbia University project "Trends in Union Leadership."

HARE (Heb. אֲרֵנֶט, *arnevet*), according to the Pentateuch one of the prohibited animals (Lev. 11:6; Deut. 14:7). The Hebrew word is connected with the Akkadian *annabu* ("the jumper"). The Vulgate translates it from the Greek λαγώς ("a hare") as *lepus*. In spite of this the Septuagint gives the translation δασύπους, that is, "the hairy-legged." The Talmud explains that the wife of *Ptolemy Philadelphus, who according to tradition appointed 72 elders to translate the Pentateuch, was named Λαγώς and the translators made the change, apprehensive that the king might say: "The Jews have mocked at me and put my wife's name [as an unclean animal] in the Pentateuch" (Meg. 9b; TJ, Meg. 1:11, 71d).

The description in the Pentateuch of the *arnevet* as a ruminant raises a difficulty since the hare is not one, and hence some cast doubt on this identification. The reference, however, is apparently to the movement of its jaws when it eats and perhaps also to its habit of regurgitating the food it eats in the early morning hours and of later chewing it again, as in rumination.

In Israel there are three species of hare: in the coastal lowland, in the mountains, and in the Negev. It is extensively hunted, but its rapid propagation prevents its extermination. The *halakhah* mentions "the wool of hares" among those to which the law of *sha'atnez* ("the prohibition of wearing mate-

rial containing wool and linen”) does not apply (Shab. 27a), the reference here being apparently to the rabbit – *Dryctolagus cuniculus* – which the Romans bred extensively and which may have been introduced into Erez Israel in mishnaic times. Some mistakenly identify the *shafan* (AV “coney”; JPS “rock-badger”), coney, mentioned in the Pentateuch alongside the hare, with the rabbit, and this is its common usage in modern Hebrew.

[Jehuda Feliks]

ḤAREDIM (lit. “reverently fearful,” from Hebrew *ḥared*, “fearful, trembling, pious”; common definition, ultra-Orthodox Jews).

Introduction

Orthodox Jews constitute the smallest major Jewish religious denomination. Although found in all principal areas of Jewish settlement, they are primarily resident in the United States and Israel. Numbering about 500,000 in the United States, the Orthodox constituted nearly 10% of American Jewry. About three-quarters of these are those called “Centrist Orthodox,” Jews who choose a middle-way between whole-hearted acculturation to America and strict insulation from it. These are Jews who, although attached to *halakhah* (Jewish law, literally “the way”), value and receive a general education in addition to their intensive Jewish one (commonly by means of attendance at a Jewish day school), attend university, and embrace middle class aspirations of a professional career and material comforts. They share high concern for Israel, accept the idea of modern Zionism, and more than any other Jewish denomination, entertain the idea of moving to Israel, often but not always settling in the territories. While practicing birth control, American Centrist Orthodox Jews tend to have just under three children per family, giving them about a 33% greater fertility rate than the rest of American Jewry. Located mostly along the northeast corridor of the Eastern United States and in metropolitan Toronto and Montreal in Canada, they are also established in Los Angeles, Southern Florida, Cleveland, and Chicago.

In addition to Centrists, about a quarter of American Orthodox Jews qualify as *ḥaredim*, sometimes called “ultra-Orthodox.” In Israel, conservative estimates have put the number of those qualifying as *ḥaredim* at between 250,000 and 300,000. Included here are not only Jews of Ashkenazi origins but also some of those of Sephardi, North African, and Middle-Eastern origins who are affiliated with Orthodox lifestyles and commitments, though not always in as consistent a way as their Ashkenazi counterparts. These latter Jews often effect a folk-religious attachment to *ḥaredi* rabbis and customs even as they sometimes deviate from some of the strict rules and regulations of the rabbis.

Definition

The term “*ḥaredim*” – once used to simply denote the religious – is today commonly reserved for those most extreme

of Orthodox Jews who, although they have changed over time, claim to have made no compromises with contemporary secular culture or essential changes in the way they practice their Judaism from what the tradition and *halakhah* have sanctified throughout the ages. Yet *ḥaredim* are not simply pristine Jews who quiescently live a traditional Jewish life but rather culturally combative proponents of tradition who often seek to aggressively assert their connection to the ways of the past in the precincts of modernity, most often contemporary U.S. and Israel.

On the surface, they have used some relatively simple mechanisms to establish and maintain their traditional quasi-ethnic identity and the separation or insularity it demands. These include dressing (and grooming themselves) in ways that make them clearly stand apart from those in the surrounding culture. For men this means wearing a beard and long earlocks as well as black caftans and black hats (fur hats or *shtrimeles* on the Sabbath for married or adult men), and often some form of knee pants and black shoes. For women it means dressing in modest clothing which covers most of the body and for the married among them, a head covering that may range from a kerchief over a shorn head for the most extreme to a wig for those less so. Variations are determined by sectarian affiliation within the *ḥaredi* world.

Ḥaredim also distinguish themselves by speaking Yiddish, a Jewish language that increasingly is limited only to them. In addition they have created environmental and residential barriers – segregated neighborhoods, for example – behind which they build their relatively insular neighborhoods and communities. They also send their children to private schools in which only those who share their values and lifestyle are included.

Beyond these relatively passive aspects of their identity, *ḥaredim* struggle actively against the influences of secular culture. Often this has led to their fighting to keep the contemporary lifestyle of permissiveness and sexual openness from entering their domains. In Israel this has taken the form of forcing the secular out of *ḥaredi* neighborhoods, demonstrating and militating against vehicular traffic on the Sabbath, fighting against what are viewed as the culturally corrosive effects of television, newspapers, or the posting of immodest advertisements in public, or against archeological digs in areas where they claim Jewish graves are to be found. In America, this has taken the form of struggling against legitimating non-Orthodox definitions of Judaism and Jews as well as trying to keep non-*ḥaredim* at a distance.

Groupings

Although to outsiders *ḥaredim* often appear to constitute a single ultra-Orthodox group, they are in fact subdivided into Ḥasidim who are organized around their fidelity to a particular charismatic rabbi-leader or *rebbe* on the one hand and *benei yeshivah*, those who identify with a particular academy of Jewish learning and its leading scholar (*rosh yeshivah*), students and interpretive traditions on the other. Within each of

these two subcultures, there are divisions. Hence one group of Ḥasidim may clearly distinguish itself from another while those who are attached to one *yeshivah* may have little to do with those associated with another. Thus a *haredi* is either a particular kind of Ḥasid, or a member of a particular *yeshivah* community, follower of a particular rabbi's interpretation of Jewish law. The divisions, supported by customs and quasi kin-group ties, may be so great as to erupt in conflict and even violence. Yet what divides these *haredim* from one another pales in comparison with what divides *haredim* in general from the rest of society. *Ḥaredi* identities take on a quasi-ethnic dimension as they become increasingly taken for granted because of common residence, endogamy, and a host of other instrumental links. They transcend time, place, and generation, precisely as does ethnicity.

Psycho-Social Worldview

Like ethnics, *haredim* share a psycho-social worldview. This is their common (often hostile) perception of a world that opposes them and seeks to undermine their attachments to one another and to the tradition. They see themselves as an often lonely force endlessly combating obstacles, convinced that catastrophes of existence come as the inevitable culmination of past choices and experiences, which most contemporary members of secular society have made and had. While a few *haredim* – most prominently Lubavitcher/Chabad Ḥasidim – have tried to engage and reach out to this world in order to try to bring it in line with their image of what is authentic, most *haredim* are content to try to struggle against it by demanding it provide protection for their way of life or at the very least leave them alone. They view the culture of yesterday (as imagined nostalgically) as inherently more authoritative than today and as a genuine guide for tomorrow. They consider their lives as a service to God and Jewish tradition and the only true merit that which is prescribed by the Torah and its accepted rabbinic interpretations. In general, in the *haredi* worldview, conformity to group norms and collective solidarity holds greater importance than individual self-actualization and personal liberty. Individuals only have merit insofar as they serve God and follow the dictates of tradition; that is their primary *raison d'être*. To know precisely how to go about this, they must be guided by those who know the law and whose understanding is informed by the tradition – the rabbis.

The modern world may be used as an instrumentality to improve this service to God, but there is nothing about modernity – including science, medicine, and technology, all of which *haredi* Jews utilize and exploit – which has ontological value in and of itself. The modern world is only to be valued insofar as it makes it more possible to serve God, continue Jewish tradition, and enhance Torah values. Studying Torah for as long as possible is thus the ideal for men, while women are expected to give birth to and rear children who will serve God and grow to be Torah scholars or the wives and mothers of scholars.

Although there are many other elements that distinguish

haredim from other contemporaries, Jews and even other Orthodox Jews, perhaps the most outstanding has to do with their attitude toward sexuality. Unlike mainstream and so-called modern Orthodox Jews who allow for the free mixing of males and females in social and educational settings, *haredim* are scrupulous about separating the sexes from the earliest years of life. Not only do they offer separate education of males and females, they also discourage dating and the free selection of marital partners but rely instead on arranged marriages, usually accomplished by the very early twenties or late teens, and commonly to other *haredim*. Although there are variations within the *haredim* world, for the most part sexual relations between husband and wife are strictly regulated by Jewish law, custom, and habit. The aim of sexual relations is procreation, and *haredi* men and women are expected to be fruitful and multiply; a childless *haredi* couple is a rarity, their situation invariably the result of fertility problems. While pleasure plays a part in these relations between husband and wife, it is not expected to become central to the relationship. In some groups, for example followers of the Ger ḥasidic dynasty, sexual relations between a married couple are to be as brief and unemotional as possible. Thus for a Ger Ḥasid, almost any desire for extended sexual experience would be viewed as excessive and hence sinful. But even in the most liberal of *haredi* groups, sexuality is to be rigorously regulated. Even husband and wife may only have sexual contact at certain times of the month (specifically, seven days after the end of the woman's menstrual period and after she has immersed herself in a ritual bath or *mikveh*) and even within the permitted period there are those *haredim* who consider some times superior to others (the Sabbath, for example).

Hasidism, the Yeshivah World, and the Ḥaredim

Among Jews of Ashkenazi origin, most *haredim* affiliate with Ḥasidism. There are many ḥasidic courts. In Israel the Gerer Ḥasidim are probably the most numerous, followed by the Belzers, Vizhnitzers, and Lubavitchers. However, there are also other important groups who, although smaller in number, have had an impact on the character of ḥasidic life. These include Klausenbeger, Karliner, Lalofer, Bobover, and Satmar Ḥasidim. In addition small sub-groupings, like the Toldos Aharon *haredim*, who share many traditions with Satmar and distinguish themselves by their fellowship and attachment to traditions begun by Rabbi Aharon *Roth, play an important role through their activism on behalf of their customs and world view.

The *yeshivah* world, as distinguished from Ḥasidism, is populated by those who identify with a particular academy of Jewish learning and its leading scholars, students and interpretive traditions. These often see themselves as heirs of the *Mitnaggedim*, those who opposed the religious excesses of Ḥasidism and its cult of personality. In general, these *haredim* represent the most liberal group within the *haredi* world. They tend to allow for greater individual initiative as well as more extensive contact with the outside world.

While the differences between these two categories of *haredim* are significant, when compared with other American Jews the similarities between them are striking. Over time, Hasidim have embraced the idea of *yeshivah* study over the pietism and zealotry that first shaped them during their emergence in Eastern Europe in the 18th and 19th centuries. On the other hand, the *yeshiva* world, which traces its primary origins to the same era in Lithuania, has transformed its attachment to its scholar-rabbis into a charismatic attachment to them in personality cults not altogether unlike those characteristic of Hasidim. Moreover, both *Hasidim* and the heirs of the Lithuanian-style *yeshivah* society today are both the most noticeable of Orthodox Jews and share a common goal of eschewing the values and many of the lifestyles of contemporary secular society and emphasizing instead a punctiliousness in religious ritual, a cultural separation from what they view as the corrupting influences of the outside world, and an attachment to the idea of preserving tradition, seen as a sacred order containing venerable truths and customs that may not be abrogated. Externally, they look and dress similarly, the men embracing black hats and coats and the women modest dress and head-coverings, and the use of Yiddish among themselves as their *lingua franca* and linguistic vehicle for keeping themselves separate from general society and bonded to one another. Although continuing to be attentive to what distinguishes them from one another, all share a common sense of being engaged in a culture war against contemporary secular culture in general and the principles of secular Zionism which has sought to redefine Jewish identity in particular. Zionism is also regarded as an expression of religious hubris and rebellion for it assumes that Jews can act to end a divinely imposed exile which, according to most *haredim*, can only be ended when God acts.

Confrontation with Modernity

Because the inherent attraction of contemporary culture is so powerful, many Orthodox Jews have managed to find ways of entering the situation of modernity and the spirit of the times while still keeping strictly within the letter of the law. This has led *haredim* to become partisans of the stringent rather than the lenient interpretations of Jewish law. The espousal of stringencies led *haredim* to take on customs that were often beyond the demands of the Jewish law; another group – in order to demonstrate its greater piety – would find an even stricter interpretation. Thus there are repeated calls by *haredim* to oppose any inroad of contemporary culture, whether this be acceding to the passing of cars through their neighborhoods on the Sabbath, allowing for archeological digs that “desecrate” Jewish graves, or countenancing immodest dress in their neighborhoods or even approving the wearing of wigs by married women rather than their shaving their heads and covering them with kerchiefs. Moreover, the requirements of the Jewish law are always enlarged in scope to include custom and folkway, and there are frequent efforts to shun material pleasures and insert an ascetic strain into Judaism.

The American *haredim* could not and for a long time did not want to fight America, their new diaspora haven. They tried instead to ignore its culture whenever possible – even to the extent of some of the most extreme traveling through it inside their own buses – and saved their most active battling in the struggle to keep other, non-Orthodox Jews at bay. In America, the *haredim* withdrew themselves from intra-Jewish organizations as much as possible, maintaining only the ties they needed to get money coming into their institutions. They vilified the Reform and Conservative Jews and were privately contemptuous of those who called themselves modern Orthodox. They refused to join most intra-communal Jewish organizations and even organized their own rabbinical association (“Agudas Ha-Rabonim”) that was made up of Orthodox rabbis who were not affiliated with the more mainstream Orthodox Rabbinical Council of America.

In America, the contra-aculturative Orthodox thus paid much attention to making money, the ultimate American power, and limiting the influence of non-Orthodox Jews in Jewish life, particularly in determining matters of personal status (deciding who was a Jew or who was married and divorced). The money, the result of an open society which provided many economic opportunities never before available to those who remained Orthodox, would give independence and help support the Orthodox way of life. For some this meant developing strength in the diamond trade, for others real estate, the garment industry, and in the last 25 years, the electronics business. Based on a community of people who trust one another and a no-nonsense approach to business which – somewhat akin to the Protestant ethic – reinvests profits and limits spending to necessities and charitable giving, seeing nothing inherently valuable in money except in what it can do to help maintain the Jewish way of life, these Jews succeeded in this goal.

Moreover, to keep America responsive to their needs, these Jews (like their other co-religionists) were careful to vote at election time, making increasingly certain that the parties and candidates knew that they voted in high numbers and en bloc. In this last regard, they allowed themselves to be publicly identified as Jewish voters – so much so that candidates seeking Jewish votes often have themselves photographed with *haredim*, hoping that this will symbolize their attraction for all Jewish voters.

In Erez Israel and later in the new Zionist state, *haredim* also tried to recreate and resurrect their traditional experience. To these Orthodox Jews – even those who shared similar *hasidic* or *mitnagged* affiliations – their American counterparts were not really “*haredim*”; they were “Americans.” They read American newspapers, worked with Americans, spoke English, and had subtly been swept up by America and the ways of the gentile society. They could not really overcome so powerful a cultural giant as the American way of life. True *haredim*, the Israelis maintained, fought relentlessly against all outside influences – including the host society – and did not allow themselves to be assimilated

by the modern world even in the quest for funds for the institutions.

For Israeli *haredim* this meant not serving in the Israel Defense Forces, viewed as a secular institution that would undermine the insularity and authoritative order of *haredi* society. As part of an agreement made during the early years of the state, all male students studying in a *yeshivah* were exempted from the universal Israeli military draft while Orthodox girls were likewise exempted. For the men, this served to encourage increased *yeshivah* study for longer periods. Thus insulated in the *yeshivah* in order to remain free of the draft, *haredi* men tended to become more extreme and stringent, and less compromising with the demands of contemporary secular society than did their American counterpart who went to work in the outside world and learned to yield and adjust to it more easily. It also made the Israelis more dependent on financial stipends from *haredi* political parties who in turn drew funds from the government in return for their political support. Over time, *haredi* educational institutions have absorbed increasing amounts of money devoted solely to maintaining the *haredim* who spend their time in study in place of gainful employment. In addition, *haredi* society depends heavily on “*gemaḥim*,” communal charity organizations and philanthropic donations from abroad. This economic precariousness of a society that absorbs more money than it generates remains among the most severe crises confronting contemporary *haredim*.

Outreach

While most *haredim* remain inward-looking, concerned only with maintaining their own members, Lubavitcher Hasidim, at the urging of their late leader, Menachem Mendel Schneersohn (d. 1995), have established a large outreach program serviced by emissaries who travel the world and try to bring back wayward Jews to a more stringent and Orthodox Jewish way of life. This large outreach effort has made the Lubavitcher Hasidim often the only *haredim* with whom outsiders have had any sort of extended contact. In contrast to the disregard that most *haredim* seem to have for those unlike themselves, the Lubavitcher attitude seems to have made friends for the *haredi* way of life. The actual numbers that Lubavitcher *haredim* have recruited to their version of Judaism, however, by most counts remains relatively small.

[Samuel C. Heilman]

The Challenge of Material Subsistence

While the *haredi* population in Israel has maintained its coherence and single-mindedness, it has not been unaffected by the winds of change. Exposure to the ethos of a consumer society and a steadily worsening economic situation have created pressures from within, often coming from the woman of the house, on whose shoulders the financial burden of earning a living often falls in the absence of a working husband. Two factors have contributed to the increasing impoverishment of the *haredim* in Israel: the mushrooming of the nonworking *yeshivah* population, which embraced some 80,000 men in

the early 2000s, about half of them married, and the drastic cutback in welfare spending by the Israeli government in the face of the deep recession brought on by the second intifada and global factors. The system of army deferment and state support for “professional *yeshivah* scholars” has a long history in Israel. Originally the number of such scholars qualifying for support in the new state was just 400, earmarked to revive the lost *yeshivah* world of Europe. In 1968 their number was doubled. In 1977, as part of Menachem Begin’s coalition agreement with the religious political parties, the quota was abolished and virtually all *haredi* men who wished to do so could engage in protracted full-time *yeshivah* study. The inducements to remain in the *yeshivah* were great: a government stipend and perpetual draft deferment. In the United States, where such inducements did not exist, a different kind of *yeshivah* world had evolved. Hasidim, who lacked a strong scholarly tradition, would leave the *yeshivah* at around the age of 21 and enter the labor market, usually in low-paying, unskilled jobs, which indeed caused many with their large families to subsist beneath the poverty line. However, the “Lithuanian” *haredim*, while prolonging their studies in a flourishing *yeshivah* world, though rarely beyond the age of 30, often combined vocational and even academic studies in suitable frameworks, like the *Touro college system, with *yeshivah* study, and consequently were able to get well-paid jobs in high-tech industries and other professions. In Israel no such socio-economic differentiation existed as between *hasidim* and “Lithuanians” in the United States. All stayed in the *yeshivot* under the Israeli system, including “Eastern” *haredim* who had adopted the lifestyle of Ashkenazi *haredim* under the influence of R. Eleazar *Shach, the mentor of their leader, R. Ovadiah *Yosef. Ironically, unlike the Lithuanian Jews of Europe, who had closed themselves in against the temptations of the outside world, Eastern Jews had never feared assimilation in the surrounding Muslim population and had therefore lived in a more open society in which working to earn one’s keep was a natural part of life. It was only in Israel that they became “Ashkenazim.”

Starting in the mid-1990s, bending to the pressure from within to raise the standard of living among *haredim* and alleviate their traditional “voluntary poverty,” *haredi* rabbis began to show a certain measure of flexibility with regard to the subject of vocational training. However, their attitude has been ambiguous and they have often wavered in determining what is permissible. Nonetheless a number of frameworks were established permitting such study, like the Haredi Center for Technological Studies in Bene Berak and Jerusalem, and thousands of men and women have enrolled over the years, though fewer than might have been expected. It is clear, however, that a new direction is tentatively being explored in keeping with economic and social realities. Though political realities could very well reinstitute a regime of government largesse and reverse the trend, it would seem that the *haredi* world, too, is being affected by modern life.

HAREL (Heb. הָרֵל), kibbutz in the Jerusalem corridor, east of Huldah, affiliated with Kibbutz Arzi ha-Shomer ha-Za'ir, founded in October 1948. Harel was established on a site where hard battles had been fought four months earlier (see Israel *War of Independence). The first settlers were *Palmah veterans of the Harel Brigade who had fought in the area and in Jerusalem; they were later joined by immigrants from various countries. Farming was based on deciduous fruit orchards, field crops, grapevines, etc. In more recent years the kibbutz set up a winery together with private investor, producing wines from the kibbutz's grapes. In addition, Harel owns a guesthouse with 33 rooms. Carob plantations and large forests have been planted in the vicinity, in the middle of which stands the Harel panorama tower. In the mid-1990s, the population was approximately 70, doubling in size to 145 by 2002.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

HAREL, DAVID (1950–), Israeli mathematician and computer scientist. Harel was born in London and immigrated to Israel in 1957. After service in the Israel Defense Forces (1968–71), he graduated with a B.Sc. in mathematics and computer science from Bar-Ilan University (1974), followed by an M.Sc. in computer science from Tel Aviv University (1976), and a Ph.D. from the Massachusetts Institute of Technology (1978). He joined the faculty of the Department of Computer Science and Applied Mathematics of the Weizmann Institute of Science, Rehovot, in 1980 and was appointed professor (1989), William Sussman Professor of Mathematics (1990), department chairman (1989–95), and dean of the Faculty of Mathematics and Computer Science (1998–2004). His past research interests include computability theory, program logic, and database and automata theory. His later interests were software and systems engineering, visual languages, synthesis and communication of smell, and modeling and analysis of biological systems.

He invented the language of statecharts and co-designed Statemate and Rhapsody, LSCS, and the play in/out methodology. One of his long-term goals was to adapt the language and tools of computer systems to model and simulate a complete multi-cellular animal such as the *C. elegans* worm. His national and international reputation is reflected by his many plenary and keynote lectures to conferences worldwide, membership on editorial boards, visiting professorships, and membership on international review committees. His awards include the Association of Computing Machinery's Karl V. Karlstrom Outstanding Educator Award (1992), the Israel Prime Minister's Prize for Software and Software Methods (1997), and the Israel Prize in computer science (2004). Harel has a major interest in education in his field and in science in general. He was a member of Israel's Higher Education Com-

mittee (1988–89) and of the Ministry for Education's High School Committee for Computer Science (1990–97). He also gave a series of lectures and organized programs on computer science for Israeli radio and television. His books, such as *Computers Ltd.: What They Really Can't Do* (2000) and *Algorithmics: The Spirit of Computing* (1987, 1992, 2004), are acclaimed as readable, outstanding computer science texts for specialists and general readers alike.

[Michael Denman (2nd ed.)]

HAREL, MENASHE (1917–), Israeli scholar in Erez Israel studies. Harel is known for his field trips throughout Israel combining academic pursuits with hiking. Harel was born in Samarkand and immigrated to Israel in 1921. In 1941 he served as a Palmah instructor in kibbutz Mismar ha-Emek. From 1943 until 1945 he was the Palmah representative in Syria, engaged in education, teaching, and assisting Jews to immigrate to Israel. In 1948 he joined the IDF, serving until 1952. Among his missions in the IDF was the establishment of the Naḥal patrol. In 1955 he graduated in geography and historical geography of Erez Israel from the Hebrew University of Jerusalem. In 1957 he received his M.A. degree in historical geography and archaeology from the Hebrew University. In 1963 he received his Ph.D. from New York University. From 1952 until 1961 he was a teacher at the David Yellin teachers seminary. From 1964 until 1969 he taught the methodology of geography at the Hebrew University and the Technion, and the historical geography of Erez Israel at the Technion. From 1969 until 1981 he served as senior lecturer for geographical history in the Department of Geography and the School of Education at Tel Aviv University. From 1982 until 1987 he served as professor in the Department of Geography at Tel Aviv University, becoming professor emeritus in 1987. During these years he was a visiting professor at New York University, Clark University, and Hebrew Union College. Harel was a member of various public institutions and produced 12 books and six monographs among other publications, including *Travels in Israel* (1960), *Geography of Erez Israel* (1960); *Sinai Journeys* (1963); *This is Jerusalem* (1969); *Journeys and Battles in Ancient Times* (1980); *Landscape, Nature and Man in the Bible* (1984); and *The Historical Geography of Erez Israel* (1997). In 2002 he was awarded the Israel Prize for historical geography.

[Shaked Gilboa (2nd ed.)]

HAREL, YISRAEL (1938–), Israeli journalist and settlement leader. Born in Chernowitz, near Kovina, Ukraine, Harel emigrated to Palestine in 1947. He fought in the 1967 and 1973 wars, participating in the capture of the Old City of Jerusalem. In 1968 he was appointed managing editor of the revisionist daily *Ha-Yom*, and the following year joined *Maariv* as deputy editor of its weekend section. His employment was interrupted after he moved to the then illegal settlement of Ofra in 1976, and he subsequently joined *Yedioth Aharonoth* as a writer-at-large. A founding member of the Greater Israel movement,

in 1980 he established the Council of Settlements of Judea, Samaria, and Gaza, acting as its secretary-general for the first seven years, and its chairman for the next eight years, to 1995. Harel's period at the council was characterized by intensive settlement activity (the number of settlements increasing from 20 in 1980 to 140 by the time he left) and by a pragmatic approach in the council's dealings with successive Labor and Likud governments.

Harel also founded and edited *Nekudah*, the council's monthly journal. Originally a magazine reporting the manifold activities of different settlements, it evolved into an intellectual journal campaigning for Jewish settlement, often featuring controversial writing, its voice influencing the nationalist agenda. While many of its contributors and readers were within the religious strata of the settlement movement, they also extended to the mainstream Israeli populations, including people identified with the Left. Never making a profit, its circulation hovered around 7,000.

Against the background of the Rabin assassination, Harel established the Forum for National Responsibility as a framework for dialogue between religious and secular Jews, which produced the so-called Kinneret memorandum. He wrote a book on religious Zionism.

[Yoel Cohen (2nd ed.)]

HARENDORF, SAMUEL JACOB (1900–1969), Yiddish playwright and journalist. Born in Chenzin, Poland, Harendorf worked on Jewish papers in Vienna and Prague, moving to England before World II. In 1940 he founded the Yiddish World News Agency and edited it until his death. Harendorf was author of *The King of Lampedusa* (1944), a play based on an incident in World War II, when a Jewish RAF pilot accepted the surrender of an Italian island in the Mediterranean. The play had the longest run in the history of the London Yiddish stage. He also wrote a play called *Hanna Senesh*.

ADD. BIBLIOGRAPHY: D. Mazower, *Yiddish Theatre in London* (1996), index; S.J. Harendorf, *The King of Lampedusa* (ed. and trans. H. Valencia, 2003).

HA-REUBENI (Rubinowitz), EPHRAIM (1881–1953), botanist and pioneer in Erez Israel. Born in Novo-Moskovsk, Ukraine, Ha-Reubeni settled in Erez Israel in 1906 and worked as teacher of natural science in various high schools. In 1907 he founded the first museum of botany in Erez Israel. Together with his wife Hannah (d. 1956) he founded in 1912 the Museum of Flora of the Bible and Talmud, in Rishon le-Zion. In 1936 they were transferred to the Hebrew University. He joined the academic staff of the Hebrew University in 1926 and in 1935 was appointed lecturer in botany of the Bible and Talmud. Ha-Reubeni contributed much to the investigation of plants in Erez Israel, their uses and associated folklore. On the basis of their research, together with linguistic studies of plant names in Hebrew, Aramaic, Arabic, and other languages, the Ha-Reubenis did much to explain the ancient Hebrew botanical terms and to identify the plants mentioned in the Bible and

Talmud. They wrote *Mehkarim bi-Shemot Zimhei Erez Yisrael* (1930) and *Ozar Zimhei Erez Yisrael* (1941).

[Frederick Simon Bodenheimer]

HAREVEN, SHULAMITH (1930–2003), Israel author. Hareven was born in Warsaw, Poland; she arrived in Erez Israel in 1940 and lived in Jerusalem. She served in the Haganah underground and was a combat-medic during the War of Independence. Later she worked with refugees and immigrants from various Arab countries and was one of the initiators of the Army Broadcasting Station for which she worked as correspondent during the Yom Kippur War. She began her literary career with a poetry collection, *Yerushalayim dorsanit* (“Predatory Jerusalem”) in 1962, and later published novels, stories, books for children, and essays. Among these are the impressionistic novel *Ir Yamim Rabbim* (1972; *City of Many Days*, 1977), depicting life in Jerusalem under British Mandate, with Jews, Christians and Muslims sharing experiences and pleading tolerance. The story *Bedidut* (“Loneliness,” 1980) tells about the desolate life of Dolly Jacobus, a Holocaust survivor, who marries into a veteran Jerusalemite family, yet fails to integrate and remains frustrated as a woman. Other books by Hareven include the novella *Sone ha-Nissim* (“The Miracle Hater,” 1983), a historic miniature about the Exodus in the Sinai desert and the emergence of monotheism; *Navi* (1989; *Prophet*, 1990), and a collection of essays on political and socio-cultural issues which was translated into English under *The Vocabulary of Peace* (1995). A lifelong member of the Israeli Peace Movement “Shalom Akhshav,” Hareven reported from Arab villages during the Intifada. She was the first woman to be elected as a member of the Hebrew Language Academy and was known for her rich, idiomatic Hebrew. A year before she died, her autobiography was published under *Yamim Rabbim* (“Many Days,” 2002). Other translations into English include *Twilight and Other Stories* (1991) and the story “My Straw Chairs” is included in *The Oxford Book of Hebrew Short Stories* (1996). For translations into various languages see the ITHL website, www.ithl.org.il.

Her daughter GAIL HAREVEN (1959–), is one of the original voices among the younger Israeli prose writers. Born in Jerusalem, she studied behavioral sciences at Ben-Gurion University as well as Talmud and Jewish Philosophy at the Shalom Hartman Institute. She teaches creative writing and feminist theory and has published collections of stories, children books as well as plays. Among these are *Aruhat Zohorayim im Imma* (“Lunch with Mother,” 1993) and *Ha-Derekh le-Gan Eden* (“The Way to Heaven,” 1998). In 2002, she received the prestigious Sapir Prize for her novel *My True Love* (2000).

[Anat Feinberg (2nd ed.)]

HARF, HANNS (1914–2004), founder and rabbi of the Nueva Comunidad Israelita – NCI (Jews of German origin) in Buenos Aires, Argentina. Born in Monchengladbach, Germany, he studied in the University of Berlin Law School and learned theology, also in Berlin, at the Conservative rabbinical seminary from which he received rabbinical ordination and a Ph.D. On **Kristallnacht* (November 9–10, 1938) he was taken to the Oranienburg concentration camp. After his liberation he married Dr. Suse Hallenstein and immigrated to Argentina. He founded the NCI and the "Lamroth Hakol" communities in Buenos Aires and was active rabbi of the former for 60 years. He was also co-founder of the Seminario Rabínico Latinoamericano "Marshall T. Meyer" (Conservative rabbinical seminary) and professor there for homiletics. He was also active in Interfaith Christian-Jewish Associations and was well known for his liberal ideas. He participated in religious-oriented television programs. Until his last days, he dedicated his life to the members of his community.

HARF, SUSE HALLENSTEIN (1912–2002), librarian of Jewish Studies. Born in Hamburg, she studied theology and philosophy at the University of Berlin and was one of the last Jewish students permitted to receive a Ph.D. there. Later she worked as a librarian in the local rabbinical Conservative seminary. In 1962 she founded, together with Rabbi Marshall T. Meyer, the library of the Seminario Rabínico Latinoamericano, which became one of the best libraries of Jewish Studies in Latin America. She became head librarian, working in the library until her retirement in 1988.

HAR HA-MELEKH (Heb. הַר הַמֶּלֶךְ; "king's mountain"; Aramaic *Tor Malka*), a hilly district in Judah. It should probably be identified with the toparchy of Orine (Latin for "the hilly one," Pliny, *Natural History*, 5, 14:70), i.e., the district of Jerusalem in Hasmonean times (Josephus, *War* 3, 3:5 (54–55); *Antiq.* 12, I:I (7)) and this may very well be the same as the "hill country" mentioned in Luke (1:39–40, 65). The Protevangelium of James (c. 150 C.E.) also mentions Mary and Joseph going into "the hill country." According to the Talmud, "any mountain that is in Judah is Har ha-Melekh" (TJ, *Shev* 9:2, 38d). Its original borders thus extended from Gibeah of Saul (Tell el-Ful) in the north to Solomon's Pools in the south and from Kiriath-Jearim

in the west to the ascent of Adummim in the east. The word *melekh* ("king") apparently indicates the Hasmonean kings beginning with Alexander Yannai. Har ha-Melekh, according to rabbinic sources, was very fertile and contained fields and vegetable gardens, olives, and grapes, and its fowls were sent to the Temple. After the destruction of the settlements in the district during the Bar Kokhba War (132–135), Har ha-Melekh was attached to the territory of *Aelia Capitolina. Its Jewish inhabitants were expelled and its produce, which continued to be supplied to Caesarea, was considered gentile produce and thus exempt from tithes. In later talmudic literature the true extent of its area was forgotten and villages in the Bet Guvrin district (e.g., Kefar Bish, Kefar Shihlayim) were erroneously attributed to Har ha-Melekh. The alleged number of its villages reached fantastic proportions ("60,000 myriads") and their populations are also highly exaggerated (TB, *Git.* 57a; *Lam. R.* 2:2, no. 4). B.Z. Luria proposed to locate Har ha-Melekh in the Mt. Ephraim range, in the direction of the Carmel, between Kefar Otenai and Narbata.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

ĤARIF, family, many of whose members were rabbis in Poland from the 16th to the 19th centuries. Some regard the family as descended from *Shalom Shakhna b. Joseph of Lublin. They included MOSES HA-ZAKEN ("the elder") BEN ISRAEL (16th–17th centuries) – the first to be given the epithet *ĥarif* ("sharp-witted") – who served as rabbi of Kremienec, Lvov, and Uleynov. He was the author of *Seder Gittin* (still in mss.) which was in the possession of Ephraim Zalman Margolioth. ISRAEL, his son, headed a yeshivah in Lvov and was *av bet din* of Uleynov. MOSES PHINEHAS (1625–1702), son of Israel, was chief rabbi of Lvov, and presided over the Council of Four Lands in 1685. He was an opponent of the Shabbateans, and added supplements to his grandfather's *Seder Gittin*. ISRAEL, second son of Israel b. Moses, was born on the day his father died, and was given his name. He was *av bet din* of Alik. Of the sons of Moses Phinehas, ZEVI HIRSCH (d. 1737) was the *av bet din* of Jaworow, and Jacob was *av bet din* of Leszniow and the province of Podolia. One son of Jacob, JUDAH LEIB, was *av bet din* of Korow, and another, SAUL (first half of 18th century), *av bet din* of Olesko, and later of Brody where he founded a *bet midrash* called after him. MOSES ĤAYYIM BEN ELEAZAR (1690–1760), grandson of Moses Phinehas, was rabbi of Komarno, Zloczow (1719), and Lvov (1724). After a violent controversy between him and Jacob Joshua *Falk concerning the rabbinate of Lvov, which arose out of an allegation by a proselyte that Moses Ĥayyim had influenced him to become a Jew, he was compelled to flee to Khotin, which

was under Turkish rule, and he died there. JACOB ISAAC (?1710–1771), son of Moses Ḥayyim, changed his name to Hochgelerter, and in 1740 was appointed rabbi of Zamosc. His son JOSEPH (1740–1807) was rabbi of Jampol and Zamosc. His halakhic glosses, *Ḥiddushei Mahari*, were published in the *Zera Aharon* (Zolkiew, 1757). *Mishnat Ḥakhamim* (Lvov, 1792), the first part of his commentary to Maimonides' *Mishneh Torah*, was also published. His sons were ḤAYYIM BEN JOSEPH (1770–1809), rabbi of Ostrowiec, Hrubieszow, and Grabowiec, author of halakhic novellae entitled *Ḥut ha-Meshullash*, appended to his father's *Mishnat Ḥakhamim*, and ISAAC BEN JOSEPH (1771–1825), rabbi of Tarnograd, Chelm, and Zamosc, author of *Zikhron Yizḥak* (c. 1822), consisting of responsa and homilies.

[Yehoshua Horowitz]

ḤARIF HA-LEVI, family of rabbis and scholars in Poland in the 17th and 18th centuries. The founder of the family was SOLOMON BEN ISAAC ABRAHAM of Przemysl (d. 1638), a pupil of Joshua *Falk, and son-in-law of Joseph ha-Kohen. He was rabbi of Lemberg when he died. His elder son, ISAAC SEGAL, was the son-in-law of Samuel *Edels, and rabbi of Rymanow. He was the ancestor of many generations of rabbis and scholars including Ephraim Zalman *Margalioth of Brody and Samuel Kamnitzer, great-grandfather of Eisik Segal of Lemberg. Solomon's second son, MOSES SEGAL, was rabbi of Polna and later head of a yeshivah in Lemberg. Moses' son, JOSEPH SEGAL (d. 1702), was rabbi of Przemysl, and the Ḥakham Zevi (Zevi Hirsch *Ashkenazi) said of him that his only transgression was his disobedience of the *takkanah* of Usha which laid it down that one should not give more than one fifth of one's income to charity. JEKUTHIEL ZALMAN SEGAL, son of Joseph, was the first rabbi of Drohobycz, appointed in 1670. Of his six sons, all of whom were rabbis, the most distinguished was ISAAC HA-LEVI. NATHAN NETA, another son of Jekuthiel, was rabbi and *av bet din* of Lemberg. He died apparently in 1776.

[Yehoshua Horowitz]

ḤARIRI, family of kabbalists of the village of Ḥarir, in the district of Irbil, Kurdistan. ISAAC BEN MOSES (17th century), the founder of the family, lived in this village during the first half of the 17th century. He wrote the kabbalistic work *Nahalat ha-*

Shem and a number of religious *piyyutim*. His son PHINEHAS, who was attracted to Shabbateanism, was also a *paytan* and author. The sons of Phinehas, ḤAYYIM and ISAAC, were rabbis in the townlet of Rawanduz, in the district of Irbil. ABRAHAM BEN PHINEHAS (19th century) left six works in manuscript. His son MOSES was a teacher for beginners in Kōi in the district of Irbil and owned a large library of religious books. He wrote at least three works, of which *Va-Yivḥar Moshe* was published in Baghdad in 1930. Moses' son Isaac was rabbi in Rawanduz.

[Haim J. Cohen]

ḤARIZI, ABU ISAAC ABRAHAM (fl. c. 1100), Hebrew poet of Toledo, Spain. Moses Ibn Ezra mentions him in his poetics (tr. by A. Halkin, *Kitab al-Muhadara wal-Mudhakara* (1975), 40b) as being a contemporary of Abu Harun ibn Abi al-'Aysh. Judah *Al-Ḥarizi praises Abraham's verses in two passages in the *Tahkemoni* (ed. by Kaminka (1899), 39, 41). It is uncertain whether he belonged to the same family as Judah al-Ḥarizi, being probably two generations older. A number of poems, known to have been composed by a "Ḥarizi" (*Mahzor Aleppo, Siftei Renanot*, Karaite Rite and Ms.), may be Abraham's. There were, however, also other Ḥarizis (Ms. Adler 135 contains poems by a Simḥah Ḥarizi).

[Jefim (Ḥayyim) Schirmann]

HARKAVI, YITZHAK (Isaac; 1915–2001), Zionist leader and educator. Born in Bialystok, Poland, he emigrated to Moisesville, Argentina, in 1926. He studied law in Santa Fe and was a teacher in the Hebrew schools of Moisesville and Santa Fe. In 1939 he moved to Buenos Aires where he worked as a teacher in the Jewish schools of the Cursos Religiosos network, and when Natan Bistrizky arrived in Argentina (1942), Harkavi directed the JNF office. An activist in the Poa'lei Zion Hitaḥdut party (connected to *Mapai – Labor Party in Erez Israel) during the 1930s, he emerged as one of the key leaders of the Zionist Movement in Argentina. Harkavi promoted democratization of the Zionist Movement and addressing the youth, including direct elections and representation. He represented his Zionist party at the Central Zionist Council in Argentina from 1943, in DAIA, and in Vaad Hachinuḥ – Board of Jewish Education of AMIA (Jewish Ashkenazi Community of Buenos Aires). Harkavi was general secretary of the first Latin American Zionist Congress, held in Montevideo in 1945, and in the early 1950s was appointed president of the Central Zionist Council.

As teacher and director (from 1946) of the Buenos Aires Bialik Hebraist school, one of the most important Zionist schools in Argentina, Harkavi contributed enormously to the increasing influence of the young State of Israel in Jew-

ish schools and communities in South America through the promotion of the Hebrew language. He also established the ICAI – Cultural Institute Argentina-Israel (in 1952) – under the sponsorship of the Israeli diplomatic representation. In 1950 he was appointed representative of the Jewish Agency for Latin America. Before moving to Israel in 1954 he succeeded in bringing an Israeli *shali'ah* as director for the Bialik school.

In Israel Harkavi was appointed the general secretary of the Mapai-Ichud Olami Party (1954–60) and Israeli ambassador to Uruguay (1960–63) and to Brazil (1968–73). He also served as a member of the Zionist Executive Council and head of the Department for Jewish Education and Culture in the Diaspora of the World Zionist Organization (1963–68).

[Yossi (Jorge) Goldstein (2nd ed.)]

HARKAVY, ALBERT (Abraham Elijah; 1835–1919), Russian Orientalist, scholar of Jewish history and literature. Harkavy was born in Novogradok, Belorussia. He studied at Lithuanian yeshivot and at the universities of St. Petersburg, Berlin, and Paris. On his return to Russia in 1870 he began teaching ancient Oriental history. The opposition in certain circles to the appointment of a Jew to a university lectureship prompted the Russian government to cancel his post, and he was transferred to the department of Jewish literature and Oriental manuscripts at the Imperial Library in St. Petersburg. In 1877 he was made head of that department, remaining in that position for the rest of his life.

Harkavy started his literary and scientific work in 1861, publishing articles mainly in *Ha-Karmel* and *Ha-Meliz* on the natural and physical sciences and on current problems in education and literature. At about that time Harkavy started his research on the origin of the Jewish community in Russia. His efforts were part of the general efforts of the Wissenschaft des Judentums school to secure equality for Russian Jews. They based their claims on the ancient Jewish heritage in Russian language. Harkavy argued his theories in several essays and articles, and especially in his first Russian book, *O yazyke yevreyev, ... i o slavyanskikh slovakh, vstrechayemykh u yevreyskikh pisateley* (1865), which also appeared in Hebrew as *Ha-Yehudim u-Sefat ha-Slavim* (“The Jews and the Slavic Language,” 1867).

Harkavy claimed that the Jewish community in Russia was formed by Jews who migrated from the region of the Black Sea and Caucasia, where their ancestors had settled after the Assyrian and Babylonian exiles. These people, who preserved an ancient Jewish heritage, which they spread among the *Khazars, expanded through the Khazar kingdom westward to Czechoslovakia. Their spoken language was Slavic, at least from the ninth century on; not until the 17th century did it change to Yiddish, and that was because many Ukrainian Jews fled the 1648–49 pogroms to Poland, where Yiddish was spoken. This theory concerning the origins of Russian Jewry led to Harkavy’s research into the history of the Khazars, the most important of which is his essay *Skazaniya yevreyskikh pisateley o khazarakh i khazarском tsarstve* (“Jewish Authors’

Reports on the Khazars and the Khazar Kingdom,” 1874). The reports were few and sketchy but Harkavy showed uncanny knowledge and acumen in their interpretation.

An important part of his work was publishing Jewish manuscripts by Jewish authors that were in the possession of the St. Petersburg library, with his comments and critical notes. Among them were works by the later *geonim*, including Saadiah Gaon, Samuel b. Hophni, and Hai Gaon; and the Spanish sages, including Samuel ha-Nagid, Joseph ha-Nagid, Judah Halevi, and Abraham ibn Ezra. He also published manuscripts in the journals *Me'assef Niddahim* (16 issues, 1878–80) and *Hadashim Gam Yeshanim* (20 issues, 1886–1907); in the series of monographs he edited, *Zikkaron le-Rishonim ve-gam le-Aharonim* (7 issues, 1879–82), and in other publications.

Significant information in Jewish history is included in his comments on volumes three to eight of H. Graetz’s *Geschichte der Juden*. Among the manuscripts he published were geonic responsa and the long version of “The Letter of King Joseph of the Khazars to R. Hisdai ibn Shaprut” and other manuscripts that the library acquired from the Karaite scholar Abraham Firkovich.

While working on Karaite documents it occurred to Harkavy that Firkovich had forged many of the manuscripts and tombstone epitaphs. He proved this claim in a series of articles and essays, of which the most significant were *Altjuedische Denkmaeler aus der Krim mitgetheilt von Abraham Firkowitsch 1839–1872* (“Ancient Jewish Monuments from Crimea...,” 1876) and “*Po voprosu o iudeyskikh drevnostyakh naydennykh Firkovichem v Krymu*” (“On Jewish Antiquities Found by Firkovich in Crimea,” in *Zhurnal Ministerstva narodnago prosveshcheniya*, 1877). Harkavy’s keen, systematic analysis in this controversy placed him in the first rank of Jewish scholars of his time. Since Firkovich used his forgeries to obtain equality for the Karaites (but not for all the Jews) in Russia, Harkavy felt he was fighting for the whole of Jewry. The controversy escalated when the learned apostate Daniel *Chwolson of the University of St. Petersburg took Firkovich’s side and defended his theories. Of his many articles about the Karaites the most significant are the one on Anan (in *Voskhod*, 1900) and his extensive research in *Ocherki istorii karaimstva* (“Notes on the History of the Karaites,” 1896–1900).

Harkavy published in Russian a description of Samaritan scrolls of the Torah found in the St. Petersburg public library (1874), and with H.L. Strack a description in German of the Bibles found in Firkovich’s collection (1875). He devoted a special essay in German, “*Neuaufgefundene hebraeische Bibelhandschriften*” (1884), to biblical manuscripts he acquired later. These descriptions are important from both paleographic and historical points of view, as the manuscripts contain various notes and comments added by the authors and copyists. Harkavy was esteemed by the czarist regime, and in the 1890s he was awarded a hereditary noble title and made an honorary member of several scientific societies in various countries. He was active in the Jewish community of St. Petersburg as the *gabbai* of the central synagogue and as a member of *Mefizei*

Haskalah be-Yisrael and Mekizei Nirdamim societies. A listing of his entire work through 1907, including 392 titles, was published by D. Magid with corrections and supplements by S.A. Poznański in a Festschrift published on the occasion of Harkavy's 70th birthday, *Zikkaron le-Avraham Eliyahu* (1908).

[Abraham N. Poliak]

HARKAVY, ALEXANDER (1863–1939), Yiddish lexicographer. A relative of the Orientalist and historian Albert Harkavy and grandson of the rabbi of Novogrodek (Yid. Navaredok), Harkavy was born in that Belorussian town. He had a traditional Jewish education, showed an early interest in languages, and acquired some knowledge of Hebrew, Russian, Syriac, German, and Yiddish in his teens. In 1878 Harkavy went to Vilna, where he was befriended by the Yiddish author Isaac Meir *Dik and wrote his first work, in Yiddish. He earned a living as a bookkeeper for *Romm, the Hebrew-Yiddish publishing house. After the pogroms of 1881 Harkavy moved to Warsaw and joined the *Am Olam movement, before immigrating to the United States, intending to settle in a Jewish collective agricultural colony. When the project did not materialize, he worked as a stevedore, farm laborer, and dishwasher, studying English intensively and then tutoring English and Hebrew privately.

Harkavy's love of Yiddish soon crystallized into a vocation, but for about ten years his search for a steady income sent him wandering. He was in Paris in 1885, returned to New York in 1886, taught Hebrew at a *talmud torah* in Montreal in 1887, where he published the first Yiddish newspaper (*Di Tsayt*), went to Baltimore in 1889 and there founded the short-lived periodical *Der Yidisher Progres*, before returning once more to New York in 1890. A year later his first popular textbook, *Der Englisher Lerer* ("The English Teacher"), was published, of which almost 100,000 copies were sold. Through this and other books in the "English self-taught" genre, such as his guide to writing letters, *Der Englisher Brivnshteler* ("The English Letter-Writer," 1892), Yiddish translations of classics, classroom lectures and popular expositions of American history and culture, New York Yiddish literary anthologies (*Der Nayer Gayst*, "The New Spirit," 1897–98; *Der Tsvantsikster Yorhundert*, "The Twentieth Century," 1900), and above all his Yiddish dictionaries, he became the teacher par excellence of two generations of immigrants. He translated *Don Quijote* into Yiddish (1910) and revised the King James English Bible and translated it into Yiddish for a dual-language edition (1926). His popular expositions included *Columbus, Entdecker fun Amerike* ("Columbus, Discoverer of America," 1892). He taught U.S. history and politics for the New York Board of Education and Yiddish literature and grammar at the Jewish Teachers' Seminary in New York, while also lecturing for the Workmen's Circle. He wrote a column called "Kol-Boy" ("Everything in It") for the *Abend-Post* and occasional articles

for many Yiddish, Hebrew, and English papers and journals. In 1935 he published *Perakim me-Hayyai* ("Autobiographic Chapters"). His most lasting achievements were, however, in lexicography. His English-Yiddish and Yiddish-English dictionaries, encompassing about 40,000 Yiddish words, went through two dozen editions and reprints. His crowning work was the *Yiddish-English-Hebrew Dictionary* (1925; suppl. 1928; fifth reprint 1988), which played a significant role in educating East European Jewish immigrants in English and is still an outstanding example of a multilingual dictionary used by Yiddish speakers and lexicographers.

[Mordkhe Schaechter / Jean Baumgarten (2nd ed.)]

HARKAVY, MINNA B. (1887–1987), U.S. sculptor, active in artistic and political circles. She is recognized for figurative sculptures with Expressionist tendencies that often address social issues in bronze, wood, and stone.

One of 10 surviving children born in Estonia to Yoel and Hannah Rothenberg, Harkavy immigrated to the United States in her early teens. She studied art in America and Europe, most notably with French sculptor Antoine Bourdelle, and showed her work at the Salon d'Automne and the Jeu de Paume in Paris. She graduated from Hunter College in Manhattan and married Louis Harkavy, a pharmacist who also published in Yiddish-language periodicals. Some of the artist's subjects were friends like art collector Leo Stein, singer Paul Robeson, and anarchist (and lover) Carlo Tresca. A copy of Harkavy's bust of Tresca was installed in his birthplace of Sulmona, Italy, after his 1943 assassination. Other works immortalize downtrodden or oppressed people, such as coalminers in the American Midwest and European Jews threatened by Hitler. Harkavy's celebrated bronze *American Miner's Family* (1931), owned by the Museum of Modern Art, features heads of the miner, his wife and children in a tableau of stoic resolve. The elongated terra cotta head of her *New England Woman*, displayed at the 1939 New York World's Fair, is reminiscent of African art and Modigliani. Harkavy's large stone sculpture *Two Men*, a comment on human communication, won first prize in a 1951 national sculpture competition held by the Metropolitan Museum of Art.

Harkavy was heavily involved in political advocacy and in organizing other artists. She was a founder of the New York Society of Women Artists in 1920, the American Artists' Congress, and the Sculptors' Guild, both in the 1930s. An activist in two languages, Harkavy represented the John Reed Club at a Communist anti-war conference in Amsterdam in 1932, and served on the Art Committee of the American Section of the Yidisher Kultur Farband (YKUF), the World Alliance for Yiddish Culture. Harkavy was deeply concerned with the fate of European Jewry. Her entry in the 1939 Sculptors' Guild Exhibition, *Lamentations: My Children Are Desolate Because*

the Enemy Prevailed, portrays a mother with arms wrapped protectively around her child.

The artist participated in a variety of group exhibitions, including those organized by the Jewish Art Center in the 1920s and the John Reed Club in the 1930s, as well as at the Whitney Studio Club and, later, the Whitney Museum, from the 1920s to the 1950s. In the 1930s, she worked under the aegis of the WPA Fine Arts Program. A one-woman show was devoted to Harkavy at the Rhode Island School of Design in 1956. Her work is included in numerous prominent collections, including the Whitney and the Museum of Modern Art in New York, the Tel Aviv Museum, the Pushkin Museum in Moscow, the Hermitage in St. Petersburg, and several university museums. During her last decades, she taught students in her studio at the Ansonia Hotel in Manhattan. Harkavy died in New York, three months before her 100th birthday.

[Lauren B. Strauss (2nd ed.)]

ḤARLAP, JACOB MOSES BEN ZEBULUN (1883–1951), Erez Israel rabbi. Ḥarlap was born in Jerusalem, where his father, who had emigrated from Poland, was a *dayyan* in the *bet din* of Moses Joshua Judah Leib Diskin. His main teacher was the Jerusalem scholar, *Ẓevi* Michael Shapira and under his influence Ḥarlap engaged in *Kabbalah and practiced asceticism. After Shapira's death, Ḥarlap published *Ẓevi la-Ẓaddik* (1907) in his memory, and arranged his writings for publication, publishing his halakhic work *Ziz ha-Kodesh* (two parts, 1920–51) with his own additions. When Rabbi A.I. *Kook arrived in Erez Israel in 1904, Ḥarlap immediately came under his influence, and a bond of unusual intimacy developed between them which was strengthened by their common interest in Kabbalah and their leaning toward mysticism and poetic meditation. Ḥarlap was particularly attracted by Kook's thought which stressed the special role of the Jewish people as a whole, the sanctity of the Land of Israel, and the Zionist movement and its upbuilding of Erez Israel – a first stage in the future messianic redemption.

When in 1908 the Sha'arei Ḥesed district of Jerusalem was established outside the Old City, Ḥarlap was appointed its rabbi. In 1912 he was appointed to the Eẓ Hayyim yeshivah. In 1918 he was one of the chief speakers at the meeting of the rabbis of Jerusalem with Chaim *Weizmann demanding that the Zionist movement confine itself to the political field, but he refused Weizmann's offer that he undertake the conduct of religious affairs in the *yishuv*. When the Merkaz ha-Rav yeshivah was founded in Jerusalem by Kook, Ḥarlap was invited to serve as head of the yeshivah and he continued in this post until his death. After the death of Rabbi Kook in 1935, many expected Ḥarlap to be chosen as chief rabbi, and in any case he was later regarded by many as his natural successor. On the establishment of the State of Israel Ḥarlap expressed orally and in writing his belief in "the beginning of the redemption"; at the same time he demanded an amelioration of religious standards. Ḥarlap never left Erez Israel during his life and regarded it as a merit "that I never departed from holy

confines and never [breathed] the air [or trod the] ground of the land of the gentiles."

Ḥarlap's main halakhic work is *Bet Zevul*, comprising his halakhic discourses, novellae on the Talmud and on Maimonides' *Mishneh Torah*, and halakhic responsa, in six parts, of which two were published in his lifetime (1942 and 1948) and the others between 1957 and 1966. His books on Jewish thought and religious meditation bear the general title *Mei Merom*. Seven volumes were published (1945ff.), among them a discussion of Maimonides' *Shemonah Perakim*, tractate *Avot*, the High Holidays, and repentance. The central idea of these works is the need to purify one's heart, and sanctify one's life. The aim of the Torah is the perfection of man in thought and in action, the penetration of "the light and spark of holiness that dwells within the people of Israel" into "the depth of the nation's soul which will bring about the redemption." Among his other works are: *Hed ha-Ḥayyim ha-Yisre'eliyyim* (1912); *Tovim me-Orot* (1920), a defense of A.I. Kook's *Orot*; *El Am ha-Shem* (1943), some of his sermons and articles; *Imrei No'am* (1947), "words of comfort, and encouragement to the people of Israel"; and *Hed Harim* (1953), a collection of his letters to A.I. Kook.

[Zvi Kaplan]

HARLAU (Rom. **Hârlău**), town in Moldavia, N.E. Romania. A Jewish settlement is known from 1742. In 1768 a Jew was authorized to establish a factory for window glass and a paper mill in Harlau. From 1751 the documents mention the "Jews' Guild," which in 1834 became the local community organization. The oldest of the five synagogues in Harlau was built in the 18th century. The community had a primary school (founded c. 1900), which was erected with the assistance of the *Jewish Colonization Association. There were also a *talmud torah*, a *mikveh*, and two Jewish cemeteries. Many Jews were *ḥasidim* of the *admor* of Pascani.

Antisemitic persecutions led half of the Jewish population of Harlau to immigrate to the United States during 1899–1900. However, at the same time Jews expelled from the villages settled in Harlau, so the Jewish population did not decrease. The community numbered 784 in 1803, 2,254 (56.6% of the total) in 1886, 2,718 (59%) in 1899, and 2,032 (22.3%) in 1930. The majority of both craftsmen and merchants enumerated in Harlau in 1913 were Jews. Following emancipation in 1919 the Jews took an active part in the municipal council. A small cooperative credit bank was founded in Harlau with the aid of the American Jewish Joint Distribution Committee. Rabbis of Harlau included Israel Isaacson (b. 1895), a deputy in the Romanian parliament, who settled in Israel.

The Zionist movement was also strong in the 1920s and 1930s. Three local Zionist leaders, Sami Stern-Kochavi, Michael Landau, and Valter Abeles (three brothers-in-law) became Jewish-Romanian political leaders in Israel in the 1950s. During World War II some of the Jews in Harlau were deported to Botosani, and others to Jassy. There were 1,936 Jews living in Harlau in 1947. In 1969 approximately 60 Jewish families were living there and they maintained a synagogue. In 2005, 22 elderly Jews lived in Harlau.

[Theodor Lavi / Lucian-Zeev Herscovici (2nd ed.)]

HARLOW, JULIUS (1931–), rabbi, liturgist, and editor. Born in Sioux City, Iowa, Harlow received his B.A. from Morning-side College in Sioux City and then entered the Jewish Theological Seminary, where he was ordained in 1959. He then became associate director of the Rabbinical Assembly, the organization of Conservative rabbis.

Harlow carved out a unique place at the Rabbinical Assembly, working as the editor and chief liturgist for the Conservative movement for some four decades. He began as the secretary of a committee charged with editing a weekday prayer book. The project had lingered until the newly ordained Rabbi Harlow, working with the senior rabbis of the movement, brought it out within two years. It bore the marks of all his other liturgical work; a clarity of language and a crispness of style. By 1965 he had become the editor of the Rabbinical Assembly publications. Among his first project was a *Rabbi's Manual, Likute Tefilah*, a small black book that rabbis brought with them to religious occasions, that contained the traditional liturgy. It won near universal acceptance in the movement and was used well beyond Conservative Judaism.

Harlow was sensitive to the twin revolutions of modern Jewish life: the Holocaust and the State of Israel, and the necessity of giving religious expression to both. This was clearly reflected in the *Mahzor for Rosh Hashanah and Yom Kippur* (1972), in which he wove into the traditional matryology of *Eleh Ezkerah* themes of the Shoah, and composed the moving *Kaddish*, which used the dissonance between the well known words of the doxology and interspersed 17 – one less than *hai* (Heb. “life”) – concentration camps and killing centers, the ghettos and other sites of Jewish catastrophe, into the prayer. The insertion of these words and the places and experiences they represent means that even the most learned cannot recite the prayer by rote, and the magnification of the Divine name is brought down to earth, shattered by the painful reality of Jewish victimization.

His major project for the next decade was *Siddur Sim Shalom* (1985), which, unlike the widely used Silverman edition, could be used for weekdays as well as Sabbaths, and included many additional texts and readings. It is a complete *siddur* with readings and with *Pirkei Avot*. By 1994 a new version included a choice in the *Amidah* between including the Matriarchs or not, as the Conservative Movement became more egalitarian, more inclusive of women. Harlow was not pleased with some of the changes introduced into the *siddur* in the intervening decade. He objected in an essay published in the journal *Conservative Judaism*; Harlow noted that “changes based upon gender language referring to God disrupt the integrity of the classic texts of Jewish prayer, drive a wedge between the language of the Bible and the language of the prayer-book, and often misrepresent biblical and rabbinic tradition.” A recent work, *Pray Tell: A Hadassah Guide to Prayer*, offers a wonderful guide to Jewish prayer representing many denominations. Even in retirement, Harlow continued his life calling, translating *Megilat Shoah* written by Avigdor Shinan of the Hebrew University, that seeks to formalize a text for reading on Yom Hashoah, primarily in the Conservative synagogue.

[Michael Berenbaum (2nd ed.)]

HARMAN (Herman), AVRAHAM (1914–1992), Israel diplomat and president of the Hebrew University. Born in London, Harman, who studied law at Oxford, settled in Palestine in 1938. From 1939 to 1940 he was in Johannesburg as a staff member of the South African Zionist Federation and then returned to Jerusalem to head the English Section of the Youth Department of the Jewish Agency. From 1942 to 1948 he was the head of the Information Department of the Agency, and after the establishment of the State of Israel Harman became deputy director of the Press and Information Division of the Israel Foreign Ministry. In 1949 he was appointed Israel consul-general in Montreal, Canada, and then became the director of the Israel Office of Information and counselor to the Israel delegation to the United Nations (1950–53). After a two-year period as the Israel consul-general in New York, Harman returned to Jerusalem in 1955 and was appointed a member of the Jewish Agency Executive, heading its Information Department. In 1959 he was appointed Israel ambassador to the United States, a post he held until 1968. His warm identification with the Jewish community and its problems brought him personal popularity wherever he served. Upon his return to Israel, Harman was appointed president of the Hebrew University, Jerusalem. He held that position until 1983, when he became university chancellor. The Institute for Contemporary Judaism and the chair of the Department of the History of the Jewish People at the Hebrew University are named for him. His wife, ZENA (1914–), was born in London and educated at the London School of Economics and Political Science. She served on several Israel delegations to the UN. In 1964 she was elected chairman of UNICEF (the United Nations Children's Emergency Fund). In 1969 she was elected to the Seventh Knesset on behalf of the Israel Labor Party.

HARMAN, JANE (1945–), U.S. politician, attorney, and college professor. Born in New York City to Adolph N. and Lucille (Geier) Lakes, Harman graduated from the Los Angeles public schools, Smith College (1966), and Harvard University Law School (1969). She married twice, to Richard Frank and to Sidney Harman, and had four children. The Harman family's wealth enabled her to mount costly campaigns. A six-term Democratic congresswoman, who represented the 36th congressional district of California in the United States House of Representatives, Harman was first elected to Congress in 1992. She gave up her seat in Congress in 1998 in an unsuccessful bid for governor of California. In 2002, upon her return, the House Democratic leadership appointed Harman to serve as ranking member on the Permanent Select Committee on Intelligence for the 108th Congress. As ranking member on the panel's Subcommittee on Terrorism and Homeland Security, Harman was at the forefront of all House actions made in response to the terrorist attack on the World Trade Center on September 11, 2001. Harman also served as a member of the House Select Committee on Homeland Security. Before her re-election to Congress in 2000, Harman was on the 10-member panel of the congressionally mandated National Council on Terrorism. Harman was fiscally moderate, but supported defense spending, thereby aiding defense and aerospace contractors in her district. She was a liberal on social issues, supporting abortion rights and pro-female and pro-child legislation.

Prior to being elected to the U.S. Congress, Harman was a lawyer, a staff member for California Senator John V. Tunney (1972–73), chief counsel and staff director of the U.S. Senate Judiciary Subcommittee on Constitutional Rights (1975–77), deputy secretary to the cabinet at the White House under President Jimmy Carter (1977–78), and special counsel to the Department of Defense (1979). An adjunct professor at Georgetown University Law Center (1974–75), Harman taught public policy and international relations at the University of California, Los Angeles where she was named Regents Professor in 1999.

[Peggy K. Pearlstein (2nd ed.)]

HARMATZ, WILLIAM ("Willie," "Bill"; 1931–), U.S. jockey, winner of the 1959 Preakness Stakes. Born in Wilkes Barre, Pa., the youngest of nine children and the son of a cattle buyer, Harmatz grew up in California, where he excelled as a gymnast and was a member of the Los Angeles All-City team. After graduating from high school, Harmatz started working at a racetrack, and a career was born. He won 1,770 races between 1953 and 1971, including 12 \$100,000 events, and won

six consecutive races on April 23, 1954. In 1959 Harmatz won the Preakness aboard Royal Orbit, after finishing fourth at the Kentucky Derby and before finishing third at the Belmont Stakes. He received the Jockey's Guild Meritorious Award in 1957 and the George Woolf Sportsmanship Award in 1960. Harmatz co-founded the Jockey's Association in 1968 and was its executive director from 1972 to 1978.

[Elli Wohlgernter (2nd ed.)]

HARNICK, SHELDON (1924–), U.S. songwriter. Born and raised in Chicago, Harnick began studying the violin while in grammar school. After service in the army for three years, he enrolled in the Northwestern University School of Music and earned a bachelor of music degree in 1949. Though his focus had been on the violin, Harnick developed skills as a writer of comedy sketches, songs, and parody lyrics. By the early 1950s, Harnick had moved to New York to try his skill on Broadway. His first song in a Broadway show, "The Boston Beguine," for *New Faces of 1952*, introduced theatergoers to the wry, subtle humor and deft wordplay indicative of a Harnick lyric. For the next few years, he contributed lyrics and songs to several Broadway shows before he joined up with Jerry *Bock to write their own musicals. Their first, *The Body Beautiful*, was a moderate success, and in 1959 they wrote *Fiorello!*, about the legendary, half-Jewish, combative former mayor of New York City. It won the Pulitzer Prize, the Tony award, and Drama Critics' Circle award as best musical of the year. Next was *Tenderloin* in 1960, set in the seamy Tenderloin district of late 19th-century New York. That was followed in 1963 by *She Loves Me*, a musical set in a pre-World War II ice cream parlor in Budapest whose songs like "Vanilla Ice Cream" and "She Loves Me" became classics.

These shows were a prelude to Harnick and Bock's greatest success, *Fiddler on the Roof*, in 1964, starring Zero *Mostel as Tevya the dairyman with five daughters. Working with the director-choreographer Jerome *Robbins and the book writer, Joseph Stein, they created a musical masterpiece that vividly evoked a vanished community while telling a story with universal and timeless appeal. *Fiddler*, based on a series of short stories by *Shalom Aleichem, earned the Tony award and a gold record for both its Broadway cast album and film soundtrack recordings. In 1971, with the Broadway production still running, the film version, starring Chaim *Topol, was released and played worldwide. The following year the stage production, with such songs as "Tradition," "Sunrise, Sunset," "Do You Love Me?," and "Matchmaker, Matchmaker, Find Me a Match," became the longest-running show in Broadway history with more than 3,000 performances, until that record was eclipsed in 1979. Over the years, the show has been performed thousands of times all over the world in dozens of languages, common and obscure.

After *Fiddler*, Bock and Harnick collaborated on *The Apple Tree* in 1966, three one-act musicals, and *The Rothschilds* (1970), a musical based on the founding of the banking dynasty. The partnership foundered at that point, but Harnick

went on to collaborate with a number of well-known Broadway and film figures, including Richard *Rodgers, Mary *Rodgers, Michel Legrand, and Joe Raposo. Harnick also provided English-language librettos for classical operas and oratorios, including works by Stravinsky, Ravel, Mozart, Bach, and Verdi. He also wrote the theme songs for two films, both with music by Cy *Coleman: *The Heartbreak Kid* in 1972 and *Blame It on Rio* in 1984.

[Stewart Kampel (2nd ed.)]

HARO (Faro), city in Castile, northern Spain. A charter (*fuero*) given to the city by Alfonso VIII (1158–1214) granted the Jews in Haro, who had aided him during the war against Navarre, a series of privileges which included arrangements concerning their security, the indemnity to be paid for the murder of a Jew, and release from various taxes. In the 13th century the community of Haro was the largest in the region of La Rioja. Around 1,000 Jews lived then in the town. Jews were permitted to fish in the river, to establish mills, and to engage in dyeing. Many Jews owned land, particularly vineyards. The *fuero* was later endorsed by Sancho IV (1284–95) and Ferdinand IV (1295–1312). Alfonso settled some Jews in the fortress but they also lived in the unwallled sections of the city. In 1305 they were authorized to choose their own judges in suits involving members of different faiths. The Jews of Haro were not directly hit by the 1391 massacres, but following the persecutions and the war of succession between Pedro I and Enrique of Trastámara the community declined drastically. An organized community continued to exist throughout the 15th century. In the second half of the 15th century some 250–300 Jews lived in Haro constituting no less than 10% of the general population. Jews owned lands and vineyards which they leased to Christians and Muslims. Some were potters. Prominent in the 15th century were the tax farmer Don Solomon Zadik and Samuel Cubo who represented the community in 1476 in a dispute with the town council regarding pasture land and the slaughterhouse. A census in 1492 at the time of the expulsion of the Jews from Spain showed that the community numbered 48 taxpayers who possessed 55 houses in the Mota quarter.

From the 12th century the Jews lived in the castle called “de la Mota.” In the course of time it expanded and included adjacent areas. There are no remains of the Jewish quarter.

[Haim Beinart]

ĤAROSET (Heb. חָרוֹסֶת), paste made of fruit, spices, nuts, and wine which forms part of the *seder* rite on *Passover eve. It is symbolic of the mortar that the Jews made when they were slaves in Egypt. The word is of unknown origin. It has been

suggested that it may stem from *heres* (חֶרֶס, “clay”), because of the color resemblance. The ingredients vary in different communities; in most western countries, it is made of apples, chopped almonds, cinnamon, and red wine. In many Sephardi communities, however, the fruits, etc. that grew in Erez Israel in Bible times – grapes, wheat (*mazzah* meal), dates, figs, olives, apricots, pomegranates, and almonds – are used. North Africans also include pine-nuts and hardboiled eggs, flavoring the paste with piquant and often pungent spices, such as ginger. Yemenites add other seasoning: e.g., chili pepper. In Israel, the bland occidental mixture is turned into a dessert by adding bananas, dates, candied peel, orange juice, and sugar. It is often served as a course of the meal.

[Molly Lyons Bar-David]

HAROSHETH-GOIM (Heb. חֶרְשֶׁת הַגּוֹיִם), biblical locality, the seat of *Sisera, commander of the army of Jabin king of Canaan (Judg. 4:2). When Sisera heard that *Barak was assembling his army at Mount Tabor, he advanced from Harosheth-Goim to the brook of Kishon, where Barak defeated him and drove his army back to Harosheth-Goim (*ibid.* 4:12–16). Various scholars have proposed to identify the site with either Khirbat al-Harbaj or Tell al-‘Amar near al-Ĥārithiyya. These identifications, however, are disputed by B. Mazar, who argues that Harosheth-Goim is not the name of a city but a general term designating the forested regions of central Galilee (cf. *Gelil ha-goyim*, “Galilee of the nations,” Isa. 8:23), over which Sisera attempted to impose his rule. The root חרש in Hebrew and related languages means “forest”; the Septuagint also translates Harosheth as *drymos*, “forest” (Judg. 4:16).

HARRAN (Hirsch), DON (1936–), Israeli musicologist. Born in the United States, Harran received his B.A. degree at Yale University in Romance languages, and then gained his M.A. and Ph.D. in musicology at Berkeley. In 1965 he settled in Israel and was among the small group of founders of the Musicology Department at the Hebrew University of Jerusalem, the first in the country, and became full professor in 1979. He was chair of the department, president of the Israeli Musicological Society, and vice president of the International Musicological Society. Harran earned a high international reputation as a meticulous, prolific, and original researcher. His primary area of specialization was the music of the Renaissance and early Baroque. His publications include more than a hundred articles and editions of late Italian madrigals and books on humanism in Italy, most importantly, *Word-Tone Relations in Musical Thought: From Antiquity to the Seventeenth Century* (Musicological Studies & Documents, 40, Neuhausen-Stuttgart: Hänssler-Verlag for the American In-

stitute of Musicology, 1986). His life-long project has been the monumental critical edition of the music of Salamone Rossi (c. 1570–c. 1628), the great Jewish composer, on whom he also published an extensive monograph: *Salamone Rossi, Jewish Musician in Late Renaissance* (Mantua, Oxford University Press, 1999). In recent years he has focused on the research of Jewish music in later periods, as well as on studies of the setting of Psalm verses.

[Jehoash Hirshberg (2nd ed.)]

HARRIS, BARBARA (Sandra Markowitz; 1937–), U.S. actress. Born in Evanston, Illinois, Harris attended the Goodman Theater School and the University of Chicago. Generally acknowledged as one of the pioneering women in the field of improvisational theater, Harris began her career with the famous Second City improvisation troupe. She moved from there to Broadway, where she won a Tony Award for Best Actress for her performance in the musical *The Apple Tree* (1967). Her other Broadway performances were *From the Second City* (1961); *Mother Courage and Her Children* (1963); and *On a Clear Day You Can See Forever* (1965). She also starred in a stage production of *Oh Dad, Poor Dad ...*, for which she won a Theater World Award in 1962.

Harris made her film debut in the bittersweet comedy *A Thousand Clowns* (1965) and went on to star in such films as *Oh Dad, Poor Dad...* (1967), *Plaza Suite* (1971), *Who Is Harry Kellerman and Why Is He Saying Those Terrible Things About Me?* (1971), *The War between Men and Women* (1972), *Mixed Company* (1974), *Nashville* (1976), *Freaky Friday* (1976), *Movie Movie* (1978), *The Seduction of Joe Tynan* (1979), *The North Avenue Irregulars* (1979), *Second-Hand Hearts* (1981), *Peggy Sue Got Married* (1986), *Dirty Rotten Scoundrels* (1988), and *Grosse Pointe Blank* (1997).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

HARRIS, CYRIL KITCHENER (1936–), chief rabbi of the Union of Orthodox Synagogues, South Africa, 1988–2004. Born in Glasgow, Harris served as a rabbi in London (1958–87) before moving to South Africa. During his U.K. period, he also served as senior Jewish chaplain to Her Majesty's Forces (1966–71), as national director of the B'nai B'rith Hillel Foundation (1972–75), as chairman of the Rabbinical Association of the United Synagogue (1978–82) and as joint chairman of Mizrahi, Great Britain (1984–85). As South African chief rabbi, he was prominently involved in speaking out against the country's then racial policies and, with the commencement of the process of political reform, was at the forefront of Jewish leaders encouraging the Jewish community to identify with the new democratic dispensation. He was the co-founder of MaAfrika Tikun, the Jewish community's initiative in respect of uplifting the disadvantaged in South Africa. Awards received included the Distinguished Leadership Award of the South African Jewish Board of Deputies (1997), the Commonwealth Jewish Council Award (2000, awarded jointly with his wife, Ann), the Jerusalem Prize for Communal Leadership

(2002), and the International Keren Hayesod IUA & UCF Honorary Award (2004). Publications include *The Jewish Obligation to the Non-Jew* (1996) and *For Heaven's Sake: The Chief Rabbi's Diary* (autobiography, 2000).

[David Saks (2nd ed.)]

HARRIS, SIR DAVID (1852–1942), South African mining magnate, soldier, and politician. A cousin of Barney *Barnato, Harris went to South Africa from London in 1871, and made on foot the 600-mile journey from Durban to the diamond mines at Kimberley, where he worked for a time as a digger. His marriage to Rosa Gabriel in 1873 was the first Jewish wedding to take place in Kimberley. He became associated with Cecil Rhodes, and from 1897 to 1931 was a director of De Beers Consolidated Mines, founded by Rhodes and Barnato. On Barnato's death in 1897, Harris was elected to his seat in Parliament, where for 32 years he was esteemed as an authority on the diamond industry. Harris fought in several frontier wars in the Cape Colony, rising to the rank of lieutenant colonel. In the Boer War (1899–1902) he commanded the town guard of Kimberley during the historic 125-day siege. He was mentioned in dispatches and decorated for his services. Later he was knighted. Harris was one of the founders of the Griqualand West Hebrew Congregation and was its president for many years. His benefactions to the community included the site on which the Kimberley synagogue was built in 1875. In Parliament he frequently spoke on immigration and other matters of Jewish concern. Known as the "grand old man" of Kimberley, Harris told the story of his life in *Pioneer, Soldier and Politician* (1931). His Anglo-Boer War career is described in "Sir David Harris – Hero of the Siege of Kimberley," in: *Jewish Affairs*, vol. 54, no. 3 (1999).

[Louis Hotz]

HARRIS, JED (Jacob Horowitz; 1900–1979), U.S. theatrical producer. Born in Vienna, Harris was taken to the U.S. as a child. His first big success, *Broadway* (1926), had a three-year run. Other productions included *The Front Page* (1928), *Uncle Vanya* (1930), *The Inspector General* (1930), *Our Town* (1938), *A Doll's House* (1938), *The Heiress* (1948), and *The Crucible* (1953). At one period he had four successes running on Broadway and was reputed to have amassed and lost more than five million dollars. Regarded as an "irascible genius," Harris was the hero in Ben Hecht's novel *A Jew in Love* (1931) and Frederic Wakeman's *The Saxon Charm* (1947). Harris wrote *Watchman, What of the Night?* (1963) and *A Dance on the High Wire: Recollections of a Time and a Temperament* (1979).

ADD. BIBLIOGRAPHY: M. Gottfried, *Jed Harris: The Curse of Genius* (1984)

HARRIS, LOUIS (1921–), U.S. pollster and author. Harris was born in New Haven, Connecticut. He was educated at the University of North Carolina where he received his B.A. in economics (1942) and then entered the Navy. He was later trained in polling by Elmo Roper of Roper Poll fame, draft-

ing columns and newspaper articles and learning the craft of the then emerging science. Harris formed his own firm, Louis Harris and Associates in 1956 and served as the pollster and political advisor for John F. Kennedy's presidential bid of 1960. In the next few years his influence broadened as he became the chief pollster for CBS News, later switching to ABC News. He simultaneously served as a newspaper columnist for such publications as the *Washington Post*, *Newsweek*, the *Chicago Tribune*, and New York's *Daily News*. The Harris poll became widely recognized, while polling itself became an indispensable and increasingly precise part of every political campaign and essential to business planning and marketing. With the advent of the computer, the processing of information became easier and the availability of information to process ever greater. Louis Harris and Associates advised candidates for public office at every level; both Democrats and Republicans are among clients who made use of their marketing services.

Harris left Louis Harris and Associates in 1992 and formed his own research firm, LH Research. He wrote many books and countless studies, some public and some quite private. From his publications one can note a particular interest in the racial issues that gripped the United States in the 1960s and the strained ties between the African American community and the Jews.

[Michael Berenbaum (2nd ed.)]

HARRIS, MARK (1922–), U.S. novelist and critic. Harris received a Ph.D. in 1957 from the University of Minnesota. He is best known for his books about baseball players, notably the Henry Wiggen novels: *The Southpaw* (1953); *Bang the Drum Slowly* (1956), which was made into a film in 1973; *A Ticket for a Seamstress* (1957); and *It Looked Like For Ever* (1979). Harris also wrote "problem" novels such as *Trumpet to the World* (1946), *Something About a Soldier* (1957), and *Wake Up, Stupid* (1959). *City of Discontent* (1952) dealt with Vachel Lindsay, and *Friedman and Son* (1963) was a play about the conflicts of Jewish life. His novel *The Goy*, about a gentile professor grappling with the meaning of historical writing as well as the meaning of his own life, including his response to Jews, was published in 1970. His study of Bellow, *Saul Bellow, Drumlin Woodchuck*, was published in 1980. His autobiographical reflections can be found in *Mark the Glove Boy, or the Last Days of Richard Nixon* (1964), *Twentyone Twice: A Journal* (1966) and *Best Father Ever Invented: The Autobiography of Mark Harris* (1976). His novel *Speed* was published in 1990, followed by *Diamond: Baseball Writings of Mark Harris* (1994). He also edited *The Heart of Boswell* (1981).

[Lewis Fried (2nd ed.)]

HARRIS, MARVIN (1927–2001), U.S. anthropologist. Born in New York City, educated at Columbia University (A.B., 1949; Ph.D., 1953), Harris taught at Columbia from 1952 to 1981 and was graduate research professor at the University of Florida from 1981 until his retirement in 2000.

Marvin Harris was one of the originators of the anthropological theory known as cultural materialism and is perhaps

the scholar most closely associated with it. He first proposed this approach in his book *The Rise of Anthropological Theory* (1968), which rejected the then dominant structuralist approaches associated with *Durkheim and *Levi-Strauss and their followers, which attribute changes in cultural development to changes in ideas rather than to material necessity. Cultural materialism, in attempting to account for the evolution of sociocultural systems, holds that the values and practices of a culture develop from the interaction of technology, the environment, population levels, and basic biological needs. Institutions like religion, law, or kinship systems – or human sacrifice, or the prohibition against eating cows or pigs – must have some function that gives a society a material advantage in its environment, or they would not have developed. Critics claim that cultural materialism is too deterministic and reductive, trying to explain too many diverse cultural phenomena too simply, but its fundamental insight – that societies are shaped by their material needs – has been incorporated into anthropological discourse, though the theory as a whole remains somewhat controversial. Its primary intellectual ancestors are Marx and Malthus, but it draws upon other sources as well.

Harris was concerned to participate in public debate, and most of his books were in fact written for a nonscholarly audience. Among his works for the general public are *Cows, Pigs, Wars, and Witches: The Riddles of Culture* (1974), *Cannibals and Kings: The Origins of Cultures* (1977), *Cultural Materialism: The Struggle for a Science of Culture* (1979), *Why Nothing Works: The Anthropology of Daily Life* (1983), *Good to Eat: Riddles of Food and Culture* (1986), and *The Sacred Cow and the Abominable Pig* (1987). His more scholarly work includes *Town and Country in Brazil* (1956), *Portugal's "Wards": A First-Hand Report on Labor and Education in Moçambique* (1958), *Minorities in the New World: Six Case Studies* (1958), *The Nature of Cultural Things* (1964), *Patterns of Race in the Americas* (1964), *The Rise of Anthropological Theory: A History of Theories of Culture* (1968), *Death, Sex, and Fertility: Population Regulation in Preindustrial and Developing Societies* (1987, with Eric B. Ross), *Food and Evolution: Toward a Theory of Human Food Habits* (1987, with Eric B. Ross), and *Theories of Culture in Postmodern Times* (1999).

[Drew Silver (2nd ed.)]

HARRIS, MAURICE (1859–1939), U.S. rabbi and communal worker. Born in London, he came to the United States at 10 and entered the business world. He studied at Columbia University earning his B.A. (1887), M.A. (1888), and Ph.D. (1889). He was ordained at Temple Emanu-El Theological Seminary, a short-lived affiliate of the famed New York Congregation (1884) and became the rabbi of Temple Israel in Harlem. His most important work was with the immigrant population. He was a founder of the Jewish Board of Guardians, the New York Society for the Prevention of Crime and a founder and president of the Federation Settlement and the Jewish Projectory, an organization designed to facilitate the successful absorp-

tion of the immigrants who flooded New York beginning in 1881. He was the author of several books, among them *History of the Medieval Jews* (1924), *The People of the Book*, 3 volumes (1929–1933), *Modern Jewish History* (1910, 1924, 1928), *Modern Jewish History from the Renaissance to the World War* (1922), *The Story of the Jew* (1919), *The Story of the Jew in America* (1921); and *A Thousand Years of Jewish History* (1927).

BIBLIOGRAPHY: K.M. Olitzsky, L.J. Sussman and M.H. Stern *Reform Judaism in America: A Biographical Dictionary and Sourcebook* (1993).

HARRIS, MILTON (1906–1991), U.S. polymer and textile chemist. Born in Portland, Oregon, at the age of 16 Harris received his B.S. from Oregon State University (OSU) in chemical engineering and his Ph.D. in chemistry from Yale University in 1929. Harris spent a large part of his career in commercial research. In 1931 Harris was one of the founders of the institute for the study of textiles at the National Bureau of Standards. Their work resulted in fibers that were water-repellent, flameproof, and rotproof. He helped develop processes for permanent press in woolen goods and wash-and-wear cotton finishing. His work led ultimately to the development of synthetic polymers such as nylon, polyester, and plastics. He was director of research at the Textile Research Institute in 1938–44. In 1945 he founded his own research laboratory, which later became a subsidiary of the Gillette Company. He was director of research and vice president of Gillette from 1956 until his retirement in 1966. He was chairman of the American Institute of Chemists (1961–62) and later chairman of its board of directors. He edited *Handbook of Textile Fibers* (1954), and the dyes and textile section of *Chemical Abstracts* (1949–61). In addition to the Milton Harris Chair at OSU, his gifts have supported three scholarships, two teaching grants, and awards in chemistry, biochemistry, and basic research. His last major financial gift to OSU was a trust fund that will provide an endowment of roughly \$2 million for the Department of Chemistry.

[Bracha Rager (2nd ed.)]

HARRIS, SIR PERCY ALFRED (1876–1952), English politician. Born in London and educated at Harrow and Cambridge, Harris was admitted to the bar in 1899, although by profession he was engaged in his father's mercantile business which traded with New Zealand. Harris retained a lifelong interest in that country, and published *New Zealand and Its Politics* in 1909. He traveled around the world three times and lived in New Zealand for three years. From 1907 to 1934 and from 1946 until his death he was a member of the London County Council and served as its deputy chairman from 1915 to 1916. In that year he returned to parliament as Liberal member for Harborough. Harris was elected for a second time in 1922 and sat continuously until 1945 when he retired. He was made a baronet in 1932 and from 1940 to 1945 was deputy leader of the Liberal Party in the House of Commons. His publications include *London and Its Government* (originally written in 1913

and rewritten in 1931) and an autobiography, *Forty Years In and Out of Parliament* (1947).

HARRIS, SAM HENRY (1872–1941), U.S. theatrical manager. Born in New York, Harris produced many successful plays. Several of them won Pulitzer Prizes, such as *Icebound* (1923) by Owen Davis and *Of Thee I Sing* (1931) by George S. *Kaufman. His partnership with playwright George M. Cohan lasted 15 years and resulted in the production of about 50 plays. Among them were the Broadway successes *The Music Box Revue* (1921), *Rain* (1922), and *The Jazz Singer* (1925). In 1929 Harris lost a considerable fortune but managed to recoup it with *Once in a Lifetime* (1930) and Moss *Hart's Pulitzer Prize-winning *You Can't Take It with You* (1936).

Harris was considered one of the great gentlemen of the theater, renowned for his fairness and kindness to actors, writers, and others involved in show business. One of the Great White Way's most prolific independent producers, Harris presented more than 130 Broadway plays and musicals. They include *The Talk of New York* (1908), *The Little Millionaire* (1911), *Hamlet* (1922), *The Cocoanuts* (starring the Marx Brothers, 1925), *Chicago* (1926), *Animal Crackers* (starring the Marx Brothers, 1928), *Dinner at Eight* (1932), *Of Mice and Men* (1937), and *The Man Who Came to Dinner* (1939). Later productions performed in the theater owned and operated by the Estate of Sam H. Harris include *I Remember Mama* (1944), *Lost in the Stars* (1949), and *Five Finger Exercise* (1959).

[Ruth Beloff (2nd ed.)]

HARRIS, SYDNEY (1917–), Canadian jurist, Jewish community leader. Harris was born in Toronto in 1917. He received his B.A. from the University of Toronto in 1939 and a law degree from Osgoode Law School in 1942. He was called to the Bar that same year. For 34 years Harris was a leading criminal lawyer appearing in courts at every level of the judicial system, including the Supreme Court of Canada. He was then appointed a judge in the Ontario Provincial Court. Among his more controversial cases was the 1978 trial of a gay Toronto newspaper charged with two different obscenity violations under the Canadian Criminal Code. In a decision still hailed as a major step in the struggle for gay rights and freedom of the press in Canada, Harris found the newspaper not guilty on both charges. After retiring from the bench in 1992, he served as a deputy judge, a member of the Ontario Assessment Review Board, and a member of the Council of Ontario Land Surveyors.

Harris was one of Canada's foremost postwar Canadian Jewish community leaders. As a member of the Canadian Jewish Congress for 60 years, Harris served as chair of Community Relations in the 1960s and as national president from 1974 to 1977. He was instrumental in lobbying the Canadian government on behalf of Soviet Jews and was a major proponent of

hate propaganda legislation and active in the anti-Nazi campaign in Toronto in the 1960s. Harris also served as president of several other organizations, including the Jewish Vocational Service, Upper Canada Lodge of B'nai B'rith Canada, and the Canadian Council of Reform Congregations. In later years, he provided counsel to the leadership of the Canadian Jewish Congress. Harris was honored with the 1967 Confederation Centennial Medal and the 1973 Queen's Jubilee Medal.

[Frank Bialystok (2nd ed.)]

HARRIS, ZELIG SABBETAI (1909–1992), U.S. linguist. Harris was born in Russia and was taken to the United States as a child of four. He graduated from the University of Pennsylvania and joined the faculty there in 1931. In 1946 he founded the first linguistics department in the country and in 1947 was appointed professor of linguistics. One of his best-known students was Noam *Chomsky.

In the late 1930s his interests shifted from Semitics to general linguistics. His early work was devoted primarily to the development of procedures of linguistic analysis. At the time, he wrote *Development of the Canaanite Dialects* (1939). His purpose was to devise a set of precisely formulated methods which, applied to data of a particular language, would yield a grammatical description of this language. This was completed in the late 1940s, and Harris then turned his attention to the study of connected discourse. He observed that formal operations of a general nature could be applied to the utterances of a discourse, reducing it to a “normalized” form. Procedures analogous to those of structural linguistics could then be applied, finally yielding a structural analysis of the discourse. This work led to an intensive investigation of the properties of the formal operations (“transformations”). Other investigations resulted in the development of computer programs for the analysis of language structure, many studies of the detailed properties of English syntax, and more abstract investigation of the formal properties of linguistic structures.

Harris helped to develop the adult education program for Israeli kibbutzim centered in Givat H̄avivah.

Harris' major publications on his work are *Methods in Structural Linguistics* (1951), *String Analysis of Sentence Structure* (1962), *Discourse Analysis Reprints* (1963), *Mathematical Structures of Language* (1968), *The Form of Information in Science* (1989), and *A Theory of Language and Information* (1992). His book *The Transformation of Capitalist Society* was produced posthumously from a completed manuscript prepared for publication by M. Eden, W. Evan, and S. Melman (1997).

ADD. BIBLIOGRAPHY: B. Nevin and S. Johnson (eds.), *The Legacy of Zellig Harris: Language and Information into the 21st Century* (2002).

[Noam Chomsky / Ruth Beloff (2nd ed.)]

HARRISBURG, capital city of Pennsylvania. Of a total population of 251,798 in Harrisburg City (48,950) and the surrounding Dauphin County, there were an estimated 5,164 Jews (according to a 1994 demographic survey). Cumberland County,

across the Susquehanna River, had an estimated 1,821 Jews out of a population of 213,674. The first Jewish settlers in Harrisburg were immigrants from Germany and England; they arrived in the 1840s and assembled regularly for Sabbath and holiday services under the leadership of Lazarus Bernhard. In 1853, this group drew up the constitution for the first synagogue, Ohev Sholom, which was Orthodox until 1867, when it adopted Reform. Rabbi Philip David Bookstaber, spiritual head of the congregation from 1924 to 1962, was a leader of the Boy Scouts of America. Other congregations that formed since then were Chisuk Emuna (1884), now Traditional Conservative; Cong. Keshet Israel (1902), the leading Orthodox institution in central Pennsylvania; Temple Beth El (1926), egalitarian Conservative; and Machzike Hadas (1904), now known as Chabad-Lubavitch (ḥasidic). Other area synagogues include B'nai Jacob Synagogue, Conservative (on the National Registry of Historic Places), founded in 1906 in nearby Middletown (Dauphin County); Cong. Beth Shalom (1970), Reconstructionist, in Mechanicsburg; and Cong. Beth Tikvah, egalitarian, Carlisle, both in Cumberland County. Eliezer *Silver, who served as rabbi of Keshet Israel from 1907 to 1925, founded many of the community's services, including the Harrisburg Hebrew School, a *talmud torah*; the Hebrew Free Loan Society; and the Transient Home. Yeshiva Academy, providing secular and Jewish education to children from preschool through eighth grade, was one of the first Jewish day schools in the country outside a major metropolitan area. It was established (and renamed for) Rabbi David L. Silver, rabbi of Keshet Israel, and Aaron S. Feinerman. The Jewish Community Center was founded in 1915 as a YMHA, by Leon Lowengard; its name was changed in 1941, and it has occupied its current building since 1956. The Jewish Federation of Greater Harrisburg was formed in 2002 through the consolidation of the United Jewish Community (founded in 1933) and the Jewish Community Center. The Federation serves as the central fundraising agency, speaks officially for the community on both Jewish matters and Jewish-gentile community relations, promotes the quality and values of Jewish life, and publishes the biweekly newspaper *Community Review*. Agencies supported by the Federation include the Jewish Family Service, the Jewish Group Home (for the developmentally disabled), the Jewish Home, and The Residence, a senior living community on the campus of the Home. David Silver, rabbi of Keshet Israel from 1932 to 1983, was the driving force (with Horace Goldberger) of the Jewish Home. In addition to afternoon schools at a few area congregations, the Federation sponsors the Harrisburg Hebrew High School for public school students. The Harrisburg Jewish community had the highest per capita donation in the country to the UJA emergency fund during Israel's Six-Day War. For decades its leading philanthropist was businesswoman Mary Sachs, known as the “Merchant Princess.” The late David Javitch founded the Giant Food Stores chain with one meat market in Carlisle in 1923; in 1968 his son Lee (now retired) took over as president of the chain, now a part of Ahold U.S.A. Companies.

Other community leaders have included Albert Hursh (d. 2004), who served the JCC and Federation professionally for eight decades; Rite Aid Corporation founder Alex Grass, who has served as chair of the Board of Governors of the Hebrew University of Jerusalem, member of the board of United Jewish Appeal, and member and past chair of the Board of Governors of the Jewish Agency for Israel; and Lois Lehrman Grass, philanthropist and patron of the arts.

Until the 1940s most Jews were engaged in the merchandising of food, clothing, and furniture; the scrap business; and peddling. In the 1960s, many were engaged in manufacturing clothing, food distribution, retail merchandising, the professions, and state government positions. In 1958 attorney Gilbert Nurick was the first Jew to head the State Bar Association. The first community college in the state, Harrisburg Area Community College, was established mainly because of the efforts of Bruce E. Cooper, chairman of its board. In 1969, William Lipsitt became the first Jewish judge of a county court. By the 1990s, most Jews were found in the professions and state government positions.

[Barbara Trainin Blank (2nd ed.)]

HARRISON, LEON (1866–1928), U.S. rabbi. Born in Liverpool England, Harrison immigrated to the United States with his parents and studied in public schools, the City College of New York, and Columbia University. He then attended the Congregation Emanu-El Theological Seminary and was ordained by Kaufmann Kohler and Gustav Gottheil. His first pulpit was in Brooklyn and later he officiated in St. Louis. He first introduced Sunday services in St. Louis and later abandoned them for late Friday evening services. Deeply concerned socially, he was vice president of the Anti-Tuberculosis Society, director of the Tenement House Improvement Association, and a founder of the Social Settlement League and the Fresh Air Society in St. Louis. A wonderful preacher he delivered a eulogy at the funeral of Henry Ward Beecher and also gave the McKinley memorial address at the St. Louis Coliseum. He was the co-editor of the Semitics section of the *Editor's Encyclopedia*. A posthumous publication of his sermons was titled *The Religion of the Modern Liberal*.

HARRISON, LESTER (“Les”; 1904–1997), U.S. basketball coach, owner, and organizer; member of the Basketball Hall of Fame. Born and raised in Rochester, New York, “Laizer” Harrison began a lifelong involvement with basketball as a player at East High School and in the inaugural New York State Section V Basketball tournament in 1922, Harrison scored 18 points in his team’s 22–18 victory over West High. Harrison played, coached, organized, and promoted professional basketball in New York State for the Rochester Seagrams, Ebers, and Pros from the 1920s through the 1940s, before forming a

semi-pro team, the Rochester Pros, with his brother Jack in 1944. The next year the team – renamed the Rochester Royals – began playing in the National Basketball League, where Harrison coached the team to a 99–39 record and three straight NBL finals, winning the championship as well as being named Coach of the Year in 1946. Harrison led the way for a merger of professional basketball leagues by joining the Basketball Association of America for the 1948–49 season, leading the Royals to a 45–15 record, going 33–1 at home and getting to the finals. After the season the NBL merged into the BAA to form one league, the National Basketball Association. The Royals won the NBA championship in 1951, making Harrison the first of five Jewish coaches to win the NBA title. He stepped down as coach after the 1954–55 season, leaving with a six-season NBA record of 250–166, and a 10-season coaching career record of 394–220, along with five divisional titles. Harrison moved the Royals to Cincinnati before the 1957–58 season and sold the team the following year. Harrison was a member of the NBA’s Rules Committee and Board of Directors, and was elected to the Hall of Fame in 1980.

[Elli Wohlgeleinter (2nd ed.)]

HARRISSE, HENRY (1829–1910), U.S. historiographer. Born in Paris, Harriette immigrated to the United States in 1849. After teaching in South Carolina, he became professor of French at the University of North Carolina and simultaneously prepared for the bar at its Law School. In 1857, he settled in Chicago and four years later in New York, dividing his time between the practice of law and writing on philosophy, French literature, and historiography. In New York, he met Samuel Barlow, the eminent attorney and Americana bibliophile, who stimulated his interest in the period of discovery. Together they published *Notes on Columbus* (1866). Harriette’s *Bibliotheca Americana Vetustissima*, which evaluated every book referring to America from 1493 to 1551 (1866; repr. 1922, 1958), established his reputation and, when he returned to Paris (1866) to practice law, he was acknowledged as an authority in American studies.

Among his other books on the period of discovery are: *Notes pour servir à l’histoire, à la bibliographie et à la cartographie de la Nouvelle-France et des pays adjacents, 1545–1700* (1872); *Ferdinand Colomb, sa vie, ses œuvres...* (1872); *Christophe Colomb, son origine, sa vie, ses voyages, sa famille et ses descendants* (2 vols., 1884–85); *The Discovery of North America* (1892); *Americus* (Eng., 1895); *John Cabot, the Discoverer of North America...* (1896); and *The Diplomatic History of America. Its First Chapter...* (1897).

HARRY, MYRIAM, pen name of Mme. **Emile Perrault**, née Shapira (1875–1958), French author. She was born in Jerusalem, the daughter of Moses William Shapira; her mother was a former Protestant deaconess. Myriam was educated in

Berlin and Paris, where she became secretary to the French critic, Jules Lemaitre. She led an active life and many of her experiences found their way into her stories. Her sensitivity to human suffering lent depth and color to such works as *La Conquête de Jérusalem* (1903), *La Divine chanson* (1911), *La petite fille de Jérusalem* (1914), *Siona chez les Barbares* (1918), *Siona à Paris* (1919), and *Le Tendre cantique de Siona* (1922). Myriam Harry also wrote accounts of her travels in Tunisia, Egypt, the Levant, Madagascar, Persia, Indochina, and Palestine. Three of these, *Les Amants de Sion* (1923), *La Nuit de Jérusalem* (1928), and *La Jérusalem retrouvée* (1930), show clearly her sympathy for the Zionist movement.

[Moshe Catane]

HARSHAV, BENJAMIN (Hrushovski; H. Binyomin/Binyamin; 1928–), literary theorist, scholar, and poet. Born in Vilna, Harshav studied in the U.S.S.R. during World War II and was active in the Zionist-Socialist movement in Germany before immigrating to Palestine in May 1948, serving in combat in the Israeli War of Independence and studying at the Hebrew University of Jerusalem and at Yale. He founded the Porter Institute for Poetics and Semiotics at Tel Aviv University, developing the approach of “constructive poetics.” In the fields of literary theory, poetics, cultural semiotics, prosody, and comparative and Hebrew literature he published over 30 monographs, in addition to numerous edited and translated volumes (especially of poetry into Hebrew and, with Barbara Harshav, into English), among them: *American Yiddish Poetry* (1986), *The Meaning of Yiddish* (1990), *Language in Time of Revolution* (1993), *Shirat ha-Tekhiya ha-Ivrit* (“Poetry of the Hebrew Revival,” 2 vols., 2000), *Marc Chagall and His Times: A Documentary Narrative* (2004), *Marc Chagall / The Lost Jewish World: The Nature of his Art and Iconography* (2006), and five volumes of his selected works in Hebrew (his important theoretical work especially in vols. 1–2; 2000). Beyond his long tenure at Hebrew University (1954–65), Tel Aviv University (1965–87), and Yale (from 1987), he held guest professorships and research fellowships at several universities in Europe and the U.S., and was a fellow of the American Academy of Arts and Sciences. He founded and edited the scholarly journals *HaSifrut*, פּטל (*Poetics and Theory of Literature*), and *Poetics Today*, and the monograph series *Sifrut, Mashma’ut, Tarbut*. Harshav wrote poetry in both Hebrew (*Shirei Gabi Daniel*, 2000) and Yiddish (under the name [H.] Binyomin): *Shtoybn* (“Dust,” 1948) and *Take oyf Tshikaves: Geblibene Lider* (“For the Sake of Curiosity: Remnant Poems,” 1994).

BIBLIOGRAPHY: Z. Ben-Porat (ed.), *Aderet le-Vinyamin*, 2 vols. (1999–2001); idem, in: *Poetics Today*, 22 (2001), 245–51.

[Jerold C. Frakes (2nd ed.)]

HART, English family, sons of Hartwig (Naphtali Hertz) Moses, formerly of Breslau, later of Hamburg. The elder son AARON HART (Uri Phoebus; 1670–1756) first studied and

taught in Poland. After 1705 he was appointed rabbi of the Ashkenazi community in London in succession to Judah Loeb b. Ephraim Anshel. The appointment was largely due to the influence of his wealthy brother Moses. Aaron was implicated in a dispute concerning the divorce of a member of the community, in defense of which he published his *Urim ve-Tummin* (1707), the first book printed entirely in Hebrew in London and his only literary production. He continued as rabbi of the Great Synagogue until his death. His authority was recognized in the Jewish communities that were springing up in the provincial towns, and he may be regarded as being informally the first chief rabbi of Great Britain. Edward Goldney, an English conversionist, engaged in a disputation with him in the last years of his life. His brother MOSES (1675–1756) emigrated to England about 1697. Partly through the assistance and support of his cousin, the magnate Benjamin Levi, he amassed a fortune as a broker. In 1722 he rebuilt the Ashkenazi synagogue (later the Great Synagogue) at his own expense and continued to control it until his death. He was highly regarded in government circles and was partly responsible for British diplomatic efforts at intervention at the time of the expulsion of the Jews from *Prague in 1745.

[Cecil Roth]

HART, AARON (1724–1800), early settler in Canada. Hart was a native of London of Bavarian-born parents. He immigrated to New York via Jamaica about 1752. At the time of General Jeffrey Amherst’s capture of Montreal in 1760, Hart was a civilian supplier to the British troops. He stayed in Canada, settling in Trois Rivières, where he acquired considerable property and engaged in the fur trade and other commercial pursuits. As seigneur of Becancour, Hart recruited a militia battalion which bore his name. The second post office established in British Canada was located in his home, with Hart as postmaster. He played a leading role in the public life of Trois Rivières and was considered responsible for developing the town into an important trading center. The Hart family was identified with this city for more than a century. To avoid marrying outside his faith, Hart sailed to England and married his cousin Dorothea Catherine Judah, whose brothers had also settled in Trois Rivières. His prayer book reveals that he was an Ashkenazi Jew and kept his family records in Yiddish. By the time he died, Hart was reputed to be the wealthiest man in the British colonies.

[Ben G. Kayfetz]

HART, ABRAHAM (1810–1885), first important U.S. Jewish publishing executive and leading Philadelphia Jew of his generation. Hart was born in Philadelphia of German Dutch parents. On the death of his father in 1823, he secured a job with Carey and Lea, the prominent publishing house founded by Matthew Carey. In 1829 he and Edward L. Carey established their own firm, E.L. Carey & A. Hart, which was soon in the first rank of American publishers. Among the authors they published were Macaulay, Thackeray, Longfellow, and James Fenimore Cooper. Although Carey died in 1845, Hart continued to use the name Carey and Hart until 1850, when his publications began to appear under the imprint A. Hart which he used until he retired in 1854. With his fortune made, Hart gave his time to civic activities and to investments in such fields as mining and sewing machines. He served as president of Mikveh Israel Congregation of Philadelphia for more than 30 years (1841–64 and 1867–76). Hart presided at the 1845 meeting that inaugurated the *Jewish Publication Society and was its president until a fire in his own building in 1851 wiped out almost the entire stock of the society’s books. He was active in the agitation for a presidential pronouncement on the *Mortara Case in 1858. For three years beginning in 1866 he was president of the *Board of Delegates of American Israelites. Hart was treasurer of the Hebrew Education Society in the years 1848–75 and was the first president of *Maimonides College. During his time no Jewish development of note in Philadelphia, and virtually none nationally, took place without his support.

[Bertram Wallace Korn]

HART, BENJAMIN (1779–1855), early Canadian army officer and magistrate. Hart was born in Trois Rivières, the third son of Aaron *Hart. In February 1811 he applied for a commission in the Lower Canada militia. Thomas Coffin, commander of the district, responded a year later advising against it on the grounds that Christian soldiers would not tolerate Jews in their midst. In August 1812 he wrote the governor refuting the objection with letters from a Catholic officer and a Protestant chaplain and pointing out Coffin’s “private resentment” at being defeated by Benjamin’s brother Ezekiel in the 1807 election. Nothing came of this exchange but despite this snub Benjamin Hart provided the sum of £1,000 to assist the paymaster in his needs. Shortly afterward Hart enlisted and saw active service in the War of 1812. Hart was justice of the peace in Montreal in 1837, and in the rebellion of that year and the following, he read the Riot Act and took an active role in quelling the disturbances, both as an army officer and magistrate. In 1826 he was president of the Shearith Israel Synagogue in Montreal.

[Ben G. Kayfetz]

HART, BERNARD (1763–1855), American merchant, father of Congressman Emanuel B. *Hart. Hart was born in London to a family which probably originated in Fuerth. He had immigrated to Canada by 1776–77 and appears to have lived and traded in both Montreal and New York City until about 1800. In 1799 he was married to a non-Jewess, Catherine Brett, ei-

ther in Canada or New York, but the marriage was a brief one. Catherine bore him one son, Henry, in whom Bernard took no interest aside from financial support. Henry's son was the literary figure Bret Harte. By the time of Bernard Hart's second marriage, in 1806, to Rebecca Seixas, niece of *hazzan* Gershom Mendes *Seixas, Hart had become *parnas* of Shearith Israel Congregation in New York, a post which he held for three years. He was active in the affairs of the congregation for many years, especially in its burial society. Hart is reported to have served as a quartermaster in the New York State Militia in 1787, and as a major during the War of 1812. He was a member of the committees that established the first New York Exchange office in 1792, and the New York Stock and Exchange Board in 1817, serving as secretary of the latter 1831–53.

HART, CECIL M. (1883–1940), Canadian ice hockey pioneer. Born in Bedford, Quebec, a direct descendant of Aaron *Hart, Canada's first Jewish settler, Cecil Hart organized, managed, and played for the Star Hockey Club from 1900 to 1922. In 1910 he formed the Montreal City Hockey League, and his Stars became champions in 1914–15 and 1916–17. Hart organized the first international amateur hockey series between Canada and the United States. Entering professional hockey in 1921, Hart secured the Montreal Canadiens of the National Hockey League for a group of businessmen and became manager. For six straight seasons they reached the championship playoffs. The Canadiens won the Stanley Cup (emblematic of the world professional championship) in 1929–30 and 1930–31.

[Jesse Harold Silver]

HART, DANIEL (1800–1852), Jamaican lawyer and politician. A merchant in Kingston for over 30 years, Hart was the first Jew to be granted civil and political privileges in Jamaica. He was the senior representative for the Parish of St. Mary in the Jamaican House of Assembly and in 1851 was appointed *custos rotulorum* (parish registrar). For many years, he was an alderman and a member of the assembly for the city and parish of Kingston, as well as a justice of the peace and assistant judge of the Court of Common Pleas.

[Bernard Hooker]

HART, EMANUEL BERNARD (1809–1897), New York City Democratic politician and leader of Jewish institutions. Hart was born in New York City, son of Bernard Hart, a New York Stock Exchange member, and Rebecca Seixas Hart. He began his political activity in 1832 as a Jacksonian Democrat, and became a member of the Tammany Society. He served for two terms as an alderman in New York City (1845–46). Defeated in his first campaign for the federal Congress, Hart won on the second try and served from 1851 to 1853. Among many other

positions which he held throughout a long, but not particularly distinguished career of office-holding were surveyor of the Port of New York (1857–62); a commissioner of Immigration (1870–73); a New York Excise commissioner (1880–83); disbursing agent at the New York custom house (1885–89); and cashier in the New York County sheriff's office (1889–93). He was also an officer in the New York State Militia. In earlier years when he was not on the public payroll, Hart was a stock and bond broker, and in later years he was a merchant. Hart was a member of Shearith Israel Congregation, as was his father, and served as president of the Mount Sinai Hospital (1870–76), when the hospital's new structure on Lexington Avenue was dedicated. He was also president of the Hebrew Home for the Aged and Infirm.

[Bertram Wallace Korn]

HART, EPHRAIM (1747–1825), U.S. communal leader and stockbroker. Hart, who was born in Fuerth, Bavaria, went to New York before the outbreak of the American Revolution. After the British captured New York (1776), Hart moved to Philadelphia. He was one of the first members of the Spanish and Portuguese Synagogue in Philadelphia, dedicated in 1782. He returned to New York in 1787, became a stockbroker, and also speculated successfully in real estate. Hart was a charter member of the Board of Stock Brokers (1792). He served as an elector of Congregation Shearith Israel (1787) and was a founder of its burial society Hebra Hessed ve Emet (1802). Hart sat in the New York State Senate (1810) and was a business associate of John Jacob Astor.

HART, ERNEST ABRAHAM (1836–1898), British physician, medical editor, and humanitarian. Born and educated in London, during the Crimean War (1854) Hart led his fellow students in a successful appeal to the Admiralty to improve the status of the naval doctors aboard ship. At 20 he qualified as a specialist in ophthalmology and in 1864 became an ophthalmologic surgeon and lecturer at St. Mary's Hospital in London. He introduced new methods in dealing with eye diseases, particularly in the treatment of aneurysm. Later he was appointed aural surgeon and dean of the medical school.

In 1858 he had begun writing for the medical journal, *Lancet*, and shortly thereafter was named coeditor. In 1866 he accepted the editorship of the *British Medical Journal*, the official publication of the British Medical Association. He expanded and improved the journal and through his efforts the membership of the Association increased rapidly. As chairman of its Parliamentary Bills Committee, he undertook a number of projects to eliminate the ills which militated against public health and sound social conditions in Britain. His exposure of the deplorable state of the London workhouse infirmaries led to the establishment of the Metropolitan Asylums Board and to better treatment of the sick among the poor. He cam-

paigned against the evil of baby farming, and it was largely through his efforts that the Infant Protection Act was passed in 1872. Hart had a large part in securing legislation ensuring the quality of the milk supply in cities, in abating the smoke nuisance, bettering working conditions in factories, and safeguarding the health of workers. He worked for the amelioration of the plight of Irish peasants and for reclaiming of wasteland in Ireland. He attacked the Indian Government for its neglect in eliminating the conditions which produced cholera. He denounced the fraud of hypnotism and mesmerism in a series of articles, which appeared under the title of "The Eternal Gullible."

As a young man he had advocated the granting of equal rights to Jews in the columns of *Frazier's* magazine and in 1877 he published *The Mosaic Code*, which dealt with the hygienic laws of the Bible.

HART, EZEKIEL (1767–1843), early Canadian political figure. Hart was born in Trois Rivières, the second son of Aaron *Hart. He succeeded his father as seigneur of Becancour. In 1807 he was elected to the legislature of Lower Canada for Trois Rivières. Because of the sharp rivalry between the French and English camps he was prevented from taking his seat at the following session of the legislature in 1808. Regarding him as a member of the English faction the French-speaking deputies pointed out that as a Jew he could not take the oath "on the true faith of a Christian." He was reelected in May 1808, and in April 1809, he was again prevented from being seated.

[Ben G. Kayfetz]

HART, HERBERT LIONEL ADOLPHUS (1907–1992), British philosopher of law, generally known as H.L.A. Hart. Born at Harrogate and educated at Cheltenham, Bradford Grammar School, and New College, Oxford, in 1932 Hart became a barrister. From 1932 to 1940 he practiced at the Chancery Bar, and from 1939 to 1945 served in the British War Office. He returned to Oxford in 1945, becoming a fellow of University College, and professor of jurisprudence in 1952–68. His major writings include *Causation in the Law* (with A.M. Honoré, 1959), *The Concept of Law* (1961), *Punishment and the Elimination of Responsibility* (1962), *Law, Liberty and Morality* (1963), and *The Morality of the Criminal Law* (1964). Each of these works is characterized by the application of the techniques of contemporary philosophy to areas of serious legal and moral contention. In general, Hart's work stands in opposition to philosophical determinism, the notion that nobody can act differently from the way he does, and therefore cannot be held responsible for what he does. To accept this point of view would risk blurring the general recognition that a man's fate should depend upon his choice, and with it the whole way of conceiving human relationships. Not only in the law or in morally crucial situations, but also in our everyday transac-

tions, we view one another as responsible and not "merely as alterable, predictable, curable, or manipulable things." From 1973 to 1978 he was principal of Brasenose College, Oxford. Hart visited Israel in 1964, giving the Lionel Cohen lectures in Jerusalem. He is regarded as one of the foremost exponents of the theory of "legal positivism."

HART, ISAAC (d. 1780), U.S. merchant. Hart, a Loyalist, left England about 1750, and established himself in Rhode Island. He soon became one of the wealthiest merchants in the colony, and his prominent position made Hart a leader of *Newport's Jewish community. He served on the committee which raised funds for the building of Newport's Touro synagogue, was one of the purchasers of the land it stands on, and his firm, Naphthali Hart and Company, erected the building. In 1780 the revolutionary government of Rhode Island exiled him with other Loyalists, and in December he was killed, supposedly during an American raid on Fort George in New York.

HART, JACOB (1745–1814), kabbalist and grammarian. He was the first native-born English scholar of this type in the modern period. A jeweler by profession, Hart took an active part in communal affairs in London and received rabbinical ordination in Europe some time between 1800 and 1804. Under his Hebrew name of Eliakim b. Abraham he published various works in Hebrew on religion, Kabbalah, and grammar. They include *Asarah Ma'amarot*, of which five treatises only were published, three of them in England (1794–99); *Milhamot Adonai*, a polemic in defense of religion against science and philosophy, sharply criticizing Voltaire and other rationalist writers; *Binah la-Ittim*, a computation of the date of the end of the world (*kez*) according to the Book of *Daniel, predicting it for 1843; *Zuf Novelot* on kabbalistic subjects; an abridgment of *Novelot Hokhmah* by Joseph Solomon *Delmedigo with notes and a commentary in which Hart attempted to prove *creatio ex nihilo*. Two of his works were published in Berlin in 1803, *Ma'yan Gannim*, an abridgment of *Ginnat Egoz* by Joseph b. Abraham *Gikatilla, and *Ein ha-Kore* on the Hebrew vowels, which contends that the Ashkenazi pronunciation is correct. In the same year Hart published in Roedelheim the grammatical treatise *Ein ha-Mishpat*. His works indicate that Hart was a man of broad general education.

HART, JOEL (1784–1842), U.S. doctor. Hart was born in Philadelphia and educated at the Royal College of Surgeons in London. Establishing himself in New York, Hart became

a leader of the city's medical community. He was one of the charter members of the Medical Society of the County of New York (1806) and was among the group that founded the College of Physicians and Surgeons in 1807. Hart gave up his practice in 1817 to become United States consul at Leith, Scotland, a position he held until 1832. He then returned to New York where he practiced medicine until his death.

HART, KITTY CARLISLE (1910–), U.S. entertainer, arts administrator. Born in New Orleans, La., as Catherine Conn, she was brought up in Paris and in Switzerland. She was educated at the Sorbonne, the London School of Economics, and the Royal Academy of Dramatic Art in London. A singer and actress, she appeared in the *Marx Brothers' farcical film *A Night at the Opera* in 1935 after appearing in three films the previous year: *Here Is My Heart*, *She Loves Me Not*, and *Murder at the Vanities*. Known for her gracious manners and personal elegance, she dated George *Gershwin and married the playwright Moss *Hart in 1946. As Kitty Carlisle, she became a household name in the United States through appearances on the panel of the television program *To Tell the Truth*, in which three contestants aver to having the same secret. She also was a guest panelist for many years on the popular series *What's My Line?*, in which panelists try to guess the contestant's occupation. Both programs gave her an opportunity to showcase her wit and intelligence.

Taking on the real-life role of arts administrator, she headed the New York State Council on the Arts, a statewide agency, for many years and raised countless thousands to support cultural institutions large and small. She proved a tireless champion of the arts, and traveled throughout the state to see performances by professional and amateur organizations. She resumed her acting and singing career in the mid-1980s and appeared both in acting roles and as herself in film and television series. She retained her singing voice well into her nineties and her one-woman shows, played in various parts of the United States, included memories of her career, anecdotes of her experiences with the Marx Brothers and Gershwin, and theatrical stories about her late husband.

[Stewart Kampel (2nd ed.)]

HART, LORENZ (1895–1943), U.S. musical comedy lyricist. Born to immigrant parents, Larry Hart traced his descent through his mother from the German poet Heinrich *Heine. Hart graduated from the Columbia University School of Journalism in 1916. Although indifferent to academic studies outside literature and drama, Hart single-handedly changed the craft of lyric writing. He became the expressive bard of the urban generation that matured between the wars after he was introduced to a 16-year-old Richard *Rodgers by a mutual friend. Together the team of Rodgers and Hart created some of the greatest musicals of the first half of the 20th cen-

tury. Hart was working in the theater for the *Shuberts, translating German plays, and Rodgers was writing variety shows at Columbia. The pair contributed to the Broadway musical *Poor Little Ritz Girl* in 1920 and by 1925 they had their own success on Broadway, *The Garrick Gaieties*, an intimate revue that was a counter to huge, flossy "girlie" productions. Rodgers and Hart believed that monotony was killing the musical and that songwriters had to integrate libretto, lyrics, and music. The two men were diametrically opposed in temperament, but not in artistic spirit. Rodgers was reserved, disciplined, and stern. Hart was emotional and earthy, quick with a joke, and effusively warm. Hart suffered from a mild dwarfism and was a homosexual at a time of great social repression. In his songs, Hart was interested in exploring a single moment of pure emotion. The pair's songs were written to work on two levels: they had to function within the plotline of the show and they had to transcend the show so that people could listen at home and appreciate the music. Hart's songs often worked on a third level. Unable to find a mate, Hart rarely wrote a requited love song. His output is dominated by dreams and fantasies, lovers dancing on the ceiling, funny, ugly valentines.

Nevertheless, the partners had a string of successes on Broadway, including *A Connecticut Yankee* in 1927, *The Boys From Syracuse* in 1938, *On Your Toes* in 1936, *Pal Joey* in 1940, and *By Jupiter* in 1943. Their songs became American classics: "The Girl Friend, Manhattan" ("We'll have Manhattan, the Bronx and Staten Island, too"), "Thou Swell," "You Took Advantage of Me," "I'd Rather Be Right," "Little Girl Blue," and "I Married an Angel," to mention a few. In the 1930s Hart wrote the lyrics for "Have You Met Miss Jones?," "The Most Beautiful Girl in the World," "The Lady Is a Tramp," "Blue Moon," "My Romance," "Where or When," and "Falling in Love With Love" from *The Boys From Syracuse*. The latter, based on *A Comedy of Errors*, was the pioneer adaptation of Shakespeare for musical comedy. Most of these songs were delicately oblique for a Depression-era audience that did not embrace sentimentality, but Hart penned the poignant "My Funny Valentine," a tribute to a homely lover; it became a classic American torch song.

By 1940 Hart and Rodgers decided that more of the naturalism of contemporary literature and drama had to be infused in musical comedy. In collaboration with the celebrated novelist John O'Hara they adapted his *Pal Joey*. The theme of a nice-looking young white song-and-dance man who could flirt and have sex with women was not easily digested by the American public. Most of the songs in the production were harshly witty. An older woman sings, "Take him, but don't ever let him take you." The show had a mixed reception but a decade later it was revived to enthusiastic audiences.

When wartime came, Hart was out of step with a patriotic public absorbed with traditional American values. The folksy *Oklahoma!* held no interest for him as he sank deeper into alcohol and depression, and Rodgers turned to Oscar *Hammerstein for a collaborator. But in 1943 Hart and Rodgers reunited for a revival of *A Connecticut Yankee*. On open-

ing night, Hart slipped away and vanished for two days. He died a few days later of pneumonia.

[Stewart Kampel (2nd ed.)]

HART, MOSS (1904–1961), U.S. playwright. Born and raised on New York's East Side, Hart wrote his first play when he was 12 and gained early experience as a producer in Jewish clubs. His first success was *Once in a Lifetime* (1930), a satire on Hollywood written in collaboration with George S. *Kaufman. With Kaufman he went on to write *Face the Music* (1932), a satire on New York municipal government which became an Irving *Berlin revue; *As Thousands Cheer* (1933), a revue with music by Irving Berlin; *Merrily We Roll Along* (1934), a satire on Broadway; and two famous comedies, *You Can't Take It With You* (1936), which won a Pulitzer Prize, and *The Man Who Came To Dinner* (1939). On his own, Hart wrote the satirical *George Washington Slept Here* (1940); the libretto for the musical *Lady in the Dark* (1941); and *The Climate of Eden* (1952). Hart's direction of *My Fair Lady*, the 1956 musical based on Shaw's *Pygmalion*, was widely acclaimed. Hart's autobiography, *Act One* (1959), a modest but moving story, was filmed shortly after his death. He was married to Kitty Carlisle *Hart.

[Bernard Grebanier]

HART, MYER (d. 1797), early American merchant, and a founder of the town of Easton, Pennsylvania, in 1752. Hart, an immigrant to the colonies, prospered with the town, and by 1763 was Easton's largest taxpayer and civic leader. Although he became a British subject in 1764, he actively supported the American Revolution. Hart was appointed to the Pennsylvania State Commission charged with the care of British prisoners of war, and in 1778 he testified that, despite contradictory reports, the Englishmen were well treated. In 1782 he moved to Philadelphia; his business there failed some years later.

[Neil Ovadia]

HART, SAMUEL (c. 1747–1810), Nova Scotia merchant and politician. Hart is known to have settled in the British colony of Nova Scotia, to have been a dry goods merchant in Halifax in the 1780s, and to have lived at Maroon Hall, in Preston. He was a member of the small Jewish community which existed in Nova Scotia in the second half of the 18th century and which dwindled and expired by the mid-19th century. From 1793 to 1799 Hart was a member of the Nova Scotia House of Assembly for Liverpool Township, thus becoming the first Jew to sit in a legislative body in territory that was later to become Canada.

[Ben G. Kayfetz]

HART, SOLOMON ALEXANDER (1806–1881), English painter. Hart was the son of a Plymouth engraver and Hebrew teacher and moved with his family to London in 1820. First apprenticed to an engraver, Hart entered the Royal Academy as a student in 1823; three years later he exhibited a miniature portrait of his father. He continued for a time to paint miniatures for a livelihood. In 1828 he showed his first oil at the British Institute, and, two years later, *Elevation of the Law* (now in the Tate Gallery, London), also called *Interior of a Jewish Synagogue at the Time of the Reading of the Law* (depicting the interior of the former Polish synagogue in London). An associate of the Royal Academy in 1835 and a full member five years later, he was professor of painting at the Royal Academy from 1854 to 1863. In his last eighteen years he served there as librarian. Hart's crowded canvases usually illustrate famous episodes of English history, and are done in the formal, dignified academic style that matured in the Regency period. Paintings on Jewish themes are also frequent. His *Rejoicing of the Law in the Ancient Synagogue at Leghorn* represents the procession of the Scrolls on Simhat Torah. His painting *Manasseh ben Israel* was destroyed in the London Blitz during World War II. His *Reminiscences of Solomon Alexander Hart, R.A.*, edited by Alexander Brodie, was published in 1882.

HARTFORD, capital of Connecticut. Population of greater Hartford County, 870,000; Jewish population, 34,000 (2001).

Early History

Hartford's town records reveal an early Jewish presence in colonial times. General court proceedings in 1659 mention a certain "David the Jew," an itinerant peddler; in 1661 a party of Jews in the city was given permission "to sojourn in Hartford seven months"; in 1667 "Jacob the Jew" transported horses to New York; in 1669 "David Jew" and "Jacob Jew" were among the 721 inhabitants listed in the town records. Advertisements in *The Hartford Courant* in 1788 and 1801 contain references to a thoroughfare known as "Jew Street," but whether it was actually inhabited at the time by Jews or Jewish merchants is unknown.

Jewish settlement in Hartford did not begin in earnest, however, until the 1840s with the first wave of immigrants from Germany. In 1847 Congregation Beth Israel was formed with an initial membership of six; four years later it had 150 members "of thriving business and good standing in society." A B'nai B'rith lodge was established in 1851, and in 1854 a *Frauen Verein* was organized to provide mutual aid and serve as a center of social activities. In 1856 Beth Israel acquired its first permanent structure, a refurbished Baptist church, and engaged Rabbi Isaac Mayer (1809–1898), who served for 12 years. With growing affluence and acculturation, the congregation erected a new synagogue in 1876, and in 1878 dropped its traditional orientation to join the Reform Union of American Hebrew Congregations.

East European Immigration

As a result of the great East European immigration to America, Hartford's Jewish population increased from 1,500 in 1880 to over 7,000 in 1910 and to almost 20,000 by 1920. The new immigrants founded the Adas Israel Synagogue in 1884, the Agudas Achim Synagogue in 1887, and six other Orthodox synagogues in the ensuing years. Two East European rabbis, Isaac S. Hurewitz, who served in Hartford from 1893 to 1935, and Zemach Hoffenberg, who served from 1899 to 1938, ministered to these congregations. They were among the many rabbis who served for more than four decades. Other Jewish institutions and organizations sprang up: the Hartford Sick Benefit Association and the Hebrew Ladies Benevolent Society in 1898; the B'nai Zion Society, which sponsored a group of 12 Zionist clubs, also in 1898; the Hebrew Institute Talmud Torah in 1901; the Hebrew Home for the Aged in 1907; the Hebrew Home for Children in 1907; a *mikveh* in 1907; the Council of Jewish Women in 1910; and a chapter of the Labor Zionist Farband in 1914. In 1912 some 30 of these organizations merged to form the United Jewish Charities. A Hadassah chapter was set up by Henrietta Szold in 1914, and in 1918, through the joint efforts of five local branches of the Workmen's Circle, the Labor Lyceum opened its doors. Among the immigrants were some who added new dimensions to Hartford's economic life. Expert furriers from Russia helped make Hartford a center of the fur trade, and skilled Jewish carpenters and cabinetmakers introduced the reproduction of antique furniture.

Post-World War I

Between the two world wars, with the cutoff of mass immigration, Hartford's Jewish community grew at a slower pace; this period was primarily one of further consolidation and integration into the general life of the city. Hartford's first Conservative congregation, the Emanuel Synagogue, was organized in 1919. Its first Jewish country club, the Tumble Brook Country and Golf Club, was opened in 1922. Mount Sinai Hospital, the first and only Jewish hospital in the state, was established in 1923. The weekly *Jewish Ledger*, founded by Samuel Neusner in 1929, with Rabbi Abraham J. Feldman as editor, has chronicled Jewish activity in the city. In 1935 a Jewish Community Council was formed, and in 1937, the Jewish Welfare Fund; the merger of these two organizations into a single Federation in 1945 united all Jewish communal and philanthropic endeavors under one roof. A Yeshiva Day School, established in 1940 and later renamed the Bess and Paul Sigel Hebrew Academy of Greater Hartford, had nine grades, with several hundred students, in 1970. An eight grade Solomon Schechter Day School affiliated with the Conservative movement opened in 1971 and a Hebrew High School, supported by the communities of Springfield, MA, New Haven, and Hartford opened in 1996. By the mid 1990s more than 400 youngsters in the Greater Hartford area were receiving an intensive Jewish day school education.

During the post-World War II period, Jewish community life in Greater Hartford centered around the city's syna-

gogues – 11 Conservative, eight Orthodox, and three Reform – and around its Jewish Community Center, built in 1955, with over 7,000 members. Prominent rabbis in the community have included Morris *Silverman (1923–1961), who edited and translated the standard *siddur* that was used in Conservative Congregations for half a century or more, Abraham J. Feldman (1925–1968), Abraham AvRutick (1946–1982), and William Cohen (1946–1994). In all, Greater Hartford had 132 Jewish philanthropic, religious, cultural, and social organizations (1970). During the post-war years, Hartford's religious leadership was unusually stable with many rabbis serving in their congregations for more than three decades including Rabbi Stanley Kessler (Beth El, 1954–1994); Hans Bodenheimer (Tikvoh Chadoshoh, 1942–1996); Henry Okolica (Tifereth Israel, New Britain, 1960–1993); Philip Lazowski (Beth Hillel, 1962–1995); Isaac Avigdor (United Synagogues, 1954–1993); Haskel Lindenthal (Teferes Israel, 1956–1993); Harry Zwelling (B'nai Israel, New Britain, 1936–1971); and Leon Wind (Beth Shalom, Manchester, 1946–1979).

The economic life of the Jewish population is concentrated in the professions and in business. Over one-fifth of Hartford's doctors, approximately one-third of its dentists and attorneys, and one-half of its certified public accountants are Jews. Jews own over half of Hartford's retail businesses, although, in the 1960s, fewer than 2% of the city's commercial bank executives and barely 1% of the executives in the 10 largest insurance companies were Jewish. In the last quarter of the 20th century those percentages changed dramatically as Jewish professional life increased, obstacles to Jews entering banking and insurance ended, and large chain stores replaced small retailers on many Main Streets in the United States. At the University of Hartford Jews comprise roughly 20% of the faculty and 33% of the student body. As is the tendency elsewhere, Hartford's Jews moved in increasing numbers to the suburbs, so that in 1970 the majority lived outside the city proper. There was a great white flight to the suburbs in the 1950s and 1960s and many of the synagogues and Jewish institutions were relocated from Hartford to West Hartford. In the 1990s Jews moved further into other surrounding communities including Glastonbury and the Farmington Valley towns of Farmington, Avon, and Simsbury.

Jews in Public Life

Between 1860 and 1969, 102 Jews were elected to city and town councils; 34 served in the state legislature since 1919. In 1933 Herman P. *Kopplemann became the first Jew from Hartford to be elected to Congress, where he served four terms. Some Hartfordites holding public office were Morris Silverman, chairman and member of the Connecticut State Commission on Human Rights and Opportunities from 1943; Bernard Shapiro, state welfare commissioner during 1959–70; Elisha Freedman, city manager, from 1963; M. Joseph Blumenfield, U.S. District Court judge from 1964; and Louis Shapiro and Abraham S. Bordon on the state judiciary. Annie Fisher was the first Jewish district superintendent of schools. During the

mid to late 20th century, Hartford's best-known Jewish citizen was Abraham A. *Ribicoff, who was governor of Connecticut, served in the Cabinet of John F. Kennedy, and was then elected to the Senate.

Jews have played an active role in Hartford's educational and cultural life. They are prominent in the University of Hartford, Trinity College, and the Hartford Symphony. A Jewish president, Stephen J. Tractenberg significantly improved the University of Hartford and during his tenure the Maurice Greenberg Center for Judaic Studies was established. Trinity College also has a Judaic Studies program that adds to the intellectual life of the community.

HARTGLAS, MAXIMILIAN MEIR APOLINARY (1883–1953), Zionist leader in Poland during the interwar period. Born in Biala Podlaska, Hartglas studied law at Warsaw University and from 1907 to 1919 practiced his profession in Siedlce. As a young student he joined the Zionist academic circle, beginning a long friendship with I. *Gruenbaum. At an early age he took part in the struggle for Polish independence, in Jewish defense, and in Zionist activities. He was among those who formulated the “work in the present” (Gegenwartsarbeit) program for Zionism at the *Helsingfors Conference (1906). In 1917 at the Third Zionist Convention in Warsaw he laid out “the foundations of the Zionist Organization in Poland,” published in Polish in 1918.

In 1919 he was elected together with 10 others on the list of the Union of Jewish Members of the Sejm (Polish parliament). The Union demanded the recognition of Polish Jewry as a national community with the rights of a national minority, entitled to organize themselves as an autonomous entity. They opposed the Polish government's discriminatory policy toward the Jews. Hartglas served as defense attorney in several famous Polish trials in which the reason for the indictment was the fact that the accused were Jews. He was instrumental in obtaining the repeal in 1931 of antisemitic czarist laws in Poland's former Russian provinces. Hartglas served as chairman of the Polish Zionist Organization and was a member of the “Jewish Club” (Kolo Zydowskie) in parliament. He settled in Palestine in 1940 and joined the staff of the *Jewish Agency. Upon the establishment of the state (1948), he became director general and later legal adviser of the Ministry of the Interior headed by Gruenbaum. Throughout his life he published articles in various Jewish newspapers on the problems of Polish Jewry and Zionism in various languages, to which he added Hebrew after his settlement in Israel.

[Shlomo Netzer (2nd ed.)]

HARTMAN, DAVID (1931–), rabbi and contemporary Jewish thinker in Jerusalem. Born in the United States to a family that had emigrated from the old *yishuv* in Jerusalem, Hartman received a traditional education in Jewish day schools, and then in the prestigious Lakewood yeshivah. His transfer to the Isaac Elhanan Seminary of Yeshiva University resulted in a major shift in his life, as he came under the influence of Rabbi Joseph B. *Soloveitchik, whose teachings would become the focus of much of Hartman's intellectual and spiritual quest. Soloveitchik represented, for the young Hartman, an exemplary combination of profound religious commitment and openness to the modern, Western intellectual world, a combination appropriate for the committed modern Jew. This combination of two worlds would become a central axis of Hartman's thought.

Following his rabbinic ordination by Soloveitchik, Hartman served several congregations in the U.S. and Canada, while completing his graduate studies at Fordham University, a Jesuit institution. This exposure to believing Christians, deeply committed to their religion but open to the world outside of religion, and to other religions, left an indelible impression on Hartman, and is clearly reflected in his thought. After receiving his Ph.D. he began his academic career, in addition to continuing his rabbinical work, and became professor of philosophy at McGill University. After his immigration to Israel in 1971 he joined the faculty of the Hebrew University of Jerusalem, and was promoted to professor of Jewish thought.

Hartman regarded his immigration as having religious-theological significance. Only in the Land of Israel, he believed, can one realize a full Jewish life. In the Diaspora, Jewish life is limited to the private realm and to the synagogue, and does not encompass the entire person. By contrast, in Israel, and only in Israel, the Jew is obligated to comprehensive political responsibility; this responsibility, in turn, bears religious and theological significance. Hartman is thus prominent among contemporary Jewish thinkers in emphasizing the religious significance of Zionism, climaxing in the establishment of the State of Israel and reflecting the theological imprint of the covenant at Sinai. In that covenant, the Jewish people received exclusive and absolute responsibility for interpreting the Torah and implementing it in the world, and the return to Zion expands that covenant into history. God, who gradually withdrew from direct control of history, entrusted it to human responsibility. Today, with the return to Zion, the Jewish people has realized its responsibility by reestablishing Jewish life in all areas of life. For Hartman, the importance of the State of Israel thus lies in the very possibility of establishing Jewish life, and not in its being a metaphysical program of redemption. In this regard, Hartman was close to such other thinkers as Yeshayahu *Leibowitz, Eliezer *Berkovits, and his friend Eliezer *Goldman, each of whom, in his own way,

pointed out the necessity of the state for Jewish life, without attributing to the state any metaphysical significance. In adopting this position, Hartman distanced himself from the view of his teacher Soloveitchik, who did not draw a metaphysical, theological map of Israel's redemption, yet regarded the establishment of the State as the Jewish people's response to the direct metaphysical challenge posed by God in history. For Soloveitchik, historical events are the voice of the "lover" who is knocking (Song of Songs 5:2) and who awaits his people's response. Hartman, on the other hand, regarded the Zionist enterprise as an exclusively human endeavor, which is the culmination of the historic covenant at Sinai.

This sense of responsibility led Hartman to accept the challenge of restoring the possibility of a new Jewish dialogue, integrating commitment to Jewish tradition with openness to the present, and took upon himself the task of establishing a new *bet midrash* to serve this vision. In 1976 a group of young men and women joined Hartman in this search for a new way to express their connection to tradition. Most of them were graduates of religious Zionist education, who felt basically uncomfortable regarding the relation of the present to the past. Hartman offered them a new way of studying, which in cultural terms is a dialogue with tradition, and which in religious terms is the realization of the covenant at Sinai and the implementation of the Torah in human life. This group of young men and women became the foundation stone of the Shalom Hartman Institute in Jerusalem, which has since then become a leading institution of Jewish research, frequented by scholars from diverse disciplines and different fields of Jewish studies, but sharing the recognition of the need to shape a new dialogue between present and past. Hartman's approach has become a recognized school of thought in Jewish studies, combining the best of classical scientific research with contemporary inter-disciplinary approaches, thus making possible a new approach to Jewish tradition. This school of thought is a realization of Hartman's religious-theological vision, even if not all its members share his theological presuppositions.

The Shalom Hartman Institute is not merely a theoretical *bet midrash* for a scholarly elite. It promotes a wide range of educational activities, including training teachers for Jewish studies in Israel and the world; seminars for Jewish communal and intellectual leaders from Israel and abroad; and, more recently, training senior officers in the Israel Defense Forces in Jewish identity and values. Hartman himself remains active in all these diverse areas of the Institute's program.

Beyond his institutional and educational activity, Hartman is among the leading Jewish theologians today. While always remaining indebted to his teacher Soloveitchik, Hartman continually rejects Soloveitchik's strict existential stance and refuses to adopt the philosophy of fracture and contradiction which typifies Soloveitchik's later thought. For the same reason, he rejects Leibowitz's conclusions. Although, like Leibowitz, Hartman recognizes the decisive role played by the believer in shaping the religious world, he rejects Leibowitz's idea that at the essence of Judaism lie a rupture and contradiction

with the world of moral values. To the contrary, for Hartman this is the very meaning of the covenant at Sinai: God establishes a covenant with people as they are, with the totality of their values and conceptions. The believer is not required to withdraw from his human world, but to locate the covenant in the heart of human life itself. In this respect, Hartman is close to Eliezer Goldman. Both Hartman and Goldman emphasized, in different contexts, the fact that the realm of religious life is not located outside the totality of human life, but at its center. The difference between them is that Goldman regarded religious decisions as nourished by a cultural and social understanding of human existence, and by an analysis of the meaning of the *halakhah*, whereas Hartman regarded these decisions as founded on the theological significance of the covenant at Sinai.

Hartman may be considered an *a priori* modernist, for whom modern values are accepted as a matter of principle, and make possible a renewed and more mature encounter with Jewish tradition, as opposed to an *a posteriori* position, such as we find in Soloveitchik's later thought, according to which Judaism develops internally, as a closed system, independently of the external world, but is forced by circumstances to participate in the external world. Hartman's position thus reflects a Hegelian view of history, in which a later stage is more important and decisive. Unlike Hegel, however, in Hartman's view the later historical stage permits a renewed return to the beginning and a more profound insight into what is latently present in earlier formative stages. For instance, in Hartman's view, the neutralization of God in the world, which post-Nietzschean modernists expressed imperfectly as the death of God, is not opposed to Judaism. To the contrary, the neutralization of God is the profoundest significance of the covenant at Sinai. In contrast with the creation of the world and the exodus from Egypt, in which God acts alone, at Sinai God turns to people. The belief in the covenant at Sinai, therefore, is for Hartman not grounded on a past historical event, but on the partnership between people and God. Jewish history is a continual expression of the historic imprint in which people take on an ever-increasingly active role. This imprint began in the period of the Talmud, with the cognition that God does not act in history: "The world behaves in its customary way" (*olam ke-minhago noheg*). Whereas in the biblical period the encounter with God was immediate and direct, for the rabbi the relationship with God was intermediated by halakhic norms. Hartman's preference for the talmudic over the biblical period is based not only on his Hegelian orientation, but is also a matter of principle, in two regards. First, whereas the biblical period was theocentric, seeing God as the exclusive agent in nature and history, the talmudic period was more anthropocentric, shifting attention away from the divine drama of creation to the real history of people, who are now responsible for God's presence in the world, by studying Torah, observing the commandments, and prayer. The talmudic approach is thus more responsive to the modern insistence on retaining autonomy and personal freedom. Hartman's later

thought regards the formation of a sovereign Jewish community in the State of Israel as an additional stage in this process of increasing human responsibility for the divine presence in the world. Second, biblical thought makes the material status of the human being dependent on human actions. This dependence, however, opens the way for the belief in “other gods” who also are capable of assuring material blessings. In Hartman’s opinion, the talmudic world-view, and especially Maimonides’ subsequent revolution, saved Judaism from such idolatrous belief.

The struggle against idolatry, which was thus a major factor in Hartman’s preference for the talmudic period, also points to the great proximity between Hartman’s thought and that of Leibowitz: they both maintain a transcendent conception of God and both understand the struggle against idolatry in terms of rejecting the contingent and immanent roles attributed to God. They also share the view that the subject of idolatry is not necessarily another, foreign god, but an erroneous conception of God’s status in the world.

The transcendent conception of God, together with the emphasis on the centrality of human religious activity, enabled Hartman to develop a type of religious pluralism, based on the idea that revelation reflects the divine desire to encounter people in their finitude and historical context, and to develop a dialogue with them in their own language. This approach enabled Hartman to a universalization of the covenant, to include not only Jews but also believers from other religions. This radical interpretation, in turn, enabled Hartman to reinterpret religious commitment. Instead of the classical understanding of religious commitment in terms of objective truth which is universally valid, Hartman’s theology posits religious commitment as the believer’s loyalty to his or her faith. Different believers have diverse religious commitments, and none can claim exclusivity of commitment; yet their commitments are not thereby harmed.

Hartman’s emphasis on the autonomous, human dimension could have led him to conclude that belief is an entirely private and voluntary affair. In opposition to this view, he repeatedly emphasized the decisive role of community. The believer does not encounter God alone and isolated from the experience of the real and historic Jewish community; the believer is thus a partner in a historical covenant with God, and is not a founder of a new covenant.

Hartman’s thought may thus be characterized both as continued interpretation of Maimonides and Soloveitchik, the two thinkers who had greatest impact on him, and as constructive dialogue with such modern and post-modern thinkers as Charles Taylor, Alastair MacIntyre, Richard Rorty, and others.

Hartman’s works include *Maimonides: Torah and Philosophic Quest* (1976); *Joy and Responsibility: Israel, Modernity and the Renewal of Judaism* (1978); *A Living Covenant, The Innovative Spirit in Traditional Judaism* (1985); *Crisis and Leadership: Epistles of Maimonides* (Eng. tr., 1985); *Conflicting Visions, Spiritual Possibilities of Modern Israel* (1990); *A Heart*

of Many Rooms, Celebrating the Many Voices within Judaism (1999); *Israelis and the Jewish Tradition, An Ancient People Debating its Future*, (2000); *Love and Terror in God Encounter, The Theological Legacy of Rabbi Joseph B. Soloveitchik*, vol. 1 (2001).

[Avi Sagi (2nd ed.)]

HARTMAN, GEOFFREY (1929–), child survivor of the Holocaust and scholar. Born in Frankfurt, Germany, Hartman was sent on a Kindertransport to England in 1939. He spent the war years in Waddeston with 19 other boys, on the estate of James Rothschild. In 1945, he came to the United States where he was reunited with his mother. Hartman attended Queens College in New York City and earned his Ph.D. at Yale where he taught for almost 40 years. He was the Sterling Professor Emeritus of English and Comparative Literature at Yale and project director and faculty advisor to the Fortunoff Video Archive.

Hartman became acquainted with the Holocaust Survivors Film Project in 1979 through his wife’s participation. When the project’s founders decided to expand to include survivors’ testimonies from around the country, Hartman, both a project board and Yale faculty member, urged the university to assist the effort. He recognized the importance and urgency of preserving Holocaust testimony and believed the university’s expertise in collections and cataloguing would make it an ideal home for the project. With his encouragement and Yale’s president, A. Bartlett Giamatti’s support, almost 200 testimonies were deposited at the Sterling Memorial Library in 1981. Professor Hartman became faculty advisor and was actively involved in directing the project’s development and growth. “The original thought about the archive was that when we reached a collection of 1,000 testimonies, we’d close shop,” said Hartman. “But our feeling changed, and we decided that any survivor who wanted to tell his or her story should be heard.” The project became the Fortunoff Video Archive in 1987. The Archive now houses over 4,300 testimonies recorded in more than 20 languages.

Hartman is an iconoclastic scholar of international repute in the field of contemporary criticism. Trained at Yale as a comparatist, and part of “The Yale School” in the 1970s and 1980s, his name is associated with the theory of deconstruction. His range of thinking, however, cannot be confined to one school of thought. Hartman’s ideas regarding the synergy of the theoretical and the practical and the relationship between the text and its reader have shaped the field of criticism. This profound approach also underlies his reading of Holocaust testimony.

In addition to his large body of works in literary criticism, Hartman has written extensively on Holocaust memory. Both his own experiences and those recorded in the Archive,

have informed Hartman's work, which includes *Holocaust Remembrance: The Shapes of Memory*; *The Longest Shadow: In the Aftermath of the Holocaust*; and *Scars of the Spirit: The Struggle Against Inauthenticity*. He is also the author of and has co-authored numerous related articles. In his writing he probes the subject of Holocaust memory in all of its complexities; finding a balance between authentic remembering and meaningful representation; the effect of and integration of trauma and Holocaust memory in survivors' lives; and how traumatic memories play out in the consciousness of the larger society as well.

[Beth Cohen (2nd ed.)]

HARTMANN, HEINZ (1894–1970), psychoanalyst. Hartmann, who was born in Vienna, was a leading theoretician in psychoanalysis and a pioneer in the field of psychoanalytic ego psychology. In 1939 he published his paper *Ich-Psychologie und Anpassungsproblem*, translated into English in 1958 as *Ego Psychology and the Problem of Adaptation*. Like Anna *Freud, he emphasized the activities of that psychic construct, the ego, as no less important than that of the drives, the id. He pointed out the importance of man's adapting to an "average expectable environment" as a function of the ego. In the same paper, he defined the "conflict-free sphere of the ego" – where patterns of behavior develop independently of unconscious intrapsychic conflict; they do so either, primarily, through inborn autonomous ego functions or, secondarily, by gaining autonomy from the conflicts which helped bring them about. A student of Freud, Hartmann amplified and elaborated numerous aspects of psychoanalytic theory, including the relation of intrapsychic events and of psychoanalysis to the environment, to society, and to the social sciences. He emigrated to Switzerland in 1938 and in 1941 settled in the United States. He served as president of the International and New York Psychoanalytic Associations (1951–57 and 1952–54 respectively). In 1959 he was made honorary president of the International Association.

[Rafael Moses]

HARTMANN, MORITZ (1821–1872), German author and revolutionary. Hartmann was born in Dušniky, near Píbram, Bohemia. One of the first Jewish youngsters in Bohemia to receive a general high school education, Hartmann demonstratively abandoned Judaism as a youth, although he never formally converted to Christianity. Extolling the Hussites and the revived Czech national feeling of his time in *Ein Tage aus der Böhmischen Geschichte* (1845) and *Kelch und Schwert* (1845), he transferred the Jewish yearning for Zion to the Czech longing for independence and spoke of Prague as the "Slavic Jerusalem." Austrian objections to Hartmann's pro-German sympathies resulted in his flight to Leipzig and eventually to Paris,

where he met *Heine and George Sand. Returning to Prague in 1847, he was briefly imprisoned and then became the central figure in "Young Bohemia," a group of German writers which included Siegfried *Kapper (later Hartmann's brother-in-law) and Friedrich Hirsch-Szarvady, later a Hungarian nationalist. Faced with the anti-Jewish excesses of the 1840s, Hartmann blamed the Czech people for the Prague disturbances and for the antisemitic tendencies of Czech nationalist leaders such as Karel Havlíček-Borovský. He turned to German liberalism, and in 1848 he was elected delegate to the revolutionary German national assembly in Frankfurt, where he was a popular idol of the extreme left and was made a member of the assembly's delegation to Vienna.

Following Windischgrätz's suppression of the revolution, Hartmann became a fugitive and expressed his disappointment and anger with the liberals in his satirical *Reimchronik des Pfaffen Mauritius* (1849). His experiences during the 1848 Revolution and abortive Baden uprising were summarized in *Bruchstücke revolutionärer Erinnerungen* (1861), edited by H.H. Houben as *Revolutionäre Erinnerungen* (1919). Hartmann earned his living as a foreign correspondent, particularly during the Crimean War (1854), after which he moved first to Paris and then to Geneva, where he taught German literature from 1860 onward and married a Protestant. Following the general amnesty of 1868 he returned to Vienna and joined the editorial staff of the *Neue Freie Presse*. The many novellas which Hartmann published during the 1850s–1860s include a few stories on Jewish themes. His collected works in 10 volumes (ed. W. Vollmer) appeared posthumously in 1873–74 and a selection of his letters (ed. R. Wolkan) in 1921.

His son, LUDO MORITZ HARTMANN (1865–1924), was a prominent Austrian Social Democrat and, as a result of his atheism and political activities, was denied a chair in history at the University of Vienna until after the fall of the Hapsburgs in 1918. Ludo Hartmann founded the *Vierteljahresschrift fuer Sozial- und Wirtschaftsgeschichte*, his major work being a comprehensive *Geschichte Italiens im Mittelalter* (4 vols., 1897–1915). He was the Austrian republic's ambassador in Berlin from 1918 until 1921.

HARTOG, LEVIE DE (1835–1918), jurist and Orientalist. Born at Gorinchem, Holland, he was professor of public law at the University of Amsterdam from 1877 to 1906, and served from 1887 on the board of trustees of the Nederlands Israëlitisch Seminarium, the Jewish theological seminary of Amsterdam. Hartog published a textbook on Dutch public law, collated the Leiden manuscripts for M. Steinschneider’s *Alfabetta de-Ben-Sira* (Berlin, 1858), and wrote a biography in Dutch of his teacher of Oriental languages, R.P. Dozy.

[Frederik Jacob Hirsch]

HARTOG, SIR PHILIP JOSEPH (1864–1947), British educator. His mother was Marion Moss (1821–97), who with her sister Celia had published pioneer sketches of Jewish history in English. Hartog, who was born in London, began his career as lecturer in chemistry at Owens College, Manchester (1891). He served as academic registrar of the University of London from 1904 to 1920. Hartog did extensive chemical research and published the results of his investigations on the thermochemistry of the sulphites, the flame spectrum of nickel compounds, and the latent heat of steam. He was associated with the founding of the School of Oriental and African Studies in London. He was a member of the Viceroy’s Commission on the University of Calcutta, India, in 1917. From 1920 to 1925 Hartog served as the first vice chancellor of the University of Dacca, Bengal. He was instrumental in the creation of the National Foundation for Educational Research, London, to study the nature and purpose of school examinations. He played a leading role in the improvement of school and college examinations. In 1930 Hartog was knighted for distinguished public service. In 1933 he went to Palestine as chairman of the committee of inquiry on the organization of the Hebrew University in Jerusalem. In the same year he became chairman of the Jewish Professional Committee to assist refugees from Germany. He was chairman of the Liberal Jewish Synagogue and active in the Anglo-Jewish Association and Board of Deputies of British Jews. Hartog’s works include: *The Writing of English* (1907), *Blaise Pascal* (1927), *Joseph Priestley and his Place in the History of Science* (1931), *Some Aspects of Indian Education, Past and Present* (1939), and *Words in Action* (1947).

Hartog’s brother, NUMA EDWARD (1846–1871), was a mathematician who had attracted attention when in 1869 he had graduated as Senior Wrangler and Smith’s Prizeman at Cambridge University but as a Jew had not been admitted to a fellowship. It is generally believed that Hartog’s case led to the passage by Parliament of the Test Act, 1871, which removed

religious barriers to holding fellowships at Oxford and Cambridge. Numa Hartog died of smallpox at the age of only 25. Their cousin was the philosopher H. *Bergson.

[Ernest Schwarcz]

HARTOGENSIS, BENJAMIN HENRY (1865–1939), U.S. jurist, historian, and civic leader. Hartogensis, born in Baltimore, was a lifelong resident there, practicing law from 1893. He wrote for the Baltimore *Sun* and *Baltimore American*, and for Jewish publications, including the (Philadelphia) *Jewish Exponent*, of which he was an associate editor, and the *Publications of the American Jewish Historical Society*. Hartogensis’ major interests were legal and historical, particularly the history of religious liberty in America, including Jewish law (especially marital) and biblical influences on American law. A leader in civic and Jewish organizations, Hartogensis was a founder of Baltimore’s night schools and the Baltimore branch of the Alliance Israélite Universelle. He established the Jewish legal section of the Baltimore Law Library.

[Robert S. Goldman]

HARVEY, LAURENCE (1928–1973), British actor. Born Hirsch Moses Skikne in Lithuania, Harvey was brought up in South Africa, the son of a building contractor. He went to England after World War II and achieved his first big success at Stratford-on-Avon in *Romeo and Juliet* (1954), which he also played on the screen. Starring roles followed in the musical *Camelot* (1964) and in many feature films. He was at his best in cynical roles of the British realistic school such as in *Room at the Top* (1959), for which he received a “Best Actor” Oscar nomination, and *Darling* (1966), as well as in *The Manchurian Candidate* (1962).

HARZFELD (Postrelko), AVRAHAM (1888–1973), labor leader in Erez Israel. Born in Stavishche, Ukraine, he studied at the yeshivot of Berdichev and Telz, receiving a rabbinical diploma. In 1906 he joined the Russian Socialist Zionist Party (ss), for which he was twice arrested and imprisoned for two years in Vilna. In 1910 he was sentenced to life imprisonment with hard labor in Siberia, but in 1914 escaped from Siberia and reached Erez Israel, where he worked as an agricultural laborer in Petaḥ Tikvah and was active in the labor movement. During World War I he played an important role in helping Jews who had been arrested by the Turks, including members of the secret *Nili group. Harzfeld was a member of *Po’alei Zion (1914–19), *Aḥdut ha-Avodah (1919–30), and *Mapai (from 1930) and was one of the founders of the *Histadrut in 1920. From 1919 he was a prominent member

of the Histadrut's earlier Central Agricultural Council (Ha-Merkaz ha-Ḥakla'i) and in over 40 years of office played an important role in planning agricultural settlement in Palestine. He initiated many settlement projects and followed with dedication and diligence the development of new settlements throughout the country. For more than 40 years, including the difficult *Stockade and Watchtower period, there was hardly an establishment of a new settlement at which Harzfeld was not personally present. He was a member of the Zionist General Council from 1921, a member of the directorate of the Jewish National Fund from 1949, and a Mapai Knesset member in the first, second, and third Knesset. Harzfeld was awarded a special Israel Prize in 1972, in appreciation of his lifelong service to the State. He became known for the "ḥasidic" atmosphere of enthusiastic group singing, which he introduced in intervals at the meetings of Zionist and *yishuv* bodies.

[Gedalyah Elkoshi]

ḤASAN, ABU ALI JEPHETH IBN BUNDĀR (second half of 11th century), thought to be one of the first of the Yemenite *negidim* who lived in *Aden between the 11th and early 14th centuries. His name indicates he was of Persian origin. According to *genizah fragments and tombstone inscriptions, Jewish leadership was transferred from *San'a to Aden, because of the rising importance of the latter's port as a center of trade between *Egypt and *India. According to documents connected with Ḥasan's name, he was active during the second half of the 11th century until approximately its close. One of the documents contains the date 1409 of the Seleucid era (1097/98 C.E.).

As a wealthy man who engaged in trade with India and served as a "traders' official" in Aden, i.e., a colleague and representative of the traders, Ḥasan was also a public leader. He was called "the head of the communities," meaning that he had authority over the Jewish communities of southern *Yemen. His title **nagid* is found in the eulogy of the Tunisian trader Abraham b. Perahyah b. Yajo for his son Maḏmūm: "And all the community called him *nagid* the son [*nin*] of a *nagid*" (*nin* being son according to Targ. Onk., Gen. 21: 23). Ḥasan's descendants were also wealthy traders who signed agreements with tribal chiefs and pirates in control of the sea routes from Egypt, by way of the Red Sea, to India, thus assuring freedom of navigation and trade. They were also called *negidim* and were active in public life in Yemen. They had connections mainly with the Palestinian academy in Egypt.

ḤASAN (Hussein) BEN MASHI'AH (tenth century), Karaite scholar. According to *Ibn al-Hiti he lived in Baghdad, where he held religious *disputations with the Christian scholar Abu Ali 'Isā ibn Zar'a. *Sahl b. Mazli'ah states that Ḥasan had disputations with *Saadia Gaon (d. 942), which seems chronologically unlikely. Ḥasan also wrote a polemical treatise against Saadia, passages of which are incorporated in the *Eshkol ha-Kofer* of Judah *Hadassi and in a manuscript in Leningrad. A remark of *Ibn Ezra in the introduction to his commentary on the Pentateuch suggests that Ḥasan wrote biblical commentaries.

ḤASDAI (Hisdai), name of four Babylonian exilarchs. ḤASDAI BEN BUSTANAI lived in the 7th century. Both he and his brother Baradoi served as exilarchs following the death of their father, *Bustanai, in about 670. The two brothers attempted to undermine the position of the sons of their father's Persian wife, alleging that she had the status of a female prisoner of war who had not been manumitted.

ḤASDAI BEN BARADOI (d. 733?) was exilarch at the beginning of the 8th century. He was the father-in-law of R. Natronai b. Nehemiah, the head of the Pumbedita academy. Various legends are told about him in Arab chronicles. His son Solomon was exilarch from 733 to 759, if not later. His second son, David, was the father of *Anan, founder of the Karaite sect. ḤASDAI BEN NATRONAI was exilarch during the first half of the 9th century.

ḤASDAI BEN DAVID BEN HEZEKIAH (the Second) was exilarch in the 12th century (d. before 1135). During this period the office of exilarch gained in prestige, and its bearers had great influence at the court of the caliph Muhammad al-Muktafi, who appointed him as exilarch. Benjamin of Tudela, the 12th-century traveler, reports that Ḥasdai was one of the teachers of David *Alroy, the false Messiah. His son Daniel took his place as exilarch. Abraham *Ibn Ezra may have met him during his visit to Baghdad in 1139. He died a year before *Pethahiah of Regensburg's visit to Baghdad in about 1175.

HASEFER, official publishing house of the Federation of Jewish Communities in Romania. Founded in 1990 in Bucharest for the purpose of publishing Rabbi Moses *Rosen's works, it was expanded after his death (1994). The president of the Federation, Nicolae Cajal, aimed to build a spiritual bridge between Jews and Romanians in order to fight antisemitism by

presenting Jewish spirituality, history, and contribution to civilization to people who would not know of them in the Communist period. It was also a period of growing interest in Jewish studies in Romania. The publishing house was enlarged and created in a way similar to that of Judaica publishing houses in other countries. The philosopher, social scientist, and literary critic Zigu Ornea was appointed director in 1995 because of his experience as director of the Minerva publishing house in Bucharest. Funding came from the Federation of Jewish Communities and from the Romanian government department for minorities. The name Hasefer ("The Book") was taken from the former bookshop of the same name that had existed in Bucharest between the two world wars, owned by Henry (Herman) Steinberg. After Zigu Ornea's death, the assistant director, Alexandru Singer, took over as director (2003). By April 2005, Hasefer had published 260 books, mainly in Romanian on the subjects of Judaism, Jewish philosophy and history, Romanian Jewish history, Holocaust, Yiddish literature, and Israeli literature. Among the well-known authors published in Romanian translation are Isaac Bashevis *Singer, Andre *Neher, Saul *Bellow, Primo *Levi, Moshe *Idel, Nava Semel, Moses *Mendelsohn, *Josephus Flavius, and *Philo of Alexandria.

[Lucian-Zeev Herșcovici (2nd ed.)]

HASENCLEVER, WALTER (1890–1940), German poet and playwright. Born in Aachen of a Jewish mother and a non-Jewish father, Hasenclever served in the German army during World War I but his experiences made him a pacifist. After 1918 he worked for a time as a foreign correspondent in Paris and the U.S. Leaving Germany in 1933, he eventually settled in France. After the French collapse in 1940, Hasenclever was twice interned and, fearing the arrival of the Nazis, committed suicide in a detention camp near Aix-en-Provence. A friend of the critic Kurt Pinthus and of Franz *Werfel, Hasenclever was an early expressionist who became famous with his revolutionary drama, *Der Sohn* (1914). This dealt with the conflict between the generations and preached resistance to blind authority. Three verse collections were *Der Juengling* (1913), *Tod und Auferstehung* (1917), and *Gedichte an Frauen* (1922). His pacifist ideas were expressed in the plays *Der Retter* (1916), and *Antigone* (1917), while satire and pathos distinguished such later dramas as *Die Menschen* (1918), *Gobseck* (1922) and *Mord* (1926). In *Jenseits* (1920) Hasenclever briefly turned to the occult. From the late 1920s he wrote plays in a more comic or ironic spirit, such as *Ehen werden im Himmel geschlossen* (1928) and *Napoleon greift ein* (1929). He also wrote German versions of foreign plays and films, one of his collaborators being Ernst *Toller. His drama *Muenchhausen*, written in 1934, appeared posthumously in 1952. His collected works in five volumes (ed. D. Breuer and B. Witte) appeared in 1990–97 and a selection of his letters in two volumes (ed. D. Breuer and B. Kasties) appeared in 1994.

HA-SHAḤAR (Heb. הַשְּׁחָר), Hebrew journal which was published and edited in Vienna by Peretz *Smolenskin from 1868 to 1884. During these 16 years, 12 volumes of *Ha-Shaḥar* were published. In theory *Ha-Shaḥar* was a monthly; in practice, however, the financial and organizational difficulties caused prolonged interruptions in its regular appearances. In his first article "Petaḥ Davar" ("Preface") Smolenskin describes its aims: the diffusion of *Haskalah; war against its Orthodox opponents, especially the Ḥasidim; war against assimilationists and religious reformers; and defense of the national values of the nation and the Hebrew language. Smolenskin molded the image of *Ha-Shaḥar* as an independent and militant journal. *Ha-Shaḥar* was initially designed mainly for Russian Jews. Because of Russian restrictions against the Hebrew press, however, it was published in Vienna, from where copies were sent to the offices of the censor in Russia before distribution through agents in Russia. Sometimes, an article which the censor was liable to reject was published in a special supplement, and sent to the subscribers in Russia in sealed envelopes separately from the regular copy. Outside Russia as well, *Ha-Shaḥar* acquired a large audience of readers, especially in Austria, Galicia, and Romania. The number of subscribers to the annual fluctuated between 800 to 1,300.

Subscriptions covered only a part of the expenses even though the publisher did not pay fees to his writers and carried out himself a large part of the proofreading and the distribution of the copies to the subscribers. Smolenskin invested his own money in *Ha-Shaḥar* and was supported by contributors from among the well-to-do *maskilim*, and subsidies from the *Alliance Israélite Universelle in Paris and the Ḥevrat Mefizei ha-Haskalah ("Society for the Dissemination of the Haskalah") in St. Petersburg.

Ha-Shaḥar published belles lettres and articles dealing with Jewish scholarly matters and current affairs. Among the Hebrew writers of the generation who contributed were M.D. *Brandstadter, R.A. Broides, the poets J.L. *Gordon, A.B. *Gottlober, J.L. *Levin (Yehalel), I. *Kaminer, S. *Mandelkern, and M.M. *Dolitzki. There, too, Smolenskin published his novels (*Ha-To'eh be-Darkhei ha-Hayyim*, *Simḥat Ḥanef*, *Kevurat Ḥamor*, *Ha-Yerushah*, *Nekam Berit*). The works are written mainly in the flowery *maskil* style. Most condemn the rabbinical orthodoxy of the time and especially the Ḥasidim,

but at the same time assail the assimilationist *maskilim*. Socialistic undertones are heard especially in Yehalel's poetry ("Kishron ha-Ma'aseh," and others).

In the area of Judaic studies *Ha-Shaḥar* published works of scholars from Western and Eastern Europe, including Solomon *Rubin, David *Kahana, Y. *Reifman, S. *Buber I.H. *Weiss, S. *Sachs, Meir *Ish-Shalom (Friedmann), A. *Jellinek, J.H. *Gurland, A.E. *Harkavy, H.Z. *Lerner, A. *Krochmal, E. Shulman, and D. Holub. *Ha-Shaḥar* also published letters of Jewish scholars and authors of the early Haskalah: S.J. *Rapoport, S. *Luzzatto, and J. *Perl. Most of the book reviews were written by Smolenskin.

Of prime historical importance were the articles which dealt with current problems. Smolenskin himself published his major articles on Jewish problems in which he introduced his nationalist ideology. These views, and especially his attack on *Mendelssohn, the cultural hero of the Haskalah, alienated many of his supporters, and by the end of 1880 Smolenskin was forced to discontinue publication. With the rise of the Ḥibbat Zion movement in the wake of the pogroms of 1881, Smolenskin renewed the publication of *Ha-Shaḥar* which now openly advocated the Ḥibbat Zion program for Jewish settlement in Erez Israel. Smolenskin filled *Ha-Shaḥar* with dozens of articles on the new movement. He attacked the Alliance Israélite Universelle, which had once supported him, for their opposition to Jewish settlement in Erez Israel. E. *Ben-Yehuda, M.L. *Lilienblum, A.S. *Friedberg, A.A. Sirotkin, and others now wrote in *Ha-Shaḥar*. In spite of his weakening state of health, Smolenskin continued to publish *Ha-Shaḥar* until his death, after which his brother, Y.L. Smolenskin, published the last four copies, completing the 12th volume.

[Yehuda Slutsky]

HA-SHILO'AH (Ha-Shillo'ah; Heb. הַשִּׁלּוֹאֵה). Hebrew literary, social, and scientific monthly in Russia until World War I. Founded in 1896, *Ha-Shilo'ah* was first edited by *Aḥad Ha-Am in Odessa and Warsaw and printed in Berlin and Cracow until after the Russian revolution of 1905. From 1907 to 1919 it was edited and printed in Odessa, while from 1920 until it ceased publication in 1926, it was edited and printed in Jerusalem. Altogether 46 volumes appeared in 23 years of publication (there were intervals during which the monthly did not publish, e.g., the Russian revolution of 1905, in 1915 under the czarist regime, in 1919 under the Soviet regime).

Aḥad Ha-Am intended *Ha-Shilo'ah* to be a journal devoted to Zionism, Jewish scholarship, and belles lettres in a style accessible to the general reader. Not believing in art for art's sake, he was interested in making literature serve the monthly's general objectives of Zionism and "usefulness" to the people. This approach was attacked by young authors (*Berdycewsky, in particular) and the controversy helped determine the course of Hebrew literature in the early 20th cen-

tury. *Ha-Shilo'ah* expressed Aḥad Ha-Am's bitter antagonism to Herzl and political Zionism, which elicited a strong reaction from the Zionist movement. The writing in *Ha-Shilo'ah* was free of rhetoric, the result of the great effort Aḥad Ha-Am spent, as his letters testify, in guiding the writers and editing their work. Thus the monthly, which only printed material of high quality, was from its inception a novelty in Hebrew periodicals. Aḥad Ha-Am's successor, Joseph *Klausner, who edited the monthly from 1903 until it ceased publication, followed a similar policy, but devoted more space to belles lettres and the works of such authors as J.H. *Brenner, I.L. *Peretz, S. *Asch, Z. *Shneour, and S. *Tchernichowsky. H.N. *Bialik, many of whose works were printed in *Ha-Shilo'ah*, coedited volumes 13–21. Most of Aḥad Ha-Am's essays also appeared in *Ha-Shilo'ah*, both while he was editor and after.

Ha-Shilo'ah revolutionized all genres of Hebrew literature and journalism. It became a model of Hebrew writing, both in form and content, and authors regarded it as an honor to publish in the journal. Indeed, the writings in *Ha-Shilo'ah* remain of interest and value today both for the subject matter and the style they introduced into Hebrew literature. Unlike Aḥad Ha-Am, Klausner was an adherent of political Zionism, yet *Ha-Shilo'ah* reflected all the trends within Zionism. When Klausner immigrated to Erez Israel in 1920, *Ha-Shilo'ah* resumed publication in Jerusalem, and from 1925, Jacob *Fichmann, editor of the literary section, coedited the monthly. In Jerusalem the journal did not enjoy the same importance as it had in Russia. There were already a number of newspapers and periodicals in Erez Israel where, in addition, the atmosphere in which *Ha-Shilo'ah* had thrived in Russia was lacking. A bibliography of the writings and authors printed in *Ha-Shilo'ah* was compiled by Joshua Barzilai-Folman (1964).

[Getzel Kressel]

HASHKIVENU (Heb. הַשְׁכִּיבֵנו; "cause us to lie down"), initial word of the second benediction after the *Shema of the daily evening prayer. This prayer for protection during the night is mentioned in the Talmud (Ber. 4b) and is considered as an extension of the *Ge'ullah benediction which precedes it. There are two versions of this prayer, the Sephardi liturgy employing a shorter version for Friday evenings in view of the discouragement of supplication on the Sabbath (TJ, Ber. 4:5, 8c; also I. Davidson et al. (eds.), *Siddur Rav Sa'adyah Ga'on* (1941), 27 and iii). The prayer closes on weekdays with the benediction: "Blessed art thou, O Lord, who guardest thy people Israel for ever" (which uses the Babylonian text), whereas on Friday evening it ends: "Blessed art thou, O Lord, who spreadest the tabernacle of peace over us, over Israel and over Jerusalem" (which was the Palestinian text). The Midrash to Ps. 6:1 attributes the inclusion of the prayer in the evening service to the

fact that the *zizit*, which perform a protective function, are not worn during the night.

BIBLIOGRAPHY: Elbogen, *Gottesdienst*, 99–109.

HA-SHOMER (Heb. הַשׁוֹמֵר, “The Watchman”), association of Jewish watchmen in Erez Israel, which was active between 1909 and 1920. It was founded by pioneers of the Second *Aliyah, many of whom had been active in revolutionary movements and Jewish self-defense in Russia, and were critical of the methods used to protect life and property in the Jewish settlements based upon non-Jewish guards (Bedouin, Circassian, Mughrebim, etc.). Most of them were members or sympathizers of the *Po’alei Zion Party. On the initiative of Israel Shoḥat, about 10 of them, including Izhak *Ben-Zvi and Alexander *Zeid, met in Jaffa in 1907 and founded a secret society called Bar-Giora, which aimed at winning the right to work and keep guard in the settlements and develop Jewish settlement in new areas. It adopted as its watchword a line from Ya’akov *Cahan’s poem “*Biryonim*” (“Zealots”): “*Be-dam va-esh Yehudah naflah, be-dam va-esh Yehudah takum*” (“By blood and fire Judea fell; by blood and fire Judea shall rise”). The members of Bar-Giora were given responsibility for the protection of Sejera (now Ilaniyyah) in lower Galilee, and, in 1908, of Meshā (Kefar Tavor). On the initiative of Bar-Giora a wider organization, called Ha-Shomer, was established in April 1909 at a meeting in Meshā. It was headed by a committee of three: Shoḥat, Israel *Giladi, and Mendel Portugali. Bar-Giora, in effect, merged with the new body. Within three years, Ha-Shomer assumed responsibility for the protection of seven villages, among them Ḥaderah, Reḥovot, and Rishon le-Zion. Other settlements passed also to an all-Jewish guard system. Within a short time the Jews in Erez Israel no longer relied on the protection of foreign consuls and powerful neighbors, but were capable of defending their lives and property. Ha-Shomer based its methods on a close study of the conditions in the country, the ways of the Ottoman authorities, and the character of the Arab bedouin and peasants. The *shomerim* spoke Arabic, wore a mixture of Arab and Circassian dress, and carried modern weapons; some of them became expert horsemen. In 1914 they numbered about 40, with another 50–60 candidates for membership and temporary auxiliaries; at harvest time, they could deploy some 300 men. Candidates had to undergo a year’s trial and take a ceremonial oath after being approved by a two-thirds majority at the annual general meeting. The *shomerim*, with their picturesque dress and armament, were prominent in the life of the new *yishuv* and played an important part in settling new and disputed land. They were widely known in the Zionist movement, which supported them. *Yizkor*, a memorial volume in honor of their casualties, in Hebrew, Yiddish and German, had a great influence after World War I on Diaspora Jewish youth. Ha-Shomer was criticized by some circles, especially the supporters of the *Ha-Po’el ha-Za’ir party, because of its independence and the fear that it might anger the Arabs. On the outbreak of World War I, Ha-Shomer had to go underground, and two of its lead-

ers, Manya and Israel Shoḥat, were exiled in 1915 to Anatolia. Its difficulties were intensified by internecine dissensions, as a result of which a group of members, headed by Israel Giladi, left and founded southwest of Metulah the settlement of Kefar Giladi. In 1916 it started to recover: its members collected and stored arms, and organized the protection of Jewish property. Ha-Shomer opposed the espionage activities of *Nili because it endangered the Jewish community, and decided to execute Yosef *Lishanski, one of the Nili group who had escaped, in case he fell into the hands of the Turkish authorities and betrayed the secrets of the defenders. Lishanski was caught by the Turks, however, and told them all he knew. As a result, 12 *shomerim* were interrogated in Damascus and four of them imprisoned. During the British campaign in Palestine, members of Ha-Shomer joined the *Jewish Legion, while others joined the mounted police, which kept order in Galilee, and played a prominent part in the defense of *Tel Hai and Jerusalem. However, new elements in the *yishuv*’s leadership demanded the reorganization of defense on a broader basis under the discipline of the recognized Jewish authorities, public and political bodies. On the proposal of some of its new members, led by Eliyahū *Golomb and Yiḥzak *Tabenkin, it was decided that the organization should disband and its members serve as the basis for a new defense system. On June 15, 1920, *Aḥdut ha-Avodah accepted the responsibility for the reorganization of defense, and Ha-Shomer ceased to exist as a separate body. Its members continued, however, to maintain contact and made an important contribution to the *yishuv*’s defense and its constructive efforts. Ha-Shomer was the first body in the Zionist movement and the Jewish *yishuv* which believed that the existence of an organized Jewish armed force would be a decisive factor in the realization of Zionism, and its example was an inspiration to the *Haganah and the pioneering youth movements.

[Yehuda Slutsky]

HA-SHOMER HA-ZA’IR, Zionist-socialist pioneering youth movement whose aim is to educate Jewish youth for kibbutz life in Israel. Ha-Shomer ha-Za’ir had its roots in two youth movements that came into being in Galicia (then a province of the Austro-Hungarian Empire) before World War I: Ze’irei Zion, which emphasized cultural activities; and Ha-Shomer, primarily a scouting movement (based on the British model). During the war, when many thousands of Jews from the eastern part of the empire took refuge in Vienna, the two movements merged and took on the name Ha-Shomer ha-Za’ir (1916). At the same time a similar development took place among the Jewish youth movements in the Russian part of Poland.

The early years of the movement coincided with the immediate postwar period, which was marked by a national and

social awakening among the peoples of Europe, the October Revolution in Russia, and the great hope of standing on the threshold of an era of peace and progress. The ideology of the new movement was also profoundly affected by the persecutions to which East European Jewry was exposed at the time (the Petlura pogroms in the Ukraine, the pogrom in Lvov, etc.). On a spiritual level, Ha-Shomer ha-Za'ir drew its inspiration from the *Ha-Shomer in Erez Israel; the writings of A.D. *Gordon, J.H. *Brenner, J. *Trumpeldor; as well as from the romantic aura surrounding the revolutionary anti-tsarist underground and its heroes. Other influences on the movement are to be found in the Free Youth Movement (the Wandervogel) as it was first developed in Germany before World War I and in the new philosophy, literature, psychology, and pedagogy of the time, which called for a reevaluation of existing modes of life and thought. Thus, Ha-Shomer ha-Za'ir sought to create a synthesis between Jewish culture and the rebuilding and defending of Erez Israel, on the one hand, and universal cultural and philosophical values, on the other, and this was to become a characteristic aspect of the movement's ideology.

Educational Method

Another characteristic of Ha-Shomer ha-Za'ir is its educational method, which provides for an organic combination of "training and study groups" with the independent culture and life of youth as practiced by the Free Youth Movement, and also utilizing the symbols and the discipline of scouting. The movement puts special emphasis on the training of the individual and the development of the personality (in its early years Nietzsche's *Thus Spake Zarathustra* was very popular in the ranks of the movement). The basic pedagogic unit of Ha-Shomer ha-Za'ir is the *kevuzah* (in which the sexes are not mixed), several of which, of the same age groups, combine for certain activities to form larger, coeducational units, such as the *peluggah* ("company") and *gedud* ("batallion"). There are three age groups – the young level (age 11–14), known as *kefirim* ("cubs"), *benei midbar* ("sons of the desert"), or *benei Massada* (sons of Massadah); the intermediate level (15–16), known as *zofim* ("scouts"); and the adult level (from 17 upward) known as *bogerim* ("adults"), as well as *keshishim* ("oldsters") and *magshimim* ("implementers, those who fulfill"). Each level has its own program, which is adapted to its emotional needs and intellectual capacity. A local branch is a *ken* ("nest"), and it is headed by *hanhagat ha-ken* ("ken leadership"); a district branch is *ha-galil* and is headed by *hanhagat ha-galil*; while a national federation is headed by *ha-hanhagah ha-rashit* ("chief leadership") and the entire world movement is headed by *ha-hanhagah ha-elyonah* ("supreme leadership").

Before World War II, the Warsaw headquarters of the movement published two periodicals, both in Hebrew: *Ha-Shomer ha-Za'ir*, which served as the organ of the movement as a whole and its adult level, and *Ha-Mizpeh*, which was the organ of the intermediate level. There was also a Ha-Shomer

ha-Za'ir publishing house in Warsaw, which put out books of educational content. The various national branches also had their own organs, either in Hebrew or the local languages.

Personal Fulfillment

Ha-Shomer ha-Za'ir is also noted for its application of the principle of personally fulfilling the ideals of the movement. It fosters among its adherents radicalism in the original sense of the term – the search for the root of things and the demand for consistency of thought, analysis, and action; this leads to the principal obligation of the individual – that of personal fulfillment of ideals and conclusions. As a result, the movement took up the struggle against assimilation (including "Red" assimilation, i.e., the widespread phenomenon of Jewish youth and intellectuals being drawn entirely into communist or socialist movements, denying their Jewish identity, and abandoning Jewish values and their responsibility for the fate of the Jewish people). It fostered the use of Hebrew – as opposed to the local language – and created a pioneering Jewish atmosphere in its groups, a pedagogic measure culminating in the paramount obligation of its members – *aliyah* and life in a kibbutz. The strict application of the principle of personal fulfillment resulted in tens of thousands of young people passing through the ranks of Ha-Shomer ha-Za'ir and being forced to leave the movement for failing to settle in Israel, failing to join a kibbutz, or failing to fulfill other demands put upon them by the movement. There were, of course, thousands who stood the test and settled in Erez Israel in kibbutzim of Ha-Shomer ha-Za'ir.

Ha-Shomer ha-Za'ir insists on the organic continuity of its program, from the youngest level up to the personal fulfillment by its adult members in the form of membership in a kibbutz in Israel. The principle of personal fulfillment also accounts for the profound educational influence exerted by the *kevuzah* leader. This derives not only from his way of life and the quality of his performance as their instructor, but also from the conviction on the part of the young members that whatever their leader demands of them, he is about to fulfill himself – settling in Israel and joining a kibbutz.

Beginnings in Erez Israel

During the Third Aliyah, (1919–23) some 600 members of Ha-Shomer ha-Za'ir settled in Erez Israel. There was no institutional link between the various groups of these settlers or between them and the movement abroad. As a result, the strength of this first wave of Ha-Shomer ha-Za'ir settlers was dissipated. They were dispersed all over the country and, to some degree, were not absorbed in kibbutz life. Furthermore, the removal of the most mature and most active members from the tasks they had fulfilled as instructors and guides caused a general slackening in the activities of the movement abroad. A severe crisis of "individualism" set in, known in the annals of the movement as "the great drift." It was not until 1927, when the Kibbutz Arzi Ha-Shomer ha-Za'ir was founded, that a permanent framework was established for the organized absorption of Ha-Shomer ha-Za'ir settlers in

Erez Israel and for the guidance of the movement abroad. In the period of the Third and Fourth Aliyah (up to 1926), Ha-Shomer ha-Za'ir evolved its ideology. Slanted toward Marxism, it represented a synthesis between Zionism and socialism, between pioneering construction and class war. When the *Histadrut was founded (1920), the Ha-Shomer ha-Za'ir kibbutzim failed to find a common language with any of the existing parties, and, instead of joining any of them, they declared themselves an independent group. Apart from its tasks in the kibbutzim, in the settlement of newcomers, and in education, the Kibbutz Arzi also became a framework for the joint development of political ideology (“ideological collectivism”) and for joint political action in the Histadrut and the Zionist Movement.

The World Movement

The World Federation of Ha-Shomer ha-Za'ir was founded in Danzig in 1924. It had been preceded by the establishment of Ha-Shomer ha-Za'ir movements in Romania, Lithuania, Latvia, the U.S.S.R. (in addition to the existing movements in Galicia, Poland, and Austria), and by the initiation of efforts on the part of the kibbutzim in Erez Israel to cooperate in the organized and concentrated guidance of the movement abroad. More branches were founded in the period between the First and Second World Convention (the latter also held at Danzig in 1927) in Czechoslovakia, the U.S., Canada, Belgium, and Bulgaria. The founding of the Kibbutz Arzi greatly enhanced the influence of Ha-Shomer ha-Za'ir in Erez Israel upon the movement abroad. Ha-Shomer ha-Za'ir in the U.S.S.R., Latvia, and, to some degree, in Lithuania, however, did not accept the independent political orientation of the majority of the movement, and members of the movement in these countries who settled in Israel found their way to the *Ahdut ha-Avodah Party (which in 1930 merged with *Ha-Po'el ha-Za'ir to become *Mapai), and did not join the Kibbutz Arzi upon its establishment. When the Kibbutz Arzi was in its early stage, there was still hope that the split in the ranks of the movement would eventually heal, and thus the Second Convention decided to regard the Kibbutz Arzi only as the “principal path for the movement.” The Russian-Latvian minority in Israel, however, not only failed to join Kibbutz Arzi, but became one of the founders of *Ha-Kibbutz ha-Me'uḥad (linked to Ahdut ha-Avodah and later to Mapai); disappointed in its expectations, the Third Convention (held in Vrutky, Czechoslovakia in 1930) decided that the Kibbutz Arzi was now the only correct path for Ha-Shomer ha-Za'ir. The Russian-Latvian minority responded by seceding from the movement and forming “Nezaḥ” (No'ar Zofi-Ḥalutzī – Ha-Shomer ha-Za'ir – Scouting Pioneering Youth, see below).

On the Eve of World War II and the Holocaust

At the time of the Fourth World Convention (Poprad, Czechoslovakia, 1935), Ha-Shomer ha-Za'ir had reached the height of its strength and achievements: groups in Hungary, Germany, Yugoslavia, France, Britain, Switzerland, Tunisia, Egypt, and South Africa had joined the movement, and there were en-

couraging beginnings in Latin America; membership totaled 70,000, with the majority about to go to Palestine or undergoing agricultural training, and with the adult members active in *Ḥe-Ḥalutz, the League for Labor Erez Israel, the elections to the Zionist Congress, etc. The rising tide of fascism in Eastern and Central Europe forced the movement to organize itself for self-defense and for the continuation of its activities under conditions of semilegality or, if this should become necessary, as an underground movement.

When World War II broke out, large numbers of members seeking to escape from the invading German forces converged upon Vilna. A part of this Vilna group eventually joined other refugees in fleeing to the Soviet Union, where they fought in the ranks of the Red Army. Some succeeded in reaching Erez Israel before the German-Russian war broke out (June 1941). Others, however, were ordered by the movement to return to Nazi-occupied territory, where they became outstanding activists of the Jewish resistance, the Jewish partisans, and the ghetto fighters. Mordecai *Anielewicz, the commander of the revolt in the *Warsaw ghetto, was a member of the Ha-Shomer ha-Za'ir movement, and elsewhere in the Polish ghettos and in other countries under Nazi occupation the movement's members were among the leaders of the uprisings.

The Postwar Period

After the war, the surviving members of the movement prepared for *aliyah* and took an active part in the organization of the “illegal” immigration to Erez Israel and the rehabilitation and reeducation of the surviving refugee children in the displaced persons camps in Germany and Italy. In the wake of the political developments in Eastern and Central Europe, the little that had remained of the movement soon dissolved. Henceforth, Ha-shomer ha-Za'ir centered its activities particularly upon Latin America, and members from this area are to be found in most of the movement's kibbutzim in Israel. Branches of the movement continue to exist also in North America, Western Europe, South Africa, and Australia. The Fifth World Convention, held in 1958, was the first to meet in Israel, which had by then become the seat of the headquarters of the movement. Branch offices also existed in Paris, New York, and Buenos Aires. Their task was to direct the work of the emissaries of Kibbutz Arzi dispatched to the various countries.

Ha-Shomer ha-Za'ir in Israel

The Israel Federation of Ha-Shomer ha-Za'ir naturally occupied a special place among the various branches. When the federation was first established (in 1930), the principles and methods applied by the movement in its work in the Diaspora had to be adapted to the conditions prevailing in Erez Israel, where the problems of Jewish youth were radically different and where the kibbutz was not far away. The relative importance of the Israel movement in the World Federation and as a reservoir of manpower for the Kibbutz Arzi grew from year to year, and it also played an ever-increasing role

in the establishment of new Ha-Shomer ha-Za'ir kibbutzim and the consolidation of existing kibbutzim. The first kibbutz founded by graduates of the movement in Erez Israel was Nir David in the Beth-Shean Valley, established in 1936. (See also *Mapam.)

U.S.-Canada

The movement was founded in North America in 1923. Ha-Shomer ha-Za'ir has found it difficult to make headway in the American Jewish community, with its economic prosperity, its lack of a youth-movement tradition, and the philanthropic character of its Zionist movement. Nevertheless, there are a number of kibbutzim in Israel in which U.S. Ha-Shomer ha-Za'ir graduates predominate (such as Ein ha-Shofet, Kefar Menahem, Hazor, Galon, Sasa, and Barkai). In the course of time, the American movement was also instrumental in the establishment of adult groups (Americans for Progressive Israel, linked to Mapam in Israel), made up of people who were attracted by the Zionist-socialist orientation of Ha-Shomer ha-Za'ir. In the U.S. the movement had its own organ, *Young Guard* and maintained branches in Detroit, Boston, New York, Los Angeles, and, in Canada, in Montreal and Toronto, as well as training farms for the specific purpose of preparing for *aliyah* and kibbutz life. In the early 21st century it had a few hundred members and ran camps in Liberty, New York, and Perth, Ontario.

Great Britain

The movement was founded in Great Britain in the late 1930s, by Ha-Shomer ha-Za'ir members among the refugees from the continent, and by members of He-Ḥalutz and Habonim, who were attracted by Ha-Shomer ha-Za'ir ideology. While it made progress during the war and the immediate postwar period, the movement has not succeeded in recovering the losses in its ranks caused by the *aliyah* of its founders and leading members (in the period 1946–1950), nor has it yet been able to reach the second generation, British-born Jewish youth. Branches exist in Manchester and in London. In Israel, Ha-Shomer ha-Za'ir settlers from Britain are found primarily in the kibbutzim Ha-Ma'pil, Ha-Zore'a, Yasur and Zikim.

South Africa

Founded in 1935, the movement has branches in Johannesburg and Capetown. In Israel, South African *halutzim* of the movement have settled in Shuval, Barkai, Naḥshon, and Zikim.

Australia

Australian Ha-Shomer ha-Za'ir was founded in 1953, with branches in Melbourne and Sydney. Its settlers in Israel are concentrated mainly in Nirim.

[Peretz Merhav]

Nezah

Nezah was established in 1930 as the result of a split in Ha-shomer ha-Za'ir, and was disbanded during World War II. The origins of Nezah are in the Ha-Shomer ha-Za'ir in Russia at the beginning of the Soviet regime. During this period many

groups of Jewish scouts existed in Russia; some were affiliated with *Maccabi, while others had no affiliations.

Ha-Shomer Ha-Za'ir in Russia held its clandestine founding convention in Moscow in 1922 and established itself as a country-wide movement. During David *Ben-Gurion's visit to Russia in 1923 the movement's basic ideology became personal fulfillment through *aliyah* and pioneering in Erez Israel. Although illegal and persecuted by the authorities, Ha-Shomer ha-Za'ir grew in size and had as many as 20,000 adherents throughout Soviet Russia. Its last "Information Page" was circulated as late as 1932, and there is evidence that some of its groups continued to exist even after that date.

The first *halutzim* of this movement went to Palestine in 1924 and founded a Ha-Shomer ha-Za'ir kibbutz from the U.S.S.R. on the shores of Lake Kinneret (now kibbutz Afikim). Their underground existence in Russia had prevented their attending the founding convention of the world movement of Ha-Shomer ha-Za'ir and upon their arrival in Erez Israel they discovered that there were substantial differences between them and the movement that developed outside Russia. They advocated membership in one of the existing labor parties (from 1930 this party was Mapai). They also opposed the creation of Ha-Kibbutz ha-Arzi as a separate federation of kibbutzim of Ha-Shomer ha-Za'ir and proposed joining kibbutzim from other movements in a single federation (which later became ha-Kibbutz ha-Me'uḥad); they disagreed with the ideological transformation which took place in Ha-Shomer ha-Za'ir, and turned it from a pioneering youth movement into a political body advocating, in one of its planks, the "socialist revolution" in the leftist meaning of the term.

The struggle inside Ha-Shomer ha-Za'ir went on for six years, ending in the secession of the Russian Ha-Shomer ha-Za'ir from the movement and the creation of Nezah, which adhered to the original ideology of the Russian Ha-Shomer ha-Za'ir. The new movement was composed of the Ha-Shomer ha-Za'ir from Russia, Latvia, Estonia, and Lithuania, and was later joined by the *Blau-Weiss (or Tekhelet Lavan) movement, in Austria, Czechoslovakia, and Yugoslavia. It also maintained close ties with the Borissia movement of Transylvania, and, in its last years, with the *Iḥud Habonim in England and America. Members of Nezah may be found in Afikim, Kefar Giladi, Ein Gev, Kinneret, Ne'ot Mordekhai, and other kibbutzim. Most of them became members of Mapai (from 1968, the Israel Labor Party).

ḤASIDEI ASHKENAZ, a social and ideological circle, with a particular religious outlook, in medieval German Jewry. The first centers of the movement were Regensburg in southern Germany and the communities of Speyer, Worms, and Mainz on the Rhine; from there, its influence spread over most of Germany and, to a certain extent, to France also. Its main literature was composed during the first half of the 13th century. This movement developed in the spiritual and social atmosphere of the Jewish communities in German towns of the 12th and 13th centuries. **Kiddush ha-Shem* (martyrdom) was an extremely important factor in its formation. Another significant factor was the challenge of the Christian pietist movements. It reacted against the pressure from these trends in Christianity and was also influenced by them. Added to these was the movement's feeling of spiritual supremacy derived from its own strength and duties to God and the nation.

The Literature of the Circle

The literature of the Ḥasidei Ashkenaz developed in two different directions. The movement produced some ethical works, intended to influence the mass of the Jews and direct them toward rigorous observance of the commandments and the moral values of Judaism (see *Ethical Literature). Most important of these works was the *Sefer Ḥasidim*, which continued to influence Jewish ethical thought throughout the centuries, and remained an active force in shaping Jewish ethics until modern times.

The second direction in which the Ḥasidei Ashkenaz developed was the writing of a vast body of esoteric works, some containing mystical elements. According to the traditions of the Ḥasidim themselves, this esoteric lore reached them through a long chain of verbal tradition, beginning in Italy in the eighth century. This tradition was carried mainly by the *Kalonymus family, which was transferred in the ninth century from Italy to Germany by one of the Carolingian emperors. Most of the prominent leaders of the Ḥasidei Ashkenaz were members of this family, notably *Samuel b. Kalonymus he-Ḥasid ("the Pious") in the second half of the 12th century, his son *Judah b. Samuel he-Ḥasid (d. 1217), and his pupil, *Eleazar b. Judah b. Kalonymus of Worms (d. c. 1230). The tradition continued to flourish in this family, and prominent among its bearers are some of the descendants of Judah he-Ḥasid: Moses, his son; *Eleazar b. Moses ha-Darshan; and Moses b. Eleazar, Judah's great-grandson. Other writers belonging to this circle were disciples of Eleazar of Worms, among them *Abraham b. Azriel, author of *Arugat ha-Bosem* and *Isaac b. Moses of Vienna, author of *Or Zarua*. The Kalonymus family represents the central group of the Ḥasidei Ashkenaz, authors of esoteric literature. There were, however, other groups or individuals who wrote such works without being in close touch with the core. Most of these works remained anonymous and very little is known about the place and time in which they were written. One of the most important is the **Sefer ha-Hayyim*, written about the turn of the 13th century by a ḥasidic scholar who was deeply influenced by Abraham

*Ibn Ezra in formulating his theology, which also includes elements similar to some kabbalistic ideas. Another anonymous writer was the author of *Sefer ha-Navon*, a commentary on the verse "*Shema Israel*"; the author had no direct connection with the main group of the Kalonymus family, though apparently he had access to at least one work written by Judah he-Ḥasid.

Besides these scattered, anonymous writers it seems that there existed a group of mystical writers in the 12th and 13th centuries who are distinguished by their use of a pseudographic *baraita* attributed to *Joseph b. Uzziel, known in Hebrew literature as the grandson of Ben Sira, the legendary son of the prophet Jeremiah (see *Ben Sira, Alphabet of). The *baraita* is mainly cosmological, closely related to *Sefer Ḥasidim*. One of the earliest commentaries on this *baraita* is attributed to a scholar called Avigdor ha-Zarefati. Among the works which originated in this group was the commentary on *Sefer Ḥasidim* attributed to *Saadiah Gaon (not to be confused with Saadiah's true commentary on that work). The best-known writer of this group is *Elhanan b. Yakar, who lived in the first half of the 13th century in England and France and wrote two commentaries on *Sefer Ḥasidim* and a theological work, *Sod ha-Sodot*.

The theology of the Ḥasidei Ashkenaz aroused some controversy in Ashkenazi Jewry; in *Ketav Tamim* Moses *Taku attacked their ideas as expressed in Judah he-Ḥasid's *Sefer ha-Kavod*, in the *Sefer ha-Hayyim*, which Taku erroneously attributed to Abraham *ibn Ezra, and in the sources of these ideas, especially the works of Saadiah Gaon, *Emunot ve-Deot* and the commentary on the *Sefer Ḥasidim*.

Various sources were used in the formulation of Ashkenazi ḥasidic esoteric thought. There were, undoubtedly, some external, Christian influences, especially some of the neoplatonic medieval writings. In most cases these sources are unknown; only in one case, that of Elhanan b. Yakar, has it been established that he made use of material included in medieval Christian theological works. It is possible that some ideas came to the Ḥasidei Ashkenaz through verbal, not written, sources. As for the Jewish sources, the Ḥasidim made extensive use of *heikhalot* and *Merkabah literature, which they copied and quoted extensively, thus preserving some texts which might otherwise have been lost. They also made use of the works of some of the first medieval theological writers in Hebrew: Shabbetai *Donnolo, *Abraham b. Ḥayya, and *Judah ha-Nasi of Barcelona; of special significance was the influence of Abraham ibn Ezra and there is hardly a ḥasidic work which does not, directly or indirectly, reflect his influence. However, the basic ideas of the Ashkenazi ḥasidic thinkers came from Saadiah Gaon, whose writings were known to them not in the 12th-century translation by Judah ibn *Tibbon, but from an earlier, poetic paraphrase in which the discursive, philosophical character of the works had been obliterated. No wonder, therefore, that the Ḥasidei Ashkenaz saw Saadiah as a mystic, similar to the ninth-century *Aaron of Baghdad (Abu Aharon) who came from Babylonia to Italy, and on whom

they relied for some mystical knowledge, especially in the interpretation of prayer.

Theology

The basic idea which the Ḥasidei Ashkenaz tried to teach was the unity and incorporeality of God, opposing all anthropomorphic descriptions of God. In this their teachings were similar to those of the Jewish philosophers in Spain. The difference, however, lies in their concept of the intermediary powers between God and man. The Ḥasidei Ashkenaz accepted from Saadiah Gaon the idea that a supreme power, the *Kavod* (“Divine Glory”), also called the **Shekhinah*, is the subject of all the anthropomorphic descriptions of God in the Bible, but they differ from him in their concept of the essence of the *Kavod*. According to Saadiah the *Kavod* was created and was one of the angels, though supreme above all. Most of the Ḥasidei Ashkenaz described the *Kavod* as a divine being, emanating from God himself (though they did not have a special word for the concept of emanation, as did the kabbalists). Some writers even described a whole world of many *Kevodot*, thus using the neoplatonic concept of a ladder of emanated beings descending from the Godhead toward the created world. *Kavod* plays a prominent part in the doctrines of the Ḥasidei Ashkenaz: the soul is connected with the *Kavod*, or even emanates from it, and receives its spiritual sustenance from it. Some of the many writings on prayer, prayer exegesis, and instructions on the right way to pray, emphasize that prayer should be directed toward the Godhead itself and not the *Kavod*, thereby suggesting that there were tendencies in the circles of the Ḥasidei Ashkenaz to consider the *Kavod* as a divine entity toward whom prayers should be directed. However, all of them regarded the *Kavod* as the major divine entity exerting influence on events in the lower world.

The theology of the Ḥasidei Ashkenaz is deeply grounded in the idea of divine immanence, and they emphatically state that the Godhead is itself present within all created things, and not the *Kavod*. In this, Saadiah’s influence is again paramount. The immanence of God is clearly expressed in the oldest remaining work of the Ḥasidei Ashkenaz, the **Shir ha-Yihud*, which was probably composed at the end of the 12th century. The idea of immanence was so central to their theology, that it was questioned why a man should turn toward heaven while praying when God was present everywhere. The answer was that in heaven dwelt the *Kavod*, and this was the revealed part of God, a sign toward which man should turn, though not one toward which he should direct his prayers.

The Ḥasidei Ashkenaz did not regard the regular laws of nature, man, and society as revealing God’s true nature. These laws were arbitrary, and sometimes their purpose was adverse to God’s intentions; that is, they were created in order to serve as a trial (*nissayon*) for the just and pious who must overcome them. Wonders and unusual happenings, however, and certainly the miracles which occur in the world, do reveal God’s true nature, and the pious and learned scholar can interpret them in order to understand better the ways and na-

ture of God. In this connection the Ḥasidim made extensive use of demonological phenomena, regarding them as a kind of miracle and trying to divine some theological moral from the analysis of such phenomena. Thus their literature contains probably the largest extant body of demonological and magical information in medieval Hebrew literature.

Secretly the Ḥasidei Ashkenaz also dealt in messianic speculation, though they tried to conceal this (thus it is almost unmentioned in *Sefer Ḥasidim*). Believing that the messianic age was about to dawn, probably around 1240, they expected retribution to be meted out to the gentiles for all the sufferings undergone by German Jewry in the dreadful age of the Crusades.

[Joseph Dan]

The followers of Ḥasidut Ashkenaz regarded themselves as bearers of a religious consciousness deeper than that generally prevailing and subject to religious duties severer than the accepted ones. The maximum was asked of the person able and willing to take upon himself the “restrictions of Ḥasidut,” while a lesser standard sufficed for those who had not entered its circle. From the *tovim* (the “good”), the Ḥasidim (the “pious”), and the *zaddikim* (the “righteous”), a maximum of emotional fervor and utmost purification of soul and thought were demanded, together with exact attention to the details of both major and minor precepts. The other members of the community at large were divided into the *ra’im* (“evil ones”) and the despotic ones – whom the Ḥasidim fought against – and the *peshtim* (“simple ones”) – whom the Ḥasidim guided inasmuch as they were capable of observing and feeling. In its relations with the community and its institutions, the Ḥasidei Ashkenaz therefore fluctuated between two contrasting attitudes: between the desire for leadership and service, and the tendency among its members to seclude themselves in order to live their exalted individual lives.

Their Symbolism

The array of symbols of Ḥasidei Ashkenaz is based to a considerable extent on faith in the strength of the Holy Names and the mystic power of the letters of the Holy Language (Hebrew) and their combinations; these are the channels of man’s communication with the celestial worlds, through study and prayer: “Every blessing and prayer ... everything ... according to its measure and its weight, its letters and its words; if it were not so, then our prayers would, God forbid, be comparable to the song of the uncircumcised nations.” Love of the Creator played a dominant role in the doctrine of the Ḥasidei Ashkenaz and among the duties of the Ḥasid; this love must saturate all his senses and resources; its strength must lead him toward joy so that no void remained in his instincts through which sin or the thought of it might penetrate. In the writings of the Ḥasidim the fervor of their emotional love and joy is expressed in symbols and parables drawn from the experiences and emotions of sexual relationships.

“Prayer is called a service like the service on the altar; when the Temple existed, the angels rose heavenward in the

flame of the sacrifices ... and today ... they rise in the prayer which issues from the heart; for prayer is like a ladder. If there is no devotion behind the words of any blessing, the ladder stops there." The perfection of the "ladder" is so conceived that "the pronunciation of every word must be prolonged, so that there is devotion in a man's heart for every word that issues from his mouth" (*Sefer Ḥasidim* no. 11). Inner devotion is achieved through external methods: the letters should be counted. Melodies should be appropriate: "For supplications and demands, a melody which causes the heart to weep; for words of praise, a melody which causes the heart to rejoice." However, he who is not a Ḥasid may be content with general devotion; simple men and women may be exempted from reciting the prayers in Hebrew, and in certain cases even exempted from saying them in their established form, as long as they devote their hearts to their Father in Heaven.

The supreme manifestation of love for God is *Kiddush ha-Shem* ("the sanctification of the Holy Name," i.e., martyrdom), a glory for which the Ḥasid yearns. In this act, he wages the war of the people of God against Christian heresy and serves the Creator by sacrificing his body. The Ḥasidim were among "the first of the martyrs" during periods of persecution. Their courage, their service of the *Kavod* and the Lord, and their self-sacrifice became an example for others.

In ḥasidic doctrine concerning the world and man, there are numerous occult elements. The Jew lives in a world and in a community in which, to a certain extent, the dead continue their association with the living; demons and spirits also encompass man from all sides and Judah he-Ḥasid even believed that they obeyed the *halakhah*. Sorcery is a concrete factor and a common occurrence in people's lives, and the teachings of the Ḥasidim contain many instructions and rules of conduct which serve as a protection against these powers. In these conceptions can be discerned the imprint of Christian superstitions current in their surroundings.

Ethical Views

The Ḥasidim make no reference to two inclinations in man – toward the "good" and the "evil" – and it appears that man is regarded as having only "one inclination"; the way in which this is used determines whether a deed is good or evil. The Ḥasidim therefore taught that the instincts, desires, and longings of the heart were to be turned toward the good side. According to them, mortification of the body was a method of repentance. They taught "commensurate repentance," that is, the acceptance, measure for measure, of affliction and degradation in return for the pleasure and the reward gained from sin; in some details these ideas show the influence of the notions and practices of repentance current among Christian monks. Mortification, however, had a merit of its own: the sufferings of the righteous vindicate the masses: "the Messiah bears the sins" of the nation and it is incumbent upon the Ḥasidim to adhere to this principle. In this approach there is undoubted evidence of Christian influence.

In relations between man and man, they demanded of themselves a mode of behavior according to "the law of Heaven," the application of absolute justice in the fullest sense of its spiritual significance and content; the "law of the Torah" was sufficient only for the man who was not a Ḥasid. There were some Ḥasidim who decided: "When two people come before the rabbi for him to dispense justice, if these two are of a quarrelsome disposition, the rabbi will apply the law of the Torah, even though a contrary decision would be reached according to the law of Heaven; if, however, these two are good and God-fearing men and heedful of the words of the rabbi, he must apply the law of Heaven, even if the law of the Torah requires the opposite." A practical example of this was their willingness to admit the testimony of "honest women." In their statements on the "two laws" lie occasional criticisms of the *halakhah* because of their demand for perfection of the soul. Some said that the punishments detailed in the Torah "corresponded to man's conception of what is unlawful" – that is, in respect of social codes of behavior, but "do not correspond to instinctive awareness" – that is, they do not accord with the standard by which the Ḥasid assesses sin, which gives due consideration to temptations and the difficulty of overcoming them.

From the words of the Ḥasidim there emerges a kind of cynical indifference toward those who mock them; to bear insult in this fashion they regarded as a pious virtue. In this they reveal the reaction of a minority which is resolute in its opinion and convinced of its uniqueness in the face of possible attacks from the majority and a clash with accepted habits. Their place in society can thus be deduced from this aspect of their doctrine. In the eyes of the Ḥasidim "humility for the sake of Heaven" is a virtue which elevates the soul of the individual, and through this the public attains stability and unity. Their extreme candor and their belief in the single uniform instinct in man brought them to realize the dialectic tension which is entailed when the way of life of the minority becomes known and honored by the many. They describe how "others honor themselves with their humility... they are greater than us and yet do not want to take precedence over anyone, as if to say, we are humble."

Social Doctrine

The social doctrine of the Ḥasidim assumes that the original and desirable situation is complete equality in respect of property and social status; inequality is the result of sin. However, they attributed moral significance to the unequal distribution of riches: wealth is given to the rich so that they may sustain the poor. In accordance with this, they were accustomed to give a tenth of their money to charity. Because of this outlook, the Ḥasidim were troubled by the problem of the criterion of uniformity – which does not draw any distinction between rich and poor – in the imposition of taxes and public obligations on individuals. They justified the prevalence of this system in public life through the fear that if individual considerations were taken into account, the "evil ones" would at-

tempt to evade their responsibilities. However, they required that “good ones” judge for themselves, after the general imposition, their ability and duty to see whether they were capable of making restitution to the poor for that which had unjustly been taken from them. R. Judah b. Samuel he-Ḥasid and his colleagues even advised a man to forgo the public honor of a *mitzvah* purchased in the synagogue if someone was prepared to acquire it for a higher price; the reward for this *mitzvah* would belong to him who had relinquished it if he secretly gave to the poor the sum he had previously paid in public for the *mitzvah*.

This outlook resulted in some tension between the circle of the Ḥasidim and the community leaders on several occasions. The writings of the Ḥasidim contain a critical account of these leaders and their deeds; clashes between the leaders of the Ḥasidim and the community are also mentioned. It is evident that the Ḥasidim disapproved of several principles of the leadership, while many others in the community objected to the attempt at practical application of the doctrines of the Ḥasidim within the communities.

To the Ḥasidim family life is the basis and framework of piety. Love between man and woman is legitimate as long as it does not lead to sin; they also considered that this love had a definite spiritual content. A man fasts and prays in order to win the woman he loves. In their writings, they gave considerable thought to matchmaking, believing that love and family descent were commendable and desirable factors and considerations. Family descent was also regarded as a basic element in the preservation of the proper way of life of the community. However, they considered money as a negative factor and consideration in matchmaking, although they did not ignore its importance in practice.

Along with their emotional depth and mysticism, the Ḥasidim also preserved the tradition of meditation and study. Their respect for books is profound: in the *Sefer Ḥasidim*, the “righteous” bewail the fact that their libraries are scattered after their deaths. They believed that it was commendable not to haggle over the price of a book.

The attitude of the Ḥasidim to the non-Jewish world is imbued with the bitterness of those who battle against a successful foe and suffer cruel oppression. But even here, in several instances, it is possible to recognize the influence of the spiritual environment of Christianity and current ideas.

The Ḥasidei Ashkenaz became influential in the Jewish world, while at the same time they adapted many and profound elements foreign to that world. They were marked by a refinement of feeling and simplicity of thought, and were woven together by bonds of personal honesty and responsibility before the Creator. Even at its height, the movement comprised only a small group within German Jewry, but as a result of the example of its leading personalities and its growth from the spiritual climate of the time, it succeeded in leaving its imprint. The testaments and customs of the leading Ḥasidim greatly influenced the general way of life, as well as specific details, conceptions of *halakhah*, and the versions of prayers.

From the second half of the 13th century onward they even exerted some influence over Spanish Jewry. The Jews of Poland-Lithuania of the late Middle Ages also pointed out with pride that “we are of the lineage of the Ḥasidei Ashkenaz,” although the atmosphere of their social and religious life had undergone many changes since the time of the Ḥasidim.

HASIDEI UMMOT HA-OLAM (Heb. הַסִּידֵי אֲמוֹת הָעוֹלָם, lit., “The pious ones of the nations of the world”), a rabbinic term denoting righteous gentiles. The concept is first found (albeit in a limited form) in the Midrash. The *Yalkut Shimoni*, for instance, explains that the verse “Let thy priests be clothed with righteousness...” (Ps. 132:9) refers to “the righteous of other nations who are priests to the Holy One in this world, like Antoninus and his type” (Yal. Isa. 429). The notion that the *hasidei ummot ha-olam* also merit a place in the world to come (a true sign of their worthiness) is found in the Tosefta, which teaches that they are as eligible as any member of the House of Israel to a share in the hereafter (Tosef., Sanh. 13:2). This dictum is twice codified by Maimonides (Yad, Teshuvah 3:5), who also defines the concept (Yad, Melakhim 8:11): “All who observe the Seven Commandments”—obligatory to the descendants of Noah (see Noachide *laws) are *hasidei ummot ha-olam*, provided that they are motivated by belief in the divine origin and the authenticity of Moses’ prophecy, and not by mere intellectual cogency. In the latter case they are to be considered only as “wise ones of the other nations” (*hakhmeihem*, according to some versions). Without specifically naming the righteous gentiles, Maimonides also equates “all human beings who ardently seek God... desire to worship Him, to know Him, and to walk uprightly in His ways...”, with priests and levites (Yad, Shemittah 13:13). The concept of *hasidei ummot ha-olam* was elaborated and embellished in medieval Jewish literature. It is mentioned by such philosophers as Hasdai *Crescas (*Or Adonai* no. 364:4) and *Abrabanel (introduction to commentary to Isaiah), R. Isaac *Arama states, “Every true pious gentile is equal to a ‘son of Israel’” (*Akedat Yizhak*, ed. Venice, ch. 60). The concept is mentioned in a legal context in the Shulḥan Arukh (YD 367:1, Be’er ha-Golah). The Zohar states that all gentiles who do not hate Israel, and who deal justly with the Jews, qualify as *hasidei ummot ha-olam* (Exodus, 268a).

Since World War II the term has been used for those non-Jews who helped Jews to escape the Nazi persecutions. (See *Righteous Among the Nations.)

[H. Elchanan Blumenthal]

HASIDIM (Heb. חַסִּדִּים, “pietists”), term used in rabbinic literature to designate those who maintained a higher standard in observing the religious and moral commandments. The various definitions in rabbinic literature of the *hasid*, and the more numerous accounts given there of them and their actions, clearly indicate that the image of the *hasid* was not identical at all times and in all circles. The sources reflect a broad spectrum of religious types, each distinguished in its own way, but common to all is a divergence from what was regarded as conventional behavior and the normal standard that was deemed praiseworthy, as is evident from the appellation *hasid*.

The precise period of the *hasidim ha-rishonim* (“first *hasidim*”) mentioned in rabbinic literature cannot be determined. Statements about them recount their virtues, which were utter devotion to fulfilling the *mitzvot* with a total disregard of any danger, extreme solicitude for human relations to the extent of transcending the strict requirements of the law, a fear of sin expressed by avoiding anything that might possibly lead astray or to the commission of sin, and by a constant readiness to undergo purification and to seek atonement for any doubtful sin by offering sacrifices. Before praying the early *hasidim* would meditate for an hour in order to direct their hearts to God (Ber. 5:1), nor did they interrupt their prayers even in the face of possible danger (Tosef., Ber. 3:20; TB, Ber. 32b). They refrained on a weekday from doing anything that involved the slightest apprehension of ultimately desecrating the Sabbath (Nid. 38a). They would bury thorns and broken glass deep in their fields, “placing them three handbreaths deep in the ground so that the plow might not displace them” and people stumble over them (Tosef., BK 2:6). The *tanna* R. Judah stated that “the early *hasidim* were eager to bring a sin offering,” but since they did not inadvertently commit sins “they made a free-will vow of naziriteship that they might bring a sin offering” (Tosef., Ned. 1:1; TB, Ned. 10a). They were accustomed to making a free-will offering of a suspensive guilt offering (*asham talui*), and this type of sacrifice “became known as the guilt-offering of the *hasidim*” (Ker. 6:3; Tosef., Ker. 4:4).

Akin to the *hasidim ha-rishonim* are the “*hasidim* and men of action” (*hasidim ve-anshei ma'aseh*). This phrase does not indicate two distinct groups of people – the *hasidim* were so called on account of the special good deeds which they performed and the miracles vouchsafed them by virtue of these good deeds. The only extant tradition states that during the “Rejoicing of the Water-drawing” (*simhat bet ha-sho'evah*) “they used to dance with lighted torches and sing songs and praises.” Some of them used to say, “Happy my youth, that has not put to shame my old age”; others, “Happy my old age, that has atoned for my youth” (Suk. 5:4; Tosef., Suk. 4:2). Outstanding representatives of the “*hasidim* and men of ac-

tion” were *Honi ha-Me'agel, his grandsons *Abba Hilkiyah and Hanan ha-Nehba (Ta'an. 23a), and *Hanina b. Dosa who lived at the end of the Second Temple period and whom the Mishnah regards as the last of the “men of action” (Sot. 9:15; the reading in TJ is “*hasidim*”). These men did not belong to the class of the halakhists, and there was even certain opposition to them (cf. Ta'an. 23a; Ber. 34b). Expressive of their deep faith and implicit belief in God's omnipotence are the deeds of the “*hasidim* and men of action” and the remarks that accompanied them on various occasions. Thus Hanina b. Dosa entertained no doubts when he said, “He who commanded oil to burn will also command vinegar to burn” (Ta'an 25a), for to them the miraculous was regarded as quite natural. When a poisonous lizard bit Hanina b. Dosa and died, he brought it on his shoulder to the *bet ha-midrash*, commenting simply: “See, my sons, it is not the lizard that kills, it is sin that kills” (Ber. 33a). The contents, motifs, and form of several stories related in the sources about “a certain *hasid*” (e.g., Tosef., Pe'ah 3:8; TJ, Shab. 15:3, 15a; BK 50b, 80a) indicate that the stories refer to these early ones (BK 103b). A difficulty is posed by the statement that “wherever the Talmud speaks of a certain *hasid* it refers either to Judah b. Bava or Judah b. Ilai” (Tem. 15b). However, this may mean no more than that these *tannaim* were the ones who reported such stories.

Despite the differences in time and conditions, the conduct and deeds of the *hasidim* and men of action bear a certain resemblance to the stories in the Bible about the earlier prophets, in that their influence derived not from the power of their exhortations but from the force of their deeds, courage, and sense of dedication. The rabbis gave expression to this in their homiletical interpretation of Genesis 2:5, “And there was not man to till the ground,” on which they commented: “There was no man to cultivate people's allegiance to God, such as Elijah and Honi ha-Me'agel” (Gen. R. 7; and see Theodor-Albeck, 117, n. 5).

The early *hasidim* created no organization or sect but were active as individuals, each in his own vicinity and time. Nor can they be identified with the *Essenes, as various scholars from the 19th century onward (Frankel, Geiger, Derenbourg, Kohler) have sought to do, for what is known about them does not accord with the descriptions of the Essenes in Philo, Josephus, Pliny, and others. Y. Baer has assigned to the “early *hasidim*” a central place in the history of Second Temple times, identifying them with the sages who flourished in the pre-Hasmonean period. Thus he contends that the Great Synagogue was a development of *hasidim* and sages, that its continuity was preserved by the *zugot, and that these *hasidim* are to be identified with the Essenes and with Philo's *Therapeutae. He believes that they were the first exponents of the *halakhah* as embedded in the earliest layers of the Mishnah, and that they laid the foundations of the entire structure of faith as reflected in the ascetic-spiritual-martyrological aspects of statements in the *aggadah*, Midrash, and Philo's writings. This account of them does not, however, accord with what is reported in rabbinic sources about the early *hasidim* and their activities. They

were not the creators of the ancient *halakhah*, nor the initiators of a philosophic and mystical teaching. The fact that they lived a simple and modest life with a minimum of material needs – “Ḥanina my son is satisfied with a *kav* of carobs from one Sabbath eve to another” (Ta’an. 24b) – does not constitute asceticism. Manifestations of abstinence among talmudic scholars are not remnants of outworn ancient ascetic teaching of the early *ḥasidim*, but are connected with the circumstances of a much later period. Moreover, the tannaitic period preserved a memory of them as being specifically distinguished and separated from the sages as a whole. Furthermore, the type of *ḥasid* of that period differed in outlook from the early *ḥasidim*. Thus *Hillel, who in his teachings incorporated ideas inherited from the early *ḥasidim*, is the author of the aphorism that “an ignorant person cannot be a *ḥasid*” (Avot 2:5). Nor could there be any piety without the study and knowledge of the Torah (see ARN¹ 12, 56; ARN² 27, 56). When Hillel died, they said of him: “Alas, the humble man, alas the *ḥasid* [is no more]” (Tosef., Sot. 13:4), his eminence in the Torah having been combined with humility (Lev. R. 1:5), and with implicit trust in the Almighty (Ber. 60a), and “all his actions were for the sake of Heaven.” But Hillel, whose personality comprised many other aspects as well, was not regarded as one of the early *ḥasidim*, and yet precisely he and those who followed in his footsteps represent the *ḥasid*-sage.

Generally the term *ḥasid* came later to refer to ideal and exemplary behavior in some sphere of life. A *ḥasid* is one who declares “what is mine is yours, and what is yours is yours” (Avot 5:10) and “he whom it is hard to provoke and easy to pacify” (*ibid.* 5:11). This and other definitions are far removed from the ways of the early *ḥasidim*. There was moreover a definite line of abstinence and of extreme asceticism which reached full maturity and became a characteristic feature of the *ḥasid* only in the amoraic period. This trend started after the destruction of the Second Temple “when the abstinent ones increased in Israel” (Tosef., Sot. 14:11), seeking in fasts a substitute for atonement, now denied to them with the cessation of sacrifices. At the beginning of the second century these expressions of abstinence vanished but reappeared to spread with greater force during the persecutions following the Bar Kokhba revolt. Ben Azzai, of whom it was said that “whoever sees Ben Azzai in a dream can hope to attain piety” (Ber. 57b), proclaimed extreme abstinence from all earthly pursuits, declaring, “Let the world be sustained by others” (Tosef., Yev. 8:4; Yev. 63b). A similar circumstance is reflected in R. Meir’s homiletical interpretation that “Adam was a great *ḥasid*” (see Er. 18b; Gen. R. 20, ed. Theodor-Albeck, 195). At the end of the tannaitic period there once again appear sages who, in their extreme demands, spontaneous reactions, and miraculous deeds, are reminiscent of the early *ḥasidim* and the men of action. Of such a type was *Phinehas b. Jair who defined and enumerated the steps leading to *ḥasidut* regarded by him as a stage in the attainment of the holy spirit (Sot. 9:15).

In the amoraic period extreme conclusions were drawn from Akiva’s principle that suffering is to be lovingly accepted

as the ultimate goal of anyone who serves God, the same interpretation being applied to man’s normal suffering – and not only to times of persecution – as a punishment for sins. But while a *ḥasid* therefore prays that he may suffer, not everyone is privileged to have such prayers answered, and accordingly some pious *amoraim*, instead of awaiting suffering, deliberately afflicted and mortified themselves. This was done by Ḥiyya b. Ashi (Kid. 81b), Zera (BM 85a), Mar b. Ravina (Pes. 68b). Not that all the *amoraim* agreed that self-denial entitled one to be called a *ḥasid* (Ta’an. 11b), Simeon b. Lakish declaring that “a scholar may not afflict himself by fasting because thereby he lessens his heavenly work” (*ibid.*). There were also *amoraim* called “*ḥasid*,” such as Ameram the Ḥasid (Kid. 81a; Git. 67b), Simeon the Ḥasid (Ber. 43b) and Mar Zutra (Ned. 7b), who acquired this title not on account of acts of mortification but of other virtues and deeds. The Ḥasid Huna declared anyone who has a fixed place for prayer to be a *ḥasid* (Ber. 6b), R. Alexandri that “whoever hears someone curse him and keeps silent is called a *ḥasid*” (Mid. Ps. to 16:11). A certain criticism was leveled against “the *ḥasidim* of Babylonia” – the *amoraim* Huna, Ḥisda, and Naḥman – in the Babylonian Talmud itself, which disparagingly contrasted their humility and courtesy with those of the Erez Israel sages, although the latter were known for their hardness (Meg. 28b; and see Ḥul. 122a). In principle, the *ḥasid* is one who does more than is required of him by the letter of the law, and *halakhot* which go beyond the strict legal requirements are termed by the *amoraim* “the Mishnah of the *ḥasidim*” (TJ, Ter. 8:10, 46b; or “the measure of the *ḥasidim*” (BM 52b). The popular test of a *ḥasid* was if his prayer for rain was answered (Ta’an. 23b). In the days of both the *tannaim* and the *amoraim* the sages were displeased with ignorant people who adopted the standards of the *ḥasid* (Shab. 121b; and see TJ, Av. Zar 2:3, 41a). Simeon b. Lakish even maintained that “if an ignorant man is a *ḥasid*, do not dwell in his vicinity” (Shab. 63a). On R. Joshua’s statement in the Mishnah that a foolish *ḥasid* is to be included among those who bring destruction upon the world, the two Talmuds quote instances of the *ḥasid* who, on account of his rigid observance of the *mitzvot* and of his abstinence, refrains from saving his fellow from death (TJ, Sot. 3:4, 19a; TB Sot., 21b).

Colloquially, the term “*ḥasid*” was used to designate a just, upright, and good person, this inexact usage being sometimes found also in literary sources: “it fits him to become just, *ḥasid*, upright, and faithful” (Avot 6:1); “even as the earlier righteous men were *ḥasidim*” (ARN¹ 8, 38; and see TJ, Sanh. 6:9, 23c, where *Simeon b. Shetaḥ and someone who flourished in the days of King David are referred to as *ḥasidim*). Inscriptions on Jewish epitaphs at Bet She’arim and in Italy contain, alongside δίκαιος (“righteous”), the term ὁσιος which is found in the Septuagint both for *ḥasid* and for *yashar*, an upright man.

[*Encyclopaedia Hebraica*]

HASIDIM, SEFER (Heb. סֵפֶר הַסִּידִים, “Book of the Pious”), major work in the field of ethics, produced by the Jews of medieval Germany. It comprises the ethical teachings of the *Hasidei Ashkenaz movement in the 12th and early 13th centuries. Two versions of the book have survived, one printed in Bologna and the other found in manuscript in Parma.

Tradition attributes the entire *Sefer Hasidim* to R. *Judah he-Hasid (the Pious) of Regensburg (d. 1217), the great teacher of Ashkenazi Hasidism. There is some proof, however, that the first two “*mahbarot*” (groups into which the book is divided) of the Parma version were written by Judah’s father, R. Samuel b. Kalonymus he-Hasid. This is substantiated by a study of their style. These two “*mahbarot*” discuss the fear of God and repentance. Some of the passages in *Sefer Hasidim* bear close similarity, in language and ideas, to the ethical introductions to the *Roke’ah*, the halakhic work by R. Eleazar of Worms. A number of scholars, therefore, conclude that R. Eleazar, R. Judah’s most prominent disciple, was the author of some of the passages in *Sefer Hasidim*, and probably its editor. It is equally possible, however, that R. Eleazar used portions of the *Sefer Hasidim* in his writings, as he did with other mystical works of his teacher. No conclusive proof is to be found as to what extent R. Eleazar participated in the authorship of the work; whereas there is a clear statement by R. Judah’s son, Moses, describing how R. Judah wrote two pages of *Sefer Hasidim* (Ms. Guenzburg 82, 64b) in the last week of his life. It can be concluded that *Sefer Hasidim* was written by R. Judah he-Hasid, and that some material was added to it from the writings of his father R. Samuel. A problem nevertheless exists regarding the origin and development of the work. Some of the earliest quotations from the *Sefer Hasidim* found in the Ashkenazi hasidic writings of the first half of the 13th century are in neither of the two known versions. It is possible that parts of the original *Sefer Hasidim* were lost early in the development of the two versions that survived.

Many of the passages in *Sefer Hasidim* are homiletic and exegetic in nature, explaining the ethical, and sometimes the philosophical or mystical, meanings of biblical verses or talmudic sayings. Most of the passages, however, discuss only ethics, and do so in direct connection with everyday life. *Sefer Hasidim* is the prime example of pragmatic and realistic ethical teachings in Jewish ethical literature; it takes into account the special characteristic of every case, the psychology of the person discussed, the historical and economic situation, and the person’s special relationship to other people. This approach renders *Sefer Hasidim* the most important historical source

for the study of everyday Jewish life in medieval Germany; it throws light especially on economic and religious relations of Jews with gentiles. The book has some descriptions of actual incidents, clarifying the situation in Germany during and after the disasters brought by the crusaders on Jews in Germany and France. Later Jewish ethical works influenced by *Sefer Hasidim* retained its strict and uncompromising adherence not only to the commandments, but to the entire body of religious ethics. The book instructs the pious man how to resist temptation and avoid any situation which may lead to sin. It teaches how to dress, to speak, to pray, to work, and to sleep; how to choose a wife and to select friends; how to harmonize between the necessities of existence and the requirements of religious life; which city is suitable for a pious person to live in and which is not; the right relationship between teacher and pupil; how to choose a righteous teacher; in what fields one may have commercial contact with gentiles and how to treat them, and many other subjects. No other Hebrew work in ethics covers so much ground and devotes such close attention to realistic detail. All later writers in the field of ethics in Ashkenazi literature used *Sefer Hasidim* as a basis; many of them added very little to what they had taken from it. After the 15th century, writers of *halakhah* used the work as an authority, sometimes the final authority, on the Jewish way of life.

The Bologna version was printed in 1538 and later in numerous other places (including Jerusalem 1957, edited by R. Margalioṭ). The Parma manuscript was published by J. Wistinetzky (Berlin, 1891–94) and in 1924 at Frankfurt, with an introduction by J. Freimann. The manuscripts found in a number of libraries are incomplete, each containing only a tenth of the whole work. Scholars who have compared the two versions reached the conclusion that the Parma one was the earlier and more reliable. It comprises more than 1,900 passages, whereas the Bologna version has less than 1,200. The Parma version has many duplications and inconsistencies, which were either omitted or harmonized in the Bologna edition. There the passages are better arranged and a system is apparent, whereas the Parma manuscript seems, in places, unedited and chaotic. The Bologna edition was probably edited and changed later by an editor who may have lived in France, probably before 1300. In the Parma version the transliterated vernacular words are in “German,” whereas in the Bologna edition they are in “French.”

The book is compiled from independent passages (*simanim*), arranged in groups (*mahbarot*), sometimes under titles describing the subject of the single group (*mahberet*), e.g., “witchcraft,” “books,” “prayer,” etc. Titles such as “This is the Book of the Just” (*Sefer Hasidim*), “*Sefer Hasidim* on the Book of Proverbs,” or “This also is *Sefer Hasidim*” are to be found in the Parma version as well. It is evident that the book was compiled from smaller collections which themselves were compiled from independent passages.

[Joseph Dan]

HASIDISM, a popular religious movement giving rise to a pattern of communal life and leadership as well as a particular social outlook which emerged in Judaism and Jewry in the second half of the 18th century. Ecstasy, mass enthusiasm, close-knit group cohesion, and charismatic leadership of one kind or another are the distinguishing socioreligious marks of Ḥasidism.

HISTORY

Beginnings and Development

The movement began in the extreme southeast of *Poland-Lithuania, and was shaped and conditioned by the tension prevailing in Jewish society in the difficult circumstances created by the breakup of Poland-Lithuania in the late 18th century and the three partitions of the country. This combined with the problems inherited as a result of both the *Chmielnicki massacres and the *Haidamack massacres. The framework of Jewish leadership was shaken, and the authority and methods of Jewish leaders were further undermined and questioned in the wake of the upheaval brought about by the false messianic and kabbalistic movements of *Shabbetai Zevi and Jacob *Frank, the shadow of the latter lying on Ḥasidism from its inception. As well as furnishing an ideological background, *Kabbalah, combined with popular traditions of ecstasy and mass enthusiasm, provided constructive elements for a new outlook in religious and social behavior. The earlier messianic movements and authoritarianism of the community leaders prevailing at that time, combined with the necessarily individualistic leadership of the opposition to such authoritarianism, coalesced to accustom the Jewish masses to charismatic as well as authoritative leadership. Mystic circles in Poland-Lithuania in the 18th century combined to create ḥasidic groups (*ḥavurot*) with a distinct pattern of life, mostly ascetic, sometimes with their own synagogue (for example, the so-called *kloyz* of the ascetic Ḥasidim of *Brody). These circles were noted for their special behavior during prayer, for their meticulous observance of the commandments, and also by their daily life. Their prayers were arranged for the most part according to the Sephardi version of Isaac *Luria. They were not looked upon favorably by the official institutions of the community because of the danger of separatism and because of their deviation from the accepted religious customs. Some among them secluded themselves, and spent their days fasting and undergoing self-mortification. Others were ecstatic – “serving the Lord with joy.” These groups were quite small and closed; their influence upon the general public was very small.

At first, *Israel b. Eliezer Ba'al Shem Tov (the Besht) appears to have been one of a number of leaders characterized

Main centers of Ḥasidism in Europe. Alternative names in Yiddish, Polish, Russian, and German are given in parentheses.

by ecstatic behavior and an anti-ascetic outlook. A popular healer who worked with magic formulas, amulets, and spells, he attracted to his court, first at Tolstoye and then at Medzibozh, people who came to be cured, to join him in ecstatic prayer, and to receive guidance from him. Israel also undertook journeys, spreading his influence as far as Lithuania. After his “revelation” in the 1730s, which marked the beginning of his public mission, he gradually became the leader of ḥasidic circles; drawn by his personality and visions, more and more people were attracted to the ḥasidic groups, first in Podolia, then in adjacent districts in southeast Poland-Lithuania. Unfortunately it is not possible to fix their number but more than 30 are known by name. Both Israel himself and his whole circle were deeply convinced of his supernatural powers and believed in his visions. Some who came within his orbit continued to oppose him to some degree (see *Abraham Gershon of Kutow, *Naḥman of Horodenko, and *Naḥman of Kosov); under his influence others turned away from ascetic talmudic scholarship to become the theoreticians and leaders of Ḥasidism and Israel’s disciples (see *Dov Baer of Mezhirech and *Jacob Joseph of Polonnoye). At his death (1760) Israel left, if not a closely knit group, then at least a highly admiring

and deeply convinced inner circle of disciples, surrounded by an outer fringe of former leaders of other ḥasidic groups who adhered to him while dissenting from his views to some extent, and a broad base of devout admirers in the townships and villages of southeast Poland-Lithuania. His outlook and vision attracted simple people as well as great talmudic scholars, established rabbis, and influential **maggidim*.

After a brief period of uncertainty (c. 1760–66), the leadership of the second generation of the movement passed to Dov Baer of Mezhirech (known as the great *maggid* of Mezhirech), although he was opposed by many of Israel’s most prominent disciples (e.g., Phinehas Shapiro of Korets and Jacob Joseph of Polonnoye), and many of this inner circle of his opponents withdrew from active leadership, a fact of great significance for the history of Ḥasidism. Nevertheless, Ḥasidism continued to propagate and spread. *Toledot Ya’akov Yosef* (1780), by Jacob Joseph of Polonnoye, embodied the first written theoretical formulation of Ḥasidism, transmitting many of the sayings, interpretations, and traditions of Israel Ba’al Shem Tov, and Jacob Joseph continued with these expositions in subsequent works. From Dov Baer’s court missionaries went forth who were successful in attracting many

scholars to Ḥasidism and sending them to the master at Mezhirech to absorb his teaching. Due to illness he did not often meet with his disciples. Unlike the Ba'al Shem Tov he was not a man of the people, and favored young scholars whose intellectual foundation did not dampen their ecstatic tendencies. From the new center at Volhynia, Ḥasidism thus spread northward into Belorussia and Lithuania and westward into Galicia and central Poland (see *Shneur Zalman of Lyady, *Levi Isaac of Berdichev, Aaron (the Great) of *Karlin, and Samuel Shmelke *Horowitz). At this time Ḥasidism even penetrated into the center of opposition to it, in Vilna. Many local Ḥasidic leaders became influential as communal leaders and local rabbis.

Ḥasidic groups went to Erez Israel creating a far-flung and influential center of Ḥasidic activity, notably in Tiberias. Israel Ba'al Shem Tov intended to go to Erez Israel, but for some unknown reason turned back in the middle of the journey. His brother-in-law Abraham Gershon of Kutow went there in 1747, settled in Hebron, and six years later moved to Jerusalem where he established contact with the mystical group "Beth El," which had been founded by the Yemenite kabbalist Sar Shalom *Sharabi. Other Ḥasidim went to Erez Israel, some settling in Tiberias. The newcomers made no notable impression on the Jews settled there. In 1777 a group of Ḥasidim of Ryzhin emigrated to the Holy Land under the leadership of *Menahem Mendel of Vitebsk. There were many who joined the caravan who were not members of the Ḥasidic camp, and it numbered at the time of its arrival in Erez Israel about 300 people. The newcomers settled in Safed but after a short while Menahem Mendel and some of his followers moved to Tiberias. Some remained in Safed, others moved to Peki'in, and so it was that the Ḥasidim spread over Jewish Galilee. Even in the very year of their immigration persecution against the Ḥasidim began in Galilee, for **Mitnaggedim* in Lithuania sent collections of "evidence" against the Ḥasidim after they had left. The Sephardim in Safed participated in the controversy and sided with the *Mitnaggedim*. In 1784 Menahem Mendel built a house for himself and in it there was a synagogue. The Ḥasidim sent emissaries to collect money on their behalf and laid the foundation in Ryzhin, Lithuania, and in other places for the permanent support of the Ḥasidim of the Galilee.

The basic pattern of Ḥasidic leadership and succession emerged in the third generation of the movement (c. 1773–1815). The spread and growth of Ḥasidism, both geographically and in numbers, the diversified and illustrious leadership of charismatic individuals who became heads of local centers, each developing his own style of teaching and interpretation of the Ḥasidic way of life, the breakup of former lines of communication and of cultural ties caused by the partitions of Poland-Lithuania (1772, 1793, and 1795), and last but not least the pressures brought to bear on Ḥasidic communities by the struggle against Ḥasidism – all these factors contributed to the decentralization of leadership of the Ḥasidic world and consequently to an ever-growing diversification of Ḥasidic thought

and variation in the Ḥasidic way of life. From this generation onward, there were always a number of contemporaneous leaders, each claiming the allegiance of his followers. In the main, both leadership and allegiance were handed down from generation to generation and thus arose both the dynasties of Ḥasidic *zaddikim* and the hereditary camps of their followers. At times the living charismatic force reasserted itself anew, as in the case of *Jacob Isaac ha-Ḥozeh ("the seer") of Lublin, who began to lead a community in the lifetime of his master, *Elimelech of Lyzhansk, without his blessing, or Jacob Isaac *Przysucha who led a community in the lifetime of his master, though without leaving him. Descent from the first leaders of Ḥasidism did not inevitably guarantee preeminence (see *Abraham b. Dov of Mezhirech) nor was it a defense against bitter attacks on unconventional leadership (see *Naḥman of Bratslav, the great-grandson of the Ba'al Shem Tov).

In this third generation, the new pattern of leadership assured the victory of Ḥasidism over its opponents and its increasing spread throughout Eastern Europe. With the inclusion of Galicia in the Austrian Empire, Ḥasidism also gained adherents among Hungarian Jewry (see *Teitelbaum family, *Mukachevo). At this time Ḥasidism also developed systematic schools of theology, such as the more intellectual and study-centered *Ḥabad Ḥasidism. Some Ḥasidic personalities, like Levi Isaac of Berdichev, were venerated by all Jewry as models of piety and love of humanity. The spiritual outlook and pattern of leadership of the practical *zaddik* (see below) also crystallized in this generation. Clearly, with such diversification in leadership and attitudes, from this generation on there was considerable and open tension between the various dynasties and courts of Ḥasidism, which sometimes flared up into bitter and prolonged conflicts (see, for example, *Naḥman of Bratslav, *Belz, *Gora Kalwaria (Gur), *Mukachevo, *Kotzk).

By the 1830s the main surge of the spread of Ḥasidism was over. From a persecuted sect it had become the way of life and leadership structure of the majority of Jews in the Ukraine, Galicia, and central Poland, and had sizable groups of followers in Belorussia-Lithuania and Hungary. With the great waves of emigration to the West from 1881, Ḥasidism was carried into Western Europe and especially to the United States. In the West its character was gradually, but ever more rapidly, diluted and its influence became more external and formal. With the abatement of the struggle against Ḥasidism by the end of its third generation and its acceptance as part of the Orthodox camp, Ḥasidism attained the distinction of being the first religious trend in Judaism since the days of the Second Temple which had a self-defined way of life and recognizable rite of worship, but yet was acknowledged (albeit somewhat grudgingly) by those who differed from it as a legitimate Jewish phenomenon.

Opposition to Ḥasidism

This recognition came only after a bitter struggle. However, only in Lithuania and possibly Ryzhin in the last 30 years of the

18th century did this struggle show clear signs of an organized movement. Except for this period, the opposition to Ḥasidism was confined to local controversies. The anti-ḥasidic camp was inspired by the ideas, fears, and personality of *Elijah b. Solomon Zalman, the Gaon of Vilna, who influenced the communal leadership to follow him in his opposition to Ḥasidism. To the Gaon, Ḥasidism's ecstasy, the visions seen and miracles wrought by its leaders, and its enthusiastic way of life were so many delusions, dangerous lies, and idolatrous worship of human beings. Ḥasidic stress on prayer seemed to him to overturn the Jewish scale of values in which study of the Torah and intellectual endeavor in this field were the main path to God. Aspersions were also cast on Ḥasidism because of the supposed hidden influence of the secret teachings of Shabbateanism and in particular of the almost contemporaneous Jacob Frank. Various ḥasidic changes in the knives for **shehitah*, and even more so in their change from the Ashkenazi to the Sephardi prayer rite, were seen as a challenge to Orthodoxy and a revolutionary rejection of traditional authority.

Writings of rabbis contemporaneous with the Besht reveal some suspicion and derision (Moses b. Jacob of Satanov in his *Mishmeret ha-Kodesh*, Solomon b. Moses *Chelm in his *Mirkevet ha-Mishneh*, and Ḥayyim ha-Kohen *Rapoport). In 1772 the first and second **herem* were proclaimed against the Ḥasidim, ḥasidic works were burned, and the first pamphlet against Ḥasidism, *Zemir Arizim ve-Ḥorvot Zurim*, was published. The Ḥasidim countered with a *herem* of their own and with burning the *Zemir Arizim*; at the same time Menahem Mendel of Vitebsk and Shneur Zalman of Lyady tried to approach Elijah of Vilna, but to no avail. In 1781 another harsh *herem* was proclaimed against the Ḥasidim: "They must leave our communities with their wives and children... and they should not be given a night's lodging; their *shehitah* is forbidden; it is forbidden to do business with them and to intermarry with them, or to assist at their burial."

The struggle sharpened during the 1780s and in particular in the 1790s. Not infrequently both Ḥasidim and their opponents denounced each other to the secular authorities (see *Avigdor b. Joseph Ḥayyim, *Shneur Zalman of Lyady), leading to arrests of various ḥasidic leaders and mutual calumnies of a grave nature. With the crystallization of the movement of the *Mitnaggedim* in Jewish Lithuania on the one hand and the appearance of the *Haskalah as an enemy common to all Orthodoxy on the other, the bitterness and ferocity of the struggle between Ḥasidism and its opponents abated, though basic differences remained on estimation of the Jewish scale of values, the place of the leadership of *zaddikim*, and the permissibility of certain ecstatic traits of the ḥasidic way of life; sometimes latent and sometimes active, these differences never wholly subsided. The code for the Jews which came out in Russia in 1804 permitted each Jewish sect to build special synagogues for itself and to choose special rabbis for itself, and thus legalization was given to the Ḥasidim in Russia. In the conflict between the *Mitnaggedim* and the Ḥasidim, it was the Ḥasidim who were eventually victorious.

The wars of Napoleon and especially his Russian campaign (1812) aroused a strong reaction among the Jewish community. The Jews of Poland and Russia were located on opposite sides of the front. These wars gave birth to many ḥasidic traditions, whose degree of trustworthiness is unknown. According to them *zaddikim* "participated" in the battles, giving their magical thrust for one side or the other. In addition to the legendary material, there are two tested facts. Levi Isaac of Berdichev was at the top of the list of Jewish contributors to the war effort of the Russians against Napoleon (1807). Shneur Zalman of Lyady ordered his Ḥasidim to spy on behalf of Russia, by explaining that "if Bonaparte wins, the wealthy among Israel would increase and the greatness of Israel would be raised, but they would leave and take the heart of Israel far from Father in Heaven" (*Beit Rabbi*).

Modern Period

In the late 19th century and up to World War I various ḥasidic dynasties and camps entered the political life of modern parties and states. Ḥasidim were the mainstay of *Agudat Israel (and see also *Maḥzike Hadas).

This change constituted a new stage in the development of the ḥasidic movement. Alongside the spiritual leaders a growing class of secular activists developed. The expansion of the ḥasidic camp and its penetration to positions of authority and public responsibility in the communities gained influence for the activists who recognized the authority of the *zaddik* and submitted to his leadership. Yet, sometimes the *zaddik* was only a tool in their skillful hands. Through all of this Ḥasidism finally lost more and more of its spiritual character; it was eventually cut off from its kabbalistic sources and turned instead to organization.

To be sure, this process did not take place without sharp battles, and even in later generations there were *zaddikim* who tried to raise anew the foundations of the Ḥasidism of the Ba'al Shem Tov. Generally, the institutionalization of Ḥasidism continued to a greater degree and notable changes took place in its content. Spontaneity gave way to routine forms.

In the second half of the 19th century the expansion of Ḥasidism stopped. With the greater – albeit moderate – tendencies toward the secularization of Jewish life, Ḥasidism shut itself in and passed from a position of attack to one of defense. The ideas of the Enlightenment, national and socialist ideals, and the Zionist movements shook the traditional Jewish way of life. Ḥasidism strongly opposed any change in the way of life and in spiritual values and alienated itself from the new forces which rose up among the Jews. The movement of *Hibbat Zion* was not welcomed in the courts of the *zaddikim*. At the end of the 19th and the beginning of the 20th centuries, the Jewish workers' movements were outside the ḥasidic camp. The numbers of Ḥasidim did not decline, but its power of attraction was failing. Only in one area did Ḥasidism produce something new: namely, a strong emphasis on Torah study. The first ḥasidic yeshivah was founded, apparently, by Abraham Bornstein of Sochaczew in the 1860s. At the end of the century the

zaddikim of Lubavitch founded yeshivot of “Tomekhei Temimim.” An attempt was also made to establish a yeshivah at Gur in Poland. It seems that by the study of Torah the ḥasidic leaders sought to immunize the ḥasidic youth from the “harmful influences” from outside. With this they repeated, in essence, the attempt of the *Mitnaggedim* of Lithuania, who were defending themselves from Ḥasidism.

In World War I (1914–18) and the first few years following it, the distribution of Ḥasidism changed. Many of the *zaddikim* who lived in the area of the battles were driven out of their towns or were forced to leave because of economic difficulties and threats to security. The vast majority of them escaped to the big cities and some of them remained there after the war. The collapse of the Austro-Hungarian Empire and the formation of new countries sometimes cut off masses of Ḥasidim from their leaders and they found themselves politically in Romania or Czechoslovakia. However, the most important and most tragic event in the lives of the Ḥasidim was the cutting off of the Russian branch, as the result of the Bolshevik regime.

The changes which took place in Jewish society in Eastern Europe in the period between the two World Wars (1918–39), and the problems which then faced the Jews, left their imprint upon the Ḥasidim of those countries. Ḥasidism continued in its conservatism. It was the main sector, and at times the only part of the Jewish population, which carefully maintained the tradition of dress, language, and education. The majority of Ḥasidim strongly opposed the Zionist movement and especially religious Zionism; they did not even encourage emigration to Erez Israel which was growing during those years, although they did not interfere with it. However, many Ḥasidim did join the waves of emigration to Erez Israel. Some of them founded Bene Berak, Kefar Ḥasidim, etc., and others settled in cities and concentrated themselves in special ḥasidic *minyanim*. They remained loyal to the *zaddikim* abroad, naming themselves after them, and maintained their connections.

During the Holocaust the ḥasidic centers of Eastern Europe were destroyed. The masses of Ḥasidim perished and, together with them, most of the ḥasidic leaders. *Zaddikim* who survived moved to Israel or went to America and established new ḥasidic centers there. Although many Ḥasidim were active in Erez Israel and were enthusiastic supporters of the foundation of the State of Israel (see e.g., *Kozienice, *Gur, Lubavitch-*Schneersohn), for some of them this was a very late development, while others retained a bitter and active hostility to everything modern in Jewish life and culture and in particular to the State of Israel (see Joel *Teitelbaum of Satmar).

In the 20th century the philosophy of Martin *Buber and A.J. *Heschel and the works of such writers as Isaac Leib *Peretz helped to mold neo-Ḥasidism, which consequently had a considerable influence on modern Jewish culture and youth.

[Avraham Rubinstein]

United States

Ḥasidim emigrated to the U.S. within the great Jewish migration of 1880–1925, where they generally formed part of the larger body of pious immigrant Jews while frequently establishing *shtiblekh* of their own. They seem to have been less successful than non-ḥasidic immigrant Jews in transmitting their style of religious life to the next generation, because, apart from their *zaddikim*, who had remained in Europe, they apparently felt a fatalistic impotence to perpetuate the Judaism they knew. After World War I several *zaddikim* went to the U.S., including the Twersky dynasties from the Ukraine and the Monastritsh *zaddik*. They gathered followers but lacked the means and the sectarian fervor to establish a ḥasidic movement. This enervation ended with the arrival in 1940 of R. Joseph Isaac *Schneersohn, the *Lubavicher rebbe*, and the general revival of Orthodox Judaism in the U.S. from that date. A network of yeshivot and religious institutions was founded under the control of R. Joseph Isaac Schneersohn and his successor R. Menahem Mendel Schneersohn, and the unprecedented practice was initiated by Lubavitch Ḥasidim of vigorously evangelizing Jews to return to Orthodoxy. The Lubavitch Ḥasidic movement achieved wide attention and exercised some influence on the U.S. Jewish community.

Following World War II, surviving Polish and especially Hungarian Ḥasidim came to the U.S., including the *zaddikim* of Satmar (R. Joel Teitelbaum), Klausenburger-Sandz (Halberstam), and Telem (R. Levi Isaac Greenwald). The Hungarian Ḥasidim exhibited no interest in winning over other Jews and remained self-segregated. A small community of Ḥasidim, followers of the *zaddik* of Skver, established the suburban township of New Square, Rockland County, near New York City. Most Hungarian Ḥasidim concentrated in a few neighborhoods of New York City, shunned the daily press and the mass media, and rejected secular education with grudging acceptance of the state's minimum standards. Most controversial was the relentless hostility toward the State of Israel, especially of Satmar Ḥasidim, who published tracts and conducted public demonstrations against it.

[Lloyd P. Gartner]

Women and Ḥasidism

Ḥasidism brought no significant changes in women's legal or social status, and in some ways intensified negative views of women already present in traditional rabbinic Judaism and Jewish mystical traditions. Ḥasidic lore preserves descriptions of daughters, mothers, and sisters of rabbinic leaders who were renowned for their rigorous standards of personal piety; a few are reputed to have become leaders of ḥasidic communities. Among them are Sarah Frankel *Sternberg (1838–1937), daughter of ḥasidic Rabbi Joshua Heschel Teomim Frankel and wife of the *zaddik* Ḥayyim Samuel Sternberg of Chenciny, a disciple of the famed Seer of Lublin. After her husband's death, she is said to have functioned successfully as a *rebbe* in Chenciny and was highly regarded for her piety and asceticism. Her daughter, Hannah Brakhah, the wife of R.

Elimelekh of Grodzinsk, was an active participant in the life of her husband's court. A. Rapoport-Albert has pointed out that there is little written documentation about most of these women. She suggests that their authority was based on their connection to revered male leaders, writing that "Hasidism did not evolve an ideology of female leadership, any more than it improved the position of women within the family or set out to educate them in Yiddish" (Rapoport-Albert, 501–2). It is most likely that these "holy women" achieved their reputations for leadership because many important ḥasidic leaders refused to meet with women who sought their spiritual presence and advice. Female supplicants were directed, instead, to the rebbe's female relatives.

The only apparent instance of a woman who crossed gender boundaries to achieve religious leadership in a ḥasidic sect on her own was the well-educated, pious, and wealthy Hannah Rochel Werbermacher (1806–1888?), known as "The Maid of *Ludomir." Werbermacher acquired a reputation for saintliness and miracle-working, attracting both men and women to her own *shetibl* (small prayerhouse), where she lectured from behind a closed door. Reaction from the male ḥasidic leaders of her region was uniformly negative, and pressure was successfully applied on Werbermacher to resume an appropriate female role through an arranged marriage. Although her marriage was unsuccessful, it had the intended result of ending her career as a religious leader in Poland. Around 1860, she immigrated to Erez Israel, where she again attracted a following of ḥasidic women and men, built her own study house, and presided at a variety of religious gatherings. After her death, her grave on the Mount of Olives became a site of devotion. While many other women throughout Jewish history have undoubtedly shared Werbermacher's piety and spiritual charisma, it was her inheritance and independent control of significant financial resources that allowed her to construct settings in which she could exercise these qualities despite male disapproval.

In its emphasis on mystical transcendence and male attendance on the *rebbe* during the Sabbath and festivals, to the exclusion of the family unit, Ḥasidism contributed significantly to the breakdown of the Jewish social life in 19th-century Eastern Europe. Similar tensions between family responsibility and devotion to Torah were also present among the non-ḥasidic learned elite of this milieu, where wives tended to assume the responsibility for supporting their families while husbands were studying away from home. The sexual ascetism of the homosocial ḥasidic courts and rabbinic yeshivot of the 18th and 19th centuries offered young men a welcome withdrawal from family tensions, economic struggles, and the threats of modernity. Similarly, the negative attitudes toward human sexuality endemic in these environments were often openly misogynistic, incorporating many demonic images of women from rabbinic, kabbalistic, and Jewish folklore traditions.

[Judith R. Baskin (2nd ed.)]

AFTER WORLD WAR II. The displacement of surviving ḥasidic communities after the genocide of the Holocaust created mul-

tipale diasporas with new roles and opportunities for women. While numerous ḥasidic dynasties reestablished yeshivot and religious governance in the new State of Israel, small communities also resettled and flourished throughout the English-speaking world, in South Africa, Australia, England, and Canada. Since the United States had already offered safe harbor to the Lubavitcher Rebbe in the prewar 1930s, assuring the centralization of the Chabad outreach wing of Ḥasidism in New York, Lubavitcher Chabad outposts expanded rapidly across North America. This movement offered a greatly expanded role for women and girls, due to the sixth and seventh Rebbes' emphasis on female education and missionary work.

Women served as important agents of faith and family life in the transmission of ḥasidic belief to new generations of followers, the *ba'alei teshuvah* of the postwar era. Where the ultra-Orthodox Satmar and Belz communities limited women's education to the minimum required by state law and, in the case of the Satmar communities of Monsey and Kiryas Joel, actively sought public accommodation of gender segregation customs, the Lubavitcher movement aggressively expanded female activism beyond the neighborhood sphere. This activism dovetailed with the emerging and secular women's movement in the U.S., transforming traditional ḥasidic women into advocates for a return to religious observance in an era of shifting gender roles. The proliferation of Chabad houses and outreach workers adjacent to secular college campuses made Lubavitcher women the most visible representatives of Ḥasidism for students curious about Jewish observance, while the number of Crown Heights women sent to lonely Chabad outposts served as a reminder of the Rebbe's trust in their religious values.

Lubavitcher educational institutions offering both English- and Yiddish-language studies for women grew far beyond the first Bais Rivkah girls schools of the 1940s to include a teacher-training seminary, an adult-education school called Machon Chana, and the *ba'al teshuvah* seminary Bais Chana in Minneapolis. Beginning in the mid-1960s, under the auspices of the N'shei Chabad women's organization, regular publications such as *Di Yiddishe Heim* and books on women's issues were produced from Crown Heights and circulated globally, permitting a number of women to attain public roles as authors and editors. Biannual conferences also brought together female activists, who enjoyed audiences with the Rebbe until his passing in 1994. Much of the focus in Lubavitcher women's campaigns involved urging more assimilated Jewish women to light candles and to observe the laws of family purity; attaining a greater level of observance by all Jews is thought to hasten the arrival of the Messiah.

[Bonnie J. Morris (2nd ed.)]

Ḥasidic Way of Life

LEADERSHIP PATTERNS. The personality and activities of Israel Ba'al Shem Tov, and the theories and traditions transmitted in his name and developed and augmented by his followers and disciples, shaped the pattern of leadership in Ḥasidism:

The leader was the *zaddik*, whose charismatic personality made him the paramount authority in the community of his followers. Tensions already evident at the time Dov Baer of Mezhirech assumed the leadership of the Ḥasidim, and the splintering of the leadership after his death, caused variations and sometimes deviations in this pattern, but in its essentials it remained unchanged.

All ḥasidic leadership is characterized by an extraordinary magnetism, given expression through various activities and symbols. The *zaddik* is believed in, devoutly admired, and obediently followed. From the end of the third generation of Ḥasidism, a dynastic style of leadership often developed, with generation after generation of a certain dynasty of *zaddikim* following in the main its own specific interpretation of the ḥasidic way of life and communal cohesion (e.g., the more intellectual and theoretical pattern with the Lubavitch-Schneersohn dynasty at the head of the Chabad wing; the enthusiastic and revolutionary teachings, style of leadership, and communal pattern of the Kotsk dynasty).

Laying differing stress on the various elements of ḥasidic belief and life-style, the *zaddik* provides the spiritual illumination for the individual Ḥasid and the ḥasidic community from his own all-pervasive radiance, attained through his mystic union with God. This union and the ensuing enrichment of his soul are used for the sake of the people, to lead them lovingly to their creator. The *zaddik* is a mystic who employs his power within the social community and for its sake. A wonder-healer and miracleworker, in the eyes of his followers he is a combination of confessor, moral instructor, and practical adviser. Also a theoretical teacher and exegetical preacher, with a style of preaching peculiar to *zaddikim*, he expounds his ḥasidic *torah* (Hebrew for the teaching of the *zaddikim*) at his table (in Ḥasidic parlance *der tish*) surrounded by his followers, generally during the third meal on the Sabbath (*se'udah shelishit*). For the individual Ḥasid, joining the court of his *zaddik* is both a pilgrimage and a revitalizing unification with the brotherhood gathered at the court, united around and through the *zaddik*. The Ḥasid journeyed to his *zaddik's* court at least for the High Holidays (although this practice later weakened) to seek his blessing, which was also entreated from afar. He submitted a written account of his problems (known as a *kvitl*), usually accompanying this with a monetary contribution (*pidyon*, short for *pidyon nefesh*, "redemption of the soul"). The money went toward the upkeep of the *zaddik* and his court (who were not dependent on or supported by any single community) and was also used to provide for the needs of the poor in the ḥasidic community. Serving as intermediaries between the *zaddik* and the Ḥasidim were the *gabbai* (the administrative head of the court) or the *mesham-mesh* (the *zaddik's* chamberlain), who from the first generation onward mediated between the *zaddik* and the Ḥasid in matters of *kvitl* or *pidyon*. In Ḥasidism the *zaddik* is conceived of as the ladder between heaven and earth, his mystic contemplation linking him with the Divinity, and his concern for the people and loving leadership tying him to earth. Hence his absolute

authority, as well as the belief of most ḥasidic dynasties that the *zaddik* must dwell in visible affluence.

THE PRAYER RITE AND OTHER CUSTOMS. From its beginnings Ḥasidism developed its own prayer rite. In fact, the ḥasidic version of the prayers, though called *Sefarad*, is not identical with the Sephardi rite, nor with the Ashkenazi, but is a combination of (1) the Polish Ashkenazi rite; (2) changes made by Isaac Luria; and (3) the Sephardi rite of Palestine upon which Luria based his changes.

The result is a patchwork and was a source of great confusion. The ḥasidic version itself is not uniform, and there are many differences between the various ḥasidic prayer books. The first ḥasidic prayer book was that of Shneur Zalman of Lyady (Shklov, 1803). The main differences in ḥasidic prayer are: the recitation of the collection of verses beginning with 1 Chronicles 16:8 ("*hodu*") before **Pesukei de-Zimra*; in the *Kedushah*, they recite *Nakdishkha* in *Shaharit* and in *Minhah*, *Keter* in *Musaf* (see **Kedushah*). Prayer for the Ḥasid is ecstatic and loud, involving song, body movements, shaking, and clapping.

In the first generations of Ḥasidism, while it was still a minority belief in most communities and under bitter attack, the Ḥasidim opened their own small prayer houses, called *shtiblekh*, a name which continued to be used. The separateness of the ḥasidic community was aggravated by their insistence on a specific type of highly sharpened (*geshlifene*) *shehitah* knife, a demand which both necessitated and permitted a separate ḥasidic *shehitah* with its own income and organization. The reason for this custom has not been sufficiently explained.

As by the mid-19th century Ḥasidism prevailed in most communities of the Ukraine, Volhynia, central Poland, Galicia, and in many in Hungary and Belorussia, the pattern of leadership based on the *zaddik* changed the character of local community leadership to a considerable extent. Local leaders and rabbis became subject to the authority of the *zaddik* whose followers were the most influential ḥasidic group in a given community.

The image and memory of past and present *zaddikim* are shaped and kept alive through the ḥasidic tale (*ma'aseh*), which is recounted as an act of homage to the living link between the Ḥasid and his God. As well as embodying the sayings of such teachers as Israel Ba'al Shem Tov, Levi Isaac of Berdichev, Nahman of Bratslav, and Menahem Mendel of Kotsk, these tales reflect popular philosophy to a great extent.

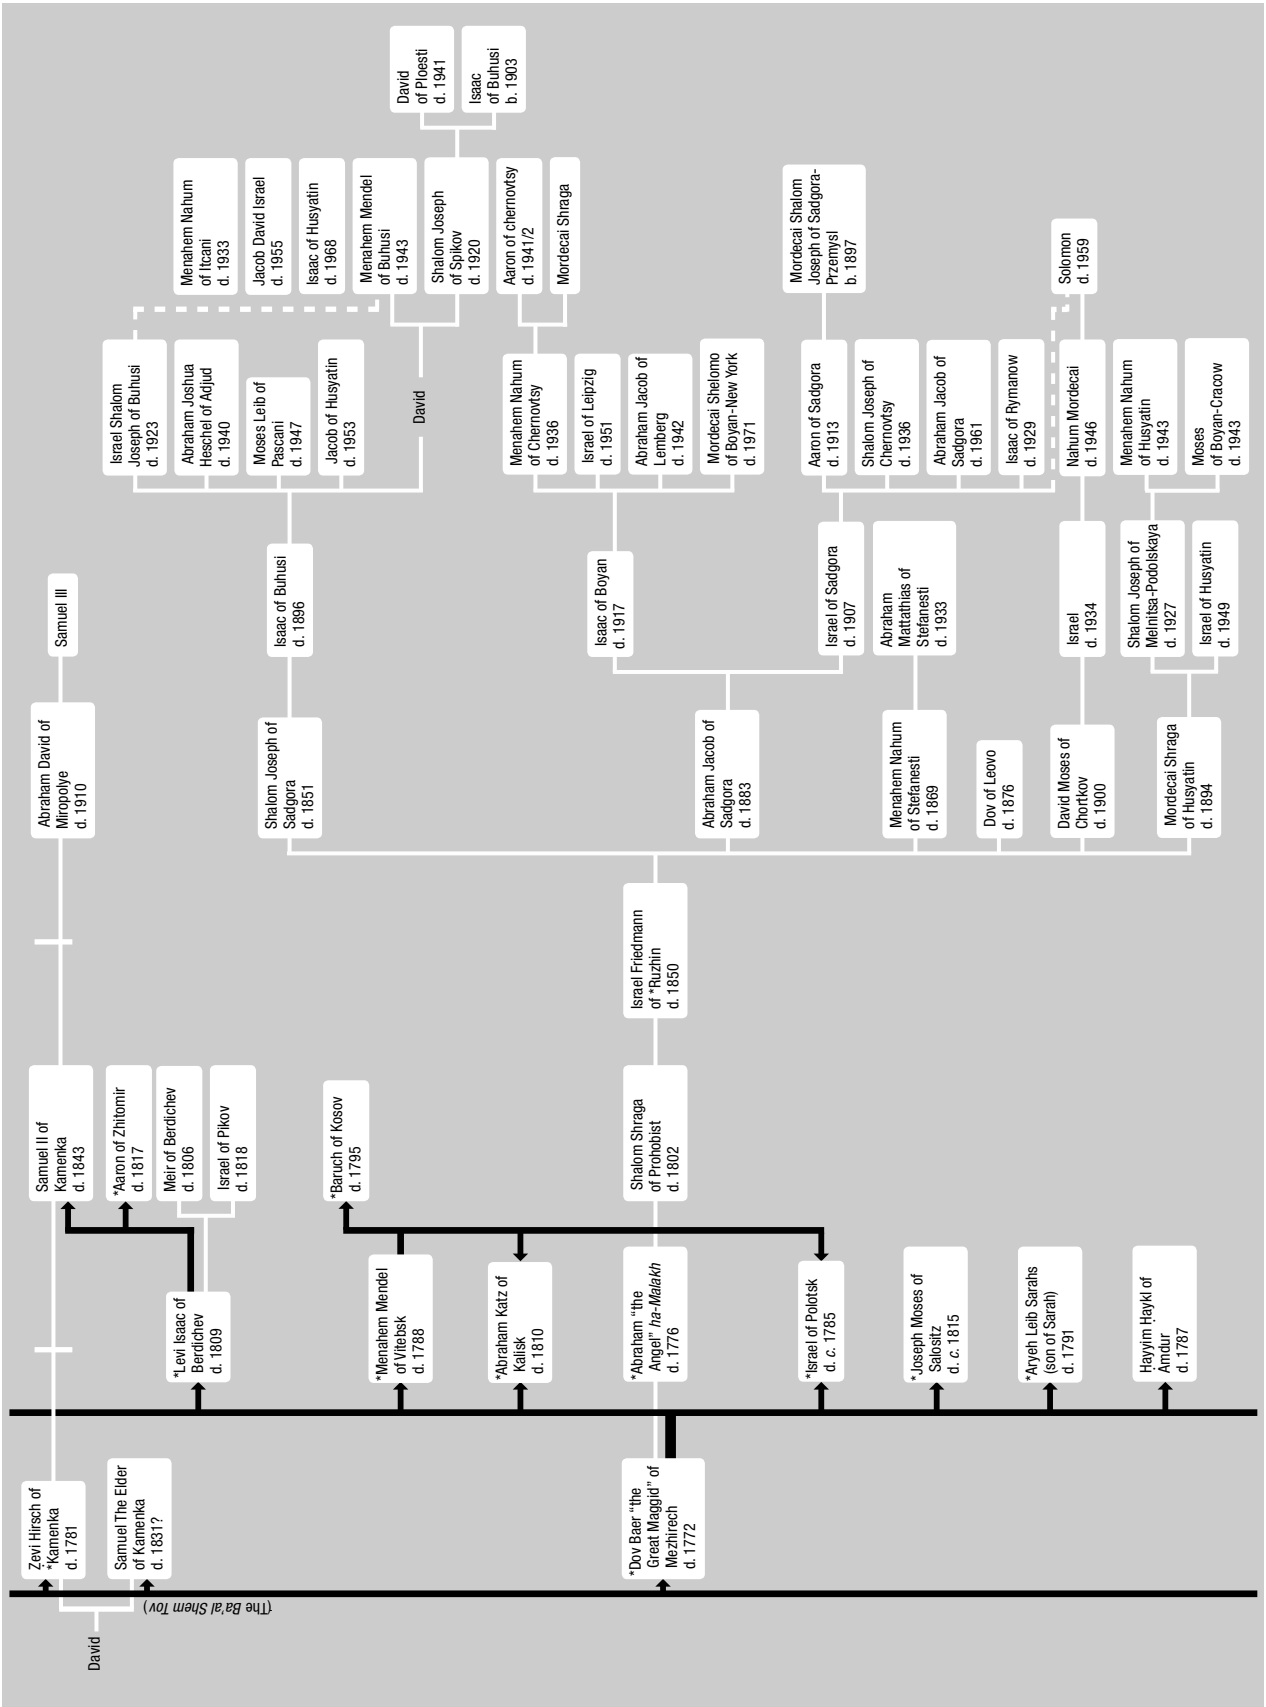

The insistence of Ḥasidism from its inception on joy (*simhah*) as the prime factor in the good Jewish life and the essential element of divine worship led to the importance of the ḥasidic dance and song as expressions of piety and group cohesion, whether in the *shtiblekh* in the individual community or when united together at the *zaddik's* court and table. Ḥasidic influence was spread, but was also further splintered, by the widespread custom of giving support and something approaching the status of *zaddik* to descendants of a dynasty

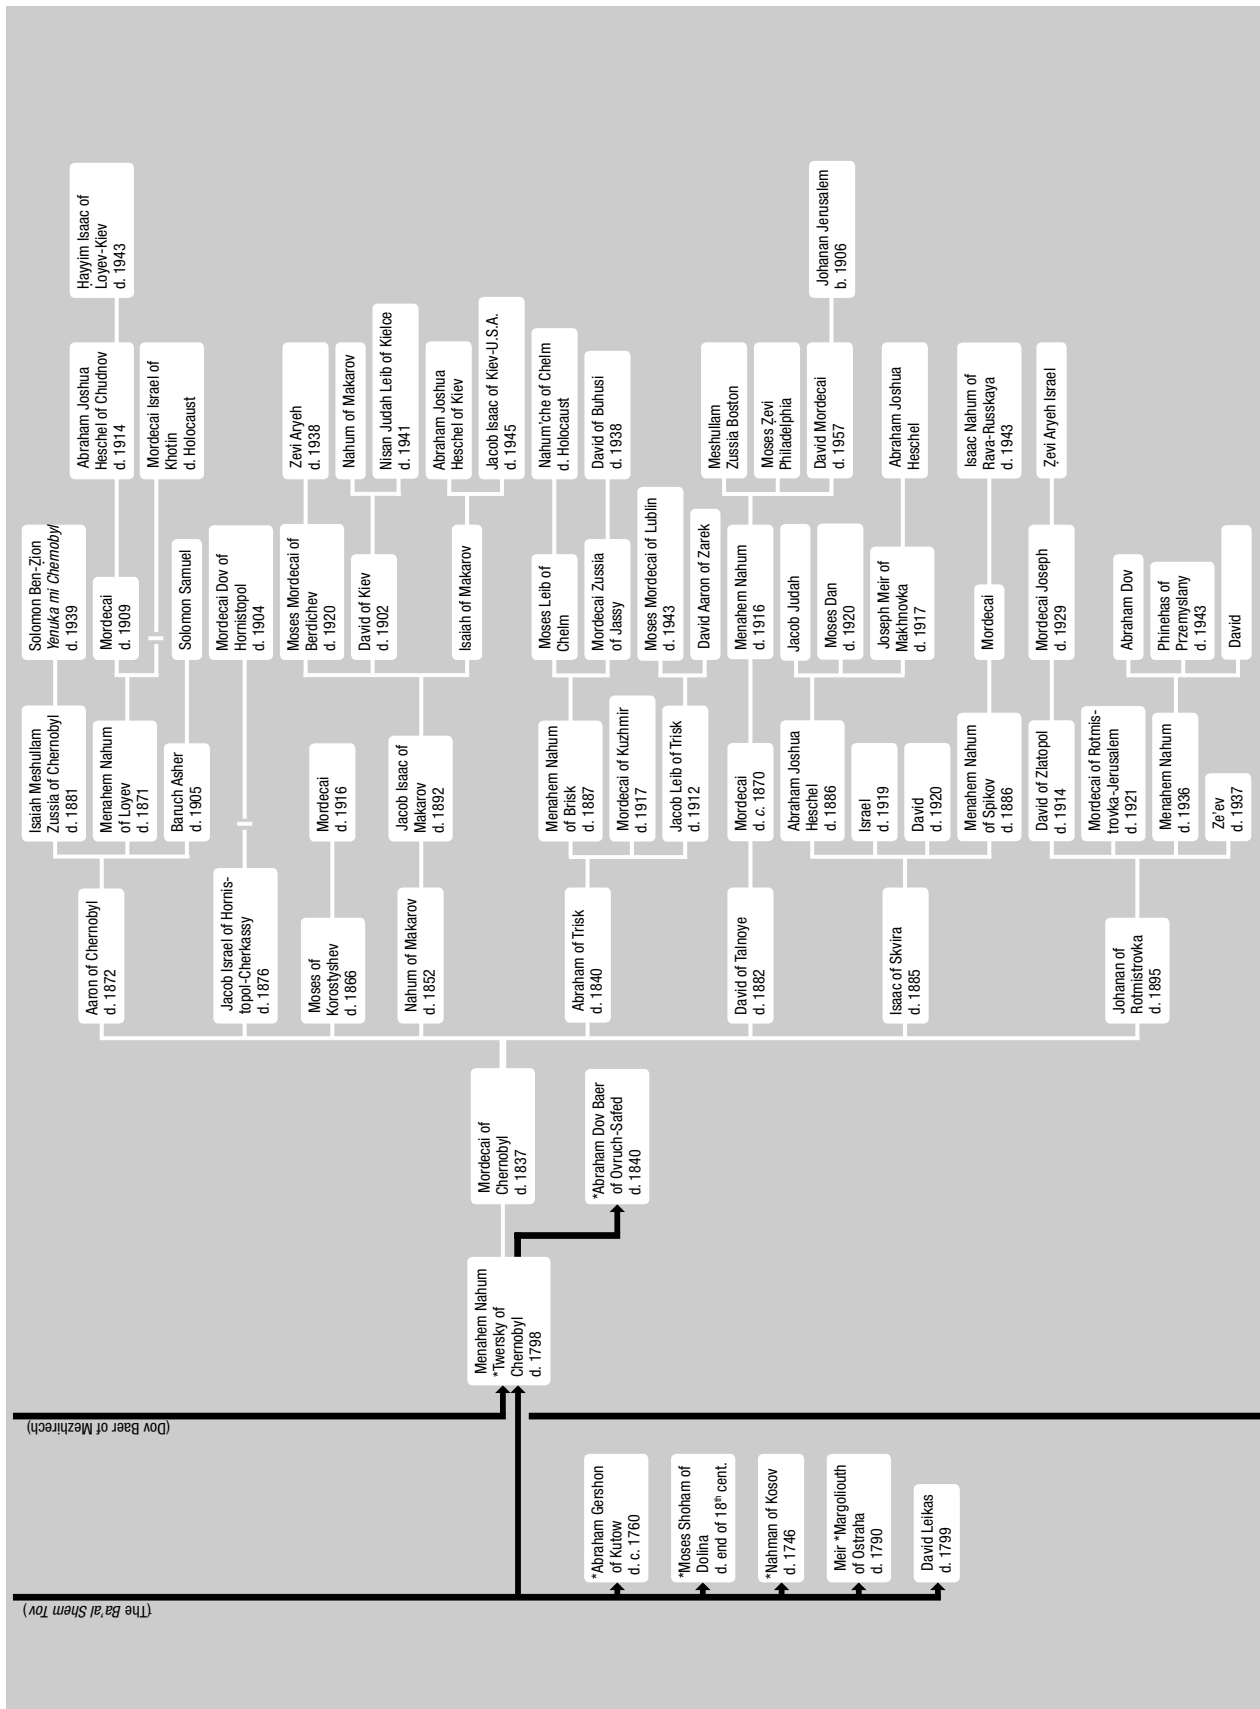

HASIDIM (chart of the relationships of the leading hasidic dynasties, from the Ba'al Shem Tov to the 20th century)

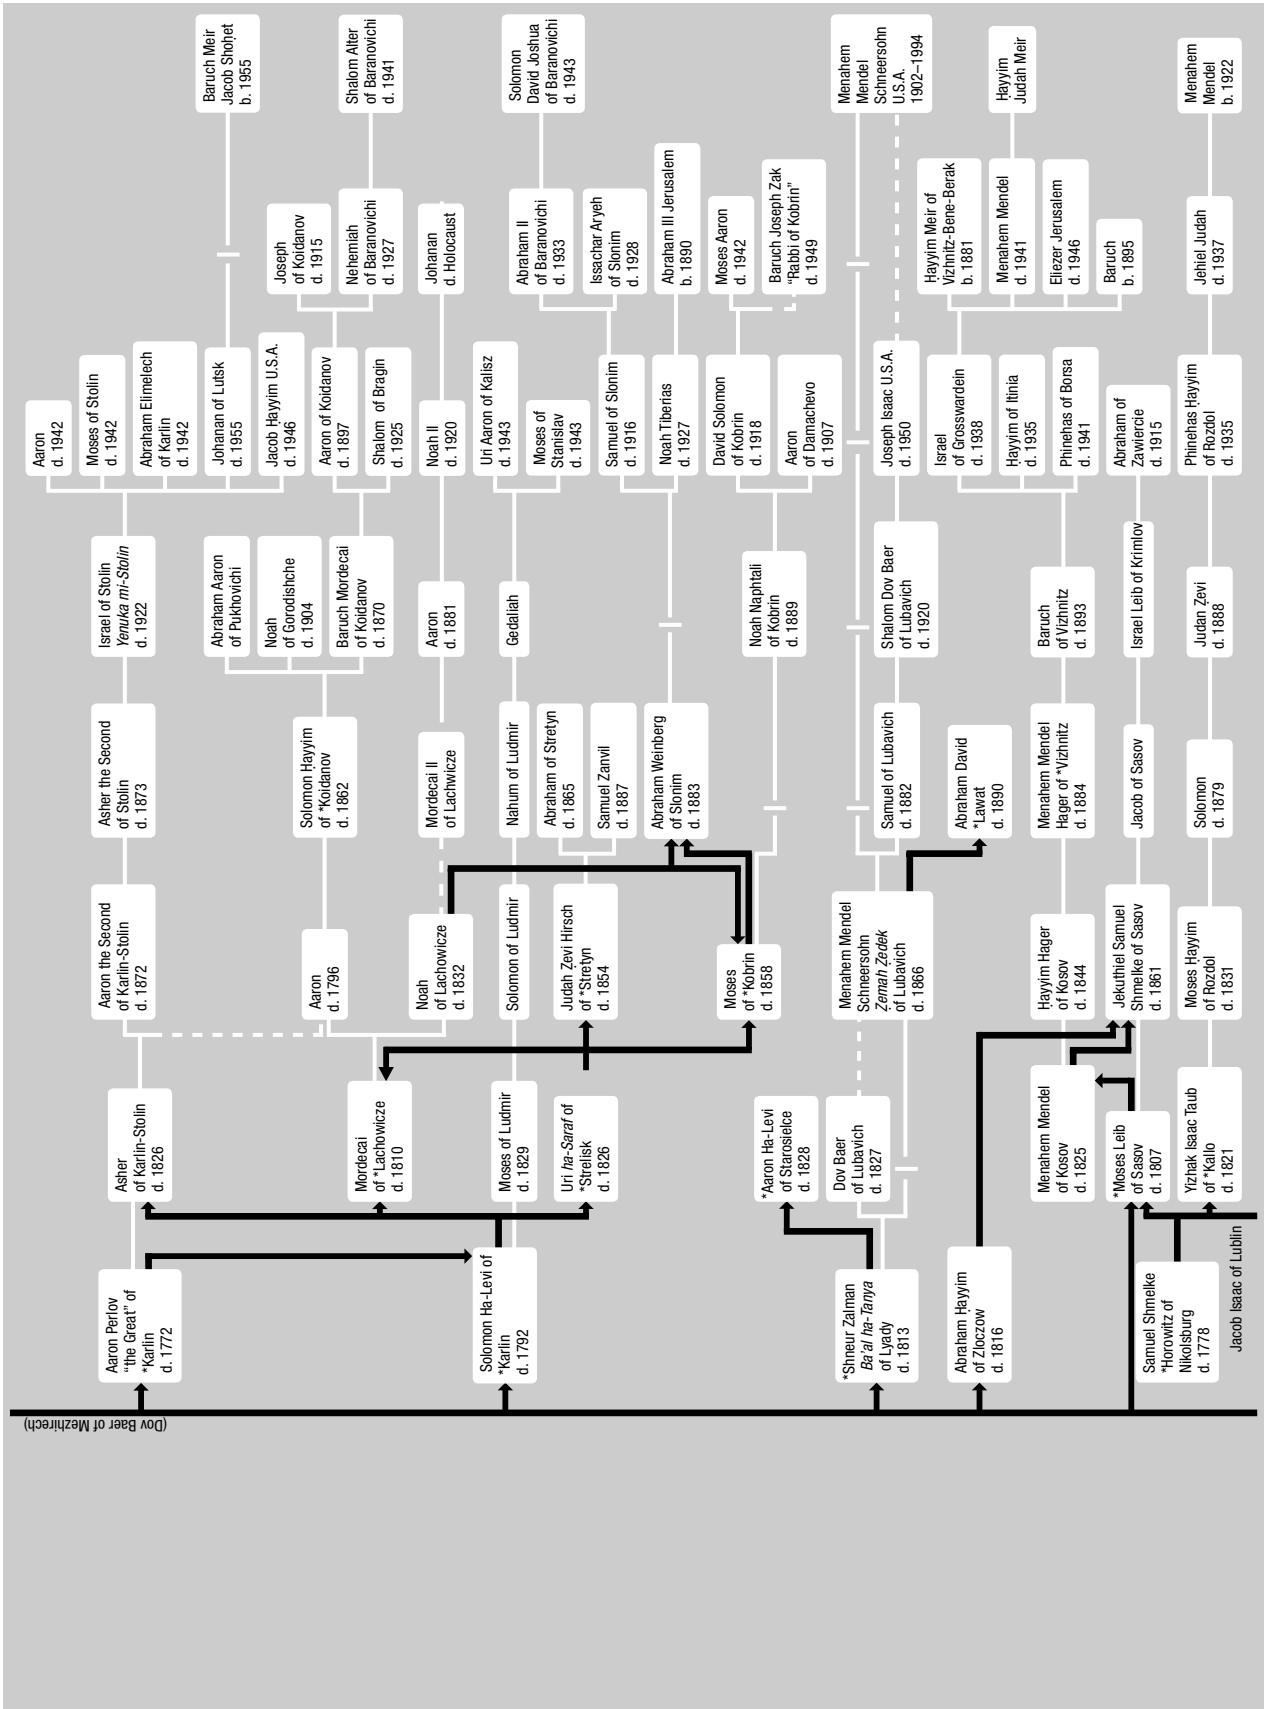

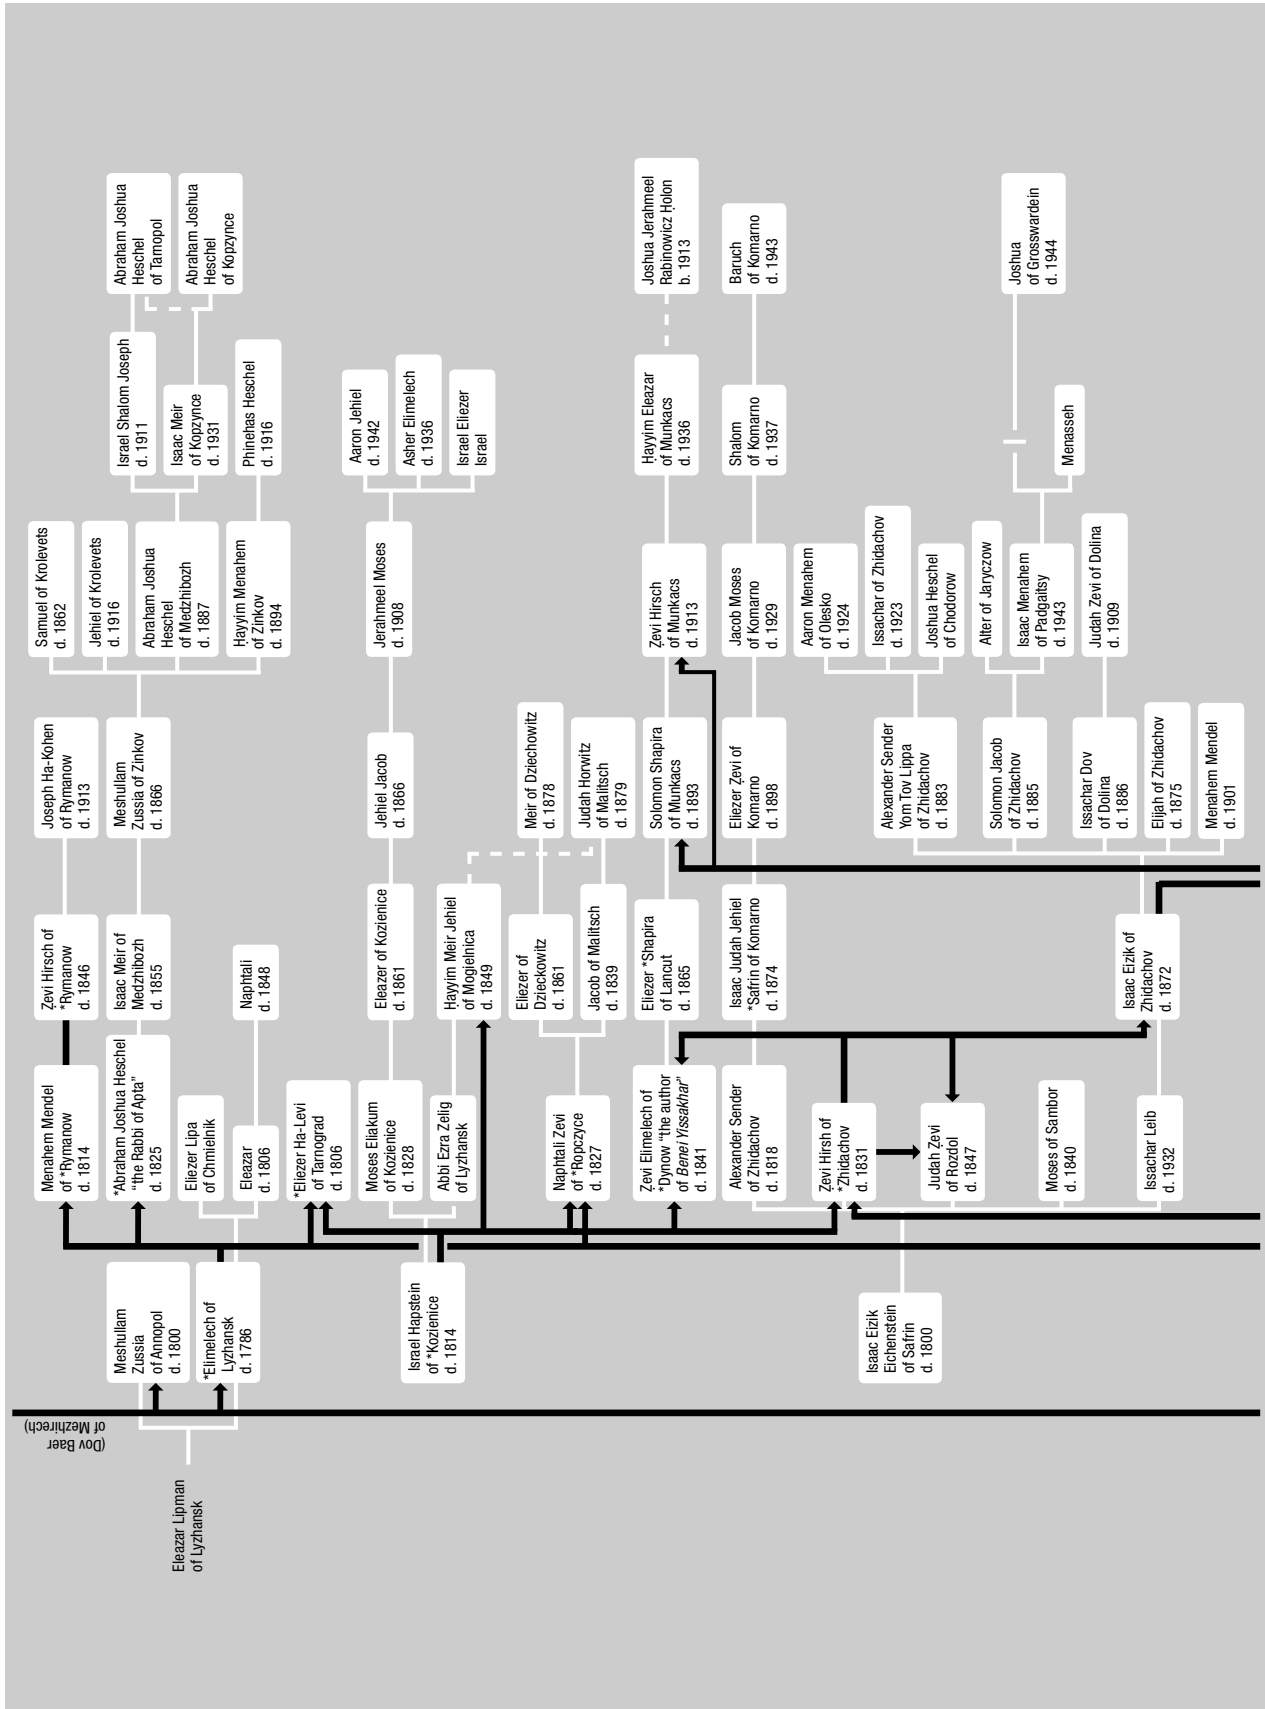

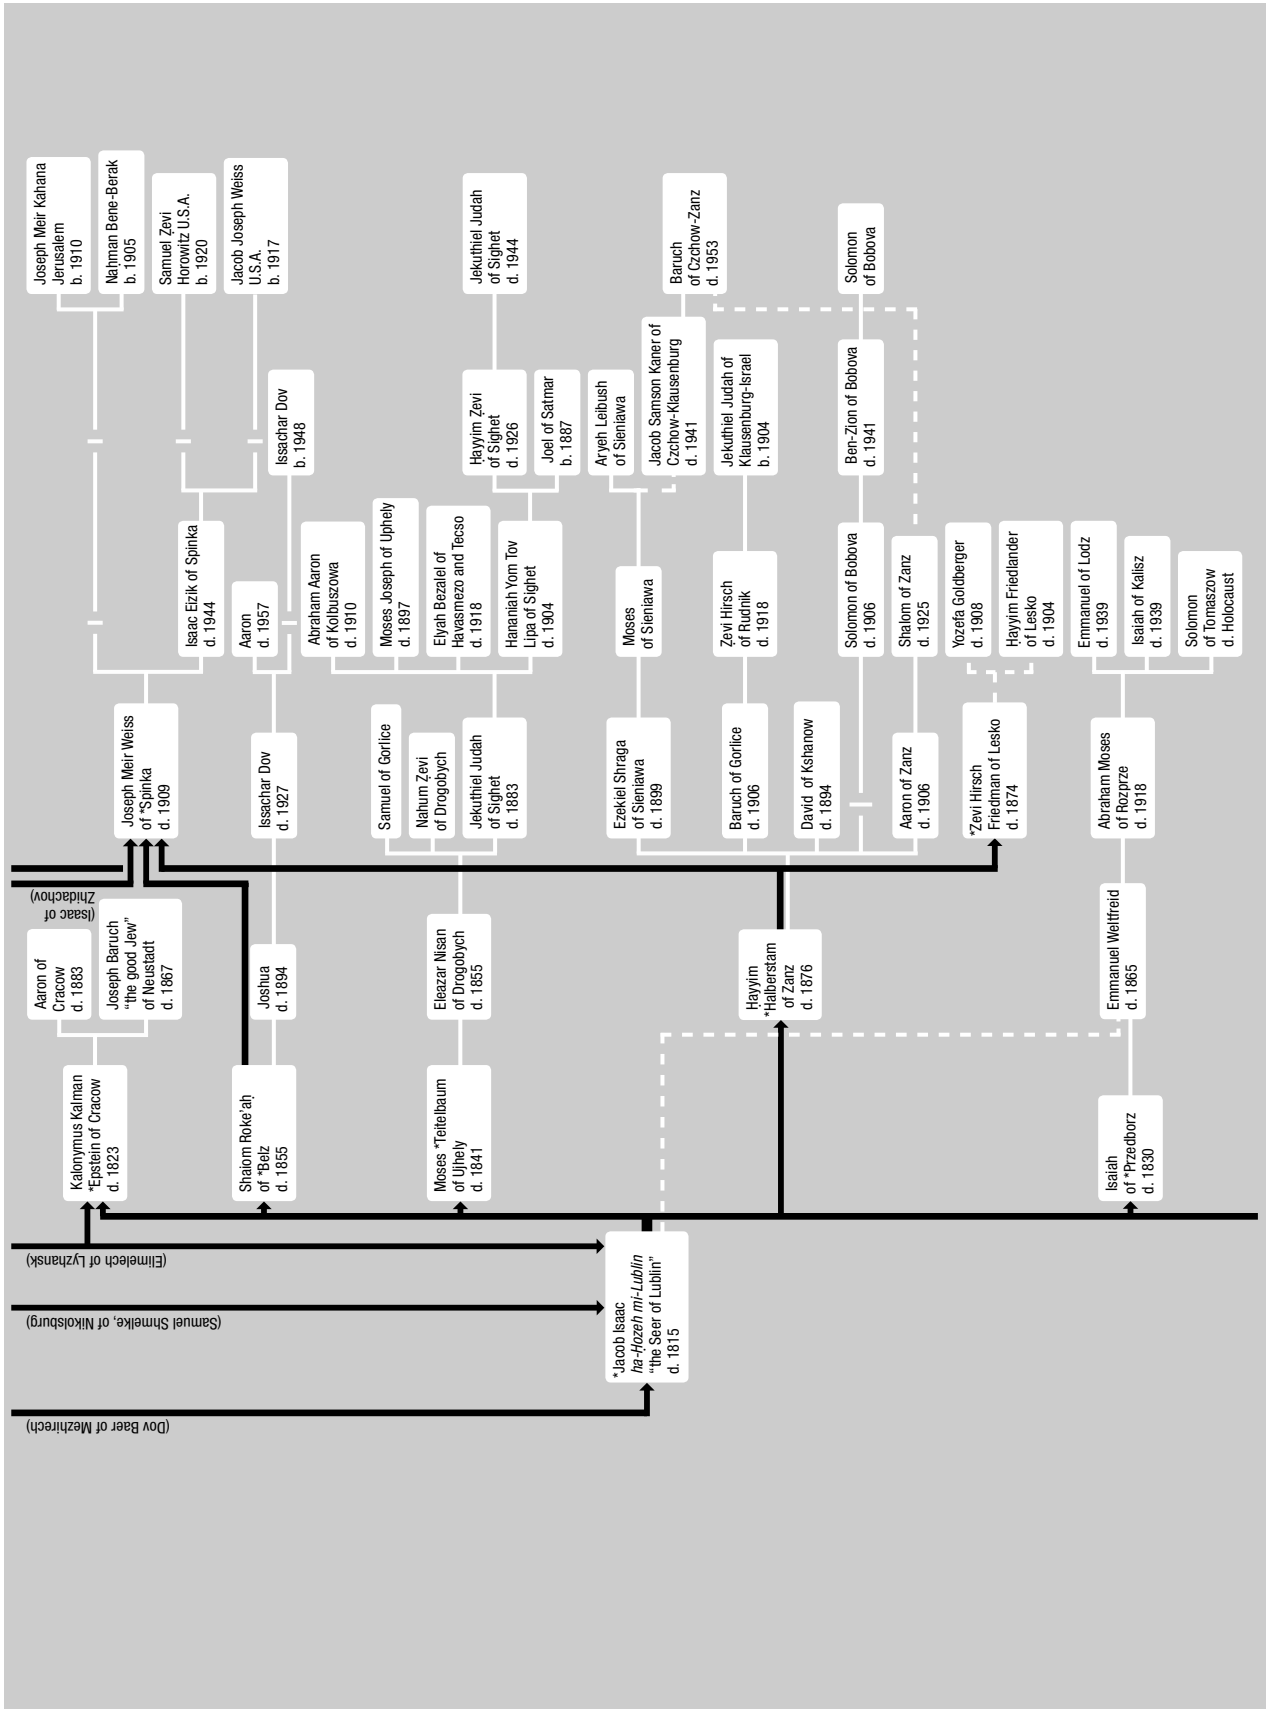

HASIDIM (continued)

who did not become *zaddikim* (the so-called *einiklakh*, “the grandsons”). Various other specific ḥasidic customs (e.g., the rushing to the *zaddik*’s table to obtain a portion of the remnants (*shirayim*) of the food he had touched) were contributing factors to the closeness of the ḥasidic group. The ecstatic prayer of the *zaddik* – mostly when reciting the Song of Songs or the *Lekhu Nerannenah* prayer on the entry of the Sabbath – which figures frequently in ḥasidic tales, was a powerful element in holding the group together.

The elements of ḥasidic song, dance, and tale later became influential in modern Jewish youth movements and helped to shape neo-Ḥasidism. From the end of World War I, the Ḥabad-Lubavitch movement led the underground struggle to maintain Jewish religious life and culture under communist regimes (see *Russia). Some ḥasidic dynasties took part in the creation of agricultural settlements in Israel (*Kefar Ḥasidim, *Kefar Ḥabad). In recent times, groups of young Jews in the United States have demonstrated their allegiance to protest movements through turning to ḥasidic modes of expression to embody their enthusiasm, specific cohesion, and adherence to Jewish identity.

[Avraham Rubinstein]

BASIC IDEAS OF ḤASIDISM

Creator and Universe

While it is true that many of the basic ideas of Ḥasidism are grounded in earlier Jewish sources, the Ḥasidim did produce much that was new if only by emphasis. With few exceptions, ḥasidic ideas are not presented systematically in the ḥasidic writings, but an examination of these writings reveals certain patterns common to all the ḥasidic masters. Central to ḥasidic thought is an elaboration of the idea, found in the Lurianic Kabbalah, that God “withdrew from Himself into Himself” in order to leave the primordial “empty space” into which the finite world could eventually emerge after a long process of emanations. This “withdrawal” (*zimzum*), according to Chabad thought especially and to a considerable degree also to ḥasidic thought in general, does not really take place but only appears to do so. The infinite divine light is progressively screened so as not to engulf all in its tremendous glory so that creatures can appear to enjoy an independent existence. The whole universe is, then, a “garment” of God, emerging from Him “like the snail whose shell is formed of itself.”

In a parable attributed to the Ba’al Shem Tov a mighty king sits on his throne, situated in the center of a huge palace with many halls, all of them filled with gold, silver, and precious stones. Those servants of the king who are far more interested in acquiring wealth than in gazing at the king’s splendor spend all their time, when they are admitted to the palace, in the outer halls, gathering the treasures they find there. So engrossed are they in this that they never see the countenance of the king. But the wise servants, refusing to be distracted by the treasures in the halls, press on until they come to the king on his throne in the center of the palace. To their astonishment, once they reach the king’s presence, they

discover that the palace, its halls, and their treasures are really only an illusion, created by the king’s magical powers. In the same way God hides Himself in the “garments” and “barriers” of the cosmos and the “upper worlds.” When man recognizes that this is so, when he acknowledges that all is created out of God’s essence and that, in reality, there are no barriers between man and his God, “all the workers of iniquity” are dispersed (*Keter Shem Tov*, I, 5a–b). In its context this parable refers to prayer. Man should persist in his devotions and refuse to be distracted by extraneous thoughts. But the idea that all is in God is clearly implied. The verse: “Know this day, and lay it to thy heart, that the Lord He is God in heaven above and in the earth beneath; there is none else” (Deut. 4:39) is read as: “There is nothing else.” In reality there is nothing but God, for otherwise the world would be “separate” from God and this would imply limitation in Him (*Keter Shem Tov*, I, 8b).

The ḥasidic leader R. Menahem Mendel of Lubavich observes (*Derekh Mitzvotekha* (1911), 123) that the disciples of the Ba’al Shem Tov gave the “very profound” turn to the doctrine of the oneness of God so that it means not only that He is unique, as the medieval thinkers said, but that He is all that is: “That there is no reality in created things. This is to say that in truth all creatures are not in the category of ‘something’ [*yesh*] or a ‘thing’ [*davar*] as we see them with our eyes. For this is only from our point of view since we cannot perceive the divine vitality. But from the point of view of the divine vitality which sustains us we have no existence and we are in the category of complete nothingness [*efes*] like the rays of the sun in the sun itself... From which it follows that there is no other existence whatsoever apart from His existence, blessed be He. This is true unification. As the saying has it: ‘Thou art before the world was created and now that it is created’ – in exactly the same manner. Namely, just as there was no existence apart from Him before the world was created so it is even now.”

As a corollary of ḥasidic pantheism (more correctly, panentheism) is the understanding in its most extreme form of the doctrine of divine providence. The medieval thinkers limited special providence to the human species and allowed only general providence so far as the rest of creation is concerned. It is purely by chance that this spider catches that fly, that this ox survives, the other dies. For the Ḥasidim there is nothing random in a universe that is God’s “garment.” No stone lies where it does, no leaf falls from the tree, unless it has been so arranged by divine wisdom.

Particularly during prayer but also at other times man has to try to overcome the limitations of his finite being to see only the divine light into which, from the standpoint of ultimate reality, he and the cosmos are absorbed. This transcendence of the ego is known in ḥasidic thought as *bittul hayesh*, “the annihilation of selfhood.” Humility (*shiflut*) does not mean for Ḥasidism that man thinks little of himself but that he does not think of himself at all. Only through humility can man be the recipient of God’s grace. He must empty himself so that he might be filled with God’s gifts.

Optimism, Joy, and Hitlahavut

Hasidic optimism and joy (*simḥah*) are also based on the notion that all is in God. If the world and its sorrows do not enjoy true existence and the divine light and vitality pervade all, what cause is there for despair or despondency? When man rejoices that he has been called to serve God, he bestirs the divine joy above and blessing flows through all creation. A melancholy attitude of mind is anathema to Hasidism, serving only to create a barrier between man and his Maker. Even over his sins a man should not grieve overmuch: "At times the evil inclination misleads man into supposing that he has committed a serious sin when it was actually no more than a mere peccadillo or no sin at all, the intention being to bring man into a state of melancholy [*azvut*]. But melancholy is a great hindrance to God's service. Even if a man has stumbled and sinned he should not become too sad because this will prevent him from worshiping God" (*Zavva'at Ribash* (1913), 9). Some hasidic teachers, however, draw a distinction between man's "bitterness" (*merirut*) at his remoteness from God and "sadness." The former is commendable in that it is lively and piercing whereas the latter denotes deadness of soul. A further result of the basic hasidic philosophy is *hitlahavut*, "burning enthusiasm," in which the soul is aflame with ardor for God whose presence is everywhere. Man's thought can cleave to God, to see only the divine light, and this state of attachment (*devekut*), of always being with God, is the true aim of all worship.

Love and Fear

The study of the Torah, prayer, and other religious duties must be carried out in love and fear. The bare deed without the love and fear of God is like a bird without wings. A hasidic tale relates that the Ba'al Shem Tov was unable to enter a certain synagogue because it was full of lifeless prayers, which, lacking the wings of love and fear, were unable to ascend to God. As observant Jews the Hasidim did not seek to deny the value of the deed but they taught repeatedly that the deed could only be elevated when carried out in a spirit of devotion. R. Hayyim of Czernowitz writes (*Sha'ar ha-Tefillah* (1813), 7b): "There is a man whose love for his God is so strong and faithful that he carries out each *mitzvah* with superlative excellence, strength and marvelous power, waiting in longing to perform the *mitzvah*, his soul expiring in yearning. For, in accordance with his spiritual rank, his heart and soul know the gracious value of the *mitzvot* and the splendor of their tremendous glory and beauty, infinitely higher than all values. And how much more so the dread and fear, the terror and trembling, which fall on such a man when he performs a *mitzvah*, knowing as he does with certainty that he stands before the name of the Holy One, blessed be He, the great and terrible King, before Whom 'all the inhabitants of the earth are reputed as nothing; and He doeth according to His will in the host of heaven' [Dan. 4:32], who stands over him always, seeing his deeds, for His glory fills the earth. Such a man is always in a state of shame and lowliness so intense that the world cannot

contain it, especially when he carries out the *mitzvot*. Such a man's *mitzvot* are those which fly ever upward in joy and satisfaction to draw down from there every kind of blessing and flow of grace to all worlds."

This idea was applied to all man's deeds, not only to his religious obligations. In all things there are "holy sparks" (*nizozot*) waiting to be redeemed and rescued for sanctity through man using his appetites to serve God. The very taste of food is a pale reflection of the spiritual force which brings the food into being. Man should be led on by it to contemplate the divine vitality in the food and so to God Himself. In the words of the highly charged mythology of the Lurianic Kabbalah, the "holy sparks" released by man provide the *Shekhinah* with her "Female Waters" which, in turn, cause the flow of the "Male Waters" and so assist "the unification of the Holy One, blessed be He, and His *Shekhinah*" to produce cosmic harmony. Because of the importance of man's role for the sacred marriage and its importance in the hasidic scheme, the Hasidim adopted from the kabbalists the formula: "For the sake of the unification of the Holy One, blessed be He, and His *Shekhinah*" (*le-shem yihud*) before the performance of every good deed, for which they were vehemently attacked by R. Ezekiel Landau of Prague (*Noda bi-Yhudah*, YD no. 93). (The redemption of the "holy sparks" was one of the reasons given for hasidic fondness for tobacco. Smoking a pipe served to release subtle "sparks" not otherwise accessible.)

Kavvanah and Zaddikism

Is a program of sustained contemplation, attachment, and utter devotion to God (**Kavvanah*) really possible for all men? The hasidic answer is generally in the negative. This is why the doctrine of zaddikism is so important for Hasidism. The holy man, his thoughts constantly on God, raises the prayers of his followers and all their other thoughts and actions. In the comprehensive work on zaddikism, R. Elimelech of Lyzhansk's *No'am Elimelech*, the *zaddik* appears as a spiritual superman, with the power to work miracles. He is the channel through which the divine grace flows, the man to whom God has given control of the universe by his prayers. The *zaddik* performs a double task: he brings man nearer to God and he brings down God's bounty to man. The *zaddik* must be supported by his followers. This financial assistance is not for the sake of the *zaddik* but for the sake of those privileged to help him. By supporting the *zaddik* with their worldly goods his followers become attached to him through his dependence on them, which he readily accepts in his love for them. Their welfare thus becomes his and his prayers on their behalf can the more readily be answered. The *zaddik* even has powers over life and death. God may have decreed that a person should die but the prayers of the *zaddik* can nullify this decree. This is because the *zaddik's* soul is so pure and elevated that it can reach to those worlds in which no decree has been promulgated since there only mercy reigns.

But if such powers were evidently denied to the great ones of the past how does the *zaddik* come to have them? The

rationale is contained in a parable attributed to the Maggid of Mezhirech (*No'am Elimelekh* to Gen. 37: 1). When a king is on his travels he will be prepared to enter the most humble dwelling if he can find rest there but when the king is at home he will refuse to leave his palace unless he is invited by a great lord who knows how to pay him full regal honors. In earlier generations only the greatest of Jews could attain to the holy spirit. Now that the *Shekhinah* is in exile, God is ready to dwell in every soul free from sin.

Social Involvement

The social implications of ḥasidic thought should not be underestimated. The sorry conditions of the Jews in the lands in which Ḥasidism was born were keenly felt by the ḥasidic masters who considered it a duty of the highest order to alleviate their sufferings. In the ḥasidic court the wealthy were instructed to help their poorer brethren, the learned not to look down on their untutored fellows. The unity of the Jewish people and the need for Jews to participate in one another's joys and sorrows was repeatedly stressed. The preachers who seemed to take a perverse delight in ruthlessly exposing Jewish shortcomings were taken to task by the Ba'al Shem Tov and his followers. The *zaddik* was always on the lookout for excuses for Jewish faults. R. Levi Isaac of Berdichev is the supreme example of the *zaddik* who challenges God Himself to show mercy to His people.

From the numerous anti-ḥasidic polemics (collected e.g., by M. Wilensky, *Ḥasidim u-Mitnaggedim*, 1970) we learn which of the ḥasidic ideas were especially offensive to their opponents. The doctrine that all is in God was treated as sheer blasphemy. The doctrine, it was said, would lead to "thinking on the Torah in unclean places" i.e., it would obliterate the distinction between the clean and the unclean, the licit and the illicit. The alleged arrogance of the claims made for the *zaddik* were similarly a cause of offense. The ḥasidic elevation of contemplative prayer over all other obligations, especially over the study of the Torah, seemed to be a complete reversal of the traditional scale of values. The doctrine of *bittul ha-yesh* was criticized as leading to moral irresponsibility. The bizarre practice of turning somersaults in prayer, followed by a number of the early Ḥasidim as an expression of self-abnegation, was held up to ridicule, as was ḥasidic indulgence in alcoholic stimulants and tobacco. The resort of the Ḥasidim to prayer in special conventicles (the *shetiblekh*), their adoption of the Lurianic prayer book, their encouragement of young men to leave their families for long periods to stay at the court of the *zaddik*, were all anathema to the *Mitnaggedim* who saw in the whole process a determined revolt against the established order.

[Louis Jacobs]

TEACHINGS OF ḤASIDISM

Origins of Ḥasidic Teachings

The teachings of Ḥasidism are as notable for their striking content as they are for the colorful literary form in which they are

cast. Their sources, however, are readily traceable to kabbalistic literature and to the *musar* literature of Safed deriving from it. The first generation of ḥasidic teachers usually embodied their teachings in terse aphorisms. These, too, reflect the influence of the aforementioned literature. The first evidence of the spread of ḥasidic teaching dates from the 1750s and comes from the anti-ḥasidic polemical writings of the *Mitnaggedim*, their implacable opponents. Authentic ḥasidic teachings appeared in print only at the beginning of the 1780s. These published teachings of the Ḥasidim make no reference to the doctrines ascribed to them by their mitnaggedic opponents. For this curious fact, two possible explanations suggest themselves. Either the *Mitnaggedim* were guilty of exaggeration and distortion in their hostile description of ḥasidic doctrine or, in the interim, a process of internal criticism had moderated original ḥasidic teachings in the decades preceding their publication. The likelihood is that both factors were at work. This does not mean to imply, however, that the teachings of Israel b. Eliezer (the Ba'al Shem Tov) recorded by his disciples are to be regarded as having been censored, thus casting doubt on their authenticity. What is to be inferred is that the antinomian and anarchistic doctrines taught by certain circles were not incorporated into classical Ḥasidism. While no evidence of the specific character of such teachings is available, there can be no doubt of the existence of such groups.

The teachings of the earliest circles of Ḥasidim were transmitted in the name of Israel Ba'al Shem Tov, Judah Leib Piestanyer, Naḥman of Kosov, Naḥman of Horodenko (Gorodenka), and others. This was a group of decided spiritual (pneumatic) cast which also fashioned for itself a particular communal life-style, a community built not on family units but rather on meetings organized around prayer circles. As a matter of principle, this pattern served as the basis for the development of the classic ḥasidic community.

It may be said that for the first time in the history of Jewish mysticism, ḥasidic thought reflects certain social concerns. There is present a confrontation with distinctly societal phenomena and their transformation into legitimate problems in mysticism as such. This concern is expressed not in the establishment of specific liturgical norms or formulas devised for the convenience of the congregation but in such doctrines as the worship of God through every material act, and the "uplifting of the sparks" (*nizozot*). In the teachings of the Ba'al Shem Tov and his circles these doctrines involved a sense of social mission.

Worship through Corporeality (Avodah be-Gashmiyyut)

One of the most widespread teachings of Ḥasidism from the very beginnings of the movement is the doctrine calling for man's worship of God by means of his physical acts. In other words, the human physical dimension is regarded as an area capable of religious behavior and value. From this assumption, a variety of religious tendencies followed. To be especially noted is the extraordinary emphasis placed on the value of such worship and the subsequent attempt to limit it

to a devotional practice suitable only for spiritually superior individuals. In the teachings of the Ba'al Shem Tov, this doctrine developed in uncontrolled fashion, culminating in the tenet that man must worship God with both the good and the evil in his nature.

The ideological background of worshiping God through such physical acts as eating, drinking, and sexual relations was suggested by the verse "in all thy ways shalt thou know Him" (Prov. 3:6). For if it is incumbent upon man to worship God with all his natural impulses by transforming them into good, then obviously the realization of such an idea demands involvement in that very area in which these impulses are made manifest – the concrete, material world. In addition, the revolutionary views concealed within the interstices of the teachings of the Ba'al Shem Tov make it clear that corporeal worship (*avodah be-gashmiyyut*) saves man from the dangers of an overwrought spiritualism and retreat from the real world. This is expressed by Jacob Joseph of Polonnoye, a disciple of the Ba'al Shem Tov, in the name of his teacher: "I have heard from my teacher that the soul, having been hewn from its holy quarry, ever ought to long for its place of origin, and, lest its reality be extinguished as a result of its yearning, it has been surrounded with matter, so that it may also perform material acts such as eating, drinking, conduct of business and the like, in order that it [the soul] may not be perpetually inflamed by the worship of the Holy One blessed be He, through the principle of the perfection [*tikkun*] and maintenance of body and soul" (*Toledot Ya'akov Yosef*, portion *Tazri'a*). The point made here in advocacy of corporeal worship is largely psychological and not theological.

The theological concept designed to reinforce the affirmation of corporeal worship is grounded in the dialectical relationship that operates between matter and spirit. In order to reach the spiritual goal, man must pass through the material stage, for the spiritual is only a higher level of the material. The parables of the Ba'al Shem Tov of the "lost son" point to the theological function served by the concept of "corporeal worship." The son, in foreign captivity, enters the local tavern with his captors, all the time guarding within him a hidden secret which is none other than the key to his redemption. While his captors drink only for the sake of drinking, he drinks in order to disguise his true happiness which consists not in drinking but rather in his "father's letter" – his secret – informing him of his impending release from captivity. In other words, there is no way to be liberated from the captivity of matter except by ostensibly cooperating with it. This ambivalent relation to reality forms a supreme religious imperative.

Social Consequences of the Doctrine of "Corporeal Worship"

The dialectic tension between matter and spirit or between form and matter – the conventional formulation in Hasidism – assumes social significance and the polar terms come to denote the relationship between the *zaddik* and his congregation. In this context, the opposition between spirit and matter is

conceived so as to create a seeming tension between the inner content of the mystical act and the forms of social activity. It is within the community, however, that mystical activity should be achieved though, of course, in hidden fashion. Those who surround the *zaddik* are incapable of individually discerning the moment in which the transformation of the secular into the holy occurs. This indispensable transformation can be experienced only communally. Therefore, the community of Hasidim becomes a necessary condition for the individual's realization of the mystical experience. It became the imperative of Hasidism to live both in society and beyond its bounds at one and the same time. The social and psychological conditions necessary for fulfillment of "corporeal worship" are rooted not alone in the disparity between form and matter, i.e., between the masses and the *zaddik*, but rather in the inner spiritual connection between the two. Only the presence of a basic common denominator makes possible the appearance of a mystical personality which grows dialectically out of otherwise disparate elements. The *zaddik* represents the "particular amid the general." The absence of such integration precludes the consequent growth of the spiritual element.

In the teachings of the Ba'al Shem Tov, little stress is placed on the theories of the Lurianic Kabbalah centering on the "uplifting of the sparks." Nevertheless, these theories later served as the theoretical justification for the necessity of *avodah be-gashmiyyut*. The Lurianic theory, as interpreted by the Hasidim, maintains that through contact with the concrete material world by means of *devekut* ("communion" with God), and *kavvanah* ("devotional intent"), man uplifts the sparks imprisoned in matter. In this context, the concept of *avodah be-gashmiyyut* carries with it a distinct polemical note, since it is asserted that its validity has particular application to the sphere of social life. Thus, a major religious transvaluation finds expression in the creation of a new system of social relations. This is exemplified in the instructions given by the Ba'al Shem Tov granting permission to desist from *devekut* during prayer in order to respond to some social need. He indicates that should a man be approached during a period of *devekut* by a person wishing to talk to him or seeking his assistance he is permitted to stop praying since in this latter action (i.e., in directing his attention from prayer to his fellow) "God is present." Here, the temporary abandonment of the study of Torah (*bittul Torah*) and of *devekut* is justified by the fact that this encounter too constitutes part of the spiritual experience of the "spiritually perfect man." As a result, the meaning of religious "perfection" is determined by a new system of values.

In the teachings of the Ba'al Shem Tov's disciple, Dov Baer, the Maggid of Mezhibezh, these motives disappear. The direction of thinking assumes a completely typical spiritualistic character. *Avodah be-gashmiyyut* is conceived of as an indispensable necessity although it is covertly questioned whether every man is permitted to engage in it. A pupil of one of the Maggid's disciples, Meshullam Feivush of Zbarazh, specifically states that it was not the Maggid's intention to proclaim *avodah be-gashmiyyut* as a general practice but rather as

a practice intended for an elite immune to the danger of the concept's vulgarization. One of the Maggid's most important disciples, Shneur Zalman of Lyady, mentions the practice with a touch of derision. Nevertheless, it came to occupy a central place in the literature of Hasidism. The meaning and limits of the concept served as a focal point of an ongoing controversy among the movement's proponents.

The Ethos of Hasidism

From the moment that the formula *yeridah le-zorekh aliyyah* ("the descent in behalf of the ascent") became established in the context of the emphasis placed upon it by the Ba'al Shem Tov, a certain perturbation of the traditional system of ethical values in Judaism was imminent. Although the precise limits of the descent into the region of evil were still open to debate, the acceptance in principle of man's mandate to "transform" evil into good, through an actual confrontation of evil in its own domain, was an idea definitely unwelcome in any institutionalized religion. The classical example of dealing with this problem propounded in the teachings of the Ba'al Shem Tov was that of the encounter with evil in the sphere of human impulses: "A man should desire a woman to so great an extent that he refines away his material existence, in virtue of the strength of his desire." The significance of this statement lies in its granting a warrant to exhaust the primordial desires without actually realizing them; it is not a dispensation for the release of bodily desires through physical actualization but through their transformation. This concept is of great importance to an understanding of the significance of confronting evil, as it points to the peculiar inner logic implicit in the idea of *avodah be-gashmiyyut* as found expression in the ethical sphere.

Within the framework of the concept of "descent" (*yeridah*) – a concept over which Hasidism wavered a great deal – can be included the idea of the "descent" of the *zaddik* toward the sinner in order to uplift him. This "descent" carries with it bold ethical implications in that it justifies the "descent" into the sphere of evil and demands the consequent "ascent" from the domain of sin. A moral danger is of course implicit in the real possibility that a man may "descend" and thereafter find himself unable to achieve the consequent ascent. Here again, the very act of confronting evil requires an independent valuation, admitting of no previous criticism or censorship, although such confrontation was regarded as the special prerogative of men of "spirit," i.e., the *zaddikim*. Thus, out of the teachings of the Ba'al Shem Tov arose a primary imperative to turn toward material reality and the worldly inferior sphere. If only in moral terms, this demand grew from a basic ethical-religious claim that man is not at liberty to abstain from the task of transfiguring the material world through good.

The teachings of the Maggid of Mezhiroch reveal a more restrained doctrine on the one hand, and an interiorization of spiritual problems on the other, evidenced by the greater degree of introspection and inwardness characteristic of the mystic. In the Maggid can be discerned a tendency toward

an increasing spiritualization, accompanied by greater moral restraint. Among the followers of the Maggid, however, developments took place in very different directions. In the courts of some *zaddikim* the influence of the thinking of the Ba'al Shem Tov was apparent in the doctrines they broadcast, propagating social responsibility and a communal mysticism. These centers of teaching developed primarily in Galicia, the Ukraine, and also in Poland at the court of the rabbi of Lublin. This last school reached a crisis point during the period of its heirs in *Przysucha, *Kotsk, and *Izbica, when it began to cast doubt on the large majority of accepted hasidic doctrines, especially on their moral significance. At the same time Chabad Hasidism in Belorussia developed in the direction of a rationalized religious life by preserving pre-hasidic moral biases, and by shunning the mystical adventurism of the Ba'al Shem Tov and even the Maggid of Mezhiroch, which in its attempt to spiritualize reality, had propounded as necessary the confrontation with evil and laid down the conditions for this conflict, while seeing in the "uplift of the sparks" its great mission. Nevertheless in the person of Dov Baer, son of Shneur Zalman of Lyady, the founder of Chabad Hasidism, can be discerned a thinker with a tendency toward a pure and aristocratic mysticism, a fact which establishes his affinity to the views of the Maggid of Mezhiroch, although this holds true only in terms of this aristocratic bent. In terms of an "ethical mentality," as it were, Dov Baer is a representative of his father's line of thought.

Prayer

In the second and third generation of Hasidism, some Hasidim testified to the fact that, in their view, the major innovation of the Ba'al Shem Tov lay in his introducing in prayer a fundamentally new significance as well as new modes of praying. The author of *Ma'or va-Shemesh*, a disciple of Elimelech of Lyzhansk, writes, "Ever since the time of the holy Ba'al Shem Tov, of blessed and sanctified memory, the light of the exertion of the holiness of prayer has looked out and shone down upon the world, and into everybody who desires to approach the Lord, blessed be He..." This can be understood to mean that the Hasidim saw in the doctrine of the Ba'al Shem Tov two things as essentially one: the radiance (of the light of holiness) and new hope, and the revived exertion (involved in the holiness of prayer). These dual motifs began to function as guidelines for hasidic prayer, in the following senses:

(1) The origins of prayer lie in the conflict with the external world, known as "evil thoughts." Prayer requires a great effort of concentration if man is to overcome the tendency of the plenitude of exterior reality to permeate his consciousness. This quite natural permeation to which man responds instinctively is considered in Hasidism as the "wayfaring" of thought and as such is the very opposite of its concentration, which requires a negation of the world, a turning away from it, and is based on man's ability to achieve pure introspection devoid of all content. The function of this introspection is to achieve the utter voiding ("annihilation") of human thought

and to uplift the element of divinity latent in man's soul. The transformation of this element from a latent to an active condition is understood as true union with God, the state marking the climax of *devekut* ("clinging to God," "communion with God"). Prayer, then, is regarded as the most accessible foundation for the technique of *devekut* with God. The spiritual effort involved in prayer was considered so strenuous as to give rise to the ḥasidic dictum "I give thanks to God that I remain alive after praying."

(2) The two stages described as constituting the process of prayer are: *dibbur* ("speech") and *mahashavah* ("thought"). In passing through the first of these stages man contemplates the words of the prayer through visualizing their letters. Concentrated attention on these objects before his eyes gradually depletes the letters of their contours and voids thought of content, and speech, the reciting of the prayers, becomes automatic. Man continues to recite the prayers until an awesome stillness descends upon him, and his thought ceases to function in particulars; he establishes a connection with the divine "World of Thought" which functions on transcendent and immanent perceptible levels at one and the same time. This immanent activity is identical with the revelation of the "apex," the inner "I." In the wordplay of the Ḥasidim: "The I (אני) becomes Nought" (ניא); in the "flash of an eye" a condition of utter annulment is established, and this is the state of nothingness the mystic seeks to achieve.

(3) For Ḥasidism the significance of prayer lies neither in beseeching the Creator and supplicating Him, nor in focusing attention on the contents of prayer. Rather, prayer is primarily a ladder by means of which a man can ascend to *devekut* and union with the Divinity. Ḥasidism did not embrace the Lurianic doctrine of *kavvanot* since it failed to accord with the primary intent of *devekut*. However, in spite of all the individualistic tendencies inherent in prayer through *devekut*, the Ḥasidim did not belittle the importance of communal worship, nor did they demand of the Ḥasid that he achieve *devekut* outside the bounds of the community and the halakhic framework of prayer. When there arose problems of prayer through *devekut* within the framework of the time sequence conventionally set for prayer, there were those Ḥasidim who chose to dispense with the framework, and even allowed a man to worship outside of the time limits set for prayer, provided that he infused his prayer with *devekut*. However, as a result, the Ḥasidim quite rapidly felt themselves in danger of jeopardizing the framework of the *halakhah*, and, for the most part, they recanted and accepted the authority of the existing frameworks.

(4) *Devekut*, which became the banner under which Ḥasidism went forth to revitalize religious life and modify the traditional hierarchy of values in Judaism, quickly led to a confrontation between it and the daily pattern of existence of the Ḥasid. Not only was traditional worship and its significance brought face to face with new problems, the same held true for *talmud torah*. The reason for this lay not in a fundamental revolt against the study of the Torah as such, but rather

in the fact that *devekut* laid claim to the greater part of man's day and left little time for learning. In this confrontation *devekut* gained the ascendancy, though there can be discerned in ḥasidic sources a tendency to strike a balance with the problematic nature of prayer, in order to prevent the study of Torah being swallowed up in mysticism. In the 19th century a distinct reaction in the direction of scholarship at the expense of *devekut* took place in certain ḥasidic "courts."

The performance of the *mitzvot*, too, and all man's actions attendant upon them, was overshadowed by *devekut*, as the fulfilling of the *mitzvot* was assessed in terms of the *devekut* achieved by man. In the new hierarchy of values the *mitzvah* itself became a means – and only one of several – to *devekut*. The widespread ḥasidic slogan "Performance of the *mitzvah* without *devekut* is meaningless" bears supreme testimony to the fact that the new mystical morality came to terms with traditional Jewish patterns on a new plane.

The existential status of man was conceived anew in Ḥasidism, and an attitude of resignation toward the world was emphasized. The Ḥasid was asked to rejoice in order to obviate any possibility of self-oriented introspection which might lead him to substitute, as his initial goal, personal satisfaction for the worship of God. The Ḥasidim went to great lengths to crystallize the primary awareness that they were first and foremost "sons of the higher world."

HASIDIC LITERATURE

Ḥasidic literature comprises approximately 3,000 works. No comprehensive bibliography is as yet available, although partial bibliographies exist, mostly as part of the general catalog of Hebrew literature. These include such works as *Seder ha-Dorot*, *Shem ha-Gedolim he-Ḥadash*, *Oẓar ha-Sefarim*, and *Beit Eked Sefarim*, in which ḥasidic works are listed. In more detailed fashion, the literature of Ḥasidism has been catalogued by G. Scholem in his *Bibliographia Kabbalistica* (1933). A detailed bibliography of Bratslav Ḥasidism can be found in the pamphlet known as *Kunteres Elleh Shemot* (1928), also edited by G. Scholem. In addition, there is a detailed bibliography of Chabad Ḥasidism, compiled by A.M. Habermann, called *Sha'arei Ḥabad*, which can be found in the Salman Schocken jubilee volume *Alei Ayin* (1952).

Ḥasidic literature began to appear in print in 1780; the first published work was *Toledot Ya'akov Yosef* (Korets, 1780) by Jacob Joseph of Polonnoye. The following year saw the publication of *Maggid Devarav le-Ya'akov* (Korets, 1781), a work of the teachings of Dov Baer of Mezhirech. The earliest works of Ḥasidism were printed at Korets (Korzec), Slavuta, Zhitomir, Kopust, Zolkiew, Przemysl, Leszno, Josefow, and at several other places. Speculative works were the first type of ḥasidic literature published; it was only in the 19th century that anthologies of ḥasidic tales came into their own, and successive anthologies began to appear in print. Several manuscripts of major importance in the canon of speculative writings, which were composed in the 18th century, were first published in the 19th century. As they gradually acquired au-

thoritative standing among the Ḥasidim, these works were frequently reprinted.

Speculative Literature

The great bulk of Ḥasidism's speculative literature was compiled in the manner of homiletic discourses (*derashot*) on selected passages from the weekly Torah readings as well as from other portions of Scripture. For the most part, it consists of recorded literature and not original writings. The homiletic framework, traditionally used for expository purposes throughout the literature of Judaism, served as background for ḥasidic ideas as well. The reader can immediately feel the ḥasidic "pulse" in each and every homiletic sermon, which reveals the presence of a distinct type of propaganda designed to spread the aims and ideas of its authors. The associative context underlying these homiletic sermons is highly complex, for it relies not only upon exegesis of scriptural passages but also on the vast range of rabbinic literature throughout the ages, on the literature of the *halakhah* from the *rishonim* to the *aḥaronim*, on the early and Lurianic Kabbalah, and on the *musar* literature of Spain and Safed. The language of these writings is influenced by the oral nature of the *derash*, in which scant attention is paid to either syntax or to artifices of style, and the idiomatic characteristics of Yiddish have left their mark on the sentence structure of the Hebrew.

Expository Pamphlets and Letters

Conscious of the need to clarify the complexities of their teachings, in order to define them with as great a degree of precision as possible, the Ḥasidim adopted a special form of writing, the expository pamphlet. This was not done with the intention of creating a new literary genre, but as a way of replying to contemporary problems over which opinion was divided. Among the important literature of this class are the *Tanya* (Slavuta, 1796) by Shneur Zalman of Lyady and *Kuntres ha-Hitpa'alat* by his son, Dov Baer. In this class, too, fall Dov Baer's prefaces to several other works. In addition, the prefaces to the writings of *Aaron of Starosielce, Shneur Zalman's foremost disciple, should be classified as belonging to this genre, although they can stand in a class of their own. Similarly, the *Derekh Emet* (1855) by Meshullam Feivush of Zbarazh, is close to an expository pamphlet in its content, while in form it is epistolary. Treatises of the explanatory type, shorter and more compressed, appear in several well-known letters, such as those of *Ḥayyim Ḥaikele of Amdur, Menaḥem Mendel of Vitebsk, and *Abraham b. Alexander Katz of Kalisk, and a type of epistolary literature, known as the "*Iggerot ha-Kodesh*" of Shneur Zalman of Lyady and Elimelech of Lyzhansk, was widely dispersed; among the richest of these collections of letters is the *Alim li-Terufah* (1896) by Nathan Sternherz of Nemirov, a disciple of Naḥman of Bratslav. Apart from this category of writing there exists a wealth of epistolary literature dealing with both current affairs and with the social problems of the Jewish communities of the time; these letters are primarily of historical importance.

Kabbalistic Writings

Notwithstanding the differences of opinion within the ḥasidic community over the relative importance of close study of the Lurianic Kabbalah – differences resulting from a variety of factors – Ḥasidism counted among its adherents several of the leading kabbalists of the age. While Elijah b. Solomon, the Gaon of Vilna, expressed particular interest in the Kabbalah of the Zohar, ḥasidic kabbalists were largely influenced by Cordoverianic and Lurianic Kabbalah. Outstanding among ḥasidic writers of kabbalistic texts were the *maggid* Israel of *Kozienice, Zevi Hirsch of Zhidachov, and Jacob Zevi Jolles, author of a lexicon of Lurianic Kabbalah entitled *Kehillat Ya'akov* (1870). It is noticeable that the kabbalistic commentaries of these Ḥasidim are not always integrated within the framework of their ḥasidic teachings, but here and there it is possible to discern traces of ḥasidic thought in their commentaries on the Zohar and on the *Ez Ḥayyim* of Ḥayyim *Vital. A more pronounced attempt at integrating the two trends of thought, though in the direction of Kabbalah, becomes evident when the works in question are ḥasidic writings which attempt to locate their origins and sources of continuity in the Kabbalah.

Halakhic Writings

Eighteenth-century Ḥasidism did not give rise to many halakhic treatises; the best-known works of this type are the *Shulḥan Arukh* (Kopust, 1814) by Shneur Zalman of Lyady, and the writings of his grandson, the Zemaḥ Zedek. Polish Ḥasidism revitalized the scholastic tradition; prominent scholars among them were Isaac Meir of *Gur, author of *Hiddushei ha-Rim*, and Gershon Ḥanokh of Radzyn (see *Izbica-Radzyn), who reinstated the custom of wearing a blue-fringed garment, or *zizit tekhelet*. Galician Ḥasidism, too, had outstanding men of learning like Ḥayyim *Halberstam of Zanz, author of *Divrei Ḥayyim* (1864), and Isaac Judah Jehiel of Komarno.

Liturgy

Although it was not ḥasidic practice to create a new liturgy, nevertheless exceptional cases are known in which Ḥasidim composed and instituted novel prayers. There were those Ḥasidim who were accustomed to add Yiddish words to their prayers, and there were also prayers which were composed and recited as additions to the conventional liturgy. Typical examples of these additional and spontaneous prayers are found in Bratslav Ḥasidism. Phinehas of Korets paid particular attention to modifications in the liturgy and even added changes of his own, which have come down in manuscript only. The *Siddur ha-Rav* of Shneur Zalman of Lyady did much to establish specific liturgical norms for the adherents of Chabad Ḥasidism.

Vision Literature

Visions were favorably regarded by the Ḥasidim, but they were allowed scant publicity and their publication was limited. In spite of this there remain a few writings which hint at the ex-

istence of visionaries. Writings by one of them, Isaac Eizik of Komarno, were widely circulated; a selection appeared in print: *Megillat Setarim* (1944).

Narrative Literature

The literature of the ḥasidic movement is generally known largely through its treasury of tales and legends. The first collections appeared in the early 19th century; the earliest of these was the *Shivḥei ha-Besht* ("Praises of the Ba'al Shem Tov"), edited by the *shoḥet* of Lunietz, and published in 1805 in Kopust. This purported to be a documentary monograph, but there is no doubt that it is simply a collection of stories which, however, contain a measure of historical fact. To some extent the *Shivḥei ha-Besht* is an imitation of the *Shivḥei ha-Ari* (Constantinople, 1766); however, there are few examples of this *shevaḥim* genre in ḥasidic literature. Few biographies or autobiographies appear in ḥasidic writings; exceptions are Nathan Sternherz of Nemirov on Naḥman of Bratslav and the works of some 20th-century biographers.

From the mid-19th century, hundreds of story anthologies began to appear. These early anthologies should not be seen as truly documentary; rather they are stories reflecting the ethos of Ḥasidism. Each story consists of a specific lesson embedded in a social or historical situation, narrating a single event and expressed in the conventional manner of "once upon a time..." From this point, the narrative situation evolves into a moral homily. The stories have a simple narrative basis; the time element is insignificant and there are no epic descriptions. The events of the story serve only as a framework for the lesson it contains, and the situation is of a spiritual and not a historical nature. In this manner, the epigrammatic element is also highlighted. It is characteristic of this type of story to recount events in the first person, thus lending the narrative a touch of authenticity, that is, the air of having been passed down by word of mouth from generation to generation. At times the stories are told in the name of some famous person, mentioned by name; at others, they are presented in the name of "a certain Ḥasid." Every ḥasidic dynasty saw to it that collections of its own stories were compiled. Fairly frequently, collections were published containing stories belonging to several dynasties, originating in the same geographical region, such as Poland, Galicia, and Ukraine.

The tradition of collecting and publishing ḥasidic tales continued down to the present century, still deriving its authority from the oral tradition. Some better-known collections are: *Sefer Ba'al Shem Tov* (1938), *Mifalot Zaddikim* (1856), *Teshu'ot Hen* (Berdichev, 1816), *Nifla'ot ha-Sabba Kaddisha* (2 vols., 1936–37), *Irin Kaddishin* (1885), *Nifla'ot ha-Rabbi* (1911), *S'iah-Sarfei Kodesh* (1923), *Ramatayim Zofim* (1881), *Abbir ha-Ro'im* (1935), *Heikhal ha-Berakhah Iggera de-Pirka* (1858), *Kehal Ḥasidim* and *Sifte'ei Zaddikim* (1924). Several 20th-century men of letters have compiled collections of ḥasidic tales, notably *Berdyzewski, Martin Buber, Eliezer *Steinman, and Judah Kaufman (Even Shemuel). Buber's anthology was published in English as *Tales of the Ḥasidim*.

INTERPRETATIONS OF ḤASIDISM

From its beginnings the ḥasidic movement has attracted the attention of both supporters and opponents in each succeeding generation. Anti-ḥasidic polemics were in print even before the movement's own writings were first published. Although in the main, complaints were voiced against the eccentric practices of the sect, among the accusations can be discerned matters of principle which were destined to figure prominently on both sides in the modern debate over Ḥasidism.

Early Opposition

The earliest opponents of Ḥasidism, such as Moses b. Jacob of Satanov, author of *Mishmeret ha-Kodesh* (Zolkiew, 1746), charged the Ḥasidim with avarice, boorishness, and contempt of the *halakhah*. In the 1770s, more adverse testimony began to accumulate; among the more important of these are the works of Israel Loebel, *Ozer Yisrael* (Shklov, 1786) and *Sefer ha-Vikku'ah* (Warsaw, 1798). Loebel accused the Ḥasidim of changing the liturgical conventions from the Ashkenazi to the Sephardi; of praying according to Isaac *Luria's doctrine of *kavvanot*; of praying with exaggerated joy when proper devotion demands tears and repentance; and of praying with wild abandon and with accompanying bodily movements. Solomon of Dubna, a follower of Moses *Mendelssohn, reproached the Ḥasidim for pride and high-handedness, and for a propensity to drunkenness. A more inclusive attack, embracing a wide range of accusations dealing mainly with the Ḥasidism's changes in traditional Jewish ways and practices, was made by Mendelssohn's teacher, Israel of Zamosc, author of *Nezed ha-Dema* (Dyhernfurth, 1773). Inveighing against both the spiritualism of their religious demands and the "moral corruption" of *zaddik* and Ḥasid alike, Israel of Zamosc pointed to evidence of the movement's bias toward separatism revealed in their changes in customs, such as the wearing of white and the adoption of the blue-fringed garment (*zizit tekhelet*) with the fringes worn on the outside. Among the ritual and spiritual claims of the Ḥasidim he denounced: the pretension to a profound religiosity; the practice of ritual bathing prior to morning and evening prayers in order to become worthy of the Divine Spirit; abstinence and fasting; spiritual arrogance; the claim to be "visionary" seers; breaking down the "walls of the Torah"; advocating the doctrine of "uplifting the sparks" (*nizozot*) in the act of eating according to the doctrine of *tikkun*; and introducing a "new liturgy of raucousness." Among their immoral practices he counted cupidity, hypocrisy and abomination, gluttony, and inebriation.

Israel of Zamosc did not assemble his charges into an ordered exposition of the nature of Ḥasidism; nevertheless, they served as the basis for an interpretation of Ḥasidism which found expression in the writings of the most profound, systematic, and recondite of Ḥasidism's opponents – Ḥayyim of Volozhin (*Volozhiner), a disciple of Elijah b. Solomon Zalman, the Gaon of Vilna. In his book *Nefesh ha-Ḥayyim* (Wilna, 1824), in which the term Ḥasid is discreetly omitted, the principles of an interpretation of Ḥasidism as a novel religious phe-

nomenon are first adumbrated. Ḥayyim of Volozhin presented Ḥasidism as a spiritual movement which ignores a cardinal principle in Judaism, namely that where the very nature of a *mitzvah*, as well as its fulfillment, is jeopardized by an idea, the latter should be set aside. Equally, where new values – lofty though they may be – threaten to come into conflict with tradition, the latter should be upheld. He rarely voiced an objection to specific ḥasidic practices but objected on a theoretical basis to matters of fundamental belief in Ḥasidism which appeared to him as dangerous. In so doing, he managed to detach his polemic from its historical context. Ḥayyim of Volozhin saw the spiritual uniqueness of Ḥasidism as follows:

(1) Ḥasidic teachings imparted a new significance to the concept of “Torah for its own sake,” an idea which Ḥasidism understood as “Torah for the sake of *devekut*” (“communion”) with God. According to Ḥayyim the study of the Torah for itself alone (and not for the sake of *devekut*) had a value transcending the fulfillment of the *mitzvot* themselves.

(2) Ḥayyim objected to the centrality in ḥasidic thought of the necessity for “purity of thought,” since in his opinion the essence of the Torah and *mitzvot* did not necessarily lie in their being performed with “great *kavvanah* and true *devekut*.” Here, Ḥayyim of Volozhin pointed out the opposition between mysticism and the *halakhah*. He emphasizes the dialectic process by which the performance of a *mitzvah* with excessive *kavvanah* leads to the destruction of the *mitzvah*. The very act of fulfilling the *mitzvah* is the fundamental principle and not the *kavvanah* accompanying its performance. He therefore challenged Ḥasidism on a matter of basic principle: performing *mitzvot* for the sake of heaven, he stated, is not a value in itself.

(3) He regarded the ḥasidic attempt to throw off the yoke of communal authority as social amoralism.

(4) He objected to the practice of praying outside the specified times set for prayer and to the consequent creation of a new pattern of life.

Hasidism and Haskalah

By the 1770s Ḥasidism had already come under the fire of the Haskalah. In Warsaw Jacques Kalmansohn published a scathing criticism of the social nature of Ḥasidism, as did Judah Leib Mises in his *Kinat ha-Emet* (Vienna, 1828). However, the writer who displayed the most striking talent for caricature and pointed satire sarcasm was Joseph *Perl of Tarnopol in his booklet *Ueber das Wesen der Sekte Chassidim aus ihren eigenen Schriften gezogen im Jahre 1816* (“On the Essence of the Ḥasidic Sect, Drawn from their own Writings in the Year 1816”; Jerusalem, National Library, Ms. Var. 293). The intent of his essay was to portray the material and spiritual conditions of the Ḥasidim in the lowest terms and to exert pressure on the Austrian authorities to force all the Ḥasidim to receive a compulsory education within the state-run school system. Perl’s major contention was that as a socio-religious phenomenon Ḥasidism was an anti-progressive factor owing to its spiritual

insularity and its social separatism: in spirit it was idle and passive and as a social group it was unproductive.

A more ambivalent view of Ḥasidism appears in the memoirs of Abraham Baer *Gottlober (*Abraham Baer Gottlober un Zayn Epokhe*, Vilna, 1828), who, when he later adopted the principles of the Haskalah, became convinced that it was Ḥasidism which had facilitated the spread of the Haskalah movement, in that it constituted a critical stage in the life of Judaism. Ḥasidism, according to Gottlober, threw off the yoke of rabbinical authority and in so doing opened the first sluiceway for the advance of the Haskalah. He also believed that Ḥasidism lay at the root of the crisis involving the Shulḥan Arukh. It displaced Shabbateanism and the Frankist movement, and tarnished the glory of “rabbinism.” Gottlober evinced a particular admiration for the Chabad Ḥasidism because of their affinity to the Haskalah. However, Ḥasidism itself he regarded as a social movement which was disintegrating in its very essence because its criticism was internally directed.

Toward the end of the 1860s and the beginning of the 1870s there began to appear in print selections of the writings of E.Z. *Zweifel, under the title *Shalom al Yisrael*, a work which came to the defense of Ḥasidism, attempting to interpret its teachings on the basis of Ḥasidism’s own authentic sources. In his balanced and informed argument, the author undertook an analysis of fundamental ḥasidic sayings and teachings, pointing out their significance and underlining, too, their uniqueness in comparison with Kabbalah. As a *maskil*, he had, of course, reservations about the “popular” elements of Ḥasidism, and about a number of its social aspects. Among the *maskilim* most influenced by *Shalom al Yisrael* was Micha Josef Berdyczewski, whose interpretation of Ḥasidism in his book *Nishmat Ḥasidim* (1899) was couched in romantic terms. Viewing the movement as a Jewish renaissance, an attempt to break down the barriers between man and the world, he saw in Ḥasidism “joy and inner happiness” and the opportunity to worship the Lord in many different ways.

Martin Buber and His Successors

Martin Buber was influenced by Berdyczewski, and in principle adopted his opinions, but his thesis was far more profound. Buber’s first works on Ḥasidism are written in the spirit of mysticism, such as *Die Geschichten des Rabbi Nachman* (1906; *Tales of Rabbi Nachman*, 1962²) and *Die Legende des Baalschem* (1908; *Legend of the Baal-Shem*, 1969²). From his existentialist teachings, which he developed and consolidated during the 1930s and 1940s, Buber utilized the principle of dialogue as a criterion for understanding the essence of Ḥasidism, which he saw as giving support to the direct encounter, active and creative, between man and the world surrounding him. According to Buber, especially in his mature work *Be-Fardes ha-Ḥasidut* (1945), the dialogue of encounter reveals the reality of God; the cosmos is potentially holy, the encounter with man makes it actually holy. Buber sought to locate the origin of this fundamental concept, which he called

pan-sacramentalism, in the ḥasidic doctrine of the worship of God through the corporeal and worldly dimensions of man's being, and attempted to view through this aspect the revival of Judaism that found expression in Ḥasidism as opposed to the *halakhah*. The ḥasidic renaissance was seen by Buber as a fresh and living religious phenomenon, and also as a process of social and communal consolidation of novel educational importance. He believed that the *zaddikim* gave expression to this new educational and religious meaning, for every *zaddik* represented a special experience acquired as a result of the encounter through dialogue. Particularly emphasizing the concrete and historical import of Ḥasidism, Buber placed little value on the abstract ideas of Ḥasidism, the intellectual games of the Kabbalah, and its millenarian hopes and expectations, being convinced that Ḥasidism had liberated itself from these elements and constructed a realistic experience of life. Buber understood the ḥasidic imperative "Know Him in all thy ways" as transcending the bounds of the *mitzvot* as religious experience over and above the *halakhah*. The element of mystery in Ḥasidism has been studied by Hillel Zeitlin.

A scathing attack on Berdyczewski and Buber was made by the Zionist *maskil* Samuel Joseph Ish-Horowitz, who, early in the 20th century, brought out a series of articles which later appeared in booklet form under the title of *Ha-Ḥasidut ve-ha-Haskalah* (Berlin, 1909). "Modern" Ḥasidism, known as neo-Ḥasidism, was taken to be that of Berdyczewski and Buber. In his work, the Ḥasidism of the Ba'al Shem Tov is depicted as a wild, undisciplined movement, while the Ba'al Shem Tov himself is shown as a charlatan influenced by his rustic surroundings and by the Haidamak movement. According to Horowitz, Ḥasidism contributed no new truths or ways of looking at the world: it simply appropriated to itself the vocabulary of the Kabbalah without fully understanding its implications, and colored it with quasi-philosophical notions "belonging to the household mentality and chronic psychology of the ghetto." Modern or neo-Ḥasidim (specifically Berdyczewski and Buber) attempted to discover in Ḥasidism ethical values and a positive popular force, in particular in the ḥasidic "joy," which they interpreted as a protest against the dejection produced by the conditions of the Diaspora, but for Horowitz the Shabbatean movement was to be preferred to Ḥasidism, as it took an upright stand, advocating a breaking free of the bonds of the Diaspora and the ghetto. Horowitz dismissed the claims that Ḥasidism was a movement of revival and revolt as little more than arrant nonsense; Ḥasidim, far from rebelling against the rabbinate, kept the *mitzvot*, minor as well as major. He contended that the neo-Ḥasidim were deceiving themselves by interpreting the values of Ḥasidism in secular terms, which he regarded a perversion of history in the spirit of a new humanism. He believed that Ḥasidism was continuity and not revolt, and that the neo-Ḥasidim did violence to its true nature by viewing it as a revolutionary movement in Jewish history.

In recent years a criticism of Buber's views of Ḥasidism has been put forward by Gershom Scholem and Rivka Schatz. Opinion is also divided on the messianic significance of

Ḥasidism, between Benzion Dinur and Isaiah Tishby, on the one hand, and Scholem on the other. J.G. Weiss (1918–1969) did remarkable work on Ḥasidism in many of his essays, most of which appeared in the *Journal of Jewish Studies*. He contributed much to the understanding of Bratslav Ḥasidism. Rivka Schatz's *Ha-Ḥasidut ke-Mistikah* ("Ḥasidism as Mysticism," 1968), a phenomenological analysis of Ḥasidism on the basis of available texts, attempts to answer certain fundamental questions concerning the spiritual aims of Ḥasidism and assesses the value attaching to ḥasidic innovations.

[Rivka Schatz-Uffenheimer]

DEVELOPMENTS IN ḤASIDISM AFTER 1970

Ḥasidism maintained a period of expansion and development. Not only did all existing ḥasidic dynasties continue to exist, in many instances they introduced new branches. There even came into being dynasties which linked themselves in the vaguest of manners to ones which had existed in Eastern Europe. Groups which had not been directly affiliated with Ḥasidism took upon themselves ḥasidic garb and recognized ḥasidic leadership, accepting a dynasty's *rebbe* as their own. This is especially noticeable among Hungarian emigrés. In this way R. Joseph Greenwald, the rabbi of Papa, became the *admor* (ḥasidic rabbi) of Papa, and his sons, R. Jacob Hezekiah and R. Israel Menahem have also become *admorim*. R. Johanan Sofer became the *admor* of Erlau, and R. Israel Moses Duschinsky, a member of the *bet din* (rabbinic court) of the ultra-Orthodox community (*edah ḥaredit*) became an *admor*. R. Raphael Blum of Kashoi – New York also became an *admor*.

This period of dynamic growth included the widespread building of housing for Ḥasidim and even led to competition – who builds more, whose *bet midrash* (study hall) is larger, with the erection of *talmudei torah*, *yeshivot*, *kollelim*, girls' schools, and even kindergartens. The networks of the *admorim* keeps on growing. The various ḥasidic groups establish new centers in addition to the area in which the *admor* himself lives. In Israel the Gur Ḥasidim set up centers in Ashdod, Arad, Ḥazor ha-Gelilit, and Immanuel – with the senior leadership in Jerusalem sending people to live in the new centers. The Vizhnitz group established new centers in Jerusalem and Reḥovot, the Belz established a new center in Ashdod, the Boyan Ḥasidim in the new town of Betar, the Lubavitch in Kefar Chabad, Kiryat Malakhi, and Safed.

The large ḥasidic groups have garnered great political influence which has led to friction. The Belz Ḥasidim left Agudat Israel, feeling that they had not been given the political weight they felt they deserved, and joined the "Lithuanians."

Later Ḥasidic Literature

Original ḥasidic literature has continued to be widely distributed. The most astounding range is that of the Lubavitcher group. Scores of basic books on and by the *zaddikim* of the dynasty, particularly by the current *admor*, are printed one after the other. Of the letters of the leader, R. Menahem Mendel Schneersohn, 18 volumes had been published by 1990.

Of the basic works of the *zaddikim* of the current generation (the past 20 years), we can cite *Imrei Emet* by R. Abraham Mordecai Alter of Gur (4 volumes) and *Beit Yisrael* by his son, R. Israel (5 volumes); *Imrei Hayyim* by R. Hayyim Meir of Vizhnitz and *She'orit Menaḥem* by R. Menaḥem Mendel of Vishiva; *Be'er Avraham*, *Divrei Shemu'el*, *Zikhron Kadosh*, *Netivot Shalom*, *Torat Avot* by the *admor* of Slonim; *Divrei Yo'el*, in 14 volumes by R. Joel Teitelbaum of Satmar, and another number of volumes on his teachings; *Ginzei Yisrael*, *Oholei Ya'akov*, *Pe'er Yisrael*, *Naḥalat Ya'akov*, *Abir Ya'akov* by the *zaddik* of the Rozhin line; *Ne'ot ha-Deshe* by the Sochaczew *zaddikim*; *Kol Menaḥem* by R. Menaḥem Mendel Taub of Kalov; *Avodat Elazar* by R. Israel Eleazar Hofstein of Kozienice; *Emunat Moshe* by R. Judah Moses Tiehberg of Aleksandrow; *Kedushat Mordekhai* by R. Moses Mordecai Biederman of Lelov; *Avodat Yehi'el* by R. Jehiel Joshua Rabinowitz of Biale; *Zidkat ha-Zaddik* by R. Joseph Leifer of Pittsburgh; *Yikra de-Malka* by R. Mordecai Goldman of Zweihl; *Zekher Hayyim* by R. Hayyim Judah Meir Hager of Vishiva.

Additional works are *Shefa Hayyim*, 5 volumes by R. Jekutiel Judah Halberstam of Zanz-Klausenberg *Birkat Moshe* by R. Moses Leib of Pascani *Or ha-Yashar ve-ha-Tov* by R. Zevi Hirsch of Liska *Divrei Yehezke'el Sheraga* by R. Ezekiel Shraga Lifshitz of Strupkov; and *Esh Da'at* and *Be'er Moshe* by R. Moses Jehiel of Izirov, in 10 volumes.

Dozens of anthologies on the early ḥasidic *zaddikim* have been published. Among them are *Avnei Zikkaron*, the Seer of Lublin; *Imrei Pinḥas*, R. Phineas of Korets; *Yalkut Menaḥem*, R. Menaḥem Mendel of Riminow; *Likkutei Shoshanim* of R. Moses Zevi of Savran; *Midbar Kadesh* by R. Shalom of Belz; and *Ner Yisrael*, by the *zaddikim* of the Rozhin dynasty. A specialist in preparing these anthologies is R. Elisha Hakohen Faksher.

There have been several new luxury editions of ḥasidic works with added information, and institutions devoted to publishing them have been set up. Most prominent are the Ginzei Maharitz Institute which produces the works of the *admor* of Biale and that of R. Abraham Isaac Kahn of Shomereim Emunim.

Among these fresh editions are *Ohev Yisrael* by the rabbi of Apta; *Me'or Einei Hakhmamim* by R. Meir of Korotyshev; *No'am Elimelekh* by R. Elimelech of Lyzhansk; *Avodat Yisrael* of the *maggid* of Kozienice; *Amud Avodah* by R. Baruch of Kosov; *Panim Yafot* of R. Phineas of Frankfort; and *Peri ha-Arez*; *Zidkat ha-Zaddik*; *Zemah Zaddik*; *Kedushat Levi*; *Kol Simḥah*; and many others. There is almost no ḥasidic work which has not been reproduced in the United States and Israel; they are simply too numerous to mention all.

From later ḥasidic interpretive literature, there have been editions of *Netiv le-Tanya* by Prof. Moshe Halamish, and *Torat ha-Ḥasidim ha-Rishonim* by Menaḥem Mendel Wischnitzer. The teachings of R. Menaḥem Mendel of Kotsk were the subject of three new books by Israel Ehrlich, Simḥa Raz, and Saul Maislish. New editions of *Shivḥei ha-Besht* were prepared by S.Y. Agnon and Pinḥas Sade. *Orot Yismah Yisrael* by M.H. Tiehberg also appeared.

Biographical literature devoted to Ḥasidim has also been prominent. Among the works are *Enziklopedyah shel ha-Ḥasidut*, vol. 1; *Tiferet she-be-Malkhut*; *Ha-Ḥasidut be-Romanyah*, and *Be-Sedei ha-Ḥasidut* by Yizḥak Alfassi; *Rebbi Levi Yizḥak mi-Berditchev* by Yisrael Ehrlich; *Rebbi Zevi Elimelekh mi-Dinov* by Nathan Ortner; *Raza de-Uvda* by R. Zevi Hirsch Rosenbaum; *Arzei Levanon* by R. Eleazar Arenberg; *Abirei ha-Ro'im* by Israel Ehrlich; *Zaddikim vi-Yre'elim* by Isser Kliger; *Zaddik Yesod Olam* by D. Werner; *Ba'al Shem Tov* by M. Eidelbaum; *Ha-Shevil ve-ha-Derekh*, *Zaddikei ha-Ḥasidim be-Erez Yisrael*, *Hod u-Gevurah*; and *Erez Yisrael shel Ma'alah* by Jehiel Greenstein; *Kedosh Yisrael* by Nathan Elijah Roth; *Ish ha-Pele* by Menashe Miller; *Ha-Mufla be-Doro* by A.Y. Tykozki; *Ha-Tekhelet* by Menaḥem Burstein; *Ohel Yosef* by R. David Halachmi (Weisbrod); *Merbizei Torah be-Olam ha-Ḥasidut*, 3 pts., by Aaron Sorasky; *Perakim be-Mishnat ha-Ḥasidut* by M.S. Kasher; *Admorei Tchernobyl* by Israel Jacob Klapholz; and *Kotsk* by Prof. Abraham Joshua Heschel. There have also appeared a series of biographies on Lubavitch *zaddikim* by Abraham Ḥanoch Glitzstein; five books on the R. Menaḥem Mendel Schneersohn, the Lubavitch *admor*; *Bi-Netivei Ḥasidut Izbica-Radzin* by S.Z. Shragai; *Enziklopedyah le-Hakhmei Galiziyah* ("Encyclopaedia of the Sages of Galicia") – most of whom were ḥasidim – by Meir Wender who also wrote *Ohel Shimon*; *Tal Orot* by Aaron Jacob Brandwein; *Tehillot Eliezer*, the story of R. Eliezer Zusya Portugal of Skolen; *Ha-Rav mi-Apta* by H.Y. Berl and Yizḥak Alfassi (two books on the same subject); *Be-Libbat Esh* by Aaron Sorasky; *Bet Karlin-Stolin* by Jacob Israel; and *Or ha-Galil* by Jacob Shalom Gefner.

With regard to scholarly literature on Ḥasidism, one should note the scientific edition of the *Maggid Devarav ke-Ya'akov* by Rivka Shatz; editions of *Toldot Ya'akov Yosef* and *No'am Elimelekh* by Gedaliah Nigal; *Shivḥei ha-Besht*, a photographed manuscript edition with annotations by Joshua Mundshain; *Ḥasidim u-Mitnaggedim*, 2 pts., by Mordecai Wiliensky; *Sifrut ha-Hanhagot – Toldotehah u-Mekomah be-Hayei Hasidei ha-Besht* by Ze'ev Gross; *Bi-Ymei Zemīḥat Ha-Ḥasidut* and *Ḥasidut Polin – Megamot bein Shetei Milḥamah ha-Olam u-vi-Gezerot 1940–1945*, both by Mendel Pikarsh; *Ha-Ḥasidut ve-Shivat Ziyon* by Yizḥak Alfassi; a scientific edition of *Shalom al Yisrael* by A.Z. Zweifel prepared by A. Rubenstein; *Mishnat ha-Ḥasidut bi-Khtavei Rebbi Elimelekh mi-Lizhansk*, a dissertation by Gedaliah Nigal; *Rebbi Naḥman mi-Breslav: Iyyunim bi-Sfarav* by Judith Kook; *Mehkarim Be-Ḥasidut Breslav* by Joseph Weiss; *Ha-Sippur ha-Ḥasidi* by Joseph Dan; *Torat ha-Elohut ve-Avodat ha-Shem be-Dor ha-Sheni shel Ḥabad* by Rahel Elior; *Mishnato ha-Iyyunit shel R. Shne'ur Zalman mi-Lyady* by Moses Halamish; *Ma'aseh Ḥoshev*, studies on the ḥasidic story by Joel Elstein; *Ba'al ha-Yesurim* by Avraham Isaac Green; and *Ha-Sipporet ha-Ḥasidit*, *Toldotehah u-Noseḥah* by Gedaliah Nigal.

Publications of Chabad or Breslav are the majority of those which appear in languages other than Hebrew. A few of the English-language works available are *The Zaddik: R. Levi of Berdichev* by Samuel Dresner; *Ideas and Ideals of the Ḥasidim*

by Aaron Milton; *Hassidic Celebration* by Elie Wiesel; *Legends of the Hassidim* by J.R. Mintz; *Maggid* by J.J. Shochet; *Until the Mashiach – R. Nachman's Biography* and *The Hassidic Masters and their Teachings* by Arie Kaplan; and *Hassidism and the State of Israel* by Harry Rabinowicz.

A special type of hasidic literature is the publication of letters by *zaddikim*. The letters of the Lubavitcher *rebbe* Menahem Mendel Schneersohn were mentioned above. The letters of Israeli *zaddikim* were reprinted by Y. Bernai. Munkacs *zaddikim* have had their letters published in *Igrot Shappirin*. There have also appeared a collection of the letters of the author of *Sefat Emet* from Gur; letters of Chabad hasidim; and *Igrot Ohavei Yisrael*.

One should also mention the discovery of hitherto unknown manuscripts by *zaddikim* which were first published in the period under discussion, such as *Or Yehoshua* by R. Abraham Joshua Heschel Kopzynce, *Mishkenot ha-Ro'im* by R. Menahem Nahum Friedman of Boyan, and *Zikhron Moshe* by R. Moses Eichenstein. There are many more examples.

[Yitzhak Alfasi]

Publications

Hasidic publications are very influential. Besides the ongoing first-rate, general hasidic series, such as *Kerem ha-Hasidut*, *Naḥalat Zevi*, and *Sifteï Zaddikim*, every self-respecting branch in Hasidism has its own publications. The Gur Hasidim find their voice for general representation in the daily newspaper, *Ha-Modia* in Israel, which always has at least one hasid of Gur on its editorial board. The other Gur publication, *Kovez Torani Mercazi Gur*, is devoted to Torah learning. The Lubavitch movement produces countless materials, including the weekly *Sihāt ha-Shavu'a* and *Kefar Habad* in Israel and the *Morgen Journal* in New York, which is a general weekly with strong Lubavitch influence.

Other weeklies of the same type as *Sihāt ha-Shavu'a* appear in various countries. Belz Hasidim publish *Ha-Maḥaneh ha-Haredi*: the Satmar group in the United States has the weekly *Der Yid*. Monthlies are also produced: *Az Nedaberu* by Vizhnitz Hasidim, *Tiferet Yisrael* for the Boyan Hasidim, *Bet Aharon ve-Yisrael* of Karlin Hasidim, and *Kerem Shelomoh* by Bobover Hasidim in the U.S.

Other regularly appearing periodicals are *Mesillot* of the Sadigora group; *Shevil ba-Pardes* from followers of R. Ashlag; *Naḥalatenu* by the Biale Hasidim in Bene Berak and *Ma'ayanei ha-Yeshu'ah* from the Biale-Lugano-Jerusalem group; *Or Kaliv* from the Kaliv Hasidim. The Nadvoznaya (Nadwozna) group publishes *Sī'ah Sarfei Kodesh*, and the Klausenberg Hasidim produce *Zanz. Or ha-Ganuz* is by the Lelov (Lelow) Hasidim of Bene Berak. *Torah Or* is published by the Seret-Vizhnitz group in Haifa. The followers of R. Alter of Lelov produce *Or Yahel* and Breslav Hasidim publish *Or ha-Zaddik*. Skvira Hasidim have *Be-Oholei Ya'akov* and Aleksandrow Hasidim produce *Karmenu*. *Kol Emunim* is the organ of followers of Reb Ahrele, while *Mayyim Hayyim* is a Torah anthology published by Nadwozna Hasidim. *Bet Yisrael* is produced by

Kuznitz Hasidim and *Ohel Moshe* belongs to Schotz-Vizhnitz Hasidim. Most of these works are written in modern Hebrew and are well-designed, employing many photographs.

SURVEY OF HASIDIC DYNASTIES

Descendants of First Generation

There are no direct descendants of the founder of Hasidism, the Ba'al Shem Tov, but there are people directly related to R. Dov Baer of Mezhirech, the second leader of the movement. Among those named Friedman, the most senior rabbi as well as one of the most revered was R. Isaac Friedman of Bohush–Tel Aviv. His followers established an important center for him in Bene Berak. During the Holocaust, Friedman was well known for saving many refugees and for helping the Zionist underground in Romania. R. Avraham Jacob Friedman of Sadigora, a member of the Council of Great Torah Scholars of Agudat Israel, was well versed in all facets of Jewish culture and knew several languages. He succeeded his father, R. Mordecai Shalom Joseph, in Tel Aviv in 1978.

Other descendants of R. Dov Baer of Mezhirech were R. Nahum Dov Breuer, who was made *rebbe* after the death of his maternal grandfather, R. Mordecai Solomon Friedman of Boyan (1971). His style of leadership was characterized by moderation, modesty, and exemplary demeanor. This vibrant group has hundreds of followers and is centered in Jerusalem. In 1985, R. Samson Dov Halperin of Vaslui carried on in place of his father, R. Jacob Joseph Solomon of Vaslui, in Tel Aviv.

Another dynasty harking back to the first generation of Hasidism is that of Peremyshlyany, from which the Nadwozna dynasty headed by the Leifer-Rosenbaum family branched off. In this family, the sons became *admorim* while their father was still living, so that the "Old Admor," Rabbi Itamar of Nadwozna–New York–Tel Aviv, saw a fourth generation of his family's hasidic leadership in 1972.

R. Itamar's sons were:

(1) R. Ḥayyim Mordecai of Nadwozna–Bene Berak, the only *admor* who succeeded in turning this branch into a group with a large, significant following. He lived in Jaffa and then moved from there to Bene Berak. His son, R. Jacob Issachar Ber, the only one to use the name Nadwozna explicitly, continued the expansion begun by his father.

(2) R. Issachar Ber Rosenbaum of Strezhnitz–New York (1981) – all of his sons became *admorim*. These included R. Asher Mordecai of Strezhnitz–New York, R. Meir of Mosholow–New York, R. Yizḥak Isaac of Cleveland–Ra'anana, R. Joseph of Kalush–New York; R. Yizḥak Isaac of Zutchka–Bene Berak, a great Torah scholar who published widely on current issues, and who relinquished his father's Tel Aviv locale in favor of Bene Berak, while his son R. Israel was an *admor* in New York.

(3) R. Asher Isaiah Rosenbaum, the *admor* of Bucharest–Haderah–Bene Berak, a very captivating figure.

Additional members of this dynasty were the *admorim* R. Shalom Leifer of Brighton–New York; R. Meir Isaacson of Philadelphia; R. Aaron Moses of Khust–New York, and his son

R. Barukh Pinhas Leifer in Jerusalem; R. Jacob Joseph Leifer of Ungvar (Uzhgorad)–New York; R. Joseph Leifer of Petah Tikvah; R. Yehiel Leifer of Jerusalem; R. Meshullam Zalman Leifer of Brooklyn; R. Levi Isaac Leifer of Jerusalem (the last four are the sons of R. Aaron Aryeh of Timisoara–Jerusalem.); R. Meir Leifer of Cleveland; R. Issachar Ber Leifer of Bania–New York; R. Aaron Yehiel of Bania–Safed; R. Joseph Meir, the son of R. Meshullam Zalman of Brooklyn.

The Kretchnif (Crachunești) family is a particularly important branch of this group. R. David Moses Rosenbaum settled in Rehovot and developed, at his own initiative, a large ḥasidic following. His son, R. Menaḥem Eliezer Ze'ev, who took over from his father at an early age, firmly established and expanded this dynasty. His brothers, who spread out throughout Israel and set up local *batei midrash* (Talmudic learning centers), were R. Israel Nisan (who went to New York) in Kiryat Gat; R. Meir of Bene Berak who took on the name Peremyshlyany; R. Samuel Shmelka in Jaffa whose family name is that of the city Bitschkov. The *admor* R. Zevi, who moved from Kiryat Ata to Jerusalem, also belongs to this family. A significant place in this group is held by the *admor* R. Abraham Abba Leifer of Pittsburgh–Ashdod, who was succeeded by his son R. Mordecai in 1990.

The descendants of R. Yehiel Mikhal of Zlotchow, also a member of the first generation of Ḥasidism, continued to hold direct positions of leadership through the *admorim* of the Zweihl family, which has lived in Jerusalem for four generations. The *admor*, R. Abraham Goldman, the son of R. Mordecai, was very involved in public affairs and was one of the few *admorim* in a position of leadership who did not come from the yeshivah world but through public life.

The Moscowitz family, to which many *admorim* belonged, mainly in Romania, was also part of this dynasty. In recent times, among the *admorim* of this family were R. Joel Moscowitz of Schotz (Suczawa)–Manchester, Montreal, London, and Jerusalem; R. Jacob Isaac of Jerusalem; R. Naftali of Ashdod; R. Jacob of Bene Berak; R. Israel David of New York; R. Moses Meir of Schotz–Har Nof (Jerusalem); R. Joseph Ḥayyim of Flatbush; and R. Isaac Eleazar in the United States.

Another link to this clan is through the Rabinowitz family of *admorim* from Skole. R. Israel Rabinowitz lived in New York and at the end of his life moved to Tel Aviv. After his death in 1971, no one took his place. His brother, R. David Isaac, lived in Brooklyn and was followed by his grandchildren, R. Abraham Moses Rabinowitz, who was the oldest, and R. Raphael Goldstein, his son's son-in-law.

Of this dynasty, there were also R. Shalom Michaelowitz of Rishon le-Zion–New York, R. Samuel Halevi Josephov of Haifa, and R. Yehiel Mikhal of Zlotchow–Netanyah, who was part preacher, part *rebbe*.

Of the descendants from Chernobyl belonging to the Twersky family there are scores of *admorim*. Exceptionally successful were the *zaddikim* from Skvira: R. Isaac of Skvira–New York who moved to Tel Aviv in 1978 towards the end of his life; R. Eleazar of Skvira Flushing, New York, who

was followed by his son, R. Abraham, in 1984. R. Abraham's son, R. Solomon, was the *admor* in New York. R. David of Skvira, following his father R. Jacob Joseph, established a large ḥasidic center, New Square in New York, with branches in London and Israel. R. David the second of Skvira–Boro Park was very well versed in medicine and had connections to hospitals in New York. His brother, R. Mordecai, was in Flatbush.

Of the house of Skvira, although not bearing the name, was R. Abraham Joshua Heshel of Machnovka, who continued as *admor* in Russia as well. In his old age he immigrated to Israel and settled in Bene Berak, where he established an important center. His sister's grandson, R. Joshua Rokach, replaced him.

The name Chernobyl itself was used by R. Jacob Israel in New York and by his son R. Solomon who took over from him, as well by as R. Meshullam Zusha of Chernobyl (1988). His sons were R. Nahum of Bene Berak and R. Isaiah in New York.

The *admorim* of the Ratmistrovka family immigrated to Palestine before the Holocaust. The latest *admor* was R. Johanan. His sons continued the dynasty: R. Israel Mordecai of Jerusalem and R. Hai Isaac in the U.S. Another member of this family was R. Zevi Aryeh of Zlatpol, who settled in Tel Aviv in 1968.

Of the Talnoye family, R. Moses Zevi of Philadelphia (1972) and R. Meshullam Zusha (1972) of Boston were *admorim*. The only one active in the late 20th century was R. Johanan of Montreal–Jerusalem.

The *admor* of Korostyshev was R. Isaac Abraham Moses, who succeeded in emigrating from Russia and settled in Bene Berak (1985).

The sixth Chernobyl dynasty was that of Cherkassy. The original founder of this line, R. Jacob Israel, had no sons and was succeeded by his daughter's son, R. Mordecai Dov in Hornistopol, who changed his surname to Twersky. The *admor* in the third quarter of the 20th century was R. Jacob Israel, who settled in Milwaukee, Wisconsin (1973). All of his sons had academic degrees and were very effective ḥasidic leaders. His sons were R. Solomon Meshullam Zalman, who established himself as an *admor* in Denver (1982), and R. Jehiel-Michal, who took his father's place in Milwaukee.

Of the seventh dynasty of Chernobyl, that of Trisk, in recent times was R. Jacob Leib of Trisk–London–Bene Berak. His sons were R. Ḥayyim of London and R. Isaac of Bene Berak. Also related to the Trisk family was the *admor* R. Ḥanokh Henikh of Radomyshl–Jerusalem. His grandson established institutions in Jerusalem in the name of Trisk.

There is no continuation of the eighth line, Makarov.

Of the other dynasties devolving from the first generation of Ḥasidism – Korets, Rashkov, Kaminka – there are a few remnants. R. Abraham Shapiro of Tluste (Tolstoye)–New York (1972) left no descendants in the position of *admor*. The only one left of the Korets-Shapiro family was R. Salomon Dov Shapiro of Shipitovka–New York, who managed to escape from Russia.

Descendants of Second Generation

Karlin Ḥasidism was represented after the Holocaust by R. Johanan Perlov, who lived in New York and Jerusalem. After his death, a segment of his followers looked to R. Moses Mordecai Biderman of Lelov as their leader, giving him – against his wishes – the title of the *admor* of Lelov–Karlin. Following his death, these Karliners made the Lelover rabbi's son, R. Simon Nathan Neta, their new *admor*. When R. Simon refused to add the term Karlin to his title, the Karliner Ḥasidim broke away from him and made R. Aaron ha-Kohen Rosenfeld their *admor*. Most of the Karlin Ḥasidim, mainly the younger members, designated R. Johanan's grandson, R. Baruch Jacob Halevi Shohat, as the *admor* of Karlin–Stolin. He was the second *yanuka* (very young person chosen as *admor*) in the history of this branch of Ḥasidism, and when he grew up he displayed excellent characteristics of leadership. He lived in New York, visited Jerusalem regularly, and planned to settle there. Karlin–Stolin operated a network of educational institutions.

The Ostrog (Ostraha) Ḥasidim had no one to replace R. Abraham Pinḥas Sepharad of New York upon his death in 1950.

The Lyzhansk Ḥasidim were led by the *admorim* R. Moses Isaac Gevartzman of Antwerp (1977) and his replacement, R. Jacob Leizer of Antwerp. In the late 20th century, another descendant, R. Elimelech Schiff of Lyzhansk–Jerusalem, began to act as *admor* of Lyzhansk.

Lubavitch Ḥasidism was led by R. Menahem Mendel *Schneersohn of Lubavitch–New York until his death in 1994. He had great influence among all circles of Torah Judaism and was noted for his superb organizational abilities, his literary capabilities, and his religious and political activities the world over. This combination is a rarity in ḥasidic circles. His literary output is unparalleled in the ḥasidic world. For over 40 years he was a dynamic, creative leader.

The descendants of R. Ḥayyim Tyrer of Chernovtsy (Chernowitz) included R. Moses Lupowitz of Bucharest–Tel Aviv (1985).

The Zbarzh-Brezhen dynasty included R. Zevi Hirsh Halperin of Brezhin–New York, whose children perished in the Holocaust. A relative, R. Elḥanan Heilperin, lived in London.

Of the Linitz-Rabinowitz dynasty there were two *admorim*: R. Jacob Meshullam of Monastritsh–Philadelphia–Ramat Gan (1971), and R. Ben Zion Joseph Rabinowitz of Orel–United States–Givatayim (1968). The only *admor* of this line in the late 20th century was R. Gedalyahu Aaron Rabinowitz of New York–Jerusalem. He spent a long period in Moscow as an emissary from Israel.

Descendants of Third Generation

Of the Neskhez dynasty, the *admor* was R. Nahum Mordecai Perlow of Novominsk. His son, R. Jacob, who replaced him, was well learned in Torah and active in charitable works. He occupied a central role in Agudat Israel and lived in Brooklyn.

The Olyky dynasty ended upon the death of R. Zevi Aryeh Landa in New York in 1966.

The Kalov dynasty had two successors. One was R. Menaḥem Mendel Taub of Rishon le-Zion-Bene Berak, a very energetic, active *admor* who frequently appeared before Sephardi audiences. Among his important projects was “Bar bei Rav,” a day of concentrated studies. The other was R. Moses ben R. Menaḥem Mendel of New York, who came from a different branch of the family.

Descendants of the *maggid* of Kozenice were R. Moses David Shapira of Gwozdiek and R. Abraham Elimelech Shapira of Grodzisk, who left no successors. In the early 21st century, there was Rabbi Elimelech Shapiro of Piaseczno-Grodzisk, who lived in Bet Shemesh, the only *admor* who considered himself an official Zionist. He was the son of Yeshayahu Shapira, a founder of Ha-Po'el ha-Mizrachi. The other *admor* was Samson Moses Sternberg, his grandson, the son of his daughter and the *admor* Rabbi Israel Eliezer Holstein of Kozenice, who lived in Kefar Ḥasidim–New York–Tel Aviv. He attracted many followers at his Tel Aviv base.

This period saw the deaths of all of the *admorim* deriving from R. Abraham Joshua Heschel of Apta. R. Moses Mordecai Heschel of Kopzyncz–New York passed away at a young age in 1976, after having been appointed to replace his father – R. Abraham Joshua Heschel. R. David Mordecai Heschel of New York died in 1964, and R. Isaac Me'ir Heschel of Medzhibozh–New York–Haifa died in 1985. There was a center named in honor of the founder in Jerusalem directed by R. Isaac Meir Feinstein, the son of R. Abraham Joshua Heschel. He did not bear the title *admor*.

An exceptionally successful ḥasidic dynasty was that of the family named Hager, which originated with R. Menaḥem Mendel of Kosov – the author of *Ahavat Shalom*. The most outstanding of them was R. Moses Joshua Hager of Vizhnitz–Bene Berak, who headed the Mo'ezet Gedolei ha-Torah of Agudat Israel. He had thousands of Ḥasidim the world over. His brother, R. Mordecai, lived in Monsey, New York, and he also enlarged the circle of his followers. R. Eliezer Hager of Seret-Vizhnitz was the leader of a large group in Haifa. In addition to gathering many more followers around him, he established branches in Jerusalem and Bene Berak. R. Naftali Hager was the leader of the Vishiva (Viseul de Sus)–Bene Berak Ḥasidim, but he did not take upon himself the title of *admor*. R. Moses Hager was the *admor* of Itnia in Bene Berak, but he had a limited circle of followers. A member of this family was R. Menaḥem Mendel Chodorov of Talnoye–Vizhnitz, who settled in New York. He was the author of *Be-Mo'ado*. A new Vizhnitz group, called Vizhnitz Ḥasidim, was established in Haifa and was led by R. Menaḥem David Hager.

Descendants of Fourth Generation

In the last quarter of the 20th century, the Lelov dynasty had three *admorim*: R. Abraham Solomon, who was centered in Jerusalem; R. Simon Natan-Neta, who was located in Bene Berak and was followed, as stated above, by a large section of

the Karlin Ḥasidim; and R. Alter, who lived in Bene Berak. They succeeded their father, R. Moses Mordecai Biederman of Lelov–Jerusalem–Tel Aviv–Bene Berak, who had died in 1988. He was the last of the special personages in Ḥasidism and the only one about whom “wonder-making” stories were told. His leadership was unusual and unique. Other descendants of the founder of this line were members of the Horowitz family of Boston. R. Moses Horowitz of Boston lived in New York, and when he died in 1985 his son R. Ḥayyim-Abraham took his place.

R. Moses’ brother, R. Levi Isaac of Boston, was one of the most outstanding figures among all current *admorim*. Most of his Ḥasidim were American-born, and he was the only *admor* who preached in English as well as Yiddish. He had excellent relations with physicians and hospitals and his generosity was legendary.

Admorim of the Zhidachov-Komarno dynasty of the Eichenstein-Safrin families were R. Ḥayyim Jacob Safrin of Komarno–New York–Jerusalem, whose son R. Shalom succeeded him, and his son R. Menaḥem Monish (d. 1990) in Bene Berak, where he established a yeshivah and large *bet midrash*. R. Menaḥem Monish was succeeded by his son.

Admorim of the Eichenstein family were R. Menashe Isaac Me’ir Eichenstein of Klausenberg–Petah Tikvah, he was succeeded by R. Dov Berish Eichenstein, who was in turn followed by his son, R. Joshua. R. Matityahu Eichenstein, who lived in New York, and R. Nathan Eichenstein who lived in Tel Aviv. Neither have successors as *admorim*.

An established line is the Zhidachov dynasty of Chicago. The current *admor* is R. Joshua Heshel, the son of R. Abraham Eichenstein, who is a third-generation Chicagoan. More distant members of the Zhidachov-Komarno line were R. Yeḥiel Ḥayyim Laavin of Makova and R. Moses Kleinberg of Cracow, who lived in Antwerp. This group had no significant center.

The Ropshitz dynasty of the Horowitz and Rubin families had dozens of *admorim*. R. Judah Horowitz of Dzikow–Tarnobrzeg refused to become an *admor* and only accepted the role at an advanced age, when he moved to London. Upon his death (1990), leaving no sons, the line ceased. His nephew, R. Joshua, was the *admor* of Dzikow in New York. A Dzikow center in Jerusalem was run by R. Yeḥezkel Horowitz, the grandson of another brother of R. Judah, who was not an *admor*.

R. Abraham Zevi Horowitz of Ozikow settled in New York, and his son, R. Shalom, succeeded him. R. Raphael Horowitz of Kolomea also settled in New York, as did R. Judah Horowitz of Stettin; R. Israel David Horowitz of Schotz (Suczawa); R. Isaac Horowitz of Melitz, the author of *Kevod Shabbat* and *Birkat Yizḥak*; and R. Ḥayyim Shlomo Horowitz of Stryzov, whose son, R. Israel-Jacob-Joel, succeeded him. R. Abraham Simḥah Horowitz of Melitz settled in Jerusalem (1973).

The *admorim* of the Rubin family were R. Abraham David Rubin of Lancut–New York (1963) and his son, R. Shlomo, who succeeded him; R. Joseph David Rubin of Sasov-

New York; R. Sender Lipa Rubin of Roman–Romania; R. Issachar Berish Rubin of Dombrova – New York; R. Isaac Rubin of Jawozow–Jerusalem; R. Issachar Berish Rubin of Dolina–New York; R. Sender Lipa Rubin of Wolbrow–New York; R. Shalom Yeḥezkel Shraga Rubin of Zeshinov–New York, (one of the greatest bibliographers of modern times, who was well versed in many fields and the author of *Pinnat Yikrat* on the Tomashov community written under the pseudonym Shalom Lavi. After his death, his son R. Aryeh Leibush Ben-Ziyyon was given the title *admor*); R. Simḥah Issachar of Tomashov – New York; the brothers, R. Menaḥem Mendel of Muzaly, R. Samuel Shmelka of Sulycy; R. Mordecai David Rubin of Szaszregen – all of whom lived in New York; R. Abraham Joshua Heschel Tubin of Los Angeles; R. Naftali Zevi Rubin of Dombrova – New York; and R. Simḥah Rubin of London.

Of the dynasty of R. Me’ir of Apta, the *admor* was R. Issachar Ber Rottenberg of Vyadislov–New York, who was an able leader of the rabbinic association founded by the Satmar Ḥasidim. His son succeeded him.

Of the dynasty of R. Uri of Strelisk were the rabbis of the Landman family, most of whom lived in Romania. In recent times there were R. Levi Isaac Landman of Tarnopol–New York, R. Zevi Landman of Baku–Nahariyyah (1965) and R. David Landman of Bucharest, who lived in Netanyah.

Of the line of “ha-Yehudi ha-Kadosh” (“The Holy Jew”) there remained only the *admorim* of the Biale family. The *admor* R. Yeḥiel Joshua Rabinowitz survived the Holocaust and reestablished Biale Ḥasidism in Tel Aviv and later on in Jerusalem and Bene Berak. Upon his death, four of his sons were recognized as *admorim*. The youngest, R. Ben-Ziyyon, who was a rabbi in Lugano, used the family name Biale and his center was in Jerusalem. His brother, R. David Mattityahu, who was responsible for the group’s institutions during his father’s tenure, established an important center in Bene Berak, with a branch in Jerusalem. The third brother, R. Zevi Hirsh, called himself the *admor* of Przysucha. The fourth son, R. Jacob Isaac, also lived in Bene Berak.

Of the dynasty of R. Moses Teitelbaum of Ujhely, considered to be Hungarian Ḥasidism, the one who occupied the central position in the entire world of Ḥasidism was R. Joel Teitelbaum of Satmar, an exceptionally brilliant scholar. He established a very solid organization with dozens of institutions. He was the most extreme of the ḥasidic *zaddikim*, and in addition to a number of books on Jewish learning he published two books against Zionism and the State of Israel. He had no sons, and upon his death his nephew, R. Moses Teitelbaum, became the group’s leader. Previously he had been the *admor* of Sighet, but he then changed his title to the *admor* of Satmar. His appointment led to the formation of factions within Satmar Ḥasidism. The group calling itself Benei Yoel (“the sons of Joel”), inspired by his widow, Feige, was vociferous in its opposition to him. Another segment gave the title *admor* to his disciple, R. Yeḥiel Michal Leibowitz, and they were called the Ḥasidim of the rabbi of Nikolsburg. R. Yeḥiel Michal was a scholarly young man who modified the extremism of his

mentor to a significant degree. A further faction which studied in the yeshivah, headed by Rabbi Menaḥem Mendel Wachter who was considered a Satmar ḥasid – left with the head of the *yeshivah* to Lubavitch Ḥasidism. All of this internal friction was widely publicized, with acrimonious mutual recriminations, and even various incidents.

Other *admorim* in the Teitelbaum family were R. Naftali of Ecsed; R. Yekutiel Judah of Lados–Zanz–New York; R. Alexander Samuel of Kolbuszowa–New York; R. Joshua Ḥayyim of Tscenjowic–New York, and his sons, R. Aaron and R. Samuel; R. Hananyah Yom Tov Lipa of Volove–New York; and R. Mordecai David of Hussakow–Beersheba.

Of the lineage of R. Zevi Elimelech of Dynov–Shapira, the following were *admorim* in recent times: R. Israel Shapira of Blazowa (a Holocaust survivor who lived to the age of 100, the oldest *admor* of this generation) his stepson, R. Levi Judah, who took on the surname of Shapira and who was his successor; R. Eliezer Shapira of Kovsed–New York (1973); the *admor* of the Munkacs line, R. Baruch Rabinowitz, who inherited the title from his father-in-law, R. Ḥayyim Eleazar Shapira. R. Baruch, who was able to draw thousands of Ḥasidim, relinquished the position of Munkacs *admor*, although he did establish his own *bet midrash* (school) in Petaḥ Tikvah. Of his sons, R. Moses-Leib was the very successful *admor* of Munkacs in New York and established a Ḥasidic empire; R. Jacob was the *admor* of Dynov in New York.

Of the Ozarow–Epstein line, there remained only the *admor* R. Moses Jehiel, author of *Esh Dat* and *Be'er Moshe* (1971). An exceptionally talented scholar, he was awarded the Israel Prize in 1967. His daughter's son, R. Tanḥum Benjamin Becker, who succeeded him, had his *bet midrash* in Tel Aviv.

The *admorim* of the Dombrova–Ungar line were R. Jacob Isaac of Dombrova–New York and R. Israel Aaron of Kaschau (Kosice)–Montreal. Affiliated with this lineage were the *admorim* of the Spiegel family: three brothers, R. Elḥanan Johanan of the Bronx; R. Moses of Brooklyn; and R. Phineas Elijah of Long Beach. Belonging to the generation following them were R. Jacob Isaac of Boro Park, R. Moses, and R. David, who were sons of R. Phineas Elijah.

Of the Wisnicz–Lifshitz family line, the *admorim* were R. Moses Lifshitz of Philadelphia–Jerusalem (1975) and R. Ezekiel Shragai Lifshitz, whose title was *admor* of Strupkov after his mother's father, who was R. Abraham Shalom Halbertam of Strupkov. He lived in Jerusalem and earned a reputation as a scholar. His son, R. Abraham Shalom, was the *admor* of Sieniawa.

There was no continuation of the Buczacz (Wahrman) and Radoshitz (Baron, Finkler) dynasties. A young man, R. Aharontchik, attempted to reestablish the Radoshitz line, and it was named after him.

The *admoriut* of the Belz Ḥasidim is still one of the largest dynasties in Ḥasidism. The *admor*, R. Issachar Ber who received the title at a very young age, replacing his uncle – R. Aaron of Belz – displayed excellent leadership qualities, although his uncommon resoluteness made him opponents.

He turned out to be a true nonconformist. His followers numbered in the thousands and his center in Jerusalem was one of the largest in the ḥasidic world.

The importance of the other *admorim* of the Rokach family was limited to their own circles. Among them were R. Moses Rokach of Kozlov, who had a huge library in New York and who was succeeded by his son-in-law, R. Jehiel Michal Rottenberg; R. David of Montreal, and R. Hanina of Turkow; and R. Baruch Rokach of Skahl who lived in New York.

Descendants of the founder of the line, R. Shalom of Belz, include R. Hananiah Yom Tov Lipa Teitelbaum of Sassov, the founder of Kiryat Yismaḥ Moshe in Ganei Tikvah; his son, R. Joseph David, who was his successor; R. Joel of Kiralhaza–New York; R. Ḥayyim Meir Jehiel Shapira of Narol–Bene Berak; R. Ḥanokh Ḥenikh Ashkenazi of Rzeszoz–Jerusalem; R. Abraham Alter Pollak of Petaḥ Tikvah, who was also a descendant of R. Joseph Meir of Spinka but was raised by his stepfather, R. Aaron of Belz.

Of the Stretyn–Langner–Brandwein family, the following served as *admorim*: R. Uri Langner of Krihynicz–New York who was a prolific scholar; R. Solomon Langner of Toronto; R. David Flam of Montreal; R. Yizḥak Isaac Langer of Toronto; R. Abraham Brandwein of Piatra–Neamt–Haifa; R. Judah Zevi Brandwein of Tel Aviv–Jerusalem, who was known as the “rabbi of the Histadrut.” In the late 20th century those bearing the name Stretyn were R. Shalom Flam of New York, whose mother belonged to the Langner family, and R. Aaron Jacob Brandwein of New York who refused to take any money from his followers or members of his *bet midrash*. A very talented scholar, he owned a large, significant private library.

Of the descendants of R. Ezekiel Panet there were three *admorim*, brothers who lived in New York, and bore the name Dej in their title. They were R. Zevi Meir of Dej, who also had a *bet midrash* in Bene Berak, and Rabbis Judah and Elimelech Alter.

Of the line of R. Joseph of Tomaszow (Frishman), there remained only R. Joshua of Tomaszow, who survived the Holocaust while losing all of his family. After he died in 1974, there was no successor.

Descendants of Fifth Generation

The Kazimierz (Kuzhmir)–Modzhitz dynasty was continued through R. Israel Dan Taub, who succeeded his father as the *admor* of Modzhitz, and replaced him on Mo'ezet Gedolei ha-Torah of Agudat Israel. He was a renowned Torah scholar. A cousin of his in America also became an *admor* and caused a split among the Modzhitz Ḥasidim in America.

Of the descendants of R. Isaac of Warka – the Kalish family – only the Amshinov branch still exists. The last member of the Warka family, R. Jacob-David-Baruch, died in 1983. The Amshinov group had two *admorim*: R. Isaac who lived in New York and was one of the oldest and most senior of the *admorim* since he had held the title since before the Holocaust, and R. Jacob Aryeh Isaiah Milikovsky who replaced his

grandfather, R. Jerahmiel Judah, who died in 1976. This young *admor* gained a group of followers despite unusual practices, such as, for example, making *havdalah* (separation of the Sabbath from the weekday) on Sunday afternoon.

The famous Kotsk dynasty was represented by R. Menaḥem Mendel Morgenstern, whose *bet midrash* was in Tel Aviv. He was not an official *admor*, since he earned a living from business. He printed the Torah teachings of his father and his grandfather. Another *admor*, R. Yehiel Meir Morgenstern, lived in New York but died with no successor.

The dynasty with the largest number of *admorim* is Zanz of the Halberstam family. Prior to the Holocaust, hundreds of its members had founded dynasties and even now they are very numerous.

The most important sectors of this group are the Bobov Ḥasidim, under the dynamic leadership of R. Salomon of Bobov, who had thousands of Ḥasidim and educational institutions as well as other projects, and the Zanz-Klausenberg Ḥasidim, led by R. Jekutiel Judah Halberstam, an exceptional Torah scholar, which had centers throughout the world, specifically in Netanyah, where they had also established the modern Laniado hospital.

Other, active Zanz descendants were R. Ḥayyim of Czchow–New York, R. David of Kashanov–New York, R. Ezekiel David of Parkrzvice–New York, and his son R. Jehiel, R. Jekutiel Judah of Sieniawa, R. Moses Aryeh of Nasoid–New York, R. Jacob of Szczakowa–Jerusalem, and his son R. Naftali. His son, R. Meir, who had been an office worker, began to serve as *admor* with the title of the *admor Ropczyce*. R. Jacob's son-in-law, R. Joshua Wagshal, was the *admor* of Lancut. Also included were R. Israel of Zhimgorod–New York, R. Aryeh Leibush of Zhimgorod–New York, R. Naftali of Gribov–New York, R. David Moses of Dinov and R. Abraham Abish Kanner of Chekhov–Haifa, whose *bet midrash* continued to function without an official *admor*.

Other Zanz ḥasidic groups were led by R. Shalom Ezekiel Shragai Rubin and R. Ezekiel Shragai Lipshitz of Stropkov who were mentioned above with their families. These two men added the name Halberstam to their family names.

The Radomsk (Rabinowitz), Kaminka (Rosenfeld), Kobrin (Palier), and Radzymin (Gutterman) dynasties had no continuation.

The Izbica-Radzyn dynasty found no direct successor from the Leiner family, and R. Abraham Issachar Engelrad, a Holocaust survivor and brother-in-law of the last *admor* of Radzyn, R. Samuel Solomon Leiner, was chosen *admor*. A large center was established for him in Bene Berak. A Radzyn center was also set up in the United States, directed by the *admor* R. Mordecai Joseph Leiner (d. 1991), the son of R. Jeruham of Radzyn.

The Gur dynasty is focal in Polish Ḥasidism. Before the Holocaust it was the largest ḥasidic group in Poland and since its leader, R. Abraham Mordecai Alter, looked favorably upon settlement in the Land of Israel, many of his followers immigrated to Palestine. The dynamic leadership of his son, R.

Israel, the author of *Beit Yisrael* (1977) brought new vitality to the Gerer Ḥasidism, making it the largest ḥasidic group in Israel. Continuing the leadership, in his own distinctive manner, was the *admor*, R. Simḥah Bunim Alter.

The Ciechanow line of the Landa family was another Polish ḥasidic group, and was led by R. Abraham Landa, the *admor* of Strykow (a branch of this ḥasidic division), who first lived in Tel Aviv and then in Bene Berak. He had a fine reputation as a scholar.

The Lithuanian Slonim Ḥasidism was led by R. Shalom Noah Brazovsky, well-versed in Torah learning, who directed the Slonim yeshivah and was the son-in-law of the last *admor* R. Abraham Weinberg of Tiberias–Jerusalem. R. Abraham was chosen since there was no direct descendant of the Slonim *admor* and R. Abraham was related to the founder of the line. A number of Ḥasidim did not accept the choice of R. Shalom Noah and gave the title to R. Abraham Weinberg, a young Torah scholar, who belonged to the family of the Slonim *admor*. He settled in Bene Berak, established a yeshivah, and gained the fierce loyalty of his followers. R. Abraham Joshua Heschel Weinberg, an *admor* who had been in business and who was a direct descendant of the Slonim family, died in 1978 and his sons did not succeed him.

Of the Wielopole–Frankel family, the only ones to serve as *admor* in this period were R. Solomon-Zalman, and R. Ben Ziyyon. R. Solomon Zalman's nephew, R. Joseph, was an *admor* in Flatbush, New York.

Descendants of Sixth Generation

Those ḥasidic groups established in the sixth generation of Ḥasidism continue to function.

The Lublin dynasty of the Eiger family is represented by the *admor* R. Abraham Eiger, a Holocaust survivor, who lives in New York.

The Sochaczew dynasty of the Bornstein family, reestablished after the Holocaust, was hard hit by the tragic death in 1969 in a traffic accident of R. Menaḥem Solomon, for whom a great future had been expected. His son, R. Samuel, was appointed to take his place.

The Aleksandrow dynasty, led by the Danziger family, which had been the second largest ḥasidic group in Poland with thousands of members, found it very difficult to reconstitute itself after the Holocaust. The survivors appointed as *admor* R. Judah Moses Tiehberg, the son-in-law of R. Bezalel Yair Danziger of Aleksandrow, who had not been the main *admor* of the group. The selection was not accepted by everyone and internal friction prevented the expansion of Aleksandrow Ḥasidism. R. Judah Moses' son, R. Abraham Menaḥem, was given the title *admor* in 1973 and gave new vitality to the group, establishing new branches and institutions. He changed his surname to that of the dynasty, Danziger. He, too, however, could not do away with the internal strife. An opposition group appointed R. Jehiel Menaḥem Singer of New York as *admor* and upon his death his son succeeded him.

The Wolborz dynasty was reconstituted only recently

with the arrival in Israel of R. Zevi Turnheim from Brazil. He set up a *bet midrash* in Bene Berak which was very active.

The Sambor court of the Ullis family was led by R. Eleazar of Montreal. Another descendant, R. Efraim Eliezer, who served as a rabbi in Philadelphia and lived to a very advanced age, did not fill the role of *admor*, but after his death his grandson became the Sambor *admor* in Jerusalem.

The Tash (Tass) dynasty of the Lowey-Rotenberg family continued along its two lines. Tash was represented by R. Meshullam Feish Lowey, who established a large, very successful ḥasidic neighborhood in Montreal and by R. Ḥayyim Solomon of Khust in New York. For the Rotenberg family, the *admorim* of the Kason line were R. Menahem Israel of Boro Park and R. Meshullam of Boro Park, who were the sons of R. Moses Samuel of Kosoni, R. Jacob of Monsey and R. Joel Zevi of Williamsburg, the sons of R. Mordecai Rotenberg of Salka-Kosoni, and R. Asher Isaiah, the son of R. Moses (the second) of Kosoni.

R. Zevi Elimelech Panet, a descendant of this line on his mother's side, established his own *bet midrash*, in the name of Kason, in Bene Berak.

Of the Liska-Friedlander line, the *admorim* were R. Solomon of Liska, R. Moses David of Borgopzund and R. Yoska of Lisk, and the latter's son, R. Zevi, succeeded him.

Of the Spinka dynasty of the Weiss-Kahana families, there were several *admorim*: R. Jacob Joseph Weiss was the most outstanding of the Spinka *admorim*. He conducted a large network of institutions centered in New York, where he lived. After his death in 1989, the line was carried on by his three sons, R. Naftali Ḥayyim in Los Angeles, R. Israel in Bene Berak, and R. Meir in Boro Park. Two other sons died while their father was still alive. R. Naḥman Kahana was the Spinka *admor* in Bene Berak until his death in 1977, when his sons were chosen as *admorim*, with R. Moses Eliyakim in Bene Berak and R. Baruch, the *admor* of Karlsburg, in Jerusalem. R. Joseph Meir Kahana was the *admor* of Spinka in Jerusalem. In 1978 his title was divided between his sons, R. Mordecai David and R. Alter, the *admor* of Zhidachov, in Jerusalem. R. Zevi Kahane was the *admor* of Spinka in Los Angeles and R. Zevi Hirsch Horowitz was the Spinka-Kareli *admor* in Williamsburg.

Of the B'kerestur dynasty, the *admorim* were R. Issachar Dov Rubin and R. Naftali Gross.

The *admor* of the Hadas court was R. Eliezer Fish of Williamsburg.

The dynasty of "Rebbe Aharele," an independent dynasty in Beregszaz and Jerusalem, was continued by his son, R. Abraham Ḥayyim Rata in Bene Berak, a unique personality, and his son-in-law, R. Abraham Isaac Kahn, who greatly increased the number of his followers. His *bet midrash* was a center of Jerusalem zealotry in content and in form.

Of the dynasty of R. Judah Leib Ashlag, another independent line which did not bear the name of a city, there were three *admorim*, the son, R. Baruch Shalom in Bene Berak, and

two grandsons, R. Ezekiel Joseph and R. Simḥah Abraham. They were sons of R. Solomon Benjamin Ashlag, the son of the founder of the dynasty. The uniqueness of these *admorim* is in their teaching of Kabbalah in public and in disseminating information about it.

The Entradam-Naszod line of the Freund family was represented by a non-direct descendant, R. Moses Aryeh Halberstam, who lived in New York. The rabbi of the Edah Ḥaredit in Jerusalem, R. Moses Aryeh Freund, was a direct descendant of the line and therefore functioned, to a great degree, like an *admor*.

Of the Bikszad dynasty, the successors were R. Nahum Zevi Fish and R. Moses Aryeh Lev, both of whom are in the United States.

In the post-Holocaust generation, new *admorim* became effective. R. Eliezer Zusya Portugal, the Skolener *rebbe*, gained his reputation for rescuing children and educating them after the Holocaust. Following his death his son, R. Israel Abraham, replaced him as *admor*. The father and son established a network of institutions in Israel under the name of "Ḥesed le-Avraham." Others are R. Isaac Huberman of Ra'anannah (1978); R. Zavel Abramowitz of Rimnitz, who was in the United States; R. Avraham Fish in Jaffa; R. Asher Freund in Jerusalem. All of them gained reputations as "wonder-workers" and attracted followers.

Sometimes a name comes up as a "wonder-worker." A noted example is R. Eleazar Abu-Ḥazeira of Beersheba. The phenomenon of recognizing an *admor* has been developing among Sephardi communities and deserves its own study.

The Braslav Ḥasidism, which had been exceptional ever since it was founded, continued to expand greatly. The increase in followers led to the establishment of different groups in Jerusalem, Safed, and a group revolving around R. Eliezer Solomon Shick. He was also a "new" Braslaver, who set up a ḥasidic center in Jabne'el in Galilee. He was considered the greatest disseminator of Braslav teachings, with his publication of hundreds of booklets of the teachings of R. Naḥman of Braslav. Braslav Ḥasidism has dozens of books of various types in distribution spreading its teachings.

THE MUSICAL TRADITION OF ḤASIDISM

Problems of Definition and Research

By one definition, the field of ḥasidic music would include all music practiced in ḥasidic society. By another, and related, definition, any music performed in "ḥasidic style" is ḥasidic. A further possibility could be to define ḥasidic music by its content, i.e., by those musical elements and forms, which distinguish it from any other music. So far, such distinctions have not been formulated according to the norms of musical scholarship. The Ḥasidim themselves also possess criteria – formulated in their own traditional terms – according to which they judge whether a melody is "ḥasidic" or not, and to which dynasty-style and genre it belongs. These, too, have not yet been translated into ethnomusicological terms. Moreover, none of the existing studies of ḥasidic music has as yet man-

aged to furnish a systematic description of the ḥasidic repertoire or even part of it. First steps in this direction were made by Y. Mazor and A. Hajdu from 1974. A pioneer effort was made by A.Z.I. *Idelsohn, the tenth volume of whose *Thesaurus* is devoted to ḥasidic music. Idelsohn based his analyses on very loosely defined form and scale types – criteria, which are not sufficient for an exclusive and thorough definition. The fundamental difficulty lies in the anthologist character of the body of material, which he assembled as a base for his analysis. Idelsohn's 250 items include vocal music, instrumental music, liturgical pieces, dance tunes, folk songs in Yiddish, etc., and are taken from various and often distant dynastic repertoires. A systematic description requires analyzing the material first by sub-units, such as dynastic repertoires or genres (dance tunes, prayer melodies, or instrumental music, etc.). A comparative summary of these would then reveal the basic aspects of ḥasidic music. Nowadays the location of these units has itself become difficult, because of the far-reaching changes, which have occurred during the last 70 years in the ḥasidic communities, especially as a result of the Holocaust. The original communal frameworks were for the most part destroyed, although attempts were made to reconstruct them in other places (chiefly in Israel and the U.S.). For some dynasties this proved impossible, since all that remained of them were a number of survivors living in various countries that could, at best, try to preserve the remnants of the tradition in their personal memory. Other dynasties did achieve a renaissance around new geographical centers but the interference of new external and internal factors could not but cause radical changes in the traditional patterns, including all aspects of the musical repertoire.

Two opposing tendencies can be discerned in the present-day repertoire. On the one hand, there is the attempt to preserve the traditional functions with their traditional melodies as strictly as possible such as Sabbath and festival prayer customs and, to a certain extent, the *tish* (i.e., rabbi's table assemblies). However, the desire to preserve tradition could paradoxically lead to major or minor changes, as happened with the Vizhnitz and Karlin ḥasidim, who made a special effort to collect forgotten *niggunim* and to reincorporate them into the pertinent ritual occasions. These changes often affected the repertoire of ritual events that up until then had maintained their distinctive traditional character. Furthermore, original elements appear in, and are stimulated by, those occasions on which both the adherents of diverse dynasties and non-ḥasidic Jews come together and influence each other, such as weddings, *Simḥat Torah celebrations, and the *hillulot* of *Lag ba-Omer and the Seventh of Adar. These events have created a distinctive repertoire, which arose mainly in Israel and the U.S. after World War II; it is made up chiefly of dance and "rejoicing tunes," which were originally linked with specific functions and dynasties and have now been detached from their earlier framework and adopted by this "pan-ḥasidic" public. Here, many melodies have been furnished with new words; individual dynastic traits have been eroded, and the reper-

toire has absorbed a number of recently composed melodies. This repertoire, however, has not accepted melodies, which are too exclusively associated with a specific dynasty, nor the slow *tish* tunes. This "pan-ḥasidic" phenomenon is found even among those ḥasidim whose communities did achieve a renaissance after the Holocaust, such as Boyan, Gur, Vizhnitz (see mus. Ex. 8).

The historical dimension of ḥasidic music poses problems of its own. In fact, we still do not know whether ḥasidic music developed out of an existing tradition and repertoire or was created as a new style in response to the new social and spiritual conditions established by the rise and development of ḥasidic society. Without this knowledge any historical theory about ḥasidic music would be farfetched. In any case one must take into account the dynastic filiations and interrelations, geographical proximity or isolation, and the importance of the "court musicians" and *klezmerim* as transmitters of musical elements from one dynastic center to another.

The Place of Music in Ḥasidic Thought

Joy and its principal means of expression – song and dance – have been important values of the ḥasidic movement since its inception in the second half of the 18th century and the ḥasidic leaders devoted increasing attention to music and dance in their writings. This signified an innovation in Jewish culture, in contrast to the general attitude of the Ashkenazi rabbinical establishment to music. A thorough survey of the musical evidence in the literary sources, and their interaction with oral traditions, is not yet available, but a beginning has been made at the Jewish Music Research Center at the Hebrew University of Jerusalem (see Mazor 2002). The literary evidence has been expressed in different ways:

(1) Sayings of *zaddikim* and their disciples about the virtues of music: They appear either as part of a story or as independent maxims and discourses in their writings. They also include kabbalistic interpretations of the **shofar*, its tones and its liturgical functions (see, e.g., the writings of Jacob Joseph of Polonnoye, *Nahman of Bratslav).

(2) The musical activities of the *zaddikim*: Stories about these activities began with *Israel ben Eliezer Baal Shem Tov himself (see, e.g., *Shivḥei ha-Besht*). These also include stories about the creation of particular melodies by *zaddikim* or their "court musicians," and descriptions of the miraculous properties were sometimes attributed to such melodies.

(3) Musical elements in the ḥasidic tales: The most fascinating of these can be found in the tales of R. Nahman of Bratslav (see especially the "Tale of the Seven Beggars").

(4) Miscellaneous stories and descriptions by the opponents of Ḥasidism: a most valuable contribution is furnished by the polemic writings of those who, from the beginning, constantly poured their scorn on the Ḥasidic predilection for singing and dancing. Their very vehemence and undoubted exaggerations demonstrate the difference between the two cultures, and the importance they accorded to music. Because of the lack of explicit descriptions in the early Ḥasidic literature

(for reasons which are as yet unclear), these anti-Hasidic writings are all the more important as historical sources.

The central place of music in Hasidic life is anchored in their musical ideology. Ideological differences between the various streams of Hasidism as well as recurring conceptual changes throughout the generations are reflected in their attitude to music. In their approach to music, a prominent conceptual change involves the movement of Hasidic thought from the theosophical sphere to the psychological one, e.g., from the divine to the human soul. In the early Hasidic writings, magical and theurgical conceptions prevailed that were rooted in the theosophical kabbalistic doctrine, in particular that of the Lurianic Kabbalah. These conceptions affirm human deeds, including musical activity, as having the power to affect the *sefirot* (Godhead) and, as a result, the entire world. Naḥman of Bratslav (1772–1810), for example, discusses the power of the tune of the prayer in *Likkutei Moharan*. Later generations abandoned the view that one can influence the divine world with music and ascribed this power only to the *zaddik*.

This change occurred under the leadership of R. *Dov Baer, the Maggid of Mezhibezh (1704–1772) and especially through the teachings of some of his disciples. According to this view music was part of contemplation, of the soul-seeking required to reveal its divine source, and allowing communion with God, *devekut*, to take place. One witnesses, then, a drift from the emphasis put on music in textual context to the belief that music can act in its own right, whether connected to a text or not. In the opinion of some *zaddikim* and their adherents, music and singing were ranked even higher than explicit prayer. In consequence, Hasidic melodies are mostly sung without words, though some are adapted to brief verses from the prayer book or *piyyutim*. However, some *niggunim* remained with a fixed text, such as the recitative *niggunim* of the Sabbath **zemiroth*, *Kol Mekaddesh* and *Barukh Adonai Yom Yom*, and dance songs of Lag ba-Omer (see Hajdu-Mazor. *101 Hasidic Dance Niggunim*, nos. 8–10). In addition, a drift took place from the performance of music in the individual, meditative sphere towards a predominant collective expression of the entire congregation. Today only the Lubavitch (Chabad) and Bratslav movements engage in both individual and collective performance. Yet, in some dynasties certain *niggunim* are performed by the Rebbe himself.

Since most Hasidic songs are textless, such a predominance of the melodic element over the textual aspect may well be directly linked with this doctrine. The primacy of the melody characterizes even the sung parts of Hasidic prayer: instead of rendering the text, the Hasidim actually perform the melody into which the words are freely interpolated. Some of these renditions often sound as if the text did not exist at all. An extreme example is the singing of the Sabbath *zemiroth* by the Slonim Hasidim, which is entirely textless: they have the words well in mind without uttering a single syllable.

The *niggun* as an expression of innermost emotions that cannot be expressed through words is considered as a means for the *zaddik* to plumb the depths of a person's soul, and to

discover whether that person is evil or pious. It also enables him to refine that person's soul and raise it to a higher level of existence. As for simple people, who have not achieved the level of the *zaddik*, the *niggun* can help them to attain spiritual elevation, either through singing, or passively, by listening. Hearing the *zaddik* singing a *niggun*, provides the ordinary person with a foothold at the edge of the world of the Sacred.

Musical Acculturation

Adopting tunes from surrounding non-Jewish cultures is a hallmark of Hasidic music. Leading Hasidic sages tried to explain this phenomenon of musical acculturation and even gave to it the force of a religious duty. For example, R. Naḥman of Bratslav approved of singing gentile music as a way to attract God's increased attention to His people's sufferings at gentile hands and to induce Him to redeem them. A more typical view holds that sacred melodies in gentile music have been, as it were, taken captive by evil forces in the constant struggle between divine forces and the forces of evil. The "divine sparks" (*nitzozot*) hidden in them, await redemption. *Zaddikim* and their emissaries, wherever they lived, were constantly seeking out melodies with a "sacred flavor" in order to redeem the sparks and restore them to their heavenly source. Thus, local gentile, folk and popular melodies (Russian, Polish, Ukrainian, Romanian, Hungarian, Turkish, and Arabic) left a strong stamp on Hasidic music. The plurality of melodic styles has brought about the opinion that Hasidic music could not be considered as an autonomous ethnomusical unit. But such an attitude disregards the obvious processes of transformation and re-creation, which occurred in these tunes through their adoption by Hasidim.

Occasionally, Hasidim borrowed gentile folksongs with the original texts, but endowed them with a new meaning in the spirit of Hasidism, justifying the texts as being allegorical (see mus. ex. 1). Some of the original songs or melodies, were preserved together with the story (apocryphal or real) of how it came to be "lifted up" from the "sphere of impurity," and by whom. Such are, for instance, the songs attributed to R. Yitzhak Eizik Taub of Kalov (one of which is illustrated in example 2).

Dynastic Styles

Which dynasties have a characteristic musical style and which dynasties share a common style? Hasidim with a musical ear insist that they can identify the dynastic origin of a tune at first hearing and claim that the *niggunim* of certain dynasties have a unique musical flavor. There are indeed a few characteristic features that can be associated with specific dynasties. For example, in dynasties closer to the West – Bobov, Gur, and Modzhitz – there is a strong Western influence, which finds expressions through a harmonic-tonal conception traceable to operatic melodies, modern cantorial compositions, and polyphonic elaboration (see mus. ex. 3). Romanian and Hungarian influences appear in dynasties in Transylvania, Hungary, and the Carpathian Ukraine such as Vizhnitz, Satmar, Munkacs, and Kalov without the tonal-harmonic thinking.

The melodic framework shows the traits found in the surrounding ethnic cultures: modes, pentatonic, and some scales with the augmented second. The *tish niggunim* of the Gur, Vizhnitz, and Modzhitz ḥasidim, whether sung to *zemirot* or with liturgical texts, are distinguished by their length. Some *niggunim* of the Vizhnitz ḥasidim resemble cantorial compositions and are sung by the *kapelye* (choral group) in a variety of polyphonic textures, such as parallel thirds, canons, and other imitative techniques, sometimes over an ostinato (see mus. ex. 4).

Ḥasidic marches can be found mainly in the repertoires of Gur, Vizhnitz, and Modzhitz ḥasidim; they are less frequent in other dynasties.

Dance *niggunim* of the Bratslav ḥasidism show the influence of their Ukrainian surroundings. The melodies are mostly short, simple in form, and in general do not exceed the range of one octave. Their melodic elements do not differ significantly from those of the Carpathian and Transylvanian dynasties described above (see: Hajdu-Mazor, *101 Hasidic Dance Niggunim*, nos. 23–26). The northern area – Belorussia and Lithuania – comprises the centers of Chabad, Karlin, and Slonim Ḥasidism. Russian motives and traits of performance are found in the Chabad repertoire, although part of it is also influenced by the Romanian *doina* style (see: Zalmanoff, no 303–304). The singing of the Karlin ḥasidim is distinguished by a strong rhythmic emphasis on every beat, while the melodic range is limited and often does not exceed the fifth. The melodies are built on progression by seconds and on the variation repetition of brief motifs (see. mus. ex. 11). Since the Karlin ḥasidim are now concentrated in Israel, and this style is closely related to several styles found in the Near East, the question arises whether these traits were already present in the original Karlin repertoire, or whether they entered and dominated it only after the reconstitution of the community in Palestine and Israel; but in the absence of older recordings and notations it must remain unanswered.

There is another specific phenomenon in the singing of some ḥasidic communities. We can define it as a gradual but continuous rise of pitch, sometimes to impressive proportions, as among the ḥasidim of Boyan, Lubavitch, and Slonim. The latter have an even more peculiar way of singing which has no parallel in other dynasties: the constant and somewhat irregular shifting of the melodic phrases upwards, through chromatic and even microtonal displacement, resulting in a continuous shifting of the tonal center. The impression it gives is one of a wide-ranging melody, though the motifs and phrases themselves (without the shifting) should give only a very small range. The upward shift can be also found in other dynasties, such as Chabad, but appear there only as an imperceptible “creeping.”

The Place of Music in Ḥasidic Life

The role of music in Ḥasidic life is intrinsically different from that of other communities. The latter distinguishes between music sung in the synagogue – which is the center of commu-

nity’s religious life – and music belonging to everyday life. In Ḥasidic society the house of the *zaddik*, as well as the *shtibl*, is the spiritual and religious center for prayer and for events where much singing was involved, such as the *tish*. The aura of sanctity, which enveloped everything that took place in the *zaddik*’s house, therefore extended itself also to those musical activities of the Ḥasidic community, which were not strictly speaking a liturgical activity. In consequence, the boundary between sacred and secular music became blurred: secular forms such as marches and waltzes could be taken over for prayer tunes, and tunes used for dances could be furnished with texts from the liturgy. Since the dance was also considered a sanctified action it was and still is found even in the synagogue, before, between, and after certain prayer services.

THE REBBE AS MUSICAL LEADER. Many ḥasidic leaders were highly musical; some also earned fame as gifted *ba’alei tefillah* (prayer-leaders) or composers. Such leaders cultivated their communities’ musical repertoire and encouraged original creativity, or drew gifted composer-*ḥazanim*, together with their *kapelyes*, to their “courts.” Very famous were the *ḥazanim* Nissan Spivak (“Nissi Belzer,” 1824–1906) in Sadgora, Yosef Volynetz (“Yosl Tolner,” 1838–1902) in Talnoye and Rakhmistrivke (Rotmistrovka), Jacob Samuel Morogovski (“Zeydl Rovner,” 1856–1942) in Makarov and Rovno, Pinḥas Spector (“Pinye Khazn,” 1872–1951) in Boyan and its branches, and the *menaganim* (musicians) Yankl Telekhaner in Koidanov, Stolín, Lechovitch, and probably Slonim, and Jacob Dov (Yankl) Talmud (1886–1963) in Gur.

A new type of leadership emerged after the Holocaust, stemming from the danger that the musical tradition would disappear with the annihilation of entire communities. The late *rebbe* of Vizhnitz (Ḥayyim Meir Hager, 1888–1972), who reestablished his community in Israel, felt this danger, and took steps to revive the musical tradition, and at the same time encouraged the inclusion of *niggunim* of other ḥasidic sources. He also established a *kapelye* that would sing in the polyphonic style, and would perform works of *ḥazzanim* from the past.

The musical leadership of the *rebbe* also finds expression during the *tish*. Some *rebbes* sing all the *niggunim* on their own, while the congregation joins in only at specified places. Other *rebbes* conduct the *tish* through subtle cues – they signal to the congregation, or the *kapelye*, with a hand gesture or even with a glance. The late Vizhnitz *rebbe* used to conduct the singing of his congregation, correcting the congregation when the *niggun* was sung inaccurately. In some communities, the *rebbe* has a special sign to bring about greater excitement in the singing. Among the Vizhnitz, the excitement reaches its peak when the *rebbe* stands up; among the Boyan, this happens when the *rebbe* claps his hands. The latter also try to affect the tempo and as a result, a *niggun* may be rendered with unusual changes of tempo (Mazor 2004).

Among the Belz ḥasidim, who were known as “not musical,” a veritable revolution took place when the current Vi-

zhnitz *rebbe's* son-in-law, Yissachar Dov Rokach, became the *rebbe* of Belz. The encouragement of original musical creations, together with the establishment of a *kapelye*, modeled on that of Vizhnitz, brought about a new and unique repertoire in addition to the traditional *niggunim*. The current *rebbe* of Karlin has directed the collection of Karlin traditional *niggunim* from all possible sources, even from the National Library in Jerusalem, in order to revive them. The guarding of the tradition included the prohibition to take the *niggunim* out of the congregation, whether through publication, recording, or handing over the scores to individuals from outside the community.

THE MUSICAL GENRES. *Niggun* (Yid. *nign*, from *nagen*, which probably meant “singing” in biblical Hebrew) is the ḥasidic term for a musical unit, i.e., a “tune,” be it sung (with or without words) or played. All this is opposed to the current meaning of the term in modern Hebrew, which uses it for playing only. The *niggun* is the central musical manifestation of ḥasidic life. The term is not applied to the prayer **nusah*, or the cantillation of the **masoretic* accents, or other types of popular songs. While the latter are conditioned by the textual factor, the *niggun*, even when sung with words, is conceived as a completely autonomous musical entity. Most *niggunim* are sung without any words, with the frequent use of carrier syllables such as *Ah, Ay, Oy, Hey, Bam, Ya-ba-bam, ti-di-ram*, etc. Others have a partial text underlay. One *niggun* may also be sung to various texts. Where a *niggun* has a fixed text, the setting shows that the melody came first and the words were fitted to it afterward; even where it is known that a *niggun* was composed specifically for a certain text, the result sounds as if the text had been adapted to the melody.

Of all the dynasties, Lubavitch alone has successfully evolved a kind of “*niggun*-theory,” through which it tries to explain ḥasidic musical activity, and to distinguish between different genres. Ḥasidic musicians (“*menagnim*”) of various dynasties use different terms to classify *niggunim*, and as a result some genres are referred to with more than one term.

1) *Tish* (“table”) *niggunim*. These make up the core of the ḥasidic repertoire, and constitute the major part of melodies sung at the assembly of the *rebbe's* table. Most have stylistic similarities to the Lubavitch genre of *devekut* (adhesion) *niggunim*, also called *hitva'adut* (gathering) tunes. In other dynasties they are known as *hisorerus* (awakening), *makhshove* (meditation), *moralishe* (moral), *hartsis* (hearty), or bet (begging) *niggunim*. All are characterized by slow tempi, expressing serious, meditative and even sad moods and by metrical or free rhythm (see: mus. ex. 5). Sometimes this free rhythm is combined with metrical sections resulting in a variable tempo. One of the most widespread types resembles a slowed-down *mazurka*, with the first beat changing, perhaps under the influence of the well-known Hungarian metric formula (see mus. ex. 6). In some dynasties, such as Chabad and Vizhnitz, these *niggunim* show the impact of East European folk forms, such as the Romanian *doina* (called by them “*a volach*”

or “*vulechl*”); in others, such as Modzhitz and Bobov, they are influenced by West European art music (e.g., operatic melodies). The length of such a *niggun* may vary. It is divided into sections, called “*fal*” in Yiddish or designated by the Aramaic term *bava* (“gate”). Their number can go from two to seven and in exceptional cases can reach 32, as in the *Ezkerah* of R. Israel Taub of Modzhitz (M.S. Geshuri, *Neginah ve-Ḥasidut be-Veit Kuzmir u-Venoteha*, pt. 2 (1952), pp. 9–18). Most *tish niggunim* are textless. The texts of the others are generally taken from the Sabbath and **zemirots* or from the liturgy (see mus. ex. 6–7).

2) Dance *niggunim* – called also *tentsl* or *freylekhs*. Other terms used by Polish ḥasidim are *hopke*, *dreidl*, or *redele*. Many dance *niggunim* have the following characteristics: duple meter; fast tempi; a periodic or symmetric structure in multiples of four bars; few sections – between one to five (the structure a-b-c-b being the most frequent); a small range, generally not more than one octave – sometimes only a fifth or a sixth; and a small number of motives (see Hajdu-Mazor, *101 Hasidic Dance Niggunim*, no 87–92). Some tunes consist of one or two motives and their developments (see mus. ex. 8). The most common tonal framework is that of the minor hexachord (aeolian mode), extended sometimes by a lower or higher second. Others of these *niggunim* use different scales characterized by the augmented second (see mus. ex. 9). Dance tunes are performed mainly at weddings and rejoicing festivals such as *Simhat Torah* and *Lag ba-Omer*, but have an important role at the ḥasidic *tish* and synagogue prayers. About a third of these *niggunim* has fixed texts, mostly short, taken from biblical verses or from the liturgy, and fitted to the melody through the repetition of words or parts of sentences. A related category is called “tunes of rejoicing,” which possess all the above characteristics but is sung in a slower tempo and mostly without dancing (see mus. ex. 10).

3) March and waltz. These joyful tunes were adopted from, or influenced by, non-Jewish cultures from Central Europe (mostly Polish and Austro-Hungarian). They are mostly used at the *tish* or for prayer but not used for dancing or marching; they are generally sung slower than their gentile counterpart. Most *niggunim* of these types are sung without text. They can be used in Sabbath and holiday services and applied to poetical texts such as *Lekha Dodi*, *El Adon*, *Ki Anu Amekha*, *Ki Hine ka-Homer*, *Ha-Yom Te'amzenu*, etc. The Vizhnitz repertoire includes *niggunim* having some characteristics of a march despite their triple meter. They call them “marsh” but they could be better called “marsh-vals.”

4) Other genres. In addition to the types of *niggunim*, the ḥasidic repertoire includes *badkhones* (jester's tunes sung with Yiddish rhymed verses), bilingual songs, and compositions in the style of choral music composed by cantors.

Tradition and Renewal in Ḥasidic Music

The main way to determine whether music in ḥasidic society grew from an existing tradition or mapped out new paths is to look for parallels in the music of non-ḥasidic communi-

ties in and after the 18th century. Two dominant musical elements are common to the ḥasidic and non-ḥasidic prayer of the communities of Eastern Europe: The modality (in Yiddish, *shtayger*) and the recitative style. The extensive use among ḥasidim of the term “*Velts Nusakh*” for the style of liturgical recitative common to both ḥasidim and *mitnaggedim* applies also in this sense. The specific character of prayer among Karlin ḥasidim, as well as certain characteristic elements in the so-called “*Volhynia Nusakh*” (which has survived among offshoots of Ruzhin Ḥasidism – Boyan, Sadegora, Czortków, etc.) and in the *nusah* of such communities as Vizhnitz, Zydaczów and its offshoots (Spinka, Kosoni, Tass), may be attributed to the preservation of old local traditions. One can see in the polyphonic practice of certain communities (such as Boyan and Vizhnitz), a continuation of polyphonic practice before the rise of Ḥasidism.

Research and Collections

Toward the end of the 19th century, Yoel Engel (1898), Sussmann Kisselgof (1912), and the former Jewish Historical Ethnographic Museum (1912–14) took in Russia the first steps in collecting and transcribing ḥasidic music (as a part of Jewish music). As for Moshe *Beregovski (1927–46), he was mainly devoted to instrumental and wordless vocal genres. The collection of ḥasidic melodies, their analysis and classification in the context of ḥasidic social life and religious thought, has been a major focus of documentation and research work at the Jewish Music Research Center in Jerusalem since its inception in 1964. This recorded material is cataloged at the National Sound Archives (NSA) of the JNUL. Recently some ḥasidic communities felt the need to produce documentation of their own. This led to the establishment of the archives of the Lubavitch, Modzhitz, and Karlin-Stolin heritage including recordings and notations of music as well as comments.

[filler syllables until the end]
fine

Example 1. *Habad*. Nie Zhuristi Khloptsi. “Rejoicing” and dance niggun for a devotional gathering (*hitva'adut*) and festive occasions, derived from a Ukrainian song. Said to have been sung by the followers of the “Middle Admor,” Dov Ber b. Shneur Zalman of Lyady, on their pilgrimages to his court. The second and third sections are probably an original hasidic development of the basic tune. This is also sung to a Yiddish text, *Gits nit kayn Nekhten*. Recorded by Y. Mazor at Kefar Habad, 1969 (Jerusalem, J.N.U.L., National Sound Archives, Yc 121/16–17). Transcription Y. Mazor.

Example 4. Vizhnitz. Part from Shira la-Shem ("Song to the Lord") for choir, sung at devotional gatherings. Recorded by Y. Mazor, at the wedding of the Rebbe's son, Bene-Berak, 1976 (Jerusalem, I.N.U.L., National Sound Archives, Yc 1007/8). Transcription Y. Mazor.

Example 5. Habad. Hitva'adut (gathering) niggun for devotional gatherings and festive occasions. Transcribed by E. Avitzur from S. Zalmanoff, Jerusalem 1980. From S. Zalmanoff (ed.) Sefer ha-Niggunim, 3rd volume, 1980.

Example 6. Karlin. Textless niggun, sometimes also sung to the words of Yah Ekhesor. Believed to be old. Recorded by Y. Mazor in Jerusalem, 1970, when sung at a Karlin wedding before the entry of the bridegroom (Jerusalem, Israel Institute for Sacred Music, M74/962). Transcription A. Hajdu.

Example 7. Habad. Avinu Malkenu ("Our Father, our King"), niggun for a devotional gathering, sometimes also sung during the Avinu Malkenu prayer. Attributed to R. Shneur Zalman of Lyady. From S. Zalmonoff (ed.), Sefer ha-Niggunim, 1949.

Example 8. Pan-Hasidic. Dance niggun, of unknown provenance, nonspecific in function. Recorded by Y. Mazor in Bene-Berak, 1957, as played by a Jerusalem klezmer group (Jerusalem, Israel Institute for Sacred Music, M39/490). Transcription A. Hajdu.

Example 9. Habad. "Rejoicing" and dance niggun for a devotional gatherings and festive occasions. Recorded by Y. Mazor at Kefar Habad, 1967, on the "Feast of redemption" (19th Kislev), at the devotional meeting in the yeshivah (Jerusalem, Israel Institute for Sacred Music, M33/514). Transcription A. Hajdu.

Example 10. "Rejoicing" niggun for various occasions. Sometimes sung to the text *Ashrenu mah tov helkenu* ("Blessed are we, how goodly is our portion"). From S. Zalmonoff (ed.), *Sefer ha-Niggunim*, 1949.

Example 11. Karlín. Opening niggun for the hakkafot. At present sung also in many other *hasidic* communities. Recorded by Y. Mazor, in the Yeshivat ha-Matmidim, Jerusalem on Simhat Torah night 1966 (Jerusalem, Israel Institute for Sacred Music, M33/514). Transcription A. Hajdu. In Israel the tune was used by the pioneers of the Fourth Aliyah (1924–1931) as a wordless dance-song, and adapted by M. Ravina to the text of Kol Dikfin in the Passover seder.

HASKALAH (Heb. הַשְׂקֵלָה), Hebrew term for the Enlightenment movement and ideology which began within Jewish society in the 1770s. An adherent of Haskalah became known as a *maskil* (pl. *maskilim*). The movement continued to be influential and spread, with fluctuations, until the early 1880s. Haskalah had its roots in the general Enlightenment movement in Europe of the 18th century but the specific conditions and problems of Jewish society in the period, and hence the objectives to which Haskalah aspired in particular, all largely differed from those of the general Enlightenment movement. Haskalah continued along new and more radical lines the old contention upheld by the Maimonidean party in the *Maimonidean Controversy that secular studies should be recognized as a legitimate part of the curriculum in the education of a Jew. For Jewish society in Central Europe, and even more so in Eastern Europe, this demand conflicted with the deeply ingrained ideal of Torah study that left no place for other subjects. As in medieval times, secular studies were also rejected as tending to alienate youth from the observance of the precepts and even from loyalty to Judaism.

The Haskalah movement contributed toward *assimilation in language, dress, and manners by condemning Jewish feelings of alienation in the **galut* and fostering loyalty toward the modern centralized state. It regarded this assimilation as a precondition to and integral element in **emancipation*, which Haskalah upheld as an objective. The *maskilim* also advocated the productivization of Jewish occupation through entering **crafts* and **agriculture*. The emphasis placed on these common objectives naturally varied within Jewish society in different countries and with changing conditions. Greater emphasis was placed on assimilation, and it became more widespread in Western and Central Europe than in Eastern Europe. Here the struggle for secular education and productivization was continuous and strong (see also Haskalah in Russia, below).

Beginning and Background of Haskalah

Moses **Mendelssohn* is generally considered to be the originator of the Haskalah movement (the "father of the Haskalah"). However, this opinion has to be corrected in that a desire for secular education had already been evinced among the preceding generation of German Jews, and some individual Jews in Poland and Lithuania, during the 1740s. Knowledge of European languages could be found among members of the upper strata of Jewish society there many years before. Mendelssohn considered that a Jewish translation of the Bible into German was "a first step toward culture" for Jews. It seems, however, that he was doubtful about encouraging the spread of Haskalah among Jewry. When in the early 1780s it was proposed to translate certain works into Hebrew so as to lead the Jewish people to abandon "its ignorance and the opposition to every sensible reform," Mendelssohn "thought that any enterprise of this sort would indeed not be harmful, but neither would it be very beneficial" (see Solomon Maimon, *An Autobiography* (1947; repr. 1967), 97). Mendelssohn was opposed to **education* of Jewish and non-Jewish children together; he

was also against the **Toleranzpatent* issued by Emperor Joseph II, fearing that the method of education proposed there would lead Jews to **apostasy*.

The birth and growth of the Haskalah movement were considerably facilitated by the policies of the absolutist regimes of Germany, Austria, and Russia during the 18th century, which deprived the Jewish community leadership of its coercive authority, such as exercise of the right of **herem* (“ban”). Large-scale commercial transactions undertaken by the **Court Jews* at this time brought the upper classes of Jewish society in contact with non-Jewish circles, and as a result there formed a section of the Jewish community which diverged from the traditional way of life. Others open to influence by Haskalah were individual Jews, frequently Jewish peddlers who often migrated to new localities without a communal organization or rabbis, where the individual was consequently left to himself.

Haskalah had a positive impact on the status of Jewish women. Many wealthy Jews hired tutors to teach their daughters modern European languages and other accomplishments. Elite women who acquired German and French language and culture played a significant role in transmitting the ideas and literature of the Enlightenment into the Jewish community. In traditional Jewish society girls had received only minimal religious training; now, instruction in music and modern languages together with exposure to a new world of secular novels, poetry, and plays distanced young women from brothers and husbands whose lives were restricted narrowly to commerce and finance. It is not surprising that many of these wealthy and accomplished women found success in a **salon* society where gentiles and Jews mixed socially. Sometimes, these social contacts led to divorces from Jewish husbands, conversions to Christianity, and marriage to gentile suitors, often from the nobility. The number of Jewish women who followed this course was small and their motives in doing so were complex. However, some of the women who abandoned Judaism were integrated into the dominant upper-class culture and society. In making the choices they did these women experienced “at an early date and in a gender-specific way the basic conflict between group loyalty and individual emancipation that would torment so many European Jews in the two centuries to follow” (Hertz, *Jewish High Society*, 198).

The experience of the “salon Jewesses” was not typical for most Western and Central European Jewish women as Haskalah rapidly transformed Jewish life. Generally, gender tended to limit the assimilation of Jewish women since most had few contacts with the non-Jewish world. Confined to the domestic scene, restricted in their educational opportunities, and prevented from participating in the public realms of economic and civic life, women’s progress to integration was halting and incomplete in comparison to Jewish men. Nevertheless, Haskalah had a far reaching impact on gender relations, following the lead of Mendelssohn, himself, who opposed arranged marriages and advocated love matches (Biale, *Eros and the Jews*, 153–58).

The spread and main centers of the Haskalah in Europe. From H.H. Ben-Sasson (ed.), History of the Jewish People, Tel Aviv, 1969.

Haskalah operated as an active trend within German Jewry in the space of one generation. Its influence first spread in **Galicia* (which passed to Austria with the partition of Poland) and later in Lithuania and other provinces of the Russian **Pale of Settlement*.

There were also countries where attitudes similar to those adopted by the Haskalah circles in Germany had been manifest among Jews earlier, where they were unaccompanied by disintegration of Jewish tradition. In Italy, men who had studied medicine and were well acquainted with philosophy and the classics, as well as Christian theological literature, held rabbinical positions. The prestige won by Jewish physicians of note was generally considered an asset and encouragement to the Jewish community (see Isaac Cantarini, *Et Kez* (Amsterdam, 1710) 1b). In Italy also, study of Kabbalah was compatible with secular studies (see Jacob Frances, in: I. Frances, *Metek Sefatayim*, ed. by H. Brody (1892), 74; Moses Hayyim **Luzzatto*).

Early stirrings of a positive appreciation of secular culture among Jews had even appeared in Germany by the first half of the 18th century and were manifest earlier among some traditional scholars and leaders like **Tobias b. Moses Cohn* the physician, author of *Ma'aseh Tuviyyah*, Jonathan **Eybeschutz*, or Jacob **Emden*. More positive and active participation in general culture still combined with a traditional outlook is reflected in Israel **Zamosc* and Aaron Elias Gomperz, who wrote his *Ma'amar ha-Madda* (1765) to point out the importance of the sciences (see also below).

The specific approach characterizing Haskalah was expressed by those to whom secular culture and philosophy became a central value which raises man to the highest spiritual level, possibly not below that of religious meditation, and for whom it symbolized the sublime aspect of man, who by his initiative can achieve progress in and dominate nature. They considered that such culture would elevate both the human and social stature of the Jew. The new spirit prompted a num-

ber of Haskalah writers to compose works popularizing science in Hebrew, like Mordecai Gumpel b. Judah Leib Schnaber (d. 1797; published under the name Marcus George Levisohn). Articles on natural sciences were published in the first Hebrew secular monthly *Ha-Me'assef* (see below) by Baruch Lindau (1759–1849) and Aaron Wolfsohn Halle.

Haskalah, like its parent the European Enlightenment movement, was rationalistic. It accepted only one truth: the rational-philosophical truth in which reason is the measure of all things. During the 1740s some of the youth had already begun to study Maimonides' *Guide of the Perplexed*. Haskalah accepted Enlightenment *Deism, giving it a specifically Jewish turn. Gotthold Ephraim *Lessing, in the parable of the Three Rings in *Nathan der Weise*, rejected the claim of any religion to represent the absolute truth. Mendelssohn held that there was nothing in the Jewish faith opposed to reason and that the revelation on Mount Sinai did not take place to impart faith but to give laws to a nation, because faith cannot be achieved by decree, while the laws which were given on that occasion were designed to serve as the laws of a unique Jewish theocratic state. Mendelssohn thus attempted to remove Judaism from the struggle between Enlightenment and revealed religion. The attitude of such Jews toward tradition underwent a radical change. The conception of Divine Providence in favor of Israel, the belief in the election of Israel, and the religious reasons advanced for the exile of Israel were weakened and the anticipation of Israel's future redemption began to wane.

While Mendelssohn and Naphtali Herz *Wessely, the pioneer of Haskalah education, did not doubt the sanctity and the authority of the Oral Law, they tried to demote the study of Talmud from its supreme position in Jewish education. Mendelssohn, in his letter to Naphtali Herz *Homberg, stressed the importance of actions and the study of the Bible in order to preserve the society of "true theists" (i.e., Judaism), while the Talmud is not mentioned there at all. This anti-talmudic mood was widespread. Study of the Talmud was not included in the curriculum of the "Free School" founded in Berlin in 1778 (see below). Wessely expressed this approach in the words: "We were not all created to become talmudists." Representing the most radical wing of Haskalah, David *Friedlaender was openly glad that the yeshivot were declining. The Talmud was also criticized in Russia. Abraham *Buchner, a teacher in the rabbinical seminary of Warsaw, even wrote a book entitled *Der Talmud in seiner Nichtigkeit* ("The Talmud in its Emptiness," 2 vols., 1848). In Galicia, Joshua Heschel *Schorr claimed that although the Talmud was historically important, its legal decisions were outdated socially and spiritually and hence no longer binding. Later Moses Leib *Lilienblum, too, considered the Talmud important but demanded from the rabbis, in the name of the "spirit of life," reform in *halakhah*.

In Western Europe and the German states, especially the northern German states, observance of *halakhah* was already being neglected before the advent of the Haskalah movement. Mendelssohn reacted sharply against the tendency to ignore

the burden of the precepts found among persons close to him, some of whom even denied Divine Revelation to Moses. Among the *maskilim* who frequented Mendelssohn's home there were, according to Solomon Dubno, "a group of men who were to be suspected of having discarded the yoke of the Torah." This negation of halakhic precepts, which was often coupled with contempt toward the whole of Judaism, also served as a factor leading to mass apostasy among the Jewish bourgeoisie of *Berlin and its surroundings.

Linguistic Assimilation

Linguistic assimilation increasingly became a hallmark of Haskalah. In Germany, as well as in Alsace-Lorraine, wealthy Jews had begun to have their children taught German and French at the close of the 17th century to facilitate both their business and social contacts with non-Jews. French became the language of the "elite" in Jewish circles, where the reading of general literature became widespread. In the 1780s there were "the daughters of Israel, who are all able to speak the language of the gentiles with eloquence, but cannot converse in Yiddish" (*Ha-Me'assef* (1786), 139). By the 1790s the younger generation of the Jewish bourgeoisie of Berlin had begun to adopt German as their spoken language. A negative attitude toward Yiddish developed. German writers had claimed in the past that the Jews had been able to deceive non-Jews by the use of Yiddish in business transactions, and as a result decrees had been issued compelling Jews to write their commercial documents and keep their books in German.

Apparently Mendelssohn was influenced by these claims and even thought that Yiddish was ridiculous, ungrammatical, and a cause of moral corruption. He initiated translation of the Pentateuch into German, in order to induce Jews to use this language (see *Bible: Translations, German). Wessely approved wholeheartedly of the measures which Joseph II introduced against the use of Yiddish (*Ha-Me'assef* (1784), 178). David Friedlaender called for the removal of Yiddish as the language of instruction in the *heder* and Jewish schools; in his opinion the use of Yiddish was responsible for unethical conduct and corruption of religion. He translated the prayers into German, "the language spoken by the inhabitants of these regions," because the Yiddish translations "were repulsive to the reader in their style and contents" (*Ha-Me'assef* (1786), 139). The *maskil* Zalkind *Hourwitz also suggested that the Jews be prohibited from employing either Yiddish or Hebrew for bookkeeping and business contracts, not only for transactions between Jews and Christians but also between Jews themselves, in order to prevent fraud.

A move against Yiddish in favor of the "mother tongue" (in this case, Dutch) was initiated by the *maskilim* in the *Netherlands during the period of French rule there. A Jewish weekly began to appear in Dutch in 1806. In 1808 a society was formed in Amsterdam for translation of the Bible and the prayer book into Dutch, as well as for the publication of textbooks in Hebrew and Dutch, the establishment of new schools, and the training of suitable teachers for them.

King Louis Bonaparte issued a decree in February 1809, in force from Jan. 1, 1811, prohibiting the use of Yiddish in documents. Sermons in the synagogues were to be delivered in Dutch, while Dutch was to be the language of instruction for Jewish youth. The *consistory of the Netherlands ordered that notices in the synagogues be published in Dutch only, and all correspondence between the communities and the consistory was to be conducted in Dutch only. In France, the *maskilim* encountered no difficulties in their struggle against Yiddish in favor of French. French had been widely spoken among Jews before the Haskalah period. *Berr Isaac Berr preferred Mendelssohn's German translation of the Pentateuch to the one existing in Yiddish until a proper Jewish-French translation had been made. In Hungary, the *maskilim* were active in substituting Hungarian for the Yiddish vernacular during the 1840s. Hungarian became the language of instruction in the Jewish schools of several communities and preachers even began to employ this language in synagogues.

Development of Hebrew

Hebrew was not only of central importance to people like Jacob Emden and Jonathan Eybeschuetz, who apparently wished that Jews should be able to speak fluent Hebrew; Mendelssohn also considered the Hebrew language a national treasure. In his *Kohelet Musar*, 3 issues (1750), he called for an extension of its frontiers, on the example of other living languages. Cultivation of Hebrew was also one of the aims of the *Biur*, the commentary on the Pentateuch initiated by Mendelssohn. For these scholars Hebrew meant biblical Hebrew. Study of the Bible held a central position in the educational program of the Haskalah movement, whereas both the content of the Talmud and even more so the style of Hebrew used in the 18th century, and by earlier Ashkenazi rabbis, drove Haskalah scholars to reject the post-biblical layers in the Hebrew language. The interest shown by German gentile scholars in the Bible and its language also contributed to a certain extent to the preference of Haskalah circles for biblical Hebrew, though from the beginning some voices expressed reservations toward this extremist approach (see also *Ha-Me'assef* (1784), 185).

Ha-Me'assef served as the organ of the Haskalah in its Hebrew aspect. It was published regularly between 1783 and 1790, with difficulties until 1797, and revived from 1809 to 1811. It was published by the Doreshai Leshon Ever ("Friends of the Hebrew Language") in Königsberg founded in 1783, and renamed in 1786 Shoharei ha-Tov ve-ha-Tushiyyah ve-Doreshai Leshon Ever ("Seekers of Good and Wisdom and Friends of the Hebrew Language"). Even *Ha-Me'assef* published articles in German; its publication ceased through extreme assimilation of the adherents of Haskalah, in particular in Germany and Austria. German attracted younger and progressive circles. The literary contribution by the so-called **Me'assefim* generation was an important stage in the development of Hebrew language and literature. Hebrew became a vehicle for secular and professional scientific expression. *Maskilim* also contributed much to research in grammar and purity of expression.

In Eastern Europe Hebrew remained the language of Haskalah literature for a longer period, appealing to a much wider public with deeper roots in Jewish culture than in Central and Western Europe. The *maskilim* there further developed and enlivened Hebrew (see Haskalah in Russia, below).

Education

The adherents of Haskalah shared the rationalist belief in the boundless efficacy of a rational education. They therefore turned to a change in the curriculum and methods of teaching as the main means of shaping a new mode of Jewish life. The first school to be guided by this ideal was founded in Berlin in 1778 and named both Freischule ("Free School") and Hinukh Ne'arim ("Youth Education"). It was primarily designed for children of the poor and was without fee. The curriculum included study of German and French, arithmetic, geography, history, natural sciences, art, some Bible studies, and Hebrew. The school had a revolutionary effect on Jewish education, for it heralded the transfer of the center of gravity from Jewish studies to general subjects. The school was successful from the beginning; only half of its 70 first pupils came from poor homes. Wessely's welcome of Joseph II's educational proposals for Jews (*Divrei Shalom ve-Emet*, 4 pts. (1782–85)) and his call to the Jews of Austria to establish schools on this pattern were an outcome both of the success of the Freischule as well as the fear that if Jews themselves did not take the initiative, Jewish children would be compelled to attend the state schools. In this work Wessely set out both a detailed program and a basic philosophy for Haskalah education. German Jews of the upper social strata were ready for this program, though it aroused much rabbinical opposition, influenced from outside Germany.

In the same year (1785), the bishop of Mainz admitted 19 Jewish boys to the general school without difficulties. Many programs for Haskalah education were proposed, some drawing on the experience of Italian Jewish and Sephardi schools, whose curricula were considered near to Haskalah aims. The question of education was widely discussed in *Ha-Me'assef*. Some radical *maskilim* demanded that German and arithmetic should be taught to begin with and Hebrew reading and writing be added at a later stage. David Friedlaender sought to introduce German as the language of instruction in all subjects and the teaching of selected chapters of the Bible of ethical value to both boys and girls. In regard to religious instruction, he also suggested that only the ethical precepts be taught.

The *maskilim*, who despised the old-style Polish teachers, the *melammedim*, whom they considered uncouth and uncultured, were not satisfied with criticism alone. On their initiative new schools sprang up in Berlin, Dessau, and Frankfurt on the Main, among other places, in which Hebrew and general studies were taught. A limited number of hours were usually devoted to Hebrew studies, while study of the Talmud was almost completely abandoned. Several educators wrote textbooks where the educational aims of the Haskalah movement found expression. The first to be written were the *Toledot*

Yisrael (Prague, 1796), on Jewish history by Peter *Beer; *Imrei Shefer* (Vienna, 1816) and *Bne-Zion* (Ger., *ibid.*, 1812), religious and moral readers for young people by Naphtali Herz Homberg. In 1807 a confirmation ceremony for boys in German, in imitation of the Christian custom, was introduced in the school at Wolfenbuettel, whence it spread to the other Jewish schools in Germany.

The influence of Haskalah also penetrated to Orthodox circles who were compelled to respond to the demands of the times. Even R. Ezekiel *Landau agreed that it was necessary "to know language and writing"; although "Torah is the main thing," "one should grasp both." R. *David Tevele of Lissa conceded to the emperor's request "to teach the children to speak and write the German language for an hour or two." The first "integral" schools (in which Jewish and general subjects were taught) were opened by the Orthodox in Halberstadt and Hamburg (see also Samson Raphael *Hirsch; *Neo-Orthodoxy).

Haskalah brought a considerable change in the education of girls. The daughters of the wealthy elite, who generally studied under private teachers, were taught European languages and music and played an important role in introducing European culture and Enlightenment ideas into Jewish life. The *maskilim* also began to show concern for the education of the daughters of the poor. Schools for girls were established in the 1790s in Breslau, Dessau, Koenigsberg, and Hamburg. The curriculum generally included some Hebrew, German, the fundamentals of religion and ethics, prayers, and arithmetic; there were also schools where the writing of Yiddish, handiwork, art, and singing were taught.

Schools with curricula based on the educational ideals of Haskalah were also established in France and other Western European countries. On the example of the "integral" schools in Germany, similar schools were also founded in East European countries. In 1813 a school was founded by Josef *Perl in Tarnopol (Galicia), where in addition to Bible, Mishnah, *Gemara*, and Hebrew grammar, the subjects of Polish, French, arithmetic, history, and geography were also taught; the language of instruction was German and there were also classes for girls. A similar school was established in Lvov in 1845. In Warsaw, three schools in which the language of instruction was Polish were established by Jacob *Tugendhold in 1819; two schools for girls were also established here.

With the foundation of the new schools, the problem of training teachers arose. Isaac *Euchel, David Friedlaender, and Judah Loeb *Jeiteles were among the first *maskilim* to raise this problem. Special institutions were established, but on many occasions the rabbinical seminaries also served this purpose. The first teachers' training seminary was opened in Kassel in 1810 by the consistory of the kingdom of Westphalia, followed by others through the first half of the 19th century. A seminary for teachers and rabbis was opened in Amsterdam in 1836 and a seminary for teachers in Budapest in 1857. Secondary schools did not develop anywhere. Only the Philanthropin school at Frankfurt extended its curriculum in 1813 to

include a secondary science-orientated section providing six years' studies after the four years of elementary classes. Some private institutions of a commercial-science orientation were established in Berlin. Those who went on to secondary studies generally attended non-Jewish institutions.

GOVERNMENT INTERVENTION IN JEWISH EDUCATION. The educational ideals of Haskalah largely coincided with the aims set out for "improvement of the Jews" (see *emancipation) and their education as conceived by "enlightened" absolutist rulers. Typical were the edicts issued by Joseph II for the Jews of Bohemia (1781), Moravia (1782), Hungary (1783), and Galicia (1789). The Jews were ordered to establish "normal" schools or to send their children to the state schools; Jews were also permitted to enter secondary schools and universities. Anyone who studied Talmud before completing the school curriculum was liable to be sentenced to a term of imprisonment; marriage was prohibited without a certificate of school attendance.

As a result of these edicts, 42 schools were opened in Moravian communities by 1784, 25 in Bohemia by 1787, and about 30 in Hungary by the end of the 1780s. In Galicia 104 schools were established but were closed down in 1806 during the period of reaction for fear of the "harmful" influence of the "anti-religious" Jewish teachers. Naphtali Herz Homberg was appointed to supervise the program in Galicia. In most German states the process of government intervention in the education of the Jews occurred at the beginning of the 19th century. Usually the Jews were ordered to establish secular schools for the education of their children or to send them to the general schools. There were also some states in Germany which at first did not authorize the Jews to establish separate schools and preferred that education be given to the Jewish children in the *heder* or the public schools. In Prussia the general schools were opened to Jewish children in 1803; until 1847 the separate Jewish schools were recognized only as private schools. The trend toward Germanization was especially marked among the large Jewish population in the Polish region of former *Great Poland.

Some states also intervened in regard to yeshivot. They began to demand that the rabbis should have a general education and especially instruction in philosophy. In 1820 Francis I of Austria issued a decree obliging rabbis to acquire secular education and employ the language of the country in prayers and sermons. A rabbinical seminary, the first of its kind was opened in Padua in 1829. This was followed up in many states and in different forms through the first half of the 19th century (see: *Rabbinical Seminaries).

The advocates of "improvement of the Jews" (see *emancipation; C.W. von *Dohm) considered the restructuring of their occupations from moneylending and trade to productivization through taking up crafts and agriculture to be an essential element in and precondition for accomplishing both betterment of their character and their position. In the main the *maskilim* accepted this social and economic program as

well as the criticism of Jewish life it implied. They hoped that productivization would bring a moral regeneration as well as change the image of the Jew for enlightened Christians. In the new schools established by the *maskilim* in Germany (see above), instruction in crafts was also introduced and some also took care that their graduates should be apprenticed to Christian craftsmen. In various German states, societies to care for the interests of Jewish apprentices were organized. In Berlin a society for the Promotion of Industry was established in 1812 following the emancipation law issued in Prussia that year. Its objective was “to awaken and promote as much as possible the creative spirit among members of the Jewish religion by means of support and encouragement” and to “courageously refute the old-established opinion that we supposedly have an exclusive tendency to commerce” (see also *Joseph II; *Crafts). Naphtali Herz Homberg advocated manual work which he considered was necessary from the moral as well as economic aspect. Homberg based his opinion on sayings of the rabbis in the Talmud in praise of labor and condemned the prevailing attitude of contempt toward the “worker” within Jewish society. Like Mendelssohn, he did not completely reject commerce from the aspect of its utility for society, but considered that the creativity of manual labor surpassed commerce from the aspect of social morality. Phinehas Elijah *Hurwitz complained that “the majority of our people do not want their sons to be taught crafts because they say with pride and arrogance that the occupation of crafts is shameful for us.” He considered that commerce contributed to hatred of the Jews and to the allegation widespread among non-Jews that the Talmud teaches the Jews how to deceive them.

Cooperating with the authorities of the enlightened absolutist states and other regimes to promote general education and productivization among Jews, with the majority agreeing on the need for improvement of the Jews and the desirability of their assimilation, Haskalah circles found it natural to emphasize the complete loyalty which Jews acknowledged to the secular rulers as their protectors, and to the country and state as the framework for their security of life and autonomy. The *maskilim* did not content themselves with the traditional prayers for the king. Laudatory poems were written in honor of Frederick the Great of Prussia, noted for his “love” of the Jews. The Austrian emperor, Joseph II, was also honored with enthusiastic poems of praise and thanksgiving. Their enthusiasm for reform led a number of *maskilim* to advise the authorities how to “improve” the Jews without paying attention to whether these improvements were desired by them or not. Some collaborated with the authorities and bypassed the regular heads of the Orthodox communities not hesitating to slander them, a method used by Naphtali Herz Homberg and his staff of teachers in Galicia.

Trends in Ideology

An ahistoric stand, inclination to assimilation, and desire for emancipation helped to erode messianic hopes in Jewish society, at the close of the 17th and the first half of the 18th cen-

tury, a trend apparent in Amsterdam, Italy, and Germany. The general anti-messianic position taken by *maskilim* was aided by the failure of the *Shabbetai Zevi movement. Jacob Emden quoted Jonathan Eybeschuetz as having preached that the main achievement of the Messiah for the Jews would be that “they would find clemency among the nations” – a traditional expression for attainment of a better legal and social status. The messianism of Jacob *Frank was oriented to nihilistic religious experience and to the conditions of contemporary Jewish existence in Poland. Some have regarded these attitudes as the catalysts of the anti-halakhic movement and the weakening of messianic hopes in Haskalah. Mendelssohn adhered in principle to the messianic hope, though he considered that it did not have “any influence on our civic behavior” – at least not in places where “they have treated the Jews with tolerance”; in his view the redemption would come through the Divine Will alone, though he once gave his opinion that the return of the Jewish people to Erez Israel could be a political-secular event, during a world war. A few *maskilim*, according to Mordecai Schnaber, equated the Messiah with the reign of universal peace and toleration. Zalkind Hourwitz in his *Apologie des Juifs* (Paris, 1789) thought like Mendelssohn that the effect of messianic faith on the actual behavior of Jews was similar to the influence of the certainty of death on human activity; “this does not prevent them... from building, sowing, and planting in every place where they are permitted to do so.”

After emancipation was attained a further weakening of messianic faith set in. When latter-day *maskilim* began to combine Haskalah ideology with a nationalist Jewish attitude their anti-messianic stand became a starting point for aspirations for redemption by natural agency (see *Hibbat Zion; *Zionism). Mendelssohn, however, regarded the Torah as a kind of divine legislation intended for the Jewish society and state only; but he saw this type of Jewish unity as a society of theists; nationalism per se was absent in his theory regarding the Jews.

Many *maskilim* identified themselves emotionally and expressly as “Germans.” In his German writings, Mendelssohn repeatedly uses the phrase “we Germans,” and he criticized use of the expression “Germans and Jews” instead of “Christians and Jews” by Johann David *Michaelis. After Jewish emancipation had been attained in France in 1791, Berr Isaac Berr proclaimed: “By Divine Mercy and the government of the people, we have now become not only men, not only citizens, but also Frenchmen.” The *Assembly of Jewish Notables convened by Napoleon in 1806 coined the term “Frenchmen of the Mosaic religion.” It also declared that “the Jews are no longer a nation” and that “France is our fatherland.” From 1807 the appellation “*israélite*” in France (in German “*Israelit*”) also spread to the German states. The change expressed trends to assimilation as well as a tendency to efface former appellations for Jews that had become connected with an odious image. Both fitted in with Haskalah ideology.

Haskalah ideology was one of the foundations of the *Reform movement in the Jewish religion. The idea of reform

had already been conceived by David Friedlaender in 1799. Through his influence the first steps in reform were taken by Israel *Jacobson, in the state of Westphalia. Friedlaender himself began to introduce reform in religion in Berlin after the Jews of Prussia had obtained their emancipation in 1812. He called for exclusion from the prayer book of all prayers for the return to Zion and the dirges on the destruction of the Temple, and demanded that prayers be recited in German; with this he also desired that the “society of true theists,” after the expression of Mendelssohn, continue to exist. Haskalah ideology was also the basis for the efforts and achievements of the founders of the *Wissenschaft des Judentums in 1819 (see also Zacharias *Frankel; Abraham *Geiger; Marcus *Jost; Moritz *Steinschneider; Solomon Judah *Rapoport; Nachman *Krochmal; Samuel David *Luzzatto; Leopold *Zunz).

The beginnings of a renewed modern interest in Jewish history are already found in the generation of Mendelssohn and Wessely. In *Ha-Me’assef*, a special section was set aside for “biographies of eminent Jewish personalities” in which popular articles were written on Maimonides, Don Isaac Abrabanel, Moses Raphael de Aguilar, Isaac Orobio de Castro, and others. In these articles the first efforts were also made to bring to light ancient sources. The program of *Ha-Me’assef* also included the publication of works on the biographies of “living Jewish scholars.” Accordingly Isaac *Euchel wrote a biography of Mendelssohn, and David *Friedrichsfeld a biography of Wessely (the two works were however published after the deaths of Mendelssohn and Wessely). In addition, a section of *Ha-Me’assef* was to deal with “the innovations taking place among our people which concern all the Jews, on their freedom in some countries, and the education of their youth... for the utility of youth with a quest for knowledge.” Biographies of eminent Jewish personalities were also published in *Shulamit*. However, serious research into Jewish history on a wide scale was taken up by Haskalah circles when the poet and scholar Solomon *Loewisohn published his work *Vorlesungen ueber die neuere Geschichte der Juden* in Vienna in 1820, the first Haskalah attempt to present a general view of Jewish history from the earlier Diaspora period down to the time of the author.

Haskalah thus became one of the mainsprings of a renewed study of the nature of Judaism and the fate of the Jewish people. Mendelssohn attempted to demonstrate the superiority of Judaism over Christianity in his description of Judaism as a rational religion and of the practical precepts as the laws of the former Jewish state (and possibly also a future state) and as symbols of the ideals of the rational faith. Mendelssohn apparently thought that even at the millennium, when the whole world would submit to the “yoke of the Kingdom of Heaven,” the Jews would still be obliged to observe the precepts because their function as “symbols,” as educational factors, would never be abrogated. This was because Mendelssohn did not believe in the entire perfectibility of mankind in any period, seeing that “the whole of humanity is in constant motion, either in ascent or decline.” Even though Men-

delsohn did not say so explicitly, it may be assumed that his references to the election of Israel and its mission were not only intended to explain the past but also to indicate the situation in the future.

During the 19th century further attempts were made in the Haskalah camp to define the nature of Judaism. Some regarded Judaism as a “spiritual religion” in contrast to the idolatrous religions which were “religions of nature” and in contrast to Christianity, which served as the battleground between the elements in the Jewish “spiritual religion” and the idolatrous elements (Solomon *Formstecher). Others regarded Judaism as a moral religion, a religion of the heart and the emotions, in contrast to Hellenism, the religion of cold reason (S.D. Luzzatto, and others). N. Krochmal defined the faith of Israel as belief in the Infinite “Absolute Spiritual One” and considered this to be the secret of the eternity of the Jewish people. The growing development of historical consciousness supplanted traditional views on the fate of Israel in Haskalah thought. Exile was no longer conceived as a chastisement meted out by Providence, but the result of natural historical factors. In the West, emancipation was generally regarded as the end of the Exile (see **Galut*). However, the difficult struggle for emancipation, which in Germany extended over several decades, awakened some doubts on the future of the Jews in Europe and here and there some far-reaching conclusions, such as emigration to America or a return to Palestine (Mordecai Manuel *Noah; *Salvador; Moses *Hess).

[Azriel Shochat/Judith R. Baskin (2nd ed.)]

Haskalah in Russia

Haskalah was introduced into Russia from Western Europe, particularly Germany. It was brought to the communities of Lithuania and Ukraine by merchants, physicians, and itinerant Jewish scholars from the close of the 18th century. As early as the 1780s some Jews in towns of Lithuania and Poland were subscribers to the *Biur* of Moses Mendelssohn and *Ha-Me’assef* of the German *maskilim*. The earliest *maskilim* in Eastern Europe were Israel Zamosc, Solomon Dubno, Judah *Hurwitz, Judah Loeb *Margolioth, Baruch *Schick, and Mendel *Lefin. They maintained direct relations with the *maskilim* of Berlin, but when spreading Haskalah in their own environment they based themselves formally on the views of *Elijah b. Solomon Zalman, the Gaon of Vilna, and regarded themselves as his disciples. Baruch Schick, who published several works on mathematics and astronomy, wrote in his introduction to his translation of Euclid (Amsterdam, 1780) that he had heard the Gaon state that “in proportion to a man’s ignorance of the other sciences, he will be ignorant of one hundred measures of the science of the Torah.” Solomon Dubno contributed to the *Biur*, Mendelssohn’s commentary on the Bible. Phinehas Hurwitz published the *Sefer ha-Berit* (Bruenn, 1797), a type of encyclopedia of various sciences, combining ethical observations and research in the spirit of moderate Haskalah. *Manasseh b. Joseph of Ilya, who was persecuted by the zealots for his free ideas, also belonged to this circle. As customary at this time,

all these authors sought and obtained the written approval of outstanding rabbis for their works.

At the close of the 18th century the wealthy *maskilim* Joshua Zeitlin established a center for *maskilim* and traditional Torah scholars on his estate near Shklov. In his large library they were able to dedicate themselves to their studies and religious perfection. Included in this group were Baruch Schick and Mendel Lefin of Satanov. These *maskilim* made use of their relations with the Russian authorities as merchants, purveyors, and physicians, and submitted proposals to the administration for the improvement of the situation of the Jews by admitting them to various crafts, by the encouragement of agricultural settlement, and by the opening of modern schools for the Jews (memoranda of Jacob Hirsch of Mogilev, 1783; of Nathan Note *Notkin of Shklov, 1797; of the physician Jacob Elijah Frank of Kreslavka (Kraslava), 1800). The *maskilim* already concerned themselves with spreading education among the masses during this period. While having reservations against the use of Yiddish, they wrote works in that language for the education of the people. The physician Moses Markuse published *Sefer Refu'ot* in Poritsk, Volhynia, in 1790 in which he offered, as well as medical advice, guidance on the education of children. In 1817 the merchant Chaim Haykl *Hurwitz of Uman published his *Tsofnas Paneakh*, an adaptation of the work of J. Campe, *Die Entdeckung von Amerika*.

A small group of *maskilim* organized themselves in the new community which was established in St. Petersburg at the close of the 18th century. Their outlook was expressed in the Russian pamphlet *Vopl docheri iudeyskoy* (1802), published in a Hebrew version, *Kol Shavat Bat Yehudah*, in Shklov a year later. Written on the occasion of the debate on the Jewish problem which then took place within the Russian government, it took up the defense of the Jewish people, and included a plea that kindness and mercy be shown to it. A few years later its author, Judah Leib *Nevakhovich, became an apostate, as did his patron, the merchant Abraham *Peretz, the son-in-law of Nathan Note Notkin. These conversions, as well as the information concerning the epidemic of conversions among the *maskilim* of Germany, stiffened the hostility and suspicions felt by the mass of Jews in Russia toward the *maskilim*. They became a considerable obstacle in the spread of Haskalah there.

During the 1820s the Haskalah movement was revived in Lithuania and Southern Russia. Its promoters were emigrants from Galicia, such as the "Brodysts" in Odessa, as well as Jews from Courland, influenced by German culture, and the inhabitants of the townlets bordering upon Prussia and Courland (Raseiniai; Zagare). During this period the *maskilim* gained a hold in Vilna, one of the centers of commerce with Western Europe. The *maskilim*, who dressed in German style and insisted on speaking pure German among themselves instead of Yiddish, which they regarded as a corrupted German dialect, were referred to by the masses as "Deytshen" or "Berliners." One of their main aims was to establish modern Jewish schools in which the pupils would be taught general subjects

and Jewish studies in the German language. In 1822, Hirsch Hurwitz (son of the above-mentioned Chaim Haykl Hurwitz) founded a school in Uman based on the "Mendelssohnian system." Of even greater importance was the foundation of a Jewish school in Odessa under the direction of Bezalel *Stern (1826). Similar schools were subsequently founded in Riga, Kishinev, and Vilna. During those years, the program of the *maskilim* was elaborated by Isaac Dov (Baer) *Levinsohn (Ribal) of Kremenets in his *Te'udah be-Yisrael* (Vilna, 1828) and *Beit Yehudah* (*ibid.*, 1839). The essence of this program was the establishment of a network of elementary schools for boys and girls in which the pupils would study Jewish and general subjects, as well as some kind of a profession; it also included the foundation of high schools for the more talented children, the promotion of productivization, particularly agriculture, among the Jewish masses, and departure from Yiddish in favor of "the pure German or Russian language."

The *maskilim* endeavored to organize themselves under the difficult conditions for free organization in general and for the Jews in particular during the reign of Czar Nicholas I. In many towns small groups of *maskilim* were established, among them the Shoharei Or ve-Haskalah ("Seekers of Light and Education") society founded by Israel Rothenberg in Berdichev, the Maskilim Society in Raseiniai, and the Maskilim Group led by the author Mordecai Aaron Guenzburg in Vilna, which established its own synagogue, Taharat ha-Kodesh, in 1846. Harassed by censorship, they struggled to publish their works, which included the first Hebrew literary periodical there, *Pirhei Zafon* (Vilna, 1841). Among them a modern Hebrew literature began to emerge. Mordecai Aaron Guenzburg wrote stories based on Jewish, general, and Russian history, adapted from non-Jewish sources or collected from other authors in this period. During the following years, Kalman *Schulmann proceeded with this enterprise. A number of poets wrote on secular subjects in lyrical Hebrew, many expressing the ideas of Haskalah. The most prominent in this group were Abraham *Dov Lebensohn (Adam ha-Kohen), whose first collection of poems, *Shirei Sefat Kodesh*, was published in Leipzig in 1842, his son Micah Joseph *Lebensohn (Mikhal), and the leading Haskalah poet, Judah Leib *Gordon. Abraham *Mapu created the Hebrew novel, and his *Ahavat Ziyyon* (Vilna, 1853) has become a landmark in the history of Hebrew literature. Despite their opposition to Yiddish, the Haskalah authors wrote works in this language in order to propagate their ideas among the masses by means of stories and works of popular science. The most outstanding of these authors, Isaac Meir *Dick, wrote hundreds of stories which were published in Vilna and Warsaw. Israel *Axenfeld and Solomon *Ettinger wrote stories and plays in the Haskalah spirit. Many of their works could not be published because of the censorship and were circulated in manuscript.

Even in the period of oppression and anti-Jewish legislation during the reign of Nicholas I, the *maskilim* looked upon the Russian government as a supporting force in their struggle for the realization of their ideas. In memoranda submitted to

the authorities, they called for the imposition of reforms on the masses, such as change of their traditional dress for the European clothes of the period, and the strict supervision of Hebrew printing presses which were to be reduced to two or three in the whole country in order to make this possible. The government accepted these proposals and had them enforced. The *maskilim* found particular satisfaction in the government's program to establish a network of governmental Jewish schools in which the language of instruction would be German (later Russian). During the early 1840s the government entrusted Max *Lilienthal, the principal of the Jewish school of Riga, with the execution of this program. He was assisted by the local *maskilim* in every town. During the 1840s and 1850s many such schools were founded in the towns of the Pale of Settlement. Their Jewish teachers were drawn from *maskilim* circles who were granted the status of government functionaries. In Vilna and Zhitomir, government rabbinical seminaries were established. Their students were exempted from military service and were trained with the aim of becoming the future teachers and rabbis of the Jewish communities. In these schools and seminaries, which were financed by special taxes imposed on the masses (*candle tax), a new class of *maskilim* was educated. They received their education in Russian, and their ties with the Hebrew language and Jewish tradition were flimsy.

Haskalah received considerable stimulus through economic changes, particularly when a wide class of Jews engaged in liquor contracting emerged. As a result of their contracts with government officials, they and their employees required a knowledge of the Russian language, arithmetic, and other sciences. There thus arose a whole class of thousands of families who were no longer dependent on Jewish society from the economic and social point of view. These Jews wore the non-Jewish dress, neglected the observance of the religious precepts, shaved their beards, and were drawn closer to the Russian language and culture. The *maskil* of the former generation had been self-taught, familiar with Jewish literature, whose principal education was drawn from German literature, as well as from the *Hokhmat Yisrael* ("Jewish Science") literature. In contrast, the new *maskil* received his education in a Russian-Jewish school or in a general Russian school and was conspicuous for his considerable alienation from Jewish tradition.

The period of the important reforms at the beginning of the reign of Alexander II and the suppression of the Polish uprising in 1863 gave a strong impetus to the spread of Haskalah among the masses of Jewish youth. The Jewish press, whose founders, journalists, and publishers were essentially *maskilim*, played a decisive role in this development. Among newspapers outstanding for their struggle in favor of Haskalah were the Hebrew **Ha-Meliz* (founded in 1860) and the Yiddish **Kol Mevasser* (1862), issued by A. *Zederbaum and first published in Odessa. The first newspapers issued by the Russian-oriented *maskilim* also appeared in Odessa, **Razsvet* and *Sion* (in 1860/61) and *Den* (1869–71), to which the lead-

ing Russian *maskilim* contributed. The older authors were joined by new ones, among them S.J. *Abramovitch (later Mendele Mokher Seforim), who wrote in Hebrew and Yiddish, I.J. *Linetzky (Yiddish), L. *Levanda, and G. Bogrov (Russian). Their writings produced a more advanced stage in Haskalah ideology, which found its expression in the saying of the poet J.L. Gordon: "Be a man when you go out and a Jew in your home." This press called for an alliance between the Jewish *maskilim* and the Russian government in order to fight "those in darkness" from within, especially the Hasidim and their *zaddikim*, and to support the governmental Russification policy throughout the Pale of Settlement. During the 1860s the institution of *kazyonny ravvin* ("government-appointed rabbi") was introduced. Its candidates were drawn from the ranks of the *maskilim* who had been educated in the Russian-Jewish schools.

In 1863, on the initiative of the richest Jews of the capital (the *Guenzburg, *Polyakov, and *Rosenthal families), the Hevrat Mefizei ha-Haskalah ("Society for the Promotion of Culture among the Jews of Russia") was founded in St. Petersburg. This society came to the assistance of *maskilim* in the provincial towns, particularly high-school students, and encouraged the publication of Haskalah literature in Hebrew, Yiddish, and Russian.

Most of the *maskilim* believed the general assumption that Russia, in the wake of the other European states, was about to declare the emancipation of the Jews. The rights which had been granted to certain Jewish circles, such as the large-scale merchants (1859), intellectuals (1861), craftsmen (1865), and members of the medical profession (physicians, pharmacists, male nurses, midwives, etc.), seemed to point in that direction. The introduction of the general obligation of military service (1874), which included important concessions in the conditions and period of service for those with a Russian education, prompted many parents to send their children to the Russian schools. While in 1870 only 2,045 Jewish children studied in Russian secondary schools, by 1880 their numbers had increased to 8,000.

During this period there were two marked trends among the *maskilim*. One called for a rapid association with the Russian nation, even to the point of assimilation. The Hebrew language (and all the more so Yiddish) was merely regarded as a temporary instrument for spreading Haskalah among the retarded masses. At most, adherents to this trend recognized the need for the promotion of *Wissenschaft des Judentums* in the Russian language. This was the path which had been adopted by West European Jewry and along which Russian Judaism was also to be led. On the other hand, the standard-bearers of a nationalist ideology which called for the fostering of the Hebrew language and loyalty to Jewish nationalism also raised their voices. The voice of this trend was the newspaper –**Ha-Shahar* (1868–84), published by Peretz *Smolenskin in Vienna but particularly addressed to Russian Jewry. Smolenskin sharply criticized the Mendelssohnian Haskalah and called for the promotion of Jewish nationalist

values. During this period, however, he was a lone voice. To the majority of the *maskilim* it appeared that the historical evolution which had taken place in Western Europe would also overtake Russian Jewry. Some opinions considered this evolution to be natural and desirable, even drawing some far-reaching conclusions from it (A.U. *Kovner), while others expressed their regrets with regard to it (J.L. Gordon, in *Le-Mi Ani Amel*, 1871).

A significant change, however, occurred in the lives of the Russian Jews during the 1870s. The breakthrough into the general economy and Russian culture by the Jews resulted in the emergence of a powerful anti-Jewish movement, whose spokesmen included leading Russian intellectuals (Aksakov; Dostoyevski). A press inciting the Russian masses against the Jews and warning them of “domination” by the Jews, especially intellectuals, over the country was created. The reaction that set in in Russia in the wake of Alexander II’s assassination at first resulted in anti-Jewish pogroms (1881–83) and later in severe restrictions of Jewish rights. One of these, the **numerus clausus*, was especially designed to bar the way of the Jewish youth to the Russian schools.

The *maskilim* reacted to this situation in various ways. Those of the older generation attempted to adhere to their policies and placed their faith in “progress” which would eventually be victorious and bring the anticipated emancipation. This circle of Jewish-Russian intelligentsia centered around the newspaper **Voskhod* (St. Petersburg, 1881–1906). A considerable section of Jewish youth joined the Russian revolutionary movement with the hope that the fall of the czarist regime would eliminate all restrictions, and that the Jews would be assimilated and rapidly absorbed within the Russian people so that the Jewish problem would automatically disappear. Another section of the older generation and the intellectual Jewish youth resorted to Jewish nationalism. They established the **Hibbat Zion* movement which considered that the solution of the Jewish problem in Russia lay in the emigration of the Jews to Erez Israel where they would engage in productive occupations. They called for an alliance with the Jewish masses who were attached to their traditions and language in order to realize this project. The organ of this sector was the Jewish-Russian newspaper *Razsvet* (1879–83) and later *Ha-Meliz*. Haskalah, as an ideological trend on the Jewish scene, now ceded its place to the new trends, all of which – even if they violently criticized Haskalah from various directions – had received many of their ideas from it.

Even if from the historical point of view Russian Haskalah was a continuation of the Central European it nevertheless possessed an originality stemming from the particular character of Russian Jewry. The large number of Jews in that country and their great concentrations in the towns and townlets of the Pale of Settlement prevented the Haskalah movement from degenerating into a rapid course of assimilation and disintegration, as had occurred in Western Europe. In Russia the new Hebrew literature became a permanent fact and not an ephemeral phenomenon as in the West. Haskalah

produced, even if in opposition to its own ideology, a secular literature in Yiddish, especially of Yiddish fiction. It gave rise to an alert Jewish press in three languages, Hebrew, Yiddish, and Russian. It also bequeathed to the nationalist movement, and particularly to the Zionist movement, the idea of productivization of the Jewish masses and their transition to labor in general and agricultural work in particular.

In the last three decades of the 19th century, the Haskalah in Eastern Europe had a significant literary impact on Jewish women as both readers and writers. As in Western and Central Europe, women preceded men in their knowledge of European languages and culture and as readers of secular Jewish literature in both Yiddish and Hebrew, particularly fiction and poetry. Often, women readers introduced new ideas into their families which contributed to the undermining of the values of traditional society. Reading of worlds and opportunities previously unimagined, they exerted a strong influence against the cultural constraints of their restricted society, sometimes encouraging the men in their circles to defect from the limitations of the yeshivah world (I. Parush, *Reading Jewish Women*).

Numerous female authors wrote and published poetry and prose in Hebrew, Yiddish, and particularly Russian periodicals between 1870 and 1914. Some came from the shtetl; others, the daughters of prosperous middle-class urban Jews, attended gymnasia, learned European languages, and earned university degrees. Among women writing in Hebrew was Sarah Feiga Meinkin Foner (1855–1936) of Dvinsk, Latvia, the first woman to publish a Hebrew novel (*The Love of the Honest* (Vilna, 1881–83)). She went on to write children’s stories, a novella, and a memoir (C. Balin, “*To Reveal Our Hearts*,” 22–23). Miriam Markel-Mosessohn (1839–1920), an excellent Hebraist who became a protégée of Judah Leib Gordon, mainly devoted herself to translating European literature into Hebrew and journalism, apparently believing it was inappropriate for a woman to write original works in Hebrew.

HASKAMAH (**Askamah**; Heb. הַסְכָּמָה, הַסְכָּמָה; “agreement,” “approbation”), in Jewish literature, a term with several meanings: (1) Rabbinic approval and approbation of the legal decisions of colleagues, usually attached to the original legal decision and circulated with it. These *haskamot* sometimes amplify the original, by including additional sources and pointing out implications. (2) In the Spanish and later also in the Italian and Oriental communities, the term was used for the statutes and ordinances enacted by the communities (see **Ascama*). (3) In the philosophical literature of the Middle Ages, “consensus,” “harmony between entities,” “pre-established harmony” (see Klatzkin, *Thesaurus Philosophicus* 1, 185–6). (4) More commonly, the recommendation of a scholar or rabbi to a book or treatise.

This entry deals with the last meaning.

ORIGINS AND HISTORY. Various opinions have been offered on the origin or development of the *haskamah* for books. Some see the influence of the *approbatio* of the Church, others see it as resulting from the papal action of 1553 in the dispute between the publishing houses of *Bragadini and Giustiniani which resulted in the burning of the Talmud (see **Censorship*). The first *haskamah* appeared in the 15th century, in the *Agur* by Jacob Landau (Naples, c. 1490), the first Hebrew book printed during its author’s lifetime; it was signed by seven rabbis. The *haskamah* for Elijah Levita’s *Sefer ha-Baḥur* (Rome, 1518) signed by the rabbi of Rome, threatens excommunication for republication within 10 years. Thus the *haskamah* fulfilled the function of a copyright, the period of protection extending from five to 25 years. The *haskamah* in Joseph Caro’s *Bedek ha-*

Bayit (Venice, 1606) is signed by three rabbis (the number of *haskamot* varied from book to book); and it concluded with a declaration by the sexton that he has read it in all the synagogues of Venice. With the introduction of title pages in the 16th century, *haskamot* came to be printed at the beginning rather than at the end of a book.

Thus, the *haskamah* developed from a recommendation to an expression of approval to a method of protecting the author’s rights and finally to a form of self-censorship to protect the Jewish community against the church censorship and later to counteract kabbalistic, pseudo-messianic, and Haskalah tendencies. Thus, at the Rabbinical Synod of Ferrara of 1554, it was enacted that no book should receive its first printing without prior approbation of three rabbis of the particular region. Similar *takkanot* were issued in Poland in 1594 and 1682. Such restrictions were used to prevent the spread of the heretical Shabbatean doctrines, or to protect the printers of the expensive Talmud editions. This led to many disputes and litigations. The majority of *haskamot* issued in the 17th and 18th centuries originated in the centers of Hebrew printing, such as Venice, Amsterdam, and Constantinople. *Haskamot* were usually written in a combination of Hebrew and Aramaic, frequently using the florid style of rabbinic writings. They sometimes contain bibliographic, biographic, and geographic data, which, though not always exact, are an important source for historians and scholars, and bibliographers like Roest, Wachstein and Wiener utilized this source.

Abuses

Haskamot have been much abused. Often their place and date were intentionally altered. Some writers, eager to have *haskamot* appended to their works, forged signatures and *haskamot*, as was the case in Nehemiah Ḥayon’s *Ha-Kolot Yehdalun* (Amsterdam, 1725). Earlier *maskilim* used forged approbations to their works in order to deceive the pious reader. Others printed only part of the book which had received the *haskamah*, and some authors published their books on inferior paper with unclear type. As a result some *haskamot* included such specifications as “the condition of this *haskamah* that the printing of this book should be completed within two years” or “on condition that the printer should print the book on white paper with black ink.” These factors, and others as well, made many rabbis reluctant to write *haskamot*. Samson *Wertheimer was ready to approve only the works of relatives or scholars who were poor. Some writers of approbations made no secret of the fact that they had been given to help the author financially (see Abraham ha-Kohen’s *Beit Ya’akov*, Leghorn, 1792). Some rabbis denied *haskamot* to any book which dealt with Jewish law; others were ready to add their names only if a well-known rabbi had already given his *haskamah*. Still others protested that they had no time to read the entire book, or that they were not sufficiently acquainted with the subject; which did not prevent some from granting their approbation merely on the reputation of the author.

Some authors were not eager to obtain the *haskamah* of rabbis who could not read the work; thus Moses Mendelssohn did not request *haskamot* for his books, nor did Raphael ha-Kohen for his *Torat Yekuti'el* (Berlin, 1772); other authorities disapproved of them altogether (Responsa *Ḥatam Sofer* ḤM 41); Ezekiel Landau used his *haskamah* to the Prague Pentateuch of 1785 to express his disapproval of Mendelssohn's Pentateuch edition. Between 1499 and 1850, 3,662 *haskamot* were issued, the majority in Eastern Europe. Authors of religious books are still anxious to print a *haskamah* by a prominent rabbi or authority. In secular works the worldwide custom of using a preface or an introduction by a well-known authority fulfills the same role.

HASKELL, ARNOLD LIONEL (1903–1980), British ballet critic and author. In 1927 Haskell started his career with a firm of London publishers, devoted himself to ballet and in 1930 was joint founder of the Camargo Society, which was influential in the revival of ballet in England. For three years Haskell was critic of the *Daily Telegraph* (1935–38). He was director of the Royal Ballet School from 1946 and a governor of the Royal Ballet from 1957. In 1954 he advised the Dutch government on the formation of a National Ballet. His books on ballet were important in the cultivation of popular taste. Among them were *Balletomania* (1934), a word he introduced into the English language; *Diaghileff* (1935); *The Making of a Dancer* (1946); *In His True Centre* (1951), his autobiography; *The Russian Genius in Ballet* (1963); *What is Ballet?* (1965); and *Heroes and Roses* (1966).

HASKIL, CLARA (1895–1960), Romanian pianist, of Sephardi background. Born in Bucharest, Haskil studied at the Conservatory in 1901 and made her debut in Vienna 1902 as a child prodigy. She studied with Richard Robert and later in Paris with Cortot.

Her technique and capacity for poetic expression won her a great reputation. Though a muscular disorder severely impeded her career, she continued playing concerts during periods of remission, making numerous appearances with Ysaÿe, Enesco, Casals, and Grumiaux and appearing as a soloist with major symphony orchestras in Europe and America. She lived in Paris from 1927 until 1940, when the German invasion forced her to flee the city. In 1949 she acquired Swiss nationality.

Haskil was made a Chevalier of the Legion d'Honneur in belated recognition of the inimitable clarity and eloquence of her playing. Her interpretation of Beethoven, Schumann, Schubert, and especially Mozart was profoundly sensitive and unique. She made memorable recordings of the complete

Beethoven sonatas for violin and piano with Grumiaux as well as of several Mozart concertos. A Clara Haskil Prize was established at the International Music Festival in Lucerne.

[Naama Ramot (2nd ed.)]

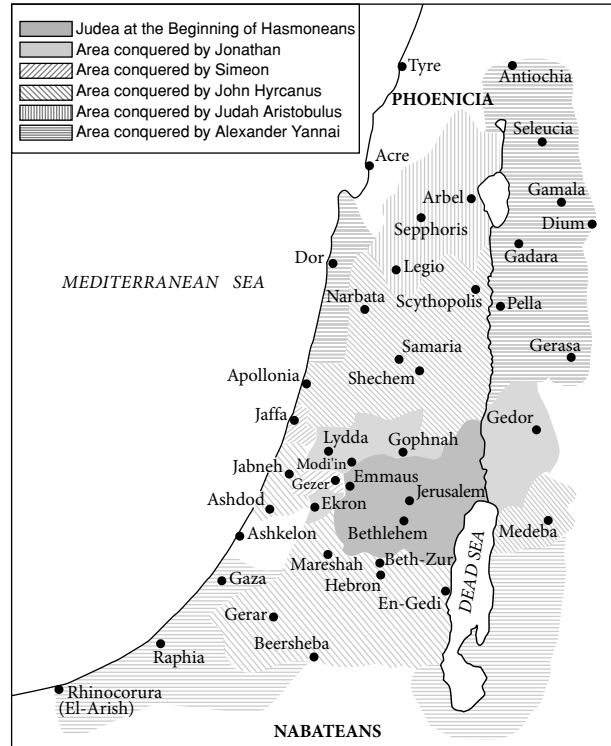

HASMONEAN BET DIN (Heb. בֵּית דִּין שֶׁל הַשְּׂמוֹנָיִים; according to a talmudic source (Sanh. 82a; Av. Zar. 36b) “the court of the Hasmoneans decreed that an Israelite who had intercourse with a heathen woman is liable to punishment on account of נִשְׁגָּא” (NSHG^A), a mnemonic designating four counts of liability: נִדְּהָ (niddah; “a menstruating woman”), שִׁפְחָה (shifḥah; “a maidservant”), גּוֹיָה (goyah; “a gentile”), and אִשֶּׁת אִישׁ (eshet ish; “a married woman”). A second tradition in the Talmud has Z instead of A, designating zonah, “harlot.” There is no further mention of this Hasmonean court, and it has therefore been suggested, that the reference is to a temporary court set up early in the Hasmonean revolt, to fill the void created by the death of the religious leaders of the period. If this is so, it would appear that this court was responsible for the ruling that defensive battle is permissible on the Sabbath (1 Macc. 2:39–41). However, it is more likely that the court was created after the establishment of Hasmonean rule in Palestine following the early successes of Judah and his brothers. Derenbourg claims that the court existed toward the end of the second century B.C.E., during the reign of Simeon and the first years of John *Hyrchanus. He further suggests that Hyrchanus changed the name of the court from *Bet Din shel Hashmona'im* to *Sanhedrin during the last years of his rule, following the schism with the Pharisees. Other scholars tend to identify the Hasmonean court with the “sons of the Hasmoneans” mentioned in the Mishnah (Mid. 1:6; in Yoma 16a, Av. Zar. 52b the reading is “house of Hasmoneans”) as having “hidden away the stones of the altar which the Greek kings had defiled,” but there is insufficient proof of this. Likewise, there is no reason to identify, as does I.H. Weiss, the Hasmonean *bet din* with the “Great Synagogue” of priests and elders that officially appointed Simeon high priest and leader of the nation (1 Macc. 14:28; see *Asaramel). The most likely solution of the problem is that the Hasmonean court “was the private council of the Hasmoneans at the peak of their power.” If this is so, the Hasmonean court was established by John Hyrchanus toward the end of his reign, or by his son Alexander Yannai during his struggle against his Pharisaic enemies. This court may have been responsible for the harsh treatment of the Pharisaic rebels. It was composed of Sadducean followers of the Hasmonean king (cf. Jos., Ant., 13:408ff., which relates how the Pharisees avenged their martyrs in the days of Queen Alexandra).

[Isaiah Gafni]

HASMONEANS (Gr. Ἀσμωναῖος; Heb. הַשְּׂמוֹנִיָּאִים), title for Maccabees in Josephus (*Ant.*, 12:263), Mishnah (*Mid.* 1:6), and Talmud (*Shab.* 21b), but nowhere occurring in the Book of Maccabees. Josephus derives the name from the great-grandfather of Mattathias, Asamoniios. Probably the name is to be connected with the village of Heshmon (*Josh.* 15:27). It has also been suggested to connect the name with Hushim (1 Chron. 8:11) or the place Hashmonah (*Num.* 33:29, 30). The Hasmoneans headed the rebellion against the Seleucid kingdom, established an autonomous Jewish state, annexed the most important regions of Erez Israel, and absorbed a number of neighboring Semitic peoples into the Jewish people. These achievements were not only of major importance to Jewish history, but also left their impact on humanity as a whole. The successful rebellion of the Hasmoneans assured the continued existence of the Jewish religion and contributed to the decisive influence of monotheism in Western culture and history. Through the policy of the Hasmoneans, initiated after the rebellion, the Jewish people ceased to play a marginal role in history and exercised influence for generations to come.

The Hasmoneans were a priestly family, probably one of those which had moved from the territory of Benjamin to the lowlands of Lydda in the last days of the First Temple. They belonged to the Jehoiarib division of priests, who lived in *Modi'in on the border of Samaria and Judea. When the restrictive edicts of Antiochus were extended to the country towns and villages of Jewish Palestine, *Mattathias b. Johanan, then the head of the family, raised the banner of revolt in Modi'in, uniting under his leadership all those who were opposed to Antiochus' policy. After Mattathias' death in 167/166 B.C.E., his son *Judah Maccabee, a military genius, succeeded him as leader of the revolt. He scored a number of victories against the Seleucid army, and achieved the conquest of Jerusalem and the purification and rededication of the Temple in 164 B.C.E. (see: *Hanukkah). Judah continued to strive for the autonomy of Judea. He won additional victories against the Seleucid forces and in 161 B.C.E. established an alliance with Rome. Though Judah's death in battle slowed down somewhat Judea's progress toward independence, his brothers Jonathan and *Simeon continued his policy, taking advantage of the waning political star of the Seleucid dynasty to strengthen their own influence and to extend the borders of Judea. They annexed the districts of Lydda, Ramathaim, Ephraim, and the Ekron region, conquered Jaffa port, and seized control of the fortresses of the Acra in Jerusalem and Beth-Zur. The appointment of *Jonathan Apphus, the youngest son of Mattathias, to the high priesthood in 152 B.C.E., made this office one of the Hasmoneans' main sources of power. In 143–142 B.C.E., Demetrius II recognized the independence of Judea, and in 140 B.C.E. a decree was passed by the Great Assembly in Jerusalem confirming Simeon as high priest, ruler, and commander of the Jewish people and making these offices hereditary. Simeon's son, John *Hyrcanus (134–104 B.C.E.), continued the territorial expansion. He conquered Idumea, Samaria, and portions of Transjordan, and forcibly converted the Idumeans

Expansion of the Hasmonean kingdom, 167-76 B.C.E. After Zev Vilnay (ed.), *New Israel Atlas*, Jerusalem.

to Judaism. The internal crisis produced by a rift between the Hasmoneans and the Pharisees began during his reign. John's heir, *Aristobulus I (104–103 B.C.E.), was the first Hasmonean to arrogate to himself the title of king. Aristobulus continued the policy of conquest, compelling the Itureans in the north to become proselytes. During the reign of his brother, Alexander Yannai (103–76 B.C.E.), who succeeded him, the Hasmonean state reached the zenith of its power. The whole of the sea coast, from the Egyptian border to the Carmel, with the exception of Ashkelon, was annexed to Judea. Yannai also extended his rule over some of the Greek cities of Transjordan and strove to establish absolute authority as king and as high priest. It was his latter capacity which brought him into open conflict with the Pharisees. Yannai's wife, Salome Alexandra (76–67 B.C.E.), continued her husband's foreign policy, but reached an understanding with the Pharisees on internal affairs. Pompey's annexation brought the independence of the Hasmonean state to an end. Though the Romans allowed *Hyrcanus II, the oldest son of Alexander Yannai, to remain high priest and ethnarch, they abolished the monarchy and also detached large areas from Judea. Much had been gained, however – Judea proper, as well as Galilee, Idumea, many parts of Transjordan, the coastal plain and the coastal belt remained Jewish in character and culture for a long time as a result of the Hasmoneans' policy. The last attempt to restore the former glory of the Hasmonean dynasty was *Antigonus Mattathias, with the help of the Parthians. His defeat and death in 37 B.C.E. at the hands of the Romans brought the Hasmonean rule to

a close, and prepared the way for Herod. Herod, however, at the height of military success had strengthened his position by betrothal to the granddaughter of Hyrcanus II, Mariamne, whom he subsequently married. The popularity of his sons by her, Alexander and Aristobulus, and of their grandson (Herod Agrippa I) was due to their Hasmonean descent. (See Chart: Hasmonean Family).

[Menahem Stern]

In the Arts

A vast number of literary works have been inspired by the heroism of Mattathias and the embattled Maccabees and by the martyrdom of Hannah and her Seven Sons, as recounted in the Apocrypha. In 1722 Antoine Houdar de La Motte published his French lyrical tragedy *Les Machabées*, but it was not until the 19th century that the subject achieved wider popularity among writers. I.B. Schlesinger’s Hebrew epic *Ha-Hashmona’im* (1816) was followed by *Die Mutter der Makkabaeer* (Vienna, 1820), a late historical drama by the German visionary Zacharias Werner, and by a more conventional tragedy, Alexandre Guiraud’s *Les Machabées, ou le Martyre...* (Paris, 1822). Interest in the theme first reached a peak in the mid-19th century with dramas including *Die Makkabaeer* (1854) by Otto Ludwig, J. Michael’s *Die Hasmonaeer* (1856; with music by V. Lachner), and a traditional Jewish interpretation of the story by Leopold Stein (1810–1882), also entitled *Die Hasmonaeer* (1859). Three later treatments of the subject were poems by Seligmann *Heller entitled *Die letzten Has-*

monaeer (1865); *The First of the Maccabees* (1860), a historical novel by the U.S. Reform pioneer Isaac Mayer *Wise; and Minnie Dessau Louis’ *Hannah and Her Seven Sons* (1902). In the Far East, Joseph *David (Penker) produced *The Maccabees* (1921), a drama in Marathi. Between the world wars, the Brazilian novelist Antonio Castro published *A Judéa e os Maccabeus* (1930) and Izak *Goller wrote *Modin Women* (1931), one of his plays on biblical themes. Under the impact of Nazism, the Holocaust, and the birth of the State of Israel, several Jewish writers returned to the heroic theme of the Hasmonean revolt. Abraham Lavsky published a Yiddish historical novel, *Di Khashmonayim Helden oder di Makkabeyer* (1941); the U.S. author Howard *Fast wrote the novel *My Glorious Brothers* (1948). Of these, Fast’s was easily the outstanding and best-known work. A work on a related theme was the Israel author Moshe *Shamir’s historical novel *Melekh Basar va-Dam* (1954; *The King of Flesh and Blood*, 1958), which dealt with the career of the later Hasmonean ruler Alexander Yannai. Innumerable plays and stories devoted to the Hanukkah festival have been written for children, including many by Jewish authors and religious leaders in the United States.

The Maccabean wars have proved somewhat less attractive to artists. *Maccabeans*, a painting by the Austrian artist Jehuda Epstein, shows the beginning of the Jewish revolt. Boris *Schatz sculptured a heroic figure of Mattathias, formerly in the Royal collection, Sofia, Bulgaria. Gustave Doré produced dramatic engravings of Mattathias’ call to arms and of the heroic death of Eleazar, brother of Judah, who was crushed by an elephant which he slew in battle (1 Macc. 6). Another episode (1 Macc. 9) – the battle of Jonathan and Simeon against Bacchides, a friend of the Syrian king, as transmitted by Josephus – was treated by the 15th-century French artist Jean Fouquet in his illuminations to the *Jewish War* and *Antiquities of the Jews*. Jonathan Maccabee appears on tapestries woven in Brussels in the 15th century, of which three portions have been preserved, showing Jonathan’s coronation and receipt of gifts from other kings. A subject more commonly treated was the story of the seven martyred brothers, “Maccabees” only by association with the Apocryphal books (11 Macc. 7), who preferred torture and death to being compelled to eat the flesh of swine. This became very popular in medieval Europe: the seven “Maccabean Martyrs” were canonized, Christians holding them to represent the Church Militant, while Antiochus symbolized the Antichrist. A church of the Seven Holy Maccabees stood in Lyons, France, and there was a chapel of the Maccabees in the cathedral of Saint Pierre, Geneva. Artists represented the Martyrs with amputated hands, together with Hannah, their mother. The Virgin with seven swords sometimes appears beside the figure of the latter. The theme also occurs in an eighth-century fresco at Santa Maria Antiqua, Rome, in medieval illuminated manuscripts, on the 13th-century southern portal of Chartres Cathedral, and in a 15th-century painting attributed to the Maître de Saint-Gilles (Amiens Museum). In the late Renaissance Jacopo Bassano painted the same subject.

In music there were a few compositions about the Hasmoneans dating from the late 18th and early 19th centuries, of which only Ignaz Seyfried's melodrama *Die Makkabaeer* (c. 1835) was of significance. Anton *Rubinstein's opera *Die Makkabaeer* (première in Berlin, 1875), for which Solomon *Mosenthal wrote the libretto after Otto Ludwig's drama, had only a brief stage career, yet it became a source of pride for East European Jewry. The aria *Leas Gesang* became a favorite at musical recitals and it was also arranged for instrumental combinations. Together with *Der heilige Sabbath* it can be found in the *Lider-Zamelbukh* edited by S. Kisselgoff (1911), with the text translated into Yiddish by A. Rivesman and into Hebrew by Saul *Tchernichowsky (no. 83–4). A comparison with the ḥasidic dance *Ladier Chabadnitze* (no. 62) in the same collection shows where the roots of the melody lie. Michael *Gnessin's *Makkavei*, a Russian “symphonic movement” for soloists, choir, and orchestra, was written after the composer's visit to Erez Israel in 1922 and was first performed in 1925. Handel's oratorio *Alexander Balus* (1777; première in 1748), with libretto by Thomas Morrell, touches on the Maccabean theme.

The theme of the Seven “Maccabean” Martyrs also achieved a degree of popularity from the end of the 17th century and throughout the 18th, inspiring an opera by Johann Wolfgang Franck (1679) and oratorios by various composers, including Attilio Ariosti (1704), Francesco Conti (1732), and Antonio Sacchini (1770). In Johann Heinrich Rolle's *Thirza und ihre Soehne* (1781), the story is ostensibly about Christian martyrs, but the characters and content are identical with the history of the Maccabees. A later example is Vittorio Trento's opera *I sette Maccabei* (1818).

The “Story of Hannah” has a permanent and honored place in the religious folksong traditions of Mediterranean and Near Eastern Jewry and it is generally sung by women on the Ninth of Av. The songs are in the vernacular and their poetical and musical form resembles the historical ballads of the various surrounding gentile cultures; only the tradition as such is the common “Jewish” element. The poems are not infrequently found in manuscripts or printed booklets of *kinot*, but the tradition is basically oral and it probably occurs throughout the vast area from North Africa to Persia and from the Ladino-speaking communities of Greece and Turkey to the Yemen.

HA-SOLELIM (Heb. הַסּוּלֵלִים; “the Trail Blazers”), kibbutz in Lower Galilee, Israel, 5 mi. (8 km.) northwest of *Nazareth, affiliated with Iḥud ha-Kevuzot ve-ha-Kibbutzim and aligned politically to Ha-No'ar ha-Ziyyoni (Independent Liberals) movement. It was founded in 1949 as the first Jewish settlement in the region. The original settlers were Israel-born and other veterans of World War II, who were later joined by new immigrants from North America. In 1969 various fruit orchards, beef cattle, and field crops constituted its principal farm branches. The *Bet Netofah Storage Lake for the National Water Carrier is located near the kibbutz. Ha-Solelim was one of the first kibbutzim to introduce peripheral neighborhoods for nonmember residents who wished to enjoy rural life without being part of the collective. The kibbutz now operates as an association with cooperative activities in the fields of education, culture, welfare, and security. It also operates guest rooms and an art gallery. In 1968 it had 216 inhabitants. By the mid-1990s, the population had grown to approximately 305, and at the end of 2002, after expansion, it stood at 557.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

HASSAGAT GEVUL (Heb. הַסָּגַת גְּבוּל), a concept which originally had specific reference to the unlawful taking of another's land; later it was extended to embrace encroachment on various economic, commercial, and incorporeal rights of others.

Encroachment on Land

IN SCRIPTURE. The original meaning of the term *hassagat gevul* was the moving (cf. *nasogu aḥor*, Isa. 42:17) of boundary stones or other landmarks from their resting places into the bounds of another's adjoining area of land, for the purpose of annexing a portion of the latter to one's own land. Naḥmanides' comment on the passage, “Thou shalt not remove thy neighbor's landmark, which they of old time have set, in thine inheritance which thou shalt inherit in the land that the Lord thy God giveth thee to possess it” (Deut. 19:14), is that Scripture speaks here “in terms of the present,” i.e., of the usual situation, since it is common for landmark removal to take place in respect of ancient landmarks set up “of old time” which are not generally known and familiar. The prohibition against removal of the landmark is repeated in the enumeration of curses for recital on Mount Ebal (Deut. 27:17). The exact marking of land boundaries was already emphasized in patriarchal times, as may be gathered from the description of the field in *Machpelah bought by Abraham from Ephron the Hittite (Gen. 23:17), and this was also the case in other countries of the ancient East. Many boundary stones, engraved with invocations and curses against their removal, have been found in ancient Babylonia.

Removal of the landmark is exhorted against and castigated in the books of the prophets and the hagiographa (Hos. 5:10; Prov. 22:28, 23:10). In Proverbs too the reference is to the “present” and usual situation, namely removal of ancient landmarks set by earlier generations. In the Book of Hosea the castigation is directed against the princes, the strong, and in Proverbs it is hinted that the weak, the fatherless, were the main sufferers. In Job too removal of the landmark is mentioned among other injustices perpetrated on orphans, widows, and the poor (24:2–4).

IN THE TALMUD. In the talmudic period the abovementioned passage from Deuteronomy 19:14 was given a literal interpretation and the special prohibition against landmark removal was held to be applicable to land in Erez Israel only. The fact that the enjoinder, “Thou shalt not remove the landmark,” appears after it is already stated that “Thou shalt not rob,” was held to teach that anyone who uproots his neighbor’s boundaries breaks two prohibitions, robbery and removal of the landmark, but that this was the case in Erez Israel only, since it is written “... in thine inheritance which thou shalt inherit in the land...” (*ibid.*), and outside Erez Israel only one prohibition (robbery) is transgressed (Sif. Deut. 188). The *halakhah* was likewise determined in later times (Maim. Yad, Genevah 7:11; Sh. Ar., ḤM 376:1).

Land robbery, even outside Erez Israel, has been regarded with great severity in Jewish law. The Talmud speaks of persons specially engaged in land measuring and the fixing of precise boundaries; surveyors are specifically instructed to make accurate calculations – down to the last fingerbreadth – and not to measure for one in summer and for the other in winter, since the measuring cord shrinks in summer (and expands in winter; BM 107b and Rashi *ibid.*; 61b; BB 89a; Maim. Yad, Genevah 8:1–3; Sh. Ar., ḤM 231:16–18).

IN THE CODES. It is explained that the general distinction made in Jewish law between *genevah* and *gezelah* (see *Theft and Robbery) – the former taking unlawfully by stealth and the latter openly with violence – applies also to the matter of trespass on land: “A person who removes his neighbor’s landmark and encloses within his own domain even as much as a fingerbreadth from his neighbor’s domain is a robber if he does so with violence and a thief if he does so stealthily” (Yad, Genevah 7: 11; Sh. Ar., ḤM 376; from the *Semag, Lavin*, 153 it also appears that this was understood to be the version of Sif. Deut. 188). The opinion was expressed by some of the *posekim* that the prohibition against robbery or theft – in relation to trespass on land – forms part of the *de-rabbanan* (Oral Law) and not the *de-oraita* (Written Law) law, since land is never stolen but always remains in its owner’s possession; this opinion is however contrary to the plain meaning of the abovementioned statements in *Sifrei* (Tur, ḤM 371:10, 376; *Perishah, ibid.*, *Sma.* to YD 371:2).

The great severity with which trespass on land has been regarded in Jewish law is illustrated in a responsum of Solomon b. Abraham *Adret (Rashba) concerning the follow-

ing matter: “A person trespassed and built a wall within his neighbor’s yard, thereby appropriating therefrom a cubit of land to his own, and then built a big house supported on this wall; now the owner of the yard comes to demolish the other’s whole building.” Asked whether in terms of the *takkanat ha-shavim* (“*takkanah* of restitution,” see *Theft and Robbery) the trespasser might pay for the value of the land taken without having to demolish the building in order to restore the land to its owner, Rashba replied in the negative: “The *takkanat ha-shavim* was instituted in respect of movable property only, and in respect of land it was not stated that he [the injured party] should sell his property and break up his inheritance” (Resp. vol. 3, no. 188).

Widening of the Concept

The first manifestations of a widening in the doctrine of *hassagat gevul* are traceable back to talmudic times, when various *halakhot* were derived from the doctrine by way of **asmakhta*. Thus the doctrine was cited in support of the prohibition against withholding from the poor (all or anyone of them) their gleanings from the produce of the field (Pe’ah 5:6; on the meaning of the term *olim* and *al tassegev gimul olim*, see Albeck, *Mishnah, ibid.*). The prohibition against *hassagat gevul* was similarly invoked to lend a quasi-legal recognition to an individual’s right (copyright) in respect of his own spiritual or intellectual creations: “Whence can it be said of one who interchanges the statements of Eliezer with those of Joshua and vice versa, so as to say of pure that it is unclean and of unclean that it is pure, that he transgresses a prohibition? It is taught: ‘you shall not remove your neighbor’s landmark’” (Sif. Deut. 188). Even the prohibition against marrying a pregnant woman or one weaning a child (i.e., by another man, for reasons of the possible threat to the welfare of the embryo or child), is supported by the doctrine of *hassagat gevul* (Tosef. Nid. 2:7; see also Mid. Tan., Deut. 19: 14; Comm. R. Hillel, Sif. Deut. 188).

Trespass on Economic, Commercial, and Incorporeal Rights

Post-talmudic economic and social developments fostered the need to give legal recognition and protection to rights which had not become crystallized within any accepted legal framework during the talmudic period. Some of these rights found legal expression and protection through an extension of the prohibition against landmark removal, so as to embrace also encroachment on another’s economic, commercial, and spiritual confines.

TENANCY RIGHTS. Jewish places of settlement in the Middle Ages were restricted – at times voluntarily, at other times by force – to particular streets or quarters. Hence the demand by Jews for dwellings in these particular places frequently exceeded the available supply, and sometimes a prospective Jewish tenant would offer a landlord a higher than customary rental in order to have the existing tenant evicted, the more so since the *halakhah* excluded neither an offer to pay a high

rental nor eviction of a tenant upon termination of his lease. In order to fill the breach against this undesirable social phenomenon, various *takkanot* were enacted in the different centers of Jewish life. These *takkanot*, aimed at protecting tenants from eviction, were reconciled with the principles of Jewish law through a widening of the doctrine of *hassagat gevul* to take in also the tenant's right to remain in occupation of the premises hired by him. The earliest of these *takkanot*, akin in content to the tenants' protection laws found in many modern legal systems, are attributed to the time of *Gershom b. Judah (tenth century; for the text, see Finkelstein, Middle Ages, 31).

In a 13th-century *takkanah* of the community of Crete (Candia) it was laid down that: "A person shall not encroach on his neighbor's boundaries by evicting him from his home... from today onward no Jew shall be permitted... to offer an excessive payment or rental to any landlord in order to gain occupation of his house... and thereby cause him to evict the existing Jewish tenant, for this is a transgression against 'cursed be he that removes his neighbor's landmark,'" not only was the offender to be fined, but the *takkanah* also prohibited anyone to hire the house in question for a full year from the date of its being vacated (*Takkanot Kandyah*, ed. Mekize Nirdamim, p. 16). Similar *takkanot* were customary in different Jewish centers during the Middle Ages (see, e.g., Ferrara *takkanot* of 1554, in: Finkelstein, Middle Ages 93f., 302, 305).

TRESPASS IN MATTERS OF COMMERCE AND THE CRAFTS. In tannaitic times the opinions of most sages inclined in favor of free commercial and occupational competition (BM 4: 12, 60a-b; BB 21b). In the third century C.E., moral censure of someone setting up in competition with a fellow-artisan was expressed by some of the Palestinian *amoraim*, although without any legal sanction (Kid. 59a; Mak. 24a; Sanh. 81a). In the same century, in Babylonia, *Huna laid down the legal principle that a resident of a particular alley operating a handmill could stop a fellow-resident from setting up in competition next to him, because this involved an interference with his source of livelihood (BB 21b). This view was not, however, accepted as *halakhah*, and at the end of the fourth century it was decided by Huna b. Joshua that one craftsman could not restrain a fellow craftsman and resident of the same alley from setting up business (in the same alley), nor even the resident of another town from setting up in the same town, as long as the latter paid taxes to the town in which he sought to ply his craft (BB 21b). Even so, however, there was no definition of the legal nature and substance of even this limited right of restraint, nor was it enforced by any sanctions upon infringement, such as the payment of compensation.

With the restriction of Jewish sources of livelihood in the Middle Ages, and the resulting intensified competition, the whole question once more came to the fore. A Jew who with much effort and money had succeeded in acquiring a monopoly in a particular commercial field stood to lose his investment and livelihood through the competition of a fellow-Jew. From the tenth century onward, the question of a

right of monopoly, its scope and sanctions, came to be widely discussed in the literature of the responsa and the codes. This discussion took in the *ma'arufyah* (a form of private monopoly) *takkanah*, which prohibited encroachment on the *ma'arufyah* of a fellow-Jew (*Or Zaru'a*, BM 10a, no. 28). Legally, the *ma'arufyah* right was a full-fledged right, capable of being sold (Resp. *Ge'onim Kadmoniyyim* 151) and was even discussed in relation to whether it passed on inheritance (Resp. *Hakhmei Zarefat va-Loter* 87). The law of the *ma'arufyah* was not free of dispute, and as late as the 16th century Solomon *Luria differed thereon in a number of material respects (Resp. Maharshal, 35, 36; *Yam shel Shelomo*, Kid. 3:2); yet he too recognized extension of the doctrine of *hassagat gevul* to include a prohibition against infringement of another's livelihood, and the majority of the *posekim* accepted the overall law of the *ma'arufyah* (Sh. Ar., ḤM 156:5 and standard commentaries; *Ir Shushan*, ḤM 156:5; *She'erit Yosef* 17).

Various *takkanot* have come down concerning the restriction of competition, particularly with reference to the acquisition of a right of lease or concession. In medieval times, particularly in Poland, a substantial proportion of the tax-collection concessions granted in respect of the wine trade, mints, border-customs, salt-mines, distilleries and saloons, etc., were concentrated in the hands of Jews, and various *takkanot* were enacted to restrict the competition in this field that had led to higher rentals and reduced profits (Halpern, Pinkas, 11f.; *Pinkas Medinat Lita*, nos. 46, 73, 87, 104; Resp. Bah., Yeshanot 60; *Masot Binyamin* 27; Resp. Maharam of Lublin 62; *Takkanot Medinat Mehrin*, p. 86, no. 259; *Havvot Ya'ir*, 42).

Setting up in competition with a fellow-artisan or professional was similarly restricted in various fields. Thus a *melammed* ("teacher") was prohibited from encroaching on a colleague's confines by taking one of the latter's pupils into his own *heder* (Takk. Cracow of 1551 and 1638, quoted by P.H. Wettstein, in: *Ozar ha-Sifrut*, 4 (1892), 580 (second pagination) and it was likewise decided with reference to ritual slaughterers (*Ba'ei Hayyei*, ḤM pt. 2, 80; *Naḥalah li-Yoshu'a*, 29; *Mishpat Zedek*, vol. 3, no. 14), the offender in this case being regarded as a robber who could be deprived of the remuneration received for such *shehitah* (Resp. *Divrei Hayyim*, pt. 2, YD 20) which might possibly even be declared ritually unfit (Resp. Shneur Zalman of Lyady, 9; see also Meshullam Roth, *Kol Mavasser*, pt. 1, no. 17).

An interesting development in this field is related to the office of rabbi. As late as the 15th century, it was decided by Israel *Isserlein and Jacob *Weil that a scholar holding the office of rabbi in a particular town could not restrain another from holding a similar office there, even though the latter would interfere with the former's prospects of earning remuneration in return for services such as arranging weddings, divorces, and the like. This decision was based on the reasoning that accepting a remuneration for such services was essentially contrary to the *halakhah* and its permissibility was not easily justifiable, and therefore it could hardly be recognized as an occupation or source of livelihood to be protected from

the encroachment of competitors (*Terumat ha-Deshen, Pesakim u-Khetavim* 128; Resp. Maharyu, 151; *Rema*, YD 245:22). This *halakhah*, however, underwent a change in the light of new economic and social realities. Already in the mid-17th century it was stated that even if competition of this kind was not prohibited in law, “perhaps there is reason for protesting against it on the grounds of custom” (*Siftei Kohen* to Sh. Ar., YD 245:22, n.15); and at the commencement of the 19th century the change was also given legal recognition when Moses *Sofer (Resp. *Hatam Sofer*, חמ 21) explained that the rule which held the law of *hassagat gevul* to be inappropriate to the rabbinate was only applicable “to that particular period when a rabbi was not engaged in the same way as a worker... but every scholar led the community in whose midst he lived and as such remuneration for *gittin* and *kiddushin* came to him naturally... but nowadays a rabbi is engaged – sometimes from another town – for remuneration, in the same way as any other worker and the community is obliged to provide him with his livelihood; we are not deterred from the acceptance of such reward, and therefore any one encroaching on the rabbi’s confines is in the position of a craftsman setting up in competition with his neighbor.” and “a rabbi who does so is disqualified from his position” (Resp. *Shem Aryeh*, OH 7).

The legal basis for the restriction of competition, with imposition of sanctions, was found in an extension of the legal doctrine of *hassagat gevul* to include encroachment on the confines of another’s trade and source of livelihood. An interesting insight into the manner in which the said extension was arrived at is offered in the method of interpretation adopted by Solomon *Luria (despite his advocacy of greater freedom of competition). In the case of a person ousted by his neighbor from a concession to a customs post, Luria reasoned that the defendant might be held liable for the pecuniary loss suffered by the other party even though it was decided law that there is no liability for **gerama* (a form of indirect damage) in tort. Luria relied on Roke’ah’s statement that anyone interfering with another’s source of livelihood falls within the enjoinder, “Cursed is he who removes his neighbor’s landmark,” a statement Luria explained on the basis that this passage seemed to be redundant in the light of the prior scriptural injunction, “You shall not remove your neighbor’s landmark,” unless it was accepted that this passage related to trespass in the field of bargaining. Luria’s decision accordingly was that the customs post be restored to the first concessionary without cost, or the defendant compensate him for the damage caused (Resp. Maharshah 89). Other scholars regarded trespass on a neighbor’s trading interests as an integral part of the prohibition against trespass on another’s right of tenancy (see Resp. Maharam of Padua 41).

COPYRIGHT. The first hints at recognition in Jewish law of the ownership of incorporeal property were given as early as tannaitic times. Thus it was stated, “a person who eavesdrops on his neighbor to reproduce his teachings, even though he is called a thief, acquires for himself” (Tosef., BK 7:13), and sup-

port for the prohibition against interchanging one scholar’s statements with another’s was found (Sif. Deut. 188) in the passage, “Thou shalt not remove thy neighbor’s landmark.” At the end of the 12th century the same passage was quoted by Judah he-Hasid in warning an heir against complying with a direction in the will of his deceased father to inscribe the latter’s name as the author of a book, even though it was known to have been written by someone else (*Sefer ha-Hasidim*, ed. Mekize Nirdamim, nos. 17–32). It was nevertheless only from the 16th century onward that copyright became a defined legal right, protected by sanctions and partially based on the extended doctrine of *hassagat gevul*.

As in other legal systems, this development arose from the spread of printing and a need for the protection of printers’ rights. As early as 1518 an approbation (*haskamah*) to the *Sefer ha-Bahur* of Elijah *Levita contained a warning, on pain of ban, against anyone reprinting the book within the following 10 years. In the mid-15th century, when Meir *Katzenellenbogen complained to Moses Isserles about the appearance of a rival edition of Maimonides’ *Mishneh Torah* (shortly after his work had been printed by Katzenellenbogen), Isserles responded by imposing a ban on anyone purchasing the *Mishneh Torah* from Katzenellenbogen’s competitor (Resp. *Rema* 10). Thereafter it became customary to preface books with approbations containing a warning against trespass in the form of any unauthorized reprint of the particular book within a specified period. Halakhic literature contains detailed discussions on various aspects of encroachment on printers’ rights. Thus Isserles imposed his abovementioned ban on anyone purchasing the *Mishneh Torah*, because in that instance it would not have availed against the printer, a non-Jew. Other scholars held the opinion that the ban should be imposed, not on the purchasers of the book – as this would cause study of the Torah to be neglected – but on the printer instead, except if he be a non-Jew (*Zikhron Yosef*, חמ 2; Resp. *Hatam Sofer*, חמ 89). Unlike Isserles, who confined the operation of his ban (to purchasers) within the country concerned only, other scholars extended operation of the ban to printers everywhere (Resp. *Hatam Sofer*, חמ 41 and 79). In most cases the period of the prohibition varied from three to 15 years, but was sometimes imposed for as long as 25 years. Some of the scholars held that a prohibition imposed against trespass on a printing right takes effect from the date of the approbation in which it has been formulated, but other scholars held the prohibition to come into effect upon commencement of the printing (Halpern, Pinkas 486; Resp. *Shem Aryeh*, חמ, 20; *Mayim Hayyim*, YD 44; Resp. *Sho’el u-Meshiv*, pt. 1, no. 44).

The above prohibition was mainly justified on grounds of the printer’s need for an opportunity to recover his heavy outlay through the subsequent sale of the printed product, since reluctance to undertake any printing in the absence of such protection was likely to send up the price of books and cause study of the Torah to be neglected by the public. In this regard there was a fundamental difference of opinion among scholars concerning the fate of the prohibition once the printer

had sold the whole of his edition, i.e., prior to expiry of the period of his protection. According to some scholars the prohibition remained fully effective against all other printers, but others held that continuation of the printer's protection, after he had already obtained his remuneration, was itself likely to cause the price of books to rise and to contribute to the neglect of study (*Ḥatam Sofer*, ח"מ 79; *ibid.* Addenda no. 57; *Parashat Mordekhai*, ח"מ 7; *Tiferet Zevi*, י"ד 62; *Mayim Hayyim*, י"ד 44; *Pithei Teshuvah*, י"ד 236:1; *Ateret Hakhamim*, י"ד 25). This was the central halakhic issue in the dispute, at the beginning of the 19th century, between the respective printers of the Slavuta edition of the Talmud (the brothers Shapiro) and the Vilna-Grodno edition (the widow and brothers Romm).

Out of this discussion grew the recognition given, in later generations, of the existence in Jewish law of a full legal right in respect of one's own spiritual creation. Thus Joseph Saul *Nathanson, rabbi of Lvov, distinguished between printing the work of others, e.g., the Talmud, and printing one's own work, stating that in the latter event "it is clear that he has the right thereto for all time... for with regard to his own [work] a person is entitled to decree that it shall never be printed without his permission or authority... and this right avails him against the world at large" (*Sho'el u-Meshiv*, pt. 1, no. 44). In support of this opinion, Nathanson had reference to the copyright offered the patent-holder of an invention under general Polish law, adding that the effect of an author's restriction against any reprint of his work within a specified period was not to prohibit what would otherwise be permissible, but, on the contrary, to authorize others to reprint his work upon expiry of the period specified because "even if no express restriction is imposed... this remains prohibited as *hassagat gevul* by the law of the Torah" (*ibid.*). A similar view was expressed by Naphtali Zevi Judah *Berlin concerning the individual's right in respect of his own teachings; he held that the individual might treat these as he would his own property – save for its total destruction, because it was a *mitzvah* to study and to teach others (*Meshiv Davar*, pt. 1, no. 24).

This view was not, however, generally accepted by the halakhic scholars. Thus Isaac *Schmelkes saw no reason why others might not reprint a book – even if first printed by the author himself – once the original edition had been completely sold; "everyone retains the right to study and to teach... why should another not be able to benefit his fellow men and print and sell cheaply?" (*Beit Yizhak*, י"ד, pt. 2 no. 75). In his opinion Nathanson's analogy of a patent-right offered no real support for the correctness of his view, since in that case the perpetuity of the right derived from royal charter, without which others might freely copy the inventor's model, and furthermore, a work relating to the Torah was to be distinguished from any other work of the spirit inasmuch as "the Torah was given to all free of charge... not to be used with a view to gaining remuneration" (*ibid.*). At the same time Schmelkes conceded the validity of a restriction imposed against reprint of a book within a specified period, not as a matter of *halakhah*, but in pursuance of the general law of the land, by

virtue of the rule of **dina de-malkhuta dina* ("the law of the land is law").

The doctrine of *hassagat gevul* strikingly illustrates one of the paths for the development of Jewish law, namely extension of the content of a legal principle beyond its original confines, in a search for solutions to problems arising through changes in social and economic conditions.

[Menachem Elon]

Hassagat Gevul (Trespass) in the Publishing of Manuscripts

The Jerusalem Rabbinical court (5715 / 861, PDR I 276) heard a case involving a claim of *hassagat gevul* by a person who engaged in the business of publishing manuscripts and who had published R. Isaiah di-Trani's commentary on various books of the Bible. As he was about to publish di Trani's commentary on other books of the Bible, it was brought to his attention that another person intended to publish the same manuscript with the commentary on those books. He therefore petitioned the court for an injunction to prevent him from doing so, on the grounds that he had already given public notification of his intention to publish the commentary on those additional works, and hence it was a case of trespass.

The court discussed various aspects of the limits of business competition (see *Business Ethics) and, at the end of its decision, cited R. Hayyim Halberstam of Zanz (*Resp. Divrei Hayyim*, ח"מ 56), who states that the custom of prohibiting the purchase of books from any printer who encroached on the rights of another printer "was based on the words of the *geonim* who preceded us," and was conditional upon a significant rabbinical figure having agreed to the publication by the first printer. He added that this prohibition had acquired the status of a custom (*minhag*), and was therefore valid even if it was contrary to the laws of the Torah.

The court ruled that there was no difference in this regard between a person who had invested funds in the printing of books and one who had invested resources in the preparation of manuscripts for printing. However, in the case in question, the plaintiff, i.e., the first printer, had not only failed to obtain an approbation from a rabbinical authority warning anyone against encroaching on his rights in this work but, according to the court, had not even given due notice of the fact that he was about to publish the commentary on the other books as well. Moreover, the defendant had not used the original invention of the plaintiff or his work, and therefore should not be forbidden to publish the commentary on those books.

Trespass by Infringement on a Monopoly

In the *Atlantic* case (CA 6126/92 *Atlantic v. Doug Frost*, PD 50(4) 471), the Supreme Court of the State of Israel relied on the prohibition against *hassagat gevul* in the context of encroachment upon commercial competition. A fishing company, which for many years had been the only entity operating in a particular part of the fishing sector, had gone bankrupt. This collapse was the result of competition from another company that had begun operating in the same line of business.

The competitor imported much larger quantities of merchandise into Israel without tax than was permitted by the authorities, resulting in a steep drop in prices and the plaintiff's bankruptcy. The court (Justice Z. Tal) examined the issue against the background of the Unjust Enrichment Law, 5738 – 1978 (see *Unjust Enrichment). This law, as is apparent from the preamble to the draft bill, derives from Jewish legal sources (pp. 482–83 of the judgment); hence, in this case as well Justice Tal based his ruling on the provisions of Jewish Law. The Court likened the case to the above-cited law of *ma'arufyah*, establishing the right of a person who had received a permit to engage in a particular area as a legally recognized monopolist, and determined that the plaintiff had grounds to prevent the defendant from engaging in competition with him, and possibly even to restore any profit which the defendant had earned as a result of his unfair competition.

The Law in the State of Israel

The Copyright Act (1911) and the Copyright Ordinance (1924), both of which originated in ordinances from the time of the British Mandate, determine the scope of the prohibition against publication and reproduction of works, including translating, processing, recording or copying such works, and the remedies – both civil and criminal – available for a breach of copyright.

The Performers' Rights Law 5744 – 1984 determines the entitlement of an artist performing artistic, literary, dramatic or musical works, not to have copies made of his performances without his consent, and his right to royalties for the use of his works.

LEGAL PROTECTION OF “MORAL RIGHTS” IN THE STATE OF ISRAEL. In a 1981 amendment, the Copyright Ordinance (1924) was amended, and section 4A was added, bearing the title “Moral Rights.” This section established an author's right to have his name applied to his works and to object to any modification to his works liable to prejudice his honor or reputation. A violation of this right constitutes a civil wrong, according to Israeli torts law (see *Torts). The explanation of the draft bill states that

In contrast to the belated recognition... by other countries of an author's intellectual property rights, the talmudic Sages were cognizant of such rights even in earliest times. An author's right to have his name applied to his own work is established both in the Sages' praise for “one who reports a saying in the name of the person who said it” [of whom it is stated that he “brings redemption to the world” – (TB, Meg. 15a ME). and the comparison drawn between a person who does not credit the author of a composition and a thief: One who attributes other people's ideas to himself is even worse than one who steals a tangible asset. By prohibiting “theft of words,” the Sages demonstrated the value attached to wisdom in general, because someone who “wears another person's prayer shawl” causes a situation in which there is “no advantage to the wise person over the fool.” The obligation to report a statement in the name of its maker is not merely moral in character: some authorities regarded a “stealer of words” as a “thief” to all intents and purposes,

and even applied penal sanctions against those who published other people's works in their own name...” (Draft Bill 5741, p. 238).

In a similar vein, in the *Qimron* case the Supreme Court addressed the Jewish legal perspective on the protection of copyright and intellectual property (CA 2790/93 *Eisenman v. Qimron*, PD 54(3) 817). A U.S. researcher published, without permission, parts of a study conducted by an Israeli scholar, who had devoted 11 years to reconstructing fragments of a scroll from the Second Temple period found in the Qumran caves. The court (Justice Y. Turkel) stated that “The roots of this important principle also derive from Jewish legal sources, which emphasizes the magnitude of the sin of a person who fails to report statements in the name of those who made them.” Justice Turkel cites the words of R. Isaiah ha-Levi Horowitz, who states: “It is a great principle to report sayings in the name of those who said them, and not to steal sayings from those who said them, for such theft is worse than stealing money... How great, in my eyes, is the sin of a person who cites an interpretation that has been published in a book, or which he has heard, and fails to mention the name of the original maker or writer of the interpretation” (*Shnei Luhot ha-Brit, Shavuot*, 183:2).

Regarding encroachment on the business and commercial rights of others, see *Business Ethics.

[Menachem Elon (2nd ed.)]

HASSAGOT (Heb. חַסָּאגוֹת), name given to rabbinic works wholly devoted to the criticism, usually negative, of earlier books. *Hassagot* literature is a part of a much wider literary genre, including *tosafot on the one hand, and on the other, supplements in the style of the *Sefer ha-Hashlamah* of *Meshullam b. Moses. They appeared initially in the time of *Saadia Gaon, when rabbinical “books” in the modern sense were first written, the first book of *hassagot* apparently being one by Mevasser against Saadia. *Hassagot* literature reached its peak in the 12th century, especially in Provence, the best known author of such works undoubtedly being *Abraham b David of Posquière (*ba'al ha-hassagot*). From the 14th century onward this class of literature began to decline, taking more and more the form of *haggahot, limited in content and generally relegated to the margins of the books.

Only a small number of *hassagot* works were thus termed by their authors. The first such is Jonah *Ibn Janaḥ's work against the grammatical works of Judah *Ḥayyuj. It was translated from the original Arabic into Hebrew by Judah ibn *Tibbon, and given the title *Sefer ha-Hassagah*, thus giving the word *hassagah* its present meaning. *Zerahiah ha-Levi, a friend of Ibn Tibbon, also uses this term with the same meaning in the introduction to his *Sefer ha-Ma'or*. Some *hassagot* works (such as the above-mentioned book of Mevasser) confine themselves to exposing the errors of the text under review, but most offer alternative views and opinions, and sometimes as in the case of Abraham b. David, even defend, explain, and supplement the text in question. *Hassagot* literature embraces a wide range of subjects, including *halakhah*, theology, and grammar. Likewise, writers of *hassagot* differ in their aims, from Mevasser who attacked, apparently on a personal background, the whole of Saadiah's literary work, classifying his *hassagot* according to chapter headings, through *Dunash b. Labrat who wrote *hassagot* on the works of his teacher Saadiah with pure academic interest on linguistic and biblical subjects alone, to Naḥmanides, who was prolific as a writer of *hassagot* (on the *Sefer ha-Mitzvot* of Maimonides, the *Sefer ha-Ma'or* of Zerahiah ha-Levi, and on the *hassagot* of Abraham b. David on *Alfasi). The *hassagot* of Naḥmanides were all written with the sole purpose of defending his predecessors, Alfasi and the author of the *Halakhot Gedolot, against the criticisms which had been leveled against them.

Some *hassagot* were written in order to justify local customs, such as those of Zerahiah on Alfasi, and some in order to undermine a scholar's authority, such as those of Meir *Abulafia on Maimonides. Most writers of *hassagot* confine themselves to important and prominent personalities, such as those mentioned above. Of the critics of Alfasi, mention should be made of his pupils, Ephraim and Joseph *Ibn Migash, whose books are not extant. Particularly noteworthy are the scholars of *Lunel, whose *hassagot* of Maimonides were written for their own instruction and were sent by them to Maimonides in order to elicit replies from him.

The *hassagot* have a style of their own. They are brief, pungent, and provocative. Their sometimes astonishing brusqueness is merely external and, in practice, was not taken amiss. The brevity of style was designed to strike a chord of decisiveness.

[Israel Moses Ta-Shma]

HASSAN, Spanish-Moroccan family whose most famous member in Spain was JAHUDA ABEN HAÇEN, the ambassador of Aragon to Granada in 1287. A refugee in Morocco, SHEMAYYAH HASSAN countersigned *takkanot* ("regulations") in Fez (c. 1575). During the 17th century, his family settled in Salé and

Tetuán. Shem Tov and DAVID HASSAN extended their affairs to Gibraltar, where SIR JOSHUA *HASSAN was the first head of government (1964–69). In 1790, the Spanish consul in Tetuán, SOLOMON HASSAN, was hanged upon the order of the sultan Moulay Yazd. A branch of the family then settled in Mogador, whence RAPHAEL HASSAN (d. after 1825), author of *Lehem Oni* (1834), left for London. In Tetuán, the financier SALVADOR HASSAN (d. after 1879) represented Spain and Italy, and his sons represented Portugal in Tangier, where they founded an important banking company.

HASSAN, SIR JOSHUA (Abraham; 1915–1997), Gibraltar lawyer and politician. Born in the British colony of Gibraltar to a Sephardi family of North African origin, Hassan was admitted to the bar in 1939. Mayor of Gibraltar from 1945 to 1950 and again from 1953, he was chief member of the Legislative Council from 1950 to 1964. In that year he became chief minister, a post equivalent to that of premier, and championed the right of the colony to remain under British rule and not to be transferred to Spain. He lost the position as a result of the elections in 1969. Hassan was a devoted and observant Jew and president of the management board of the Jewish community. He was also active in Zionist affairs and was president of the Jewish National Fund Commission for many years. Even while holding the highest offices, Hassan continued to go from house to house collecting the contents of the J.N.F. boxes. He became a queen's counsel in 1954 and in 1963 received a knighthood. Hassan again served as chief minister of the Gibraltar legislative council from 1972 to 1987.

ḤASSĀN IBN ḤASSĀN (second half of tenth century), Spanish astronomer, who was called by some Ḥassān ibn Mar Ḥassān and by others Ali ibn Mar Ḥassān. It seems that Ḥassān was not his father's personal name but his family name. Ḥassān was a *dayyan* in Cordoba. That he lived in the tenth century can be inferred from the date 972 C.E., which he used in his calculations. He was an astronomer who followed the system of al-Battānī, writing three works which were in the possession of Jewish astronomers in *Spain and in Eastern countries during the Middle Ages but were later lost.

HASSENFELD, SYLVIA KAY, U.S. philanthropist, community activist. Hassenfeld was born in Philadelphia, Pennsylvania, after World War I, the daughter of Sophie and Joseph Kay. After marrying Merrill Hassenfeld, she moved to Providence, Rhode Island, and joined his family members in their extensive service to the Jewish and local community. As the Hassen-

feld's family business expanded from pencil manufacturing to the Hasbro Corporation, one of the foremost global manufacturers of toys and games, Sylvia Hassenfeld became involved with the Hasbro Children's Foundation, Hasbro Children's Hospital in Providence, and other philanthropic initiatives. She also occupied Jewish communal positions of increasing responsibility and influence, chairing the National Women's Division of United Jewish Appeal, serving as a member of the Board of Governors of the Jewish Agency for Israel, and becoming the first female president of the American Jewish Joint Distribution Committee (JDC). During Hassenfeld's tenure as president of the JDC from 1988 to 1992, she worked to protect the Jewish populations of Eastern Europe as the communist Soviet Union dissolved. She also supported the Israeli government's efforts to airlift Ethiopian Jews to Israel. After her term as president of the JDC was over, she became the chairman of the board of the JDC. Hassenfeld was a longtime advocate for Israel and a major figure in the Jerusalem Foundation. Other Jewish communal activities included sitting on the boards of the United Israel Appeal, the Memorial Foundation for Jewish Culture, and the Council of Jewish Federations. She was on the boards of the New York University Medical Center, the Paul Nitze School of Advanced International Studies at Johns Hopkins University as well as the Hasbro Children's Foundation. She was also appointed a member of the United States Holocaust Memorial Council. In 1994 the American Jewish Historical Society honored her with the Emma Lazarus Statue of Liberty Award, an award that was noted in the Senate of the United States. As one of the few women to achieve such stature in the world of Jewish philanthropy, Hassenfeld was an important and effective member of the American Jewish community.

[Melissa Klapper (2nd ed.)]

HASSID, WILLIAM ZEV (1897–1974), U.S. biochemist. Born in Jaffa, Hassid served in the British Army in World War I, then went to the U.S. in 1920. He became professor of plant biochemistry at Berkeley, California, 1950, and of biochemistry, 1959. His field of research was in structural carbohydrate chemistry and on carbohydrate metabolism in plants. He was the chairman of the Carbohydrate Division of the American Chemical Society and a member of the National Academy of Sciences.

HASSIDEANS (Assideans; Greek form of Hebrew *Hasidim*; “pious ones”), religious group or sect which originated in about the third or fourth century B.C.E. It centered around the revival and promotion of Jewish rites, study of the Law, and the uprooting of paganism from the land. The date of origin cannot be known with certainty. The Hassideans are first mentioned by name during the persecutions of Antiochus IV (Ephiphanes), king of Syria (175–164 B.C.E.), when its members joined the Maccabean opposition led by Mattathias in his revolt against the Syrians. They formed the nucleus of the Maccabean revolt and refused to compromise in any way with

the Hellenizing policy of the Syrians. The Hassideans were exposed to torture and death for their refusal to desecrate the Sabbath and other Jewish observances. In 1 Maccabees 2:41 it is recorded that they were “mighty men in Israel... such as were devoted to the Law.” In 1 Maccabees 4 they are described as welcoming peace with the Syrians when the latter offered them assurances of religious liberty. The Hassideans ceased to cooperate with the Hasmoneans (the successors of Judah the Maccabee) in their fight for political independence.

Certain references to the **Hasidim* are found in the Psalms (12:2, 30:5, 31:24, 38:28, et al.), but it is doubtful that these accounts refer to the *Hasidim*. The passages speak of the efforts of the *Hasidim* to observe the Law, their persecutions by their adversaries, and their struggles against their enemies. References to *Hasidim* in the Mishnah and the Talmud (Ber. 5:1, Hag. 2:7, Sot. 3:4, Avot 5:10, and Nid. 17a) may refer to the Hassideans or merely to pious individuals of a later period. The Talmud refers to the strict observance of the commandments by *Hasidim*, to their ardent prayers, which they would not renounce even at the risk of their lives, and to their rigid observance of the Sabbath. Because of their meticulous observances the Hassideans have been linked with the *Essenes, but scholarly consensus places them as the spiritual forerunners of the *Pharisees.

HAST, MARCUS (Mordechai; 1840–1911), *hazzan* and composer. Born in Praga, near Warsaw, Hast served as *hazzan* in Warsaw, Torun, and Breslau, and from 1871 in the Great Synagogue in Duke's Place in London. He published the traditional repertoire of the London synagogue, together with some of his own compositions, in *Ozar ha-Rinnah ve-ha-Tefillah* (1874, with Michael *Bergson), *Seder ha-Avodah* (1879), and *Avodat ha-Kodesh* (1910). He also composed some cantatas and oratorios on Jewish subjects (*Bostanai*, *Azariah*, *The Death of Moses*, *The Destruction of Jerusalem*), conducted the Amateur Choral Society, and founded the Association of Cantors of Great Britain. Some of his synagogal compositions were included in the collections edited by his son-in-law Francis Lyon *Cohen.

HATCHWELL, SOL (or **Suleika;** 1820–1834), Jewish martyr of Morocco, where she is known as “Sol ha-Zaddikah.” After Sol Hatchwell had visited Muslim friends in her native Tangier, two Moors testified that she had recited the *Shahāda* (Muslim declaration of faith). In spite of her vigorous protests, she was henceforth, according to Muslim law, considered a Muslim. Her case was brought before the sultan of Morocco, who ordered that she be brought from Tangier to Fez. Despite alternating offers of honor and threats, she refused to renounce

Judaism. Condemned to death, she was publicly beheaded in Fez. For a long time, her martyrdom remained a historical topic, inspiring numerous Jewish and non-Jewish authors. The authors of legends, novels, plays, and *kinot* adopted the story of the “Jewish heroine” as their theme; the painter Dehodencq depicted her in his painting known as “The Torment of the Jewess.” Her tomb in the cemetery of Fez became the site of pilgrimages of both Jews and Muslims.

[David Corcos]

HA-TEKUFAH (Heb. הַתְּקוּפָה; “The Season”), Hebrew periodical devoted to literary, scientific, and social subjects which appeared (first as a quarterly, then as an annual) intermittently between 1918 and 1950. *Ha-Tekufah* received the financial backing of Abraham Joseph *Stybel, a philanthropist who had placed David *Frischmann in charge of launching Hebrew literary projects on an unprecedented large scale. Accordingly, Frischmann established both the Stybel publishing house, and launched *Ha-Tekufah*, serving as the editor of both projects. The first volume of *Ha-Tekufah* appeared in Moscow early in 1918, before the Bolshevik regime had decided to suppress Hebrew literature. Frischmann published the works of the world’s best authors and scholars. The literary standards of the periodical were high. Frischmann encouraged young authors, for example Eliezer *Steinman. In all respects and not least for its beautiful graphic work, *Ha-Tekufah* was a rare phenomenon in Hebrew literature. Following the suppression of Hebrew in Russia, Frischmann moved to Warsaw where he published issues 5–15. After his death in 1922, he was succeeded by Ya’akov *Cahan and F. *Lachower. When Stybel’s publishing house underwent a crisis, *Ha-Tekufah* was moved to Germany and volumes 24–27 (1928–30) were edited in Berlin by Benzion *Katz, S. *Tchernichowsky, and S. *Rawidowicz. The twin volume 26/27 (1930) lists Berlin–Tel Aviv as its places of publication. Volumes 28–29 (1936) were edited by Ya’akov Cahan and published in Tel Aviv. Finally, *Ha-Tekufah* moved to the United States, volumes 30–35 (1946–1950) appearing in New York, edited by E. *Silberschlag and Aaron *Zeitlin (the last volume by Zeitlin alone).

Ha-Tekufah is a treasure trove of Hebrew literature of all genres, including belles lettres by many of the leading writers of the time. Its scholarly articles and translations were also by the leading figures in their field. The contributors to *Ha-Tekufah* are listed in an index appended to volume 25 (author’s name only), and in an index (authors and subjects) to all the volumes prepared by J. Barzilai-Folman (1961).

[Getzel Kressel]

HA-TENU’AH LE-MA’AN EREZ ISRAEL HA-SHELEMAH (The Land of Israel Movement), a nation-wide grouping founded in the immediate aftermath of the Six-Day War, which aimed at ensuring the permanent retention by Israel of the territories occupied in that war. Its membership embraced political elements of the Right and Left, including a particularly strong group of the left-wing *Ha-Kibbutz ha-Me’uhad as well as most of the Young Guard of the *National Religious Party. Its first manifesto, published in September 1967, was signed by leading writers, including S.Y. *Agnon, Hayyim *Hazaz, Nathan *Alterman, and U.Z. *Greenberg, high-ranking army officers of the IDF Reserve, and leaders of commerce and industry, as well as university teachers, rabbis, and members of the various kibbutz movements. The manifesto laid down three basic propositions: first, that the Jewish people was bound both by its history and by its responsibility to the future to retain possession of the entire area of the Land of Israel as circumscribed by the cease-fire lines of June 1967, which were to become the permanent borders of the State; second, that no Israeli government had a mandate for surrendering any part of this inalienable trust; third, that the key to the integration of the new areas lay in immigration and intensive settlement.

The movement campaigned by means of mass meetings throughout the country, as well as by political lobbying among all the partners to the government coalition. From April 1968, it began publishing its own bi-weekly paper, *Zot ha-Arez*. It was directly involved in the resettlement of Jews in *Hebron in 1968, and less directly in other settlement projects on the West Bank and the Golan Heights. In 1970, a group sympathetic to the ideas of the Land of Israel Movement was formed in the U.S. under the name of “Americans for a Secure Israel.” This group publishes a periodical, *Outpost*, which appears at irregular intervals.

After the adherence of the Israeli government to the U.S. peace proposals (associated with the so-called “Rogers Plan”) in the summer of 1970 and the subsequent withdrawal of Ga’al from the government coalition, the Land of Israel Movement spearheaded a “National Committee to Oppose Withdrawal,” which included leading members of the main political parties both of the government and the opposition, with Dr. Chaim Ya’hil as chairman.

In 1973, a group of leading members of the Land of Israel Movement joined the new Center Block (Likud) under the leadership of Menahem *Begin. The group was represented in the Likud list by General (Res.) Avraham Yoffe and by the writer Moshe *Shamir, and Yoffe was elected to the Eighth Knesset as a result of the elections held on December 31, 1973.

In March 1976 this group joined with the Independent Center and the State List (led by Yigael Hurvitz) to form a new party, La’am (“For the People”), which became the third largest component of the Likud. In the elections to the Ninth Knesset in May 1977, La’am gained eight seats with Moshe Shamir representing the Land of Israel group. The Likud was now in power and the Land of Israel group was at the cen-

ter of the political map with the majority of La'am supporting its position.

Throughout this period, the original Land of Israel Movement, led by Zvi Shiloah, remained in existence as a non-party forum. In September 1977 it formed an association with Gush Emunim and with the En Vered Circle (a group of Labor veterans from the moshavim). All these elements were united in a common determination to develop and extend Israeli settlements beyond the Green Line, and in particular in Judea and Samaria. They withdrew their support from the Begin administration after the signing of the Camp David accords in September 1978, and finally found a means of expressing their radical opposition to the government peace plans through a new formation, the Land of Israel Loyalists (Berit Ne'emanei Erez Israel) set up at the end of 1978. This body had a wide political base both within and outside the government coalition. Led by such personalities as Professor Yuval Ne'eman, Yigael Hurvitz, Moshe Shamir and Moshe Tabenkin, it aimed at rallying mass opposition to the proposed autonomy plan and the peace agreements with Egypt.

A significant development came in October 1979 with the establishment of Tnu'at ha-Teḥiyah ("The Movement for Revival") consisting of the chief elements of Berit Ne'emanei Erez Israel with the exception of a group led by Yigael Hurvitz which remained in the government coalition resuming the name of Rafi. Teḥiyah was set up as a full-fledged political party inexorably opposed to the autonomy plan and to further concessions to Egypt. Prominent in its leadership were two members of the Ninth Knesset, Geulah Cohen and Moshe Shamir, who withdrew from the Likud in order to identify with the new party as a right-wing opposition. Professor Yuval Ne'eman had a central role in a collective leadership which included Gershon Shafat and Rabbi Eliezer Waldman (central figures in Gush Emunim) as well as Dr. Israel Eldad, Professor Yair Sprinzak, Israel Shenkar and Zvi Shiloah. Teḥiyah mounted a public campaign in 1980 prior to the elections for the Tenth Knesset (in those elections, held in June 1981, Teḥiyah won three seats). The effect of this political challenge was widely felt, especially among the Likud factions and in the National Religious Party. Whilst some were inclined to rejoice at the removal from their midst of the "Land of Israel Loyalists," thinking this would free them for a more moderate political line, others felt that the new development dictated a firmer stand on the part of the older established parties in all that concerned concessions to Egypt, autonomy and settlement on the West Bank. A major feature in Teḥiyah's platform was the emphasis on the need to combine religious and secular elements of the country in a single political framework.

With the electoral success of Teḥiyah and the rise of the more aggressive *Gush Emunim the movement gradually lost its attraction for the younger generation.

[Harold Harel Fisch]

HA-TIKVAH (Heb. הַתִּקְוָה; "The Hope"), anthem of the Zionist movement, and national anthem of the State of Israel. The poem was written by Naphtali Herz *Imber, probably in Jassy in 1878, and first published as "*Tikvatenu*" ("Our Hope") in his *Barkai*, 1886 (with the misleading note "Jerusalem 1884"). Its inspiration seems to have been the news of the founding of *Petaḥ Tikvah; the themes of the poem, together with those of Imber's "*Mishmar ha-Yarden*" ("Guarding the Jordan"), show the influence of the German "*Die Wacht am Rhein*" and "*Der Deutsche Rhein*" (the "River" and "As long as" motives) and the Polish patriots' song which became the national anthem of the Polish republic ("Poland is not lost yet, while we still live"). In 1882 Imber read the poem to the farmers of *Rishon le-Zion, who received it with enthusiasm. Soon afterward – probably in the same year – Samuel Cohen, who had come to Palestine from Moldavia in 1878 and settled in Rishon le-Zion, set the poem to a melody which he consciously based on a Moldavian-Romanian folk song, "*Carul cu Boi*" ("Cart and Oxen"). In an atmosphere in which new songs and adaptations became folk songs almost overnight because folk songs were needed, and at a time when no one thought of copyright, the melody became anonymous in an astonishingly swift process of collective amnesia. Thus even Abraham Zvi *Idelsohn, who settled in Jerusalem in 1906, approached it as a purely folkloric phenomenon; in his *Thesaurus* (vol. 4, 1923) he published the first of his comparative analyses of the melody, which have been widely accepted and copied since, not always with the proper credit. The true history of "*Ha-Tikvah*" was rediscovered independently by Menashe *Ravina and by an Israel amateur musicologist, Eliahu Hacoheh. The Moldavian "*Carul cu Boi*" is itself only one of the innumerable incarnations of a certain well-known melodic type (or pattern) found throughout Europe in both major and minor scale versions. Probably the earliest printed version of "*Ha-Tikvah*" with its melody is found in S.T. Friedland, *Vier Lieder mit Benutzung syrischer Melodien...* (Breslau, 1895).

Many, but not all, of the changes which intervened between the original text and early forms of the melody of "*Ha-Tikvah*" and the current version can still be retraced through songbooks, memoirs, etc. Some of these arose spontaneously; others were made on purpose, either to modify the text according to contemporary opinion or literary criteria, or to achieve the Sephardi syllable-stress instead of the old-fashioned Ashkenazi stress of the original. The standard harmonization is the one established in 1948 by the Italian conductor Bernardino Molinari, who orchestrated "*Ha-Tikvah*" for the *Israel Philharmonic Orchestra; another orchestration by Paul *Ben-Haim is also current. The first English translation of the poem was made by Israel *Zangwill, the first German one by Heinrich *Loewe. In religious Zionist families there is a tradition of singing Psalm 126 (*Be-Shuv Adonai et Shivat-Ziyyon*) with the *zemiroth to the melody of "*Ha-Tikvah*." The words can be found in several of the traditional collections of religious poetry published in Near Eastern communities dur-

ing the past 50 years, and “*Ha-Tikvah*” was therefore entered by Israel *Davidson in his *Ozar*.

Two competitions for a Zionist anthem, the first proclaimed in *Die Welt* in 1898 and the second by the Fourth Zionist Congress in 1900, came to nothing because of the unsatisfactory quality of the songs composed or suggested. At the Fifth Zionist Congress in Basle in 1901 one of the sessions concluded with the singing of what was still called “*Tikvatenu*.” During the Sixth Zionist Congress (Basle, 1903), it was sung by dissenting factions. The Seventh Zionist Congress (Basle, 1905) ended with an “enormously moving singing of ‘*Ha-Tikvah*’ by all present,” a moment which can be said to have confirmed its status. Although already proposed by David *Wolffsohn, the formal declaration of “*Ha-Tikvah*” as the Zionist anthem was only made at the 18th Zionist Congress in Prague in 1933. Under the Mandate, “*Ha-Tikvah*” was the unofficial anthem of Jewish Palestine. At the Declaration of the State on May 14th, 1948, it was sung by the assembly at the opening of the ceremony and played by members of the Palestine Symphony Orchestra at its conclusion. However, “*Ha-Tikvah*” has not been given official status as a national anthem by a proclamation of the Knesset.

[Bathja Bayer]

HATOKAI, ALDIN (1944–), Israel laborer. Hatokai was awarded the Israel Prize in 1986 for managing a work crew of Jews, Muslims, Druze, and Circassians in an exemplary manner and setting an outstanding example as an employee of the American-Israeli Paper Mills in Haderah.

HATRED (Heb. *הִתְנַחֵם*), overt or covert ill will. The Torah explicitly prohibits hatred of one’s fellow in the verse “Thou shall not hate thy brother in thine heart” (Lev. 19:17). Hatred is understood by the rabbis as essentially a matter of mental disposition, as implied in the phrase “in thine heart.” One who expresses hostility to his fellow through word or deed, although he violates the commandment “love thy neighbor” and injunctions against injury, insult, vengeance, etc., is not, according to most rabbinic authorities, guilty of the specific sin of hatred referred to in Lev. 19:17 (Sifra, *Kedoshim*; Ar. 16b; Maim. *Yad*, *De’ot* 4:5, *Sefer ha-Mitzvot*, prohib. 302; *Hinnukh* 238). The reasons are, apparently, that covert hatred is the more vicious form (*ibid.*) and that a person can defend himself against open hostility (I.M. Kagan, *Hafez Hayyim* (Vilna, 1873), 13, n. 7). The Talmud is emphatic in its denunciation of hatred. Hillel taught that the essence of the entire Torah is, “What is hateful to you, do not do to others,” all else being “commentary” (Shab. 31a). Hatred of one’s fellow creatures “drives a man out of this world” (Avot 2:16). One who hates his fellow is considered a murderer (DER, 11).

Gratuitous Hatred

(Heb. *שְׂנֵאת הַנֶּחֱם*). According to the Talmud gratuitous hatred is the most vicious form of hatred, and the rabbis denounce it in the most extreme terms. In their view the Second Temple was destroyed as punishment for this sin (Yoma 9b; cf. Story of Kamza and Bar Kamza, Git. 95b). It is equal to the three paramount sins of idolatry, fornication, and murder (Yoma 9b).

Halakhic Implications of Hatred

According to all rabbinic authorities one who hates (that is, one who, out of enmity, has not spoken to his fellow for three days) is ineligible to serve as a judge in cases involving his enemy; according to some he may not even be a witness (Sanh. 27b). Certain relatives of a woman (e.g., mother-in-law, stepdaughter) may not testify concerning the death of her husband, for fear they may harbor hidden enmity (Yev. 117a).

Permissible Hatred

It is proper to hate the wicked. “Do not I hate them, O Lord that hate Thee?” (Ps. 139:21); “The fear of the Lord is to hate evil” (Prov. 8:13). The same thought is expressed in the Talmud (Pes. 113b). Exhortations to hate all manner of evil abound in the Bible (e.g., Ex. 18:21; Ps. 26:4). God Himself hates every form of immorality (e.g., Deut. 12:31; Isa. 1:14; Ps. 5:6) because of its harm to mankind, since God Himself cannot be affected (Saadiah Gaon, *Beliefs and Opinions*, 4:4). The enjoinder to hate evildoers applies, however, only to impenitent and inveterate sinners, those who pay no heed to correction (Maim. *Yad*, *Roze’ah* 13:14; *Hinnukh*, 238).

The Bible, nevertheless, distinguishes between the person as such and the sinner in him, “As I live, saith the Lord, I have no pleasure in the death of the wicked, but that the wicked turn from his way and live” (Ezek. 33:11). One must assist even one’s enemy in transporting his burden (Ex. 13:5) for otherwise “he may tarry [by the wayside]” and endanger his life (BM 32b; Pes. 113b). Furthermore, in order to learn to subdue one’s baser inclinations, one must give priority to aiding the wicked over the good (BM 32b; Maim. *Yad*, *Roze’ah* 13:13). Thus, the true object of proper hatred is the sin, not the sinner, whose life must be respected and whose repentance effected. Beruryah, wife of Rabbi Meir, offered her interpretation of Psalm 104:35, “Let sins [*in loco* – sinners] cease out of the earth,” and thereby admonished her husband to pray not for the destruction of sinners but for their regeneration (Ber. 10a). It is forbidden to rejoice at the downfall of even those sinners whom it is proper to hate: “Rejoice not when thine enemy falleth” (Prop. 24:17). Thus, since one can never be certain of one’s motives, of the absolute wickedness of the sinner, and of whether one has discharged or is indeed even capable of completely discharging his obligation to reform the sinner, the rabbis stress the obligation of loving all men: “Be of the disciples of Aaron, loving peace and pursuing peace, loving your fellow creatures and drawing them near to the Torah” (Avot 1:12).

[Joshua H. Shmidman]

HATRY, CLARENCE CHARLES (1888–1965), British company promoter. Born in London, the son of a silk merchant, Hatry was educated at St. Paul's. In 1910 he took over his father's silk business and promptly went bankrupt. Notwithstanding this setback, he emerged within a few years as a successful insurance broker. With the temporary boom created by the end of the World War I, Hatry developed into probably the best-known company promoter in Britain, buying, consolidating, and then selling virtually any company he could find, often amalgamating them into poorly conceived trusts and making and losing several fortunes. Just before the 1929 Wall Street crash, when rumors of a large-scale swindle involving Hatry began to circulate in the City of London, he voluntarily confessed to fraud and, in 1930, was sentenced to 14 years' imprisonment for defrauding his customers of an estimated £15 million. Released in 1939, Hatry reemerged in the post-1945 period as a reformed businessman, owning London's famous Hatchard's Bookshop and other firms. Just after his release from prison he also managed to write an intelligent book on immigration and minority groups, *Light Out of Darkness* (1939). He is said to have been depicted in numerous detective stories of the time in which a swindler is murdered, including Ngaio Marsh's *Death at the Bar* (1939).

[William D. Rubinstein (2nd ed.)]

HATVANY-DEUTSCH, a 19th-century family of Hungarian industrialists and landowners, originally from the province of Arad. In the 20th century members of the family achieved distinction as painters, writers, and patrons of the arts. Its founder was **IGNAC DEUTSCH** (1803–1873), who established Hungary's first sugar refinery in the 1820s. Under his sons, **BERNÁT** and **JÓZSEF (I) DEUTSCH**, the business expanded and made an immense contribution to the Hungarian national economy. As a reward the brothers were raised to the nobility in 1879 and authorized to add "de Hatvan" ("Hatvany") to their surname, the town of Hatvan, east to Budapest, having become the center of their industrial operations.

József I's son, **SÁNDOR HATVANY-DEUTSCH** (1852–1913), was, like his father and grandfather, born in Arad. He continued the development of the family business and founded the Hungarian manufacturers' association, but he was also a noted patron of the arts. He helped to establish various charitable institutions and received a barony in 1908. Sándor's sons gained distinction in Hungarian cultural life. The elder, **LAJOS HATVANY** (1880–1961), author, literary critic, and journalist, wrote in Hungarian and German. Born in Budapest, he entered the literary life of the Hungarian capital and, as a young man, was a founder of the literary periodical *Nyugat*. A generous supporter of aspiring writers, he was a prominent champion of Endre Ady (1877–1919), the great Hungarian poet.

Among the journals which Lajos Hatvany edited before and during World War I was *Pesti Napló* ("Pest Journal"). His political outlook was radical and he took an active part in the democratic October Revolution of 1918. At the outbreak of the Communist Revolution of 1919 he went to Vienna, but returned to Budapest in 1927 and gave himself up for trial. He was found guilty of treason and libeling the Hungarian people, and sentenced to a short term in prison. On his release he resumed his writing career, but with the advent of the Hitler regime, he was again forced to leave the country in 1938. He spent World War II in England and returned to Hungary in 1947. During the 1950s he was condemned to silence, and was only granted recognition after 1959.

Lajos Hatvany's studies and criticisms were thorough. A convinced assimilationist and himself converted, he never ceased to deal with the problem of the Hungarian attitude toward Jews, and of Jewish assimilation and nationalism. His great trilogy, *Urak és emberek* ("Gentlemen and People," vol. 1, 1927; complete, 1963²), depicts the history of a Jewish family at the turn of the century and is a clear reflection of his own internal struggle. An English version of the first part appeared in New York as *Bondy Jr.* (1931). His other works include *Die Wissenschaft des Nichtwissenswertes* (1908), a satire on philological exaggerations; *Die Beruehmten* (1913), a drama; *Das verwundete Land* (1921); *Gyulai Pál estéje* ("The Sunset of Paul Gyulai," 1911, 1960²); and *Ady – cikkek, emlékezések, levelek* (1959²).

The second son of Sándor was the painter **FERENC HATVANY** (1881–1958). Like his brother Lajos, he was born in Budapest and converted to Christianity. As a student he came under the influence of Adolf *Fényes. He acquired a fine collection of 19th-century French paintings and some of his own nudes and still lifes are displayed in the Budapest Museum of Fine Arts. He settled in Paris about 1947 and died in Lausanne.

The descendants of Ignac Deutsch's other son, Bernát, also attained importance in Hungarian public life and a few of them remained within the Jewish fold. Bernát's son, **JÓZSEF (II) HATVANY-DEUTSCH** (1858–1913), collaborated with his cousin Sándor in the development of the sugar industry, and his banking and other financial interests made him one of the wealthiest Jews in Hungary. Active in Jewish communal affairs, he was a trustee and benefactor of the Budapest rabbinical seminary and a generous supporter of the Hungarian Jewish Literary Society (IMIT). He also established pioneering welfare and sickness benefit schemes for workers in his factories. In 1908 József II, like Sándor, was created a baron and became a member of the Hungarian parliament's upper house. He died in Germany. József II's children were the author **LILI HATVANY** (1890–1967), the political writer **ANTONIA HATVANY-DEUTSCH** (b. 1894), and the industrialist and writer **BERTALAN HATVANY** (1900–1980). Born in Budapest, Bertalan was a successful businessman, and a patron of literature, one of the writers whom he supported being the great Hungarian poet, Attila József (1905–1937). An active

Zionist and a generous contributor to the movement, he held views similar to those of the *Berit Shalom on the problem of peace between Jews and Arabs. Bertalan Hatvany left Hungary in 1939, spent some time in Australia, and then settled in Paris. His early travels are reflected in books such as *Ázsia és a nacionalizmus* ("Asia and Nationalism," 1931); *Ázsia lelke* ("The Soul of Asia," 1935, which includes much of Jewish interest, including impressions of Erez Israel); *Konfuciusztól Nehemiásig* ("From Confucius to Nehemiah," 1936); *A kínai kérdés története* ("History of the Chinese Question," 1938); and *Az út és az ige könyve* ("The Book of the Way and the World," a translation of Tao-te Ching, 1957).

[Baruch Yaron]

HAUBENSTOCK-RAMATI, ROMAN (1919–1994), composer. Haubenstock-Ramati was born in Cracow, where he worked as a radio conductor from 1947 until 1950. He then spent some years in Israel, heading the Central Music Library, Tel Aviv, and teaching composition at the Rubin Academy of Music there. In 1957 he settled in Vienna, where he directed the reading of modern scores for the Universal Edition (1957–68). Later he was appointed professor of composition at the Vienna Musikhochschule (1973–89), where he continued the Schoenberg tradition in his teaching, being himself a late representative of the Second Viennese School. In the 1950s Haubenstock-Ramati was impressed by the mobile sculptures of Alexander Calder and strove to express their kinetic energy in his music series of *Mobiles* (1957–58). The composer created variable forms in which components can be varied, repeated, or combined; he also developed his own system of graphic notation. The combination and confrontation of mobile and stable forms dominate his compositions of the 1960s, especially the opera *Amerika*, 1962–64, based on the novel by *Kafka.

[Yulia Kreinin (2nd ed.)]

HAUPT, PAUL (1858–1926), U.S. Orientalist and Bible scholar. He taught from 1880 at the University of Goettingen. In 1885 he was appointed to head the incipient Oriental Seminary in Johns Hopkins University in Baltimore, Maryland, U.S., but he continued to lecture at Goettingen each summer until the outbreak of World War I. His more than 500 publications in German and English (as well as one Hebrew article on the Pentateuchal sources, 1895) and his training of several generations of Semitic philologists significantly influenced American biblical and Oriental studies.

The scholarly writings of Haupt are governed by the empirical historical method with full employment of linguistic and philological data. His first essay, "The Oldest Semitic Verb Form" (in *JRAS*, 1878), showed that the Akkadian present is

probably the most archaic verb form preserved in the extant Semitic languages. His biblical commentaries on the Song of Songs (1902), Ecclesiastes (1905), Nahum (1907), Esther (1908), and Micah (1910) emphasize Hebrew metrics. In *Purim* (1906) he discussed the origin of the Purim festival, tracing it to the Persian Nauroz feast, and in *Midian and Sinai* (1909; = ZDMG, 63 (1909), 506–30) he argued for the historical and cultural maturity of the Mosaic era. In his semipopular writings, Haupt was very productive, but whimsical and pontifical. Influenced by the writings of E. Burnouf, he wrote two learned articles on the Aryan ancestry of Jesus, which were later used by the Nazis as propaganda against the Jews. His original writings were supplemented by his editorial work on important series of *Orientalia* and *Biblica*. He edited with W.R. Harper the early volumes of *Hebraica* and with Friedrich Delitzsch the *Assyriologische Bibliothek* and *Beitraege zur Assyriologie und semitischen Sprachwissenschaft*. Three series of Oriental studies published by Johns Hopkins University were under his supervision. He also edited the *Polychrome Bible* (1893, 1896–1904) and with H.H. Furness edited the English translation of selected portions.

BIBLIOGRAPHY: *Oriental Studies Dedicated to P. Haupt* (1926), includes bibliography; Albright, in: *Beitraege zur Assyriologie und semitischen Sprachwissenschaft*, 10 no. 2 (1928), xiii–xxii.

[Zev Garber]

HAUPTMAN, HERBERT AARON (1917–), U.S. mathematician and Nobel laureate in chemistry. Hauptman was born in New York City and received his B.S. at City College (1937), M.A. at Columbia University (1939), and Ph.D. from the University of Maryland (1954) in mathematics after serving in the U.S. Navy in World War II from 1942. He was a staff member of the Naval Research Laboratory in Washington, D.C. (1947–70), before joining the crystallography group of the Medical Foundation of Buffalo (now the Hauptman-Woodward Medical Research Institute), where he became research director in 1972 and then president. He was also research professor in the departments of biophysical sciences and computer science of the University of Buffalo. Hauptman's research work stems from his collaboration with the physicist Jerome Karle starting in 1947. They developed mathematical methods for establishing the structure of complex molecules which could previously only be determined by time-consuming, classical crystallographic techniques of more limited scope and accuracy. He was awarded the Nobel Prize jointly with Jerome Karle (1985), the only mathematician to have received the award in chemistry. His Nobel lecture discusses the integration of direct and mathematical techniques for establishing molecular structure. Subsequently he continued to refine these methods, which are in universal use in basic and medical research and in drug design. He remained actively involved in the work of the institute named after him, which studies protein structure, protein interactions, and the alterations predisposing to disease. His many honors include the Gold Plate Award of the American Academy of Achievement (1986), election to the U.S. National

Academy of Sciences (1988), and an honorary degree from Bar-Ilan University (1990).

[Michael Denman (2nd ed.)]

HAUPTMAN, JUDITH (1943–), U.S. scholar of rabbinics, rabbi. Born in Brooklyn, New York, Hauptman was a graduate of the Yeshivah of Flatbush in 1961. She then enrolled in Barnard College. After a year there, she moved to Jerusalem and spent three years studying at the Hebrew University; she then returned to Barnard College and received her bachelor's degree in economics in 1967. At the same time, she also earned a bachelor's of Hebrew literature in Talmud from the Seminary College of Jewish Studies. Hauptman continued her studies by entering the graduate program in rabbinics at JTS, receiving her masters degree in Talmud in 1973 and pursuing her doctorate under the supervision of David *Weiss Halivni. When she completed her graduate studies in 1982, she became the first woman to ever be awarded a Ph.D. in the field of Talmud and Rabbinics.

Hauptman then joined the faculty of the Jewish Theological Seminary, where she served as the assistant dean of the Seminary College of Jewish Studies, held the Rabbi Philip R. Alstat Professorship in Talmud, and was appointed the E. Billie Ivry Professor of Talmudic and Rabbinic Culture.

One of the major focuses of Hauptman's scholarly work has been in the synoptic study of rabbinic texts: the study of parallel and related texts found in different documents as a means of exploring the historical development of laws, traditions, and documents in rabbinic culture and writing. Her first book, published in 1988, was *Development of the Talmudic Sugya: Relationship Between Tannaitic and Amoraic Sources*, which addresses the place of early, "tannaitic" literature in the rabbinic culture of study that ultimately produced the two Talmuds. Hauptman became a pioneer in a growing new approach, one that sees in the Tosefta materials which predate the Mishnah and out of which mishnaic material was developed.

A second prominent focus of both Hauptman's scholarly and other work has been Jewish feminism. In the early 1970s she was a member of Ezrat Nashim, a group advocating for the greater inclusion of women in Jewish ritual in the Conservative movement, including the ordination of women as rabbis. In 1972, she published "An Assessment of Women's Liberation in the Talmud" in the journal *Conservative Judaism*, and two years later her essay "Images of Women in the Talmud" appeared in the collection *Religion and Sexism*, edited by Rosemary Ruether; she went on to publish numerous works analyzing rabbinic attitudes and legislation regarding women. This aspect of Hauptman's work is exemplified by her book *Rereading the Rabbis: A Woman's Voice*, published in 1998. In this work, Hauptman examines the historic development of rabbinic legislation in a number of areas relating to women and women's lives – marriage and divorce, social relations between the sexes, dowry and inheritance, etc. – in order to demonstrate a consistent trend toward greater (though

still unequal) rights and protections for women over time. Her 1993 articles "Some Thoughts on the Nature of Halakhic Adjudication: Women and Minyan" and "Women and Prayer: An Attempt to Dispel Some Fallacies," both in *Judaism*, became the basis on which JTS Chancellor Ismar *Schorsch revised JTS policy to allow full participation for all women in egalitarian services at the seminary.

Having trained rabbis for more than a decade and having advocated the ordination of women, Hauptman applied to the rabbinical school of the JTS. The result was quite surprising. Citing concerns about the potential conflicts that might arise if Hauptman were to sit in classes with those who were her students on other occasions, Chancellor Schorsch denied her application. Undeterred, she subsequently enrolled in the Academy for Jewish Religion, and was ordained as a rabbi in 2003.

[Gail Laibovitz (2nd ed.)]

HAURAN (Heb. הַרְרָן), region in northeastern Transjordan, today part of Syria. The name occurs for the first time – as *Hauranu* – in the account of Shalmaneser III's expedition against Hazael of Aram-Damascus in 841 B.C.E. Tiglath-Pileser III in 733/2 B.C.E. turned it into an Assyrian province called Haurina. This is apparently the Hauran mentioned by Ezekiel in the only biblical reference to the place (47:15–18). In describing the ideal boundaries of Erez Israel, Ezekiel cites on the north "Hazer-Haticcon [probably Hazer-Inum] which is by the border of Hauran" and on the east "between Hauran and Damascus." The Septuagint reads here "Auranitis"; the suffix *-itis* indicates that it was a Ptolemaic administrative district. In 198 B.C.E. the district of Hauran was taken from the Ptolemies by the Seleucids and with the decline of that kingdom it became the possession of the Itureans who held it also at the beginning of Roman rule. In order to restrain the inhabitants of adjacent *Trachonitis who were in the habit of raiding the convoys of Damascus, Augustus in 23 B.C.E. assigned the Hauran (together with Trachonitis and Batanaea) to Herod who settled Jews there in military colonies (Jos., Ant., 15:343; Wars, 1:398). It remained in the domain of the Herodian dynasty, passing from Herod's son Philip to Agrippa I and Agrippa II and with the death of the latter it was attached to Syria. At the end of the third century the Hauran was transferred to Provincia Arabia of which it remained a part until the end of Byzantine rule. The Hauran flourished during the Roman period when many cities were founded there including Canatha and Dionysias-Soada. As it was located in Jewish territory, the Hauran was one of the places in the Second Temple period where beacons were lit to announce the approach of Rosh Ha-Shanah and the festivals. After the signals were received at the Hauran from Agrippina (Grapina)-Kawkab al-Hawā they were transmitted to Bet Bitlin (RH, 2:4). The Hauran's border with the Nabatean kingdom in the Roman period can be very precisely established by inscriptions and eras used for dating purposes. The border included al-Mushannaf, Bosana (Būsān), Ḥabrān, Dionysias-al-Suwayda, and Karak in

the Hauran. In Roman times it is therefore apparent that the concept of the Hauran had expanded and also included the fertile valley known today as al-Nuqra. The borders of Hauran thus reached Arabia along Wadi al-Dhahab in the south, the slopes of the Jebel el-Druze (Druze Mountain) in the east, Trachonitis in the north, and the Bashan (in the limited sense) and the city of Dion in the west.

Jewish settlement in the Hauran continued in talmudic times; several rabbis bore its name (e.g., Ḥunya de-Berat Huran; TJ, Shek. 1:1, 46a). In the fourth and fifth centuries Christianity became deeply rooted in the Hauran as is indicated by the participation of bishops from the Hauran in church councils and the many ruins of churches found there. These churches inherited the independent style of the Eastern tradition which had evolved in the architecture and ornament of the buildings of the Hauran as early as Roman times and which also influenced synagogues in the Galilee. As in other border districts, Arabic influence increased in the Hauran in the Byzantine period. It was incorporated in the kingdom of Benu Ghassān under Byzantine protection but in 634 the Arabs conquered it without undue effort. The Hauran thereafter declined until *Druze from Lebanon began settling there in the 18th century. Following the riots in Lebanon between Druze and Christians in 1860, Druze settlement in the Hauran increased considerably and the region today is called Jebel el-Druze (Mount of the Druzes). Geographically the term Hauran comprises three separate concepts: (1) Mt. Druze itself, 5,900 ft. (1,800 m.) high; (2) the mountain, its slopes, and the el-Nuqra valley; and (3) all of the eastern part of northern Transjordan from Damascus to the Yarmuk. About 80,000 Druze live in the region.

[Michael Avi-Yonah]

HAURWITZ, BERNARD (1905–1986), U.S. physical scientist. Haurwitz was born in Glogau, Germany, and studied mathematics and science at the Universities of Breslau and Gottingen before getting his Ph.D. in geophysics at the University of Leipzig under the supervision of Ludwig Weickmann (1931). After a lectureship in Leipzig (1931–32), he visited the Massachusetts Institute of Technology (MIT) and the California Institute of Technology. Electing not to return to Nazi Germany, he worked at the University of Toronto as a Carnegie Institution fellow (1935–37) and with the Canadian Meteorological Service (1937–41). He returned to MIT as associate professor (1941–47) before moving to New York University as professor and chairman of the newly formed meteorology department and research associate at the Woods Hole Oceanographic Institution. He moved to Boulder, Col-

orado, initially as professor of geophysics at the University of Colorado and research associate at the High Altitude Observatory (1959–64), and then to the National Center for Atmospheric Research to direct the Advanced Study Program (1964–67). On retirement (1976) he became senior research associate. During the period 1964–85 he was also research associate and then visiting professor at the Geophysical Institute of the University of Alaska in Fairbanks. Haurwitz's research interests centered on dynamic meteorology, defined as the application of mathematics and physics to studying the atmosphere and ocean tides. He was a theoretician who also excelled in precise observation and analysis. He made major contributions to analyzing the physical state of the upper atmosphere and its effects on ocean tides, the influence of solar activity on the atmosphere, and the nature of noctilucent clouds which form at very high altitudes and usually at high latitudes. His work had practical applications to weather forecasting, of particular importance during World War II. Haurwitz was a renowned teacher and his papers and books are models of clarity. His honors included election to the U.S. National Academy of Sciences (1960), the Carl-Gustaf-Rosby Award of the American Meteorological Society (1962), and the Bowie Medal of the American Geophysical Union (1972). He served on the Board of Governors of the Hebrew University of Jerusalem. Haurwitz was twice married, the second time to the scientist Marion Wood. He was passionate about hiking and skiing, activities that largely influenced his choice of working location. He died in Fort Collins, Colorado.

[Michael Denman (2nd ed.)]

HAUSDORF, AZRIEL ZELIG (1823–1905), a precursor of the *Hibbat Zion movement and pioneer of Jewish settlement in Erez Israel. Born in Myslowice, Silesia, Hausdorf attended a yeshivah until the age of 20, when he went to London. He left in 1847, to settle in Jerusalem. He was a translator and expert on Jewish subjects for the Austrian consul and also represented the Jews at the Prussian consulate. He thus helped to protect the rights of refugees from Russia and Poland who did not enjoy the protection of a foreign power. When Baron Gustave de *Rothschild visited Erez Israel, Hausdorf assisted him in founding the Misgav la-Dakh Hospital in the Old City of Jerusalem. He was a founder of the Ḥevrat Ahavat Zion, formed by members of Kolel Hod (Holland-Deutschland community), which bought a plot of land in the vicinity of the Temple Mount (1858), in order to found the Batei Maḥaseh quarter for the poor. The *kolel* sent him to Holland and Germany, where he acquired the support of Zevi Hirsch *Kalischer. He helped to acquire various plots of lands (near Jaffa and at Moza).

[Geulah Bat Yehuda (Raphael)]

HAUSDORFF, FELIX (1868–1942), German mathematician. Hausdorff was born in Breslau, and was professor of mathematics at Greifswald from 1913 to 1921 and at Bonn from 1921 until his retirement in 1935. Together with his wife he committed suicide in 1942 in order to avoid the deportation order of the Gestapo. Hausdorff was an authority on set theory and its applications to sets of points and real analysis. His textbook *Mengenlehre* (Leipzig, 1935) is recognized as one of the great classics of set theory. The depth and simplicity of his research into fundamental problems was a source of inspiration in the rapid development of modern mathematics. Hausdorff was devoted to music and literature and published belles lettres under the pen name of Paul Mongré.

HAUSER, EMIL (1893–1978), violinist and teacher. Born in Budapest, Hauser became a teacher at the Hoch Conservatory, Frankfurt, in 1913, and joined the Adolph Busch Quartet. In 1917 he formed the Budapest String Quartet, in which he played first violin, until emigrating to Palestine in 1932. He founded the Palestine Music Conservatory, Jerusalem, in 1933, which was the first professionally oriented music school in the country with a comprehensive program for all instruments, theory, composition, history, and Arab music. Hauser headed the chamber music class at the Juilliard School of Music, New York, from 1947 until 1959 and Pablo Casals' master courses in Zermatt, Switzerland, for four years. His *Interpretation of Music for Ensemble* was published in 1952.

[Jehoash Hirschberg (2nd ed.)]

HAUSER, HENRI (1866–1946), French historian. Hauser was born and educated in Oran, Algeria, but made his career in France. He was professor of ancient and medieval history at the University of Clermont-Ferrand (1893), taught modern history at the University of Dijon (1903), and after 1921 economic history at the University of Paris. Hauser's works include *L'enseignement des sciences sociales* (1903), *Travailleurs et marchands dans l'ancienne France* (1920), and *Les débuts du capitalisme* (1927). In *L'impérialisme américain* (1905), he prophesied the decline of Europe and dominance of the United States, and his *Méthodes allemandes d'expansion économique* (1915) pertained largely to the role German industry had upon the outbreak of World War I. When the Nazis occupied France in 1940, he fled to the south where, in hiding and despite failing eyesight, he completed a study on the economic thought of Richelieu.

[George Schwab]

HAUSER, PHILIP MORRIS (1909–1994), U.S. sociologist. Hauser was born in Chicago, where he also studied, receiv-

ing his Ph.D. from the University of Chicago in 1938. From 1938 until 1947 he was deputy director at the U.S. Bureau of the Census; in 1947 he was appointed professor of sociology at the University of Chicago. He was president of the American Sociological Association (1967–68) as well as the American Statistical Association and the Population Association of America.

Hauser worked on various studies of population, urban problems, and city planning. He continued the ecological emphasis of the Chicago School of Sociology, and channeled it demographically. He founded the University of Chicago's Population Research Center, a leading center for the study of demographic processes. He served as its director until 1979. Hauser became the Lucy Flower Professor Emeritus of Urban Sociology at the University of Chicago in 1974.

An internationally known demographer, Hauser was an active proponent of population control in the United States and elsewhere. He also took an active interest in the civil rights movement. Especially concerned with the consequences of racial segregation and overpopulation, Hauser was a member of Chicago's board of governors of the Metropolitan Housing and Planning Council (1958 to 1970) and served as a consultant for the city's Department of Development & Planning and the Department of Health. In 1963 he became chairman of the Advisory Panel for the Desegregation of the Chicago public schools

His works include *Government Statistics for Business Use* (1946), *Population and World Politics* (1958), *Housing a Metropolis* (1960), *The Population Dilemma* (1963), *Handbook for Social Research in Urban Areas* (1967), *Differential Mortality in the United States* (with E. Kitagawa, 1973), *Social Statistics in Use* (1975), and *The Challenge of America's Metropolitan Population Outlook, 1960 to 1985* (with P. Hodge).

[Werner J. Cahnman / Ruth Beloff (2nd ed.)]

HAUSER, RITA ELEANOR (1934–), U.S. lawyer and U.N. representative known for her interests in world peace, human rights, and philanthropic ideals. The elder of two daughters of Nathan and Frieda Abrams, Hauser received her B.A. from Hunter College in 1954, did graduate work in France on a Fulbright Scholarship, and attended Harvard Law School where she was one of the first women students. Hauser's advanced degrees included a Ph.D. in political economy from the University of Strasbourg in France; an LL.B. from New York University Law School, and the French equivalent of an LL.B. (a License en droit) from the University of Paris Law Faculty. An international lawyer, Hauser was senior partner and counsel in the New York City law firm Stook, Stook, and Lavan for more than 20 years. Raised in a Republican family, Hauser became involved in high-level Republican politics, where she was recognized as a distinguished strategist and speech writer. Hauser was appointed as the U.S. Representative to the United Nations Commission on Human Rights from the late 1960s to the early 1970s and was also a member of the United States del-

egation to the United Nations General Assembly. While serving at the U.N. Hauser met Golda *Meir, who encouraged her engagement with Jewish issues and Middle East politics. As head of the International Center for Peace (1984–91) Hauser was instrumental within the team brokering the Oslo Accords between the Palestine Liberation Organization and the State of Israel. In her capacity as chair of the International Peace Academy (which is affiliated with the United Nations), Hauser was also invited by the Palestine Elections Committee to serve as an official observer of the 1996 Palestinian elections. Hauser and her husband, Gustave, the parents of two children, created the Hauser Foundation, a philanthropic organization “that aims to illuminate the vital role that the nonprofit sector and nongovernmental organizations play in aiding societies to discover and accomplish important public purpose.” The Hauser Foundation also focused specifically on conflict resolution in the Middle East. Hauser was the founding chair of the Advisory Board of the RAND Center for the Middle East Public Policy (an acronym, RAND, was derived from the contraction of research and development). Hauser was director of the International Institute for Strategic Studies in London and served on the boards of the New York Philanthropic Society and the Lincoln Center for Performing Arts. She also served as vice chair of the Dean’s Advisory Board of Harvard Law School, as national co-chair of the Harvard University Campaign, and on commissions of the U.S. Department of State and at the Brookings Institution. In 2001 President Bush appointed her to the U.S. President’s Foreign Advisory Board and to the U.S. President’s Intelligence Oversight Board.

[Marla Brettschneider (2nd ed.)]

HAUSNER, BERNARD (1874–1938), rabbi, Polish Zionist leader, and representative of Poland in Palestine. Born in Czortkow, Galicia, he studied at the University of Vienna and at the rabbinical seminary there, graduating in 1901. He taught religion at the secondary schools of Lemberg (1899–1914) and was rabbi and spiritual leader of the Lemberg Jewish community for the two years that the city was occupied by the Russians (1914–16). He also served as military chaplain in the Austrian army on various fronts (1916–18). After the war he became a leader of the Zionist movement, particularly of Miz-rachi, in Poland. He served as a member of the Sejm (Polish parliament) from 1922 to 1927, when he settled in Palestine. In 1926 Hausner published a treatise in Polish on the financial rehabilitation of Poland, which earned him the reputation of an economic expert. In Palestine, he served first as economic adviser to the Polish government and later (1932–34) as Polish consul in Tel Aviv. Both in Poland and Palestine, Hausner took an active part in public affairs and published essays on Jewish subjects (in Polish), as well as a Polish translation of the *maḥzor*.

His son was GIDEON *HAUSNER (1915–1990), chief prosecutor in the *Eichmann trial.

[Getzel Kressel]

HAUSNER, GIDEON (1915–1990), Israeli lawyer. Hausner was born in Lvov (Lemberg) where his father Bernard *Hausner was rabbi. He came to Erez Israel in 1927 and after graduating from the Hebrew University in 1941 and from the Law School in 1943 entered private practice. He was lecturer in Commercial Law at the Hebrew University from 1954 to 1960, when he was appointed Attorney General, serving until 1963. In this capacity he served as chief prosecutor in the *Eichmann Trial, about which he wrote *Justice in Jerusalem* (1966, 1967²). Speaking in the name of the Jewish people in a powerful opening statement and telling the story of the Holocaust with the aid of over 100 witnesses and 1,600 documents, Hausner became the voice most clearly identified with the trial and the achievement of a final reckoning with one of the most monstrous figures of the Nazi era. Hausner was a member of the Knesset from 1965 to 1981, representing the Independent Liberal Party and was chairman of its parliamentary group from 1967 to 1974. He was a minister without portfolio in the Israeli cabinet from 1974 to 1977. He was chairman of the Israel Association for Human Rights since 1965 and of the Council of Yad Vashem from 1969.

***HAUTVAL, ADELAÏDE** (1906–1988), French psychiatrist and Righteous Among the Nations. Born in Hohwald (Bas Rhin), France, to a Protestant family, Hautval studied medicine in Strasbourg and after her qualification worked in several psychiatric wards. In April 1942, traveling to her mother’s funeral, she was arrested trying to cross the demarcation line separating the two zones of France without a permit. Awaiting her trial in Bourges prison, she vehemently protested the harsh treatment of Jewish prisoners who were incarcerated there. The reply she received was, “As you wish to defend them, you will follow their fate.” Sent to Auschwitz with a convoy of women prisoners, she arrived there in January 1943. She reportedly bore a sign, stitched on her overcoat, with the inscription: “A friend of the Jews.” At Auschwitz, she helped hide a group of women afflicted with typhus and looked after them as best as she could. She was then asked by the ss garrison doctor, Eduard Wirths, to participate in the sterilization experiments practiced on the bodies of Jewish women in the infamous Block 10, which involved removing their ovaries either surgically or by means of radiation in order to produce sterility. Hautval told Wirths that she was completely opposed to these experiments. Wirths was surprised that she would object to a program whose ultimate purpose was the preservation of a superior race. Wirths asked her, “Cannot you see that these people are different from you?” and she answered him that there were several other people

different from her, starting with him. After her confrontation with Dr. Wirths, she was advised to stay out of sight; she feared retribution but was not punished. Moved to the nearby Birkenau camp, she continued to practice medicine and heal the prisoners as much as possible, considering the circumstances, until August 1944, when she was transferred to the Ravensbrueck women's camp in Germany. She survived and was liberated in April 1945. In 1963, she appeared in London at the trial of Leon Uris vs. Wladyslaw Dering. Uris, in his book *Exodus*, had mentioned the experiments perpetrated by Dering and others on bodies of prisoners in Auschwitz, without the use of anesthesia, and Dering had consequently sued Uris for libel. A witness for the defense, Hautval refuted Dering's claim that it was futile to disobey orders in Auschwitz, since in Dering's words, "to refuse would be sabotage," adding that in Auschwitz "all law, normal, human, and God's law were finished." Hautval, by contrast, maintained that ss orders to remove women's ovaries could be gotten around in such ways as to avoid punishment. Justice Lawton in his summing up of the evidence to the jury described Dr. Hautval as "perhaps one of the most impressive and courageous women who has ever given evidence in the courts of this country [England]." Years later, recalling the Holocaust, she stated: "This unspeakable horror could have been avoided. If only this organized contempt of humanity, this megalomaniac insanity, had been confronted by a civilized world – lucid, courageous, and determined to safeguard its primary values." On a visit to Israel in 1966, to plant a tree in the Garden of the Righteous at Yad Vashem, after being honored the previous year with the title of Righteous Among the Nations, she stated, "The return of the people of Israel to their own country is an accomplishment concerning not only itself but the world at large.... Israel has always played a gestative, fermentative role, due to which it was hated or respected. Its mission in the world continues. May Israel remain faithful to it. The entire history of the Jewish people demonstrates the primacy of spiritual forces. Hence, its undertaking cannot but be successful."

[Mordecai Paldiel (2nd ed.)]

HAVANA, capital of Cuba; general population: 2,180,000 (2001); estimated Jewish population 1,000 (82% of the Jews in the country).

During colonial times Havana was considered by Spain as "the key to the Americas" for its important strategic location. It was the meeting point of the treasure fleet on its return to Spain. Historians assume that *Crypto-Jews were present

among the inhabitants of Havana as well as among the merchants from non-Catholic countries who were involved in illegal commerce with the Spaniards.

The first Jewish group to settle in Havana after Cuban independence (1902) came from the United States. They founded the United Hebrew Congregation in 1906. They were followed by Sephardim, mainly from Turkey, whose communal congregation, Shevet Ahim, was founded in 1914. In the 1920s thousands of Jews from Eastern Europe arrived in Cuba, hoping to use it as a stepping stone to the U.S. Many of them settled in Havana, where they founded the Centro Israelita (Jewish Center) in 1925, together with a large number of social, religious, cultural, and political organizations. In the late 1930s and during World War II Havana became a temporary haven for thousands of Jews fleeing Nazi Germany, using loopholes in Cuba's immigration laws. In May 1939, however, Havana was the scene of the tragic episode of the s.s. **St. Louis*, whose passengers were refused landing and were compelled to return to Europe, where many of them perished in extermination camps.

Following World War II the Havana community prospered both economically and socially. In 1951 the Ashkenazi community laid the cornerstone for the Patronato, a magnificent building that symbolized the social mobility and prosperity of Havana Jews. When the Sephardim inaugurated their Sephardi Center, Fidel Castro was already in power.

The Cuban revolution of 1959 marked the decline of Havana Jews. Following the nationalization of private business, around 90% of them emigrated from Cuba, most of them to the United States. The government respected the right of the Jewish community to continue its religious life, but the demographic decline, the emigration of lay and religious leaders, and the influence of the atheistic policy of the state had a growing impact on Jewish life. In 1973 Cuba severed its diplomatic relations with Israel, and the isolation of Havana Jews increased. The deterioration of communal life continued until the late 1980s, when 752 Jews (82% of the total in Cuba) were registered in the community's records for the distribution of products for Passover, sent annually by the Canadian Jewish Congress.

Since 1990 the community in Havana experienced a great revival. The collapse of Communism in the Soviet Union forced the Castro government to look for new sources of hard currency, and Cuba was opened to tourists and foreign investors. The community in Havana receives moral and material support from Jewish organizations, especially from the *Joint Distribution Committee. Today there are three religious congregations functioning in Havana – the Patronato (with a Conservative synagogue), Adath Israel (Orthodox), and the Sephardi Center. In addition there are several other groups, including the B'nai B'rith, the Women's Organization, and ORT. For a detailed history of Havana Jews (including bibliography) see *Cuba.

[Margalit Bejarano (2nd ed.)]

HAVA (also known as **Hana** or **Fava**) **OF MANOSQUE**, surgeon in early 14th century Provence. Hava was one of many Jewish women active in medicine during the Middle Ages. She belonged to a prominent medical family; her husband and son were also surgeons and she probably apprenticed with a relative. In late 1321 or early 1322 Hava faced court charges over her treatment of a Christian who had injured his testicles; the court wanted to know if Hava had palpated the wound. She answered in the negative because her son, Bonafos, had assisted in the treatment. Hava gave the instructions and designated the necessary medicines, while her son had physical contact with the patient.

[Cheryl Tallan (2nd ed.)]

HAVAS, GÉZA (pen name, **K. Havas Géza**; 1905–1945), Hungarian journalist, born in Nagykanizsa. In 1936 he joined the review *Szép szó*, whose editor was the poet Attila József. He chose the Nazi economists as his target and wrote incisive articles against them. He also edited collections of essays on socialism and wrote a study on Magyar lyrics of the 20th century, *Új magyar líra* (1940). From 1941 he was interned in labor camps and in 1944 was deported to Germany. He died in the concentration camp of Guenskirchen, near Mauthausen, a few hours before the arrival of the U.S. Army.

HAVAZZELET (Heb. הַבְּצֵלֶת), Hebrew newspaper, first published in Jerusalem in 1863, discontinued after approximately one year, revived at the end of 1870, and continued until close to the outbreak of World War I. Founded by Israel Bak, a pioneer of the Hebrew press, *Havazzelet* began publication after *Ha-Levanon* on July 13, 1863 in the wake of a controversy which broke out in Jerusalem concerning the affairs of the Ez Hayyim school. It opposed the position taken by *Ha-Levanon*, its journalistic rival. So fierce was the dispute that both papers were forced to discontinue publication in 1864. When *Havazzelet* resumed publication in 1870, Bak's son-in-law, I.D. Frumkin, gradually moved into the editorial staff, and soon became its editor. In the last years of the paper his son Gad Frumkin also served as editor.

The paper was the organ of the Ḥasidim, who were a minority among the general Ashkenazi *yishuv* in Jerusalem, mainly composed of *Mitnaggedim*. *Havazzelet* opposed the leadership of the Ashkenazi *yishuv* and supported the programs for the settlement of Israel (see S. *Berman, Rabbi J. *Alkalai) which were opposed by Ashkenazi rabbis of Jerusalem. In 1873 it launched an attack against the controllers of the *halukkah* funds and those countered with a boycott against *Havazzelet* and its editor. Frumkin advocated the "productivization" of the Jewish community in Israel, especially by means of agriculture, and opposed Sir Moses Montefiore's programs

because of his excessive sympathy for those in charge of the *halukkah*. He encouraged young forces from among the members of the *yishuv* to participate in the newspaper.

Havazzelet appeared originally as a monthly, and from the second copy of the second year as a weekly, continuing as such for several decades. Only in its last years was the format enlarged, and the paper was published three times a week (1908–10); in the end it was printed again as a weekly. In 1870–71 a Yiddish supplement (*Die Roze*) came out. The literary supplement was called *Pirhei Havazzelet*. In 1882, under the editorship of A.M. Luncz, there was published a foreign language supplement called *Gazette de Jerusalem*, and in 1884, the supplement *Mevasseret Ziyyon* appeared under the editorship of Eliezer Ben-Yehuda.

After the pogroms in Russia in the beginning of the 1880s the paper advocated *aliyah* and encouraged the first immigrants to settle on the land of Petaḥ Tikvah. With the arrival of the first wave of *aliyah* from Russia and from Yemen, the paper endeavored to ease their absorption both in agricultural work and in Jerusalem. Frumkin invited Ben-Yehuda to Jerusalem from Paris to work on the *Havazzelet*. Ben-Yehuda's publication of his own independent newspaper, *Ha-Zevi* in the autumn of 1884, gave rise to an antagonism between *Ha-Zevi* and *Havazzelet*. *Havazzelet* soon became the mouthpiece of the older generation of the *yishuv* in Jerusalem, while *Ha-Zevi* supported the new *yishuv*, especially the agricultural villages. The former, which in the beginning had been in opposition to the *halukkah*, now became its loyal supporter. It now rejected the program of enlightenment that it had advocated in the 1870s, turned against the modernists of the *yishuv*, and later opposed political Zionism.

Gad Frumkin tried to revive the flagging spirit of the *Havazzelet* at the beginning of the present century, but his energy was curbed by his father. While this newspaper died out, a new press with an entirely different direction rose in its place. *Havazzelet* nevertheless raised a generation of writers and scholars, mainly from the old *yishuv*, who later filled distinguished positions in literature, science, and public life in Jerusalem and Erez Israel. In 1954 a selection of the writings of I.D. Frumkin from the volumes of the *Havazzelet*, together with a comprehensive introduction and comments, was published in Jerusalem.

[Getzel Kressel]

HAVDALAH (Heb. הַבְּדִלָּה; "distinction"), blessing recited at the termination of Sabbaths and festivals, in order to emphasize the distinction between the sacred and the ordinary, with regard to the Sabbath (or festival) that is departing and the or-

dinary weekday. *Havdalah* is one of the most ancient blessings: according to the Talmud “the men of the *Great Synagogue instituted blessings and prayers, sanctifications and *Havdalot* for Israel” (Ber. 33a). Some authorities hold that the obligation to recite the *Havdalah* derives from the Pentateuch. According to the Babylonian Talmud, it was originally inserted in the *Amidah*, but subsequently “when they became richer – they instituted that it should be said over the cup of wine; when they became poor again – they inserted it again into the prayer” (*ibid.*). Three views are mentioned in the Jerusalem Talmud (Ber. 5:2, 9b): (1) *Havdalah* was originally inserted in the *Amidah* and then also transferred to the cup of wine “for the benefit of the children”; (2) it was originally instituted over the cup of wine; (3) it was instituted in both places at the same time. Because of these variations, there were four opinions, already in the time of the *tannaim*, on the place of *Havdalah* in the *Amidah*. Moreover, in accordance with most of the *tannaim*, the present practice is to recite the proper *Havdalah* blessing over the cup of wine, while in the *Amidah* only mention of it should be made. At a much later date, in the middle of the medieval period, the custom began to develop of reciting *Havdalah* over a cup of wine in the synagogue as well, in order to exempt those who had no wine (cf. Ta’an. 24a).

The text of the *Havdalah* ceremony over a cup of wine developed over a long period of time and, in the Ashkenazi version, a number of verses were added at the beginning as “a good omen” (Tur, OH 296:1). These usually commence with, “Behold, God is my salvation,” etc. (Isa. 12:2–3). This introduction is followed by three blessings – over wine, spices, and light – inserted in the *Havdalah* arrangement much before the time of *Bet Hillel and Bet Shammai, who already differed about their text and order (Ber. 8:5), even though R. Judah ha-Nasi instituted the last two over the cup of wine merely for the benefit of his household (Pes. 54a). The purpose of the blessing over light – “Who creastes the light of the fire” – is to show that work is now permitted and to stress the departure of the Sabbath. The blessing over the wine itself stems from the duty to recite *Havdalah* over a cup of wine, as in the case of *Kiddush. The reason for the blessing over spices has not been clarified. The *rishonim* explained it as compensation to the Jew for the loss of the “additional soul” which traditionally accompanied the Jew throughout the Sabbath (see Ta’an. 27b; Sof. 17:5; and see Tos. to Pes. 102b); other reasons have also been suggested (Tur, OH 296).

The *Havdalah* blessing itself, the fourth and final, according to the order of the prayer, was known from early times in various versions, differing primarily in the number of distinctions (e.g. “between the Sabbath and the other days of the week”) they contained. In the Talmud (Pes. 103b; TJ, Ber. 5:2, 9b) it is laid down that “He who would recite but few distinctions, must recite not less than three, but he who would proliferate must not recite more than seven.” R. Judah ha-Nasi, however, recited only one, the distinction “between the holy and the profane” (Pes. loc. cit.). Poetic versions containing seven distinctions have been preserved in the *Genizah* frag-

ments (see Zulay in bibl.). Similarly with its wording in the *Amidah* of which various versions are known in the liturgies, of the different communities and in the *Genizah* fragments (see Zulay, bibl.).

Havdalah over a cup of wine is customary also when the Sabbath is immediately followed by a festival, since the festival’s stringency is less than that of the Sabbath (Hul. 26b). Combined in this case with the *Kiddush*, its wording is: “Who makest a distinction between holy and holy.” The order of this *Kiddush-Havdalah* is indicated by the well-known acrostic *yaknehaz (*yayin* (“wine”), *Kiddush, ner* (“candle”), *Havdalah, zeman* (“season” = *she-heḥeyanu*)). This *Havdalah* is mentioned in the evening blessing for the sanctification of the day and the combined formula, fixed by *Rav and *Samuel in Babylonia, is known as “the pearl of Rav and Samuel” (Ber. 33b). When the termination of the festival is followed by a working day, *Havdalah* is recited without candle or spices.

There are many customs connected with *Havdalah*: the pouring of some of the wine on the ground as an omen of blessing (cf. Er. 65a), and hence the custom of overfilling the cup (Turei Zahav to OH 296:1); passing the last drop of wine in the cup over the eyes (cf. PDRÉ 20), and extinguishing the lamp with the remaining drops; when saying the blessing over the light, some look at their fingernails and some at the lines on their palms (S. Assaf, *Sifran shel Rishonim* (1935), 177). After *Havdalah* it is customary to chant special hymns, the best known being: “May He who sets the holy and the ordinary apart,” originally instituted for the termination of the Day of Atonement, and “Elijah the prophet.” Other songs and hymns said before or after *Havdalah* are mostly based upon the Jerusalem Talmud (loc. cit.).

[Israel Moses Ta-Shma]

The Spice Box (*Hadas*)

In the ceremony of *Havdalah*, it is customary for a box of aromatic *spices to be handed round accompanied with an appropriate blessing. In medieval Europe, sweet-smelling herbs such as myrtle (Heb. *hadas*) were generally used for this purpose. For this reason, the spice box came to be known as a “*hadas*” when spices were substituted for herbs. The moment of transition is marked by Rabbi Ephraim of Regensburg in the 12th century, who recorded that he said the blessing not over a branch of myrtle, but over spices contained in a special glass receptacle. This is probably the earliest mention of a special spice box. The earliest extant example, however, dates from about 1550. It originated from the synagogue at Friedberg, Germany and is now in the Jewish Museum, New York. Another example, dated 1543, was formerly in the Landes museum at Kassel but was lost when the museum was destroyed by the Nazis. The spice box has taken a large variety of forms and has inspired craftsmen to fantasy and often to whimsy. Among the Ashkenazi Jews it often took the form of a fortified tower. It has been suggested that this form was adopted because spices, which came from the Orient, were so valuable that they had to be stored in the castle or city hall. It is also thought to have been derived from the ritual imple-

ments of the Church, such as the monstrance and thurible, which also took this form, as the implements of the Church were executed by the same gentile craftsmen as those of the synagogue. A “Jewish monstrance” commissioned from a Frankfurt silversmith in 1550 is thus probably a spice box. The tower form could be imitated from a local tower or church steeple, surrounded by a balustrade, surmounted with a pennant and carrying a clock face indicating the conclusion of the Sabbath. It was executed in silver, sometimes engraved to resemble masonry, and later in filigree. Human and animal figures were placed around the tower: biblical worthies, soldiers, musicians, various synagogal officials such as the *shoḥet* (ritual slaughterer) with his knife, the scribe with his pen and inkwell, the *Schulklopper* with his hammer (who woke worshippers for morning prayers), or sometimes a Jew holding a beaker of wine and performing *Havdalah*. A variant of the tower form was executed in northern Italy in the 18th century, where it was covered with delicate filigree work, studded with semiprecious stones and adorned with enamel plaques depicting scenes from the Bible. Spice boxes were also made in many other forms, such as animals, fish, birds, flowers and fruit, and even windmills. There was also the simpler form of round, square, or rectangular boxes. On occasion the spice box was combined with the taperholder used in the *Havdalah* ceremony. The spices were contained in a drawer beneath the taper, which was sometimes supported by a figure. In the East small jars and boxes were used to keep the herbs. In Persia these were jars with elongated necks, sometimes filled with rose water. As a result of the revival of Jewish ritual and synagogal art in Israel and the United States after World War II, spice boxes have been designed and executed by eminent artists in a contemporary manner.

HAVER, 16th-century family of rabbis, originally from Damascus. The best-known members of the family are Isaac and his son Ḥayyim. ISAAC (d. 1541) was a rabbi and *posek*. According to Moses *Basola, before 1522 he was the head of the Sicilian community of Damascus and a physician. He discussed halakhic problems with Jacob *Berab I. He died in Damascus and in 1564 his remains were taken by his son ḤAYYIM, to Safed for burial. Ḥayyim was already an important rabbi of Safed before his father's death, since his signature appears on a ruling of 1536 together with those of other great Safed halakhists (see Responsa *Avkat Rokhel*, of Joseph Caro, no. 124). He was apparently called to Damascus to succeed his father. In 1546, in accordance with his father's custom, Ḥayyim sent to Safed from Damascus the yearly calendar of the Sicilian community. He appears to have returned to Safed after a number of years and to have become one of the mem-

bers of the *bet din* of Moses di *Trani, his signature appearing on a halakhic ruling of 1557 together with that of Di Trani and Shem Tov Bibas (Moses di Trani, Responsa *Mabit*, 1:287). A ruling by Ḥayyim from his Damascus period appears in *Avkat Rokhel* (no. 114). He died in Safed. ISAAC, one of his sons, is mentioned in a responsum of 1567 (*Mabbat*, 2:88). Apparently JOSHUA HAVER, the friend of Israel *Najara and a merchant in Syria, was also a member of this family.

[Abraham David]

HAVER, HAVERIM (Heb. חָבֵר, pl. חֲבֵרִים; “member”), the name for those belonging to a group that undertook to observe meticulously both the laws of **terumah* (“heave-offering”) and **ma'aser* (“tithing”) as well as the regulations of impurity and purity. The regulations binding the obligations of the *haver* were already laid down in the time of Hillel and Shammai, since Bet Hillel and Bet Shammai differ about the details. A candidate for membership of the group was not immediately accepted as a full *haver*, but was subjected to a period of education and probation. The candidate declared his readiness “to accept the obligations of a *haver* in the presence of three *haverim*” (Bek. 30b). He was first accepted “for wings” (Tosef., Dem. 2:11), according to S. Lieberman, one who washed his hands before eating and before touching ritually clean food (*Tosefta ki-Feshutah* (see bibliography), pt. 1, 214). In the next stage he undertook more stringent obligations of ritual purity, undertaking “that he would not give *terumah* or *ma'aser* to an **am ha-arez*, nor prepare ritually clean food for him, and that he would eat ordinary food in a state of ritual purity” (Tosef., *ibid.*, 2:2; Lieberman, *ibid.*, 210; see Dem. 2:3). After undertaking to observe all the obligations of a *haver* he underwent a period of probation – 30 days according to Bet Hillel and 12 months according to Bet Shammai – before being accepted as a full *haver*. Anyone could join the group, including women and slaves (Tosef., Dem. 2:16–17), on condition that they undertook to fulfill the aforementioned obligations. No candidate was exempted from the conditions of acceptance (“even a scholar had to undertake them,” *ibid.*, 2:13). Joining the group of *haverim* meant separation from those who were not *haverim* – from the *am ha-arez* – raising many problems in daily life, even in the life of the family, when some members were *haverim* while others were not. In pursuit of their aims the *haverim* did not isolate themselves from society or create special centers for themselves, nor did they form an organized group with officeholders having particular functions. Detailed *halakhot* were evolved to regulate relations between them and their environment in all spheres of life.

It is not possible to determine the exact period of the group's first emergence. The fact that the *halakhot* dealing with the *haver* were mainly transmitted in the names of the

**tannaim* who lived after the Bar Kokhba revolt does not suffice to support the opinion of A. Buechler (see bibliography) who ascribed them to the era of Usha and even assigned them to the priests of Galilee. Not only is this contradicted by some sources, as stated, that Bet Shammai and Bet Hillel differed on details of these *halakhot* (see Tosef., Av. Zar. 3:9–10 for the period of Rabban Gamaliel), but other evidence also conflicts with Buechler's opinion. It has long been recognized that the arrangement for accepting *haverim* is reminiscent of the description given by Josephus (Wars, 2:137) of the acceptance into the fold of the Essenes, and parallels have been pointed out with the school of the Pythagoreans. The discovery of the Scroll of the *Manual of Discipline in the Judean desert throws new and important light on the subject. It is a document of a society in Erez Israel, describing its life and regulations. There are indeed differences between the two; the Dead Sea group was a fraternity whose members lived communally and shared their possessions. Nevertheless the regulations with regard to ritual purity and many of the arrangements for initiation were common to both, and the same phrases and expressions occur in both. It seems reasonable to suppose that the various groups of *haverim* among the Pharisees too were not all of one character and certainly did not always conduct themselves in all matters with the same degree of stringency. The differences are still reflected in those tannaitic statements which incorporate earlier *halakhot*.

It seems that originally when the *haverim* were few in number their regulations were more stringent, but as they came to be accepted by wider circles a more lenient tendency developed. There are explicit references to this effect. "At first they said that a *haver* who becomes a tax collector is to be expelled. Later they said that as long as he is a tax collector, he is not trusted, but if he withdraws from it, he is to be trusted" (Tosef., Dem. 3:4). It would also appear that *halakhot* which are quoted as disputes between *tannaim* are in actual fact merely transmissions of *halakhot* from different times, as for instance: if they regret becoming *haverim*, they can never again be accepted, so claims R. Meir; R. Judah says: If they regret it publicly they can be accepted, but if clandestinely (i.e., they disregarded the regulations in private, but behaved in public as *haverim*) they are not to be accepted (because of their hypocrisy); R. Simeon and R. Joshua b. Korḥa say: They may be accepted in both cases (*ibid.* 2:9). Meir's view represents the remnant of the strict rules of a group of *haverim*, which, by the way, have a parallel in the scroll of the Manual of Discipline 7:1: "And if he cursed... then he shall be set apart and never again return."

The fact that most of the *halakhot* of the *haverim* were taught during the era of Usha does not point to the time they came into existence but to the fact that at that time the regulations were renewed with the purpose of making *halakhot*, which at one time were of concern to small groups of *haverim*, into the *halakhot* of the community as a whole. Meir took a stringent view while his colleagues favored a more lenient one. The renewal of these *halakhot* after the Bar Kokhba revolt can

be ascribed to the general tendency towards asceticism then prevailing. However, it seems that, in practice, these stringencies were confined to scholars and their disciples, so that in the time of the *amoraim* "*haver*" became a synonym for a scholar, so that it was said "The *haverim* are none other than the scholars" (BB 75a; cf. the expression "*haverim* of Torah" TJ, Ber. 1:1, 2d; Tanh., Nizzavim, 4; Lieberman in: *Tarbiz*, 2 (1930/31), 106), and it seems that in Babylon the Palestinian *amoraim* were called "*havurah*" ("group of *haverim*"; Shab. 111b; "the lion of the *havurah*"; Pes. 64a).

The Post-Talmudic Period

In the academies of Babylon during the geonic period the three scholars sitting in the first row after the seven heads of the **kallah* called **allufim* ("chiefs") were known as *haverim*. At the close of the geonic period this title was also bestowed upon important scholars outside the academy, such as Jacob b. Nissim and Saadiah b. Ephraim of Kairouan. In the academies of Erez Israel, an ordained scholar was called "*haver* of the Great Sanhedrin," and the 70 members of the academy were called collectively "*havurta kadishta*" ("holy association"). The five *haverim* after the *gaon* and the head of the academy were referred to by number, "third of the *havurah*," "fourth of the *havurah*," etc. A candidate for the *havurah* was called *me'uttad la-havurah* ("destined for the *havurah*"). The designation was also widened figuratively into "the most eminent *haver* of the *havurah*," "the splendor of the *haverim*," and "the glory of the *haverim*," etc. In the 11th century the title *haver* was added to the names of the *dayyanim* heading the communities of Erez Israel, Syria, and Egypt, who were apparently ordained by the yeshivah of Erez Israel. The title was also current in the academy of Fostat (a letter of 1441 mentions "our teacher and master, R. Pethahiah Kohen, the *haver* of the Great Sanhedrin"). In Arabic-speaking countries the term "*haver*" became a synonym for an educated man and a scholar and found its way into the Arabic language. The Jewish scholar in Judah Halevi's *Kuzari* is called in the Arabic original "Al-Ḥibr." In France, Italy, and Germany, it was used as a designation for young scholars, *benei havurah* (*Or Zarua*, pt. 2, nos. 91 and 329; see Urbach, in: *Tarbiz* 10 (1938/39) 32 n.17). Only in the 14th century when the appointment of a rabbi in Germany depended upon ordination and the granting of the title *morenu*, did the title *haver* become an indication of official recognition of exceptional merit in Torah learning. Its attainment was bound up with the fulfillment of certain conditions which varied from country to country and from one period to another. In the *takkanot* of the communities and regional councils of Poland, Lithuania, and Moravia, the conditions of the right to bear this title, together with a preferred status in the community, concessions in taxation, and other privileges, were laid down. The additional privileges granted to the bearers of the title brought the communal leaders to lay down the conditions for attaining the titles, even though they were granted by rabbis. The decline of the institutions for Torah study at the end of the 17th century in Poland and Lithuania

brought with it also a modification of the requirements for the title of *haver*, and it tended to become a mere title of respect.

HAVER IR or **Hever Ir** (Heb. **חֶבֶר עִיר**; **חֶבֶר עִיר**), a phrase whose exact vocalization and therefore meaning is uncertain. If the reading is *haver ir* (lit. “an associate of the city”), it refers to an individual; if it is *hever ir* (lit. “a town association”) the reference is to a specific association or organization. The latter reading could also imply a congregation or the religious quorum (*minyān*) required for public worship. The Mishnah (Ber. 4:7) records a difference of opinion as to whether the individual may himself recite the *Musaf* prayers or whether they may only be said publicly by the *hever ir*. In this context the phrase seems to mean a *minyān*. A similar conclusion is reached from the discussion concerning the differences between the order of the sounding of the *shofar* during private worship and public *hever ir* (RH 34b).

The rules regarding deportment at a funeral and in a house of mourning seem to indicate that the phrase refers to a specific communal fraternal society. The *hever ir* must participate in a man's funeral but not a woman's (Sem. 11:2). Neither was the *hever ir* obligated to extend condolences on the day that people gather the bones of relatives for reburial in ossuaries (Sem. 12:4). When the *hever ir* was present at the house of mourning, visitors were permitted to bring less costly food, since there were then many people to be fed (Hul. 94a; Sem. 14:13). In Jerusalem, there originally were *havurot* (“associations”) for participating in joyful events such as marriage and circumcision and in gathering the remains of the dead and comforting mourners (Tosef. Meg. 4 (3):15; Sem. 12:5). It may be that these *havurot* were the precursors of the *hever ir*, or that they functioned together with it. They differed in that the *havurot* were voluntary organizations whereas the *hever ir* was officially appointed by the townspeople as their representatives in performing these meritorious deeds.

Nevertheless, there are also instances where *haver ir* seems to be the correct reading. After transient visitors to a town are assessed for charity, they may demand reimbursement for distribution to the poor in their own communities before their departure. However, when a *haver ir* is in charge of the communal charity, no refund is granted and the *hever ir* uses it at his discretion (Meg. 25a–b, Rashi ad loc.). Likewise, the poor man's tithe could be given to the *haver ir* who

used it at his discretion (Tosef., Pe'ah 4:16). A kohen who had a disqualifying blemish was not permitted to utter the Priestly Benediction publicly, since the people would be distracted by it. If he is also a *haver ir*, however, he may recite the benediction, since he is so well known that they will pay no attention to his disability (Tosef., Meg. 4 (3):29).

[Harry Freedman]

HAVILAH (Heb. **חַוִּילָה**), name mentioned five times in the Bible, both as a personal and place name. The name Havilah was applied to the territory watered by the Pishon River (Gen. 2:11), which was noted for choice gold, bdellium, and lapis lazuli (Gen. 2:12). Josephus and most Church Fathers identified the land of Havilah with the Ganges Valley. While the proper identification is still unknown, there are various theories concerning its location. The association of the land of Havilah with the products mentioned above supports Y.M. Grintz's identification of Havilah with Aualis, an Abyssinian district mentioned in Greek and Latin sources. This Havilah, or Aualis, is perhaps the Meluhha referred to in cuneiform records and identified as the Egypt of the period of the Cushite dynasty; however, this latter point is especially questionable in relation to Havilah. Friedrich Delitzsch located the land of Havilah in the Syrian Desert, west and south of the Euphrates. P. Haupt, who regarded the Pishon as the belt of water formed by the Kerkha, Persian Gulf, and Red Sea, identified Havilah with Arabia. In E.A. Speiser's view, the identification of the whole geographic background revolves around the proper location of the biblical Cush, which is identified either as an African kingdom (Ethiopia) or as the Mesopotamian kingdom of the Kassites (Akk. Kaššû). Speiser prefers the latter identification. Thus the background of Havilah remains that of the Garden of *Eden in Babylonia (Persian Gulf). According to Cassuto, the common element in all five references to Havilah is the ethnic ties between the various peoples located on either bank of the Red Sea. The Bible, however, distinguishes the Havilah that serves as one of the boundaries of Ishmaelite territory from all other places named Havilah, with the qualifying phrase “by Shur, which is close to Egypt” (Gen. 25:18). It was in the area between this Havilah and Shur that Saul defeated the Amalekites and captured Agag, their king (1 Sam. 15:7). The personal name Havilah appears in the Table of Nations (Gen. 10:7 = 1 Chron. 1:9) and in Abrahamic genealogies (Gen. 10:29 = 1 Chron. 1:23). In the former, Havilah is one of the five sons of *Cush the son of Ham. In the latter, Havilah is the sixth generation in lineal descent from Shem. The latter Havilah, the son of Joktan, apparently stands for a locality in South Arabia, as do Hadoram (Gen. 10:27), Sheba (Gen. 10:28), and Ophir (Gen. 10:29).

[Mayer Irwin Gruber]

HAVIV, AVSHALOM (1926–1947), Jew executed by the British in Palestine. Haviv was born in Haifa and when he was two years old his parents moved to Jerusalem. While still a secondary pupil in Bet ha-Kerem he joined the IZL. After serving in the *Palmaḥ in En-Ḥarod under the “year of service” program, he returned to Jerusalem where he renewed his activity in IZL, relinquishing studies at the Hebrew University. Together with Meir Nakar and Yaacov Weiss he was a member of the group which was given the task of ensuring the retreat of the members of IZL who performed the daring break into the prison of Acre in 1946, but failing to hear the agreed signal for retreat, they remained there too long and were captured. They were sentenced to death on May 16, 1947, and were hanged in Acre prison on the 12th of Av of that year, together with Eliezer Kashani and Mordekhai Alkaḥi.

HAVIV-LUBMAN, AVRAHAM DOV (1864–1951), pioneer of Jewish settlement in Erez Israel. Born on a Jewish agricultural settlement, Graitzevo, near Mogilev, Haviv-Lubman joined the Hovevei Zion movement and, in 1885, moved to Erez Israel. He went to live in Petaḥ Tikvah with his uncle, Mordekhai Lubman, who worked as a land surveyor for Baron Edmond de *Rothschild. He disliked the settlement's traditional way of life and moved to Rishon le-Zion, where he struggled together with others against the baron's paternalistic management of the new agricultural settlement. He was a founder of the Aguddat ha-Koremim (“The Vintners' Association”), which took over the supervision of the baron's wine cellars. For 16 years he was at intervals head of the local council of Rishon le-Zion. He wrote memoirs of his childhood and the early days of settlement in Erez Israel entitled *Mi-Sippurei ha-Rishonim le-Ziyyon* (1934) and *Benei Dori* (1946), as well as a monograph on Rishon le-Zion (1929).

[Yehuda Slutsky]

HAVRE, LE, major port, N. France. From about the beginning of the 18th century, Jews, especially from *Bordeaux and its environs, wished to settle in Le Havre. In 1714, *Louis XIV ordered the town to expel all foreign Jews except “those who call themselves ‘Portuguese.’” Around 1725, however, two Jewish families of German origin, the Hombergs (who were con-

verted after a while) and the Lallemonds, settled in Le Havre and obtained letters of naturalization. In 1776 the town once more refused several Jews permission to reside there in spite of their “royal passports” (actually valid for Paris). An organized community was founded in the mid-19th century. A new community, reconstituted after World War II, had a population of about 1,000 in 1969 and possessed a synagogue and community center.

[Bernhard Blumenkranz]

HAVURAH. The havurah, or Jewish fellowship group, encompasses “a wide range of approaches in which relatively small groups of Jews come together regularly for programs which include Jewish study, celebration, and personal association” (Reisman, 1977). Use of the Hebrew term *havurah* (pl. *havurot*) as a social institution has its origins in the small communities of Pharasaic Jews from which emerged rabbinical Judaism over 2,000 years ago. In contemporary usage, the havurah refers to an attempt to restore a sense of Jewish community to North American Jewish life. In contrast to the synagogue, the havurah is distinguished by the personal responsibility assumed by members for their religious and social activities, rather than delegating them to the rabbi or other institutional officials.

Contemporary havurot emerged through two different and unrelated avenues. In the early 1960s, the Reconstructionist movement, which had espoused fellowship groups since its inception in the 1930s, established havurot to give substance to the teachings of Rabbi Mordecai Kaplan to transform the Jewish community. After becoming an independent denomination in 1968, Reconstructionists continued to create havurot as a substitute for, or adjunct to, its synagogues.

In the late 1960s, inspired by the counterculture of that period, many havurot were created predominantly by Jewish students who combined their Jewish seeking with political activism and opposition to the Vietnam War. Notable among these havurot were Chavurat Shalom in Somerville, Massachusetts (1968), the New York Havurah (1969), and Fabrangen in Washington, D.C. (1970). Havurot in this period also often adapted Hasidic motifs such as communalism, mysticism, ecstatic singing, and transcendence, both to restore what members felt was missing from Jewish life, and to emphasize their rejection of the conventional “corporate” synagogue.

The havurah may thus be considered a postmodern institution in that it celebrates the “cultural, and social transformations that have come together in the contemporary period and that include a movement away from the modern idea of a universalistic rational culture and toward a multicultural reality that celebrates the value of the local and the particular and attempts a new openness to premodern forms and motifs” (Kepnes 1996).

By the early 1970s the havurah had become an accepted part of the American Jewish scene, and were divided between

independent and synagogue-affiliated havurot. Research conducted at that time found that most havurah members were young families with young children, closely resembling the demographics of synagogue members. However, they demonstrated a higher level of personal observance than synagogue members and were more likely to espouse liberal or radical political opinions. Since 1974, an annual summer retreat has been sponsored by the National Havurah Committee, the organizing body of independent havurot; by 1982 it was estimated that 20% of Reform congregations had one or more havurot.

Today there are several hundred independent havurot, primarily in the U.S., although the idea has spread to Canada, Israel, and several European countries. Approximately one-third of all Conservative and Reform congregations have one or more havurot, and some 40 havurot are affiliated with the Reconstructionist movement. While their loose organization makes it impossible to gather precise statistics about havurot, their influence on American Jewish life far exceeds their modest numbers. Havurah members occupy positions in academic Jewish studies, cultural organizations, Jewish federations, Jewish education, and the rabbinate. The egalitarianism of the havurah has become a fixture in American Jewish life, especially with regard to Jewish feminism. Other innovations inspired by the havurah and adopted by many Jewish organizations include retreats, the exercise of creating imaginative, non-rational midrash, the use of Hasidic *niggunim* (melodies), Jewish folk music, and the revival of Jewish crafts.

Indeed, the havurah example has stimulated the creation of new Jewish institutions such as the Elay Hayyim Jewish Retreat Center in New York State, and the proliferation of *minyanin* (prayer and study groups) in cities across the United States. As the havurah continues to evolve, the children of havurah members of the 1960s have themselves founded second-generation havurot, and National Havurah Conference's annual retreat has become a multi-generational event.

In addition, unaffiliated and highly mobile young Jews increasingly incorporate computer communications into their creation of postmodern Jewish fellowships and communities. An example of this is Kehillat Hadar in New York, founded in 2001 with seed money from the Jewish Federation of New York, a trans-denominational egalitarian community with members in their 20s and 30s who use a World Wide Web site and electronic mailing list to organize and schedule study, celebration, and social action in rented facilities. Similarly, Mishpacha, funded by the Memorial Foundation for Jewish Culture, is an online havurah providing interaction and Jewish learning for young Jewish parents.

The havurah has not become as stable and self-sustaining a Jewish institution as the synagogue. However, for four decades it has provided an avenue of involvement for Jews who seek to express their Judaism in a small, self-directed group, while stimulating innovation in the larger Jewish community. It is still too soon to determine if the recent experi-

ments influenced by the havurah will have similar influence and longevity.

HAVVOTH-JAIR (Heb. הַוּוֹת יָאִיר), an area in northern *Gilead (Num. 32:41; 1 Kings 4:13; 1 Chron. 2:22), also ascribed to the *Bashan and to the *Argob district, that was part of the kingdom of *Og of Bashan (Deut. 3:14; Josh. 13:30). According to A. Bergman (Biran), the city of *Ham was originally the center of the region. After Og's defeat at *Edrei, the region was occupied by *Jair, son of Manasseh, and named after him (Num. 32:41). A nomadic population called Ya'uri, Yari, or Ya'hiri, is known from Assyrian documents to have been in the area of the Euphrates beginning with the 13th century B.C.E., and some scholars assume that groups of these nomads reached Gilead and were gradually incorporated into the Israelite tribes. The meaning of *havvoth* is apparently "villages," i.e., groups of tent camps of nomads or seminomads surrounded by loose stone walls (in the *Nuzi documents, the word *khawu* designates a stone wall around a field). The half-tribe of Manasseh, cattle breeders who had settled in Transjordan, probably had many such camps and moved with their herds from one to another in search of pasture (Num. 32). According to Judges 10:3–5, Havvoth-Jair was named for *Jair, the Gileadite, who judged Israel for 22 years and was buried at Kamon (modern Qamm) in Gilead. According to 1 Chronicles 2:22, however, it may have received its name from Jair, son of Segub, of the tribe of Judah. The villages of Jair are again mentioned in Solomon's sixth administrative district under the son of Geber from Ramoth-Gilead; the villages were joined to Argob in Bashan (1 Kings 4:13). The area was later lost to Aram and annexed by Geshur (1 Chron. 2:23). *Jeroboam II seems to have retaken it for a short time (1 Chron. 5:11–17), but it was finally conquered and depopulated by *Tiglath-Pileser III (1 Chron. 5:26).

[Michael Avi-Yonah]

HAWAII, the 50th state of the United States; admitted in August 1959. Jewish beginnings in Hawaii are shrouded in myth. Ebenezer Townsend, Jr., a sailor on the whaling ship *Neptune*, wrote in the ship's log on Aug. 19, 1798, that the king came aboard ship and brought "a Jew cook with him." This may or may not be true, but it is the first mention of Jews in connection with Hawaii.

A Torah scroll and *yad* ("pointer") owned by the royal family of Hawaii show a connection between it and the early

Jewish population of Hawaii, 2001.

Jewish community. How the scroll and *yad* came into the possession of King David Kalakaua is not clear. The *Daily Pacific Commercial Advertiser* of Dec. 24, 1888, states that Queen Liliuokalani, Kalakaua's successor, had the scroll draped around the inside of the tent at Her Majesty's bazaar. As late as 1930, the Jewish community borrowed the scroll from the descendants of the royal family for use on holidays. The *yad* and the scroll have recently been donated to Temple Emanuel, a Reform congregation. Because of its condition, it is no longer used for ritual purposes, but can be seen on display.

It is believed that Jewish traders from England and Germany first came to Hawaii in the 1840s. A few American Jews came from California at the end of the 19th century, but there was no organized Jewish community until the founding of the Hebrew Benevolent Society in 1901. The same year marked the consecration of a Jewish cemetery at Pearl City Junction. In 1923 the National Jewish Welfare Board (NJWB) established the Aloha Center for Jewish military personnel. In 1938 the Honolulu Jewish community was established. Temple Emanuel was organized in 1951. The temple had a membership of 300 families in the early 21st century. In 1971 Congregation Sof Ma'arav, a Conservative synagogue, was founded. In 1975 the Aloha Jewish Chapel, a synagogue for military and ex-military, was built at Pearl Harbor. Chabad of Hawaii was established in 1990 and maintained regular services and a small presence. During the 1990s Jewish synagogues were established on Maui, the island of Hawaii, and Kauai.

The total Jewish population probably numbered about 10,000 in 2005, with the majority in Honolulu on the island of Oahu. This is out of a state population of 1,236,100. Because of the large number of unaffiliated Jews, this number is only an approximation. The population is both youthful and largely transient. Most of the Jews arrived since World War II; some were stationed there during the war and after the war returned with their families. A few have been there for 40 years or more. Since statehood in 1959 the population of the state has almost doubled. The influx of new people included many Jews and many in the professions, such as medicine, law, university teaching, government services, both federal and state. A number went into real estate and other busi-

nesses. As of 2005, three of the last four attorneys-general of the state were Jewish. The governor, Linda *Lingle, was also Jewish. She was a member of all three congregations. A men's club and sisterhood were affiliated with Temple Emanuel. A B'nai B'rith Lodge and a Hadassah Chapter were organized. In 2004 a Hillel chapter was established at the University of Hawaii at Manoa in Honolulu. Religious services were held regularly by all three congregations. There were no specific Jewish neighborhoods; Jews lived everywhere and were active in all aspects of Hawaiian life, feeling very much at ease in Hawaii's multiracial society.

[Gertrude C. Serata / Robert Littman (2nd ed.)]

HAWK, bird of prey. Two genera of hawk are found in Israel, the *Accipiter* and the *Falco*, these being referred to respectively in the Bible as *nez* (AV, JPS = hawk) and *tahmas* (AV, JPS = "nighthawk"), mentioned among the unclean birds that are prohibited as food (Lev. 11:16; Deut. 14:15). The *nez* is generally identified with the sparrow hawk (*Accipiter nisus*), which nests on trees in various places in Israel, pounces in flight on its victims, particularly small birds, and is recognizable by its bright abdomen streaked with dark lateral stripes. It winters in Israel and some migrate to southern lands, as mentioned in Job (39:26). The Pentateuch refers to "the *nez* after its kinds." In Israel there are two other trans migratory species that belong to this genus. But the expression *nez* may also include other genera of birds of prey. Thus, for example, the *aggadah* says that Israel is like a dove which the *nez* seeks to devour (Song R. 2:14, no. 2), the reference here being to a bird of prey larger than the hawk, such as the *buzzard which preys upon doves (the *Accipiter* hunts only small birds: see Hul. 3:1) or the saker falcon (*Falco cherrug*) which in certain countries is trained to pursue birds and animals. Of the genus *Falco* there are several species in Israel, the most common being the non-migratory kestrel (*Falco tinnunculus*) which preys upon birds and field mice and is apparently the biblical *tahmas*, a word meaning "robber, bandit."

HAWN, GOLDIE (1945–), U.S. actress. Hawn, whose mother was Jewish and father Presbyterian, was born in Washington, D.C. She first found work on the short-lived television series *Good Morning, World* and then achieved almost instant stardom on the successful television comedy-variety show *Laugh-In* (1968–70). Hawn left the cast for motion pictures and achieved major status immediately in her first film, *Cactus Flower*, winning an Oscar for Best Supporting Actress (1970). She has since starred in such films as *There's a Girl in My Soup* (1970); *Dollars* (1971); *Butterflies Are Free* (1972); *The Sugarland Express* (1974); *The Girl from Petrovka* (1974); *Shampoo* (1975); *Foul Play* (1978); the hugely successful *Private Ben-*

jamin, for which she was nominated for a Best Actress Oscar (1980); *Seems Like Old Times* (1980); *Bird on a Wire* (1990); *Best Friends* (1982); *Swing Shift* (1984); *Protocol* (1984); *Wildcats* (1986); *Overboard* (1987); *Deceived* (1991); *Housesitter* (1992); *Crisscross* (1992); *Death Becomes Her* (1992); *The First Wives Club* (1996); *Everyone Says I Love You* (1996); *The Out-of-Towners* (1999); *Town and Country* (2001); and *The Banger Sisters* (2002). Nominated for eight Golden Globe Awards, she won one in 1970, along with her Oscar, for Best Supporting Actress in *Cactus Flower*. Hawn is the mother of actress Kate Hudson.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

HÁY, GYULA (Julius; 1900–1975), Hungarian and German playwright. From 1919 Háy lived in Germany but after 1933 moved to the U.S.S.R., returning to Hungary in 1945. While *Isten, császár, paraszt* (“God, Emperor, Peasant,” 1940) was popular in Hungary, a number of Háy’s Marxist dramas were successful in pre-Nazi Germany and later in East Berlin. These include *Haben* (1938) and *Gerichtstag* (1946). Jailed after the 1956 revolution, Háy moved to West Germany in 1966.

His autobiography, *Born 1900*, appeared in English in 1974.

°HAY, JOHN MILTON (1838–1905), U.S. statesman who supported Romanian and Russian Jewish rights. Hay was a secretary of state under presidents William McKinley and Theodore Roosevelt from 1898 to 1905. He was involved in U.S. diplomatic representations during this period on behalf of Romanian and Russian Jews. In 1902, at the urging of American Jewish leaders including Oscar S. Straus and Jacob H. Schiff, Hay addressed a note to the signatories of the Berlin Treaty of 1878 protesting Romania’s violation of that treaty by its restrictions on Jews. Following the *Kishinev pogrom of 1903, again after Jewish pressure and with an eye to domestic political considerations, Hay publicized a protest petition drawn up by B’nai B’rith.

ḤAYDĀN. A town and a region in north *Yemen, after which all Jews living there were called Ḥayādinah, in about 40 small communities such as Ṣāḍah, Baraṭ, Qal’ah, Ghālib, Harāḍ, and Mashhad. Known also as Ḥaydān al-Shām (in the north), to distinguish it from another Ḥaydān in the south-west. The earliest information about the Jews of Ḥaydān is a document from 1670, dealing with the division of a house in Ṣan’ā (*San’a) among three brothers of the Ḥaydānī family. The existence of the Jews of north Yemen among the Muslim majority was not based on the Muslim discriminatory rules (*ghiyār*) as in other places in Yemen and other Muslim countries, but on the tribal pre-Islamic system, where the Jews, as other weak segments

of the society, were *jārs* (neighbors) whom the Sheikhs had to protect on behalf of their honor. There are many testimonies about wars waged by an Arab tribe, in consequence of killing or hurting a Jew protected by that tribe, against another tribe from which the killer came. As a result of their special status, the Jews of north Yemen did not wear sidelocks, the most distinctive sign in the appearance of the Yemenite Jew. Many of them were expert in the art of repairing the Arabs’ weapons and could even carry weapons and sometimes took part in tribal wars. They also could live among the Muslims in more than two-story houses in contrast to the rule in other places. Another of their major occupations was silversmithing. Although we have scant information about the Jews of north Yemen in some sources like the account of the traveler R. Baruch b. Samuel of Pinsk (1833), they were first exposed to scholars only after Joseph Halévy and Ḥayyim Ḥibshūsh wrote the accounts of their travel to that area in 1870. Subsequently some of the Jews emigrated from N. Yemen, such as A. Tabib, Z. Glusqa, and M. Kappara, and published books about the Jews living there. These Jews began to immigrate to the Land of Israel in 1907, and two personalities later became prominent leaders of the Yemenite community: Abraham Tabib and Zekharyah Glusqa. They settled in Reḥovot and Rishon le-Zion and engaged in agriculture, playing a leading role in the promotion of Jewish labor. Another movement of *aliyah* took place in the mid-1940s, led by R. David Zādok ha-Levi. They wandered in Yemen for two years until they reached *Aden and later arrived in Israel on the “Magic Carpet” in 1949 with their countrymen. They settled in nearby Kiryat Ekron and Kefar Gevirol (near Reḥovot).

[Yosef Tobi (2nd ed.)]

HAYDEN, HENRI (1883–1970), painter. Hayden was born in Warsaw, and arrived in Paris in 1907 to join a compatriot, *Marcoussis. Hayden’s first major influence was Gauguin, but he soon came under the spell of Cezanne, notably in his first major painting “The Chess Players at La Rotunde,” exhibited in 1914. Through the poet and critic André Salmon he met Juan Gris and Jacques *Lipchitz, who introduced him to Cubism. In due course he became a colleague of Picasso, Metzinger, Andre Lhote and Robert de la Fresnaye. The dealer Leonce Rosenberg put him under contract and bought his entire studio. His Cubist masterpiece “The Three Musicians” (1920) is now in the National Museum of Modern Art, Paris. From 1922 he adopted a more figurative style and returned to landscape. In 1939 he was forced to leave Paris and went to live in the remote French countryside, where he became a close friend of the writer Samuel Beckett. On his return to Paris in 1944 Hayden found his studio ransacked and most of his Cubist paintings missing. In the last 20 years of his life Hayden enjoyed renewed fame and

popularity. His landscapes and still lifes combine a simplified Cubism with a new lyrical sense of color.

[Charles Samuel Spencer]

HAYDEN, MELISSA (1928–), U.S. ballerina. Hayden's dramatic power and virtuoso technique marked her as one of the outstanding dancers in America. Born Mildred Herman in Toronto, Canada, she trained early to be a dancer and at 17 went to New York, where she attended the School of American Ballet. After dancing in the ballet corps of Radio City Music Hall, she joined Ballet Theater in 1945, became a soloist, and joined the New York City Ballet in 1950, where she was named principal dancer in 1955. During her first season there she danced leading roles in *Illuminations*, *The Duel*, and *Age of Anxiety*. She also created roles in George Balanchine's *Agon*, *Firebird*, *Midsummer Night's Dream*, and other works of the repertoire. In 1963, she danced *Swan Lake* and *Coppélia* with the National Ballet of Canada. In her book *Melissa Hayden – Offstage and On* (1963) she explained her approach to dancing for the benefit of young people. From 1977 to 1983 she directed her own ballet school and from 1983 taught ballet at North Carolina School of the Arts. Hayden was awarded the Handel Medalion, New York's highest award for cultural achievement. She wrote *Off Stage and On* (1963), *Ballet Exercises* (1969), and *Dancer to Dancer* (1981).

HAYES, ISAAC ISRAEL (1832–1881), U.S. explorer. Born in Chester, Pennsylvania, Hayes volunteered in 1853 as ship's surgeon on Kane's expedition to the North Pole in search of Sir John Franklin. His ship was icebound in Kane's Basin for two years, during which time Hayes took part in many sledge expeditions, on one of which he discovered and explored Grinnell Land. With nine of the ship's crew he also attempted to reach Opernavik (Greenland), and get help for the stranded ship (1854). Although he was forced to return to the ship, the following summer the whole crew made use of the route he had taken to make their escape. In 1860 Hayes sailed from Boston in command of the schooner *United States* in an attempt to discover the open water which he maintained surrounded the North Pole. After wintering in Kane's Basin, he continued north by sledge. He finally observed what he thought was the open polar sea but which in fact was the Kennedy Channel, which opens into the Arctic via the Mall Basin. He returned to Boston in 1861. He made his last trip to the Arctic in 1869, when he was accompanied by the American artist, William Bradford. Later in life he became a member of the New York Assembly.

The careful notes made by Hayes on his expeditions were a valuable contribution to natural history, meteorology, glaciology, and hydrology, and were included in the annals of the exploration society. He also took the first photographs of the Arctic. His writings include *An Arctic Boat Journey* (1860), *Physical Observations in the Arctic Seas 1860 and 1861* (1867),

The Open Polar Sea (1867), *Cast Away in the Cold* (1868), and *The Land of Desolation* (1871).

HAYES, SAUL (1906–1980), Canadian Jewish community official, lawyer. Born in Montreal, Hayes was the voice of the Jewish community of Canada from the late 1930s through the 1960s. A graduate of McGill University and a lawyer, Hayes' first job was as a lecturer in the university's School of Social Work in 1934. He soon joined a prominent Montreal law firm.

But law was not Hayes' primary interest; Jewish community service was. And so when industrialist Samuel *Bronfman became president of a struggling and ineffective Canadian Jewish Congress in January of 1938, Hayes eagerly accepted his invitation to become its director. Through the CJC's United Jewish Refugee Committee, which he headed for many years, Hayes led the battle against the antisemitism that permeated Canada in the 1930s and 1940s. As well, and perhaps more importantly, he organized Canadian Jewry – along with a very small number of non-Jewish organizations – to lobby a hostile government to let in some of the desperate Jews of Europe looking for a haven from Nazi persecution.

Hayes was the Jewish community's first native-born civil servant. He was a passionate and eloquent spokesman for its interests. For almost 40 years he appeared before parliamentary committees, met with hundreds of cabinet ministers, legislators, and bureaucrats, wrote countless speeches and articles, and represented Canadian Jewry at international meetings, including the founding conference of the United Nations in San Francisco in 1945 and the Paris Conference on Post-War Peace Treaties in 1946. He well deserved the description of him by Yaacov Herzog, Israel's ambassador to Canada in the 1960s, as "the foremost civil servant of the Jewish people."

What Hayes was most proud of were his contributions to the modernization of a highly restrictive Canadian society. He was instrumental in forcing federal and provincial governments in the postwar period to adopt laws against racial and religious discrimination in housing and employment, was an early proponent of multiculturalism, was highly influential in persuading dubious Canadian authorities to allow into the country thousands of Jewish immigrants following the war, and was a member of an innovative royal commission which crafted legislation against hate-mongers. He also lobbied successfully to create a Jewish education system in Quebec largely funded by the provincial government.

A lifelong Zionist, Hayes created the Israel Bond Association in Canada, paved the way for Canadian investment in Israel, and led the fight against the *Arab boycott of the Jewish state. In representing Israeli interests in Canada, Hayes often played a more important role than Israel's ambassador in Ottawa.

Hayes retired from the Canadian Jewish Congress in 1974, the same year he was appointed to the Order of Canada, the nation's highest honor.

[Irving Abella (2nd ed.)]

HAYNT (הַיִּנְט), leading Yiddish daily in Warsaw before World War II. It was founded in 1908 by the Hebrew-Yiddish journalist Samuel Jacob Jackan and two Zionists, the brothers Noah and Nehemiah *Finkelstein, as a continuation of the daily *Yidishes Tagblatt*, which they had published from 1906. Its first issue appeared on Jan. 22, 1908, with Jackan as editor and a staff that included David *Frischmann, Hillel *Zeitlin, Hirsch David *Nomberg, and Moshe Bunem *Justman ("B. Yeushzon"). *Haynt* supported Zionist ideology and in 1909 reached the unprecedented circulation of 70,000. In 1910 another Yiddish daily *Der Moment* was founded in Warsaw, edited by Zevi *Prylucki, which attracted some members of *Haynt's* staff. In the ensuing continuous competition *Haynt* maintained its lead. It attracted readers by publishing stimulating articles and thrilling novels in serial form, and also offering prizes (among them a trip to Erez Israel). By 1914 its circulation had risen to more than 100,000. Its staff at that time included Sholem *Asch, Menahem *Boraisha, Abraham *Goldberg, Shemarya *Gorelik, Z. Wendroff, A.L. Jacobowitz, J.A. Leizerowicz, H.D. Nomberg, David Frischmann, Isaac Leib *Peretz, and *Shalom Aleichem. *Haynt* took a firm Jewish national stand in the elections to the fourth *Duma in 1912. It also fought the assimilationists in Warsaw in the Jewish communal elections of that year. In 1915, *Haynt* was closed down by the Russian authorities but reopened a few months later, when Warsaw was captured by the Germans. In independent Poland *Haynt* was deprived of many readers in the Ukraine and other regions not included in Poland's boundaries. It reached an agreement with the daily *Dos Yidische Folk*, published from 1919 by the Zionist Organization of Poland, becoming an organ of the Zionist Organization and replacing Jackan with Yehoshua *Gottlieb as editor. From 1921 Abraham Goldberg was the editor, but the paper's basic policy was determined by Yizhak *Gruenbaum. In 1932 *Haynt* passed to the ownership of a cooperative composed of members of the editorial board and employees. After Goldberg's death in 1933, Aaron Einhorn and Moshe Indelmann edited the paper until its last issue on Sept. 22, 1939, on the eve of the German occupation of Warsaw. Leading contributors of *Haynt* included Vladimir *Jabotinsky (until 1933), B. Singer, I.J. Singer, Osias *Thon, Gershon Levin, Jacob *Lestschinsky, Z. *Segalowitch, Nahum *Sokolow, Ephraim *Kaganowsky, Ezriel *Carlebach, Z. *Shneour, and M. *Kipnis. It also issued periodicals in Yiddish and Polish, as well as two newspapers in Hebrew: the daily *Ha-Boker* (1909), edited by David Frischmann, and the weekly *Ba-Derekh* (1932–37).

[Gedalyah Elkoshi]

HA-YOM (Heb. הַיּוֹם, "the Day"), the first Hebrew daily newspaper. Published in St. Petersburg for 25 months, Feb. 12, 1886, to March 12, 1888, *Ha-Yom* was edited by Judah Leib *Kantor, who enjoyed the regular help of David *Frischmann and Judah Leib *Katzenelson. The Hebrew press had existed for 30 years when *Ha-Yom* appeared, and the Hebrew newspapermen of that time regarded the venture with skepticism and even derision. But Kantor's persistence overcame all obstacles and the paper appeared daily, in large format, with news gathered by telegrams received directly from the Russian telegraphic agency.

Another innovation was *Ha-Yom's* simple and clear style, by means of which Kantor hoped to dislodge the stilted Hebrew still dominant in the press. The editor proved that a Hebrew paper could report on political and social events as efficiently as a paper in any other language and *Ha-Yom* actually became a European-style daily. The editorials and political articles were usually written by Kantor, while Frischmann regularly published feuilletons as well as the first of his famous literary letters, and Katzenelson contributed articles on science. Reporters from London, the U.S., and other Jewish centers contributed to the paper, which also printed substantial reports from Erez Israel. However, the paper could not hold its ground owing to the rivalry with *Ha-Meliz* and *Ha-Zefirah*, which by the admission of its editors, Judah Leib *Gordon and Nahum *Sokolow respectively, reluctantly became dailies in order to compete with *Ha-Yom*. Another cause for its failure was its reserved and even cool attitude toward the Hibbat Zion movement. The paper proved, as Kantor said in his introduction to the first issue, that "the Hebrew language had the resources to discuss everyday life as it did in the old days."

[Getzel Kressel]

HAYON, NEHEMIAH HİYYA BEN MOSES (c. 1655–c. 1730), kabbalist with Shabbatean tendencies. Because of the bitter dispute which centered around Hayon, the information about his life is full of contradictions and must be sifted critically. His ancestors came from Sarajevo, Bosnia. From there, his father moved to Erez Israel after spending several years in Egypt where, according to his own testimony, Hayon was born. As a child, he was taken to Jerusalem, grew up in Shechem (Nablus) and in Jerusalem, and studied under Hayyim Abulafia. At the age of 18 he returned to Sarajevo with his father and married there. His enemies claimed that from that time on he was known for his adventures. He traveled widely throughout the Balkans and spent several years in Belgrade until its occupation by Austria in 1688. He

may have joined his father as an emissary to Italy for the ransoming of captives from Belgrade. According to the testimony of Judah Brieli, Ḥayon was in Leghorn in 1691. Later he served for a short time in the rabbinate of Skoplje (Üsküb), Macedonia, at the recommendation of one of the great rabbis of Salonika.

He returned to Erez Israel c. 1695 and lived for several years in Shechem (Nablus). After his first wife's death, Ḥayon married the daughter of one of the scholars of Safed. Ḥayon was well versed in exoteric and esoteric lore. From his youth, he was attracted to Kabbalah and he knew the Shabbatean groups intimately. His kabbalistic doctrine evades the issue of Shabbetai Zevi's messianic claims, but is based on principles common to Shabbateanism. When Ḥayon received the pamphlet *Raza de-Meheimanuta* ("The Mystery of the True Faith"), attributed to Shabbetai Zevi by his sectarians, he claimed that he himself wrote it and that it was revealed to him by Elijah or by the angel *Metatron. Changing its name to *Meheimanuta de-Khula* he began to write a detailed commentary. In the meanwhile, he lived briefly in Rosetta, Egypt, and from that time he became known as one who engaged in practical Kabbalah. When he returned to Jerusalem (c. 1702–05), hostility developed between him and R. Abraham Yizḥaki who for several years leveled many accusations against Ḥayon (but never directly accused him of Shabbateanism). Later, he returned to Safed and from there he went to Smyrna, apparently intending to publish his long commentary to *Meheimanuta de-Khula* and to find supporters for a yeshivah, which he wished to establish in Jerusalem. On his return to Jerusalem, the rabbis began to harass him and he was forced to leave Erez Israel. He went to Italy via Egypt (1710–11). According to the testimony of Joseph *Ergas, in Leghorn, Ḥayon disclosed to him his belief in Shabbetai Zevi. In 1711, in Venice, he published his small book *Raza de-Yihuda* on the meaning of the verse on the unity of God, *Shema Yisrael*, as an abridgment of his larger work to which he added, in the meantime, a second commentary. The rabbis of Venice gave approbations to this booklet without understanding its intent. The book did not arouse controversy. Later, Ḥayon moved to Prague where he was received with great honor in scholarly circles and gained approval for *Oz le-Elohim*, his main work, and *Divrei Neḥemyah*, a book of sermons. David Oppenheim approbated *Divrei Neḥemyah* and Ḥayon altered the approbation to include the kabbalistic *Oz le-Elohim* as well. R. Naphtali Cohen, who at first befriended Ḥayon, kept him at a distance after a rumor got about that connected him with the *Doenmeh in Salonika. Ḥayon traveled via Moravia and Silesia to Berlin where, in 1713, supported by the wealthy members of the community, he succeeded in publishing *Oz le-Elohim*. It was daring of Ḥayon to publish a text which in many manuscripts was circulated then as a work of Shabbetai Zevi. With great acumen, he tried to prove in his two commentaries that this doctrine was firmly based in the classical texts of the Kabbalah. In some passages, he criticized the works of *Nathan of

Gaza and Abraham Miguel *Cardozo, in spite of his doctrine being basically close to Cardozo's. Ḥayon's innovations were a new formulation of the principles of the beginning of Emanation and the difference between the First Cause which he calls "*Nishmata de-Kol Ḥayyei*" ("Soul of All Living Beings") and the **Ein-Sof* ("The Infinite Being"). What the kabbalists call *Ein-Sof* is in his opinion only the extension of the Essence (of God) or the *Shoresh ha-Ne'lam* ("the Hidden Root," i.e., God), but paradoxically enough this Essence is finite and it possesses a definite structure, **Shi'ur Komah* ("Measure of the Body of God"). Ḥayon thought that Isaac Luria's doctrine of *Zimzum* ("withdrawal") must be understood literally and not allegorically. His doctrine of the three superior *parzufim* ("aspects of God"), *attika kaddisha*, *malka kaddisha*, and *Shekhinah*, differs from the theories of other Shabbateans only in details and in terminology. His book may be defined as a strange mixture of basically Shabbatean theology and exegetical acumen by which he read the new theses into the *Zohar and the Lurianic writings. He prefaced his book with a long essay in which he argued, apparently hinting at the unorthodox sources of his thought, that it is lawful to learn Kabbalah from everyone, not only from those who conform to traditional Orthodox criteria. *Divrei Neḥemyah* contained a long sermon in which it was possible to see an indirect defense of the apostasy of the Doenmeh sect in Salonika, but which could also be interpreted as criticism of them. In June 1713 Ḥayon left Berlin for Amsterdam. Apparently he knew of the hidden Shabbatean tendency of Solomon *Ayllon, rabbi of the Sephardi congregation. Indeed, Ḥayon received the patronage of Ayllon, his *bet din*, and the *parnasim* of the community. However, a bitter and complex struggle developed between the supporters of Ḥayon and those of Zevi *Ashkenazi, the rabbi of the Ashkenazi community, and of Moses *Ḥagiz who knew of Ḥayon's early quarrels in Erez Israel and recognized the Shabbatean "heresy" in his opinions, when they investigated his book. In this controversy, relevant factors (the true views of Ḥayon and his Shabbateanism) and personal factors (the arrogant behavior of Zevi Ashkenazi, personal antagonisms) are mingled. Essentially, the accusers of Ḥayon were right but from a formal and procedural point of view the Sephardi *bet din* was right. The quarrel aroused strong emotions, at first in Amsterdam, in the summer and the winter of 1713, and it swiftly spread to other countries. Naphtali Cohen apologized for his previous approval of Ḥayon and excommunicated him. So did Italian rabbis to whom both sides turned for support. The leaders were Judah Brieli of Mantua and Samson Morpurgo of Ancona. Most of the participants in the controversy had not actually seen the books of Ḥayon and depended only on the letters from both sides. The major pamphlets against Ḥayon are: *Le-Einei Kol Yisrael* (the judicial decision of Zevi Ashkenazi and letters from him and from Naphtali Cohen; Amsterdam, 1713); *Edut le-Yisrael* (*ibid.*, 1714); works by Moses Ḥagiz including *Milḥamah la-Adonai ve-Ḥerev la-Adonai*, also including the letters of many Italian rabbis (Amsterdam,

1714); *Shever Poshe'im* (London, 1714); *Iggeret ha-Kena'ot* (Berlin, 1714); *Tokhaḥat Megullah ve-ha-Zad Naḥash* by Joseph Ergas (London, 1715); and *Esh Dat* by David Nieto (London, 1715). This book and several leaflets also appeared in Spanish. The *bet din* of the Sephardim published in Hebrew and in Spanish *Kosht Imrei Emet* (Amsterdam, 1713; in Spanish, *Manifesto*). Ḥayon answered his critics in several books and pamphlets in which he defended his views but denied that they contain any Shabbatean doctrine. They include *Ha-Zad Zevi Ashkenazi*; (Amsterdam, 1714); *Moda'a Rabba* (1714, including his biography); *Shalhevet Yah* (against Ergas), also including the pamphlets *Pitkah min Shemaya*, *Ketovet Ka'aka*, and *Iggeret Shevukin* (1714). His polemics against Ergas' *Ha-Zad Naḥash*, called *Naḥash Neḥoshet*, is found in Ḥayon's handwriting (Oxford, Ms. 1900). Because of the controversy he had aroused, Ḥayon did not succeed in publishing his second comprehensive work on Kabbalah, *Sefer Ta'azumot*. A complete manuscript of the work is preserved in the library of the *bet din*, formerly that of the *bet ha-midrash*, in London (62).

Zevi Ashkenazi and Moses Ḥagiz were forced to leave Amsterdam. However, the intervention of the rabbis of Smyrna and Constantinople, who excommunicated Ḥayon and condemned his works in 1714, decided the struggle against Ḥayon, whose supporters advised him to return to Turkey in order to obtain the annulment of the excommunication. Ḥayon returned and attempted to achieve this but he succeeded only partially. In his old age, he went back to Europe where in the pamphlet *Ha-Kolot Yeh'dalun* (1725) he published some documents in his favor. His journey was unsuccessful because Moses Ḥagiz again came out against him in the booklet *Leḥishat Saraf* (Hanau, 1726) where he threw suspicion on several of the documents, or on the circumstances under which they were signed. Most of the communities did not allow him access and even Ayllon refused to receive him in Amsterdam. Ḥayon wandered to North Africa and apparently died there before 1730. According to Ḥagiz, his son converted to Catholicism in order to take revenge on his father's persecutors and was active in Italy.

[Gershon Scholem]

HAYS, family established in the New World in the first quarter of the 18th century, when MICHAEL HAYS (d. 1740) emigrated from Holland to New York. Michael's sons JACOB (d. 1760), SOLOMON, ISAAC (d. 1765), and JUDAH (1703–1764) and their descendants flourished in the American colonies. Jacob was active in building Congregation Shearith Israel in New York City in 1730. Jacob's sons BENJAMIN (d. 1816),

MICHAEL (1753–1799), and DAVID (1732–1812) became farmers in Westchester County, and all actively supported the American cause during the Revolution, Benjamin by fighting in the army, Michael by permitting colonial troops to use his farm to store supplies. To keep the rebel army from utilizing the stores, the British army seized Michael's farm in 1776 and did not restore it until 1782. After the war Michael served in the New York State Constitutional Convention. The youngest brother, David, operated a store in Bedford in addition to his farm. He married into the *Etting family. While he was serving with the American army, Loyalists, who were attempting to keep supplies from reaching the colonial forces, burned his home, his store, and the rest of Bedford on the night of July 9, 1779. David's eldest son, JACOB (1772–1850), converted to Christianity and in 1802 was appointed high constable (chief of police) of the City of New York, a position he held until a year before his death.

HAYS, ARTHUR GARFIELD (1881–1954), U.S. lawyer and civil liberties advocate. Hays, who was born in Rochester, New York, practiced law in New York for 20 years. In 1925 he abandoned his private practice to become general counsel of the American Civil Liberties Union. He represented clients without remuneration in numerous cases involving the violation of freedoms guaranteed by the Bill of Rights. Hays served as co-counsel with Clarence Darrow in 1925 in the celebrated Scopes anti-evolution case which became known as the “monkey trial.” Although Scopes was convicted for violating a state law which prohibited the teaching of any theory that denied divine creation, the trial compelled the State of Tennessee to abandon the enforcement of this law. Hays was involved in the defense of Sacco and Vanzetti, and the Scottsboro Boys whose death sentence for alleged rape was reversed by the U.S. Supreme Court. He also defended Dmitrov and other Communists tried in Germany for the Reichstag fire, pleading through a German as the Nazis would not permit Hays, a Jew, to plead himself. After World War II, he helped the occupation forces to re-create democratic institutions in Germany. Hays was never prepared to confine his defense of liberty only to the causes for which he had sympathy. Thus, although he detested Nazism, he joined the attorney of Friends of New Germany in seeking an injunction against a police commissioner in New Jersey who had closed all halls to Nazi meetings (1937). He wrote several books, among them *Trial by Prejudice* (1933), *Democracy Works* (1939), and his autobiography, *City Lawyer* (1942).

[Alan Reitman]

HAYS, DANIEL PEIXOTTO (1854–1923), U.S. lawyer. Hays who was born in Westchester County, New York, received his LL.B. from Columbia University Law School in 1875. A member of an old and prominent New York Jewish family, he was the grandson of Benjamin Etting Hays (1779–1858) and

a descendant of Jacob Hays (see *Hays family), who went to the New York Colony in the 1720s. Active in New York City and Westchester County politics for many years, Hays served as president of the Harlem Democratic Club, as delegate to several New York State Democratic conventions, and was appointed head of New York City's Municipal Civil Service Commission by Mayor Gilroy. Hays vigorously supported the presidential candidacy of Grover Cleveland in *City and Country*, a Nyack, New York, newspaper owned by him. Hays was also extremely active in Jewish communal affairs, serving on the executive committee of the Union of American Hebrew Congregations, as trustee and secretary of the Jewish Publication Society, and president of the Young Men's Hebrew Association. He was also a founder of the *American Hebrew*. His *Collected Poems* appeared in 1905.

[Abram Kanof]

HAYS, ISAAC (1796–1879), U.S. physician. Hays, a descendant of Michael Hays' son Isaac (see *Hays family), was born in Philadelphia. He graduated from the University of Pennsylvania (1816) and received an M.D. there (1820). An oculist, he was one of the pioneers in the study of astigmatism and color blindness, and he invented a scalpel for use in cataract surgery. Hays's contribution extended beyond his specialty. He was the editor of several important journals, one of the founding members of the American Medical Association (1847), and wrote the code of medical ethics which has been adopted throughout the United States.

HAYYAT, JUDAH BEN JACOB (c. 1450–c. 1510), kabbalist. Hayyat was born in Spain and studied Kabbalah under Samuel ibn Shraga. Around 1482 he addressed basic questions on Kabbalah to Joseph *Alcastil, who answered him at length. After the expulsion of the Jews from Spain in 1492 he suffered many hardships on sea voyages and in North Africa. In 1494 he reached Italy and for several years lived in Mantua where at the request of Joseph *Jabez he wrote in the early 16th century a detailed commentary on *Ma'arekhet ha-Elohut*, an early kabbalistic work that was widely circulated among contemporary kabbalists in Italy. The commentary, titled *Minhat Yehudah*, was published together with the *Ma'arekhet* in Ferrara in 1558 and in several later editions. It is considered one of the outstanding works of Kabbalah in the generation of the Spanish Expulsion. More than a commentary on the *Ma'arekhet* it is an independent, systematic work whose intention and major views differ greatly from those in the book which it supposedly intends to expound.

Hayyat was a radical representative of the Kabbalah of the *Zohar, in contrast to the Kabbalah of Abraham *Abulafia, which was accepted in Italy, and to the semi-philosophical Kabbalah of Isaac b. Abraham ibn *Latif, which Hayyat harshly criticized. He was one of the first to quote at length passages of the Zohar and the *Tikkunim* and based his kab-

balistic theory on their sayings. He had reservations about philosophical commentaries on the Kabbalah which circulated in Italy. He also disputed against the *Iggeret Hamudot* of Elijah of *Genazzano which identified the **Ein Sof* ("the Infinite") with the first *Sefirah* ("emanation"). Concerning the essence of the *Sefirot*, Hayyat mainly concurred with the view of Menahem *Recanati. The process of creation is explained, according to him, by the double movement of expansion and contraction of the divine will. Creation is nothing but a realization into actuality through the divine will of the potential hidden unity of the *Ein-Sof*. Hayyat had a recognizable influence on all 16th–17th century Kabbalah. Even those who falsely wrote under names of earlier authors used his works at length. His supercommentary on Recanati's commentary to the Pen-tateuch has not been preserved.

[Gershom Scholem]

Hayyat was probably acquainted with the Italian Kabbalah as represented by Johanan Alemanno with his penchant for a more philosophical understanding of this lore and for Abraham *Abulafia's Kabbalah. Hayyat's book represents a successful attempt to establish the Spanish Kabbalah in a center in which other forms of this lore had been studied.

HAYYIM ABRAHAM RAPHAEL BEN ASHER (d. 1772), Jerusalem rabbi and kabbalist. Hayyim was a member of the *bet din* of Raphael *Meyuhas, and later *av bet din* in Jerusalem. Toward the end of his life, in 1771, he was appointed *rishon le-Zion* (Sephardi chief rabbi). In 1731 (or 1734) he published in Constantinople the *Sha'arei Kedushah* of Hayyim *Vital. Between the years 1734 and 1765 he traveled as an emissary of Jerusalem, seeking contributions in Constantinople, Italy, France, and Egypt. Hayyim was a signatory of the *Shetar Hitkasherut* ("articles of association") of the society of kabbalists. Head of the yeshivah Yefa'er Anavim in Jerusalem, he cosigned the *takkanah* forbidding bachelors between the ages of 20 and 60 from residing in Jerusalem. He gave approbations to many works, among them the *Zivhei Shelamim* of Judah Diwan (Constantinople 1728), and the *Shulhan Gavoha* of Joseph Molkho, Salonika, OḤ 1756; YD 1764. He died during a famine and plague that raged in Jerusalem.

[Simon Marcus]

HAYYIM BEN ABRAHAM HA-KOHEN (c. 1585–1655), kabbalist, born in Aleppo. His ancestors went to Erez Israel after the expulsion from Spain (1492) and later settled in

Aleppo. Ḥayyim was the disciple of Ḥayyim *Vital during his last years in Damascus, and he left an interesting story about his growing attachment to the study of Kabbalah under his teacher. Later, he was one of the rabbis of Aleppo. Ḥayyim wrote numerous works in the course of a 20-year period, which are listed in the introduction to his book *Torat Ḥakham*. During a long sea voyage, which he undertook in order to bring these manuscripts to print, the ship was attacked by pirates off Malta. He saved himself by jumping into the sea near the coast, but all his manuscripts were lost. He states that he decided to write them again. Around 1650 he set out again for Constantinople where he stayed two to three years. The first part of his book *Mekor Ḥayyim*, a detailed kabbalistic commentary on the rules of the Shulḥan Arukh, was published here. At the end of 1652 he was in Smyrna; later he went to Venice and returned through Zante to Aleppo. Through the mediation of Samuel *Aboab of Verona he had published in Venice the large volume of sermons, *Torat Ḥakham* (1654), with the kabbalist Moses *Zacuto acting as proofreader. Another part of *Mekor Ḥayyim*, called *Tur Bareket*, was published by the brothers Raphael and Abraham b. Danan in Amsterdam in 1654. In the same year Ḥayyim set out again for Italy where he published two additional parts, *Tur Piteda* and *Tur Yahalom* (Leghorn, 1655). He died in Leghorn during the publication of his last book which thus remained incomplete, and only single sections have survived as pamphlets. All his commentaries on the Shulḥan Arukh have been published in two volumes (1878). In Leghorn, he introduced Nathan *Hannover to Isaac *Luria's Kabbalah. Hannover included in his *Sha'arei Ziyyon* a lament by Ḥayyim for the *Tikkun Ḥazot* (midnight prayer), *Kol be-Ramah Nishma*, which has since become part of every edition of this midnight liturgy. Among his commentaries on the Five Scrolls, only *Ateret Zahav* on Esther, explained both according to the literal meaning (*peshat*) and the Kabbalah, in the author's handwriting (Jerusalem, JNUL, Ms. 8° 1581), and *Torat Ḥesed* on Ruth, have been preserved. The last, however, was published by the kabbalist David Lida as his own, under the title *Migdal David* (Amsterdam, 1680). This plagiarism was known in kabbalist circles even before it was made public by H.J.D. *Azulai in *Shem ha-Gedolim*. In his books Ḥayyim quotes only portions from throughout the *Zohar, and sometimes also the sayings of his teacher Vital, but most of his presentation is not based on other sources "and all his words are as if written from Sinai" (Nathan Hannover, introduction to *Sha'arei Ziyyon*). A prayer book with kabbalistic meditations by Ḥayyim is extant in several manuscripts (two at the Ben-Zvi Institute in Jerusalem). Ḥayyim "was very careful not to write amulets," and was also opposed to those who spent too much time in prayer, wasting thus the whole day upon mystical meditations. Among kabbalists he was considered more of a theoretical scholar than a practical mystic.

[Gershon Scholem]

ḤAYYIM BEN BEZALEL (c. 1520–1588), talmudic scholar. Ḥayyim was born in Posen, and was the eldest of four brothers, all rabbis, the most famous being *Judah Loew b. Bezalel of Prague (the Maharal) who mentions him in his responsa (no. 12). Ḥayyim studied first with Rabbi Isaac Sepharadi in Posen. From him, Ḥayyim acquired his abiding love for Bible study and the in-depth study of Rashi's commentary. As a young man he studied in the yeshivah of *Shalom Shakhna at Lublin where he was a contemporary of Moses *Isserles. His final teacher was Rabbi Solomon Luria, the Maharshah. From him, Ḥayyim acquired a method for studying *halakhah* as well as a dislike for halakhic codes (see below), Ḥayyim settled in Worms in 1549 where he lived in the home of his uncle, Jacob b. Ḥayyim, the local rabbi, succeeding him in 1563. He subsequently left to become rabbi of Friedberg, remaining there until his death.

When Isserles published his *Torat Ḥattat* on *issur ve-hetter* (on the dietary laws), Ḥayyim published a vigorous polemic against it in his *Vikku'ah Mayim Ḥayyim*. The introduction to the work was couched in such strong language both against Isserles and Joseph *Caro that it was omitted from editions after the first (Amsterdam, 1712), but has been reproduced in full by Tchernowitz (see bibl.). Ḥayyim's criticism was a general one against all those who presumed to publish halakhic codes which purported to give the final definitive *halakhah*, since they lead to neglect of the early authorities and can be used with disastrous results by the unlearned. Of Joseph Caro he comments that after saying "who am I to decide between the opposing views of the great authorities?" he then proceeds to do so. "It is like a man who says, 'I have the greatest respect for what you say, but you are lying!'" The main target of his criticism, however, is Isserles' work. The *Torat Ḥattat* ("Law of the Sin-Offering") was rightly named, he said, since it, albeit unwillingly, causes people to sin, and it "even borders on *hillul ha-Shem* (Profanation of the Name of God)." In the same way as Moses set up the Copper Serpent with the best of intentions, yet when it became an object of idolatry Hezekiah did not hesitate to destroy it, so would he act with regard to this work of the "later Moses." He felt that Isserles should at least have stated that his work was only to be used by qualified scholars. (He himself had spent 16 years in composing a similar work, but only for his private use, and when one of his students purloined it and copied it, he sternly reprimanded him and destroyed the copy.) In addition to his general criticism he specified three reasons for his opposition: (1) Isserles had amended the code of Caro which reflected the Sephardi *minhag* to make it accord with the Polish *minhag*, but he had completely ignored the differences between the Polish and the German *minhag*, which was more authoritative and ancient. (2) He had introduced a new element of leniency when "considerable (financial) loss" or "exceptional circumstances" (*she'at ha-deḥak*) were involved. (3) He abolished the *halakhah* in favor of unsubstantiated custom.

Ḥayyim wrote a number of other works. His *Sefer ha-Ḥayyim*, which he wrote in two months while he was con-

fined to his house on account of a plague in 1578, is a moral and ethical dissertation. In style and language it is reminiscent of the pietistic works, and in fact his brother refers to him as “he-Ḥasid.” In general, Ḥayyim was not in favor of the study of philosophy. He thought that only advanced students should study philosophy, even Jewish philosophy. As for the study of Kabbalah, Ḥayyim praised the *mekubbalim* (Kabbalah practitioners) for their ability to enter God’s palace, yet he was critical of their abandoning the “small interests of the King,” namely the study of Talmud and Halakhah. His *Ez Ḥayyim* on Hebrew grammar (written in 1579) is still in manuscript. He was inspired to write it because of the criticism of Christian Hebrew scholars who accused the Jews not only of neglecting the study of Hebrew in favor of the Talmud, but even of forbidding it. He admits that he used the grammatical works of these detractors as one of his sources. He attributes the neglect of the study of Hebrew grammar to the fact that in the “bitter and long exile . . . it was impossible to encompass all subjects in the curriculum, for which reason alone the early authorities, especially the Ḥasidei Ashkenaz, confined their instruction to the Talmud” (Introduction). He also wrote *Be’er Mayim Ḥayyim*, a supercommentary on Rashi’s Pentateuch commentary in response to the great popularity enjoyed by Rashi’s commentary but the lack of true comprehension of Rashi’s work. Ḥayyim’s work focuses on the correct translation of the Torah text, the grammatical comments made by Rashi, and those aspects of his commentary that are unique. In addition, Ḥayyim wrote *Iggeret ha-Tiyyul* (Prague, 1605) consisting of explanations of talmudic passages using the methods of *Pardes, (*peshat, remez, derash, sod*) in alphabetical order.

[Alexander Tobias / David Derovan (2nd ed.)]

HAYYIM BEN HANANEL HA-KOHEN (second half of the 12th century), French tosafist. Ḥayyim lived in Paris and was a distinguished disciple and admirer of Jacob *Tam about whom he said that he would have defiled himself (referring to the prohibition against defilement of a kohen through contact with the dead) had he been present at his death (cf. Tos. to Ket. 103b). Ḥayyim wrote *tosafot* to several talmudic tracts and is quoted in the printed *tosafot* and in many other *rishonim*. “On him” said Isaac the Elder, “rested the honor of the entire generation.” Ḥayyim opposed immigration to Palestine, stating that “in our generation the commandment to live in Palestine does not apply,” as it was impossible to observe many commandments connected with the land (*ibid.*, 110b). However, he considered Jewish existence in the Diaspora as temporary. Ḥayyim was the grandfather of *Moses b. Jacob of Coucy, author of the *Semaḡ*, and among his most prominent disciples was *Samson b. Abraham of Sens.

BIBLIOGRAPHY: Urbach, *Tosafot*, 107–10; V. Aptowitz, *Mavo le-Sefer Ravyah* (1938), 250.

[Zvi Meir Rabinowitz]

HAYYIM (Eliezer) BEN ISAAC “OR ZARU’A” (late 13th century), German rabbi and halakhic authority, called “Or Zaru’a” after the famous work composed by his father, *Isaac b. Moses of Vienna. Ḥayyim was orphaned in his early youth. His principal teacher was Meir b. Baruch of Rothenburg, whose opinions he frequently cited. He also studied under such eminent scholars as Asher b. Jehiel and Ḥayyim b. Moses of Wiener-Neustadt. His permanent places of residence were Regensburg, Neustadt, or Cologne and he is said to have spent some years in France. Ḥayyim is considered one of the last of the tosafists. While his father, Isaac b. Moses, the author of the *Or Zaru’a*, is mentioned numerous times throughout the **tosafot* commentaries, Ḥayyim is only mentioned in the *Tosafot Yeshanim*, a variant version of the *tosafot* commentaries.

Ḥayyim’s responsa (Leipzig, 1865; repr. Jerusalem, 2002, with commentary) are especially valuable for the light they shed on the people, places, and events of his time. Thus he mentions (no. 110) a rabbinical synod which he attended at Mainz in about 1288, in which one of the matters discussed was the taxes imposed on the Jews by Rudolf of Hapsburg. In the same responsum he refers in passing to R. Meir of Rothenburg’s imprisonment (see also no. 164). Some of the responsa provide important source material on Jewish-Christian relations in the 13th century. Most of Ḥayyim’s decisions are based on those of the French and German halakhic authorities, particularly on his father’s *Or Zaru’a*. His abridged version of that codification, which he entitled *Kizzur Or Zaru’a* (or *Simanei Or Zaru’a*), summarized each section of the original work, omitted the legal discussions, and included his own views together with those of other scholars. From the many references to the *Kizzur Or Zaru’a* in German rabbinic literature of the 14th and 15th centuries it is clear that his abridgment enjoyed long popularity. An important aspect of Ḥayyim’s work is the lively correspondence he conducted with many of his contemporaries. It is believed that he addressed inquiries even to the Spanish scholar Solomon b. Abraham *Adret (Resp. Rashba, pt. 1, no. 572).

Knowledge about the life and teaching of Ḥayyim “Or Zaru’a” derives from a book of responsa of which he was the author and a book of homiletic sermons (*derashot*) which was published under the title *Derashot MHR”H, Halakhic Decisions of Rabbi Ḥayyim Or Zaru’a*, first ed. according to Parma MS Moscow by Yitzḥak Shimshon Lange (Jerusalem, 1973).

The book of *Derashot* contains homiletic treatises on 25 portions of the Torah, summing up various laws and customs. Both his responsa and homiletic treatises contain a wealth of material throwing light on relations between Jews and their gentile surroundings. He endeavors throughout to provide the Jews of Ashkenaz with guidance in their dealings with the hostile gentile environment. From the copious historical material found in his responsa, much can be learned about the Jewish

communities (*Kehillot*), their internal organization, leadership, rights, and obligations. We also learn how he grappled with the challenges and dangers of living as a Jew in the midst of a medieval, gentile society.

[Shlomo Eidelberg / Yehoshua Horowitz / David Derovan (2nd ed.)]

HAYYIM BEN JEHIEL ḤEFEẒ ZAHAV (13th century), German talmudist. Ḥayyim studied under his father and under *Samuel of Evreux. Many of his responsa are included in the responsa of *Meir b. Baruch of Rothenburg (ed. by M. Bloch, 1895, nos. 188–9, 209, 241, 249, 296–8, 339–41, 355–6, 382–3, 461–3). In a responsum (no. 241) he affirms that he filled the post of “emissary of Kolonia,” probably Cologne. It has been therefore assumed by some that he was a member of the Cologne *bet din* and represented the community before the government. He was probably given the appellation “*Ḥefeẓ Zahav*” because of his book bearing this title, but from the endings of many of the responsa (nos. 189, 241, 339) it can also be deduced that his father was the author of the book. It appears that Ḥayyim was a colleague of Samuel b. Menahem, the teacher of Meir of Rothenburg, since in one responsum (no. 188) he refers to him as “my associate.” This Ḥayyim is not to be identified with Ḥayyim b. Jehiel, the brother of *Asher b. Jehiel.

[Yehoshua Horowitz]

HAYYIM BEN SAMUEL BEN DAVID OF TUDELA (14th century), talmudic scholar of Tudela, Spain. Ḥayyim was a pupil of Solomon b. Abraham *Adret, and the latter’s responsa contain a number addressed to Ḥayyim. For some time Ḥayyim was in France, where he studied under *Perez b. Elijah. His main work is the *Zeror ha-Ḥayyim* (published in 1966), consisting of the laws appertaining to blessings, prayer, Sabbaths, and festivals, arranged according to the order of the calendar; it is based on views of various French, Provençal, and Spanish scholars but chiefly upon his teachers, Adret and Perez, though he does not mention them by name. His other work, *Zeror ha-Kesef*, on topics in *Hoshen Mishpat*, is still in manuscript. These books (referred to by the *rishonim* as the *zerorot*, “bundles”) were in the possession of later scholars (but cf. Resp. Ribash, no. 396), who made use of and quoted them. This was particularly so in the case of the 16th-century Safed scholars, including Joseph *Caro. In this work, Ḥayyim al-

ludes to a book of sermons he wrote, and Masud Ḥai Roke’aḥ, at the beginning of his *Ma’aseh Roke’aḥ* (Venice, 1742), quotes Ḥayyim’s commentary to the tractate *Mo’ed Katan*, which is also cited by Bezalel *Ashkenazi in *Kelalei ha-Shas* (in Ms.). Among Ḥayyim’s relations was Joseph ha-Dayyan, referred to respectfully several times in the responsa of Isaac b. Sheshet (Ribash).

[Israel Moses Ta-Shma]

HAYYIM BEN SOLOMON TYRER OF CZERNOWITZ (c. 1760–1816), rabbi and ḥasidic leader; born near *Buchach, Galicia. A disciple of *Jehiel Michael of Zloczów, he later served as rabbi in Mogilev, Kishinev, Czernowitz and district, and Botoșani. He had a profound knowledge of rabbinical literature and mysticism, was an eloquent preacher and a talented writer. He did much to spread Ḥasidism and opposed the spread of *Haskalah in Romania. His resistance to certain government decrees forced him to relinquish his office in Czernowitz in 1807. In 1813 he immigrated to Erez Israel and settled in Safed. He wrote the following works, which were published in many editions: *Siddur shel Shabbat* (Mogilev, 1813); *Be’er Mayim Ḥayyim* (Sudilkov, 1820, with Pentateuch; Czernowitz, 1849); *Sha’ar ha-Tefillah* (Sudilkov, 1825); and *Erez ha-Ḥayyim* (Czernowitz, 1861).

[Avraham Rubinstein]

HAYYIM ḤAYKL BEN SAMUEL OF AMDUR (d. 1787), ḥasidic leader in Lithuania. At first *ḥazzan* in Karlin, and a teacher in the little town of Amdur (Indura), near Grodno, he was attracted to *Ḥasidism through Aaron the Great of *Karlin. Ḥasidic sources relate that he subjected himself to excessive fasting and self-mortifications before he made the acquaintance of Dov Baer, the Maggid of Mezehrech. Becoming one of Dov Baer’s most prominent disciples he founded a ḥasidic center in Amdur after the death of his teacher in 1773. A profound thinker and an enthusiastic and fearless propagandist of Ḥasidism, Ḥayyim was the ḥasidic personality most hated by the *Mitnaggedim* in Lithuania in the 1780s, and was a considerable factor in the outbreak of a second round of polemics between the two factions in 1781. He is described in somber tones in the literature of the *Mitnaggedim*, especially in the writings of *David of Makow. In *Shever Poshe’im* (in M. Wilensky, *Ḥasidim u-Mitnaggedim*, vol. 2, 1970) he and his associates are discussed with scorn. The *Mitnaggedim* persecuted him to such an extent that Ḥayyim was compelled to leave Amdur for a while and to stay in a village. He was undeterred by these persecutions, however, and continued to lead his congregation as *zaddik* until his death, bequeathing his position to his son Samuel.

Ḥayyim taught that God is infinite and men cannot comprehend Him. However, there is much latent power in

man's intellect and by losing his own sense of being, he can be drawn nearer to and be united with his source. Ḥayyim therefore preached a complete negation of the human will before the divine will. The observance of a *mitzvah* was interpreted as an act desired by God, and it is only this desire of God's which imparts validity to the *mitzvah*. It is also forbidden to serve God for the purpose of attaining the World to Come or other rewards. Ḥayyim is revealed as an extreme spiritualist: "We should forget ourselves as a result of our adhesion to Him." One should despise this world: "He who prays for his sustenance should be ashamed for doing so." If "I have set the Lord always before me, then I have no time to consider the events which befall me, for God surely knows of my needs better than I do myself." When a man stands before the Creator, all his limbs should tremble for fear of the Lord so that he does not know where he is standing, so much has he meditated on His essence. If, at that time, evil thoughts enter his mind, he should not repel them. On the contrary, this gives him the opportunity to elevate these thoughts to their source. If a man has sinned, he should rather endeavor to unite himself to the soul of the *zaddik*, as a result of which he will adhere to God.

His sermons were collected in *Ḥayyim va-Ḥesed* (1891, 1953²), including "rules of behavior" and letters to his followers, some of which had been previously published in *Iggeret ha-Kodesh* (Warsaw, 1850).

[Moshe Hallamish]

HAYYIM JUDAH BEN HAYYIM (17th–18th century), talmudist, rabbi of Janina (Ioannina), Greece. Ḥayyim Judah was born in Salonika, where he studied under Solomon *Amarillo, whose daughter he married. Toward the end of his life he emigrated to Jerusalem, where he had many disciples, among them Solomon Havdalah, a member of the *bet din* of Abraham Yizḥaki and in his old age rabbi of Jerusalem. H.J.D. *Azulai speaks of having seen a volume of Ḥayyim's responsa in manuscript. He carried on a halakhic correspondence with Samuel Florentin, author of the responsa *Me'il Shemu'el*, and others. His responsa are found in the works of others, e.g., *Kerem Shelomo* (Salonika, 1719) and *Zera Avraham* (Constantinople, 1732).

BIBLIOGRAPHY: Fuenn, *Keneset*, 356; Azulai, 1 (1852), 58, no. 28; Rosanes, *Togarmah*, 4 (1935), 329; 5 (1938), 287.

[Simon Marcus]

HAYYIM PALTIEL BEN JACOB (late 13th–early 14th century), German talmudic scholar. Ḥayyim Paltiel was a pupil of *Eliezer of Touques, and also, apparently, of *Meir b. Baruch of Rothenburg. He traveled through the cities of Bohemia and served as rabbi of Magdeburg. His questions to Meir

of Rothenburg are included in the Cremona (1557, nos. 32–34), Prague (1608, no. 226), and Lemberg (1860, no. 507, et al.) editions of the latter's responsa and a number of his responsa to other scholars are also included in these collections. Of great historical importance is the responsum (Lemberg ed. no. 476) he wrote in 1291 from Magdeburg on the subject of the **Herem ha-Yishuv*. He was one of the first – if not the first – to add the self-effacing epithet *tola'at* ("worm") to his formal signature, Ḥayyim Paltiel Tola'at (abbreviated to *Ḥapat*). One of his responsa to two of his pupils was forwarded by them to *Asher b. Jehiel for his opinion (*Resp. Rosh*, Kelal 30, no. 4). Ḥayyim Paltiel's chief importance lies in his *Sefer ha-Minhagim*, which contains the customs for the whole year, referring to benedictions, prayers, and festivals, according to the Ashkenazi rite. The work was later used by Abraham *Klausner, who adapted and amended it, and added other customs and explanations. The connection between the work of Klausner and that of Ḥayyim Paltiel was first suggested by H.J. Ehrenreich in the introduction to his edition of Klausner's *Minhagim* (1929), and was proved beyond doubt when Paltiel's work was discovered and published in *Kirjath Sepher* by D. Goldschmidt (see bibliography). Ḥayyim Paltiel thus emerges as one of the first authors of the **Minhagim* books, which gained wide popularity in 14th-century Germany and which laid the foundation for the spread of the version known in essence as *nosah Ashkenaz* ("the Ashkenazi rite"). It is probable that he is identical with the Ḥayyim Paltiel whose biblical explanations are extensively quoted in a still unpublished manuscript of a Bible commentary by a 14th-century French scholar.

[Israel Moses Ta-Shma]

HAYYIM (Ben) SHABBETAI (known as **Maharhash – Morenu Ha-Rav Ḥayyim Shabbetai**; before 1555–1647), rabbi in Salonika. He studied under Aaron Sason, and subsequently became head of the yeshivah of the "Shalom" community. Many of his pupils became leading authorities such as Solomon ha-Levi, Isaac Barki, Ḥasday ha-Kohen *Perahyah, and David *Conforte. It is not clear whether Jacob Ruvio or Ḥayyim Shabbetai was appointed to the post of chief rabbi by the leaders of the Salonikan communities in 1638, but certainly after Ruvio's death in 1640, Ḥayyim Shabbetai served as chief rabbi. In point of fact, he had been referred to as "the great rabbi" as early as 1622. He devoted himself assiduously to congregational matters, introducing many important regulations, and was regarded as the outstanding halakhic authority of his time, questions being addressed to him from communities near and far. Only part of his works have been published. These include novellae on the tractate *Taanit* and on the last chapter of tractate *Yoma*, published in the *Torat Moshe* of his son Moses (Salonika, 1797); responsa on *Even ha-Ezer* (Salonika, 1651); and *Torat Ḥayyim* (3 parts, Salonika,

1713, 1715, 1722), responsa. The second part of this last work is preceded by a *Kunteres ha-Moda'ah re-ha-Ones*, on contracts entered into under duress, which was published separately (Lemberg, 1798) with a commentary by Jeremiah of Mattersdorf and his son Joab. Ḥayyim also wrote *Torat ha-Zevah*, on the laws of slaughtering and inspection and *Seder Gittin* (unpublished). Many additional responsa are to be found in the works of his contemporaries and disciples. He was also rabbi of Kahal Shalom Synagogue in Salonika in which position he was succeeded by his son Moses.

[Abraham David]

ḤAYYOT, MENAHEM MANISH BEN ISAAC (d. 1636), Polish and Lithuanian rabbi. Ḥayyot's father served as rabbi of Prague. He himself was rabbi of Turobin, Moravia, apparently while very young, and later became a rabbi in Vilna. No biographical details of him are known but he is quoted in the works of many of his great contemporaries, such as Ephraim of Vilna in his *Sha'ar Efrayim* (Sulzbach, 1688) and Samuel Bacharach of Worms in his *Hut ha-Shani* (Frankfurt, 1679). His son-in-law was Joseph Josefa *Horowitz. His tombstone was the oldest in Vilna. Of his works the following have been published: *Kabbalat Shabbat*, also entitled *Zemiroth le-Shabbat* (Prague, 1621), Sabbath songs; an elegy, *Kinah le-Hurban*, on the fire in Posen in 1590 (Prague, 1590?); and a fragment of his supercommentary to Abraham ibn Ezra to Exodus 3:15 (see Herschkowitz, bibliography). In the catalogue of David *Oppenheimer there is mention also of a manuscript of *Derekh Temimim* (no. 375) by Ḥayyot, a commentary to the weekly portion of the Law, *Balak*, giving the plain meaning as well as homiletical and kabbalistic interpretations.

BIBLIOGRAPHY: S.J. Fuenn, *Kiryah Ne'emanah* (1915²), 67–70; H.N. Maggid-Steinschneider, *Ir Vilna* (1900), 1f.; M. Herschkowitz, in: *Sinai*, 59 (1966), 97–127.

[Itzhak Alfassi]

ḤAYYUJ, JUDAH BEN DAVID (c. 945–c. 1000), the most important Hebrew grammarian towards the turn of the 10th century. About his life little is known. He was born in Fez and arrived at Córdoba in 960 when the dispute between *Menahem b. Jacob ibn Saruq and *Dunash b. Labrat was at its height. It is doubtful whether he should be identified with Judah b. David, one of the three students of Menahem who composed *Teshuvot al Dunash ben Labrat*, the two others being Isaac ibn Kapron and Isaac ibn *Gikatilla (ed. by Z. Stern in 1870).

His works include (1) *Kitāb al-Tanqīṭ* or *Kitāb al-Nuqat* ("Book of Vocalization") was translated into Hebrew by Abraham Ibn Ezra. It includes grammatical and masoretic mat-

ters, dealing mainly with nouns. (2) *Kitāb al-'Af 'al Dhawāt Ḥurūf al-Līn* ("The Book of Weak Letter Verbs"), translated into Hebrew by Moses ha-Kohen ibn Gikatilla, by Ibn Ezra, and by Isaac b. Eliezer ha-Levi (1458); parts of an anonymous translation have been found. (3) *Kitāb al-'Af 'al Dhawāt al-Mithlayn* ("The Book of Geminative Verbs"), translated into Hebrew by Moses ha-Kohen ibn Gikatilla and Ibn Ezra (entitled *Ṗo'le ha-Kefel*).

(4) *Kitāb al-Nutaf* ("Book of Plucked Feathers"); Ibn Ezra called the book *Sefer ha-Korḥah* ("Book of Baldness"), and this later became corrupted to *Sefer ha-Rokḥah*. In this book he intended to explain the difficult verses in the eight books of the Prophets by linguistic method. There are extant parts on Joshua, Judges, Kings, Isaiah, Jeremiah, and Ezekiel, which include discussions of individual words, as well as a discussion on the importance of the *meteg* and other accents for understanding the Hebrew language.

The originals and the Hebrew translations of (1) (2) and (3) were published by J.L. Dukes (1844), G.W. Nutt (1870), and M. Jastrow (1897). Remnants of the Arabic original of (4) and their translation into modern Hebrew were published by P. Kokovtsov (see bibl.), S. Abramson, I. Eldar, and N. Allony. Recently, all these and other remnants were republished by N. Basal in *Kitāb al-Nutaf* (2001).

In his two works on the verb, Ḥayyuj developed the view that all Hebrew roots are made up of three letters, one of which, however, may be interchanged when conjugated with a weak letter, and may be elided or assimilated to a letter with a *dagesh*. This is a departure from the earlier view which recognized two-letter roots (תם, קם, רע, בל) and even some one-letter roots (the ך and the ך of וי and ויט). According to G. Goldenberg (*Leshonenu* 44 (1980), 281–292), however, Ḥayyuj's major invention was not the tri-literality of the Hebrew verb but rather his concept of *s?sin layyin*.

His works spread rapidly throughout the Eastern countries and even became popular in Germany. Jonah ibn Janāḥ completed in his *Kitāb al-Mustalḥaq* the material missing in Ḥayyuj's works. Based on Ḥayyuj's theory, Ibn Janāḥ also wrote a comprehensive biblical Hebrew grammar and lexicon. Moses ha-Kohen ibn Gikatilla (?) prepared a synopsis in *Mukhtaṣar Ḥayyuj* (synopsis of Ḥayyuj's works); copies of these books were found in the Cairo *Genizah*. Several works following Ḥayyuj's footsteps were written, including *Sefer ha-Shoham*, by Moses b. ha-Nesi'a, and *Sefat Yeter* by Isaac b. Eliezer ha-Levi. All the work on Hebrew language and biblical exegesis since Ḥayyuj has been based on his ideas, and much of what he said, as well as his terminology (coined later on in Hebrew), is used to this day.

[Nehemya Allony / Aharon Maman (2nd ed.)]

HAYYUN, ABRAHAM BEN NISSIM (d. 1500), Portuguese scholar; a pupil of Joseph b. Abraham *Hayyun, rabbi of Lisbon. He was among the Jews who left Portugal after the decree of expulsion was issued in 1496, settling in Constantinople. He wrote *Imrot Tehorot*, an ethical work (Constantinople, 1515–20; Salonika, 1595; and Jerusalem, 1876), and *Ma'amar be-Mofetim*, on miracles described in the Bible (mentioned by Abraham b. Solomon Hayyun at the end of Joseph Hayyun's *Millei de-Avot*).

BIBLIOGRAPHY: M. Kayserling, *Geschichte der Juden in Portugal* (1867), 74; Benjacob, *Ozar*, 41 no. 786; A. Yaari, *Ha-Defus ha-Ivri be-Kushta* (1967), 79, 128.

HAYYUN, JOSEPH BEN ABRAHAM (d. 1497), last rabbi of the Jewish community of Lisbon before the expulsion. Among his distinguished disciples were Abraham b. Nissim *Hayyun and Joseph *Jabez. While Hayyun was still in Lisbon, Isaac *Abrabanel consulted him on various halakhic questions, concerning one of which he composed a tract, *Maggid Mishneh*. After the decree of expulsion from Portugal was issued in 1496, Hayyun went to Constantinople, where he died shortly afterward. His published works are a commentary on the Book of Psalms (Salonika, 1523), and *Millei de-Avot*, a commentary on *Avot* (Constantinople, 1578; republ. Venice, 1606); a number of his notes on the order of the *haftarot* are included in *Likkutei Man* (Amsterdam, 1764). Other works remain in manuscript.

BIBLIOGRAPHY: Benjacob, *Ozar*, 324 no. 1106, 641 no. 380; Ben-Sasson, in: *Sefer Yovel le-Y. Baer* (1960), 217ff., 220; idem, in: *Zion*, 28 (1961), 56ff., 60; A. Yaari, *Ha-Defus ha-Ivri be-Kushta* (1967), 128.

HAZA, OFRA (1957–2000), Israeli singer. Haza was born in the Hatikva quarter of Tel Aviv to parents who had come from Yemen. She started singing as a child and at the age of 12 was accepted into the “Hatikva Quarter workshop” under the direction of Bezalel Aloni. Having completed her army service, she took part in 1979 in the movie *Shlager* where she sang the “freiha” song (lyrics, Assi Dayan, music, Zvika Pik), which became a huge hit and sent her to the top of all the charts. She was crowned “singer of the year” four years in a row (1980–1983) and in 1983 represented Israel at the Eurovision song contest. She soared to international fame when her song *Galbi* (“My Heart”; 1984) was reworked for the European market and became a best seller. Another Hebrew Yemenite wedding song of the famous poet Shalem Shabazi, *Im Nin'alu*,

went through a similar process and sold two million copies in Europe alone. After her performances in New York in 1989 she recorded the album “Desert Wind” (1989) and noted singers such as Paul Anka and Cliff Richards recorded duets with her. In 1998 the producer Steven Spielberg invited her to perform the theme song in his animated epic *Prince of Egypt* and she did this in the 29 languages the film was translated into. She also gave her voice to the character of Yokhebed. In spite of her international success she remained faithful to the Israeli public and her performances drew huge crowds. She participated and won first prizes in the music festival and the festival of children music. Her repertoire was based in great part on Yemenite singing.

She was asked to come to Oslo to sing when Yitzhak Rabin, Shimon Peres, and Yasser Arafat received the Nobel Peace Prize. She received second prize at the Eurovision contest.

Ofra Haza recorded 25 albums, including seven in foreign languages recorded in Europe and in the United States.

[Nathan Shahar (2nd ed.)]

HAZAEI (Heb. הַזְּאֵל; “God has taken note”), king of Aram-Damascus (c. 842–798 B.C.E.). According to an inscription of Shalmaneser III, King of Assyria (858–24), Hazael was the “son of a nobody” – who took the throne after Hadad-ezer (Adad-Idri) disappeared or died following his defeat by Shalmaneser (RIMA 3, p. 118). He founded a dynasty in Damascus during the unsettled period that also witnessed the accession of *Jehu in Israel and *Athaliah in Judah.

According to I Kings 19:15–16, Hazael was to be anointed king of Damascus by *Elijah, as Jehu was to be anointed king of Israel. When, thereafter, Ben-Hadad (= Hadad-ezer) lay ill, *Elisha directed Hazael, a royal servant, to tell Ben-Hadad that his illness was not fatal, but that in fact Ben-Hadad would not survive, and that Hazael would be king. The unclear text of II Kings 8:7–15 has usually been understood to mean that Hazael smothered Ben-Hadad in order to usurp the throne of his master (see, e.g., *Ben-Hadad and Pitard in Bibliography, but contrast Rashi and Gersonides a.l. as well as Lemaire). Hazael immediately began the attacks on Israel predicted by Elisha, attacking *Ramoah-Gilead and seriously injuring Joram of Israel (II Kings 8:28–29).

During the campaigns of Shalmaneser III in the West, Aram, under Ben-Hadad (or Hadadezer), had stood at the head of a southern Syrian coalition which effectively repulsed the Assyrian armies under Shalmaneser at the battle of *Karkar in 853, and thereafter in 848 and 845. In 841, when Shalmaneser again campaigned in the West, Hazael alone resisted, withstanding a siege of Damascus, while Tyre, Sidon, and Israel became vassals of Assyria. A punitive campaign by Shalmaneser in 838 again failed to subdue Damascus, and the Assyrians withdrew, leaving Hazael the undisputed power in southern Syria. Hazael then began a series of attacks on Israel which resulted in the period of Aram's greatest territorial con-

trol and Israel's greatest weakness. At the end of the reign of Jehu, Hazael conquered all the Israelite lands east of the Jordan, and took possession of the highlands of Galilee (II Kings 10:32–33; Amos 1:3). After Jehu's death he overran the entire territory of Israel, proceeding south along the coast to Gath on the border of Judah (II Kings 12:18–19). Hazael completely humbled the kingdom of Israel throughout the reign of Jehoahaz (II Kings 13:1–3, 7, 22), dominated the trade routes to Arabia, probably conquered all of Philistia, and even threatened Jerusalem, retreating from the city only upon the payment of a heavy tribute by Joash, king of Judah (II Kings 12:19; cf. II Chron. 24:23–24). So great was Hazael's power and domination over Israel and Judah that the resumed expeditions of Assyria under Adad-Nirari III in 805 were viewed as a liberation, and Adad-Nirari was acclaimed a deliverer (II Kings 13:5). As Dion has observed, the Aramean king who claimed victory over Israel and "the house of David" in the Tel Dan Inscription (COS II, 161–62) was most likely Hazael. The mention of the victorious king's father in that inscription would seem to conflict with the biblical characterization of Hazael as a royal servant and the Assyrian "son of a nobody," but both accounts may be "enemy propaganda" (Dion: 1999, 153–54).

Some interesting artifacts remain from Hazael's reign, of note is the ivory bed plaque inscribed as "belonging to our Lord Hazael" (*lmr'n hz'l*) that was discovered at Arslan Tash (the Assyrian provincial capital Hadattu). A horse's nose piece found in Samos, Greece, in 1984 and inscribed in Aramaic marks the year that Hazael "crossed the river" (COS II, 163).

[Tikva S. Frymer / S. David Sperling (2nd ed.)]

HAZAI, SAMU (1851–1942), Hungarian army officer and minister. Born in Rimazombat, Hazai graduated from the military academy in Vienna. He taught at the Ludovika Military Academy of Budapest and at the officers' school, of which he later became director. He was made Hungarian minister of defense in 1910 and was later given a barony and raised to the rank of fieldmarshal-lieutenant. During World War I, Hazai instituted several emergency laws, and later was in charge of recruitment for the entire Austro-Hungarian army. After the collapse of the empire in 1918 he was arrested for a short time by the Hungarian revolutionary government, and later played no further part in public affairs. Hazai converted to Christianity in his youth and had no interest in Jewish matters.

HAZAK (Heb. חַזַק; "be strong"), a salutation of well-wishing based on Moses' address to Joshua "Be strong and of good courage" (Deut. 31:7; 31:23; cf. II Sam. 10:12; Haggai 2:4). A fuller version, *Hazak, hazak venithazzak* ("Be strong, be strong, and let us be strengthened"), is recited at the Torah reading in the synagogue when one of the five books of the Pentateuch is completed (Isserles to Sh. Ar., OH 139:11). In the Sephardi ritual, the person who returns to his seat after having been called up to the Reading of the *Torah is greeted by his neighbors with *Hazak u-varukh* ("Be strong and blessed"); he replies *Barukh tihyeh* ("Be blessed"), or *Kulkhem berukhim* ("Be you all blessed").

HAZAKAH (Heb. חֶזְקָה; lit. "possession," "taking possession"), a term expressing three main concepts in Jewish law: (1) a mode of acquiring ownership; (2) a means of proving ownership or rights in property; (3) a factual-legal presumption (*praesumptio juris*) as to the existence of a particular fact or state of affairs. In its first connotation *hazakah* creates a new legal reality, unlike the latter two cases where it is merely instrumental in proving or presuming an existing one. For *hazakah* in its connotation of possession see also *Evidence, *Ownership, *Property. For (1) see *Acquisition, Modes of.

HAZAKAH AS PROOF OF OWNERSHIP

Immovable Property

Possession per se of immovable property (*karka* or *mekarke'in*, lit. "land," as opposed to *metaltelin*, "movable property") known to have belonged to another does not displace the title of the legal owner (*mara kamma*, "first owner") thereto, for "land is never stolen" (*karka einah nigzelet*; BK 95a; TJ, BK 10:6, 7c) and "is always in the possession of its owner" (BM 102b). The possessor is accordingly required to prove that he acquired the property in a legally recognized way. If, however, he has held undisturbed possession in the manner of an owner for a period of three consecutive years, without protest from the previous owner, the possessor's plea that he purchased the property or received it as a gift (from the first owner or his father) and that the deed thereto has been lost, is believed. Where his possession is not accompanied by such a claim of right (*she-ein immah ta'anah*) but merely with the contention that "no one ever said anything to me," the *hazakah* is not established (BB 3:3). Where the property is purchased or inherited from another, the holder's mere plea (some scholars require proof on his part) that the deceased or seller held possession of the property in the manner of an owner, for even one day, will validate the occupier's *hazakah*, for "he cannot be expected to know how his father came by the property" (Rashbam, BB 41a). For this reason the court would "plead the cause" of the heir or purchaser (BB 23a), to the effect that he came by the property in a lawful manner.

In Jewish law *hazakah* is part of procedural law B 170a; for this reason the laws of *hazakah* are treated by Maimonides in *hilkhot To'en ve-Nitan* and not in the book on *Kinyan*), in

contrast with the Roman law *usucapio* of the Twelve Tables, which is a matter of the substantive law whereby ownership is created by virtue of possession for a period of two years. The *ḥazakah* of Jewish law is somewhat akin to the possession in the Roman *praescriptio longi temporis* of the end of the second century C.E., according to which possession of property for 10 or 20 years effectively established title, if accompanied by *iusta causa*. There, however, possession is equally effective even if it transpires that ownership was acquired in a defective manner *ab initio*, in contrast with the Jewish law, where “he who possesses a field by virtue of a deed which is found to be defective, his *ḥazakah* is not established” (Tosef., BB 2:2; BB 32b; cf. TJ, Shevu. 6:2, 37a, where a contrary opinion is expressed).

PERIOD OF POSSESSION. According to some *tannaim* (BB 36b and BB 3:1; *Tanna Kamma*) *ḥazakah* always requires possession for a period of three full years (this period is mentioned already in the Hammurapi code, sec. 30–31). Rava, a Babylonian *amora* of the first half of the fourth century, explains the length of this period on the ground that it is not customary for a purchaser to preserve his title deed for longer than three years, and that thereafter the first owner is not entitled to demand production of the purchaser’s deed (BB 29a). In the case of a field producing one annual crop only, the period is 18 months according to Ishmael and 14 months according to Akiva, i.e., a period sufficient for the cultivation and enjoyment of three crops; a period covering the production of three crops – even if enjoyed in one year – is sufficient, according to Ishmael, in the case of a field of diverse trees whose fruits are harvested in different seasons (BB 3:1). According to Judah, a *tanna* of the second century, the period of three years applies in the case of an absent (abroad, “in Spain”) owner (BB 3:2), but one year suffices where both the first owner and the occupier are present in the same country (Tosef., BB 2:1; according to BB 41 a *ḥazakah* is immediately effective in the latter case). An analogous distinction is made in the Roman *praescriptio longi temporis*, between possession *inter absentes* (20 years) and *inter praesentes* (10 years). Some scholars (Gulak, Karl) are of the opinion (based on BB 3:2) that in ancient *halakhah* the law of *ḥazakah* was applicable only when both parties were in the same country; at the commencement of the amoraic period, this *halakhah* was interpreted as having been instituted because of “conditions of emergency” (BB 38a–b), whereby there was no means of travel between various districts within Erez Israel; in times of peace, however, *ḥazakah* is effective even in the absence of the first owner. However, the question of the operation of *ḥazakah* between parties in different countries remained a disputed one even during the early amoraic period (TJ, BB 3:3, 14a).

MANNER OF EXERCISING POSSESSION. Possession must be held “in the manner in which people normally use the particular property” (Yad, To’en ve-Nitan 11:2); it must therefore be held for an uninterrupted period, unless it is local custom to cultivate the field one year and leave it fallow the next (BB

29a). It is a requirement that the possessor not only cultivate the field, but that he also enjoy its fruits, “for the essence of *ḥazakah* is the gathering of fruit...” without which evidence of all his other activities on the land will not avail (TJ, BB 3:3, 14a; BB 36b).

PROTEST. Protest on the part of the first owner within the period of three years interrupts the occupier’s *ḥazakah*, because it has the effect of warning the occupier to preserve his title deed as proof of ownership. In ancient *halakhah* this protest (variously called עָרַר or עָרַרָה (*arar*; Tosef., BB 2:4; TJ, BB 3:3; BB 39b) and מְהַאֵה (*meḥā’ah*; BB 29a, 39a et al.) by the *amoraim* of Erez Israel and Babylonia respectively), served the procedural function of commencing litigation (analogous to the Roman *litis contestatio*) and was accordingly required to be made before the court. Doubt was already cast on this requirement by the *amoraim* of Erez Israel (TJ, BB 3:3), and according to the Babylonian *amoraim* protest requires no more than that it should be made known to the public (*gillui milta le-rabbim*) by the first owner, or that he make a statement before witnesses that he maintains his interest in the property (BB 39b). In the fourth century the Babylonian *amoraim* prescribed a formula for the protest: “*Peloni* is a robber who occupies my land by robbery and on the morrow I shall bring suit against him,” but an unqualified statement: “*Peloni* is a robber” is not an effective protest (BB 38b–39a), lest the occupier plead that “he merely insulted me and therefore I did not look to my deed” (Yad, To’en 11:7). Protest before two witnesses – not necessarily in the presence of the occupier – suffices, for the fact thereof is bound to come to the occupier’s notice one way or another (BB 38b, 39b; Yad, To’en 11:5).

Any reasonable explanation for the lack of protest is a bar to effective *ḥazakah*. For this reason *ḥazakah* does not operate between husband and wife or parent and child, each in respect of the other’s property, for in these cases the one party is not fastidious about the other’s use of the property (BB 3:3; *Teshuvot ha-Rashba ha-Meyuḥasot le-ha-Ramban*, no. 93). In suits between other related parties, the issue of *ḥazakah* is decided by the court on the merits of the evidence in each case, depending on “whether one brother relied on the other in the running of his affairs,” etc. (Resp. Rashba, pt. 1, no. 950; Tur and Sh. Ar., ḤM 149:6–8). Nor is *ḥazakah* gained by artisans (building contractors), *partners, metayers (אָרִיסִין – tenants receiving a share of the crop; see *Hiring and Letting), and guardians (see *Apotropos; BB 3:3), for they occupy by license (*reshut*; BB 42b; TJ, BB 3:5) and there is therefore no purpose in making protest against them. Possession will also not lead to *ḥazakah* when the first owner is unable to make protest, whether for lack of communication with the occupier because of emergency conditions (BB 38a–b; see above) or because the occupier came on the property by the use of force, “like those of a certain family who are prepared to commit murder for monetary gain” (BB 47a). The exilarchs (“of that time”) were also barred from gaining *ḥazakah* because the property owners “stood in awe of them” (i.e., of making protest; Yad, To’en

13:2; BB 36a; Rashbam ad loc.; Joseph b. Samuel *Tov Elem, *Teshuvot Ge'onim Kadmonim* no. 48, ascribes the lack of protest to the pleasure derived by the owners from the exilarch's use of their property). Nor could others gain *hazakah* over the property of the exilarchs, for the latter did not "hasten" to protest, because they were able to take forcible possession of their property or because they were not particular, on account of their wealth, about others using their property (BB 36a and Rashbam *ibid.*; *Ge'onim Kadmonim*, no. 48; *Beit ha-Behirah*, BB 36a). A non-Jew who acquires forcible possession and a Jew who derives his title through him do not gain *hazakah* over the property of a Jew (BB 35b), though in the time of R. Joseph, in Babylonia, it was decided otherwise, for there was a "judicial system which permitted no person to exercise duress against any other person" (*Beit ha-Behirah*, BB 36a and Git. 58b).

PLURALITY OF OCCUPIERS AND SUCCESSIVE OWNERS. *Hazakah* may be gained through someone occupying on behalf of the person claiming *hazakah*, as in the case of the tenant to whom the claimant lets the dwelling (BB 29a); and possession by one partner on behalf of another is similarly effective if each of them has occupied the property for part of the three-year period, provided that this partnership arrangement between them was publicly known (BB 29b; *Beit ha-Behirah*, BB 29b; Yad, To'en 12:5 – "since they are partners, they are as one"). The required period for *hazakah* is cumulative both as against successive "first owners" and in favor of successive possessors, who respectively derive title from their predecessors (Tosef., BB 2:7–8). At the commencement of the amoraic period, Rav determined that the combined period for which possession was held by both the seller and the purchaser would only be cumulative in the case of a sale by deed, as in this manner the matter would become public and the "first owner" aware that a cumulative *hazakah* was challenging his ownership.

ASPECTS OF HAZAKAH IN POST-TALMUDIC TIMES. Aspects of *hazakah* were discussed by the *posekim* against the prevailing social and communal background. One matter discussed was the application of *hazakah* to a permanent seating place in the synagogue, which became an asset capable of being alienated and inherited (Sh. Ar., ḤM 162:7; Rema and *Pithei Teshuvah* ad loc.). Some of the scholars recognized the application of *hazakah* thereto (Meir ha-Levi Abulafia and others), but stress was laid on the difficulty of establishing uninterrupted synagogue attendance at all appointed services for three years – a requirement for effective *hazakah* (*Shitah Mekubbezet* and Nov. Ritba to BB 29b). Some scholars excused absence on account of illness or mourning (*Beit ha-Behirah* BB 29a) and even occasional absence for pressing business reasons (Responsa Rashba pt. 1, no. 943; Tur, ḤM 140:16; *Beit ha-Behirah* BB 29a differs), and the latter view prevailed (*Beit Yosef* ḤM 141:2; Rema ḤM 140:8). On the other hand, *hazakah* was generally not recognized as extending to public and communal property such as consecrated property, *talmud torahs*, chari-

table institutions, and the like, for "who shall make protest?" (Rashba, pt. 1 no. 642), and when recognized, *hazakah* was held to be effective only under special circumstances and in respect of property in the care of appointed officials or seven representative citizens (Tur and Sh. Ar., ḤM 149 end).

Many of the discussions of this period centered on relationships between Jews of different social status and between Jews and their gentile neighbors. The talmudic *halakhah* precluding others from gaining *hazakah* of the property of exilarchs and vice versa was discussed by Solomon b. Abraham *Adret and *Asher b. Jehiel in relation to the property of Jews who held official positions and exercised authority. Both decided that the cases were not analogous, for the exilarchs functioned as "quasi-royalty" and "... in these generations a Jew who should find favor with the king does not impose such awe..." as would deter the owner of property from protesting (Resp. Rosh 18:17; Resp. Rashba, pt. 1, no. 941; Tur, ḤM 149:13; *Sma* ḤM 149, no. 18; *Siftei Kohen* ḤM 149, n. 12). The question of *hazakah* in relation to a non-Jew or a Jew deriving title through him was frequently treated and the decision made dependent on the prevailing attitude of the central government toward the particular Jewish community: "In a case where the Jew can bring the non-Jew before the court of the land, a Jew deriving title through a non-Jew has *hazakah*" (Ravyah, quoted in *Mordekhai* BB 3:553; Rah quoted in the Nov. Ritba, BB 35 and see Ha-Ittur's dissenting opinion; cf. also Tur and Sh. Ar., ḤM 149:14 and 236:9; BB 55a and commentators ad loc.). Some of the *halakhot* of *hazakah* relating to immovable property were applied also in the matter of *Hezkat ha-Yishuv* ("the right of domicile").

Movable Property

Contrary to the rule in the case of immovable property, "movables" are in the *hazakah* of the person having the physical possession thereof even if the plaintiff brings witnesses that the movables are known to belong to him, and the former's plea that he acquired them according to law is accepted (Yad, To'en 8:1; Tur, ḤM 133:1; source of the rule: BB 3:3; Tosef., BB 2:6; only "the launderer has no *hazakah*"), except when the chattels are known to be stolen property (BK 68b, 94b; Sh. Ar., ḤM 354:2). The authorities were in dispute on the requirement of a plea of right on the part of the possessor in the case of movables (*Shitah Mekubbezet* BB 28b). *Hazakah* of movables is gained forthwith, possession for a period of two or three days and sometimes even one hour – depending upon the subject matter – being sufficient (BB 36a and Rabbenu Gershom ad loc.; also Rashbam BB 42a). However, not every *tefisah* ("taking of possession," "seizure") establishes valid *hazakah*, thus "... if they saw him hiding articles under his garments and he came out and said 'these are mine' he is not believed," unless there is a reasonable explanation for this type of behavior, as in the case of articles which are habitually concealed and the like (Shevu. 46a–b).

The rule excluding the operation of *hazakah* as between "first owners" and possessors standing in a special relation-

ship toward each other (see above) applies also to movables, e.g., in the case of the artisan, the bailee, etc. (BB 3:3; Tosef., BB 2:5–6). Similarly it does not operate in respect of “articles which are made to be given on loan or hire” (Shevu. 46a–b), where the first owner may account for the fact that movables of this type are found in the hands of the possessor on these grounds. On the other hand, the first owner’s claim that these movables were stolen from him is not believed, for this is an admission that they were not lent and “we do not presume a man to be a thief” (Shevu. 46b; Rosh and Ran ad loc.). Most commentators include in the category of “articles which are made to be given on loan or hire,” all chattels “which are likely to be lent by their owners” (Rif and Ran to Shevu. 46b). According to this view, only chattels which their owners fear may be damaged, such as certain types of books (Rashi to Shevu. 46b), or those which are particularly valuable, such as articles of silver and gold (*Terumat ha-Deshen*, no. 335), are not to be considered as made to be given on loan or hire. This view is opposed by Maimonides, who holds that such a view in effect invalidates in respect of most movables – the principle that a thing must be considered to be the property of the person in whose possession it is found. Maimonides distinguishes between articles which are “likely to be given on loan or hire” – in which category he places all movables – and things which are “made to be given on loan or hire,” defined by him as articles which in a particular locality are specifically made with a view to their being borrowed or hired for a fee and not for sale or home use, such as “large copper kettles for cooking at celebrations,” *hazakah* being included in the latter case only (Yad, To’ën 8:9); other articles may also come within the latter category but only where their owner has witnesses to prove that he has constantly lent or hired them out and that he holds them for such purpose (To’ën 8:9 and 10 and Rabad’s stricture thereon).

SPECIAL CATEGORIES OF MOVABLES. In the case of slaves, a period of three years is required for effective *hazakah* (BB 3:1). Animals (livestock) were apparently deemed to be like other movables in the tannaitic period, i.e., *hazakah* was effective immediately; this may be deduced from the existence of a special ruling precluding shepherds from acquiring *hazakah*, as in the case of the artisan and bailee (Tosef., BB 2:5). At the commencement of the amoraic period, Simeon b. Lakish determined that the normal rule of *hazakah* did not apply in respect of livestock (BB 36a), for they “stray from place to place” (TJ, BB 3:1, 13d) and therefore “the fact of detaining it under his hand does not constitute proof, for it went of its own accord into his *reshut*” (i.e., domain; Yad, To’ën 10:1). Differing opinions were expressed with regard to establishing *hazakah* in respect of chattels not falling within the normal rule, e.g., articles made to be given on loan or hire and livestock; some of the *posekim* expressed the opinion that in these cases *hazakah* is never established; others held that it is established after a period of three years; and some held that there is no fixed period for effective *hazakah*, the court having

the discretion to decide the matter in each case (*Yad Ramah* BB 36a; Rashbam BB 36a; Nov. Ritba BB 36a; Nov. Rashba BB 46a; Tur, ḤM 133:10 and 138:1–2; Resp. Maharam of Rothenburg, ed. Prague, no. 180).

See also *Limitation of Actions. For *hazakah* in relation to servitudes (*hezkat tashmishim*) and torts see *Servitudes.

HAZAKAH AS A LEGAL-FACTUAL PRESUMPTION

This occurs in a number of forms:

(1) A legal presumption of the continued existence of a once-ascertained state of affairs, until the contrary be proved – “an object is presumed to possess its usual status” (Nid. 2a), e.g., that the flesh of an animal is presumed to be forbidden as having been cut from a living animal until it is ascertained that it was ritually slaughtered; once slaughtered, the animal’s flesh is presumed to be permitted unless the manner in which it became *terefah* becomes known (Ḥul. 9a); that the husband is alive at the time that the bill of divorce is handed to the wife, even though he was old or ill when the agent or *shali’ah* left him (Git. 3:3); similarly the presumptions of normal health and fitness, referred to variously as *hezkat ha-guf* (Ket. 75b), *hezkat bari* (Kid. 79b; BB 153b), and *hezkat kashrut* (BB 31b).

(2) A legal presumption of the existence of a fixed and accepted custom or of the psychological nature of man, such as the following: that an agent fulfills his mandate (Er. 31b); that a woman does not have the impudence to declare (falsely) in her husband’s presence that he has divorced her (Yev. 116a) and she is therefore believed; that a debtor does not settle his debt before due date, therefore his plea (without proof) that he repaid the debt before due date is not believed (BB 5a–b); that a **haver* does not allow anything which is untithed to leave his hands and therefore if he dies leaving a silo full of produce, this is presumed to have been tithed (Pes. 9a); that no man affixes his signature to a document unless he knows the contents thereof, and he cannot therefore plead that he did not read or understand its contents (PDR 1:293–5).

(3) Legal presumptions permitting a conclusion of fact to be inferred from particular surrounding circumstances. Presumptions of this kind were relied upon even in cases of capital punishment, as if the conclusion had been proved by the evidence of witnesses: “we flog ... stone and burn on the strength of presumption” (Kid. 80, and examples there quoted), “even where there is no testimony on the matter” (Rashi ad loc.). Similarly, in certain circumstances a woman reputed to be married to a particular man was held to be his wife (Yad, Issurei Bi’ah, 1:21, as per TJ, Kid. 4:10).

Support for the validity of the latter presumptions was found in the law of the Torah that the penalty for “one who curses or smites his father” is death: “how do we know for sure that he is his father? Only by way of presumption” (Yad and TJ, loc. cit.; in Ḥul 11b, the aforesaid *halakhah* concerning “one who smites his father” serves as a basis for deduction of the *majority rule).

[Menachem Elon]

IN THE MIDDLE AGES AND EARLY MODERN TIMES

Hazakah was one of the main normative concepts of Jewish economic and social life. In the course of time it was applied to the most varied rights and objects: e.g., right of settlement in a given community, rights over a certain clientele, as well as rights to seats in a synagogue, and the right to exercise certain honorific functions at religious services.

Since it fitted into the structure and spirit of the guilds and civic economy and social morality, *ḥazakah* developed and proliferated. Based in principle on talmudic law (see above), its widening application came through communal authorities enacting new **takkanot* to meet new circumstances (see **Arenda*, Councils of the **Lands*, *Ḥerem *ha-Yishuv*, **Ma'arufyah*, and **Poland-Lithuania*). For that reason it was mainly the lay leaders of the communal administration (*kahal*), not the rabbi, who passed final judgment on the protection of tenancy and other acquired rights. The dispensation of *ḥazakah* ultimately rested upon the goodwill of the community and its leaders. As a result, practices varied in different communities, from town to town, and certainly from country to country. The prohibition on settling in a community without permission (*herem ha-yishuv*) was the source of one of the main forms of *ḥazakah*. *Ḥazakah* proper generally applied to tenant protection, whereby no Jew was permitted to rent from a gentile owner a house occupied by another Jewish tenant without the latter's consent, a right the latter usually acquired after three years of occupancy. The purpose of the prohibition was to prevent raising the rents of old or new tenants. An ordinance attributed to Gershom b. **Judah* stated that the house of a gentile from which a Jew had been evicted might not be leased by another Jew for an entire year. Even houses owned by Jews were included in similar decisions by the conference of Candia in 1238 and by some halakhists. At a meeting of elders in Ferrara in 1554 it was resolved:

Whereas there are some who infringe the *takkanah* of R. Gershom, which forbids any Jew from ousting another Jew from a house rented from a Christian landlord, and whereas such offenders claim that when the landlord sells his house the Jewish tenant thereby also loses his *ḥazakah*, we therefore decree that though the Christian owner sell his house, the right of the Jewish tenant to retain possession is unchanged; any Jew who ousts him is disobeying the *takkanah* of R. Gershom and also this *takkanah*, now newly enacted?"

In Italy this law, which was recognized by the authorities, was called *jus gazaga* or *casaca*. The Lithuanian Council of the communities adopted a rule in 1623 that a house owned by a gentile and rented to a Jew who had a *ḥazakah* on it might be sold to another Jew by permission of the head of the *bet din*. The buyer thereby also acquired the *ḥazakah*. However, if he did not move into the house himself, he had to grant the tenant priority in occupying the house. The same ordinance was made to apply to a store in the market-place which was also governed by the three-year *ḥazakah* rule; in this case the buyer had to recompense the tenant for his *ḥazakah* costs. Although few *ḥazakah* records remain for Polish Jewry in

the days when its council functioned, the communal law was enforced in Poland also. The practice was particularly prevalent in countries where Jews could not own lands, or were restricted to crowded ghettos or voluntarily inhabited Jewish quarters. The rule was a necessity to prevent exorbitant rent. In Spain, where Jews could own land, the *ḥazakah*, or *praescription*, applied to ownership of land as well as to rentals. Since *ḥazakah* was an important property right, it was negotiable, testable, and used as a dowry. The *kahal* made it an important source of income.

In Russia *ḥazakah* persisted long after the abolition of the *kahal* in 1844. The leaders of the Minsk community sold possession of a gentile's store to a Jew and bound every future *kahal* to protect this man's right to the acquired option on the property. The same enforcement of acquired rights was practiced with equal stringency within the Jewish community: merchants were shielded against outside competition; there were rules against the importation of meat and wine and many other protectionist regulations; artisans could acquire a form of *ḥazakah* on a customer, *ma'arufyah*, whereby no other craftsman was permitted to do work for him; a person could acquire rights to a seat in the synagogue, to a Torah Scroll, or to ornaments loaned to the congregation for its use. The term *ḥazakah* also applied to tenure of communal workers. In Moravia a law was passed that a rabbi who refused to appear in court to be tried, or engaged in trade, could lose his tenure and be dismissed.

[Isaac Levitats]

Hazakah as a Legal-Factual Presumption

The second category mentioned above – i.e., reliance on the presumed nature and behavior of human beings – also includes another form of legal presumption, pertaining to a will written by a person in a life-threatening situation. The context may either be that of a *shekhiv me-ra* (a person presumed to be dying), or that of a healthy person who regards himself as being in a life-threatening situation. In both cases the assumption is that the will reflects the testator's full and binding intention. Moreover, in the case of a deathbed will (i.e., the will of a *shekhiv mera*) the will is valid even without a *kinyan*, because we assume that, due to the unique circumstances of its making, it reflected the person's final decision (Maimonides, *Yad*, *Zekhiyah u-Matanah* 8.2, 4, 24, 26.)

In an Israeli Supreme Court decision in the *Koenig* case (FH 80/40 *Koenig v. Cohen*, 36(3) PD 701), Justice Menachem Elon held that this halakhic rule should determine the interpretation of Section 23 of the Succession Law, 5725 – 1964. Section 23 utilizes the term *shekhiv me-ra*. Justice Elon ruled that the use of this talmudic term indicates its origin in Jewish law regarding a deathbed will, and hence the applicability of the Jewish law to such a case. The decision in the *Koenig* case related to a case in which a woman left a will on a piece of paper without a date or signature just before she killed herself. The justices disputed the legal validity of the will, and Justice Elon contended that the will should be seen as a deathbed will and therefore valid, notwithstanding its deficiencies and flaws, on

the basis of the aforementioned legal presumption. (*ibid.*, pp. 733–738.; cf. *Acquisition, *Succession)

Another legal presumption is that “a son does not dishonor his father” (*Resp. Zikhron Yehudah* § 92; R. Judah b. R. Asher [Asheri]). In the *Hager* case the Supreme Court based its ruling on this presumption (CA 1482/92 *Hager v. Hager* judgment 47(2) 793; per Justice Elon, p. 806). The case concerned a disagreement between the widow and the parents of the deceased. The widow had unilaterally erected a tombstone on the grave. The parents applied to the Court, requesting it to order that the engraving on the tombstone be changed, *inter alia*, because it did not include the names of the deceased’s parents. On the basis of the aforementioned legal presumption the Court ruled in the parents’ favor, determining that the deceased would not have wished to distress his parents by omitting their names from his tombstone.

HAZAN, YA’AKOV (1899–1992), Israeli political leader and leading figure in the *Mapam socialist party; member of the First to Seventh Knessets. Born in Brest Litovsk in Russia. Hazan studied in a reformed *heder*, then later at a Hebrew high school and the Warsaw Polytechnicum. In 1915 he was one of the founders of the Hebrew Scout movement in Poland, which developed into *Ha-Shomer ha-Za’ir, and of the *He-Ḥalutz movement in Poland. In 1923 he immigrated to Palestine, where he worked as a farm laborer and in the draining of swamps before settling in kibbutz Mishmar ha-Emek and participating in the foundation of *Ha-Kibbutz ha-Arzi, the kibbutz movement of Ha-Shomer ha-Za’ir in 1927. For many years he was a member of the *Histadrut Executive. Together with Meir *Ya’ari he headed Ha-Kibbutz ha-Arzi, and later

Mapam. While Ya’ari was more of an ideologue and writer, Hazan was a brilliant orator and charismatic leader. Until the mid-1950s he supported, together with Ya’ari, a pro-Soviet line. In the Knesset he was Mapam’s main spokesman on foreign and defense issues. In the Third, Fourth, Sixth, and Seventh Knessets, when Mapam had representatives in the government, neither he nor Ya’ari accepted ministerial positions. Prior to the elections to the Ninth Knesset in 1969 he was one of the architects of the establishment of the Alignment between Mapam and the *Israel Labor Party, and fought against those who wished to dissolve it. Within Mapam he was considered to be relatively hawkish in his positions. However, in 1984 those within Mapam who objected to the establishment of the National Unity Government between the Alignment and the *Likud gained the upper hand, and Mapam returned to being an Independent parliamentary group in the Knesset. In 1989 Hazan received the Israel Prize for exemplary lifelong service to Israeli society. Among other writings he published the autobiographical *Yaledut u-Ne’urim* on his childhood and youth.

[Susan Hattis Rolef (2nd ed.)]

HAZANI, MIKHA’EL YA’AKOV (1913–1975), Israeli politician; one of the leaders of the *National Religious Party. Hazani was born in Bedzin, Poland, and studied at a rabbinical seminary. Immigrating to Erez Israel in 1931, he became a prominent member of the Lamifneh faction of *Ha-Po’el ha-Mizrachi. He was one of the pioneers settling Kefar Jawitz and a supporter of Jewish settlement in the Lower Galilee. Considered one of the founding fathers of religious settlement, he was an enthusiastic supporter of the development of Gush Katif. The name of Moshav Katif was changed in 1975 to Nezer Hazani in commemoration of him; it was evacuated in 2005 along with the other settlements in Gush Katif.

Hazani was elected to the Knesset in 1951. Specializing in economic affairs he was appointed vice chairman of the boards of the Bank of Israel and the Mizrahi Bank. He was appointed deputy minister of education in 1969 and succeeded Yosef Burg as minister of social welfare in 1970. He was reappointed in the short-lived government of Golda Meir, formed on March 10, 1974, but submitted his resignation on April 2 as a result of his disagreement with his party’s attitude on the question of “Who is a Jew?”

On October 30, 1974 Hazani was again given the portfolio of social services when the National Religious Party rejoined the coalition and he served in this capacity until his death in 1975.

HAZAZ, HAYYIM (1898–1973), Hebrew writer. Born in Sidorovichi (Kiev province), Hazaz received a traditional and secular education, studying Hebrew and Russian literature. From the age of 16 (1914), when he left home, to 1921 he

moved from one large Russian city to another. During and after the Russian Revolution he worked in Moscow on the Hebrew daily *Ha-Am* and at the time of the Denikin and Wrangel pogroms he was in the Ukraine from where he escaped to the Crimean Mountains (1920). Hazaz went to Constantinople in 1921 where he lived about a year and a half and then moved to Western Europe, spending nine years in Paris and Berlin. The German capital had for a short time in the early 1920s become the Hebrew literary center after the Russian one had been destroyed by the revolution. Early in 1931 he left for Erez Israel and settled in Jerusalem. Hazaz was politically active much of his life. He was the president of the Israel-Africa Friendship Association from 1965 (when it was founded) until 1969. After the Six-Day War (1967) Hazaz was prominent in the Land of Israel movement calling for settlement in the territories occupied during the war and for their permanent inclusion in the State of Israel.

Early Period – Russia

Hazaz began his literary career in Russia, publishing in *Ha-Shiloah* (1918, 274–84) under the pseudonym H. Zevi “*Ke-Vo ha-Shemesh*,” a sketch, followed half a year later by his only short poem, “*Al ha-Mishmar*,” dedicated to Saul Tchernichowsky. “*Meri*” and “*Ma’amar Moshe Rabbenu*” also appeared in *Ha-Shiloah* (1925, 1926), but under his own name. Hazaz published much during this period; his stories were well received and he gained wide acclaim. Many of his stories are set against the background of the Russian Revolution, among these are: “*Mi-Zeh u-mi-Zeh*” (“From This and That,” in *Ha-Tekufah*, 21 (1924), 1–32); “*Pirkei Mahpekhah*” (“Chapters of the Revolution,” *ibid.*, 22 (1924), 69–97); and “*Shemu’el Frankfurter*” (*ibid.*, 23 (1925), 81–184). The overall theme is the fate of the Jewish *shtetl* and the chaos and destruction wrought in its traditional way of life by the revolution whose impact is however only implicitly expressed. It is reflected in the interaction of forces from within and from without rather than directly represented by any single character. In all three stories only one non-Jewish revolutionary appears. Hazaz’ fundamental interest in the revolution is thus on the level of human relations and understanding where it sowed bewilderment and confusion. The brief and concise description of events, trends, emotions, and characters and the fragmentary dialogue lend reality and immediacy to the narrative. However, the division of characters into the young revolutionary generation on the one hand and the anti-revolutionary older generation on the other is somewhat schematic. The general pervading mood is one of destruction in which the old world is wrenched from its axis while the new world is as yet not clearly focused. Thus the older generation, in the throes of tragedy, gains the sympathy of the reader. The young, however, are neither accused nor derided and even the irony directed against them is mild. Hazaz rewrote two of the stories: “*Mi-Zeh u-mi-Zeh*” became “*Nahar Shotef*” (“Flowing River,” 1955, 1958, 1968), and “*Pirkei Mahpekhah*” became *Daltot Neḥoshet* (“Copper Doors,” 1 vol., 1956; 2 vols., 1968). Best among the revolutionary stories, “*Shemu’el*

Frankfurte,” has as a protagonist a revolutionary idealist, a Jesus-like figure, whose noble character leads him to a martyr’s death. The story was excluded from his collected works and the author has stated that it needs rewriting (*Ma’ariv*, Sept. 26, 1969). At this time Hazaz also wrote a number of works not on the *shtetl* theme. “*Hatan Damim*” (“Bridegroom of Blood,” in *Ha-Tekufah*, 23 (1925), 149–72), a prose poem, unfolds against the stark Midian desert. Zipporah, the wife of Moses, is portrayed as a tragic figure abandoned by her husband who had become a man of God. Modern in tone, the work is a lyrical masterpiece. It appeared in all of Hazaz’ editions (in four slightly different versions) including a bibliophilic edition. *Be-Yishuv shel Ya’ar* (“In a Forest Settlement,” 1930), Hazaz’ first novel, is set in the early 1900s during the Russo-Japanese war. The plot centers around a Jewish family living among gentiles “in a forest settlement” and evolves against a background of revolutionary ideas and the disintegration of tradition. The gentile characters are tall strong woodcutters closely tied to their native soil. On the surface the members of the Jewish family seem to be living peacefully but beneath the apparent calm lurks the reality of the Jew’s rootlessness. This alienation casts him simultaneously in a derisive and in a tragic light. The Jewish characters seem to be haunted by a fatalistic pessimism which affects everything they do. Thus they view their moving to the countryside and their abandoning of traditional values as determined by fate. The parodic and satiric figure of the young *melammed*, a revolutionary who expounds Marxian theories, also believes that his failure to be active in political affairs is predetermined by fate. The underlying symbol of cutting down the trees is imbued with Jewish characteristics. *Be-Yishuv shel Ya’ar* has not been included in any edition of Hazaz’ works. He called it “a book full of printing errors and sown with some wild oats. This book does not exist for me” (*Ma’ariv*, Dec. 29, 1967), and yet he thought of rewriting it (*Ma’ariv*, Sept. 26, 1969).

Erez Israel

Reḥayim Shevurim (“Broken Millstones,” 1942) marks the beginning of Hazaz’ Erez Israel period. Six stories are still set in the Jewish *shtetl* while the remaining three depict life in Erez Israel. The themes of the Diaspora stories – poverty, the *bet ha-midrash* and Torah study, interest on loans, loafers’ banter, *maskilim* and gentiles, and riots – were also treated by his predecessors, but his individualistic outlook and style invested them with new meaning, originality, and verve. In “*Shelulit Genuzah*” (“The Hidden Puddle”), the protagonist, Eliah Kotlik, a pauper, runs away from his ever-nagging wife. The story is built upon a series of “flights” which reach their climax in his escape from Reb Kamatzel, who owes him money. Kotlik’s last flight is of a moral nature motivated by the precept of the Torah not to harass an impoverished debtor. The contrast between the first and last flights points up the spiritual growth of the hero: the fleeing victim of the first flight turns into the fleeing persecutor of the last. On another level, the last flight reveals the shortcomings of the value system

of modern society in contrast to that of traditional Judaism. Despite its debased material conditions, the Judaism of the *shtetl* was imbued with a great humanitarian spirit. Kotlik's jump into the muddy puddle is thus a symbolic act: he disturbed "... the stagnant puddle which had been contemplating the heavens." *Adam mi-Yisrael* ("A Jew") is a story episodic in structure whose narrator, the protagonist's son, relates the wanderings of his father from *bet midrash* to *bet midrash* and his death at the hand of rioters. A *shtetl*'s mute cry on the day of a riot permeates *Ashamnu* ("We Have Sinned"), an ideational story. The quelled attempt at rebelling against the conventional behavior of the *galut* Jew in the face of danger serves but to heighten the anguish of the writhing *shtetl*. The tone, bitter and hostile, carries a note of choked helplessness. The structural framework of *Dorot Rishonim* ("First Generations") is a retrospective view of the destroyed *shtetl* on which Hazaz lavishes praise. The aura of stability and spiritual harmony of the *shtetl* is however disturbed by a sense of imminent danger. Erez Israel is the locale of *Ha-Tayyar ha-Gadol* ("The Big Tourist"). The protagonist, a grotesque character, is drawn against the background of a satiric-humoristic description of the numerous holy historical sites that seem to spring up all over Erez Israel. Hazaz' second major work, *Ha-Yoshevet ba-Gannim* ("Thou That Dwellst in the Gardens," 1944), is a novel which narrates the experiences of three generations of Yemenites living in Erez Israel. The generation of elders is represented by an old man who dreams of the Messiah and tries to calculate his advent. Moving in a visionary world of his own, his sanity at times is doubted. His son represents the second generation that has thrown off the burden of the traditions of Yemenite-Jewish culture, but at the same time has not adapted to the cultural milieu of Israel. The third generation, the young daughter, though alive to the new environment, is unable to strike deep roots in the new culture and her integration remains superficial. *Avanim Rotehot* ("Boiling Stones," 1946), his third book, is comprised of 10 stories, the first of which is the second edition of *Hatan Damim*. "Galgal ha-Hozer," *Ba'alei Terisin*, and *Yerahem ha-Shem* are sketches of Yemenite life. *Harat Olam* and *Havit Akhurah* depict the life of German-Jewish immigrants in Erez Israel. Humor and tragedy become inextricably intertwined especially when a ludicrous, grotesque, and mixed-up Israeli intrudes upon their life and creates even greater confusion. *Esh Bo'eret* and *Drabkin* are insights into the lives of immigrants from Eastern Europe. The former describes the naive devotion of *halutzim* who, despite overwhelming hardships, escaped from Russia. In the latter the protagonist, Drabkin, is an embittered Zionist who in the Diaspora had dedicated his life to the rebuilding of the homeland but in Erez Israel was unable to find a significant role to play in its life. Drabkin's rejection is psychological. Having been badly received on arrival he projects his frustrations onto his ideals. The gap between ideals and their practical realization is questioned by a number of Hazaz' heroes. In *Ha-Derashah* ("The Sermon"), perhaps the most famous of his works, the hero, Yudke, strongly criticizes

the accepted notions of Zionism. He objects to Jewish history which he describes as a boring chronicle of massacre and futility; a history created by the gentiles rather than willed by the Jewish people. He exhorts the Haganah leaders to wipe this humiliating and soiled record of a sorely tried people from the consciousness of the "new Jew." Jews of the past, he argues, wallowed in the tragedy of exile, they really did not wish to be redeemed. Traditional Judaism while praying for redemption was actually bent on preventing it. The story has many artistic flaws; on the first level it is clearly didactic and verbose. Another level, however, which gives the story dramatic impact, is created by the hero, a psychologically motivated round character, whose inner conflicts become apparent during his sermon; by the catcalls which his speech evokes; and by the network of imagery interwoven through the fabric of the story.

Hazaz' most comprehensive work, *Ya'ish* (4 vols., 1947–52), is set within an ethnological framework and traces the life of Ya'ish, a young Yemenite Jew. An ascetic and a dreamer, he abandons his mysticism upon his arrival in Erez Israel. The work is a deep psychological probing into the inner recesses of Ya'ish's mind. Hazaz demonstrates an amazing familiarity with Yemenite culture and its rich religious heritage. These form a closely woven pattern within which the trials and conflicts of the protagonist are enacted. The emotional range and tension of the hero's struggles are filtered through the agonizing experience of a man whose fertile imagination and hallucinations are those of a kabbalist, whose perception is deep and penetrating, and whose inner struggles reveal a suffering divided soul. A network of symbols is woven through the fabric of the story highlighted by such fantasy scenes as Ya'ish's ascent to heaven where he converses with the angels. The Yemenite world with its local color and folklore is vividly and realistically conveyed and Ya'ish's life, steeped in mysticism, stands out in sharp relief against the backdrop of the humdrum life of the community. During the time that Hazaz wrote *Ya'ish*, he also published *Be-Kez ha-Yamim* ("At the End of Days," 1950) a play set in Germany (Ashkenaz) during the time of *Shabbetai Zevi; the theme of redemption not only creates the mood but is the motivating force of the dramatis personae. Despite the historical setting, the confrontation of ideas and concepts transcends time and place. The hero, a zealous advocate of messianism, faces a hostile public led by the rabbi who is the very embodiment of rationalist orthodoxy. The central theme of the drama is similar to that of *Ha-Derashah*: Jews suffer exile because they lack the courage to be redeemed. *Daltot Ne'oshet* (1956), an adapted and extended version of *Pirkei Mahpekha*, was considerably revised stylistically. The author expanded the descriptive passages and restrained the expressionistic outbursts of the narrator whose personal feelings and attitude toward the revolution are now that of an outsider, the "objective observer." Instead of the earlier stormy fearful mood, the style is freighted with minute ironic descriptions. A retrospective tone weaves its way through the fabric of the story deflecting, and at times distorting, the narrator's angle

of vision. *Ḥagorat Mazzalot* ("The Zodiac," 1958) is a collection of three stories: "Ofek Natui," "Ḥuppah ve-Tabba'at," and "Nahar Shotef." The plot of "Ofek Natui" ("Horizon") unfolds against the background of the Lachish region, an area developed for agricultural settlement in the 1950s; the theme is again the basic Jewish problem of Diaspora versus "redemption." The protagonist of "Ḥuppah ve-Tabba'at" ("Canopy and Wedding Ring") is an old Tel Avivian woman who lost all her sons in the Holocaust. She supports herself through peddling notions in cafes and donates her last penny toward the writing and consecration of a *Sefer Torah*. This symbolic act underlines her death which comes to her while she has a vision on the seashore. She leaves life, in which she was an alien, to go to a world where she belongs. *Nahar Shotef*, an adaptation of "Mi-Zeh u-mi-Zeh," shows similar stylistic changes as those effected in *Daltot ha-Neḥoshet. Be-Kolar Ehad* ("In the One Collar," 1963; translated into French and Swedish) harks back to the struggle waged by the Jewish underground against the British in Palestine. The protagonists, young Jewish fighters condemned to death, cheat the hangman by committing suicide (the story is based on an actual occurrence). The question of Diaspora, redemption, and *Kiddush ha-Shem is also a major theme here. The concept of self-sacrifice as an ideal holy to man is present in all of Hazaz' works.

A revised edition of all his writings appeared in 1968. Hazaz more than once rewrote many of his works and while claiming that he remained faithful to the essence of his writings (*Moznayim*, 26 (1968), 261), he also insisted that whoever only read his early writings, without rereading them in the later editions, would not know him (*Ma'ariv*, Dec. 29, 1967). Hazaz' writings are extensive geographically, historically, and ethnographically. Geographically, he ranges over an area that extends from the far north of Russia to the south of Yemen, from Germany in the west to Erez Israel in the east. Historically his creative imagination encompasses biblical times, prior to the revelation at Mount Sinai, extending to the Second Temple period before the destruction of the Temple, the messianic dreamers in Germany, the prerevolutionary period and the revolution years in Russia, the riots in the Diaspora and in Erez Israel, the Holocaust generation and the one that has been resuscitated out of its own ashes, the fighters for Israel's freedom, and the new settlement in Israel. Ethnographically he roams over much of the Diaspora (from Russia to Yemen), probing into the life of different segments of the Jewish people and portraying them in their original dwellings and in their new homes. His themes form a network of fundamental ideas and phenomena of contemporary Jewish life, which he relates to the history of the nation. The modern Jewish period he sees as a link in the great chain of Jewish national history and of the different Jewish historical epochs: "These are multivariant parts of culture of one national personality which have been welded together" (*Hed ha-Ḥinnukh*, no. 37 (1968), 7). This concept of unity is also reflected in Hazaz' style and language, whose imagery and multiplicity of meaning are rooted in the ancient sources, thus encompassing and integrating simulta-

neously sources and originality. The wealth of his linguistic associations and his original imagery, at once real and fictitious, are the hallmarks of his style. Hazaz in his writings drew on his very wide knowledge of Talmud and Midrash to weave an intricate literary pattern. Thus many of his references and allusions are somewhat obscure to the average modern reader. In his revisions he has tended to minimize Arabic idioms which he had used extensively to create an effect of colloquial speech. He also deleted kabbalistic and *gematria* allusions and plays on cryptic words to arrive at a more limpid style. All his revisions thus have a sense of novelty and freshness. A movement from the tragic to the grotesque and satiric can be discerned in most of Hazaz' writings, especially in his later works. He uses different stylistic devices to achieve the tragic-comic. In his Russian tales the *shtetl* often rises to tragic stature, only to sink into caricature. A juxtaposition of sublime beliefs and the pettiness of those who profess them strikes the tragic-comic note in the Yemenite tales: thus the exalted redemptive theme of *Ha-Yoshevet ba-Gannim* is offset by parody; and the tragic moments in *Ya'ish* are undermined by the absurd. The play *Be-Kez ha-Yamim* borders on the tragic-grotesque. Hazaz was awarded the Israel Prize for literature in 1953.

[Jacob Bahat]

Hazaz was awarded the Bialik Prize for the second time in 1971 and the following year the Annual Prize of the American Academy for Jewish Research. In 1973 there appeared a collection of 16 short stories under the title *Even Sha'ot*, one of which, "Otto ha-Ish," has been translated into English, French, German, Spanish, Swedish, and Russian.

The first work published after his death by his wife, as his executor, was *Pa'amon ve-Rimon* (1975), consisting of 20 short stories written between 1969 and 1973. It was followed by *Mishpat ha-Ge'ulah* (1977), a collection of his essays and public addresses delivered on various occasions between 1950 and 1973, and in the same year a third printing of his 15 volumes was published in a paperback edition (Am Oved).

Hazaz was one of the initiators of Bet Ha-Sofer, the Hebrew Literary Center in the Old City of Jerusalem, and after his death the building was named in his honor.

An English translation of Hazaz's *Daltot Neḥoshet* (*Gates of Bronze*) was published in 1975. A French translation of *Be-Kez ha-Yamim* (*A la Fin des Temps*) was published in 1977 and an English translation entitled *The End of Days* 1982. "Raḥamim" appeared in G. Abramson (ed.), *The Oxford Book of Hebrew Short Stories* (1996). For English translations see: Goell, Bibliography, 2140–69, 2648, 2817; see also Spicehandler, in *Ariel* 1967. For further translations see ITHL at www.ithl.org.il. For a bibliography of Hazaz's works see R. Weiser (1992).

HA-ZEFIRAH (Heb. הַזְפִּירָה, “The Dawn”), a Hebrew paper appearing in Warsaw intermittently between 1862 and 1931. Founded as a weekly in 1862 by Ḥayyim Selig *Slonimski, *Ha-Zefirah* was devoted to science and technology, the only Hebrew paper of its kind during the 1860s and 1870s. The space devoted to news and Jewish scholarship was negligible. Slonimski, who had written scientific books in Hebrew from the 1830s, sought a regular forum for tracing the development of the sciences, which were expanding rapidly in those years. S. *Abramovitsh (Mendele Mokher Seformim), writing on science and technology, contributed regularly, but Slonimski was the principal contributor to most issues. The paper ceased publication after six months when the editor was appointed principal of the rabbinical school in Zhitomir. When that institution closed down in 1874, Slonimski revived *Ha-Zefirah*. Unable to obtain a permit in Russia, he published the paper in Berlin in the summer of 1874, with the aid of J.L. *Kantor. Although still mainly devoted to the sciences, Kantor introduced into the paper topical articles, political commentaries, and reports from Russia and other countries. Finally, Slonimski obtained his license and the paper again appeared in Warsaw from September 1875 until it ceased publication.

In Warsaw, too, Slonimski devoted the bulk of the paper to science and the rest to sections then common in the Hebrew press. In 1876, however, when Nahum *Sokolow began writing for the paper, its character changed as he increasingly supplemented scientific writing with topical articles and surveys of current affairs. Originally only a regular contributor, Sokolow became acting editor, then chief editor, and finally the author of almost all articles appearing in the paper. In the early 1880s he gradually reduced the size of the science section and made the paper more like its contemporaries, only more vibrant. Thanks to his introduction of variety into the paper's con-

tent, *Ha-Zefirah* enjoyed a wide circulation. Sokolow's name became synonymous with *Ha-Zefirah* and his articles on various subjects attracted many readers both among the *maskilim* and the Ḥasidim. Following *Ha-Yom's* lead, *Ha-Zefirah* became a daily in 1886, and began to provide an opportunity for new writers. Because Sokolow was deeply rooted in Polish Jewry, the paper served as the principal organ of Polish Jewry for almost two generations. *Ha-Zefirah* also printed reports from most of the Jewish centers throughout the world, particularly Erez Israel and the United States. Sokolow realized the importance of innovation and novelty in journalism. Accordingly, he periodically changed the paper's format and writing style, to meet changing tastes. The attitude of Sokolow and the paper toward the Ḥibbat Zion movement and political Zionism was at first reserved, but after the First Zionist Congress *Ha-Zefirah* was faithful to Herzl.

Ha-Zefirah ceased publication early in 1906 when Sokolow became secretary of the World Zionist Organization. In 1910 the paper was revived with Sokolow as a regular contributor but edited by several of his disciples. During World War I the paper again ceased publication, but was reissued as a weekly in 1917 and as a daily in 1920. It did not appear from 1921 to 1926, when it was revived only to be discontinued again in 1928. *Ha-Zefirah* appeared for the last time in 1931, the year it permanently ceased publication. Among the paper's later editors were Isaac *Nissenbaum, Yizḥak *Gruenbaum, Joseph Heftman, and A.A. *Akaviah.

HAZER, HAZERIM (Heb. הַזְפִּירָה, הַזְפִּירָה).

(1) a biblical term for seminomadic settlements on the edge of the Negev that were fenced in but not walled. The *hazerim* occupy an intermediate position between nomadic encampments and settled towns (Josh. 21:12, where it is translated as “villages”), but in the course of time some of them developed into towns (cf. Hazar-Gaddah, Hazar-Shual, Josh. 15:27–28, etc.). A similar meaning is apparently expressed by the term *hagar* (from the root meaning “to fence in”). Place names combined with *hagar* are frequently mentioned in the Negev in the lists of *Shishak's conquests; in later sources the term refers to the Roman *limes*. The Avvim, who were absorbed by the invading Caphtorim (Philistines), also lived in *hazerim* in the south as far as Gaza (Deut. 2:23). In the Targum Yerushalmi, *Hazerim* is considered a locality and is identified with Rafah.

[Michael Avi-Yonah]

(2) HAZERIM (Heb. הַזְפִּירָה), kibbutz in the northern Negev, Israel, 4½ mi. (7 km.) W. of Beersheba, affiliated with Iḥud ha-Kevuzot ve-ha-Kibbutzim, founded by graduates of Ha-Zofim, among them “Teheran Children” and Israeli-born youth on the night of Oct. 6, 1946, on which 10 other new settlements were simultaneously set up in the South and Negev. In the first 10 years of its existence, Hazerim sought ways to

treat its desert loess soils and overcame isolation and siege in the *War of Independence (1948). The kibbutz economy was based on field crops (mostly irrigated), fruit orchards, cattle, and an industrial enterprise, Netafim, for drip irrigation equipment, which became its economic mainstay with sales in over 100 countries, 24 subsidiaries and plants (including facilities in Cuba and China), and sales of \$230 million in 2002. The population of the kibbutz in 2002 was 791.

HAZEROTH (Heb. הַזְרוֹת, *hazerot*). (1) The second station of the Israelites on their journey eastward from Mount Sinai to Ezion-Geber between Kibroth-Hattaavah and Rithmah in the wilderness of Paran (Num. 11:35; 33:17–18). At Hazeroth, Miriam and Aaron “spoke against” Moses because he had married “a Cushite woman,” and in punishment Miriam was “shut up” for seven days, during which the people waited there (*ibid.* 12:16). Hazeroth is also mentioned in the Bible together with Di-Zahab (Deut. 1:1). Its identification is dependent on the location of Mount Sinai. Those scholars who accept the traditional view of Mount Sinai at Jebel Musa identify Hazeroth with the oasis of ‘Ayn al-Ḥaḍra, northwest of Dhahab (Di-Zahab?). Others who identify Mount Sinai with Jebel Ḥilāl locate Hazeroth at another ‘Ayn al-Ḥaḍra in its vicinity.

(2) A Hazeroth is mentioned on the Samaria ostraca among the places paying tribute of wine and oil to Samaria in the time of the Israelite kingdom. It is possibly identical with ‘Aṣira al-Shamāliyya, 3 mi. (5 km.) north of Shechem.

HAZEVAH (Heb. הַזְעֵבָה), moshav in the central Aravah Valley, southern Israel, about 23 mi. (38 km.) S. of Sodom, affiliated with Tenu’at ha-Moshavim. It was founded in 1965 as a *Naḥal border outpost settlement. The moshav lies about 3 mi. (5 km.) southeast of the spring, oasis, and ancient site by that name (*Notitia Dignitatum*, ed. by O. Seeck (1876) gives *Eisiba*, ‘Ayn Ḥuṣub in Arabic), where Iron Age sherds were found. Under Roman rule, Ḥazevah was a border castle at an important road junction, and a military unit, the second cohort of the Gratiana Legion, was stationed there. Under the British Mandate, a police station was set up near the spring, which is the most abundant in the Israeli part of the Aravah Valley. In November 1948, the occupation of Ḥazevah by Israel forces lifted the siege of Sodom and led to the conquest of the whole Negev. In the early 1950s an experimental station, mainly for the propagation of forest trees, was established at the oasis. In the 1960s, the existence of rich groundwater reserves in the area was confirmed. Two small settlements exist nearer the spring, a village of private farmers and a group of immi-

grants, mainly from North America. The moshav economy was based on farming, mainly vegetables and hothouse flowers. In addition, fruit plantations, vineyards, and ornamental fish were cultivated. Tourism was another source of income, including guest rooms, catering, guided tours, and jeep treks. In the mid-1990s, the moshav’s population was approximately 520, dropping to 420 in 2002.

HAZKARAT NESHAMOT (Heb. הַזְכָּרַת נְשָׁמוֹת; “mentioning of the souls”), memorial prayer. In the Ashkenazi ritual, it is said after the reading of the Torah, during the morning service of the last day of Passover, Shavuot, and Sukkot (the three pilgrimage festivals), and on the Day of Atonement. In the Sephardi rite it is recited also on the Day of Atonement eve before *Ma’ariv*.

The prayer is divided into three sections; the principal part opens the prayer with the words, “*Yizkor Elohim*” (“May God remember... the soul...”). In common language the prayer has therefore become known as *Yizkor* or *Mazkir*. *Hazkarat Neshamot* expresses the fervent hope that the departed souls will enjoy eternal life in God’s presence. There is evidence that this custom dates back to the period of the Hasmonean wars (c. 165 B.C.E.) when *Judah Maccabee and his men prayed for the souls of their fallen comrades and brought offerings to the Temple in Jerusalem as atonement for the sins of the dead (II Macc. 22:39–45). The belief that the meritorious deeds of descendants can atone for the departed appears frequently in aggadic literature (Hor. 6a; TJ, Sanh. 10:4, 29c; Sif. Deut. 210; Tanh. Berakhah 1; et al.). However, *Hai Gaon and his pupil *Nissim b. Jacob (c. 1000 C.E.) opposed the custom of praying for the departed on festivals and on the Day of Atonement, and of donating to charity on their behalf. They believed that only the actual deeds performed by a person during his lifetime count before God. Nevertheless, the memorial prayer became one of the most popular and cherished customs, especially in the *Ashkenazi ritual. Historically, it gained its significance through the *Crusades and through the severe persecutions that took place in Eastern Europe during the 17th century when thousands of Jews died as martyrs. They were all inscribed in the death rolls (called *kunteres* or *memorbuch*, or *yizker-bukh*) of their communities and commemorated in the memorial prayers held on the three festivals, on the Day of Atonement and, in some congregations, on the Sabbaths during the *Omer period (between Passover and Shavuot). In time, the death rolls came to include names not only of martyrs, but also of other members of the community, and the custom of memorial prayers for individuals evolved. After the memorial prayer for relatives, in the Ashkenazic rite the prayer *El Male Raḥamim is recited for those who have died. Nowadays, a special prayer is frequently added for the victims of the Nazi Holocaust and for the Jewish soldiers who died in wars, particularly in Israel. The traditional memorial service concludes with the recital of *Av ha-Raḥamim. The Torah Scroll(s) which had been taken out for the Reading of

the Law is (are) returned to the Ark and the *musaf* service follows. In the Sephardi ritual, instead of reciting the *Hazkarat Neshamot* after the Torah service, everyone who is called to the Torah, after blessing it, recites a memorial prayer for his relatives. *Hazkarat Neshamot* mentions charitable offerings “for the repose of the departed souls” (Sh. Ar., OH 621:6) and in Orthodox synagogues, it is customary to promise donations during the service. It is also customary that those whose parents are still alive leave the synagogue during the entire *Hazkarat Neshamot* prayer. In the Conservative ritual, several introductory readings and appropriate Psalm verses in Hebrew and in the vernacular, as well as sections for meditation and special responsive readings in that language, were added to the traditional text of *Hazkarat Neshamot*. In the Reform ritual, the memorial service is held only on the last day of Passover and on the Day of Atonement as part of the late afternoon service before *Ne'ilah. This service consists of a shortened version of the traditional text, the recital of Psalm 23 and of selected poems by Ibn *Gabirol, *Judah Halevi, and *Baḥya b. Joseph, and of readings and meditations expressing the transience and evanescence of life and the merits of those who have lived an exemplary life. Solemn music accompanies this *Hazkarat Neshamot* service which concludes with the entire congregation reciting the *Kaddish. Synagogues are usually well attended by both men and women on the days that *Hazkarat Neshamot* is said; in some congregations these days have become occasions for major sermons by the rabbi.

HAZKUNI, ABRAHAM (b. 1627), rabbi and kabbalist. Hazzkuni, who was born in Cracow, was a disciple of Yom Tov Lipmann *Heller. He published a summary of Isaac *Luria's *Sefer ha-Kavvanot* under the title *Zot Hukkat ha-Torah* (Venice, 1659). His commentary on the *Zohar, *Shetei Yadot* consisting of two parts, *Yad Ramah* and *Yad Adonai*, was lost through the negligence of the printer, with the exception of eight pages which are preserved in Oxford and New York (JTS). Hazzkuni's son Jacob later published his father's commentary on the Pentateuch under this same title (Amsterdam, 1726). Hazzkuni also wrote *Zera Avraham*, a two-part work containing casuistic *derashot* on the Torah; *Yode'a Binah*, of unknown content; and novellae to the tractates *Bezah* and *Mo'ed Katan*. He died in Tripoli.

[Samuel Abba Horodezky]

HA-ZOFEH (Heb. הַצּוֹפֵה).

(1) Daily Hebrew newspaper, published in Warsaw from

1903 to 1905. Following the journalistic tradition of **Ha-Yom*, *Ha-Zofeh* was well-balanced in its presentation of items of both Jewish and general interest, and upheld a Zionist point of view. Published daily, without interruption, the paper was managed by Y.A. Eliashov who also provided substantial financial support. Its first editor, A. *Ludvipol, was succeeded by H.D. *Nomberg. Ludvipol's regular staff included Simon *Bernfeld, Reuben *Brainin, A.L. Levinsky, I.L. *Peretz, and J. *Klausner, each of whom contributed material in his own field, e.g., stories, critical essays on Hebrew, Jewish and general literature, articles of political content, and feuilletons. Among the many other contributors to *Ha-Zofeh* were Hillel *Zeitlin, Mendele Mokher *Seforim, S. *Asch, H.N. *Bialik, S. *Ben-Zion, Y.D. *Berkowitz, I. *Bershadski, Y. *Gruenbaum, S. *Tchernichowsky, Ya'akov *Cahan, S.A. *Horodezky, V.Z. *Jabotinsky (he began his Hebrew writing here), M.L. *Lilienblum, J. *Fichmann, Itzhak *Katzenelson, Yaakov *Rabinowitz, Judah *Steinberg, Jacob *Steinberg, and Moshe *Smilansky.

Ha-Zofeh was bitterly opposed to the *Uganda Scheme. During the Sixth *Zionist Congress (1903), it reached the peak of its circulation (almost 15,000 subscribers), because of its reporting of Herzl's opening remarks on Uganda in a telegram (something hitherto unheard of in the Hebrew press), and also because of its representation at the Congress by Brainin, Bernfeld, Ludvipol, and Hermoni. A free copy of all of Bialik's poems was presented to its subscribers while subscribers to **Ha-Shilo'ah* were granted a substantial discount. The newspaper was discontinued in 1905, during the first Russian revolution, mainly because members of the *Bund struck against the publishing house in which the paper was published.

Ha-Zofeh conducted the first short-story contest in Hebrew literature. Y.D. Berkowitz won first prize, and his story was published, together with other worthy entries and the opinions of the judges, in *Kovez Sippurim* (1904).

[Getzel Kressel]

(2) Daily paper published in Tel Aviv. Established in August 1937 as the organ of the World Mizrahi Movement, it initially published three times a week and was edited by *Rabbi Benjamin (Yehoshua Redler-Feldman), and from December it was published daily and edited by Mordekhai *Lipson. The paper's editor-in-chief was Rabbi Meir *Bar-Ilan. Lipson was succeeded by Yeshayahu Bernstein.

Under Shabbetai Don-Yaḥia's (S. Daniel)'s editorship (1951–80) the newspaper generated support and understanding for the modern Orthodox outlook that the establishment of the State of Israel was the beginning of the messianic redemption, and that modern Orthodoxy should become an integral part both of the state's institutions such as the armed forces, and of the general population.

During the 1948–67 period key subjects the newspaper's op-ed and editorial columns dealt with at length were the relationship between religion and state, with particular attention to the budgetary needs of the state religious education sector, and to strengthening the chief rabbinate institution – which

was in effect a creation of the modern Orthodox sector. In 1961 Ben-Gurion criticized the paper, after the paper criticized him for a speech attacking the modern Orthodox community.

The newspaper gave expression to different shades of party opinion between Po'alei Mizrahi and Mizrahi. When Daniel was elected to the Knesset on the National Religious Party list, he resigned after only a month, preferring his work as *Ha-Zofeh's* editor. The newspaper led a hand-to-mouth existence, and several times faced closure. Its lack of resources limited news coverage. Though many rabbis and religious educators were among its readers it failed to widen its readership to the larger modern Orthodox public. The newspaper had a highly regarded weekly literary supplement mostly including Torani literature and edited by Yehoshua Shemesh, who became the paper's deputy editor.

The change in agenda of the NRP's Young Guard after the 1967 war found expression editorially inside *Ha-Zofeh*, which embraced the right of Jewish settlement in a Greater Land of Israel. Moshe Ishon, who was editor from 1980 to 1997, produced skilled polemics on the subject. After the 1993 Oslo accords, the newspaper found itself in direct conflict with the Likud government. Statements of leading Zionist rabbis castigating withdrawal from biblical territory were given prominence – raising afresh the question of the relationship between modern Orthodoxy and contemporary state institutions like the army. With the modern Orthodox dividing into three strata: the moderate veterans, the *haredi le'ummi*, and the right the newspaper found itself having to appeal to all.

When Ishon retired in 1997 at the request of the paper's directors, facing ever-dwindling circulation as readers transferred their loyalties to the general press with its superior news coverage, the newspaper changed direction with the appointment of Gonen Ginat, a journalist who turned the paper into a bold tabloid with racy headlines. In revamping the news coverage, he recruited younger journalists. Chayuta Deutsch was appointed literary editor, widening the scope from Torah literature to the broad range of Israeli literature. Haggai Huberman was the settlements correspondent. The paper investigated the relationship between Shin Bet agent Avishai Raviv and Yigal Amir, Rabin's assassin. It also played an important part in generating opposition among the modern Orthodox camp to the Sharon government's withdrawal from *Gush Katif in 2005. At times the paper became so scurrilous – such as accusing *haredi* girls' seminary students of engaging in prostitution – that Ginat on several occasions was forced to apologize in the paper's pages.

Circulation in 2005 was 12,000 daily and 18,000 on Sabbath and holiday eves. In 2005 the National Religious Party sold the paper to Shlomo Ben Zvi, a religious newspaper tycoon, owner of *Mekor Rishon*, a nationalist quality weekly, Radio Kol Chai, a *haredi*-orientated radio station, and founder of Techelet, an experimental Jewish tradition television channel. The newspaper maintains a website.

HAZOR (Heb. הַצֹּר), a large Canaanite and Israelite city in Upper Galilee. It is identified with Tell al-Qidāh (also called Tell Waqqāṣ), 8¾ mi. (14 km.) north of the Sea of Galilee and 5 mi. (8 km.) southwest of Lake *Huleh. The city was strategically located in ancient times and dominates the main branches of the Via Maris ("Way of the Sea") leading from Egypt to Mesopotamia, Syria, and Anatolia.

Canaanite Hazor is mentioned in the Egyptian Execration Texts (19th or 18th century B.C.E.) and is the only Palestinian town mentioned (together with Laish) in the Mari documents (18th century B.C.E.) where it appears as a major commercial center of the Fertile Crescent with caravans traveling between it and Babylon. It is also frequently mentioned in Egyptian documents of the New Kingdom, in the city lists of Thutmose III (where it appears together with Laish (*Dan), *Pella, and *Kinnereth), and of Amenhotep II and Seti I. In the *el-Amarna letters, the kings of Ashtaroth and Tyre accuse Abdi-Tirshi, king of Hazor, of taking several of their cities. The king of Tyre furthermore states that the king of Hazor left his city to join the *Habiru. In other letters, however, Abdi-Tirshi – one of the few Canaanite rulers to call himself king proclaims his loyalty to Egypt. Hazor is also referred to in the Papyrus Anastasi I (probably from the time of Ramses II).

The Bible contains a direct reference to the role of Hazor at the time of Joshua's conquests. *Jabin, king of Hazor, headed a league of several Canaanite cities against Joshua in the battle at the waters of *Merom: "And Joshua turned back at that time, and took Hazor, and smote the king thereof with the sword. For Hazor beforetime was the head of all those kingdoms... and he burnt Hazor with fire... But as for the cities that stood on their mounds, Israel burned none of them, save Hazor only – that did Joshua burn" (Josh. 11:10–13). Hazor is also indirectly mentioned in the prose account of *Deborah's wars (Judg. 4) in contrast to the "Song of Deborah" (Judg. 5) which deals with a battle in the Jezreel Valley and does not mention Hazor. According to I Kings 9:15, the city was rebuilt by Solomon together with *Megiddo and *Gezer. The last biblical reference to Hazor records its conquest, with other Galilean cities, by *Tiglath-Pileser III in 732 B.C.E. (II Kings 15:29). In Hasmonean times, Jonathan and his army, marching northward from the Ginnosar (Gennesar) Valley during his wars against Demetrius, camped on the plain of Hazor near *Kedesh (I Macc. 11:76). Josephus locates the city above Lake Semachonitis (Ant. 5:199).

Hazor was first identified with Tell al-Qidāh by J.L. Porter in 1875 and again by J. Garstang in 1926. The latter conducted soundings at the site in 1928. Four large campaigns of excavations – the James A. de Rothschild Expedition – took

place between 1955 and 1958, under the direction of Y. Yadin on behalf of the Hebrew University, with the aid of PICA, the Anglo-Israel Exploration Society, and the Israel government. A fifth campaign took place in 1968.

The site of Hazor is composed of two separate areas – the tell proper covering some 30 acres (120 dunams) and rising some 130 ft. (40 m.) above the surrounding plain, and a large rectangular plateau, about 175 acres (700 dunams) in area, north of the tell. The latter is protected on its western side by a huge rampart of beaten earth and a deep fosse, on the north by a rampart and on the other sides by its natural steep slopes reinforced by glacis and walls.

Lower City

Garstang had concluded from his soundings that the large plateau (enclosure) was a camp site for infantry and chariots and since he found no Mycenaean pottery (which first appears in the area after 1400 B.C.E.), he dated Hazor's final destruction to about 1400, the date he ascribed to Joshua's conquest. The excavations, however, revealed that the enclosure was not a camp site but that the entire area was occupied by a city with five levels of occupation. It was first settled in the mid-18th century B.C.E. (Middle Bronze Age II), to which the fortifications date, and was finally destroyed sometime before the end of the 13th century B.C.E. The discovery of Mycenaean and local ware from the 13th century helped to disprove Garstang's date of its fall. Seven areas in different parts of the lower city were excavated and the same chronology was found in all. The first city (stratum 4) was followed by a settlement (stratum 3) from the end of the Middle Bronze Age II (17th–16th centuries) which was razed by fire. The city was rebuilt in the Late Bronze Age I (stratum 2, 15th century). This stratum represents the peak of Hazor's prosperity together with the 14th-century city (stratum 1b) in which time Hazor was the largest city in the area in the land of Canaan; City 1b suffered destruction in undetermined circumstances. The last settlement in the lower city (stratum 1a) was a reconstruction of the previous one and with its fall, before the end of the 13th century, occupation ceased in the lower city. Its destruction, both here and in the contemporary city on the tell, is to be ascribed to the conquering Israelite tribes, as is related in detail in the Book of Joshua.

In the southwestern corner of the lower city (area c) a small sanctuary was found on the foot of the inner slope of the rampart. It dates from stratum 1b and was rebuilt in 1a. A number of basalt steles and statuettes were found in a niche in one of the walls, one with two hands raised toward a divine lunar symbol – a crescent and a circle, and a statuette of a seated male figure with its head intentionally broken off. Benches for offerings line the walls of the temple. A pottery cult mask was found in a potter's workshop nearby as well as a bronze standard plated with silver and bearing a relief of a snake goddess.

Rock-cut tombs with an elaborate network of tunnels connecting them were found in the eastern sector of the lower city (area F), dating from the earliest stratum. A large building

(probably a temple) with thick walls was constructed there in the next city which used the older tunnels for a drainage system. In the next stratum (stratum II) a temple was built. In stratum 1b the area assumed a definite cultic character and a large monolithic altar with depressions for draining the sacrificial blood stood there.

In several areas, a large number of infant burials in jars were found beneath the floors of houses from stratum III.

Four superimposed temples were found in area H, at the northern edge of the lower city. The earliest (stratum III) consisted of a broad hall with a small niche – a sort of holy of holies. South of the hall was a raised platform reached by several finely dressed basalt steps. The next temple was substantially the same in plan but a closed court was added and an open courtyard south of it. The court was entered through a broad propyleum. The courtyard contained a large rectangular *bamah* ("high place") and several altars. A clay model of a liver, inscribed in Akkadian, found in a pile of debris nearby, was intended for use by the priest-diviners and mentioned various evil omens. A bronze plaque of a Canaanite dignitary wrapped in a long robe was also found. In stratum 1b, the temple was composed of three chambers built on a single axis from south to north: a porch, a main hall, and a broad holy of holies with a rectangular niche in its northern wall. In its general plan it resembles several temples found at Alalakh in northern Syria as well as the temple of Solomon. A row of basalt orthostats (which may have belonged originally to the previous temple) forming a dado around the interior of the porch and the holy of holies which is very similar to some found at Alalakh and other sites, shows distinct evidence of northern influence. On either side of the entrance to the porch stood a basalt orthostat with a lion in relief (only one was found, buried in a pit). The following temple (stratum 1a) shows only minor alterations. Two round bases found in front of the entrance to the hall are apparently similar to the Jachin and *Boaz of Solomon's temple. The many ritual vessels (probably reused from the previous temple) include a basalt incense altar, with the emblem of the storm god in relief – a circle with a cross in the center, ritual tables and bowls, a statuette of a seated figure, cylinder seals and a scarab bearing the name of Amenhotep III. Outside the sanctuary were found fragments of a statue of a deity with the symbol of the storm god on its chest. The god had stood on a bull-shaped base.

A succession of city gates and walls ranging in date from the founding of the city to its final end was found in area K on the northeastern edge of the lower city. The gate from stratum III was strongly fortified, with towers on either side and three pairs of pilasters in the passage. A casemate wall adjoining it is the earliest example of this type found thus far in Erez Israel. A similar series of gates was found in the 1968 season on the eastern edge of the lower city.

Upper City

Five areas were excavated on the tell proper where 21 levels (with additional sub-phases) of occupation were uncovered.

Settlement began here in the 27th century B.C.E. (end of the Early Bronze Age II), and, after a gap between the 24th and 22nd centuries, it was resettled in the Middle Bronze Age I (stratum XVIII). From the period of Hazor's zenith (15th century) parts of a large palace (the residence of the king?) and temple were uncovered which contained part of an orthostat with a lioness in relief similar to the lion orthostat from the contemporary temple in the lower city. Stratum XIII, the last Late Bronze Age city on the tell, shows the same signs of destruction in the 13th century as were found in the lower city. The upper city, however, in contrast, was resettled after a short interruption, but not in the form of a true city. Most of its constructions are still of a seminomadic character – silos, hearths, and foundations for tents and huts. These remains are essentially identical with those of the Israelite settlements in Galilee in the 12th century and indicate that the majority of this settlement occurred only after the fall of the cities and provinces of Canaan.

Stratum XI is an 11th-century, unfortified Israelite settlement, with a small high place. Only from the time of Solomon onward did Hazor return to its former splendor, though on a smaller scale than in Canaanite times. Solomon rebuilt and fortified the upper city (stratum X) with a casemate wall and a large gate with three chambers on either side and two towers flanking the passage. These are identical with the fortifications he constructed at Gezer and Megiddo (cf. 1 Kings 9:15). The following city was destroyed by fire and rebuilt by the House of *Omri in the ninth century (stratum VIII) which erected a strong citadel covering most of the western part of the tell (area B). The citadel is symmetrical in plan with two long halls running from east to west and surrounded on three sides by chambers. The entrance was ornamented with proto-Aeolic capitals and a monolithic lintel. Near the citadel were a number of public buildings. The citadel was strengthened in the eighth century and continued in use until Hazor's conquest by Tiglath-Pileser III in 732 B.C.E.

A large storehouse with two rows of pillars in the center (mistakenly interpreted as Solomon's stables by Garstang) also dates to stratum VIII (House of Omri). Stratum VI (eighth century) was destroyed by an earthquake, possibly the one which occurred in the days of *Jeroboam II, mentioned in the Book of Amos. The last fortified city at Hazor is represented by stratum V, and after its destruction by the Assyrians the city remained uninhabited except for a temporary unfortified settlement (stratum IV). A large citadel in stratum III was evidently constructed by the Assyrians and continued in use in the Persian period. Another citadel, from stratum I, is attributed to the second century, i.e., the Hellenistic period.

In the 1968 season a large underground water system was discovered at the center of the southern edge of the mound facing the natural spring below. It has the same plan (although on a much larger scale) as the famous one at Megiddo, and was hewn out of the rock at the same period, i.e., the ninth century B.C.E. (Hazor stratum VIII).

[Yigael Yadin]

Later Excavations and Chronology

Since 1990 excavations have been conducted at the site by A. Ben-Tor. Limited remains from the Early Bronze period were found in deep soundings (Strata XXI–XIX), mainly from the EB II and EB III with a fine assemblage of Khirbet Kerak ware. Only a handful of shards are known from the Intermediate Bronze Age (Stratum XVIII). Hazor flourished in the Middle Bronze Age II (Strata pre-XVII, XVII, XVI and post-XVI in the upper city; Strata 3–4 in the lower city) with the lower city being settled for the first time with impressive defense systems (earthen rampart and moat, and gateways) and the corner of a palace. Cuneiform tablets date from this period: a clay liver model, a bilingual Sumero-Akkadian text, a legal document, and an economic text and a fragment of a royal letter. The Late Bronze Age strata (upper city: Strata XV–XIII; lower city: Strata 2–1A) were separated from the preceding Middle Bronze Age city by a substantial destruction layer (Stratum post-XVI). The Late Bronze Age city included a number of major architectural monuments such as the earthen ramparts, the city gates, and the temples (the Stelae Temple in Area C; Orthostat Temple in Area H). Stratum XIV was destroyed in a fire and this may have been at the time of Seti I (end of the 14th century B.C.E.). The final phase of occupation in the Late Bronze Age was also destroyed. Yadin attributed this to the Israelites as described in Joshua 11:10. The exact date of this destruction is still unclear. The settlement in the Iron Age I (Strata XII–XI) was not very impressive, consisting mainly of storage pits and foundations of temporary structures. Monumental structures belong to the Iron Age II–III (Strata X–IV) and these include the fortifications: a six-chambered city gate and casemate walls. They were dated by Yadin to the 10th century (following 1 Kgs. 9:15), but attempts have recently been made to lower this date. Later works include the construction of a wall around the acropolis and the hewing of a water supply system. Hazor was conquered and destroyed in 732 B.C.E. An Assyrian citadel and palace are known (Stratum III), as well as a few remains from the Persian and Hellenistic periods (Strata II–I).

HAZOR (**ha-Gelilit**; Heb. תְּצוּר הַגְּלִילִית), development town with municipal council status in eastern Upper Galilee, N.E. of Rosh Pinnah and 2½ mi. (4 km.) S. of the mound of ancient Hazor. The site was chosen in 1950 and its first housing schemes were ready in 1953, taking in immigrants from the Rosh Pinnah *ma'barah* and newcomers and having a population of 895 by the end of that year. Large numbers of immigrants, principally from Middle East and North African countries, were housed at HAZOR, but many of them left after a short interval, due to poor local conditions. Later, when economic opportunities improved, the population grew again and

reached 5,250 at the end of 1969. In the mid-1990s, it was approximately 8,190, and at the end of 2002 it reached 8,550, on a municipal area of 2 sq. mi. (5.2 sq. km.). Ḥazor's assets have been a favorable location for communications, a rich farming hinterland in the Ḥuleh Valley, an ample water supply, and the availability of level ground for industrial enterprises. A drawback has been the proximity of two other towns – Safed and Kiryat Shemonah. Income has been considerably below the national average.

[Shlomo Hasson / Shaked Gilboa (2nd ed.)]

ḤAZOR ASHDOD (Heb. **חֶצוֹר אֲשְׁדוֹד**), kibbutz in the southern Coastal Plain of Israel, affiliated with Kibbutz Arzi Ha-Shomer ha-Za'ir. It was founded together with 10 other settlements in the south and the Negev on Oct. 6, 1946, by a group which had previously founded *Gevulot as a Negev outpost. The members were joined by pioneer youth from the U.S., Bulgaria, and other countries. Ḥazor Ashdod had a population of 535 in 1968 and 560 in 2002. The kibbutz engaged in farming based on field crops and poultry and a number of successful enterprises, including Solbar Industries, manufacturing soy protein concentrates with sales in 45 countries, Danor, specializing in soy phytochemicals, and SafePlace, specializing in safety accreditation. The name Ḥazor is assumed to be historical as it is mentioned by Eusebius (Onom. 20:1; 30:22, et al.). The name of the nearest city, *Ashdod, was later added to distinguish between the kibbutz and the development town *Ḥazor, situated in Galilee.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

HA-ZORE'A (Heb. **הַזוֹרְעָה**; "the Sower"), kibbutz on the western outskirts of the Jezreel Valley, Israel, affiliated with Kibbutz Arzi Ha-Shomer ha-Za'ir. It was founded in 1936, during the Arab riots, by a group of the Zionist pioneer Werkleute movement from Germany. Later, immigrants from Bulgaria, Syria, and other countries joined the settlement, which in 1968 had 610 inhabitants. The population rose to approximately 1,030 in the mid-1990s but declined to 915 in 2002. Its economy has been based on highly intensive farming, including the breeding of ornamental fish and water lilies, a Quality Control Center with a laboratory for calibration tests, and a factory for polyethylene packaging material. Its well-known furniture factory was closed down. The Manasseh Forest, one of Israel's largest forests, is located nearby. Ha-Zore'a has an art and antiquities museum, Bet Wilfred Israel, housing inter alia Wilfred *Israel's Far Eastern art treasure collection.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

HA-ZORE'IM (Heb. **הַזוֹרְעִים**), religious moshav in eastern Lower Galilee, Israel, affiliated with the Ha-Po'el ha-Mizrachi moshav association. It was founded in 1939 on land provided by the Palestine *Jewish Colonization Association. The set-

tlers, who came from several countries, engaged mainly in raising field crops, livestock, and orchards. In the course of the years farming failed to support the settlers and today only a few still earn their livelihoods in agriculture (poultry, dairy cattle, and vegetables), with most working outside the moshav. Remnants of an ancient village assumed to be Serungiya (or Sirgunya) in the talmudic period (Gen. R. 1:6) were found here. The present settlement initially bore this name but the name of the founding group ("the Sowers") was later officially recognized. In 1968 its population was 300, rising to 400 in 2002, with expansion underway.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

ḤAZZAN (Hazzan), Turkish family, apparently of Spanish origin. Many of its members were scholars. In addition to Israel Moses b. Eliezer *Ḥazzan, the following members of the family may be mentioned. JOSEPH BEN ELIJAH ḤAZZAN (d. after 1694) was a pupil of Joseph *Trani, colleague of Ḥayyim *Benveniste in Constantinople, and the teacher of Abraham Israel Ze'evi. From Constantinople he proceeded to Smyrna, and from there to Jerusalem, where he died. He was the author of *Ein Yehosef* (Smyrna 1735), on *Bava Me'zia*, and some responsa – most of his responsa were destroyed in a fire together with other manuscripts; *Ein Yosef* (Smyrna, 1675), homilies on the weekly readings of the Bible; and a commentary on the *Ein Ya'akov*, to which he refers in the preface to the *Ein Yosef*. A commentary on the Pentateuch has also remained in manuscript. ḤAYYIM (d. 1712), his son, was one of the rabbis of Smyrna. He later served as a rabbi in *Egypt and then proceeded to Jerusalem. Queries were addressed to him from different countries. During 1704–7, together with Abraham Rovigo, he traveled in Western Europe as an emissary of the Jerusalem community. He continued alone to Eastern Europe and died in Mir, Lithuania. He was the author of *Shenot Ḥayyim* (Venice, 1693), sermons on the Pentateuch, as well as novellae and responsa left in manuscript. His son DAVID (18th century) was one of the scholars of Jerusalem, where he had been born. In the 1720s he traveled in Western Europe as an emissary of the Jerusalem community, then proceeded to Smyrna, where he established a printing press. David was the author of *Ḥozeh David* (Amsterdam, 1724), a commentary on the Psalms; *Kohelet Ben David* (Salonika, 1748), on Ecclesiastes; *Agan ha-Sahar* (Salonika, 1750), on Proverbs; and other works.

Jacob Ḥazzan (d. 1802), a Jerusalem scholar, was also an emissary of the Jerusalem community from 1770 to 1775 in Turkey, Western Europe, and Poland. JOSEPH RAPHAEL BEN ḤAYYIM JOSEPH (1741–1820), known as *ha-Yare'ah* from the first letters of his name (Y-osef R-aphael b. Ḥ-ayyim), was a rabbi in Smyrna. In 1811 he proceeded to Hebron and after two years went to Jerusalem where he was appointed *rishon le-Zion*. He was the author of *Ḥikrei Lev* (7 vols., Salonika-Leghorn, 1787–1832), novellae on the four parts of the Shulḥan Arukh, and *Ma'arekhei Lev* (Salonika, 1821–22) in two parts,

homilies. His sons were Eliezer, Elijah Raḥamim, Isaac, and ḤAYYIM DAVID; Ḥayyim *Palaggi was his grandson. ELIEZER (d. 1823) was a rabbi in Jerusalem, where he died. His works, *Ḥakor Davar*, *Ammudei ha-Arazim*, on the *Sefer Yere'im* of Eliezer of Metz, and kabbalistic novellae have remained in manuscript. He was the father of Israel Moses *Ḥazzan. ELIJAH RAḤAMIM (d. 1840) was a rabbi of Smyrna and the author of *Orah Mishpat* (Salonika, 1858), on the Shulḥan Arukh *Hoshen Mishpat*. He left in manuscript responsa, sermons for Sabbaths and festivals, and *Even ha-Mikkah*, on the *Mikkah u-Mimkar* of *Hai Gaon. A number of his responsa are contained in the *Ḥikrei Lev* of his father. ḤAYYIM DAVID (1790–1869) was born in Smyrna. At the age of 20 he went to Constantinople and in 1840 he was appointed rabbi in Smyrna. He settled in Jerusalem in 1855 and in 1861, succeeding Ḥayyim Nissim Abulafia, was appointed *rishon le-Zion*. He was the author of *Torat Zevaḥ* (Salonika, 1852), on the law of *sheḥitah*; *Nediv Lev* (2 pts. Salonika-Jerusalem, 1862–66), responsa; *Yitav Lev* (Smyrna, 1868), homilies; *Yishrei Lev* (*ibid.*, 1870), various novellae; and other works in manuscript. SOLOMON ḤAZZAN (d. 1856) was rabbi of *Alexandria and died in Malta. He was the author of *Sefer ha-Ma'lot li-Shelomo* (1894), a compilation of biographies of scholars not included in the *Shem ha-Gedolim* of Ḥ.J.D. Azulai. ELIJAH BEKHOR BEN ABRAHAM (d. 1908), grandson of Ḥayyim David, was born in Smyrna. In 1872–74 he went to North Africa as an emissary of the Jerusalem community. In 1874 he was appointed rabbi of *Tripoli and from there went to Alexandria, where he died. He was the author of *Ta'alumot Lev* (Leghorn-Alexandria, 1879–1902), responsa in four parts; *Neveh Shalom* (Alexandria, 1894), on the customs of Alexandria; *Zikhron Yerushalayim* (Leghorn, 1874), on love of the Holy Land; and other works.

[Simon Marcus]

HAZZAN (pl. **Hazzanim**) (Heb. חַזָּן, חַזָּנִים), cantor officiating in a synagogue; used in this specific sense since the Middle Ages.

History of Role and Function

The word frequently occurs in talmudic sources, where it denotes various types of communal officials, most prominently the *hazzan ha-keneset*. This official performed certain duties in the synagogue, such as bringing out the Torah scrolls for readings (Sotah 7:7–8) and blowing a trumpet to announce the commencement of the Sabbath and festivals (Tosef., Suk. 4:12). He was not, however, regularly required to chant the synagogue service but could do so by request (TJ, Ber. 9:1, 12d); in talmudic times there was no permanent cantor and any member of the congregation might be asked to act as *sheli'ah zibbur* (TJ, Ber. 5:3, 9c). It was during the period of the *geonim* that

the *hazzan* became the permanent *sheli'ah zibbur*. Among the factors which contributed to this change were the increasing complexity of the liturgy and the decline in the knowledge of Hebrew, together with a desire to enhance the beauty of the service through its musical content. The *hazzan ha-keneset*, who traditionally guarded the correct texts and selected new prayers, was a natural choice. When **piyyutim* began to take an important place in the liturgy of the synagogue, it was the *hazzan* who would recite them and provide suitable melodies. Some of the *paytanim* were themselves *hazzanim*. The recitation of the *piyyutim* was called *hizana* (*hizanatun*) by the Arabic-speaking *paytanim* and the Hebrew equivalent *hazzanut* (*hazzaniyyah* among Sephardi communities) came to refer to the traditional form of chanting the whole service, and later to the profession of cantor also.

During the Middle Ages the status of the *hazzanim* rose, and they were given better salaries, longer tenure of office, and more communal tax exemptions. The post of *hazzan* was “the most permanent and continuous synagogue office, one which underwent relatively few changes after the early Middle Ages” (Baron, Community, 2 (1942), 100). In Northern Europe eminent rabbis served as *hazzanim*, among them Jacob *Moellin ha-Levi (Maharil) of Mainz (c. 1360–1427), who established strict norms for Ashkenazi *hazzanim* and some of whose chants are still in use. Gradually, the qualifications demanded of a *hazzan* became fixed. He was required to have a pleasant voice and appearance, to be married, to have a beard, to be fully familiar with the liturgy, to be of blameless character, and to be acceptable in all other respects to the members of the community (Sh. Ar., Oḥ 53:4ff.). These strict requirements were modified occasionally, but were rigorously enforced on the High Holy Days. Ironically, the growing popularity of the *hazzan* made him the most controversial communal official. His dual role of religious representative and artistic performer inevitably gave rise to tensions (which persist in modern times). In many communities priority was given to a beautiful voice and musical skill over the traditional requirements of learning and piety. Leading rabbis castigated the *hazzanim* for needless repetition of words and for extending their chanting of the prayers with the sole purpose of displaying the beauty of their voices.

The emancipation of European Jewry led to important changes in the style and content of synagogue music. Traditional melodies were now set down in musical notation with harmonies to be sung by *hazzan* and choir. New melodies were composed under the influence of modern European musical trends and techniques. The pioneer in this field was Solomon *Sulzer, chief *hazzan* in Vienna from 1825 to 1890; he was closely followed by Samuel *Naumbourg of Paris, Louis *Lewandowski of Berlin, Hirsch *Weintraub of Königsberg, Moritz *Deutsch of Breslau, Abraham *Baer of Göteborg, Sweden, and many others. The ḥasidic movement, where the rabbi recited the prayers, and parts of the Reform movement which substituted the plain reading of the liturgy for the office of *hazzan*, remained outside this development. Indeed

the joyful tunes of the Hasidim gradually became popular with many Orthodox communities. The use of the organ and mixed choirs introduced by the *Reform movement radically changed cantorial music. Hebrew and German prayer texts were chanted to German chorale tunes; these replaced the traditional prayer music. Rabbi Isaac M. Wise, architect of American Jewish Reform, substituted the plain reading of liturgy for the office of *hazzan*. Only a few houses of worship retained *hazzanim* (e.g., Alois Kaiser) who tried to develop a tradition of American synagogue music. Classical reform in the U.S. was modified under the impact of the Zionist movement and East European immigration, and pressure grew to restore traditional forms of worship. Two *hazzanim* who became professors, A.W. Binder at the *Jewish Institute of Religion and A.Z. Idelsohn at the *Hebrew Union College, reintroduced traditional liturgy and music into Reform rabbinical studies.

The period from the end of the 19th century until World War II is described as the “Golden Era of *Hazzanut*.” Cantorial music had a singular appeal to the Jewish masses, who would fill their synagogues to overflowing in order to hear an outstanding *hazzan*. Improved communications enabled leading *hazzanim* to tour Jewish communities on a far greater scale than previously, thus increasing their reputations, sometimes to legendary proportions. They were equated with the great operatic tenors of the time, whose style they grew to imitate. Even non-Jews were attracted to the synagogues to hear famous *hazzanim* and Gershon *Sirota was invited annually to sing for the czar. Following the mass emigration of Jews from Eastern Europe to the U.S., great *hazzanim* like Sirota, Josef *Rosenblatt, Mordechai *Herschman, and Zavel *Kwartin gave concert tours in America, where all of them, except Sirota, remained. They were able to command enormous salaries and fees for concerts and High Holy Day services.

A major factor in building up the reputations and perpetuating the fame of the great *hazzanim* was the development of sound recordings, beginning with the first cantorial disk made by Sirota in 1903. Furthermore, lesser *hazzanim* adopted the style and melodies of the great cantors which they learnt from the records, and the singing of famous musical compositions became a chief attraction of synagogue services. In the postwar period prominent *hazzanim* included Moshe *Koussevitzky and his brothers Jacob, Simchah, and David, Leib *Glanz, Israel Alter, Moshe Ganchoff, Pierre Pinchik, Leibele Waldman, Sholom Katz, and, in the younger generation, Moshe Stern. Some, such as Richard *Tucker and Jan *Peerce, achieved international fame as operatic tenors, but retained their contact with the synagogue through recordings and High Holiday and Passover services. In Israel the development of *hazzanut* lagged behind the U.S. However, the regular radio programs devoted to both Ashkenazi and Sephardi *hazzanut* had a large following. Many of the world's leading *hazzanim* sang in Israel and a cantorial conference was held there in 1968. *Hazzanim* served in the chaplaincy corps of the Israel army, but only the large towns employed *hazzanim* on a

regular basis. A number of successful *hazzanim* were attracted to the U.S., Great Britain, and South Africa, where the financial rewards were much greater. Most major Jewish communities in the world had professional associations of *hazzanim* and several bulletins and journals were regularly published. An important factor in assuring the future development of *hazzanut* was the growth of cantorial training schools, in the U.S. (at Yeshiva University, the Jewish Theological Seminary, and the Hebrew Union College), in Great Britain (at Jews' College), and in Israel (at the Selah Seminary in Tel Aviv, and elsewhere).

[Hyman Kublin]

Later Developments

ISRAEL. In the 1970s the growing shortage of qualified *hazzanim* in the Diaspora was partly met by the increasing tendency on the part of Israeli *hazzanim* to officiate in communities in the Diaspora on the High Holy Days. A number of Diaspora *hazzanim* who immigrated to Israel, on retirement devoted themselves to the training of *hazzanim* (among them was Shelomoh Mandel of Johannesburg). In 1979, the Israel Institute for Religious Music in Jerusalem issued *Ve-Shinantam Le-Vonecha* for the teaching of the cantillation of the Bible according to the various traditions, Ashkenazi, Sephardi, Moroccan, and Yemenite, edited by its director Judah Kadaki, with the expert advice of Prof. I. Yeivin and Dr. Avigdor Herzog. In 1980 it issued two records of the traditional liturgy recordings of the prayers of the Jews of Salonika and Libya.

The First World Conference on Jewish Music, held in Jerusalem in 1978, included various aspects of *hazzanut*.

From 1977, an annual “*Hazzanut Week*” was held in Tel Aviv with the regular participation of David Koussevitzky. In 1978, the *hazzan* Shelomoh Ravitz, who has been in Tel Aviv since 1932, was appointed a “Yakir Tel Aviv” (Distinguished Citizen of Tel Aviv). Synagogue choirs are rare in Israel, but that of the Central Synagogue of Haifa, established by the *hazzan* Leon Kornitzer, was regarded as one of the best in the world, and celebrated its 40th anniversary in 1979. From 1950 it was conducted by Isaac Heilman.

The 1980s saw the gradual disappearance of *hazzanut* from synagogues in Israel, with only a few synagogues employing professional cantors. The only synagogue in the country with a permanent choir for Sabbaths and holidays was the Great Synagogue in Jerusalem, led by Eli Jaffe. Concert *hazzanut* was replacing synagogue *hazzanut* as the number of well-attended cantorial concerts continued to grow. In 1986, Dr. Mordecai Sobol established the Yuval Ensemble, composed of cantors, singers, and instrumentalists. The ensemble appeared in liturgical music concerts throughout Israel; it also took part in the Israel Festival in 1991. Cantorial training schools were founded in Tel Aviv, Bat Yam, Petaḥ Tikvah, and Jerusalem. The Renanot Institute, directed by Ezra Barnea, continued the dissemination of the melodies of the various Jewish communities. Tape recordings were produced for the High Holy Day, Festival, and Sabbath prayers and for the Passover *Seder* in the style of the different Jewish communities.

The series of books edited by Yehuda Kadari, *Ve-Shinantem le-Vanekha*, for the study of Torah cantillation in the tradition of the various Jewish communities, was completed. Renanot published *Mi-Zimrat Kedem*, edited by Edwin Seroussi, on the life of the Turkish cantor and Rabbi Isaac Algazi, one of the greatest Sephardi cantors.

The Tel Aviv Beth Hatefutsoth Museum's Center for Jewish Music, under the direction of Dr. Avner Bahat, began operations in 1982 and among other things has produced tapes of prayers in the traditions of the Jewish communities of Koenigsberg and Danzig sung by Cantor Naftaly Herstik as well as of works by the composer Alberto Hamzi. Tel Aviv University's music department marked the 80th birthday of Prof. Hanoch Avenary, an outstanding contemporary scholar of Jewish music and *hazzanut*, with a special edition of its journal, *Orbis Musica*. Two books by Akiva Zimmerman appeared in Tel Aviv, *Be-Ron Yaḥad* (1988), on the world of liturgical and Jewish music, and *Sha'arei Ron* (1992), on *hazzanut* in responsa literature and Jewish law. In 1992, upon the 50th anniversary of the death of the singer and cantor Joseph Schmidt, there was established in Tel Aviv a public committee to perpetuate his memory. Thus far there has appeared a memorial tape with selections of prayers and songs from Joseph Schmidt's repertoire sung by Cantor Moshe Stern. This tape was produced by the curator of the Jewish museum in Augsburg, Ayala-Helga Deutsch.

Prof. Isaac Bacon of Beersheba and Bar-Ilan universities published a book in 1991 containing the tunes of his father, Cantor Hirsch Leib Bacon. This is the first time the melodies of this cantor, who was extremely well known in Galicia, have appeared in print. Worthy of note is the book of melodies published by Dr. Zvi Talmon, *Pa'amei ha-Heikhal* (1992), which offers tunes for Sabbath and Festival prayers and is a continuation of his first book, *Rinat ha-Heikhal* which appeared in 1965.

EUROPE. England was the only country in Europe which had organized *hazzanut* activity. The Cantors Association organized concerts on Hanukkah and Lag Ba-Omer and published an annual *Cantors Review*, edited by Elie Delieb. In Belgium, Pinḥas Khallenberg, who for 43 years had served as *hazzan* of the Central Synagogue in Brussels, died. He had also served as the senior Jewish chaplain of the Belgian army and was known as a painter and writer.

Leo Rosenblatt, for close to half a century *hazzan* in the Central Synagogue of Stockholm, retired. His *Ha-Shirim asher le-Yehudah* was published by the Cantors Assembly of New York in 1979.

The memorial day in honor of Salomon *Sulzer in commemoration of 100 years since his death was marked in his city of birth, Hohenems, with the naming of a street after him. In 1990, the Austrian government produced a special postage stamp in his honor. In 1985 Prof. Hanoch Avenary published a book devoted to Sulzer and his times. An important work for the field of *hazzanut*, *Hebrew Notated Manuscript Sources up*

to circa 1840, written by Prof. Israel Adler, head of Jerusalem's Center for Jewish Music, appeared in 1985.

Three works treating liturgical traditions of Amsterdam Jewish communities appeared; *Shirei Hazzanei Amsterdam*, edited by Cantor Hans Blumenthal, is devoted to the prayer services of the Amsterdam Ashkenazi congregation, while *Tenu Shevaḥ ve-Shirah* and *Mi-Yagon le-Simḥah* edited by Cantor Abraham Lopes Cardozo, addresses itself to the tunes of Amsterdam's Portuguese community.

In England the status of *hazzanut* declined and the London synagogues were forced to reduce cantors' salaries. In 1988 a concert including cantorial music was given in commemoration of the 50th anniversary of *Kristallnacht*.

Soon after the collapse of the Communist regime in Eastern Europe, concerts of cantorial music were held in Poland, Hungary, Romania, and the area of the former U.S.S.R. with the participation of cantors from Israel and the United States. An academy for Jewish music and *hazzanut* was established in Moscow with the support of the Joint Distribution Committee and Cantor Joseph Malovany, its director.

The chief cantor of the Vienna Jewish community, Abraham Adler, who retired in 1992 after holding the position for 17 years, published two volumes of his works as *Zeluta de-Avraham*.

The final stamp minted by East Germany prior to its reunification with West Germany in 1991 featured the composer Louis Lewandowski, who had been the choir conductor at the Oranienburgerstrasse synagogue in Berlin, a synagogue destroyed on *Kristallnacht* and now being restored.

In 1985 a Joseph Schmidt Archive was established in Rueti near Zurich. The collection contains recordings, documents, announcements, and much other material on the life history of the singer and cantor Joseph Schmidt. The initiator of the archive and its director is Alfred Fassbind, who in commemoration of the 50th anniversary of Schmidt's death published a biography on him. The book, *Ein Lied geht um die Welt* – *Spuren einer Legende, Eine Biographie – Joseph Schmidt* (1992), includes the first discography of Schmidt's recordings.

UNITED STATES. The various cantors' associations continued to conduct schools for *hazzanut*, and in addition they existed in conjunction with Yeshiva University (Orthodox), the Jewish Theological Seminary (Conservative), and the Hebrew Union College (Reform).

The Cantors Assembly of the United States, the largest of its kind in the world, published a quarterly *Journal of Synagogue Music*, as well as compositions by individual outstanding *hazzanim*, both past and present day, many of them hitherto unknown.

The oldest association of *hazzanim* in the United States, "the Jewish Ministers'" Cantors' Association of America expanded its activities and for the first time in many years held a conference in Atlantic City in 1980, on *Hazzanut* in the Eighties.

The largest center in the world for cantorial music is the United States, where great changes took place in the field of *hazzanut* in the 1980s and 1990s. Orthodox synagogues hardly employ any professional cantors, and in Conservative and Reform synagogues the main function of the cantor is that of musical director. Most of the Orthodox cantors belong to the Cantorial Council of America which holds a convention yearly and publishes an annual volume.

The Cantors Assembly held two conventions in Israel, one in 1987, marking 20 years of a united Jerusalem, and the second in 1992, noting 25 years of a united city. In addition, in 1991, during the Gulf War, a delegation of its members went to Israel and gave concerts as a sign of identification with the State of Israel. A special committee, led by Cantor Sol Mendelson, was set up to maintain links with Israel.

Among cantorial activities of note in the U.S. were Special Sabbaths organized by Park Synagogue in New York City devoted to the works of cantors and composers of earlier generations as well as contemporary ones. In charge of music activities in Park Synagogue was the cantor David Lefkowitz and the conductor Abraham Kaplan.

In commemoration of 100 years since the death of Solomon Sulzer a symposium was held in his memory sponsored by the Hebrew Union College, the Jewish Theological Seminary of America, the Leo Baeck Institute, and the Austrian Cultural Institute. Selections of prayers set to his music were aired and a special exhibit was mounted in his memory. The director of the event was Dr. Neil Levin.

Among the most famous U.S. cantors of this generation were Shlomo Katz (d. 1982), David Koussevitzky (d. 1985), Samuel Malovsky (d. 1985), and Zevi Aharoni (d. 1990). In Aharoni's honor, the University of Florida at Boca Raton established a memorial room which houses the important books in the fields of cantorial and Jewish music.

Books of notes in the sphere of cantorial music which appeared in the U.S. include *Chosen Voices* (1989) by Mark Slobin, surveying the history of *hazzanut* in the U.S.; *Synagogue Song in America* (1989) by Joseph A. Levin; and *The Golden Age of Cantors* (1992), edited by Velvel Pasternak and Noah Schall, which contains works by cantors of the "Golden Age" in America, biographies, an introduction by Irene Heskes, and cassettes tapes of the cantors performing their works.

Compact discs containing cantorial music have begun to appear; some feature contemporary cantors, others are recordings of music which previously appeared on phonograph records. There are also now video tapes of cantors. Of particular interest is a video made in 1990 by the National Center for Jewish Film of Brandeis University and produced by Sharon Puker Rivo and Cantor Murray E. Simon. It is of a film originally made in 1931 with the cantors Yossele Rosenblatt, Mordechai Herschman, Adolf Katchko, David Roitman, and Joseph Shlisky. Added to the film now are explanatory comments by the cantor, Prof. Max Wohlberg.

[Akiva Zimmerman]

Women in the Cantorate

Throughout most of Jewish history the cantor, or *hazzan*, was male. Ordination of women as cantors began in the United States in the 1970s. Between 1975 and 2000, several hundred female cantors were ordained. The major Jewish legal (halakhic) issue to be overcome was that of a woman fulfilling the obligation (*hiyyuv*) of public prayer for men who would say "Amen" to her blessing (*berakhah*). This ability and responsibility of the representative of the congregation (*shali'ah zibbur*) to fulfill the obligation (*le-hozi et ha-kahal*) for the community is central to the cantorial role. Because of this representative role, many traditional legal scholars believe that it is more complex to invest women as cantors than it is to ordain them as rabbis.

The Reform movement was the first to ordain women as cantors. As of 2005, three-quarters of all graduates from Hebrew Union College's (HUC) School of Sacred Music in New York were women. Worldwide, more than half of Reform cantors are women and there is some concern that the role of cantor in the Reform movement will be redefined into a female profession.

In the Conservative movement, the number of female cantors grew from zero to 30 percent between 1985 and 2005. Unlike the protracted national process that preceded the acceptance of women into the Rabbinical Assembly and as students in the rabbinical school, the 1984 admission of women to the cantorial program of the Cantors Institute of the Jewish Theological Seminary (JTS), where women had always been admitted as students of Jewish music, was accomplished by the decision of JTS chancellor Ismar Schorsch. This led to some resentment among cantors in the field. Although JTS first ordained women cantors in 1986, the professional association of Conservative cantors (Cantors Assembly) did not admit them to membership until 1990.

By 2005, U.S. Reform (Hebrew Union College), Conservative (Jewish Theological Seminary), and Reconstructionist (Reconstructionist Rabbinical College) movements, as well as trans-denominational programs at Gratz College in Philadelphia and Hebrew College in Boston had formal training programs for cantors which ordained women. These *hazzanim* not only led services and educational programs; they also presided at life-cycle events, such as weddings and funerals.

ḤAZZAN, ISRAEL MOSES BEN ELIEZER (1808–1863), rabbi and author. Ḥazzan was born in Smyrna, and in 1811 went with his father to *Jerusalem, where he studied in the yeshivah of his grandfather Joseph Raphael *Ḥazzan. In 1842 Israel was appointed a member of the *bet din* in Jerusalem and in 1844 journeyed to London as an emissary of the Jerusalem community. During his stay in London he wrote a pamphlet, *Divrei Shalom ve-Emet*, against a pamphlet issued by the recently established Reform movement in England; and another pamphlet against the decisions of the Rabbinical Synod at Brunswick under the title *Kinat Ziyyon* (Amsterdam, 1846). The same year he joined a group established for the purpose of fighting the Reform movement. He later went to Rome, where he was appointed rabbi (1847–54), and interceded on behalf of the Jews of Italy in the court of Pope Pius IX. From Rome he proceeded to Corfu, where he was rabbi for five years. He was then invited to *Alexandria, serving as rabbi and *av bet din* there until the end of 1862. He then settled in *Haifa but died in *Beirut, where he had gone on account of ill-health. His remains were taken for burial to Sidon since it was regarded as being within the borders of Erez Israel. Ḥazzan also wrote *Naḥalah le-Yisrael* (Vienna, 1851), on the obligation of deciding laws of inheritance according to Torah; *Kedushat Yom Tov* (*ibid.*, 1855), against the attempt in Italy to abolish the second day of the festivals; and *She'erit ha-Naḥalah* (Alexandria, 1862), a dispute between a merchant and two emissaries of Erez Israel. It was later combined with the *Naḥalah le-Yisrael* (1862) but is part of a work *Nezah Yisrael*, which has remained in manuscript and is an attack on the *Vikku'ah al Hokhmat ha-Kabbalah* of S.D. *Luzzatto. Other works are *Iyyei 'ha-Yam*, in two parts (pt. 1 Leghorn, 1869; pt. 2 is still in manuscript), a commentary on the responsa of the *geonim*, and *Kerakh shel Romi* (Leghorn, 1876), responsa. Still in manuscript are *Hoker Lev*, responsa, and *Yismah Lev*, sermons preached in Jerusalem and during his activity as an emissary.

[Simon Marcus]

HE (Heb. ה; חֵ) the fifth letter of the Hebrew alphabet; its numerical value is therefore 5; pronounced as a fricative laryngeal. The earliest Proto-Canaanite form of the *he* is a pictograph of a calling (or praying) man 𐤅, 𐤆. This developed in South Arabic into 𐩦 and in the Phoenician script into 𐤅. Variants of the latter form survived in the Hebrew 𐤅, Samaritan 𐤅, and Greek (and Latin) “E”, where it became the vowel *epsilon*. The Aramaic *he* unified the two lower horizontal bars into one vertical 𐤅. This form was adopted by the Jewish script, but later the left vertical separated from the upper horizontal stroke 𐤅. The Natatean *he* joined the two downstrokes 𐤅 and thus the Arabic 𐤅 developed. 𐤅 is used as an abbreviation for the Divine Name. It is also frequently found on *amulets where it signifies the five fingers of the hand. See *Alphabet, Hebrew.

[Joseph Naveh]

HEAD, COVERING OF THE. Jewish tradition requires men to cover the head as a sign of humility before God, and women, as evidence of modesty before men, although the Bible does not explicitly command either men or women to cover the head.

Men

According to the description of the priestly garb in Exodus (28:4, 37, 40), the high priest wore a miter (*miznefet*), and the ordinary priests a hat (*migba'at*). It was generally considered a sign of mourning to cover the head and face (11 Sam. 15:30, 19:5; Jer. 14:3–4; Esth. 6:12). In talmudic times, too, men expressed their sense of grief while mourning by covering their heads, as did *Bar Kappara after the death of *Judah ha-Nasi (TJ, Kil. 9:4, 32b; TJ, Ket. 12:3, 35a). A mourner, one on whom a ban (**herem*) had been pronounced, and a leper, were, in fact, obliged to cover their heads (MK 15a), as was anyone who fasted in times of drought (Ta'an. 14b). These people had to muffle their heads and faces. It was considered an expression of awe before the Divine Presence to conceal the head and face, especially while praying or engaged in the study of mysticism (Ḥag. 14b; RH 17b; Ta'an. 20a). The headgear of scholars was an indication of their elevated position (Pes. 11b); some of them claimed that they never walked more than four cubits (about six feet) without a head covering (Shab. 118b; Kid. 31a; also Maim. Yad, De'ot 5:6, and Guide 3:52). The custom was, however, restricted to dignified personages; bachelors doing so were considered presumptuous (Kid. 29b). Artistic representation, such as Egyptian and Babylonian tablets or the synagogue at Dura Europos, generally depict Israelites, (and later Jews) without head covering. On the other hand, some rabbis believed that covering a child's head would ensure his piety and prevent his becoming a thief (Shab. 156b).

According to the Talmud (Ned. 30b), it was optional and a matter of custom for men to cover their heads. Palestinian custom, moreover, did not insist that the head be covered during the priestly benediction (see J. Mueller, *Hilluf Minhagim she-bein Benei Bavel u-Venei Erez Yisrael* (1878), 39f., no. 42). French and Spanish rabbinical authorities during the Middle Ages followed this ruling, and regarded the covering of the head during prayer and the study of the Torah merely as a custom. Some of them prayed with a bare head themselves (Abraham b. Nathan of Lunel, *Ha-Manhig* (Berlin, 1855), 15b, no. 45; *Or Zaru'a*, Hilkhot Shabbat 43). Tractate *Soferim* (14:15), however, rules that a person who is improperly dressed and has no headgear may not act as the *hazzan* or as the reader of the Torah in the synagogue, and may not invoke the priestly benediction upon the congregation. Moreover, the covering of the head, as an expression of the “fear of God” (*yirat shamayim*), and as a continuation of the practice of the Babylonian scholars (Kid. 31a), was gradually endorsed by the Ashkenazi rabbis. Even they stated, however, that it was merely a worthy custom, and that there was no injunction against praying without a head cover (Maharshal,

Resp. no. 7; *Be'ur ha-Gra* to Sh. Ar., OH 8:2). The opinion of David Halevy of Ostrog (17th century) is an exception. He declared that since Christians generally pray bareheaded, the Jewish prohibition to do so was based on the biblical injunction not to imitate the heathen custom (**hukkat ha-goi*; *Magen David* to OH 8:2). Traditional Jewry came to equate bareheadedness with unseemly lightmindedness and frivolity (*kallut rosh*), and therefore forbids it (Maim. Yad, De'ot 5:6).

The covering of the head has become one of the most hotly debated points of controversy between Reform and Orthodox Jewry. The latter regards the covering of the head, both outside and inside the synagogue, as a sign of allegiance to Jewish tradition, and demands that at least a skullcap (Heb. *kippah*, Yid. *yarmulka*) be worn. Worship with covered heads is also the accepted rule in Conservative synagogues. In Reform congregations, however, it is optional.

[Meir Ydit]

Women

It was customary for most women in the ancient Near East, Mesopotamia, and the Greco-Roman world to cover their hair when they went outside the home. In biblical times, women covered their heads with veils or scarves. The unveiling of a woman's hair was considered a humiliation and punishment (Isa. 3:17; cf. Num. 5:18 on the loosening of the hair of a woman suspected of adultery; III Macc. 4:6; and Sus. 32).

In talmudic times, too, married women were enjoined to cover their hair in communal spaces (e.g., Ned. 30b; Num. R. 9:16). In a society so highly conscious of sexuality and its dangers, veiling was considered an absolute necessity to maintain modesty and chastity. If a woman walked bareheaded in the street, her husband could divorce her without repaying her dowry (Ket. 7:6). Some rabbis compared the exposure of a married woman's hair to the exposure of her private parts (Ber. 24a), and forbade the recitation of any blessing in the presence of a bareheaded woman (*ibid.*). The rabbis praised pious women such as Kimhit, the mother of several high priests, who took care not to uncover their hair even in the house (Yoma 47a; Lev. R. 20:11). Nevertheless, covering the head was a personal imposition and restriction from which men were glad to be exempt. According to Sotah 3:8, men differ from women in that they may appear in public "with hair unbound and in torn garments." In Eruvin 100b, one of the disadvantages or "curses" that is cited as an inevitable part of being female includes being "wrapped up like a mourner." Some aggadic sources interpret this custom as a sign of woman's shame and feeling of guilt for Eve's sin (Gen. R. 17:8; ARN² 9; Er. 100b and Rashi ad loc.; cf., also, the opinion of Paul in I Cor. 11:1–16). Girls did not have to cover their hair until the wedding ceremony (Ket. 2:1). It gradually became the accepted traditional custom for all Jewish women to cover their hair (see Sh. Ar., EH 21:2).

In the early modern period the practice of a woman's shaving off all her hair upon marriage and covering her head

with a kerchief (*tichal*) became widespread in Hungarian, Galician, and Ukrainian Jewish communities. Justifications for this stringency were to ensure that a married woman's hair would never be exposed and to eliminate the possibility of a woman's hair rising to the surface during her ritual immersion in the *mikveh*, rendering it invalid. Opponents argued that shaving the head would make a woman unattractive to her husband. Toward the end of the 18th century some circles of women began to wear a wig (*shaytl*). This "innovation" was opposed by certain Orthodox authorities such as Moses *Sofer (see A.J. Schlesinger, *Lev ha-Ivri*, 2 (1928³), 109, 189) but continued to be widely practiced. In the early 21st century, a diverse range of customs connected with hair covering are followed by Orthodox Jewish women. Among some modern Orthodox women, there has been renewed interest in various modes of covering the hair after marriage. Many women who are not Orthodox continue the custom of covering their hair in synagogue.

HEAD, EDITH (1897–1981), U.S. costume designer. Head was born Edith Claire Posener to Max and Anna Posener (née Levy) in San Bernardino, California. When her mother divorced and remarried, Edith took her stepfather's surname, Spare, and adopted his Roman Catholic faith. The family moved to Los Angeles when Head was 12. She received an undergraduate degree from the University of California at Berkeley and a master's degree in French from Stanford University in 1920. She returned to Southern California to teach at the Hollywood School for Girls. When asked to teach an art course at the school, Head signed up for night classes at the Otis Art Institute and then the Chouinard School of Art. In 1923, she married Charles Head, but the couple divorced in 1938; however, Head would use his surname for the rest of her life. Head responded to an advertisement from Paramount for a costume design artist in 1923 and won the position by borrowing designs from art school students at Chouinard. In 1927, she was appointed assistant to Travis Banton, Paramounts chief costume designer. Her first film credit as a

costume designer was for the Mae West film *She Done Him Wrong* (1933). In 1938, Head became the first woman to lead a studio's costume department. Barbara Stanwyck even had Head written into her contract after her deft handling of the numerous costume changes in *The Lady Eve* (1941). In 1945 she started making regular appearances on Art Linkletter's *House Party* to give fashion advice to women, which was followed by her advice books *The Dress Doctor* (1959) and *How to Dress for Success* (1967) and later a syndicated advice column. In 1946, she worked on the film *Notorious*, which began a 30-year collaboration with director Alfred Hitchcock. Head received her first Oscar nomination for costume design in 1948 for *The Emperor Waltz*; she was nominated a total of 34 times in her career, winning Oscars for *The Heiress* (1949), *Samson and Delilah* (1949), *All About Eve* (1950), *A Place in the Sun* (1951), *Roman Holiday* (1953), *Sabrina* (1954), *The Facts of Life* (1960), and *The Sting* (1973). When Paramount failed to renew her contract in 1967, Head went to Universal, where her six-decade career finally came to an end in 1981 with her 1,131st film, the Steve Martin comedy noir *Dead Men Don't Wear Plaid* (1982).

[Adam Wills (2nd ed.)]

HEAPS, ABRAHAM ALBERT (1885–1954), Canadian Labour leader, politician. Heaps was born in Leeds, England and attended school until 13, when he went to work to help support his family. He apprenticed as an upholsterer, and opened his own workshop and managed a large furniture store before he immigrated to Canada in 1911.

Once in Winnipeg, Heaps worked as an upholsterer for the Canadian Pacific Railway and became active in the local labor movement. He also joined the English branch of the Social Democratic Party of Canada, and was a pacifist in World War I. After two failed attempts to secure a seat as alderman, Heaps was elected in a 1917 by-election and subsequently won his seat easily.

Heaps was one of the main leaders of the Winnipeg General Strike, heading the strikers' Relief Committee. He was charged with seditious conspiracy and, after his release on bail, traveled to various Canadian cities to raise support and funds for the defense of the strikers. He conducted his own defense at his 1920 trial, and was the only one acquitted of the eight charged with seditious conspiracy.

After several years in the insurance business, Heaps was elected in 1925 to the federal House of Commons. He served as a Member of Parliament representing the heavily Jewish riding of Winnipeg North until 1940, first for the Independent Labour Party and then for the Co-operative Commonwealth Federation (CCF). He served as parliamentary whip for the CCF after 1935, and with the head of the CCF, J.S. Woodsworth, he strongly advocated the passage of social legislation, such as the federal old age pension and unemployment insurance.

Heaps' greatest sense of failure was his inability to convey the threat of the totalitarian regimes in Russia, Italy, and espe-

cially Germany. Resorting first to quiet diplomacy, he tried in vain to convince the federal government to open Canada up to desperate Jewish refugees from Hitler's Germany. He was no more successful with the public condemnation of the government of Mackenzie King. Despite Heaps' often-stated belief in the complete and vigorous prosecution of the Canadian war effort in World War II, Woodsworth's opposition to the declaration of war in September 1939 made Heaps suspect as well, and he was defeated in the federal election of 1940. Heaps subsequently held several government jobs, before moving to Montreal, where he briefly worked in the dress industry and as an arbitrator of labor disputes before his retirement.

Heaps married Bessie Morris (d. 1938) in 1913, and they had two sons, David and Leo, both of whom earned the Military Cross for distinguished wartime records. Leo also served with the Israeli army during the War of Independence. Heaps remarried in 1947, to Fanny Almond.

[Henry Trachtenberg (2nd ed.)]

HEART (Heb. לֵב, *lev*, pl. לְבוֹת, *libbot*; לֵבָב, *levav*, pl. לְבָבוֹת, *levavot*). The corresponding Hebrew words only sometimes have the meanings in question but many translators and writers on Bible are, or act as if they were, largely unaware of the fact.

STRICTLY ANATOMICAL SENSES OF LEV AND LEVAV **Senses That Do Not Include the Heart**

BREAST. The current English translations reveal an awareness that in Nahum 2:8 [7] *levav* means not heart but breast and rightly represent the women as "beating their breasts"; but breast is no less certainly the meaning of *lev* in Exodus 28:29–30 (three times in all). Again, in 11 Samuel 18:14–15, since it is only the attack of 10 of Joab's henchmen that finishes Absalom off after their leader has stuck three darts into the victim's *lev*, those darts must have been stuck, not into his heart, but into his breast. Somewhat similar is the case of 11 Kings 9:23–24. Jehoram is trying to flee from Jehu in his chariot, but an arrow from Jehu's bow overtakes him and strikes him "between the arms." Now, the rendering of some recent Bible translations (most recently NEB), "between the shoulders," is perhaps too free, but it is historically correct, since it can be seen on contemporary Assyrian reliefs that the lowness of the chariot floor compelled the charioteer to extend his arms horizontally when, like Jehoram here (verse 23), he held the reins in his hands. Add to this that the ground was level (Jezreel), and Jehu only a short distance behind Jehoram, and one must wonder what view of the course of the arrow through the hapless Omrid's chest was adopted by the same translators to account for the statement that "the arrow pierced his heart." What the words *va-yeze (wa-yeze) ha-ḥezi mi-libbo*

do mean is – word for word – “and the arrow emerged from his breast.” Probably Jeremiah 17:1 is still another instance. This sense of *lev*, by the way, is not confined to biblical Hebrew (see Sot. 1:5; Mak. 3:12). The word *hazeh* (“breast”), unlike its Aramaic etymon, seems to have been used only of animals so long as Hebrew was a living language.

THROAT. This is what *lev* means in Isaiah 33:18; Psalms 19:15; 49:4; Job 8:10; Ecclesiastes 5:1. *Lev* is either parallel to *peh* (“mouth”) or associated with the root *hgy* (which always denotes audible sounds, including the coo of the dove (Isa. 38:14; 59:11), the growl of the lion (Isa. 31:4), and the twang of the lyre (Ps. 92:4), and never silent meditation), or both, with the exception of Job 8:10, in which *lev* alternates with the *peh* of the otherwise identical phrase in 15:13. In fact, *lev* is the proper word for “throat” in biblical Hebrew, *garon* taking its place only where the former would be misunderstood (as where *lo’ yehgu be-libbam* would have meant not, “They cannot utter sounds with their throats,” but “They do not speak sincerely,” see Hos. 7:14).

Senses that Include the Heart

Even where the word *lev* clearly refers to something inside the body cavity, it does not always mean specifically the heart. It doubtless does when it is paired with “kidneys” (Jer. 11:20; 17:10; Ps. 7:10; 73:21), but probably more often it merely conveys the general idea of “the insides, the interior of the body”; and from this sense derives its use with *yam(mim)* (“sea(s)”) and *ha-shamayim* (“the air” or “space”) to express the notions “(far) out at sea” and “(high) up in the air (in space)” (Ex. 15:8; Ezek. 27:4, 25–27; 28:2, 8; Ps. 46:3; Prov. 23:34).

NOT STRICTLY ANATOMICAL SENSES OF LEV AND LEVAV

The interior of the body is conceived of as the seat of the inner life, of feeling and thought. Strong feeling is conceived of as a stirring or heating of the intestines (*me’ayim*) – Isaiah 16:11; Jeremiah 4:19 [20]; Lamentations 1:20 – as well as of the heart – Deuteronomy 19:6; Jeremiah 48:36; Psalms 39:4. Gladness is a function not only of the heart (e.g., Prov. 23:15) but also of the kidneys (Prov. 23:16; cf. Jer. 12:2b), which also urge a certain course on a man. But it is the *lev(av)* that figures most often in references to the inner life, both emotional and – and this is its special sphere – intellectual. That is why when *lev(av)* is mentioned alone it is often hard to decide whether the underlying physical concept is specifically the heart or the inwards generally. At any rate, the Bible never mentions about the *lev(av)* anything that is literally physical, such as a heartbeat; nor does it ever mention any literal pain or ailment of it. That somebody’s “heart” is sick means that he is grieving; that Israel’s “heart” is obstructed (older translations, regrettably, “uncircumcised”) signifies that it is religiously stubborn and intractable – cutting away the obstruction of Israel’s “heart” of course means making it religiously reasonable. So, too, that a man says something “in his heart”

means that he says it to himself, or thinks it; that he is “wise of heart” means that he is intelligent or skillful. One who has no “heart” is a dolt. A faithful English translation is precisely one that in most cases does not contain the word “heart,” but either substitutes “mind,” or sometimes “spirit,” or – quite often – does not render the noun at all; for it is often hard to feel, let alone express, the differences between such pairs as “gladness of ‘heart’” and plain “gladness,” “he rejoiced ‘in his heart’” and the bare “he rejoiced,” etc. On the other hand, in the interests of both aesthetics and usefulness, “heart” should be substituted in English for the emotional kidneys and intestines of biblical Hebrew: the King James “my bowels were moved for him” (Song 5:4) is not either more beautiful or more enlightening than something like “my heart yearned for him.” Finally, on the one hand the word *levav* illustrates biblical Hebrew’s lack of a terminology for distinguishing clearly between mind (or “soul”) and body; for when Psalms 104:15 says that bread fortifies a man’s *levav* while wine cheers a man’s *levav*, the first *levav* means “insides” if not actually “body,” but the second one means “spirit.” Nevertheless, the words *lev* and *levav* enable the language to come close to distinguishing between the two, the former by juxtaposition with *basar* (בָּשָׂר) the latter by juxtaposition with *she’er* (שֵׁעָר), two words meaning “body” (lit. “flesh”; see Ps. 73:26; 84:3; Eccles 2:3; 11:10). Psalms 73:26 helps us to detect the fact that the word *ro’sh* (רֹשׁ) (“head”) in Isaiah 1:5 is a corruption, due to contamination by the *ro’sh* in the following verse, of an original *she’er*, the restoration of which yields for Isaiah 1:5b the sense, “Every body (not just the head but the entire body, see verse 6) is sore and every spirit is anguished.”

[Harold Louis Ginsberg]

IN THE TALMUD AND AGGADAH

The rabbis adopted the biblical view that the heart is the seat of the emotions, and they applied this notion to every sphere of human action and thought. It is doubtful if they were aware of the circulation of the blood and the part played in this by the heart, but they did state that “all the organs of the body are dependent on the heart” (TJ, Ter. 8:10, 46b). In the list of ailments and maladies which render an animal *terefah* – defects from which they cannot recover – is the perforation of the heart (Hul. 3:1).

However, most of the references to the heart in talmudic literature belong to the sphere of ethics. When each of the five disciples of *Johanán b. Zakkai was asked to express his view on “the good way to which a man should cleave and the evil way which he should shun,” Johanán gave his approval to the answers of R. Eleazar b. Arakh, “a good heart” and an “evil heart,” since “the answers of all the others are included in his” (Avot 2:9). The heart is the seat of all emotions, both good and bad, and commenting on the fact that the longer form *levav* is used in Deuteronomy 6:5 “thou shalt love the Lord thy God with all thy heart,” the Talmud emphasizes that even the evil inclination can be impressed into the service of

God, “with both thy inclinations” (the good and the bad; Ber. 54a). The frequently quoted statement, “the All Merciful requires [only] the heart” is not found in that form in the Talmud, but is stated by Rashi (to Sanh. 106b) on the basis of an assertion of similar content.

Prayer is referred to as “the service of the heart” (TJ, Ber. 4:1, 7a). The word **kavvanah* (“intention,” “direction”) is found in its fuller and in its verbal form as “the direction of the heart.” Thus a person who in the course of reading reaches the **Shema* at the time for the obligatory reading of that passage as part of the liturgy: “If he directed his heart he had fulfilled [this obligation]” (Ber. 2:1). The **etrog*, which is regarded as the fruit of perfection, is compared on the basis of its shape to the heart (Lev. R. 30:14). The hypocrite is described as he who is “one thing in the mouth and another in the heart” (BM 49a). On the verse “I communed with my own heart” (Eccles. 1:16) the Midrash (Eccles. R. 1:16) enumerates over 60 emotions of the heart, “the heart sees, hears, speaks, falls, stands, rejoices, weeps, comforts, sorrows, can be arrogant, can be broken, etc.,” each one demonstrated by an appropriate verse from Scripture.

For the halakhic problems connected with heart transplants, see **Transplants*.

HEARTFIELD, JOHN (1891–1968), German photographer, graphic artist, and caricaturist; pioneer of artistic photomontage and collage. Born in Berlin as Helmut Herzfeld, he enrolled at the Munich Arts and Crafts School in 1908 and at the Berlin Arts and Crafts School to continue his studies in 1913. In 1916, as a protest against German hostilities against England he changed his name to John Heartfield. At the end of World War I, in 1918, he joined the German Communist party (KPD) together with his friend George Grosz. In 1917 they founded the satirical journal *Die Pleite* (“The Crash”) together with John’s brother Wieland, for which he created his first political and satirical posters directed against Fascism by using the technique of photomontage. In 1929, at the International Werkbund exhibition in Stuttgart, he showed several of his collages and photomontages in journals and as book covers under the heading *Benuetze Foto als Waffe* (“Make Use of Photography as a Weapon”). He also illustrated *Deutschland, Deutschland ueber alles*, a satirical book written by Kurt Tucholsky. As a member of the Communist Party and on the staff of the *Arbeiter-Illustrierten-Zeitung*, a weekly newspaper for working people, he published satirical attacks and was already a thorn in the side of the Nazis and had to flee after their rise to power in 1933. He was able to continue his activities first from Prague and later from Paris, where he met Walter **Benjamin* in 1935. In 1938, he settled in London and received permission to work as a freelance cartoonist in 1943. After the war, he returned to East Berlin, became a much-

honored professor there at the Academy of Fine Arts, and had many exhibitions in Communist Berlin, Warsaw, Moscow, and Prague. Most of Heartfield’s montages foreshadow the catastrophe of World War II, such as the cover of a journal under the title *Italy in Chains* (1928). Among his most famous posters was the one called *As in the Middle Ages... So in the Third Reich* (1934), featuring a dead body braided onto the swastika.

HEBER (Heb. הֵבֶר and הֵבֶר; “community”).

(1) Heber son of Beriah son of **Asher* son of Jacob (Num. 26:45) was among those who accompanied Jacob to Egypt (Gen. 46:17). He is the eponymous ancestor of the Asherite clan Heber (Num. 26:45). The importance of the clan is evident from the centrality of the genealogical listing of the sons of Heber among the Asherites (1 Chron. 7:32–39).

(2) Heber the **Kenite*, a descendant of Hobab, the father-in-law of Moses (Judg. 4:11), and the husband of **Jael* (Judg. 4:17, 21; 5:24), who slew **Sisera*. Heber had previously separated himself from the Kenites, the descendants of Hobab who dwelt in the Negev among the **Amalekites*, and pitched his tents near Elon-Bezaananim (Judg. 4:11; cf. 1 Sam. 15:6).

HEBRAISTS, CHRISTIAN (1100–1890). Factors governing gentile enterprises in Hebrew scholarship prior to the latest phase of more widespread secular attitudes may be distinguished as (1) motivation; (2) scholarly facilities; and (3) occasion; appreciation and assessment of these ought to suffice to set the achievements of gentile Hebraists in the context of the cultural background, including economics, geography, and politico-religious history relevant in each case. Such considerations ought to precede the arbitrary division into chronological periods. Since, however, time and place cannot be ignored, the section numbers that follow will be used for reference back.

(1) **Motivation.** (a) Study of the “Old” Testament and of New Testament origins and presuppositions. It was generally assumed that the Latin Bible (in whatever textform lay before the scholar) corresponded exactly, or at least virtually, with the Hebrew original; but (aa) in the later Middle Ages it was occasionally glimpsed, and from Erasmus’ time more frequently appreciated, that the Hebrew Bible and its primary versions each have their own internal text history. (b) Christian commitment to self-identification with the religious experience of Jesus, the apostles and the early Church, which had been formed by reaction to the Hebrew Bible, the institutions, and at first also the language of the Synagogue. This sometimes led to (bb) interest in post-biblical Jewish institutions and their

exploration through verbal contacts with Jews and later from literary sources. The synchronistic assumptions of traditional Judaism regarding the coevality from Sinai of the Pentateuch and the institutional elaboration of Jewish life at its contemporary phase of development (as the modern scholar would consider it) were not questioned, except insofar as the Gospels may obliquely query them. The Christian student thus regarded his Jewish informants as an organically living, though theologically fossilized specimen of the personal, domestic, social, jurisprudential, ethical, and speculative realities of ancient Erez Israel. Curiosity was often aroused by the presence of a vigorous Jewish life as an enclave within Christendom and in part independent of its presuppositions. This also acted as a spur to (c) missionary activity toward the Jews, expressed not only in preaching but (cc) by engagement in controversial disputations. This could easily slip into (d) antisemitism, and the unscrupulous exploitation of rabbinic literature for purposes of anti-Jewish propaganda. (e) The revival of learning in the West, and a religious humanism, discovered anew the notion of the classical language and its literature, and as explained more fully below could accommodate Hebrew within the same intellectual approach. Finally, there is (f) incipient Orientalism, and the exploitation of the Semitic versions of the Bible both as a bridge to the vocabulary, etc., of the cognate languages and as themselves affording tools for the understanding of biblical and post-biblical Hebrew and Aramaic. Archaeological interest, which arose only recently, belongs in this category; its predecessor, the antiquarianism of pilgrim and traveler, falls properly within (b).

(2) **Facilities for Scholarship.** (a) The availability of sources of information regarding Hebrew, Jews, and Judaism of a traditional, approved, and so scholastically recognized caliber, either scattered through the patristic writings, the greatest of which were read and reread throughout the western Church, or encyclopedically arranged. (aa) The invention of printing affected not only the availability of these but also the diffusion of post-scholastic tools – grammars and dictionaries of Hebrew – that could supersede them. (b) The availability of teachers of Hebrew, locally or through migration or invitation: either Jews (who, though unsystematic, were mostly learned in their “lore”), or apostate Jews, or gentiles who had achieved a real competence. (c) Finally, institutions with libraries and endowments: originally the monasteries and the mendicant orders, and later the colleges and universities, *ex hypothesi* institutions for professed Christians, but at the latest stage sometimes modified so as to accept Jews as students and as teachers *de jure*.

(3) **Occasion**, i.e., individual or mass movement and its consequences in interaction. (a) Medieval Christian scholars migrated from northern Europe, especially to Italy and Spain, in search of learning. (b) Jewish scholars and informants moved on, driven by persecution, expulsion, or economic stress, but (bb) sometimes for less urgent causes, and

occasionally with a preparedness to accept Christian baptism. (c) Conquests, treaties, revolutions, ecclesiastical settlement or realignment, or liberalizing reform, frequently forced (and occasionally attracted) large-scale movements of Jews. (d) A common language for Jewish tutor and gentile pupil (e.g., Norman French, or English), or mutual intelligibility through closeness of their respective dialects (e.g., Judeo-German and High German, or (Judeo-)Spanish and Latin).

The 12th Century

During the first Christian millennium the Church produced two substantial Hebraists, *Origen and *Jerome (i.e., Hieronymus), whose biblical commentaries were widely read. These, together with *Philo and *Josephus, constituted the basic sources of information on Hebrew and Jewish matters, their data often being taken over unacknowledged. Of the two streams of transmission one was encyclopedic and the other exegetical. Isidore of Seville (seventh century) drew heavily on Jerome in his *Etymologies*, which became the standard work of reference, being utilized in particular by Bede (d. 735) and successively by Hrabanus Maurus and the latter’s pupil Walaf-rid Strabo (c. 808–49). The exegetical tradition is likewise one of plagiarization of the standard Christian commentaries on each book of the Bible.

By the early 12th century this material was being digested, often so succinctly as to reach almost catchword proportions, in the gloss that was becoming a marginal and interlinear accompaniment to manuscripts of the Latin Bible. The gloss also incorporated some matter taken from the encyclopedic stream, and was itself a literary undertaking suggested by the glossation of the standard Western authorities in medicine and law. It seems highly probable that this Christian technique of dealing with voluminous material reckoned to give the “approved” interpretation of an authoritative text was deliberately adopted by *Rashi (1030–1105) as the model for his own succinct running commentaries on the Hebrew Bible and the Talmud.

Rashi’s commentaries, which spread rapidly and with acclaim from the Rhineland over Jewish Europe, constitute the first important occasion for a fresh advance in gentile Hebraism. They were not pitched at a specialist rabbinic readership, but were meant for the ordinary educated Jew, and it was generally the latter (or his apostate mutation) rather than the professional rabbi to whom the Christian student turned for help. Northern France, particularly Paris and its environs, formed the locale, and “Romance” the *lingua franca*, as testified by the Cistercian Stephen Harding (d. 1134). Motivation (1, a) was central, but (1, cc) was also operative; for religious controversy with the Synagogue, actively prosecuted by the early Church, had revived in Carolingian times. It stimulated a Jewish apologetic in the commentaries of Rashi and his successors, but little of substance is known about the Christian side in these early public disputations.

Christian initiative came from the abbey of St. Victor, 1110, and its daughter house in England, Wigmore. Hugh of St. Victor, who taught in Paris from about 1125 until 1141, set himself the task of rehabilitating the literal-historical sense of Scripture that had traditionally in Christian exegesis been reckoned the mere handmaid of allegory. His endeavor brought him to the Jews, and to the fallacious assumption – shared by his successors – that all interpretation deriving immediately from Jewish sources must, *ex hypothesi*, be “literal,” including midrashic assertions which the Jews themselves would not have regarded too seriously as “facts”: for the bare “letter” of Scripture was all that the Jews were deemed to possess. Hugh consulted them regarding their understanding of the Prophets; he also learned some Hebrew, sometimes preferring a literal Latin translation to the established Vulgate reading. Deriving his knowledge from oral informants, he quoted matter found in Rashi, Joseph *Kara, and *Samuel b. Meir (Rashbam). Hugh’s pupil *Andrew, an Englishman, was likewise dependent on oral sources, whereas the latter’s own pupil, Herbert of Bosham, who was still using oral informants, could clearly read Rashi for himself. But Bosham’s commentary on Psalms never circulated. Andrew’s extensive works, which cover the Pentateuch and utilized matter from his contemporary Joseph *Bekhor Shor, were widely read in monastic libraries in England and France. They were not only exploited by *Nicholas de Lyre (see below), but were plagiarized by Peter the Digerter, author of the standard medieval *Historia Scholastica*, and by preachers (e.g., Archbishop Stephen Langton) whose sermons circulated widely in written form.

During the 12th and 13th centuries Christian scholars were prosecuting their search for the philosophical and scientific texts of Greek antiquity and late antiquity in Italy, Sicily, southern France, and Spain. This sometimes brought them to Jewish interpreters, or to Hebrew versions of Aristotle and others made from the Arabic; but their concern with the intermediate Hebrew was incidental only, except insofar as it related to *Maimonides and – later on – other philosophers of Judaism who had written in Arabic and had been translated into Hebrew. It is a fair assumption – but no more – that the Latin-speaking translators of these Arabic texts, such as Gundissalinus, would have acquired some Hebrew alongside their study of Arabic. But in those cases where they were either dependent on a Hebrew version, or were collating one with its antecedent Arabic, they may very well have relied entirely on a Jewish collaborator.

The Rise of the Mendicant Orders

The year 1210 saw the foundation of the Franciscans, whose Hebrew interests were mainly motivated by (1, b), and 1215 that of the Dominicans or Preachers, who, responding primarily to (1, c) and (1, cc), sited their houses when possible near Jewish quarters or actually within them, as at Oxford. Their missionary zeal was directed also toward Muslims, and

consequently to Spain where many Jews spoke Arabic, and led a few Dominicans to study Arabic and others Hebrew; they may have established a Hebrew school at Paris in about 1236. The efforts of the Franciscans have left more trace in England, due largely to the encouragement of Robert Grosseteste (d. 1253), bishop of Lincoln, and to the pioneering endeavors of Roger *Bacon, himself an author of Greek and Hebrew grammars, who grasped the cognate nature of Hebrew, Aramaic, and Arabic. An interlinear glossation of the Hebrew Bible (*superscriptio Lincolniensis*) reflects in its name Grosseteste’s encouragement: it follows the Hebrew word order with syllabically literal faithfulness, and often reflects Rashi’s exegesis and develops his Norman-French glosses. The Psalms version survives complete, and fragments of other parts of the Bible, but coverage was probably not completed; and Henry of Cossey, a Cambridge Franciscan (d. 1336), in saying that the Church had “not yet” authorized the version, may imply domestic aspiration or a serious project. The collaboration of Jews, possibly reluctant and still faithful rather than apostates, has been proved. Thus facility (2, b) was apparently available preeminently in France and England, and the English expulsion of 1290 (occasion type 2, b) may have increased potential consultants in Paris and elsewhere.

The result of this (and doubtless other unrecorded) interest, alongside motive (1, aa; see below) was the enactment of the ecclesiastical Council of Vienne (1312) – thanks to the efforts of the Arabist Raymond Lull – that two teaching posts each for Greek, Hebrew, Syriac, and Arabic should be established at Paris, Oxford, Bologna, and Salamanca respectively. In Oxford the converted Jew John of Bristol taught Hebrew and Greek for a few years from 1321, and in Paris and Salamanca the Hebrew chair was staffed for about a century, but that of Paris certainly thereafter lapsed. The *superscriptio* was forgotten, possibly being overshadowed by the commentary of the Franciscan Nicholas de Lyre to the entire Bible. Learning on Andrew and heavily impregnated by independent use of Rashi, it was later supplemented by the apostate Paul of Burgos (see Pablo de Santa *Maria) (d. 1435) from *Ibn Ezra and *Kimḥi. The Christian student apparently now felt that he could skip the Hebrew text, and its linguistic study hibernated until the late 15th century. Lyre’s supplemented “*Postillae*” became, alongside the *Historia Scholastica* (see above), the standard source for Jewish exegetical matter; Lyre’s work was the first Christian commentary to reach print (1471–72), long retaining its place.

The other contributory stimulus (1, a; 1, aa) was the endeavor to correct and standardize the text of the Latin Vulgate, initiative here lying with the Dominicans, although the Franciscan *correctoria*, profiting from their predecessors’ experience, were more influential. The general effect, however (in default of print), was to leave confusion worse confounded, as Bacon (criticizing the Dominican *correctoria*) pointed out with great emphasis; the reason partly being failure to separate

the task of establishing the “best” Vulgate text (i.e., the purest or the fullest, according to standpoint), from that of collating the current (let alone the most primitive) Latin text with the current Hebrew, whose uncompromised originality was presupposed. Such Hebrew expertise as is evinced in this work is associated with the Dominican Hugh of St. Cher (d. 1263) of Paris, and with the Franciscan William of Mara (fl. 1280), whose Hebrew scholarship was enthusiastically acclaimed by Bacon. The only permanent effect of this activity was a unified chapter division since adopted (with slight exceptions) by Jews in the Hebrew text as well.

Missionary activity in Spain also led the Dominicans to investigate post-biblical Jewish literature, with a view to the refutation of matter therein allegedly incompatible with Christianity. In Raymond *Martini the Dominicans produced a scholar unusually versed in rabbinic literature, whose controversialist *collectaneum* (*Pugio fidei*) contains some extracts – now considered genuine – from Jewish sources which are no longer extant. A similar 13th-century enterprise, by French Dominicans led by Theobald, excerpted a number of allegedly objectionable *extractions de Talmude* (including some from Rashi’s commentary), the continued influence of which even into the age of print is only now becoming clearer. The *Pugio Fidei* remained a standard source for anti-Jewish polemic, which hovered between motives (1, cc) and (1, d). In the public *Disputations (1, cc) forced on the Jews, initiative came largely from apostates and from the Dominicans; and since most of the apostates (e.g., Pablo *Christiani, or Gerónimo de Santa Fé, alias Joshua (al-) *Lorki) were at best amateur rabbinists of inferior competence to their Jewish respondents, the Hebrew scholarship adduced on the Christian side was largely repetitive. After the Reformation, Protestant tractarians were able somewhat to enlarge the repertoire (see e.g., Johann *Eisenmenger).

Jewish Scientific Writings

In addition to Christian concern in the Hebrew Bible and messianic and similar passages in talmudic literature, there sometimes was an interest in Hebrew texts which were recognized as being both Jewish, and also creatively new, in a way that Talmud and Midrash were not: namely, scientific writings. This does not refer to the recovery of the older Greek texts through Arabic and Hebrew versions as described above, but rather to the near contemporary works – medical, mathematical, astronomical, etc. – of Abraham Ibn Ezra, *Abraham b. Ḥayya (Savasorda), Maimonides, and others. In Jewish philosophy the most significant production, Maimonides’ *Guide of the Perplexed*, early became available in a Latin translation that relieved aspirant students of learning Hebrew. The same applies to the older medical writings of Jews, especially Isaac *Israeli, while the Jewish authorship of the *Fons Vitae* by Ibn *Gabirol (Avicbron) was apparently early forgotten. But by the 13th–14th centuries the scientific writings of Jews (mainly of Spain) were being sought by Christians in south-

ern Europe, and occasionally (via these southern countries) further north; thus, Kepler was to put himself to trouble to see astronomical matter included in works of *Levi b. Gershon (Gersonides).

The presence, from 1391 onward, of many converted Jews in Spain, and after 1492 of many crypto-Jews, facilitated such studies (2, b; 2, c): not only because Hebrew teachers were relatively easy to find, and to employ (as being professedly Christians) *de jure* in the universities, but also because these “converts” had often carried with them into their Christian conformity an interest in, and familiarity with, earlier Jewish science, and themselves maintained the tradition in Latin (or Spanish), alongside the contemporary work (up until 1492) of their still faithful kinsfolk.

The Kabbalah, Italy, and the Renaissance

Spain was also the birthplace of the Zoharic Kabbalah, the wider impact of which was first felt in the communities of Italy and Provence, where (as in Spain) Jewish instructors could easily be found. Italy stands out, already in the 15th century, for Christian kabbalistic interests. Motivation was ambivalent (1, bb; 1, c; 1, cc). The *Zohar’s ascription to R. *Simeon b. Yoḥai in late antiquity being presupposed, it was reckoned authentically Jewish, and consequently not open to repudiation by Jews if adduced controversially by Christians. Moreover, features of the kabbalistic system were deemed to be not merely coherent with Christian trinitarianism but indeed potentially to underwrite it. By the end of the 15th century, Kabbalah had become a significant discipline of study for a few Christian humanists – e.g., *Pico della Mirandola and *Egidio da Viterbo – who were really competent in Hebrew and Jewish Aramaic. Such names mark the crowning achievement of medieval Christian Hebraism, which is marked off (though still a continuity) from modern Hebrew studies by the work of Johann *Reuchlin and the age of print. Five outstanding 16th-century scholars in the field were Pietro Columna *Galatinus, Francesco *Giorgio, Guillaume *Postel, Guy Le *Fèvre de la Boderie, and Benito *Arias Montano. This Hebrew interest, as the outcome of the religious humanism of the Renaissance, is linked by the same parent to the Hebrew scholarship of the Reformation, in which the same atmosphere largely prevailed – and the Christian kabbalists could never have made such remarkable progress but for the encouragement of Hebrew in Italy by prince and prelate during the earlier part of the 15th century. A revised attitude (1, e) toward Greek and Roman antiquity, as having discovered the vehicle for certain permanent values in a linguistic meticulousness that could consequently be considered “classical,” easily set the language of the Hebrew Bible alongside them: since biblical values (as read with a Christian glossation) were considered permanent, biblical Hebrew, no less than Plato’s Greek or Virgil’s Latin, must be acknowledged to be “classical.” Post-biblical Hebrew might, as a corollary, have been scorned as debased and post-classical, but it was not; perhaps because, inarticulately and

paradoxically, the Christian humanists sensed a continuity of a sort between post-biblical Judaism and Christianity, unlike the discontinuity with paganism. Consequently, despite the conviction that the Church had displaced the Synagogue as the authentic embodiment of the message of the “Old” Testament, the supposedly obsolete institutions and theology of Judaism – presumed still to be those of apostolic times – remained worth investigating.

Such academic motivations were reinforced by (1, c) conversionism, and led not merely to the study of Hebrew – occasionally even as a spoken language, with Jewish or apostate assistance – it also stimulated the collection of Hebrew manuscripts, not as curiosities but as appropriate to any humanist’s library that purported to be well equipped. Typical of the enterprise may be considered Giannozzo *Manetti, who at the encouragement of Nicholas v laid the foundations of the Vatican Hebrew collection. At the turn of the 15th–16th centuries such interest flourished sufficiently to lead to the foundation of a few “trilingual” colleges – in Alcalá (Spain), thanks to the patronage of Cardinal *Ximenes (Cisneros), in Paris (College de France), at Oxford (Corpus Christi College), at Louvain, Vienna, and conceivably elsewhere. In some cases these arrangements were absorbed in, or replaced by professorships (see below); elsewhere they may have petered out. But in England the tradition of “trilinguality” (to be carried further, in ideal, by Robert Wakefield’s tract (1524) on the *laus et utilitas* of Arabic, Aramaic, and Hebrew) passed into some of the grammar schools then being founded, e.g., Colet’s refounded St. Paul’s (London) – there to survive, admittedly in an attenuated form, except in the case of Merchant Taylors’ School, where it was prosecuted vigorously into the 20th century.

The Reformation and the Age of Printing

For approximately 50 years (1490–1540) the following three independent factors invigorated each other: (A) The emergence of a cadre of near-modern type scholars, preeminently J. Reuchlin and C. *Pellicanus, capable of training successors on the basis of comprehensive and categorically articulated grammars of at least biblical Hebrew accidence, which they themselves composed. These grammars were substantially influenced by David Kimḥi’s. (B) The spread of the *printing press, and the demands of Christian Hebraists for Hebrew type – a need met in northern Europe at first by blockcutting for each word. Pride of place again belongs to Italy, where movable Hebrew type-font had already been well developed by Jewish printers; the enterprise of the Christian printer Daniel Bomberg of Venice stands out. Enjoying the patronage of Leo x, and availing himself of the editorial services of really expert rabbinites (including the convert Jacob b. Ḥayyim of Tunis, and Elijah *Levita) Bomberg gave Europe both its first “rabbinic” bibles (i.e., Hebrew texts with parallel Jewish commentaries), and the first complete edition of both Talmuds. The presence of these volumes, often from an early date, in

academic libraries across Europe may be a significant pointer to Hebrew interest locally. Pellicanus’ Hebrew grammar was the first to be printed (Strasbourg, 1504); Reuchlin’s (Pforzheim, 1506) also contained a vocabulary. With these basic tools, which were rapidly improved, the modern foundations of western academic Hebrew may be considered laid. (c) The movement toward ecclesiastical reform that ended in the emergence of nation-centered Protestant churches independent of Rome owed much to the claim – ultimately a quasi-dogma – that authority lay not in the tradition of the western Church controlled by the papal curia, which had encrusted the Bible with its own interpretation (parallel to the procedure of rabbinic Judaism), but in the unadulterated text of the Bible itself. Hence the need for study of the biblical languages, and for producing improved translations – soon into the vernaculars of Europe, but also into Latin (e.g., that by Xanctes (Santes) *Pagnini, 1528). Pagnini’s was a Catholic enterprise and when the Council of Trent asserted the “authenticity” of the Latin Vulgate, this was on grounds of its embodying of and linkage with “officially” endorsed patristic exegesis (analogous to the position of Targum Onkelos within Judaism), and not by way of depreciation of the greater accuracy of the new translations. But the result was that, until recent times, Catholic vernacular versions have continued to be made from the Latin, with the significant exception of the Spanish Bible, which was a Jewish production made in Italy, and accepted by the curia through (ex-) Marrano channels.

Together, these trends brought about the establishment of professorships of Hebrew in the universities, both in Catholic countries and under the reformed churches, in part as an item of governmental policy; the “Regius” chairs at Oxford and Cambridge, for example, being founded by Henry VIII in 1540. Henceforth, however, gentile Hebraism in Europe flows along divided streams – one Catholic, and the other in the countries of the Reform.

Post-Reformation Catholic Hebraism

The Counter-Reformation focused Catholic Hebrew scholarship almost exclusively on the Hebrew Bible, Jewish interests that had engaged men like Pico della Mirandola being left for Protestants. The major achievements were consequently the polyglot editions of the Bible (Antwerp, 1569–72, and Paris, 1628–45). But paradoxically it was an Italian Cistercian, *Bartolucci, and his successor Imbonati, whose *Bibliotheca Magna Rabbinica* (Rome, 1675–93) laid the foundations of Jewish bibliography, thereby adding to Hebrew scholarship a dimension from which Jewish no less than gentile Hebraists have benefited. In the late 18th century G.B. de *Rossi in Parma likewise set himself to widen Hebrew academic horizons once again.

The Protestant Countries

In the reformed countries, most Hebraists were members of the nationally established church concerned; but ecclesiasti-

cal and political frontiers break down in the case of Hungary, where a preponderant number of the Hebrew scholars were Calvinists, many of them having studied abroad. Protestant masoretic studies produced in the 17th century some notable editions of the Bible, particularly those of the Dutchmen Leusden and van der Hooght; but the crowning achievement was the publication in London (1657) of the most elaborate polyglot Bible ever produced, by a scholarly team led by B. *Walton. But during the later 16th and early 17th centuries the making of vernacular bible versions was earnestly prosecuted, having begun with Luther's German from 1523 and *Tyndale's English from 1530, both made direct from the Hebrew. The names of those responsible for the English "Authorised" Version (King James', 1611) are all known, and included some of the best contemporary Hebraists and Orientalists (see *Bible, Versions, English). The high frequency with which from 1504 onward Hebrew grammars were published (and reprinted) must imply a student market greatly outnumbering the names of those Christian Hebraists known to us as such from their publications; many others, theologians and lawyers, etc., from, e.g., Wittenberg, Jena, Leipzig, or Basle – place-names that occur time and again on the title pages of grammars – must have carried away an ability to read the Hebrew Bible, and their casual use of it in their writings can often be traced from the indexes, or the occurrence of Hebrew typeface, in their collected works.

Two Hebrew presses – at Basle and Leiden – stand out as academically adventurous. Sebastian *Muenster who published (1542) a post-biblical Hebrew grammar, issued from Basle a number of rabbinic texts, some with Latin translations, in which he enjoyed the cooperation of Paulus Fagius. The *Buxtorf dynasty carried on and extended the same editorial activity, producing translations of several of the classical texts of medieval Judaism, including *Judah Halevi's *Kuzari* and Maimonides' *Guide*, as well as the first large-scale *Lexicon Chaldaicum Talmudicum et Rabbinicum* (1639). The Leiden and Amsterdam presses, especially the former (as also to a lesser degree those of Lund and Uppsala) printed many Hebrew publications including the doctoral dissertations of students of Jewish texts, as presided over by their teachers. The typical set task, from the later 16th century until toward the end of the 18th, was to translate into Latin a tractate of the Mishnah, or a section of Maimonides' Code, or the commentary of Rashi, Ibn Ezra, or *Abrabanel, to part or all of one of the biblical books (Rashi to the whole Hebrew Bible was published in Latin by J.F. *Breithaupt (1710–13)). Although any system will presumably have depended on a teacher's own interests and assignments to his pupils, probably with little attention to work being done elsewhere, the amount of rabbinic literature thus haphazardly placed in the hands of readers of Latin is impressive.

Other enterprises rank as fresh groundbreaking, such as *Scaliger's communication with the Samaritans of Nablus. Dutch and (even more so) English trading connections with

the Levant gave some scholars opportunity to visit Turkey as chaplains, the preeminent example being Edward *Pococke, whose Hebrew scholarship won genuine acclaim from contemporary levantine rabbis. John *Selden, as a lawyer, developed remarkable insight into the workings of *halakhah*, and the body of rabbinic learning applied to the exegesis of the New Testament (an enterprise that had continental parallels) by J.B. *Lightfoot was highly considered indeed. Chrestomathies for introducing students were also being produced, e.g., *Reland's *Analecta Rabbinica* (Utrecht, 1702). Reland's pupil A. *Schultens (d. 1756) first systematically exploited Arabic for the elucidation of Hebrew vocabulary. Among the Puritans of New England, the *Mayflower* had included one or two with a knowledge of Hebrew in its passenger list, and H. *Ainsworth is to be reckoned a "professional"; otherwise, through the 18th century American Hebraism was an affair of amateurs, some of them by no means negligible in competence, typified by Ezra *Stiles of Yale.

The Nineteenth Century

After approximately 1800 two new factors reduced the spate of rabbinic dissertations. One was the growth, after J.D. Michaelis' study of the Mosaic Law (1770–75), of the modern source-analytical study of the Hebrew Bible, largely elaborated regarding the Pentateuch by K.H. *Graf, and classically stated by J. *Wellhausen in 1889. This diverted the attention of Hebraists in the reformed countries back toward the Bible, especially since the decipherment of cuneiform yielded, from the middle of the century onward, an increasing body of highly relevant new source material. The other factor was Jewish emancipation, which produced a few Jews of the type of *Zunz and *Steinschneider who were academically trained in the Western sense and eager to apply modern scholarly techniques and categories to Jewish material, to whose attentions contemporary Christian Hebraists were apparently content to resign it. Conceivably the change of attitude in Germany, where hitherto much rabbinic scholarship had been prosecuted by gentiles, may be linkable to reaction against the liberalism that had produced Jewish emancipation. The net result was that what had hitherto counted as Hebrew scholarship split into two quasi-independent disciplines, namely, Old Testament scholarship, which maintained a nodding acquaintance with the newly recognized discipline of Oriental or Semitic studies; both largely ignoring "Jewish" scholarship as having little more to contribute to their respective disciplines, and as falling in an academic no-man's-land between East and West. There was thus a gap of approximately a century in the cultivation by Christian scholars of rabbinics as a tool for New Testament and other late-antique studies, until its relevance was rediscovered in the 20th century, and enhanced in importance when the Dead Sea Scrolls began to be investigated.

The history of gentile Hebrew scholarship cannot be properly written until the careers and achievements of its prac-

tioners have been not only assessed but also correlated. The list of names which follows makes no claim to completeness. (See Table: Christian Hebraists.) The Hebrew competence of those listed prior to about 1500 may prove, on investigation, sometimes to have been less than repute has credited to the individual concerned, but these early students have been given the benefit of the doubt. After about 1500 minimal qualifications for inclusion are tenure of an official academic or para-academic teaching post for Hebrew, or defense of a thesis on a rabbinic subject, or the publication of a Hebrew grammar (authors of the multitudinous manuscript Hebrew grammars extant in libraries have not been included, unless otherwise qualified). So far as is known, the list includes no name whose bearer was of Jewish parentage but who himself apostatized. With one or two readily intelligible exceptions, it excludes all who died after 1890. This year – that of the death of F. *Delitzsch, and following that of the publication of Wellhausen's documentary hypothesis – may be taken as the division between post-Reformation Hebrew scholarship and the accommodation of Hebrew and Jewish subjects within Semitics, the Hebrew Bible nevertheless sometimes still being felt to be a preserve of the Christian theologian, which prevails in the modern secular university and some of its confessional counterparts.

HEBREW BOOK TITLES.

Bible

A number of book titles are mentioned in the Bible, i.e., “Book of the Generations of Man” (Gen. 5:1), “*Book of the *Covenant” (Ex. 24:7 etc.), “Book of the Wars of the Lord” (Num. 21:14), “Book of Jashar” (Josh. 10:13; 11 Sam. 1:18), and “Book of Chronicles of the Kings of Judah and Israel.” The Pentateuch itself is variously named as the “Book of the Law of Moses” (Josh. 8:31) or the “Law of God” (Josh. 24:26), later becoming the *Torah in short, or *Ḥamishah Ḥumshei Torah* (“Five Books of the Torah”) or *Ḥummash*. Together with Prophets and Hagiographa this became in due course the Bible (Gr. Βιβλία lit. “Books”) or in Hebrew *Kitvei ha-Kodesh* (“Holy Scriptures”). A term like *Ketuvim* originally described the Hagiographa only, but then was extended to the entire biblical canon. Still later, the title *Esrím ve-Arba’ah*, the 24 books (of the Bible) occurs. The *abbreviation תנ”ך (*Tanakh*), the first letters of the three sections in the Hebrew Bible – *Torah, Nevi’im, Ketuvim* – is now the most popular term. The term *Mikra* (or *Kera*) is also used in the Mishnah and Talmud for the Bible (or a verse thereof; Ned. 4:3; Shab. 63a; Ta’an 5a; Tj, Ket 35:3). For the titles of individual books in the Bible, in particular of the Pentateuch, it is necessary to go back to the Septuagint where they appear as Genesis, Exodus, Leviticus, Numbers, Deuteronomy, terms describing, more or less, the contents of the books. In later Hebrew usage, the first or one of the first words of each book (*Bereshit, Shemot, Va-Yikra, Ba-Midbar*, and *Devarim*) was adopted as a title, which was a widespread practice among Greeks as well. Titles in Apocrypha and Pseudepigrapha describe putative authors and/or contents (e.g., *Wisdom of Ben Sira*).

Talmudic Era

In the Mishnah and Talmud the names of orders and tractates reflect contents rather than authorship, but the unwieldy size of tractate *Nezikin*, homonymous with the entire order, led to its being divided into *Bava Kamma, Bava Mezia*, and *Bava Batra* (“the first, middle, and last gate”). Chapters, which were not numbered, are quoted by one or several initial words. Alternatives to the title Talmud (“study”) are *Gemara* (“learning”), or the abbreviation ט”ש (*shas*), for *Shishah Sedarim*, the six orders of the Mishnah and Talmud, a title which resulted

from the Church’s banning of the Talmud and the consequent censorship. The oldest Midrashim, like the commentaries on the books of the Pentateuch, take their titles either from these books (e.g., *Torat Kohanim* “priestly law” but later **Sifra*), from their use as textbooks (e.g., *Sifrei de-vei-Rav*, “school-books”), or from their hermeneutic character (**Mekhilta*). Aggadic Midrashim bear either the generic name of Midrash added to that of the biblical book (e.g., *Midrash Shemu’el* or *Midrash Tehillim*) – sometimes with the word *Rabbah* (“great”) added (*Midrash Bereshit Rabbah*, see *Genesis Rabbah etc.) or that of a talmudic teacher reputed to be its compiler (e.g., *Midrash Tanḥuma*, which is also called *Yelammedenu* from the characteristic opening phrase of each chapter, and the *Pesikta de-Rav Kahana*). Later Midrashim have more fanciful titles (see below) such as *Lekah Tov* (“Good Teaching,” Prov. 4:2), *Shoher Tov* (“Seeker of Good,” Prov. 11:27), etc. Midrash אבכיר (*Avkir*) derived its name from the initials of the concluding peroration. אמן בימינו כן יהי רצון (“Amen, in our days, may it be [His] will”).

In geonic literature titles express the general nature of their compilations, such as *Halakhot Gedolot* or *Halakhot Pesukot* (“Great Rules”; “Decided Rules”) or these together with the author’s name (e.g., *She’iltot* – ritual questions (and answers) – of Aḥai Gaon; the *sefer* of Rav Amram, or of Saadia Gaon).

Middle Ages

In the Middle Ages, with the great increase in Hebrew literature of all sorts, there was a proliferation of titles, which may be roughly classified as follows:

NAMES AS TITLES. The names or abbreviations of names of the leading exegetic or halakhic authors are now used to describe their works, such as Rashi (whose Talmud commentary was also called by the generic name *Kunteres*, from *commentarius*), RaSHBA (R. Solomon b. Abraham Adret), RoSH (R. Asher b. Jehiel), Mordecai (b. Hillel), etc. often the particular nature of the work (*tosafot*, “glosses”; *ḥiddushim*, “novellae”; *she’elot u-teshuvot*, “responsa”) is indicated in the name. Later the names of authors appear as part of titles taken from a biblical phrase such as *Ein Ya’akov* (Deut. 33:28) by Jacob ibn Ḥabib; *Kaftor va-Ferah* (Ex. 25:33) by Estori Farḥi; *Paḥad Yizḥak* (Gen. 31:53) by Isaac Lampronti or *Magen Avraham* by

Abraham Gombiner. Combinations of names with the word *beit* (“house of”), *sha’ar* or *sha’arei* (“gate” or “gates of”), *minḥat* and *korban* (“offering of”), *derekh* (“way of”), *even* (“stone of”), *yad* (“hand of”), etc. are very frequent. While almost all titles in medieval (and post-medieval) religious literature began with the word *sefer* (“book of”) in some cases the word *maḥberet* or *maḥbarot* (“composition of”) was used in combination with the author’s name, e.g., *Maḥbarot Menaḥem* (b. Saruk, a dictionary); *Maḥbarot Immanu’el* (of Rome, poems). The author’s desire for anonymity, stemming from a genuine or assumed modesty, was in constant conflict with that of perpetuating his or his father’s name; the result was devious titles, both concealing and revealing. Thus Joseph ibn Kaspi (“silver,” of L’Argentière, 13th–14th centuries) incorporated this byname in all his works: *Adnei Kesef* (“Sockets of Silver,” Ex. 26:19), *Haḥazerot Kesef* (“Silver Trumpets,” Num. 10:2), *Kesef Sigim* (“Silver Drops,” Prov. 26:23), etc.

TITLES REFLECTING CONTENTS. In the Middle Ages this way of titling books was widely adopted. Saadiah Gaon called his treatise the *Book of Beliefs and Opinions*, and the title of Judah Halevi’s philosophic dialogues, *Kuzari* (“The Khazars”) reflects their imaginary framework. Similarly, titles such as Ibn Gabirol’s *Mekor Ḥayyim* (“Source of Life”), Maimonides’ *Guide of the Perplexed*, and Albo’s *Ikkarim* (“Principles”) express the basic idea or purpose of the works in question. In the same vein Maimonides called his code *Mishneh Torah* (“Repetition of the Torah” alluding both to Deut. 17:18 and to Judah ha-Nasi’s Mishnah), though it was later called the *Yad ha-Ḥazakah* (“The Strong Hand,” Deut. 34:12), since the numerical value of *yad* is 14, the number of books into which the code is divided. There are several works called “Book of Precepts” (*Sefer Mitzvot*), one by Maimonides (originally in Arabic), one by *Moses of Coucy, and the *Sefer Mitzvot Katan* of *Isaac b. Joseph of Corbeil. Israel Najara wrote a short manual of *sheḥitah* for youngsters, to which he gave the equivocal title of *Shoḥatei ha-Yeladim* (“Slaughtering of Children”).

METAPHORICAL TITLES. These occasionally overlap with the previous categories, as can be seen from examples mentioned above. However, most of these fanciful appellations do not provide the uninformed reader with any clue to the true contents of the work. Jacob b. Asher called his code *Arba’ah Turim* (“Four Rows”) from the four rows of precious stones on the high priest’s breastplate (Ex. 28:17); Joseph Caro named his code Shulḥan Arukh (“Prepared Table”; Ezek. 23:41); and Moses Isserles titled his annotations to it *Mappah* (“Tablecloth”). Early halakhic compendia bore such titles as *Eshkol* (“Cluster of Grapes”), and *Shibbolei ha-Leket* (“Gleanings of Corn”). In his work *Levushim* (“Garments”), Mordecai Jaffe named each of the 10 sections with one of the epithets of the biblical Mordecai’s attire (Esth. 8:15). Solomon ibn Gabirol called his astronomic treatise *Keter Malkhut* (“The Royal Crown”); the kabbalistic classic is known as the *Sefer ha-Zohar* (“Book of Splendor”) and kabbalistic literature in general indulged in euphuistic titles which usually expressed some

mystical idea as well; e.g., *Ez ha-Ḥayyim* (“Tree of Life”) by Ḥayyim Vital and *Tomer Devorah* (“Palm Tree of Deborah”) by Moses Cordovero.

The **gematria* system of using the numerical value of letters and words also played a great part. Thus the responsa of Simeon b. Zemaḥ Duran were named *Tashbez* – this was not only the abbreviation of *Teshuvot Shimon ben Zemaḥ* and the biblical term “chequer-work” (Ex. 28:4), but also its numerical value was 792, the number of responsa included in the work. In some cases an abbreviation based on initials displaced the title in common parlance: a typical example (apart from the classic case of Rashi) is *Shelah* (for *Shenei Luḥot ha-Berit*). The author, Isaiah Horowitz, became generally known as Ba’al ha-Shelah, and sometimes by paradoxical rebound the book was popularly called by this latter title. Similarly the Pentateuch commentary ascribed to Jacob b. Asher, author of the *Arba’ah Turim*, is known as the *Ba’al ha-Turim* (cf. Zerachiah ha-Levi’s commentary *Me’orot* on Alfasi, known as *Ba’al ha-Ma’or*).

The importance the Jews attached to a man’s literary or scholarly work caused authors like those mentioned above to be known almost exclusively by the titles or abbreviations of titles of their books, such as the SHELaH just mentioned, or the Ḥatam Sofer (title of Moses Sofer’s works: responsa, novellae etc.), the Ḥafez Ḥayyim (Israel ha-Kohen of Radun, after his ethical treatise of that name), the Ḥazon Ish (Abraham Isaiah Karelitz, after the title of his novellae).

Some titles seemingly chosen simply from biblical personal or place names – e.g., *Avi’ezzer* (by Eliezer b. Joel ha-Levi); *Taḥkemoni* (by Judah Al-Ḥarizi); *Tishbi* (by Elijah Levita) – usually contained an allusion to the author’s name.

INITIAL WORDS AS TITLES. As with biblical and midrashic literature, medieval works were also occasionally called by their initial word or words, e.g., *Tanya*, the title of a 14th-century ritual and one popularly given to Shneur Zalman’s *Likkutei Amarim*.

“FOLLOW-UP” TITLES. These were often used for commentaries, like the previously mentioned *Mappah* for the Shulḥan Arukh. Shem Tov Falaquera gave his commentary to Maimonides’ *Moreh Nevukhim* the title *Moreh ha-Moreh* (“Guide to the Guide”), and N. Krochmal wrote a *Moreh Nevukhei ha-Zeman* (“Guide for the Perplexed of the Time”). Solomon b. Abraham Adret’s *Torat ha-Bayit* (“Law of the House,” Isa. 30:9) was criticized by Aaron ha-Levi in his *Bedek ha-Bayit* (“Repair of the House,” 11 Kings 12:6) and this was countered by Adret by his *Mishmeret ha-Bayit* (“Guard of the House,” *ibid.*, 11:6). Samuel b. David ha-Levi’s *Turei Zahav* (“Circlets of Gold”) prompted Shabbetai Kohen to write *Nekuddot ha-Kesef* (“Studs of Silver,” cf. Songs 1:11). Further classifications and subclassifications can and have been made. For translators the older Hebrew book titles sometimes present a problem.

MODERN TIMES. While the medieval manner of entitling rabbinic books has continued into modern times, as exemplified by Rabbi A.I. (Ha-Kohen) Kook’s responsa (*Da’at Kohen*, *Ezrat*

Kohen, Mishpat Kohen) and other writings (*Iggerot Ra'ayyah, Olat Ra'ayyah*, etc. – *Ra'ayyah* (Rav Abraham Yizhaq Ha-Cohen) being an abbreviation of his name), modern writers in Hebrew follow the prevailing standards in Western literature and scholarship, without abandoning recourse to the former Hebrew tradition. Examples are the titles of some of S.Y. Agnon's novels and short stories (such as *A Guest Who Stays Overnight*, Jer. 14:18) and M. Shamir's *King of Flesh and Blood*, a frequent midrashic phrase.

HEBREW COLLEGE, transdenominational institution of Jewish higher education located in Newton Centre, Massachusetts. Founded in 1921 and first located in Roxbury, then the center of Boston Jewish life, through its several generations the college has followed the dynamism of the Boston Jewish community, relocating with post-World War II Jews to suburban Brookline in 1953, then to Newton in 2001.

At one time locally based and focused mainly on the Boston and New England Jewish community, the contemporary Hebrew College serves the American and worldwide Jewish community, via an array of degree and other educational programs designed for the entire gamut of the life cycle. That includes training for early childhood educators, day school and Hebrew school educators, a Prozdor for middle and high school students, Camp Yavneh, a summer camp for Jewish youth, degree programs ranging from bachelor's and master's degrees to rabbinic and cantorial ordinations, Hebrew language intensive Ulpan, and a host of adult learning opportunities including the two-year course known as *Me'ah*. Its mission has always been to provide a link between the world of higher education, academic Jewish studies, and the Jewish community.

Its birth in 1921 reflected several trends in American, American Jewish, and modern Jewish history. The rise of new ideologies in the wake of the breakdown of Jewish communal and cultural life meant a new approach to the question of a new culture and new identity for Jews. This involved centrally new approaches to education, as the vehicle for cultural transmission. The college, founded primarily by Hebraists, Zionists, legatees of the East European Haskalah, along with its sister institutions in other American cities like Philadelphia, Baltimore, Cleveland, and Chicago, to name a few, expressed these trends in its commitment to Hebrew language and culture. Its first location, Roxbury, lay at the heart of the burgeoning Jewish ethnic and religious community of Boston.

Its founding also stemmed from a particular moment in American Jewish life. The considerable energy that the immigrants expended in integration and acculturation, and the host of ethnic social welfare institutions created by them, (such as burial societies, free loan networks, *landsmensschaften*, synagogues), had not been matched by equal investment in Jewish educational institutions. This stemmed from lack of funds, the paucity of resources such as trained educators and few rabbinic immigrants, and some degree of disinterest and disagreement about what Jewish education should be. After

World War I, there arose a series of Bureaus of Jewish Education, centralized institutions that began to create a momentum for routinizing and standardizing Jewish education, which would include the building of modern *talmud torahs* and the training of teachers to staff those new sorts of congregational and community schools.

These developments suggest the importance of the American context, particularly ideas of cultural pluralism on the one hand, and Progressivism on the other. Cultural pluralism, as articulated by figures like Randolph Bourne and Horace Kallen, saw America as a republic of nationalities, a symphony with distinctive parts contributing to a greater whole, an entity dependent upon those parts for their enduring existence. No matter the internal debates about what Jewish culture should be, Jews as an ethnic group had a right to exist, and should maintain group cohesion, so went this worldview. The college, with its de-emphasis of religious ideology and its embrace of the Jewish cultural heritage, dovetailed beautifully with such pluralism.

So too with Progressivism, which saw organization as a key to solving the myriad challenges of modern life. The increasing professionalization of modernity, the belief in rationalism and rational methods for creating organizations to problem solve, found expression in American higher education. The early part of the 20th century witnessed young Jews at institutions like Columbia's Teacher's College, where they imbibed the ideas of thinkers such as John Dewey. The head of the New York City Jewish *Kehillah's* Bureau of Jewish Education, Samson *Benderly, inspired a whole generation of such future Jewish educational leaders. These men and women went on to found schools and summer camps like Yavneh; they played key roles in the emerging Hebrew College movement. Yavneh in particular signaled the belief that culture must be actualized through living experience, in formal and informal contexts. They also believed that modernized culture required intellectual deliberation. Method was necessary to rethink and re-engineer teacher training, the writing of new textbooks, the building of new schools.

Trends in postwar America contributed to the college's reformulation of its program, if not its larger purpose. The founding of the State of Israel, and declining interest in intensive Jewish supplementary education, led to the weakening of Hebraism as an ideology and as an approach to Jewish education. For a considerable time, the college was the one place where Jewishly interested intellectuals could seriously pursue advanced academic Judaic studies. The list of prominent alumni includes the journalist Theodore White, and academics such as Walter Ackerman, Arnold Band, Ben Halpern, Paula Hyman, Frank Manuel, and Isadore Twersky, men and women of diverse religious and Jewish ideological perspectives who went on to prominent academic careers at UCLA, Brandeis, Harvard, and Yale.

The explosion of academic Jewish studies challenged the college's mission in that regard. In its place has come the new emphasis upon adult Jewish learning, as the baby boom has

created a new adult culture of interest in education throughout the broader American middle class, particularly in the areas of religion and spirituality. The College, together with the local Jewish Federation, created *Me'ah* in 1994, to meet this need. The program features a curriculum-based two-year program of academically taught adult Jewish learning, bridging the gap between classical Jewish texts, history and ideas, and the cognitive and affective needs of adults. Today the program reaches dozens of communities throughout Boston, New York, and elsewhere in America, with an enrollment in the thousands.

In its most recent phase it has truly become a national institution, recruiting students literally from around the globe, who may also study from around the globe via the Internet and the college's online offerings, including an M.A. degree.

Hebrew College represents the twin modern dynamics of building and subverting in Jewish cultural life. It maintains Jewish life while it changes it, incorporating the modern tensions between ethnicity and religion. It accepts classical notions of what constitutes Jewish culture, for example biblical and rabbinic texts, even as it experiments with new genres such as modern Hebrew literature that serve to expand our notion of the Jewish cultural canon. In recent years this has taken on programmatic form as the college embraced rabbinic and cantorial training, and moved – albeit transdenominationally – to a greater degree of openness to trends in contemporary spiritual life such as neo-mysticism.

Similarly, the College embodies interesting structural tensions of being Jewish in America. It espouses the virtue of Jewish community, and sees itself as among the vanguard of institutions training Jewish leaders, albeit in an American context much more comfortable with individualism and liberalism. Its physical place, situated alongside of the Andover Newton Theological School, the oldest Protestant seminary in America, symbolizes the college's increasing receptivity to participating in the larger American realm of higher religious education. It remains both communally based as well as academically elitist, striving to maintain the standards American Jews associate with academic excellence. Nowhere is this more in emphasis than in the college's commitment to adult learning, which attempts to bridge the distance between the folk and the elite as bulwarks of contemporary Jewish life.

[David Benjamin Starr (2nd ed.)]

HEBREW GRAMMAR.

The following entry is divided into two sections: (I) an Introduction for the non-specialist and (II) a detailed survey.

(I) HEBREW GRAMMAR: AN INTRODUCTION

There are four main phases in the history of the Hebrew language: the biblical or classical, the post-biblical or neo-classical and rabbinic (which includes medieval scholarly writings and continued until the latter part of the 19th century), and the modern. In biblical times Hebrew was a living, spoken

language but, from the centuries immediately preceding the Christian era, it ceased to be the vernacular. Nevertheless, biblical Hebrew persisted as the language of the Scriptures and as a model for compositions of a devotional nature. Because it was transmitted from one generation to the next, over many centuries, as a written language which found oral expression only in pious recital, its structure became artificially fixed.

It is remarkable, however, that the basic structure of the language has remained constant throughout all its stages of development. In the post-biblical and modern phases there was a progressive accretion in vocabulary by the creation of new words in accordance with the inherent laws of the language and by borrowing. Yet, divergencies in grammar were, for the most part, not fundamental, but peripheral. Thus a general introduction to the Hebrew language would best be served by confining it to the biblical phase and, where relevant, by pointing out divergencies which appeared in the later stages. The scheme of biblical Hebrew grammar is derived from the literature of the Hebrew Bible, known as Masoretic (from *מסורה* (*massorâ*) “tradition”).

Understanding the Patterns of Biblical Hebrew Grammar

An understanding of the patterns of biblical Hebrew grammar, as opposed to the mechanical learning of a catalogue of seemingly irrational rules, may be achieved by recognizing that the formulation of these rules rests on three main principles:

1. the adoption of agreed conventional signs in writing to represent the spoken word, as it was traditionally transmitted and articulated;
2. deliberate adjustments in spelling, in conformity with any spontaneous modification in the articulation of the spoken word, due to natural fluctuations caused by inflection;
3. statements, in concise but adequate terms, of forms of Hebrew thinking, as expressed in speech.

The aim of this article is not to present a comprehensive scheme of Hebrew grammar, but to demonstrate that there is a rationality underlying it. To achieve this end, items of grammar will be selected to illustrate how the above three principles are translated into formal Hebrew grammar. Occasional analogies from other languages will be cited to show that, in other languages also, elements of grammar reflect articulated speech and thought processes.

The Hebrew alphabet consists of consonants only. The reader of a Hebrew consonantal text – if he was proficient in the language – automatically supplied the appropriate vowels, as determined by the context. Anyone familiar with English would know automatically whether the context of a sentence requires him to read the consonantal word r-d as “red,” “rid,” or “rod.” Similarly, anyone who knows Hebrew well would immediately recognize from the context whether *אם* (*m*) is to be read as *אם* (*im*, “if”) or *אם* (*em*, “a mother”), or whether *דבר* (*dbr*) is to be read *דָּבָר* (*dābār*, “a word”), *דֵּבַר* (*deber*, “a plague”), *דִּבְּרַ* (*dibbēr*, “he spoke”), or *דֹּבֵר* (*dobēr*, “speaking”).

When Hebrew ceased to be a spoken language, the uninitiated were unable to supply the relevant vowels to a conso-

nantal text. It was realized that some apparatus had to be devised to indicate vowel-sounds as aids to reading. There were two stages in the development of such an apparatus. The first was the employment of the weak letters ה, ו, י (*h, w, y*) to serve also as vowel indicators. ו (*w*) represented both the o and u sounds, so that מות (*mwt*) could be read as either מוֹת (*môt*, “death of”) or מוּת (*mût*, “dying”). י (*y*) indicated both the i and e sounds; מי (*my*) could be read as either מִי (*mî*, “who?”) or מֵי (*mê*, “waters of”). The terminal silent ה (*h*) generally indicated the a vowel-sound, but sometimes also the e sound, so that מה (*mh*) could be read as either מָה (*mâ*) or מֶה (*meh*), both meaning “what.” This device was employed in the texts of the so-called Dead Sea Scrolls and is maintained even today in modern Hebrew writing.

Though this system reduced the area of possible error, it was clearly unsatisfactory, because it was not exact. In the eighth century C.E. the Tiberian system of vowel-points was devised to represent all the vowel-sounds, as traditionally held. This apparatus was generally adopted and is still in use.

Among Jews of European origin, the influence of their vernaculars on the articulation of Hebrew consonants led to the coalescing of several pairs of consonants. א and ע are both silent, כ and ק are both pronounced as the same *k* sound, ב and ו are both articulated as *v*, ס, ש, and also ת among Ashkenazi Jews are pronounced as *s*, while in Israel the ת and ט are both pronounced as *t*. However, it should be realized that, in biblical times, each Hebrew consonant had its own particular phonetic value, as is still the case among Oriental Jews in the recital of their sacred Hebrew texts. In ancient Israel there was a clear difference in sound between, for example, the word אם (*im*, “if”), and עם (*im*, “with”), the latter being articulated with a back-throated guttural sound. Similarly one could distinguish between אתה (*attâ*, “you,” masc. sing.) and עתה (*attâ*, “now”). There was a clear distinction in sound between the words כל (*kôl*, “all”) and קול (*kôl*, “a voice”), for the latter was articulated as a distinctive back-throated *k*.

The operation of the three above principles in the formulation of rules of Hebrew grammar can now be dealt with.

1a. When a vowelless letter stands at the beginning or in the middle of a word, the convention is to place two dots, vertically arranged (:), under it, as שמואל (*šmû'êl*, “Samuel”) and יצחק (*yishâk*, “Isaac”). This sign is known as שווא (*šwâ*, probably meaning “speed”), which for convenience is spelled *shewa*. It indicates that the letter under which it appears has no full vowel. It was found that, when articulating a syllable beginning with a vowelless letter, a quick, vowel-like sound was involuntarily induced (something like the quick *e* in the word “because”). The *shewa* under such a letter is known as *vocal* and is represented in transcription by a diminutive *e*; thus the first example is transcribed *šemû'êl*. At the end of a syllable in the middle of a word, as in יצחק (*yis/hâk*), the *shewa* under the vowelless letter is a silent (“quiescent”) one.

The peculiarity of speech indicated by the vocal *shewa* suggests that the ancient Israelite could not articulate a word beginning with two consonants without involuntarily giving

the first (i.e., the vowelless) letter a quick vowel-like sound. He would have pronounced the word *black* as *belack*. This peculiarity is shared by the Arabs, who would pronounce this word as either *balack* or *iblack*. In modern Hebrew, however, owing to the influence of European languages, there is no difficulty in articulating a word beginning with two consonants. The first example would be articulated as *shmu-el*.

b. In the Hebrew alphabet there are six letters which under certain conditions are pronounced hard (*b, g, d, k, p, t*) and, in other situations, are pronounced soft (*b̄, ḡ, d̄, k̄, p̄, t̄*). When such a letter is hard in speech, the convention in writing is to place a dot in it, called by grammarians דגש (*dageš*, “piercing”) *lene*, or *light dageš* (ב, ג, ד, כ, פ, ת). When such a letter is soft in the spoken word, it is left without any dot in it (ב, ג, ד, כ, פ, ת).

To the question as to when these letters are pronounced hard and when soft, the answer may be given that it seems that the vocal organs of the ancient Israelites were so conditioned that, when one of these letters began a syllable, and no vowel immediately preceded, they pronounced it hard, as פָּרַשׁ (*pāraš*, “he spread”) and יָסַפֵּר (*yis/pōr*, “he will count”). It follows, then, that when one of these letters was at the end of a syllable, as יִפְרֹשׁ (*yip/rōš*, “he will spread”), or in the middle of a syllable, as בָּכַל (*bekāl*), or at the beginning of a syllable but with a vowel immediately preceding, as סָפַר (*sā/par*, “he counted”), the letter was pronounced soft. When the word פָּרָה (*pārâ*, “cow”), whose initial letter is hard, receives the prefixed conjunction, it becomes וּפָרָה (*ūpārâ*, “a cow”); the speaker automatically softens the letter after the vowel sound. In modern Hebrew, however, this rule is not always observed in fluent speech.

c. If a letter in the middle of a word is doubled in articulation, the convention is to write a single letter only, but with a dot in it. The word for “thief” is גַּנָּב and represents the spoken גַּנְנָב (*gannāb*). This dot, indicating a doubled letter, is known as *dageš forte*, or *strong dageš*, to distinguish it from the other *dageš*, the light one, which indicates the hard letter, as the ג in this example. However, the six letters (*b, g, d, k, p, t*), when hard, may be doubled in the middle of a word, as שַׁבָּת, representing שַׁבְּבַת (*šabbāt*), in which case the *dageš* is theoretically both *lene* and *forte*. It should be noted here that the guttural letters (א, ה, ח, ע), by their very nature of being either weak (inaudible) or throat letters, cannot be doubled in articulation, so that, in writing, they do not receive a *dageš forte*. Strangely enough, this also applies to the letter ר (*r*).

The doubling of a letter is by no means arbitrary; it is usually due to some natural phenomenon in speech. In anticipation an English composite word may be quoted, derived from Latin, with the negative prefix *in-*. The combination *illegal* is articulated *illegal* and actually spelt phonetically. This is exactly what happens in Hebrew. When, for example, the two words מִן (*min*, “from”) and שָׁם (*šām*, “there”) are spoken together the natural flow of speech, they become a composite word. The combination מִן־שָׁם (*minšām*) is articulated as מִשְׁשָׁם (*miššām*) but written מִשָּׁם, with the *dageš forte* in-

dicating the double letter. This phenomenon of speech is described in the following rule of grammar: “When a vowelless נ (n) stands between two vowelised consonants, it is assimilated to the consonant immediately after it, giving rise to the doubling of the latter.”

2. In many English words the spelling has not kept pace with changes in pronunciation. The word *daughter* is pronounced *dauter*, but the persistence of the medial *gh* in the spelling suggests that originally it must have been articulated with a guttural-like sound, as in the parent German word *tochter*. The American spelling of some words shows an arrested attempt towards writing words phonetically: *plough* is spelled *plow* and *though* is sometimes written as *tho*, but the trend did not develop consistently. In Hebrew, however, every modification in the articulation of words, usually due to the effect of inflection or the presence of a peculiar letter, is faithfully reproduced in writing by corresponding adjustments in spelling.

a. The first example is the two-syllabled word דָּבָר (*dābār*, “word, matter, thing”), which begins with an open syllable (i.e., one ending in a vowel) and has the stress on the second syllable. The plural is formed by attaching the ending יִם- (*-im*) and the stress moves on to this new syllable at the end. The speaker, hurrying on to the stressed syllable at the end, quite naturally elides the vowel אַ (*ā*) in the first (*open*) syllable. It becomes דֶּבְרִים (*debārīm*), and not דָּבְרִים (*dābārīm*); the first syllable, now vowelless, is written with the vocal *shewa*. The modification in articulation is paralleled by the corresponding adjustment in the spelling. (An analogy of this phenomenon in speech is the English word *médicine*, which, with an accession at the end and the moving forward of the stress, becomes *medicinal* – almost *mdícinal*.)

b. The next example introduces a characteristic usage in Hebrew. In an expression such as “(the) word of Moses,” דָּבָר (*dābār*, “word”) and מֹשֶׁה (*mōšeh*, “Moses”) are so closely associated that they become one compound idea; in fluent speech they are virtually one composite word and the stress is mainly on the second half of the composite word. The effect is similar to that in the example just quoted. That is, דָּבָר (*dābār*) has received an accession at the end and the stress has moved forward, so that the vowel in the first (*open*) syllable is elided and a secondary effect is that the vowel in the second (*closed*) syllable is shortened. The combination is pronounced דֶּבַר־מֹשֶׁה (*debar-mōšeh*) and written as such. The first noun is so dependent upon the second one that it is said to be in the construct state. This natural shortening of the vowel in the closed syllable of a word in the construct state is seen also in the combination of יָד (*yād*, “hand”) with מֹשֶׁה (*mōšeh*) in the expression “(the) hand of Moses” – יַד־מֹשֶׁה (*yad-mōšeh*).

c. It was noted earlier that a vowelless נ (n) between two vowelised consonants is assimilated to the following letter which, in consequence, is doubled and that, in writing, this doubling is represented by a *dageš forte* – מִנְשָׁם (*minšām*) becoming מִשְׁשָׁם (*miššām*). When, however, the letter following

the vowelless נ (n) is a guttural (א, ה, ח, ע) or ך which cannot be doubled in articulation, a natural adjustment is made. When the phrase “from a man” – מִן אָדָם (*min ādām*) – becomes a composite word in the flow of speech (hypothetically מִןאָדָם, *minādām*), the vowelless נ (n) is assimilated, but the following letter cannot be doubled. The resultant form מִןאָדָם (*miādām*) leaves the first syllable open, i.e., ending in a vowel. Since the natural tendency was to pronounce an open syllable with a long vowel (unless that syllable was stressed, in which case the effect was the same), the short vowel (*i*) in the first syllable is automatically prolonged by the speaker to ...(*ē*) and the combination becomes מִנְאָדָם (*meādām*), the spelling being adjusted to conform with the modification in speech.

d. The following example of a rule of grammar appears superficially to be irrational and yet, on examination, it reflects a normal fluctuation in speech which is represented phonetically by the written word. The possessives are expressed by particles suffixed to the noun as “a house is old,” “my house is old.” The feminine singular noun, such as תּוֹרָה (*tôrā*, “Torah”) with a suffix (“my Torah”) becomes תּוֹרָתִי (*tôrātī*). How can one account for the apparent insertion of the letter ת (*t*) before the suffix? Arabic provides the perfect analogy.

In classical (literary) Arabic, nouns have three case endings. The feminine singular noun “city” is *madīnatun* (nominative), *madīnatin* (genitive), and *madīnatan* (accusative). In colloquial Arabic, however, the case-endings are dropped, leaving the form *madīnat* for all cases, but it is actually pronounced *madīna* (or *medīna*). The final *t* is not articulated (like the tendency in America to pronounce the word *breakfast* as *breakfas*). However, when this *t* is in the middle of a word and it has a vowel, as with a possessive suffix attached (“my city” being *madīnatī*) it is, of course, clearly articulated.

Scholars have pointed to the same phenomenon appearing in the transition from pre-biblical to biblical Hebrew. There are indications that, originally, Hebrew nouns had case-endings, like Arabic: the word for Torah was *tôrātu* (nom.), *tôrātī* (gen.), and *tôrāta* (acc.). The case-endings were dropped and the resultant form תּוֹרָת (*tôrāt*) was pronounced תּוֹרָה (*tôrā*) and spelled that way. As with Arabic, it was the final ת (*t*) which was not articulated but, when it is medial with a vowel, it is, of course, clearly articulated – “my Torah” could only be תּוֹרָתִי (*tôrātī*). Because the final ת (*t*) was not articulated, it was dropped in spelling; when it is medial and audible, it is present in the spelling.

The tendency to drop a final *t* sound is present in other languages. In Ireland the well-known surname *McGrath* is actually pronounced *McGra*. The French say *il est* (“he is”) pronounced *il-ē* but as a question it is *est-il?* (“is he?”) – pronounced *ēt-il*), the medial vowelised *t* being quite naturally articulated. More striking still, and akin to the situation in Hebrew, is the French *il a* (“he has”), which, as a question, is *a-t-il?* (“has he?”), with the medial vowelised *t* articulated and reappearing in the spelling.

3. In biblical Hebrew the main idea of an expression is stated first and it is then qualified, limited in application or

modified by what immediately follows. “My word” is, in Hebrew thinking, something like “word, mine” – דְּבָרִי (*debārī*), the main idea being “word,” which is first expressed and then limited to “mine” by the following particle ם (i). “A big house” is, in the Hebrew order of thought, “a house (the main idea), a big (one)” (qualifying it) – בַּיִת גָּדוֹל (*bayit gādōl*). It follows logically that the phrase “the big house” is, in Hebrew thinking, “the house, the big (one)” – הַבַּיִת הַגָּדוֹל (*habbayit haggādōl*) and “my big house” will be “house, mine, the big (one)” – בֵּיתִי הַגָּדוֹל (*bēṭī haggādōl*). The rule which is then enunciated is “the adjective follows the noun it qualifies (and agrees with it in gender and number), and if the noun is specific (as indicated by the definite article or the possessive suffix) the adjective following the noun has the definite article.” In the same pattern of thought the adverb follows the noun it modifies; “exceedingly good” is “good, exceedingly” – טוֹב מְאֹד (*tōb mē’ōd*).

THE VERB. In the structure of the Hebrew verbal system one again detects characteristic thought processes. Whereas medieval and modern Hebrew adopted the European concept of past, present, and future tenses, in biblical Hebrew no such notion was formulated. Instead acts or states of being were viewed as either completed or incompleted. The completed state, referring to something finished or done, generally corresponds to the notion of the past tense but, with certain verbs, it may indicate a European present tense. The form זָכַרְתָּ (*zākartā*) could mean “you remembered” but, since the basic sense is “our state of remembering is completed,” it could imply “you remember.” The incompleted state, indicating something not yet finished or not yet done, generally refers to the future but with a few verbs it could imply a continuing present. תִּזְכֹּר (*tizkōr*) could mean “you will remember” but, since the basic notion is “our state of remembering is incompleted,” i.e., it is still going on, the derived sense could be “you keep on remembering,” that is “you are mindful of.” Unhappily, grammarians have adopted the terms perfect and imperfect – as used for Latin and Greek conjugations of verbs – but these do not accurately represent the biblical Hebrew concept.

It is to be noted that in the completed state, it is the act or state of being which is regarded as the main idea. Thus the verbal element is expressed first and is limited or applied to the person (in the example given the particle ת – (*tā*) for אַתָּה – *’attā*, “you,” masc. sing.) which immediately follows. In the incompleted state, however, what seems to be more prominent in the mind of the speaker is the person who is about to do, or is in the process of doing, something. Thus the element representing the person (in the example the ת, *t*) is stated first and the verbal element follows.

The Western notion of the present tense is represented in Hebrew by the participle, e.g., זֹכֵר (*zōkēr*, “remembering”), preceded by the appropriate personal pronoun. “You remember” is, in Hebrew, אַתָּה זֹכֵר (*’attā zōkēr*). Since the Hebrew participle is virtually a verbal adjective, the thought underlying that expression is “you (are) a remembering (person).”

There are seven forms in the Hebrew verbal system. The first may be regarded as basic and the other six as derived forms, as in the following scheme:

I. SIMPLE ACTIVE: שָׁבַר (*šābar*, “he broke”). This is the completed state. It has also the incompleted state, participle, imperative, etc., and all these are conjugated with persons, numbers, and genders.

II. SIMPLE PASSIVE, but, with some verbs, the passive has also something of a reflexive effect. Its form is נִשְׁבַּר (*nišbar*), meaning “he (or “it”) was broken.” However, from the simple active רָאָה (*rā’ā*, “he saw”) the derived form of this category נִרְאָה (*nir’ā*) means “he was seen,” but this produces the extended sense “he showed himself,” that is, “he appeared.”

III. INTENSIVE ACTIVE. Derived from the simple active שָׁבַר (*šābar*, “he broke”) is the intensive form שִׁבְּר (*šibbēr*) (with the middle root-letter doubled to express intensity) and the derived sense is “he smashed,” “he shattered.” It will be realized that a derived form in this category must produce a new idea by extension, so that only such verbs which lend themselves to such an extension, by which a new idea is derived, can be included in it.

IV. INTENSIVE PASSIVE. This is simply the passive of III and its form is שֻׁבַּר (*šubbar*, “he (or “it”) was smashed/shattered.”

V. CAUSATIVE ACTIVE. The notion of *causative* is present in a few English verbs. “To seat” is the causative of “to sit” and “to fell” is the causative of “to fall.” Since only a limited number of simple active verbs can be extended with a causative effect which produces a new idea, the verb גָּדַל (*gādal*, “he was great”) is selected, of which the derived causative is הִגְדִּיל (*higdīl*, “he caused to be great,” i.e., “he enlarged”). Of the verb רָאָה (*rā’ā*, “he saw”) the derived causative is הִרְאָה (*hir’ā*, “he caused to see,” “he let one see,” “he showed”). Of the (weak) verb בא (*bā*, “he came”) the derived causative הִבִּיֵא (*hēbi’*, “he caused to come”) produces the sense “he brought.”

VI. CAUSATIVE PASSIVE. This is the passive of V and its form is הֻגְדַּל (*hogdal*), meaning “he (or “it”) was made great,” i.e., was enlarged.

VII. REFLEXIVE. Again, for the sake of clarity, another verb is taken as the parent of this derived form. From the simple active נָשָׂא (*nāsā*, “he lifted up,” “he raised up”), the derived reflexive is הִתְנַשֵּׂא (*hitnassē*, “he raised himself up”) and this, in turn, produces the sense “he boasted.”

The terminology devised by the early Jewish grammarians to designate the above seven verbal forms has been universally accepted. They firstly considered the simple active to be קָל (*kal*, “light”), while the other six were said to be כְּבִדִּים (*keḇēdīm*, “heavy”), since each one of them received additional letters or syllables. These six *heavy* forms were subdivided into the following categories. Taking as their basis the verb פָּעַל (*pā’al*, “he did”), they designated the simple passive as a נִפְעַל (*nip’al*), i.e., a “was done” form. The intensive active was called a פִּעַל (*pi’el*), i.e., a “did intensively” form and its passive a פּוּעַל (*pu’al*) i.e., “was done intensively” form. The causative was designated a הִפְעִיל (*hip’il*), i.e., a “caused (one)

to do” form and its passive אֶפְעַל (*hop’el*), i.e., a “was caused to be done” form. The reflexive became the הִתְפַּעֵל (*hitpa’el*), i.e., a “did to oneself” form. Though this system may appear to be clumsy and cumbersome, its adoption as the standard, universal terminology has avoided the multiplicity of terminologies in different languages.

THE WEAK VERB. Hebrew has very few examples of irregular verbs, in which a complete conjugation is made up of two different roots. One such example is the verb שָׁתָה (*šātā*, “he drank”), of which the derived causative form, with the meaning “he caused to drink,” “he gave to drink,” “he watered, irrigated,” is not הִשְׁתָּה (*hištā*) but הִשְׁקָה (*hiškā*), from a different root, namely שָׁקָה (*šākā*). There are, however, many verbs which, because of a peculiar letter in the stem, diverge from the normal or regular and these are known as *weak*. The reader will now be familiar with the categories of peculiar letters which bring about modifications in the articulated word. Examples of these as they affect the verb are given below:

a. The letter נ (*n*). The incompleting state of the normal verb שָׁמַר (*šamar*, “he kept, watched”) is יִשְׁמֹר (*yišmōr*, “he will keep, watch”). However, of the verb נָטַר (*nāṭar*) (which has the same meaning) the incompleting state is not יִנְטֹר (*yintōr*), for the medial, vowelless נ (*n*) standing between two vowelised consonants is assimilated to the next letter, which is thereby doubled, so that the resultant form of this word is יִטְטֹר (*yittōr*) – a divergence from the normal.

b. Guttural letters (א, ה, ח, ע) and ר. It was noted above that the characteristic of the *pi’el* (intensive) form is the doubling of the middle root-letter, as שָׁבַר (*šibbēr*, “he smashed”). When this medial letter is a guttural or ר, which cannot be doubled in articulation, the preceding vowel is prolonged. “He glorified” is not פָּאָר (*pā’ar*) but פָּאֵר (*pā’ēr*), “he refused” is not מִאָּן (*mi’ēn*) but מִאֵן (*mē’ēn*), thus producing a deviation from the normal. (Note: This always happens with the weak gutturals א and ע. With the harsh guttural ה and ח, no doubling takes place but, because of their harsh nature, the preceding vowel seems to merge with the letter (נָחַם – *niḥam*, “he comforted”) and so the prolongation of that vowel is arrested.)

c. The weak letters (א, ה, ו, י). Taking again as the standard the verb שָׁמַר (*šamar*, “he kept”), one with a medial weak letter ו (*w*) will deviate from the normal in the following way. “He arose,” which one might have expected to be קָוַם (*kāwam*) deteriorates into קָמָה (*kām*); the weak ו melts into the vowel-sounds in which it is placed. The spelling is adjusted to the modified form. A verbal root with a terminal silent א also induces a deviation from the normal. “He found” is not מָצָא (*māšā*), for the terminal א is silent, so that, in actual sound, the syllable is open, i.e., ending in a vowel. Since the open syllable was usually pronounced with a long vowel, the speaker automatically prolonged it and the resultant form became מָצָאָ (*māšā’*).

In this instance also the early Jewish grammarians devised a rather cumbersome terminology to denote categories of weak verbs, which has been universally adopted. It was

based on the word פְּעַל (*pō’al*) which was their term for “verb.” If the first root-letter was weak, they referred to it as the פ (*pe*) of the root, the second root-letter as the ע (*ayin*) of the verb and the third root-letter as its ל (*lamed*). For example, the verb נָטַר (*nāṭar*) was designated as a פִּ”ן (*pe nun*), i.e., initial נ, verb; the verb פָּאָר (*pā’ar*) was described as an אִ”ע (*ayin alep*), i.e., medial guttural, verb; the verb קָמָה (*kām*), whose root-letters are קוּם, was designated as an וִ”ע (*ayin waw*), i.e., medial ו, verb; the verb מָצָא (*māšā*) became known as a אִ”ל (*lamed alep*), i.e., terminal א, verb.

The structure of Hebrew grammar, of which a partial sketch has been given here, has not changed appreciably through the centuries, from biblical times to the present day. It manifests itself even in the highly evolved spoken and written Hebrew of contemporary Israel. The realization that Hebrew grammar reflects natural phenomena in speech and characteristic forms of thought leads to an understanding and appreciation of the genius of the language.

For a different view of Hebrew morphology in general and of the verbal system in particular, see U. Ornan, *Ha-Millah ha-Aḥaronah – Manganon ha-Zurah shel ha-Millah ha-Ivrit* (2003).

Introduction

1. DEFINITION OF TOPIC. The Hebrew language is very old; but even in the oldest portions of the Bible, written more than three thousand years ago, it is a fully formed literary vehicle. No language, however, can remain unchanged over so long a period. Hebrew was subject to change, though for almost half its existence it was preserved only in writing, as a literary language. Nevertheless, an intelligent Hebrew speaker, of

the level of an Israeli high school graduate, can read and understand literature written in Hebrew from the very earliest times to the most modern. Furthermore he will find in the Hebrew language of each of the periods many elements actively used in modern speech. Many highly civilized societies from time to time rewrite the literary products of past generations to make them more comprehensible to the modern reader, sometimes wholly translating, at others, merely replacing the obsolete by more modern terms. By contrast, Hebrew literature such as the Bible, Mishnah, Midrashim, medieval poetry, etc., are today taught in schools in their original form, and may be read by the community at large. Hebrew thus appears to have maintained its original uniformity; yet linguistic analysis reveals that this uniformity is in fact limited and in part imaginary. The relative uniformity of Hebrew results primarily from two factors: the graphic representation of the language, and its morphology. Hebrew today is written, as it was in the past, in an alphabet in which all the letters represent consonants. Although several of these letters may, in specific circumstances, also indicate vowels (and in modern times even more so than in the past), this does not alter the general character of Hebrew writing, in which only a part of the total sounds are fully expressed: the part represented consists of those sounds which are naturally more stable and not given to radical change, while those sounds given more naturally to change are not represented by the writing. The employment of vowel points to express these sounds is very limited, and even nowadays does not determine the form of the written Hebrew word. This retention of the relatively constant element, and elimination of the element given to change, are great aids in understanding the written Hebrew word regardless of its date of origin. However, the factor primarily responsible for the uniformity of the language is Hebrew morphology. In the accepted vocalization of the Bible, the morphology of biblical Hebrew was fashioned in accordance with one tradition, the Tiberian. This tradition was not only accepted as the norm, but in the eyes of many even became sanctified. The morphology of biblical Hebrew in the Tiberian tradition determines the nature of the grammar of written Hebrew in general, and even new elements, whether taken from other periods or traditions of the language, or originally foreign elements, are adjusted to comply with the regulations of Hebrew morphology. In contrast to the relative stability of morphology and writing, the meaning and the function of grammatical forms and vocabulary and pronunciation have been variable. The particular pronunciation reflected by the accepted vocalization tradition of the Bible (even now mandatory for a vocalized word), is still heard today, but not all of its details are together represented in any one tradition. Closest to the pronunciation of the original vocalizers is that of the Yemenite and Babylonian communities (cf. below, Table 3: Consonants as Pronounced by Various Communities). The grammatical description given below refers to the language as it is written in modern times; a description of the various periods of the Hebrew language is given in the entry *Hebrew Language; and the distinctive

traits of the various living traditions are discussed in the article *Pronunciations of Hebrew.

2. WRITING AND SPELLING. Hebrew is written in two sets of symbols, letters and vowel points; the first is, of course, mandatory, while the latter is reserved, primarily for the areas of education, poetry, prayer books and, to a limited extent, publications intended to reach a very wide audience. The basic alphabet consists of 22 letters; to these one must add five (ך, ם, ן, ף, ץ) used in final word position only, another seven (ב, ג, ד, כ, פ, ת, ש/שׁ), whose individual pronunciation is re-

**Table 1:
The Letters**

Dageş as דג ⁴	mm	mm	mm

- 1) Some of the vowel signs are accompanied by letters (*matres lectionis*) which are not part of the system of vocalization e.g., ך, ם, ן, ף, ץ.
- 2) In A the length (or absence of it) in the vowels is represented in accordance with linguistic considerations.
- 3) The term *şewa* indicates both a reduced vowel and the absence of any vowel after the consonant; in the latter case it is not transliterated.
- 4) The *dageş* is also a double valued sign. In the letters כפ ןכ ןכ ןכ it indicates a different phonetic character and not necessarily gemination. Whether these letters, when pointed with *dageş*, also indicate geminated consonants depends on syllable structure; thus the correct transliteration of כ – by b or by bb – for example demands a knowledge of Hebrew grammar. The *dageş* is placed in the letter ן at the end of a word when the letter is pronounced consonantal h, and does not indicate gemination. In accordance with its function the *dageş* is variously called *forte* (for gemination), *lene*, and *mappiq*. Similarly a dot above ן indicates a pronunciation difference between š and ś.

flected only in vocalized writing, and three (׳ג, ׳ו, ׳צ) used in words of foreign origin only. All but four of the letters represent consonants only, while ך, ן, ף, and ץ are used at times to indicate the presence of specific vowels. These letters, when not representing consonants, are called *matres lectionis*. Of the 13 vocalization signs, 12 are intended to represent vowels, and one represents changes in consonants. The various systems used to transliterate Hebrew into Roman script generally reflect two different approaches. The first transliterates the Hebrew alphabet into graphemes of the particular language in accordance with the spelling conventions of that language. This gives rise to a plethora of conventions according to the languages concerned. The other system attempts to transliterate Hebrew so that the letters and vowels will be perfectly or nearly perfectly represented. This system demands the addition of diacritic signs to the Roman alphabet. Table 1: Hebrew Letters and Punctuation is a synoptic table of three methods of transliteration.

The “A” system is used largely in linguistics or when an early Hebrew text is being transliterated. “B” and “C” were established by the Academy for Hebrew Language in 1957 in order to represent living Hebrew. “B” is used in catalogs, title pages, and maps. The sole difference between “B” and “A” is in the letters כ and צ where “B” represents the official modern pronunciation; this is also true with regard to the long *qameş*

which is not differentiated from the *pathah*. “c,” on the other hand, intended for popular use, as in road and street signs, eliminates most of the diacritic signs, and simplifies the vocalization. The appearance of the unvocalized Hebrew word is likely to be different from the vocalized word even in its letters. This is due to the tendency to add *matres lectionis* in non-vocalized writing, in positions where they would be unacceptable in vocalized writing. For this reason it is also called “full spelling.”

Phonology and Morphophonology

3. CONSONANTS. Table 2: Point and Way of Articulation summarizes the inventory of consonants in modern Hebrew, but they are not all at once present in any one of the varied pronunciation systems. The consonants are listed in accord with their general phonetic value, though some have more than one realization (כ, ך, ן). This variety is of a wider scale in Hebrew than in most other languages because the speakers of Hebrew are of diverse language backgrounds, and this background is apparent even in the generation whose mother tongue is Hebrew and who are, themselves, monolingual. The range of differences within each consonant is not represented in the table. Those consonants in squares are part of the Tiberian pronunciation (see *Masorah), and are therefore represented in modern writing; they are, however, normally not differentiated in the general or official pronunciation. They can still be heard in liturgy and worship (on ן see below) in some communities, and even in the speech of the older generation. The consonants in circles are not pronounced by a large part of the general populace and have been assimilated to כ, ן, ן. Their independence is maintained in the language in so far as their influence is felt in inflection and declension of words. Those consonants in dotted squares can be heard at times in originally Hebrew words in special situations, or in careless speech, as *hezbon* (הזשבון), but are not independent except in words of foreign origin, as in *žargòn* (jargon), *žurnal* (journal); they do not determine the character of the Hebrew language in any area of grammar. Therefore, they will be referred to as “foreign,” as distinct from “inherited.”

If the foreign consonants and those which appear in squares are subtracted, it will be found that the total of inherited consonants in official modern Hebrew is 25, and the incidence of three, circled in the table, is very limited. In other words, the total varies between 22 and 25. This state of affairs changes in regard to the inventory of the consonantal phonemes. The phoneme, by definition, is that unit which only in distinction to another in the same position, performs the function of distinguishing between two words. The phoneme can be of more than one sound (ideally this is always the case), and all these sounds are related to each other as allophones (= variants). Not everyone is agreed as to the number of phonemes in the language, a problem which exists not only in Hebrew. It depends on how we evaluate sounds in foreign words, personal names, or rare words. For example, ן, ן hardly ever occur in identical surroundings in Hebrew; where the one is

Table 2: Point and Way of Articulation

Point of Articulation	Way of Articulation										
	Plosive		Nasal	Lateral	Rolled	Affricate		Fricative		Semi-Vowel	
	Unvoiced	Voiced		Voiced		Unvoiced	Voiced	Unvoiced	Voiced		
bilabial	פּ פ	בּ ב	מּ מ							וּ ו	4

interdental								תּ ת	דּ ד		2
dental (tongue tip and upper teeth)	תּ ת	דּ ד	נּ נ	לּ ל	רּ ר	צּ צ (ts,c)		סּ ס	זּ ז		(8)6
alveolar (tongue tip or blade and teeth ridge)			נּ נ	לּ ל		צּ צ	גּ ג	שּ ש	זּ ז		4(6)
alveolo-palatal (tongue blade and teeth ridge)								שּ ש			1
velarized alveolar (tongue blade and back, and teeth ridge)	טּ ט							צּ צ			2
palatal										יּ י	1
velar	כּ כ	גּ ג						כּ(ח) כ	גּ(י) ג		4
uvular	קּ ק										1
pharyngeal								חּ ח	עּ ע		2
glottal	אּ א							הּ ה			2
	6	3	2	1	1	2	1	9	6	2	33

found the other is not (as וּפְּנִים/פְּנִים and not וּפְּנִים/פְּנִים); they are, therefore, allophones of the same phoneme. When, on certain rare occasions each sound may be heard in the same environment, there will be no difference in the meanings of the words. Generally, one of the forms of the word is considered incorrect in proper speech, as קְצֵבָה opposed to קְצֵבָה. However, if foreign words are considered, the difference between p and f proves to be distinctive as in the words פּוּנְקִיָּה (*punkya* = puncture) opposed to פּוּנְקִיָּה (*funkya* = function). To the extent to which such words enter the language of less educated persons there is more likely to be created a split between the p (פּ) and f (פּ), and each is liable to appear in the same conditions. With regard to the written language, these rare phenomena are to be ignored, and the count will include 22 consonantal phonemes of the 25 consonants mentioned above, since פּ פּ are allophones of פּ פּ and together are three phonemes. The consonantal phonemes can be divided into nine groups in accordance with their point of articulation:

bilabials	פּ, בּ, מּ, וּ	4
dental	תּ, דּ, נּ, לּ, רּ, צּ	8
alveolar	שּ	1
velarized alveolar	טּ	1
palatal	יּ	1
velar	כּ, גּ	2
uvular	קּ	1
pharyngeal	חּ, עּ	2
glottal	אּ, הּ	2 (= 22)

A pronunciation different from the one described above would show some slight differences in the localization of the phonemes. Ignoring the “foreign” consonants, the difference between the consonants in Hebrew and those (estimated) in proto-Semitic is in the number of fricative and affricate sounds only. Some of these sounds originate in Hebrew and did not exist in proto-Semitic (labio and dental fricatives), some palatals existed but were phonemes in proto-Semitic, while they are allophones in Hebrew (as כּ). Similarly, all those proto-Semitic consonants which have disappeared from Hebrew are fricatives and were assimilated to other Hebrew fricatives, while in Aramaic, for example, the proto-Semitic fricatives were assimilated to the plosives (כּ in proto-Semitic became זכר in Hebrew and דכר in Aramaic). There are three types of articulation which determine phonemic contrasts in the consonants: voice, emphasis, and nasality. The voiced/unvoiced distinction has five pairs: בּ, דּ, גּ, זּ, עּ opposed to פּ, טּ, כּ, תּ, סּ; the emphatic/non-emphatic pairs are טּ, קּ opposed to תּ, כּ; and nasality affects six consonants: בּ, פּ (together an archiphoneme) opposed to מּ; and נּ (dental and not alveolar), תּ opposed to דּ. Voice and nasality are phonetic qualities, whereas emphasis does not denote a clearly defined common phonetic quality of the relevant phonemes. The most that can be said is that these sounds are produced partially with the back portion of the mouth. The plosive/fricative quality which in our arrangement does not determine the phonematicity of בּ, כּ, פּ, is the determining difference between אּ and הּ. There

are those who are of the opinion that א is a voiced consonant, but this results from a desire to produce a symmetrical phonological scheme and has no foundation in actual articulation. Only if it is assumed that the ה is voiced (as in Arabic) is the difference between א and ה not one of plosive/fricative, but one of voice. The determining features do not necessarily have to rule all consonantal oppositions; for example, voice is a determining quality in ten (or at the most twelve) sounds only, and there are voiced consonants (ל, נ, ר) which do not have unvoiced pairs, and unvoiced consonants (ט, ק, צ, ש) which do not have voiced pairs.

4. CONSONANTS AS PRONOUNCED BY VARIOUS COMMUNITIES. The official, model, most careful pronunciation of Hebrew, used, for example, by radio announcers, especially in reading selections from the Bible (and sometimes called “Semitic,” or “Eastern”), is the result of a mixture of different systems of pronunciation used for generations in the various communities. This mixture is not precisely the result hoped for by those who were instrumental in the rejuvenation of Hebrew speech; generally, it can be said that, of those sounds which were distinctive to only one community, more were omitted from the official and general pronunciations than were accepted. The consonants of the official pronunciation are reviewed in the section entitled Consonants above according to their general phonetic value; therefore, it will be instructive to review synoptically the consonants as they were articulated in the past in the different Jewish communities (still occasionally used in prayer and liturgy), from which the sounds of modern Hebrew were extracted. Such a review will indicate what shades of pronunciation are likely to be heard, primarily in the speech of the older generation in official Hebrew.

Table 3: Hebrew Consonants indicates that some consonants were retained in all pronunciations while others were lost or assimilated to other similar sounds. If we arrange them next to the 29 consonants of the vocalizers of the Bible, the following picture emerges: 11 stable consonants (ב, ד, ו, ז, ח, ט, י, כ, ל, מ, נ, פ, צ, ק) are preserved in all traditions (nine, if we omit ט and פ which developed in a unique manner in the Samaritan tradition); eight consonants א, ג, ה, ו, ז, ט, ש, ע are retained by most of the pronunciations and changed in a few; and ten consonants א, ב, ג, ד, ה, ו, ז, ט, ש, ע are changed in most of the pronunciations. It emerges that differences in pronunciation are mainly in two groups: five consonants ה, ט, ע, צ, ק which are “semitic” (gutturals and emphatics) and five others א, ב, ג, ד, ת; of which at least four א, ב, ג, ד, ת tend to lose their fricativeness.

5. בגדכפ"ת. As already pointed out, in the official language only ב, ג, פ are pronounced in two ways – hard and soft (spiranted) – but in vocalized spelling א, ד, ת are similar to them in every way. The distribution of hard and soft allophones is not given to simple phonologic definition, and there are exceptions in both directions. However, since the distribution of the soft allophone is greater than the hard one, finding it in positions which contradict the rules is not a radical de-

viation. On the other hand, a hard allophone where it would be expected to find the soft constitutes a clear exception and, in proper modern speech, is even less common than in biblical Hebrew. The following are the rules for their distribution:

A) The hard consonant always appears when (1) there is gemination, as שְׁבַת, סָכָה, סָכָה, סָפָר and (2) even when ungeminated, if it is not preceded directly by a vowel, as: בַּיִת; הַשְּׁבֵתָה; כֶּסֶף; מִקְתָּב; פֶּה; מִסְפָּר.

B) The spiranted consonant appears (1) when ungeminated and preceded directly by a vowel, as: שְׁבֵתָה, סִיכָה, סוֹפָר; (2) when it is the second part of a cluster in one syllable, either at the beginning or the middle but not at the end of the word, as דְּבִישׁ, דְּבִישׁ, דְּבִישׁ; קָפָר, קָפָר, קָפָר; צָרְפָת, צָרְפָת, צָרְפָת; מְרַבּוּתִי, מְרַבּוּתִי, מְרַבּוּתִי (= עֲזֻבוּנוֹת = עֲזֻבוּנוֹת). Opposed to these are: יִבְרָךְ (rare forms likely to appear in poetry) שְׁמֵרָתְךָ, נִרְדָּךְ and (3) when it is the second part of a cluster which divides into two syllables (opposed to rule A 2) in the following morphological types:

(i) *Nouns*: (a) In the plural forms of nouns of the type מְלִיכוֹת; אֲסִיפִיהֶם; דְּרִבְיָהֶם; מְלִיכֵי as: פְּעֻלוֹת, פְּעֻלוֹת, פְּעֻלוֹת. (b) In declension of פְּעֻלָּה forms even in the singular, as: עֲרֵבֶת, נִדְרָתוֹ. (c) In the declension of פְּעֻלָּה forms in singular and plural even in those words where the *šere* is not retained, as: הִשְׁכַּחְתִּי, הִשְׁכַּחְתִּי. (d) In פְּעֻלָּן and derived forms, as: עֲרֵבֶת, עֲרֵבֶת, עֲרֵבֶת; הִשְׁכַּחְתִּי, הִשְׁכַּחְתִּי, הִשְׁכַּחְתִּי. (e) In פְּעֻלוֹת forms, such as מְלִיכוֹת, גְּאוּלָּתוֹ, רַעְבָּתוֹ, גְּאוּלָּתוֹ. (ii) *Verbs*: (f) In the conjugation of the infinitive *qal*, as: בְּמִלְכוֹ, בְּמִלְכוֹ, בְּמִלְכוֹ. (g) In the conjugation of the imperative *qal*, as: בְּמִלְכוֹ, בְּמִלְכוֹ, בְּמִלְכוֹ.

Generally: (h) In all forms of verbs and nouns when the syllable preceding בגדכפ"ת is closed in declension, as: נִאֲסָפוּ – נִאֲסָפוּ, עֲרֵבוּ – עֲרֵבוּ, מְעַרְכוֹת – מְעַרְכוֹת, מְעַרְכוֹת – מְעַרְכוֹת, מְעַרְכוֹת – מְעַרְכוֹת.

(i) In all forms of words after a closed syllable to which is prefixed one of the servile letters בּוּכ"ל with the exception of the *qal* infinitive with ל, as: לְדָבוּב, לְדָבוּב, לְדָבוּב, וּדְבַל, וּדְבַל, וּדְבַל; לְשָׁבוּב, לְשָׁבוּב, לְשָׁבוּב, וּרְכַב, וּרְכַב, וּרְכַב, וּרְכַב, וּרְכַב, וּרְכַב. Two exceptions worthy of note due to their frequency in the language are: שְׁתִּים, and the second person fem. perfect ending ת – as in לְקַחְתִּי, לְקַחְתִּי, in which a hard ת is retained contrary to the above rules.

Note: The distribution of the plosive and spiranted allophones of בגדכפ"ת is quite complicated, but can be ordered in accordance with the above rules with regard to the official language and the speech of intellectuals. In other social strata, and in the speech of children, these rules are not maintained, however; at times the plosive allophone dominates and at times the spirant (for example: תִּפְסֵם by analogy to the perfect תִּפְסֵם; תִּפְסֵם from the imperfect תִּפְסֵם). A further weakening of these rules is due to the foreign words in Hebrew which contain a p or f which is not in accordance with the aforementioned rules (cf. section on Consonants above).

6. אהה"ע. These consonants are similar in that (1) they cannot be geminated; (2) they do not usually close a syllable;

Notes: (1) Research into the various traditional pronunciations is still far from able to present all the information clearly tabulated; in fact it is only just beginning. Therefore, the table contains only those sounds described in the scientific literature, and it must be noted that the quality of these descriptions is not uniform, nor do they all attain the same level of precision. Still the table reflects the situation generally. It should be noted that the term "Sephardi" does not represent a homogenous community but one spread over Europe and Asia. This accounts for the high number of variants. (2) The horizontal line next to 'alef, heh, het, ayin, indicates that this consonant is not pronounced at all; when this line appears with a consonant it indicates that in certain environments it is not articulated, or that part of the community does not pronounce this consonant. (3) A consonant in parentheses is a less common variant or is limited to certain instances (as f, bb in the Samaritan tradition). (4) The consonants are listed in accordance with the rules of the International Phonetic Association. (5) For further details of pronunciation of the various communities see "Pronunciations of Hebrew."

(3) they generally influence the vowel which precedes them either in quality, or by creating a vowel similar to that with which the syllable is or should have been, closed; (4) they are vocalized with *hatefs* when they are not in syllable final position as: (1 and 3) **בָּאָר** (בָּאָר) instead of **בְּאֵר**; **מְטֵהָר** instead of **מֵטְהָר**; **נְאֵדָר** instead of **נֵאֵדָר**; **נְאֵדָר** instead of **נֵאֵדָר**; **נְאֵדָר** instead of **נֵאֵדָר**; **מְשַׁטְרָה** instead of **מֵשַׁטְרָה**; **מְעֵלִית** instead of **מֵעֵלִית**; **מְרֵבִית** instead of **מֵרֵבִית**; **מְרֵבִית** instead of **מֵרֵבִית**; **מְרֵבִית** instead of **מֵרֵבִית**; **מְרֵבִית** instead of **מֵרֵבִית**; **מְרֵבִית** instead of **מֵרֵבִית**; **מְרֵבִית** instead of **מֵרֵבִית**. As a result of these qualities, they are classified under the heading of ‘gutturals’, a name which has been accepted even though it does not accurately describe all of them from the point of view of their articulation.

א.

In modern speech, this consonant never closes a syllable. Still, there are some who, in certain words such as **מִצְדֵּקָה**, **נְאֵדָר**, **נִצְדָּר**, are careful to close the syllable with the א because they are so vocalized in the Bible, a fact which is also exploited in writing poetry. On the other hand, (1) א always disappears at the end of a word, as **מְצַא**, **צַא**, **מְלֵא**, **מְבּוֹא**, **נְשׂוּא**, **חֲטַא**, **שְׂנוּא**, **וְרָא**, **וְרָא** (compare **וְיִשְׁקֵךְ**, **וְיִשְׁקֵךְ**); (2) within the word it sometimes disappears, and at other times receives a *hatef* vowel. This situation is not the result of precise phonological conditioning, but differs in different morphological situations, as **מְצַא**, **תְּאָדָּר**, **נְשׂוּאָכֶם**, **בּוּאָכֶם**, **מְצַאָּךְ**; **מְצַא**, **תְּאָדָּר**, **נְשׂוּאָכֶם**, **בּוּאָכֶם**, etc.; (3) unlike the biblical norm the א rarely disappears between a *šewa* and a vowel, but in several forms this is always the case: **רְאִישִׁים** (from **רְאִישִׁים**), **מִצְדָּקָה** (from **מִצְדָּקָה**), **מִצְדָּקָה** (from **מִצְדָּקָה**), **מִצְדָּקָה** (from **מִצְדָּקָה**), etc. (When not pronounced it sometimes does not appear in the written word, and this is the rule in the imperfect of פִּ׳א verbs in first person singular, as: **אֲמַר** from **אֲמַר**, **לֹאֲמַר** (from the root **אֲמַר**). In the Bible this elision is more common.

ה.

(1) Feature number (3) of א is the rule with respect to ה: (a) when used as the definite article and coming after ב, כ, ל. For example: **בְּדָבָר**, **כְּדָבָר**, **לְדָבָר** (but **וְהַדָּבָר**);

(b) In the imperfect and participial forms of *hif'il* and *huf'al*, as **יַפְקִיד**, **יַפְקִיד**, **יַפְקִיד**, **יַפְקִיד**, **יַפְקִיד**, **יַפְקִיד**, but in the infinitive the ה is retained: **יַפְקִידוּ**, **יַפְקִידוּ**, etc. It is also retained in a number of personal names, as: **יְהוֹנָתָן**, **יְהוֹנָתָן**, **יְהוֹנָתָן** alongside **יְהוֹנָתָן**, **יְהוֹנָתָן** alongside **יְהוֹדָה**.

Note: Some generations ago there was a tendency to retain the definite article and forms like **כַּהֲדַבֵּר**, **כַּהֲדַבֵּר** were common. Today this is maintained in the words **לְהֵבֵא נְהִיִּים**, but the form **כַּיִּים** is also used.

(2) The ה tends to be assimilated to the preceding consonant when it is part of a pronomial suffix **וְהוּ**–**וְהוּ**–, **וְהוּ**–, **וְהוּ**– (rare form **וְהוּ**–, **וְהוּ**–; rare form **וְהוּ**–, **וְהוּ**–; rare form **וְהוּ**–, **וְהוּ**–).

(3) It tends to be elided in the pronomial suffix **וְהוּ** after **וְהוּ**– as **וְהוּ**–, **וְהוּ**–, **וְהוּ**–, etc., are found mainly in poetry and almost always is elided after **וְהוּ**– (from **וְהוּ**–).

ח.

Even in pronunciations in which there is no difference between this consonant and the spiranted כ, it maintains its independence in that it acts as a guttural and not as one of the **בגדכפת**. It does not become a כ and prefers those vowels preferred by gutturals, as: **נְצַח** opposed to **נֵסַח** (only uneducated speakers, if they pronounce the כ as a ח are likely to equate them, for example saying **סוּמְכַת** instead of **סוּמְכַת** and vice versa).

ע.

Even in the pronunciation which identifies this sound with the א, the ע is kept separate in different phonetic contexts. In this way it is similar to that pronunciation which maintains the ע as an independent sound. For example, it tends to be pronounced with the furtive *pathah* (**נוּשָׂא** opposed to **נוּשֶׁא**) and often demands a vowel different from the vowel used for א as: **יַעֲבַר** opposed to **יַאֲסַף**, and **לֶעֱבַד** opposed to **לֶאֱבַד**. This independence is further realized in various morphological situations.

7. OTHER CONSONANTS. ן followed directly by another consonant is usually assimilated to it; only the ן which is part of the root is not usually assimilated to **ע** **אהח**“ע; in some roots and other forms this is also the case (perfect **נֶפַל**, imperfect **יִפַּל**; perfect **נִהַג**, imperfect **יִנְהַג**; perfect **נִדָּוַן**, imperfect **יִדְוֹן**; perfect **נָעוּר**, imperfect **יַעוּר**; infinitive **לִפֹּל** but **לִנְעַע**, etc.).

צ pronounced as *z* (= *c*) is a compound sound and can be heard in speech when ס and ת are contiguous, as, for example, in **בִּית־סַפֵּר** (a common spelling mistake among children is **בִּיצַפֵּר**!). It still acts in Hebrew as one sound (monophonemic), and it is impossible to demonstrate oppositions in meaning which depend on the opposition (*z*/*ts*); the fact that *z* can be only one of the elements of a root is itself proof of this assumption.

שצסו.

The clusters **תַּס**, **תַּש**, **טַצ**, **טַז** where the ת (ט or ט) is the *t* of the *hitpa'el*, are impossible and the order is reversed to **סַת**, **שַׁת**, **צַט**, **זַט**. Also rare are the clusters **תַּס** etc., when the ת (or ט or ט) are elements of the root. In fact, in the words or forms derived from these roots a vowel usually appears between them – **תַּשַּׁס**. However, since the Middle Ages these combinations have appeared in a few words where the *t* is part of the root, as **מִתְשִׁיר**.

Note: It is possible to prove that the ש was an independent sound in biblical times and was so considered by the vocalizers of the Bible. Still, here and there, there are examples of the merging of this consonant with the ס in the Bible as in **עַשׂ** alongside **עָסַע**, and in rabbinic Hebrew many of the words and roots with ש in the Bible appear with ס, as: **שִׁיחָה** instead of: **שִׁיחָה** etc. Hundreds of years have passed since ש ceased to exist as an independent sound and became ס in all Jewish pronunciations and ש in the Samaritan pronunciation. Only the spelling recognizes the differences between ש and ס, and in certain instances this is an aid in differentiating homonyms, as: **שַׁרְר** = rule / **סַרְר** = rebel, **שִׁכָּר** = hired / **סַכָּר** = closed, **סַמְיָה** = diploma / **שַׁמְיָה** = a blanket. The medieval *paytanim* used to

put a word beginning with **ש** between **ל** and **ע** in their acrostics even though the biblical poets put it together with **ש** (Psalms 118); similarly there were lexicographers in the Middle Ages who placed words beginning with **ש** with those beginning with **ס** that is, according to their pronunciation rather than their graphic form.

ו"י.

These two sounds (if the **ל** is pronounced bilabially) are to be classified as being between a consonant and a vowel, also in their function in the language. Unlike other consonants, they interchange with vowels in specific instances and they are geminated like consonants. The **ל** at the beginning of a word or as the first element in a root was rare and was generally replaced by **י**; thus even in modern Hebrew there are very few words which begin with **ל**. [In the pronunciations of most of the communities which contain the spiranted **ב**, there is a tendency to pronounce the **ב** and **ל** identically, the **ב** at times being pronounced as a **ל** (bilabially) and vice versa. But even in this case only the **ל** retains the above relationship to the vowels, never geminated into a **ב**. Only in the Samaritan pronunciation did the **ל** become a **ב** in most positions, after the soft **ב** was entirely lost.]

8. GEMINATION AND CLUSTERS. Besides the gemination of a consonant caused, in Hebrew as in other languages, by the occasional immediate sequence of that consonant namely when a root consonant comes into contact with an affixed formative (for example **הַתְּנִיחַ** > **תְּנִיחַ** > **תְּנִיחַ**, **הַתְּנִיחַ** > **תְּנִיחַ**, **הַתְּנִיחַ** > **תְּנִיחַ**), gemination is very common in Hebrew and serves to create nominal and verbal forms. Some call a geminated consonant in Hebrew a "long consonant" parallel to a "long vowel," but this comparison is justified neither by the phonetic process which takes place (the syllable boundary is within the consonant; a difference is felt, for example, between lengthened **ל** in **תְּנִיחַ** and the regular geminated pronunciation of the **ל** in **תְּנִיחַ**), nor by the function in the language which it fulfills.

(1) Every form which has a geminated consonant, can have that consonant replaced by a cluster of two consonants but never by one alone, and thus **פָּקַד**, **פָּרַג**, **פָּלַל** are all of the same verbal type, and **פָּרַג** and **פָּרַג** are considered to be of the same nominal type; (2) A cluster of two consonants at times becomes a geminated consonant, and the two forms may even exist side by side (**לָפַל**, **לָפַל**). (3) A geminated consonant may split into a cluster of two consonants (common in Aramaic, rare in Hebrew), and in some of the words which have a two consonant cluster in Hebrew today there was originally a geminated consonant, as: **גָּלְמוּד** (from **גָּלְמוּד**), **שָׂרְבִיט** (from **שָׂרְבִיט**). (4) The limitations regarding the vowel before the last consonant in the syllable, are also in force for the vowels which precede a geminated consonant. Therefore, a geminated consonant functions just like a cluster of different consonants, being more limited only in that it cannot come at the end of the word (compare **צָלַל** (< **צָלַל**) opposed to **נָפַט** (< **נָפַט**), opposed to **שָׂמַרְתָּ**). At the beginning of a word a geminated consonant can be found only when the first consonant is not

part of the root but a formative element, as: **תְּתַרְגֵּם**, **מִמְנֵן** (see below); or when the word comes after the interrogative **מַה** (**מַה־יָּה**), thus constituting a phonetic unit (in the Bible this is common in various combinations of words and vowels). In addition to geminated consonants, there are times in modern Hebrew, especially in the speech of young girls, when, as an expression of emotion, a consonant is lengthened, as *yof-f-f-fi* (**יֹפִי**), but this has no grammatical function.

There is a tendency to eliminate gemination, especially when the geminated consonant is vocalized with a *šewa*; and thus the gemination is usually eliminated in **י** with *šewa* and in the **מ** of the participle after the definite article, as **הַמְּסַבּוֹת** (= they are causing; but **הַמְּסַבּוֹת** (= parties)). However, this tendency is overruled by morphological considerations (**הַמְּסַבְּרִים** and not **הַמְּסַבְּרִים**; but in the Bible **הַמְּבַקְּשִׁים**). The tendency to eliminate becomes the rule when the consonant involved is either **א** or the spiranted allophones of **ת** which are never geminated. In other words, five phonemes cannot be geminated. (In the Samaritan pronunciation the **ר** is geminated just as any other consonant, and this was also the case in the Hebrew of Septuagint times.) Many Hebrew speakers today do not commonly geminate consonants in their speech, but they maintain those conditions which derive from gemination and determine the form of the word, as the hard **פ** **סָפַר** (a barber) and the spirant in **סָפַר** (counted) etc. According to the rule, a cluster of more than two consonants is impossible in Hebrew. A cluster at the beginning of a syllable is realized generally by a *šewa* inserted between them. Clusters of more than two consonants are found only in international words used in Hebrew, for example **סְטְרַאטֵגְיָה** (alongside **אֶסְטְרַאטֵגְיָה**). In the middle of a word a cluster of three consonants is conceivable. This is especially true when the first element in the cluster is a geminated consonant as, **שָׂמַרְתָּ** (< **שָׂמַרְתָּ**), which is usually articulated with the addition of a *šewa* between the geminated consonant and the one following it. In "inherited" words a cluster at the end of a word is possible if it ends in a plosive (for example **תָּפַן**, **קָשַׁט**, **נָרַד**, but **תָּפַן**). In international words this rule does not always apply (**סוּצִיאַלִּיזְם**), but modern pronunciation tends to insert a *šewa* in such cases.

9. VOWELS. There is no essential difference between the two types of sounds – vowel and consonant – the difference being rather one of degree; in fact, the semi-vowels **ו** and **י** are proof that it is possible to pass from one category to the other. The consonants are classified above according to three criteria: point of articulation, method of articulation (open or closed), and the action of the vocal chords (voiced or unvoiced). Since the vowels are all voiced and articulated in the open position, we are left only with the criterion of point of articulation, that is, the relative closeness of the organs of articulation to each other. In articulating the vowels, actual contact is not conceivable; the basis for classification is, therefore, the movement of the tongue and the working of the lips (the traditional Hebrew names for the vowels, *pathah*, *qameṣ*, etc., are an attempt to

describe the opening of the mouth and the activity of the lips). Following the direction in which the tongue is raised during the articulation of the vowels, we may divide them into “front,” “central,” and “back.” Generally, a rounding of the lips is an accompanying feature of back vowels, and spreading the lips an accompanying feature of front vowels, but rounding and spreading of the lips are possible in all the types of vowels. The section on consonants above mentioned the great variety of consonants heard from the Hebrew speaker and the reasons for them. The vowels, by their very nature, are even more variegated. For the consonants it is at least possible to establish ideal standards for official speech, but there are no set standards applicable to the vowels. There have been no studies to date which can supply information as to the exact phonetic makeup of the vowels in modern Hebrew, but this deficiency does not prevent a phonemic description, since the variations in the vowels are not distinctive and do not affect the meanings of words. Therefore, it will be sufficient to classify the vowels generally into: front: *i*, *é*, *e*, represented in writing by \neg *hireq*, \neg *šere*, \neg *segol*, and \neg *hatef segol*; central: *a*, represented by \neg *pathah*, \neg *qameš (gadol)*, and \neg *hatef pathah*, and *ě*, represented by the *šewa*; back: *o* represented by \neg *holem*, \neg *qameš qatan*, and \neg *hatef qameš*, and *u* represented by \neg *šureq* and \neg *qibbuš*. By using average measurements the relationship among the vowels can be graphically described in the following way:

Since only the general values of the vowels have been mentioned, it emerges that the number of vowels is close to the number of vowel phonemes, which are all the above, save the two circled, i.e., the *segol* and the *šewa*. Regarding the phonemic value of a sound there are likely to be differences of opinion (see section 3, Consonants, above), and the doubts which might be raised about this classification will, therefore, be discussed in sections 12 and 13, on The Phonological Status of the Vowels and The *Šewa* and *Hatefs*, below. Many Hebrew speakers do not differentiate between *e* and *é*, and even those who do differentiate do not always apply the *šere* and the *segol* respectively where demanded by the rules of vocalization. Even among those who do differentiate, there are some who articulate the *šere* almost as a diphthong *ey*. Note that *hatefs* differ phonetically from the *šewa*, and do not represent independent qualities but are identical to full vowels.

10. VOWEL QUANTITY. In the common pronunciation the vowels are not differentiated as to length, only the *šewa* being of shorter duration than the other vowels. Experimental methods have proved that the vowel in an accented syllable is slightly longer than the vowel in an unaccented syllable, but this difference is not discernible by the ear, since no seman-

tic difference depends on a vowel length. (In English, by contrast, this is a distinguishing feature, cf. [it] (it), opposed to [i:t] (eat).) In fact it may be said that the vowels in Hebrew are isochrons (of equal length). However, since there is long standing tradition in Hebrew of dividing the vowels into “long” (lit. big) and “short” (lit. small), an aspect which is also relevant to the rules of punctuation, this division will now be considered. The differentiation originated in an attempt to divide the vowels according to length (compare O-mega and O-mikron in Greek), that is: long and short. The Spanish grammarians of the Middle Ages felt that the *qameš* (pronounced “a”), the *šere*, *holem*, *šureq*, and full *hireq* (with *yod*) were long vowels, while the *pathah*, *segol*, *qameš* (pronounced “o”), *qibbuš* and *hireq* (without *yod*) were short vowels. They considered that there were five qualities of vowels (a, i, e, o, u) and that these were either long or short. This division is a reflection of the “Sephardi” pronunciation, but it must be recognized that in that pronunciation the accent also caused a lengthening of the vowel, and so the “short” vowels in accented syllables were long (for example \neg is pronounced with a long vowel even though it is a *segol*; the same is true for the *pathah* of \neg). The opposite is true for “long” vowels which are next to the accented syllable and are pronounced short (an exact description was given by R. Joseph Kimḥi in the 12th century). In the 19th century, which was interested in comparative historical study, this principle of division was accepted by Hebrew linguistics with one change: the symbol representing a vowel (excluding the *šewa* and *hatefs*) represents only quality, and that quality can be either long or short. The length is not determined by the symbol or by its place in the word (contrary to Kimḥi, above), but rather in accordance with comparative grammar. As a result of these considerations long vowels are those which generally remained unchanged in the declension of the word, while those which change are either short or lengthened in special phonetic conditions. Thus, for example, the *šere* of \neg (dead) is always long while that of \neg (tooth) is short (except for biblical pausal forms); similarly, the *holem* of \neg is always long, while that in \neg is short (except in pausal forms). This differentiation between originally long vowels and secondarily lengthened vowels gave rise to a threefold distinction: “long” vowels (that is originally long), “middle” (that is lengthened), and “short.” However, the term “middle” never achieved wide acceptance. This division, unlike that proposed by Kimḥi, is not rooted in any real tradition of Hebrew pronunciation, but is entirely based on theoretical considerations, which assume a Hebrew pronunciation among the Masoretes, when they determined the vocalization of the Bible. Early evidence, such as Greek transliterations and well-based considerations, tends to justify the assumption that in early Hebrew there was a difference in the length of vowels, and that the behavior of the vowels as it appears in the vocalization of the Bible reflects the ancient division as to length. There is, however, no proof that these differences of length existed at the time of the vocalization of the text. In any case the vowel signs are indicative of seven qualities only (excluding the *šewa* and *hatefs*).

Phonematic investigation does not indicate any semantic differences dependent on vowel length. Such proofs as חול (*hōl*) = sand opposed to חל (*hol*) = secular or profane, or עד (*‘ēd*) = witness, opposed to עד (*‘éd*) = a piece of cloth, are misleading, since according to the traditional division the vowels are “long” in both pairs of words and the assumption that the vocalizers differentiated is completely unproven. According to the traditional pronunciation two pairs of homonyms can be seen, each of which arose in specific situations. The difference between the vocalization of official Hebrew today and that which is the assumed basis of the rules of vocalization – which are obligatory even today – lies not (at least from the phonemic point of view) in quantity, but in the change of quality of several vowels. Though it is claimed that Hebrew vowels are isochronic phonemes, this does not mean that in Hebrew speech all *a* vowels, for example, are of the same length in all situations. But on the other hand, the difference between מן (*min*) = from, and מין (*mīn*) = type, does not indicate that the vowel system is to be divided into long and short. The truth is that confronting such pairs is artificial since the two words differ in their syntax and linguistic position.

11. VOWELS AS PART OF THE SYLLABLE. From the discussion above it is clear that a description of vowel distribution should be on two levels: (1) the vowels as pronounced today; (2) the use of the vowel signs. In describing the written language it is impossible to ignore the distribution of the vowel signs, since it is not only an important part of Hebrew spelling, but helps to understand the morphophonemic relationships. Table 4: Syllables reflects the distribution of the vowels which are listed according to type of syllable and place of accent in the word.

12. THE PHONOLOGICAL STATUS OF THE VOWELS. From the above it is clear that there are altogether five phonemic vowels – *i, e, a, o, u*. This can be ascertained from a consideration of the possible oppositions, ten in all ($\frac{5 \times (5-1)}{2}$). We also see that all possible oppositions are utilized only in (a) open syllable, whether accented or not and in a (b) closed accented syllable; in an (c) unaccented closed syllable many oppositions neutralized, as the examples below will show.

In syllables of the types (a) and (b) *i* is defined by its opposition:

- 1) to *é* in ניר/נִיר; שְׁכִינָה/שְׁכִינָה; רַחַם/רַחַם; שְׁרָה/שְׁרָה; פֶּעֶל/פֶּעֶל; רִק/רִיק; דִּין/דִּין;
 - 2) to *a* in שיר/שִׁיר; שׁוֹר/שׁוֹר; בְּכוֹרָה/בְּכוֹרָה; נַחֵם/נַחֵם; צִיר/צִיר; אֲמִירָה/אֲמִירָה; צִיר/צִיר;
 - 3) to *o* in קֶץ/קֶץ; קֶץ/קֶץ; קֶץ/קֶץ;
 - 4) to *u* in שְׁכִינָה/שְׁכִינָה; גֹּר/גֹּר; אֲמִירָה/אֲמִירָה; גֹּר/גֹּר;
- é* is defined by its opposition to *i* (see above);
- 5) to *a* in גֹּר/גֹּר; עֵד/עֵד; גֹּר/גֹּר;
 - 6) to *o* in קֶץ/קֶץ; קֶץ/קֶץ; קֶץ/קֶץ;
 - 7) to *u* in שְׁכִינָה/שְׁכִינָה; גֹּר/גֹּר; אֲמִירָה/אֲמִירָה; גֹּר/גֹּר;
- a* is defined by its oppositions to *i* and *é* (see above);
- 8) to *o* in שִׁיר/שִׁיר; שִׁיר/שִׁיר; שִׁיר/שִׁיר;
 - 9) to *u* in שְׁכִינָה/שְׁכִינָה; גֹּר/גֹּר; אֲמִירָה/אֲמִירָה; גֹּר/גֹּר;
- o* is defined by its opposition to *i, é, a* (see above);

Table 4: Hebrew Syllables

vowel	open syllable		closed syllable	
	Accented	Non-Accented	Accented	Non-Accented
<i>i</i> – hireq	שִׁימוּ; תְּנִינוּ; רְבִי	רַחַם, כִּישׁוֹר; אֲבִירֹת; קֹמִי	מִן, מִן; –; תְּבִשִׁיל	גְּבִרְתִּי, שְׁמִחָה; אֲוִיבָב; –
<i>é</i> – sere	שִׁפּוֹר; הוֹצֵאנוּ; צֵא, הַקְנֵה	עֵנַב, מִיטֵב; מִקְהֵלָה; –	אֵלָה; הֶסְבּוּ; לֵב, לֵיל, מִסֵּב	–; –; –
<i>e</i> – segol	מִלֵּל; סוֹסֵיךְ; מִרְעָה	נֶאֱמָרוּ, יְחֻזַּק; –; דֶּשָׂא, הֶגֶה	נֶגְבָה; –; אֶמֶת, בְּרָזֶל	נֶגְדוּ; מִקְלָכִם; קֶדֶשׁ
<i>a</i> – and	נָחַל, שְׁמֹרָנִי; מִלְכָּה	נֶחֱלָה, עֵשָׂהוּ, שְׁמֹרָנִי; –	גָּג, שְׁמֹר, עֵבְרוּ, נֶחֱלָה; הוֹרְדָנוּ; עוֹלָם, דוֹנָג	מִלְכוּ; הוֹרְדָתֶם; רֵוִחַ, בָּחַל
<i>o</i> – and	קֶדֶשׁ; נְדוֹנוּ; פֹּה, מִלְכוּ; qatān	קוֹנֵה, אֲרֻצוֹתֵיהֶם; –	שְׁהִיָּם, גֶּרֶשׁ, קוֹנֵה; קִטְנֵי; אֲדָם, כְּבוֹד	בְּתִבְתִּי, קָרְבָנֶם; קִטְנֵי; –
<i>u</i> – and	קִימוּ; תִּקְוִמוּ; בְּנוּ	רַחַם, סוֹגֵר; מִלְבוּשִׁים; אֲחוּ	–; –; מִלְבוּשׁ	וּלְקַחְתֶּם, חֲלִיצָה; מִשְׁכַּרְתוֹ; –
	šewa –; and –; haṭefs –	–; –; –	–; –; –	–; –; –

* Accented syllables are marked by a single quote. Notes to Table 4:
 (1) The examples show the vowels (a) in an opening syllable, (b) in a medial syllable (c) in the word final syllable; between each type there is a semicolon. Although there is no real difference between the first two categories, examples are cited for the sake of completeness. This enables us to see whether a certain vowel cannot appear in one of the syllables of the word, which situation is indicated by a dash.
 (2) In each type examples are given for orthographical reasons. A comma is placed between them. This gives us a view of the distribution of the vowel signs. It may be concluded that each of the six vowels, except for *é*, can appear in all positions of the word. *é* alone does not appear in a closed unaccented syllable. The *šewa* is – phonemically – the realization of a cluster, but from the phonetic point of view it is a syllable peak, and appears only in an unaccented syllable. The *haṭefs* are to be classed with the *šewa*, and even those who pronounce the *haṭefs* as full vowels do not produce any change in the above distribution picture. However, if the uses of the vowel signs and their relationship to the vowels which they represent are investigated, it will be seen that, unlike the vowels themselves, their use is limited and conditioned by the type of syllable in which they appear, and the rule is as follows: (1) *šere, holem, qameš gadol*, and *šureq* do not appear in unaccented closed syllables; (2) *qameš qatān* and *qibbuš* do not appear in closed or open accented syllables. This shows that there is a connection between the distribution of vowel signs and accentuation. This relationship cannot be explained if only the accented Hebrew pronunciation is considered; but must be seen against the phonetic values of the signs in the pronunciation of the Tiberian vocalizers. Similarly there is apparently a relationship between the type of syllable and the use of the full vowel signs (with *ו* and *י*), cf. the use of the *holem* without a *ו* in קִטְנֵי. This relationship is also not comprehensible given the modern pronunciation, but only on the basis of Hebrew pronunciation in the ancient past, when two important factors were in force: quantitative differences of vowels and a tendency to express that quantitative difference in the writing, as, for example, עוֹלָם opposed to אֶמֶר. This presents one of the greatest problems in teaching proper vocalization, for without the clear presentation of the historic background it is, of necessity, a mechanical process.

10) to *u* in שוק/שוק; אָמור/אָמור;

u is defined by its oppositions to the other vowels (see above).

In syllables of type (c) only the following oppositions are found:

i (1) to *a* in דָּבַר/דָּבַר; (2) to *o* as הִפְקְדָנוּ/הִפְקְדָנוּ; (3) to *u* in חִיבָנוּ/חִיבָנוּ; פִּנְהָ/פִּנְהָ; *a* opposed to *i* (see above); (4) to *o* in עָצְמוּ/עָצְמוּ; (5) to *u* as חָפְהָ/חָפְהָ; חָקְשָׁ/חָקְשָׁ. It will be seen, therefore, that *é* is not opposed to any vowel in this position and that *o/u* are not opposed; however, variants like אָמְנָם/אָמְנָם and אָמְנָם/אָמְנָם are found in Hebrew. In fact, most of the oppositions are derived from the conjugations of the verb, where *o/u* indicates the passive and *a/i* the active forms, and even in this area the oppositions are limited. This is the result of a process in ancient Hebrew, during which oppositions of short vowels in closed syllables were eliminated; and when the use of the internal passive in post-biblical Hebrew was minimized the scope of these oppositions was, automatically, greatly reduced.

In the above description the *e* (*segol*) was not included in the phonemes although there are cases where a difference of meaning between a pair of words is reflected in the relationship between the *segol* and some other vowel, as: אָרְאָה/אָרְאָה; עָרַב/עָרַב; לַחֵם/לַחֵם (= solder). Though the *segol* is a very common vowel, such cases are quite rare and we cannot therefore assume the opposition *segol* to another vowel in the structure of the language. It is correct to see the *segol* as an allophone of the *šere*. If the forms אָרְאָה/אָרְאָה through the whole of their paradigms, are investigated, it will be seen that the opposition in all conjugated forms is *a/i*, as, for example תִּרְאֶה/תִּרְאֶה; only in the first person singular is this *i* represented by a *segol*, since the *i* does not appear after an *alef* in a closed syllable (when not geminated). The *é* should have taken the place of the *i* but *é* cannot appear in an unaccented closed syllable. This complimentary relationship between *é* and *e* is common in all forms of the conjugation and declension of ל"ו roots, as: מְקַנְהוּ/מְקַנְהוּ (construct state); מְקַנְהוּ/מְקַנְהוּ (possible in construct state); בָּן/בָּן (construct); and others. On the other hand *e* is found at times in the same environment as *é* in גָּדַר/גָּדַר; נָצַח/נָצַח; יָתַר/יָתַר; שָׁכַל/שָׁכַל; בָּהֵן/בָּהֵן; פָּתַח/פָּתַח and others without any distinction. It may, therefore, be concluded that at times *e* is a conditioned allophone which becomes mandatory in certain environments, and at times – under different conditions – it is (in very limited scope), an optional allophone (cf. N.S. Trubetzkoy, *Grundzuege der Phonologie*, p. 46, regarding *d/t*). Examples such as עָרַב (evening)/עָרַב (wasp) which both contain the phoneme *é* should be considered homonyms as are their plural forms עָרַבִּים and as is עָרַב (pleasant/guarantor) etc. (The fact that the *segol* appears only with the א and is a conditioned vowel, and not independent, is also seen clearly in the forms אָעֲלֶה/אָעֲלֶה; the *segol* does not appear in the rest of the *qal* paradigm, as תַּעֲלֶה/תַּעֲלֶה, but all the forms save the first remain homonymous.)

Note: Although in modern Hebrew the *segol* must be considered to be an allophone of the *šere*, it is possible to prove

that in ancient Hebrew the *segol* is a reflex, in all cases, of an original *a* and was an allophone of *a*.

13. THE ŠEWA AND ḤAṬEFS. A) The grapheme known as the *šewa* (ְ) represents two independent phonetic values: the absence of a vowel, and a very short vowel, which can be described as central and vague. In grammatical terminology the former is called *šewa quiescens* (שווא נח) and the latter *šewa mobile* (שווא נע). Only the second type interests us in our study of the behavior of the language. Indeed this term, *šewa*, has become accepted in general linguistics as describing a vowel of this quality. In Hebrew the *šewa* cannot rightfully be listed with the phonemes, since no difference in meaning depends on the *šewa* (the same applies to *ḥatefs*). The *šewa* must be regarded as a conditioned vowel which appears in clusters of consonants, whether, historically, the *šewa* comes in place of a full vowel (גְדוּלָּ < גְדוּלָּ) or the absence of a vowel (מַעֲבָרָּ < מַעֲבָרָּ). Therefore, phonetic differences such as פְסוּלָּ < פְסוּלָּ or נְרוּעָּ < נְרוּעָּ have the following phonologic makeup: /pasul/:/psul/, /zarō':/zro'/. In Hebrew the *šewa* is never accented and is always found between two consonants.

B) Since there is one grapheme, the *šewa*, for two values, the grammarians established rules indicating when the *šewa* was to be pronounced as mobile (נע); however, the pronunciation of the vocalizers who instituted the *šewa* sign differs from the Sephardic pronunciation, whose rules are accepted in the pronunciation of official Hebrew today. In common speech, different groups of speakers pronounce the *šewa* differently, or do not sound it at all. The following are the rules for educated speech: the *šewa* is pronounced (a) at the beginning of a word (גְבוּלָּ, גְדוּלָּ, גְדוּלָּ); (b) when it is the second of two *šewas* (יִשְׁמְרוּ); (c) when it comes with a *dageshed* consonant (יִשְׁמְרוּ); (d) after a vowel in an open syllable (שִׁירָכָם). Since the ability to distinguish the length of vowels has been largely lost, only a trained ear can determine which is an open syllable followed by a consonant plus *šewa* mobile, and which a syllable closed by the first of a cluster of consonants. Only when the cluster consists of a geminated consonant is the difference clear: סָבְרוּ, סָבְרוּ are at times pronounced (*sav-ru*) (*gadlu*), but not סָבְבוּ, סָבְבוּ (*savēvu*) (*ga-lēlu*). This differentiation was passed by analogy to words like קָלֵל, קָלֵל, whose first syllable is – historically – closed. In this way a differentiation developed between רִנַּת and רִנְנַת which was apparently unknown to early Hebrew, where both were pronounced simply (*rin-nat*); only in certain prosodic situations could רִנְנַת be pronounced (*ri-nēnat*).

C) There are those who, in addition to the two types of *šewa* mentioned, find in Hebrew a third type which they call *šewa medium* בִּינוּנִי or מִרְחֵף. This is a *šewa* which comes after a “small” vowel (see above Vowel Quantity): (1) if the following consonant is a spirantized *šewa*, as בגדכפ”ת, מְרַבֵּד, מְרַבֵּד (see section on בגדכפ”ת above); (2) with an originally geminated consonant, as אֶלְמִים (compare singular אֶלֶם), אֶלְמִים (sing. אֶלֶם); (3) with the first consonant of a cluster as רִנְנַת (see above). This *šewa* medium is not a separate phonetic entity, but in types (1)

and (2) the *šewa* is quiescent, that is, it does not represent any vowel in pronunciation, and in type (3) may be pronounced as a *šewa* mobile, as pointed out above. Phonetically there is no such thing as a *šewa* medium which is between the quiescent and mobile; it is a fiction created to explain certain phonetic developments which are not uniform. There are some grammarians (Bergstrasser and others) who tend to see in the *šewa* medium an independent historical entity, i.e., a *šewa quiescens* where once there was a vowel, while others see in it an independent phoneme (Birkeland, p. 55). However, a sound which is not an independent part of the order of sounds (since it is either *quiescens* or *mobile*) cannot be considered a phoneme. It must be remembered that both the *šewa* and *ḥatefs*, as well as the absence of any vowel, are likely to appear in Hebrew in a position where once there was a vowel (שִׁמְרוּ, in pause שְׁמֵרוּ; שְׁמֵרוּ, in pause, שְׁמֵרוּ) or where there was no vowel at all (נֶעְרוּ opposed to נְשִׁמְרוּ, נֶעְרוּ, נֶעְרוּ, נֶעְרוּ, נֶעְרוּ).

b) In the official language the grapheme *šewa* reflects one sound (ɛ) in all phonetic situations where it is pronounced. In ancient Hebrew this sound varied between ä and ě, and tended to assume the sound of the neighboring vowels. This fact is reflected in personal names which have been transmitted in their Greek or Latin pronunciations as: שְׁדוֹם Sodom, שְׁלֹמֹה Solomon, נְתַנְאֵל Nathanael, גְּדֵרָה Gadera. In the pronunciation of the vocalizers the *šewa* was generally ä (this caused it to be interchanged with the *ḥatef-pathah*), and it changed, according to ancient rules, toward the sound of the neighboring vowel when the *šewa* is next to אההע"ו. This feature can still be heard in the pronunciations of several communities where כְּמוֹ and נְקִיָּה are pronounced *kāmo*, *nāqiyya* and not *kĕmo*, *nĕqiyya*. The different nuances of the *šewa* in official Hebrew are the *ḥatefs* (if pronounced quickly), and these sounds are interrelated with the consonants א, ה, ח, and ע; only rarely is a *ḥatef* found with a different consonant, as צְפָרִים, כְּתָנוּת, דְּמִי. In the Hebrew of the vocalizers the *šewa* and *ḥatef-pathah* represented one quality; in the official pronunciation today the *šewa* and *ḥatef-segol* are equal, the latter with a guttural.

As opposed to what has been said above, on the relationship between the *šewa* and the *ḥatefs*, it is possible to claim, that semantic differences are dependent on the *ḥatefs*, unlike the *šewa*, and as a result the *ḥatefs* are phonemes. The differences are of the type אָנִי/אָנִי, חָדְשִׁים/חָדְשִׁים, עָלִי/עָלִי, חָלִי/חָלִי. However, as pointed out above regarding the *segol* (in section 12, The Phonological Status of the Vowels, above), it may be said that the *ḥatefs* are reflexes of the *šewa* – the result of a cluster of consonants – while the choice as to which nuance of the *šewa* is used in a particular instance depends, to a great extent (at least with regard to the *ḥatef-qames*), on the quality of the full vowel found in the same position in other forms of the word; thus חָדְשִׁים follows חָדַשׁ and חָדְשִׁים follows חָדַשׁ. The oppositions of the *ḥatefs* are only apparent; the real oppositions being between the full vowels; there is thus the possibility of *ḥatef* interchanges within the very same word, as in אָכַלְתְּ – אָכַלְתְּ, אָמַרְתְּ – אָמַרְתְּ, אָמַרְתְּ – אָמַרְתְּ, דְּמִי – דְּמִי, אָמַרְתְּ – אָמַרְתְּ, אָכַלְתְּ – אָכַלְתְּ.

Note: Diachronically, and also from the phonologic synchronic point of view, the furtive *pathah* must be considered the same as a *ḥatef* which is pronounced before the guttural. However, unlike the *ḥatef*, the furtive *pathah* is always pronounced as a full *a* vowel.

14. THE ACCENT. The accent in Hebrew falls on one of the last two syllables of the word. On the ultimate syllable it is called מִלְרַע (*milra'*) and on the penultimate מִלְעֵל (*mil'el*). It is impossible to determine clear phonological rules for each type of accentuation since the situation in Hebrew is the result of a complicated development, not all of which is clear today. One may say that in Hebrew the ultimate accentuation is dominant, while the penultimate is found:

A) in the noun:

1) in segolate forms, i.e., when preceding the final consonant there is

a) a *segol* (מְלֹךְ, סֶפֶר, כֶּתֶל, שׁוֹמֵר, כְּתִיב, מִסְפָּר, כְּתִיב, שׁוֹמֵר, כְּתִיב);

b) a *pathah* – if the last consonant is ה, ח, or ע (קִבֵּעַ, מְלַח, גִּבְיָה, תַּמָּה) or if the consonant before the last is א, ה, ח, or ע (תֵּאָר, שְׁהֵם, תֵּאָר);

c) *hireq* if the consonant before the last is י (לֵיל, בֵּית). In all of these forms the common feature is that the unaccented vowel is lost in declension. To this category belong also those nouns ending in an open syllable with *segol*, *hiriq*, or *šureq*, which when declined place a consonant for this vowel, as אֶחָד, אֶחָד, אֶחָד; this is also the case for the demonstrative אֵלֶּה;

2) nouns (and other words) to which are suffixed locative ה־ or the dual ending ים־ (מְצֻרִים, אַרְצֵהּ); similarly לֵילָהּ, הַמָּה, הַנָּה; (הֵן = הַנָּה, הַמָּה);

3) nouns (and other words) to which are suffixed the possessive pronouns: ה־, ה־, ה־, ה־, ה־, ה־; (אֶחָד, אֶחָד, אֶחָד); similarly מוֹ-, which today is only found in poetry (בְּתִימוֹ).

B) in the verb:

4) in the perfect: before the suffixes ת־, ת־, ת־; (הִשְׁכַּמְנוּ, שִׁבְרָתְךָ, שְׁמַרְתָּ);

5) in the imperative and the imperfect: before נָ-, (תְּשַׁבֵּרְנָה, שְׁמַרְנָה);

6) in addition to those instances mentioned in (4) and (5): in *hif'il* of all forms, excluding ל־ forms, and in ע"ו and ע"ע forms in *qal* and *nif'al*, and in ע"ע forms even in *huf'al*, in forms ending ה־, ה־, ה־, ה־; (הִגִּידוּ, הִגִּידוּ, הִגִּידוּ);

7) in verbs with suffixed object נִ-, ה־, ה־, ה־; (אֶחָד, אֶחָד, אֶחָד).

c) in certain forms which today appear only in poetry, such as the pausal forms (יְשַׁמְרוּ, אָנֹכִי) or the inversive tenses (וַיִּשֶׁם, וַיִּתְּגַד).

There are exceptions to the above rules: the accent is on the penultimate in the third person fem. sing. perfect with pronominal suffixes אֶהְבְּתֶךָ, אֶהְבְּתֶךָ, אֶהְבְּתֶךָ; the accent is on the ultima in the inversive perfect tense וְשַׁמְרָתִי וְשַׁמְרָתִי.

If for the moment the segolate nouns and the forms appearing in inverted tenses are excluded, it may be included

that the penultimate accent appears in Hebrew only when the word ends in an open syllable; this, to a certain degree, reflects the early division of ultimate and penultimate accents in Hebrew.

In the Bible the accent is given to change from penultimate to ultimate (as in עוֹרֵי in Judg. 5:2) and especially from ultimate to penultimate in word groups, but there are no cases of enclisis, only proclisis. In modern Hebrew, however, enclitic forms are common not only in speech but also in poetry; as opposed to שְׁמַע-נָא, בּוֹא-נָא, אָמַר-לִי we find שְׁמַע-נָא, בּוֹא-נָא, אָמַר-לִי; however, this is not considered the norm. Proclitic forms are common in construct. In speech there are certain tendencies to penultimate accentuation which differ from the rules given here, but they are not considered correct (as שְׁמַרְתֶּם). The accentuation of foreign and borrowed words and personal names must be considered separately. The rules of accentuation in the original languages have affected the accentuation of the borrowed words, so that at times even syllables before the penultimate are accented. In personal names the emotional factor cannot be ignored, and feelings such as love and indulgence affect the accentuation. However, the standard which is demanded by the Academy for Hebrew Language and used in broadcasting is the ultimate accentuation, and so the norm is אוֹנִיבְרִסִיטָה and not אוֹנִיבְרִסִיטָה or אוֹנִיבְרִסִיטָה, and similarly רִחֵל and not רִחֵל. On the other hand, foreign words with Hebrew suffixes are usually accented in keeping with the norm, as אוֹנִיבְרִסִיטָאוֹת. The tendency to penultimate accentuation is found in the pronunciations of many communities, and in Samaritan Hebrew has become the rule.

Accentuation has phonemic value in Hebrew, since it is a distinguishing feature between certain pairs of words – בָּנוּ (in us) / בָּנוּ (they built), בָּאָה (she is coming) / בָּאָה (she came), קָוְמִי (imp. fem. sing.) / קָוְמִי (infinitive with pron. suf.). Hebrew accentuation is “stress” type (dynamic accent) and by its nature is likely to affect the vocalization. In fact it causes changes in the vowels of a word depending on their nearness to the accent (see section 16. Interchange and Elision of Vowels, below).

15. THE DIPHTHONGS. The diphthong is – by definition – the combination of two vowels within one syllable. The diphthong is created when the point of articulation glides from place to place within the one breath. More precisely it is a combination of a series of vowels, but it is sufficient to indicate the extreme vowels, i.e., the opening and the concluding (or the intended conclusion). Thus instead of the sign *a...e...i*, the sign *ai* (or *ay*, *ai*) is used. By its very nature one of the parts of the diphthong is primary, and the other secondary, or accompanying. If the diphthong begins with the accompanying element it is called rising (as *ua*); if it ends with this element it is called falling (*au*).

In Hebrew grammar, combinations such as וֵי, וִי, וְ, וִי, וְ, וִי are called diphthongs. However, in Hebrew it is the falling diphthongs that are of significance because of the morphologi-

cal changes they cause. The use of the term diphthong in Hebrew is therefore limited to cases of a vowel with “semi-vowel,” ו or י (see section 7. Other Consonants, above). A combination of two vowels in one syllable, whether caused by the splitting of one vowel into two (as in the frequent pronunciation of the *šere*, *ey*), or by the proximity of a certain vowel to ה, ח, or ע (furtive *pathah*) – which is realized phonetically by being split into two syllables – concerns Hebrew grammar only as far as establishing the phonetic facts. In fact the term diphthong does not accurately describe the combination of a vowel and ו in the regular pronunciation of modern Hebrew, where it is a combination of a full consonant (v) and vowel. However, this combination can be regarded as a diphthong because in the pronunciation of some communities it is actually articulated as such, and because it interchanges morpho-phonemically with vowels, unlike the combination of vowel plus spiranted ו which is phonetically its equal. In the interchanges the early history of this combination is still apparent. (The fate of the early *aw*, *ew*, etc., in modern Hebrew is similar to that of the same diphthongs in late Greek.) From the point of view of function it is clear that the Hebrew diphthongs are syllables with a consonant; not a phoneme in the precise meaning of the word, but a bi-phonematic element. The only interchange within the provenance of the rising diphthong is the וִי־הַחִיבוֹר (waw copulative) becoming ו (u) before a cluster of consonants and before ב, ו, מ, נ, פ as וִישָׁם but וִישָׁמִי; וְנָתַן but וְנָתַן; וְנָתַן but וְנָתַן. In all other changes of vowel the waw copulative acts in the same way as the consonants ב, כ, and ל. The total of diphthongs is eight, that is ו with *i, e, a, u*, and י with *i, a, o, u*. The falling diphthongs which are always maintained and do not interchange are *iw*, *ew*, *uw* (אָחִיו, עֶרְוִים, כְּסָלוֹ; גּוֹ, וְיָדוֹת; וְיָדוֹת); *oy*, *uy* (גּוֹי, גּוֹי) while the other diphthongs are replaced in the paradigm of the word by vowels, or are split into two syllables. Even though there are no absolute rules, there is great consistency, especially with regard to the diphthongs *aw*, *ay*. The main points are as follows:

A) *iy*. *iy* is used only when the accompanying element is geminated, as קָיִם, עֶבְרָיִים, עֶבְרָיָה, סִיּוּם. The combination *yyi* is at times interchanged with *i* as צִיּוּם = עֶבְרָיִים = צִיּוּם.

i appears in all other situations, such as: מִימִינוֹ, בִּירוּשָׁלַיִם; מִימִינוֹ (in poetry there is sometimes to be found מִימִינוֹ, בִּירוּשָׁלַיִם). The morphological variant יָה־ (feminine ending) / יָת־ is connected with this phenomenon.

B) *aw*. *aw* is found (a) within the word (1) when the accompanying element is geminated, and (2) in the syllable preceding the *heh locale*; and (b) at the end of a word when it concludes that word.

o is found within the word in an unaccented syllable; as far as this rule is concerned “within the word” includes the end of the word in construct, provided that the syllable is closed.

awe is found at the end of a word, when, after the diphthong that should rightfully appear, there is a consonant and an accented syllable, that is always in the absolute state.

Note: “End of the word” includes monosyllabic words. Examples for the interchange *awe/aw/o* are: מוֹת־/מוֹתוֹ/הַמּוֹתָהּ;

עָנוּ, סָתִי, צוּצוּה; כְּגוֹן/גּוֹנוֹ/גָּוֶן; חֲצַרְמוֹתִי/חֲצַרְמוֹתָהּ/חֲצַרְמוֹת; מְנוֹת, כְּנִי.

c) *ay*, *ay* is found (a) within the word (1) when the accompanying element is geminated, and (2) in the syllable preceding the *heh locale*, and (b) at the end of a word when the syllable ends with it and is not a construct form.

é is found within the word in an unaccented syllable (and here “within the word” includes the end of the word in construct forms); *e* is found in the same positions as *é*, and in place of it before the pronomial suffixes הָ-, הֵ-, אֵי; *ayi* comes at the end of a word, when, after the diphthong that should be there, there is a consonant and the syllable is accented. Examples for the interchange *ayi/ay/é/e* are סוֹסִי/סוֹסִי סוֹסִיךְ, סוֹסִינִי/סוֹסִי סוֹסִיךְ, סוֹסִיךְ/סוֹסִיךְ, סוֹסִיךְ; לֵילִי-/לֵילָה/לֵילִי; מֵימִי-/מֵימִיָּה/בֵּיתִי; בֵּיתוֹ/הַבַּיִתָּה/בַּיִתָּה; סוֹסִיָּה, מְתִי, חֵי-/חֵי; דִּי/דִי. Exceptions to the above rules are found in both directions, and in modern Hebrew more so than in the past. The important exceptions are the following:

The diphthong is found (a) where gemination has disappeared (see 8. Gemination and Clusters) as: וַיְחִי (see וַיְחִי), הֵיְחִידִים; (b) in words where the accompanying element is felt to be essential for maintaining the paradigmatic connection, as in הַיְחִידִים (which are connected etymologically to הַיְחִידִים, הַיְחִידִים, הַיְחִידִים) (but מוֹרִידִים from מוֹרִידִים). A vowel is at times found alongside a split diphthong, as: לֵילִי alongside לֵילִי, אֵינִי alongside אֵינִי, אֵוֶן alongside אֵוֶן (with a semantic difference), עֵיִם alongside עֵיִים, עֵבְרִיִים alongside עֵבְרִיִים. Today the tendency (apparently also in other areas) is to exploit the phonetic variants יֵים-יֵים- for semantic distinctions. Comparative grammar teaches that in various words which today have a vowel, there was originally a diphthong (for example יוֹם, סוֹף) and in several instances this fact is reflected in the plural forms, as שְׁוֹרִים from שוֹר, שְׁוֹקִים from שוֹק, דְּוִדִים from דוֹד (also דוֹדִים from דוֹד, לְוָחִים from לוֹחַ (alongside לוֹחֹת). At times – completely exceptional – a vowel other than the ones listed in the rules above interchanges with a diphthong; for example *i* in the already archaic form, in the Bible, עִירָה (ass; Gen. 49:11) and in the common word עִיר (town), where not only the archaic plural עִירִים (Judg. 10:4) hints at an original diphthong, but even the derivative word עִירָה (small town) (through עִירוֹת) retains this connection; *e* is found alongside *é* in אֵי.

Generally it can be said:

1) finding a vowel in a position where a diphthong is expected is part of a general tendency of early Hebrew, and in many words and forms there is no remnant of this original diphthong;

2) finding a diphthong in a position where a vowel is expected is an increasing tendency of later and modern Hebrew, due to the morphological considerations stated above, and thus there is to be heard not only שְׁמִיָּהּ but also שְׁמִיָּהּ (not considered a literary form), דְּוָקָא, כְּוָנִי, דְּוָסָה (and cf. Bialik in *Ha-Berékha*; גְּוָנִי גְּוָנִים). Variants such as עוֹלָה/עוֹלָה (cf. Job. 5:16; עוֹלָתָה/עוֹלָתָה; Ps. 92:16) שוֹעַ/שׁוֹעַ (Isa. 22:5) are not produced in modern Hebrew.

The expansion of the diphthong and even its splitting into two syllables occurs in late Hebrew even more than in mod-

ern official speech: it is found in medieval Mss. and in modern Samaritan Hebrew. The special relationship between the diphthong and vowel affects the spirantization of the *bet* (see section 5. *bet* above) when near a diphthong. Within the word the diphthong usually acts as a vowel and causes the spirantization of *bet*, as in מְנוֹתָהּ, בְּיָתָהּ, הַיְבּוֹל, הַיְבּוֹמָהּ but שְׁלוֹתִי.

Examining the diphthong and its interchanges, we learn that:

a) *ay*, *aw* display almost (cf. above *aw* (a) 2: *ay* (a) 2) identical traits: this is not the case in, for example, biblical Aramaic and later Jewish Aramaic, where *ay* is still found without gemination, whereas *aw* is always interchanged with a vowel. In an effort to limit the occurrences of the diphthong (which is common in Canaanite) by interchanging it with a vowel, Samaritan Hebrew went much further than classical Hebrew (although there are parallels in Jewish traditions); the original *aw* diphthong has disappeared completely while the *ay* diphthong appears only rarely;

b) the type of syllable – open or closed – and the place of accentuation affect the diphthongs and their interchanges. Still, it is impossible to establish pure phonological criteria for the above rules, since the phonological rules which governed biblical Hebrew with great regularity have long ceased to operate with respect to the quantity of the vowels and the structure of the syllable, and a new situation has developed in which the morphological factor has become dominant. This new situation, reflected in the vocalization of the Bible, continues to spread. Mention should be made not only of interchanges of the diphthong but to all vowel changes, to be discussed below, and accentuation discussed above. In these it is possible to discern morphophonemic phenomena and in fact morphophonemics plays an important role in Hebrew grammar. This may explain the large number of exceptions to phonological rules, especially in matters of the vowel system. These exceptions can be grouped into morphological rules (cf. above *aw* b); *ay* b); cf. also section 5. *bet* above and the *Historical Note* in section 16 on Interchange and Elision of Vowels, below).

The dominance of morphological principles over phonological is one of the features of a literary language which continues to be used many generations after certain phonological rules have ceased to be operative and are exchanged for other rules.

16. INTERCHANGE AND ELISION OF VOWELS. In the light of the above-mentioned assumptions that vowel quantity is not a distinguishing feature in Hebrew (see section 10. Vowel Quantity, above), and that almost any vowel quality can appear in every type of syllable (see section 11. Vowels as Part of the Syllable, above), the fact that a given vowel is maintained in all the forms of a paradigm but interchanged with another vowel in a different paradigm is rather surprising. This is a complicated aspect of Hebrew grammar which cannot be understood without resort to its historical background. Con-

logical types in which one or the other situation occurs. Even within the morphological types there are variations which confuse the Hebrew speakers. As far as the official language is concerned, the Academy for Hebrew Language determines what is correct in each type.

ג) *Historical Note:* This complicated situation, full of phonological inconsistencies, is the result of the change which took place in early Hebrew when there were still quantitative differences in vowels (see section Vowel Quantity). When quantity ceased to be free and phonemic – that is, when the language no longer accepted short vowels in open syllables – it lengthened or elided such vowels (depending on their relationship to the accent). In this way there developed either long syllables (that is, consonant plus long vowel, or consonant plus short vowel plus consonant) or syllables with *šewa* (or *ḥatefs*). As a result, in the paradigm of a given word which contained an original short vowel there were forms with long vowels (that is the vowel was lengthened because of the accent and this in turn caused a change in quality) alongside forms with short vowels (in a closed syllable), or elided vowels. At the same time, there are words with original long vowels which are maintained in all the declensions of the word, for example:

1) עֲדָה (= assembly): *‘ēdā* (<‘*īdat*): *‘ādāti*: *‘ēdot*: *‘ādōtēkā*:
עֲדָה (= feminine witness): *‘ēdā*: *‘ēdāti*: *‘ēdōt*: *‘ēdōtēkā*;

2) גִּבּוֹר: *gibbōr* (<*gibbār*): *gibbōrēkem*: *gibbōrīm*: צִפּוֹר
šippor (<*šippur*): *šippurkem*: *šippōrīm*.

Since a short vowel in Hebrew has become mechanically lengthened or elided by the stress, the basis for interchange and elision of originally short vowels has been lost. As a result of reciprocal influences, originally short vowels have begun to act as long vowels and vice versa. *e* and *o* were originally both long and short, and as long vowels played a key role in maintaining what were originally short vowels in declension and conjugation (compare זַעַת, לְדַת, צַפְרָה, צַתּוּבוֹת). *a*, which was originally a short vowel (the original long vowel was *ō*), affected originally long *ā* which in certain instances (as in the words קָרְבָּן, קָתֵב, קָתֵב) did not become *ō*, and so was later elided in positions where other *a* vowels would normally be elided; therefore, one can find קָרְבָּנִיהָ, קָתֵבִי, etc. Beginning in mishnaic Hebrew, many words entered Hebrew from Aramaic with what was originally a long *ā*, and these maintained the *ā* in their declension; in this manner the relative symmetry of biblical Hebrew, which maintained *ā* only in few morphological types, was disturbed. Another factor disturbed the vowel *šewa* relationship: the existence of vowels (originally short) in syllables that became open after the cancellation of gemination (see section on Gemination and Clusters above) in all the declensions of the word. So, for example, פָּרָשׁ (<פָּרָשׁ) meaning “horseman,” caused פָּרָשׁ meaning “horse” (II Sam. 1:6, Ez. 27:14) to retain the *a* vowel after the פ, and not elide it in the manner that the *a* vowel was elided after the ל of גָּמַל. The verb (without suffixes) in Hebrew is less given to change than the noun and to a greater extent reflects the early relationships (and not only in this regard). The noun, however, is

subject to the influence of analogy; there are thus, from the phonologic point of view, many more contradictions in the paradigm of the noun. The great confusion with regard to interchanges made it necessary for the Academy for the Hebrew Language to establish the rules for maintaining or eliding a vowel. The Academy based these rules on morphological and semantic principles, i.e., principles which are at variance with precise phonetic processes.

17. INTERCHANGES DUE TO SOUND COMBINATIONS. In addition to the changes already discussed, there are changes in Hebrew caused by the chance sequence of sounds in the word. The natural tendency of the speaker is to conserve effort in his speech, and to try to minimize sharp changes in the use of one or the other of the organs of speech. In fact, speech is full of the assimilation of one sound to the other. Only when this assimilation is particularly sharp is the change felt. Since the consonants are more stable than the vowels, they tend to change less; cf. the changes due to assimilation, e.g., the ל to the neighboring consonant, the exchange of ת with ט or ד when close to צ or ט (see section 7. Other Consonants, above). At other times, a sequence of similar sounds demands a greater effort from the speaker and he tends to dissimilate them, as: displacement of ו by י in the plural form עֲרִיזוֹת (from עֲרוּזָה, but עֲרוּזוֹת!) or י by א in עֲרִיזָה alongside עֲרִיזָה (but there is no עֲרִיזָה!) or הֶגְיִים alongside הֶגְיִים. Many variants in Hebrew comparable to הֶגְיִים/הֶגְיִים are occasionally used to distinguish differences of meaning, as הוֹרָאָה/הוֹרָאָה, הוֹרָאָה/הוֹרָאָה. In this class of variants is the plural ending -וֹת/-וֹת found commonly in loan words from the period of mishnaic Hebrew. Another type of change, called metathesis, is found in Hebrew in words like שְׁלֵמָה/שְׁמָלָה, כְּשֵׁב/כְּשֵׁב. More common are the vowel changes due to environment. This causes the *šewa/ḥatef* change after א, ה, ח, ע; *a* is preferred over *e* in שְׁמָה (opposed to שְׁמָה) and over *i* in יְעַמֵּד opposed to יְשַׁמֵּר, אֲשַׁמֵּר against אֲשַׁמֵּר (but אֲשַׁמֵּר is found alongside אֲשַׁמֵּר). Medieval manuscripts contain many more changes than are common in the official language, and some of the common forms in modern Hebrew can be explained as a result of this practice. So the common plural of מַסְבִּים is מַסְבִּים, but the plural מַסְבִּים (מַסְבִּים) is simply a variant of מַסְבִּים, which assumed one of the meanings of the word. Among the changes whose origin is the desire to dissimilate the following are noteworthy:

1) A change which is active to a certain extent and noticeable in modern Hebrew: – *u* or *o* in a syllable next to a syllable with *u* or *o* is interchanged with *i* or *e*. This is found not so much in the inflection of words as in the derived forms. In inflection: תִּכּוֹן, רֵאשׁוֹן, נִכְחַח from נִכְחַח; חֵצוֹן, תִּכּוֹן, רֵאשׁוֹן from חֵצוֹן, תִּכּוֹן, רֵאשׁוֹן; חֵצוֹן, תִּכּוֹן, רֵאשׁוֹן instead of חֵצוֹן (from חֵצוֹן); in this way the *i* of שְׁלֵטוֹן can be understood as opposed to שְׁלֵטוֹן; similarly in all *pa‘ul* participles with the suffix -וֹת – the *u* tends to be changed to *i*, פְּעִילוֹת; in a combination of words לִילָא לִילָא.

2) The exchange of *a* by *e* is found in the definite article (also in the word מֶה), given certain conditions in the word;

this change is not properly maintained in the spoken language.

Introduction

1. DEFINITION OF THE SUBJECT. There is considerable disagreement as to which linguistic features are to be included in the area of morphology. Generally, semiticists have commonly included the discussion of parts of speech and the changes which they undergo as a result of their declension, as well as word-formation, in discussions of morphology. This is usually from the "form" aspect alone, without entering into investigations of the uses of these forms in speech. This latter problem is included in the study of syntax. The exceptions to this rule are Gesenius' Hebrew Grammar (29th edition) which was written by Bergsträsser (incomplete) and the Mishnaic Grammar by M.Z. Segal, which include the functions of the forms in their discussion of morphology. Another problem is, what is to be included in the term "form": a part of a word which does not have an independent existence? A word? A combination of words with a specific meaning or a particular structure (compound)? Or a feature such as the word order in the sentence which in some languages is morphological? Those who take morphology in its simplest, most straightforward meaning, include the linguistic form and exclude meaning, and distin-

guish between Lexical Morphology and Syntactic Morphology on the one hand, and, parallel to these, between Lexical Semantics and Syntactic Semantics, on the other hand (cf. S. Ullman, *Principles of Semantics* (1957), 33 ff.). The preceding statement has not discussed all the methods of systematization but has merely alluded to the wide gulf which separates the different systems. The following description includes in the term "form": a form which is not in itself an independent word; an independent word; and to a limited extent the unit which supersedes a single word, if it is a lexical unit. This discussion of the structure of a linguistic form also includes its functions in the expression.

2. THE ROOT AND THE STEM (גזרה). A study of series of Hebrew words which are related semantically, such as:

a) שָׁמַר; שְׁמוֹרִים, שְׁמוּרָה, מִשְׁמָרַת, מִשְׁמָר, שְׁמִירָה, שׁוֹמֵר, שָׁמַר, נִשְׁמָר, שְׁמָר, etc., and

b) פָּקַד, פְּקִידוֹן, תִּפְקִיד, מִפְקָדָה, פָּקַד, פְּקִיד, פְּקִידָה, פּוֹקֵד, פְּקִיד, etc., will immediately demonstrate that there are a number of consonants in each of the words, which contain the common semantic element (even if only in a general way) and a number of vowels or vowels plus consonants which serve to qualify the meaning which is common to the entire family, to the particular, specific meanings of the various words or forms. The group of consonants found in each word of the above examples (a) שָׁמַר (b) פָּקַד is called the root while the rest is called the formative (see section Phonology: 4. Consonants as Pronounced by Various Communities above). In Hebrew as in the other Semitic languages the root is always made up of a group of consonants. This is not the case in English, for example (and other Indo-European languages), where the roots also include vowels, as: "cut," "boy," "love." Only in certain cases are there those who call the consonants common to a group of words the root, as: s-ng, in the words, song, sing, sung, while others will choose one of these words and refer to it as the root, the other forms which differ from it being called the derivatives of that root. Clearly, the Hebrew root is only the abstract basis of a family of words used in the language, and does not denote the origin from which these words are derived, as it is hard to assume any level of the language in which the speaker was able to pronounce consonants alone as words. However, the fact that it is an abstraction is not to say that it is a grammatical fiction and merely a technical tool for the analysis of linguistic forms; it is in fact a living reality, an integral part of the structure of the language, which every Hebrew speaker feels. The root is not simply a prehistoric residual or an inherited element but a reality which is continually being produced in the language, and to a certain extent modern Hebrew suffers from a hypertrophy of root production. The reality of the root in Hebrew is seen from the modern roots דּוּחַ, טַלְפֵּן, אַכְּלָס, אֶכְרֵל which are derived from the abbreviation דָּו"ח (דִּין וְהַשְׁבּוּת) through the verb דָּוַח, and from the words "telephone," אוּכְלוֹס ("population"), and "neutral," by eliding the vowels. This is done even though the vowels in these foreign words are an intrinsic part of the word, without

which they would not retain the meaning they have as a Hebrew root. In slang and children's talk new roots are formed more easily – whether from Hebrew words such as צברה in the word מצברה from the phrase מצב רוה, or from foreign words such as בלף from bluff. However, only a small number of these words enter more educated speech. This is adequate proof of the reality and vitality of this phenomenon.

The norm for a root is three consonants, and this is in any event the minimum needed for formation of a verb. Hebrew, however, still recognizes roots of one consonant (especially in particles and pronouns) such as א (in the words אה, או, א, in the words אה, אה), כ (in the word כה); two letter roots, such as: דג, עץ, אב, אב, but these are doubtless vestiges from an ancient period, when Hebrew had not yet separated from other Semitic languages. However, this is no longer a productive method for producing new roots in Hebrew. The standardization of the root to three consonants took place in the proto-Semitic period. Hebrew also contains a number of roots with four or more consonants. In the earlier stages of the language they are few, but today they have been greatly expanded, as for example תפקד from the noun תפקיד, which is in turn derived from תפקד, or מספר from מספר originally from ספר. The verb, however, needs a minimum of three consonants and whenever a verb is created, a root (at least of three consonants) is implied, even from a one-consonant root like זהי (in זיהה) from ז, or from a two-consonant root like אחי (אחה) from אה, אה (דמום) from דם, אה (דמום) from דם. There is still no conclusive proof whether ע"ו" (see section 23. Paradigm of Mute Forms, below) verbs and ע"ע verbs are derived primarily from original two-consonant roots or from three-consonant roots one of whose consonants is elided under specific phonetic situations (cf. Biblical Hebrew). However, it is important to note that structurally in the historical period these verbs are integrated into the three consonantal root system and follow its rules, so that verbs of the form קם, קן in the perfect, generate nouns and other forms like קיום, קין. Theoretically, in all words which can be analyzed to a root, all the consonants of the root are present. These consonants of the root usually appear in all the forms, but as a result of phonetic processes, some of which took place in the earliest stage of Hebrew, there are cases where one (and occasionally even two) of the root consonants was weakened and does not appear in all of the derived forms of the root. For example, as a result of the tendency of the *nun* to be assimilated to the following consonant (cf. section Phonology: 7. Other Consonants) one finds forms such as מפקה, מפקה, מפל, and as a result of the elimination of the diphthong (see section Phonology: 15. Diphthongs) we find in Hebrew מנה from the root בני against מנה, מנה and others. In systematization of the Hebrew forms, and in categorizing the words grammatically, one must consider this feature which affects the external forms of words without necessarily weakening its association with the other forms and words derived from the same root. In accordance with the structure, it is customary to divide the Hebrew roots into two main groups (stems) called Strong Verbs and Weak (Hollow) Verbs. The three con-

sonants פעל are used as the symbol of the root and in accord with the place of elision the weak verbs are divided into the following stems: פ"א (that is, the weakening takes place in the first consonant of the root and is the consonant *alef*, and similarly) פ"י, פ"ו, פ"י, ע"ו, ע"י, ל"א, ל"י (usually called ל"ה because of the spelling of the perfect form like לקנה). A separate category is assigned to the roots with duplication or the ע"ע which stand between the strong and weak verbs.

3. THE "BASIC ELEMENT." There are, however, a considerable number of Hebrew words – excluding verbs – in which morphological analysis does not yield a root in the form described above but a combination of consonants and vowels, whether (a) the word is an independent form (a "free" form, as in the Indo-European root discussed above) or (b) it does not appear as an independent form (a "bound" form) or (c) it is a loan word or (d) it is an old inherited part of the language. Thus a group of related words such as פנקס, פנקסון, פנקסנית, פנקסן, does not yield a Hebrew root פנקס, just as the words טלפון, טלפונאי, טלפונאות, although there is a Hebrew root טלפן, cannot be derived from that root since the formatives *é-é-o*, *é-é-o-ay* do not exist in Hebrew. In both these groups of words the "elements" פנקס and טלפון, being independent words in the language, are not susceptible to further morphological analysis. The same is true for original Hebrew words such as אצבעוני and מחירון, which semantically have no connection to צבע, and מחר, but retain their connection to אצבע, מחיר which are independent words. This phenomenon is especially noticeable in those cases where the "elements" do not serve, or, because of their makeup, are unable to serve, as independent words, such as מדיניות (the independent word is מדינה), צורני (the independent word is צורה), ירושלמי (the word is ירושלים), רשימון (the word is רשימה and not רשים), תברואן (the word is תברואה), בקשנות (the word is בקשה: familiar usage). A "basic element" of this type is parallel to a root insofar as the derived forms and their semantic content are directly related to it and not its root, even if it can be analyzed further into a root. For the concept "basic element" which we have introduced into the morphological analysis of Hebrew we use, in Hebrew, the term נטע (plant) which is found in a grammatical text of the Middle Ages.

Note: Attention should be paid to the difference between the concepts "basic element" as used here and "base" which is used by some scholars in morphological analysis. They refer to a specific form of a noun or verb which is itself a combination of a root plus pattern. It is the base to which other morphemes or suffixes are added, thus שמר is the base of שמרתי etc. or לבב is the base for בלבב, בלבון, בלבון. The base is an historical genetic concept (cf. Brockelman, *Grundriss*, 1, 287; Bauer & Leander, 246). The term "basic element," however, refers to a structure parallel to the root and of the same level, in that it cannot be further analyzed without losing its semantic relation to the word which is based upon it.

In biblical Hebrew the formation basic element + formative was rare and found mainly in nouns with the ending

יְ- (denoting belonging in the widest sense; cf. section 9. Suffixes); in modern Hebrew this formation is much more common, and in fact it was already in wider use in tannaitic Hebrew, with the adaptation of many foreign words. At times, when there is no clear-cut morphological analysis as with רְשִׁימוֹן, or as with words such as קָרְבָּן, קָרְבֵּן, קָרְבָּן there is some doubt as to which type of formation it is. Words like קָרְבָּן can be analyzed *qorb+an* or *QRB+.o..an* (QoRBan). In such instances one must fall back on semantic analysis. If there is a semantic connection between the word and the root, and this formative is found in the Hebrew language and forms are built up in this way – then one is dealing with a root, but if there is no semantic connection with the root or such a morpheme is not known in the language (cf. above טִלְפֹּן) then this form is the result of a “basic element” plus a formative. So רְגֵזָן is easily analyzed: a root plus the morpheme *a.an.*, while מְרַגֵּז (in children’s language) must be analyzed as a basic element (מְרַגֵּז) plus the formative *an*, for if this were not the case the causative quality, which is not expressed in the root but in the *hifil* formative included in the “basic element” which is the *hifil* participle, would be lost.

4. THE FORMATIVE AND THE MORPHEME. The formative is that element – a phoneme or group of phonemes – with which a word is created, whether from a root or a “basic element.” In Hebrew morphology it is possible to speak of two types of formatives: one which is combined with the root and in Hebrew linguistics is traditionally called the *משקל* (pattern); and one added to the “basic element” and is either a prefix or a suffix. The formative called *משקל* is always an infix, because it comes within the root, but can also be a prefix and infix at one and the same time as in: *mišMaR*, or an infix and a suffix as: *kišRon*; or a prefix, infix and suffix as with *mišBezēt*. This formant is always discontinuous while the one which comes with the “basic element” is always continuous. The group of patterns which make up one verbal paradigm is called a conjugation (בְּנִיָּן) as: *šaMartī*, *šaMaRta*, *šaMaR*. (In the early days of Hebrew linguistics in the Middle Ages the terms *משקל* and בְּנִיָּן were used interchangeably.) In the common spoken language there is also a “minus formative” discernible, where a word is developed by removing a part of the word which serves the basis of the derivation (this is called a back-formation), as the elision of the יְ- in the words *אנטיפאטי*, *פסיכי*: resulting in *פסיך*, *אנטיפאט*. In this way a differentiation is achieved between the description of the quality (adjective) and its subject (substantive). Literary language includes non-accentuation (the accentuation which has phonemic value in Hebrew, cf. Phonology: 14. The Accent) of one of the elements of a compound and so a difference is achieved between the preposition *עַל יָד* and *עַל יָד* when both words are given their full meaning. Formations such as *מגדל אור* <מגדלור, יכול אני> יכולני (in this last word the plural *מגדלורים* as against *מגדלי אור* is proof for that formation) come into being by eliding part of the compound. In the section on “Basic Element” it was stated that the “basic element” could be a word in itself used in Hebrew or some-

thing different or less than a word. In the formation of “basic element” plus formative, attention should be paid to the third category, where the formative plays a special role. While Hebrew can absorb foreign words easily, Hebrew grammar does not absorb elements which are foreign to its structure. It has already been seen that it is impossible to form a Hebrew verb from a foreign word if a root is not abstracted from its consonants (cf. *טלפן*). Similarly, Hebrew has difficulty in absorbing words which are adjectives or adverbs without first giving them a Hebrew form. This is not the case with other nouns. Words like *טנק*, *ריאליזם*, *אידיאליזם*, *אידיאליסט*, *כלור*, *בנק* and many others were assimilated into Hebrew without any serious attempt to exchange them for Hebrew innovations. This is not the case with words such as banker, chloric, realistic, psychic, and clerical; if they appear in Hebrew whether in their English, French, German, or other form, they remain foreign. In order to derive Hebrew forms two methods are used: either the Hebrew formative is added to the foreign word like *קלריקלי* (clerical+*i*), *ריאליסטי*, etc., or the corresponding foreign formative is exchanged for a Hebrew one, like: *אִי בְּנִקְאִי* (אִי in place of -er), *כְּלוּרִי* (יְ- in place of -ic), *טְרַגִּיקוֹן* (Tragik + er), *הִיסְטוֹרִיוֹן* (histor + ion), etc. In each instance the grammatical element which determines the category of the word in the original language is replaced by a Hebrew element. Were it not for this process the word could not be assimilated into Hebrew, and would certainly not be able to serve as the basis for other derived forms. A similar situation is the addition of the feminine ending הֶ- to words which are borrowed from a language in which they are feminine even though they do not have a special feminine ending or are not used as the feminine at all. The Hebrew feminine form lends to the borrowed word a Hebrew form which makes its declension simpler, as *אוניברסיטה* (plural *אוניברסיטאות*), *פונימה* (phoneme). A special function of the Hebrew formative is, therefore, to adapt foreign words to a Hebrew form. This type of formation has not yet been thoroughly investigated, nor has it been described.

Unlike the roots and “basic elements” which develop in modern times, the formatives (not only the pattern formatives) are mostly inherited from earlier times and fixed. They change as to their function and semantic value, which at times differ in modern Hebrew from what they were in biblical or earlier Hebrew. Still, it cannot be said absolutely that no new formatives are being created in Hebrew. The history of different languages shows that formatives generally originate from independent words whose meaning has become blurred as a result of the wide use of a particular compound, or by transferring an element from a word which already exists in the language (the so-called metanalysis). Thus in post-biblical and modern Hebrew the compound *היה* + participle is used to express continuous (durative) and repeated (iterative) action, and so there is a difference between *הוא היה אומר* and *הוא אמר*.

In biblical Hebrew *היה*, even when found in a similar syntactical frame, is not the formative element (auxiliary word)

it is in modern Hebrew. Still, even in modern Hebrew *היה* has not become fixed as a formative only in the strict sense. However, in literary Arabic, for example, of the compound *sawfa yaḥruḡu* (סופו לצאת) in rabbinic Hebrew, “He will go out”) only *sa* remains from the first word (*sayaḥruḡu*) and this becomes the formative for expressing the future. Spoken Arabic knows of other such formatives. An investigation of modern Hebrew is likely to reveal several other candidates for new formatives, one of which is *š* with the imperfect verbal form to express desire: *יֵלֵךְ* = *נֹא* = *שִׁילֵךְ*. In the literary language this formative developed from a certain syntactic combination. By analogy a new formative was created in modern Hebrew (probably as a result of a sarcastic expression), *טרון* – from the word *תיאטרון*, and it serves to refer to a place where performances are presented, as: *זירהטרון* (circus), *צ’יזבאטרון* (a satirical theater), and *בוובהטרון* (puppet theater). In literary Hebrew *נַת* – is used as a diminutive form (as *טפֿנֿת*, *קטֿנֿת*). This is a new formative. Some centuries ago *נִית* – was used (cf. *נְעֻרֵינִית* (על־מוֹנִית, *נְעֻרֵינִית* (אָדוֹן) or *הִיצוֹנִית* (fem. counterpart of *אָדוֹן*) or *הִיצוֹנִית* (fem. of *הִיצוֹן*). The attempts to reestablish the *šafel* (שִׁקֵּם, שִׁכְפֵּל, שִׁכְתֵּב, שִׁכְנֵע) which in ancient Hebrew had no position and certainly no fixed function (words of this form are always borrowed), are all parts of this process. To summarize: not even the area of the formative is completely closed to new addition or limited to its original complement. The root, “basic element,” and formative are the three components to which the Hebrew word can be analyzed, and each, individually, is the minimal meaningful morphologic unit which cannot be divided further and which has semantic content, in other words: morphemes.

Note: Some modern linguists use the term morpheme as the basis of their morphologic analysis of the Hebrew language and do not see any need for the term formative. But even they cannot ignore the traditional concept, the root, completely (nor do they eliminate the concept of pattern); instead they speak of a root morpheme. But it seems that in a language such as Hebrew, where the root is a vital and living element (see section 2. The Root and the Stem), one must relate to the fundamental difference between the abstract “root” and the “formative,” which is the element that generates a real word, a noteworthy stage in any morphologic analysis, even though both elements are similar in that they are minimal units – morphemes. The morpheme is a concept in morphology which includes inflection and derivation, while the formative is reserved for the process of derivation. Inflection is generally an automatic process, depending on the type of word (noun, verb, etc.); derivation is always a new process.

5. PARTS OF SPEECH. The elements discussed above combine to make words. It is common to sort the words into categories called “parts of speech.” Traditionally, Hebrew grammar differentiates (as did Aristotle) between three types only: noun, verb, participle. However, for several generations, under the influence of the grammar of various European languages, the division into nine parts of speech has become part of Hebrew

grammar. There is no area of modern linguistics where the differences between scholars are more pronounced than in the division into parts of speech. It has been correctly claimed that the criterion for the accepted division is not consistent; at times it is the form and at times the content, or a mixture of the two. The logical demand to categorize the words based on differences in form leads to the conclusion: “every language has its own scheme. Everything depends on the formal demarcations which it recognizes” (E. Sapir, *Language*, 1949, 119). It must be admitted that it is not easy to fulfill this prerequisite. In our opinion it is better to analyze Hebrew in accordance with the traditional division into three parts of speech since it is thus possible to include the formal criterion more precisely. A sharp distinction exists between the noun and the verb. The verbal nouns, the participle, and the infinitive belong morphologically to the category of nouns, although syntactically there are features common to them and the verb. Regarding particles, there is not always a sharp distinction between them and the noun; some are inflected like the noun (*יָדָךְ* like *עֵינֶיךָ*) or have other qualities which are like the noun, while only the conjunctions and the interjections are entirely different from the noun and the verb. But there are particles (prepositions) which can, in accord with their morphological behavior, be classified as “nouns” (*בֵּין*, *אֵין־אֵין*, *אֵין־אֵין*). Also from a syntactical point of view the only clear division is between the noun and the verb (a “verbal sentence” has a verb as a predicate; a “nominal sentence” has a noun or particle as a predicate). The division into nine parts of speech confuses, since it confounds meaning (substantive, adjective, number) with the criterion of form and does not necessarily follow from an analysis of Hebrew speech.

Noun Formation

PATTERNS. To the problem of how many patterns there are in Hebrew and what they are, there is apparently a simple answer; if the word is analyzed to its root then the pattern is left after eliding the root consonants. But, surprisingly enough, there is a great divergence between what is commonly presented in the grammars and scientific literature (particularly that not written in Hebrew during the last generations) and the practical grammars (especially those written in Hebrew) based on the long internal Jewish tradition. Suffice it to point out that a standard work such as Bauer and Leander’s Hebrew Grammar lists about 80 patterns for the noun while the “traditional” count (since David *Kimḥi) is about 290. It is not in the nature of the language observed that the difference between these two systems lies, since few new patterns have been added to biblical Hebrew. The critical difference is the method of observation. The traditional method depends on a descriptive approach, in which each form is considered to be another pattern, while the accepted scientific system is based on a historical-diachronic approach, in which are classified together all nouns even if they appear in different forms if they were the same in the early (sometimes even prehistoric) stages of the language; that is, the criteria come from outside

the linguistic stage being described. Following are some examples of different types of classification.

a) The nouns: מְלֶכֶךְ, נֹחַל, תִּישׁ, לָיִל, לָיִל, עִיר, גְּדִי, גָּן
 “Traditional” system “Scientific” system

- | | |
|----------------------|---|
| 1. מְלֶכֶךְ pat: נחל | these are all part of the <i>qatl</i> pattern because their original forms were: <i>ṣmalk</i> , <i>ṣnahl</i> , <i>ṣtayš</i> , <i>ṣlayl</i> , <i>ṣʿayr</i> , <i>ṣgady</i> , <i>ṣgann</i> |
| 2. תִּישׁ pat: ליל | |
| 3. לָיִל pat: ליל | |
| 4. עִיר pat: עיר | |
| 5. גְּדִי pat: גדי | |
| 6. גָּן pat: גן | |

b) The nouns: שְׁלוֹם, כְּבוֹד, רְחוּק, גְּדוּל, אָדָם, עֵבֶת, גְּבוּרָה, עֲשׂוּק, עֲשׂוּקָה, כְּרוּז, כְּתָב, קָרַב, קָרַב are classified:

“Traditional” system “Scientific” system

- | | |
|---|---|
| 1. פְּעוּל pattern: All nouns till כתב (but some point to the differences in declension) | 1. <i>qatāl</i> : קרב, כתב, כבוד, שלום. |
| a) elimination of the <i>qames</i> שְׁלוֹם, etc., b) maintaining the <i>qames</i> כְּרוּז etc., c) gemination of the 3 rd radical אָדָם. | 2. <i>qatul</i> : a) עבת, אדם, גבה
b) רחוק, גדול |
| 2. פְּעוּל pat: קרב, כתב. | 3. <i>qatūl</i> (?) <i>qatāl</i> (?): עשוק, כרוז. |

c) The nouns: רְחוּק, קְנוּא, שְׁכוּר, גְּבוּר, צָפֹר, קָנָא, קָשָׁת, קָנָא, צָפֹר, גְּבוּר, שְׁכוּר, קְנוּא, רְחוּק, רְחוּקָה, אֵיל are classified:

“Traditional” system “Scientific” system

- | | |
|---------------------------------------|---|
| 1. פְּעוּל pat: רתוק, קנא | 1. <i>qattāl</i> pat: all except איל, צפר |
| 2. צָפֹר pat: שְׁכוּר, גְּבוּר, צָפֹר | 2. <i>qattal</i> pat: איל |
| 3. אֵיל pat: קנא | 3. <i>quttul</i> pat: צפר |
- (Another less acceptable division in the scientific system:
qattāl: רתוק, קנא
qattal: איל, קנא.)

A further difference: the nouns with the addition הָ as: גְּבוּרָה, נְחֻמָּה, אֵילָה are independent patterns in the “traditional” system, *qatl*, *qattāl*, *qattal* in the “scientific” grammar. The examples show that none of the methods is entirely consistent. Traditional grammar does not distinguish between מְלֶכֶךְ with two *segols* and נֹחַל with two *pathahs* and מְלֶכֶךְ with a *pathah* and a *segol*, while historical grammar is at times confused about the original form, and forced to establish patterns such as אֵילָה (with *šewa!*). The criteria upon which we should base the different patterns in Hebrew from a descriptive structural point of view, will be given below with examples.

Note: In confronting the “traditional” and “scientific” methods of classification two typical forms of classification have been used, but it should be remembered that in each there are differences (especially in the “traditional”) which affect the final count of patterns. While David Kimḥi (12th cent.) counted 290 patterns, Jonah ibn Janāḥ (11th cent.) counted about 80 (if one eliminates about 60 which are patterns of personal names). He already classified diverse forms such as אֵילָה, עִיר, עִירִים, עִיר, אֵילָה under the same pattern.

7. PRINCIPLES OF PATTERN ANALYSIS. It is clear from the above that the “scientific” methods describe the way the Hebrew word was created from its proto-semitic form and are essentially interested in prehistory and not the historical reality. On the other hand, the “traditional” system is found to describe the external appearance of the noun, even if that appearance is unique among the forms which make up the paradigm of that noun, and due entirely to chance as a result of the coincidence of certain sounds in the word. For example, מְלֶכֶךְ, נֹחַל, נֹחַל have two syllables in these forms only, while in other forms of the declension of the singular, the base is of one syllable: מְלֶכֶךְ, נֹחַל, נֹחַל as in the nouns יוֹם, לַיִל, עֵם. The analysis of patterns must be done on two levels: first the nouns must be analyzed as they appear: that is the root and the formative element must be distinguished; then the common features in appearance must be investigated in relation to the structure of the root (“stem”) and each group will yield its pattern. Just as every group of words with a basic common meaning will yield a “root,” so too from a group having common formation features the “pattern” will emerge. On both levels of the analysis the process is only descriptive and refers to the language in the given circumstances. It may be said that the relationship of the “appearance” to the “pattern” is as the phone to the phoneme or the morph to the morpheme. In the process of the analysis the following rules will be carefully considered:

1) The need to distinguish between nouns derived from roots by patterns and nouns derived from a basic element + formative. For example: לְהַטוּטָן, פְּרִטְסִין, though there is a root להטט (note: פְּרִטְסִין = להטט + פְּרִטְסִין, see section 3. The Basic Element). These are not of concern here. One must be especially wary of nouns ending in the feminine as: אֵילָה : יְבֵשָׁה, אֵילָה is to be analyzed אֵילָה + הָ, however, is to be analyzed יבש + a.a-a.

2) Pattern formations are (primarily) the result of the relationship between the consonants of the root and the vowels and consonants which are not part of the root. The relationships between the root consonants themselves, such as the hollowness of certain roots (see the section: 2. The Root and the Stem) or the repetition of one or two of the consonants, do not affect the concept of pattern, nor the declensions which are connected to the structure. Pattern is an abstraction and the appearance of the word is its realization. This principle is not properly reflected even in scientific grammar books where the patterns *qattil* and *qatlil*, for example, are separated as are others, although from the point of view of the number of root consonants there is no difference between them (see Phonology: 8. Gemination and Clusters) nor is there a difference in the way they are declined. Repetition of a root consonant can have an expressive function, but is not a matter of the pattern. From this point of view, רְכַבָּת, כְּרִטְסָת, טְפִטְפָּת, דְּפִדְפָּת (= רכבת) are of the same form, as are כְּבוֹב, גְּנוּד (= סבוב), אֵילָה, פְּלִפֵּל (= איל) and אֵילָה (= איל) and אֵילָה (= איל).

3) As a result of vowel interchanges (cf. Phonology: 15. The Diphthongs; 16. Interchange and Elision of Vowels) a dif-

ferentiation must be made between those changes which affect the meaning of a word and those conditioned changes which do not. For example the vowels which follow the formative מ in the nouns מְזַמֵּר, מְעַצֵּר, מְזַבֵּחַ, מְזַמֵּר do not indicate a pattern change (although they produce different appearances!) whereas the three respective vowels after the צ in מְעַצֵּר, מְעַצֵּר, מְעַצֵּר determine three different patterns. The same is true for the vowels of the formative in מְפַקֵּד or in מְעַמֵּד which determine different patterns, while the change מְעַמֵּד does not determine different patterns.

4) As to the “appearance” one must consider its connection to the root, and in all the declensions of the noun in a specific paradigm, a form may be picked out and established as representative of the pattern, as long as the form chosen serves to clarify the others in accord with the rules of the language. The linguist is liable to discover that in Hebrew very often the declined form and not the dictionary form (“*casus rectus*” or absolute form) is the one which is most representative of the pattern. This is a result of certain developments in the language which caused change in the absolute form of the word. So from *qullo*, *qullot*, the form *qol* (lightness, easiness) could easily be understood according to the rules of vowel interchange (see section Phonology: 16. Interchange and Elision of Vowels) but not the opposite (the absolute *qull* is not possible!); there is, indeed, the homonym *qol* (voice) in the absolute which declines as *qolo*, *qolot*. Clearly one appearance (as *qol*) is liable to produce more than one pattern and vice versa. At times this method of analysis is likely to agree (although without intention) with the historical method, but very often it will yield different results. If the decision that *qull* is of the *qutl* pattern is in agreement with the historical position, the decision that *qol* is not of the *qatl* pattern (*qawl* in Arabic) or the *qal* pattern (*qāla* in Aramaic, and so in the Silwan inscription) but of the *qol* pattern, is opposed to the accepted historical point of view. Any agreement with the historical position is indicative of the fact that here and there the early state is still reflected in the modern makeup of the language.

5) From the above (4) it is clear that the patterns as they are determined by the structure of modern Hebrew must be arrived at not from the vocalized forms but from the pronunciation which does not recognize quantitative differences, recognizing instead a total of five vowel phonemes (see section Phonology: 12. The Phonological Status of the Vowels).

8. DETERMINING THE PATTERNS. In accord with the above principles the various stages in determining the patterns of the noun can be described: Example I: (1) מְלִדָּה, (2) מְצַדֵּק, (3) מְסַגֵּל, (4) מְסַפֵּר, (5) מְאַבֵּן, (6) מְעַדֵּר, (7) מְרַח, (8) מְצַח, (9) מְצַד, (10) מְגַן, (11) מְעִיר, (12) מְגַן, (13) מְבַכֵּי, (14) מְחַצֵּי, (15) מְחַטֵּא, (16) מְרַשָּׂא, (17) מְבַכֵּה, (18) מְעַד, (19) מְלִיל, (20) מְשׁוּר, (21) מְאוּן. In almost all of them the three root-consonants are immediately recognizable, and in some of them when they are declined in singular or plural (מְבַכֵּי, מְחַטֵּאִים, מְצַדֵּדִים, etc.). In many there is an obvious connection with other nouns (מְלִיכָה, מְלִיכָה, etc.), or to a verb

(מְבַכֵּה, מְגַן) – indicating that these forms are derived from roots and not from a basic element. They can be divided, based on appearance, as follows:

- מְפַעֵל: 1, 2, 3, 5, 7, 8, 16, 17
- מְפַעֵל: 4, 6
- מְפַל: 9, 10
- מְפַל: 15, 18, 19
- מְפִיל: 11
- מְפִיל (or מְפַעֵל): 12
- מְפִיל: 20, 21
- מְפַעֵי: 13, 14

In all there are at least eight different appearances (some differentiate between מְפַל and מְפִיל [לִיל]). Checking the structure of the roots (= “stems”) we find five types: (a) strong (1–8), (b) מְפַעֵל/מְפִיל (11, 12, 18, 19, 20, 21), (c) מְפִיל (15, 16), (d) מְפִיל (13, 14, 17), (e) מְפַעֵל (9, 10). Since the types of consonants in the roots do not determine the pattern (cf. principle 2) it is fundamentally possible for all the words to be variations of one pattern, if it can be shown that with regard to the vocalizations attached to the root (the formative) there is no difference between them. In accordance with the declension of the following (a) מְלִכָּי, מְרַחֵם, מְגַן, מְבַכֵּי, etc. (b) מְצַדֵּק, מְסַפֵּר, מְעַדֵּר, מְבַכֵּי, מְצַד the diachronic approach is likely to distinguish two patterns *qitl* and *qatl*, and, based generally on comparative reasoning, these nouns will be included in one of the two patterns, especially recognizable in the מְפַעֵל/מְפִיל stems since some of the nouns have a diphthong and others a simple vowel (cf. section on Phonology: 15. The Diphtongs). On the other hand, the descriptive grammar of Hebrew in its historical setting will abstract from these forms three patterns:

- a) *pi/a'l* 1–17, (20?)
- b) *pel* 18, 19
- c) *pol* 21, (20?)

Since for many generations (a fact which is already evident in the vocalization of the Bible) the form מְפַעֵל is declined with an *i* after the first root-consonant, while *a* appears only if the first or second root-consonant is מְפַעֵל, and in a number of ancient words (as מְלִכָּו, therefore the interchange *a/i* is conditioned and this pattern may be called *pa'l* or *pi'l*; both have been absorbed in historical Hebrew to one pattern. On the other hand the ancient group which included 11, 18, 19, has been broken up and there is no longer any similarity in their behavior; this leads to the need for a *pel* pattern; the same is true for 12, and 20 is more properly placed in (a) because of its plural מְפַעֵי.

Example II: (1) מְשַׁמֵּר, (2) מְעַמֵּד, (3) מְחַמֵּד, (4) מְסַעֵ, (5) מְדַעֵ, (6) מְיַדַע, (7) מְוַדַע, (8) מְקַוֵּם, (9) מְדַוֵּן, (10) מְמַצֵּא, (11) מְבַנֵּה, (12) מְעַשֵּׂה, (13) מְסַדֵּךְ, (14) מְסַכֵּב, (15) מְשַׁקֵּ.

They are commonly divided into:

- מְמַפַּעֵל: 1, 2, 3, 10
- מְמַפַּעֵה: 11, 12
- מְמַפַּל: 4, 5, 15
- מְמִיפַל: 6
- מְמוּפַל: 7
- מְמוּפִיל: 8, 9

מִפֶּל: 13

מִפֶּל: 14

An investigation of the structures yields seven types: (a) strong 1–3; (b) פ"נ 4, 15 (מִשֶׁק meaning touch, is related to the root מִשֶׁק); (c) פ"ו/פ"י 5–7 (there is no root נדע to which מִדַּע may be related); (d) ע"ו/ע"י 8–9; (e) ל"א 10; (f) ל"י 11–12; 13 (compare the verb סכך 14, 15 (שִׁשֶׁק meaning noise is related to the root שִׁשֶׁק)). The diachronic approach will establish for these 15 nouns of eight appearances two patterns *maqṭal* and *miqṭal*. The last is indicated only in 14, just as the first is derived from the rest except for 1–3, 10–12; these cannot be historically included with certainty in either of the two patterns. But in accordance with principles no. 2 and 3 above one pattern, *maf'al*, can be determined whose first vowel is easily distinguished in all the nouns except for 14 and for that reason a better symbol would be *ma/ifa'al*.

It must be noted that there is no permanence in the language; relationships to roots are constantly being eliminated and new relationships develop. A word which cannot be analyzed into a root and pattern is a basic element. The two words שיר, איש are similar in their appearance, the second is related to the root שיר (שיר, משורר, שירה) and so is analyzed according to the pattern *pi/a'l* while the first was not related until modern times to any family of words, and when the root איש was created (מִאִישׁ, אִישׁ) its morphological status was changed. Consistency demands that we analyze words with fewer than three root-consonants such as דָּ, שִׁפָּה, פָּה (which are actually relics of a period which preceded the three-root system!) as “basic elements,” until there will be a family of words which will relate them to a root. In this way the 290 appearances in the “traditional” grammar will be reduced to about 90. About 50 of these are infix types, and the rest are prefix-infix-suffix types. The consonantal elements which precede the root are (in alphabetical order) א (אֶזְכָּרָה), ה (הִבְדִּיל), י (יִלְקוּט), נ (נִפְתָּלוּם), ת (תִּלְמוּד). The elements of the pattern which follow the root are: ה־ (קִבְּלָה, פִּשְׁרָה), ת־ (אֶמְדוּן), ון (עִקְרוּן), ון (מִשְׁקֵלָה, מִסְגֵּרָה), ת־ (מִשְׁקֵלָה, מִסְגֵּרָה), ון (עִקְרוּן), ון (מִשְׁקֵלָה, מִסְגֵּרָה). From this great number of possible patterns in Hebrew there are today no more than 25 which are productive (this is a general impression and not the result of an exact statistical investigation). If one ignores the patterns used for participles and infinitives (*nomina actionis*), which are automatically formed with the verb, then the infixed *pi/a'l* is especially productive for concrete and abstract nouns, such as: מִבְּלָה, מִרְקָה, מִפְּסָל, מִקְצָר, מִזְנֵע, קִצְרָה; *po/u'l* mainly for abstract nouns: אֶרֶץ, קִצְרָה, אֶרֶץ; while *pa'al* is used to indicate profession or permanent character: נִגְנָה, שִׁדְרָה, נִגְנָה. The prefixed and suffixed patterns which are productive are the ones with מ before the root and a “feminine” ending such as מִזְמֵרָה, מִסְפָּרָה, מִנְהַלָּה, מִקְטָרָה, מִמְכָּלָה, etc.

9. SUFFIXES. Although the creation of forms through patterns is dominant in Hebrew (verb patterns should be added to noun patterns), ancient Hebrew once created forms from the basic element + suffix. The changeover from one type of word formation to the other can be illustrated by two examples.

(1) basic element + formative > pattern. The nouns רַעֲבֹן, רַעֲבֹן are differentiated by the suffix ון- and it is likely that this was added to the basic element רַעֲבֹן, just as ון- was added to ראש (there is no such root) and ראשון was formed. However, in various nouns which are formed in this way, a syllable + an open vowel which in antiquity must have become lengthened, are changed to a closed syllable by gemination of the next consonant. According to the accepted rule: לְבָנִים לְבָן: equivalent to קִטְּוֹן and which was *qatal+on* could develop into *qatalon* leading to רַעֲבֹן. In historical Hebrew while רַעֲבֹן can still be analyzed as basic element רַעֲבֹן + suffix ון-, צִמְאוֹן is a *pi'alon* pattern, and cannot be analyzed as צִמְאוֹן + ון-. The same word in the Samaritan pronunciation, however, *ṣāmām'on* enables us to see the older stage and can be analyzed as ון- + צִמְאוֹן parallel to רַעֲבֹן.

(2) Noun pattern > basic element + formative. The words מְלָכֹת, עִמְקוֹת, גְּבָהוֹת, מְלָכֹת, עִמְקוֹת, גְּבָהוֹת, etc. are each made up of two morphemes which are obtained through the analysis: roots מַלְכַּת, עִמְקַת etc. and the formative *a..ut*, and cannot be analyzed into the stems מְלָכֹת (note מְלָכֹת and not מְלָכֹת) or עִמְקוֹת and the suffix ות, but in אֲנוּשׁוֹת the analysis is necessarily אֲנוּשׁוֹת + ות. At times both types of creation function alongside each other as in the synonyms אֲדוּנָה (אֲדוּנָה + the pattern *a..ut*), אֲדוּנָה (the basic element אֲדוּנָה + the suffix *ut*). Though it is possible that the pattern containing ות was formed from a basic element and a formative as in example (1) (since the element ות was probably created as a result of metanalysis from ל"ו), historically one first finds in Hebrew words with ות which are analyzed by patterns and only later those which are analyzed “basic element” + formative. Note that this type of formative is common in names of people and places.

The suffixes can be divided into two groups: those which have fallen into disuse (obsolete) and those still used. The suffixes which are no longer in use and are not productive, are at times not recognized even by the expert as formative elements. Still, they should not be ignored, and should be included in a descriptive grammar, since there is still a relationship between a noun with such a suffix and a noun without it. Furthermore, the availability of the early classical sources creates new forms through formatives which have been considered unproductive and long dead (cf. נִי־ת = below). Of the suffixes in common use, some are very productive.

Obsolete suffixes:

a) vowels: ה־, ו־, are found mainly in personal names, as שְׁלֵמָה, עֵדוּ, מוֹגֵדוּ, but also חֵיתוּ (= חֵית) (= בֵּן; perhaps the ו of בִּשְׁעֵתוּ, בִּזְמוֹנוּ which was originally the third person suffix whose value was weakened because of the weakening of the syntactic connection, also belongs to this category). ה־, ה־: אִשָּׁה (fire-offering), לְבָנָה (in this way the singular of בְּטָנִים was formed several decades ago. Today this form is considered incorrect.), אֲרִיָּה (from אֲרִי cf. אֲרִיָּה). ה־ ≤: so-called “*he locale*,” found originally and mainly in adverbs denoting places as מִשְׁמָה, מִלְּאָה, מִשְׁמָה. See also ת־ below.

b) vowels and consonants: ב־ in the place name שְׁעֵלְבַיִם

pounds like חד־סטרי (one-way) and חד־פעמי (unique) which are not entirely parallel to the English forms (but compare the German *einmalig* = unique). The fact that such foreign words are analyzed as including prefixes, cannot dictate that the Hebrew analysis be done in the same way; that must be done in accordance with the manner in which these words are integrated into the Hebrew system. It will be demonstrated that there is really no difference between this form and the existing compounds in Hebrew. A compound of two or more words which become one indivisible word, so that at times the original elements are no longer recognizable, is almost unknown in classical Hebrew; of this form are the early words (מה שהוא < משהוין, plural of משהוין, כל מה) כלום, בלימה, בליעל and the modern words כדורגל, דחפור, רמזור, מגדלור and the slang and affected speech compounds such as ארחי־פריחה (טורה + ארחי פריח) "a student parade from the school of architecture," are formed.

There are, however, many combinations of more than one word in Hebrew, which due to their wide use have become fixed formally with fixed semantic values; they can be called compounds. The compound is usually the necessary condition and the first step toward merging the separate elements into one word. Various types and levels of construction can be differentiated:

1) Where one is in construct state; two nouns are joined, the first ("nomen regens") is qualified by the second ("nomen rectum"). This is the reverse of the situation in Indo-European languages: for example מלאכת־יד = hand-work, the same order is common in a compound of a noun and its adjective מלאכה קשה = hard work. The opposite order is possible, as in English, if the first part is a noun of quantity or vague, and therefore of wider meaning than the second part, which limits scope of the first word, as in: שלש קלשון (1 Sam. 13:21) – trident, משנה כסף (Gen. 43:12; but Gen. 43:15) = double money, דרום אפריקה South Africa, צפון אמריקה North America (but קוטב הצפון = North Pole). There is no clear formal criterion to establish when a combination is a regular construct or when it is a fixed compound; the semantic content may help but it is not an absolute criterion. Still it may be pointed out that deviation from the normative grammatical rule which demands that the article be placed before the second word (*nomen rectum*) (הבית ספר and not בית הספר) does, to some degree, indicate that the combination is felt to be a fixed compound, and so we find התל אביבי, הבר מצוה (in the Bible הלחמי, בית הלחמי קורא, הבעל קורא, המגן דוד, הבעל קורא, (בית הלחמי השולחן ערוך, הבית יוסף). Indeed, this rule is obligatory with numerals: השבע עשרה (and never העשרה) and is also the case for names of books such as השולחן ערוך, הבית יוסף. Another indication found in the older sources is the addition of the plural to the *nomen rectum* בית המבשלים (Ezek. 46:24), (שלושה) בית פרסות (Oholot 8:12), similarly the addition of the feminine ending to the *nomen rectum* as in Phoenician רבת הכהנים = רבכהנת. Still these possibilities have not become integrated into literary Hebrew, though they are found in slang as the plural of טוב מאד (the grade "Excellent") = טובמאודים. There are, however, some compounds, such as ברנש plur.

ברנשים (בר אוז < plur. ברנשים, fem. ברנשה, which reveal this formation principle. There is, therefore, no absolute formal differentiation between a fixed compound and the construct state of two nouns.

2) Where the form of the compound is two words joined by *waw* and at times even without it, as in: מושא ומתן, דין וחשבון, מושא ומתן (יום יומי) יום יום. This last is the rule in the second decade (11–19) of the numerals as שבעה ועשרים (but שבעה עשר or עשרים ושבעה!). Regarding this type there is a syntactic test which indicates if it is a compound: if the adjective and the predicate are in the singular: המושא והמתן נמשך, דין וחשבון מקיף. Already in the medieval Hebrew grammars we find עמם מסורה (segol =) שלש נקודות.

3) Another type is the compound of noun with an adjective as קרן־הקיימת, לבד(ה) גם, יום טוב, לשון (ה) רע. Here a possible formal test is the use of the article with the second word only.

In short, there is in Hebrew a basis for compound words becoming fixed lexical units, but the limits of the construction are not sharp. It is not difficult, therefore, to include in this category the formation which some see as second derivatives: such as בין לאומי. Since the two qualities which are commonly used to distinguish it from a compound, (a) the order in agreement with English and (b) the definite article being placed normally before the first term as הדו־תנועה (the "deviate" form due to hyper-correction דו־התנועה is also heard!), are not unique to this formation at all. It must also be noted that while in English most of the prefixes are not independent words the situation in Hebrew is the opposite. Only very few elements, foreign or loan words like ארנטי, ארכי, do not function as independent words. The fact that most of the compounds have the relation suffix י־, that is, they are used as adjectives, is a statistical fact, but is not grammatically meaningful, since forms which do not serve as adjectives such as תת־לשון (hypoglossus), תת־תזונה (undernutrition), are also found, though not as frequently.

In the discussion of compounds two types should not be excluded: (1) the derivation of words from commonly used abbreviations, עכו"ם (עובד כוכבים ומזלות) and thus עכומי; סכו"ם (עכו"ם) and thus סכומי; (לא היו דברים מעולם) להד"ם; (סכין כף ומזלג) להדמי; (א word used in poetry); this form is especially common in military jargon, and mention need only be made that this was how the word סמל (sergeant) was created (= סגן מחוץ למניין), and many names of weapons, as תולך (= תותח ללא רתע) and (2) blending two elements taken from two different words and making one word out of them, as in דחף + חפר) דחפור (= מד + חנייה). Early examples are פלמוני (< אלמוני) and זוט + זעיר) זוטור.

11. THE DECLENSION OF THE NOUN. *Gender*. In nouns as in most pronouns and most of the verbal forms there are two genders, masculine and feminine, but only the feminine is normally marked. This mark in the singular establishes the gender whereas the feminine or masculine plural marks are not decisive. There are a number of nouns both for feminine

expresses the concept of ownership – in its widest sense – relative to the subject of the pronoun. The form of the pronoun differs when in the singular, the plural, or the dual. This feature is not logical since the subject of the pronoun does not change if the noun is plural. It is the result of internal phonetic development and metanalysis (part of the noun in masculine plural is merged together with the pronoun), and is not paralleled in classical Arabic or in ancient Aramaic (in later Aramaic a similar situation developed); in biblical Hebrew there are still remnants of the early situation (אֲבוֹתֵיהֶם = אֲבוֹתָם). Following is the list of pronouns with examples of the declension of the noun קול.

Pronominal Suffix

Singular Noun

יְ-	my voice קולי	1 st Person Sing.
ךְ-	your voice קולך	2 nd Person Sing. Masc.
ךְ-	your voice קולך	2 nd Person Sing. Fem.
וְ-	his voice קולו	3 rd Person Sing. Masc.
הְ-	her voice קולה	3 rd Person Sing. Fem.
נִ-	our voice קולנו	1 st Person Plural
כֶּם-	your voice קולכם	2 nd Person Plural Masc.
כֶּן-	your voice קולכן	2 nd Person Plural Fem.
ם-	their voice קולם	3 rd Person Plural Masc.
ן-	their voice קולן	3 rd Person Plural Fem.

Plural Noun

יְ-	my voices קולותי	1 st Person Sing.
ךְ-	your voices קולותיך	2 nd Person Sing. Masc.
ךְ-	your voices קולותיך	2 nd Person Sing. Fem.
וְ-	his voices קולותיו	3 rd Person Sing. Masc.
הְ-	her voices קולותיה	3 rd Person Sing. Fem.
נִ-	our voices קולותינו	1 st Person Plural
כֶּם-	your voices קולותיכם	2 nd Person Plural Masc.
כֶּן-	your voices קולותיכן	2 nd Person Plural Fem.
ם-	their voices קולותיהם	3 rd Person Plural Masc.
ן-	their voices קולותיהן	3 rd Person Plural Fem.

These are the standard forms of the pronouns, but in poetry and in flowery style in general there are several variations found, especially in biblical Hebrew. The above pronouns are used also with the prepositions such as עם, את, בן, על; some with the pronominal suffixes usual for the singular nouns (as עמי, אתו) and some with those used for the plural noun (as עלי, תחתיו). It should be noted that in prepositions כְּ as opposed to כִּי in nouns is found (עמך, לך) and נוּ in place of נוֹ; this latter being also used in the noun כל to form כלנו.

Besides this, the synthetic, method for indicating possession, there exists an analytic method, by the use of the word של. Expressions such as קולי, קולם, and הקול שלי, are of equal value. For this reason there are those who call של a “separated pronoun.” Actually, however, this is a syntactic method, since של originates (already in the earliest stages of the language) from the relative clause in which the relative particle is attached to the preposition. Thus the expres-

sion הקול שלי is to be analyzed as “the voice which I have” exactly the same as הקול שצועק “the voice which is crying,” and in certain instances the preposition כ fills the same function as the preposition ל, for example = הפחד שלי = הפחד שבי, but the compound... של, since it is so common, became one word parallel to a pronoun and competed with the pronoun successfully in common speech and in those cases where there is a morphological difficulty in declining the noun (as in foreign words or words with the definite article, which cannot be joined to a pronoun) and personal names or where there is a semantic difficulty. Fundamentally, the preference for one way over the other is a matter of style and not of grammar.

12. PRONOUNS. *Personal Pronouns.* When the person is not expressed through pronouns which are attached to the noun (see section 11. Declension of Nouns) or the verbs (see section 20. Inflection of Objective Pronouns), they are independent words whose forms are as follows:

Singular		Plural
אני, אנוכי	1 st Person	אנחנו, אנו
אתה	2 nd Person Masc.	אתם
את	2 nd Person Fem.	אתן
הוא	3 rd Person Masc.	הם, המה
היא	3 rd Person Fem.	הן, הנה

There are also several variations in form and usage in the ancient language which are no longer used. The first person singular אנוכי whose use declined and completely disappeared by the end of the biblical period, is now found in modern Hebrew not only in poetry but also in general use, for emphasis. The pronouns הַמָּה and הַנָּה are considered archaic forms, and are only used in poetic writing. These personal pronouns are used only as subjects in the sentence; the pronominal object is expressed by the pronominal element suffixed to the verb or the preposition, or to the word אֹת (absolute אֶת) as אֹתָם, אֹתְךָ. It should be noted that the double forms for first person in singular and plural, is a distinctive feature of Hebrew among the other Semitic languages, and only in Ugaritic is there a duplication in the first person singular pronoun.

Demonstrative Pronouns. These pronouns are used to indicate something before the speaker, whether close-by or far off (deictic use), or something which has already been mentioned in the discussion (anaphorically). Today the distinction between the near and far demonstrative is more precise than it was in the ancient language. For that which is near, זה (masc.), זו (fem.) = this (sing.) and הללו, אלו, אלה (poetry also אל(ה)) = these (pl.); for that which is far: ההוא (masc.), ההיא (fem.), הַלְלוּ, הַלְלוּ (masc.), הַלְלוּ (masc. and fem.), הַלְלוּ (fem.) = that (sing.), and ההם (masc.) ההן (fem.) = those (pl.). אֹתָם, אֹתְךָ, אֹתָהּ, אֹתוֹ can be substituted for the above but also express intense identification, “that same.” The fact that in the past there was no differentiation between near

and far, is seen from expressions like *זוה לזוה* and *זוה וזוה* (not: *זה להווא*, *זוה ומהווא*, *זה ומהווא*). In certain instances the demonstrative force of the definite article has been maintained, as in *היום* and in literary style it is used more frequently not only in these fixed forms. The use of the definite article in a direct address as: *הדוד!* is basically demonstrative. The third person singular pronoun is used as a demonstrative in expressions such as *הוא שאמרת*: “that is what I said” and *היא שעמדה לאבותינו*: “it is that which stood for our fathers.” When compounded with the interrogative pronoun like *זוה מי*, *זוה מה*, or such words as *זוה עתה* the demonstrative force of the pronoun is weakened and it becomes an element of the emphasis.

Interrogative Pronouns. *מי* = “who,” *מה* = “what,” are not declinable, nor are *איזה*, *איזו*, *אלו*, *אי* (= “which.”) There is a variation of *מה*: *מה* the use of which is subject to the same rules as the definite article, but which is found unconditionally with the interrogative pronoun *במה*. *איזה* is actually the demonstrative, with the addition of the interrogative *אי*, found also in the words *איפה* (= *היכן*). In plural the forms *אי אלה*, *אי אלו* were shortened for phonetic reasons to *אילו(ה)* and became identical to the demonstrative. Due to ambiguity the singular forms *איזה* and *איזו* are also commonly used in the plural (*איזה אנשים היו שם*) and it should be noted that the demonstrative element *זה* which can come to strengthen the interrogative *מי* as stated above, appears in tannaitic literature also with *איזה* as: *אי זו? איזו זה?* and this is positive evidence for the crystallization of the compound *איזה* (which appears in the Bible as two words, and in which *זה* is used to strengthen the interrogative *אי*), into the interrogative pronoun.

Indefinite Pronouns. Except for the words *פלוגי* (פלוגית) *אלמוני* (אלמונית), *אלמונים*, *אלמוניות* = “somebody” and *כלום*, *מאומה*, “nothing, something,” there are no special words in Hebrew to express indefiniteness, and the interrogative words are used for that purpose as in *מי לחיים*, *מי למות* = “some for life – some for death,” *דבר-מה* = “something” and especially in relative expressions such as *עשה מי שעשה* = “somebody did it.” The words *איש*, *אדם*, *איש* (בן) are also used to indicate the indefinite as is the pronoun *אתה*. (The indefiniteness of the subject is often indicated by use of the plural verb without a pronoun, as in: *בעבר עשו את הדבר כך וכך היום עושים בדרך אחרת* = “in the past they used to do it so; nowadays they do it differently.”)

Relative Pronouns. The relative in as far as it is expressed syndetically (cf. Syntax) is made up of *אשר* or *ש* plus the pronoun (generally the personal pronoun) but in certain syntactic situations the pronoun is not explicitly stated: *האיש שהוא יושב* (= *האיש שיושב*), “the man who is sitting,” *המקום שהייתי בו* (= *המקום שהייתי*), “the place in which I was.” In verbal sentences the relative is *ש*, *אשר*, while in nominal sentences the definite article has that function, as in *האיש היושב* = *האיש אשר יושב* (in biblical Hebrew the demonstrative is also used in this way (cf. Job 19:19) as is the definite article before the verb as in *ההרימו* (Ezra 8:25). A relative pronoun

can be a subject or an object and come directly after a preposition as: *את שראה* “whom he saw,” *לשכמותו* = “to one such as him,” *לשעבר* = “in the past,” *על ידי שנתן* = “by his having given,” but generally the use of correlatives is preferred, as: *על ידי העובדה שנתן*, *על ידי כך שנתן*, *לאיש כמותו*, *את מי שראה*. Sophisticated style prefers to forego the use of the modern correlatives such as *עובדה* and *כך*.

Reflexive and Reciprocal Pronouns. Reflexivity can be expressed synthetically, by verbal conjugations or analytically; since the tannaitic period the analytic method is preferred over the synthetic. In this construction the possessive pronoun suffixed to the prepositions is used, *עשיתי דבר זה בי ולא בו* = “I did it to myself and not to him”; *הוא ניסה את הנסיון עליו ולא על חברו* = “he experimented on himself and not on his friend,” or suffixed to certain nouns such as the limbs of the body, *ראש* (דמו בראשו) = “his blood is on his head”; “it’s his own fault”), *הוא גופו אמר לי* (גוף, *שומר נפשו*) = “he looks after himself”), *הוא גופו אמר לי* (גוף, *שומר נפשו*) = “he himself said to me”) and others especially with the noun *עצמו* (*עצמו לדעת*: *עצמו* = “he deliberately destroyed himself” – suicide), *בא בעצמו* (“he himself came”), etc. The noun *איל*, as in *מאליהם*, *מאליו*, is also used in this way. From this last noun Aramaic produced the word *ממילא*, which was borrowed in Hebrew, and is a word whose sole purpose is to express reflexivity.

In early Hebrew reciprocity was also expressed synthetically, as *נדברו* = “they spoke with each other,” *התראו* = “they saw each other,” *שניהם מצטרפים* = “they join each other,” but in the post-biblical period this method was abandoned and reciprocity was expressed analytically by repeating the demonstrative, as *זה לזה*, *זה עם זה*, or by expressions like, *איש... חברו*, *איש... רעהו*, *איש... אחותה*; e.g., *דברו איש אל רעהו*, *דברו זה עם זה*, etc.

This review of the various pronouns indicates that this part of speech in Hebrew has unique aspects not only from the formal point of view (one and two consonant roots; no differentiation of gender and number as in *מי* and *איזה*) but also in function, i.e., the lack of clear demarcation between demonstratives, relatives, interrogatives, and indefinitives. In other words even in modern Hebrew the early situation is clearly reflected; one pronoun can be used freely for all the above functions. The differentiation of function (which is not new) is the result of a long process and can be compared to the exchange, in Hebrew, of paratactic structures, common in ancient Hebrew, for hypotactic structures using well-defined conjunctions for different purposes.

13. PARTICLES. In this category are to be classified all those words which are not nouns or verbs and whose common function is to indicate grammatical relationships. There are the following types:

Prepositions. Prepositions, which appear only with nouns, such as *ב* (in), *ל* (to), *על* (on), *מן* (from), *על-פי* (by).

Adverbs. Adverbs such as *מאוד*, *במאוד* (very), *חנם* (gratis), *ללא* (not), *אמנם* (certainly), *ישירות* (directly), *בעקיפין* (indirectly).

(The term adverb, however, does not accurately describe the situation in a language like Hebrew since this type of word can qualify a noun as well, גדול מאוד = “very big,” גבור מאוד = “very strong,” or זה אמנם שלחן = “this (is) surely a table.”)

Conjunctions. Conjunctions which join words and sentences such as ו, אף, גם, and those which join only sentences like אם, כי, מפני ש..., בשביל ש..., עד (ש). The examples indicate that different layers are immediately recognizable. Primary words (i.e., whose origin is not obvious) such as בוכ"ל which exist as proclitics, אם, לא; words whose origin is obvious, such as חנם (< חן), בעקיפין, and words which are derived from sentences, such as כיצד, whose original form כאיזה צד is still found, יען (shortened imperfect form from יענה). Synchronically, two kinds can be recognized: (a) those which formally behave like nouns – having suffixed pronouns (בי, לו, פי) – and those which do not behave like nouns or verbs, and (b) those which are syntactically nouns and can serve as the predicate of a nominal sentence, such as דבר זה כיצד?, ראובן פה? and those which are unable to be used in this way (conjunctions). The above examples indicate how easy it is to form prepositions in Hebrew, and in fact the development in this area is great (many examples being influenced by foreign constructions), as in: ... (older: בגלל: הודות ל...), (older: לפי: בהתאם ל...), (older: עם... ש...), which are considered less elegant than the older forms. Actually every noun can be used as an adverb, the criterion for the noun being not morphological but its syntactic use. In the sentence זה דבר עשה ראוּבֵן (‘‘Reuben did this thing unwittingly’’), the word בשוגג can mean ‘‘as an unwitting person,’’ but in שרה עשתה דבר זה בשוגג (‘‘Sarah did this thing unwittingly’’), it must be an adverb because there is no accord in gender between שוגג and שרה. So, too ראובן עשה ביוֹדעים as opposed to עשה ביוֹדע. The limited ability of the language to express adverbs as a special formal category is compensated by the syntactic devices mentioned as well as others.

14. NUMERALS. The numeral in Hebrew is a unique phenomenon and extremely complicated, both morphologically and syntactically. In part there are parallels in the other Semitic languages, and it is presumably a common residue from proto-Semitic. The numerals are expressed in Hebrew (a) by words which indicate units אֶחָד (1), שְׁנַיִם (2), שְׁלוֹשׁ (3), אַרְבַּע (4), חֲמִשׁ (5), שֵׁשׁ (6), שֶׁבַע (7), שְׁמוֹנֶה (8), תֵּשַׁע (9), עֶשֶׂר (10); (b) by the suffix ים – which is added to the numerals תשע-שלוש (30 = שלשים, 90 = תשעים) and עשר (20 = עשרים) and; (c) by the words 100 = מאה, 1000 = אלף, 10,000 = רבוא (archaic form and rarely used today). These basic words are compounded in different ways and from them are derived the various forms for particular use. There are different forms for the cardinal numerals, ordinal numerals, and fractions, but the ordinals and fractions exist only for the first ten, and must be expressed syntactically for the rest of the numerals.

Cardinal Numbers. There are two forms, the masculine: אחד, שנים, שלש, ארבע, ... and the feminine: אחת (+ת), שתים

(שְׁנַיִם), ארבעה, שלשה, ... but it is exceedingly strange that in Hebrew, as in Semitic languages in general (for a discussion see Robert Hetzron, *Journal of Semitic Studies*, 12 (1967), 180 ff.), there is no syntactic agreement between the cardinals (and any derived numerals) from 3–10 and their referents; the masculine numeral is used as an adjective or predicate for a feminine noun and the feminine numeral for a masculine noun; as in שלשה בנים (or בנים שלושה), בנות שלש (בנות שלוש). When the object counted is not referred to, the masculine or feminine numerals can be used. The numerals 1–10, 100, 1000 have both absolute and construct forms, but are used with the counted object in either form, not according to any grammatical rule, as in: שלושה אנשים, שלושה אנשים, עשרה, שלושת אנשים, שלושה אנשים, אלפים, אלפים. The feminine construct form is also commonly used in the first decade for feminine nouns as in שלושת נשים, which is always the case with pronouns, and so not only שְׁלֹשָׁתָם but also שְׁלֹשָׁתָן (not, שלשן!). Pronominal suffixes are not used with the numerals 11–99; only in the early literature do we find חֲמִישִׁיהֶם (11 Kings 1:14). On the other hand, pronominal suffixes are used for 100 and 1000 as in במאתנו, באלפיהם (‘‘in our century’’) as is the dual and plural. For the second decade of numerals two constructions are used; construct in the feminine numeral as שלוש, עשרה, and the connection of the two terms without the *waw* in the masculine numeral as שלושה עשר (cf. no. 10). Note, too, that the second part of the numeral in the second decade has a different form than it has in the first decade, thus: עֶשֶׂר (not עֶשֶׂר) masc., עֶשְׂרֵה (not עֶשְׂרֵה) fem. For 20–90 the connection with *waw* is common today as: עשרים ושלשה with the ten first followed by the unit but also the reverse order שלשה ועשרים which was common in different periods, and is not very uncommon in literature. However, in the second decade such a construction is considered exceptional (cf. Ez. 45:12 חמשה ועשרים שקלים, עשרה וחמשה שקל, ועשרים ועשרים). It is the rule in the Aramaic of Elephantine, just as the compound by construct in the masculine עֶשֶׂר אֶלְף (Judg. 8:10) or עֶשְׂרֵה אֶלְף (Judg. 20:25) would be considered exceptional today.

Numerals from 2–10 demand plural nouns only (חמישה איש for example, is considered to be incorrect), from ten upward the noun can be either singular or plural (שלושים איש, שלשים אנשים) and it should be noted that the Academy of the Hebrew Language has suggested that the plural be used to prevent mistakes in the first decade as mentioned above. Combinations of numbers above 100 can be made in different forms (in addition to the possibility of a different order for the tens and units as pointed out above). 3755 can be שלושת אלפים שבע מאות וחמשים וחמישה or שלושת אלפים שבע מאות וחמשים וחמישה. The last seems to be the most common. It should be noted that a number like 3715 is rendered generally שלושת אלפים שבע מאות וחמשים וחמישה so that the 1 is in the last possible place in the compound.

Ordinal Numbers. There are two types: masculine and feminine. From 3–10 its form appears to be derived from a ba-

sic element whose pattern is *pa'il*, as שלישי, רביעי, חמישית, etc. For 1 both the numeral ראשון (from ראש) and אחד serve. The fact that the number “one” has an ordinal form which is not connected etymologically to the cardinals is common to other Semitic languages. From 11 on the ordinal does not have an independent form and the cardinal fulfills that function also: הבית העשרים וחמישה, השנה השלוש עשרה. The common use of the singular of the ordinal (from the third ten and up) הבית העשרים וחמישי (as in Arabic) is considered incorrect. Ordinality can also be syntactically expressed, by using the cardinal as a *nomen rectum* in the construct state: השנה העשרים וחמש = שנת עשרים וחמש, שנה חמישית = שנת חמש. Just as in the construct the numeral is always the *nomen rectum* so when it is an adjective it also comes after the noun, as, האיש השלישי and not the opposite.

Fractions. For ½ the noun חצי is usually used. But, מחצית, מחצה, are also used; for ⅓, ¼, ⅕ on, the feminine ordinal form שלישית, רביעית, חמישית is used, but שלישי or רבע (also רבע), חמש, are also possible. From ⅙ to ⅒ only the form with ית- is used. Note that while the suffixes ית-, יה- are elsewhere similar in origin and function (cf. section 9. Suffixes), in the numerals there is a differentiation: עשירית = ⅒, עשיריה = group of ten, חמישית = ⅕, חמישיה = a group of 5.

Multiples. Multiples are often expressed by שבעתיים = ×7 (not 7×2).

Distributives. Expressed by repeating the number as in שנים שנים.

In summation it may be said that there is nothing in Hebrew morphology to compare with the numeral for different forms and types of usages and syntax, and that the numeral best reflects the special nature of Hebrew morphology which includes, side by side, the very old with the new. “The uniqueness of Hebrew in our day and the source of its problems is that nothing in it has died and so there exist – and are in use – different chronological layers side by side, not on top of one another as in languages with a historic continuity” (Z. Ben-Hayyim, “An Ancient Language in a New Reality,” *Lešonenu La'am*, Jerusalem, 1953, 43–44).

[Zeev Ben-Hayyim]

Verb Formation

15. WHAT IS TO BE CLASSED AS THE VERB. The verb, a part of speech easily identifiable according to all theories and in all languages (including, of course, Hebrew), can be characterized from three points of view: semantically, the verb denotes an action or a change of state or the existence of a state; morphologically, it is usually accompanied by an indication of its grammatical subject, whether as a separate word or as an affix or as both; and syntactically, it functions as the main part of the predicate (see Syntax).

Forms of the Hebrew verb that never (or only sometimes) include an explicit reference to the subject, such as the infinitives and the verbal noun, are considered borderline cases between verb and noun. There are two extreme views on what is

to be included in the paradigm of a Hebrew verb. According to one view, the paradigm comprises only such forms as distinguish persons and tenses, and hence each בְּנֵן (“conjugation”) is taken to be a separate verb. For others, however, the paradigm of the verb includes also the conjugations, which are regarded as belonging to one verb if they have a common root. There are also some who treat two or more of the conjugations (but not all) as part of the same paradigm, for example פָּעַל – הִתְפַּעֵל or פָּעַל – נִפְעַל. The best English translation for בְּנֵן would be “verb pattern,” not “conjugation.” The latter term is however kept in the following, since it is commonly used in English works dealing with Hebrew morphology.

16. THE CONJUGATIONS. The verb paradigms are treated almost identically in all accounts, whether traditional or modern, scholarly or pedagogic. There is unanimity on the existence of seven principal conjugations, to which most verbs are related, and also of certain other patterns that have only rare and partial exemplification.

The most acceptable names for the conjugations are based on the form of the third person singular masculine past of a regular root, i.e., of a root having all its consonants in all forms of the paradigm. From the very beginning of Hebrew grammar in the Middle Ages the root פֿעֿל has been used for this purpose, under the influence of Arabic grammar. Accordingly, the names of the conjugations are הפֿעֿל, הפֿעֿיל, הפֿעֿיל, הפֿעֿיל, הפֿעֿיל, הפֿעֿיל, הפֿעֿיל (or הפֿעֿל). However, because of the peculiarity of the consonant פֿ in Hebrew (see Phonology 6), this root has disadvantages which do not apply to the corresponding root in Arabic:

(1) פֿ cannot be doubled and therefore the names of the conjugations הפֿעֿל, הפֿעֿל, הפֿעֿל, הפֿעֿל lack the principal formal characteristics of these conjugations, namely, the doubling of the middle radical, e.g., בּ in דִּבֵּר (*dibber*), ל in שָׁלַח (*šallah*), גּ in הִטְרַגֵּל (*hitraggel*).

(2) When the פֿ is the first in a consonantal cluster, it is separated from the following consonant by a semi-vowel חָטָף (see above, §13), i.e., *ä*, *ë*, or *ö*. This type of vowel is not found, however, in corresponding verbs that do not have פֿ in that position. Contrast דָּרְשׁוּ (*darəšu*) with פָּעַלוּ (*pa'alu*), גָּדִי (*gədi*) with אָדִי (*adi*).

(3) The פֿ generally does not close a non-final syllable. When it does according to its pattern, it must be followed by a חָטָף. Contrast שִׁמְרִי (*šimri*) with גְּאֲרִי (*ga'ari*).

(4) The פֿ sometimes causes changes in preceding vowels, as in the last example (see below §22).

In the 19th century, scholars began to look for another root that would serve to denote the conjugations and decided on קֿטֿל. This root has two advantages:

- (1) none of its consonants has any peculiarities; and
- (2) it is found (sometimes in certain variations) in almost all Semitic languages. On the other hand, Hebrew grammarians have pointed out that this root had a serious disadvantage from the educational point of view: its meaning (“to kill”) is unpleasant.

Recently, it has been recognized that it is in fact possible to use the root פ'ע'ל, provided that it is transcribed phonemically without reference to the phonetic properties of the פ. For this purpose, we have repeated (i.e., doubled) the consonant in the Hebrew representation as well as in the transcription. The names of the seven conjugations, according to this approach are: *pa'al* (פָּעַל), *nip'al* (נִפְעַל), *pi'el* (פִּיעַל), *pu'al* (פּוּעַל), *hitpa'el* (הִתְפַּעֵל), *hip'il* (הִפְעִיל), *hup'al* (הֻפְעַל). Since the transcription in Latin symbols is phonemic and not phonetic, the פ is always symbolized by /p/, even when phonetically it has the value [f]; likewise there is no need to distinguish between פתח and קמץ, both being symbolized by /a/.

Other names have been proposed for the conjugations, which identify them semantically (see below), in particular קל ("light") and כבד ("heavy"). Originally, these names covered all seven conjugations: קל for פָּעַל and נִפְעַל, כבד for פִּיעַל, פִּעַל, and פּוּעַל, and הַתְּפַעֵל and נוסף כבד ("supplemented heavy") or גורם ("causative") for הִפְעִיל and הֻפְעַל. However, the original application was later forgotten. In popular usage and in most textbooks, קל alone has been retained, but it is restricted to the פָּעַל conjugation. Occasionally, הַבְּנִין הַגּוֹרֵם ("the causative conjugation") is used for הִפְעִיל and הַבְּנִין הַכּבֵּד ("the heavy conjugation") for פִּיעַל. The decision whether or not conjugations with a common root are to be treated as part of the same verb has great practical significance, not only grammatically but also lexicographically. Dictionaries of modern Hebrew list nouns according to their initial consonants, disregarding whether the consonants are radicals or not, so that, e.g., מְקַרָּא appears under מ and תְּלַבֵּשׁת under ת. However, many follow the practice of dictionaries of biblical Hebrew in listing verbs, regardless of conjugation, according to the first radical, e.g., הִלְבִּישׁ under ל next to לָבַשׁ, and נָכַס under כ, next to כָּנַס, and sometimes, in the same way, even verbs without a corresponding form in פִּעַל, e.g., הִתְכַּוְּנוּ under כ, because of its root כ'ו'נ'. Some modern popular dictionaries, on the other hand, enter the form of the third person masculine singular past for each conjugation, e.g., הִתְרוֹמַם under ה and נָכַס under נ, thus following (though probably unconsciously) the view that verbs from the same root in different conjugations are to be treated as independent verbs. (For the advantages of this view for grammar and semantics, see below.)

17. A CONSIDERATION OF EARLIER VIEWS ON THE RELATIONSHIP BETWEEN THE CONJUGATIONS. Those adopting the view (traditional for all Semitic languages) that conjugations of verbs from the same root constitute one paradigm must consider the semantic relationship between the various conjugations. In the extreme formulation of this view, every conjugation is said to have a particular meaning in relation to the "basic form" of the verb, the form פָּעַל. An attempt along these lines has been made, in particular, for biblical Hebrew (see Biblical Hebrew 9). It has resulted in the fabrication of imaginary forms that do not appear in the Bible, and also in the neglect of some forms that do, for example, the נִפְעַל conjugation.

A similar, though less extreme, position is generally taken in textbooks. These also treat the פָּעַל conjugation as the basic form, said to be semantically "simple," but they attempt to establish a semantic relationship for each root between the פָּעַל conjugation and other conjugations, it being assumed that each of these makes some addition to the basic meaning of the פָּעַל. The principal additional meanings, expressed synthetically by a change in the form of the verb, are said to be passive, reflexive, reciprocal, strengthening, durative, iterative, causative, change in state, declarative, and deprivative. Thus, for example, the נִפְעַל is said to express the passive when the active agent is found with the פָּעַל, e.g., שָׁבַר ("he broke") – נִשְׁבַּר ("it was broken") or הִפְעִיל, e.g., הִרְגִיעַ ("he soothed") – נִרְגַע ("he was soothed"); reflexive, e.g., נָהַר, נִשְׁמַר ("he took care of himself"); or reciprocal, e.g., נִדְבְּרוּ ("they spoke to one another"). The פִּעַל is said to express the strengthening, e.g., שָׁבַר ("he broke") – שָׁבַר ("he smashed"); the durative, e.g., רָקַד ("he danced") – רָקַד ("he danced for a long time"); repetitive, e.g., קָבַר ("he buried") – קָבַר ("he buried many"); causative, e.g., לָמַד ("he learned") – לָמַד ("he taught"); or deprivative, e.g., שָׁרַשׁ ("he uprooted"). The פֻּעַל is said to be the passive equivalent of verbs with the same root in פָּעַל. The הִתְפַּעֵל is explained as denoting the reflexive, e.g., הִתְרַחֵץ ("he washed himself"); reciprocal, e.g., הִתְלַחֲשׁוּ ("they whispered to each other"); passive chiefly when the active is in the פָּעַל, e.g., בָּשַׁל ("he cooked") – הִתְבַּשַּׁל ("it was cooked"); or strengthening, e.g., הִתְנַשֵּׁם ("he breathed strongly"). The הִפְעִיל is said to denote the causative, chiefly when the active is in the פָּעַל, e.g., מָלַךְ ("he reigned") – הִמְלִיךָ ("he made [him] a king"), and consequently changes the verb from intransitive to transitive, e.g., יָשַׁב ("he sat") – הוֹשִׁיב ("he caused to sit," "he set"), or from untransitive to ditransitive, e.g., אָכַל ("he ate") – הִאָּכִיל ("he fed"); a change of state, e.g., הִעֲשִׁיר ("he became rich"), especially a change of color, e.g., הִלְבִּין ("it became white"); or declarative, e.g., צִדִּיק ("righteous") – הִצְדִּיק ("he declared as righteous," "he justified"). The הֻפְעַל is considered the passive equivalent of the הִפְעִיל. In addition, some verbs with a "simple" meaning like that of the פָּעַל appear in other conjugations, e.g., נָכַס ("he entered"), רָחַף ("he hovered"), הִתְנַגַּד ("he opposed"), הִמְתִּין ("he waited").

However, this view of the semantic relationships of the conjugations, with the פָּעַל taken as the basic conjugation, does not sufficiently fit the facts. Even a partial examination of Hebrew verbs shows that, except for פִּעַל and הִפְעִיל (which almost always have a predictable relationship with פָּעַל and הִפְעִיל respectively), we cannot automatically predict the meaning of a root in one conjugation from that of the same root in another conjugation. Though there are many instances of predictable semantic relationships between the conjugations, like those given above, in many instances verbs of the same root have no relationship at all or have an unpredictable relationship, e.g., דָּבַר ("he spoke") – הִדְבִּיר ("he subdued"); מָהַר ("he bought a wife") – מָהַר ("he hastened"); בָּצַר ("he gathered grapes") – נִבְצַר ("it was withheld") – בָּצַר ("he fortified"); סָפַר ("he counted") – סָפַר ("he told") – הִסְתַּפֵּר ("he had his hair

cut”); **סָפַק** (“he clapped hands”) – **סָפַק** (“he supplied”) – **הִסְפִּיק** (“he made enough”) – **הִסְתַּפֵּק** (“he had sufficient”); **הֵאֱמִין** (“he believed”) – **הִתְאַמֵּן** (“he trained himself”). It may well be that at an early period of the language, the conjugations constituted a paradigm of predictable semantic relationships similar to the paradigm of changes of person and tense within a conjugation, but as a consequence of the development of meanings of verbs throughout the history of the language, the conjugations cannot now be recognized as belonging to one paradigm.

Similarly, there was once a fixed semantic relationship between nouns of different patterns belonging to the same root. Indeed, even in contemporary Hebrew there are such relationships, e.g., between nouns denoting people with particular occupation such as **סַפֵּר** (“barber”) and the corresponding noun for the place of work, **מִסְפָּרָה** (“barber shop”). In general, new nouns have been formed in recent times on the appropriate patterns, e.g., **קִטְיָה** (“season for picking fruit growing on trees”) and **תְּלִישׁ** (“season for picking fruit growing on low bushes”) for the seasons of agricultural work; **מַרְפֵּאָה** (“clinic”) and **מִכְבֵּסָה** (“laundry”) for places of work. Nevertheless, each noun is treated as an entirely independent noun; the semantic relationship between nouns of the same root has not resulted in their being considered one noun with various patterns.

18. THE EXTENT TO WHICH A PREDICTABLE RELATIONSHIP EXISTS BETWEEN THE CONJUGATIONS. Two forms have predictable relations when they fulfill two conditions: (1) if one of them exists, it follows that the other exists too; (2) when the meaning of one of them is known, the meaning of the other one is self-explanatory. Only forms having predictable relationships with other forms can be considered as belonging to the same paradigm, since only these can be freely used by a speaker though he has never heard them before and are unambiguous to the hearer though he has never encountered them before. For example, within one conjugation there are predictable relationships between forms varying only in person or tense, such as **שָׁמַרְתִּי** – **שָׁמַרְתָּ** or **אֶשְׁמַר** – **אֶשְׁמַרְתָּ**. Similarly, the relationships between verbs in **פָּעַל** and **הִפְעִיל** and verbs of the same root in **פָּעַל** and **הִפְעֵל**, respectively, are virtually predictable. There is not complete predictability because some intransitive verbs in **פָּעַל**, e.g., **טָיַל** (“he went for a walk”) and **רָחַף** (“he hovered”), and in **הִפְעִיל**, e.g., **הִסְמִיק** (“he became red”) and **הִחְלִיד** (“he [it] became rusty”) either do not have corresponding forms in **פָּעַל** or **הִפְעֵל** or, if they do, these do not express a passive meaning.

Predictable relationships between **פָּעַל** and **נִפְעַל** (with respect either to the existence of one form if the other exists or to the stipulated semantic relationship) apply only to some verbs. Thus, there is no corresponding form in the other conjugation for **יָרַד** (“he descended”), **נִבְהַל** (“he was alarmed”), or **נִשְׁבַּע** (“he swore”), and a predictable active-passive relationship is lacking between **יָשַׁב** (“he sat”) – **נִוָּשַׁב** (“it was inhabited”); **כָּנַס** (“he assembled”) – **נִכְנַס** (“he entered”); or **יָשָׁן** (“he slept”) – **נִוָּשָׁן** (“he was old”). Even less predictable are the relationships

between **פָּעַל** and **פָּעַל**. It is impossible to know whether the change from **פָּעַל** to **פָּעַל** will entail strengthening, lengthening, repetition, causation, or some other meaning, which might be completely different from that of **פָּעַל**, e.g., **שָׁחַק** (“he played”) – **שָׁחַק** (“he laughed”), **חָנַךְ** (“he educated”) – **חָנַךְ** (“he inaugurated”), **בָּשַׁל** (“he cooked”) – **בָּשַׁל** (“it ripened”). Moreover, there are many verbs in **פָּעַל** that have no corresponding forms in **פָּעַל**, e.g., **טָיַל** (“he went for a walk”), **זָנַב** (“he routed the rear”), **חָדַשׁ** (“he renewed”), **חָיַךְ** (“he smiled”), **צָוָה** (“he commanded”).

Similarly, it is impossible to be confident that the **הִפְעִיל** will express the causative of the **פָּעַל**, since many verbs in **הִפְעִיל** do not have any semantic connection with the same root in the **פָּעַל**, or have an unpredictable relationship, e.g., **יָרַק** (“he spat”) – **הוֹרִיק** (“it became green”); **סָרַט** (“he scratched”) – **הוֹרִיק** (“he filmed”); **רָצָה** (“he wanted”) – **הִרְצָה** (“he lectured”). Furthermore, there are some verbs in **הִפְעִיל** whose passive is in **נִפְעַל** as well as in **הִפְעֵל** (occasionally with some difference in nuance), e.g., **הִרְתִּיעַ** (“he deterred”) – **נִדְרַע** (“he published”) – **נִדְרַע**, and these somewhat disturb the predictability in relationship between **הִפְעִיל** and **הִפְעֵל**.

There is certainly no predictable relationship between **פָּעַל** and **הִתְפַּעֵל**. Not only are there two large categories of semantic relationships, exemplified, on the one hand, by **רָחַץ** (“he washed”) – **הִתְרַחֵץ** (“he washed himself”), and on the other, by **כָּתַב** (“he wrote”) – **הִתְכַּתֵּב** (“he had a correspondence with [someone]”), but there are also many verbs appearing in only one of these conjugations, e.g., **גָּזַל** (“he robbed”) and **הִתְקַרַּךְ** (“he caught a cold”), or which have independent meanings in the two conjugations, e.g., **סָפַר** (“he counted”) – **הִסְתַּפֵּר** (“he had his hair cut”). The semantic relationships between other conjugations, such as **פָּעַל** – **הִתְפַּעֵל** or **פָּעַל** – **הִפְעִיל** are also unpredictable in similar respects.

An awareness of this situation requires a consideration of the conjugations not as an inflection of one verb but as a set of different verb patterns related by derivation. The relationships between **פָּעַל** and **פָּעַל** and between **הִפְעִיל** and **הִפְעֵל** may perhaps be an exception to this generalization.

19. THE INFLECTION OF THE VERB. The inflection of a verb includes all forms of the verb that vary in pronominal subject or object, e.g., **יִשְׁמַר** (“he will guard”) – **יִשְׁמְרוּ** (“he will guard him”), gender, number, tense, and modality. In traditional literary language, modal differences are chiefly expressed synthetically in the verb itself by certain additions to the normal forms, e.g., **אֶשְׁמַרְהוּ** – **אֶשְׁמַרְהוּ**, but sometimes auxiliary verbs have this function (see Syntax). Differences in tense include not only the distinctions between past, present, and future, but also forms having a modal character, e.g., the imperative, and those that lack a time distinction, e.g., the construct infinitive, the absolute infinitive, and the action noun. These last three can be used in nonverbal functions as well as the present form which can also function as a noun in all respects. The affixed pronominal forms, which by their characteristics and by their place in the verb determine not only the

subject and object but also the tense, are the inflectional morphemes, and are attached to the basic form, the inflectional base. The relationship between the inflectional base and the inflectional morphemes is similar to that between basic element and formative (see above 3. The Basic Element; 4. The Formative and the Morpheme), except that the combination of the latter results in a new word with a separate entry in the dictionary, since it is a derivational process and lacks the completely predictable semantic relationship of an inflectional process. In the **פָּעַל**, **הִפְעֵל**, and **הִתְפַּעֵל** conjugations, the same base serves for all the tenses, but in the other conjugations different bases are used, as can be seen in the table below. The existence of more than one inflectional base in a paradigm is not unique to the conjugations: there are some noun patterns with the same feature.

Inflectional Bases in the Conjugations. (In phonemic transcription, in which *šewa* is not marked; see Phonology: 13. The *Šewa* and *Ḥatefs*.) (See Table: Hebrew Grammar 1.)

The same inflectional morphemes are used for the same tense in the various bases, though between base and affixed morpheme there may develop sometimes transitional phones and other phonetic phenomena that can be described precisely in a few rules. The inflectional morphemes of past and imperative are suffixes, while those of future are prefixes, except that in the second and third person plural, and in the second person feminine singular there are also suffixes identical with those of the imperative. The inflectional morphemes of the participle are those for gender and number in nouns (see 11. The Declension of the Nouns) and do not vary with change of person. In addition, the forms of the participle in all the conjugations except **פָּעַל** and **נִפְעַל** are prefixed by the morpheme *m* (sometimes a vowel is inserted after the *m*, see below). The inflectional morphemes of the construct infinitive resemble the inflectional morphemes of nouns (see above 11. The Declension of the Nouns). Every verb which can be followed by an object (usually only a direct object) can take, after the inflectional morphemes already mentioned, an additional inflectional morpheme, the objective pronoun (for details, see below 21. Inflections of Weak Verbs).

Table: Hebrew Grammar 1

	Past	Participle	Future	Imp.	Inf.
<i>Pa'al</i>	<i>šamár</i>	<i>šómér</i> <i>lebéš</i>	<i>šmór</i> <i>lbáš</i>		<i>šmór</i>
<i>Nip'al</i>		<i>nišmár</i>	<i>hiššamér</i>		
<i>Pi'el</i>	<i>dibbér</i>		<i>dabbér</i>		
<i>Pu'al</i>		<i>dubbár</i>			
<i>Hitpa'el</i>			<i>hitgabbér</i>		
<i>Hip'il</i>	<i>hiṭḥíl</i>		<i>hathíl</i>		
<i>Hup'al</i>		<i>huḥlát</i>			

Note: The following changes affect the inflectional base of the **הִתְפַּעֵל**:
 (1) When the first radical is **י**, **ו**, **צ**, **ש**, or **ז** it precedes the *t* (see Phonology 6, 17). This change is optional if the first radical is **ד** or **ז**.
 (2) The *t* is changed to *d* after **ד** and **י**, and to *ṭ* after **ז** and **צ**.

The following are the affixed pronominal inflectional morphemes denoting the subject:

To the inflectional base (= -) of the Past

Singular:	1 st Person	Common	- <i>ti</i>
	2 nd Person	Masculine	- <i>ta</i>
		Feminine	- <i>t</i>
	3 rd Person	Masculine	- <i>ø</i>
		Feminine	- <i>a</i>
	Plural:	1 st Person	Common
2 nd Person		Masculine	- <i>tem</i>
		Feminine	- <i>ten</i>
3 rd Person		Common	- <i>u</i>

To the inflectional base (= -) of the Future

Singular:	1 st Person	Common	ʾ -
	2 nd Person	Masculine	<i>t</i> -
		Feminine	<i>t</i> - <i>i</i>
	3 rd Person	Masculine	<i>y</i> -
		Feminine	<i>t</i> -
	Plural:	1 st Person	Common
2 nd Person		Masculine	<i>t</i> - <i>u</i>
		Feminine	*(<i>t</i> - <i>na</i>)
3 rd Person		Masculine	<i>y</i> - <i>u</i>
		Feminine	*(<i>t</i> - <i>na</i>)

To the inflectional base (= -) of the Imperative

Singular:	2 nd Person	Masculine	- <i>ø</i>
		Feminine	- <i>i</i>
Plural:	2 nd Person	Masculine	- <i>u</i>
		Feminine	- *(<i>na</i>)

*The masculine forms of the same person are usually used instead of these. The form given in parentheses is the prevailing one in biblical Hebrew, but nowadays it is considered a possible variant only. To some extent, especially in the colloquial language, the masculine form of the second person plural in the past is also used for feminine. See also note 8 of the following section.

20. CHANGES IN THE BASE. The following rules describe the principal changes affecting the form of the verb when the inflectional morpheme is affixed to the base:

(A) Prefix.

(1) *h* at the beginning of the base is omitted after future and participle prefixes (but not when **ב**, **ז**, or **ל** come before the construct infinitive).

t + *hiššamér* → *tiššamér* → *tiššamer*

y + *hathíl* → *yathíl*

but *l* + *hitgabbér* → *lhitgabbér*

(2) When by adding a consonant before a base, the result is a form with a cluster of three consonants at the beginning, a vowel (generally *i*) is inserted between the first two consonants, namely between the prefix and the first conso-

nant of the base. (This is a general rule which applies to the future and infinitive of *pa'al*, as well as to many other forms, e.g., below 7).

$n + \acute{s}m\acute{o}r \rightarrow n\acute{s}m\acute{o}r \rightarrow ni\acute{s}m\acute{o}r$

(3) After the prefix \acute{s} , the vowel *e* instead of *i* is used in rule 2 and when a preceding *h* is omitted (rule 1). See also the beginning of 22. Inflections of Weak Verbs.

$\acute{s} + \acute{s}m\acute{o}r \rightarrow \acute{s}\acute{s}m\acute{o}r \rightarrow \acute{s}e\acute{s}m\acute{o}r$

$\acute{s} + hitgabb\acute{e}r \rightarrow \acute{s}hitgabb\acute{e}r \rightarrow \acute{s}itgabb\acute{e}r \rightarrow \acute{s}etgabb\acute{e}r$

There are a few exceptions, chiefly in biblical Hebrew, where *i* follows the prefix \acute{s} .

(B) Suffix.

(4) The vowel before the last consonant of the past base, whether *é* or *í*, changes to *á* before any suffix beginning with a consonant.

$dibb\acute{e}r + ti \rightarrow dibb\acute{a}rti$; $hith\acute{i}l + ta \rightarrow hith\acute{a}lta$

(5) When the suffix is a vowel, the vowels *é*, *ó*, and *á* before the last consonant of the base generally remain only in forms used in classical Hebrew, especially at the end of a sentence. ("Pausal forms.")

$hugg\acute{a}\acute{s} + a \rightarrow hugg\acute{a}\acute{s}a$

$had\acute{a}l + i \rightarrow had\acute{a}li$

$\acute{s}am\acute{a}r + u \rightarrow \acute{s}am\acute{a}ru$

However, they disappear (become *šewa*) in the regular form of the verb, when the accent is on the syllable of the suffix.

$\acute{s}am\acute{a}r + \acute{a} \rightarrow \acute{s}am\acute{r}\acute{a}$ (or $\acute{s}am\acute{o}r\acute{a}$)

$dibb\acute{e}r + u \rightarrow dibb\acute{r}\acute{u}$ (= $dibb\acute{o}ru$)

See below for some uses of pausal forms in contemporary Hebrew. However, the vowel *i* does not disappear:

$hith\acute{i}l \rightarrow hith\acute{i}lu$

(6) The vowel *í* in the imperative and future base of הִפְעִיל changes to *é* before the suffix *-na*.

$t + hath\acute{i}l + na \rightarrow tath\acute{e}lna$

And in the imperative before the suffix \emptyset , *í* changes to *é*:
 $hath\acute{i}l + \emptyset \rightarrow hath\acute{e}l$

(7) If through the disappearance of *é*, *ó*, or *á* (according to 5) a cluster of three consonants is created at the beginning of the word, a vowel is inserted between the first two (as in 2). When the third consonant is *b*, *k*, *p* – it is realized as the corresponding fricative variant, i.e., *v*, *x*, *f*.

$\acute{s}m\acute{o}r + i \rightarrow \acute{s}m\acute{o}ri \rightarrow \acute{s}mr\acute{i} \rightarrow \acute{s}imri$ (imperative of פָּעַל),

and similarly with construct infinitive, e.g.,

$l + \acute{s}m\acute{o}r + \acute{o} \rightarrow l + \acute{s}mr\acute{o} \rightarrow l + \acute{s}omr\acute{o} \rightarrow l\acute{s}omr\acute{o}$.

(8) The vowels *a* and *e* in an open syllable before the accent disappear when the accent moves to the end of the bases:

$lab\acute{e}\acute{s} + im \rightarrow labe\acute{s}im \rightarrow lbe\acute{s}im$

$\acute{s}am\acute{a}r + t\acute{e}m \rightarrow \acute{s}amart\acute{e}m \rightarrow \acute{s}mart\acute{e}m$

In colloquial language, the suffix *-tem* is unaccented. It is used for both masculine and feminine. Since the accent does not shift, *a* and *e* do not disappear:

$\acute{s}am\acute{a}r + t\acute{e}m \rightarrow \acute{s}am\acute{a}rtem$ (col.)

(9) The vowel *é* in the last syllable of the participle base (except for the base *labéš*) disappears when a suffix beginning with a vowel is attached to the base. (Such a suffix attached

to a participle, which is a nominal suffix, is always accented. But see the next rule.)

$mdabb\acute{e}r + im \rightarrow mdabbrim$

$\acute{s}om\acute{e}r + \acute{a} \rightarrow \acute{s}omr\acute{a}$

(10) If the suffix *-t* (but not *-át*) is attached to the participle base as the feminine inflectional morpheme, the result is a form ending in two consonants, which is treated like the segholates (see above 6).

$ni\acute{s}m\acute{a}r + t \rightarrow ni\acute{s}m\acute{a}rt \rightarrow ni\acute{s}m\acute{a}ret \rightarrow ni\acute{s}m\acute{e}ret$

$mdabb\acute{e}r + t \rightarrow mdabb\acute{e}rt \rightarrow mdabb\acute{e}ret$

Notes:

(1) The attachment of the suffix \emptyset to the base usually does not affect the form of the base, except for phonetic changes, e.g., the change of קָמַר to פָּתַח in the last syllable of the base (but see rule 6, above).

$\acute{s}am\acute{a}r$ (= שָׁמַר) + $\emptyset \rightarrow \acute{s}am\acute{a}r$ (= שָׁמַר).

(2) The theoretical form of the base is also the form that is realized at the end of a sentence. In general, the "pausal forms" of all the persons are the forms from which it is possible to produce the regular forms by the rules of inflection detailed above. It should be further noted that some "pausal forms" are sometimes used in ordinary speech, and not necessarily at the ends of sentences, e.g., $\text{הִתְעַצֵּה לֹא הוֹבְנָה כְּרֵאוֹי}$, הִבְרֵ לְנִי .

21. THE INFLECTION OF OBJECTIVE PRONOUNS. (1) For the objective inflection the forms of the verb containing the subjective pronoun serve as the inflectional base (see 19, 20). The inflectional morphemes denoting objective pronouns are as follows:

Singular:	1 st Person	Common	<i>ni</i>
	2 nd Person	Masculine	<i>ka</i>
		Feminine	<i>k</i>
	3 rd Person	Masculine	<i>hu, w, o</i>
		Feminine	<i>ha, h</i>
	Plural:	1 st Person	Common
2 nd Person		Masculine	<i>kém</i>
		Feminine	<i>kén</i>
3 rd Person		Masculine	<i>m</i>
		Feminine	<i>n</i>

These inflectional morphemes are, in the main, attached to all the bases of the verb, but there is not always free variation in the inflectional morphemes of the third person singular, the choice of which sometimes depends on the nature of the base. Thus, the morphemes *h* and *o* are not affixed to the base *šamárti*, and others like it. The inflectional morphemes affixed to participle bases are generally the possessive inflectional morphemes of the noun (see above, 11).

(2) Changes in the Base. These inflectional morphemes generally cause changes in the vowels of the base, because the accent of the base usually moves forward when the inflectional morpheme is attached. As a result of the movement of the accent, vowels disappear, mainly according to regular phonetic principles (see Phonology 16).

$\acute{s}am\acute{a}rti + k\acute{e}m \rightarrow \acute{s}martik\acute{e}m$

(see above 20, rule 8.)

šamáru + ni → *šmarúní*

tišmóri + m → *tišmrím*

(the base vowels *á*, *ó* disappear, see above 20. Changes in the Base, paragraph no. 5.)

A striking change in the past form ending in *tém* or *tén* is the change of this suffix to *tú* when this form serves as the base for the objective inflection.

šmartém + ni → *šmartún*

(3) Transitional Phones. In several bases transitional phones are created between the base and the inflectional morpheme:

(1) The vowel *i* is added to the base of the second person feminine singular past:

šamárt + hu → *šmartíhu*

šamárt + nu → *šmartínu*

(2) *t* is added to the base of the third person feminine singular past with shift of accent:

šamára + ni → *šmarátini*

šamára + kém → *šmaratkém*

(3) The vowel *á* is added to the base of the third person masculine singular past:

šamár + nu → *šmaránu*

šamár + m → *šmáram*

But before the morpheme *k* (second person feminine singular) the inserted vowel is *é*:

šamár + k → *šmarék*

(4) The vowel *é* is added to the future bases ending in a consonant:

tišmór + ni → *tišmréni*

yilbaš + m → *yilbašém*

The vowel *á* of the future and imperative base of *lbáš* pattern does not disappear, unlike *é* and *ó* in other future and imperative bases. (See Phonology 16:2, 4.) Contrast future bases ending in a vowel, e.g.,

tišmóri + ni → *tišmríni*

yišmóru + m → *yišmrúm*

yilbášu + n → *yilbašún*

The transitional vowel *á* (and sometimes *é*) is affixed to the infinitive base:

lišmór + ni → *lišmoréni* (cf. 20.2)

laqáḥat + m → *laqáḥtám*

22. INFLECTIONS OF WEAK VERBS. This concept is first discussed above in 2 (end), where it is stated that because of a phonetic characteristic of one of the radicals it may sometimes happen that two realizations of the same pattern may be different. The simplest change is that resulting from the peculiar phonetic characteristics of the gutturals *א*, *ה*, *ח*, and *ע* (see Phonology 6, Morphology 16). Their presence sometimes necessitates a vowel not found in the corresponding form without a guttural, e.g.,

yišmór/yaḥboṭ; *yilbaš/yeḥdal*

In these cases, the high vowel *i* is replaced by a lower vowel, *e* or *a*, next to a guttural. (See also rule 3 in 20.) In ad-

dition, between a non-final guttural and the following consonant a vowel *הטח* is sometimes inserted, usually corresponding to the preceding vowel, e.g., *yaḥāmol*, *yeḥāzaq*, *yo‘ōmad*, but also *mu‘āmad*. In the case of *ה*, *ח*, and *ע* if as the third radical it ends the word, and there is no vowel *a* preceding it, then a preceding *a* is inserted, e.g., *nizzēaḥ*, *yaškiaḥ*. With respect to *א* in this situation, see below 24.4. The impossibility of doubling the gutturals and *ר* (Phonology 8, Morphology 16) causes changes in preceding vowels when doubling is required in corresponding forms. The changes are from short vowels to long vowels, and are known in grammar as “compensation for the *dageš*.” Sometimes, the change is expressed merely orthographically, e.g., in the pattern *ydabber*:

יִפְאַר, *יִפְרֵשׁ* instead of *יִפְרֵשׁ* †, *יִפְאַר* †

but sometimes it is also audible in modern pronunciation, e.g., in the pattern *mdubbar*:

מִיְעָר instead of *מִיְעָר* †, *מִיְעָר* †

פְּרֵשׁ instead of *פְּרֵשׁ* †, *פְּרֵשׁ* †

Apart from the gutturals and *ר*, there are two characteristics that cause changes in the forms:

(1) Assimilation, when one consonant completely assimilates another consonant, usually regressive assimilation.

‡yinpól → *yippól*; *‡yilqah* → *yiqqah*

(2) Elision, when one of the radicals is *א*, *ל*, or *י*:

qar’ú, but *qratém*

yašanta, but *tišán* (‡ *tiyšán*)

šaléw, but *šalíti*

The conditions for these changes are that, for assimilation, the assimilated consonant be at the end of a non-final syllable, and for elision, the elided consonant be at the end of any syllable. (See below, in this connection, forms of verbs with identical second and third radicals, e.g., *סב*, *נסב*.)

23. PARADIGMS OF ASSIMILATED FORMS. Typical of paradigms of assimilated forms is the presence of duplication of consonants in the middle of the verb. These paradigms are more often known as paradigms of defective verbs. This term derives from a study of the written language, since in the Hebrew script duplication is indicated by only one letter (with a point, “*dageš forte*,” inserted in it). As a result, when a consonant is assimilated to its neighbor, one letter is missing from the script, that of the assimilated consonant. The term *assimilated* derives from a study of the phonetic characteristics of the language and an observation of the phonetic processes of assimilation as the principal characteristic typifying the membership of the root in this paradigm. However, there are a few instances in these paradigms of omission of a consonant and not its assimilation.

1. Defective *פ”נ* and Defective *י”פ* (Better: assimilated *פ”נ* and assimilated *י”פ*). The paradigm of this type with most roots is known as defective *פ”נ* (see Phonology 7), which comprises roots whose first radical is *ל*. This *ל* is assimilated to the second consonant of the root in certain circumstances, e.g.,

‡ yinpól (//*yišmor*) → *yippól*

‡ ninzal (//*nišmar*) → *nizzal*

As stated at the end of 22, this assimilation occurs only when the assimilated consonant comes at the end of a non-final syllable. Most roots with **נ** as the first radical belong to this paradigm, but not all: sometimes the **נ** appears even when the condition exists for its assimilation. This is so when the second radical is a guttural, e.g., *yinham*, *yan'im*. (There are only two or three roots where the **נ** is assimilated to a guttural in some forms.) And it is so in a sizeable number of other roots, e.g., *yanzihu*, *yinbor*, especially in verbs or forms that have been coined in recent times. It is worth pointing out that the facility for assimilating the **נ** has become a means of distinguishing between different meanings, e.g., *yanbiṭ* (“will cause to bud”) versus *yabbiṭ* (“will look”), *yangid* (“will put contradictory items”) versus *yaggid* (“will tell”), including meanings of verbal nouns, e.g., *hangada* versus *haggada*, *hankara* (“alienation”) versus *hakkara* (“consciousness”). The root **נ'ק'ל** is generally included in this paradigm because of the assimilation of its first radical, even though it is **ל** and not **נ**.

A parallel paradigm is that of defective **פ"ב**, which comprises roots whose first radical **ב** assimilates to the second. There are only six or seven roots in this paradigm, e.g., *yzb* (*yazzib*, *hizzib*), *yzq* (*nizzaq*, *nizzoq*). The bases of verbs that are defective **פ"ב** and **פ"ב** hardly differ from those of regular paradigms, which are detailed in 20, and the same changes of base occur, which are included in those rules. The exception is that the imperative bases in **פעל** (*lbaš*, *šmor*) tend in the **פ"ב** and **פ"ב** paradigms to lose the first radical without any substitution, e.g., *pol* (for *npol*), *ga* (for *nga*). In these imperative forms there is therefore a true loss and not an assimilation (see Biblical Hebrew 10). With the root **נתנ** the last **נ** is assimilated to the following consonants in cases like *natánti* → *nattáti* and in **לתת**. This last form is to be understood as a development of a feminine infinitive, in which *t* is added to the radicals. Other infinitives like this occur mainly in biblical Hebrew, e.g., **לְתַתְּנָה**, **לְתַתְּנָה**. This construction as an infinitive is not productive nowadays, and most instances that are still used belong to the **פ"ב** or **פ"ב** paradigms, e.g., **לְתַתְּנָה**, **לְתַתְּנָה**. A similar process has occurred with the biblical form **לְתַתְּנָה** for the root **ל'ד'ר**, which must be understood as *laladt* → *lalatt* → *lalat*.

2. Verbs with duplicated second radical or geminates are usually included among the defective paradigms. This can be justified not because in certain forms one letter is written symbolizing both the second and third radicals, e.g., **סבב**, but because in other cases the last radical is entirely omitted, e.g., **סב**, **נסב**. But two points must be made clear: (a) In the inflections of roots in this paradigm, assimilation does not take place, since the two neighboring consonants written with gemination are identical; there is nothing unique in their being symbolized by one letter, since all gemination is symbolized in Hebrew script by one letter. Gemination is similarly symbolized by one letter in words like *natánnu* (**נתנו**), *karátti* (**כרתת**). (b) The omission of the third radical in forms like **סב**, **נסב** is only a realization rule, a phonetic rule, and does not convey anything about the theoretical structure of the word. The omission occurs, therefore, on the final level of the lan-

guage, since there is a general rule in Hebrew that gemination of consonants does not occur at the end of a word, one consonant alone remaining instead. A theoretical form like *sabb* changes, therefore, to *sab* without any assimilation, just as with words like **לב**, **לב**, **חק**, in all of which gemination occurs with the last radical when it appears in the middle of the word, e.g., **לבי**, **לבי**, **חקי**. (See Table: Hebrew Grammar 2.)

Table: Hebrew Grammar 2

	Past Participle	Future Imp. Inf.
<i>Pa'al</i>	<i>sább</i>	<i>sóbb</i> <i>qáll</i>
<i>Nip'al</i>	<i>nasább</i>	<i>hissább</i>
<i>Pi'el</i>		<i>sobéb</i>
<i>Pu'al</i>	<i>sobáb</i>	
<i>Hitpa'el</i>		<i>hitsobéb</i>
<i>Hip'il</i>	<i>hesébb</i>	<i>hasébb</i>
<i>Hup'al</i>	<i>husább</i>	

The regular inflectional morphemes (19) are attached also to the bases of this paradigm, and rules 1, 3–5, 8–10 set out in 20 apply also to these bases, e.g.,

t + *hitsobéb* → *thistobeb* → *tistobeb* (20.1)

^ʾ + *hitsobéb* → *ʾestobeb* (20.3)

sobéb + *ti* → *sobábtí* (20.4)

sobáb + *u* → *sobábu* (pausal form) → *sob^abu* (20.5)

nasább + *á* → *nasabbá* → *nsabbá* (20.8)

m + *sobéb* + *ím* = *msobébím* (20.9)

m + *sobéb* + *t* → *msobébt* → *msobébet* (20.10)

The principal phenomena that are peculiar to the rules for affixation of inflectional morphemes to bases of geminates are as follows:

Prefixed Morpheme: (1) a transitional vowel appears between the prefixed morpheme and the future bases of **פעל** if the accent is on the base. Before the base *sobb* the transitional vowel is *a*, while before the *qall* it is *e*:

y + *sóbb* → *y + a + sóbb* → *yasóbb* → *yasób*

y + *sóbb* + *u* → *y + a + sóbb + u* → *yasóbbu*

y + *qáll* + *u* → *y + e + qáll + u* → *yeqállu*

The same applies when **ל** is affixed to the infinitive base:

l + *sóbb* → *lasóbb* → *lasób*

Suffixed Morpheme: (2) when a suffix beginning with a consonant is attached to a base ending with gemination, the transitional vowel *o* is generally inserted between them, with *e* instead of *o* preceding – *na*:

sább + *ti* + *sább* + *ó* + *ti* → *sabbótii*

sább + *tém* → *sább + o + tém* → *sabbotém*

hissább + *na* → *hissább + é + na* → *hissabbéna*

(3) However, there are forms lacking this transitional vowel which lose the gemination of the base before a suffix beginning with a consonant, as if it was at the end of the word:

hissább + *na* → *hissábna* = [*hissávna*]

hussább + *ta* → *husábta* = [*husávta*]

hesébb + *nu* → *hesábnnu* = [*hesávnu*]

(4) The vowel *e* before gemination of the base is changed to *i*, and *o* to *u* when the accent is after the gemination:

sóbb + na → *sóbb + é + na* → *subbéna*

m + hesébb + ím → *mesébbím* → *msibbím*

(5) As usual with a consonant cluster whose first consonant is *h*, a half-vowel appears in this situation:

hasébb + nu → *hasébb + ó + nu* → *hsibbónu* → [*häsib-bónu*]

24. PARADIGMS OF MUTE FORMS. The term “mute” refers to the phonetic process occurring to various inflectional forms in which the consonants א, ל and ך of the root cease to be pronounced, becoming mute. (With respect to ה, see below.) Subclassification of these paradigms is based on the identity of the mute consonant and on its place in the root: mute א״פ; mute ״פ; mute ״ע; mute ״ע״; mute ״א״ל; mute ״ל״ל. There are very few instances of mute ״פ and mute ״ל״ל; these are therefore usually not treated separately, but are included under mute ״פ and mute ״ל respectively.

1. Mute א״פ. There are only five roots in this paradigm. א is mute chiefly in future forms of פֿעל, e.g., יאכל, יאבד, יאפה, יאפה. There are a few instances of other forms with mute א, e.g., גאָהוּז. The vowel *o* appears in a syllable in which א is mute.

2. Mute ״פ. This paradigm comprises two subclasses, distinguished by the vowel of the syllable in which ך is muted: חִירִיק, e.g., יִינֵק, יִינֵק; or צִירִיק, e.g., יִשֵּׁב, יִדַּע. This latter subclass is assigned by many grammarians to defective ״פ paradigm, chiefly because the letter ך is not written in many of the forms. It is true that in the inflectional base of future, imperative, and infinitive of פֿעל the first radical is omitted (see below in the table of bases in this paradigm: *red*). However, the defective paradigms are characterized not by omissions, but by the assimilation of a consonant to its neighbor, and in this paradigm there is no such assimilation (compare above, 23:1). Consequently, this subclass belongs to the mute paradigms. Historically, only forms with חִירִיק as vowel of prefix give convincing proof of an original ך as first radical, while those with צִירִיק suggest an original ל. The difference is not apparent in the future forms of פֿעל, but it is very clear in the הִישִׁיר, הִינִיק: הִפְעִיל as opposed to הוֹרִיד, הוֹשִׁיב. The vowel *o* following the ה is the result of monophthongization of *aw*, the original forms probably being **hawrid*, **hawšib* (see Phonology 15), while הִינִיק, הִישִׁיר result from the monophthongization of **hayniq*, **hayšir*. (Evidence of this is also to be found in forms like מִיִּשְׁרִים, מִיִּשְׁרִים, where monophthongization has not taken place.)

Inflectional Bases of Mute ״פ Paradigm. The bases of פֿעל, פֿעל, and הִתְפַּעֵל are identical to those of regular verbs, see 19. (See Table: Hebrew Grammar 3.) The rules for inflection given in 20 apply to all inflections in this paradigm. Special attention should be paid to the following:

(1) The first radical ך is mute when by rule 20.2 it is preceded by the vowel *i*:

Table: Hebrew Grammar 3

	Past	Participle	Future	Imperative	Infinitive
<i>Pa'al</i>	<i>yarad</i>	<i>yoréd</i>	<i>réd</i>		<i>redt</i>
		<i>yašen</i>	<i>yšan</i>		<i>yšon</i>
<i>Nip'al</i>		<i>nolád</i>		<i>hiwwaléd</i>	
<i>Hip'al</i>			<i>holíd</i>		<i>heníq</i>
			<i>heníq</i>		
<i>Hup'al</i>		<i>hurád</i>			

t + yšan → *tiyšán* → *tišan* (rule 20.3 does not apply);

(2) Before the base for future, imperative, and infinitive of פֿעל *red*, the transitional vowel *e* is inserted:

t + red → *t + e + red* → *teréd*

(3) The infinitive base of פֿעל given in parentheses follows a development characteristic of the segholates, e.g., *redt* → *rédet*, and the transitional vowel *a* is inserted before it and after the prefix *l*, e.g., *l + redet* → *l + a + redet* → *larédet* (when the infinitive is in the construct state, no transitional vowel is inserted).

3. Mute ״ע-״ע. The distinction between ״ע and ״ע is evident only in the inflectional base for the future, imperative, and infinitive of פֿעל, exemplified by *qum* in ״ע and *šir* in ״ע.

Since this description is restricted to contemporary Hebrew, there is no discussion of the difficult problem, still disputed, as to whether the roots of this paradigm were originally bilateral and at a later stage ל or ך developed between the two consonants, or whether they were originally trilateral and subsequently the middle consonant, ל or ך, was muted (see Biblical Hebrew 10, Morphology 2). For our purpose it is sufficient to point out that the name of this paradigm is based on the second possibility. On the other hand, there is evidence of the formation of regular trilateral roots (19) through the development into a consonant of a medial ל or ך e.g., תִּנּוּךְ from תִּנּוּךְ, מִיִּנּוּךְ from מִיִּנּוּךְ. However, it should be mentioned that most of the creations are in פֿעל (as in the above examples) or in פֿעל and הִתְפַּעֵל (e.g., מִתְּגַיֵּר, מִתְּגַיֵּר), that is to say in patterns where the middle radical should be doubled and hence greater attention is paid to it. When the development of a medial ל or ך does not take place, the inflection for פֿעל, פֿעל, and הִתְפַּעֵל in this paradigm is identical to that of geminates described in the preceding section.

Inflectional Bases of Mute ״ע-״ע Paradigm. The inflectional morphemes detailed in 20 are affixed to these bases according to rules 1, 3, 4, 5 (but rule 5 does not apply to the bases *qám*, *nakón*), 6, 8, 10 listed in 20. (See Table: Hebrew Grammar 4.) In addition, transitional vowels are formed according to rules 1 and 2 stated for the geminates (see section on verbs with duplicated radicals in Paradigms of Assimilated Forms above), with only a slight difference: the transitional vowel of the prefix is always *a* (except for the base of the verb בּוֹשֵׁשׁ – which serves both past and future – where it is *e*). The following rules are peculiar to this paradigm:

Table: Hebrew Grammar 4

	Past and Participle	Future Imp. Inf.
<i>Pa'al</i>	<i>qám</i>	<i>qúm</i> <i>šír</i>
<i>Nip'al</i>	<i>nakón</i>	<i>hikkón</i>
<i>Hip'il</i>	<i>heqím</i>	<i>haqím</i>
<i>Hup'al</i>	<i>huqám</i>	

(1) The vowel *ú* of *qúm* changes to *o* before the suffix –*na*:

qúm + *na* → *qómna*

(2) The vowel *ó* generally changes to *u* before the transitional vowel *ó*:

nakón + *t* → *nakón* + *ó* + *t* → *nkunót*

Here are some additional examples of the production of forms:

(1) (rule 1) *t* + *haqím* → *taqím*

(2) (rule 3) *ʔ* + *hikkón* → *ʔikkon* → *ʔekón*

(3) (rule 4) *heqím* + *ta* → *heqámta*

(4) (rule 5) *huqám* + *u* → *huqámu* (pausal form) →

huqmú,

but

qám + *u* → *qámu*

nakón + *a* → *nakóna*

(5) (rule 6) *haqím* + *na* → *haqémna*

(6) *heqámtem* (rule 4) → *hqamtém* (rule 8) → [hãqamtém]

(by rule 5 in the geminate paradigm)

(7) *m* + *huqám* + *t* → *muqámmt* (rule 1) → *muqámet* →

muqémet (rule 10).

Examples of the rules for transitional vowels:

(8) *t* + *qúm* → *t* + *a* + *qúm* → *taqúm* (geminate – 1) but *n* + *boš* → *nebóš*

(9) *heqím* + *ta* → *heqím* + *ó* + *ta* (geminate – 2) → *hqimóta* (rule 8) → [hãqimóta] (geminate – 5)

For an example where a transitional vowel is not formed, see (3) geminate.

4. Mute Third Radical. With respect to the roots in this paradigm too, it can be argued that they were originally bilateral with a third consonant developing in the final position. Indeed, there is evidence in several cases of such a development (see above, Morphology 2: *ʔ*ח'א, *ʔ*ה'ו). However, the more common view is that these roots were originally trilateral and the final consonant was muted in certain circumstances. This view finds support in the history of Hebrew and other Semitic languages. It is worth pointing out that Hebrew has only a few instances of the existence of *ʔ* as a third radical (as in *הַשְׁקִיף*), apparently because already at an early stage the *ʔ* in such roots was changed to *ʕ*. It should also be mentioned that the popular name *ל"ה* is based on the written language and not the spoken, since while the third person masculine singular past forms of these roots are indeed written with final *ה*, a consideration of the whole of the inflection shows that the final consonant is really *ʕ*, e.g., in forms like the passive participle *רַצִּי* or verbal noun in *פְּעַל*, *רַצִּיָּה*, *רַצִּיָּה*.

rziya (like *šmira*); verbal noun in *פְּעַל* *niqquy* (like *dibbur*); and in various noun forms, e.g., *niqqayon*. Finally, it may be noted that in many instances there is an overlap between roots in the paradigms *ל"ל* and *ל"י*, e.g., *הַשְׁקִיף* (as well as *הַשְׁקִיף*) from *ש'ק'י'פ*, *הַרְצֵא* from *ר'צ'י'א*. The reverse phenomenon is especially common: forms with a root from the paradigm *ל"ל* but with their inflection following that of *ל"י*, e.g., *ב'ט'א* (*ב'ט'א*). In mishnaic Hebrew this was the general practice, which was apparently reinforced through the influence of contemporary Aramaic, in which the *ל"ל* paradigm was completely lost and its forms became identical to those of *ל"י*. However, it would not be correct to argue that this is a phenomenon restricted to mishnaic Hebrew: the transition is reflected in the pointing of the biblical text, and most of the instances can be explained as deriving from an internal phonetic development, namely, the elision of *ʕ* when it is second in a consonantal cluster, e.g., *ח'ו'ט'א'י'ם* ← *ח'ו'ט'א'י'ם*. Forms common in mishnaic Hebrew, e.g., *רַצִּיָּה*, *רַצִּיָּה* serve nowadays merely as stylistic variants.

Inflectional Bases of Mute ל"ל Paradigm. The inflectional morphemes listed in 19 are affixed to the bases of this paradigm and the rules detailed in 20 apply (with the reservations stated immediately below for rules 4 and 10). (See Table: Hebrew Grammar 5.) The following rules are specific to this paradigm:

(1) *ʔ* is mute at the end of a word, and in the middle of a word before a suffix beginning with a consonant:

qoréʔ → *qoré*

qaráʔ + *ti* → *qaráti*

milléʔ + *ta* → *milléta*

Similarly:

m + *hitmalléʔ* + *t* → *mitmallét*

i.e., rule 10 of 20 does not apply to this paradigm, because the elision of *ʔ* prevents the creation of a segholate form.

(2) Instead of rule 4 of 20 the following rule applies to this paradigm: *a* and *i* in past bases (except of *פְּעַל*) change to *e* before suffixes beginning with a consonant:

niqráʔ + *ti* → *niqráti* (rule 1) → *niqréti*

hiqríʔ + *nu* → *hiqrínu* (rule 1) → *hiqrénu*

Note: In a small number of roots in the past base of *פְּעַל* the second vowel is always *é*, e.g., *zamáé*, *maléé*.

5. Mute ל"י.

Table: Hebrew Grammar 5

	Past	Participle	Future Imp.	Inf.
<i>Pa'al</i>	<i>qaráʔ</i>	<i>qoreʔ</i>	<i>qraʔ</i>	<i>qroʔ</i>
<i>Nip'al</i>	<i>niqráʔ</i>		<i>hiqqareʔ</i>	
<i>Pi'el</i>	<i>milléʔ</i>		<i>malléʔ</i>	
<i>Pu'el</i>		<i>mulláʔ</i>		
<i>Hitpa'el</i>		<i>hitmalléʔ</i>		
<i>Hip'il</i>	<i>hiqríʔ</i>		<i>haqriʔ</i>	
<i>Hup'al</i>		<i>huqráʔ</i>		

Inflectional Bases of Mute ל"י Paradigm. (See Table: Hebrew Grammar 6.) It is easy to see that the distinction between the

past bases and the other bases in this paradigm lies primarily in the final vowel, which is *á* in the past and *é* in the other bases. The following rules specify what is characteristic of this paradigm:

(1) The suffix *a* of the third person feminine singular past changes into *ta* (and is then classed with suffixes beginning with a consonant).

(2) The infinitive is formed by the affixation of a special suffix *ót* to the base (and this is then classed with suffixes beginning with a vowel).

(3) The final vowel of all the bases is omitted before a suffix beginning with a vowel, and in such a case the accent is on the vowel of the suffix (this rule replaces rule 5 in 20):

- baná + u → banú*
- haqné + i → haqní*
- l + naqqé + ót → lnaqqót*

Note: To take account of “pausal forms,” ancient inflectional bases must be considered, e.g., *bakáy + u → bakáyu* (rule 5 in 20).

(4) The vowel *á* in past bases changes to *i* when a suffix beginning with a consonant is added in bases of פָּעַל, פָּעַל, and הִפְעִיל, and to *e* in other bases and occasionally in bases of פָּעַל and הִפְעִיל:

- baná + nu → banínu*
- niqqá + ti → niqqíti (or niqqéti)*
- hiqná + ta → hiqnéta (or hiqníta)*
- nibná + tém → nibnetém*

In addition rules 1, 2, 3, 8 detailed in 20 apply to the inflection of this paradigm:

- t + hibbané → tibbané* (20, rule 1)
- t + bné → tibné* (20, rule 2)
- ʔ + bné → ʔebné* (20, rule 3)
- ʔ + hibbané → ʔebbane* (20, rule 3)

baná + tém → banitém (rule 4 of this paradigm) → *bnitém* (20, rule 8)

but *l + hibbané + ót + m* (objective pronoun) → *lhibbanotám* (without change of the vowel *a* of the base).

Table: Hebrew Grammar 6

	Past	Participle	Future Imp. Inf.
<i>Pa'al</i>	<i>baná</i>	<i>boné</i>	<i>bné</i>
<i>Nip'al</i>	<i>nibná</i>	<i>nibné</i>	<i>hibbané</i>
<i>Pi'el</i>	<i>niqqá</i>		<i>naqqé</i>
<i>Pu'al</i>	<i>nuqqá</i>		<i>nuqqé</i>
<i>Hitpa'el</i>	<i>hitnaqqá</i>		<i>hitnaqqé</i>
<i>Hip'il</i>	<i>hiqná</i>		<i>haqné</i>
<i>Hup'al</i>	<i>huqná</i>		<i>huqné</i>

SYNTAX**1: THE INFLUENCE OF FOREIGN WORKS ON HEBREW SYNTAX****1.1: The Traditional Grammars**

The first Hebrew grammarians devoted their attention chiefly to phonology and morphology, generally omitting special, ordered chapters on syntax. Some study was, however, made into the syntactical connections between adjacent or related words. This usually appears in traditional grammars when they deal with the system of accents. Many centuries passed before syntactic questions such as agreement of gender and number between different words in a sentence were first discussed comprehensively in a Hebrew grammar (*Miqne Avram* by Abraham de *Balmes, 1523).

1.2: Neglect of Syntax

This neglect seems to be due to the influence of the treatment of syntax in languages such as Latin, Greek, or Arabic, where the function of a word is generally shown by its form, and especially by the suffixes attached to it. The grammarian might therefore suppose that syntax essentially consists of such case suffixes, so that Hebrew, which lacks these suffixes, “has no syntax,” or at least its syntax is not central to the language. The grammarian might therefore persuade himself that he should rather devote his energies to phonology and morphology. This conception of syntax continued to influence the treatment of Hebrew syntax even in the period of “scien-

tific grammar,” when philologists included a separate chapter on syntax in their Hebrew grammars. Until very recently, syntax was considered a study which attempted to reveal the logic behind language and thus external reality. For several centuries Latin was thought to be the most complete expression of logic and reality. Hence, while grammarians such as Gesenius, Ewald, or König and their modern counterparts such as Perez and Segal treat Hebrew syntactic phenomena in great detail, their approach is not based on linguistic formal criteria derived from a study of Hebrew, but on categories of “reality” as reflected in Latin and as “laid bare” in Latin syntax.

1.3: Conventional Syntax in Other Languages

It is well known that this defect has affected the treatment of syntax in other modern languages, including English. For example, grammarians have continued even recently to discuss the distinction between dative and accusative in English, as if the formal differences between them – noticeable in Latin but hardly at all in English – reflect relationships in external reality, and as if these relationships need to be considered in the syntax of every language, even where no distinction between them is made in the language.

1.4: Conventional Hebrew Syntax

Hebrew grammarians likewise saw Hebrew syntax as reflecting reality and the relationships existing in it, rather than as a formal study of the way words are linked and sentences are linked. For example, the Latin distinction between “direct object” and “indirect object” (see section Object below) is based upon the difference between a word that was an obligatory complement to a verb and was linked to it directly, i.e., without the word being preceded by a preposition, and a word which, while being an obligatory complement to a verb, needed a preposition before it. But in Hebrew what was called a “direct object” is under certain clear (and very frequent) conditions preceded by the preposition אֶת. “Direct object” in Hebrew, then, was applied not to a word with a certain status (or function) in the sentence, but to a word that designated a substance. That substance had a certain status in “reality” and had a certain relationship with another substance existing in the world. This relationship is realized by an action passed from this second substance to the one designated by the word which is “direct object.” In other words, this syntax deals not with the grammatical relationships between words but with the relationships in the real world between what the words signify. A good illustration of this treatment of syntax appears in the comment usually quoted in the section dealing with the “direct object”: “Sometimes the preposition לְ appears before the direct object instead of the preposition אֶת (for example in the biblical verse הִרְגוּ לְאַבְנֵי הָרֶגֶט, II Samuel 4:30).” In this comment “direct object” is stated by the fact that a person is directly affected by the action, that is to say it is a person existing in the world that makes it “direct object” and not a linguistic relation existing in the sentence.

2: THE PARTS OF SPEECH

2.1: The Parts of Speech and External Reality

This conception of the word as reflecting reality is evident in what is traditionally the opening chapter of books on syntax: the chapter dealing with the “parts of speech.” Since the early grammarians believed that reality was reflected best in Latin, it is precisely here that there is the greatest influence of Latin (and Greek) syntax. In these languages the function of a word can be recognized through its form, largely because of the many case suffixes that these languages have; hence, it was natural for the forms to serve as a basis for the treatment of functions. But in Hebrew it is exceptional for form and syntactic function to correspond, as in *הַבְּיָתָה* contrasting with *הַבְּיָתָה*. Only in the verb is there a regular correspondence, since it has merely one function, namely, to be the predicator of the sentence. It is reasonable to suppose that without the influence of foreign works on syntax the chapter on the “parts of speech” would have been the introduction to a treatment of morphology rather than of syntax. Indeed, the earliest medieval grammarians did include a discussion of the “parts of speech,” which they then divided into three only: noun, verb, and particle (*מְלָה* – literally “word”). They defined “noun” and “verb” semantically (for example, “a word denoting a substance or concept,” “a word denoting an action or state”), while “particle” (comprising whatever was not regarded as “noun” or “verb”) was defined by the function it had of linking other words. But, particles were also termed “sense words,” since they supplied sense to the sentence. (See above 5. Parts of Speech in section Morphology above.)

2.2: The Classification into Parts of Speech

The division into three parts of speech was preserved in Hebrew grammar even when the division into nine parts of speech, traditional in Greek and Latin (and also in modern languages), entered Hebrew grammar. The nine were grouped under the three earlier parts as follows:

- A. *noun*: 1. noun (substantive) 2. adjective 3. numeral 4. pronoun
- B. *verb*: 5. verb
- C. *particle*: 6. conjunction 7. preposition 8. adverb 9. interjection

2.3: A Criticism of the Conventional Classification

The division into nine parts of speech is also largely based on the meaning of words. That is to say, the assignment of a word to a particular part of speech is generally decided not by its formal features nor by its function, but by the concept it denotes. As a result, the classification suffers from several defects:

(1) Not every word denotes a concept. For example, conjunctions merely denote that words are linked to each other. In practice, therefore, grammarians define different parts according to different criteria: meaning, function, and sometimes even form.

(2) The meaning of a word depends on its context,

and therefore the same word type is likely to be considered as belonging to several parts of speech, depending on the context of the particular word tokens. For example, in the sentence *הַשּׁוֹמְרִים מְטַיְלִים הַלַּיְלָה* (The watchmen are walking around tonight) the first word is considered a noun and the second a verb, and the same applies to the sentence *הַמְטַיְלִים שׁוֹמְרִים הַלַּיְלָה* (The hikers are on guard tonight). The third defect of this classification follows from the previous two:

(3) The division into parts of speech does not establish exclusive sets, since many words belong to more than one part of speech. It is this third defect in particular that has led some prominent linguists to deny any value to the classification into parts of speech. Yet this classification, virtually in its entirety, is generally accepted even in the most modern Hebrew textbooks, although it is clear that in many ways it does not fit the facts of the Hebrew language. Thus, many scholars claim that there is no basis for distinguishing in Hebrew between noun and adjective, since every adjective can be considered a noun (e.g., *גָּבוּר*, *חָכָם*), and clearly many nouns originally served as adjectives (e.g., *לְבָנָה*, *חֲמָה*). It is true that this claim is made particularly for biblical Hebrew, but it is true also for modern Hebrew. It applies to the forms of the participle, which can be taken as nouns, as adjectives, or as verbs. This last possibility is especially evident in modern Hebrew, where the forms of the participle are given in the verb paradigm, though formally they resemble nouns.

3: SENTENCE TYPES

A sentence is a syntactical unit built from a word or words of which each one (or a combination of them) fulfills a specific syntactical function as a “sentence-part.” This unit can stand by itself, can sometimes be connected to other similar units – whether preceding it or following it, and whether they are articulated by the same speaker or by others – and it is intoned in a manner which members of that language-group recognize as a complete articulated unit which does not lack a continuation. The sentence has an additional typical attribute: it is recursive, i.e., this unit can include in it a further internal sentence or sentences, each one of which fills a function as a sentence-part (see below). Unlike many other languages, the Hebrew sentence – apparently also in its deep structure (see below 3.1: Structural Analysis) – does not have to include a verb (see below 4.23: Nominal Sentence and Verbal Sentence). On the other hand the Hebrew sentence may be a single word which is a verb, since the Hebrew verb includes a pronoun. Transformational rules (see below Structural Analysis) are likely to influence the sentence and reduce it to a single word which is not a verb; however, this attribute can be found in many languages.

3.1: Structural Analysis

Modern linguistic theory considers grammar to be a set of generative rules for the language. A central place is occupied by what are called transformational rules. Transform-

mational rules are also generative rules, but they apply to sentences or parts of sentences derived from simpler generative rules. Transformational rules change the order of words in a sentence, produce conjoinings and dependencies within sentences or between sentences, replace words by other words or formatives by other formatives, delete sentences or parts of sentences, etc. According to this theory, one must distinguish between the surface structure of a language and its deep structure. The latter includes the generative and transformational rules and also most of the semantic links that appear “on the surface.” So far, only a few works have been written on Hebrew grammar according to this theory or under its influence, and even these follow its earlier formulations. Consequently it is neither possible to describe here the “deep structure” of Hebrew, nor to survey the transformational rules that operate in the language, except in those areas where a few details have been discovered. The following description is therefore essentially a survey of surface structure, taking into account works written according to the classical method.

3.11: CLASSIFICATION OF SENTENCES. A classification of sentences according to their surface structure yields four types of sentences: (1) simple sentence, (2) multiple-unit sentence, (3) compound sentence, and (4) complex sentence.

This classification is usual in books on Hebrew syntax, except that some authors treat together the multiple-unit sentence and the compound sentence, while some do not treat the compound sentence at all, because “there is nothing to deal with in the compound sentence except what we find in its parts as separate sentences” (Segal).

3.12: THE SIMPLE SENTENCE. A simple sentence is a sentence in which each part is realized by one word. This seems the best definition, even though there are some problems with it. For example, several adjectives may be attached to one noun to form a noun phrase. At first sight each one might be considered adjectival to the same noun, and yet in most cases the sentence will be regarded as simple, e.g., *הַמְעִיל הַשְּׁחוֹר שְׁלִי נִקְרַע* (My new black coat was torn). Another problem is that sometimes the function of the predicator is realized by a verb phrase, one word of which is the main verb while the rest are auxiliaries, e.g., *הַשִּׁיעוֹר מֵתַחִיל לְהִרְאוֹת מְעִיֵּן* (The lesson begins to appear interesting). Here the three final verbs together realize the function of predicator. The problem of adjectives in a noun phrase can be solved by recognizing that sometimes an adjective is not attached directly to the noun, which forms the nucleus of the noun phrase, but to the whole of the preceding phrase – the phrase of noun + adjective. In the above example, the correct analysis for the constituency of the adjectives is *שְׁלִי* (3) *נִקְרַע* (2) *הַמְעִיל הַשְּׁחוֹר* (1) (2) (1) *הַמְעִיל הַשְּׁחוֹר* (1) (2) (3), compare the English equivalent (My (new (black coat))) was torn. First the words *הַמְעִיל הַשְּׁחוֹר* (the black coat) form a phrase; then to this phrase as a unit the following adjective *הַחֹדֶשׁ* is attached, forming the phrase *הַמְעִיל הַשְּׁחוֹר הַחֹדֶשׁ*; finally *שְׁלִי* is added, relating to the whole of the preceding phrase *שְׁלִי*

(*הַמְעִיל הַשְּׁחוֹר הַחֹדֶשׁ*). This explanation is based on one of the important principles of structural linguistics, “the theory of immediate constituents” (IC). A close examination reveals that each of the adjectives belongs to a different adjectival category, i.e., has a different function within the sentence. There are indeed many more parts of the sentence than is traditionally supposed (see below). The problem with auxiliaries is solved by considering them morphemes attached to the center of the predicator (“the main verb”) to give it some modal or aspectual nuance (see below 4.45 Infinitive as Object). The auxiliaries also vary in their function. If they are regarded as realizing certain parts of the sentence, then they too are additional parts of the sentence.

3.13: THE MULTIPLE-UNIT SENTENCE. The multiple-unit sentence is a sentence in which one of the parts is realized by several words linked to each other by parataxis (sometimes expressed by a conjunction), e.g., *“אָבִיךָ וְאִמְךָ דּוֹאֲגִים לְךָ”* (Your father and mother are anxious about you), *“הֵבֵא כַפּוֹת וּמְזַלְגוֹת”* (Bring spoons and forks). Some exclude from this type such sentences as have verbs that are linked paratactically, e.g., *“הוּא הִתְרַחֵץ, הִתְלַבֵּשׁ וַיֵּצֵא לְעִבּוּדָה”* (He washed, dressed, and went out to work); *“וַיֹּאכַל וַיִּשְׂתַּי וַיִּקָּם וַיֵּלֶךְ וַיֵּבֶן”* (“and he did eat and drink, and rose up, and went his way. So Esau despised his birthright,” Gen. 25:34), maintaining that such a structure should be classed as a compound sentence (see 3.14: The Compound Sentence). The motivation for this view is that a construction containing a subject and a predicator is considered to be a sentence, and this definition applies to the verb, every form of which contains a subject-pronoun. Since a group of consecutive sentences linked paratactically is termed a compound sentence, the sentences in the above example should be considered compound sentences. In an analysis of the sentence (to be more precise, an analysis of the surface structure of the sentence) this approach is advantageous.

3.14: THE COMPOUND SENTENCE. The compound sentence is traditionally subclassified according to the type of linking: addition, contrast, choice, or result. It is obvious that this classification is essentially semantic. Though there is a practical need for it, it is doubtful whether it has a place in a theoretical treatment in syntax, at least as long as syntax is concerned only with surface structure (but see below 6.31: Coordination in section Links beyond the Sentence).

3.15: THE COMPLEX SENTENCE. The complex sentence is defined as a sentence one or more of whose parts is realized by a sentence (rather than by a word or a phrase). In every complex sentence there is therefore an embedded sentence. Since the embedded sentence performs, as a sentence, a function within the complex sentence, one can say that it is subordinate in the complex sentence. Some therefore define a complex sentence as follows: It is a sentence consisting of at least two sentences, which are linked by the subordination of one sentence to another. According to this view, the subordinated sentence is termed the dependent sentence, and the subordinating one

the main sentence. But one should rather say that one sentence is a part of the other, and, in the same way as a sentence-element expressed by one word, it generally relates to one of the parts of the sentence as an independent unit. For example, if its function is that of adjunct, it is linked to the noun (irrespective of the noun's function), as in *הַיֶּלֶד שֶׁרָאִינוּ אֶתְמוֹל חָזַר כָּבֵד לְבֵיתוֹ* (The boy, whom we saw yesterday, has already returned to his home) or *רָאִיתִי אֶת הַיֶּלֶד שֶׁבָּא מִן הַכִּפּוּר* (I saw the boy who came from the village). Similarly *“וְיִשְׁמְמוּ עָלֶיהָ אוֹיְבֵיכֶם הַיּוֹשְׁבִים בָּהּ”* (“and your enemies that dwell therein shall be astonished at it,” Lev. 26:32) as opposed to *“כָּכָה יַעֲשֶׂה ה' לְכָל אוֹיְבֵיכֶם אֲשֶׁר”* (“for thus shall the Lord do to all your enemies against whom ye fight,” Josh. 10:25). Adjunct sentences are divided into relative clauses, as in the above examples, and adjunct-content sentences to be discussed below, in 4.38: Relative Clause. If adverbial, such a sentence is linked to the verb-predicator, e.g., *חָזַרְנוּ מִן הַטַּיִל לִפְנֵי שֶׁשָּׁקְעָה הַשָּׁמֶשׁ* (We returned from the hike before the sun set). Even when the subordinated part is subject, it can be said to be chiefly linked to the predicator, e.g., *מִי שֶׁטָּרַח בְּעֶרְבֵי שַׁבָּת יֵאָכֵל בְּשַׁבָּת*, (Whoever exerts himself on the Sabbath eve will eat on the Sabbath). The last example demonstrates the inappropriateness of the term “dependent” for the subordinated sentence, since it can realize one of the main functions of the sentence, that of subject, and hence “main” is likewise inappropriate for the subordinating part of the complex sentence. For other types of sentence structure, see 4.23: Nominal and Verbal Sentences, 4.24: Identifying Sentence, 4.25: Attributive Sentence, 4.26: Focusing Sentence, and 4.27: Indefinite Sentence.

3.2: Pragmatic Classification

Other analyses of sentences may be made according to the speaker's commitment to what is being said or according to his attitude to what is being said.

3.21: THE SPEAKER'S COMMITMENT. The speaker's commitment is discernible from the form of the sentence: declarative, exclamatory (or optative), and interrogative (“yes-no” question or “specific” question, i.e., question specifying type of information required). In modern Hebrew “yes-no” questions generally differ from declarative sentences merely in intonation, though sometimes – particularly in the written language – a question may be prefaced by a word indicating that the sentence is a question, e.g., *הֲאֵם* or *כִּלּוֹם*. In any event, the structure of the sentence remains the same when it serves as a “yes-no” question. In a specific question the sentence is introduced by the appropriate interrogative word, e.g., *מָתַי* (when), *אֵיךְ* (how), *מַדּוּעַ* (why). See below for the order of words in such questions. The same applies to the exclamatory sentence. Any declarative or interrogative sentence can be considered an exclamatory sentence when rendered by an exclamatory intonation. Investigation into Hebrew syntax must include intonation to allow for such a classification of sentences. But so far no research in this field has been published. We must therefore be content with the general observation that for a Hebrew sentence to be interpreted as a question it must be said with a rising tone,

particularly toward the end, and in any case the last syllable must be heard as being on a higher pitch than the penultimate. On the other hand, in a declarative sentence the last syllable is lower in pitch than the penultimate. Specific questions vary and it is difficult to state what their characteristic intonation patterns are. However, it is important to point out that specific questions can function exactly as they are, as embedded (subordinated) sentences in a complex sentence, and then obviously they do not have an interrogative intonation.

3.22: THE SPEAKER'S ATTITUDE. The attitude of the speaker toward what is said in the sentence or toward one of the details in it, and the extent of his belief in what is said, can be expressed in three ways: (1) parenthetically, e.g., *הַסּוֹס, יִמּוּחַ שָׂמוּ, מִתְגַּרְהַ בִּי*, (The horse – damn it – is annoying me);

(2) by a verb, by a subordinating expression, or by a sentence, the sentence transmitting the main content being subordinated to them, e.g., *יִתְכַן שָׁמָּח יָרֵד שֶׁלֶג*, (It is possible that tomorrow snow will fall), *יְהִי רְצוֹן שֶׁתֵּלֵד אִשְׁתִּי זָכָר*, (‘‘May it be [God’s] will that my wife bear a male child’’), or *מִי יִתֵּן תְּבוּאָה שֶׁאֶלְתִּי (1) מִי יִתֵּן*, (‘‘Would (lit. who will give) that my desire be fulfilled’’). See also Subordinators in 6.321: Links beyond the Sentence – אֲשֶׁר; (3) through certain auxiliaries (modal auxiliaries) that are attached to the nucleus of the predicator, e.g., *מִסְפַּר הַמּוֹרְדִים עָלּוּל לִגְדֹל*, (The number of rebels may increase). See 4.45: Infinitive as Object.

4: THE PARTS OF THE SENTENCE

4.0: A Syntactic Framework

A syntactic analysis of surface structure means the identification of a string of words as a sentence and the identification of the function in the sentence of each word or group of words. The process of identification and analysis will be better understood if the sentence is compared to an elastic frame that can be expanded as required. The frame contains a string of words and each word or group of words appears within an inner frame, a frame symbolizing a part of the sentence. This conceptual framework underlies the definitions given above of types of sentences. Identification of a word's function in a sentence means determining in which inner frame to put the word; identification of sentence type means recognizing the composition of the inner frames in the external, sentence frame. The structure of the sentence is illustrated as follows with each term designating a frame making up a part of the sentence:

Note: The order of the parts of the sentence given from right to left is not intended to represent their actual order. On this, see below.

The frames shown here are filled with words. They are “elastic,” that is to say they can “stretch” and contain more than one word. When one or more frames of the parts of the sentence is filled by a sentence, the sentence frame covering all the frames is termed a “complex sentence” and the sentence filling one of the parts of the sentence is termed an “embedded sentence.” The features of an “embedded sentence” are generally the same as those of other sentences. An embedded sentence can itself contain within one of its internal frames another embedded sentence. This feature of the sentence – its recursiveness – allows for the possibility, at least theoretically, of expanding it to an infinite length.

4.1: The Division into the Primary Five Parts

Traditionally, Hebrew syntax distinguishes five parts of the sentence: (1) subject, (2) predicator, (3) adjunct, (4) object, (5) adverbial. It should be noted that this does not correspond to the division into subject and predicate, which is traditional in the grammars of many languages. On this, see 4.2: Subject and Predicator; 4.21: Predicator and Predicate. The first two parts are called the principal parts of the sentence, and the other three the subsidiary parts of the sentence or complements. The adjunct is complement to any noun whatever its function may be; the object and adverbial are complements to the predicator, but see 4.53: Sentence Adverbial. Some parts of the sentence are traditionally subclassified. A distinction must be made between two types of subclassification: (1) a part of the sentence is designated variously according to the nature of the words realizing it, e.g., the usual distinction between different kinds of adverbial: place, time, cause, result, etc.; (2) a part of the sentence is itself divided into two parts, each of which denotes a different syntactic functions, e.g., a predicator can be said to be composed of two parts: copula and predicator. (Some designate as extended predicator the part of the sentence comprising both of these.) The first type of classification is generally based on non-syntactic surface-structure features. For example, the distinction between place adverbial and time adverbial is determined merely by the meaning of the word filling the frame adverbial. A frame complementing a verb and filled by *אתמול* (yesterday) or *אַחֲרֵי אַרְבָּעִים יוֹם* (after 40 days) is called time adverbial, whereas if it is filled by *כֵּן* (here) or by *בְּרֹחֹב פְּלוּגֵי* (at X Street) it is called place adverbial. It is doubtful whether such a classification is relevant to the surface structure analysis, though obviously there are many occasions even here when it is necessary to make such distinctions (cf. 4.5: Adverbial). On the other hand, the classification of a part of the sentence into different internal parts is clearly relevant to all levels of syntax, since each part fulfills a different syntactic function and is distinct from the other parts of the sentence. For example, it is not enough to say that the phrase *מֵתְחִיל לְהִרְאוֹת מְעִיִּן* (begins to seem interesting) is the predicator in the sentence *הַשְּׁעוֹר מֵתְחִיל לְהִרְאוֹת מְעִיִּן* (The lesson begins to seem interesting). To describe the internal composition of this part of speech: one part functions as predicator-nucleus (*מְעִיִּן* – interesting), while the others are attached

to it, their function being to express the aspect (*מֵתְחִיל* – begins) or the modality (*לְהִרְאוֹת* – to seem) of the predicator-nucleus. These deserve attention from writers on syntax and an appropriate term, such as predicator-auxiliaries. Generative rules are needed for the ways in which the predicator-auxiliaries combine with the predicator-nucleus. Unfortunately, this area has not yet been sufficiently investigated in Hebrew. In the literature on Hebrew syntax there are only a few scattered remarks on such distinctions. In what follows each of the traditional parts of the sentence is surveyed in turn, with comments where possible on any subclassification.

4.2: Subject and Predicator

In syntax it is usual to define these two parts of the sentence in relationship to each other. The justification for doing so is that what determines whether a word fulfills the function of subject is the existence of a relationship between that word and another word with the function of predicator in the sentence. This relationship called Nexus by Jespersen – whether it exists between words actually appearing in the sentence or whether it exists only in the deep structure of the sentence – is a necessary condition for sentence status. It is not, however, a sufficient condition, since some types of Nexus appear in a frame which is not a “sentence,” though it is the consequence of a transformation applied to a sentence, e.g., *הִלִּיכַת הָרוֹפֵא* (the doctor’s walk) derived from *הָרוֹפֵא הִלֵּךְ* (the doctor walked) or *אֲנִי חוֹשֵׁב אוֹתוֹ לְחָכָם* (I consider him wise) the last two words of which are derived from *הוּא חָכָם* (He is wise). It is usual to define subject and predicator semantically, e.g., “The subject is the word denoting the substance spoken about in the sentence, the predicator is what is said about this substance.” However, the question that the speaker is posing is not always amenable to an unequivocal answer. Moreover, sometimes it is clear that what is being spoken about in the sentence is not denoted by the word that is subject, but by a word with a different syntactic function. For example, in the sentence *חַם לָהּ* (She is warm, literally, Warm is to her) the topic of the sentence is third person singular feminine, but the corresponding pronoun is not the subject of the sentence. As elsewhere in syntax, one ought to use formal rather than semantic criteria to define “subject,” “predicator,” and the other parts of the sentence. If a straight definition (such as “The subject is...”) seems too difficult, we can define the parts of the sentence operationally. The following is an example of such an operational definition of subject and predicator (following Ornan, *The Syntax of Modern Hebrew*): If one has a word that by itself constitutes a sentence, and if (1) the word is a verb, and one can substitute for it a combination of that verb and a subjective pronoun – *הוּא* (he), *הִיא* (she), etc., agreeing with it in gender and number, and this combination is likewise a sentence, then in this new sentence-frame the function of the subjective pronoun is termed “subject” and that of the verb is termed “predicator”; or if (2) the word is a noun, and one can substitute for it a combination of that noun and the verb *הָיָה* (be) agreeing with the noun in gender and number, and this combination is likewise a sen-

tence, then in this sentence-frame the function of the noun is termed “subject” and that of the verb is termed “predicator.” (On concord, see 5.11: Concord Between Subject and Predicator.) Substitution is an important factor in this definition. Indeed, it is a central principle in structural linguistics. According to this principle, words, phrases, or parts of words that are substitutable within a given frame, form a grammatical class. The above definition can be extended by the method of substitution to include all the words or phrases filling the function of subject in the given frame and all those filling the function of predicate. For that purpose the above definition must be supplemented: “Any word, or group of words, that can replace a word filling the function of subject, likewise fills the function of subject, provided that the resultant sentence does not thereby become deviant.” A corresponding addition can be made for the definition of the predicator.

4.21: PREDICATOR AND PREDICATE. As noted above the division of the sentence usual in Hebrew syntax differs from that usual in the grammars of many languages, though Hebrew grammarians have not sufficiently considered the difference. In particular, a distinction should be made between the Hebrew concept *נְשׂוּא* (predicator) and the general concept “predicate.” The parts of the sentence in the predicate are the predicator, the object, the adverbial, and any adjunct to these parts. The predicator is the nucleus of the predicate, with all the other parts in the predicate the complements of the predicator.

4.22: THE COPULA. The predicator itself can be expressed by more than one word. Modal or aspectual predicator-auxiliaries were mentioned above (in 4.1: The Division into the Primary Five Parts, cf. 4.5: Adverbial). To these should be added the past and future forms of the verb *הָיָה* (be), since when the predicator is expressed by a noun or participle these may be combined with it to denote time, e.g., *וַיְהִי עֹבֵד אֲדָמָה*, *וַיְהִי עֹבֵד אֲדָמָה* (Cain was a tiller of the earth). In this use the verb *הָיָה* fills the function of copula, which is also considered a predicator-auxiliary. Similarly, the forms of the third person pronoun – *הוּא*, *הִיא*, *הֵם*, *הֵן* – are used as copulas. This type of copula is used for emphasis (but 5.23: Copula Concord). Some consider the negative word *אֵין* as a copula, since “like the third person pronouns” it can be combined only with a noun or a participle (see below). However, it is more correct to consider as copula only the pronominal attached to this negative word. Thus, it is true that there is a copula in the sentence *אֵסְתֵּר אֵינָהּ מְגַדֶּת* (Esther does not tell), but it is the pronominal suffix in *אֵינָהּ* (literally she-not), while in *אֵין אֵסְתֵּר מְגַדֶּת* there is no copula. It should also be noted that *הוּא*, *הִיא*, *הֵם*, *הֵן* can be combined with the predicator even when it is a verb in the past or future, e.g., *עָצַת יְהוָה הִיא תְּקוּמָה* (see 4.25: Attributive Sentence; 4.26: Focusing Sentence; 5.23: Copula Concord).

4.23: NOMINAL SENTENCE AND VERBAL SENTENCE. It is usual in Hebrew syntax to distinguish between nominal sen-

tences and verbal sentences according to whether the predicator is a noun or verb. This distinction was borrowed from Arabic syntax, but in Arabic it depends on the first word of the sentence: if it is a noun, the sentence is nominal; if it is a verb, the sentence is verbal. Opinions differ when the predicator in Hebrew is a participle. In earlier Hebrew the participle was regarded as a noun and hence a sentence whose predicator was a participle was considered a nominal sentence. However, in modern Hebrew the status of a participle having the function of a predicator is identical with that of a verb, and consequently it is doubtful whether it is correct to consider such a sentence in modern Hebrew as a nominal sentence. Opinions also differ when the predicator consists only of a prepositional phrase, as in *הַיֶּלֶד בְּבַיִת* (The boy [is] in the house). Generally, books on Hebrew syntax assign such sentences to the class of nominal sentences. Some maintain that a sentence whose predicate is a prepositional phrase has no predicator and therefore it cannot be a nominal sentence, but instead should be termed a verbal sentence without a predicator. The presence or absence of predicator (expressed by a verb) is the sole difference, according to this view, between these sentences and sentences such as *הַיֶּלֶד יָשַׁב בְּבַיִת* (The boy sat in the house), *הַיֶּלֶד הָיָה בְּבַיִת* (The boy was in the house). The word *בְּבַיִת* (in the house) serves in the sentences exactly the same function of complement to the predicator (in this instance, adverbial).

4.24: IDENTIFYING SENTENCE. Nominal sentences (in the restricted meaning of the term) where the state of determination of the subject and predicator is the same – whether they are both determined or both undetermined – are called equative or identifying sentences. With such sentences, e.g., *מִלְחָמָה הִיא מָוֶת* (War is death), it is sometimes impossible to decide which is subject and which is predicator except by the context. At all events, each of the parts identifies the other, the predicator being called the identifying predicator. Of particular interest are cases where the second part of the sentence is realized by a subordinate sentence, e.g., *יְהוָה אֱלֹהֵיכֶם הוּא הַנִּלְחָם לְכֶם* (The Lord your God is the one who fights for you). There is no basis for the view that in such a structure the first part *יְהוָה אֱלֹהֵיכֶם* is always the subject and the second part *הַנִּלְחָם לְכֶם* is the predicator. On the contrary, the first part usually has the function of predicator.

4.25: ATTRIBUTIVE SENTENCE. When the subject is determined and the predicator is undetermined, the predicator's function is to attribute what is denoted in the subject to the class possessing the characteristic denoted by the predicator, e.g., in *יֹסֵף הוּא פְּקִיד* (Joseph is an official) the attribution is to the class of officials. Such a predicator is termed an attributive predicator.

4.26: FOCUSING SENTENCE (EXTRA-POSITION). This last structure formally belongs to the focusing sentence structures, but this term is usually assigned to sentences such as *אֵישׁ אֵינוֹ שָׁם לֵב אֲלֵיהֶם* (The veterans – nobody

pays any attention to them) or **סבא – הוא אינו מתעייף לעולם** (Grandpa – he is never tired). The structure of such a sentence is explained in current syntax as the result of a transformation from another sentence in which the first word of the focusing sentence appears in the second part of the sentence in place of the pronoun that agrees with it in gender and number: **איש אינו שם לב אל הוותיקים** (Nobody pays any attention to the veterans), **סבא אינו מתעייף לעולם** (Grandpa is never tired). With a focusing sentence (in the restricted sense of the term) the first word, or first endocentric phrase, is always to be considered the subject of the sentence, while whatever comes after it is the predicate. The predicate itself is an embedded sentence, and hence the focusing sentence is always a complex sentence. Others maintain that the focusing sentence is merely a simple sentence with a change in the order of the words. In any case, all agree that the noun appearing initially in a focusing sentence is very much more emphasized than it would be in a simple sentence.

4.27: INDEFINITE SENTENCE. It is worth noting that there are sentences without a subject, in particular where the predicator-nucleus is realized by an infinitive linked to a modal auxiliary, e.g., **אפשר להבחין בקר מיד** ([It is] possible to discern it immediately), cf. 4.45: Infinitive as Object. However, many will argue that **אפשר** (possible) alone is predicator, and the string of all the other words in the sentence is the subject. In any case, this sentence is an indefinite sentence, that is to say a sentence whose understood subject is any man or men in general.

4.3: Adjunct

The adjunct differs from the other parts of the sentence in that by definition it cannot serve as nucleus for another part of the sentence, nor can it be linked to any part except a noun, irrespective of what function the noun fills in the sentence. Any word to which an adjunct serves as a nucleus, is considered in Hebrew syntax also as an adjunct.

4.31: MORPHOLOGICAL CLASSIFICATION OF ADJUNCTS. From a morphological point of view, seven types of adjunct can be distinguished:

(1) attributive adjunct; (2) possessive pronoun adjunct (whether affixed or independent); (3) adjunct in the construct case; (4) prepositional phrase adjunct; (5) adjunct before nucleus; (6) appositive; (7) embedded sentence. These types are exemplified as follows:

- (1) **האיש הזקן הזאין בסבלנות** (The old man listened patiently);
- (2) **הכובע שלי נפל למים** (My hat fell into the water);
- (3) **קירות הבית מכסים אזוב** (The walls of the house are covered with moss);
- (4) **הזקן מנחריים הקים את המפעל** (The old man from Nahrayim set up the enterprise);
- (5) **שלושה סוסים דוהרים** (Three horses are galloping);
- (6) **ראובן, הבכור, ירד למצרים** (Reuben, the firstborn, went down to Egypt);

(7) **הנער, שלא ידע בין ימינו לשמאלו, הסכים ברצון** (The lad, who could not distinguish between his right and left, agreed willingly).

All these types of adjunct appear to be transformed from other structures. With uncertainty as to the source of adjuncts of type (5), all have their source in the predicator (cf. 5.12: Predicator Transformed into Adjunct) or, in some cases, in another part of the predicate. Thus, the following set of sentences can be seen as the source of the adjuncts in the above examples:

- (1) **האיש זקן; הוא הזאין בסבלנות** (The man is old; he listened patiently);
- (2) **יש לי כובע; הוא נפל למים** (I have a hat; it fell into the water);
- (3) **יש קירות; הם מכסים אזוב** (The house has walls; they are covered with moss);
- (4) **הזקן גר מנחריים (קשור מנחריים); הוא הקים את המפעל** (The old man lived in Nahrayim (he is connected with Nahrayim); he set up the enterprise);
- (5) **ראובן הוא הבכור; הוא ירד למצרים** (Reuben is the firstborn; he went down to Egypt);
- (6) **הנער לא ידע בין ימינו לשמאלו; הוא הסכים ברצון** (The lad could not distinguish between his right and left; he agreed willingly). At present it is not clear what the source is for an adjunct denoting quantity. On concord with the adjunct, see 5.12: Predicator Transformed into Adjunct, and 5.3: Determiner Concord.

4.32: RESTRICTIVE AND NONRESTRICTIVE ADJUNCT. Only a few works dealing with Hebrew syntax mention the distinction between restrictive adjunct and nonrestrictive adjunct, sometimes merely to indicate that a nonrestrictive adjunct “is not an adjunct.” An example of a restrictive adjunct would be if a man having three sons and wanting to say something about the eldest says **בני הגדול לומד כבר באוניברסיטה** (My grown-up son is already studying at the university). The function of the word **הגדול** (grown-up) is that of restrictive adjunct, distinguishing this son from the others. An example of a nonrestrictive adjunct would be if a man with one son wants to say something about him and wants incidentally to mention that he is grown-up; he says **בני הגדול לומד כבר באוניברסיטה** (My grown-up son is already studying at the university). The function of the word **הגדול** (grown-up) is then that of nonrestrictive adjunct. This distinction is important, and in practice has also a formal expression, particularly in intonation, but sometimes also in punctuation. There is no pause between the nucleus and a restrictive adjunct: the pitch of the latter rises slightly, and it has greater stress. On the other hand, there is a slight pause between the nucleus and a nonrestrictive adjunct: the pitch of the latter falls slightly, and it has a lighter stress. If the nonrestrictive adjunct is long, it is usual to put a comma before it. Usually there is no comma before a restrictive adjunct, even when it is a subordinate embedded sentence (despite the official rules for punctuation, which require a comma before every adjunct that is a sentence).

The structural ambiguity of the adjunct can be explained in transformational grammar. The adjunct is transformed from the predicate of another sentence, this sentence being the continuation of a preceding sentence. The same subject serves these two sentences, both of which are deleted by a deletion transformation and hence do not appear in the text. But the subject of the second sentence does not always refer to the same quantity of substances or material that the subject of the first sentence refers to. When it refers to a lesser quantity, the adjunct in the transformed sentence is a restrictive adjunct; when it refers to the same quantity, the adjunct is nonrestrictive. The sources of the above examples are therefore in the following two sets of sentences:

- (a) He has three sons. **יש לו שלושה בנים**
 One of them is grown-up. **אחד מהם גדול**
 He is studying at the university. **הוא לומד באוניברסיטה**
 His grown-up son is studying at the university (restrictive adjunct). **בנו הגדול לומד באוניברסיטה**
- (b) He has one son. **יש לו בן אחד**
 He is grown-up. **הוא גדול**
 He is studying at the university. **הוא לומד באוניברסיטה**
 His grown-up son is studying at the university (nonrestrictive adjunct). **בנו הגדול לומד באוניברסיטה**

4.33: POSSESSIVE PRONOUN AS ADJUNCT. Some explanatory comments on several of the types of adjuncts enumerated above are called for. The possessive pronoun as adjunct: in “deep grammar” its source is in a sentence denoting possession, e.g., **יש לו אח** (He has a brother) → **אחיו** or **שלו** (his brother). The possessive pronoun affix, e.g., in **אחיו**, and the independent possessive pronoun, e.g., **שלו**, are not entirely free variants, but sometimes the appearance of one or the other is conditioned (see below). It is worth noting that in written Hebrew the use of the affix is between ten and fifteen times more frequent than the use of the independent form. As far as can be ascertained from the few studies in this area, the use of the affix is greater in spoken Hebrew, but more substantial studies are required before one can establish the relative frequency with any certainty.

The most obvious conditions favoring the appearance of the independent form of the possessive pronoun are the following:

- (1) when a second possessive pronoun is used to emphasize an affixed possessive pronoun, e.g., **פרמתי שלי לא נטרתי** (I did not tend my own vineyard);
- (2) when the nucleus is a proper noun, e.g., **לא יעזב ולא יטש את מנדלי שלו** (He will not desert his Mendele);
- (3) generally with a foreign or borrowed word, e.g., **הטלפון שלו מצלצל** (His telephone is ringing);
- (4) with a noun-numeral, e.g., **בשנות השלושים שלו** (In his thirties);
- (5) with a noun in the construct state, e.g., **דירת השרד שלו** (His official residence);
- (6) with a word that was not originally a noun, e.g.,

אתה מוכן להפר את הברגו שליך? (Are you ready to cancel your anger?);

- (7) with a phrase that is used metaphorically, e.g., **גם בארבע אמות שלנו** (Even within our “four cubits”);
- (8) when the nucleus has two meanings and the rarer meaning is intended, e.g., **העיר התפרסמה בצדיקים שלה** (= **באדמורים**) (The city was famous for its “pious men” = ḥasidic rabbis);
- (9) when the nucleus is used euphemistically, e.g., **זאת מציעים לי ה“ידידים” שלי!** (My “friends” suggest it to me!). Haim Rosén (see bibliography) has argued that the difference in usage between the two forms corresponds to the difference between inalienable possession (e.g., the family relationship or the parts of the body) and alienable possession. This proposal seems dubious.

4.34: THE CONSTRUCT STRUCTURE. An endocentric phrase consisting of nouns, or words that have nominal function, the order of which cannot be changed without changing the meaning of the phrase, is said to be in the construct state. This phrase may be in three structures:

- (1) Close construct state, when two nouns are linked without interruption (except for the definite article), e.g., **בית האיש** (The man’s house). On the changes in form of the first noun, see above, Morphology. The second noun does not change.
- (2) Loose construct state when the word **של** interrupts between the two nouns, e.g., **הבית של האיש** (The house of the man).
- (3) Reduplicated construct state, when a possessive pronominal affix agreeing in gender and number with the second noun is attached to the first noun, and the word **של** is put between the nouns, e.g., **ביתו של האיש** (The (his) house of the man). The two last structures are termed dismembered construct states. There are other ways as well of making the construct state discontinuous, for example by the preposition **ל** or **מן**, e.g., **צנצנת מזכוכית** (A glass container). It is difficult to say under what conditions the three types of construct states are in free variation and when one of them must be used. But it is clear that there are certain phrases that can only be used in one type of construct state, e.g., **הקמת הבית** (the inauguration of the home), **זוטו של ים** (the floor of the sea). With other phrases, the meaning changes if a different type is used, e.g., **זה דבר המפקד** (This is the message of the commander), **זה דבר של המפקד** (This item belongs to the commander); **בן עשרים** (twenty years old), **בנם של עשרים** (the son of twenty). In a construct state consisting of two words the nucleus is usually the first word, while the second word is the adjunct, e.g., **עבודת אלילים** (the worship of idols). For other possibilities, see 4.36: Adjunct before the “Head.” If it consists of three or more words, usually the second and later words are each adjunct to the immediately preceding word, and the combination is in turn adjunct to the immediately preceding word. For example in the phrase **עבודת אלילי זהב** (the worship of idols of gold), **זהב** (gold) is adjunct to **אלילים** (idols) and **אלילי זהב** (idols of gold) is adjunct to **עבודה** (worship):

In an analysis of surface structure, the words in construct state are classified semantically; in deep grammar they can be classified according to the function they perform in the underlying structure from which the construct state has been transformed.

4.341: *Classification of Types of Construct Structure.* The following are the chief meanings attributed to the *nomen rectum* (the last noun of the construct phrase; following Perez): (1) the owner of what is denoted by the *nomen regens* (the last but one of the phrase), e.g., גַּן הָאֲכָר (the farmer's garden); (2) the material from which is made what is denoted by the *nomen regens*, e.g., כְּלֵי כֶסֶף (vessels of silver); (3) the genus of what is denoted by the *nomen regens*, e.g., עֲצֵי שֵׁטִים (trees of acacia wood); (4) the characteristic of the *nomen regens*, e.g., לִשׁוֹן שֶׁקֶר (an expression of falsehood); (5) the limit of application for the characteristic expressed in the *nomen regens*, e.g., נְקֵי כַפַּיִם (clean of hands); (6) the content of the *nomen regens*, e.g., סִפְרֵי מוֹסֵר (books of ethics); (7) the agent of the action expressed as a verbal noun in the *nomen regens*, e.g., נְשִׁיכַת שׁוּעָל (the bite of a fox); (8) the object of the action expressed as a verbal noun in the *nomen regens*, e.g., הַדְּלָקַת נֵר (the lighting of a candle); (9) the instrument used for the result expressed in the *nomen regens*, e.g., שְׂרוּפוֹת אֵשׁ (burnt by fire); (10) the place of the *nomen regens*, e.g., אֲרָזֵי לְבָנוֹן (cedars of Lebanon); (11) the time of the *nomen regens*, e.g., חֲזוֹן לַיְלָה (the vision at night); (12) the cause for the fact in the *nomen regens*, e.g., חוֹלַת אֶהְבָּה (sick through love); (13) the result of the *nomen regens*, e.g., גֶּשֶׁמִּי בְרָכָה (rains of blessing); (14) the purpose of the *nomen regens*, e.g., מִזְבֵּחַ קֶטֶרֶת (altar of incense). In addition, sometimes the *nomen rectum* denotes the name of the *nomen regens*, e.g., נְהַר פָּרַת (the river of Euphrates), and sometimes it emphasizes the *nomen regens* or its quantity by repetition of the same word in the plural, e.g., עֶבֶד עֶבְדִים (slave of slaves). When the *nomen regens* is בעֵל (master) or אֲדוֹן (lord) the *rectum* is its property (the converse of 1 above). According to transformational theory every phrase in the construct state is a transformation from another structure, for example (cf. Ornan):
 (The farmer has cows) פְּרוֹת־הָאֲכָר → לְאֲכָר־יֵשׁ פְּרוֹת
 (The fish has a sword – its characteristic) לְדָג־יֵשׁ חֶרֶב → דָּג־הַחֶרֶב
 (The pen is made of iron) עֵט־בְּרוֹזֶל → הָעֵט עָשׂוּי מִבְּרוֹזֶל
 (The moon is in the form of a sickle) הַיָּרֵחַ הוּא בְּצוּרַת חֶרְמֶשׁ → חֶרְמֶשׁ־הַיָּרֵחַ
 (The land is called “Canaan”) אֶרֶץ כְּנַעַן → הָאֶרֶץ נִקְרָאת “כְּנַעַן”
 (The Jordan flows through the valley) הַיַּרְדֵּן זוֹרֵם בְּתוֹךְ בְּקָעָה → בְּקָעַת־הַיַּרְדֵּן
 (The child is healthy) בְּרִיאוֹת הַיֶּלֶד → הַיֶּלֶד בְּרִיא

(Jackals howl) יִלְלַת תְּנִים → תְּנִים מִיְלָלִים
 (The dog (habitually) guards the flock) הַכֶּלֶב שׁוֹמֵר אֶת הַצֹּאן
 → כֶּלֶב צֹאן
 (The old man walks in the morning) הַזָּקֵן מֵטִיל בְּבֹקֶר → טִיֵּל הַבֹּקֶר (שֶׁל הַזָּקֵן)

Since the structure of the construct state can be transformed from a large number of different sources, it is clear that it has a large number of possible meanings. However, in practice many meanings are ruled out, since the speaker knows the meanings of the words and the context in which the structure appears. There is in fact no ambiguity in a construction such as פְּרוֹת הָאֲכָר (the farmer's cows) since the meaning of the words allows only one possible interpretation, namely that the farmer is owner of the cows (and not the reverse, for example). Nevertheless, there are instances where the construct state is ambiguous. This might arise, e.g., when the *nomen regens* is a verbal noun derived from a transitive verb, since the *rectum* can then be agent of the action (subject in a background sentence) or recipient of the action (object in a background sentence). For example, בחִירַת הַנְּשִׂיא (the choice of the president) could be interpreted as a transform of הַנְּשִׂיא בָחַר (The president chose) or (מישהו) בָּחַר אֶת הַנְּשִׂיא (X chose the president). It has been claimed that in such cases the close construct state is selected for one meaning and the loose one for the other, בְּחִירַת הַנְּשִׂיא being interpreted solely as “X chose the president” while the transform of “the president chose” would be הַבְּחִירָה שֶׁל הַנְּשִׂיא (cf. Haim Rosén in the bibliography). An examination of considerable material drawn from newspapers and modern literature does not support the claim.

4.35: PREPOSITIONAL PHRASE ADJUNCT. An adjunct realized as a prepositional phrase is the result of one or the other of two transformations:

4.351: *Prepositional Phrase Adjunct as Sentence Remnant.* (1) It may be a remnant of a sentence in which it functioned as an adverbial. When the sentence is embedded in another sentence, the subject and predicator are deleted and the adverbial becomes an adjunct to the subject of the other sentence. This is illustrated in the following example:

It is worth demonstrating how this explanation appears in the usual formulation of the generative-transformationalists. The two sentences are first placed one after the other:

Representation of האוטובוס יאחר לצאת

(The bus will leave late): NP_i + VP_j

Representation of האוטובוס נוסע לירושלים:

(The bus travels to Jerusalem): NP_i + VP_k + PP

NP_i + VP_j + NP_i + VP_k + PP

(1) (2) (3) (4) (5)

However, under certain conditions (e.g., when the subjects of the two sentences are two instances of the same nominal structure, if the referent of the subject is identical in both sentences), a transformation applies which changes the order of the words. In place of the order given above (left to right) the words are ordered (1) (3) (4) (5) (2), i.e.:

NP_i + NP_i + VP_k + PP + VP_j

The second sentence is parenthetically included, as it was, in the first: האוטובוס (האוטובוס נוסע לירושלים) אחר לצאת. Now an obligatory transformation applies, which deletes the second instance of NP, and adds instead a relative (אשר, ש, or ה). The result is NP_i + *š*e + VP_k + PP + VP_j, i.e., האוטובוס שנוסע לירושלים אחר לצאת. However, this sentence can again be transformed as follows:

Structural Description: NP_i + *š*e + VP + PP + VP_j

Structural Change: (1) (2) (3) (4) (5)

(1) ∅ ∅ (4) (5)

The relative *š* and the internal predicator VP are deleted, leaving only NP_i + PP + VP_j: האוטובוס לירושלים אחר לצאת

4.352: Prepositional Phrase with Verb Transformed to Noun.

(2) The prepositional phrase is a remnant as before. However, the verb which is complemented is not deleted, but transformed into a noun, the phrase changing from complement of a verb to complement of a noun, that is to say an adjunct. For example:

adverbial adjunct
הליכתו לבית הספר → הוא הלך לבית הספר
הטיול בבקר → הילדים טילו בבקר

We should treat as a special case prepositional phrase adjuncts introduced by מן (= מ) (from) when they designate the place of origin or of action of what is denoted by the noun serving as nucleus, e.g., הנקן מנָהָרִים (the old man from Naharayim), המכשפה מפָּרִיס (the witch from Paris). It is not clear what is the source sentence from which these adjuncts are transformed.

4.36: ADJUNCT BEFORE THE "HEAD" (CENTER, NUCLEUS).

A pre-nucleus adjunct generally denotes quantity, and it comprises cardinals, dividers, measures, and words such as הרבה (much), רב (the majority of), שאר (the rest of), קצת (a little), מִבְּחַר (the best of).

Cardinals agree with the nucleus in gender, and in the case of units of measurement, also in number, e.g., חמשה אנשים (five men), חמש אמות בד (five cubits linen), שנים עשר דינאם אדמה (twelve dunams of land). The numbers 3–10 are likely to be in the construct state before the nucleus, especially when the latter is determined, number 2 generally so, while number 1 appears after the nucleus when the latter is singular (איש אחד), and in the construct state before the nucleus when it is determined and plural (אחד האנשים).

Nouns for containers, such as בקבוק (bottle), פח (can), may serve as measuring units for liquids or for bulk solids such as קמח (flour), or פירות (fruit), provided the reference is to mass-produced vessels of fixed size, e.g., הקבית מכילה שלושה פחים (The barrel contains three cans), ארבע תבות תפוזים (four boxes of oranges). It has not yet been established whether there is in modern Hebrew a systematic semantic difference (as Haim Rosén has claimed) between measures appearing in a close construct state, e.g., שני שקי קמח (two sacks of flour), in a loose construct state, e.g., שני שקים של קמח, or in apposition, e.g., שני שקים קמח. Similarly nouns for shapes, provided reference is to shapes with a more or less fixed size, can serve as measures for solids, e.g., שני כפרות לחם (two loaves of bread).

4.37: APPPOSITION. Two nouns one of which has the function of adjunct to the other, but without their being in the construct state relationship, are said to be in apposition. An appositive is transformed from a noun predicator. If the predicator from which it is transformed functioned as identifier in an identifying sentence (cf. 4.24: Identifying Sentence), the appositive also functions as an identifying appositive, e.g., היא נמצאת (Miriam is the matron). היא נמצאת (Miriam is on leave) → היא נמצאת (Miriam, the matron, is on leave). When the predicator is attributive (cf. 4.25: Attributive Sentence), the appositive is an attributive appositive, e.g., לוי הוא ד"ר למשפטים (Levi is a doctor of law). הוא התמנה למרצה (He has been appointed lecturer) → לוי, ד"ר למשפטים, התמנה למרצה (Levi, a doctor of law, has been appointed lecturer). Books on syntax generally note that the appositive follows the nucleus. Hence, in שלמה המלך (Solomon the king), המלך is said to be appositive, while in המלך שלמה (King Solomon), the proper noun שלמה is said to be appositive. But on the basis of the semantic identity of the two phrases, it has been proposed that an attributive noun denoting status, occupation, or title that is attached to a proper noun should be considered an appositive even when it precedes the proper noun, e.g., הד"ר למשפטים לוי התמנה למרצה (Doctor of Law Levi has been appointed lecturer). In such cases the appositive has a determiner.

As with the adjectival adjunct, all appositives can be divided into restrictive and nonrestrictive. Other types of appositives are appositional compounds, e.g., מטה = ברסה (divan bed) and quantifying apposition, e.g., שלושה אנשים (three men). Certain introductory expressions appear before identifying appositives, e.g., כלומר (that is to say), דהיינו (that is), especially). Another characteristic of the identifying appositive is that the preposition before the nucleus is sometimes repeated before the following appositive. It seems that this only applies when the appositive is nonrestrictive. Such a repetition is obligatory when the nucleus is a pronoun and the following appositive is a noun, e.g., אמרו עליו על רבי עקיבא (They said about him, about Rabbi Akiva).

4.38: RELATIVE CLAUSE. An adjunct sentence is a transformation of a complete predicate and not just of a predicator, e.g., המחזה העלה אמש לראשונה (The play was put on last night

for the first time). *הוא ודאי יזכה להצלחה* (It will certainly meet with success) → *המחזה שהעלה אמש לראשונה ודאי יזכה להצלחה* (The play which was put on last night for the first time will certainly succeed). The condition for this transformation is that the noun appearing in one sentence will also appear in the other sentence. In the transformed adjunct sentence this noun is deleted and is replaced by a pronoun agreeing with it in gender and in number. However, if the noun functioned as subject of the sentence before its transformation, then generally gender and number concord with the predicator is sufficient and a pronoun is not inserted. See further on this, 5.22: Pronoun Concord in a Relative Clause. The indicators of the subordination of the adjunct are *אשר* and *ש* (virtually in free variation), and *ה* under certain conditions (cf. 6.32: Subordinators in Links beyond the Sentence). Adjunct sentences may also be asyndetic, cf. 6.322: Word Order in Links Beyond the Sentence. Another category of adjunct sentence must also be distinguished, namely the adjunct content-sentence, e.g., *ההשערה שיש חיים על המאדים נתבדחה* (The supposition that there is life on Mars has been proved false). The source for the content-adjunct is not in the predicate of a preceding sentence but in the object sentence of a preceding sentence. It is formed when the verb complemented by the object is converted into a noun. The source of the content-adjunct in the above example is in the object of the following sentence. *שערו שיש חיים על המאדים* (It was supposed that there is life on Mars) → *ההשערה שיש חיים על המאדים* (The supposition that there is life on Mars...), cf. the similar phenomenon in 4.35: Prepositional Phrase Adjunct and 4.352: Prepositional Phrase with Verb Transformed to Noun, a prepositional phrase as adjunct. There is no element in a content-adjunct which agrees in gender and number with the noun to which the adjunct is attached. Introducing words of the subordination of the content-adjunct are *ש* or *כי*. If the content-adjunct is transformed from a question, the interrogative word serves as an introducing word of subordination, e.g., *הוא דאג: מה יעשה בעיר הגדולה? זה לא נתן לו מנוח* (He worried: What would he do in the big city? This gave him no rest) → *הדאגה מה יעשה בעיר הגדולה לא נתנה לו מנוח* (The anxiety about what he would do in the big city gave him no rest). When the content-adjunct begins with an infinitive there is no other introductory word of subordination, e.g., *נבר אצלם הרצון להתבלט* (In them could be seen the desire to excel).

4.4: Object

Grammars of European languages and of Arabic, also accepted in Hebrew grammars, have long defined the object semantically (e.g., “The word denoting the substance to which the action expressed in the predicator passes is called the direct object. If the action is merely connected with it, the word is called the indirect object”).

4.41: OBLIGATORY COMPLEMENT AND OBLIGATORY PREPOSITION. The syntactic definition of an object is based on its being obligatory, or “close,” complements of the verb-predicator. Optional complements are adverbials (cf. 4.5:

Adverbial). In many instances it is possible to distinguish sharply between an obligatory complement, e.g., the prepositional phrase consisting of *ב* and a following noun as complement to the verb *השתמש* (use) and an optional complement, e.g., the same phrase as complement to the verb *הלך* (walk). *השתמש בחדר* (He used the room), as opposed to *הלך בחדר* (He walked in the room). Usually the preposition introducing an obligatory complement cannot be changed, for example, we cannot replace the preposition *ב* linked to the verb *השתמש* by another preposition. Sometimes there is a restricted range of permissible substitutions though generally only one additional preposition is allowed, e.g., *נתמנה ל... = נתמנה כ...* (He was appointed as...). Sometimes a change of preposition effects the meaning of the verb, e.g., *קנא ב...* (He envied) ... ≠ *קנא ל...* (He suspected). A preposition introducing an obligatory complement is called an obligatory preposition. It can be considered a part of the lexical entry for the verb. Although at first sight the obligatory preposition must always accompany its verb, there are certain conditions, apparently varying with particular items, under which it can be omitted. In all probability one should speak of varying degrees of obligatoriness in Hebrew (cf. 5.5: Obligatoriness). Moreover, the same verb may appear also without requiring a particular preposition. Since the obligatory preposition is part of the verb's lexical entry, it must be concluded that such a verb should be given two separate lexical entries, one when the obligatory preposition is a part of it, and the other when the verb appears without an obligatory preposition. Generally the two entries will have different meanings, e.g., *עבד* (He worked) – *עבד על* (He worked upon); *התגלגל* (He wandered around) – *... התגלגל ל...* (He was transformed into); *השתגע* (He became mad) – *השתגע אחרי* (He longed desperately for). The difference can cause ambiguities since a particular preposition not required by the verb in a certain occurrence can nevertheless be attached to it as an optional complement. Hence, the combination of the same verb and preposition can be followed by either an object or by an adverbial. In such instances, of course, the distinction is not so easy to make. At all events, dictionaries do not adequately distinguish between prepositions that are obligatory to a certain degree, and optional prepositions.

4.42: DIRECT AND INDIRECT OBJECT. The terms “direct object” and “indirect object” derive from European or Arabic grammars. They were originally intended to distinguish between objects preceded by a preposition and those linked directly to a verb without an intervening preposition. Hebrew, however, has a preposition – *את* – which appears before a direct object. Thus, the use of this term in Hebrew does not correspond to its original use. On the other hand, *את* generally appears only before an object which is a determined noun, and many writers point to this as justification for the use of the term in Hebrew. It has also been argued that *את* should not be regarded as a preposition at all, but merely as an indicator of determination. In practice there is no essential syntactic distinction between direct object and indirect object,

since all objects are obligatory complements. A subclassification of obligatory complements based on the nature of the obligatory preposition should include את, even though את can be replaced under certain conditions by ∅, which is merely a variant of את. It seems that here too the influence of foreign grammars has been excessive.

4.43: TRANSITIVE AND INTRANSITIVE VERB. These terms are entailed by the preceding terms. Generally, those defining object semantically will define “intransitive verb” and “transitive verb” semantically, e.g., “a verb whose action passes to another body is a transitive verb,” while an intransitive verb is a verb “whose action does not pass to others, but affects only the actor.” It is obvious that in such definitions “verb” means the lexical entry of the verb, comprising all its forms in all its occurrences. A moment’s thought will show, as Jespersen has shown, that the action of many transitive verbs does not pass to another body. The syntactic approach should be applied here too and each verb classified in the sentence in which it appears. That is to say, one should not refer to a verb in this respect as a concept comprising all the possible forms distinguished in the grammar, but as a given form appearing in a given sentence. The tokens of the verbs and not their entries or their types should be classified as transitive and intransitive. In the sentence המלך מעשן סיגר (The sailor is smoking a cigar), מעשן is considered a transitive verb since it has an obligatory (close) complement, while in the sentence המלך מעשן (The sailor is smoking) or המלך מעשן בלהיטות (The sailor is smoking eagerly) it is an intransitive verb since it does not have a complement or it has an optional complement.

4.44: FIRST AND SECOND OBJECT. When in the same sentence there are two objects with the relationship between them of subject-predicator, i.e., nexus (cf. 4.2: Subject and Predicator), it is usual to call them first object (the object performing the function of subject in that relationship) and second object (performing the function of predicator), e.g., הרופא חשב את החולה לבדאי (The doctor considered the patient an impostor), underlying which is the sentence החולה בדאי (The patient is an impostor). Only certain verbs can appear in such a sentence, verbs denoting the attitude or opinion of the person designated in the subject to what is designated in the first object. This attitude, or an action resulting from this attitude, is expressed in the second object. Thus, in the above the attitude of the doctor to the patient is expressed in בדאי (an impostor). Similarly, מוצא אני מר ממות את האשה (I find woman more bitter than death) – האשה (woman) is first object, מר ממות (more bitter than death) second object. Here another structure should be mentioned, namely sentences in which the object is a subordinate sentence beginning with a subordinator, e.g., הרופא חשב שהחולה בדאי (The doctor thought that the patient was an impostor). In biblical Hebrew the word הנה (behold) often opens the subordinate sentence, e.g., ופרעה חלם... והנה מן הניאר עלת שבע פרות (‘‘and Pharaoh dreamed... and, behold, there came up out of the river seven kine,’’ Genesis 41:1, 2) and וירא והנה חרבו פני האדמה (‘‘and he

looked, and behold, the face of the ground was dried,’’ Genesis 8:13). See also 4.51: Circumstance Adverbial.

4.45: INFINITIVE AS OBJECT. A complex sentence whose predicator is a verb denoting saying or thinking and whose object is an inner sentence, e.g., הבטחתי שאבוא (I promised that I would come) with שאבוא (that I would come) as object, can be expressed also as הבטחתי לבוא (I promised to come) with לבוא (to come) as object. The infinitive לבוא is transformed in this case from אני אבוא (I will come), containing subject and predicator. Sometimes the infinitive has its own complements, e.g., in the sentence המפקד דרש מן החילים להשמע לו (The officer required the soldiers to obey him), לו is object, obligatory complement to להשמע (to obey) while להשמע לו (to obey him) is object of דרש (required). However, sometimes an identical surface structure should not be treated in this way because the first verb in such a combination is an auxiliary verb while the infinitive is the nucleus of the phrase with the function of predicator. ‘‘Auxiliary verb’’ has a wider range in this sense than is accepted for some languages, including English. These verbs complementing the nucleus of the predicator comprise modals and aspectual verbs, viz. verbs denoting the speaker’s attitude toward the content of the sentence, the attitude of the person designated as subject toward the content of the rest of the sentence, or the point of time in the action, its duration, its recurrence, etc. For example: הגשר עלול להשבר (The bridge is likely to break), המפקד נאלץ להמתין (The officer was forced to wait), הגשר מתחיל להשבר (The bridge is starting to break), הגשם מוסיף לרדת (The rain continues to fall), האכר נוהג לשתות (The farmer is accustomed to drink). It ought to be added that besides the infinitive (the most usual form), the nucleus in such combinations may also take on such forms as participle, e.g., התחיל מפקפק (He began doubting); verbal noun preceded by the preposition ב, e.g., הרבה באכילה (He ate a lot, literally: He increased in eating); or finite verb identical in person and tense to the auxiliary, the two verbs being coordinated by the conjunction ו, e.g., חזר וקרא (He again read, literally: He returned and read); another aspect is expressed by repeating the same verb itself: הם הלכו והלכו (They walked for a long time). There have been hardly any studies in this area of Hebrew, and there is still no complete list or categorization of these auxiliaries.

4.46: INTERNAL OBJECT. An internal object is the term applied to a verbal noun functioning as object to a verb of the same root. The internal object is usually not an obligatory complement. It has one of two functions: (1) to emphasize the verb serving as predicator, e.g., למעל מעילה, לגנב לגול גזלה, למעל מעילה, לגנב (To embezzle (misuse), to rob, to steal – and to disappear). This use is a modern counterpart of the use of the infinitive absolute in biblical Hebrew, e.g., הלוך הלוך העצים (The trees have surely gone); (2) to serve as nucleus to an adjunct when the combination of nucleus and adjunct functions as adverbial to a predicator, e.g., the phrase ומאששת (a heavy and firm sitting) in the sentence ישב הכפרי ישיבה ומאששת (The villager sat heavily and firmly). A direct

object is usually not determined, and therefore the preposition **אֶת** rarely precedes it.

4.5: Adverbial

The adverbial is an optional complement of the predicator (or of the sentence as a whole, cf. 4.53: Sentence Adverbial). Adverbials generally begin with a preposition, if we exclude a few words considered adverbs, e.g., **פה** (here), **אתמול** (yesterday), **יחדו** (together), **היטב** (well), or temporal words, e.g., **יום** (day), which in this function generally appear without anything added before them (though two adjacent instances of such words may appear, e.g., **יום יום** (every day), **שנה בשנה** (year by year), similarly **טפין טפין** (drop by drop)) and if we exclude the locative expressed by a noun to which is added an unstressed *a*, e.g., **צפונה** (northwards), **הביתה** (home(wards)). The prepositions used for this purpose are the same prepositions introducing obligatory complements, except for **את**. (See 4.51: Circumstance Adverbial.) In Hebrew syntax, as in the syntax of other languages without cases, it is usual to classify adverbials not formally – a method used in languages with cases – but according to content. Thus, often the following adverbials are distinguished, or at least some of them: place, time, cause, purpose, manner, measure, circumstance, condition, concession, and result. Not all of these appear in every book, nor do the authors agree on the ascription of a phrase to the same adverbial. Thus, there are differences with respect to phrases denoting duration of time, e.g., **עבד שלוש שעות** (He worked three hours). Different authors designate such a phrase as time adverbial, measure adverbial, or manner adverbial. Studies on the deep structure of adverbials have scarcely been written, apart from some work on the circumstance adverbial, which is recognized as a transformation of a predicator under certain conditions, e.g., **הילדה חזרה עיפה** (The girl returned tired) ← **הילדה חזרה** (The girl returned); **היא הייתה עיפה באותו זמן** (She was tired at that time). It may be supposed that research in this area will show that the traditional categories of adverbials, now based on semantic distinctions in surface structure, derive from deep structure.

4.51: CIRCUMSTANCE ADVERBIAL. The circumstance adverbial is also called “circumstance adjunct,” since like adjuncts it agrees in gender and number with subject or object, e.g., **הילדים יצאו שמחים** (The children went out happy), **פגשתי אותם מאשרים** (I met them happy). In both instances the agreement derives from the same source. The adjunct is transformed from a predicator – an adjective or participle – and so is the circumstance adverbial, except that with the latter the predicator denotes not a permanent phenomenon, but one that is contemporaneous with the action expressed by the predicator in our sentence. Thus, in the sentence **הילדה חזרה עיפה** (The girl returned tired) the girl is said to be tired at that time. If tiredness was a permanent characteristic, the adverbial **עיפה** would have been changed into an adjunct: **הילדה העיפה חזרה** (The tired girl returned). On the other hand, the circumstance adverbial does not have to be attached to a subject or object, and these do not function

as nucleuses to it. Moreover, the circumstance adverbial is not determined, even when the noun it is related to is determined. This adverbial can be expressed by a participle form preceded by the preposition **ב**, e.g., **הוא נכנס לענין במתכוון** (He entered into the affair intentionally). The adverbial differs in these features from the adjunct. (For the difference between circumstance adverbial related to the object and second object, cf. 4.44: First and Second Object.) Since the predicator is the source for both circumstance adverbial and adjunct, we cannot accept the suggestion that the circumstance adverbial be termed “circumstance predicator.” The transformation of the predicator does not necessarily produce a circumstance adverbial. Furthermore, terms for the parts of the sentence in surface grammar are not generally based on their transformations from deep structure. A circumstance adverbial can be realized by a complete sentence. This sentence, considered a subordinate sentence, is linked to the independent part by the conjunctions **כש**, **בלי ש**, **בלא ש**, and **ו**, or it is juxtaposed to the independent sentence without a conjunction, e.g., **הילדה הצביעה על השודד כשהיא רועדת מפחד** (The girl pointed to the robber while she was trembling with fright), **הולך לו ידינו בדרך, השמים הכחלים מעל ראשו והנהל לימינו** (Our friend walks along, the blue skies above his head and the brook on his right). In circumstance sentences, the predicator is realized by a participle form (or the sentence lacks a predicator, cf. 4.23: Nominal Sentence and Verbal Sentence). See also 5.13: Predicator Transformed into Circumstance Adverbial.

4.52: TYPES OF CONDITIONAL ADVERBIAL. The conditional adverbial is unique among the adverbials. In the rare instances when it is realized as a nominal phrase in a simple sentence it will normally begin with... **במקרה של** (in case of), but it is chiefly realized as a subordinate sentence in a complex sentence. The conditional adverbial is called **רישעה** (protasis) whether it appears at the beginning or end of the sentence, while the rest of the sentence is called **סיפה** (apodosis). The conditional adverbial can be distinguished grammatically, and not just semantically. Moreover, the two chief categories – real condition and hypothetical condition – are also formally distinguishable. Conditional sentences also have their own intonation patterns.

A “real condition” denotes something that has happened, is happening, or will happen and whose existence entails a result expressed in the apodosis part of the sentence. The chief signs of an adverbial of real condition are (1) special subordinating conjunctions – **אם**, **כש**, **כאשר**; (2) the word order in the protasis; (3) the place of the protasis in the sentence; (4) the dependence of the tense of the verb in the superordinate part on that of the verb in the conditional part. Sometimes several of these signs come together, cf. 6.322: Word Order as Indication of Subordination in section Links beyond the Sentence.

A “hypothetical condition” is one which at the time it is said is known not to be fulfilled. The speaker speculates as to the possible results if the condition had been fulfilled.

The traditional conjunctions for a hypothetical condition are *לו* and *אלו*, and in the negative *לוֹלָא*, *אלולא*. The introductory *אלמלא* (*אלמלי*), used mainly in literature, is sometimes interpreted as positive and sometimes as negative. In modern Hebrew (also in some places in biblical Hebrew) *אם* is used also for a hypothetical condition. This use is accompanied by a verb form consisting of *היה* (verb “be”) plus participle, e.g., *אם היית אומר לו* (If you had said to him), which is usually interpreted as a hypothetical condition indicating that the speaker knew the other had not said it. On the other hand, *אם אמרת לו* (If you said to him) is interpreted as a real condition, denoting that the speaker does not know whether the other had said it or not, but it is certainly possible that he said it. The sign of an unreal condition here is not a special conjunction (*לו*, *לוֹלָא*, *אלולא* as opposed to *אם*) but the form of the verb (*היה* + participle as opposed to past tense). The verb in the apodosis of a hypothetical condition also has the form *היה* plus participle, irrespective of the verb in the protasis.

A double condition is one in which the speaker sets out both the result of the fulfillment of the condition and the result of its lack of fulfillment. This structure is also known as *תנאי בני גר ובני ראוּבן* (a condition of the children of Gad and the children of Reuven), cf. Numbers 32:29–30.

An emphatic condition with negative followed by positive (see below), is apparently related to the double condition and is derived from it by a deletion transformation. For example, *לא יכנס אדם למחנה צבאי אלא אם (כן) הרשה לך* (A person may not enter a military camp unless he is expressly permitted), which is presumably before the transformation *לא יכנס אדם למחנה צבאי אם לא הרשה לך*; *יכנס אדם למחנה צבאי אם (כן) הרשה לך* (A person may not enter a military camp if he is not expressly permitted; a person may enter a military camp if he is expressly permitted).

A concessive sentence is a conditional sentence the content of whose apodosis is reversed as far as can be determined from its presumed protasis and the subject matter of the whole sentence. It also appears to be derived from a double condition, where neither the fulfillment nor the lack of fulfillment of the condition can change the result. For example, the sentence *אם לא תעמד על שלך – לא תקבל*, וגם אם תעמד על שלך – לא תקבל (If you don’t defend your own, you will not receive anything, and even if you defend your own you will not receive anything) can be contracted to *אם לא תעמד על שלך וגם אם תעמד על שלך – לא תקבל* (If you don’t defend your own and even if you defend your own, you will not receive anything). (The introductory formula for such a structure can be, “...אם...אם” “...אם...אם”). If from such a structure the condition which is more probable in the context is deleted, the result is a concessive sentence: *אם לא תעמד על שלך – לא תקבל* (Even if you defend your own you will not receive anything). A concessive sentence can also come from a series of conditional sentences in which one element is changed every time until the series comprises a wide range of topics the last of which is the converse of the first. When only the last is ex-

pressed, the rest of the possibilities are understood, deduced *a fortiori*. For example, in *לא יקראו לי אבוליציניסט, לא אם יקראו לי אבוליציניסט, לא אם יקראו לי אבוליציניסט, לא אם יקראו לי אבוליציניסט* (Even if they call me an abolitionist, I shall not hand over the Negro), what is also clear is that *לא יקראו לי אבוליציניסט, לא אם יקראו לי אבוליציניסט, לא אם יקראו לי אבוליציניסט, לא אם יקראו לי אבוליציניסט* (All the more so, I will not hand over the Negro if they call me names that are less derogatory, if they do not use any derogatory names against me, or they praise me for it).

4.53: SENTENCE ADVERBIAL. Some adverbials do not complement the predicator, but are comments adding details to what is said in the sentence as a whole, e.g., *במקלי עברתי את הירדן* (With my staff I crossed the Jordan), *דרכם נמשכה בשתיקה* (Their journey continued in silence). These are not predicator adverbials but sentence adverbials or situation adverbials. A subordinate clause can also realize this function, e.g., *הוא נכנס לעצם הענין בלא שנתכוון לכך* (He went into the heart of the matter though he did not intend to do so). Following N. Chomsky’s works on transformational grammar, it has been claimed by some authors, that in many cases place and time adverbials, as well as some other adverbials, should be considered as sentence adverbials, e.g., *פה הנערות נאות* (Here the girls are nice) (see Rubinstein, *Lešonenu*, 35).

4.54: PREPOSITIONS AS INTRODUCERS OF ADVERBIALS. Grammars do not give a complete list of prepositions introducing classes of adverbials, but a large number can be extracted from the examples they give. A fuller list is provided of conjunctions introducing subordinate sentences functioning as adverbials. Below is a list of the main prepositions and conjunctions serving as introducers to adverbials:

Place Adverbial: prepositions – *ב, מ, ל, אצל*, conjunctions – *במקום אשר* (and other prepositions preceding *מקום*, or *מקום*), e.g., *מקום אשר*.

Time Adverbial: prepositions – *ב, ל, מ, אחר*, conjunctions – *קדם, ש, טרם, מאז, אך, לאחר*, *בעת, ש, משעה, ש, מדי, כל עוד, בעוד, כיון, ש, כל אימת, ש, בעת, ש, לפני, ש, אחרי, ש, מוש, כש*, and also the above prepositions (except *ב, ל*) in combination with *ש*, e.g., *לפני, ש, אשר, לפני, ש, אשר*, or (except *ב, מ*) in combination with *אשר*, e.g., *אשר, אשר, אשר*.

Manner Adverbials: prepositions – *ב, ל, מ, יותר*.

Measure Adverbials: prepositions – *עד*.

Cause Adverbials: prepositions – *הודות, ל, בשביל, מ, בגלל*, conjunctions – *הואיל, ..., משום, ש, על*, *בגלל, מפני, עקב, כיון, ש, מפני, ש, לפי, ש, מכיון, ש, שכן, כי, באשר, עקב, כיון, כי, יען, בשביל, ש*, and several of the above prepositions followed by *ש*, e.g., *בגלל, ש*.

Purpose Adverbials: prepositions – *למען, ל*, conjunctions – *כדי, ש, בשביל, ש, למען, אשר, למען*.

Conditional Adverbials: prepositions – *במקרה, ש*, conjunctions – *אם, כי, אם, ל, כש, בזמן, ש, כש, כי, אם, כל מי, ש, מי, ש* (and other introducers of time adverbials).

Concessive Adverbials: prepositions – על אף; conjunctions – עם כל, בכל, אם כי, אף אם, אף ש, אף על פי ש, אפילו – גם אם, אף כי, גם כי, ש, עד כי, ש, עד אשׁר.

Result Adverbials: prepositions – עד, ל, עד כִּי, ו (in a negative sentence or in a rhetorical question); conjunctions – עד כי, ש, עד אשׁר.

Equative Adverbials: prepositions – כִּי, כִּי, כמו; conjunctions – כְּמִדָּה, כְּכֹמֶה, כְּכֹל אֲשֶׁר, כְּמוֹ, כְּלַעֲמַת שׁ, כְּדָרָךְ שׁ, כְּשֵׁם שׁ, כְּשֵׁם שׁ, כְּשֵׁם שׁ, כְּשֵׁם שׁ, כְּשֵׁם שׁ.

The independent part of the sentence is introduced by correlative conjunctions, e.g., כִּן, כְּכֹה, כִּי, אִךְ.

Comparative Adverbials: preposition – מִ; conjunctions – שׁ, וְיִתֵּר מִמֶּה שׁ, וְיִתֵּר מִשׁ, מֵאֲשֶׁר, מִשׁ. Sometimes the whole sentence is a rhetorical question: the comparative adverbial opens with a conjunction such as הֲנָּה, אִם, וְיִמָּה, הֲנָּה while the independent part is introduced by a correlative conjunction, e.g., וְאִיךְ, כִּל שִׁכּוֹן, עַל אַחַת כְּמֶה וְכְמֶה, קָל וְחֹמֶר, וְאִיךְ.

Below are examples of other uses:

Instrumental Adverbial: כִּי (colloquially also עם) – הִכָּה בְּפַטִּיִּשׁ (He hit with a hammer).

Price Adverbial: כִּי (also בְּעֵד רַב) – קָנוּ בְּכֶסֶף רַב (They bought with a great deal of money).

Concomitant Adverbial: כִּי (also עם) – יָצְאוּ בְּרִכּוּשׁ גָּדוֹל (They went out with a lot of property).

Coordinate Adverbial: עם – הֵלֵךְ עִם חֲבֵרוֹ (He went with his friend).

Material Adverbial: מִּמֵּ – הַקִּיר בְּנוּי מִלְּבִנִּים (The wall is built of bricks).

Oath or Promise Adverbial: e.g., חַי נֶפְשִׁי שׁ, בְּחַיֵּי שׁ.

5: DEPENDENCY WITHIN THE SENTENCE

In Hebrew, as in other languages, sometimes a word or a form involves the appearance of another word or form in the same sentence or in a neighboring sentence. The reciprocal relationship between the words is called “dependency.” Dependencies within the sentence are classified as (1) concord in gender and number (5.11–5.23), (2) concord of determination (5.3–5.4), (3) obligatory appearance (5.5), and (4) order of parts of sentence (5.6).

5.11: CONCORD BETWEEN SUBJECT AND PREDICATOR. The basic concord rule in Hebrew is the rule requiring that as far as possible the predicator should agree in gender and number with the subject. When the predicator is a verb, participle, or adjective, it always appears in a form agreeing in gender and number with the subject (see below 5.14: Lack of Concord between Subject and Predicator; 5.25: Lack of Concord in Adjunct Sentences on instances of lack of concord), e.g. הַזְּמַן קָצֵר, הַמְּלָאכָה מְרֻבָּה, בְּעֲלֵי הַבַּיִת דוֹחִקִים וְהַפּוֹעֵלוֹת עֲצֵלוֹת (The time is short, the work is great, the masters of the house are pressing, the female workers are lazy). When the predicator is an adjective or participle, agreement of gender between subject and predicator in the plural is always determined by the singular form of the subject. That is to say, it is irrele-

vant whether the plural suffix of the noun is –ים or –ות. If the noun is masculine, the plural suffix of the adjective predicator is always –ים, e.g., הָאֲבוֹת זְקֵנִים (The fathers are old), since in the singular we have הָאָב זָקֵן, and of course הַבְּנִים חַדְוָנִים (The sons are diligent) with a singular הָבֵן חַדְוָנִי. Similarly, with a feminine noun the plural suffix of the adjective is always –ות, e.g., הַתְּאֵנִים יְבֵשׁוֹת (The figs are dry), since the singular is הַתְּאֵנָה יְבֵשָׁה, and obviously הַבָּנוֹת חַדְוָנוֹת (The daughters are diligent) with a singular הַבַּת חַדְוָנָה.

It is different when the predicator is a noun. Nouns do not always have gender inflection, nor is the meaning of the plural form always the same as that of the singular. Therefore, when such a noun realizes the function of predicator, it is sometimes impossible for the predicator and subject to agree in gender or number, e.g., הַשְּׁלוֹם הוּא תְּקוּוֹתֵנוּ (Peace is our hope), מִלְחָמָה הִיא מוֹת (War is death), הַמִּזְכּוּסִים הֵם הָאֲחֵרוֹן (The stores are the last obstacle). Nevertheless, sometimes a noun that normally is not inflected for gender did receive gender inflection when used in new ways. For example, the noun כּוֹכַב (star) was used as predicator for both male and female when it was first applied to an actor, e.g., גְּרֵטָה גָּרְבוּ הִיא כּוֹכַב גָּדוֹל (Greta Garbo is a great star). But after a time the form כּוֹכַבֶּת was created, e.g., דְּלִיָּה לָבִיָּה הִיא כּוֹכַבֶּת (Dalia Lavi is an Israel star).

5.12: PREDICATOR TRANSFORMED INTO ADJUNCT. When the predicator is transformed to the function of adjunct (see 4.31: Morphological Classification of Adjuncts), the agreement with subject is preserved, i.e., when the predicator in the source construction agrees with the subject, the adjunct transformed from it agrees in gender and number with its nucleus, e.g., הַזְּמַן הַקָּצֵר לֹא הִסְפִּיק (The short time was not sufficient), הַפּוֹעֵלוֹת הָעֲצֵלוֹת פִּטְפְּטוּ (The lazy female workers chattered), אֶסְתֵּר הַמִּלְכָּה הֵיחָה יָפֵה, (Esther the queen was beautiful). But if the predicator in the source construction is a noun that cannot be inflected, then the appositive, which is the result of the transformation, does not necessarily agree in gender and number with its nucleus, e.g., הַשְּׁלוֹם, תְּקוּוֹתֵנוּ, עוֹדְנוּ רַחוּק (Peace, our hope, is still far off), הַקְּרָקַע, סְלָעִים, לֹא תֵעָבֵד (The ground, rocks, will not be tilled). When a predicate containing a verb as predicator is transformed into a subordinate sentence with the function of adjunct (see 4.38: Relative Clause), the predicator continues to agree with the nucleus in gender and number, e.g., הַיְלָדִים [הַיְלָדִים שֶׁחָקוּ בְּחִצֵּר] לֹא הִרְגִּישׁוּ בְּמִתְרַחֵשׁ (The children [The children played in the courtyard] did not notice what was happening), הַיְלָדִים שֶׁשֶׁחָקוּ בְּחִצֵּר, לֹא הִרְגִּישׁוּ בְּמִתְרַחֵשׁ (The children, who played in the courtyard, did not notice what was happening).

5.13: PREDICATOR TRANSFORMED INTO CIRCUMSTANCE ADVERBIAL. Similarly, the circumstance adverbial also agrees in gender and number with the subject or object, since it is also a transform of the predicator (cf. 4.51: Circumstance Adverbial). There is also a requirement of concord between a circumstance sentence and one of the parts of the independent sentence in which it appears, e.g., הִיא דְּבָרָה וְעַיִנָּה מְרִיקוֹת (She is a woman and her eyes are watering).

(She spoke, as her eyes were flashing). In many circumstance clauses, however, no concord exists, at least in the surface structure, e.g., *וַיַּעֲמֵד בְּמִשְׁעוֹל הַכְּרָמִים, גִּדְרַר מִזְהָ וּגְדַר מִזְהָ* (And he stood in the path of the vineyard, a fence here and a fence here = between two fences).

5.14: LACK OF CONCORD BETWEEN SUBJECT AND PREDICATOR. In some instances there is no concord between subject and predicator. Usually, this results from a difference between the grammatical gender or number of the noun and the natural gender or number of the person or entity denoted by the noun (Hebrew has no neutral), as in the following cases:

(1) *Collective noun*. When the noun denotes a group of individuals, its form is singular, but its predicator can be in the plural, agreeing with the content rather than the form, e.g., *הַחֲבֵרָה רָצוּ לָלֶכֶת* (The group wanted to go. Colloquial). The number of collective nouns with this usage seems to be fewer in modern Hebrew than in earlier periods of the language.

(2) Proper nouns that have the plural or dual form are always combined with a predicator in the singular and take the grammatical gender corresponding to the natural gender of the person, e.g., *רַחֲמִים הָלַךְ* (Rahamim went off), *תָּמָר חָזְרָה* (Tamar returned), *יוֹנָה הָלַךְ* (Jonah went off (when the reference is to a male)), *יוֹנָה הָלְכָה* (Jonah went off (when the reference is to a female)).

(3) Names of countries are always in the feminine, whatever the form of the noun, e.g., *וַתִּכְנַע מוֹאֵב בַּיּוֹם הַהוּא* (Moab surrendered on that day), *מִצְרַיִם שְׁלָחָה צָבָא לְתִימָן* (Egypt sent an army to Yemen), *יִרְדֵּן הִכְרִיזָה עַל מַצְבַּח חָרוֹם* (Jordan proclaimed a state of emergency), *אֲרֻצּוֹת־הַבְּרִית יָזְמָה וְעִידַת שְׁלוֹם* (The United States initiated a peace conference).

(4) *Pluralis majestatis*. The noun is in the plural not to indicate plurality but out of respect to the person designated. Modern Hebrew includes in this category *אֱלֹהִים* (God) and also *בְּעֵלִים* (owner), e.g., *לֹא נִמְצָא בְּעֵלָיו שֶׁל הַכֶּלֶב* (The owner of the dog was not found).

5.21: PRONOUN CONCORD IN A FOCUSING SENTENCE (EXTRA-POSITION). Gender and number concord in a sentence is sometimes not the basic concord between subject and predicator (5.11–5.13), but the result of a transformation deleting a noun and replacing it with a pronoun. The substituted pronoun always agrees in gender and number with the deleted noun. Since there is usually another instance of the same noun elsewhere in the sentence, the pronoun agrees in gender and number to this other instance, as in the example given in 4.26: the sentence *אִישׁ לֹא שָׁם לֵב אֶל הַנְּתִיקִים* (Nobody paid any attention to the veterans) is transformed into a focusing sentence when the noun *הַנְּתִיקִים* (the veterans) is taken from its place and put initially while in its place is introduced a third person masculine plural pronoun, agreeing with it. Since the deleted noun followed a preposition, the substituted pronoun also follows the preposition and hence is attached to it. The resulting sentence is *הַנְּתִיקִים – אִישׁ לֹא שָׁם לֵב אֲלֵיהֶם* (The veterans, nobody paid any attention to them). The same applies when the

focused part functioned as subject in the source sentence, e.g., *סָבָא אֵינוֹ מִתְעֵיף אֶף פְּעַם* (Grandfather never gets tired). When the subject is extracted from this sentence and placed initially, a third person masculine singular pronoun is introduced in its place, agreeing with *סָבָא* (Grandfather). Since the noun is not preceded by a preposition, neither is the pronoun. The resulting sentence is *סָבָא – הוּא אֵינוֹ מִתְעֵיף אֶף פְּעַם* (Grandfather, he never gets tired). The pronoun agreeing with the focused part is called referring pronoun or “binder”. As explained in 4.26: Focusing Sentence, the first noun in a focusing sentence is the subject and the rest of the sentence is the predicate. Consequently, the basic concord rule between subject and predicate applies here too; the element in the predicate agreeing with the subject is the referring pronoun.

5.22: PRONOUN CONCORD IN A RELATIVE CLAUSE. When the predicate of a focusing sentence is transformed into an adjunct sentence (4.38: Relative Clause), the concord between subject and predicate is transformed into concord between the noun nucleus and the adjunct sentence: – *הַנְּתִיקִים [הַנְּתִיקִים] אִישׁ לֹא שָׁם לֵב אֲלֵיהֶם* (The veterans [The veterans, nobody paid any attention to them] began to organize themselves in separate organizations → *הַנְּתִיקִים, הַחֲלוּ לְהִתְאָרְגַן בְּאֲרָגוּנִים נִפְרָדִים* (The veterans, to whom nobody paid any attention, began to organize themselves in separate organizations). Even when the focused part was subject in the source sentence, e.g., *סָבָא – הוּא אֵינוֹ מִתְעֵיף אֶף פְּעַם* (Grandfather, he never gets tired), the whole of the predicate can be transformed into an adjunct sentence. However, if there is already subject-predicator concord in this sentence, for example when the predicator is a verb or there is a copula in the predicate, then this concord is usually sufficient. In this case, the adjunct sentence does not contain the subject pronoun, e.g., *סָבָא, שְׂאֵינוֹ מִתְעֵיף אֶף פְּעַם, חָיָךְ בְּסִלְחָנוֹת* (Grandfather, who never gets tired, smiled forgivingly) and not... *הָאִישׁ שֶׁהָלַךְ, אֵסָבָא, שֶׁהוּא אֵינוֹ מִתְעֵיף אֶף פְּעַם, חָיָךְ בְּסִלְחָנוֹת* (The man, who went off on a journey, did not return), and not *הָאִישׁ, שֶׁהוּא הָלַךְ בְּדֶרֶךְ, לֹא חָזַר* (The man, who went off on a journey, did not return), and not *הָאִישׁ, שֶׁהוּא הָלַךְ בְּדֶרֶךְ, לֹא חָזַר*. This does not apply to a nominal sentence that does not have subject-predicator concord, e.g., *הַמַּחְסָנִים הֵם הַמְּכֻשָׁל הָאֲחֵרוֹן* (The stores[they] are the last obstacle), the source of which is in the identifying sentence *הַמַּחְסָנִים – הַמְּכֻשָׁל הָאֲחֵרוֹן* (The stores – the last obstacle), cf. 4.24: Identifying Sentence. The relative clause formed from the predicate includes the pronoun *הֵם*, which agrees with the subject: *הַמַּחְסָנִים שֶׁהֵם הַמְּכֻשָׁל הָאֲחֵרוֹן עוֹלִים בָּאֵשׁ* (The stores, which are the last obstacle, are going up in fire). On whether the subject pronoun (*הֵן, הֵם, הוּא*) is copula or referring pronoun of a focused part, see below 5.23: Copula Concord.

5.23: COPULA CONCORD. The source of the copula (see 4.22: The Copula) is a referring pronoun in a subject-focusing sentence, cf. the examples in 5.21: Pronoun Concord in a Focusing Sentence and 5.22: Pronoun Concord in a Relative Clause. However, the subject pronoun is also used in sentences where the focused part is not felt to be emphasized in any way (4.24:

Identifying Sentence). This appears to have happened for two reasons:

(1) Subject-focusing sentences became common in nominal sentences in the present tense by analogy with nominal sentences in the past and future tenses, that is speakers tended to insert a word agreeing with subject in gender and number between subject and predicator, or more precisely, to link such a word to the predicator (not necessarily putting it before the predicator) as they do with sentences in the past or future. Since this word (an inflected form of הָיָה (be)) does not introduce any emphasis to the sentence in the past or future, the emphasis is also lost in sentences with subject pronouns in the present tense.

(2) In certain constructions that lack subject-predicate concord, and particularly in sentences without a predicator the desire for “leveling” activates speakers, i.e., the need is felt to add something that will produce subject-predicate concord, in order that such constructions can enter the regular framework of Hebrew sentences, in which there is subject-predicator concord. We can explain in this way the obligatory appearance of the pronoun as a copula in sentences such as **הַפְּגוּר הוּא בְּיַצוּר דְּשָׁנִים** (The delay is in the production of fertilizers), **הָעֲלִיָּה הִיא בְּשֹׂכֵר** (The rise is in salary), which are transformed from sentences **פְּלוּגֵי מַפְגֵּר בְּיַצוּר דְּשָׁנִים** (X is lagging in the production of fertilizers), **הַשֹּׂכֵר עָלָה** (The salary rose) respectively. (See E. Rubinstein, for another explanation.) Usually the copula agrees with the subject. However, there are cases where the copula agrees with the predicator, when several words separate the subject from the copula and the copula is next to the predicator. In the colloquial language, and sometimes in writing, some use **זֹאת**, **זֶה**, **זֶהוּ**, **זֶהוּ** (or **זֹאתִי**) as copula. There is also quite frequent use of **הֵנוּ** or **הֵנָּהוּ** and other inflected forms of **הֵנָּה** as copula.

5.24: OTHER CASES OF CONCORD. (1) A possessive pronoun agreeing with a noun mentioned after it is to be found in the double construct state: **בֵּיתוֹ שֶׁל הָאִישׁ** (the man’s house), **חֲרָדָתָם שֶׁל הַהוֹרִים** (the parents’ dread), cf. 4.34: The Construct Structure.

(2) A pronoun attached to a preposition and referring to a noun mentioned after it is to be found in the apposition structure **אָמְרוּ עָלָיו עַל רַבִּי עֲקִיבָא** (They said about him, about Rabbi Akiva), cf. 4.37: Apposition.

(3) A demonstrative pronoun introducing an identifying sentence agrees in gender and number with the noun appearing as part of the complement in the identifying sentence, and not with the noun in the preceding sentence to which the pronoun refers, e.g., **הַשְּׂאֵלָה יְדוּעָה, אָבֵל זֶה עִנְיָן אַחֵר** (The question is well-known, but this is a different matter); **זוֹ פְּסָקָה חֲדָשָׁה**; **אֵלֶּה דְּבָרִים נְדוּשִׁים** (... this is a new paragraph); **אֵלֶּה דְּבָרִים נְדוּשִׁים** (... these are matters that are well-known), cf. also 6.12: Demonstrative Pronouns. The same applies if the reference is to something mentioned after the identifying sentence, e.g., **זֹאת הַתּוֹרָה** (This is the law) or **אֵלֶּה הַחֻקִּים** (These are the statutes), when the details come after such a sentence.

The demonstrative pronoun **זֶה** can be attached to an undetermined noun or to an undetermined construct state. The noun or construct state then becomes determined. That is to say, **בֵּית הָאֲבָנִים זֶה** is equivalent to **בֵּית הַבְּנִית זֶה** and **בֵּית הָאֲבָנִים זֶה** to **בֵּית הַבְּנִית זֶה**. Agreement in gender and number between pronoun and preceding noun is obligatory.

5.25: LACK OF CONCORD IN ADJUNCT SENTENCES. (1) Adjunct content-sentences (see 4.38: Relative Clause), which are not transformed from a predicate but from an object sentence (on which there is no obligatory concord in gender and number with anything outside the sentence), do not require concord with the noun nucleus transformed from the verb-predicator in the source sentence.

(2) Introductory expressions, especially for adverbial sentences (see 4.54: Prepositions as Introducers of Adverbials), e.g., **בְּאַפְּן שֶׁ, שְׂעָה שֶׁ, מְקוּם שֶׁ**. The sentence subordinated by such an expression does not include a referring pronoun agreeing with **מְקוּם שֶׁ, שְׂעָה שֶׁ, אַפְּן**, etc., e.g., **כָּל פֶּעַם שֶׁנִּפְשׁוּ הֵיטָה מְרָה עָלָיו**, etc. (every time that he felt depressed). It means that the noun in the introductory expression loses its semantic force, in whole or in part, and becomes entirely or virtually a grammatical word. Its “adjunct sentence” is not really an adjunct sentence. The introductory expression can also subordinate a sentence with a different function, for example as subject, e.g., **הֲאֵם לֹא הִגִּיעָה הַשְּׂעָה שֶׁתִּתְאַחֵד חֻכְמַת יִשְׂרָאֵל עִם שִׁפְתַי יִשְׂרָאֵל?** (Has the time when the wisdom of Israel will be united with the language of Israel not come?).

(3) Pronoun substitute. In some adjunct sentences the place adverbial **שָׁם** (there) replaces a pronoun attached to a preceding preposition, e.g., **הַחֲלוֹן שֶׁהֶצְטוּפְפוּ שָׁם יוֹנִים**... (the window where the doves crowded, literally the window which doves crowded there). The substitution of **שָׁם** for an inflected preposition is found in the Bible, e.g., **אֶרֶץ כְּנָעַן, אֲשֶׁר אֲנִי מְבִיא אֶתְכֶם שָׁמָּה** (the land of Canaan, where I shall bring you).

(4) If in the source the nucleus was the object of **אָת** in the adjunct sentence, the appearance of **אָת** with an inflected pronoun agreeing in gender and number with the nucleus is not obligatory. For stylistic reasons it is normally omitted, unless the omission will lead to ambiguity. For example, **חִמְרָא שֶׁשָּׁמַע מִפִּי מוֹרְיוֹ אוֹ קְרָא בְּעֵבֶר** (material that he heard from his teachers or read in the past) and not **חִמְרָא שֶׁשָּׁמַע אוֹתוֹ מִפִּי מוֹרְיוֹ אוֹ קְרָא אוֹתוֹ בְּעֵבֶר** (literally, material that he heard it from his teachers or read it in the past). It is normally possible to add in any such adjunct sentence the preposition **אָת** inflected to agree with the nucleus.

(5) When the nucleus is a verbal noun or abstract noun with the same root as the predicator in the adjunct sentence. In such a case there is no referring pronoun in the adjunct sentence, e.g., **הָאֲבֵל שֶׁמִּתְאַבְּלֵת עַל בְּנָהּ** (the mourning which she mourns for her son). This phenomenon is presumably connected with the characteristics of the internal object.

(6) “Space words.” When the nucleus is only required for grammatical purposes, namely for the attachment of an ad-

junct sentence, words devoid of semantic content, such as indefinite pronouns or demonstrative pronouns, e.g., *זה*, *כך*, *מה*, or words with a very general semantic content, e.g., *דבר* (thing), *עובדה* (fact) are used. Such a nucleus does not require the presence of a referring pronoun in the adjunct sentence that is attached to it, whether the nucleus sums up what is said before or whether it comes after an obligatory preposition as introduction to what is to follow. For example: *לְאָבָא אָמְרָה כִּי אֶת אָרוּחַת בְּמִסְעָדָה, מָה שֶׁהוּא שֹׁמֵעַ מִתּוֹךְ שְׂתִיקַת הַכְנָעָה* (She told Father that he is eating lunch today at a restaurant, which he heard in submissive silence). However, sometimes the “space words” are not entirely devoid of semantic content and denote something more than a word like *דבר* or *עובדה*, e.g., *בְּמִלְאֵת שְׁבָעִים שָׁנָה לְהִדְחַת בֵּית הַמְּלוּכָה הַפּוֹרְטוּגָלִי, תֶּאֱרִיךְ שָׁחַל*, e.g., *אֶתְמוּל* (At the end of seventy years following the dethronement of the Portuguese monarchy, a date which fell yesterday...) or *לִּי 1939 בֵּין 1941* (He was imprisoned in a concentration camp, a place where he died or was killed between 1939 and 1941).

5.3: Determiner Concord

Determination is not recursive. It follows that the four methods of determination exclude each other: (1) the definite article; (2) a proper name; (3) a noun in combination with a possessive pronoun; (4) a *nomen regens* in the construct state. Determiner concord exists between a nucleus-noun and an adjective serving as its adjunct, i.e., either both words are determined or neither are determined: *גִּיָּר הַחֶלֶק* (smooth paper), *הַגִּיָּר הַחֶלֶק* (the smooth paper). In mishnaic Hebrew and to some extent in biblical Hebrew it is possible for the adjunct to be determined while its nucleus is not determined, e.g., *מֵיִם הָרָעִים* (the evil waters), *יָם הַתִּיכוֹן* (the Mediterranean Sea), *יוֹם הַשֵּׁשִׁי* (the sixth day). This phenomenon is seldom found in modern Hebrew. Determiner concord does not have its source in the deep grammar. It is a surface phenomenon: the adjunct adjective receives determination even though the predicator, which served as its source, was not determined. The cause of determination is attraction: determination of the noun attracts determination of the adjunct adjective attached to it. The attraction of the definite article from the noun to the adjunct applies even to a demonstrative pronoun following a noun with the definite article (see section 5.24: Other Cases of Concord), since corresponding to *בֵּית זֶה* (this house) we can have *הַבַּיִת הַזֶּה* without a difference in meaning being felt between these phrases. The same applies to the construct state relationship. Here too if the noun is determined by the definite article and the pronoun *זֶה* follows, the article is also attached to the pronoun *בֵּית אֲבָנִים זֶה* – *בֵּית הָאֲבָנִים הַזֶּה* (this house of stone). In the phrase *הַבַּיִת הַזֶּה* there is therefore a double determination. This is a clear example of redundancy, unique in determination, since determination is not recursive, i.e., a noun that is already determined cannot accept additional determination.

5.4: Restrictions on Determination

The non-recursive nature means that the definite article can-

not be combined with a proper name, nor with a noun with an inflected possessive, nor with a *nomen regens*; a proper name cannot be combined with the definite article (unless the name has been changed into a common name, or if the definite article is part of the name, e.g., *הַיַּרְדֵּן*, *הַלְבָּנוֹן* (the Jordan, the Lebanon)) nor with a possessive pronoun and it cannot be a *nomen regens*; a noun inflected for the possessive cannot be a proper name (unless it became an independent item, not connected with the common noun), cannot be combined with the definite article, and cannot be a *nomen regens*; a *nomen regens* cannot be a proper name unless it is a shortened name, e.g., *רִאשׁוֹן לְצִיּוֹן* for *רִאשׁוֹן לְיִשְׂרָאֵל*, *נְחֻלַּת יְהוּדָה* for *נְחֻלַּת יִשְׂרָאֵל*; it cannot be combined with the definite article or with a possessive pronoun, but if the construct state is taken to be a compound the definite article can precede it, e.g., *הַכּוֹדֵרְגֵל* (the football). It should be added, however, that two (or more) people with the same name may be referred to with a definite article preceding the name in plural “שְׂתֵי הַשְּׂפּוֹרוֹת”. Determination by the demonstrative pronoun *זֶה*, which may precede or follow the noun, does not come under this rule: *זֶה* can come in addition to the above four methods. But if *זֶה* follows a noun with the definite article or the construct state with the definite article, the definite article must precede: *הַזֶּה* (see 5.3: Determiner Concord). When *זֶה* follows a noun determined by another method, the definite article is not obligatory but optional: *זֶה כּוֹבְעֵי זֶה* (or, *כּוֹבְעֵי הַזֶּה*) (my hat), *זֶה אַבְרָהָם הַזֶּה*, *אַבְרָהָם הַזֶּה*, *אַבְרָהָם הַזֶּה* (this Abraham), but *זֶה בַּיִת זֶה* (this house) – *בַּיִת אֲבָנִים זֶה* (this house of stone) – *בַּיִת הָאֲבָנִים הַזֶּה*.

5.5: Obligatoriness

Obligatoriness in the widest sense refers to the obligatory appearance of a word or form as a result of the existence of another word or form in the same sentence. It signifies roughly what is signified by “dependency” in the sentence but from the standpoint of one element in the dependency, either the active element or the passive one. For example, when the word *אֶתְמוּל* (yesterday) appears in a verbal sentence the verb normally is in the past. Here, what has been made obligatory is the element signifying that the verb is in the past form, while what made it obligatory is the word *אֶתְמוּל*. A further instance is the infinitive following certain auxiliaries, e.g., *עָשׂוּי, מְכָרָח, עֵשׂוּי, עֵלּוּל*, (cf. 4.45: Infinitive as Object). Other auxiliaries require either an infinitive or a certain form of the verb, i.e., a participle, or a verbal noun, e.g., *הִתְחִילוּ לְהִבִּין* (they began to understand), *הִתְחִילוּ מְבִינִים* (they began understanding), *הִמְעִיט לְדַבֵּר* (he spoke less, literally: he lessened to speak), *הִמְעִיט בְּדַבּוּר* (literally: he lessened in speech). In a narrow and more usual sense, obligatoriness is used to denote the obligatory appearance of a particular preposition when there is in the same sentence a particular verb requiring the preposition. For example, the appearance of the preposition *בְּ* is required by the verb *הִשְׁתַּמֵּשׁ* (cf. 4.41: Obligatory Complement and Obligatory Preposition). Compared with English, the rules are less stringent in this respect, since there are various cases when certain “obligatory” prepositions can be omitted without affecting the mean-

ing of the verb. In most cases when an obligatory preposition is retained, the meaning of the verb without the preposition differs discernibly from its meaning with the preposition, e.g., *התגלגל לְ* (roll) – *התגלגלְ* (roll); *דלק אַחֲרַי* (burn) – *דלק אַחֲרַי* (pursue after); *התגלגלְ* (change to). When the verb does not have another meaning, then under certain conditions the obligatory preposition can be omitted, e.g., *לְ* after *התכוון* (intend) can be omitted before a subordinate sentence beginning with *שׁ*, e.g., *התכוונתי שתבואו* (I intended you to come). It is also possible to retain the preposition *לְ* here, but it would then be necessary to add a space-word between *לְ* and *שׁ*, e.g., *התכוונתי לְךָ שתבואו*, cf. 5.25, (6): Lack of Concord in Adjunct Sentences – “Space Words.” This area of degrees of obligatoriness, i.e., when the obligatory preposition can be omitted, has not been sufficiently investigated in Hebrew. The preposition *אֶת* is required (after certain verbs) only before a determined noun (it may be omitted, however, for stylistic reasons) but if an undetermined noun follows, its omission is obligatory. Some phrase the rule differently: “Before an undetermined noun the obligatory preposition *אֶת* is changed to the obligatory preposition \emptyset .” Obligatory prepositions are retained in many cases when the verb is converted into a verbal noun, e.g., *הַרְדִּיפָה אַחֲרֵי הַנְּאוֹת הַחַיִּים* (the pursuit after the pleasures of life), *הַזְלוּל בַּסִּכָּנָה* (the contempt for danger). This area too requires further investigation.

5.6: The Order of the Parts of the Sentence

Concord between different parts of the sentence in gender, number, and person; marking of the subject pronoun in the verb form (Morphology – 19. The Inflection of the Verb); presence of prepositions, particularly presence of *אֶת* to mark the “direct object” – all these allow a reduction in Hebrew of restrictions on the order of the parts of the sentence. While comprehensive investigations have not been undertaken into the order of parts of the sentence in modern Hebrew, it is possible to say in general that word order is fairly free, and usually what the speaker wishes to emphasize he says at the beginning of the sentence. Below is given a list of restrictions (more or less accepted by all) on the order of the parts of the sentence. Nevertheless, in some instances the strict observance of them is more a matter of style than of syntax. The influence of word order in other languages can sometimes be discerned.

(1) When the sentence begins with an object or adverbial and the predicator is a verb, the predicator follows the object or adverbial and the subject comes after the predicator. The rule applies particularly when the verb is in the past or future, e.g., *אֶתְמוֹל הִפְלִיגָה הָאֲנִיָּה* – (Yesterday sailed the boat) *הָאֲנִיָּה הִפְלִיגָה אֶתְמוֹל* – (The boat sailed yesterday). In colloquial Hebrew, sometimes in writing also, there are cases where this rule is not kept.

When two complements of the predicator occur in the sentence, for example two different objects or an object and an adverbial, the speaker is free to give them in any order. But if one of them is an inflected preposition, i.e., the complement includes a personal pronoun, the inflected preposition pre-

cedes the second complement. If both of them are inflected prepositions, the order is free, unless one of the words is *אֶת* with a pronominal inflection, in which cases it comes first. For example: *רָאִיתִי אֶת הַיֶּלֶד אֶתְמוֹל* (I saw the child yesterday); *רָאִיתִי אֶתְמוֹל אֶת הַיֶּלֶד* (I saw yesterday the child) – but: *רָאִיתִי אֶתְמוֹל אוֹתוֹ* (I saw him yesterday) and not *אֶתְמוֹל אֶתְמוֹל אוֹתוֹ* (I saw yesterday him). *לָקַחְתִּי אֶת הַסֵּפֶר מֵאֲחוֹתִי* (I took the book from my sister); *לָקַחְתִּי מֵאֲחוֹתִי אֶת הַסֵּפֶר* (I took from my sister the book) – *לָקַחְתִּי אוֹתוֹ מִמֶּנָּה* (I took it from her) and not *לָקַחְתִּי מִמֶּנָּה אוֹתוֹ* (literally I took from her it).

(3) Interrogative words, coordinating conjunctions, and the various subordinating conjunctions appear at the beginning of the sentence, whether the sentence is independent or subordinate. But a few subordinating words such as *כֵּן*, *לְכֵן*, *עַל כֵּן*, *אִם*, sometimes occur not at the beginning of the sentence they are connecting but within it, e.g., *לְכֵן שְׁאַלְתִּי אוֹתוֹ מְדוּעַ לֹא בָא* (Therefore I asked him why he did not come), *עַל כֵּן, מְדוּעַ לֹא בָא, שְׁאַלְתִּי אוֹתוֹ* (I asked him, therefore, why he did not come). The coordinating word *גַּם* (also) links the word after it to one of the words preceding it in that sentence or in a preceding sentence. Hence, *גַּם* can appear in various places in the sentence. In speech *גַּם* sometimes occurs after the word it is linking (undoubtedly under the influence of foreign languages). For example: *גַּם שְׁתִּיתִי [וְ] אֶכְלָתִי* (I ate [and] also I drank); *הָיָה שָׁם גַּם הַנְּשִׂיא* (Also the president was there). The latter sentence implies a previous statement that others were there.

(4) There is still no adequate investigation in modern Hebrew of the order of the parts of the noun phrase, i.e., the order of the various adjuncts relative to the nucleus. But if there is no special reason for changes, the order seems to be as given below (the degree of confidence in this order is sufficiently high for the first five parts, though in the rest it is less; the parentheses denote that it is possible to omit that part and pass on to the next, and still preserve a noun phrase): (quantity adjunct +) noun phrase nucleus (+ *nomen rectum* adjunct) (+adjective adjunct) (+separate possessive pronoun adjunct) (+demonstrative pronoun) (+prepositional phrase adjunct) (+appositional adjunct) (+subordinate sentence adjunct). For example: *שְׁנֵי מְעִילֵי הַצֹּמֵר הַחֲדָשִׁים שְׁלִי הָהֵם מֵאֲנְגְלִיָּה, מֵתַנַּת דּוּדַי, מְעִילֵי מִנֵּי. שְׁהִגְעוּ בְּדִיוֹק לְפָנַי שְׁבוּעָה, וְנִעְלְמוּ.* (Those two new woolen coats of mine from England, my uncle’s gift, which arrived exactly a week ago, have disappeared; literally: Two coats of wool – new – mine – those – from England – the gift of my uncle – which arrived exactly a week ago – have disappeared). “A special reason for change” (above) includes the wish for emphasis, an afterthought, and the length of the adjunct, particularly when it is a subordinate sentence. An attached possessive pronoun may accompany any noun.

(5) Any noun can be placed initially as a focused part (cf. 4.26: Focusing Sentence). Though as a result the general word order is changed, within the source sentence now serving as predicate the word order remains as it was, with the referring pronoun taking the place of the focused noun, cf. also 6.322: Word Order as Indication of Subordination.

6: LINKS BEYOND THE SENTENCE

Although speech consists not only of the combination of words, but also of the combination of sentences, the links between sentences in the same discourse have not been described in books on syntax, and in fact have not been given a linguistic description at all. Those dealing with the combination of sentences do so within theories of rhetoric or composition and pay attention not to grammatical questions but to literary and logical structure. In this respect some changes occurred in the early 1950s, when Z.S. Harris began linguistic analyses of a whole discourse, which can include much more than one sentence and can sometimes consist of a dialogue between two or more speakers. In doing so, even though some previous scholars had already dealt with this topic, he laid the foundations for the development of modern linguistic views on deep structure. As stated in the section 3.1: Structural Analysis above, there are few descriptions in Hebrew as yet which are based on those assumptions, still there are works in Hebrew that describe some of the material related to the problem of links beyond the sentence, for example the uses of the various subordinating conjunctions. The following survey covers these topics: (1) anaphoric references in sequentially related sentences; (2) elliptical sentences related to previous sentences; (3) ways of combining sentences.

6.1: Anaphoric Reference in Sequentially Related Sentences

6.11: PERSONAL PRONOUNS. Those rules of pronoun concord applying within the sentence, e.g., in a focusing sentence or in a relative clause, apply also when the pronoun is in a different sentence, which follows the one with the noun, even though the two sentences do not have any other grammatical links. Moreover, the pronoun in the new sentence (if indeed the second instance of the noun has been deleted and a pronoun has replaced the noun) normally cannot be omitted as happens under certain conditions in adjunct sentences. Thus, the deletion of the second instance of a noun and its replacement by a personal pronoun happens not only in a focusing sentence or in a relative clause but in general, whether the first noun is in the same sentence (in surface structure) or in a preceding sentence. The personal pronoun therefore agrees in gender and number with the noun, even though only the first instance of the noun remains. For example: רָאִיתִי אֶת הַיֶּלֶד. הַיֶּלֶד חוֹרָב לְבֵית הַסֵּפֶר (I saw the child. The child returned to school), רָאִיתִי אֶת הַיֶּלֶד. הוּא חוֹרָב לְבֵית הַסֵּפֶר (I saw the child. He returned to school).

6.12: DEMONSTRATIVE PRONOUNS. (1) A demonstrative appearing in a sequentially related sentence but not functioning as adjunct sometimes refers back to a noun in a previous sentence. However, if its function in the sequentially related sentence is that of subject or predicator, it must agree in gender and number with the predicator or subject respectively of the sequentially related sentence and not with the noun in the preceding sentence to which it refers (cf. 5.24, (3): Other Cases of Concord). For example:

הֵבֵאתִי אוֹתוֹ אֶל הַדִּירָה; "זֶה יְהִיהוּ בֵיתְךָ" אָמַרְתִּי לַאֲפָרְתִּי (I brought him to the apartment. "This will be your home," I said). The same applies to the demonstrative *זֶה* and its inflectional variants, e.g., *יֵשׁ לִי עֲשָׂרָה פְּקִידִים גְּרוּעִים; אֵינְנִי רוֹצֵה עוֹד פְּקִיד כָּזֶה* (I have ten rotten clerks; I don't want another clerk like that). (See H. Rosén, *Ivrit Tova*, for another explanation.)

(2) Sometimes the demonstrative does not refer to a noun in the preceding sentence, but to the whole of the content of the sentence or to a part of it. In such a case there is no requirement for concord with a particular element in the preceding sentence. Generally the demonstrative is then *זֶה*, e.g., *הַיְלָדִים שָׁכְבוּ לִישׁוֹן. זֶה הָיָה בְּשַׁעַר עֶשֶׂר* (The children went to bed. That was at ten). A sequentially related sentence with such a structure can introduce stories, e.g., *זֶה הָיָה בְּחֻנֻּכָּה...* (It happened at Hanukkah). By doing so, the narrator plunges the reader straight into the story, making him feel that he is not at the beginning of the story. Another possible explanation: *זֶה* refers in these cases to something unknown which is to be explained later, so that the reader becomes anxious to know what is coming.

(3) The definite article should also be mentioned here, since its appearance before a noun indicates a reference to the previous appearance of the noun and confirms that the two instances of the noun have the same referent, e.g., *אִישׁ הָיָה בְּאֶרֶץ עוּז, אִיּוֹב שְׁמוֹ. וְהָיָה הָאִישׁ הַהוּא תָם וְיָשָׁר* (There was a man in the land of Uz, whose name was Job. And that man was perfect and upright). The fact that sometimes the definite article appears before the first appearance (in surface structure) of a noun does not invalidate this claim, since in such a case it may be supposed that a previous sentence containing a non-determined instance of the noun has been deleted as a result of a transformation. Here belong also various adjuncts, restrictive and nonrestrictive alike (4.32: Restrictive and Nonrestrictive Adjunct). There is no doubt that the sentences in which these appear are linked to preceding sentences, whether they are retained or deleted.

6.2: Fragmentary Sentences

Usually every sentence has two parts, a subject and a predicate. However, in Hebrew, as in other languages, there are short sentences that cannot be divided in this way. Some have called them single-element sentences, analyzing them according to their surface structure. But from the point of view of deep grammar they should be considered as remnants of normal sentences, with subject and predicate, from which some parts (subject and/or predicate or parts of the latter) have been deleted. Here belong expressions of agreement with or opposition to a preceding sentence (usually said by another speaker), e.g., *כֵּן* (Yes!), *לֹא* (No!), *אֲוִלִי* (Perhaps!), these being remnants of the predicate. Sentences such as *רוּחַ. שָׁמֶשׁ. חָם* (Wind. Sun. Warm.) are used in literature and not necessarily in sequentially related sentences. The part that would complete them and make them into proper sentences has been omitted, because it can be understood or because it is unimportant, and not because it has been mentioned previously.

כי introduces indirect speech, adjunct content-sentences, object sentences from which adjunct content-sentences can be transformed, and subject sentences derived from these object sentences by a change of the verb-predicator from active to passive. כי therefore is used in all structures not open to אשר. However, כי cannot introduce a subject sentence when the predicator is an initial modal expression such as הלוואי (would that), הבל (a pity), הלוואי שיירד שלג (would that snow will fall), but not הלוואי כי ירד שלג †. Similarly, כי cannot introduce relative clauses. Another function of כי is to introduce adverbial sentences of cause (and in biblical Hebrew, also time and condition adverbials).

ה introduces relative clauses that begin with the participle form of the verb, which agrees in gender and number with the nucleus.

ו mostly marks coordination rather than subordination. However sometimes, and especially in literature, it introduces a sentence that is or seems to be subordinated to the preceding sentence, when the subordinate sentence is one of circumstance, comparison, result, or purpose, e.g., הנער יצא לדרך וידייו ריקות (The lad went out and his hands were empty) – circumstance; השמש זרחה, והשיטה פרחתה, והשוחרט שחט (The sun shone, the acacia blossomed, and the slaughterer slaughtered) – comparison; בקש רחמים ויסלח לך (Seek mercy and you will be forgiven) – result; מה נעשה וננצל? (What shall we do and we shall be saved?) – purpose. See also 4.54: Prepositions as Introducers of Adverbials.

6.322: *Word Order as Indication of Subordination.* Generally, the order of the parts of the sentence in a subordinated sentence does not differ from that in an independent sentence (5.6: The Order of the Parts of the Sentence). But word order in relative clauses and conditional sentences may influence the nature of the link between them and the sentences in which they appear. In conditional sentences the place of the subordinated sentence may determine the nature of the link, usually together with other factors, such as intonation.

(1) A relative clause beginning with an inflected preposition that agrees in gender and number with the nucleus (see 5.21: Pronoun Concord in Focusing Sentence; 5.22: Pronoun Concord in a Relative Clause) can occur without the initial subordinator ש (or אשר) e.g., ראייתי את הבית בו גר אחיך (I saw the house in which your brother lives), as opposed to בו ראייתי את הבית שאחיך גר בו. It is usual to term such a relative clause as an asyndetic relative clause, since it lacks an initial conjunction. It may be argued that a marker of subordination is present, though not the usual ש, the inflected preposition filling also that function besides its function within the relative clause. In biblical Hebrew an asyndetic relative clause may occur also without this condition e.g., יאבד יום אנלד בו. A relative clause without an inflected preposition may appear without a marker of subordination if it has a verb in the future agreeing with the nucleus and preceded by the negative participle בל, e.g., אמונה בל-תעריער (a faith that cannot be uprooted). It is impossible to add the subordinator ש or some

other subordinator in initial position here. In such a structure the negative participle לא can replace בל but it is then possible to add ש or אשר, e.g., כבד שלא יתאר, (weight that cannot be described) or כבד לא-יתאר.

(2) Conditional sentences (see 4.52: Types of Conditional Adverbial) can be expressed without an initial conditional word under certain restrictions: (a) the protasis must come first, (b) the predicator must come first in the protasis. The absence of the conditional word is usual in legal language, e.g., יביאנו לתחנת המשטרה הסמוכה, (A man has found an object, he shall bring it to the nearest police station). The future form of the second verb expresses not the condition, but the intention of the whole sentence to serve as a permanent instruction in all cases to which the condition applies. Similar conditional sentences are found in literature. However, they are not instructions, but refer to recurring events. In these the second verb may also be in the past, e.g., הביאם לאמו; מצא מסמרים – הביאם (He found buttons – he brought them to his mother; he found nails – he brought them to his father). Proverbs may likewise have this form, e.g., in biblical Hebrew, – מצא אשה – מצא טוב (He found a wife – he found a good thing). When such sentences are said orally, the conditional sentences have characteristic intonation patterns. In the colloquial language, too, there may occur conditional sentences without an introductory conditional word. Only sentence order, word order, and intonation show them to be conditional, e.g., ירצו – לא יאכלו (They will want – they will eat; they won't want – they won't eat). A change of sentence order, of word order, or of intonation will necessitate a conditional word, e.g., אם ירצו; לא יאכלו, אם לא ירצו (They will eat if they want; they will not eat if they don't want).

[Uzzi Ornan]

The following is not intended to serve as an exhaustive bibliography, but rather as an aid to the interested reader seeking additional information. It includes entries of three types:

- (1) General research works on Hebrew linguistics and contemporary language problems.
- (2) Publications containing particularly extensive bibliographical material.
- (3) Publications presenting a wide variety of approaches.

HEBREW IMMIGRANT AID SOCIETY (HIAS), international immigrant and refugee service. HIAS was founded in New York City in 1881, when the Russian Emigrant Relief Committee, a temporary body established to help Jews escaping Czarist Russia, formed the Hebrew Emigrant Aid Society. The new organization provided meals, transportation, and employment counseling to arrivals at New York's Castle Garden, the main immigrant-processing center of that time. In 1882 the first Jewish shelter was established on the Lower East Side. In 1889 the shelter adopted the name Hebrew Sheltering House Association and was reorganized by East European Jewish immigrants under the Hebrew name, Hachnosas Orchim. In 1909 the Hebrew Sheltering House Association (1884) and the Hebrew Immigrant Aid Society (1902) merged. Responding to the growing needs of Jewish immigrants from Eastern Europe, the organization soon grew to national dimensions, providing help in legal entry, basic subsistence, employment, citizenship instruction, and locating of relatives for nearly half a million newcomers to the United States during the organization's first decade. Under President John L. Bernstein (1917–26), HIAS offices were opened in Eastern Europe and the Far East.

In 1927 HIAS joined the Jewish Colonization Association (ICA) and the European Emigdirect to form the collectively run HICEM. Although the economic depression of the 1930s resulted in demands for additional domestic services to Jewish communities all over the world, most of HICEM's efforts were devoted toward financing and assisting emigration from Nazi Germany and finding outlets for refugees from Eastern and Central Europe in Western Europe and South America. HIAS continued its European activities throughout World War II, while imploring Western governments to open their gates wider to Jewish war refugees. In 1945 HIAS dissolved its partnership with HICEM, and in 1949 it cooperated with the *American Jewish Joint Distribution Committee (JDC) in forming the Displaced Persons Coordinating Committee. As in previous years, HIAS continued to fight against restrictive U.S. immigration laws following World War II, and worked with Israel and with other Jewish immigrant services.

In 1954 HIAS merged with the United Service for New Americans and the JDC Migration Department into the United HIAS Service, a single international agency which helped thousands of East European and North African immigrants – especially following the Hungarian revolt of 1956 and the Middle East crises of 1956 and 1967 – to find new homes, mainly in Western Europe, the United States, and South America. Today about 30 percent of HIAS's budget comes from the U.S. Department of State; the remainder comes from private donations.

During the 1980s there were tensions between HIAS, representing the American Jewish community along with some of the Soviet Jewry movement's agencies, and the Israeli govern-

ment over whether and how to aid Soviet Jews seeking freedom in countries other than Israel. The Israeli government felt that the Soviet Jewry movement was a Zionist movement and that since it had issued the visas under which Soviet Jews were able to leave, all Soviet Jews should go to Israel and emigrate, if they so chose, from Israel to other countries. HIAS, some local federations, and the Union of Councils felt that the Soviet Jewry movement was a human rights and human freedom issue and therefore, they were prepared to assist Soviet Jews just as they assisted Jews leaving other lands of oppression. The divisions were deep. Each side was faithful to the truth of their experience. In the end HIAS helped those Soviet Jews who wished to come to the United States directly and local federations assisted in the resettlement.

In addition to its world headquarters in New York City, HIAS maintains offices in Buenos Aires, Charlotte, N.C., Djabal and Goz Amir, Chad, Kiev, Moscow, Nairobi, Quito, Ecuador, Tel Aviv, Vienna, and Washington, D.C. Since its beginnings in 1881, HIAS has helped more than 4.5 million people to immigrate to the United States and other countries of safe haven around the world.

BIBLICAL
THE DEAD SEA SCROLLS
MISHNAIC
MEDIEVAL
MODERN PERIOD

A detailed table of contents precedes each section.

PRE-BIBLICAL

Nature of the Evidence
The Sources
Phonology
Morphology

Pre-biblical Hebrew, for the purposes of this article, refers to the Hebrew language as reflected in written documents up to and including the 12th century B.C.E. (Taanach, cf. below). This study is limited to an analysis of the written evidence which reflects the Hebrew spoken in Palestine during the pre-biblical period. (No attempt will be made to reconstruct Proto-Hebrew (‡) forms based on the masoretic Hebrew found in the Bible). Evidence of this type exists for the period from the mid-20th to the 13th centuries B.C.E.

Nature of the Evidence

There is no corpus of texts written in pre-biblical Hebrew, but only toponyms and single words transcribed into syllabaries which were not able to render accurately the consonants and vowel patterns of Hebrew. This material is written in the Egyptian and Akkadian syllabaries and care must be

exercised in reconstructing the language upon which these transcripts are based.

The Akkadian syllabary (as a result of Sumerian influence) was unable to represent gutturals except for *h*. Therefore, these transcriptions cannot help to determine which of the Proto-Semitic gutturals were still in use in pre-biblical Hebrew. However, whenever a guttural was pronounced it was usually rendered by an *h*, e.g.,

נְחֻשְׁתָּ	<i>nu-hu-uš-tum</i> (EA 69:28)
עַפְרָה	<i>ḥa-pa-ru</i> (EA 141:4; also <i>a-pa-ru</i> , EA 143:11)
זָרוּחַ	<i>zu-ru-uḥ</i> (EA 287:27)
צִהָרָה	<i>zu-uḥ-ru-ma</i> (EA 232:11)

The Egyptian material, while more faithfully representative of the consonantal system, did not have a clearly defined vowel system. As far as the vocalization of the Egyptian material is concerned, this study bases itself on W.F. Albright's *Vocalization of the Egyptian Syllabic Orthography* (VESO).

In discussing the verbal scheme of pre-biblical Hebrew, it must be carefully determined if a particular form is pure Canaanite, or whether it is in fact simply poor Akkadian, or the result of contamination – a combination of Akkadian and Hebrew elements (cf. the discussion on *yaqattal* forms, Morphology no. 5 below). When assessing place names, it is necessary to remember that they are conservative by nature, and do not always undergo the same linguistic changes as other words (e.g., *Ak-ka* Phonology no. 5). It is important, too, to remember that place names are often lexically difficult and may at times be non-Semitic in origin (cf. Hazor Phonology no. 5). Naturally, such words are expected to behave differently than the norm of pre-biblical Hebrew. Finally, it must be remembered that Canaanite itself was probably under the strong influence of Amorite, and that some forms found in the transcriptions may be directly due to this influence.

Keeping these factors in mind, and remembering that there is no corpus of pre-biblical Hebrew as such, but words or groups of words written in non-Hebrew syllabaries, it is surprising how much can actually be said about the phonology and morphology of the earliest stage of Hebrew.

The Sources

(1) The Egyptian material consists of lists of Canaanite personal and place names. In 1909, Burchardt published all the words and Hebrew parallels known at that time. Much more important are the Execration texts, published first by Sethe, and supplemented by Posener. These are texts inscribed on vases and contain the names of potential rivals; it was assumed that with the smashing of the vase, the opponent would also be destroyed. These texts date from the mid-20th to the late 19th centuries B.C.E. The Egyptian material is completed by an 18th-century list of Egyptian slaves (The Hayes List) which contains more than 30 North-West Semitic names, and was published by Albright. In all, there are 150 names from the period between 1900 and 1750 B.C.E.

(2) At Taanach (5 mi. (8 km.) south of Megiddo), some important cuneiform material was unearthed by the archae-

ologist E. Sellin in 1903–04. It contains six letters written in cuneiform Akkadian, which date from the 16th–15th-century B.C.E. period and were edited by the Assyriologist F. Hrozny in 1904. The letters appear to have been written by Canaanite scribes (especially the first two), and in several instances their native speech is clearly reflected in the strange Akkadian forms found in the letters. This material was supplemented by another letter found at Taanach and published originally by D.R. Hillers in 1964; it is written in alphabetic cuneiform and dates from the 12th century B.C.E. (cf. F.M. Cross's republication of this letter).

(3) It has long been recognized that many of the Ur III and Old Babylonian names found in Akkadian sources do not reflect standard Akkadian, but a distinct dialect or language. The traditional division of Semitic languages sets Akkadian off as East Semitic, and it was naturally agreed that these names, if they are not Akkadian, must be West Semitic. In 1926, Th. Bauer collected and analyzed about 700 names of this type in his work *Die Ostkanaanaeer* and argued (following Landsberger) that these names were Canaanite (but originated east of the Tigris, hence were East Canaanite). Since many of these names were prefaced by the Sumerian ideogram *MAR.TU*, which is equivalent to the Akkadian *amurru* ("west"), the people who bore these names came to be known as Amorites. Other scholars (Albright) have suggested that the language was a dialect (eastern) of Canaanite, while some (Goetze) feel that Amorite and Ugaritic make up a separate division within North-West Semitic. Since Bauer's publication, the number of known Amorite names has virtually tripled; a more up-to-date study can be found in Huffmon's *Amorite Personal Names in the Mari Texts* (with a complete bibliography of the problems of Amorite). It is not clear whether the designations *MAR.TU* (Sumerian) and *amurru* (Akkadian) were originally independent terms or linguistic equivalents. In the older (Ur III) period, persons described as *MAR.TU* have names which are often not Semitic, while in the later (Old Babylonian) period, many persons with West Semitic names are not designated in this way. This fact has prompted scholars to distinguish two linguistic strains: one called Amorite (Ur III) and the other East Canaanite. It seems clear today that the relationship between these two groups is much closer than originally thought and both may be referred to as Amorite (cf. Gelb, in *JAOS*, 88 (1968), 39–47).

The similarity between many Amorite names and names found in the Egyptian Execration texts, points to the importance of this material for the study of pre-biblical Hebrew. There undoubtedly were many points of similarity between the Amorite West Semitic dialect and the language of Canaan; Amorite, however, is not Canaanite as seen clearly from the fact that *ā* does not go to *ō* (the Amorite *s* = the Canaanite *š* is also significant).

(4) Possibly the most important source which has direct bearing on the language spoken in Canaan in pre-biblical times are the *Tell el-Amarna letters (EA). Discovered in 1887 at Tell el-Amarna, in Egypt, these letters contain the

correspondence between the ruling Egyptian court and their vassal princes in Canaan. The letters are ostensibly written in Akkadian, which was at that time (14th century B.C.E.), the lingua franca of the Near East. However, the Canaanite scribes were not fully conversant with the Babylonian language they attempted to write, and constantly substitute Canaanite forms and idioms for the Babylonian, producing a real “*Mischsprache*” which, when analyzed, yields much information about the scribes’ native tongue. There is, in fact, at least one Canaanite proverb written entirely in the language of the scribe: *ki-i na-am-lu tu-um-ḥa-zu la-a ta-ka-bi-lu u ta-an-si-ku qa-ti amelim ša yi-ma-ḥa-aš-ši*: (meaning, “If ants are smitten, they do not accept [the smiting quietly], but they bite the hand of the man who smites them”) (EA 252:16–19; cf. Albright, in BASOR, 89 (1943), 29–32).

More important than the native influence on the Akkadian in these letters are the Canaanite glosses which the scribe wrote in the margins of the text (in the Akkadian syllabary) as the equivalents to Akkadian words in the body of the letter. For example, in a letter from Jerusalem (EA 287:27), the Akkadian *qat* has the gloss *zu-ru-uḥ* is equivalent to the Hebrew *zəroaʿ* (זרוע, “hand”). In the Akkadian syllabary ^ʿ = *ḥ*; and *ō*, which was non-existent, was transcribed as a *u*; therefore, *zu-ru-uḥ* is the exact equivalent to the Hebrew זרוע.

The reasons for writing these glosses are unclear. The scribe may have written the Canaanite gloss for an Akkadian word he was not sure of, and filled in the proper form later. This explanation is the most likely since the gloss is always the exact equivalent of the Akkadian word in the text, and the scribe surely did not expect the gloss to clarify the text for the Egyptian reader. Still, whatever the reason, these glosses remain the most direct evidence of pre-biblical Hebrew.

The letters were given an excellent edition by Knudtzon (with some help by Weber and Ebeling) in 1915. Further texts were published by Dossin, Gordon, Schroeder, and Thureau-Dangin (for complete references cf. R. Borger, *Handbuch der Keilschriftliteratur*, 1 (1967), 238). This was supplemented by fine grammatical studies by Boehl, Ebeling, Dhorme, Albright, and Moran (cf. bibliography).

The material is presented under two headings: Phonology and Morphology. Each grammatical point is given separate treatment with the appropriate title preceding the evidence. When necessary, any differences between the earlier (Egyptian) and the later (cuneiform) material are noted and explained.

Phonology

(1) *ḥ* AND *ḥ*. These two Proto-Semitic consonants are not distinguished in the Hebrew script. The Phoenician-Canaanite alphabet contains only one grapheme for these two consonants indicating that the language for which this alphabet was developed did not differentiate between these two sounds. The Tiberian vocalization shows that the reading tradition also did not distinguish between the two sounds, as a diacritic was not used to differentiate between them (as opposed to *š* and

ś). Greek material indicates some differences in transcribing the *ḥ*, but this seems to be rooted in secondary and dialectical developments. It is, therefore, necessary to look elsewhere to determine whether Hebrew ever differentiated between the *ḥ* and *ḥ*. The material written in cuneiform (Taanach, Amorite, Amarna) is of no help here since the Akkadian syllabary only recognizes the consonant *ḥ*; thus the distinction, if it did exist, could not be represented in that syllabary. The Egyptian material, however, is of crucial importance.

The early Egyptian material clearly distinguishes between *ḥ* and *ḥ*:

ḥa-ar-pu in Canaanite *ḥharbu*, Hebrew *ḥereb* (VESO XII, A, 4); while

ḥu-ru in Canaanite *ḥhurru*, Hebrew *ḥor* (VESO XIII, A, 5).

In the later Shoshenq list (c. 950), the etymological *ḥ* seems to have merged with *ḥ*, as: *bt ḥ(w)rn* (Beth-Horon) (which etymologically is probably *ḥ*). This indicates that the Egyptian (Amarna) documents reflect the state where the assimilation of *ḥ* to *ḥ* was becoming finalized, and that this later state is reflected in the Shoshenq list.

It is difficult to accept the position (Goetze) that where these consonants are differentiated, it is as a result of Amorite (!) influence. Amorite was written in the cuneiform syllabary which could not differentiate between *ḥ* and *ḥ*, so there are no objective grounds for assuming that Amorite made this distinction. This position can only be justified by the assumption that Ugaritic and Amorite form a subgroup within North-West Semitic, and that the Ugaritic differentiation was maintained in Amorite. But there is no real evidence that this distinction was maintained in Amorite, and it is more reasonable to assume that cuneiform writing limited the Amorite pronunciation of gutturals just as it did the Akkadian. While there was clearly an Amorite influence in Canaan, there is no reason to assume that some early stage of Hebrew could not have differentiated between *ḥ* and *ḥ* as in the early Egyptian material.

(2) INDEPENDENCE OF THE *ś* PHONEME IN PRE-BIBLICAL HEBREW. The fact that only two graphemes are used in biblical Hebrew to distinguish the three sounds *s*, *ś*, *š* (*ś* and *š* are distinguished by means of a diacritic) reflects the situation in the language from which the alphabet was borrowed, and not directly on Hebrew. The fact that Greek and Latin transcriptions were unable, at a much later date, to distinguish between the three sounds is not relevant, since there is only one Greek-Latin grapheme *s* (σ) which parallels the early Hebrew sibilants.

In biblical Hebrew the three phonemes *s*, *ś*, and *š* are kept distinct. This is also the case in Epigraphic South Arabic, while in the other Semitic languages these three phonemes have coalesced into two. This indicates that the situation reflected in biblical Hebrew is primary, and not the result of a late innovation.

In the pre-biblical cuneiform material, this distinction is difficult to recognize (where only *s* and *š* are distinguished),

while the Egyptian material seems clearly to indicate that the distinction between these three phonemes was carefully maintained. Here *š* and *t̄* were transcribed by the sign for *s*, while *š* was represented by *š*, so that etymological *ś* and *š* were kept distinct:

Ya-si-r-*š*-ra, in Hebrew *š*Yasir'el (ישראל, "Israel") (VESO III B3);

sa-*š*-ra-ta, in Canaanite *š*ša'ar(a)t(a), in Hebrew *ša'ara* (שערה, "hair") (VESO V A 13); while,

ša-*š*-ra, in Hebrew *ša'ar* (שער, "gate") (VESO XV A 4).

(3) *t̄* AND *š*. The Hebrew-Phoenician alphabet has only one grapheme for these two Proto-Semitic consonants, and they both seem to have coalesced into *š*.

The early Egyptian material seems to indicate that the distinction between these two phonemes was still maintained. In these transcriptions both *t̄* and *š* are written with an *s*:

'a-*t̄*-ra, in Canaanite 'asira(a), in Amarna *asiru*, in Hebrew 'asir (אסיר);

tu-pi-ir, in Canaanite *soper*, in Hebrew *sofer* (סופר), but 'strt ('attartu) = Astarte (Burchardt 285);

ha-da-sa-t (*hadašatu*), in Canaanite *hadaš(a)t(a)*, in Hebrew *hadaša* (חדשה, "new") (VESO XII, A, 6).

But *š* is transcribed as *š* in the word *qa-di-š*, in Hebrew *qadoš* (קדוש) (VESO XC9).

However the same lists mention *ša-š*-ra, in Canaanite *š*ša-ar, in Hebrew *ša'ar* (שער, "gate") (VESO V, A, 14) (from *t̄*a'aru), indicating that the *t̄* was unstable even here and that it tended to merge into *š*. In the Shoshenq list, the *š* and *t̄* are undifferentiated: *šbrt* = *šibbolet* (from *t̄*ibbolet?). In short, the *t̄* was already on its way to coalescing with the *š* in the period of the early material, and by the time of the Shoshenq list and biblical Hebrew, it had disappeared as a separate phoneme.

The Amarna evidence is difficult to interpret. On the one hand, the difference in spelling between La-ki-si (EA 288:43) and Ša-ak-mi (EA 289:23) in the Jerusalem letters indicates that in that area *š* and *t̄* were kept etymologically distinct (*š* in Ša-ak-mi must be from *t̄*, cf. Ugaritic *t̄*km, as well as the fact that it is written with an *s* in the Egyptian transcriptions (VESO XIV A 15); and *š* in masoretic Hebrew). However, it has been noted (Goetze) that the spelling La-ki-š*š* also appears in the Jerusalem letters (EA 289:13) and that the cuneiform signs for *sa*, *sī*, *su*, serve as scribal variants for *ša*, *šī*, *šu*.

(4) 'ayin and *š*ayin. These two phonemes, which have coalesced into 'ayin in biblical Hebrew, are still distinguished in the Egyptian material.

'n-qn-*š*-a-m(a), in Canaanite En-qne-*š*-am(ma), in Hebrew Yoqnē'am (יקנעם) (VESO V, A, 6), while

'a-*š*-da-ta, in Canaanite *š*Gazzat(a), in Amarna, Azzati, Hazati, in Hebrew Azzah (עזה, Gr. Γαζα) (VESO XVI, A, 11).

However, we also find *ša-š*-ru, in Hebrew *š*ער ("gate") < *t̄*aeru (VESO V, A, 14), which would indicate that *š* > ' , as it has in biblical Hebrew. Here too, it must be pointed out that while the transcriptions prove that the distinction between the two phonemes still existed in early Hebrew, the distinction was fast disappearing. The cuneiform material can be of

no help as the syllabary does not (generally) distinguish between these consonants.

In a published letter from Taanach (BASOR, 173 (1969), p. 45–50), dated the late 13th or early 12th century B.C.E., the name *p^šm* (*pu'm*) appears. If this name is related to the Ugarit *pšm*, this would indicate that *š* < ' . (This letter is written in an alphabetic orthography (related to Ugaritic?), and it may be assumed that if the *š* = ' distinction still existed in Canaanite, it would have been represented in this way).

(5) LONG *a* (*ā*) BECOMES LONG *o* (*ō*). All the relevant material indicates that this shift, which is considered unique in Canaanite (of the classical Semitic languages), took place as early as the 15th century B.C.E. An instance from Amorite is especially interesting. The name of a northern city appears as Ḥašura (Hazor). Since the *ā* > *ō* shift did not take place in Amorite at all, this seems to indicate that the situation in Canaan in the 15th century B.C.E. was already post shift. (However, care must be taken in this case since the name is etymologically unclear and its vocalization may reflect a non-Semitic pronunciation.) All other relevant material indicates that when the Amarna period started the shift had already taken place in Canaanite.

(a) *Egyptian Material*. Bi-*š*-ru-ta, in Canaanite *be'rot*, in Hebrew בראר (VESO X, C, 4)

(b) *Amarna Canaanite (Many Examples)*. a-nu-ki (EA 287:66, 69), in Hebrew אנוכי; šu-un-nu (EA 263:12), in Hebrew שוןנו; ru-š*u*-nu (EA 264:18), in Hebrew ראשנו. The place name Ak-ka, in Hebrew אככו reflects a conservative pronunciation.

(c) *Taanach*. Interestingly enough the only indication for this shift in Taanach is the name Gu-li which may be derived from the Canaanite Go'eli, Hebrew גואל (I 3) (but cf. below). However, other place names, such as Ra-ḥa-bi (IV 22), Hebrew רחוב, and Ma-gi-id-da (V 15), Hebrew מגידו, seem to indicate that this shift had not yet taken place. (Another possible reading for the name in IV 22 is Elu-ra-pi-i, Hebrew אלו.)

Unfortunately, all the Taanach evidence is in the form of personal and place names, and it may be that although the shift had taken place generally, these names had preserved an older pronunciation. It is also possible that the shift had not yet taken place in the pre-Amarna period, or, at any event, not in the south of Canaan. The only evidence to the contrary is the name Gu-li which may be part of the Canaanite Gu-li-Adad (Albright), or the Hurrian Guli-Tešub (Maisler (Mazar)), in which case it is not relevant to the problem. The sum of the evidence seems to indicate that in Taanach, in the period preceding Amarna (16th–15th century) the shift *ā* > *ō* had not yet taken place.

(6) THE PROTO-SEMITIC *n* IS ASSIMILATED TO THE FOLLOWING CONSONANT. In biblical Hebrew, the Proto-Semitic *n* is assimilated to the following consonant. The pre-biblical material shows that this process was in a state of flux and that in the early period the *n* was not as consistently assimilated as later on.

The Egyptian *Bi-in-ti-^s-n-t* is in Canaanite \ddot{B} *int(i)-^sanat* (“daughter of Anat”; Canaanite *bint* = Hebrew בַּת). In other words the *n* of בַּת remained unassimilated (VESO VI B 12).

In Amarna there is both *gitti* < *ginti* as well as *ginti* (Hebrew *gat*), indicating that the tendency to assimilate the *n* did exist, but had not yet reached the proportions of biblical Hebrew where it is the norm in these circumstances. *La-bitu* < *labintu* (EA 296:17) is also found in Amarna.

(7) *a'* > (*ā*) > *ō*. The Amarna material indicates that this change had already taken place in Hebrew:

(a) *ru-šu-nu* (EA 264:18), *roš* (רֹאשׁ, “head”) reflects the following development: *rōš* < *rāš* < \ddot{r} *rāš*.

(b) *zu-u-nu* (EA 263:12); *zon* (צֶן, “sheep”) here too we assume *zōn* < *zān* < \ddot{z} *ān*.

The Egyptian material generally reflects the later stage, as in the name *ršqdš* (*rš* = רֹאשׁ) (VESO X, C, 9), but *ru-³u-š* (*a*) is also found (VESO X, C, 7). *Ru-³u-š(a)-qdš*, in Canaanite \ddot{B} *Roš-qids*, is explained by Albright as being a Canaanite back formation of *ro³(o)š* from *rōš*, on the analogy of the plural *rašim* (רֹאשִׁים) which was probably dialectic (VESO III, E, 6). Another possible interpretation is that this name preserved the earlier pronunciation (cf. the name Ak-ka (עֶכּוֹ) in Amarna Hebrew (Phonology, no. 5)).

(8) MIMMATION. Mimmation, known in early Akkadian, is almost unknown in biblical Hebrew, except for a few fixed forms like אֲמַנָּם, יוֹמָם, חָנָם. The earlier material preserves several interesting examples. In the Execration texts, the city of Jerusalem is transcribed as \ddot{Z} *ws \ddot{Z} mm* (= Urusalimum). Similarly, the Taanach letters indicate a high rate of mimmation, especially in the Canaanite letters. (In Amarna there is a marked decrease in the use of mimmation, an indirect indication that the Taanach letters precede the Amarna letters).

Morphology

(1) CASE ENDINGS. The Semitic languages had originally three basic cases: nominative, accusative, and genitive, which were differentiated by suffixes (in singular *-u, -a, -i*). Especially prominent in the early history of the language, they generally fell into disuse. In biblical Hebrew, the nominal case endings have generally been lost, except for certain compound names like מִתְרוּשָׁלַח, and possibly poetic forms like בָּנוּ בְעוֹר, and חִיתוֹ אֶרֶץ. The *heh localis*, long thought to be a preserved accusative in biblical Hebrew, has to be reevaluated in the light of the Ugaritic evidence. In Ugaritic, which does not generally employ the *mater lectionis*, there is the word *šmmh* which would indicate that the *h* has consonantal force (cf. Speiser, in: *Israel Exploration Journal*, 4 (1954), 108–115).

Both the Egyptian material and the cuneiform material from Amarna indicate that case endings were still in use at that time. In the earlier Egyptian lists, place names usually end with *-u*, but the tendency was for *-a* to replace *-u* in later material, e.g., Ayaluna, Ašqaluna, Šiduna, and Ḥašura. This indicates that before the case endings were completely dropped, there was a period where these final short vowels were confused and the cases were no longer grammatically distinguished.

Boehl has shown (see also Dhorme, in: RB, 23 (1914), 347–8 = *Recueil E. Dhorme* (1951), 460–1) that the case endings in Canaanite are by and large not confused and the distinction between the different cases is maintained. Examples of the use of the nominative *-u*:

a-pa-ru (עַפְרָ) EA 141:4

ru-šu-nu (רֹאשֻׁנוּ) EA 264:18

The genitive *-i*:

sa-aḥ-ri (שַׁעֲרֵי) EA 244:16

a-na-yi (אֲנִי) EA 245:28

The accusative *-a*:

ḥa-an-pa (חַנְּפָ) EA 288:7

mu-ur-ra (מִרָ) EA 269:16

These case endings were elided in Hebrew after the Amarna period and are very rare in biblical Hebrew.

(2) THE FIRST PERSON SINGULAR INDEPENDENT PRONOUN: *ʾanoki*. The *ʾanoki* form is found in Amarna Hebrew (*a-nu-ki* EA 287:66, 69). In late biblical Hebrew, this form becomes rare and is almost always replaced by *ʾani*.

(3) THE DUAL ENDING: *-ay(m)a*. In Amarna, the dual ending is known from the word *hi-na-ia* (“my (two) eyes” (nom.)) (EA 144:17). A similar form is known from Taanach *išma-ga-re-ma* (II, 8) (“two Chariot wheels”), with the Canaanite dual endings.

(4) FIRST PERSON POSSESSIVE SUFFIX: *-nu* (OUR). *Ti-mi-tu-na-nu* ((and you) “killed us”), in Amarna (EA 238:33).

THE VERB (1) CAUSATIVE PREFIX *ha-*. The Hebrew causative prefix *ha-* appears in Amarna as *ḥi-* (attenuation). The example is from EA 256:7, *ḥi-iḥ-bi-e*; it is clearly a Hebrew form which is impossible in Akkadian. The scribe used the Hebrew הִחַבֵּיָהּ for the common Akkadian verb of the same meaning, *puzzuru*.

(2) THE ENDING OF THE FIRST PERSON SINGULAR OF THE QATALA FORM: *-ti, qatalti*. In Amarna, *qatalti* forms appear, e.g., *ba-ni-ti* “I built” (EA 292:29).

TENSES. The Hebrew verbal scheme, which consists (primarily, cf. below) of two tenses, differs radically from the Proto-Semitic system. The two tenses: a prefixed one indicating incompleting action (imperfect), and the suffixed one indicating completed action (perfect), are secondary. It is possible to give approximate dates for the introduction of these verbal forms from the cuneiform evidence for early Hebrew.

(3) QATALA PRETERITE FORM. The *qatal(a)* form, which in Akkadian is the basis of the stative form (a nominal not a verbal form in Akkadian), is found in Amarna serving also as the Hebrew preterite form. For example:

la-ma-ad (“he has learned”) (EA 196:30).

ša-al (“he questioned”) (EA 289:10).

(4) YAQTUL IMPERFECT FORMS. The Amarna evidence points clearly to the fact that the *yaqtul* imperfect form had already been developed in Canaan. However, as Moran has pointed out, this function was not exclusive with this form. His work on the Amarna letters from Byblos led him to the conclusion that the imperfect indicative had two functions:

(a) present future; (b) past iterative. The passage EA 104:17–36, which Moran quotes, is instructive. The verb *lequ* (“take”) appears three times in the prefixed form *tilquna*, once as a present, once as a future, and once as a past.

miya mārū Abd-aširta ardi kalbi šar māt Kašši u šar māt Mittanni šunu u tilqūna māt šarri ana šāšuna panānu tilqūna ālāni ḥazānīka u qālāta annū inanna dubbirū rābišaka u laqū ālānišu ana šāšunu anumma laqū al Ullaza šumma kīamma qālāta adi tilqūnu āl Šumuru u tidūkūna rābiša u šāb tillati ša ina Šumura.

Who are the sons of Abd-aširta the slave and dog? Are they king of the Kassites or the king of the Mittani that they take the royal land for themselves? Previously they used to take the cities of your governors, and you were negligent. Behold! now they have driven out your commissioner and have taken his cities for themselves. Indeed, they have taken Ullaza. If you are negligent this way they will take Simyra besides, and they will kill the commissioner and the auxiliary force which is in Simyra.

(5) YAQATTALU FORM OF THE VERB. The *yaqattal* form of the verb, attested to in the Akkadian present and the Ethiopic indicative, is generally thought to be missing from North-West Semitic. There are, however, certain forms found both in Amorite and in Amarna Hebrew which seem to indicate that an independent *yaqattal* form may have existed in North-West Semitic.

In Amarna Hebrew, the forms which seem to be of the *yaqattalu* pattern are, e.g., *tidabbibu* (EA 138:49) (“they speak”) and *i-paṭ-tar* (EA 2:46) (“he loosens”). However, the situation is not so simple. Even if the gemination in these forms is accepted as being genuine, they can be explained as Akkadian present forms with the Amarna Canaanite *i-* prefix in place of the Akkadian *a-*. In other words, these would not be genuine Canaanite forms but blends of Akkadian stems with Canaanite prefixes which were produced when speakers of Canaanite tried to write Akkadian.

In Amorite there are also certain names which give the impression of being *yaqattal* forms: e.g., the names *yabanni* (Akkadian: *ibanni*) and *yanabbi* (Akkadian: *inabbi*). Huffmon feels that these names can be properly compared to Ugaritic (cf. *pi’el* of *bāna* in post-biblical Hebrew), and do not necessarily reflect North-West Semitic *yaqattal* forms. Personal names, such as I-ba-as-ir and Ya-ba-an-ni-AN, are in his opinion clearly *pi’el* forms. There is therefore, in his opinion, no unambiguous evidence which indicates that there were in fact *yaqattal* forms of the verb in early North-West Semitic.

However, it has been pointed out (Von Soden, in: *Die Welt des Orients*, 3 (1964), 180) that the situation in Amorite is not at all clear:

(a) It is noteworthy that all the *yaqattal* forms that have been found in Amorite are derived from three weak verbs (excepting *ibassir* which may not even be Canaanite);

(b) Some of the roots, like *yanabbi* (“he calls”) and *yabanni* (“he builds, makes”) are not found as *pi’el* forms in Akkadian. The obvious conclusion is that these are not *pi’el* forms at all but the present of a true *yaqattal* form. (Some of

the other names which appear in Amorite: *yabassi*, *yaḥatt/ṭṭi*, *yamatt/ṭṭi*, and *yasattṭi* are lexically unclear, and cannot be used as evidence.)

The fact that this form is clearly found in a North-West Semitic dialect (Amorite) may indicate that the Amarna Canaanite material should be reassessed. It may be that those forms which appeared to be Canaanite-Akkadian contaminations are true Canaanite Hebrew forms.

(6) YAQATULA (SUBJUNCTIVE) FORM OF THE CANAANITE VERB. In biblical Hebrew, the moods of the imperfect stem have a limited use (opposed, for example, to classical Arabic). The situation in pre-biblical Hebrew is more difficult to determine. Since Akkadian has a homophonous morpheme, known as the *ventive* (a modal suffix in Akkadian which indicates motion toward the speaker or focus of attention; e.g., *illik* (“he came”), *illikam* (“he came here”)), a large number of relevant occurrences of the suffix *-a* (with *ya/i/u/ qtal* forms) are readily explained, at least at first glance as examples of the *ventive*.

Moran has proposed that true *yaqatula* forms are identifiable by semantic means and that they are specifically used in two instances (*Orientalia*, 29 (1960), 1–19):

(a) to express a wish, request, or command – *yi-sa LUGAL* (“may the king come forth”).

(b) in clauses of purpose or intended result – *ib-lu-ṭa* (“so that I may live”).

The fact that the biblical Hebrew form, known as the cohortative, has the same functions as the Byblian Amarna (a group of Amarna letters from Byblos) *yaqtula*, indicates that the Hebrew cohortative is a continuation of this “subjunctive” (H. Bauer and P. Leander, *Historische Grammatik der hebraeischen Sprache* (1922), 273; P. Joüon, *Grammaire de l’Hébreu Biblique* (1923), 315 n. 1).

(7) TAQTALU(NA) THIRD PERSON MASCULINE PLURAL FORM. There seems to be some evidence from Amarna which points to the fact that a *taqtalu(na)* third person masculine plural form existed in pre-biblical Hebrew, as in Ugaritic (cf. Boehl, p. 53 and Moran, in: *Journal of Cuneiform Studies*, 5 (1951), 33–35). Hints of this form are also found in biblical Hebrew: e.g., ותקרבו in Ezekiel (37:7) as well as ותאמר and ותאמרנו in Deuteronomy (5:21).

(8) INFINITIVE ABSOLUTE USED AS A FINITE VERB. In biblical Hebrew there are a few clear cases of the use of the infinitive absolute form of the verb with finite force. *ושבח אני* (Eccles. 4:2) and *ונהפוך הוא* (Esth. 9:1) are the clearest examples of this phenomenon, paralleled by the *qtl/yqtl’nk* construction found especially at Karatepe. The fact that this was a fairly regular construction in Early Hebrew (and North-West Semitic in general) is shown by the many examples in the Amarna letters: e.g., (from Amarna), *u ma-ti-ma šu-ut* (“and when he died truly”) where the form *matima* is an infinitive absolute followed by the independent pronoun with the force of an independent verb (cf. Moran, in *Journal of Cuneiform Studies*, 4 (1950), 169–72).

The Names

Biblical Hebrew is also called early Hebrew in contradistinction to living middle Hebrew, as reflected in the Mishnah, the older portions of the Talmud and early Midrash; to written middle Hebrew, as it was used after its extinction as a living language; and to modern Hebrew. It is known mainly from the Hebrew portions of the Bible (i.e., the whole Bible with the exceptions of its quite restricted *Aramaic parts, i.e., two words in Gen. 31:47; Jer. 10:11; Dan. 2:4–7:28; Ezra 4:8–6:18), which constitutes a rather limited corpus. The name “Hebrew Language” itself does not occur in the Bible; instead, it is called the “language of Canaan” (Isa. 19:18) and “Judean” (II Kings 18:26, 28; Isa. 36:11, 13; Neh. 13:24, in the last passage already in accordance with the late, post-exilic usage, which extended the term “Judean” to the nation). Not until about 130 B.C.E. (in the prologue to Ben Sira) does εβραϊστί – occur to denote old Hebrew. Josephus and the New Testament, however, use this term both of Hebrew and Aramaic (in contradistinction to Greek).

Ancient Evidence (Inscriptions and Transcriptions)

Only slight additional material can be adduced from inscriptions and transcriptions, which is not only due to their limited extent. The most important old Hebrew inscriptions are the calendar of *Gezer (c. 10th century B.C.E.), ostraca of *Samaria (from the eighth (?) century B.C.E.), the inscription of *Siloam (c. 700 B.C.E.), the *Lachish and Tel *Arad letters (sixth century B.C.E.). Their linguistic evaluation is impeded by their consonantal script, even the vowel letters being less frequent than in the Masoretic Bible Text. Thus *i* and *ú* in a medial position are often unmarked (as ʔ Siloam 2 = ʔis (“man”), ʔr Siloam 3; 6 = ʔúr (“rock”). Nevertheless, some new, grammatical material may be derived from them, as the monophthongization of diphthongs even in stressed syllables outside Judah (cf. qš Gezer 7, qayis (“summer”); cf. the pun of the prophet Amos (8:2) of this word with qeš (“end”); yn

in the Samaria ostraca, yáyin (“wine”) or the ending-ô, which is considered by some scholars as dual nominative ending in *status constructus* (yrhw (“two months”), Gezer passim), and even the attestation of forms occurring exceptionally in the Bible (as *hyt* Siloam 3 = *hayât* (“she was”), a rare form of the third person feminine perfect of *verba tertiae yôd*, instead of the usual *hâyâtâ*) is of help. Moreover, they often contain additions to the limited vocabulary of Biblical Hebrew.

Akkadian, Greek, and Latin transcriptions, on the other hand, mark the vowels as well, thus making the recognition of grammatical structure possible. Yet the special conditions of both the transcribed and the transcribing language has to be taken into account, besides the intricacies of transcription itself. Disregard of these pitfalls inevitably results in misinterpretations, as when P. Kahle regarded the double pronunciation of *b*, *g*, *d*, *k*, *p*, and *t* as artificial, *inter alia* because Origen (185–204 C.E.) and Jerome (342–420 C.E.) deviate in their transcriptions. Kahle did not take into account the fact that Greek and Latin at that time had no means of differentiating between aspirates and spirants (cf. e.g., the use of χ for Arabic *k* in the Greek papyri of Nessanah, because *k* was at least slightly aspirated; see Blanc in *To Honor R. Jacobson* (1967), 298). Moreover, with the exception of Origen’s transcription of coherent texts, and words quoted by Jerome, these transcriptions are limited to proper names and thus make an insight into the lingual structure rather difficult. Nevertheless, they are by no means unimportant. Sometimes they exhibit Aramaized forms as against the Hebrew feature according to the Masorah (as Akkadian *sa-me-ri-na-ai*, Septuagint Σεμερω, Σαμηρω; cf. Ezra 4:10, 17 *šamráyin*, as against masoretic *šomrôn*), and vice versa (as masoretic *Bnê braq*, cf. modern *Ibn ibraq*, as against Akkadian *ba-na-a-a-bar-qa*, Septuagint Βαυβακάτ [!]). In some cases the noun formation is different (as Akkadian *am-qa-ru-na*, Septuagint ἄκκάρω, exhibiting *qatṭālôn* (masoretic *qittālôn*), as against masoretic *ʔeqrôn*, reflecting the parallel *qitlôn*; or masoretic *ʔerek* corresponding to Septuagint Ὀπέχ, Akkadian *Uruk* (also *Arku*?). Septuagint Ἀμμάν and Akkadian (*Bit*-) *Ammānu* exhibit the stage preceding masoretic *ʔammôn* (cf. Septuagint variant lecture Ἀμμών). Even more important are transcriptions exhibiting features preceding the masoretic vocalizations, as Akkadian *a-u-si* (Hosea) presumably still containing the diphthong, or Akkadian *ha-za-ki-a-a-a*, which, as against masoretic *Ḥizqiyā*, perhaps still exhibits the preservation of *a* in the second and first syllables (cf. also Septuagint Ἐζεκιὰς). Since Greek may distinguish between long and short *e/o* by using η, ω and ε, ο, respectively, Greek transcriptions may even be very important for the recognition of grammatical structures (forms like Septuagint Ἡσων = masoretic *ʔésāw*, exhibit, it seems, the oldest attestations of the lengthening of vowels in pretonic open syllables). This situation may sometimes be complicated by later sources exhibiting forms that are considered to be earlier, as when the masoretic so-called *segolata* (as *zēker* – “remembrance”), similarly transcribed in the Septuagint (as Γαθηρ – *geter*), still appear *apud* Origen as monosyllables (as ζεχρ = *zēker*).

The Masoretic Text

The Masoretic Text is also not easy to evaluate. It is made up of three historically distinct elements, viz. (in order of their antiquity and stability) the consonantal text, the vowel letters, and the system of diacritical marks for vowels and cantillation.

In the course of time, even the consonantal text underwent changes – an altering in pronunciation led to a change in spelling (since *šîn* was pronounced as *samek*, the latter was rarely substituted for it, as *stâw* (“winter”), Song of Songs 2:11 instead of the original *štâw*). Similarly, antiquated forms were replaced by more usual ones (cf. e.g., 11 Sam. 22:37, 40, 48 *taḥatēnî* (“under me”), as against *taḥtây*, Ps. 18:37, 40, 48, representing the more usual and, presumably, later form), and synonyms replaced obsolete words (cf. parallel passages occurring, e.g., in Chronicles as against Kings, or readings exhibited by “vulgar” Qumran biblical texts). It is even possible that puristic redactions expurgated usages still alive, in favor of literarily preferred features (as Bergstraesser, in: ZATW, 29 (1909), 40 ff. assumed for *šē* being superseded by *ʾāšer*). On the other hand, the differences between Masoretic manuscripts (in contradistinction to the Samaritan version) are so few that this uniformity has to be explained according to the “one-recension” (or even the “archetype”) theory.

More conspicuous are differences in the usage of the vowel letters *ʾ*, *h*, *w*, and *y*: in the Masoretic Text, as a rule, but not always, etymologically long vowels, with the exception of medial *â*, are marked by one of these letters. The spelling, however, was more defective than in available texts (cf. also the spelling of inscriptions discussed *supra*), at least at the time of the Septuagint, and there are some differences between the Tiberian and other traditions. Nevertheless, the uniformity mentioned above obtains, as a rule, also in the sphere of the vowel letters. However it has to be assumed that changes affected vowel letters (just as the consonantal text) as obsolete forms were superseded by later ones, and this is exhibited by variant readings occurring in “vulgar” biblical passages found in Qumran. In the Masoretic Text this development is reflected by the so-called *ktiv*, (“what is written”) and *qrê* (“what is to be read”), two variant readings of which the *ktiv*, occurring unvocalized in the text, is rejected in favor of the *qrê*, adduced vocalized on the margin (in many Bibles, however, the *ktiv* is adduced in the text with the *qrê*’s vocalization, thus causing confusion). Sometimes the *ktiv* exhibits an older feature, given up in favor of the later *qrê* (and in many manuscripts what is adduced as *qrê* in other manuscripts, has already penetrated into the text as a single reading). Thus, it seems that the archaic perfect third person plural feminine *-h*, to be read *-â*, as exhibited by *ktiv*, was superseded by the ending *-û* in *qrê*. Moreover, the pronominal suffix *-ô* of the third person singular masculine, after nouns terminating in a consonant, is still sometimes archaically spelled with *h* in *ktiv*, as against the more usual spelling with *w* in *qrê*. (Sometimes, however, the spelling with *-h* is the only spelling transmitted.) In other cases the *ktiv* exhibits the later feature. Thus *ʾty*, representing

ʾattî (“you”) (feminine singular), presumably due to Aramaic influence (cf. the Samaritan version and *DS1a*), sometimes occurs as *ktiv*, the *qrê* being *ʾatt*. The same applies to the perfect second person singular ending *-ty*, to be read *-tî*, which was superseded by *-t*.

The latest stage is exhibited by the vowel and cantillation marks, which developed between c. 600 C.E. (the date of the final redaction of the Talmud, in which they did not yet occur) and the beginning of the 10th century (from which period dated manuscripts have been discovered), but is based on a much older tradition. The only vocalization and cantillation system in use is the so-called Tiberian vocalization. It represents the most elaborate system and is the only one completely preserved. Therefore, it serves as the main base for the grammatical investigation of biblical Hebrew. In principle, however, the other vocalization systems are equally important, i.e., the Babylonian system, which includes several sub-species, and the so-called Palestinian. One has also to take into consideration the Samaritan tradition of pronunciation, and important linguistic features may also be elicited from the Dead Sea Scrolls. The most important innovation, differentiating Tiberian (and one subsystem of Palestinian) vocalization from the others is change of *â* to *â*, thus coinciding with *â < u*. (This feature seems to be very late, however, not after Jerome’s time.) There are also other divergences, such as less attenuation of *a* to *i* in closed unstressed syllables according to the Babylonian vocalization (as *šâbʾâ* = Tiberian *šîbʾâ*, which, *obiter dictum*, already penetrated into Babylonian), a wider supersession of the perfect *paʾil* by *paʾûl*, and the preservation of *â* in the perfect, imperfect, imperative, and infinitive of *hitpaʾel*. Yet even the Tiberian system exhibits inconsistencies, and it is difficult to establish whether they are due to the mixture of readings of different subschools (cf. those of *Ben Asher, whose readings have been accepted, and *Ben Naphtali), to chance, or to the desire to be over-accurate. Yet, in spite of all these difficulties in proper linguistic evaluation, the main features of biblical grammar are quite clear.

Despite the multilayered character of the linguistic tradition, the Bible, though stretching over many hundreds of years and emanating from different parts of Palestine, exhibits a surprisingly uniform language. This is due to its being a standardized literary language, on the one hand, and the later changes the text underwent (see *supra*) on the other. Nothing is known from the Bible even about dialectal differences, with the exception of the fact that the Ephraimites pronounced *sibbôlet*, rather than *šibbôlet* (cf. also *supra* for more far-reaching monophthongization outside Judah). Post-Exilic books, however, exhibit certain special features which are also found in Middle Hebrew (and sometimes in Aramaic), such as the prevalent use of *ʾāni* for *ʾānôkî*, and of *ʾet* with pronominal suffixes rather than their direct annexation to the verb, and the usage of the participle becomes more frequent. Moreover, these books evince a penchant for *scriptio plena*. On the other hand, poetry, in contradistinction to prose, exhibits certain peculiarities, as the longer forms of the prepositions *ʾelê*, *ʾalê*,

ʾade (“to, on, till”) as against prosaic *ʾel ʾal ʾad* respectively, the less frequent use of the definite article, of the object marker *ʾet* and the relative pronoun, further the use of endings *-i / -ô* in the noun in *status constructus* (*-i* in additional cases as well), the pronominal suffix *-mô* (“their/them”), the use of *status constructus* when preceding prepositions, and the extended use of the shortened imperfect.

CONSONANTS. Biblical Hebrew uses the following letters to mark consonants (four of which may also serve as vowel letters, *v. supra*): א = ʾ, ב = *b*, ג = *g*, ד = *d*, ה = *h*, ו = *w*, ז = *z*, ח = *h*, ט = *t*, י = *y*, כ = *k*, ל = *l*, מ = *m*, נ = *n*, ס = *s*, ע = ʿ, פ = *p*, צ = *s*, ק = *q*, ר = *r*, שׁ (or שׂ) = *š* (*ś*), ת = *t*. The letters *k*, *m*, *n*, *s*, and *p* have special forms in final position. The inventory of Hebrew consonantal phonemes, as marked by these letters, is reduced as against the Proto-Semitic one, Hebrew *z* representing Proto-Semitic *z* and *δ*, Hebrew *h* Proto-Semitic *h* and *ħ*, Hebrew *š* Proto-Semitic *š*, *d*, and *z*, Hebrew ʿ Proto-Semitic ʿ and *ǵ*, and Hebrew *ś* Proto-Semitic *ś* and *t*. On the other hand, some of the letters in the early period might have been polyphonic, as no doubt was שׁ, marking, in the Judean dialect at least, both *š* and *ś* (differentiated in Tiberian vocalization, e.g., by a point above the letter on its right or left side respectively). It has been claimed that ח and ע were polyphonic as well, exhibiting *h / ħ* and ʿ / *ǵ* respectively, and that reminiscences of this feature were still alive at the time of the Septuagint, which transcribes ח and ע by *zero / χ* and *zero / γ* respectively, χ and γ roughly corresponding to *h* and *ǵ* respectively. On the other hand, these transcriptions may be due to difficulties of transcribing sounds lacking in Greek (cf., *mutatis mutandis*, the transcription of Arabic ʿ by Greek γ; see Violet, in: OLZ, 4 (1901), 384ff., and the papyri of Nessana, transcribing Arabic *h* and *ħ* as a rule by *zero*, once Χαλέδ, Χομας] by χ; *ǵ* by γ, but once by *zero* [Ἀζαλίς]. *B*, *g*, *d*, *k*, *p*, and *t* after vowels developed into spirants (even in juncture; differentiated in Tiberian vocalization by the absence of a point, the so-called *dageš lene*, in them, as against the point in stops), thus entailing the polyphonic use of them in writing. Yet, at first at least, these stops and spirants did not represent different phonemes, and even if they did so later (cf. *perhaps ʾalpē* – “thousands,” *status constructus* as against *ʔalpē* – “2,000” *status constructus*), their phonemical load was very small: this, however, depends on the moot question of the phonemic status of *šewa*, *v. infra*. It was in the later biblical Hebrew as well that *ś* coalesced with *s*, and this entailed rare cases of mixing them up in spelling (cf. *supra*). Other important sound shifts, affecting consonants in certain positions, are initial *w* very early becoming *y* (with the notable exception of *w* – “and”), which then often analogically penetrates into medial position as well; the dropping of intervocalic *h* (as *ʔsūsahu* becoming *sūsô*); and *w* and *y* dropping in many positions (as *ʔyīnawu* > *yaʾāne*, – “he will be humble,” *ʔgalaya* > *gala* – “he went into exile”) and ʾ in some positions (*ʾākilu* > *ʾōkel* [pause] – “I shall eat”). *N* preceding a consonant is assimilated to it. At a later phase, the laryngals and pharyngals became weakened and were no longer apt to be doubled

(this applies to *r* as well); as compensation, the vowel preceding them is often lengthened in this situation. Moreover, *ə* following them appears in the Tiberian vocalization as *ā*, *ē*, *ε*, and *â*, and these sounds usually develop after pharyngals and laryngals not followed by a vowel in the middle of the word. Moreover, these consonants often change *i / u* into *a* (*i* at least into *ε*). Doubling of final consonants is given up (as *ʔsall* > *sal* (“basket”)) (with the partial exception of *tt* occurring e.g., in *ʔatt* (“you,” feminine singular)), and this occurs even in medial position when followed by a consonant (as *tāsobnâ* (“they will turn,” feminine)), and also when the originally following *ə* has become *zero*, (as *ʔwayyāhî* > *wayhî* (“it was”)).

VOWELS. The vowels according to the various vocalization systems differ: mention has already been made that in Tiberian vocalization (and in one subsystem of Palestinian) *â* shifted to *â*. Babylonian vocalization does not differentiate between *a* and *ε*. Whereas the consonantal script is phonemic (and in some cases even polyphonic), the vowel marks, especially according to the Tiberian system, can designate auxiliary vowels as well (cf., e.g., the so-called furtive *pataḥ*, automatically developing before final *h*, *ħ*, and ʿ after vowels other than *a* and *â*). On the other hand, the Tiberian vocalization is polyphonic as well, since absence of vowel, and *ə* are marked by same sign ְ, *šewa* (but in other vocalization systems absence of vowel is not marked at all, this being also the case with final letters in the Tiberian system, with the exception of *k*, *t* as stop, and final consonant clusters); it is perhaps the most important moot question of Hebrew vocalization, whether ְ has or has not to be analyzed as a phoneme, since, e.g., the phonemic status of spirantic *b*, *g*, *d*, *k*, *p*, and *t* largely depends on it (cf. *supra ʔalpē* as against *ʾalpē*; if ְ has to be accorded a phonemic static, *ʾalpē* has presumably to be phonemicized as *ʾalpē*, and then the spirantization would merely result from the preceding vowel). At any rate, historical *ə* may develop into *zero*, and vice versa. The Tiberian vocalization (and at least a part of the others) denotes (with the exception of *šewa* and its allophones *ā*, *ē*, and *ε*) quality rather than quantity: this is demonstrated mainly by the use of the same sign (ְ = *â*) to mark both historical *â* and *u*, as well as by the parallel occurrence of *a/ε*, accounted to be short, and *e/o*, regarded as long, in certain paradigms (as the verbal paradigms *pāʾal*, *pāʾel*, *pāʾol*, the nominal paradigms *qāʾal* (*t* being *h*, *ħ*, or ʿ), *qēʾel* as against *qeʾtel*, *qōʾel*; for the usage of *pʾl*, *qʾl* *v. infra*); therefore, length as marked in this article rests on historical reconstruction of a linguistic stage preceding that of the Tiberian vocalization (another change as against Tiberian vocalization, as used in this article, is that, as a rule, vowels were transcribed in accordance with the Sephardi pronunciation, ְ, as a rule, transliterated by *â* rather than by *â*).

The vowels of the Tiberian system (with the exception of *šewa* and its allophones mentioned above) are (the Tiberian vowel signs, are, as a rule, sublinear, whereas the other systems use superlinear vocalization): ַ = *a*, ָ = *ā*, ֶ = *ε*, ֵ = *e*, ֹ = *i*, ֺ or ֻ = *o*, ֽ or ֿ = *u*. Since no quantitative distinctions exist,

there is no difference whether or not a vowel sign is followed by a vowel letter (as between ך and ך; ך and ך, or ך and ך respectively) and even ך and ך are identical: their respective use depends only on whether or not the consonantal text exhibited vowel letters. Whereas the inventory of Hebrew consonants is restricted against the Proto-Semitic one (see *supra*), that of the Hebrew vowels is extended: Proto-Semitic had, it seems, a system of three short (*a:i:u*, at an earlier stage presumably *a:i/u*) and three long vowel phonemes (*â:i:û*) only, which, of course, were differently actualized. Tiberian *a* mainly stems from Proto-Semitic *a*, and also from *i* in closed stressed syllables (*lex Philippi*, as *ḥafistâ* > *ḥafastâ* (“you wanted”)), Tiberian *â* from Proto-Semitic *a*, *â*, and *u* (in the last case, pronounced according to Sephardi pronunciation *o*, as against *â* in the other cases), Tiberian *ε* from Proto-Semitic *a*, *i*, and *ay* (when preceding *â*), Tiberian *ε* from Proto-Semitic *i* and *ay*, Tiberian *i* from Proto-Semitic *i*, *î*, and *a* (in unstressed, closed syllables, see *supra*), Tiberian *o* from Proto-Semitic *u*, *â* (in formerly stressed syllables, then often analogically spreading to other positions as well), and *aw*, and Tiberian *u* from Proto-Semitic *u* and *û*. As shown, the diphthongs *aw* and *ay* were monophthongized, becoming *o* and *e* respectively. Sometimes, they are preserved, as normally before double *w* and *y*, e.g., *gawwkâ* (“your back”), *ḥayyim* (“life”), and in other conditions, like *mnûḥaykî* (“your rest,” Ps. 116:7) and *ʿawlâ* (“wickedness”). In closed syllables bearing the main stress *aw* and *ay* were split into two syllables, as *ḥawek* = *tâwek* (“middle”), *ḥbayt* > *bâyit* (“house”), *iy* often becomes *î*, especially after prepositions (as *ḥilyhûdâ* > *ḥîhûdâ* (“to Judah”)); so also *ḥmiyyadê* > *ḥmiydê* > *midê* (“from the hands of...”). In Babylonian vocalization *yə*, especially in initial position, is graphically represented by *yi*, which, according to some scholars, is intended for the pronunciation of *î* (as *yirâ* (“be afraid!”), as against *yərâ*), and similarly in Tiberian vocalization *w-* (“and”) before labials, and consonants followed by *ə*, becomes *u* (as *umélék* (“and king”)). Moreover, according to the Ben Naphtali school of the Tiberian system, medial *əyi* is apt to shift to *i ə* (marked by *šewa*) developed from original short vowels in open syllables two or four syllables before the stress (as *ḥladabaraykumu* > *ladibərəkém* later *ladlbrəkém*, (“to your things”)); sometimes short vowels in open pretonic syllables are reduced (as *ḥmasmərîm* > *masmrim* (“nails”)); so always in *status constructus* and prepositions, bearing only secondary stress or no stress at all, as *ḥdabar-* > *dəbar-*); in other cases again the following consonant is doubled, thus enabling the retention of the short vowel, as *qtannâ* (“small,” feminine); as a rule, however, pretonic short vowels (especially *a*) in open syllables are lengthened (as *ḥdabar* > *dâbâr* (“thing”), *ḥinab* > *ʿenâb* (“grape”), as well as in open stressed final syllables. In closed stressed final syllables vowels are lengthened, as a rule, in nouns in *status absolutus* (as *yâd* (“hand”)), but not in *status constructus* (as *yad-*) and in verbs (as *katab* (“he wrote”)), presumably because the latter lost their short final letters earlier, thus terminating in closed syllables. Eventually, however, short final vowels were generally omitted.

STRESS. The stress is transmitted by the cantillation marks: it falls on the last or the penultimate syllable. Because oxytones are more frequent, in this article, as a rule, only paroxytones are marked as such. Since, as a rule, the penultimate syllable is stressed when no final syllable was lost, whereas the last syllable bears the stress, when the word terminated in a short final vowel at an earlier stage, a stage of general paroxytone accent may be reconstructed. The few exceptions, as *kâtbâ* (“she wrote”), *kâtbû* (“they wrote”), and similar perfect, imperfect, and imperative forms, further e.g., *yâdkâ* (“your (masculine singular) hand”), also exhibiting exceptional reduction of the vowel in the syllable preceding the stress (see *supra*), have to be regarded as later forms, the original syllable pattern being preserved in the pausal forms *kâṭbâbâ*, *kâṭbûbû*, and *yâḏēkâ*. An even later stage of stress is exhibited by the so-called *segolata*, in which the cluster was split at a very late stage (as *ḥsiper* > *seper* (“book”); cf. *supra* for the transcription of these forms). An early stage of Proto-Hebrew stress may tentatively be reconstructed by the assumption (cf. *supra*) that it was *stressed â* that shifted to *ô*.

PRONOUNS. Hebrew (as Semitic) word formation exhibits, as a rule, tri-radical structure: the main meaning is carried by the (generally three) radical consonants, while the vowels only add shades to it. Yet particles (as much as not of nominal origin) and pronouns deviate from this structure, pronouns also allowing word composition, a feature alien to Semitic linguistic system (as *hallâzē* (“this”), compounded from the demonstrative that serves as definite article as well+*lâ+zē*).

“I” is expressed by *ʾani* and *ʾanôkî*, both occurring in pause as *ʾani* / *ʾanôkî*, exhibiting a more original stress structure (as in the case in pause in most cases, cf. *supra*; for *ʾanôkî* being the original form; cf. also the preservation of *â*, as well as *ô* < *ḥâ* peculiar to stressed syllables, v. *supra*). The same is the case for pausal *ʾattâ* (also *ʾattâ*) as against the context form *attâ* (“you,” masculine singular). In some rare cases *ʾattâ* is spelled defectively without the usual final *h*, i.e., *ʾt* (e.g., 1 Sam. 24:18), always as *ktiv*, in others again *ʾt* is vocalized *ʾatt* (e.g., Num. 11:15). For *ʾattî* (*ktiv*) occurring for *att* (“you,” feminine singular), v. *supra*. For *hî*(?) (“she”), *hû* (?) (“he”) is substituted as *ktiv* in the Pentateuch, for which, as *qrê perpetuum*, *hî*(?) is read. הִיא, הוּא (“he, she”), as occurring in the Qumran scrolls, exhibiting long forms with final vowels, are, it seems, due to secondary analogical formation. For the regular *ʾanáhnû* (“we”) *náhnû* occurs rarely, and once (Jer. 42:6) the *ktiv* *ʾnw*, identical, it seems, with mishnaic *ʾanû*. Whereas *hem* and *hémma* (Babylonian *hām* and *hāmma*; “they”), *atten* (once, Ezek. 13:20) and *attēna* (Babylonian *ʾattān* and *ʾattānnā*, “you,” feminine plural) alternate, *heʾnna* (Babylonian *heʾnnā*; “they,” feminine plural) is the only existing form, rather than *ḥhen*. *attem* (“you,” masculine plural) is the only existing form in the masoretic text, *ʾtmh* (*attēmā* or perhaps *attēmmā*) occurring only in “vulgar” versions found in Qumrân, presumably exhibiting (as does *hemmā*) a late analogical formation. For marking possession, etc., and direct object, identical pro-

nominal suffixes attached to nouns, prepositions and verbs respectively are used in Hebrew (and in Proto-Semitic), the only difference between them being in first person singular, -î denoting “my” (and, as a rule, attached to prepositions) and -nî “me.” If the word to which the pronominal suffixes are attached terminates in a consonant, it is, as a rule, preceded by a “connecting” vowel, *a* being the favorite vowel after perfect, *e* after imperfect and imperative. Yet before -*kem* /*ken* the “connecting” vowel is missing (as *yedkem* (“your hand”) as against, e.g., *yâdeñû* (“our hand”)). The absence of the “connecting” vowel before the pronominal suffix of the second person singular masculine (as *yâdkâ* (“your hand”)), however, is secondary, see *supra*. On the other hand, pausal forms such as *lâk* (“to you,” masculine singular) display the omission of the final syllable. -*kâ* is sometimes spelled with a final *h*, and this spelling becomes more frequent in the Qumran scrolls. After nouns, prepositions, and imperfect forms terminating in consonants the pronominal suffix of the second person feminine singular is -*ek*, rarely -*âk* (*kullâk* (“you in your entirety”), presumably influenced by *lâk* (“to you” where the *â* belongs to the particle) or -*ekî*. -ô (“his”), spelled archaically also with -*h*, *v. supra*, is sometimes superseded by -*ehû*-, which is the regular suffix only after imperfect, imperative, and nouns terminating in *e*, but becomes more frequent in the Qumran scrolls. After perfect forms, -ô and -*âhû* alternate. *Tagmûl’ôhî* (“his benefits,” Ps. 116:12), instead of ordinary *tagmûlâw* (-*âw* being the usual suffix after plurals), exhibits Aramaic influence. For -*âh* (“her”), also used after perfect (the consonantal value of the *h* being marked by a point in it, the so-called *mappiq*), quite often -*â* occurs (without *mappiq*, the *h* used as vowel letter only). For -*ken* (second person plural feminine), -*hem*, -*hen* (third person plural masculine and feminine respectively), forms with final -*â* rarely occur: -*kenâ*, -*hêmâ*, and *henâ* respectively, and even *kem* (second person plural masculine) is attested in the Qumran scrolls with final-*â*, where this ending is especially frequent. For -*hem* the archaic poetical -*mô* occurs. For -*ân* (which together with -*âm* replaces -*hen* and -*hem* respectively after nouns and perfect forms terminating in consonants, whereas -*êm* is used after imperfect forms for the masculine) after nouns -*ânâ* is rarely attested. In nouns terminating in the plural ending -*ôt*, for *ôtêhem* / -*ôtêhen* (“their,” masculine/feminine) -*ôtâm* / -*ôtân* occurs. Suffixes after imperfect and imperative forms, as well as after certain particles, are sometimes preceded by -*en*, the so-called *nûn energeticum*, as *ybârâkenhû* (“he will bless him”), generally assimilated to the following consonant, as *yakkekâ*, (“he will smite you”), or assimilating a following *h*, as *yišmrennû* (“he will keep him”).

The demonstrative pronouns *ze* (masculine singular), *zôt* (feminine singular, rarely *zô*), *ell e* (plural, rarely *el*) (“this”), exhibiting the alternation of *ð*-root in singular and *l*-root in plural, well known from other Semitic languages, are, if used attributively, preceded by the definite article, in analogy to the usage of attributive adjectives (as *harryôm hazze*, “this day”). This construction is to be regarded as later than that occurring in Middle Hebrew, exhibiting both the noun and the attribu-

tive demonstrative pronoun without the definite article (as *yôm ze*). Accordingly, a phrase like *ballaylâ hû* (instead of the regular *ballaylâ hahû*, exhibiting the use of the third person of the personal pronoun as “that” – demonstrative), in which the definite article is attached to the noun, rather than to the demonstrative, is, it seems, the intermediary stage. The definite article *ha-* (with doubling of the following consonant) has still retained its demonstrative force in phrases like *harryôm* (“this day, today”). On the other hand, *ze* is sometimes used as presentative, or as relative pronoun (as is also *zû*). *Mâ/me* (“what”), spelled *mh*, with doubling of the following consonant (this doubling is a real one, not like that called *dhîq* or *’âtê mērahîq*), has presumably, partly at least, to be derived from *ḫmah/ ḫmeh*. “Who” is *mî*.

TENSE SYSTEM. The Hebrew tense system, besides the imperative (in second person only, in form closely related to the imperfect), consists of four finite forms, *viz.* the perfect and the consecutive (the so-called conversive) perfect, the imperfect and the consecutive (conversive) imperfect. The consecutive tenses are preceded by *w-* (“and”), which before the imperfect has the basic form *wa* (with doubling of the following consonant). It is a moot question whether this system marks aspects (without any notion of time) or rather time. At any rate, in biblical prose at least, these forms seem to denote time, since the difference between perfect and consecutive imperfect, referring to the past, and imperfect and consecutive perfect, referring to the future/present respectively, depends, it would seem, on the syntactical environment only: as a rule, whenever it makes the use of *w-*, etc. (“and”) possible, the consecutive forms are used, in accordance with the demanded time, otherwise simple imperfect/perfect are applied. Besides the indicative, the imperfect has a cohortative (especially in the first person), formed by the ending -*â*, (also occurring after consecutive imperfect and the singular masculine of the imperative), and a jussive. The latter, though often coinciding with the indicative, even more resembles the consecutive imperfect, both being formed from the apocopate; the main difference between them is the paroxyton stress of the consecutive form (presumably an archaic feature, reflecting the stage in which, see *supra*, general paroxyton stress obtained, the indicative being *ḫyaf’âlu* > *yaf’âl*, the apocopate *ḫyaf’al*. The jussive was then more fully adjusted to the stress pattern of the indicative than the consecutive imperfect). In *verba tertiae y*, apocopate forms of the imperative occur as well. As to the consecutive perfect, it often exhibits oxyton stress, as against the paroxyton stress of the perfect. Yet this oxyton stress is, it seems, secondary, since syllable structure is in accordance with the paroxyton stress (as *wâ’âkaltâ* (“and you shall eat”), parallel to *’âkaltâ* (“you ate”), rather than *ḫwâ’âkaltâ*).

The perfect is formed by affirmatives, which in the first and second persons resemble the endings of the personal pronouns (but first person singular terminates in -*tî*). The third person singular masculine has the ending *zero*, the feminine -*â*, the plural-*û*.

Less clear are the formatives of the imperfect, which uses the prefixes *v* (*v* marking any vowel) for first person singular, *tv* for second person, and third person feminine, *yv* for third person masculine, and *nv* for first person plural. Other persons are indicated, apart from the mentioned prefixes, by suffixes as well: *-i* (rarely *-in*) in second person feminine singular (as *tišm'i* “you will hear”), *-û* (rarely *-ûn*, which, very seldom, penetrates into the third person plural of the perfect as well) in second and third person masculine plural (as *tišm'û /yišm'û* (“you/they will hear”)), and *-nâ* in second and third person feminine plural (as *tišma'nâ* (“you/they (feminine) will hear”)); rare is the *yv* prefix in third person feminine, as *y'aãmođnâ* (“they (feminine) will stand,” Dan. 8:22)). The imperative has no prefixes, but the same suffixes; for *-nâ* very rarely *ḫ-n* occurs: *šmá'an* (< *ḫšmá'n*) (“hear (feminine plural)!,” Gen. 4:23) (in most cases forms of the imperfect and imperative terminating in *n* are considered as *scriptio defectiva*, and vocalized *-nâ*).

Among infinite forms, the Hebrew verbal system possesses a participle, which may behave as a noun (it may, e.g., stand in *status constructus* and be negated by *'en*, the negation of nominal sentences), on the one hand, and as a finite verbal form, on the other (it may, e.g., govern direct object and be continued by a consecutive finite form, as *makke' iš wâmēṭ* (“if one smites a man and he dies”), although the participle stands in *status constructus*). Among the two infinitive forms, the so-called *infinitivus constructus* has usual infinitive functions, as *meṭīb naggen* (“he who excels in playing,” Ezek. 33:32); *wayyered... lir'ōṭ* (“and He descended... to see,” Gen. 11:5). Very often the *l-* form is used even when not in final sense, exhibiting the coalescence of *l* with the infinitive, as *ḥāfeṣ... laḥāmīṭenû* (“He wanted... to kill us,” Judg. 13:23; in Middle Hebrew this form becomes the only existent infinitive form). It is also used as gerund, as *bârâ... la'āsôt* (“he created... in making,” Gen. 2:3). The so-called *infinitivus absolutus*, so called, because it does not stand in *status constructus* nor is it governed by preposition, is a peculiar blend between verbal noun and verbal interjection. It is, besides its rare infinitive functions, mainly used as internal object (as *bēraḳtâ bārēk* (“surely you have blessed,” Num. 23:11), as a rule preceding the finite verb (as *mōt yūmât* (“surely he will be killed,” Gen. 26:11); also replacing modal adverbs (as *wayyēlek ḥâlōk w'ākōl* (“he went while eating,” Judg. 14:9), and as substitution of finite verbal forms (as *zrā'tem harbe whābe m'āṭ 'ākōl w'en-lsob'â*, “you have sown much, but brought home few, you have eaten, but not to satiety,” Hag. 1:6), mainly of the imperative (as *zākōr 'et-yôm haššabbāt* (“be mindful of Sabbath”)).

VERB PATTERNS. Of all word classes it is the verb that has the most conspicuous patterns, although patterns as such are one of the main characteristics of Semitic languages in general and of Hebrew in particular. These patterns are characterized by a certain vowel sequence, which, interwoven with the trilateral root, together with the repetition or doubling of radical consonants, as well as the addition of certain formative con-

sonants, reflects various modifications of the root connected with specific meanings. It is customary to denote the verbal themes by the root *p'l* (which, however, has the disadvantage of not being able to denote the doubling of the second radical, since *ʿ* cannot be doubled) in accordance with the vocalization of the third person masculine singular of the perfect. The usual verbal patterns in biblical Hebrew are the ground theme *pā'al* (also called *qal*); its reflexive-passive *nif'al*; *pi'el*, exhibiting doubling of the second radical and denoting intensive and factitive action, its passive *pu'al* and reflexive-reciprocal theme *hitpa'el*, the causative *hif'il* and its passive *hof'al*. Beyond these themes a stage may be reconstructed which, with the exclusion of *nif'al*, exhibits a well-balanced system:

	Ground pattern	Double pattern	Causative pattern
	<i>pā'al</i>	<i>p'iel</i>	<i>hif'il</i>
internal passive	<i>ḫpu'al</i>	<i>pu'al</i>	<i>hof'al</i>
t-form (reflexive reciprocal)	<i>ḫhitpā'al</i>	<i>hitpa'el</i>	<i>ḫhitaf'el</i>

From the patterns marked by a double dagger (‡) only remnants exist. The inner passive of *pā'al* disappeared because of its resemblance to the inner passive of perfect *pī'el* and imperfect *hif'il*, being superseded by *nif'al*, which, besides its original reflexive meaning, acquired passive functions as well; it can only be recognized by its perfect being identical with *pu'al*, the passive of *pi'el*, its imperfect with *hof'al*, without a corresponding *pi'el/hif'il*. *Hitpā'al* subsisted in *hitpāqdû* (“they were counted”) only (which is mixed up with its passive *hoṭpāqdu*) whereas the very existence of *hitaf'el* is dubious, depending on the analysis of forms like *tataḥārê* (“you will compete”), *wattetaššab* (“and she stood”).

In *pā'al*, the neutral perfect forms *pā'el* and especially *pā'ol* are being superseded by *pā'al*. In the imperfect and imperative *yaf'ol /p'ol* and *yaf'al /p'al* respectively are alive, *yaf'il /p'il* being absorbed by *hif'il* and not really subsisting but in some “weak” roots. From vestiges a stage may be reconstructed exhibiting the imperfect forms *yaf'ol* (and *yaf'il*) as against *yif'al*, cf. *yehelaš* as against *yahāloš*; *yēbōš* as against *yâqim*; *yēqal* as against *yâsob*. The only living *infinitivus constructus* is *p'ol*, *p'al* (as *liškab* (“to lie”)); the stop *k*, as against *ḳ* in *škab*, is due to the coalescence of *l* – with the infinitive, *v. supra* being marginal and *p'il* existing in some “weak” verbs only. Feminine forms of the *infinitivus constructus* are attested as well, as *ahābâ* (“to love”). The *infinitivus absolutus* has the form *pā'ol*, *ô* in the second syllable also occurring in other themes. The active participle, originally belonging to *pā'al*, is *pō'el*, whereas *pā'el* and *pā'ol* are the original participles of *pā'el* and *pā'ol* respectively, yet losing ground against *pō'el*. The passive participle is *pā'ul* (whereas the participle of the internal passive of *pā'al* is *pu'al* and *pī'ol*, with redoubling of the second radical, as *'ukkâl* (“eaten”), *yillōd* (“born”).

Nif'al, exhibiting attenuated *i* in its first syllable, still preserves *a* in some “weak” roots. In the imperfect, the impera-

tive and the infinitive (the two latter forms have a *hi-* prefix), the *n*, immediately preceding the first radical, is assimilated to it; the last radical of these forms is, as a rule, preceded by Tiberian *e*, but Babylonian *ä*. In contradistinction to all the other themes, with the exception of the ground theme, the participle is not formed with the prefix *m-*, but in accordance with the perfect (*nif'äl*).

Pi'el exhibits *a* in perfect in the second syllable about as often as *e*; in the Babylonian vocalization *ä* (corresponding to *a / e*) prevails, and some few verbs (as *dibber*, "he spoke") exhibit *e* according to Tiberian vocalization as well. In the imperfect, etc., the first radical is followed by *a*, the second by *e* in the Babylonian system sometimes by *ä*).

Hitpa'el sometimes exhibits *a* in its third syllable in all forms (with the exception of the participle), especially in pause, and in the Babylonian vocalization the corresponding *ä* prevails. If the first radical is a sibilant, it precedes the *t* (as *hištappek* ("to be poured")). Sometimes, the *t* is assimilated to the first radical (as *hištamme / hištaddeq* ("to be defiled/to clear himself")).

In *hif'il* the vowel of the prefix is *i* in the perfect (*a* occurring in "weak" verbs only), *a* in the other forms; that of the second syllable, as a rule, stressed *i*, before consonantal affirmatives in the perfect *a*, in the imperfect, etc. *e*, which is exhibited also by *infinitivus absolutus* and those forms of the imperative and jussive which lack conjugation endings and pronominal suffixes. The *h* of the prefix is, as a rule, dropped in the imperfect.

Pu'al and *hof'al* have the vowel sequence *u / o-a*, characteristic of the internal passive.

WEAK VERBS. Verbs are that class of words in which trilateralism is most strictly carried out. Nevertheless, some verbal classes, *viz. mediae infirmae* and *geminatae*, cannot be explained on the assumption of sound shifts operating on trilateral roots only: they have to be considered as partly emerging from biliteral roots, blending with forms of trilateral roots, which underwent changes because of "weak" letters; and this may apply to other "weak" verb classes as well.

Verba primae n assimilate the *n* to the immediately following second radical, this being in accordance with the general behavior of *n* (see *supra*). Moreover, those having the imperative *p'al* in the ground theme, drop the *n* in it (as *gaš* ("approach")), as well as in the *infinitivus constructus*, which terminates in the feminine ending *-t* (as *šgašt > gešēšē*). The same is the case with *nātan* ("to give"), which is the only verb *primae n* having an *i* – imperfect (*yitten*): *ten*, *štint > tešē*. It is also the only verb *tertia n* which assimilates this *n* to consonantal suffixes, as *nātattī* (as against e.g., *sākantī*, where the *n* is analogically restored). It may be due to the influence of *nātan*, that its antonym *lāqah* ("to take") treats its *l* like an *n*: *yiqqah*, *qah*, *qāha*. Also some *verba primae y* (especially those having *š* as their second radical, as *niššab* ("he stood") as against *hityaššeb*) and *mediae infirmae* (as *massig* ("removing") as against *nāsōg*) behave like *primae n*.

Verbae primae y form *yaf'il* imperfect, its imperative and its infinitive omitting the *y*: *yāšab* ("to seat"), *tēšeb* (with assimilation of the prefix vowel to the following one), *šeb*, *šebet* (< *šibēt*, *ə* with feminine ending); *yāda* ("to know"), *tēda* (< *tadeā*, cf. the infinitive-noun *dē'ā*), *da*, *dāat*. *Hālak* ("to go") behaves similarly: *tēlek*, *lek*, *leket*. *Yākol* ("can") has the solitary imperfect *yūkal*. *Nif'al* has in perfect and participle *ō* (*nōlad* ("was born"), *nōlād*, exhibiting the prefix vowel *a*, cf. *supra*, as does the whole paradigm of *hif'il*, as *hōlid*), the other forms, as a rule, exhibit *w* as first radical. *Hof'al* has *ū* (as *hūbal*, "he was brought").

In *verba tertiae infirmae*, *y* has superseded *w*. Forms without suffixes have the same endings in all themes: *-ā* in perfect (and *ātā* in feminine singular third person), *-e* in imperfect and participle, *-e* in imperative, *-ōt* in construct infinitive. Consonantal affirmatives are preceded in perfect by *-e* or *i* in unstable distribution, *i* only being used in *p'al* (as if continuing *p'al*); *enā* (*'e < e* [*< ay* due to assimilation to the following *ā*, pronounced *ā*]) is the suffix of imperfect second and third person, and imperative second person, plural feminine. Before vocalic affirmatives *y* and the preceding vowel drop (as *āšū* ("they did"), *āšī* ("do," feminine singular)). In jussive and the consecutive imperfect the second radical syllable is omitted (as *tē'ās*, "let it be done"); final double consonants thus arising are simplified (as *wayman* ("and he appointed")); so also in the shortened form of the imperative: *šaw* ("order!"). Final consonant cluster may be preserved, if the second consonant is a stop (as *wayyebk* ("and he wept")), or as a rule, broken up (as *yireb < šyirb* ("let it multiply")).

In *verba tertiae*, the *'* is dropped (preserved as vowel letter only) in final position and a preceding short vowel lengthened (as *šmāša' < māšā*, "he found"). Before consonantal affirmatives of the perfect *'* is dropped, *ā* (⌘) being the preceding vowel in *p'al* (as *māšātī*) and, it seems, in *pu'al* and *hof'al* (the only instance being *hūbātā* ("you have been brought, Ezek. 40:4)). *ē* (⌘) in the other perfect forms (as *yārēti* ("I feared," *p'al* form of the ground theme), *niqrēti* ("I was called")), as well as in the feminine singular of the participle (as *mūšēt* ("being brought out")). The suffix of imperfect second and third person and imperative second person, plural feminine, ends, as in *tertia y*, in *-enā*, yet exhibiting *'* as vowel letter, rather than *y* as in *tertia y*.

Verba mediae infirmae exhibiting in the first and second persons of the perfect of the ground theme short vowels (as *qamtī*, "I stood up"), but long ones in the third (as *qām*, corresponding to the *p'al*-form *meš* ("he died") and the (synchronically) *p'al*-form *bōš* ("he was ashamed")). In the (regular, jussive, and consecutive) imperfect, the imperative and *infinitivus constructus* of the ground theme, *verba mediae* *w* exhibit *ū*, etc., as *yāqūm*, *yāqóm*, *wayyāqom* (with *qāmāš qātān* in the last syllable), *qūm*, *qūm* (but second/third person feminine plural *tāšobnā*, along with *tāmūt'enā*, exhibiting, as do *mediae geminatae*, the same ending as *tertia y*); *mediae y* *i*, etc., as *yāšim* ("he will put"), *yašem*, *wayyāšem* (these forms being identical with the corresponding *hif'il* forms; therefore

ground themes of *mediae y* are apt to pass to *hif'ıl*, as *bántâ* (“you understood”) to *hebîn*), *śim*, *śim*. The old *yif'al* imperfect is preserved in *yebôš*. The active participle is identical with the perfect, but in contradiction to it is always oxyton (this applies to the other themes and to *mediae geminatae* as well), even before vocalic affirmatives: perfect *qâm*, *qâmâ*, *qâmû*, *mêt*, *mêtâ*, *mêtû*, *bôš*, *bôšâ*, *bôšû*, as against participle *qâm*, *qâmâ*, *qâm'im*, *qâm'ôt*, *mêtâ*, *bôšâ*, etc. The imperfect and imperative too have paroxyton stress before vocalic affirmatives, and this applies to perfect, imperfect, and imperative *nif'al* and *hif'ıl* and *mediae geminatae p'âl*, *nif'al*, *hif'ıl* and *hof'al* as well. Perfect and participle *nif'al* is like *nâsôg* (“to retreat”), *hif'ıl* like *hêqim*, *mêqim* (where the preformative has the same vowel as that of the perfect); the perfect consonantal affirmatives of these two themes as well as of *p'âl*, *nif'al*, and *hif'ıl* of *mediae geminatae* are preceded by *ô*, as *nâsûgôti* (exhibiting *û* rather than *ô* in the radical syllable), *hâbî'ôtîw* (“I brought him,” along with *hebêtî*; rarely also forms like *wahâqemônû* with *ê* occur). *Nif'al* imperfect, etc., exhibits *ô* (as *yissôg*). *Hof'al* (as also that of *mediae geminatae*) is formed on the analogy of *primae y*. For *pi'el*, *pu'al*, and *hitpa'el*, in classical language *pol'el*, etc., is used: *qômem*, *qômam*, *hitqômem* (externally identical with the *pô'el*, etc., forms of *mediae geminatae*, in which (along with forms like *sibbeḅ*, *gullal*, *hitḥammem*) forms like *sôbeḅ*, *gôlal*, *hitgôlel* are used for *pi'el*, etc. From both verb groups *piḅel*, etc., themes may be derived, as *gilḡel* from *gll* or *ṭiltel* from *ṭwl*).

Besides “strong” forms, *verba mediae geminatae*, as a rule, exhibit forms containing one radical syllable with doubling of the second (= third) radical (which, however, is simplified when not followed by a vowel, as *p'âl rab* (“was much”), *nif'al timmaqnâ* (“they will be consumed”). Along with them forms with reduplication of the first radical occur, the so-called Aramaic formation, together with the doubling of the second radical (as *hoššammâ* (“its being desolate”), and without it (as *wayyiqqdû* (“and they bowed”). Forms without any reduplication are also attested (as *yâzmû*, (“they will plan”). In the imperfect of the ground theme, *yaf'ol* (as *yâsob*, consecutive imperfect *wayy'âsob*) corresponds to a perfect (when without ending or with vocalic affirmatives) and participle built according to the “strong” pattern (as *sâbab*, *sâbabû*, *sôbeḅ*), whereas *yif'al* (derived from adjectives exhibiting *a* in their sole syllable, the final consonant being doubled when followed by affirmatives, as *yeqal* (“he will be easy”) from *qal* (“easy”)) has them in the “one radical syllable” form (as *qal*, *qállâ*, *qállû*, *qal*, *qallâ*, *qallim*, *qallôt*). From the *yaf'il* imperfect only remnants exist (as *yâḡen*, “he will defend”). Perfect/participle *nif'al* have two forms: *nâsab/nâsâb* (also participle *nâḡel*) and *nâboz/nâbôz*, and the same applies to imperfect/imperative: *yiddam* and *yissob*. *Hif'ıl* perfect has *a* (as *hêqal*) or *ê* (as *heḡel*; the Babylonian system *ä* only), the imperfect *ê* (as *yâqel*; the Babylonian has sometimes *ä*), the participle *ê* in both the radical and prefix syllable: *m'ês'êḡ* (as have some perfect forms, v. *supra*).

SUBSTANTIVES. Both trilateralism and the development of patterns is less conspicuous in nouns than in verbs. There exists a set of biradical substantives with a fixed vowel, which, by their meanings, demonstrate that they belong to the oldest stratum of the language: *yâd* (“hand”), *dâm* (“blood”), *dâḡ* (“fish”), *b'ên* (“son”), *š'em* (“name”), *êš* (“tree”), *šânâ* (“year”), *šâpâ* (“lip,” in plural transferred to triradical scheme by the inclusion of the feminine ending: *šiptôt'ekâ*), etc. The notion of patterns is best developed in verbal nouns, in participles and infinitives, as *qittûl* (*q, ṭ, l* denoting the three radical letters respectively) belonging to *pi'el*, moreover in nouns with *m*-prefix, especially in *nomina instrumenti* exhibiting *maqṭel*, less in those with *t*-prefix. The suffixes include *-ôn* and *-ût* (containing the feminine ending as well). Among nouns without affixes *qâṭil*, *qatṭil* are frequent in adjectives, *qâtôl*, plural *qtullim*, denotes color adjectives, *qittel* bodily or mental faults, *qattâl* intense qualities and occupations. One-syllabic nouns, terminating in a consonant cluster, open the cluster, mostly by *ê* (*segol*, the so-called *segolata*, see *supra*), as *yeleḡ* (“child”) *ṭyald*, *šeḅet* (“to sit”) < *ṭšibt* (in pause *yâleḡ*; *šâbeṭ*, yet *meleḡ* and most nouns having original *qitl* pattern do not change in pause).

Substantives are used in different *status*:, in *status absolutus*, when standing alone; in *status constructus*, when closely attached to a following noun (the so-called *nomen rectum*, historically a genitive; the *nomen rectum* defines and, when itself determinate, determines the noun in *status constructus*); and *status pronominalis*, when attached to a pronominal suffix, which stands in the same relation to the noun as the *nomen rectum* does. The feminine ending is either *-â* (in *status constructus* and *pronominalis -at*, etc., exhibiting an earlier stage), or *-t*; sometimes these feminine endings alternate, as when *-â* used in *status absolutus* and *t* in *status constructus* and *pronominalis*, as *merkâḅâ* (“chariot”), *mirkēḅet-* (< *ṭmirkâḅt*, exhibiting the opening of the final cluster, as in the *segolata*), *merkâḅtô*. The dual is rather reduced, being as a rule used with “two,” “two hundred,” some nouns denoting time and mainly with objects which naturally occur in pairs, especially the double members of the body. Its ending is *-âyim*, that of the masculine plural *-im*, the *status constructus* and *pronominalis* of both *-ê* (historically to be derived from the dual), which is also added to the *status pronominalis* of the feminine plural ending *-ôt*. The so-called *segolata*, including one-syllabic nouns with feminine ending, as *yaldâ* (“girl”), form their plural from bisyllabic stems, exhibiting *â* after the second radical: *ylâḡim* (“children”), *ylâḡôt* (“girls”). Mention must also be made of the unstressed locative ending *-â* (spelled *-h*, < *ṭah*, as intimated by Ugaritic), as *šâ'pônâ* (“northward”), also occurring between *status constructus* and its *nomen rectum*, as *midbârâ dammešeq* (“to the wilderness of Damascus”).

ADJECTIVES. The boundaries between substantives and adjectives are rather blurred. There are relatively few patterns exclusive to one of these word classes (as *segolata* mainly for substantives, *qâtôl*, plural *qtullim* for color adjectives). Ad-

jectives invariably have feminine forms ending in-â/t, masculine plural terminating in-îm and feminine plural in-ôt; substantives, on the contrary, need not have special feminine forms and also feminines without endings occur (as ʾâṭôn (“she-ass”). Moreover, in the substantives *singularia/pluralia tantum* occur, and the plural ending-îm may be attached to feminine substantives (as ʾiššâ (“woman”), plural nâšîm), and even more often *vice versa* (as ʾâḥ (“father”), plural ʾâḥôt). Yet some substantives exactly behave as adjectives in this respect (as *yeled*, *yaldâ*, *ylâḏîm*, *ylâḏôt*). Adjectives proper do not have *status pronominalis*, yet substantial usage of adjectives (and sometimes also *vice versa*) is frequent. Sometimes adjectives may occur in *status constructus*, yet their usage is very special (as *nqî kappâyim* (“clean as regards hands”)), and it may not be substituted by *status pronominalis* (as if *ḥnqihen*; but this may apply sometimes to substantives in *status constructus* as well). Some syntactical usages, however, seem to be possible for adjectives only, rather than for substantives, as the use of modifiers like *mâʾôḏ* (“very”), *yôṭer* (“more”). The simplest solution would perhaps be to set up three different classes: substantives, adjectives, and finally nouns, which would then include both word classes, as far as their special character cannot be defined by formal criteria. Adjectives used as attributes are preceded by the governing noun.

NUMERALS. As to the cardinal numbers, ʾehâd, feminine ʾahât (“one”) is mainly used as adjective, šnâyim, feminine štayim (sic! with *t* as stop, exhibiting a quite exceptional initial cluster) “two,” as substantive, governing the counted noun in *status constructus*: šne-, feminine šte-, or following it in *status absolutus*. As to the numbers three to ten, those with zero-ending refer to feminine nouns, whereas those with -â (in *status constructus -at/-t*) to masculine ones, a common Semitic feature, in opposition to the other noun classes. They precede or follow the counted nouns in *status absolutus*, but they may precede them in *status constructus* as well (historically an archaic feature): this is the rule with definite nouns, as well as with *yôm*, etc. The “ten” in the numbers 11–19 is ʾâšâr for masculine, ʿesre for feminine, spelled ʿsrh; it is uncertain whether it exhibits an alleged feminine ending -e, since in Ugaritic it is spelled with final *h*, thus intimating a consonantal ending. The ordinal numbers have special forms only from one to ten, exhibiting the theme *qtîlî*, with the exception of šiššî (“sixth”), and perhaps šênî (“second”). “First” is *rîšôn*, a relatively late form, as it is customary in Semitic language, the older usage being the use of the cardinal number “one,” still persisting in biblical Hebrew.

PREPOSITIONS. Prepositions, as far as etymologically transparent, are as a rule nouns in *status constructus/pronominalis*, as ʾešel (“near, by”), ʾešlkâ; ʾal-, poetical ʾâle (“on”), ʾâlekem, the suffix -eķem originally exhibiting the final -y root, rather than a plural suffix. Through the influence of prepositions like ʾâleķem, other prepositions too govern plural suffixes, as *tâḥat* (“under”), *taḥtêķem*. Among the three uni-consonantal prepositions, only *l-* (“to”), and *b-* (“in, by”) govern pronominal suf-

fixes (as *lkâ*, *lâk*, *lâķem*), but *k-*, originally a demonstrative element, governs pronominal suffixes mainly by means of -mô-: *kâmôķâ*, *kmôķem*. *Min* (“from”) as a rule assimilates its *n* to the following consonant (as *mibbnô* (“from his son”), *mikkem*, cf. also *mehem*, with lengthening of the vowel preceding the pharyngeal not capable of doubling); before some suffixes *min* is doubled, as *mimmenni* < *ḥminmini* (“from me”), along with poetical *minni*. There are two prepositions ʾet; one denoting “with,” has the form ʾittô, etc., before pronominal suffixes, the other, used as optional mark of determinate direct objects, the forms ʾôtô, ʾetķem; sometimes, however, these two sets become mixed up. Since the impersonal passive may govern objects (as indirect object, e.g., *ybullâ lamméléķ* (“the king will be afflicted,” 11 Sam. 17:16)) or a direct one, e.g., *maššôt yeʾâķel* (“unleavened bread shall be eaten,” Ex. 13:7), it may govern ʾet preceding the definite object as well, e.g., ʾet-kol-dgê hayyâm yeʾâseḥ lāhem (“shall all the fishes of the seas be collected for them?” Num. 11:22).

NEGATION. As word negation and in verbal clauses *lô* is used, in nominal clauses ʾen, in prohibition ʾal with the imperfect (jussive; but, as in Semitic languages in general, never with the imperative).

CLAUSE FORMATION. It is in the domain of clause formation that Hebrew has best preserved the ancient Semitic character. In contradistinction to Arabic, it has not relinquished free sentence structure in favor of systematization. Yet, although it has lost, like Aramaic, the case and mood endings, it has not been affected by a similar syntactic formlessness. The boundary lines between main and subordinate clauses are blurred, since *w-* (“and”) may precede the main clause following the subordinate one; cf. also *w-* introducing the main clause after phrases like *wayhi ʾim...*, *w-...* (“and it happened, when..., then...”). Circumstantial clauses resemble main clauses even more, mainly differentiated by the use of different tenses. Moreover, the number of subordinate conjunctions is relatively small, the most important ones being the relative pronoun ʾâšer, also used as introducing substantive clauses, *kî* introducing substantive and causal ones, conditional ʾim and hypothetical *lû*. Very frequent is the presentative *hinne*, often followed by a participle marking the future.

VOCABULARY. The vocabulary of biblical Hebrew is, in accordance with the limited size of the Bible, restricted, exhibiting many words from the field of religion, morals, and emotion. Loan words include those borrowed from Akkadian, as a rule through the intermediary of Aramaic, the influence of which becomes strong in later language.

PROBLEMATIC ELEMENTS

THE INFLUENCE OF THE DSS UPON CHRISTIAN GREEK**DISCOVERY**

The discovery of the *Dead Sea Scrolls (= DSS, 1947) provided an important missing link in the development of Hebrew (= *H): a period which spans biblical Hebrew (= BH) and mishnaic Hebrew (= MH), extending from about the middle of the second half of the first century B.C.E. to 200 C.E. Before this discovery the only extant text dating back to this period (BH to MH) were fragments of the Book of *Ben Sira found in the Cairo *Genizah. Fragments found in the excavations at *Masada, however, indicate that the language used in the *Genizah* fragments is corrupt and does not faithfully represent the original text.

During the last centuries B.C.E., BH ceased to be a spoken language. Insofar as H was spoken, it was apparently, more or less, of the type that later emerged as MH. The literary language, which is represented by the DSS language, tried to hew as closely as possible to late biblical Hebrew (= LBH), as represented, for example, by the Books of Chronicles, which originated during the first centuries of the Second Temple period. Thus the language of the DSS should be considered as the last offshoot of LBH.

MAIN ELEMENTS OF THE LANGUAGE OF THE DSS

The DSS language, which apparently served only as a literary vehicle, is composed of the following elements: (1) BH; (2) Official Aramaic; since Aramaic (= A) had become, even before the destruction of the First Temple (586 B.C.E.), the lingua franca of the Near East and apparently also the vernacular of (nearly?) the whole of Syria-Palestine, it influenced the devel-

opment of H; (3) vernacular H (the later MH) which increasingly infiltrated literary H.

The above three elements were the most important in the shaping of the language of the DSS which, however, also reveals novel traits, especially in spelling and phonology. These elements, apparently reflecting the linguistic situation in Palestine during the period in question, stem from the fact that (4) the educated classes apparently spoke Greek; (5) the vernacular of the common people was (apparently) an A dialect (or dialects) slightly different from literary A, Official Aramaic, the so-called A of the empire; (6) neither BH as transmitted, nor vernacular MH, was uniform (there being mainly two traditions: the Tiberian and the Babylonian, each with its own vocalization; sometimes the Babylonian forms emerge in the DSS); (7) there are many elements of Samaritan Hebrew (= SH) in the language of the DSS; (8) the possibility that archaic forms survived in the language of the DSS that had disappeared from H (known from the vocalization of the Jews and the reading traditions of the Samaritans) cannot be excluded.

Negative factors were also decisive in the formation of the DSS language: (9) an ever-decreasing knowledge of BH, resulting in a situation where archaic and rare words and forms of BH became obscure to the average literate Jews. In his writing, which in intention was to be BH, the literate Jew was inclined to replace obsolete words and forms with common and familiar ones. Thus a kind of basic BH, which included the above elements, came into being; (10) certain biblical words in the vocabulary of the DSS, whose meaning had become obscure (known today through modern research), not used in their original meaning but according to the interpretation given to the words by the members of the sect and their contemporaries; (11) the scrolls contain words that might have been taken over from other languages or dialects of Palestine or the neighboring territories, but have since disappeared entirely (e.g., the language of the Edomites, living in southern Judea); (12) it is possible that some new words in the DSS were common in the H or A vernacular(s) and by mere chance are not in the transmitted H and A sources.

The elements that compose the language of the DSS might have varied with the different writers. There are, for example, sources in which the role played by MH is much more prominent (e.g., the *Copper Scroll) than in other sources. The complexity of the picture that emerges from the DSS is the reason why there is as yet no solution for many of the linguistic problems in the DSS, and the outline of this language, given below, can only be tentative.

SOURCES**Biblical Texts**

The complete *Isaiah* (1QIsa^a) is one of the most important scrolls of the DSS. The language, which is "vulgar" (i.e., the intention was not to render the text exactly as transmitted), is a "modernization" of the original Isaiah, as represented by the Isaiah type of the Masoretic Text (= MT) whose language

was modified so that the contemporary reader might more easily understand the text. As has been noted above, the average reader was scarcely able to understand the MT properly, and often unable to read it correctly. Therefore, copyists often substituted the contemporaneous forms for the original ones even in the case of proper nouns. For example, the form עוֹזִיָּה, representing the type that became common mainly after 586 B.C.E. (the destruction of the First Temple), is used instead of the original שְׁעִיָּה עוֹזִיָּה, which represents the dominant type during the previous period.

Most of the biblical texts of the DSS are practically identical with those of the masoretic Bible. Fragments of “vulgar” texts from other books of the Bible, such as Exodus and Psalms, were, however, also found. The linguistic differences between these texts and the masoretic Bible are more or less to be attributed to the tendency to “modernize.”

Non-Biblical Texts

The most extensive non-biblical texts are the Manual of *Discipline; the *Thanksgiving Psalms; the *Peshar Habakkuk, a commentary on the Book of Habakkuk; and the *War Scroll. These texts originated with a certain sect (generally identified with the *Essenes). A few fragments of non-canonical writings were also found, such as, The Book of *Jubilees and *Ben Sira* whose Hebrew version had until that time been practically unknown (see above Discovery). The *Zadokite* documents, as represented by the fragments found in the *Genizah*, do not reflect the original language of the DSS. (As with the Book of Ben Sira found in the *Genizah*, their language was also changed by the copyists of the Middle Ages.)

LANGUAGE OF THE DSS

Isaiah is the only DSS text which has been extensively dealt with from the linguistic point of view. The following survey, therefore, will be based mainly on the language of this scroll.

Spelling

The DSS employ the *scriptio plena* to make reading easier (there existed as yet no vowel signs) and to eliminate, as far as possible, a pronunciation. For example, לֹא (“not”) was spelled לוֹא, otherwise the reader might have read it as לָא (*lā*) as in א (indeed, the Samaritans in their Bible substitute the א form for the ה). Plene spelling with ו abound to indicate the phones (*u, o*), not only where these vowels represent an original diphthong (*aw*) that turned into an (*ō*), e.g., יוֹם (“day”; a spelling common also in the MT), or an original long vowel, e.g., שְׁלוֹשׁ (“three”; which is fairly common in MT), but also for originally short, later lengthened, vowels, e.g., עוֹל (“yoke”; this type of spelling is rare in MT), and short vowels that were not lengthened, e.g., אוֹזְנִים (“ears”; very rare in MT), and even half vowels, e.g., חוֹלִי (“illness”: = חָלִי; extremely rare in MT). To a lesser extent, the same applies to the use of י, e.g., מֵית (“dead”; = מָת in MT), אֲבִנִיטָךְ (= אֲבִנִיטָךְ, “your girdle”). א was also used as a vowel letter to indicate the vowel (*a*), e.g., יֵאֵתוֹם (“orphan”; the spelling is extremely rare in MT). As a word fi-

nal ם might be used instead of ה indicating an (*e*) type vowel, e.g., יַעֲנִי (“he will answer”). Generally there is no real consistency in the spelling. The word “head,” for example, has different spellings: רוֹשׁ, רוֹאשׁ, רֹאשׁ, רֵאשׁ. The DSS share these types of plene spellings with MH, especially as preserved in the manuscripts.

The DSS, mainly, in the *Isaiah Scroll* and only sporadically elsewhere, developed another type of plene spelling where a digraph (two letters) indicates one vowel (like the English *ea* (“beat”) as against *i* (“bit”)). This type of spelling is exemplified at the end of words: וֹא indicated (*ō*), אֵי indicating (*i*), e.g., in the above mentioned לוֹא (“not,” the א is original and the ו is added); בּוֹא (“in it,” the ו is original and the א is added); כֵּיא (“because,” the א is added). These spellings appear also in the middle of words, e.g., רוֹאשׁ, רֹאשׁ (“head”), but in this case the א is practically always original, while the ו (and י) are added. As to consonant spelling, ש at that period turned into ס, thus the spelling סֵאִי (= שֵׁאִי “lift up”) is found. There is, however, also the inverse where through a hypercorrection מֵאֵס (“to despise, reject”) is spelled מֵאשׁ.

Phonetics and Phonology

An outstanding feature of the language of the DSS is that the laryngeals ה, א and the pharyngeals ע, ח, which became weakened, are sometimes dropped and sometimes confused with each other. For instance, תַּנְתּוֹ (= תַּאֲנַתּוֹ “his fig”), יַבּוֹר (= יַעֲבוֹר “he will pass”), מִנְחָל (= מִנְהָל “leader”), סֵלָה (= סֵלַע “rock”). These pronunciations are a characteristic of SH and Samaritan Aramaic (= SA). According to both Talmuds, the Jews of Beth-Shean and Haifa, probably influenced by the Greek vernacular, could not pronounce these phones properly. (The same applies to European immigrants in Israel, since European languages also lack these phones. They do, however, exist in Arabic and the Yemenites, therefore, pronounce them properly.) It is then possible that the weakening of these phones in the DSS occurred under the impact of Greek.

Morphology

PRONOUNS. Independent Personal Pronouns. Instead of אַת (“you” fem.), אַתִּי is sometimes found. This form (rare in masoretic BH), which at first sight seems to be archaic, is probably an Aramaism (the same happened in SH). Instead of הוּא (“he”) and הִיא (“she”) very often הוּאָה and הִיאָה are employed in the DSS. These spellings might reflect archaic forms that disappeared from masoretic BH (see above, Main Elements of... DSS, 8), but the possibility of an analogous new formation cannot be excluded. אַתְּמָה = אַתְּמָה (“you” plural) is no doubt a late form parallel with the form transmitted by the Samaritans orally in reading their Bible (despite the spelling אַתְּמָה pronounced אַתְּמָה). אַנּוּ (“we”) appears several times in the non-biblical scrolls (MH), in BH only once as *ketib*.

Personal Suffix Pronouns. The type ךָּ (דְּכָרָךְ) (“your word”) is very often spelled plene דְּבִרְכָה/דְּבִרְכָה (plural). The spelling disproved the theory of P. Kahle who believed that the vocalization of the Masoretic Text came into being under Arabic

influence (after the seventh century C.E.). The type ידו (“his hand”) is sometimes spelled ידי, since apparently, as in SH, יו was pronounced (o) and both ו and יו could be used indiscriminately. The type בניה (“her sons”) is sometimes spelled plene בניה/א; the type דברכם (“your word”) is often spelled דברכמה (as in SH); the type דברם (“their (masc.) word”) is often spelled דברמה (by analogy); and the feminine suffix הן is sometimes spelled הנה (original? or a new formation by analogy). There is a strong tendency to use forms like רוחו (= רוחו “his spirit”), a BH poetic form, while forms like עליו (= “upon him”) are A.

The Verb

PERSONAL SUFFIXES. Instead of the type שמרת (“you (fem.) watched”), the type שמרת is sometimes used; it appears in the Song of Deborah (Judg. 5:7) whose language is archaic. The type apparently died out in BH but reentered the language under A influence, mainly in the late books of Jeremiah and Ezekiel (mostly as *ketib*, but not as *qeri*). It seems obvious, therefore, that the same influence is responsible for its emergence in the DSS (and in the Samaritan *Pentateuch). This is not the only known case where an archaic form disappeared from H and reentered the language through A, thus creating the impression of an archaic survival. As to the type שמרתמה (MT שמרתם “you (plur.) watched”) it also parallels the Samaritan oral transmission (but spelled שמרתם) and is, as אתם < אתמה (see Morphology, Independent Personal Pronouns), a later development.

OTHER FEATURES. Instead of מסיר (“is taking away”) (*hif'il*) there is מהסיר, which again reflects the impact of A. Spellings like ישפול (= ישפל, “he will be degraded”) indicate that an original (a) imperfect might turn into an (o) imperfect; such spellings are prevalent in MH and A dialects.

PAUSAL FORMS. Instead of the imperative form דרשו (“seek”), there is דרושו, which is either an A form, or an H pausal, occurring also in BH according to the Babylonian vocalization. There seems to be little doubt that the forms of the type תזכור (“you will remember”) and אתמוכה (see below; pausal forms in the context) penetrated the DSS from MH. These forms are still found in the manuscripts (see Mishnaic Hebrew Language) and even entered the Christian Palestinian Aramaic (= CHPA) dialect from MH. The long imperfect forms of the type אתמוכה (“I would like to uphold”) (expressing wish, etc.), which often take the place of the normal imperfect אתמוך, continue a trait fairly common in LBH (e.g., Ezra). The assumption of R. Meyer that the DSS employed a tense not found in masoretic BH, the so-called present future (as in Akkadian), is unfounded. However there is as yet no clear-cut solution to forms like ישופטני (= ישפטני).

Among the new noun patterns one especially worth mentioning is *qutl* (= *qotēl* in masoretic H) which sometimes appears as *qotol*, e.g., אוהול (“tent”) = אוהל; cf., masoretic מלך = “Moloch” in the Septuagint; kindred forms also appear in CHPA.

SYNTAX

Although very little research has been done in the field of syntax, a few characteristics can be mentioned. Biblical syntax is employed, including the use of the conversive ו (waw), yet the copyist of *Isaiah* (see above Sources) occasionally substitutes a form belonging to the contemporaneous spoken idiom, e.g., instead of ואת כל אלה ידי עשתה ויהיו כל אלה (“All these (things) my hand has made”) he used... והיו כל אלה (“and so all these things came to be (mine).”) (Isa. 66:2). Biblical syntax requires here the imperfect plus the conversive ו. In MH the perfect is followed by the perfect plus ו; it is then the MH construction substituted for the BH one. Asyndetic relative clauses (= without the relative pronoun אשר) are still found in BH. Since they disappeared from MH and A, the writer is inclined to add the “missing” relative pronoun אשר and instead of בדרך תלך (“the way you should go”) (Isa. 48:17) he creates the normal clause: בדרך אשר תלך. Sometimes he employs other means to evade the problem: in Isaiah 62:1 וישועתה כלפיד יבער (“and her salvation is as a burning torch”) where there is no אשר after כלפיד he turned יבער into תבער; תבער thus is no longer the subject of יבער but ישועתה becomes the subject of תבער. The translation now is “and her salvation will burn like a torch.”

אשר לוא plus the imperfect seems to be employed as a prohibitive in the non-biblical scrolls, e.g., אשר לוא ילך איש (“no one shall walk”) which might have its parallel in MH and in the H and A letters of Bar Kokhba. The infinitive plus ל is sometimes used as a command, e.g., לשלח הואה מאתם (“They shall banish him”) (LBH) and mainly negated by לוא as a prohibition, e.g., ולוא לסור (“and not to turn aside”) also with אין, e.g., ואין לצעוד (“not to walk”). The same use is found in A inscriptions in Jerusalem: לא למפתח (lit., “not to open”), practically unknown in BH; it is also found in Punic (a Canaanite dialect of the Northern African coast); and it perhaps has its parallel in a certain Greek usage (found also in a Greek inscription in Jerusalem). It is impossible to pinpoint the origin of this use.

In the Book of Chronicles (LBH) the use of the accusative particle את with the pronominal suffix is generally avoided as in the *Manual of Discipline* (see above Sources). This is also the case in MH (as represented by the language of the *tannaim* only) which in this respect is a direct offshoot of the DSS.

Note אבית (= בבית “in the house”), and kindred forms, as in MH and Punic. Types like לאין שרית (“without a remnant”) is to be found in LBH.

STYLE

In this area, too, more research is required. One point certainly deserves to be mentioned. The non-biblical scrolls are full of either biblical quotations, most of which are slightly different from the original, or of biblical allusions where the meaning is often not quite clear but the reference of the allusion is known, for instance, כי בשררות לבי אלך למען ספות הרוה את הצמאה, “I follow my own willful heart – to the utter ruin of moist and dry alike” (i.e., everything) (Deut. 29:18) is alluded to by וילך בדרךי הרויה למען ספות את הצמאה out of which sense can hardly be made.

VOCABULARY

The vocabulary of the DSS consists of native and foreign elements (loans and loan translations).

Native Elements.

These comprise BH, MH, and H of undefinable origin that does not occur in any other H source, but might be original (or a loan? see above Main Elements of... DSS, 8 and 12).

BIBLICAL HEBREW. BH has to be subdivided according to its sources: (1) archaic BH (= ABH); (2) standard BH (= SBH); (3) LBH. BH should also be divided into: (a) words that survived unchanged; (b) words that are used in a morphologically changed form; (c) words whose meaning changed; (d) words whose meaning changed owing to a certain interpretation of their original meaning which had been forgotten; (e) words which are new morphologically and semantically, but which arise "legitimately" from BH.

ABH. **אדיר** ("mighty"), **האזן** ("to listen"), **מעון** ("dwelling place").

SBH. SBH is very much in evidence. **אדון** ("lord"), **חלק** ("to divide"), **מערכה** ("line of battle"), **עת** ("time"). Thanks to the DSS, MH, and SA it has been shown that the BH **מסר** means "to count" (> "to hand over").

LBH. Since the Hebrew of the DSS is the last offshoot of LBH (above Discovery), the presence of LBH words is not surprising, e.g., **זוע** ("to move") (intransitive), **מודע** ("knowledge?" "opinion?"), **מדרש** ("interpretation, study"), **עמד** ("to get up") instead of **קום**, **פשר** ("explanation"), **שר** ("prince" (= "angel")), **כוהן הרואש** ("high priest"). The case of **קץ** ("time, epoch") is striking. Its proper meaning in LBH, "time" (and not only "end"), was (re)discovered mainly because of its usage in the DSS. These instances represent words that have survived unchanged (type a).

BH **משוור** (participle of *hof'al*) (= "twisted thread") appears as **משוור** (obviously a participle of *pu'al*); the root **נדב** is used as *nif'al* (with the meaning of *hitpa'el* = "to volunteer"); **להב** ("flame, blade (of sword)") is found as **לוהב**. The plural of **איש** ("man") sometimes appears as **אנושים** (as if it were the plural of **אנוש** "man", which does not occur in BH). These instances represent words that are used in a morphological changed form (type b).

גורל ("lot") is also used for "group" and **עצה** ("counsel") as "council." **מבקר** ("inspector") goes back to the BH root **בקר** ("to visit" > inspect). **דשא** (**מועד**) "spring (time)" (like Akkadian and Epigraphic South Arabic) in BH is "herbage"; **זרק** ("javelin, dart"). These instances represent words whose meaning changed (type c).

חרישית (= "stormy wind") apparently goes back to the interpretation of Jonah 4:8, but the meaning is obviously not the original (an instance of type d).

MISHNAIC HEBREW. **גודל** ("thumb") = **גודל** (**א**) in MH; **כנסת** ("assembly"); **תלמוד** ("learning"); **מועט** ("little"); **מלאה** ("pregnant woman" – this word occurs in the *Temple Scroll*); **גבל** ("to knead"); **זעטוט** ("youth (young man)"); **ממון** ("wealth"); **נחשול**

("wave"); and **הלכה** ("rule?") might be MA or A. But **בית משפט** ("court") is perhaps a loan translation of the MH **בית דין**. Several technical terms of the sect also are found in mishnaic sources, e.g., **קרב** ("admission," lit., "to bring near"), or **רבים** (= "the many") which seems to be one of the names of the sect. However, **רוב** apparently means "many" (only?) as in BH, but not "majority" as in MH.

HEBREW OF UNKNOWN ORIGIN. **בדן** (**א**) (a kind of brocade?) whose root does not occur in BH. The roots **מוזז** and **תחם** are as yet unexplained.

Foreign Elements

These are (1) A loans and loan translations; (2) Persian loans; (3) Greek and Latin loan translations.

ARAMAIC LOANS AND LOAN TRANSLATIONS. (MH vocabulary itself derives from A) **דוכי** ("purification") = the H root **זכה**. Typical for the language of the DSS is the root **סך** used as a verb ("to draw up in battle order") and as a noun (meaning "order, battle order, ordinance, prescription"). It seems to be a loan word from A, but the meanings mentioned above are nearly unknown in A. The meaning of the root **סדר** (verb and noun), employed as a military term, is close to **סרך** and is apparently also A; **אוחזי אבות** ("intercessors") is a loan translation from A, going back to Akkadian.

PERSIAN LOANS. **רז** ("secret") and **נחשיר** ("battered") should be mentioned here. The latter shows the impact of the life at the court of the Persian governor.

GREEK AND LATIN LOAN TRANSLATIONS. Since there are no Greek and Latin loans in the DSS, it seems to be dangerous to hazard any suggestion concerning loan translations. However, if **מגדל** ("tower, turret") denotes a military structure and if the same holds true for the Greek *πύργος* and the Latin *turris*, there is reason to believe that some kind of connection exists between Indo-European words and Hebrew words. Even if it is assumed that the term **יחד** ("community") goes back to BH, the fact that the sect chose this term might have been influenced by the Greek *κοινωνία*. But **כנפים** ("wings") as a military term cannot be taken as a sign of Latin influence.

PROBLEMATIC ELEMENTS. Several words, among them **תעודה**, are not entirely clear, both with regard to their meaning and with regard to their development.

THE INFLUENCE OF THE DSS UPON CHRISTIAN GREEK

Scholars found a number of terms in the DSS which parallel Greek terms in the New Testament, e.g., "sons of light" (Luke 16:8). There is reason to believe that the Greek *ἐπίσκοπος*, a technical term of early Christianity (> "bishop"), reflects the term **מבקר** ("overseer") of the sect. The Greek *τάγμα* found in *Josephus, designating the sect of the Essenes, seems to be a loan translation of the term **סרך** which, as in the compound word **סרך (היחד)**, was employed by the sectarians as the name of their sect.

Words and phrases quoted can be traced with the help of concordances and E.Y. Kutscher's indexes.

INTRODUCTION

The destruction of the Second Temple probably brought the continuous development of biblical Hebrew (= BH) (together with its last branch, the Hebrew of the Dead Sea Scrolls) to an end. With the destruction of the religious and spiritual center, the standard literary language disappeared, and its place was taken by the vernacular, namely mishnaic Hebrew (= MH). The recent discovery of the Bar Kokhba letters, some of which are in MH, supports this view. It is, however, most likely that MH had already existed previously for hundreds of years as a vernacular. Its influence can be detected in the later books of the Bible, e.g., the Chronicles and Esther, but it was not employed as a literary language until after the destruction of the Second Temple.

TYPES OF MISHNAIC HEBREW

Two main types of MH should be distinguished: (1) The language of the *tannaim*, i.e., the Hebrew (= H) of the Mishnah, the Tosefta, the halakhic Midrashim, and the *baraitot* in the two Talmuds. (It seems, however, that the *baraitot* of the Babylonian Talmud were influenced by the language of the *amoraim*, see (2)). It may be assumed that these literary works go back to a time when MH was still spoken, most probably until the end of the second century C.E. (see below). The language of the *tannaim* is known (a) in the form as used in Palestine (often vocalized with the Tiberian vocalization); (b) in the form it was transmitted in Babylonia, sometimes vocalized with the Babylonian vocalization. (2) The language of the *amoraim*. A distinction, however, must also be made between (a) the language of the Palestinian *amoraim* (the Hebrew in the Palestinian Talmud and the aggadic Midrashim); (b) the language of the Babylonian *amoraim* (the Hebrew in the Babylonian Talmud). Since at this period (third–fifth centuries C.E.), MH was probably no longer a spoken language in Palestine – certainly not in Babylonia – it may be assumed that, as in modern H, this dialect was mixed with BH, as well as with Aramaic (= A) of the respective areas (more than tannaitic H). As a result, the H of the *amoraim* cannot be employed as a trustworthy basis for the study of MH (on further difficulties, see infra second drawback of Segal – The Problem of the Sources of MH).

Besides the above three categories, mention should be made of the language of prayer and benediction which also in the language of the *tannaim* contains elements from BH. Even in general prose the BH elements in tannaitic sources might in a few cases be quotations or allusions from the Bible rather than living elements.

GEOGRAPHICAL PROVENANCE OF MISHNAIC HEBREW

It may be assumed that MH was the vernacular only in Judea which was resettled by the Babylonian exiles in the sixth and fifth centuries B.C.E. In the rest of Palestine, especially in Galilee which had been conquered by the Maccabees (second century B.C.E.), A was apparently the only vernacular. The few A words in the New Testament also point to this con-

clusion, since the major New Testament figures came from Galilee. After the Bar Kokhba revolt (132–135 C.E.), however, when the Romans had nearly annihilated the whole population or sold them into slavery, the number of settlements in Judea was greatly diminished. The rabbis and their disciples moved to Galilee bringing with them their language and the tannaitic literature written in it, i.e., MH. On the other hand, their children, born in an Aramaic-speaking environment, did not continue to speak H. As R. Meir (a contemporary of R. Judah ha-Nasi) states: **כל הדר בארץ ישראל וקורא קריית (קריאת)** (“Anyone who dwells in Erez Israel, recites the *Šema*’ morning and evening, and speaks in the ‘Holy Tongue’ is assured a place in the world to come,” Sif. Deut. 333 and parallels). While there were still Jews who spoke MH, its position was already shaky and was in need of some kind of strengthening. The statement of R. Judah ha-Nasi: **בארץ ישראל לשון סורסי למה? או לשון הקודש** (“In Erez Israel why Syriac (i.e., Aramaic)? Either the ‘Holy Tongue’ or Greek,” BB 82a) shows that the language of his contemporaries was mainly A.

The few Jews who continued to live in Judea possibly still spoke H. An indication of this may perhaps be found in the statement of R. Jonathan (fourth century C.E.) from Eleutheropolis, southern Palestine, who recommended **עברי לדיבור** (“Hebrew as the vernacular,” TJ, Meg. 71b, bot.). This indicates that MH had not completely died out in this area, but in Galilee it was nonexistent. R. Johanan (the first Palestinian *amora* who was still a disciple of R. Judah ha-Nasi) had to emphasize that in MH the correct plural of **רְחֵל** (“ewe”) is in a certain case (Epstein) **רְחֵלוֹת** and not **רְחֵלִים** as in BH. (His maxim was **לשון תורה לעצמה ולשון חכמים לעצמן** (“The language of the Torah is a language by itself and the language of the sages is a language by itself” (Hul. 137b)). The assumption that MH died out because the *tannaim* moved to Galilee explains why the disciples of R. Judah ha-Nasi had to ask his maidservant the meaning of such H words as **מְטַאָטָא** (“broom”) (occurring in the Bible) and **חֶלְגִלוֹגוֹת** (“purslane”) which were unclear to them (Meg. 11a). It may be assumed that the (old?) maidservant had moved from Judea to Galilee with R. Judah’s household, and, therefore, spoke H. On the other hand, the (young?) disciples, who may have been born in Galilee, did not know the meaning of these words.

THE PROBLEM OF MISHNAIC HEBREW

The religious reformer A. Geiger, who was the first to write a scientific grammar of MH, thought that MH had never been a spoken language, but had been artificially created by the rabbis to facilitate their halakhic discussions. He was not the first to hold the opinion that MH was not a “normal” H dialect; some medieval Jewish scholars considered it to be a “corrupt” BH to a large extent. Since the concept of linguistic development was unknown in the Middle Ages, medieval scholars could see the reason for the differences between BH and MH only as deliberately wrought changes. Geiger, however, lived at a time when the historical study of languages and their development

was taken for granted. H. Graetz, S.D. Luzzatto, and J. Levy, contemporaries of Geiger, strongly opposed his views. However, they, like Geiger, did not substantiate their arguments with tangible proofs and Geiger’s view came to be accepted by all contemporary non-Jewish and some Jewish scholars until Segal refuted it convincingly.

In an article published at the beginning of the 20th century (JQR 1908), M.H. Segal showed Geiger’s views to be unfounded. He demonstrated that MH was a natural outgrowth of BH (by BH is meant, besides the archaic poetic H and the standard prose, also late biblical Hebrew (= LBH) such as the language of the Books of Chronicles and the Book of Esther) and the natural link coming after LBH. As an example, consider the independent first person singular pronouns **אֲנִי** – **אֲנִכִּי** (= I) both of which are found in BH. In LBH there is a distinct trend toward the use of **אֲנִי**. Moreover in the Books of Chronicles, which parallel the Books of Samuel and Kings to a great extent, **אֲנִכִּי** is replaced by **אֲנִי** (e.g., I Chron. 21:10 = II Sam. 24:12). In MH only **אֲנִי** survived. Were MH an artificial language, it would be impossible to understand how the rabbis, not being modern linguists, were able to choose only the elements which belong to LBH. The situation is understandable, however, if it is assumed that MH was the natural continuation of LBH.

MH also has forms which are to be found neither in BH nor in A. Were Geiger correct in assuming that MH was an artificial creation, representing a mixture of BH and A, these novel forms in MH could not be explained, for example, where did MH get the pronoun **אֲנֵנוּ** (“we,” found once in the Bible (Jer. 42:4) as *ketib*)? Clearly Geiger’s opinion is in this form totally unfounded (see following par.).

The recent discoveries in the Judean Desert, especially the letters of Bar Kokhba and his contemporaries, some of which are written in MH, have dispelled all doubts as to Segal’s conclusions. These letters show – as was rightly pointed out by Milik – that MH was a living natural language. As a matter of fact, however, both Segal and Geiger were right. MH was a living language in Palestine only until about 200 C.E., the time of the *tannaim*, but a dead language during the time of the *amoraim*.

THE PROBLEM OF THE SOURCES OF MISHNAIC HEBREW

Segal committed two methodical errors in his study which he repeated in the grammars of MH composed later: (1) he tried to minimize the extent of the influence of A on MH; (2) he based his work on the printed texts of MH rather than on manuscripts, which was an especially grave scholarly misjudgment.

The studies over the past decades of J.N. Epstein, H. Yalon, and S. Lieberman have shown that the printed texts are unreliable. This does not refer only to normal scribal errors, but it can be shown that during the Middle Ages the copyists, and later the printers, tried to harmonize MH with BH because they considered departures from BH in MH as mistakes. This

“correcting” tendency led to a complete distortion of the linguistic structure of MH.

The following examples will prove this point. A glance at any dictionary of MH will show that the word “man” occurs in the BH form אָדָם . Since Segal’s works appeared, however, hundreds of examples of the spelling אָדָם have been discovered in manuscripts of the Mishnah, Tosefta, the Palestinian Talmud, and the aggadic Midrashim (Epstein). It was corrected out of existence in printed versions, and in manuscripts where the form אָדָם does appear the beginnings of correction can already be observed (see, e.g., Ms. Kaufmann to Ber. 1:8). This phenomenon may be taken as clear proof of the widespread tampering with the printed text: the form אָדָם has completely disappeared from the printed texts on which the existing dictionaries of MH are based.

The following is another example: Segal states in his grammar that the second person singular masculine possessive (and objective) pronoun in MH is identical with the biblical form אָדָם , e.g., אָדָם (“your word”). Mainly on the basis of vocalized manuscripts of mishnaic literature, as well as the oral reading tradition especially of Yemenite Jews, H. Yalon has shown that the correct form in MH is אָדָם , i.e., אָדָם . The form was still known to be MH by the disciples of the medieval grammarian *Menahem b. Jacob ibn Saruq and is preserved until this day in the prayer book of the Sephardi (and Yemenite) ritual, e.g., אָדָם אָדָם (“Let us sanctify you and glorify you”). In the prayer book of the Ashkenazi ritual, however, these forms have been “corrected” by the grammarians. Only in *piyyutim* are traces of the form still to be found, e.g., in the *piyyut* for *Hoshanah Rabba: אָדָם אָדָם (“Your truth and your covenant”). Early transcriptions on the Hexapla (third century C.E.) and in the writings of *Jerome (fourth and fifth centuries C.E.) lead to the same conclusion. They superimposed it, however, on the biblical text (Ben-Hayyim). In the Sephardi communities there were also disputes as to whether this ending should be retained or dropped because the grammarians demanded the eradication of the “error.” Recently, it has been shown that the second person singular feminine possessive pronoun suffered a similar fate. In manuscripts the ending אָדָם is found; thus אָדָם and not אָדָם . Both these suffixes go back to A.

Having come to the conclusion that MH, as it appears in the printed texts, is unreliable, the problem arises: On what uncorrupted source can a description of MH be based? It can also be shown that even manuscripts of the Mishnah, the Tosefta, and the halakhic Midrashim are linguistically unreliable. The problem is to find a manuscript which the copyists have changed only to a minimal extent. The same problem exists with regard to the A of the Palestinian and Babylonian Talmuds. As to the Palestinian Talmud, the problem was solved mainly by comparing its A portions to the language of the contemporary Galilean inscriptions composed in A. Those manuscripts which were linguistically the closest to the Galilean inscriptions were thus linguistically most reliable. Concerning MH, this procedure was more difficult since inscrip-

tions or parchments written in MH, such as the Bar Kokhba letters, are quite rare.

With the aid of reliable manuscripts of the Palestinian Talmud, it is possible, however, to identify good manuscripts of MH. It may be assumed that if the A portions of the text were not corrupted by the copyists, then the H portions are also reliable. With the help of these manuscripts, the few existing H inscriptions, transcriptions of Hebrew–Aramaic words in the New Testament, in Greek inscriptions, and in the writing (transcriptions) of certain Church Fathers, it was possible to establish the most salient criteria for determining how to identify uncorrupted manuscripts. In general, the copyists harmonized the spelling conventions of MH with those of the Bible and the Babylonian Talmud. Thus, if it were possible to show that the words in a particular manuscript had spellings and forms which differed from those found in the Bible and in the Babylonian Talmud, but were parallel to forms found in inscriptions and in the Greek transcriptions from Palestine, then it would be proved that the manuscript represented Palestinian MH close to its original form.

The following are a few examples to illustrate the above methodology:

(1) In good manuscripts of MH there is the form אָדָם instead of the biblical אָדָם . This form is found in contemporary Palestinian inscriptions and in the New Testament. On the other hand, it is nonexistent in Babylonian manuscripts and sources. This shows that manuscripts with the form אָדָם represent a Palestinian version.

(2) The name Shammai is always spelled אָדָם in the Babylonian Talmud. In good manuscripts of the Mishnah it is spelled אָדָם or אָדָם . It can be demonstrated that the orthography אָדָם , אָדָם is the Palestinian representation of the final diphthong *ay*. (The problem of the final *hiriq* (*e*) remains as yet unsolved.) On the other hand the Babylonian orthography is אָדָם .

With the aid of several other distinguishing features, it was possible to identify several good manuscripts, in particular the following: the Kaufmann manuscript of the Mishnah (entirely vocalized), the Parma manuscript of the Mishnah (partially vocalized), the Cambridge manuscript published by W.H. Lowe (unvocalized), and fragments from the Cairo *Genizah*. The first two manuscripts mentioned above are vocalized with Tiberian signs, though in a vulgar manner since the punctuator, who had a “Sephardi” pronunciation, interchanged *qameš* with *patah*, *šere* with *segol* (and *qameš qaton* with *holem*). The above sources represent, more or less, Palestinian tannaitic H. On the other hand, the Sifra manuscript (which is good) and certain Mishnah fragments from the Cairo *Genizah*, both with Babylonian vocalization, reflect tannaitic H as preserved in Babylonia.

With regard to the language of the Palestinian *amoraim*, the Vatican Ms. Ebr. 30 of Bereshit Rabbah, as well as the *Genizah* fragments of the Palestinian Talmud, were found to be reliable. Reliable sources for the H of the Babylonian *amoraim* have as yet to be determined.

The following description of MH is based, in the main, on the Kaufmann manuscript. Occasionally, reference will be made to Babylonian vocalized forms known mainly from the Sifra (see previous par.) and from *Genizah* fragments of the Mishnah (published mainly by P. Kahle and studied by E. Porath and recently by I. Yeivin).

Spelling

The spelling is more plene than that of BH. Not only the so-called long vowels (*ū, ō*) are spelled with ו (waw) e.g., שׁוּמֵר (“guard”), but also short and even half vowels are indicated by ו, e.g., עֹמְרִים (“sheaves”) (the punctuator crossed out the ו). The same applies, more or less, to the different varieties of *i-e-ε* (long and short) being spelled with י (yod), e.g., לִיקְרוֹת (“to read”). Even א (*alep*) is (rarely) used to indicate (*a*), e.g., שִׁיאָרָה (“caravan”) (also, cf., the following par.). ו and י, used as consonants, are often doubled, thus: וו, יי. The vowels *e, ε* as word finals might be indicated by י, cf., יוּנִי = Yavne (see the following par.). Sometimes even spellings reminiscent of the Dead Sea Scrolls are found, like לִיקְרָאוֹת (“to read”); the etymological א plus the ו indicating (*o*). As the above-mentioned שִׁיאָרָה indicates, א could be used as a vowel letter for *a*.

Phonetics

CONSONANTS. The consonantal inventory of MH is identical with that of BH. Though, undoubtedly, some change took place in their realization (= pronunciation) during the period under discussion, there is no foundation whatsoever for Kahle’s assumption that the laryngeals and pharyngeals were completely lost. Nevertheless, some interchanges of these phonemes are found. It is known that in Tivon, Haifa, Beth-Shean, and in the academy of Eliezer b. Jacob ע (*ayin*) and א (*alep*) were interchanged. According to the Babylonian Talmud, the Galileans were unable to distinguish between א (*alep*), ה (*he*), ח (*het*), and ע (*ayin*) in their A vernacular, a statement which, however, seems exaggerated. The laryngeals and pharyngeals were apparently confused mainly in the large urban centers, as a result of Greek influence. MH, as transmitted, has only been slightly influenced by this confusion and there are only a few places in the Mishnah where the *amoraim* are in doubt as to whether the correct reading is with א or ע, e.g., אַיִד or עִיד (“festival”) (Mishnah Av. Zar. 1:1).

It is quite possible, however, that the linguistic change ע < ח (*het* > *ayin*) took place (as in Galilean Aramaic), e.g., עָג עִיגָה (“he made a circle”) (Mishnah Ta’an.3:8). Final *mem* in non-declined words very often turns into *nun* אָנָן < אָדָם or הָם > הָן (see above the Problem of the Sources of MH). בֵּת (*bet* = ב without *dagesh*) and ו (waw) merged. Thus they were interchanged in manuscripts, e.g., יִבְנֶה (place name) is spelled יוּנִי. Interchanges between ק (*qop*) and כ (*kap*) are very infrequent. More common is the interchange ב (*bet*) and פ (*pe*), e.g., לְהַבְקִיעַ שְׁעָרִים (= לְהַבְקִיעַ שְׁעָרִים = “to raise prices arbitrarily”) (Ta’an. 2:9). Initial א (when followed by a half vowel?) is sometimes dropped (+ its vowel) cf. above אֶלְעִזֹר (The Problem of the Sources).

VOWELS. The vowels of MH at first glance also seem identical with those of BH. There is, however, reason to assume that some change took place, thus instead of *hiriq qaton* a type of *ε* (*segol*) was pronounced, and instead of *qibbuṣ* a type of *o* (*qameṣ qaton* – *holem*). However, even in manuscripts, very few examples of this pronunciation have survived, apparently as a result of the “corrections” of copyists under the influence of BH, e.g., הִלִּיל, הוֹצֵפָה etc. = הִלֵּל (proper noun), הוֹצֵפָה (“*huzpa*”). This type of pronunciation parallels that known from the transcriptions of the Septuagint and from vocalized texts of Galilean Aramaic.

ASSIMILATION AND DISSIMILATION. Assimilation of consonants in MH occurs more or less under the same circumstances as in BH. Vowels, as in Galilean Aramaic, preceding labials tended to be realized as *o* (*u*) e.g., מְסַבֵּין < מְסַבִּין (in the *Haggadah* of Passover “reclining”) (Ben-Hayyim). ר (*reš*) seems to have had the same effect on vowels as labials. This accounts for forms like קְרֹדִים > קְרֹדִים (BH) (“spade”), etc. (also cf. the Greek name of the river יַרְדֵּן = *Yordan*(*ēs*)). A long *i* apparently could turn a preceding half vowel (*šewa* (:)) into an *i*, e.g., בִּיסִיד (instead of בִּיסִיד) (“with lime”).

Dissimilation of a consonant occurs in the word מַרְגָּלִית (μαργαρίτις “pearl”) and of a vowel in the Greek word נִימוֹס (from Greek νόμος “law”) (on the pattern of תוֹכֹן – תוֹךְ > “inside,” “central”).

Metathesis occurs in נְמִיל (“port”), לָמָן in the Palestinian form), the Babylonian form of the Greek λμῆν.

Morphology

PRONOUNS. *Independent Personal Pronouns*

Comparative Table

(not all the vocalizations of MH are documented)

	Mishnaic Hebrew		Biblical Hebrew
	אָנִי		אָנִי, אָנֹכִי
אֶתְּ	אֶתְּהָ, אֶתְּ	אֶתְּ (אֶתְּ)	אֶתְּהָ
הִיא	הִיא	הִיא	הִיא
	אָנוּ		אָנֹכֵנוּ, נְחֵנוּ
אֶתְּם, (?)	אֶתְּנוּ, אֶתְּם	אֶתְּנוּ, אֶתְּם	אֶתְּם
הֵם, הֵן	הֵם, הֵן	הֵנָּה	הֵם, הֵמָּה

In MH (and already in LBH) אָנֹכִי had disappeared. אֶתְּ as a masculine pronoun is apparently a borrowing from A. אָנוּ is an internal H development. The vocalic endings of הֵמָּה and הֵנָּה disappeared. Final מ (*mem*) was apt to appear as נ (*nun*) (see above Phonetics, consonants), therefore in both the pronoun and the verb the plural masculine and feminine forms merged (see following pars. on possessive pronouns and verb (the conjugation)).

The independent personal pronouns furnish a good example for the elements which make up MH: (1) BH; (2) A; (3) internal H development.

Possessive Suffixes

(not all the vocalizations of MH are documented)

Mishnaic Hebrew		Biblical Hebrew	
	דְּבָרִי		דְּבָרִי
דְּבָרֶיךָ	דְּבָרְךָ	דְּבָרְךָ	דְּבָרְךָ
דְּבָרֶיהָ	דְּבָרוֹ	דְּבָרָהּ	דְּבָרוֹ
	דְּבָרֵנוּ		דְּבָרֵנוּ
דְּבָרְכֶם-ם	דְּבָרְכֶם-ן	דְּבָרְכֶן	דְּבָרְכֶם
דְּבָרְכֶם-ן	דְּבָרְכֶם-ן	דְּבָרְכֶם	דְּבָרְכֶם

Note: Instead of the ending ךְּ-, םְּ- there occurs also an ending ם־, generally corrected to ן-, the ם being crossed out (Epstein, Kutscher). It is found also as an object suffix of the perfect. The second person singular masculine (Yalon) and feminine (Kutscher) forms are the result of A influence. (On the interchange מ (*mem*) > נ (*nun*), see above Phonetics.)

Independent Possessive Pronouns. MH developed an independent possessive pronoun – שְׁלִי (geminated ל, e.g., שְׁלִי “mine”). The distribution between this pronoun and the suffixed forms is still unclear as are the rules governing the use of the definite article in this case. The beginning of this development is to be found in the biblical form – אֲשֶׁר ל- (= MH -שְׁ), e.g., בְּמִדְּבַרְכֶת הַמִּשְׁנָה אֲשֶׁר לוֹ (“in the chariot of his second-in-command,” Gen. 41:43).

Demonstrative Pronouns. Near Deictic Pronouns.

Mishnaic Hebrew		Biblical	
זו	זֶה	זֶה, זוּ (זו, זאת)	זֶה
	אֵלּוּ		אֵלֶּה

Instead of זאת which predominates in the Bible, זוּ, found mainly in LBH, occurs in MH. It is possible that this word entered MH from another dialect. (If it is assumed that the form developed in MH from the BH זאת, it is impossible to explain the loss of the final ת (*taw*). The form אֵלּוּ perhaps developed under the influence of plural verbal forms, such as בְּתַבְנוּ, etc. It is unclear under what conditions the definite article is employed with the noun and the demonstrative pronoun.

Far Deictic Pronouns. Alongside the forms הַהוּא, הַהִיא, etc., there are the following forms in MH: הַלֵּז, הַלֵּזָה for the masculine and the feminine, הַלֵּלוּ-הַלֵּלוּ (הַלֵּלוּ) for the plural. The particle אַת with suffixed pronouns acts as a demonstrative pronoun (preceding the noun), e.g., אֹתוֹ הַיּוֹם (“that day”). The reflexive pronoun is created by using עֲצָמִים (“bone”) (very much like the English “(my) self,” e.g., קוֹנֵה אֶת עֲצָמוֹ “he acquires himself (= his freedom)”); הוּא עֲצָמוֹ (“he himself”). The relative pronoun is -שְׁ, which appears both in archaic BH and in LBH.

Since -שְׁ can scarcely go back to אֲשֶׁר of BH and besides is paralleled by the Akkadian *ša*, here too (see Near Deictic Pronouns) an H dialect different from BH may be assumed as its origin.

VERB. Verbal Roots. The verbal root pattern *xyx*, e.g., כָּרוּךְ (“to wrap”) only emerges in MH while four radicals, e.g., from לָנַעַנַע roots of the type לָנַעַנַע (“to shake”), or by duplicating the last radical, e.g., עָרַבַב (“to mix”) already appear in BH.

Conjugations. The *pu^cal* has practically disappeared (the participle excepted). The perfect of *hitpa^cel* practically disappeared and the form *nitpa^cal* (corrupted in the printed editions to *nitpa^cel*) occurs instead (only twice in the Bible). It is apparently a blend of *nitpa^cal* and *hitpa^cel*. In the פִּי”ו verb an *’ettap^cal* conjugation (borrowed from A) exists (extremely rare).

In addition to the *hipⁱl* there is also a *šap^el* conjugation (assumed to be borrowed from Akkadian through A) which is conjugated like the *pa^cel*, e.g., שָׁחַרַר (“to liberate”). Traces of the passive *qal* are found in the פִּ”נ verbs, e.g., נִטְלָה (“taken”), etc., however it might be a recreation in MH as in modern Hebrew נִשְׁכַּתִּי (“I was bitten”) and not נִשְׁכַּתִּי which is identical with the *pi^cel* (here an active form). This usage was extended to other verbs, e.g., נִנוּצַר (“saved”).

The exact meanings of the various conjugations still remain to be clarified. The following is a tentative description:

The *qal* is generally identical with the *qal* of BH, i.e., it can indicate a simple action (transitive or intransitive) and it can serve as a denominative even in a case like פָּרַה חוֹלְבֶתָהּ (lit., “a milking cow”). There is, however, a conspicuous difference in the intransitive verbs. While in BH a form like גָּדַלְתָּ can mean both “you were great” and “you became great” (even “you are great”), in MH only the second meaning occurs, e.g., גָּדְלָהּ (“grew” < “she became great”); the first meaning has to be expressed by means of the auxiliary הָיָה, plus the participle or adjective, e.g., הָיָה גָּדוֹל.

Nipⁱal also seems generally to be identical with BH, i.e., it can be a reflexive נִטְמַן (“he hid himself”) and also נִשְׁאַל (“he asked for himself”), apparently in a reciprocal meaning נִחְלְקוּ (“they disputed”), but generally a passive, e.g., נֶאֱכַל (“it was eaten up”), and perhaps also with a new meaning to express perfectivity (inchoation), e.g., נִזְכֵּר אֲנִי (“I am remembering”) but אֲנִי נִזְכָּר (“it comes to my mind”). In BH *qal* זָכַר is employed in both meanings. Maybe נִכְנַס (“he entered”) has to be explained the same way (cf., וַיֵּאֲסֹף “he entered,” Num. 11:30).

Pi^cel, as in BH, expresses intensive action, meaning repeated action, or an action performed on many objects (Yalon) (cf., BH וַיִּבְתַּר (qal) וַיִּבְתַּר אֶתֶם בַּתְּנוּךְ... וְאֵת הַצֶּפֶר לֹא בָתַר (“and cut them in two... but he did not cut up the bird,” Gen. 15:10)); or when the work is performed by many actors, e.g., הָיוּ מְתַלְשִׁין (“they were plucking”); also as a denominative, e.g., מְעֻשָׁנִין (“to fumigate”); even in a privative sense מִיִּבְלִין (“to remove wens”), and as a causative מִיִּלְדִין (“to help in childbearing”). The *pi^cel* also can serve in an intransitive meaning as an inchoative בִּיכִירוֹ (“began to ripen”). A few cases of this last meaning already appear in BH, e.g., פִּתְחָהּ (“has been opened,” lit., “has opened”). In some cases the *pi^cel* seems to have dislodged the *qal* without change of meaning, e.g., עִיבַר (“he passed”) (Pes. 3:8), but whether it is a general feature of MH (Ben-Hayyim)

has still to be established (cf., BH דַּבֵּר (“speaking”) *qal*, but generally the *pi’el* is employed).

Hi’p’il, as in BH, serves as a causative מַשְׁחִיטִין (“cause to slaughter”), as a denominative הִגְרִיל (“he cast lots”) as in the *pi’el* (also *nip’al* and *qal* to a certain extent). It also serves as an inchoative הִעֲשִׂיר (“he grew rich”).

The *hop’al* served as a passive of the *hip’il*.

The *hitpa’el-nitpa’al* is mainly employed, as in BH, as a reflexive, e.g., נִסְתַּפֵּג (“he dried himself”), also as an inchoative, e.g., נִשְׁתַּמַּד (“he went mad”), a reciprocal נִשְׁתַּפְּרוּ (“they became partners”), and very often as a passive נִתְגַּלָּה (“it became uncovered”), rare in BH. In contrast to BH where it serves as a denominative very often meaning “to pretend to,” e.g., מִתְעַשֵּׂר (“he pretends to be rich”), in MH this meaning does not occur and in the *hitpa’el* it means “to become rich” (cf. *Hi’p’il*). The *šap’el* is a causative (but conjugated as a *pi’el*).

Prefixes and Suffixes of The Tenses. As with personal pronouns, the masculine and feminine forms in the perfect of the verb also coalesced as a result of the phonological development of final ם (*mem*) > ן (*nun*), thus כתבתם – כתבתן. The loss of the feminine plural forms in the imperfect is the result of a different process. All the archaic forms of BH, e.g., imperfect forms with the ending ן (ן) such as תשמרון (“you (plur.) will guard”) disappeared from MH (in spite of the fact that some of them were identical with the parallel A forms).

Perfect		
	כְּתַבְתִּי	כְּתַבְתֶּהּ
כְּתַבְתָּ		כְּתַבְתֶּן
כְּתַבְתֶּם	כְּתַבְתֶּנּוּ	
	כְּתַבְתֶּן, -ם	
	כְּתַבּוּ	

(Note the full spelling of כתבתה). It should be noted that MH (as in the Dead Sea Scrolls) very often uses the pausal forms also instead of the contextual form. This is always the case in the *hop’al*, e.g., הוֹקְדָשׁוּ לְמִשְׁכָּן (“they were dedicated to the Tabernacle,” Zev. 14:10).

Imperfect		
	אֲכַתֵּב	תִּכְתֵּב
תִּכְתֵּבִי		יִכְתֵּב
תִּכְתֵּבְךָ	נִכְתֵּב	
	תִּכְתֵּבוּ	
	יִכְתֵּבוּ	

Participle (Imperative and Infinitive). The main changes in the participle are in the feminine singular only the ת- ending is used: שומרת (“guarding”) (except for the ע”ו, and ל”י (ל”א) verbs to a certain extent), while the plural masculine employs,

besides the ending ם - also ן (A). In the imperative, the feminine plural is replaced by the masculine plural (cf., imperfect above). The participle can be negated by לֹא and not only by אֵין, while the infinitive is negated by לֹא שְׁלֵא, e.g., שְׁלֵא לְחַתּוֹם, אֵין רְשִׁי שְׁלֵא לְחַתּוֹם (= רְשִׁי יִי) (“it is not permitted not to seal”).

Verb Classes. Strong Verb. In the *qal* perfect only the patterns קָטַל and קָטַל (הִשְׁיֵכָה “it became dark”) have survived, while in the participle all three forms, attested in BH; קוֹטֵל, קוֹטֵלָה, (e.g., דֹּלֵק “burning”) and the only case of קוֹטֵל = כּוֹל (“he can,” “is able”) appear. (Incidentally, the feminine and the plurals, not attested in BH Hebrew, are כּוֹלָה, כּוֹלִין, כּוֹלוֹת.) In the “imperfect” there seems to be a tendency to turn (a) forms (of the intransitive verb) into (o) forms, cf., יִקְרוֹשׁ (“it should congeal”). The spelling indicates an (o) imperfect; the punctuator of the manuscript, however, crossed out the ו (waw) and vocalized קָרַשׁ (also see verbs ע”ע). In the *hitpa’el* imperfect there appear, though rarely, also forms like תִּתְחַבֵּר (“consort”) (Avot 1:7).

Weak Verb. א”פ verbs: the infinite of *qal* is patterned after the ‘imperfect’; לומר (“to say”) etc. (cf., Spelling above), לֹאכַל (“to eat”).

ע”ע verbs: note the form נַעֲשָׂה (“it was done”) (= נַעֲשֵׂה in BH).

ע”ע verbs: in the imperfect and imperative the (a) turns (always?) into (o), e.g., יִשְׁחוּט (“he shall slaughter”) שְׁחוּט (“slaughter”) (see above the strong verb).

ל”א and ל”י verbs: The ל”א verbs generally turned (as in A) into ל”י verbs: sometimes, however, the former spelling is retained, e.g., קָרִינוּ (“we have read”), but יִקְרָא (“he shall read”), in לְקַרְוֹת (“to read”); in לְקַרְאוֹת (“to read”) the original א appears, in spite of the ל”י form (see above Spelling); in the perfect the ending of the third person singular feminine is often ת־, e.g., הָיְתָה (“she was”). This ending, found also in BH (rarely) in the strong verb, is in BH considered mainly an archaic survival. Its emergence in the ל”י verb in MH cannot be attributed to A influence since it does not occur in the other verbal classes. It seems that this form entered MH from a non-biblical Hebrew dialect in which the original הָיְתָה † had not become הִיְתָה. The ending ת (*taw*) is also found in the other conjugations but in the *nip’al* there are, besides forms like נִיָּכוֹת (“she burnt herself”), such forms as נִיָּטָמָה (“she became unclean”) where the form of the original ל”א verb is identical with the feminine singular of the present. But the same form can also occur in an original ל”י form נִישְׁבִּיתָה (“she was taken prisoner”). Naturally, the biblical forms with the ending תָּה also occur. In the participle *qal* there are two forms, e.g., קוֹנֵה (“he buys”) and יָכָה (“he takes possession,” “he gains,” “he obtains a privilege”).

פ”פ verbs: the infinitive of the *qal* is patterned after the imperfect, e.g., לִירֹד (“to go down”). The same applies to פ”נ verbs: לִיתֵן (“to give”); note forms like לִישׁוֹל (“to take”) where the ן is assimilated (which is not the case in BH).

ע”ע verbs: *qal*, there are also participle forms like חוֹלוֹת (rare in BH) (“they (fem.) dance”); in the infinitive and in the “imperfect” also forms like לָדוֹן (also לָדוֹן and לָדִין) are found

(cf., ע"י verbs). There are in BH perfect *qal* forms like קם ("he got up"), טוב ("he was good"), and מת ("he died"), paralleling similar forms in the strong verbs. From the second pattern only בוש survived ("he was ashamed"), as did מת. In the perfect of *nip'al* forms like נדון and נידון ("he (it) was judged or he (it) was discussed"), in the participle נידון, are employed. There is also נמוך ("low, short") but in the Babylonian vocalization נמוך. In the *hip'il* there are forms like הוביר ("he left (the field) fallow") (patterned after פ"י). In the geminated conjugations (*pi'el*, *pu'al*, *hitpa'el*) the forms derived by doubling of the third radical (practically) disappeared; forms like התכוון ("he intended") (כ"ו) are replaced (practically always) by the נתכוון type, the second radical being geminated, as in the strong verb.

ע"י verbs: they disappeared almost entirely by (1) turning into ע"ו; דין mostly appears (in the "imperfect") as דין; (2) or by being transferred to the *hip'il* (since the "imperfects" are identical); participle *qal*; שם ("putting" via imperfect ישם) > משים (participle of *hip'il*), only once in BH.

Geminate Verb. There is a tendency in the *qal* perfect and participle to employ the intransitive verbs with the transitive forms, i.e., they are patterned after the strong verb: e.g., גוששט ("(ship) touches (the ground)" – in Hebrew it is intransitive), but רבו ("they multiplied") (intransitive form). In the imperfect the so-called A forms do not seem to occur (ייצנו "to keep it cool," Shab. 22:4) is not a clear-cut case). In the *nip'al* the geminate verbs are generally treated as strong verbs, e.g., נמדד ("was measured"), נמדד ("is being measured"), תיקצץ ("let it be cut off"). There seem to be very rare cases of forms like נמוקו ("they were defeated") patterned after ע"ו verbs. In the geminated conjugations *pi'el*, *pu'al*, *hitpa'el* (as in the ע"ו verb, see above) only the strong verb forms appear.

With the verbs הנה and הנה short form ינה (= ינה) is employed in the imperfect, while in the imperative the root הנה (A) is used often even in the A form הני (= הנה) ("be" sing.); הנו (= הנו) ("be" plur.). The root חי sometimes appears in the participle *qal* as a geminate חי ("he lives"), like קל ("he is easy"), but according to spelling חיה, obviously to be vocalized חיה (like חיה above) but corrected in the manuscripts to חי.

Tenses. The tense system of BH underwent a radical change in MH. The following forms disappeared: the long imperfect of the type אשמרה ("I will guard"); the short imperfect of the type יעל ("he shall go up"); the forms with the consecutive ו (*waw*) (שמר, ושמר) the absolute infinitive שמור. The infinitive construct only survived with the preposition ל, e.g., לשמור ("to guard"), sometimes even when the preceding verb governs the preposition מן, e.g., אסור מלרחוץ ("(he) is forbidden to wash"). The new system comprises: (1) the perfect (which also serves as a preterit);

(2) a practically new periphrastic form: היה ("be") (mainly used for the past but also for the future and imperative) plus the active and passive participle to indicate repeated, usual, concurrent, etc., action (rare in LBH).

The participle is employed as present and future. A new periphrastic form (mainly employed when the future needs a clear-cut indication, especially when in contrast to the present) came into being: infinitive ל + אתה הולך + דע מאין באתה ואתה הולך ("Know whence thou art come, whither thou art going, and before whom thou art designed to give an account and reckoning"). Contrary to BH the imperfect does not denote future anymore: it turned into a modal form expressing wish or intention (in the first person) or command (in the third person). It is also used after an imperative, as שמור לי ואשמור לך ("guard for me and I shall (will) guard for you") and as a subjunctive, after the relative pronoun – ש. The imperative survived apparently unchanged. The passive participle, mainly the *qal* of intransitive verbs, is employed with certain verbs as a kind of present perfect-present יושב ("I am sitting (seated)"). מקובל אני ("I have received") (rare in BH).

It should be noted that MH, as A, very often uses the proleptic suffix with verbs, e.g., the common expression י אמר לו רבי x לרבי (אמר רבי x לרבי).

NOUN. The noun forms are generally the same as those in BH, though some became more widespread, especially some of the verbal nouns of the *qal*. About 15 different noun forms are used as verbal nouns of the *qal*, among them the noun pattern קטילה should be especially noted, e.g., אנינה ("grief"). This noun pattern in BH as a verbal noun (e.g., אכילה ("eating")) is rare, in the Mishnah, however, there are 130 examples. Its influence was so great that it was able to change the biblical form of שרפה ("conflagration") to שרפה. In the ל"י (and ל"א) verbs this form may appear in the קטילה pattern, e.g., בריה ("creature, creation"), קריה ("reading"), etc. Though rare, the form קטילה is also found, such as כניסה ("entrance"). The form קטילה is also rare (though common with verbs that denote sound), e.g., צוהה ("shouting"). A new form is גזל ("robbery"), חנק ("strangulation"). Verbal nouns with suffixes are also found, e.g., פדיון ("redemption"). (The word does not occur in the absolute state in the Bible.) The number of A patterns is relatively small, e.g., כלל ("general rule"), פרט ("specification"); with the prefix מ (*mem*): מנס ("bringing in"), showing that A had a minor influence in this field.

The verbal noun of the *pi'el* is קטול or קטלה (both BH but the latter is a borrowing from A). In the *hip'il* also the A form הקטלה (already in the Bible) predominates along with הקטל, e.g., הקטר ("burning" ("of offering")). In the ל"י verbs, the form in Babylonian sources is, e.g., הוראה ("instruction"); whereas in Palestinian sources it is הוריה. The form הקטל, e.g., הקטר, is, in fact, identical with the absolute infinitive in BH. (As in BH, the *segol* is an allophone of *pataḥ*). In the Babylonian vocalization it may appear both as הקטל and הקטל (in certain cases). The passive and reflexive conjugations do not have their own verbal nouns and employ the verbal nouns of the corresponding active conjugations, e.g., וידוי ("confession of sin") from להתודות. It should be noted, however, that the *nip'al* infinitive הרת, occurring in the Mishnah also as

כַּרְת (‘‘extermination’’), serves as a verbal noun; even a plural form occurs כַּרְתוֹת.

The form with the ending ךַּ- (‐ān) is a *nomen agentis* (the agent) noun pattern which is peculiar to MH. In Palestinian manuscripts, these appear mainly as גוֹזֵל (‘‘robber’’), רוֹצֵחַן (‘‘murderer’’), etc. (The vocalization is not uniform.) In Babylonian sources mainly the forms גוֹלֵל and רִצְחָן occur. The origin of this form is still unclear. The *nomen agentis* for *qal* of the קָטוּל pattern, e.g., לָקוּחַ (‘‘buyer’’) might be of A origin. It should be noted that MH tried to develop a special form to represent the result of an action, namely קָטִילָה (practically nonexistent in BH). The only example of this form is חֲתִיכָה (‘‘a piece’’) alongside the verbal noun חֲתִיכָה (‘‘cutting’’).

Alongside of the construct there is the paraphrastic (the circumlocuted) construct state which uses the particle של. As Yalon has demonstrated, this word was attached to the *nomen rectum* (if this was determined) and contained the definite article, e.g., רַבּוֹנוֹ שֶׁל הָעוֹלָם = רַבּוֹנוֹ שֶׁל הָעוֹלָם (‘‘master of the world’’). How and when של was separated from the noun and ceased to contain the definite article is not entirely clear. In the Bar Kokhba letters של is separated from the following word, which, however, has the definite article. This shows that the dialect of the Bar Kokhba letters is not identical with MH as it is known today.

In the של phrase there are four types. In three of them של includes the definite article:

(a) הַיַּיִן וְהַחֹמֶץ שֶׁלְגוֹיִם (‘‘wine or the vinegar of Gentiles’’) (Av. Zar. 2:3). (b) with the proleptic suffix אֵינִיהֶן שֶׁלְגוֹיִם ‘‘the festivals of the Gentiles’’. The difference in meaning of these two constructions is not entirely clear. In each phrase both nouns are determined. (c) שֶׁלְזָהָב (= נְבֻרֶשֶׁת) נִפְרָשֶׁת (‘‘a golden candlestick’’) (Yoma 3:10). (d) לְשׁוֹן שֶׁלִּיהוֹרִית (‘‘a thread of crimson wool’’). In each of these phrases both nouns are undetermined. The reason for the difference between the two last constructions is not clear.

Plural. Besides the plural with ם-ים, ךַּ-, and ךַּ-ות, a plural with the ending ךַּ-אות in Babylonian sources, e.g., מְרַחְצֵי־אוֹת (‘‘bathhouses’’). The plural of nouns ending in ךַּ-ות is not ךַּ-יות, as in the Bible, but ךַּ-יות, e.g., מְלַכֵּי־אוֹת (‘‘kingdoms’’). A double plural of compound nouns, such as, רֵאשֵׁי־שָׁנִים (‘‘new years’’) occurs (cf., for example, the form אֲנָשֵׁי־שָׁמוֹת, found in Chronicles, to אֲנָשֵׁי־שָׁם (‘‘famous men’’) which appears in Genesis).

The rules governing the use of the definite articles are still not entirely clear. It should, however, be pointed out that a noun with an accompanying adjective generally does not take the definite article, e.g., לַיְלָה הָרִאשׁוֹן (‘‘the first night’’). Other usages, such as, הַכֹּהֲנִים הַגְּדוֹלִים (‘‘the high priests’’) which appear to be exceptions to the rule require further investigation (cf., הַכֹּהֵן הַגָּדוֹל in the Dead Sea Scrolls).

PARTICLES. While there are many new adverbs and conjunctions, such as, בְּנִתְיָם (‘‘meanwhile’’), בְּדִי (‘‘in order to’’), עַכְשֵׁי (‘‘now’’), כִּיצַד (‘‘how’’), noteworthy is אֲבִית instead of בְּבִית. It seems that the biblical prepositions have remained

to a greater extent than the other particles, as in the case of the language of the Dead Sea Scrolls and Punic. Some usages which should be especially noted are the following: -ל is used to a great extent for -ב, e.g., הִיְתָה תְרוּמָה לְתוֹךְ פִּי, (‘‘the *terumah* was in his mouth’’). Many verbs take either one of the following prepositions: ב or ל. ל also indicates the accusative (rare in BH but common in A). The prepositions על – עד interchange (as they do in Galilean and Samaritan Aramaic). The copulative ו (waw) sometimes acts as an explicative ו (waw), e.g., מְבָרֵךְ עַל הַטּוֹבָה וּמַעֲיִן עַל הָרָעָה (‘‘A man should say the benediction for good fortune regardless of any consequent evil’’) (in German: *und zwar*).

In particles of negation besides אֵין (‘‘not’’), employed in nominal sentences including participles (note the declension: אֵינִי, etc. אֵינָה / אֵינּוּ – ‘‘he/she is not’’), also לֹא is used to negate participles. The A loan לֹא is used mainly in the phrase לֹא אֵם (‘‘if not’’). אֵי (‘‘אֵין’’) occurs apparently only before א, e.g., אֵי אַתָּם (‘‘don’t you’’). The expression ‘‘yes,’’ which is absent in BH, in MH appears as הֵן (from A).

SYNTAX. Owing to the radical changes that occurred in the tense system of MH (see above), the syntax of MH looks very different from that of BH. However, since research in syntax has to be based on good manuscripts (see The Problem of MH), the picture is as yet not entirely clear.

The following may more or less be stated: in the verbal sentence generally the verb seems to precede the subject but not always. A verb can take a verbal complement in three ways: (a) infinitive plus ל (as in BH); (b) the participle הִתְחִיל בּוֹכָה (‘‘he started weeping’’) (rare in BH);

(c) a relative clause, צָרִיךְ שֵׁיאָמַר (‘‘he must say’’). In the past conditional the construction participle plus הִיָּה is preferred, אֶלּוּ (negative לֹא) opening the sentence, e.g., אֵילוּ הָיִיתִי יוֹדֵעַ לֹא הָיִיתִי נוֹדֵר (‘‘Had I known (that this was so) I would not have made my vow’’). Interrogative sentences which expect a negative (?) answer begin with כְּלוּם. Relative sentences are more numerous than in BH since in MH subordinate clauses are used instead of the biblical infinitive plus ב or כ (not occurring in MH).

In the comparative sentence often יוֹתֵר is added, e.g., רַע יוֹתֵר מִסוּדַמִּיין (‘‘worse than the Sodomites’’) (Tos. Shab. 7:23).

While in BH the passive is used almost only if the agent is unknown (with very few exceptions), in MH it seems to be employed even if the agent is known, e.g., הַנּוֹלָדִים מִן הַסּוֹס (‘‘all offspring from a horse,’’ lit., ‘‘born by a horse’’). The agent is expressed by מִן and by ל, e.g., נֶאֱכָלִים לְכֹהֲנִים (‘‘are eaten by the priests’’). As noted, the syntax of MH has to be restudied on the basis of good manuscripts.

VOCABULARY. A great part of BH vocabulary disappeared from MH including even words indicating close relation, דוּד (‘‘uncle’’) or parts of the body, such as, בֶּטֶן (‘‘belly’’), בְּהֵן (‘‘thumb’’) was replaced by גּוֹדֵל (אֲגוּדֵל). As is well known these two fields are the most resistant to change in every language. Less amazing is the fact that vocabulary used only in the po-

etic parts of BH did not generally survive in MH, e.g. *חָרוֹץ* (“gold”). The vocabulary of MH is composed of the following elements: (1) Hebrew; (2) loanwords from Persian, Akkadian, Greek, Latin, and Aramaic.

Hebrew. The Hebrew element has many facets:

(a) BH whose meaning remained the same, such as, *יָד* (“hand”), *רֶגֶל* (“foot”), *בַּיִת* (“house”), *מִטָּה* (“staff”), *יָצָא* (“to go out”), *שָׁמַע* (“to hear”), *רָאָה* (“to see”).

(b) BH words which took on a different form (in the following examples the first word is the biblical form and the second the mishnaic): *מִשְׁאָת* – *מִשְׁוֹאָה* (“flares,” “fire signs”), *לְהִכְשִׁיל* – *לְהִכְשִׁיל* (“to cause to stumble”), *יָמִין* – *יָמִין* (“right hand”) (Aramaic?), *זֶג* – *זֶג* (“grape-peel”), *חֵיל* – *חֵיל* (“surrounding wall”). Some words found in the Bible are only in the singular whereas in MH they occur also in the plural, e.g., *שָׁמִיטִים* – *שָׁמִיטִים* (“sabbatical year”). In particular this is the case with collective nouns, such as *פְּרִי* – *פְּרוֹת* (“fruit”), *יָרֵק* – *יָרֵקוֹת* (“vegetable”). Some words found only in the plural in the Bible occur in MH in the singular, such as, *בֹּטְחָה* – *בֹּטְחָה* (= *בֹּטְחָה* “pistachio”). Verbs, such as *תָּרַם* (*תָּרַם* < *תָּרוּמָה* < *רוּם*), from the BH root *רוּם*, in *הִרְיִם* (“to raise”), with the preformative *ת* (*taw*) formed the noun *תְּרוּמָה* (“heave offering”). MH derived from *תְּרוּמָה* a new root *תָּרַם* which is now used instead of BH *לְהִרְיִם*. Nouns were formed from verbs, e.g., *יָעַד* (“meeting place”) < *הִנְעִיד* (“to meet”), *וְדוּי* (“confession of sin”) < *הִתְוַדָּה* (“to confess”) where the biblical aversion to *waw* as the first radical did not apply anymore.

(c) Some nouns which apparently changed their gender under A influence, e.g., *כּוֹס* (“goblet”) which became masculine while *שָׂדֶה* (“field”) became feminine.

(d) A biblical element which changed semantically but not morphologically. Some words are concrete in the Bible and abstract in MH, e.g., *נָהוּג* “to lead,” in MH “to behave.” Similarly *גָּזַר* in MH means only “to decide” and not “to cut.” *עוֹלָם* in the Bible means “eternity,” but in MH “world.” Some words were semantically restricted, e.g., *צְדָקָה* “righteousness” and “charity,” in MH means only “charity.” *חַג* (“holiday”) refers only to “Sukkot” in MH and *עֲצָרָת* (“assemblage”) only to “Shavuot.” It is sometimes difficult to decide whether a particular biblical root changed its meaning or the root in MH is simply homophonic, for example, *פָּסוּל* in the Bible means “to hew,” with the derived noun *פְּסוּלָת* (“refuse”) (cf., *נִעְוָרָת* “tow”). From *פְּסוּלָת* a denominative *qal* verb was formed (“to declare unfit”); there may, however, be a different root here (as found in Arabic). But the root *לְהִתְחַטֵּא* (“to ingratiate himself”) is certainly not identical with the Hebrew root *חָטָא* (“to sin”), but is an A root.

(e) Non-biblical Hebrew elements. It is certain that the Bible does not contain the whole vocabulary of the biblical period, as shown by personal names and inscriptions (cf., the word *זִידָה* in the Siloam inscription (as yet unexplained) and *נִצְרָה* appearing on weights (meaning apparently “half,” cf., Arabic). Therefore at least some of those roots which cannot be proven to be foreign loans are probably survivals from the bib-

lical period and only incidentally did not appear in the Bible. This is, of course, impossible to prove in most cases. Sometimes, it cannot be determined whether the form originated in H (or in a Hebrew-Canaanite dialect) or in a neighboring dialect (such as Edomite (?)). It seems probable that most of these words are of H (or Hebrew-Canaanite) origin. Consider, for example, the root *חָזַר* (“to return”) (in Eastern Aramaic *חָזַר* – *הָדַר*; in Western Aramaic *חָזַר*, apparently a borrowing from Hebrew). This root may have reached H through one of the Canaanite dialects. On the other hand, the root of *לְהִתְעַכֵּב* (“to be delayed”) is less certain. (There is no certain parallel in the other Semitic languages.) The certainty is greater for agricultural terms or for parts of the body, e.g., *סָרְף* (“resin”), which do not occur in other Semitic languages. The form of the word *טָחוּל* (“spleen”) shows its Hebrew-Canaanite origin. Since the Arabic cognate is *tihāl* and *ā* appears here as *ō*, as in Hebrew-Canaanite (a change which did not occur in A loanwords), the H origin of the word seems more or less to be certain. The root *מָסוּק* (“to harvest olives”) is probably Hebrew since it has no cognate in the other Semitic languages. It was only by chance that these roots did not occur in the Bible, or maybe they were current in a different H dialect (regarding *מָסוּק* compare the biblical root *נָקוּף* with a similar meaning) but not in BH. In order to clarify the relationship between MH and BH, and especially A, the vocabulary of the former should be studied thoroughly on the basis of excellent manuscripts and according to different fields in semantics.

Loanwords. Persian. The Persian hegemony in Palestine lasted only 200 years and Persian consequently did not leave a strong mark. Administrative terms such as *גִּזְבָּר* (“treasurer”), already found in the Bible, occur, but not *מְרַכּוּל* (the Palestinian form) – *אִמְרַכּוּל* (the Babylonian form) (“a high official”). The word *וִרְד* (“rose”) seems to be Iranian. The fact that the word begins with *ו* (*waw*) points to its non-Hebrew origin (but see above Vocabulary (b)).

Akkadian. Most Akkadian words in MH were borrowed through an A intermediary. Some words, however, do not appear in A. The Akkadian-Sumerian *אִפְר* (“meadow”) is hardly found in the A dialects. On the other hand *אִמְתִּי* (“when”), parallel to BH *מִתִּי*, is found in several A dialects. Many Akkadian mercantile terms, such as, *שִׁטְר* (“writ”), *גִּט* (“writ (of divorce)”), *תַּגְר* (“merchant”), *אֲרִיס* (“tenant farmer”) from the Akkadian root *erēšu* (“to plough”) have entered MH, as have terms from the material culture, such as, *דָּף* (“page”) (of Sumerian origin). The root *וָזַז* (“to move”) is also of Akkadian origin. It is possible that the meaning of *לְקוּחָה* (“to purchase”), found mainly in MH, is an Akkadian calque (loan translation). That is apparently why when *לְקוּחָה* (“to take”) also acquired the new meaning “to purchase,” the BH *לְקַח אִשָּׁה* (“to take a wife,” i.e., “to marry”) changed in LBH to *נָשָׂא אִשָּׁה*.

Greek. Many administrative, religious, mercantile, material culture (excluding agriculture), and even everyday words were borrowed from Greek. From the Greek word *זֶג* (“yoke”) a

denominative verb was formed; similarly אָויר (אָויר?) (“air”) and הַדְּיוּט (“simple person”) are Greek. There are mercantile terms: פִּינְקֵס (“account book”) and סִיטוֹן (“wholesale provision dealer”); household terms: קְתֹדֶרֶת (“chair with a back”), and פְּרוֹוֹדוֹד (corrupted in the printed versions פְּרוֹוֹדוֹר) (“vestibule”); administrative terms: סְנֵהֶדְרִין (Greek “assembly”), and לְקַלֵּס (“to praise,” mainly a king or a high official); urban terminology: מִטְרוֹפּוֹלִין (“city”), פֶּלְטִין (“palace”), and לְמֵן (in Babylonian sources of מַח (“port”)); food terms: כְּרוֹב (“cabbage”). The expression יָפָה (דְּרָשָׁתָּ) (“you have (well) explained”) (in BH יָפָה = beautiful) seems to be a calque, as is apparently הַשְׁלִים (“he did”) (Lieberman).

Latin. The few Latin loanwords are from the administrative and military spheres, e.g., לִיבֵר (“scribe”), לֵגִיוֹן † (“legion”), נוֹמְרוֹן (“troop of soldiers”) – אֶסְטְרָטָה – סְרָטָה (“street”), קָרוֹן (“wagon”), סֶפְסֵל (“bench”), and טַבְּלָה (“table”).

Other Languages. Assuming that the language of the Edomites who settled in Palestine was closer to Arabic than to H (there is, however, no proof of this), it may be hypothesized that the word שׁוֹבֵב (“dovecote”), Arabic *šubbak* (“window”), was borrowed from Edomite. The Arabic *š* was taken into Hebrew without the linguistic change to שׁ. According to an opinion in the Talmud, the expression יוֹנֵי הוֹרְדִסְיָה (the second word appears in various forms) in the Mishnah means “doves of the king Herod,” which (according to Josephus) he raised in his home. חוֹטָם (“nose”), from a rare biblical root, brings to mind the nose ring (חֹטָם) of the camel. This word may have come into Hebrew from the language of a people that still employed camels (from Edomite?); the assumption is, of course, purely speculative.

Influence of Aramaic. Unlike the above languages whose influence on MH was felt mainly in the vocabulary, A had a far-reaching impact and left its mark on all facets of the language, namely, orthography, phonetics and phonology, morphology including inflection, syntax, and vocabulary. There is room for investigation as to whether MH was a Hebrew-Aramaic mixed language. This question may be posed owing to the fact that A had a pervasive influence in all spheres of the language, including inflection, which is generally considered to be impenetrable to foreign influence. It is possible, however, that because of the symbiosis of A and Hebrew-Canaanite the two exerted a mutual influence (see especially phonology).

Orthography. All of the peculiarities mentioned above as being in MH are found, more or less, in the Palestinian Aramaic dialects as well, especially Galilean and Christian-Palestinian Aramaic, and even in the eastern dialects.

Phonetics and Phonology. The fact that the consonantal phonemes (according to biblical A also the vocalic phonemes) are from a synchronic point of view identical in both languages – a phenomenon without parallel often even in different dialects of the same language – is noteworthy. There is reason to believe that this is due to Hebrew-Canaanite: from A

inscriptions it is known that there were several phonemes in A which did not exist in Hebrew-Canaanite. Common to H and A are the double realization כפ"ד כפ"ת (*bgdkpt*); the weakening of the gutturals to a greater or lesser extent in most of the A dialects; and common assimilation and dissimilation phenomena (with regard to ר (*res*), especially in Galilean Aramaic).

Inflection. The independent personal pronoun אַתְּ (“you” masc.) and the possessive pronouns הִי-, יָהֵ- (see above Pronouns) are clear indications of A influence. With regard to the verb, the influence was weaker. The A root הוה appears maybe even with an A vocalization (see above). The loss of the *pu^{al}* is paralleled in A, whereas the *hop^{al}* still exists as opposed to the A dialects where it disappeared (with the exception of the early dialects). The rare occurrence of the *ettap^{al}*, the development of the *nitpa^{al}*, and the rejection of forms such as תִּשְׁמְרוּן (see above conjugations) point to an anti-Aramaic trend. A influence was less felt in the noun patterns.

Tenses and Syntax. The tense system completely parallels that of Galilean Aramaic and is close to that of Christian-Palestinian and Samaritan Aramaic. It is also similar to that of Eastern Aramaic. The assumption that the whole tense system is influenced by A seems to be inescapable. Note, however, that biblical Aramaic and the old A inscriptions show that this system is not original with A. Even though there still is no real comprehensive study on the syntax of MH and the Western Aramaic dialects, there seems to be a far-reaching parallelism between them.

Vocabulary. It is clear that A influence is considerable in this category. Absolute proof is provided by loanwords having an A root consonant which differs diachronically from the Hebrew cognates (ד, ט, ע, ת), or by loanwords in which a difference arises because of the Hebrew-Canaanite vowel shift *ā > ō*. Thus, for example, הִתְהַטָּא (“to ingratiate”), אִירַע (“to occur”) < A עִרַע, Hebrew-Canaanite עִרַן † are all A; similarly, אִילָא (“but”) = אִם לֹא = אֵן לֹא in BH, שְׁעָה (“hour”). Even in the numerals there are A elements, e.g., שֵׁשֶׁת (“a sixth”) and תּוֹמָן (“an eighth”). As is well known also the numerals are most resistant to penetration of foreign elements.

In other cases the decision may be in favor of an A influence, e.g., אֶמְצַע (“middle”), כֶּמֶן (?) (“money”), and many more. There is still no up-to-date work on this subject. All the studies published in this field are unreliable.

There are also many calques, such as, אָחַז = סָגַר (“he closed”). Similarly the fact that in MH כוּס (“goblet”) is masculine and שָׂדֶה (“field”) is feminine goes back to A influence.

Due to A influence there are occasionally in MH words which are archaic in the Bible (but in general such words disappeared from MH), e.g., עוֹנָה (“time”), – יָמוֹת (“days”) as in the phrase יָמוֹת הַחֶמֶה (“the sunny season”).

A biblical word might change in form because of A influence, e.g., גֵּיהֵנָם (גֵּיהֵן) in the Bible, but גֵּיהֵנָם (“Gehenna”) in MH (with a different meaning). This is the traditional pronunciation in several Jewish communities.

DIALECTS OF MISHNAIC HEBREW

The early state of affairs as represented by the manuscripts will be discussed here and not the differences between the living traditions of the different Jewish communities (mainly the Yemenite, Sephardi, and Ashkenazi). It is certain that there were differences between the Babylonian and Palestinian traditions. It is even possible to assume that archaic forms which later changed in the Palestinian tradition occasionally remained in the Babylonian tradition. Consider the following example: according to the transcription of the New Testament it is known that the old form of רַבִּי ("rabbi") was רַבִּי. This form was preserved in the Babylonian vocalization tradition, but in Palestinian manuscripts the vocalization is רַבִּי (רַבִּי) and even רַבִּי. Greek transcriptions from Palestine, and later transcriptions in Italy, prove that the first two forms are correct Palestinian forms. They were also preserved in the traditions of various communities. The form מוּעֵט ("small part") is found mainly in Babylonian sources. The normal form מְמוּעֵט is found mainly in Palestinian manuscripts (also מוּעֵט). However in the Dead Sea Scrolls the Babylonian form מוּעֵט occurs. A clear difference between Palestine and Babylonia is indicated by such forms as הוֹדֵיָהּ ("thanks") (Babylonian) as opposed to הוֹדֵיָהּ (Palestinian). Similarly גוּלָן (Babylonian) and גוּלָן (Palestinian).

It seems that even in Palestine there were dialectical differences and though the indications are few concerning the vocabulary, the evidence of the Talmud on certain points may be accepted. רַפְפוֹת ("shutters") were called by one *tanna* רַעְדוֹת. Besides this, it is difficult at the moment to find other differences, such as, the interchange א – ע (*ayin*) – אֵלֶּפ (*alep*) attributed to the academy of Eliezer b. Jacob. The מַח of the Bar Kokhba letters is slightly different from that which has been transmitted. שֵׁל is not connected to the word following it. The *nomen rectum*, however, has the definite article (as opposed to the situation in the printed editions of מַח texts). Instead of אֵת, there is (as in Punic) ת, e.g., אֵת הַכְּבָלִים = תַּכְּבָּלִים ("the chains") (perhaps this form will be discovered in good manuscripts). The word אֵי ("then") found in these letters is not present in normal מַח.

There seem to be traces of an ה dialect which was not identical with בַּח. If this is not assumed, then it is difficult to explain the exclusive use of וּ instead of זֹאת (*zō + t*) since there is no way of explaining the loss of the ת (*taw*). It is preferable to assume that וּ came to predominate in מַח from another ה dialect in which this archaic form existed. (וּ already occurs in the Bible.) The forms הִיָּה ("she was") and קָנָה ("she bought") are even more to the point (see above weak verb). The regular biblical form הִיָּתָה and קָנָתָה developed from קָנָתָה + *ā* which was taken over from the other verbal classes. It is impossible to understand how a retrogression would occur in מַח; these forms are thus better explained as intrusions from a dialect in which the process קָנָתָה < קָנָת did not take place. (Survivals of the archaic form occur in the Bible and in the Siloam inscription.)

MISHNAIC HEBREW OF THE PALESTINIAN AMORAIM

This dialect has been studied on the basis of Vat. Ms. Ebr. 30 of Bereshit Rabbah. On the one hand it has been found to have a considerable mixture of בַּח and on the other to contain independent forms that are found in מַח but not in tannaitic sources. (They occur in very few cases and must have been corruptions). Thus, זֹאת occurs as an adjective, e.g., הַלְבְּנָה הַזֹּאת ("this moon"). The far deictic pronouns הַלְּזֶה ("that") and הַלְּזֶה ("that one") disappeared and were replaced by אוֹתוֹ ("him"), etc. These changes are to be regarded as internal ה developments, though the last was perhaps influenced by א. The ending ת is sometimes found in the third person feminine perfect in verb classes other than ל"ה (א influence). In the imperfect first person singular, the first person plural form is sometimes employed (as in Galilean Aramaic). This usage is found only once in the Mishnah. As in בַּח the construct infinitive without ל occurs, e.g., בּוֹא + מֵן (בּוֹא). As opposed to מַח the following differences should be noted: (1) internal ה development; (2) admixture of בַּח; (3) increased א influence.

MISHNAIC HEBREW OF THE BABYLONIAN AMORAIM

This dialect has not yet been studied (see below). The word אֲשֵׁפֶת ("trash") as against אֲשֵׁפֶת (in the tannaitic Hebrew) may point to independent development.

[Eduard Yecheskel Kutscher]

Kutcher's description is still valid in its main features. However, since the 1970s research in מַח has made considerable progress. While the description above is based on the Mishnah according to Ms. Kaufmann, in recent years other MSS of the Mishnah have been described, such as Paris, Parma 497, Deinard, Maimonides' Autograph, and Genizah fragments. Haneman's description of the verb system in Ms. Parma 138 can serve as a model for the "classic" מַח verb system. Other tannaitic as well as amoraic sources were investigated, such as the Tosefta, Sifra, Palestinian and Babylonian Talmuds. Traditions contained in old sources and oral traditions were described, such as Yemen, Aleppo, Tunisia, Italy, early and late Ashkenazi traditions, the Karaite tradition, and others. The Babylonian Punctuation tradition is presented in detail in Yeivin's monumental work. Syntax is described according to Ms. Kaufmann of the Mishnah and there is a full description of the tense system.

In these descriptions many features were recognized to be typical of מַח. The following are a few examples: It was proved that a doubling of ר was common in certain traditions of מַח. The relative pronoun שׁ is vocalized with *sheva* in some circumstances, such as שֶׁהוּא (these two phenomena are very rare in the Masoretic Vocalization of the Bible). Some conjugations of the verb (or modifications of old conjugations) were established: *nuf'al* as a variant of *nif'al* in verbs I-y and I-n, e.g. נִשְׁל (instead of the common נִשַׁל); *pCE* > *el* and *nitpCE* > *al* (instead of *pa'el* and *nitpa'al*), e.g., מִזְמֵן; *nitpa'al* in participle can take the form נִתְפַּעֵל (instead of the common

מתפעל). For the meaning of the conjugations, it was claimed that the *hif'il* can serve for the same meaning as the *qal* (as it is claimed of the *pi'el*).

In the field of vocabulary, Moreshet's lexicon lists and discusses all the verbs in MH not found in the Bible. According to his findings, there are about 500 new verbs in MH, of which two-thirds can be attributed to Aramaic influence. In this field mention should also be made of the Historical Dictionary Project of the Academy of the Hebrew Language, which produced a full concordance of tannaitic and amoraic literature according to reliable MSS (of other periods). This concordance gives an accurate list of the vocabulary of MH and serves as a fundamental tool of research in this field.

The richness and variety revealed in so many reliable sources enabled Bar-Asher to sort and arrange MH sources according to two criteria (he deals exclusively with the Mishnah, but in fact his observations are valid for all tannaitic and amoraic sources): (1) Palestinian vs. Babylonian branches, e.g., while in Palestinian sources (such as Ms. Kaufmann of the Mishnah) we find the verb **נתאלמנה**, in Babylonian sources (such as quotations from the Mishnah in the Babylonian Talmud) the verb is **נתארמלה**. Although the last verb was probably borrowed from A, it is an ancient borrowing, as it occurs already in the Hebrew of the Dead Sea Scrolls. (2) Western vs. Eastern traditions, which differ mainly in the realization of written texts; e.g. while in the Western traditions a doubling of **ר** is almost nonexistent, it is quite common in the Eastern traditions of MH. Many of these differences seem to go back to ancient times and may have existed when MH was still a living tongue.

INTRODUCTION

After Hebrew as a spoken language was replaced by Aramaic, it became a written language whose history is from and for books alone. The principal sources for the writers were Biblical Hebrew and Mishnaic Hebrew and these met the needs of all forms of written expression: religious and secular poetry, letters, books on science, and philosophy.

Hebrew became a second language, existing side by side with the vernacular languages spoken by Jews wherever they happened to be. Such a duality was quite normal in the Middle Ages; spoken Arabic existed alongside classical Arabic, other languages were spoken where Latin was the literary medium. Although it became a written language, Hebrew did not remain petrified, limited to passages quoted in their original form and meaning, but lived "an active life" in written texts. New topics, whether in original writings or in translations, necessitated an expansion of the language, especially in the coining of new terms for concepts and subjects not found in the Bible, the Mishnah, or the Midrashim, e.g., philosophy, medicine, etc. Responsa which had to deal with everyday subjects, not found in earlier halakhic responsa, also led to linguistic innovation, especially in vocabulary. Since it was a written language, many new forms were invented for literary purposes: rhetorical language and stylistic embellishment, especially in poetry. It is difficult to evaluate the changes on linguistic grounds alone, particularly in poetry; the language was, as it were, raw material for stylistic variation.

In a living language which serves as a natural means of spoken communication, an innovation is any new form which carries a specific meaning (morphological-semantic innovation). Innovation of this kind occurred in the written language in books of science, especially as translations of new concepts which had previously been unknown to the Hebraic world and had no equivalents in Hebrew, e.g., *agron* (more correctly *egron*; "a dictionary"), *mahut* ("essence"). New meanings were added to existing words; this is a common feature of poetry as a means to enrich the language. In *piyyut*, though not only there, use was made of the system of "alternate forms," whereby existing words could change their form – according to regular patterns of analogical formation, and also irregularly – without any change in meaning. These are morphological-stylistic changes, but not semantic. This technique is generally foreign to the spoken language where every form has its own specific meaning.

The linguistic changes of the written language, unlike those of the spoken tongue, do not take place of their own accord, through the operation of analogy, leveling, attraction, etc. They owe their existence to the needs of artistic and stylistic embellishment and are premeditated rather than spontaneous (as will be explained below). They include changes

in frequency – rare words become common – sometimes because of the different frequency in the language of influence, sometimes because of a deliberate choice of words felt to beautify the language. Some innovations rose from a linguistic understanding of the processes of analogical word formation (שִׁקְיָה) available in the language of their execution; others arose from the contact between written Hebrew and the spoken vernacular, or from the influence of a source language upon its Hebrew translation. A description of written Hebrew should include the different periods, places, and styles in which it was written. Each had its own attitude to the original sources; some were sparing in innovation, others rich in additions; some preserved words as they found them, others changed both form and meaning (whether intentionally or not). The different languages with which Hebrew came in contact must also be discussed: the Aramaic of the Midrashim and the Talmud which at the beginning of the period wielded its influence as a spoken vernacular and at the end of the period as a written language which stayed alive as the vehicle for study of the Babylonian Talmud (and to some extent of the Zohar); Arabic, from the period of the *ge'onim*; Middle High German which had considerable influence on the language of the Jews of Germany; there are even signs of French influence (e.g., in the language of Rashi) and Italian (a little in *Megillat Ahima'az*, 1504, and rather more in the language of *Immanuel of Rome). There is a strong connection between the form which written Hebrew took and the nature of the culture and society which supported it. The language of poetry in Spain flourished against the background of the Golden Age of Spanish culture, in imitation of the craft of Arabic poetry. The Midrashic folk language in Germany, unaffected by the rigors of syntax and grammatical rules, is well explained by the humble character of this Jewish community which was influenced by the liturgy and the *halakhah* of Erez Israel, took hardly any interest in science and grammar, and lacked any social or cultural environment advanced enough to provide a model for literary creation.

The Hebrew language will be described mainly, but not solely, by reference to the language of prominent figures in the world of literature or Jewish intellectual life. An account will also be given of the link between the ideas of the grammarians and the writing of good Hebrew. Nothing will be said of the pronunciations of Hebrew (for phonological developments, see *Pronunciations of Hebrew).

THE LANGUAGE OF PIYYUT

The first revival of Hebrew after its extinction as a spoken vernacular was in the *piyyut* in Erez Israel, where there was a considerable return to written Hebrew, not only as a language from which to quote but as a linguistic activity aimed at increasing the vocabulary with newly derived nouns and verbs. The *piyyutim* were religious poems used as prayers in public worship. Some scholars have placed the beginning of liturgical poetry as early as the third or fourth century (J. Schirmann); others have put forward later dates. The generally accepted

opinion is that they date from the fifth–sixth century, in Erez Israel, and were written against a background of Midrashim and spoken Aramaic. The *piyyutim* are a blend of Biblical Hebrew, eminently suitable for ceremonial religious poetry of a national character, and Mishnaic Hebrew, without which it would have been impossible to give them the homiletic, midrashic content which is their main characteristic. Zunz seems to have been the first to name the *piyyutim* “Midrashim in the guise of poetry,” and it is customary nowadays to emphasize that they are versified homilies (e.g., Mirsky). The linguistic blend is apparent not only in the choice of vocabulary but also in the grammar. The extensive revival of verbs in *binyan pu'al*, the co-occurrence of short and long tense forms, the use of the absolute infinitive and to a limited extent of the conversive *waw* are typical of Biblical Hebrew; the use of *binyan nitpa'al*, and complex infinitive forms like מְלַקְטֵל, etc., derive from Mishnaic Hebrew.

The unique feature of the language of the *piyyutim*, however is not the blend of Biblical and Mishnaic Hebrew but its particular variety of linguistic innovation. Though the verse of the earliest known *paytanim*, *Yose b. Yose and *Yannai, was not overcharged with difficult words in unusual declensions, the language of all the *paytanim* was customarily referred to as *'az qozez* after the *piyyut* read on Purim (a *qerobah* to *Parshat Zakhor* by Eleazar *Kallir):

קְצוּצֵי לְקַצֵּץ	אֵץ קוֹצֵץ בֶּן קוֹצֵץ
רְצוּצֵי לְרַצֵּץ	בְּדָבוֹר מְפּוֹצֵץ
פְּלֵץ וְנִתְלַצֵּץ	לֵץ בְּבוֹא לְלוֹצֵץ
כְּנֵץ עַל צַפּוֹר לְנֵצֵץ	כְּעֵץ מְחַצְצִים לְחַצֵּץ

The evil man, son of an evil man, ran
to cut down my persecuted ones;
With slander my broken ones to destroy;
The evil one when he came to do evil
was destroyed and the evil was done to him,
When he advised to shoot the shooters
like a hawk upon a bird to prey.

i.e., Haman, son of Hamdata, ran to cut down the Jews, to destroy them with slander. When the evil man came to do his evil deed he himself was destroyed and the evil was done to him; when he gave counsel that Israel be shot with arrows.

Many typical features of the *piyyutim* are indeed to be found in this poem: allusive phrases (קוֹצֵץ בֶּן קוֹצֵץ, also in the Midrash, מְחַצְצִים), innovations in verb forms (פְּלֵץ) and forms like כְּעֵץ which has both עֵץ for עָץ and כֵּץ before an inflected verb. The poem demands explication, not only linguistically but as a riddle, with its reminiscences of the Bible and the Midrashim, its brevity, and its wealth of allusive phrases. *Saadia Gaon, whose language has much in common with the writings of the liturgical poets, was aware that the language of some of the *piyyutim* was faulty (see his introduction to the *Agron* (more correctly *Egron*) and his note to his *siddur*, p. 225). The main critic was Abraham *Ibn Ezra who described the language of Kallir as “a breached city, with no walls” (commentary to Eccles. 5:1) and said of the liturgical poets in general that

“they do not know how to speak correctly, they strive to use hard words, and say תחון instead of תחנה” (in his book *Safah Berurah*). There were also many other harsh critics.

The following were the characteristic features of liturgical poetry:

(a) The method of creating verb forms; what has been called “one rule for all conjugations, defective and reduplicative.” This was the most highly criticized feature (Zulai, *The Liturgical School of Poetry of Saadia Gaon*, p. 7, bibl.). Examples are עש for עשה (conjugating a ל"ה verb as though it were ו"ע), קע for קעע (פ"ע for פ"ו) and so on. However, this mixture is only found in the perfect. Forms like יעושו (the imperfect of עושו if it were an ו"ע verb) and יסוע do not occur. Even in the perfect most of the forms can be explained simply as deletion of the first (קע from קעע) or last (עש from עשה) letter; only a few isolated forms show a real conversion to a different conjugation, usually to ו"ע, in other forms of the perfect, e.g. הוזהר, הוזהרו. A more plausible approach, therefore, is to describe this method of conjugating verbs (which was not explained by the liturgical poets themselves) in the terms used by Saadia Gaon in the second chapter of his *Sefer Zahot*, as deletion of the initial or final letter of a particular form, and not necessarily of the root consonants, by analogy with certain biblical forms: קע after יסע עש, עש after יעש and so on. The deletion of the *nun* is thus not conditioned by *šewa naḥ*, nor is the deletion of the *he* by the shortened imperfect form. Forms such as מעש, תחי, תאו can similarly be explained as deletion, by analogy with מעל-מעלה in the Bible. With the recognition of the tri-consonantal basis of the Hebrew root (by *Ḥayyuj) such forms were strongly criticized by grammarians and poets in Spain, and this technique, much used by Saadia Gaon, almost disappeared from secular poetry after the period of the *payṭanim*. (N.B. such forms as בט, פץ, etc. are not evidence that the weak roots were considered bi-consonantal. Menahem and Dunash, who were unaware of the tri-consonantal nature of such conjugations, established the root שב for verb forms like שוב, ישב and נשב, yet did not mix the conjugations in their writings, and derived the forms in accordance with biblical use. They never substituted קמית for קמת for example).

(b) The liturgical poets created many new words by conjugating roots in all the *binyanim*; for them the *binyan* was part of the automatic inflectional system, like tense and person. The later poets of Spain saw the *binyan* as non-automatic, not subject to unrestricted analogical extension, confined to forms found in biblical Hebrew and mishnaic Hebrew. Not so the writers of the *piyyuṭim*. They derived many words from nouns: סמדר (from סמדר), זלעה (from זלעה), הבטין (from בטן), and even from adverbs and particles: טרמני from טרם and בלעד from בלעד. They also incorporated derivational affixes and suffixes as root letters: להתשיר from תשויר by analogy with mishnaic להתרים from תרוקח. This abundance of morphological variation is the hallmark of liturgical poetry, and has been vilified as bizarre by its critics. The grammarians and some of the poets in Spain rejected the alternate forms because they

“changed the holy writ” (Dunash ben Labrat’s reply to Saadia Gaon, 95), stating “we shall read every word in the form in which we found it” (*ibid.*). Abraham Ibn Ezra declares: “a man must use a word in the form in which it is found” (*Moznayim*, 33). (A similar statement was made by Moses Ibn Ezra in *Širat Yisrael*, 148). Both Abraham and Moses Ibn Ezra criticized the use of given verbs in *binyanim* in which they did not occur in the Bible. Dunash denounced a change in noun forms but allowed the use of different *binyanim*. The early critics rejected these changes because they wanted to preserve biblical Hebrew; later critics deprecated poets who adopted different forms and made innovations which did not contribute to the sense of the poem.

Criticism of the language of *piyyuṭ* is intrinsically criticism of its style. Abraham Ibn Ezra mentions four flaws – two concerning the language and the other two content and poetic devices: the *piyyuṭ* is (1) influenced by a foreign tongue, i.e., the Aramaic of the Talmud; full of (2) grammatical errors; (3) riddles and fables obscure in meaning; and (4) homilies. In comparison to the prayers, the *piyyuṭ* is obscure in language and style and is unfit to be used in liturgy (Comm. Eccles. 5:1). Basically, however, the language of the *piyyuṭ* is difficult because of its many allusions: עמוסים (“the encumbered”) standing for “the Children of Israel,” איתן (“the strong”) for “Abraham,” etc. Many of the forms, drawn from the Midrashim, were more difficult for the Jews of Spain than those of Erez Israel who knew the Midrashim well. Graetz sharply criticized the *piyyuṭ*, while Samuel David Luzzatto explicitly defended Ha-Kallir: “not because of ignorance and duress did he write it so, but to embellish the style,” (introd. to *Mahzor Roma*, 1861), “Eleazar Kallir was not tongue-tied but for his wisdom and of his own will did he write it” (Letter to S.J. Rapaport, 1884). Zunz described the language of the *piyyuṭ* with great understanding and he knew that it was written for the taste of that generation (*Ha-Derašot be-Yisrael*, pp. 184–5). In his opinion the plenitude of vocabulary serves as an ornament of style, and many forms are simply “nonce words,” not meant to be established as part of the language (see bibl.).

The liturgical poets left nothing in writing which would inform us of their view of language and style, but it is clear that they regarded an active, prolific use of derivational inflections as one of the glories of the language. The wealth of forms is similar to the technique of listing synonyms (the liturgical poets liked to fill a line with a long list of synonyms or near-synonyms), the use of word play, and the use of a recurrent rhyme word. The invention of new forms which do not carry new meanings creates both a richness of sound and a degree of synonymy which are among the rhetorical techniques of liturgical poetry. For Bialik also, criticism of the literary value of the *piyyuṭim* is inseparable from criticism of their language: “the period of Ha Kallir and his disciples was a time of infatuation with liturgical poetry, which became more and more sentimental” (*Širatenu ha-Ze’ira*). He condemned the “makers of acrostics” and the “tasteless stammerers” whose language was “like the gravel (אבני הצץ) of *aḏ qoqez*.”

(c) The letter *kap* (כ- standing for כָּאֲשֶׁר as well as כ- for כָּמוֹ) can be prefixed to an inflected verb: גַּר צָדִק נִצְחָתוֹ כְּנִחְלָק לוֹ לַיְלָה “you made the righteous proselyte prevail at midnight” (Yannai in “*Wa-Yehi ba-Ḥazi ha-Laylah*”). So also כְּהִלְכֵי, כְּדַבְּרֵת, כְּהִלְכֵי. This is a characteristic feature of liturgical poetry in Erez Israel. Dunash regarded the prefixing of כ to verbs in the perfect tense as a rule of analogy from biblical practice (הִתְלַכּוּא, Josh. 10:24 – replies to Saadiah Gaon, 114). In his poem against *Menahem ibn Saruq he uses the form כְּשִׁקַּט. Although Ibn Janaḥ permitted the use of *kap* before a perfect tense for reasons of scansion (to provide an iamb (Harikma 45–46)) it was not used in secular poetry in Spain, undoubtedly due to the influence of the grammarians. Saadiah Gaon used *kap* before perfect tenses, but in *Sefer Zāḥot*, written late in life, he denounced its usage. Examples of *kap* before perfect tenses are also to be found in the writings of Hai Gaon. However, in those communities which drew their inspiration from the Midrashim, the halakhah and the liturgical poetry of Erez Israel, this linguistic feature continues to occur, and not only in acrostics. In *Megillat Aḥimāʿaz* (Italy, 1054) we find כְּשִׁמְעוּ, כְּבָאוּ, and in the German elegies and poems written about the horrors of the Crusades we find כְּהִלְךְ and כְּפִחְזוּ.

From the Spanish period until the Enlightenment, the liturgical poets were charged with ignorance of grammar. It would be going too far to say that they had no understanding of language; their view of word creation is not in line with accepted grammar. A realization of the motives which led to such abundance of morphological-stylistic innovation can bring us closer to understanding the liturgical poet as a deliberate, if inartistic, manipulator of language. In recent years new light has been thrown on the language of the *piyyuṭim* as a linguistic and not merely a stylistic phenomenon. Study of Palestinian Aramaic and the language of Hebrew Midrashim written in Erez Israel has revealed that the language of the *piyyuṭim* is based on “Palestinian idiom” (Zulai). Words thought to be arbitrary innovations invented by the liturgical poets have been shown to be rooted in the language of the Midrashim and the Targum. Yallon has pointed out words which passed from the Midrashim to the *piyyuṭim* (גָּהָר meaning reproof, פָּנָה meaning look, יָאֵשׁ meaning weak, לִבְבֵי meaning shout, בָּרוּר meaning strong and existing, and others). Expressions from the Hebrew spoken in Erez Israel survived in the *piyyuṭim*: קִפְיִדַת רוּחַ – severity – and יְרִיקַת תְּפִלוֹת – prayer (noted by Zulai), or מוֹדַע for תְּעוּדָה document, and מִסְפֵּק – danger (Shalom Spiegel). S. Lieberman has also pointed out the affinity to midrashic language (see bibl.). The language of Erez Israel can elucidate difficult passages in liturgical poetry, and makes it clear how the creation of the poets was natural and not artificial. A comprehensive description of the language of the *piyyuṭim* against the background of the languages of Palestine and the attitudes to grammar out of which it took shape would contribute greatly to a clearer understanding of this first important manifestation of written Hebrew.

SAADIAH GAON

It was Saadiah Gaon who brought about the great revival of Hebrew writing in Babylon. Actually, even before his time the use of Hebrew in writing had not been set aside completely. In Erez Israel there had been liturgical poetry, Midrashim and collections of legal decisions, the best known, *Sefer ha-Maʿasim* (“The Book of Court Cases” or “Judgments”), was collected at the beginning of the geonic period.

After the period of Saadiah Gaon the Palestinian *geonim* continued to write a good Hebrew, and Ibn Janaḥ affirms that “the men of Tiberias excelled all others in the purity of their Hebrew.” In the talmudic academy of Damascus, which took over from that of Erez Israel, *halakhah* and metrical, rhymed prose were written in Hebrew (in the 11th century). The same kind of thing occurred in Babylon. In the Talmud short extracts from the *amoraim*, consisting of a presentation of the problem and a brief discussion, are written in Hebrew; detailed discussion in Aramaic comes later. At the end of the eighth century Pirkoi ben Baboi wrote chapters of *halakhah* in good Hebrew. The collections of halakhic decisions, *Halakhot Pesukot* of Yehudai Gaon and *Halakhot Gedolot* of Simeon Kayyara both contain sections in Hebrew. Needless to say they derive from Palestinian literature, but they do bear witness to the fact that even in Babylon, Hebrew had not given way completely to Aramaic, and was used for special purposes, e.g., for halakhic decisions. Several Aramaic books on *halakhah* were translated, or translated and edited in Hebrew, notably *Halakhot Re’u to Halakhot Pesukot* and the book *We-Hizhir* to the responsa of Aḥai of Shabḥa. Conventional opinion (Poznansky, Epstein, Assaf, and Ginzberg) holds that the translations were done in Erez Israel, or at the very least in Greece and Italy, since Hebrew translation could only have been carried out where Babylonian Aramaic was unknown. Nevertheless, according to S. Abramson it is quite possible that they were written in Babylon when Aramaic had given way to Arabic. Therefore the *Halakhot Pesukot*, for instance, was translated into Arabic too. Linguistic features regarded as typically Palestinian – אָדָם for לוֹכַל, אָדָם as the infinitive of אָכַל – cannot therefore be taken as evidence of the place of composition; the translators in Babylon could well have considered language of Erez Israel a fitting model for good Hebrew. If they were written in Babylon, it could not have been earlier than the time of Saadiah Gaon.

Saadiah Gaon introduced the writing of liturgical poetry in Hebrew into Babylon. He was followed by *Hai Gaon, whose language is generally simple, but very similar in its techniques of word creation, patterns, and usage to Saadiah’s language. Saadiah Gaon brought a consciousness of the need for beauty to the writing of Hebrew. In the introduction to his dictionary, the *Agron*, he writes of Hebrew as a woman who had been slighted when the Children of Israel preferred the imperfect foreign tongues of exile to her own beauty of expression. The *Agron* was designed to fashion Hebrew into a proper instrument for the writing of poetry. It is commonly held that the language of Saadiah Gaon is a link in the chain connect-

ing the language of the *piyyutim* and the language of Spanish Jewish poetry; this view is expressed primarily in “The Liturgical School of Poets of Saadiah Gaon” by Menahem Zulai. The language of Saadiah Gaon is far removed from the biblical purism of Spanish Jewish poetry, as we shall see. However, though it is true that it shares features with the language of the *piyyutim*, and continues this tradition, it also foreshadows in several ways the approach to language of the Spanish poets. Saadiah Gaon wrote *piyyutim* in Hebrew as well as polemical literature *Essa Meshali*, *Sefer ha-Galuy* and *halakhah* (*Sefer ha-Mo’adim*). He wrote an introduction to his *Agron*, his grammar of Hebrew (*Sefer Zahot*), philosophy (*Emunot ve-De’ot*) and responsa in Arabic. It was he who initiated this duality in Jewish writing in the Middle Ages: Hebrew for poetry, and Arabic for prose, even for those who honored Hebrew, the mistress, more than Arabic, the serving maid (expression of Al-Ḥarizi in his book *Tahkemoni* and Solomon ibn Gabirol in *Ha-’Anaq*).

It was Saadiah Gaon who introduced the concept of “pure” language – *zahot ha-lašon* – to Hebrew writings and grammar (on the basis of Isa. 32:4), thereby creating a Hebrew cognate of the Arabic *faṣāḥa* which is also etymologically related to the Arabic term *taṣḥīḥ*. “Pure” language for Saadiah Gaon is a linguistic ideal, beautiful, clear, and correct, with all forms derived according to proper rules of analogical formation, free from errors of irregular word formation. Analogy (הִיקָשׁ) is permitted to operate according to biblical patterns which, in his opinion, were “fertile” but not according to infertile patterns. This view of purity of language matches the primary concept of *faṣāḥa*. Later, “purity” will be able to express various linguistic and stylistic qualitative features that affect poetic ornamentation and rhetorical figures (such as plays upon words and synonyms). According to Saadiah “purity” of language is not just the passive use of received vocabulary; it welcomes innovation, since it is linguistic activity that shows knowledge of the language and makes it beautiful. Thus Saadiah Gaon used Hebrew like the liturgical poets who preceded him. He created new verbs by using existing roots in all the *binyanim*, each with its special meaning, e.g., מְקַוֶּה – giving hope, שֵׁשׁ הַנְּפִישׁ gave rest (נָפַשׁ) (חָדַל) and so on. He formed verbs from nouns: הִתְהַוֶּה (from תְּהוֹם), הִמְעִין (from מַעוֹן).

In deverbal derivation Saadiah used the various nominal patterns which he regarded as nouns of action (infinitives), though not other noun-forms: לַעֲט, טְפִיפָה, דְּרָשׁוֹן, שְׂטָמָה (hatred) these are the commonest types – and also מְדַבֵּק (for חֲמוּמָה), “quarrel” (דְּבִיקָה), מְחַמְרָת (“restriction” for חֲמוּמָה). Like the liturgical poets he changed the form of extant words without changing the meaning, as he himself stated explicitly (with respect to word expansion and deletion in the second section of *Sefer Zahot*, and with respect to the variations in the form of nouns derived from verbs, see replies of Dunash, 122): *wa al-ma’na wāḥid* “the meaning is one,” i.e., the different forms are “equivalent in meaning,” differing only in “articulation.”

(a) He used expanded forms of words in accordance with techniques which he explained in his grammatical writ-

ings (he referred to expansion as *tafkim*): יִסְדֵּךְ for יִסְדֵּךְ (from יָסַד), לְדוּגֵג for לְדוּגֵג (from דָּוַג), תְּלַתְלֵךְ for תְּלַתְלֵךְ (from תָּלַת), סַתְסַתְךָ for סַתְסַתְךָ (from סָתַת), אִימִימָה for אִימִימָה (“horror”). Lengthened forms of the imperative and the imperfect like those of the infinitives are used without any implications of modality: לְנִשְׂאָה, לְעֹלָה, לְיִצְיָאָה, לְיִבְיָאָה.

(b) He omitted letters in various word forms, on the model of contractions found in the Bible: כָּעַ, כָּעַ, כָּעַ – shortened perfects; לְהַעֲלֵךְ – shortened infinitive; מְעַלְלֵךְ for מְעַלְלֵךְ – shortened present participle; מְעַשֵׁךְ – מְעַשֵׁךְ, חֹזֵךְ – חֹזֵךְ, תְּחִי, תְּחִי – shortened verbal nouns; and of course many shortened imperfects – תְּהַגֵּךְ (תְּהַגֵּךְ), תְּהַגֵּךְ – since this form does not carry any jussive meanings and can be used to form further shortened forms without any effect at all on the shade of meaning.

(c) He used alternative forms of words by analogy with doublets found in the Bible: עָרִיסָךְ for עָרִיסָךְ (“dough” like גְּלִיל – גְּלִילָה); כְּפֹרֵךְ – כְּפֹרֵךְ, כְּפֹרֵךְ – כְּפֹרֵךְ (like יְבוּשָׁה – יְבוּשָׁה); חֲרָבֵךְ (from חָרַב, like חָרַבֵּךְ from חָרַב) and so on. The explanations given earlier for the word creation of the liturgical poets are made explicit in the writings of Saadiah Gaon. All these derived forms, he says, come easily to the language; they are mere changes in form which do not necessitate any special shade of meaning. In Saadiah Gaon’s opinion, the principal source for Hebrew writing is the Bible, though he also made no small use of mishnaic Hebrew. Choice was dictated by the needs of style. He did not think of biblical Hebrew and mishnaic Hebrew as separate entities; the latter simply completed the documentation of the words in the former. Like the Arab grammarians of his time, he lacked any historical sense of earlier and later periods in the development of the language. He thought that all the words in the Bible were fit for use, including the rarest and oddest; further words could only be created by the operation of analogy on this vocabulary. He continued the tradition of the liturgical poets in his use of allusive phrases: בְּנֵי אֱלֹהֵיךְ (“children of eternity”) for the Children of Israel and פְּרִיזָה for the Temple and many others. Liturgical poetry was a source of literary inspiration for Saadiah Gaon in many ways: specific usages, nonce-words, allusive phrases, rhyme and alphabetical arrangement, and such words and expressions as צָרַח, פָּצַח, נָשַׁם, גִּיא (“valley,” i.e., land), יְחִיד (“unique,” i.e., Isaac), גְּבִינָה (“peak,” i.e., Mt. Sinai). Liturgical poetry was a source of style and thematic material, but not of linguistic innovation *per se*; he would not accept any new forms which did not satisfy his own linguistic principles. Such words, he thought, could be invented by anyone who knew the language and had the inclination. The main features he shares with the liturgical poets is his constant use of derivation without change of meaning. In the following respects he foreshadows the language of Jewish poetry in Spain

(1) There was a close relation between his linguistic inventiveness and his views on language; like the poets of Spain he remained faithful to the rules of grammar (though since his conception of the language was different, the results are also different).

(2) It was he who initiated the criticism of the language of the *piyyutim* (in the Arabic introduction of the *Agron*, and *Siddur* p. 225).

(3) Though he continued to use the techniques of the liturgical poets, he did so with reservations. He derived nouns according to the patterns of verbal nouns only, and placed restrictions of the freedom to create new words by analogy. (In Spain also, *vide infra*, innovations were more frequent with verbs than with nouns). Therefore like the Spanish poets he made considerable use of participles, active and passive, as adjectives (פּוֹתֵל – “crooked,” כְּחוּד – “hidden”).

(4) He used short and long tense forms freely, without any distinctive modal significance, and this lack of specific meaning facilitated morphological innovation by analogy. The Spanish poets did the same (*vide infra*).

(5) The rules of analogy are binding as far as the derivational inflections are concerned, but a word may have many different shades of meanings. Saadiah Gaon did not always use a word in the sense in which he translated it in his translation of the Bible. He translated תְּבִילָה as “punishment” (in Ar. *Dāhiya*) and then uses תְּבִילִית – by analogy with חֲרָסִית – חָרָס (Siddur Saadyah Gaon p. 198) – in the sense of “abomination.” He translates אֲרִשֶׁת שִׁפְתַיִם in Psalms 21:3, as “permission” (Ar. *isti’dhāna*) and explains this interpretation by reference to Ezra 3:7; in his poetry he uses אֲרִשֶׁת and רוּשָׁה as synonyms, with the meaning “say.” The technique of allusive phrases also depends on the view of language that a word may have many meanings, all available for use.

(6) Saadiah Gaon had his own opinions as to which were the proper patterns for analogical word formation, and the frequency of a word had no relevance. A typically mishnaic word which occurs only once in the Bible is considered biblical. The Spanish poets took the same stand.

A conventional explanation of the language of liturgical poetry holds that it was not difficult for its audience, who were learned in the Midrashim. Saadiah Gaon certainly thought the *piyyuṭim* difficult to understand, and regretted that most people had a scanty knowledge of the language. He thought that people liked *piyyuṭim* even though they did not understand them (Siddur Saadyah Gaon p. 156). Prayers and entreaties (בְּקִשׁוֹת), by which a man might draw near to his Creator, were written by Saadiah Gaon in language devoid of allusions and morphological innovations, lest the language mar the prayers and therefore were praised by Abraham Ibn Ezra (commentary to Eccles. 5.1.). True innovations are scarce in the language of Saadiah Gaon, and occur not in his poetry but when he needs to coin technical terms; for these, like the Spanish writers (*infra*) he uses the method of loan-translation. He borrows both the concept and the way of expressing it: אגרון (lit., “hoard”) for dictionary, a loan-translation of the Arabic *ḡamhara*, (a verbal noun). There are other synonyms for dictionary in Arabic from the roots *ḡml*, *ḡm* and *iḥatawā*, all meaning “hoard” or “collect” יסוד, from Ar. *ʾaṣl* (root).

Arabic Influence

The influence of Arabic is more strongly felt in his views on language than in his actual grammatical innovations. His grammatical theory is strongly influenced by the opinions

of Arab grammarians on analogy, e.g., in his abundant use of the קִטְל pattern (as most fertile *fiʿl*, *faʿl*, and *fuʿl* in Arabic) in not differentiating between what would now be called the infinitive (קִטְלוּ) and the verbal noun (קִטְלוּת). There are very few Arabicisms in his language, even fewer than in the poetry of Spain (*infra*): צִרְחַת בָּהּ – the root צִרַח is common in liturgical poetry, but the meaning “declare” and the use of the preposition ב are from Arabic عَץ נִגְדַעַת *al-Hiwwi* 4) where for reasons of rhyme the word עֵץ (“tree”) is construed as feminine, as in Arabic. In his translation into Arabic he preferred words which were alike in sound to the Hebrew, and sometimes did the same in his own writing. In the introduction to the *Agron* he uses the expression הוֹדְרָת for “woman,” from the expression יוֹשֶׁבֶת פְּנִימָה בְּחֻדְרִים. This is close to נָה which means “wife” in the writings of Saadiah Gaon and is etymologically similar to the Arabic *al-Mukdara* (girl kept indoors).

SPANISH HEBREW POETRY

Spanish Jewry followed the spiritual center that was in Babylonia as far as the *halakhah* was concerned; however in literary writing an important innovation took place there in comparison to both Erez Israel and Babylonia. The duality – Hebrew for poetry and Arabic for prose – which started with Saadiah Gaon was fulfilled to a large extent in the literary activity of the Jews of Spain. Arabic replaced Aramaic as the vehicle for non-poetic expression (mainly *halakhah*) and became the language for prose writing (grammar, medicine, philosophy, exegesis, etc.) although there were still scientific books written in Hebrew (see below). Hebrew was used for poetry although some secular poetry was written in Arabic and Aramaic.

The Hebrew of poetry in Spain underwent a fundamental change when secular poetry became a separate and respectable literary genre. The beginnings of secular poetry are to be found in the polemic writings of Saadiah Gaon (which are the forerunners of poems of personal quarrels and denigration) and secular poetry became an accepted art – important and widespread in Spain – starting with the wine and war poems of Samuel ha-Nagid (d. 1055).

The earliest liturgical poets in Spain (especially Isaac ibn Ghayyat, Ibn Abitur, and Ibn Khalfon) drew their linguistic and stylistic inspiration from the *piyyuṭim*; they wrote mainly sacred poetry, in the same style and language as other liturgical poets, uninfluenced by the Arabs as the Arabs had no religious poetry. But secular poetry, a personal art (unlike religious poetry which was designed for public worship), was the product of Arab culture, and took shape in the image of Arabic poetry with which it competed by imitation. Liturgical poetry could not provide suitable vehicles for the writing of secular poetry. Linguistic change actually crystallized in secular poetry, under the influence of Arabic; iambic meter was taken over, and there is a close tie between the meter and the formation of words and verbal conjugations. In religious poetry it was used only sparingly; *Keter Malkut* by Solomon ibn Gabriol, for example, is written in one of the meters of li-

turgical poetry, with a fixed number of syllables per line. The move towards biblical purism, as understood by the poets of the Middle Ages, began in secular poetry.

The choice of Hebrew for poetry and Arabic for prose is closely interlinked with the move towards a biblical Hebrew. The writing of secular poetry in Hebrew was supported by the continued writing of religious poetry in Hebrew (which there was no cause to write in Arabic). The linguistic duality had its counterparts in the surrounding culture: old Spanish for speech and Latin for writing in Christian Spain, Andalusian Arabic for speech and the Classical Arabic of the Koran for poetry in Muslim Spain. The Jewish poet would rather make a careful, diligent, accurate study of the language of the Bible than learn how to write the language of the Koran. He had to choose between two languages which both required considerable study. (Prose was written in Middle Arabic, which did not need special study.) Perhaps, however, the fact that it suited his background is of little account compared with the national and religious feeling that biblical Hebrew had a special status, was a “superior language,” a “very choice tongue” (Solomon ibn Gabirol in *Sefer ha’Anaq*) and “a wondrous language” the best of all the languages, and of course richer and more beautiful than Arabic (Al-Ḥarizi in the first chapter of *Taḥkemoni*). See also the speech of the companion in Judah Halevi’s *Sefer ha-Kuzari*, Part 2, 68.

Biblical Hebrew was extolled as a “pure” language by no means inferior and indeed superior to the “pure Arabic” which was used for poetry. It was eminently suitable for the writing of verse comparable with Arabic verse, since it had similar virtues: (a) The similes, metaphors, and other figures of speech in the Bible were well suited to poetic style. In the last chapters of his book *Širat Yisra’el*, Moses Ibn Ezra quotes examples from the Bible for every one of the rhetorical figures used in Arabic poetry. (b) The tradition of a fixed vocalization could serve as a basis for the iambic measures introduced from Arabic poetry. (c) The study of the grammar of biblical Hebrew was highly developed in the Middle Ages; there were few references to features of mishnaic Hebrew and the Hebrew of the period in grammar books. Arabic poetic language was also subjected to perpetual scrutiny by Arab scholars. (d) Biblical commentary added to the vocabulary a wealth of meanings and shades of meaning which were essential to a richness for poetic expression.

The introduction of a wide range of subjects – passion and wine, war, dispute, lampoon and jest, elegy, panegyric and self-aggrandizement, love, friendship and marriage – was accompanied by the use of iambic meters. Instead of every line containing a fixed number of syllables, there was a regular alternation of full vowels and *šewa na’*, i.e., reduced vowels. Dunash ben Labrat is usually considered the first to introduce iambic meters into Hebrew poetry. He used “well-scanned newly invented distinguished metrically constrained poetic forms” (Replies of Dunash to Menahem 4, 19). And this view is confirmed by the accusations leveled against Dunash by the disciples of Menahem, that he abused the forms of the lan-

guage: “our holy tongue destroyed and left it null and void, because he had employed a foreign measure” (Replies of the disciples of Menahem 7, 44.) Menahem’s disciples themselves phrased their replies in iambic measures, to show that their condemnation did not stem from poetic incompetence. The iamb was soon accepted by all poets as the proper measure for secular poetry. In the beginning it was difficult to adjust to the new meter; Al-Ḥarizi said of the language of the period when the iamb was first introduced that “the writers of the time wrote bad measures.” It was the meter which usually determined the choice of words: *שׁ* or *אָשׁר*, *אָז* or *אֲזַי*, *אֲנִי* or *אֲנֹכִי*, depending on the needs of the rhythm. Sometimes it even led to a change in the basic form of the word (e.g., *קָרַב*, with a *šewa*, for *קָרַב*); Ibn Janah realized that the exigencies of meter could open the way to deviations from proper inflection (*Ha-Riqma*, 226–7). Many long and short tense forms were chosen to fit the meter (imperfect forms ending in *נן*, e.g., *וְיָבִינָהוּ* for *וְיָבִינָהוּ*, were very useful) and rare words became common because they could provide iambs. *לָמַעַן* (from Neh. 6:13) or *בְּיַעַן* (which occurs only once in the Bible, in the combination *יַעַן בְּיַעַן*) were regularly used in place of *יַעַן*. The letter *he* with a *šewa* at the beginning of a word for emphasis (*הִנְּי*, “indeed”; *הִנְּלִי*, “indeed to me”) fitted the meter and was grammatically acceptable (Ibn Janah, *Ha-Riqma*, 68: “*he* to establish or verify a fact”).

“Pure” language is, above all, grammatically accurate, and Spanish Hebrew poetry, especially secular poetry, is characterized by the poet’s strict adherence to the rules of grammar (an approach which, as has been pointed out above, begins with Saadiah Gaon). In his *Sefer ha-Riqma* Ibn Janah notes linguistic usages of the poets and affirms that a poet should not be blamed for linguistic deviations necessitated by the requirements of poetic forms (pp. 226–7 and p. 275); it even happened that poems were corrected by their readers according to the rules of grammar (*Ha-Riqma*, p. 275). In his book *Širat Yisra’el*, Moses Ibn Ezra teaches the art of writing poetry. Matters of grammar, which “add salt to the food,” are explained first, before any discussion of decorative figures, and the poet is told which grammar books are worthy of study before he is referred to any books on prosody (p. 100). Poets who “did not follow the grammarians” are condemned (p. 65) see also Al-Ḥarizi in *Taḥkemoni* ch. 18). The ideal form of poetic language is given full expression in *Širat Yisra’el* from which the above are quotations. Essentially it is a matter of adherence to all the rules of the grammar of biblical Hebrew, with no innovations in form due to analogy, since “the language must be imitated, but without creating new words” (147). Verbs must not be used except in the *binyanim* in which they occur in the Bible (148). The given form of a word must not be changed. Care must be taken not to turn masculine into feminine or singular into plural, or vice versa. However, according to his system it is permissible to create new forms in the infinitive, *קָטַל* (149), and it follows from the general trend of his remarks (though he does not say so explicitly) that a verb could be inflected in all the forms of the given *binyan*: short

and long tense forms, and *hip'il* on the model of יְהִינִן, which was convenient for iambic meter. The ban on analogical word formation is a reaction against the copious use of such forms by the liturgical poets. (A similar opinion to Moses Ibn Ezra's can be seen in Abraham Ibn Ezra's *Zahut*, 26, with reference to the ban on analogy for nouns, by contrast with verbs and in the replies of Dunash to Saadiah Gaon, no. 95). However, there was not a single poet who abstained completely from morphological innovation, and even Moses Ibn Ezra allowed himself a few new forms, as he himself admitted (p. 156–7). In his opinion, his language was tainted with error because of human weakness, and lack of skill in his early poetry.

Moses Ibn Ezra's deviation into analogy are few: תְּבוּנוֹ (the Bible has the form תְּבוּנוֹת), עֲלוּמוֹתִי (for עֲלוּמֵי), מְגִדְנִי (for מְגִדְנוֹתֵי), מַעֲצָב (for מַעֲצָבָה or עֲצָב in the Bible), and אָהָב, גַּחַל, singular forms derived from אֶהְבִּים, גַּחַלִּי – though incorrectly since the correct singular forms occurring in the Bible are אֶהְבֶּה and גַּחַלְתָּ. Moses Ibn Ezra's purity – *zahot* – of biblical language and abstention from morphological innovation are maintained to a fairly similar extent by Judah Halevi and Abraham Ibn Ezra. However in their work there are also exceptions, giving every secular poem a flavor of liturgical language. A further feature the secular lyrics share with the *piyyuṭim* is the use of allusive phrases: יְחִידָה (unique) for soul, צִיר (messenger) for Moses, יְקוּתֵי־אֵל for Moses, and so on. Considerable use of word derivation is made by Samuel ha-Nagid, who wrote when the language of Spanish poetry was just beginning to take shape (גִּוּעַ אֶקְדָּחָה, אֶקְדָּחָה חֲרִינָה, “hope”), and innovations in the *binyanim*. Indeed in his own time he was censured for his use of analogical word formation, especially in the creation of nouns (*Širat Yisrael*, 67). Solomon ibn Gabirol also has many new forms not found in the Bible (David Yellin counted 1,500), and though most are found in his sacred works, there are some in his secular poetry: חֶפְשׁוֹן, תַּחֲנֵן, בְּהִיקָה, etc. The most serious offense in the eyes of Moses Ibn Ezra was the creation of verbs and adjectives from nouns; no wonder he criticized Solomon ibn Gabirol for such forms as מִישְׁפָּה, מִשְׁהֶמָּה and פְּיִנְיָה (*Širat Yisrael* 151).

Most violations of the ban on analogy are to be found in the *binyanim*; it is more difficult to avoid using verbs in active and passive conjugations than to refrain from inventing new noun forms. The use of passive conjugations – *pu'al* and *hop'al* – is particularly common in the language of poetry, partly under the influence of Arabic. Various forms of verbal nouns were fashioned – בְּהִיקָה, גִּוּעַ, חֶפְצוֹן, – and many participles, active and passive, since this was the only way of creating adjectives (none of the adjectival patterns were productive). Singular forms were derived from plurals to a degree exceeding the limits prescribed by Moses Ibn Ezra (Al-Harizi has סִנּוּרִים from סִנּוּר, and Ibn Ezra has פְּלִילִים from פְּלִיל used in the sense of “judge”). Even more frequent are plurals for singular: אֶהְלָמוֹת, לְשִׁמִּים, גְּרָדִים and רְפָשִׁים (plural forms are much used in rhyming). Nevertheless, fundamentally and in comparison to liturgical poetry and to poetry of Saadiah Gaon on the one hand and to Hebrew prose literature on the other,

secular poetry should be regarded as faithful to the given forms of biblical vocabulary. Innovations of language are of course far commoner in religious poetry. Certain of the techniques found in the *piyyuṭim*, anathema to those believers in “pure” language who hearkened to the grammarians, do occur in religious poetry: ָ plus perfect tense (in Ibn Khalafon and quite frequently in Solomon ibn *Gabirol) and the use of “shortened perfects” such as עָטָה (for עָטָה) and כָּטָה (for כָּטָה) in Solomon ibn Gabirol.

Moses Ibn Ezra believed that analogical innovation marred the purity of biblical Hebrew, but sparing use of mishnaic Hebrew did no harm: “If we avail ourselves sometimes of the language of the Mishnah, this is acceptable, since its words are pure Hebrew” (p. 59). The language of secular poetry, unlike sacred poetry is free of forms typical of the *piyyuṭim*. Not only literary motives and content-words from the Mishnah are used, תְּנַאֲרֵי מְדַרְשׁ, אֶסוּר, etc., – but also form-words such as פָּרַט לְ-, צָרִיךְ, פָּרַט לְ-, פָּאן. The word כָּאֵלוֹ is popular, and the structure מ + לְקָטָל (*yaday kebedim mi-lesapper* – Judah Halevi) is quite common. *Binyan nitpa'al* appears sporadically (Abraham Ibn Ezra *nitrape'ita*), and not because of acrostic composition; Moses Ibn Ezra writes שְׁתַּבַּח in place of the biblical יְהַלֵּל. Samuel Ha-Nagid, a great talmudic scholar, especially introduced Mishnaic-Hebrew usage. At the end of the period, from the 13th century onwards, the adherence to biblical Hebrew weakened; Meshullam di Farra, for example, has more usages from the Midrash and even from the languages of his time, סְפִינָה from the kabbalists, בְּהִמֵּי, etc. It should be recalled that it was not frequency and provenance of a word which determined its value. Not merely were rare words acceptable in poetry, but a word that occurred only once or twice in the Bible and regularly in the Mishnah was nevertheless regarded as biblical; it was used as commonly as a biblical word, and not sparingly like the mishnaic vocabulary. The alternation between שָׁ and אָשַׁר is thus between two biblical words, and words of the קָטִילָה pattern (very common in the poetry of Samuel ha-Nagid for example), though regarded by present-day linguistic research as typically mishnaic, are treated as biblical on the strength of אֶכְלִיָּה, חֲנִינָה, and other biblical examples.

Despite the restraints on analogy, there were ways of diversifying the vocabulary; any *binyan* could be used in the long forms (לְכַפְּרָה, רִיבּוֹן) and in the short forms (תָּשׁוּ, יְתַעַל) in exact conformity with the conventions for adding or subtracting letters found in the Bible. In consequence, and by contrast with the language of liturgical poetry, forms like עָטָה for עָטָה and מַחֲנֶה for מַחֲנֶה are scarcely found in Spanish poetry. The free use of lengthened and contracted imperfect forms, which are useful for rhyming and scansion, derives from the writer's belief that such changes of form, unlike changes of *binyan*, had no effect upon the meaning. Medieval grammarians did not interpret the lengthened imperfect as cohortative, or the shortened imperfect as jussive (see Ibn Janah, *Ha-Riqma* p. 96). Hence the license to use such forms freely accorded with the grammatical theory of the period. And there was similar freedom to meet the stylistic demands of poetry by using the *waw*

conversive, pausal forms, possessive suffixes on the model of *הִפְרִיד*, *הִקְיִן*, and the imperfect *hip'il* forms like *הִפְרִיד*, *הִקְיִן*, and the imperfect *hip'il* forms like *הִפְרִיד*, *הִקְיִן* (even Moses Ibn Ezra, though not to excess). The restrictions on analogy reduced the abundance of forms, but the language of secular poetry is rich in means of expression, since the poets gave the biblical vocabulary a wealth of meanings. The formal, grammatical features of a biblical word were binding, but not the semantic. (Once the tri-consonantal form of the root was fully established, changes in the interpretation of a word – as revealed by the dictionaries – exceed changes in the formal analysis of root and declension – as revealed in the grammar books.) Abraham Ibn Ezra and Moses Ibn Ezra, for example, insisted on the correct use of a word, in accordance with its meaning in context, and were aware that a word might have different meanings, related and quite unrelated.

The poets were well aware that a particular word had been interpreted in different ways by the lexicographers, the commentators, and the translators, and this enabled them to choose whichever meanings they required for their poetry. They used duality of meaning to rhyme a word with itself, (צמוד שלם). *Al-Ḥarizi does this in *Ha-ʿAnaq* and Moses Ibn Ezra in his poem *Ha-ʿAnaq*, also known as *Taršish*. The latter rhymes *אֵיד* (“misfortune”) with *אָד* (“mist”), and *צִיר* (“pain”) with *צִיר* (“messenger”) and *צִיר* (“door”). Judah Halevi writes *דְּלִקְוֹנִי אֶהְרִיד וְאַחֲרָיִךְ דְּלִקְוֹתִי* (“my love inflamed me and I pursued thee”), using *דִּלֵּק* in two different senses. *אֶגְמוֹן* (Isa. 9:30) is used by Al-Ḥarizi with the meaning “fortress” (as interpreted by *Ibn Janah) and by Samuel ha-Nagid with the meaning “branch” (as translated by Saadiah Gaon). Many words may be interpreted with the aid of the medieval dictionaries, and these interpretations are supported by the biblical commentators and the translators. Moses Ibn Ezra combines *שָׁוָה* (“placed”) with *שָׁוָה* (“straightened”) and *שָׁוָה* (“lied-deceived”), in accordance with Ibn Janah’s interpretation of the word *yešawwe* in Hosea 10:1 as “will lie.” For Solomon ibn Gabirol *qol ha-tor* is “the voice of salvation,” as in the translation of Targum Jonathan. Moses Ibn Ezra, Samuel ha-Nagid, Al-Ḥarizi and others used the word *אֶשְׁיִשָּׂה* with the meaning “chalice,” an interpretation given to this biblical word by a few commentators. Moreover, the poets could add meanings at their own discretion, as their poetic talents dictated. Since the range of meanings was quite open, the influence of Arabic on poetic language, though on the whole restricted, was felt mainly in the meanings of existing words and not in the creation of new ones.

Influence of Arabic on the Language of Secular Poetry

Whereas the Hebrew of scientific works was deeply influenced by Arabic, the language of poetry was not greatly affected by Arabic other than in the meanings of words and the frequency of rare words. Some words took over the functions of their Arabic cognates but, in addition to the Arabic usage, a source could usually be found for this new meaning in the Bible, sanction was given by the grammarians, and further incentive for the use was provided by the demands of scansion: ל

is used to mean “because,” as in Arabic, and as found by Ibn Janah in the Bible (*Ha-Riqma* 55:13), *וְאַם* to mean “nevertheless,” ostensibly like the Arabic *wa’in* but actually found in the Bible (Num. 36:4; Jer. 5:4).

The process of loan-translation, which so enriched the technical vocabulary of Hebrew in the Middle Ages was restricted in poetic language to literary symbols (in literature these are similar to technical terms): *עֹפֵר* (“doe”), *צִבִּי* (“deer”) for “beloved” – *ḡaḏal* in Arabic; *זְמַן* (“time”), *yamim* (“days”) for “hostile fate” – *dahr*, *zamān* in Arabic; *gan* (“garden”) for “paradise,” Arabic *ḡanna*; *perud* for “a parting of lovers” – Arabic *tafriqa*, contrasting with *perida*, which expressed the separation of death; *מוֹסָר* *musar* (“right conduct”) for “erudition” – Arabic *adāb* (as in Saadiah Gaon’s translation to Prov. 1:2); the expression *aḥi musar* derives from Arabic, and means “a learned man.” *Midbar* (“desert”) for “graveyard,” and a few other expressions are reminiscences of similar Hebrew figures of speech to be found in the Bible or the Midrashim. Sometimes a word acquires a new meaning from the range of meanings carried by its Arabic cognate; even in these cases there is usually a biblical source, with Arabic influencing the preference for a particular usage and turning rare expressions into common ones: *שָׁב* meaning “became” (Ar. *āda* – *וְשָׂבָה הָאֱהָבָה אֵיבָה* (“and love turned to hate”; Al-Ḥarizi). The source of this usage is Isaiah 29:17. *עַד* for “even” (Ar. *hattā*) *וְאָמַי הִבְגְּדוּ בִּי עַדִּי אָבִי וְאָמַי* “they betrayed me, even my father and my mother” – Moses Ibn Ezra, with authority for the usage in Judg. 4:16; *מַעֲנֶה* for “meaning” (Ar. *ma’nā* as in the Targum version of Prov. 1:1); *עַם* for “people” (Ar. *qawm*) – as in Judges 9:36 – *אָהַב* for “want” (Ar. *ahabba*).

Words acquire the meaning of their phonetic (and sometimes etymological) counterparts, even when there is basically no identity of meaning. *אָבָל*, in addition to its usual meaning of “but,” often signifies “and even more,” as Ar. *bal* and authority can be found in Genesis 17:19. The usual synonym for *אָבָל*, i.e., *אֵינִי* also acquired the same meaning: *כּוֹכְבָיו צִצִּים וְאוֹלָם בִּסְתֵי פְרוּחוֹ* “his stars were flowers, moreover, in winter they bloomed” (Solomon ibn Gabirol). *פָּלָךְ* is regularly used to mean “the wheel of heaven” (Ar. *falak*), *גֵּיל* is “generation” (Ar. *g’il*), *יַעַד* means “promise” (Ar. *wa’da*), *שָׁם* means “afterward” (Ar. *thumma*). *שׁוֹעֵר* for Shem Tov *Falaquera means “poet”; Ar. *šā’ir*, not the usual medieval interpretations for *שׁוֹעֵר* in the Bible. *יָרַח בְּהַלּוֹ* (Al-Ḥarizi) is “a new moon” – Arabic *hilāl*. *Iggeret haqura* (Samuel ha-Nagid) is a “despised letter” – Arabic *haqira*. Whereas *דָּפוּק* means “hasten” in the poetry of Khalfon, in the language of Samuel ha-Nagid and Judah Halevi the root *דַּפַּק* means “flow” (Ar. *dafaqa*) and is used as in Arabic figures of speech to describe the flow of tears. *הַשָּׂק* is frequently used as love due to its similarity to Arabic *‘aṣāqa*; *נַעֲמָה* is “an ostrich” (Arab. *na’ama*), *מְמוֹלָח* is “beautiful” (Ar. *malih*), and *רָכַב אֶנְיוֹת* (“traveled on a ship”) is also coined after an Arabic expression and *הֵנָּה* for “here” (Ar. *hunā*).

In translations the prepositions which follow a verb are much influenced by the source language, especially if it is a spoken tongue (see below on the language of the translations).

In the “pure” Hebrew of secular poetry, however, the prescriptions of the grammarians were preserved and the usage of the Bible was followed for most prepositions. Arabic influence explains in Hebrew *נָסַע בִּי* for “moved me” (Judah Halevi), *נָסַע בְּ-* for “transported,” *עָבַר בְּ-* “transferred” (Moses Ibn Ezra); in Biblical Hebrew, however, one can find quite similar usages (*נָסַע בְּדָבָרַי*, *נָסַע בְּדָבָרַי*). Solomon ibn Gabirol wrote *וְאֵתְמַה מִשְׁלָמָה* for “surprised at,” apparently as in Arabic *taʿābaba min* and was criticized for it by Moses Ibn Ezra (*Širat Yisrael* 154). There are also characteristic features of poetic language which have no clear links with Arabic: *טור* for “a line of poetry,” *תַּבֵּל* for “the world below,” *פֶּגֶר* for “a body,” not a corpse. Features of medieval Hebrew which are common in the language of medieval translations are found only sparingly in poetry: nouns ending in *-ות* which were regularly masculine in prose, are treated on a few occasions as masculine in poetry: *דְּמוּת נִמְשָׁל* (Judah Halevi) *הָיָה פְתִיּוֹת* (Al-Ḥarizi) *לְבָבוֹת גְּדוּלוֹת* (Al-Ḥarizi) – this phenomenon is explained below in the section on the translations.

ORIGINAL PROSE WORKS AND TRANSLATIONS

Those poets who disparaged the writers of Arabic as “guarding the vineyards of others” themselves wrote scientific works in Arabic – on philosophy, *halakhah*, science, poetics, geography, etc. They include Saadiah Gaon, Ibn Gabirol, Judah Halevi, Moses Ibn Ezra and Al-Ḥarizi. Ḥayyuj, Ibn Janah and others even wrote studies of Hebrew grammar in Arabic.

Just as various factors combined to produce a secular poetry in Hebrew, and in biblical Hebrew at that, so the writing of prose and the kind of Hebrew used for translations and original works were interconnected. The Arabs wrote prose in Middle Arabic, with none of the ideal “purity” of the language of the Koran reserved for poetry. And the Jews knew how to write this kind of Arabic (by contrast with the language of the Koran, which required special study). For prose writings they had hardly any linguistic tools to hand, unlike the language of sacred verse which provided a beginning for the writing of secular verse. There was the mishnaic tradition of prose writings on *halakhah* but Arabic had taken over the function of talmudic Aramaic, and was judged appropriate for writings on *halakhah*, especially where everyday matters were concerned. Since there was no need to set up a form of Hebrew which should rival the unrhymed Arabic of scientific writings in beauty they could write either in Arabic or in a different Hebrew from that of poetry, with no obligation to observe the rules of “purity” described above. The proportion of mishnaic Hebrew and biblical Hebrew varies from writer to writer. Abraham Ibn Ezra and Abraham b. Ḥiyya (d. c. 1136) both wrote original Hebrew. The former – a grammarian, poet, and biblical commentator – tended to write a biblical Hebrew and preferred forms like *לֹא יָקָא* to *אֵין...אֵלָא* and so on; the latter used many talmudic expressions: *אֵין כִּי*, *אֵין...אֵלָא*, *לְהֵלֵן*, *סְפָקָא*, *כְּדָאי*. The language of prose is mixed, though the writers could write a more biblical Hebrew close to the style of the *maqāma*, when they chose to, and this applies not only to the poetry of the translators – Abraham Ibn

Ezra, Al-Ḥarizi, Ibn Ḥasdai but to passages of rhymed prose interspersed among the testamentary injunctions of Judah ibn *Tibbon to his son or in the letters of Abraham son of Maimonides etc. In his introduction to the translation of *Ḥobot ha-Leḇabot* (“Duties of the Hearts”) Judah ibn Tibbon explains that he used biblical or mishnaic Hebrew, “whichever seemed closer, and as occurred to me at the time of translation.” (It was, for example, convenient for him to translate *min ḥaythu* by the biblical word *בְּאִשֶּׁר* which is close to it, but the expression *lā illā* becomes mishnaic *לֹא אֵלָא*.) In its syntax the language of prose is close to mishnaic Hebrew – there are no conversions of tense, no long or short verb forms – but the repertoire of conjunctions is considerably mixed (*אֵין עַל פִּי שֶׁ-*, *אֵין עַל פִּי שֶׁ-*, *אֵין עַל פִּי שֶׁ-*, *אֵין עַל פִּי שֶׁ-*, etc.).

The language of the hundreds of translations carried out from the 11th to the 15th century, and the language of original works written in Hebrew in the style of the translations (e.g., the works of Albo, Crescas, and Levi b. Gershon) is sometimes called Tibbonian Hebrew, after the five generations of Ibn Tibbons who translated into Hebrew innumerable books written in Arabic by Jews and Arabs. Samuel ibn Tibbon called his father Judah “the father of translators,” though there had been earlier translations for almost a hundred years. The “translatorese” in original writing derives from the general influence of Arabic, from imitations of language patterns created by the translators, and from the strong attraction of Arabic literature which, though not translated literally, was summarized, with a flavor of the original remaining in the summary. Of course, in kabbalistic literature in original Hebrew there is no more Arabic than sentence patterns derived from the translators, and some terminology, but these traces of Arabic are clearly discernible, both in Kabbalah and in Maimonides’ *Mishneh Torah*.

Though there are nearly as many styles as there are writers or families of writers, it is possible to give a general description of the language of prose that came under Arabic influence. Since it contains many deviations from the forms described by the medieval Hebrew grammarians, Tibbonian Hebrew was sometimes used as a pejorative term for poor, inelegant Hebrew. But it was not usually the result of deliberate carelessness, or lack of respect for the grammarians. Judah ibn Tibbon in the introductions to his translations of *Ḥobot ha-Leḇabot* and *Sefer ha-Riqma*, and his son Samuel in his introduction to his translation of Maimonides’ *Moreh Nebukhim* (“Guide of the Perplexed”) explained the difficulties arising from the tendency of the translator to adhere closely to the source language text (and they both realized that the similarity of the two languages actually strengthened this tendency). Hebrew was inadequate, they thought, to express the full richness of Arabic, and they asked readers to correct mistakes of language.

From the “explanations of strange words” which Samuel ibn Tibbon appended to his translation of the *Guide of the Perplexed*, we learn that after he had completed the translation he changed several Arabic-influenced words to better,

more Hebrew equivalents: *kihun*, a borrowing from the Arabic *kihāna* (though with a Hebrew declension!) was replaced by **קסס**; the expression **על דעת** modeled on the Arabic *‘alā ra’yī*, even though it can be given biblical authority (Job 10:7), was replaced by **כפי דעתי**, since the greater frequency of the latter expression gives a more Hebrew flavor to the language. In his testamentary injunction to his son Samuel, Judah ibn Tibbon implored him to preserve “the purity (*zahut*) of the language,” and to beware of Arabisms.

As the language of Spanish poetry should be judged by its appropriateness to prosody and poetic style, so the language of prose should be judged by its suitability to translation and for the skill of the writer as a translator. The principal writers who concerned themselves with the problems of translations were Al-Ḥarizi (*Taḥkemoni* ch. 18, and his preface to his translation of Maimonides’ introduction to the Mishnah), Moses Ibn Ezra (*Širat Yisrael* p. 112), Judah and Samuel ibn Tibbon in the introductions quoted, and Abraham b. Ḥasdai in his introduction to his translation of Isaac Israeli’s *Sefer ha-Yesodot*. The last three explained that there were “places which were liable to bring the translator into error,” and the Ibn Tibbons listed the mistakes that were liable to be caused by too close an adherence to the source language text: confusion of masculine and feminine genders, prepositions, meanings of words, etc. They all described the mistakes as stemming from the “translator’s bother.” “Translatorese” is evident even in the *Maḥberot Iti’el* which Al-Ḥarizi translated from the *maqāmāt* of Al-Ḥariri. Despite their poetic style, with biblical interpolations, Arabic influence is more noticeable in them than in *Taḥkemoni*, which he wrote in original Hebrew. The latter has also more Arabic usages than his other poetry, since even though not actually a translation it is based on Arab sources.

For a full understanding of the language of prose, the degree of adherence to biblical and mishnaic Hebrew, the scope of Arab influence in all its aspects, and the particular Arabic patterns which affected the Hebrew, it is necessary to classify all the features of the language, distinguishing those which were deliberate innovations (mainly terminology) and those which were accidental, caused by too close an adherence to the source. There are some features which are hardly found outside translations, e.g., a singular verb preceding a plural subject (excluding the verb **היה**, which was quite commonly found in the singular before a plural). Samuel ibn Tibbon tried to avoid this Arab grammatical rule of concord, as he explains in the introduction to his translation of *Moreh Nebukhim*. Features of common occurrence include **-ל** to denote cause and **בש** in the sense of “become.” The Hebrew language of the beginning of the period, before it became a language of translation, can be judged as a separate entity, capable of influencing those who were faithful to it in their writings (e.g., Abraham Ibn Ezra and Abraham bar Ḥiyya), by contrast with the source language which had all the tools of expression for translation ready to hand. It is worth examining the language of those who did not know Arabic and wrote in the style of the translators, and the language of those who did know Arabic but who did

not draw much upon Arabic cultural sources for content, e.g., the kabbalists and writers on *halakhah*.

It is not surprising that Al-Ḥarizi, who wrote in the first chapter of *Taḥkemoni* that Hebrew “is narrow but may turn broad to us, short but will suffice for all of us,” strove to enrich it from its own sources, avoiding Arab loan-words. But Judah ibn Tibbon, who felt that “Hebrew is insufficient for all purposes of speech” (in the introduction to his translations of *Ḥobot ha-Lebabot*), since biblical and mishnaic Hebrew did not contain the wherewithal for handling new topics, took over many features of Arabic, a richer language in his eyes. However, though it is customary to describe the language of Al-Ḥarizi as simple, correct, elegant, and more biblical (Baneth, Mirsky), it is also full of all kinds of features showing Arabic influence, though not to excess. On the other hand, the Ibn Tibbons also used many specifically Hebrew expressions, out of opposition to Arabic, sometimes consistently and sometimes replacing expressions that showed Arabic influence.

Abraham Ibn Ezra criticized the language of the liturgical poets (in his commentary on Eccles. 5:1) but in the self-same critical passage he wrote that Kallir, as it were, “described the rose on fear,” **תאר את השושנה באימה** (as in Ar. *waṣafa bi*) and that he was “surprised from him” **תמה מנוני** (Ar. *tā’agab minhu*) and that he fled off the passage, **ברח מן הפסוק** (Ar. *haraba min*). None of these traces of Arabic are to be found in the poetry of Abraham Ibn Ezra.

Notwithstanding his decision to write a good Hebrew, Judah ibn Tibbon made a rule of preferring to impart the idea with precision rather than “use as good a style as he would prefer” (introduction to *Ḥovot ha-Levavot*). This method proved its worth; his translation of *Ḥobot ha-Lebabot* superseded that of Joseph Kimḥi, which was more grammatical but less accurate and his son’s translation of the *Guide of the Perplexed* replaced that of Al-Ḥarizi, which aimed at a greater beauty of language at the expense of accuracy.

The Components of Arabic-Influenced Hebrew

LEXICON. (a) With all the abundance of innovation and wealth of terminology that accompanied the new ideas, the number of words borrowed with their original form and usage is extremely small; most of the borrowings take the form of loan-translations. Most of the terms in philosophic works were translated into Hebrew (one of the Arabic loans is **משאאי** for “peripatetic,” though Al-Ḥarizi translates it **ההולכי**). The Arabs themselves translated almost all the Latin and Greek terms into Arabic. It was actually in the natural sciences and allied subjects that more words were borrowed. This is immediately apparent if we compare Moses ibn Tibbon’s translation of *Millot ha-Higgayon* (“Words of Logic”) where he translated all the technical terms, with his translation of Maimonides’ *Hanhagat ha-Beri’ut* (“Management of Health”) where foreign words like **אשרוב** (“syrup”), names of plants, and foods remain untranslated, as they do in other translations of books on medicine in the Middle Ages. The borrowed words are all in forms and patterns which can easily be adapted into He-

brew and thus absorbed in the language and inflected just like any other word: לַחֵן (“melody”), קָטֵר (“caliber”), קָטֵב (“pole”), מְרָכֵז (“center”), אֹרֶזְקָה (“horizon”), גֵּוֹמֵטְרִיָּה (“geometry”), תַּאֲרִיִּחַ (“history”), עֵלָה (“disease”), אֶקְלִים (“region”), חֵקֶן (“enema”), עֶצֶל (“muscle”). Some of them came into general use and became thoroughly Hebraized – תַּאֲרִיִּחַ, אֶפְקָה – while others were in limited use like עֶצֶל in the works of Nathan ha-Me’ati (“the Italian Tibbon”), or נֹעַ (“type”), which was rare, and used by Nahum ha-Ma’arabi in the translation of *Iggeret Teiman* in place of the more usual סוּג מִין.

Samuel ibn Tibbon regarded borrowings as the major class of “strange words” and preferred native Hebrew words, changing קָטֵב to קָטֵר, and giving to גֵּוֹם, in the sense of “body,” biblical authority – Isaiah 44:14 – though this is not the usual meaning attributed to this verse in the medieval dictionaries. Al-Ḥarizi who as we have seen wished to widen Hebrew from within, suggested נִקְדָּה and עֲמוּד instead of מְרָכֵז instead of קָטֵב, אֶלְכָסוֹן instead of קָטֵר, and חֲמֹר רָאשׁוֹן instead of הַיִּיָּל. However, in his explanation of foreign words he also includes קָטֵר and קָטֵב. He uses two terms for one thing and this suggests that he was unaware of the importance of preserving uniformity of terminology. Other translators also tried to find Hebrew alternatives for loan-words: Nahum ha-Ma’arabi used עֲמוּד in place of קָטֵב, whilst Abraham Ibn Ezra prefers סֶדֶן. Abraham b. Ḥiyya who composed original scientific works before the language of translation had become fixed, quoted Arabic words as such, e.g., “the center of the circle, which in Arabic is called *markaz*.” He uses the term תַּשְׁבְּרַת (“geometry,” “plane,” a loan-translation of Ar. *taksīr*) and prefers בְּרִיחַ קָטֵר, though occasionally he uses קָטֵב.

(b) Words are sometimes introduced that are similar in sound to their Arabic counterparts, and generally any similarity in meaning or etymological connection is either lacking or very slight. “Grammatical inflection” (in Ar. *taṣrīf*) is translated by Dunash צְרוּרִי, though נְטִיָּה would be more appropriate as a loan-translation (see (c) below).

Judah ibn Tibbon calls apical consonants אֲוִתִּיּוֹת הַדְּלִיקָה after al-Mudālaqa, which should etymologically be הַזְּלִיקָה. The waw consecutive is called וָו עוֹטְפָתָה, from the Arabic *ʿatafa*, *muḥāl* means “absurd,” like *muḥāl*, פְּרָק means “difference” (Ar. *farq*), גְּדָר means the mathematical “to the fourth power” (Ar. *ḡadr*), לָכֵן is used with the meaning “but” (Ar. *lākin*) and נֶצֶב is both “accusative case” and the vowel “a” (Ar. *naṣb*). Sometimes a biblical word which bears a phonetic resemblance to an Arabic word is used as a translation and the new meaning is given authority by biblical commentary, which was also influenced by the comparison with Arabic. הִידָּה is translated as “talk” (Ar. *ḥadīth*), the translation used by Saadiah Gaon for this word in Proverbs 6:16 and the explanation given by Ibn Janaḥ in his book of roots, under חוּר. The Arabic *ʿurūq* is sometimes translated עֲרֵקִים דּוֹפְקִים, i.e., arteries, and a biblical parallel is found in the word עֲרֵקִי (*oreqay*; Job 30:17), which most medieval commentators interpreted in accordance with the Arabic. It should be pointed out that this kind of innovation is very close to borrowing; the borrowed word, however,

is taken over with a change of form to a Hebrew declension, or is attached to an existing Hebrew word.

(c) The most prolific source of word creation was loan-translation. Among the new words created were אֵיכוֹת (Ar. *kayfiyya*), מַהוּוֹת (Ar. *mahiyya*), כְּמוּוֹת (Ar. *kamiyya*), and many other verbal nouns with suffix וֹת-, which was used to express abstractions. However, Arabic words were mainly translated by existing Hebrew words. Most of the deliberate innovations used by translators for the enrichment of the means of expression and for accuracy, are in the realm of terminology: בְּנִיּוֹן (“conjugation”; Ar. *mabniyya*), מִשְׁקָל (“declension”; Ar. *wazn*), שְׂמוֹשׁ הַלְשׁוֹן (“language usage”) and עֲשִׂית הַלְשׁוֹן (“language manipulation”; Ar. *isti’ māl*), גְּזוּר, also קֶצֶב, חֶצֶב, כָּרַת, all meaning “inflect” (Ar. *iṣṭaqqā*), מְלִים נְרָדְפוֹת (“synonyms”; *mutarādifāt*) מְלִים מְשִׁתְּפוֹת (“homonyms”; Ar. *muṣṭaraka*), מְקוּר (“infinitive”; Ar. *maṣḍar*), מְקָרָה (“Abstract noun”; Ar. *ḥadaṭ*), נְשׂוּא (“predicate” of a verbal sentence; Ar. *maḥmul*), הַגְּדָה (“predicate” of a nominal sentence; Ar. *ḥabar*), בְּחִינָה (“aspect”; Ar. *i’tibār*), מְפֻשֵׁט (“abstract”; Ar. *muḡarrad*), בְּכַח (“potential”) and מְפַעֵל (“actual”; Ar. *bi al-quwwa* and *bi al-fi’l*); מִצְפּוֹן (“conscience”; Ar. *ḍamir*), חֲבוּר (“a book”; Ar. *taḥlif*), הַתְּחֵלָה (“principle”; Ar. *mabda’*), הִכָּה (“duplicate”; Ar. *ḍaraba*). There are also loan-translations which did not provide any technical terminology: בְּשִׁלוּחַ (“absolutely”; Ar. *bi’iṭlāq*), חָבַר עַל (“agreed”; Ar. *uḡmīa ʿalā*), נֶאֱוָת לְ-, הִסְכִּים לְ-, נֶאֱוָת לְ- (“matched,” “fit”; Ar. *wāfaqa*) בְּקֶצֶת הַיָּמִים (“one day;” adv., Ar. *fi ba’ḍi al-ayyām*). Since every loan-translation that makes use of an existing word also involves extending the meaning of that word in accordance with the range of meanings of its Arabic counterpart, it is difficult to distinguish between loan-translation and semantic borrowing. Perhaps the fundamental difference between them is the degree of intention. When the motivation is the need to translate an existing Arabic technical term (it is mainly technical vocabulary that is at issue, though non-technical expressions also occur) we speak of loan-translation; when it is the unintended effect of adherence to the Arabic text that leads to certain lexical associations, we speak of semantic borrowing.

(d) The following are examples of extension of meaning by semantic borrowing: עֲנִיּוֹן (“meaning”; Ar. *ma’nā*), לְקַח (“begin”; Ar. *aḥada*), אֶגְרָת (“essay”; Ar. *risāla*), בְּאוּר (“proof,” “lecture”; Ar. *bayān*), גּוֹבֵר (“common”; Ar. *ḡālib*), רְמֹז (“advise”; Ar. *iṣṣāra*), דִּין (“religion”; Ar. *dīn*), קְמוּ (“approximately”; Ar. *naḥwa*), רוֹצֵה (“mean”; as in רוֹצֵה לומר (“mean to say; Ar. *yurīd*), בְּחֵק (“concerning”; Ar. *bi ḥaqq*), אֶצְלִי (“in my opinion”; Ar. *ʿindi*). Sometimes an extension of meaning derives wholly or mainly from a similarity in sound, with or without any etymological connection: דַּיַּף acquires the meaning “deny” from Arabic *zayyafa*; חָג (“pilgrimage”), things which are מְפֻכְקִים are “suitable” (Ar. *muwāfiq*).

(e) A feeling for the Arabic language governed the choice of particular Hebrew words, and affected the frequency of words whose use in Hebrew was restricted; this gives a distinctly Arabic flavor to the language. רָאָה (“see”) means “think,” a use found in mishnaic Hebrew, אָמַר (“say”) means “order,” חֵשֶׁק (“love”), חוּשׁ (“feeling”) and not רָגַשׁ (because of Ar.

ḥassa, חֶלְוָה (“difference”; Ar. *Iktīlāf*) and not שְׁנִי or הַבְּדִל (‘‘accident’’) more common than מִקְרָה or מְאֻרָע (Arab. *ḥadat*). What is a borrowing with one writer may be recognized as a legitimate Hebrew usage by another. Samuel ibn Tibbon, for example, quotes from the introduction to Maimonides’ *Sefer ha-Madda* the expression לִידַע שֵׁשׁ שָׁמ מְצוּי רְאוּשׁוֹן to know that there is a God – as clear proof of Arabic usage in the original Hebrew writings of Maimonides, and understandable therefore in a translated text (Introduction to his translation *Moreh Nebukhim* – this is a usage of type (b) as analyzed above). Yet since there are rare examples in mishnaic Hebrew of שָׁמ used to mean ‘‘in reality’’ and not as a locative, it may well be that Maimonides had found this Hebrew source in rabbinic literature for himself. Samuel Ibn Tibbon’s father-in-law, Jacob Anatoli, thought that Maimonides found a source for this non-locative use of שָׁמ in Ezekiel (in his book *Mal-mad ha-Talmidim* p. 113a) as illustrated by S. Abramson, which would make it an example of class (e). Expressions of the form תְּכִלִּית הַשְּׁלֵמוֹת (‘‘the peak of perfection’’) a literal translation of Arabic *Gāyat al-Kimāl* – were widely used, and a source was found for them in Psalms 139:22 – תְּכִלִּית שְׂנֵאָה. Typical words include זוּלַת (as a translation for *ḡayr* and *duna* in their various meanings) and בְּלֵתִי (to translate *ḡayr* and *‘adam*). Samuel ibn Tibbon acknowledged that his innovations led to new homonymy when he himself added new meanings to existing words (the fifth class of ‘‘strange words’’).

The following are the new kinds of homonymy created:

1. In addition to its usual meaning in the language, the word received a new technical sense: שֶׁבֶר is a term for the Hebrew vowel *ḥireq*; and, not particularly technical: *ḥida* means ‘‘talk’’ (Ar. *ḥadat*, see above) but also retained the meaning of the *ḥidoṭ* of the Queen of Sheba, and thus also signifies ‘‘allegory’’ in kabbalistic literature and Maimonides’ *Mishneh Torah*. Sometimes homonymy is transferred from Arabic to Hebrew; *bāb* in Arabic means ‘‘rule,’’ ‘‘chapter of a book,’’ and ‘‘explanation,’’ and all these meanings were taken over by the Hebrew שֶׁעַר. Arabic *ḥarf* means both ‘‘letter of the alphabet’’ and ‘‘particle,’’ and both meanings were transferred to the Hebrew אֹתֵת. אֹתֵת הַעֲתִיק translates *naqala* both in the meaning ‘‘translate’’ and also ‘‘hand down (by tradition),’’ though ‘‘tradition’’ is just as commonly rendered by קְבֻלָּה. 2. A Hebrew homonym is paralleled by different Arabic words, in different *binyanim* or patterns: מְאָמַר is both ‘‘essay’’ (Ar. *maqāla*) and ‘‘category’’ (Ar. *maqūla*); הַשְׂיָג means both ‘‘add,’’ a loan-translation of Arabic *alḥaqa* (fourth *binyan*), and ‘‘appeal,’’ like the Arabic verb *lāḥaqa ‘alā* (third *binyan*). 3. The Hebrew homonyms translate two different Arabic words: עוֹבֵר means ‘‘possible’’ – (Ar. *ḡā‘iz*) and ‘‘past’’ – (Ar. *māḏī*); לֹגִיכִי is ‘‘logical’’ – (Ar. *nāṭiq* – ‘‘believer’’ in the philosophy of *al-kalām*) and also the grammatical term ‘‘first person,’’ – (Ar. *mutakallim*). הַשְׂיָג means ‘‘understood’’ (Ar. *adraka*) and ‘‘added’’ (Ar. *alḥaqa*). הַעֲתִיקָה is ‘‘translation’’ (Ar. *naql*), one of the types of metaphor (Ar. *maḡāz*), and ‘‘transmigration of souls’’ (Ar. *tanāsuh*). 4. The homonymy derives from the falling together of a loan-translation and a phonetic equivalent; דְּגֻר is both ‘‘def-

inition,’’ loan-translation of *ḥadd*, and ‘‘to the fourth power’’ Arabic *ḡadr*. As regards the principles whereby the vocabulary could be expanded, there are equivalences between the language of scientific prose and the language of Spanish poetry, though the degree of expansion in prose is far greater, due to the needs of writing on new topics rich in new terms and concepts. The case is different with morphology and syntax, where derivations in general and those derived from Arabic in particular abound in prose yet are hardly found at all in poetry. Since the language of prose was not subject to the principles of *zāḥut* (‘‘purity’’) which mainly affect the formal aspects of grammar, and since its counterpart was an intermediate variety of Arabic, which had a different degree of adherence to the strict rules of classical Arabic, it even deviated from the rules of grammar established in the grammatical writings of the period. It was not an elegant language, and its foreign features were conspicuous, but its freedom to innovate helped to fashion it into a precise language of scholarship, capable of expressing abstract, scientific ideas.

The following are the salient features of the language of prose:

NOUN MORPHOLOGY. The use of the suffix morpheme י- (called in Ar. *nisba*) to turn a noun into an adjective meaning ‘‘possessing, related to, having the quality of’’ was productive, almost automatic: דְּבָרִי, שְׂמוּשִׁי, גִּשְׁמִי; Arabic gave new life to this suffix (found in the Bible), which most frequently occurred as in Arabic without the infixed *nun* after short words or words ending in a vowel: רוּחִי, תוֹרִי, צוּרִי, חוּשִׁי, גּוֹפִי (for גּוֹפְנִי, צוּרְנִי, etc.). This morpheme does not feature in the linguistic innovations of Saadiah Gaon and was rare in poetry, which used participles instead: מְדַבֵּר for דְּבָרִי (‘‘logical’’), or phrases like בְּעַל גִּשְׁמִי for גִּשְׁמִי and אֶחָי מוֹסְרִי for מוֹסְרִי etc. Moses Ibn Ezra also considered this kind of innovation contrary to analogy (unproductive) for the morphology of ‘‘pure’’ poetic language (*Širat Yisrael*, 151, apropos the derivation of פְּגִינָה from פְּגִינָה, which is ‘‘mere cleverness’’).

In varieties of Hebrew which were closer to mishnaic Hebrew, and more restrained in their enthusiasm for Arabic, this derivation was replaced by the typically mishnaic pattern: קִטְלָן e.g., in the writings of Abraham bar Ḥiyya – שֶׁקֶרָן for שֶׁקֶרִי (‘‘something containing lies’’ not ‘‘one who lies’’), מְעַשֵׂי עִמְלָן, ‘‘practical’’ (contrasted with שְׁכֵלִי ‘‘intellectual’’), דְּבָרִי דְּבָרָן for דְּבָרִי (‘‘logical’’). The morpheme *-ut* creates abstract nouns and can be combined with nouns: נְצַח נְצֻחוֹת ‘‘eternity,’’ רִיקוּת – רִיקוּת ‘‘vacuum,’’ רִגְלִיל – רִגְלִילוֹת ‘‘regularity,’’ גִּשְׁמִי – גִּשְׁמִיּוֹת ‘‘corporeality,’’ and with verbal nouns: הַתְּרַשְׁמוֹת, הַתְּרַשְׁמוֹת, הַתְּרַשְׁמוֹת. Sparing use had been made of this device by the liturgical poets (דְּבָרִיּוֹת, וְתִיקוֹת), apparently under the influence of the infinitive with the suffixed definite article in Aramaic (אֲתֵרִיּוֹתָא), but in the language of Saadiah Gaon it is not used at all and it is extremely rare in Spanish poetry. In prose it became indispensable, one of the preferred productive morphemes, even in the prose writings of the poets (Abraham Ibn Ezra uses דְּגֻשׁוֹת and דְּתִיקוֹת). In Arabic the suffixed morpheme

-*ut* was borrowed from Aramaic, and is quite limited in distribution; this is not an example of Arabic influence.

The use of the masculine gender for nouns formed with ו- is characteristic, and though Samuel ibn Tibbon found authority for this in the Bible (אָחוּז בְּשָׂרֵי פִלְצוֹת) “a shudder seized me” in the introduction to his translation of *The Guide for the Perplexed*, quoting Job 21:6) the abundance of these forms in the masculine clearly derives from Arabic: Nouns ending in ו- are masculine in Arabic, and a considerable number of the new words formed in Hebrew with this morpheme derive from Arabic infinitives which are also masculine: גְּשָׁמוֹת (Ar. *taḡsim*), נֶצְחוֹת (Ar. *taʿbīd*), הַשְׁתַּדְלוֹת (Ar. *iḡtīhād*), and many more. Use of the masculine gender also spread to those words, few in number, where the suffix corresponds with the feminine abstract noun suffix in Arabic: מְהוֹת, אֵיכוֹת כְּמוֹת, though these words were also used in the feminine. Words with the suffix -ית were also used in the masculine and Samuel ibn Tibbon found authority for this usage also in the Bible (וְאַחֲרֵי־כֵן יִשָּׁגָא Job 8:7). Sometimes words are used in the grammatical gender of their Arabic counterparts: אֶמֶת is masculine – אֶמֶת גְּמוּר (Arab. *ḥaqḥ*); דְּעֵת is also masculine דְּעֵת בְּרוּר (Arab. *ʿalm*). Words used in the feminine include טָבַע אֵי (Ar. *ḡazīra*), כַּח (Ar. *quwwa*), מְנַהֵג (Ar. *āda*), כְּרוּר (Ar. *kurra*), and כְּפוּר (Ar. *qiṣṣa*). They are of course also used in the masculine, in accordance with the tradition of the language, and the proportion of Arabic or Hebrew usages varies with the writer’s talent and grammatical knowledge. In addition to the masculine use of אֶמֶת the form אֶמֶתָּה is very common, due to Arabic *ḥaqīqah*. When a masculine plural is formed by adding -ot, attributive adjectives characteristically take the same ending: סוּדוֹת עֲצוּמוֹת, מְקוּמוֹת יְדוּעוֹת, גְּדוּלוֹת, מְקוּמוֹת יְדוּעוֹת, (שְׁמוֹת מְשַׁתְּפִים). This formal correspondence may have been helped by the rule in Arabic that inanimate plurals take adjectives in the feminine singular. When the translator was faced with *asrār ʿašima*, the adjective was drawn towards the feminine, though not feminine singular; since there was no precedent in Hebrew for a structure like “סוּדוֹת גְּדוּלָה” such a form was naturally rejected. Middle Arabic had also begun to challenge the rules of congruence in Classical Arabic, and tended toward greater uniformity. Since Arabic had only one form and syntactic usage for what are usually described nowadays as the infinitive (קְטוּל) and the verbal noun (קְטִילָה), both these forms are used interchangeably in the language of prose, e.g., הֶרְחַקְתָּ הַגְּשָׁמוֹת וְהָעִמִּיד הָאֲחֵדוֹת, “removal of corporeality and establishment of uniformity.” Arabic *Ġāyat al-Taḥaffuẓ* is translated both תְּקִלַּת הַשְׁמִירָה and תְּקִלַּת הַשְׁמוּר and this is the reason that the use of the infinitive with the definite article is common: הַהַעֲשׂוֹת, הַהַעֲשָׂל (Saadiah Gaon also makes no distinction between these forms. The inability of the infinitive to take the definite article begins with Samuel ha-Nagid, and in the language of poetry neither the absolute nor the construct infinitive is used as verbal nouns.) The abundant use of fused construct forms (i.e., without *šel*) can be attributed to the influence of Arabic construct forms, as can the use of the definite article before an adjective in the construct form:

הַחֲזוֹק הַלְבֵן, הַמְחִיב הַמְצִיאוֹת and especially before the comparative הַיּוֹתֵר הַשּׁוֹב. This is the Arabic feature of marking as definite any construct form which is not a noun, the so-called “unreal construct.” The tendency to use two construct forms with a single dependent noun – פּוֹשְׁעֵי וְרָשָׁעֵי יִשְׂרָאֵל (“the evil and wicked of Israel”) – may be due to the influence of Middle Arabic.

VERB. In the introduction to his translation of *Guide of the Perplexed*, Samuel ibn Tibbon acknowledges the tendency of a translator to be drawn towards the קָשֶׁר (his term for preposition) used with the verb in Arabic, e.g., *qibbel le-* instead of *qibbel min*. Arabic prepositional usages, infrequent in the language of poetry, are quite common in prose:

מְתַרְעֵם מִן (Ar. *taʿāḡaba min*), נִפְלְאָ מִן (Ar. *ḡadāba min*), חָקַר עַל (Ar. *fataša ʿan*); מְקִיף בִּי (Ar. *ʾahāta bi*), הַבְּטִיחַ בִּי (Ar. *waʿāda bi*); חָסַר אֵל (Ar. *iftaqara ilā*); and so are קָרוֹב מִן, גִּינָה מִן, לֹא יִתְכַּן מִן, הַתְּנַגֵּד עַל, etc.

Sometimes the preposition adds a specific meaning as in Arabic: הֶאֱמִין בִּי = אָמַר בִּי – “believe in” (Ar. *qāla bi*). Intransitive verbs of motion are made transitive by the “causative *bet*” like in Arabic; this usage is also found in poetry, but to a much greater extent in prose; – הִתְגַּלְגַּל בִּי (“rolled”). עָף בִּי (“set flying”), etc.

Judah and Samuel ibn Tibbon were aware of the influence of the Arabic *binyanim* on the Hebrew verb, but apparently did not consider this such a serious defect as the influence of the prepositions; in poetry too the amount of analogical formation and innovation in the verb was greater than in the noun and the particles. The main development was the increase in the use of the *hitpaʿel*, which translated three Arabic *binyanim*: *tafaʿala* (as הִתְנַחֵס, Ar. *tanāqasa*); *tafaʿla* (“transitive verb,” Ar. *mutaʿadd*, הִזְכֵּר “remember,” Ar. *tazakkara*, הִסְתַּפֵּק “be in doubt,” Ar. *tašakkaka*); *iftaʿala* (“homonyms,” Ar. *muštaraka*, מְתַתְּלִפִים “different,” Ar. *muḥtalifa*, הִסְתַּכֵּם “agree,” Ar. *ittafaqa*, מְתַאַחֵר “later, following,” e.g. הִגְאוּזִים הַמְתַּחְרִים, Ar. *mutaʿahhir*).

In Middle Arabic, these *binyanim* had largely supplanted the “internal passives,” hence: הִתְבַּאֵר (Ar. *tabayyana*) instead of בִּאָר (Ar. *buyyina*), הִתְיַלַּד “was created” (said of rainbow, water, etc., Ar. *tawallada*), etc.

The use of *hitpaʿel* as a passive in place of passives with internal vowel modification is not simply continuation of mishnaic practice, since the Ibn Tibbons also introduced many forms of “internal” passives. The increase in the use of passive conjugations, in prose and in poetry, is attributed to the influence of Arabic. The “internal” passives – *puʿal*, and *niḡʿal* – were used mostly in impersonal structures: יִחַיְב, יִזְכַּר, יִקְסֵף, יִרְצֵה, יִזְנֶן, יִזְנֶן, יִזְנֶן. New auxiliary verbs were created: שָׁב, חָזַר in the sense of “become” (Ar. *āda, raḡāʿa*), לֹא סָר, לֹא נָזוּ meaning “keep (doing something)” (Ar. *mā zāla*) and עָשָׂה, שָׁם, “make,” with an objective complement – עָשָׂה הַסְּפֵק בְּרוּר (“make doubt clear, clarify doubt”; Ar. *ḡāʿala*). Tenses converted by *waw* were almost no longer employed. The modal forms of the verb, jussive and cohortative, were scarcely used in medieval Hebrew prose. In poetry the long and short forms of the imperfect

were used simply as morphological variants, not expressing modal ways as they were understood by Hebrew grammarians to appear in the Bible, without any influence from verbal patterns found in Classical Arabic. The language of prose dispensed with these forms, since it had no need of a multiplicity of forms for embellishment. Middle Arabic, which had lost some verb forms, may also have contributed to the general picture and helped to eliminate long imperfections in ן since in North Africa and Spain it was the short forms which were used in the plural. A Past Continuous or a Past Habitual, like the Arabic *kāna yaf'al* occurs: *hava yabo* (a usage also found in Saadiah Gaon and in the *maqāmāt* of Al-Ḥarizi). The combination of כָּבַר and the imperfect is used to express possibility, by analogy with Arabic *qad*; in fact, כָּבַר as an equivalent for *qad* is increasingly used, both in the language and in grammatical description. Ibn Janah (*Sefer ha-Šorashim*, s.v. כָּבַר) explained that כָּבַר was like Arabic *qad*, and expressed “the existence of a thing.” By using כָּבַר as an equivalent of *qad* the following tenses were formed: pluperfect: $\text{הָיָה כָּבַר עָשָׂה}$; future perfect: $\text{יְהִי כָּבַר עָשָׂה}$. This pattern is found mainly in the language of translation, but also occurs elsewhere (e.g., in the writings of Crescas, 14th century). However, it had already begun to fade from the grammatical stock of medieval Hebrew a few generations after the end of the period of the translations. But the use of כָּבַר plus the perfect to signify time and for emphasis כָּבַר נִתְבְּאֵר , $\text{כָּבַר יָדַעַת$, כָּבַר יָדַעַת equivalent to the Arabic *qad*, was much more in line with the spirit of the language, and Arabic accounts merely for its widespread distribution. As in Arabic כָּבַר was placed before the verb, as in mishnaic Hebrew where this usage originates, and not after the verb, as occurred occasionally in mishnaic Hebrew and quite commonly in varieties of Hebrew influenced by languages where the equivalent of כָּבַר (*schon, déjà*) come after the verb. There are, however, examples of כָּבַר occurring after a verb, mainly when the verb is in a subordinate clause: $\text{כָּבַר מְטַעֲנוֹת הָהָר}$ (“... those statements of the companion which I have already heard”; beginning of the *Kuzari*).

SYNTAX. The use of the demonstrative without *he* (the definite article) before a noun with *he* is very common: $\text{אֵלֹהֵי הַדְּבָרִים}$, זֶה הָאִישׁ . The structure with the demonstrative before the noun and no *he* – אֵלֹהֵי הָאִישׁ , as in mishnaic Hebrew – is preferred to אֵלֹהֵי הָהוּא , the biblical form. Though there are a few examples in the Bible to serve as precedents (זֶה הַיּוֹם Ps. 105), and an equivalent structure in late Aramaic (הַדְּרִין עֲלֵמָא), Arabic was certainly the major factor: *hādha al-walad, dhalika al-walad*. This usage is not found at all in the writings of Saadiah Gaon and hardly in poetry, but occurs frequently in the original prose writings of Abraham b. Ḥiyya, Maimonides, and Al-Ḥarizi. However, there are many places where the Ibn Tibbons used forms like הָאִישׁ הָהוּא , $\text{הָהֵם הַדְּבָרִים הָהֵם}$ in their translations, even when this meant deviating from the word order that confronted them in the Arabic text: *dalika al-raḡul*. The use of relative clauses with no conjunction after an indefinite antecedent ($\text{אִישׁ שֶׁעִין בְּ-}$ for אִישׁ עִין בְּ-)

($\text{מְלֵאכָה שֶׁצְּרִיכָה נְסִיוֹן}$) is also the exact counterpart of an Arabic structure (*sifa*). This structure can also be given biblical authority ($\text{שְׂרִים זֶהב לָהֶם}$) but comes in prose much more than in poetry. Elegant translators added the definite article, in places where it did not occur in Arabic, in order to bring the structure closer to the form prevalent in mishnaic Hebrew and to a considerable extent also in biblical Hebrew (compare Aḥiṭub’s translation of *Millot ha-Higgayon* with Moses ibn Tibbon’s). Moreover, the Ibn Tibbons added quite a few relative clause markers (שֶׁ , אֲשֶׁר , -ה) where none existed in Arabic, and translators like Al-Ḥarizi and Aḥiṭub are not free from asyndetic relative clauses. Such clauses are also found in original texts which were influenced by the language of the translations, e.g., *Beit ha-Beḥira* by Ha-Me’iri, written in Provence at the end of the 13th century.

Relative clauses were also formed, on the modal of the Arabic *na’t sababī*, in which the adjective or participle is predicative to a following noun, and agrees with it in number and gender, but preserves an indirect link with the antecedent with which it shares the same category of deixis, definite or indefinite: $\text{הַמְדוּת הַמְסֻפָּר בְּהֵן הַבוֹרָא}$ (“the qualities (feminine plural) attributed (masculine singular) to the Creator (masculine singular)”). This structure occurs most frequently when the predicate in the relative clause is a passive participle and impersonal: $\text{צָרַךְ הַלְשׁוֹן הַמְעַתֵּק אֵלָיו}$ (Judah ibn Tibbon’s introduction to *Ḥobot ha-Leḇabot* $\text{הַדְּבָרִים הַמְזוּהָר מֵהֶם וְהַמְצִיגָה בָּהֶם}$ (“things (masculine plural) warned against (masculine singular) and commanded (masculine singular)”) (Moses ibn Tibbon’s translation of *Sefer ha-Mizwot*). Also based on Arabic is the common structure with מִן... מִן... מִן (and similar structures with other words replacing מִן and מִן), where the first part of the sentence functions restrictively: מִה שֶׁישׁ אֵתִי (the beginning of Ibn Tibbon’s translation of the *Kuzari*; “what I have of claims and answers,” i.e., those claims and answers that I have). Similarly $\text{מִה שֶׁעָשׂוּ לָנוּ הַמְצָרִים}$ (etc. This structure, modeled on Arabic, survived at least until the 18th century. Gershon b. Solomon composed his *Šāar ha-Šamayim* in the second half of the 13th century. All scholars are agreed that he did not know Arabic. His book, “a breviary of the wisdom of nature,” was based on scientific works translated from Arabic. He picked up this structure, new to Hebrew, from the books he studied and he understood how to use it correctly. He writes for example: $\text{חֹזֵשׁ הָרְאוּת לְכֹן הַנְּאוּת לֹ מִמְאָכֵל וּמִשְׁקָה}$ (“the appropriate from food and drink,” i.e., those foods and drinks which are appropriate). In the spirit of Arabic are the many object-noun clauses in place of infinitives: נִרְצָה שֶׁנֵּדַע (“we shall want that we shall know”; instead of נִרְצָה לְדַעַת “we shall want to know”; compare the Arabic *nuridu an na’rifā*; $\text{נִצְטְוִינוּ שֶׁנַּעֲנִישֶׁהוּ}$ (“we were ordered that we should punish him”) instead of $\text{נִצְטְוִינוּ לְהַעֲנִישׁ אוֹתוֹ}$ (“we were ordered to punish him”), $\text{נִצְטְוִינוּ לְהַעֲנִישׁ אוֹתוֹ}$ (“I decided to compose...”) Subordinate clauses are also common after words such as צָרִיךְ , etc. and are modeled on Arabic *an* clauses introduced after such verbs e.g., $\text{צָרִיךְ שֶׁנִּתְבְּוֹן}$ (“it is necessary that

we look”) for אָנוּ צְרִיכִים לְהִתְבּוֹנֵן (“we must look”; compare the Ar. *yağibu ’an*).

By contrast, infinitives are frequent in place of subordinate adverbial clauses of time, purpose, reason, and comparison: אַחֲרֵי בִּאֲרִי for “after I had explained” (Ar. *ba’ad tabayyuni*); לְהִיְתוֹ for “because he is” (Ar. *likawnihi*); כְּאָמְרוֹ (“as he says” or “as it says in the text”; Ar. *kaqawlihi*). Under the influence of Arabic the use of אֶת before a direct object diminished and the use of cognate objects increased e.g., תִּמְחָה תְּמִיּהָה, The circumstantial use of participles is common אָמַר הַנְּבִיאַ מִתְחַנֵּן (“the prophet said, imploring”; Ar. *qāla al nabi mutašafī’an*). The use of the objective complement is also frequent: יִשִּׁים הַסִּפֵּק בְּרוֹר (“he will make the uncertainty clear,” i.e., will clarify it).

Literal translation produces structures which are the exact image of the original Arabic text: וְתִחַלַּת מִי שֶׁמְצָא זֶה הַדְּעַת i.e., the first who found... (Ar. *awwal man ’amada ’alā*). The use of the prefix מִי – for listing details and explanations (called in Ar. the *mīm al-mubayyina*) was transferred from Arabic, when it was not translated by such words as כְּמוֹ, כְּגוֹן (“such as”) which is the usual method. Though not mentioned by grammarians like Ibn Jannah, it is found in untranslated Hebrew, even in thoroughly Hebrew contexts such as Maimonides’ Mishneh Torah: כָּל הַבְּרוּיָאִים מִמְּלֶאכֶי וְגַלְגָּל (“all created things, such as, angels...” *Yesodei Torah* 4, 1).

In the Bible the word אָמְנָם adds emphasis and by virtue of this usage is employed to translate typically Arabic structures. Due to its phonetic similarity to Arabic *ammā* it is used to emphasize the subject: וְאָמְנָם הָרֵאשׁוֹנוֹת צְרִיכוֹת בְּאוֹר (“as for the first ones, they need proof”). And because of its phonetic similarity to Arabic *innamā* it can emphasize a following predicate. Other words are also used to translate *ammā* and *innamā* – אֶשֶׁר לִי – אִם, אִוְלָם, אֶשֶׁר לִי – אֶבְל, אֶבְל – even by the Ibn Tibbons. Al-Ḥarizi, who to some extent preferred אֶבְל, very often tried to side-step such structures altogether. However, the use of אָמְנָם to emphasize what follows, a structure modeled on Arabic syntax, is very common in works which drew their Arabic inspiration from the translations written in the 13th and 14th centuries: they occur frequently, for example, in the writings of Cordovero, who lived in the 16th century.

Translators who were nearly always led to render the Arabic *lā ilāh* by לֹא אֱלֹהִים... לֹא very seldom managed to use לֹא אֱלֹהִים to translate the Arabic *innamā*. The merits of original, untranslated texts are noteworthy by comparison with the language of the translations. Samuel ibn Tibbon translated the words of Maimonides (*Guide of the Perplexed* 2, 44): הַנְּבוּאָה אָמְנָם תִּהְיֶה: (“prophecy will only be in a vision or a dream”; in Ar. the word *innamā* comes after the word for prophecy). But Maimonides himself wrote (*Hilkhot Yesodei Torah* 7, 2) אֵין רוֹאֵין מִנְּבוּאָה בְּנְבוּאָה אֱלֹהִים בְּחִלּוֹם (“no vision of prophecy is seen except in dream...”).

MAIMONIDES

This example from Maimonides of a Hebraic structure, לֹא אֱלֹהִים rather than the use of אָמְנָם in imitation of an Arabic pattern, is not unique. Asyndetic relative clauses are rare in the

Mishneh Torah, and many of the laws begin after the fashion of mishnaic Hebrew: צִוּרוֹת שֶׁעֲשָׂאוּם (“shapes that have been made”), אֶפְרָחִים שֶׁקִּנְנָה בָּהֶם (“chicks for whom a nest has been made”). נְבִיא שֶׁיַּעֲמֹד לָנוּ (“a prophet who shall represent us”) etc. Subordinate clauses are preferred to infinitives, and particularly worthy of comparison are the many occasions where Maimonides uses כְּמוֹ שֶׁנֶּאֱמַר or כְּעֵינֵן שֶׁנֶּאֱמַר as against כְּאָמְרוֹ, which Moses ibn Tibbon uses in his translation of Maimonides’ *Sefer ha-Mizwot*.

In vocabulary also, the Hebrew of Maimonides tends to be free from Arabic influence. Whereas Samuel ibn Tibbon writes of הַתּוֹרָה (“the pole of the Law”; in his translation of *Guide of the Perplexed*), in line with the Arabic figure of speech, Maimonides himself wrote עֹמֵד הַחֲכָמוֹת – “the pillar of wisdom” (introduction to *Sefer ha-Madd’a*) – see above on the respective uses of עֹמֵד and קֶטֶב. He wrote גִּלְם וְצוּרָה and not גִּלְם וְצוּרָה (“matter and form”), נִתְבָּרַר and not נִתְבָּאֵר (explained), which is a loan translation of *tabayyana*, מְזֻאָרַע and not חֲדוּשׁ (event; Ar. *ḥadat*) though he did also use the words נִתְבָּאֵר (meaning “explained and proved”) and תִּתְחַדֵּשׁ (meaning “take place”). Maimonides took great care with the language of *Mishneh Torah*; he wanted it to be “clear and precise” (as he wrote in the introduction) and chose to use not the language of prophecy or the language of the Talmud (i.e., Aramaic) but “the language of the *Mishnah* so that it will be easy for the majority” (as he wrote concerning the *Mishneh Torah* in his introduction to *Sefer ha-Mizwot*). In fact, he used typically mishnaic forms more than was usual in the language of the translations: לִידַע, לִיָּדָךְ, הִיאָךְ – and particularly the use of a proleptic pronoun לֹא לְמִשְׁשָׁה, which is not a feature of Arabic-influenced medieval Hebrew.

For all his conscious preference for “the language of the *Mishnah*,” Maimonides interlarded his prose with many biblical expressions, not just vocabulary items but whole phrases in a rhetorical style replete with biblical quotations: מְרִי נַפְשׁ (“bitter of soul,” Prov. 31:6); מְפֹרֵד וּמְפֹרֵד (“dispersed and scattered,” Esth. 3:8); בְּלוּיֵי סְחָבוֹת (“cast off remnants,” Jer. 38:11); כֶּמֶר מִדְּלִי (“a drop in the bucket,” Isa. 40:15), etc. There are undoubtedly traces of Arabic influence in the language of Maimonides, but they nearly all derive from Arabic features in Hebrew texts written by his predecessors, and most of them have their roots in Hebrew: prefixed ל – to indicate cause, prefixed מ – for exemplification (see above), עֵינֵינִים רְחוּקִים instead of עֵינֵינִים רְחוּקִים meaning “be doubtful about...”; הַעֹבְדֵי אֱלִילִים (“idol worshippers”) with the definite article preceding the construct form; הָעֵתִיק meaning “understand”; הַעֵתִיק meaning “hand down by tradition” (Ar. *naqala*); the technical terms עֶקֶר “principle,” מְצוּי רֵאשׁוֹן (“first entity” – a term for God). A typical feature of his prose is the translation into Hebrew of most of the Aramaic expressions in the Talmud: שְׁלֵם הָעֵינֵין for שְׁלֵם הָעֵינֵין (“the matter is complete”); כָּל דְּאֵלִים גְּבַר for כָּל הַמִּתְגַּבֵּר זָכָה (“whoever is in power wins”); בֵּר מְצָרָא for בֵּר מְצָרָא (“an immediate neighbor”); and many more. Maimonides’ language is closest to the style of learned

medieval Hebrew in passages of philosophical reflection (especially in Yad, *Yesodei ha-Torah*), and it is these sections which best show how superior and “Hebraic” his style is by comparison with the language of the Ibn Tibbons.

ITALY

In the year 1054, in Italy, Ahimaaz b. Paltiel, descendant of a line of liturgical poets, wrote his *Megillat Ahimāaz*, the genealogical record of his family. The language of his book is naturally akin to that of the liturgical poets. There are many features of mishnaic Hebrew (*binyan nitpa'al*, proleptic use of pronouns as in *יש לו לאדם*, demonstratives as in *אותם הימים*, words such as *סבור*, *צריך*, *שכן* etc.), enriched by biblical Hebrew in the form of interlarded quotations, morphology, syntax and vocabulary: *waw* conversive, infinitival phrases as in *בנהגיע*, *בבוא*, lack of innovation in *pu'al* and so on. A form like *לילכה*, with a mishnaic infinitive – *לילך* – and a biblical lengthening, testifies to the blend of language varieties! Like the liturgical poets that preceded him, he combined *-ך* with a perfect tense – *כבט*, *כראו*, made much use of allusive phrases (*שושנה*, “rose” = Israel), and employed the typically liturgical vocabulary: *רשה* (for “said, command”), *פציקה*, *גשם*, *בכך* (for “then”) etc. Traces of Italian influence on the language are slight but well defined (*פךקון* for “fork,” and see below with respect to the use of *טרם*). The initial use of a demonstrative (*זו המדינה*) in the language of Ahimāaz may derive from late Aramaic, or from the occasional use of the structure in mishnaic Hebrew, or possibly even from Italian or Arabic, as in the case of *מזה הענין* in the writings of Shabbetai Donnolo, who preceded him by almost 100 years. This book was written before the language of Spanish poetry had taken definite shape, but Immanuel of Rome, who lived in the middle of the 13th century, and who wrote a clearly biblical Hebrew, studded with quotations, though enriched with mishnaic features and even references to the Mishnah, was well versed in Spanish poetry, as he himself bears witness. Since he followed the trend of Spanish poetry and drew upon its language as a source of inspiration, he makes use of innovations and words whose frequency has risen under the influence of Arabic: *כר* meaning “stop,” *שב* for “become,” *אנון* for “grief” (Ar. *anna*), *כמו* for “approximately,” *תשבורת* (“geometry”), *גשם* (“body”), *אלוהי* (“theological”), *למודי* (“mathematical”), the pattern *כן...מה* (see above, p. 1631f.) and so on. The imprint of Italian is inestimably greater on his style than on that of Ahimaaz; he wrote poems in Italian and introduced the sonnet into Hebrew poetry. Italian accounts for the use of the following words in the masculine: *תבל*, *בטון*, *רגל*, *צפור*, *אצבע*, and of the following in the feminine: *חוק*, *שער*, *זקן*, etc. *פרה*, a name of a coin, is a loan translation of the Italian “florin” and the pattern *השלו* is a reflection of *il suo*.

Shabbetai Donnolo, a physician who lived in the 10th century in southern Italy, also wrote in a style blended of mishnaic and biblical Hebrew, and the result is entirely different from the language of the Ibn Tibbons. In addition to technical terms borrowed from Latin and Greek, his language also shows Italian influence: *בטון* in the masculine (like *il ventre*),

טרם and *מטרם* take on the meanings of Italian *avanti* i.e., first of all, better: *נאה לרופאים לידע טרם הבשמים* (“it is good for doctors, first of all to know perfumes”). Ahimaaz too uses *terem* in the sense of “before anything else.”

Obadiah of Bartinoro wrote his letters from Erez Israel (in the middle of the 15th century) in a language basically biblical but enriched with mishnaic features, and showing signs of Italian influence, apart from a few usages, mainly in loan words – *cottimo* for “piece work,” *capitano* for “captain” etc.

THE KARAITES

The Hebrew of the Karaites has not yet been described as a distinct variety. For the moment it must suffice to say that the rhymed polemical writings resemble those of Saadiah Gaon and the language used by the *ge'onim* in their liturgical poetry. The writings of Daniel al-Qūmisī (ninth century), Sahl b. Mazli'ah, and Solomon b. Jeroham (10th century), for example, are largely biblical in style, and richly studded with quotations, but also contain freely derived verb forms, in all the *binyanim*, and noun declensions of which the most productive are *קטל* and *קטילה*, *קטלון*. The Karaites fought against the oral tradition, and Saadiah Gaon countered their arguments by pointing out the indispensability of mishnaic Hebrew for understanding the Bible (in his *Perush Shiv'im Millim*); their language, however, is not a pure biblical Hebrew. None of them abstained completely from mishnaic usage, not merely as regards such content words as were vital in the debate on oral law (*מדרש*, *תקנה*, *גזירה*, *אסור*, *התיר*, etc.) but also structures and form words characteristic of the Mishnah: *binyan nitpa'al*, *אותה השנה*, *ראוי ל-*, *צריך ש-*, etc. And their vocabulary included words typical of liturgical poetry: *רשה* (“say, command”), *פציקה*, *צרה*, etc.

The Karaites were much influenced by Arabic culture, and their prose style is therefore marked by the influence of Arabic; it is very close to the language of the Ibn Tibbons (see *Eškol ha-Kofer* by Hadassi, written in Istanbul in the 12th century). But its specific features are worth special study. There are certain terms characteristic of Karaite Hebrew, some of which occur nowhere else: *נקבתי* and *נקברי* (“masculine” and “feminine”), *עדפנות* (“advantage”), *כתם* (“impression”), *אפע* (“event”), *היותות* (“existence”), and so on.

For recent studies of Karaite Hebrew see Maman in Bibliography.

Samaritans

From the 13th and 14th centuries onwards the Samaritans composed prayers and other works in Hebrew influenced by Arabic. A full description has not yet been made; Cowley has offered initial research as has Z. Ben Hayyim (*Tarbiz* 10). A necessary line of investigation will have to be how this Hebrew could exist independent of extra-biblical Hebrew (Ben Hayyim, *Lešonenu La'am*, 1969).

See also Ben Hayyim, *Ivrit va-Aramit Nusah Shomron*, vols. 1–5 (1957–77).

PROVENCE AND NORTHERN FRANCE

The Jews of Provence came under the influence of Spanish Jewry; it was in the towns of Provence (mainly Narbonne and Lunel) that the work of the Ibn Tibbons and the Kimḥis in translation was carried out. It is not surprising, therefore, that Menahem ha-Me'iri from Provence (14th century) wrote his book *Beit ha-Behira* in a style containing all the typical features of “Tibbonian” Hebrew. The influence of Arabic is marked, especially in the introduction, and not in the body of the work, which is a summary of halakhic judgments. Nevertheless, even the actual discussion of *halakhah* shows far more Arabic influence than the Hebrew of Maimonides’ *Mishneh Torah*.

Unlike the Jews of Provence, the Jews of northern and eastern France had strong cultural and social ties with the Jews of western Germany – “Ashkenaz” – and it was in the towns of Champagne, the Rhine Valley and Lorraine that Ashkenazi Hebrew was fashioned. The Hebrew of Rashi and the French authors of *Tosafot* (talmudic commentary) is close to Ashkenazi Hebrew, as regards its sources and constituent elements, but the language of influence is Old French, not Middle High German; the influence is much smaller than the corresponding influence of German on Ashkenazi Hebrew.

The influence of French accounts for the increased use of the verb *‘asa* in the Hebrew of Rashi, by analogy with “*faire*,” e.g., *עשה בְּרָכָה*, though such forms do occur in mishnaic Hebrew. Also from French is the use of *בִּית* and *בִּשְׂר* in the feminine. But the French background is most marked in the direct quotation of Old French words in order to explain the Hebrew: “*רשם*, in French *cogneau*,” etc. The language of Rashi is generally excellent, accurate Hebrew; it is largely mishnaic, enriched with biblical words and forms, even his commentary on the Talmud, e.g., *תַּפְעֵלָה*, infinitival clauses like *בְּשׁוּבִי*, *בְּבֹא*, the lengthened imperfect, and figurative expressions such as *לְבוֹ דָּוָה עָלָיו* (“his heart grew faint” – see Lam. 5:17), *הוּן עֲתֵק מְאֹד* (“very great riches” – see Prov. 8:18), though on a modest scale compared with the rhetorical figures in the rabbinical style. In his commentary on the Bible he made sparing use of Aramaic, and only in fixed expressions: *דְּאִיתְמַר דְּתִיב*, and a wide use of the Aramaic prefix *de-* but in his commentary on the Talmud and in *Siddur Rashi* he did use Aramaic and not only technical terms; his language in this respect can be described in the same terms as we shall use for the language of rabbinical Hebrew in general. Rashi created new words and patterns; his understanding of Hebrew grammar and his ability as a stylist give him a special place among the writers of Hebrew in Ashkenaz.

ASHKENAZIC AND RABBINIC HEBREW

The Jews of Ashkenaz (western Germany and eastern France) had close ties with Erez Israel, and this relationship is very evident in their *piyyutim* (Gershon ben Judah Me'or ha-Golah, Jacob Tam, Meir of Rothenburg etc.), which continued the language and grammar of Palestinian liturgical poetry, though on a more modest scale. However, in the responsa, in the books on ritual, in community records, and to some ex-

tent, also in books dealing with their trials and tribulations, there is apparent, already from the 11th century, the beginnings of the blended style known as rabbinical Hebrew, found in its most characteristic form in the responsa written in Poland, mainly from the 16th century. It is composed of mishnaic Hebrew, biblical Hebrew, Aramaic (largely from the Babylonian Talmud), a certain amount of Arabic-influenced Hebrew, the influence of Middle High German in Ashkenaz, and once the center of Ashkenazi Jewry had moved to Poland the influence of Yiddish, whose German component was the same kind of German as that spoken by the Jews of Ashkenaz.

The Influence of German on the Hebrew of the Jews of Ashkenaz and the Influence of Yiddish on Hebrew in Poland

The status of Hebrew in Ashkenaz as compared with Middle High German was different from its status in Spain compared with its sister-tongue Arabic. In Germany the two languages in contact were from different families and far apart in form and structure. It is the strangeness of the effect of the influencing language that is most marked, though the very distance can also tone down the influence. The Ibn Tibbons were well aware that it was the closeness of Arabic to Hebrew which secured it such huge influence. From Arabic Hebrew borrowed a few words in Hebrew declensions; from German, at the beginning of the period, no words were borrowed at all, and they were quoted as foreign whenever they were needed in explanation: “*בְּרִיָּה*” or in German *brennt*” (Eleazar b. Nathan, 11th century). Loan words begin to appear in Hebrew in Poland from the 16th century, more in the questions that were posed than in the responsa of the rabbis, and almost all of them dealing with everyday life, hardly any concerned with matters of ritual. They include names of colors and clothes, food, and diseases. Words were also borrowed for which Hebrew equivalents existed: *Diamant* (דְּיָהֶלֶם), *Juwelen* (תְּכֵשִׁיטִים) etc. It is the language of the Ḥasidim and the *Mitnaggedim* in the 18th century which is most full of loan words.

Whereas Spanish Jewry was bilingual as far as writing was concerned (Hebrew and Arabic), in Ashkenaz Hebrew served as the sole written language. The literary language of the surrounding culture was mainly Latin, though Middle High German was also beginning to be used in writing for epic poetry, courtly lyrics and sermons. The Middle High German used in sermons to bring people to confession, repentance and fear of sin could well have influenced Ḥasidim of Germany by virtue of the subjects themselves but only as a literary language heard in sermons out of doors, not as a written language. Its influence should therefore be considered as that of a spoken vernacular not as a vehicle for literary expression. The Jew did not regard it as an enlightened, respectable language, worthy of competition with such an excellent tongue as Hebrew. They did not imitate it, they did not translate from it, and they had very little occasion to adopt from it terms and concepts that needed a Hebrew guise. The main effect is felt in passages dealing with everyday life: the account books of

the religious congregations, responsa dealing with everyday affairs, accounts of troubles and persecutions.

When Polish Jewry replaced German Jewry as the spiritual center, a change began to take place in the status of Yiddish, transferred to a Slavic environment (though there had been earlier written documents in Yiddish); it became henceforth a normal second written language. Among the responsa written by Moses Isserles, Solomon Luria and others in Poland in the 16th century there are also some written in Yiddish. No study has yet been made on the relation of Hebrew and Middle High German in Germany as compared with that of Hebrew and Yiddish in Poland. Generally speaking, the German element in the Hebrew of Ashkenaz is close to that in the Hebrew of Poland; it is only in the language of the Ḥasidim and the *Mitnaggedim* in the 18th century that the influence of Yiddish is far more profoundly felt.

In the history of Ashkenazi Hebrew, a special place is reserved for the language of *Sefer Ḥasidim*, a collection of tales and customs attributed to *Judah he-Ḥasid from Regensburg and written or collected by his disciples in the 12th and 13th centuries. The spirit of modesty and humility typical of those ascetic God-fearing Ḥasidim permeated not only the subject-matter but also the language, which was very close to the spoken variety, abounding in anacolouthon, unstylized, without interlarded quotations or figurative embellishment. The vocabulary of the book is small, sufficient for the needs of the subject-matter, with no concern for the needs of style, and the influence of Middle High German is quite strongly felt. The influence of Middle High German and the German element in Yiddish is best described by reference to the *Sefer Ḥasidim* and the responsa written in Germany and Poland. The following are some of the most noteworthy features: there is considerable use of prepositions in the German manner, though Hebrew prepositional usages were not rejected completely; they are also used, the proportion depending on the writer, the translator or the context (as already noted, the influence of German is more marked in passages dealing with everyday affairs: -לְ instead of מִן, גָּבַח מִן ... מתגאה מן ("proud of") as in *sich rühmen von*; יָדַע מִן, as in *wissen von*. The preposition אַחֲרֵי takes on the uses of *nach* – שְׁלַח אַחֲרָיו ("send for him"), and so on. The preposition עַל is used like *auf*: קָנָה עַל הַשּׁוּק ("bought in the market") *auf den Markt*; הָיָה עַל הַרְחֹב ("was in the street") – *auf der Strasse*; הִמָּתִין עַל פְּלוֹנִי ("wait for someone") – *auf jemand*; and even more in the language of the Ḥasidim in the 18th century: קָמַח עַל פֶּסַח etc. Though the possessive construct pattern found in the Bible is commoner than the prepositional structure with *sel* found in mishnaic Hebrew, there are exceptional cases where a prepositional structure with *min* is used, in imitation of *von*: גָּבַח מִן הַצְדָּקָה ("a collector of charity"). There are a few loan translations, mainly for the purpose of expressing concepts from daily life: בֵּית הָעֵצָה (*Rathaus*); בֵּית עֲנִיִּים ("poorhouse"); בֵּית יְתוּמִים ("orphanage"). Much commoner is the extension of the meaning of the Hebrew word in accordance with the meanings of its Middle High German equivalent: כָּנְגַד or כָּנְגָד

means "approximately," a secondary meaning of *gegen*, and in later Hebrew -לְ כָּבִיב is used in this sense, like *um*. יָדַע means "be able" as well as "know," since *koennen* has both meanings; הַפְּסוּק עוֹמֵד כְּתוּב (as in Ger. *steht*), תוֹפֵס means "hurry" (*chappen*), עֲזַב means "let" (*lassen*), אֵיזָה means "some" as well as "which," both meanings of *welche*; הוֹלָה אֶצֶל הַקָּר ("sick because of the cold," a secondary meaning of Middle High German *bi* (the similarity between אֶצֶל and עַל יְדֵי may have helped). In the responsa, the phrase הָיָה לוֹ expresses duty and obligation, not permission and ability as in mishnaic Hebrew and Aramaic; this is the meaning of Middle High German *hân ze*. Very common is the use of מָה as a relative pronoun – מַה שְׁחַפֵּץ שְׂיַעֲשֶׂה "deeds that he wants to perform" (*Sefer Ḥasidim*) – like Middle High German *was*. One new sentence structure came from Middle High German: a subjective clause whose predicator was a modal adjective (אָסוּר "forbidden," צָרִיךְ "necessary," טוֹב "good") could begin with the word אִם, which gave it the force of a conditional clause – שֵׁשׁ דְּבָרִים שְׂאָסוּר אִם יִלְמַד לְאַחֲרֵים – "there are things which it is forbidden that (or "if") he teaches (them) to others." A similar structure with *ob* is found under such conditions in Middle High German.

German also produced a marked increase in the use of features which already existed in Hebrew though less conspicuously. רַק in the prepositional sense of "but" is found in the Bible אֲשֶׁר לֹא תִדְבַר אֵלַי רַק אֱמֶת ("tell me nothing but the truth"; 1 Kings 22:16) – and this biblical stylistic feature occurs in Spanish Jewish poetry. In Ashkenazic Hebrew רַק is also used as a conjunction in the sense of "but, however," before a verbal clause; it also occurs in the form שֶׁ רַק presumably under the influence of Middle High German *nur*, which means both 'but' and 'only'. An example is חָס לִי לְרָאוֹת כְּזֶה וְלֹא לְמַחֹת וְרַק כֹּל זֶה עֲדִין הוּא שׁוֹרֵשׁ רָאשׁ וְלַעֲנָה "God forbid I should see such a thing and not protest, but all this is still a source of evil and corruption" (from the 17th century *Shenei Luhot ha-Berit*). עַד occurs with the meaning "as long as," found in biblical and mishnaic Hebrew, and assisted by the fact that *bis* carries this meaning. In the Bible אִם sometimes comes at the beginning of the apodosis in a conditional sentence: לֹדֵלִי תוֹרַתְךָ שֶׁעָשִׂי אִם אֲבִדְתִּי בְּעִנְיִי (Ps. 119:92) "if thy law had not been my delight then I should have perished in my troubles." In Ashkenazic Hebrew the high frequency of אִם after a conditional or temporal clause can be attributed to the corresponding use in German of *denn*, e.g., in the language of Berthold from Regensburg, a preacher at the time of the *Sefer Ḥasidim*. The normal pattern is thus אִם הָיָה בְּהִגְרָמְתוֹ אִם כֹּל הַקְּהָל פְּטוּרִים "if he is the cause, then the whole congregation is exempt."

The large number of expressions in German with *machen* is matched in Ashkenazic Hebrew by the number of expressions with עָשָׂה, though a few such phrases can be found in the Midrashim: עָשָׂה עֲבָרָה, עָשָׂה עוֹלָה, עָשָׂה נִזְיָפָה, עָשָׂה חֲרָפָה, עָשָׂה חֲרִיפָה, etc. The influence of German also explains the number of expressions like הָיָה לוֹ צַעַר, הָיָה לוֹ בּוֹשָׁה, הָיָה לוֹ עָוֹל, etc. Here it is the frequency which is affected, since they are not

a complete innovation in Hebrew. The use of *sich* as a reflexive object leads to the use of inflected עצם in Hebrew translation – equivalents; to the few examples found in mishnaic Hebrew are added מסגל עצמו (“adjust oneself”), מחזיק עצמו (“hold oneself,” i.e., avoid, as in Ger.) תופס עצמו (“consider oneself”). It was also used with verbs in *binyan hitpa’el*, which in such cases lost reflexive meaning: מתקשט עצמו (“adorn oneself”), מתלבשת עצמה ככוהנת (“dresses herself as a priestess” – *Sefer Hasidim*), etc.

German could also lead to a diminution in frequency of occurrence: the relative infrequency of את as compared with biblical and mishnaic Hebrew can be explained by the absence of any corresponding particle in German. Similarly the reduction in the use of the definite article corresponds with its reduced use in Middle High German; נטלו כל and not... הכל is modeled on the use of *alles*.

No new tense forms were created in Ashkenazic Hebrew, but to some extent the systemic relationships of existing forms were reorganized (see Rabin in bibl.). In *Sefer Hasidim* the use of the participle for both present and future indicative is well marked: לעתיד לבוא מתפללים. The imperfect יקטל serves as present and future subjunctive, expressing doubt, possibility etc.: הַרְעֵ שֶׁל גֵּר הָיָה צְדִיקִים: “the seed of a proselyte may produce righteous men.” And this systemic relationship between יקטל and קוטל corresponds with the opposition between present-future indicative and present-future subjunctive in Middle High German, where the expression of futurity by means of modal auxiliaries – *will, soll* – was still rare. Moreover, since there is a firm foundation for this division of function between קוטל and יקטל in mishnaic Hebrew and Aramaic, the novelty is felt more strongly in the use of the pattern היה פועל not only as a past continuous (a usage inherited from mishnaic Hebrew) but also as a functional, though not formal, equivalent of the past subjunctive in Middle High German: והרב לא היה מלמדו בהנחם “the rabbi would not teach him for nothing” (*Sefer Hasidim*, section 585). This use is also not a complete innovation, since it resembles the combination היה and present participle in unfulfilled conditions in Aramaic and in mishnaic Hebrew אלו הייתי יודע “if I had known,” (הוא אמינא); what is new is the systemic relationship between קטל and היה קוטל, corresponding to the past indicative and past subjunctive in Middle High German. There are examples in Ashkenazic Hebrew of the sequence of tenses found in German: ראה בחלום שהיה רוכב על סוס אדם “he saw in a dream that he was riding on a red horse” (in *Sefer Hasidim*); the tense in the subordinate clause is marked as past, like the main clause, and not present, which is normal in Hebrew.

The Role of Mishnaic Hebrew in Ashkenazic Hebrew

The language of Jews who studied Talmud naturally made great use of mishnaic Hebrew. It should be noted that *Sefer Hasidim* actually uses forms that are not particularly common, e.g., *binyan nup'al* – נצל (“was saved”), נטל (“was taken”) – and the pattern הקטילה as verbal noun for *binyan hip'il* – הרעיבה, הפסידה. The most productive derivational pattern by far was

שדכן from mishnaic Hebrew; the innovations include שדכן קטלן, עולן, שמחן, שתדלן, מטבען, עצרן, פשרן, etc.

The Role of Biblical Hebrew

Ashkenazic Hebrew took from all varieties known to its writers; the Hebrew of the Bible was absorbed from the stratum of biblical Hebrew in the liturgy, from the weekly readings of the law and from the *haftara*. Hence the use of למען, יתכן, אן, אן, and so on. And unlike Arabic-influenced prose, Ashkenazic Hebrew also made use of lengthened tense forms: אכתבה, ישמרן, and the future with *waw* conversive. This tense is seldom found in *Sefer Hasidim* and relatively infrequently in the prose of Rashi, but it began to occur with increasing frequency until it became a distinguishing mark of rabbinic Hebrew. The increasing use of rhetorical figures from the Bible may have helped to establish it in the language; fragments of verses which contained a *waw* conversive were directly quoted as part of the rhetorical figure, and thus made their way into rabbinic Hebrew. Biblical figures of speech are absent from the humble style of *Sefer Hasidim*, and used with taste and moderation by Rashi; in the language of Jacob Tam they are widespread (their flavor of *piyyut* derives from his being a liturgical poet), and they are quite common in the writings of Rabbi Meir of Rothenburg (end of the 14th century), for example. They are very common in the salutations, at the beginning of many of the responsa from Germany and Poland, though not only there. Some writers use them more, some less, depending on their individual taste and ability. Though most rhetorical figures derive from verses in the Bible, there are also some from mishnaic Hebrew, and even from Aramaic, all for the rhetorical adornment of the opening section of the letter, with no conception of the principle of purity of biblical language as a rhetorical virtue. The writers of the responsa begin ישמעתי ותרגז בטני (“I heard and my stomach quaked”; Meir of Rothenburg); or אדירים והעליתי חרס (see Ex. 15:6, “I plunged into deep water and brought up nothing”; Moses Isserles); or נאתן את לבי לדרש ולתור סבותיו בספרים (see Eccles. 1:13, “I gave my heart to seek and search out its reasons in books” (a frequent figure)). They begin with a rhymed eulogy: (see Ps. 18:30, אמרת צרופה ומרחשתך עמקה וצפה “thy word is perfect and thy feelings are deep...”; Meir of Rothenburg)). Sometimes the point of the quotation distorts the original meaning of the verse quoted: Simeon accuses Reuben in the words בפלגות ראובן גדולים חקרי לב (see Judg. 5:16, “in the divisions of Reuben there were great heart-searchings” (a question addressed to Jacob Tam)). Sometimes the form is changed: the Rabbi replies עקב קול עקב (not ערעורים וקול – “the voice is the voice of the deceit.” Sometimes the spelling of the word is changed: הארו אשר בלבנון באר (“the cedar of Lebanon is proof”) the reference is to Isaiah 40:16 where the form is actually בער (“burns”; a quip from the responsa of Ša'ar Efrayim, 17th century).

The Role of Aramaic

In *Sefer Hasidim* there are slight touches of Aramaic – דכתיב – and they are fairly restricted in Rashi's commentary on

the Bible. However, in Rashi's commentary on the Talmud, in the responsa of Jacob Tam, or in *Sefer ha-Rokeah* of Eleazar of Worms, the amount of Aramaic acquires a status comparable to that of mishnaic Hebrew, since both constitute the language of the Talmud and the writers may not always have realized when they had moved from Hebrew to Aramaic.

The extensive use of Aramaic is not confined to the Aramaic *halakhah* under discussion, nor even to the technical terms alone (פְּלִיגִי, צְרִיכָא, טַעֲמִיָּהוּ, אֲלֵמָא לֵן, קְיִמָא לֵן, etc.). -ךְ is used instead of שׁ in an otherwise completely Hebrew context, to mean "of" – הפְּרָק דְּהַמְסַכְתָּ (the chapter of the tractate); פְּנִיקָס דְּוַעַד אַרְבַּע אַרְצוֹת; and also to mean "that" – נִרְאָה לִי דְּ- (it seems to me that...); אָמַרְתִּי דְּאָסוּר (I said that it was forbidden"). Whereas as Rashi commenting on the Bible writes אַף עַל פִּי שֶׁ-; מִשּׁוֹם שֶׁ-; כִּי־וְ- when he comments on the Talmud he writes דְּ-; כִּי־וְ-; מִשּׁוֹם דְּ-; כִּי־וְ- The verb forms מִיִּירִי and מִיִּיתִי are much used in Hebrew contexts, and sometimes complete clauses in Aramaic are interpolated. Generally the Aramaic phrases are quoted freely in new Hebrew contexts, though in the form and with the inflections found in the Talmud. The Hebrew most thoroughly mixed with Aramaic was written in Poland during the 17th and 18th centuries.

The Link With Arab-Influenced Hebrew

The Jews of Ashkenaz and the Jews of Spain maintained cultural ties, whether by means of responsa (e.g., when Asher ben Jehiel moved from Germany to Spain) or by reading each other's books. The kabbalists of Spain were interested in the Ḥasidism of Ashkenaz, in Germany they read the writings of Maimonides, Saadiah Gaon, and the *musar* book, *Ḥobot ha-Leḇaḇot*. In Poland several of the scientific works, all written in "Tibbonian" Hebrew, were well known.

Since Ashkenazic Hebrew reflects all the varieties of literature known to its writers, and since in principal there was no form of the language whose use was banned on stylistic and grammatical grounds, it is not surprising that several features of Arab-influenced Hebrew also occurred. The use of nouns ending with the suffixes -ית and -ות in the masculine is characteristic of rabbinic Hebrew (תְּכֵלִית אַחֲרוֹן), and similarly plural concord of the form סוּדוֹת גְּדוּלוֹת (instead of גְּדוּלִים). It is not clear whether this usage derives from Spanish Hebrew or whether it is an aspect of the general weakening of strict grammatical rules (it is possible that this is due to the fact that words ending in *-ut* and *-it* in Yiddish entered the neuter gender). Sometimes Arabic and German/Yiddish tended to produce the same result, e.g., the demonstrative without the article before the noun, reduced use of אַתְּ, the preposition מִן in מִן דְּבַר מִן, סִפְר מִן, דְּבַר מִן and the comparative form יוֹתֵר טוֹב, יוֹתֵר נָאֵה, where the frequency and the order of words can be attributed to German (*mehr...*) and French (*plus...*), though Arab-influenced Hebrew also uses this structure as a translation of Arabic.

A deliberate, quite marked use of the Hebrew which took shape in Spain and Provence is found in Poland, mainly

from the 16th and 17th centuries. Moses Isserles was a man of philosophic bent and apart from his responsa on matters of *halakhah* he also used the language of the *Guide of the Perplexed*: אֶקְלִים, אֶלְהִי, עֵינִי ("region"), מַסְכִּים ("match, fit"), בְּרַח מִלַּעֲסֵק, מְשַׁכֵּל, וְעַל צַד הַשְּׂכָל, and so on.

Forty years after the expulsion from Spain 16th-century Safed became a center for Jewish learning and Kabbalah whose greatest scholars generally wrote a Hebrew close to the Arabic-influenced variety of Spain and Provence, especially in Kabbalistic works where a style of writing had already been established in Spain (see, for example, the language of Moses Cordovero). In Safed, too, the use of lengthened tense forms and the *waw* conversive were introduced into the language of prose. Isaiah Horowitz, author of *Shenei Luḥot ha-Berit*, was educated in Poland and wrote an Ashkenazic Hebrew, but his style contained many of the distinguishing marks of Arabic-influenced Hebrew: the definite article before an infinitive e.g., הַהִשְׁתַּמֵּשׁ, רַשָּׁם, מְשַׁכֵּל for "influence," מַסְכִּים meaning "match," אָמַת in the masculine, עֲצֻמוֹת, מְהוּוֹת and so on; after all, he was a kabbalist, immigrated to Erez Israel, and wrote his book there.

The extreme case of the encounter between Spanish Hebrew and Ashkenazic Hebrew is the language of the 18th century Ḥasidim. Besides being stamped with the imprint of Yiddish to a greater extent than any preceding variety of Hebrew, it also continues the traditional prose style of Ashkenazic Hebrew (as exemplified in the responsa, in the *musar* books and especially in the well-loved *Sefer Ḥasidim*). But whereas stories of the *zaddikim* and passages dealing with everyday life are written mainly in Ashkenazic, rabbinic Hebrew, the philosophic literature of Ḥasidim is strongly marked by Spanish Hebrew; the ḥasidic writers continued the kabbalistic tradition of Isaac Luria, and took over the terms and expressions from kabbalistic literature and Spanish books of ethics such as *Ḥobot ha-Leḇaḇot*; רוּחַנִיּוֹת ("spirituality"), אַחֲוּיוֹת ("unity"), גִּשְׁמִיּוֹת ("corporeality"), בְּחִינָה, סְגֻלָּה, דְּבָקוּת, etc. (see M.Z. Kaddari in bibl.).

Influence of Hebrew on Yiddish

It was through rabbinic Hebrew, with its blend of all varieties, that Hebrew words found their way into Yiddish. From biblical Hebrew – אֶזְרָא, עוֹלָה, אֶזְרָא; from mishnaic – אַפְשָׁר, אַפְלוֹ; from Aramaic – סְתִמָּא, פִּשְׁטָא, and even from Arab-influenced Hebrew, mainly via ḥasidic literature: מְגַשֵּׁם, מְגַשֵּׁם, שְׁלִיָּלָה, הַעֲדָר, etc. Many of the high frequency words most characteristic of Ashkenazic Hebrew, words occurring already in *Sefer Ḥasidim*, came into Yiddish: מְאֹס ("obnoxious"), עוֹלָם ("an urban Jewish community"), קְהָל, מְעֵשָׂה, מְעֵשָׂה (in the language of the *Sefer Ḥasidim* it already has the meaning "story" as well as "deed"), אָז, אֹדוֹת, תְּדִיר. The Hebrew derivational pattern most characteristically Yiddish – קְטָלָן – (in words like יִשְׁרָן, בְּטָלָן, בְּלָעוּ, etc.) is also the pattern most vital to Ashkenazic Hebrew.

Haskalah and Medieval Hebrew

The stylistic uniqueness of rabbinic Hebrew lies in its blend of different varieties of the language: only a few new words were coined, to meet the needs of writing about everyday life. By contrast, Spanish Hebrew was a professional tool, a necessary instrument for all kinds of scientific, philosophic and scholarly writing. The writers of the Haskalah turned their backs on rabbinic Hebrew for its careless grammar and because it represented the Judaism of the Talmud. For poetry and to a considerable extent for stories they adopted biblical Hebrew; however, for serious prose works some of the *maskilim* chose the Arabic-influenced language of Spain, especially for technical terms and expressions (see for example the extensive use of Tibbonian Hebrew made by Naḥman Krochmal in *Moreh Nebukhei ha-Zeman*).

The Hebrew language was a major concern of Haskalah writers. They were keenly aware of normative problems in writing and the need for linguistic research in Hebrew. Writers and grammarians like Naphtali Herz Wessely, Judah Leib Ben Zéev, and those who collected ancient texts made a decisive contribution toward the molding of the language and its modernization. The Haskalah may be seen as a preparatory period for the revival of Hebrew (see Modern Hebrew Literature).

[Esther Goldenberg]

MODERN PERIOD

The growth of Hebrew as a modern language, spoken by masses and gradually used in all areas of life and thought, may be divided into three stages corresponding to periods in the history of modern Palestine: (1) 1881–1918 initiated by Eliezer Ben-Yehuda's arrival in the country. He and his followers developed and propagated Hebrew in everyday life. (2) 1918–1948; under British rule when Hebrew was first considered a language of Palestine, and later (1922) one of the three official languages. During this time the Hebrew-speaking population increased rapidly, established many cultural institutions, including its own educational system up to university level, in all of which Hebrew, with few initial exceptions, became the only language used. (3) 1948– marked by the foundation of the State of Israel. Hebrew became the predominant language of the state, and was used in all branches of its activities: government departments, the army, etc., were integrated into the life of the Hebrew-speaking population. Gradually Hebrew was also spoken by non-Jewish citizens. Each of these three periods, characterized by the cultural background and the linguistic past of the immigrants who adopted Hebrew as their new language, has influenced its revolution.

[Eli Eytan]

At the time of the revival of Hebrew for everyday speech, the languages most current in the old *yishuv* (Jewish population) were Yiddish, Ladino, and Arabic, while French and German formed the main channels to European culture. The immigrants of the first period, mostly from Eastern Europe,

spoke Yiddish; many of them also spoke Russian or Polish and at least understood German. These languages influenced Hebrew but their effect, noticeable in new aspects of Hebrew, gradually decreased, and the impact of English grew. Since the end of World War I English had a marked influence on Hebrew because of the influx of British and other English-speaking government and army personnel and their closer contacts with the *yishuv*. The fact that the establishment of the State of Israel did not diminish this influence is due to a wide knowledge of English among the Israeli population through higher education and close acquaintance with English and American culture to which immigration from English-speaking countries contributed substantially.

Period of Revival (1881–1918)

Hebrew was spoken in Palestine even before the revival movement, but only as a *lingua franca* among Jews who had no other common language. This phenomenon also existed among Jews in many other countries in earlier periods. The revival, in contrast to early periods, however, saw the establishment of Hebrew as the sole or at least the principal language, i.e., a transformation from a language used only occasionally for special purposes by speakers of other languages to a language used by a community for all their communication needs – speaking, reading, and writing.

The revival took place in Palestine. When the British conquered the country, Hebrew was already one of the languages of Palestine. In General Allenby's published proclamation about martial law in Jerusalem, Hebrew was published on top, while Arabic was the second, before Russian and Greek, all considered languages used by the local population. On the other side of the sheet, the proclamation was published in (1) English, (2) French and (3) Italian, languages of the allies. Only toward the end of this period, Hebrew also began to be studied in the Diaspora to a limited extent.

Eliezer Ben-Yehuda's pioneer work for the revival of Hebrew would have failed had there not been at that time three conditions which proved essential to the process of revival: (1) There was no national language in Palestine. The inhabitants did not belong to a "nation" (in the Western sense), but were divided into religious-ethnic communities ("millets") that used a number of languages. Literary Arabic was the language of prayer, worship, and study for all Muslims including government workers and members of the Turkish army and, to some degree, for several Christian denominations. But millions of Muslims outside Palestine also used literary Arabic in a similar fashion, thus preventing it from being an exclusive national language. Turkish was used for political, governmental, and military matters all over the Ottoman Empire. The most common spoken language was local colloquial Arabic, which was used only as a spoken vernacular and thus deemed unworthy to be a national language. Other languages, such as French, Russian, Italian, Greek, and Armenian were used by certain millets, or as cultural languages. None of them, however, could be taken as a national language. (2) European na-

tionalist thought, together with a yearning for a Hebrew renaissance, reached Palestine in the middle of the 19th century. Already in the 1860s young people in the Jewish communities of Palestine attempted to change the static way of life there. Newspapers, printing houses, and various workshops were founded, and settlements were established “outside the walls” (i.e., of the old *yishuv*). The lack of a national language in Palestine created the need for a common language for the developing society, and it was natural that Hebrew be considered worthy of this role; all the more so that Hebrew (in the Sephardi pronunciation) even before this had been the common language of different Jewish communities. (3) The fact that the original language of the country had been Hebrew provided a solid ideological basis for the revival of the language, and gave it an advantage which no other language had. Publication of such ancient Hebrew inscriptions or engravings as the Siloam inscription (1880) and the Mesha inscription (1868) made a deep impression upon the people of that generation and emphasized the connection between Hebrew and Palestine. The revival of the language symbolized the “Golden Age” of ancient Israel which was about to be renewed.

The major difficulty encountered in making Hebrew the sole (or principal) language of the country was in the area of vocabulary. There were few difficulties, if any, in the field of grammar. In Hebrew phonology the need for marking such new sounds as č, ž, ğ (to accommodate foreign words and non-Hebraic personal names) was met without difficulty by adapting the letters צ, ז, ג. (These sounds had previously been marked by combinations of letters such as טש, זש, דז. ז had been indicated for some time also by the letter ז, undoubtedly through the influence of the French pronunciation of the letter j.) The problems of orthography were solved at once: “defective” orthography (כתב חסר) was introduced. There were, certainly, difficulties in this area, and it is relevant to mention Ben-Yehuda’s short-lived experiment in the use of “capital” letters for personal names (as in English and French). Morphology was not expanded, but newly invented words were usually styled according to existing morphological patterns. It is often possible to distinguish tendencies to use a certain pattern or a specific suffix, such as Ithamar *Ben-Avi’s predilection for the suffix of relation (עמדה זכותית, יהודה מיידיית, יהודה זכותית). Although Hebrew syntax changed considerably during the days of the revival of the language, these changes were generally brought about unintentionally and without premeditation. (However, an apparent example of an intentional syntactical change is to begin sentences with a verb, like in Arabic, as was done for a time in newspapers.) In contrast, the need for new words was recognized from the start. Ben-Yehuda illustrates this in the following statement: “Have any of the readers (of Smolenskin) ever felt that in all of the circumstances of the different events that this very capable author brought into his stories, he never mentioned for example, the simple, common act, of tickling? This act which we meet often in every story in a living language we will never meet in the stories of Smolenskin, simply because he did not have a word for it. In spite of

this his stories are well written. But whoever wishes to write something of wisdom and science, and especially someone like myself, who speaks Hebrew at home with the children, about everything in life, feels every moment a lack of words without which living speech cannot take place” (the Large Introduction, 12–13). Most of the efforts of those who revived the language were dedicated to answering this need.

The End of the Revival Period

The period of revival was characterized by reviving existing words, creating new ones, and enriching the language with words from Semitic sources (in the main) cast in the Hebrew mold. However, a large number of these words (several thousand) were rejected and have fallen into disuse. The pressing need to remedy the critical lack of words often led to hasty innovations. Those educated in literary Hebrew, especially the last generation of *maskilim* in Eastern Europe, did not readily accept this “manufacturing of words” in Palestine. They tended to be more careful in making innovations, preferring to adopt foreign words, especially “international” terms, the majority of which were of a Latin or Greek origin. This school of thought began to make its influence felt in Palestine from 1905 onward, with the Second Aliyah. The coming of the Third Aliyah from Eastern Europe, immediately after World War I, strengthened this view until in the late 1920s the influence of the “language of the revival” could hardly be recognized since many of its words were forgotten. The late books and journalism of Ithamar *Ben-Avi were a kind of “swan song” of the revival period, but even his language greatly reflected the above-mentioned changes. The end of the Ottoman Empire and the recognition of Hebrew as an official language in Palestine is therefore only one reason for fixing the end of World War I as the close of the “revival period.” The other reason is that at this time the influence of those who demanded great caution in the formation of new words grew, and they were tolerant to foreign words as long as proper Hebrew terms had not been created with careful consideration.

Linguistic Problems of Modern Hebrew

PRONUNCIATION. Reviewing the first 22 years of the Va’ad ha-Lashon (*Zihkronot Va’ad ha-Lashon* 1, 2nd ed. p. 4), Ben-Yehuda recalls the days when all the various pronunciations of Hebrew were heard in Jerusalem “from the Lithuanian to the Sephardi, from the Volhynian to the Yemenite and the Persian.” The necessity to establish a standard pronunciation was under discussion for some time. At a meeting of teachers in 1885, for example, it was decided to teach Ashkenazi Hebrew for the first two years in Ashkenazi schools and then switch to Sephardi pronunciation, while in Sephardi schools the opposite should be done – in “order that they know both.” By 1912, however, Ben-Yehuda continues, “by the nature of things the Oriental pronunciation, the one living among the Sephardim, had become dominant, and from Jerusalem it

spread to all speakers of Hebrew in the country.” This statement was a rough summary of the position which had developed in a relatively short time, but which, in fact, was – and is to this day – only a limited fulfillment of the original wish to adopt the Sephardi pronunciation. The phonetic inventory of the Ashkenazim, both of the old *yishuv* and new immigrants whose number rapidly grew, could not easily be replaced by the whole range of sounds found in genuine Sephardi speech. To give one example, any Ashkenazi could easily learn to pronounce both vowels of the verb *עָצַר* (“he restrained,” etc.) as *a* and to stress its last syllable, instead of pronouncing the first vowel as *o* (as according to his Ashkenazi dialect), and stressing the first syllable. It proved, however, impossible for the vast majority of Ashkenazi Jews – except by sustained conscious effort to – pronounce the Sephardi (like Arabic) consonants *ע* [ʕ] and *צ* [s]. *עָצַר* and *צָצַר* (“he stored up”), as well as many other pairs of linguistic forms, thus became homophonous, creating new problems in teaching orthography and grammar. This process of different phonemes coinciding in actualization even led to certain restrictions in the use of the existing vocabulary and in the possibilities of its enlargement. *צָצַר*, e.g., is hardly ever used in everyday speech, and a possible new noun *מְצָצָר* † would be rejected owing to its homophonous rival *מְעָצָר* (“retention, arrest”). The difficulties, stemming from the homophony of originally distinctive features, constituted, and still do, one of the main arguments to continue trying to propagate a purer Oriental pronunciation. On the other hand, the common “Sephardi” pronunciation had meanwhile acquired a certain value of social superiority, since most of the leaders of the new *yishuv* came from Ashkenazi circles, and many Oriental Jews, whose original speech did contain the sounds in question, abandoned that part of their native phonetic inventory in order to imitate the speech of their social superiors.

At the first convention of the Hebrew Teachers’ Association in 1903, the pronunciation issue was discussed, but no decision was taken, mainly because Eliezer Ben-Yehuda and David Yellin, members of the Va’ad ha-Lashon, held different views on the desirability and feasibility of one or the other feature of genuine Oriental pronunciation being adopted as standard. The debate went on until, in 1923, the Va’ad ha-Lashon decided to demand the following reform in the pronunciation of the Hebrew letters in question: **ב** without *dageš* = English *v*; **ו** = Arabic *wāw* and English *w*; **ח** = Arabic *ḥā* as distinct from **כ** without *dageš* = Arabic *ḥā* and German *ch* (as in “Bach”); **ט** = Arabic *ṭā* emphatic *t*; **ע** = Arabic *ʕayn*; **צ** = German *z* (*tz*); **ק** = Arabic *qāf* (emphatic velar); **ת** without *dageš* = Arabic *tā* and English unvoiced *th* (as in “thin”).

It is noteworthy that this ruling does not follow the Sephardi tradition in all details. Here, both alternants of *bet*, one written with *dageš* (**ב**) and the other without (**ב**), were pronounced by some Sephardi communities as *b*, and the settlers of Galilee, following their Sephardi teachers, had already adopted this pronunciation. The Sephardim also pronounced **צ** as emphatic unvoiced *ṣ*, like Arabic *ṣād*, while the pronuncia-

tion *tz* provided for in the ruling is Ashkenazi. Furthermore, nothing was said about the vowel *segol* (ֿ), which in Sephardi speech is not distinguished from *šere* (ֿ), i.e., closed *e*, while Ashkenazim and some Israeli speakers to this day distinguish *segol* from *šere*. The Va’ad ha-Lashon in this decision also omitted mentioning the difference in pronouncing *qameš* preceding *ḥataf-qameš*, as in *יָעָמְרָה*, which the Sephardim pronounce *Na’omi* and the Ashkenazim (and most Israelis) *No’omi*.

The authority of the Va’ad ha-Lashon was not sufficient to enforce this reform in the face of already-established speech habits. Consequently, current Hebrew pronunciation differs from that of the Ashkenazim in the following details only: (1) *qameš-gadol* (ֿ) = *a*; (2) *holem* (ֿ) = *o*; (3) *taw* without *dageš* (ת) = *t*; (4) ultimate stress of most words, while penultimate stress is confined to some classes of words, as in classical Hebrew.

In the matter of stress, however, the Ashkenazi way has led to some more deviations from the Sephardi and classical Hebrew system. Many proper names of persons and places have penultimate stress in everyday speech: (‘Raḥel; ‘Moshe, ‘Shlomo, ‘Heḥfa, etc.), and the retracted accent has become, particularly in childrens’ speech, a mark for names of things charged with some affective value: *glida* (“ice cream”), *buba* (“doll”), etc. Penultimate and antepenultimate stresses are also characteristics of foreign borrowings: *komu’nisti* (“communist”), *rele’vanti* (“relevant”) etc., notwithstanding their Hebrew suffix *-i*; *integ’razya* (“integration”), *uni’versita* or *univer’sita*; (“university”), etc.

Efforts to propagate a diction based on classical grammar and Sephardi pronunciation were especially made among broadcasters. The question, however, as to what this desirable correct diction entails and what can be attained was debated up to the late 1960s. Up to that time, the *Academy of the Hebrew Language had recommended to the Israel Broadcasting Service to observe the Oriental pronunciation of *het* and *ʕayin*, the gemination of consonants with *dageš-ḥazaq*, as in *hassefer* (הַסְפֵּר); *dibber* (דִּבֶּר); and the *šewa-na’*, as in *devarim* (דְּבָרִים), *katevu* (כָּתְבוּ), *dibberu* (דִּבְּרוּ). This recommendation was followed to some extent. It is doubtful whether the Oriental diction, though preserved by some Jews of the Oriental communities and applied to Hebrew by Arab citizens, can still contribute to a reform in the speech of wider circles. On opposite trends see Bentolila in Bibliography.

SPELLING. In 1929 when the Va’ad ha-Lashon first published its quarterly *Leshonenu*, the editors stated in their programmatic introduction: “The problem of spelling has not yet been solved.... Some advocate grammatical spelling, others insist on ‘full’ spelling. This is why the editors have decided to use, for the present, the accepted grammatical spelling and add complete punctuation wherever the reading is doubtful... Thus, we have attained uniformity of spelling without deciding upon the problem itself.” What is meant by “full spelling” (כְּתִיב מְלֵא) here is the method of employing, instead of vowel punctuation, vowel letters to supplement the letters admit-

Exceptions to the main rules, i.e., classes of words and letter combinations where no addition of vowel letters is allowed, are shown in these examples: קנה = קנה; תאמר = תאמר; קנה = קנה; תאמר = תאמר (in these verb forms with quiescent א and ה, there is no ו for o); אָמַנְם = אמנם; חִכְמָה = חכמה; אָנִיָּהּ = אנייה; טְהַרָה = טהרה (*qameṣ-qatan* and *ḥataf-qameṣ* are normally not rendered by ו); דִּיּוֹן = דיון; נְטִיּוֹת = נטיות (i left unmarked when preceding -י- or -י-).

It will have been noticed that this supplemented unpointed orthography still uses the following diacritical points: dots in ו and י to distinguish them from each other and from consonantal ו; in ב, כ, פ to distinguish them from ב, כ, פ; and in ה to mark this letter as the final consonantal *h*. While recommending this method, the Va'ad ha-Lashon had made it optional considering that the necessary printing types may not be available. The result could have been foreseen: almost nobody used the dotted letters, but wrote ו for both *o* and *u* and used וו to mark the consonant *w* (*v*), taking advantage of the alternative allowed by the Va'ad. Thus, in fact, בִּקְרַר was (and still is) written בוקר – שולחן – דבור; דיבור – ענין – ענין – הוועד – הוועד – הוועד, etc., and ענין – ענין – ענין – הוועד – הוועד – הוועד, etc. When the Academy of the Hebrew Language adopted the rules of the Va'ad ha-Lashon in 1969, this alternative was abrogated and the basic ruling alone maintained.

The resolution of the Academy was submitted to the Ministry of Education and Culture and published with the minister's signature. A committee appointed by the ministry started consultations to decide at what stage and by what didactic methods supplemented unvocalized spelling should be taught in schools.

Since that time, the Academy revised the spelling rules once again. The decisions made in 1994 can be consulted in R. Gadish (ed.), *Kelalei ha-Pissuk, Kelalei ha-Ketiv Hasar ha-Nikud, Leshonenu La-Am*, special issue, 4th edition (2002).

VOCABULARY. How the vocabulary of the “dead” language was adapted to the requirements of expression in all fields of life and thought is taken by many as the most outstanding achievement of the revival period. True, in less than two generations, thousands of new words and new uses of words have become part of the Hebrew lexicon. However, in this respect at least, Hebrew never was really dead; in literature and occasionally in speech, new words were being coined continually, and while these activities did not cover all domains of life, contents were not restricted to religion, philosophy, poetry and the like. Medieval literature comprises works on medicine, mathematics, astronomy, and other sciences. Matters of daily life were dealt with, for example, in the vast **responsa* literature, in itineraries, etc. and new impulses of modernization further widened their scope. To adduce only two examples, one of a more comprehensive character and the other one particular word: (1) many names of animals used today are not words invented by Ben-Yehuda or after him, but first appeared around 1870 in *Mendele Mokher Seforim's “Natural History”; (2) if the Hebrew word for “passport” occur-

ring in medieval literature – תִּיּוּר (*tiyyur*) or כֶּתֶב־תִּיּוּר (*kètav tiyyur*) – had not been overlooked, there would have been no need for the recent use of the ancient word דַּרְכּוֹן (*darkon*, a coin) in this sense.

As the last example shows, new words have been formed for concepts that had already been expressed by other words in the past. *Bialik's idea (in his essay “*Hevlé Lašon*,” 1891) that total acquaintance with the store of the language ought to precede coining new words could not be followed, let alone his wish that a complete dictionary of all Hebrew writing should be the source for new word creations. In *Aḥad Ha-Am's view (put forward in his essay *Ha-Lašon ve-Sifrutah*, 1909), the vocabulary could only be expanded by creative artists and thinkers who would be guided by the genius of the language. Bialik, though he agreed with him with regard to genuine autonomous creation, insisted upon the necessity to supply, even by designed regular activity, all the words needed, particularly those that had their semantic counterparts in other languages.

Bialik thus approved of, and later participated in, the work undertaken by Ben-Yehuda and the Va'ad ha-Lashon. While many words were, and are, to an ever-increasing degree, invented by writers and experts in their special fields, the principles and methods that guided Ben-Yehuda and his circle were followed by almost all authors of words, if not through conscious abidance, then by imitation and analogy.

The sources and ways for extending the vocabulary were expounded in *Zikronot Wa'ad ha-Lašon* I (p. 7f.): (1) The best method to glean lexical items for modern use was “to search all departments of Hebrew literature and gather from them words...” If the meaning of an ancient word in its original context is doubtful, efforts should be made to clarify its interpretation; if, however, no decision can be reached, coining a new word is preferable to using a contested word. Thus, even today a biblical or later word may be submitted to the Academy for inclusion in a dictionary, but may be opposed by some members, or rejected by the majority, because commentators disagree on its meaning at its source. (2) As far as necessary, Aramaic words may be accepted, but these, unless they are already well known in their original form, are to be reshaped to fit Hebrew pattern and grammar, as happened to the Aramaic עֻבְדָּא (*ovada*) which became עֻבְדָּה (*uvda*) (“fact”), changing both its vocalization and gender.

Ben-Yehuda's design to exploit freely the abundant vocabulary of Arabic has been accomplished to a limited extent only. Most of the words from an Arabic source found in literary and higher colloquial language are either medieval borrowings: אֶפֶק (*ofeq*), קֹטֵב (*qotēv*), קֹטֵר (*qoter*), מְרָכָז (*merkaz*), and more, or are due to Ben-Yehuda himself: הַגִּירָה (*hagira*), הַשְּׁחָרָה (*hashara*), זִבְדָּה (*zivda*), אֲדִיב (*adiv*), לֵטִיפָה (*letifa*), etc. Later, few new words entered standard Hebrew from Arabic, presumably because the creators of the new vocabulary came in the main from circles who knew no Arabic. When borrowing from foreign languages, they preferred the European, often international, word to the Arabic one, e.g., נִיטְרָלִיּוֹת,

(*netraliyyut*; “neutrality”) to the suggested הייוד (*hiyyud*: from the Arabic *hiyād*). It is all the more remarkable that sub-standard speech has a high proportion of Arabic words and phrases.

In earlier years, borrowing from non-Semitic languages was firmly rejected with the exception of words with a Hebrew-like form or already in frequent use, but this attitude was later abandoned. Yet, many speakers of Hebrew even today frown upon words taken from European languages, such as, אַקדמיה (*aqademya*) and אוניברסיטה (*universita*) proving that such words are felt to be foreign unwieldy elements and that the prior general attitude in this respect did not merely stem from the extremism of a few. On the whole, however, international technical terms are now widely adopted not only in specialized publications but in newspapers and books for the general public. Colloquial speech, too, comprises many foreign words, partly perhaps due to a passing snobbish fashion. *Even-Shoshan’s seven-volume “New Dictionary” (1966–1970) contains 3,448 foreign, mainly international, words among its 33,549 basic items, and in the “Dictionary of Terms in Photography,” published by the Academy in 1966, there are 53 borrowed international words among its 700 items. An important restriction on the borrowing of words of non-Semitic origin is the structure of the Hebrew verb which is formed according to severe rules, e.g., that certain vowels must appear in certain positions in verb forms; that only a limited number of consonants can constitute a verb-root, etc. As a matter of course, the necessary coining of an original Hebrew verb often also leads to the replacement of the corresponding foreign noun.

According to the principles of the *Va’ad ha-Lashon*, words should be created “in agreement with the rules of grammar and analogy.” As far as possible, they are to be derived from roots found in biblical and talmudic literature and, in the second place, from Aramaic and other Semitic, especially Arabic, roots. To establish new scientific terms, one should aim at the essential signification, not the literal meaning, of the words of other languages. Newly coined words have not only to be grammatically correct, but pleasing to the ear and appropriate to the spirit of the language.

Contrary to the intention to avoid expressing only the literal and etymological meaning of the foreign word, loan-shifts and loan-translations have been and are an ever-growing source for new uses of existing Hebrew words. As in every language throughout the ages, Hebrew words also contract new meanings under the influence of particular applications of corresponding words in other languages, and foreign compound words and phrases are rendered in Hebrew by literally translating their components. English “crane,” for the hoisting machine, French “grue,” etc. have brought about the Hebrew אַגוּרן (*aguran*) derived from the name of the bird; and German “Kindergarten” has engendered גַּן-יְלָדִים (*gan-yeladim*; “garden” (of) “children”). Nowadays, the principle of such semantic borrowings is seldom debated; only innovations that are felt to be too farfetched and removed from prevailing usage are rejected. In word formation, modern Hebrew, for the

most part, follows the methods inherited from former stages of the language. The available noun and verb patterns are used to the full for innovations. Yet, some possibilities of derivation and combination that in older Hebrew were realized in relatively small measure are now put to use more extensively and, as some maintain, even excessively. The following deserve special mention and exemplification:

(1) Many nouns and adjectives are derived from noun bases by adding suffixes:

(a) *-an*, fem. *-anit* for nouns, as in: הַצוּפָרֵן (*haššeran*, “trumpeter”); תוֹתָחָן (*totahan*, “artilleryman”); דוֹדָן (*dodan*, fem. דוֹדָנִית (*dodanit*, “cousin”); מְהַפְכָן (*mahpēkan*, “revolutionary,” n.); תִּיקָן (*tiqan*, “cockroach,”), from תִּיק (*tiq*, “envelope,” i.e., the protective shell of the insect’s eggs).

(b) *-ay*, fem. *-ait* for nouns, as in: עֵתוֹנָי (*ittonay*, fem. עֵתוֹנָיִת *ittona’it*, “journalist”); בּוֹלָאֵי (*bulay*, “philatelist”); אַוִירָאֵי (*awiray*, “airman”); מְכוֹנָאֵי (*mēkonay*, “machinist”); טֵלֶפּוֹנָאֵי (*telefonay*, fem. טֵלֶפּוֹנָאִית *telefonait*, “telephone operator”); סְטַטִּיסְטִיקָאֵי (*statistiqay*, “statistician”).

(c) *-on*, fem. *-onet*, often for diminutive nouns: דָּבּוֹן (*dubbon*, “young bear, teddy bear”); יַלְדוֹן (*yaldon*, “small boy”), יַלְדוֹנֶת (*yaldonet*, “small girl”); שְׂדוֹן (*šedon*, “sprite”).

(d) *-i*, fem. *-it*, mainly for adjectives: צְבָאִי (*ševa’i*, “military”); גַּמְמָדִי (*gammadi*, “dwarfish”); אֶפְסִי (*afsi*, “amounting to nothing”); תְּהוֹמִי (*tēhomi*, “abysmal”); עֲנָקִי (*anaqi*, “colossal”). The suffix *-i* is also widely used to derive adjectives from compounded pairs of nouns, as in: צְפוֹן-מִזְרָחִי (*šefon-mizrahi*, “north-eastern”), from צְפוֹן-מִזְרָח (*šefon-mizrah*, northeast); גַּב-לְשׁוֹנִי (*gav-lēšoni*, “dorsal,” in phonetics), from גַּב-לְשׁוֹן (*gav-lašon*, “dorsal surface of the tongue”); כְּלָל-אֲנוּשִׁי (*kēlal-ēnoši*, “all-human, universal”). This mode of derivation, found in the Bible in gentilitical names, like בְּנֵי-יְמִינִי (*Ben-Yēmini*, “Benjaminite”) and בֵּית-הַלְּחֶמִי (*Bet-Hallahmi*, “Bethlehemite”), has also been extended to compounds whose first member is a quantifier, as in: חֵד-כּוּוּנִי (*had-kiwwuni*, “unidirectional”); דוּ-לְשׁוֹנִי (*du-lēšoni*, “bilingual”); רַב-צְדָדִי (*rav-šēdadi*, “many-sided”); or a preposition, as in: בֵּין-לְאֻמִּי (*ben-lē’ummi*, “international”); עַל-אֲנוּשִׁי (*al-ēnoši*, “superhuman”).

(e) *-it*, for nouns, some diminutive (besides being the feminine form of *-i*): מְכוֹנִית (*mēkonit*, “automobile”); מוֹנִית (*monit*, “taxi”); יָדִית (*yadit*, “handle”); מַפִּית (*mappit*, “napkin”); תּוֹתִית (*tawit*, “label”).

(f) *-ut*, for abstract or collective nouns: בּוֹרְרוּת (*borērut*, “arbitration”); צִיּוֹנוּת (*šiyyonut*, “Zionism”); רוֹקְחָנוּת (*roqēhut*, “pharmacology”); מֵיִלְדוּת (*meyallēdut*, “obstetrics”); עֵתוֹנוּת (*ittonut*, “press”).

(g) Several of the foregoing suffixes may combine to form new derivations, such as: מְהַפְכָנִי (*mahpēkani*, “revolutionary,” adj.); מְהַפְכָנוּת (*mahpēkanut*, “revolutionism”); תּוֹתְחָנוּת (*totēhanut*, “artillery”); עֵתוֹנָאוּת (*ittona’ut*, “journalism”); גַּמְמָדִיּוּת (*gammadiyyut*, “dwarfishness”); אֶפְסִיּוּת (*afsiyyut*, “worthlessness”).

(2) New nouns are built by joining elements of two other words, particularly when this is suggested or facilitated

by both words having one or more consonants in common or by the second word beginning with a glottal stop (*ʾalef*) which can easily be omitted. קולנוע (*qolnoaʿ*, “cinema”) is but a simple joining of קול (*qol*, “sound”) and נוע (*noaʿ*, “movement”), while אופנוע (*ofannoaʿ*, “motorcycle”) joins אופן (*ʾofan*, “wheel”) and נוע (*noaʿ*). Two original consonants are omitted in דהפור (*dahpor*), a blending of the verbal roots דחף (*d.h.f.*) and חפר (*h.f(p).r*); with the recurring pair ח (*h*) and פ (*f(p)*) inserted only once, the sequence דחפר (*d.h.f(p).r*) is left and shaped into a noun with the vowel sequence *a.o* frequent in nouns. On the same vowel pattern רמזור (*ramzor*, “traffic light”) is formed from the verbal root רמז (*r.m.z.*, “to indicate”) and the noun אור (*ʾor*, “light”) whose initial א *ʾalef* is elided. The popular creation שמרטף (*šmartaf*, “babysitter”) is compounded from שמר (*š.m.r.*, “to watch”) and טף (*taf*, “children”), but the Academy prefers שומר-טף (*šomer-taf*) modeled after the biblical שומר-טף (*šomer-saf*, “keeper of the door”).

(3) Among verbal innovations the amount of denominative verbs is significant: רישת (*riššet*, “to cover with a net”) comes from רשת (*rēšet*, “net”); קרקע (*qirqʿa*, “to ground [an aircraft]”) from קרקע (*qarqaʿ*, “ground”); נתב (*nittev*, “to pilot”) from נתיב (*nativ*, “path”), and numerous others, especially scientific, technological, and military terminology. For such new active verbs, the pattern *pīel* is preferred with *hifʿil* left far behind and *paʿal* (*qal*) almost entirely neglected.

(4) Many of these new denominative verbs are derived from nouns with prefixed or suffixed formatives. Thereby, new roots, mostly quadriliteral, have entered the language: מרכז (*mirkez*, “to centralize”), with it the passive participle ממרכז (*mēmurkaz*), and the action noun מרכז (*mirkuz*) have been derived from מרכז (*merkaz*, “center”) to differentiate from the former verb רכז (*rikkez*, “to concentrate”) which shows the original root רכז (*r.k.z.*) מספר (*mispar*, “to number”) contains in its secondary root מספר (*m.s.p.r.*) the consonants of מספר (*mispar*, “number”), a noun derived from the primary root ספר (*s.f(p).r.*). The relation between תזמר (*tizmer*, “to orchestrate”), תזמורת (*tizmóret*, “orchestra”), and the primary root זמר (*z.m.r.*) is similar. In a *piyyuṭ* by Eleazar *Kallir (of the early Middle Ages) there is the verb התמיר (*hitmir*) originating from תמורה (*tēmura*, “change”) which in turn is based on the primary root מור (*m.w.r.*); the verb התמיר (*hitmir*) has now passed from its remote literary source into modern use in the meaning “to substitute” in chemistry. From the primary root חמצן (*h.m.z.*) Ben-Yehuda formed the noun חמצן (*hamzan*, “oxygen”), and this served as a base for the new verb חמצן (*himšen*, “to oxydize”).

(5) Another way to form denominative verbs is to derive new roots from contractions or acrostics of compound words. Thus, from דין-והשבון (*din-wē-ḥešbon*, “account, report”) first the acrostic דוה (*duah*, “report”) came into use, and then the verb דוה (*diwwah*, “to report”) was formed with the artificial root דוה (*d.w.h.*). In order to obtain a Hebrew verb for “to internationalize,” to which בנאם (*ben-lʿummi*, “international”) did not lend itself, a contracted root בנאם (*b.n.ʿm*) had to be presumed to arrive at the desired verb בנאם (*binʿem*)

and its action noun בנאים (*binʿum*, “internationalization”). However, this presumption is not so farfetched, since there is a Hebrew noun אמה (*umma*), besides לאם (*lʿom*) for “nation.”

(6) In analogy to several verbs of the *šafʿel* formation inherited from biblical and later Aramaic and Hebrew, some new causative verbs and action nouns with the prefixed *š-* have been created from existing roots, mainly where other verb formations had already been exploited for the same root. To these innovations, some of which have been sanctioned by the Academy, belong שחזר (*šihzer*, “to restore”), root חזר (*h-z-r.*, “to return”), and its action noun שחזור (*šihzur*); שקם (*šiqqem*, “to rehabilitate”) with שקום (*šiqqum*) as action noun, root קום (*q-w-m.*, “to rise”); שפרט (*šifret*, “to elaborate”) derived from פרט (*pʿrat*, “detail”); שכפל (*šikpel*, “to duplicate, multiply [written matter]”), etc. Among the first and most widely used of these new words were שחזור (*šihzur*) with the meaning of restoration of a previous condition inherent in its root חזר (*h-z-r.*), and שקום (*šiqqum*), which intrinsically only means “causing to rise, erecting,” but was used in contexts entailing the connotation of “again.” Many speakers, therefore, came to attribute this meaning of remaking or redoing to the *šafʿel* formation, and by way of vindicating this semantic shift, some even interpreted the prefixed *š-* as an abbreviated שוב (*šuv*, “again”). On this assumption, more verbs and action nouns with initial *š-*, corresponding to English *re-*, have been formed and in part accepted: שהלף (*šihlef*, “to re-exchange”), root חלף (*h-l-f.*) – in another sense שהלף > שלחף (*šalḥef* < *šahlef*) is already found in the Aramaic of the Targum and Talmud; שערוך (*šʿiaruk*, “reassessment”), root ערך (*ʿ-r-k.*); שזרע (*šizraʿ*, “to resow”), root זרע (*z-r-ʿ.*); שגזור (*šigzur*, “back formation” in linguistics), root גזר (*g-z-r-ʿ.* “to derive”), etc.

(7) A considerable number of passive verbal adjectives has been adopted with the vowel sequence *a-i* inserted in the root and corresponding in meaning to French and English adjectives in *-able*, *-ible*. The first of these probably was שביר (*šavir*, “breakable”), followed by קריא (*qari*, “readable,” “legible”), סביר (*savir*, “reasonable”), כביס (*kavis*, “washable”), חדיר (*ḥadir*, “penetrable”), דחיס (*dahis*, “compressible”), and more. However, this pattern has at all times served in the formation of other adjectives (as the biblical *ʾašir* “rich”) and of nouns (as the biblical *qašir* “harvest”). Its application to defective roots meets with difficulties; its use is limited to derivations from *paʿal* (*qal*) verbs, and its corresponding abstract noun is ambiguous (e.g., דחיסות *dēḥisut* may be understood as “compressibility” and as “[state of] compression,” from *dahus*, “compressed”). Words of this semantic category are, therefore, also formed in other ways, either with the suffix *-i* appended to an action noun, as in שמושי (*šimmušī*, “practical”), from שמוש (*šimmuš*, “practice, use”), or, as in classical Hebrew, either by the use of passive participles, such as מתקפל (*mitqappel*, “collapsible,” “folding”); נאכל (*neʿēkal*, “edible”); מטלטל (*mitṭaltel*, “portable”), etc., or by compounding בן- or בר- with abstract nouns, mostly action nouns, as in בן-סמך (*ben semek*; “reliable”) and בן-בוז (*ben-buz* [Bialik],

“contemptible”); בַּרְבִּיצוּעַ (*bar-biṣṣua*“ executable”); בַּרְבִּיטוּל (*bar-biṭṭul*, “abolishable”), etc.

GRAMMAR. In 1905, the teachers’ convention agreed to Yellin’s proposal for a standardized orthography based on the biblical vocalization system. This, to a large extent, led to the acceptance of biblical Hebrew grammar for modern Hebrew. The spelling and vocalization adopted determined the form of words and their inflection, though in this sphere, too, usage had to be normalized to eliminate variations and prosodic peculiarities of the Bible text.

In 1910, this topic was discussed in a meeting of the Va’ad ha-Lashon in which Eliezer Ben-Yehuda, Yisrael Eitan, David Yellin, Aharon Masie, and Yosef Meyuḥas took part. The summary of this debate, published in *Zikronot Va’ad ha-Laṣon* 11 (2nd ed., 1929, p. 17ff.) has lost little of its import; many of the arguments set forth then are still heard whenever there is doubt about the preferable form and inflection of a word or a class of words. The discussion then originated from one particular question, i.e., the correct plural for the mishnaic אֶגְנִי (*ogen*, “rim, brim”), whether it should be אֶגְנִיִּים (*ōganim*) according to grammar based on the Bible, or (אֶגְנִיִּים אוּגְנִיִּים) (*ognim*) as found in mishnaic Hebrew. Many aspects of modern grammar were treated in the light of ancient literary sources during this debate.

In conclusion, the following resolution was proposed by D. Yellin and adopted: “We take from talmudic and midrashic literature words and expressions which we need and new grammatical forms supplementing those found in the Bible. Talmudic words accepted are to be given a Hebrew form whenever possible. For verbs no new forms are needed if in the Bible there are corresponding forms.” The significant words in this resolution provide that neither in vocabulary nor in grammar should anything available in the Bible be replaced by elements from later literature. Regarding the special problem of the plural of nouns, such as אֶגְנִי (*ogen*), both forms were admitted, but later the “Dictionary of Technical Terms,” published in 1929 by the Va’ad with H.N. Bialik as one of its editors, contained only the plural form אֶגְנִיִּים (*oganim*) in conformity with biblical grammar.

The principles adopted by the Va’ad ha-Lashon were observed, with few exceptions, by teachers and in textbooks. According to these norms, the teaching of grammar, on the whole, not only excluded the divergent traditions of Hebrew and the innovations found in post-biblical literature, but also disregarded the language in which Hebrew literature had been written since the end of the Haskalah. It was to the principles of the Haskalah that normative grammarians now reverted. The literature before the revival of Hebrew speech in Palestine, especially since Mendele Mokher Seforim, had not submitted to the restrictions imposed by the Haskalah, but had freely blended biblical elements with talmudic and later grammatical forms as well as with words and phrases from all periods and even borrowings from modern European languages. However, as modern literature and speech have continued to

grow, grammar based on the Bible has proved inadequate for all the new material.

The strict adherence to what was known and held in biblical grammar is well exemplified by A.Y. Shapiro in his *More Nevuké ha-Laṣon* (Warsaw, 1909). The author corrects about 140 words and grammatical forms found in the writings and speech of his contemporaries, naturally according to his views on the Bible text and to the conclusions he draws from it. Thus, he rejects אֶרְכָּה for אָרוּכָה; נִאָּנַח for הִתְאַנַּח; אָבַד for נָאָבַד (fem. of אָרַךְ, “long”), the infinitives לִישֵׁב, לִיָּלֵךְ, etc., for the biblical forms לְדַעַת, לְשַׁבֵּת, לְלַכֵּת, etc.; infinitives such as לְקָרוֹת for לְקָרָא; פִּי יִפִּי both in the absolute and construct case for פִּי; the imperfect אֶלְמוֹד for אֶלְמַד; עוֹמֵס for עוֹמֵס (“carrying, burdened”): ... לְ... הָרָאָה אֶת... אֶת... for ... הָרָאָה אֶת... אֶת... etc. Although the author, in an appendix, shows that some of these and other non-biblical forms are found in talmudic literature, he does not approve of their use in modern language. However, these forms and many more have in fact existed in the literature, or in certain traditions of Hebrew, for centuries and are accepted by some of the best modern writers, their selection being but a matter of personal style.

As Hebrew is the paramount unifying factor of modern national culture in Israel, a distinction had of necessity to be made between the standard language taught in schools and used in public addresses, broadcasting, and the like, and the individual idiom of creative writers and the traditions of the various Jewish communities in reading religious and other texts that naturally also influence their everyday speech. The work of establishing a normative grammar of modern Hebrew – one of the chief tasks of the Va’ad ha-Lashon and the Academy of the Hebrew Language – will understandably take a long time and, in fact, imposes itself constantly anew in response to cultural developments. However, once the foundations have been laid and become general usage, much can be left to natural growth without interference of any linguistic authority. Even today the greater part of new words and word forms used spontaneously by individuals already conforms to grammar rules.

The new, Hebrew grammar is gradually being built by two separate activities: by comprehensive discussion and decision on systematic divisions of grammar and by ad hoc instructions on particular problems submitted by writers, teachers, journalists, and other members of the public or arising from the work of terminological committees. The former course is naturally preferred, yet it is lengthy and cannot answer urgent needs; therefore, the latter is unavoidable, although its ad hoc directives have occasionally to be amended to agree with a subsequent comprehensive ruling.

The foremost aim of the Va’ad ha-Lashon in its systematic treatment of grammar was to decide on words for which the biblical text does not provide sufficient exemplary evidence or offers several divergent forms of one word, e.g., for the noun לְטָאָה (“lizard”), found only in this form once in Leviticus, two forms with pronominal suffixes may be inferred: לְטָאָתִי or לְטָאָתֵי; by analogy, two forms for the post-biblical

מִתְחַהֵּה (“protest”) would be possible; אָגַם (“pool,” “pond”) has two inflected forms belonging to different paradigms: אָגַמְיָהַם and אָגַמְיָהָם, both in Exodus. Whenever there was no doubt about the biblical form of a word, the Va’ad accepted this precept and allowed only very few exceptions dictated by firmly established usage, e.g., permitting קְתִיבֵי הַקִּדְּשׁ (“Holy Scriptures”) besides the form based on the Bible קְתִיבֵי הַקִּדְּשׁ from קְתִיב with an unchangeable *qames*. This principle inevitably led to a twofold treatment of words of one and the same morphological pattern: Words taken from the Bible went one way, and those coming from later sources or coined recently went another. Thus, the rule for nouns of the pattern *qēṭal* to which קְתִיב belongs, lists the biblical words whose *qames* is to be unchangeable, and provides for the change of *qames* to *pataḥ* or *šewa* only in words from later sources, such as שָׁרַר (“writ, note”) – שְׁטֵר־חֹב (“note of debt,” sing. construct state) – שְׁטֵרֵי־חֹב (plur. construct state).

When the Academy continued this work of the Va’ad ha-Lashon, the renewed debate led to a fundamental change. Now, the rules are to deal with modern Hebrew as a whole, and the dichotomy of its vocabulary by reason of its sources, whether biblical or post-biblical, has been abandoned. It is no longer a matter of course that for each biblical word its biblical inflection be accepted in the modern language. If this is to be done, and, in general, it is, the issue is open to discussion and subject to decision in accordance with the tendency to allow well-established traditions and usages their proper place, and to make each new rule as comprehensive as possible. Most of the rules still have their exceptions, of course, but these are few, and they sometimes include biblical forms or state their existence without recommending their use.

So far, only the rules for the inflection of nouns have been systematically discussed and partly established. The arrangement of the rules follows the alteration of the vowels in each class of nouns, this being the prominent feature in Hebrew inflection. Each rule is the outcome of a thorough examination of the ways in which the various sources of the language treated the vowels in inflection. The rules for *qames gadol* and *pataḥ* have been published (*Zikronot* 7–8, 1962, p. 91ff and 13, 1967, p. 7f.), and the rules for the other vowels were decided upon and issued by the Academy in later sessions, the most recent publication being in *Leshonenu La-Am*, 51–52 (2000–1), pp. 153–98.

As an example, paragraph 8 of section 2 in chapter I will be given here with some added remarks:

The *qames gadol* is stable in the endings ךְּ-, תְּ-, ךְּ-, in nouns denoting occupations and qualities, such as לְמַדְּנִיכִים – לְמַדְּנִין; בִּימָרִי – בִּימָר; לְבַלְרִיכִים – לְבַלְרִין; גְּאוֹתָן – גְּאוֹתֵי; קִבְּלוּ – קִבְּלוּנִי; סְמַרְטוּטִי – סְמַרְטוּטֵי; סְנַדְלִיכִים – סְנַדְלִיךְ.

The *qames* is stable in the nouns אֵיתָן – אֵיתֵי; סִימָן – סִימְנֵי; אֵיתָנִי – אֵיתֵי; and in loanwords, such as רִוּמָן, גְּרַפּוּמָן, etc.

In other nouns, the *qames* changes in inflection: – שְׁלַחְנוֹתָן (constr.); בְּנִינֵי – בְּנִינֵי; עֵינֵיכֶם – עֵינֵי; אֲמַדְנֵי – אֲמַדְנֵי; פְּלַחְנֵי – פְּלַחְנֵי; שְׁלַחְנוֹתָן (constr.); בְּנִינֵי – בְּנִינֵי; עֵינֵיכֶם – עֵינֵי; אֲמַדְנֵי – אֲמַדְנֵי; פְּלַחְנֵי – פְּלַחְנֵי; עֵקְבָרִי – עֵקְבָרִי; סוֹדֵרִי – סוֹדֵר; טַפְסָרִי – טַפְסָרִי; קָרְבָנוֹתֵי – קָרְבָנוֹתֵי; עֵקְבָרִי – עֵקְבָרִי; קוֹלְרִיכִים – קוֹלְרִיכִים.

This paragraph presupposes paragraph 1 of section 1 which provides that “every *qames gadol*, occurring in the absolute state in a stressed syllable, changes to *pataḥ* in the singular construct state and before the pronominal suffixes ךְּ-, ךְּ-, ךְּ-.” Therefore, שְׁלַחְנוֹתָן, e.g., in these two contexts becomes שְׁלַחְנוֹתָךְ and שְׁלַחְנוֹתָי respectively.

Of the 21 words adduced as examples in this rule, only seven are biblical: אֵיתָן, שְׁלַחְנוֹתָן, קָרְבָנוֹתֵי, עֵינֵי, עֵקְבָרִי, טַפְסָרִי, עֵקְבָרִי. (The last word, of Sumerian-Accadian origin, occurs twice in the Bible, once with *hireq* and once with *pataḥ* in the first syllable.) Another nine words, partly Greek or Latin borrowings, are found in talmudic-midrashic literature: סוֹדֵר, קוֹלֵר, סְנַדְלִיכִים, סִימָן, אֲמַדְנֵי, פְּלַחְנוֹתָן, גְּאוֹתָן, קִבְּלוּ, and one, לְמַדְּנִין is found in medieval writings (and also in Yiddish), but there are many newly created words of the same formation. Two words are modern derivations from older ones: סְמַרְטוּטִי (“rag picker”) from the talmudic סְמַרְטוּט (“rag”) and בִּימָר (“stage technician”) from the originally Greek בִּימָה (“stage”). The remaining two, גְּרַפּוּמָן, רִוּמָן, are contemporary loans from European languages.

The salient point here is that, without regard to their history, all these words are integrated in the modern vocabulary and divided with respect to their inflection: not necessarily in conformity to biblical grammar. The fact that they do not behave uniformly in inflection has historical reasons. The group with changing *qames* follows three of its members – שְׁלַחְנוֹתָן, עֵקְבָרִי, קָרְבָנוֹתֵי – for which the Bible text has *šewa*, or *šewa compositum*, replacing *qames* in the relevant inflected forms. The other group, with stable *qames*, complies with the usual pronunciation of most of its members.

Outside of the systematic treatment of grammatical and other problems by the Academy, ad hoc solutions of specific questions deal not only with morphology, but with syntax and style as well. A few examples must suffice here. In the field of morphology it is often necessary to fix the exact spelling and vocalization of old words that have been handed down in several forms. The vowels of the talmudic noun גּוֹפָן (“character of script”) are uncertain; thus of the forms גּוֹפָן, גּוֹפֵן, גּוֹפִין which are found, the first has been chosen. Even for the verb הוֹיַע (“to sweat,” in the *hif’il*, two vocalizations have been in use: הוֹיַע and הוֹיַע; the choice fell on הוֹיַע because it agrees with the root suggested by the inflection of the biblical noun זְעָה (“sweat”) which alone is in common use today (זַעַי). Committees on terminology, when proposing a new word, are often in doubt about its grammatical form. Thus, מְכֵל (“container”) has been selected instead of מְכֵל previously chosen by the Va’ad ha-Lashon. Foreign words admitted into the language require their Hebrew plural to be determined. Thus for the plural of מַקְסִימָאוֹת (“maximum”) the form מַקְסִימָאוֹת has been proposed in the same way as mishnaic Hebrew dealt with similar Greek and Latin nouns (וִילוֹן – Latin “vellum” – plural וִילָאוֹת).

Syntactic structure in translated literature and in journalistic writing has been greatly influenced by European languages (now mainly English). One of the results, for example, is the frequent appearance of non-restrictive, continuative relative clauses, such as, הַשּׁוֹטְרִים רָדְפוּ אַחֲרָי הַגָּבִב שֶׁנִּמְלֵט לְתוֹךְ הַבַּיִת,

הִקְרוּב. ("The police pursued the thief, who escaped into the nearest house"). Although this use is found neither in the colloquial language nor in that of writers whose Hebrew is considered exemplary, it is frequent in journalese and officialese. Some linguists do not condemn it on this level of the language, and the same applies to other syntactic structures, equally foreign to more elevated and conservative style.

Modern Hebrew as a Semitic language, with an ancient literary heritage still cherished and studied, was already exposed to the impact of the modern world and of modern non-Semitic languages when it only was the vehicle of literary revival and before it became a fully living language. Whoever took part in the revival of the language, in writing or in speech, was aware of this position, its requirements and consequences. But for the past 80 years at least, Ben-Yehuda and his collaborators and their successors have made a conscious effort to develop Hebrew and adapt it to modern use on the lines on which, in their view, it would have developed if its natural life had continued without interruption into the 20th century. In fact many other languages which have not passed a period of suspended animation now face problems quite similar to those of modern Hebrew. What Hebrew experienced now has happened to it before, for example, in the talmudic period and in the later Middle Ages, when not only new words were formed or borrowed and old words were used to refer to new objects, but the morphological, syntactic, and conceptual structure of the language changed in part, both by direct imitation of other languages and under the influence of their manner to organize the relation between words and concepts.

One of the characteristics of modern Hebrew is the speed of the changes in all respects. Thus it offers much interesting material to the linguist to show the trends of its evolution and to discover general linguistic facts and processes in it. Two phenomena: "Westernization" and "re-Hebraization" (much discussed in treatises on language policy, especially by Rosén, Ben-Hayyim, and Bendavid), in the recent development of the language are obvious to all observers. The "ancient language being in a new reality" absorbs concepts and forms of Western languages through cultural contacts, through more or less apt translation, immigration, and bilingualism, etc. The wish to strengthen the inherited Hebrew component is obvious and may be realized through extended Hebrew education, more intense study of classical writings, the growth of modern literature imbued with old language tradition and the increased number of its readers, competent guidance of language development and by adapting old forms to modern contents.

[Eli Eytan]

Gelb, *Computer-aided Analysis of Amorite* (1980); C.H. Gordon, "Amorite and Eblaite," in R. Hetzron (ed.), *The Semitic Languages* (1997), 1001–13; M.P. Streck, *Die Amurriter, die onomastische Forschung, Orthographie und Phonologie, Nominalmorphologie* (2000). BIBLICAL. The best grammar is still that of G. Bergstraesser, *Hebraeische Grammatik* (1918–29), which, though a torso, is an impressive piece of scholarship in the field of phonetics and the verb. An excellent short account is contained in G. Bergstraesser's *Einfuehrung in die semitischen Sprachen* (1928, repr. 1963), 36–46. For the development of stress see M. Lambert, *REJ* (1890), 73–77; J. Cantinneau, in: *Bulletin d'Études Orientales de l'Institut Français de Damas* (1931), 81–98. Important grammars are: H. Bauer and P. Leander, *Historische Grammatik der hebraeischen Sprache des Alten Testaments* (1922; does not contain syntax); W. Gesenius, E. Kautzsch and A.E. Cowley, *Hebrew Grammar* (1913² and many reprints; translated from the 28th German edition of 1909); P. Joüon, *Grammaire de l'Hébreu Biblique* (1923). Important material is contained in E. Koenig, *Historisch-kritisches Lehrgebaeude der hebraeischen Sprache* (1881–97). Biblical Hebrew against its general Semitic background is described in C. Brockelmann, *Grundriss der vergleichenden Grammatik der semitischen Sprachen* (1907–13); yet his *Hebraeische Syntax* (1956), mostly taken from the masterly syntax contained in the second volume of his *Grundriss*, is less good, since it lacks the general Semitic back-

ground. Good is the syntax of A.B. Davidson, *Introductory Hebrew Grammar; Hebrew Syntax* (1912³), and even today one will often consult the masterly syntax contained in H. Ewald, *Ausführliches Lehrbuch der hebraeischen Sprache des Alten Bundes* (1870⁸) which was translated into English by James Kennedy as *Syntax of the Hebrew Language of the Old Testament* (1879). The new work of (G. Beer-) R. Meyer, *Hebraeische Grammatik* (1952–55²) is only important because of the new material adduced; the same applies to A. Sperber, *A Historical Grammar of Biblical Hebrew* (1966), where, e.g., material of Jerome's transcriptions is to be found. For the language of the Qumran scrolls see E.Y. Kutscher, *Ha-Lašon wê-ha-Reqa' ha-Lěšoni šel Měgillat Yěš'ayahu ha-Šělma* (1959; with English summary). For Hebrew inscriptions cf. S. Moscati, *Stato e problemi dell'epigrafia ebraica antica* (1952) where additional literature is adduced; also Aharoni and Amiran, in: IEF, 14 (1964), 138–43; Aharoni, in: IEF, 16 (1966), 1–7. For transcriptions of Palestinian place names see W. Borée, *Die alten Ortsnamen Palaestinas* (1930); for transcriptions of the Septuagint, G. Lisowsky, *Die Transkription der hebraeischen Eigennamen des Pentateuch in der Septuaginta* (1940); for those of Origen, E. Bronno, *Studien ueber hebraeische Morphologie und Vokalismus auf Grund der Mercatischen Fragmente der zweiten Kolumne der Hexapla des Origines* (1943). For the transcription of Arabic names in Nessana see the index of Arabic names by F.E. Day, in: C.J. Kraer (Jr.), *Excavations of Nessana*, 3 (1958), 352–5. For the Bible text see D. Ginsburg, *Tora Nėvi'im Kėtuvim* (1926²); R. Kittel and P. Kahle, *Biblia Hebraica* (1962¹³). One sample of the edition of the Hebrew University Bible Project has also appeared: M.H. Goshen-Gottstein, *The Book of Isaiah*, sample edition (1965). For an example of P. Kahle's views on the work of the masoretes see his *Cairo Geniza* (1959²). The best biblical dictionaries are still F. Brown, S.R. Driver, and A. Briggs, *A Hebrew and English Lexicon of the Old Testament* (1906, etc.); W. Gesenius and F. Buhl, *Hebraeisches und aramaeisches Handwoerterbuch ueber das Alte Testament* (1915¹⁶); W. Gesenius, *Hebrew and Chaldee Lexicon to the Old Testament* (1857, repr. 1957); and L. Koehler and W. Baumgartner, *Lexicon in Veteris Testamenti libros* (1953, Supplement 1958) – only the Aramaic part is up to the high standards of its predecessors. A new edition of this dictionary by W. Baumgartner, B. Hartmann and E.Y. Kutscher is appearing: *Hebraeisches und Aramaeisches Lexikon zum Alten Testament*, 1 (1967). For further literature see Steinschneider, *Handbuch*.

Elliger, *Studien zum Habakuk-Kommentar vom Toten Meer* (1953). MANUAL OF DISCIPLINE: P. Wernberg-Møller (ed. and tr.), *Manual of Discipline* (1957); J. Licht (ed.), *Měgillat ha-Sėraķim* (1965; "Rule Scroll"); J. Maier (ed.), *Texte vom Toten Meer... 2 vols.* (1960), includes all the above scrolls. ZADOKITE DOCUMENTS: C. Rabin (ed. and tr.), *Zadokite Documents* (1954, 1958²). STUDIES ON THE GRAMMAR IN THE DSS: E.Y. Kutscher, *Ha-Lašon we-ha-Reqa' ha-Lěšoni šel Měgillat Yěš'ayahu ha-Šělma* (1959; "The Language and the Linguistic Background of the Isaiah Scroll"), includes summary in English; Ĥ. Yalon, *Měgillot Miđbar Yėhuda; Divré Lašon...* (1967; "Studies in the Dead Sea Scrolls, Philological Essay"), includes summary in English; M.Z. Qaddari, *Ha-Ĥiyyuv bi-Lěšon ha-Měgillot ha-Gėnuzot* (1968; "Semantic Fields in the Language of the DSS"), includes summary in English. SELECTED ARTICLES: B. Jongeling, "Les formes QTWL dans l'hébreu des manuscrits de Qumrân," in: *Revue de Qumran*, 1 (1958/59), 483–94; F.W. Bush, "Evidence from Milĥamah and the Masoretic Text for a Penultimate Accent in Hebrew Verbal Forms," *ibid.*, 2 (1959/60), 501–14 (against his conclusions see: E.Y. Kutscher above, 254–61); M.H. Goshen-Gottstein, "Philologische Miscellen zu den Qumrantexten," *ibid.*, 2 (1959/60), 44–46; J.C. Greenfield, "The Root GBL in Mishnaic Hebrew and in the Hymnic Literature from Qumran," *ibid.*, 2 (1959/60), 155–62; E.J. Revell, "The Order of the Elements in the Verbal Statement Clause in IQ Sereq," *ibid.*, 3 (1961/62), 559–69; S.J. de Vries, "Syntax of Tenses and Interpretation in the Hodayoth," *ibid.*, 5 (1964/66), 375–414; S. Lieberman, "The Discipline in the so-called Dead Sea Manual of Discipline," in: JBL, 71 (1952), 199–206; von N. Adler, "Die Bedeutung der Qumran Texte fuer die neutestamentliche Wissenschaft," in: *Muenchener theologische Zeitschrift*, 6 (1955), 286–301; J.P. de Menasce, "Iranien Naxcir," in: *VT*, 6 (1956), 213–4; W. Nauck, "Probleme des fruehchristlichen Amtsverstaendnisses," in: *ZNW*, 48 (1957), 200–20; Z. Ben-Hayyim, "Traditions in the Hebrew Language, with Special Reference to the Dead Sea Scrolls," in: *Scripta Hierosolymitana*, 4 (1958), 200–14; R. Meyer, "Spuren eines

westsemitischen Praesens-Futur in den Texten von Chirbet Qumran,” in: *Gottes ist der Orient. Festschrift... O. Eissfeldt ...* (1959), 118–28; T. Leahy, “Studies in the Syntax of DSS,” in: *Biblica*, 41 (1960), 135–57; A. Bendavid, *Lěšon Miqra u-Lěšon Ḥaḳamim* (1967²), 80–94 (deals mainly with mutual influences of Aramaic, Greek, etc. and Qumran Hebrew). COPPER SCROLL: The language of the *Copper Scroll*, first published by J.M. Allegro (1960, 1964²), which is close to Mishnaic Hebrew, was not dealt with in this article because the readings are not sure; see, however, B. Lurie, *Mēgillat ha-Nēhošet mi-Midbar Yēhuda* (1963); H. Braun, *Qumran und das Neue Testament*, 2 vols. (1966); this important work systematically goes through the New Testament and compares it with the Qumran scrolls also in linguistic respects (lone translation); An index *verborum* of Qumran Hebrew only a *Stellenregister*, 368–83. See also bibliography at end of Dead Sea Scrolls article. **ADD. BIBLIOGRAPHY:** EDITIONS OF TEXTS: Y. Yadin, *The Temple Scroll, Three Volumes and Supplement* (1983); J.H. Charlesworth, ed., *The Dead Sea Scrolls* (1994–); F. García Martínez and E.J.C. Tigchelaar (eds.), *The Dead Sea Scrolls Study Edition* (1997); E. DEFINITION AND SCOPE

For the purposes of this article the term modern Hebrew literature designates belles lettres written in Hebrew during the modern period of Jewish history.

The definition is more limited than the generally accepted notion that modern Hebrew literature includes everything written in Hebrew during the modern period (e.g., Y.F. Lachower, *Toledot ha-Sifrut ha-Ivrit ha-Ḥadashah* (1928–48); J. Klausner, *Historyah shel ha-Sifrut ha-Ivrit ha-Ḥadashah* (1930–1950) and others). This view has some validity concerning Hebrew letters written before 1914 when most Hebrew authors, in addition to belles lettres, wrote historical or philosophical works, journalistic articles, and even popular science, all of which were generally held to be "literature." Dov Sadan

has suggested that a history of modern Hebrew literature should also include rabbinic literature written in the modern period, literature composed in other Jewish languages (particularly Yiddish), and even works of Jewish content composed in European languages (*Al Sifrutenu*, 1950). However while the influence of these types of literary endeavors in modern Hebrew literature must be taken into account by the historian, they are not in themselves an integral part of it.

The development of modern Hebrew literature represents an almost unique phenomenon in world literature. It is now generally assumed that Hebrew ceased being the spoken language of most Palestinian Jews even before the close of the biblical period, albeit evidence exists that small pockets of Hebrew speakers persisted even in the mishnaic period. In the Middle Ages, it became *leshon ha-kodesh* ("the sacred tongue") and the overwhelming number of books written in Hebrew were of a religious nature. Side by side with these religious works a secular or quasi-secular literature also developed – in Spain, Provence, and Italy. By the time modern Hebrew literature began, however, this literature was on the wane, even in Italy, its last stronghold. Moreover, modern Hebrew is, on the whole, the work of Ashkenazi Jewry and among them secular literature rarely appeared before modern times.

Hebrew was not only the literary language of medieval Jewry but also served as its *lingua franca*. Nevertheless, it had to be rendered flexible before it could adequately be used as a language to depict modern life. The literary problem created by the radical difference between Hebrew and Yiddish, which most of the Hebrew writers and readers spoke, became crucial with the rise of realism on the Hebrew literary scene. It was difficult to write in Hebrew realistic dialogue which was spoken in another tongue.

To some degree, too, the command of Hebrew was a class phenomenon. Large segments of the Jewish working class never attained sufficient competence in the language. It is therefore no accident that as Yiddish literature developed at the close of the 19th century, it not only enjoyed greater popularity but politically tended to be more radical than Hebrew literature. Moreover, it was natural that Hebrew would become the vehicle of the Zionist movement, while Yiddish, the language of the Diaspora, was that of Jewish movements which were Diaspora orientated. On the other hand, it would be oversimplifying matters to claim that the Yiddish-speaking masses were capable of understanding many of the sophisticated modernist poets and writers of fiction who were the proponents of Yiddish literature in its heyday. In any society most significant literature has always been and is still produced and read by the educated segment.

Unlike the authors of many "folk" literatures which developed in Europe during the nationalist period (19th century), Hebrew writers had the advantage of possessing a rich tradition and a large corpus of "classical" literature: the Bible, the Talmud, the Midrashim, the prayer book, medieval religious and secular poetry and prose, and the prose works of various pietistic groups. As modern Hebrew literature devel-

oped, the classical tradition proved to be a mixed blessing. Writers were overwhelmed particularly by the literary excellence of the Bible and often became discouraged in the face of its achievement. It is, however, to the credit of contemporary Hebrew writers that this is no longer a major problem. Without abandoning its classics, Hebrew writing is no longer frustrated by them.

From a statistical point of view Hebrew is a minor literature. It is currently estimated that there are approximately seven million people who speak Hebrew, of whom the large majority are either children or semiliterates in the language (including both poorly educated Israel natives and the very large number of immigrants who are highly educated but read European languages). Hebrew bestsellers have a circulation of 10,000–50,000. Hebrew poetry on the other hand is read by a comparatively large group of Israelis and dozens of volumes of verse are published annually. Being a "small" literature, written and read by a society whose intellectuals belong to a variety of language cultures, Hebrew literature is strongly subject to multifarious European literary influences. The interplay of Russian, Polish, English, French, and German literatures with Hebrew literature has greatly enriched the Hebrew literary scope and has given it its special flavor.

BEGINNINGS

Scholars disagree as to when modern Hebrew literature actually began. There are generally two schools of thought:

(1) those who adhere to Gershom *Scholem's views and consider the disruption of the medieval authority of the Jewish community in the wake of the Shabbatean debacle at the close of the 17th century the starting point of the modern age (Simon Halkin, *Modern Hebrew Literature* (1950), 29–32);

(2) those who hold that the German Haskalah (see below) of the latter half of the 18th century marks the beginning (J. Klausner; *Historyah* etc.; B. Kurzweil, *Sifrutenu ha-Ḥadashah: Hemshekh o Mahpekhah?*, 1959; Ḥ.N. Shapiro, *Toledot ha-Sifrut ha-Ivrit ha-Ḥadashah*, 1940). *Lachower, without reference to Scholem's thesis, opens his history with Moses Ḥayyim *Luzzatto (1707–1746) contending that not only was he the cultural heir to the Italian-Hebrew humanists of the 16th and 17th centuries, but was influenced by modern non-Jewish writers and by their secularist ideas (a view held by Ḥ.N. Bialik, Shalom Streit, N. Slouschz, and Avraham Shaanan). Scholem's thesis explains the inner causes which ultimately led to the development of the "anti-establishment" movements of the late 18th and early 19th centuries (Ḥasidism and Haskalah) and points out that proto-Haskalah ideas were current among the disillusioned Frankists in Prague during the 18th century ("*Mitzvah ha-Ba'ah ba-Averah*" in: *Keneset*, 2 (1937) see also *Commentary*, 51 (Jan. 1971), 41–70). However, the secularism which clearly identifies the modern period first received significant literary expression in Germany during the Enlightenment (for contrary opinions see B. Kurzweil, *Ba-Ma'avak al Erkhei ha-Yahadut* (1970), and Ḥ.N. Shapiro, *Toledot ha-Sifrut ha-Ivrit ha-Ḥadashah*).

Those who would begin modern Hebrew literature with Moses Ḥayyim Luzzatto agree that its basic characteristic is its secularism but assert that Luzzatto's plays were products of the "new spirit" and that these in turn affected subsequent modern Hebrew literature. Luzzatto's world view however was not modern. He was a kabbalist and the bulk of his works were religious and mystical. His poetics too are clearly based on medieval notions; *Leshon Limmudim* (1927) draws heavily on Quintilian. Moreover, while he influenced David *Franco-Mendes during his stay in Holland, his plays were not known to the early German Hebrew authors.

PERIODIZATION

Historians also disagree as to the periodization of modern Hebrew literature. Lachower follows a geographical-chronological pattern in the first two volumes of his history: (1) "From the Growth of the New Literature in Italy until the Decline of the Haskalah in the West" – Italy, Holland, and Germany (1750–1830); (2) "The Early Days of the Haskalah in the East until the Close of the Haskalah Period" – Austria, Galicia, and Russia (1820–1880). In volume 3 he shifts to a conceptual definition: "From the Beginnings of the Jewish National Idea until our Times" – Russia (1860–1920). *Klausner, proposing a more "literary" scheme, limits his history to the Haskalah (1781–1881) dividing it into three periods which are also defined conceptually and geographically: (1) the rationalist, pseudoclassical period (1781–1830) – the defense of the Enlightenment in Germany against the attack of the traditionalists; (2) the romantic period (1830–1860) – the reconciliation between religion and the Haskalah in Galicia; (3) the realistic period (1860–1881) – the attack of the Haskalah on religion in Russia and Poland.

B. *Kurzweil prefers a cultural-historical scheme distinguishing between (1) the "naïve Haskalah" which attempts to reconcile modernism with religion (1781–1830); (2) the militant reformist Haskalah (1830–1881) with its humanist-European orientation; (3) the period of disillusionment with European humanism (1881–1948). He argues unconvincingly that a fourth period, characterized by an apocalyptic vision of national sovereignty, begins with Uri Zevi *Greenberg. The schemes of Klausner and Lachower are faulty because they treat early modern Hebrew literature as a mature literature when in reality it possessed little aesthetic value prior to 1881. Most of the authors were provincial, used a cumbersome language, and hardly had acquired the European education and the standards of judgment which they were avidly seeking. Their works must therefore be considered as precursors of a literature which was to reach maturity only at the close of the 19th century.

The following scheme reflects more accurately the periodization of modern Hebrew literature:

I. The European Period (1781–1921)

(1) Haskalah Literature: the beginnings of modern Hebrew literature in Europe (1781–1881): (a) The German Haskalah (1781–1830); (b) The Galician Haskalah (1820–1860); (c) The Russian Haskalah (1840–1881)

(2) Modern Hebrew Literature in Europe: in Russia and Poland (1881–1920)

II. The Palestinian-Ḥalutzic Period (1905–1948)

(1) The Ottoman period (1905–1917)

(2) The Mandate period (1920–1948)

III. The Israel Period (1948 to the present)

THE EUROPEAN PERIOD (1781–1917)

Haskalah Literature: The Beginnings of Modern Hebrew Literature in Europe (1781–1881)

THE GERMAN HASKALAH (1781–1830). The first center of modern Hebrew literature developed in Prussia (particularly in the cities of Berlin and Königsberg) among the new Jewish merchant and managerial class, which had risen to social and economic prominence during the latter half of the 18th century. This new class discovered in the ideology of the German *Aufklärung* ("Enlightenment"), with its emphasis on "reason," "good taste," and "the rights of man," a rationale that would justify their abandonment of many Jewish religious practices which had hindered their access to gentile society. It would also support their demand for social and political rights in a society which judged a man's worth by his ability and not by his origins. They believed that the realization of this ideology would transform the Jews into productive and enlightened citizens of the emerging modern state. When the Hebrew writers of Germany began propagating the "new philosophy" they selected the Hebrew word *haskalah* as the equivalent for the German *Aufklärung*. Etymologically *haskalah* is derived from the root *לכל* denoting understanding, reason, or intelligence. *Haskalah* meant a commitment to reason rather than to revelation as the source of all truth, or, perhaps more correctly, the identification of revelation with reason. The *maskilim* averred that the practices, beliefs, and mores of Judaism and Jews must be in consonance with reason and that those which were not were basically not Jewish but distortions of the lofty purposes of Judaism.

The *maskilim* chose as a model the enlightened gentile merchant class which had accepted good taste and reason as its two social criteria. Their world view included not only the realms of science and philosophy but also the whole area of social behavior and aesthetics. Jews must not only abandon their medieval patterns of thought but also their outlandish manners, dress, and taste and adopt those which are in accord with the new order of things. The task of the *maskil* was *lehaskil* ("to be enlightened" and "to enlighten others"). For the *maskil*, education was not only the tool for the dissemination of the new truth but formed the very basis of his aesthetic theory. The prime purpose of literature was to educate the reader morally, socially, and aesthetically. Haskalah literature was therefore didactic and propagandist, aiming at bringing enlightenment to the "benighted" and backward Jewish communities of Germany and Eastern Europe.

It was natural for the Haskalah to choose Hebrew as its linguistic vehicle. The Yiddish dialects had no literary prestige at the time and were especially repugnant to *maskilim* who

considered Yiddish to be a vulgar and ungrammatical corruption of German. Yiddish identified and isolated Jews from the general culture and underscored their cultural inferiority. On the other hand, Hebrew was not only the classical language of Judaism and the written language of its educated classes, but it also enjoyed enormous prestige in the non-Jewish world as the language of the Bible. Since educated and intelligent Jews of the old school could not read German, Hebrew served as the medium through which not only ideas of the Haskalah were disseminated but also, by means of appropriate translations and textbooks, as a vehicle to acquire German, the modern language most accessible to them. A major literary enterprise of the German Haskalah was the *Biur* (publ. 1780–1783), a German translation in Hebrew characters of the Pentateuch which was supplemented with a modern commentary in Hebrew (see Translations of *Bible). Thousands of Jews learned German through the *Biur*.

Moses Mendelssohn. The most significant personage of the German Haskalah, Moses *Mendelssohn, wrote mainly in German. In his literary and philosophical works he attempted to harmonize traditional Judaism with the new rationalist-deistic philosophy of his times. Mendelssohn also dealt with general philosophical problems and was accepted as a cultural, if not a social, equal in gentile circles – a symbol of the new type of Jew for both gentiles and Jews. Though he wrote very little Hebrew, he was the unchallenged leader of the German Haskalah and the initiator (or at least the one who encouraged) its main literary projects: the *Biur* and *Ha-Me'assef* (see **Me'assef*), the first Hebrew periodical. The *Biur* was at first favorably received by Western European traditional Jewry but soon, for fear that it would lead to cultural assimilation, was denounced as heretical. On the other hand, enlightened Jews hailed it as a major achievement. It served as a textbook to generations of East European Jews in the study of literary German, which in turn was a means to obtain secular knowledge. *Ha-Me'assef*, a Hebrew monthly magazine, modeled after the *Berliner Monatsschrift*, was founded in 1783 in Königsberg by a group of young *maskilim*. It appeared intermittently until 1829. All of the leading figures of the early Haskalah contributed to *Ha-Me'assef* including Moses Mendelssohn, Naphtali Herz *Wessely, Solomon *Maimon, David Franco-Mendes, Isaac Abraham *Euchel, Isaac *Satanow, and Shalom b. Jacob *Cohen. Its influence during the earlier years of the German Haskalah was great, but with the Germanization of Jewish intellectual life its circulation dropped off. Readers of German were unable to abide its lower literary and critical standards. From a purely literary point of view *Ha-Me'assef* was not very important. It is significant only as a pioneering project of modern Hebrew literature.

Naphtali Herz (Hartwig) Wessely. The leading Hebrew author of the German Haskalah, Naphtali Hartwig Wessely (Naphtali Hirsch Weisel), wrote only in Hebrew although he knew several European languages, including German. Through his pamphlet *Divrei Shalom ve-Emet* (1782), an impassioned plea in support of the edict of toleration (1781), he won renown

as the foremost apologist of the Haskalah. In it he urged the adoption of modern educational methods and the need for “human” knowledge (science, history, and social ethics) as well as “religious” knowledge.

Wessely's main contribution to modern Hebrew literature however is *Shirei Tiferet* (“Poems of Splendor”), a long epic poem on the life of Moses; it is the major literary work of the German Haskalah (pts. 1–5, 1789–92; pt. 6 posthumously 1829). Judged by modern standards, the poem has small literary merit; while it is written in an almost purely biblical style, it is imitative and lacks the conciseness and concreteness of the original biblical account. Moses is cast in the rationalist image of the Haskalah and the entire work is permeated with Haskalah preachments. From a formal point of view, Wessely introduces the alexandrine (the 12-syllable heroic line prevailing in the French poetry of his day) which was to dominate early modern Hebrew poetry for half a century. Of particular interest are his prose introductions to the “books” of the poem which, although written in a period in which sentimentalism already predominates in German literature, still express earlier neoclassical views.

Types of Literature. The German Haskalah produced several epic poems besides the work of Wessely; most significant among them were Shalom b. Jacob Cohen's *Nir David* (“The Splendor of David,” Vienna, 1834); Issachar Schlesinger's *Ha-Hashmona'im* (“The Hasmoneans,” 1817); *Hayyei Shimshon* (“The Life of Samson”) by Sueskind Raschkow (d. 1836); and Moses Frankfurt *Mendelssohn's *Toledot Avraham* and *Toledot Yosef*. Other poets influenced by the Italian Hebrew school of the 17th and 18th centuries composed closet dramas in verse which were either allegories imitating Moses Hayyim Luzzatto's *La-Yesharim Tehillah* (“Praise to the Upright,” Amsterdam, 1743), or based on biblical themes: Shalom Cohen's *Amel ve-Tirzah* (1862); *Gemul Atalyah* (“Athaliah's Retaliation,” Amsterdam, 1770), by David Franco-Mendes (1713–1792), adapted from Racine's *Athalie*; and Joseph *Ha-Efrati's (Troppolowitz) *Melukhat Sha'ul* (“Saul's Reign,” Vienna, 1794). A third genre was the Hebrew proverb or maxim in which Isaac Satanow excelled. He published *Mishlei Asaf* (“The Fables of Asaf”) and its sequel *Gam Elleh Mishlei Asaf* (“Also These Are the Fables of Asaf”). Related to this genre are the *mikhtamim* (maxims in rhymed quatrain form) and the fable (Joel (Brill) *Loewe, Baruch *Jeiteles, and Judah Leib *Ben-Zeev). Except for the verse of Ephraim *Luzzatto, a contemporary of the German Haskalah who lived in Italy and later in London, no lyrical poetry of any merit was produced. Most of the poetry in this genre was a feeble imitation of contemporary German verse and moralistic or didactic in tone. Two poems worthy of mention are *Aggadat Arba Kosot* (“The Legend of the Four Goblets,” Berlin, 1790), by the talented poet Solomon *Pappenheim, which after Wessely's epic is the most important poem of the period, and Solomon *Loewisohn's ode to the Hebrew language which he composed as a preface to his book *Melizat Yeshurun* (“The Poesy of Jeshurun,” 1816).

The German Haskalah produced no remarkable narrative prose. The few pieces in *Ha-Me'assef* are merely sentimental prose poems. Mention should be made, however, of Aaron *Wolfsohn-Halle's *Sihah be-Erez ha-Hayyim* ("A Conversation in the Land of the Living"), a biting satirical sketch directed against the rabbis of his day, and Moses Frankfurt Mendelsohn's article on the history of the German Haskalah (in *Penei Tevel*, published posthumously in 1872). Solomon Maimon's contribution to Hebrew literature was insignificant compared to his role as a German post-Kantian philosopher and to his literary contribution as the author of an autobiography in German which influenced later autobiographical writing in Hebrew. He also wrote a number of works in Hebrew, almost all in philosophy, the physical sciences, and mathematics. His best Hebrew work, *Givat ha-Moreh* (Berlin, 1791), is a commentary on Maimonides' *Guide of the Perplexed*.

Ancillary Centers of the Early Haskalah. Besides the German authors, a number of *maskilim* continued the tradition of Hebrew writing in Italy. Foremost among them were Ephraim Luzzatto, whose *Elleh Benei ha-Ne'urim* ("These Young Men," London, 1768) contain the best lyrical poetry of the period, and Samuel *Romanelli. In Amsterdam a group of writers appeared who were influenced by Moses Hayyim Luzzatto or his disciples. In Alsace several poets wrote patriotic Hebrew poetry, the most notable being Elie Hālfan *Halevy. Not all "German" *maskilim* were natives of Germany. Solomon Maimon and Solomon b. Joel *Dubino were born in Lithuania, Isaac Satanow in Podolia, and Judah Leib Ben-Zeev in Poland. In Lithuania a subcenter of the Haskalah developed in the town of Shklov and from there moved to St. Petersburg where a number of Shklov's wealthy merchants settled (Joshua *Zeitlin, Nathan *Notkin, and Abraham *Peretz; for a short time the Galician author Menahem Mendel *Levin (Lefin) was a tutor in Peretz's home). The most important St. Petersburg *maskil*, Judah Leib *Nevakhovitch (Ben Noah), published a pamphlet in Russian that he had originally composed in Hebrew, in which he urged the emancipation of Jews.

The End of the German Haskalah. The rapid Germanization of German Jewry led to the displacement of Hebrew as the language of the enlightened Jewish middle classes in Prussia. Between 1794 and 1797 one issue of *Ha-Me'assef* was published annually. By 1797 only 120 subscribers remained. In the meantime a Jewish literature in German, including a literary journal, began to develop. It is no accident that it was reported that Aaron Wolfsohn-Halle, one of the editors of *Ha-Me'assef*, was unable to write Hebrew in his old age.

THE GALICIAN HASKALAH (1820–1860). From Prussia, the Haskalah movement spread to Polish Galicia. Prosperous Jewish merchants from Galicia involved in the export-import trade (exporting agricultural products to Germany and importing manufactured goods) often frequented the great trade fair at Leipzig where they met the new, enlightened German Jewish merchants. German-Jewish salesmen in

turn came to the larger cities of Galicia bearing the new way of life with their wares. Centers of the Haskalah were soon established in Brody, Tarnopol, Lemberg, and Cracow in the early 19th century.

Demographically the Jewish population of Galicia was larger and more concentrated than that of Prussia. Intellectually, however, it was uninfluenced by the indigenous Slavic communities of the area whose cultural level was on the whole inferior to that of the Jews. Galician *maskilim* looked to German as the language of European culture. Politically, it was in the interest of the Austro-Hungarian monarchy to encourage Jewish, pro-Austrian elements as a separatist counterforce to Polish nationalism. Consequently, the assimilationist factors which affected Prussian Jewry were far less felt in Galicia.

The first Haskalah leader to come to Galicia was Naph-tali Herz *Homberg who, in 1787, upon Mendelssohn's recommendation, was appointed chief inspector of German Jewish schools in Galicia by Joseph II. Despite the vigorous opposition of rabbinic and ḥasidic leaders, he established over a hundred modern Jewish schools in Galicia and Bukovina and opened a teachers seminary in Lemberg. Homberg's arrogance toward Jews and his subservience to the government earned him the hatred of Galician Jewry. They blamed him not only for the "heretical" views and practices taught at his schools but even more for his part in the imposition of the notorious and discriminatory candle tax from which he personally and illegally profited. Homberg also served as censor of Hebrew books. His critical and caustic reports about the backward social situation of the Jews and their inferior morals reinforced the antisemitic views of his patrons. In the wake of growing protests and accusations by the Jews, he was finally removed from his office in 1806 and the schools he established were gradually closed.

Far more significant for the development of the Haskalah in Galicia was M.M. *Levin (Lefin) who, like Homberg, came to Berlin in the 1780s and for a time was a member of Mendelssohn's circle. Mendel Levin ultimately returned to Galicia, living most of the time in Brody. There he became a leader of the first generation of the Galician Haskalah and a friend of N. *Krochmal, S. *Rapoport, Josef *Perl, and Jakob Samuel *Bick. Levin's major contribution to modern Hebrew literature, the development of a Hebrew prose style based on mishnaic Hebrew, was to affect subsequent prose writing. He is also one of the early writers of modern Yiddish.

A key literary figure of this early period is the poet Shalom Cohen. Polish born, he too came to Berlin in the 1780s joining N.H. Wessely's circle. After *Ha-Me'assef* ceased publication in 1797, he succeeded in reviving it in 1808 for a short time. In 1810, he was invited by Anton von *Schmidt, the Viennese gentile publisher of Hebrew books, to serve as editor of his publishing house. In Vienna he launched **Bikkurei ha-Ittim*, the first Hebrew periodical in the Austro-Hungarian Empire (Vienna). The journal was in the form of an almanac and at first served as a vehicle for the reprint of an anthology of *Ha-Me'assef*, but later included original articles. Anton von

Schmidt's publishing house played a major role in encouraging the new Hebrew literature. He employed leading *maskilim* as editors and proofreaders, published many of their books, and printed the two periodicals which were to serve as the forum of the Galician Haskalah, *Bikkurei ha-Ittim* (1820–1831) and *Kerem Hemed* (1833–1856).

The major contribution of the Galician Haskalah was in the area of Jewish studies. The first generation of German *maskilim* had attempted studies in this field but, except for some grammatical works, their achievements were awkwardly unprofessional. Only after the succeeding generation had shifted to German as their medium of expression did the golden age of *Wissenschaft des Judenthums dawn in Germany. In Galicia, however, Hebrew remained the language of modern Jewish scholarship. Foremost in the ranks of its scholars was Nachman Krochmal, the mentor of an entire generation. His *Moreh Nevukhei ha-Zeman* ("Guide of the Perplexed of the Time," 1851) is considered to be the philosophical statement of the period. An amorphous work, unfinished by its author and put together and published posthumously in 1851 by Leopold Zunz, it attempts to reconcile Judaism with the post-Kantian (mainly Hegelian) idealism, the prevailing philosophy of the age. Krochmal is the first to outline a scheme for Jewish history which not only explains the survival of Jewry in time but attributes to it an eternal existence because of the special relationship of God (The Absolute Spirit) to the Jewish people. With great erudition and intelligence he discusses almost all of the major problems of Jewish historiography, thus laying the groundwork for future historical research.

Less profound but still significant are the monographs of Krochmal's disciple Solomon Judah Rapoport which, in the main, constitute scholarly biographies of leading Jewish scholars in the medieval period (the series *Toledot Anshei Shem* which was published in *Bikkurei ha-Ittim* and *Kerem Hemed*). Although Samuel David *Luzzatto lived in Italy, his works also belong to the Galician Haskalah in whose journals he published and with whose scholars he was intimately involved. Luzzatto was a prolific writer who was involved in almost every scholarly, theological, and communal problem of his times (see his voluminous correspondence, *Iggeret Shadal* (1882–94)). His best work was in the areas of Hebrew and Aramaic grammar, biblical exegesis, and medieval Hebrew poetry.

From a purely literary point of view, the Galician Hebrew authors are to be credited for evolving the Hebrew prose satire. They not only influenced Hebrew style but introduced character types which would receive more sophisticated development in subsequent Hebrew fiction.

Galicia's most important satirist Josef Perl was a communal leader involved in educational reform who used his connections with the monarchy to foster the Haskalah. Perl's two satires *Megalleh Temirin* ("The Revealer of Secrets," 1819) and *Bohen Zaddik* ("The Zaddik on Trial," 1838) were primarily directed against the new ḥasidic movement which had captured the imagination of the lower classes of Galician Jewry dur-

ing the first half of the 19th century. Perl evinced a profound, if hostile, interest in Ḥasidism, studied its sources diligently, wrote the article on Ḥasidism in Peter *Beer's book on Jewish sects, and is said to have completed a book on Ḥasidism in German which was never published. *Megalleh Temirin*, written in an epistolary style, parodies the folkish ungrammatical Hebrew of the Ḥasidim. In keeping with the rationalist-modernist prejudices of a *maskil* Perl draws a grotesque picture of the ignorance, superstition, and gullibility of the Ḥasidim and the cunning of their leaders. Unwittingly, he creates a Hebrew prose style which imitates the Yiddish speech of his characters. In *Bohen Zaddik*, he widens his satiric scope to include other classes of Galician Jewish society, even the *maskilim* themselves. Despite the satirical distortion, Perl's is the first attempt to depict the social context in Hebrew fiction and his cast of types often served as prototypes for the more sophisticated characters of later East European fiction.

Stylistically, Isaac *Erter chose a different path than Perl's. The high style of biblical Hebrew in which his satires are written seems to Hebrew readers of today to be out of keeping with his subject matter. He uses dream sequences or imaginary visions as vehicles for his satires. He spares no one: impoverished Ḥasidim, enlightened physicians, corrupt tax farmers who exploit the poor. In *Gilgul Nefesh* ("Transmigration of Souls," 1845) he uses a bestiary to satirize his characters. Although Erter is less basic to the development of Hebrew prose than Perl, his influence, even on as late a writer as S.Y. *Agnon, is discernible. The Galician Haskalah did not produce great poetry. *Maskilim* continued the tradition of adapting European poetic drama to fit the taste of their Hebrew reading contemporaries. Rapoport, whose poetic talent was decidedly limited, adapted Racine's *Esther* and *Athalie*, justifying his choice in terms of the importance of historical themes for the restoration of Jewish pride. Meir *Letteris adapted Goethe's *Faust*; he eliminated Christological references, set it in the mishnaic period, and identified Faust with the heretical *tanna* *Elisha b. Avuyah.

Letteris and Samuel David Luzzatto were the best of a number of poets who wrote lyrical, meditative, and eulogistic poetry. Other poets deserving mention are Aryeh Leib Kinderfreund (1788–1837), Baruch Shenfield (1787–1852), and Dov Ginzberg (1776–1811).

THE RUSSIAN HASKALAH (1840–1881). The Haskalah in Russia developed in two geographical centers – Lithuania (Vilna) and Belorussia (Kremenets Podolski). Vilna was influenced by the tradition of rationalist Orthodoxy developed among the disciples of *Elijah b. Solomon the Gaon of Vilna and by the German Haskalah. Haskalah came to Belorussia by way of Galicia with many of its earliest authors actually having lived in Galicia at various times.

Early Period. Historians of the Russian Haskalah aver that already during the German period proto-*maskilim* were to be found in Vilna, Shklov, and St. Petersburg, but it is generally agreed that the first Russian *maskil* of major significance

was Isaac Dov (Baer) *Levinsohn of Kremenets Podolski. Levinsohn came into contact with almost all the leaders of the Galician Haskalah during his long stay in that province (1813–24). Following his return to Volhynia, he began a period of prolific publication primarily in the area of Jewish history, theology, and philology. His first major work, *Te'udah be-Yisrael* (1828), attempts to justify the Haskalah in terms of traditions and urges a reformation of the *heder* system and the introduction of Hebrew grammar and German translation as aids to the understanding of the Bible. More significant are his apologetic-theological works: *Beit Yehudah* (1839), *Zerubbavel* (1863–64), and *Ahiyyah ha-Shilloni ha-Hozeh* (1863). Levinsohn lacks historical and scientific methodology and he was only vaguely aware of current philosophical views about religion in general, and Judaism and Christianity in particular. The works are a defense of Judaism, especially the Talmud; he contends that the latter is a great encyclopedic work, full of wisdom and deep faith, and Judaism is a liberal religion – far more rational, liberal, and comprehensive than Christianity. Jesus he saw as a rabbinic Jew who never intended to found a new religion and whose moral teachings are all to be found in the Talmud. Jews rejected Jesus' political views, not his ethical program. Levinsohn also wrote a book refuting blood libels (*Efes Damin*, 1837) and published works on Hebrew philology.

In the field of belles lettres, Levinsohn composed two satires against Hasidism which were clearly influenced by Josef Perl's and Isaac Erter's works, but are inferior to them. He also wrote a volume of verse comprised of epigrams, satires, and occasional poetry of no literary merit whatsoever.

Poetry. Greater strides were made in the development of Hebrew poetry and prose fiction in Lithuania. Four important writers appeared at the close of the century who paved the way for the great Hebrew writers: Adam ha-Kohen *Lebensohn, his son Micah Joseph *Lebensohn, Judah Leib *Gordon, and the novelist Abraham *Mapu. Adam ha-Kohen Lebensohn is the first of a long line of Russian Hebrew poets. Essentially cerebral, his poetry is the product of the mental world of a Vilna *maskil* who viewed life as a somber enterprise and literature as having a serious ethical purpose. Lebensohn's personal life, beset as it was with economic difficulties in his early adult years and the untimely deaths of several of his sons, reinforced his basically tragic view of life. Restrained by the literary conventions of the times, his long poems, written in a pseudo-biblical style, were marred by verbosity, a penchant for punning, and an exaggerated tendency to intellectualize.

The emotional fire lacking in Adam ha-Kohen Lebensohn's intellectualized verse animates the poetry of his son Micah Joseph Lebensohn (Mikhal). Mikhal's talents were encouraged and nurtured by his father, who afforded him every opportunity to gain the European education which he, the father, lacked. Mikhal studied at German universities and was strongly influenced by the German Romantics. Although his style remains biblical, his Hebrew attains a remarkable flex-

ibility and he does not hesitate to introduce neologisms. The poetry of his Berlin days is urban, with allusions to city parks, gas lamps, and carriages. He is also one of the first modern Hebrew poets to write love poetry. Many of his longer poems are on biblical themes but his attitude to biblical heroes often differs from the traditional view. For example, he is able to empathize with Sisera in *Ya'el ve-Sisra* ("Yael and Sisera"); the hero of *Nikmat Shimshon* ("Samson's Revenge") becomes a symbol of revolutionary ardor; and he identifies with Moses, in *Moshe al Har ha-Avarim* ("Moses on Mt. Abarim," all published in Mikhal's collection of poems *Shirei Bat Ziyyon* (1851)). Mikhal, sick with tuberculosis, like Moses will not reach the Promised Land. In *Ḥag ha-Aviv* ("Spring Holiday"), one of his most moving poems, the young poet bewails his tragic inability to relate to nature and to society because he is aware of his imminent death. In contrast to all his predecessors, Mikhal wrote genuine lyrical poetry. Unfortunately, he appeared too early on the Hebrew literary scene to attain the literary level to which his talents might have carried him had the language and the literature in which he wrote reached the maturity it was to gain half a century later.

The greatest literary figure of the Russian Haskalah, Judah Leib Gordon, was a poet, short-story writer, and militant journalist who dominated the literary scene until the 1880s. Emerging in the 1860s as a younger member of the Vilna Haskalah and a disciple of Lebensohn the elder, he was committed to what has been described as the realistic Haskalah. Although his poetry was written in biblical Hebrew and was often hampered by the bombast of biblical rhetoric, it reached beyond the limitations of its period. Most of it was also dominated by the reformist thrust of the Haskalah. Gordon, unlike his predecessors, not only questioned the "spirituality" of the traditional Jewish values of the rabbinic period but also those of the Bible. He demanded a more vital materialistic commitment to life. His rejection of the "impractical and overspiritualized" Jewish world of his childhood led him to depict traditional "villains" of the Bible in more positive terms. Thus in his long poem *Zidkiyyahu be-Veit ha-Pekuddot* ("Zedekiah in Prison," 1879), he justified Zedekiah's criticism of Jeremiah's unrealistic stress on the spiritual at a time of national crisis. Soldiers and statesmen, realistic men of affairs, and not prophets and scholars were needed to save the country. Gordon's poems frequently struck out against the unreasonable legalism of the rabbis and called vigorously for the improvement of the woman's status ("*Kozo shel Yod*," 1869). A genuine lyricism pervades his poetic fables which, although drawn from the Midrash, Aesop, La Fontaine, and particularly Krylov, are original works. More than any of his predecessors, Gordon had an uncanny ear for the biblical idiom and was able to forge new phrases which retained the biblical cadences. Bialik was to acknowledge the debt which he and his generation owed to Gordon.

Prose. Abraham Mapu, the first modern Hebrew novelist, chose the historical novel (*Ahavat Ziyyon* (1853) and *Ashmat*

Shomeron (1865)) as his genre and in keeping with the general tendency of Hebrew writers preferred biblical themes to current topics. The difficulties in writing a contemporary social novel in Hebrew became manifest when Mapu himself tried to do so later in his career. Mapu, who knew French, was clearly influenced by both Eugène Sue and Alexandre Dumas père, whose long, involved, historical and social novels enjoyed great popularity during the period. *Ahavat Ziyyon* ("Love of Zion), set in the days of the kings of Judah, was also influenced by Moses Hayyim Luzzatto's two works *Migdal Oz* and *La-Yesharim Tehillah* even to the point that there exists evidence that the names of its two main characters were initially to be the same as those in *Migdal Oz*. The pastoral quality of the novel reflects not only the Haskalah's attitude toward agriculture but Luzzatto's as well. *Ahavat Ziyyon* became the first "best seller" of modern Hebrew literature. More ambitious, but less successful artistically, was Mapu's social novel *Ayit Zavu'a* ("The Painted Eagle," 3 vols., 1857–64). For all its structural faults, long-windedness, and inability to go beyond typology in its characterization, it constitutes the first attempt at depicting contemporary Jewish life in fiction. The characters are types that Mapu transposed from historical novels into the social context of the day; he also drew upon the satires of Erter and Perl. The infant state of modern Hebrew literature, the yet undeveloped Hebrew prose idiom, and the social and cultural situation of Russian Jewry hampered Mapu's effort. Nevertheless, his was a daring attempt to extend the new literature, thus paving the way for the next generation of Hebrew novelists who were to draw upon his typology.

In the generation following Mapu, Peretz Smolenskin and Reuben Asher Braudes contributed to the development of the Hebrew novel. Smolenskin, by far the more influential of the two, founded *Ha-Shaḥar* (1869–84), a journal which he was forced to publish outside of Russia to circumvent censorship restrictions. Abandoning his initial Haskalah assimilationism he embraced a fiery brand of Jewish nationalism which called for an ultimate return to Zion. Smolenskin's *Ha-To'eh be-Darkhei-Hayyim* ("Who Wanders in the Ways of Life," 3 vols. (1868–70)) became the novel of the generation. A character novel like *Ayit Zavu'a*, *Ha-To'eh be-Darkhei ha-Hayyim* is structured more competently than Mapu's work because it centers around the main protagonist (Joseph) who roams the Jewish Pale of Settlement in search of the meaning of life. The novel contains elements of the picaresque: Joseph wanders into the world of Jewish beggars, sees life in a yeshivah and the court of a ḥasidic rabbi, and travels as far as London, Paris, and Berlin. Smolenskin thus attempted to draw a panorama of Jewish life not only as it was lived inside Russia but also in Western Europe. Far more realistic than Mapu's, his fictional world is still considerably removed from life. The novel remained a rambling, poorly constructed work, full of Haskalah speculations about life, European culture and society, and the meaning of Jewish history. Although many of its characters were derived from Mapu and, like the latter's, are flat and drawn in black and white, Smolenskin extended their range.

More realistic and written with greater discipline were the novels of Reuben Asher Braudes. The plot of his unfinished novel *Ha-Dat ve-ha-Hayyim* ("Religion and Life," 1885) revolves around the struggle of a young *maskil* to liberate himself from the narrow world of his childhood town and become a European; it is, in part, drawn from the biography of Moses Leib Lilienblum. In *Shetei ha-Kezavot* ("Two Extremes," 1888), the protagonist has liberated himself from tradition only to discover that the new secularism lacks the certainty and peace of mind afforded by the old Orthodoxy. Although Braudes was unable to free himself from the one-sided view of the Haskalah and often lapsed into ideological preachments, he came closer to the reality he attempted to depict than any other novelist of the period.

The Modern Period (1881–1917)

RUSSIA AND POLAND. By the 1880s, literary and political factors earmarked a new period in modern Hebrew literature. Almost a century of literary endeavor had been completed by then. Writers had a large corpus of literature to fall back on, a literature which had struggled with language, genre, and motifs and was ready for real artistic achievement. The cultural situation of East European Jewry had also undergone a radical change. A generation of writers had emerged that expressed its awareness of the secular-scientific orientated European culture through Hebrew literature. Although few writers could be called totally "European" in their point of view, a degree of sophistication had been attained that had been lacking in the previous generations. In the meantime European Romanticism, intimately bound to idealist philosophy, had given way to naturalism and realism – literary movements which were rooted in a more materialistic view of the universe. Influential Russian literary critics, like Pisarev and Chernyshevski, called for a more realistic form of writing and demanded a literature of social criticism. These attitudes were quickly picked up by some of the younger Hebrew critics who began publishing in the journals of the Russian Haskalah. Abraham Uri Kovner, well versed in Russian positivist criticism, called for a realistic literature which would mirror the true character of the nation and lead to economic and social reform. He attacked the artificial biblicism which dominated much of Hebrew literature and commended the satires of Erter and Perl and Mapu's *Ayit Zavu'a*. A more realistic-materialistic literature was also advocated by Abraham Jacob Paperna. Moses Leib Lilienblum in his *Olam ha-Tohu* ("Desolate World," 1873) attacked the idealistic Haskalah; he ascribed its use of romantic and unrealistic subject matter and theme to an escapism nurtured by the tragic and hopeless reality of Jewish life. Critics of the 1870s attacked the *batlanut* ("the impracticability") of Hebrew literature and denigrated most of its achievements.

Political and social events reinforced these new views. The rise of Russian reaction during the reign of Nicholas II, and particularly the pogroms of the early 1880s, which were either instigated by the czarist regime or at least actively encouraged by its political police, disillusioned the vast major-

ity of the *maskilim*. The whole reformist program, grounded on the naïve belief that the only deterrent to the emancipation of Russian Jewry was its own religious obscurantism and its own economic and social backwardness, was thus put into question. A new empathy for the people, its way of life, and its aspirations now replaced the bitter sarcasm of the realistic Haskalah. The prejudice against the older way was softened by a more balanced evaluation of its significance. While Hebrew writers did not abandon their criticism of the old way, they were capable of greater artistic objectivity.

The new nationalism did not reject modernization; on the contrary, it defined Jewish life in terms of the values of European nationalism. A national literature must aim at an objective depiction of the condition of the people and it must use European aesthetic standards in the working out of its themes. The shift from universalism to particularism led also to the discovery of the individual. In the Haskalah period fiction and poetry tended to depict types. The literary type stood somewhere between the allegorical hero and the individualized character. With the new period a more individualized characterization manifested itself in fiction and poetry.

The literary activity of Moses Leib *Lilienblum serves as a paradigm of this transvaluation of values. Raised in an obscurantist ḥasidic environment, he began his literary career as a polemist advocating religious and social reforms. His autobiography *Ḥatot Ne'urim* ("Sins of Youth," 1876–99), a classic work of the period, eloquently describes his struggle toward freedom. Lilienblum, influenced by Joshua Heschel *Schorr, a radical Galician *maskil*, argues against the "divine authority" of the Talmud and the Shulḥan Arukh contending that although the halakhic laws had validity in their time, they should not be accepted uncritically by modern Jews. In the 1860s, he and J.L. Gordon were the leading proponents of reform. During the 1870s, he seems to have lost hope in theological solutions and turns to positivism, and even socialism, as the new alternative. After the 1880s, he despaired of Russian liberalism and embraced the Zionist nationalism of the *Hibbat Zion* movement, stressing the "Oriental" quality of Jewish life. He never lost his pragmatic view of the world and therefore rejected Aḥad Ha-Am's cultural nationalism as being unrealistic and vapid.

The Age of Aḥad Ha-Am. The most influential intellectual figure of the European period was *Aḥad Ha-Am (Asher Ginzberg), a brilliant essayist, who attempted to develop an integrated philosophy for the new nationalist movement. He was not an original thinker but was able to articulate an ideology out of contemporary ideas with which to meet the needs of many Hebrew intellectuals of his day. Aḥad Ha-Am had indicated, at various times in his career, that he planned to write a systematic exposition of his philosophy, but he did not carry out his program. Unfortunately the essay form, which was his medium, hardly lends itself to a systematic presentation of ideas.

Aḥad Ha-Am drew heavily on positivist, utilitarian ideas current in his days and on the then newly developed science

of sociology. At the center of his philosophy he placed the nation, which he equated with society. Judaism was the system of ideas, laws, and mores which the Jewish nation had developed in order to preserve itself. Individuals are merely limbs of the nation. The nation is the constant factor in human history. The success and prosperity of the nation is the only reward which is vouchsafed to the ephemeral individual.

In times of national crisis or degeneracy, Judaism was forced to express itself in terms of the individual. Biblical Judaism was national and communal, but after the destruction of the Second Temple and the loss of national sovereignty, rabbinic Judaism was compelled to direct its appeal to the individual, and only then was the doctrine of individual salvation propounded. Natural redemption will follow when the center of gravity will shift from the selfish concern for individual prosperity, spiritual or material, to the broader concern for the welfare of the people as a whole.

In his system society, i.e. the nation, replaced God as the source of authority. Yet Aḥad Ha-Am was careful not to tamper with the *sancta* of Judaism. The traditional Jewish customs were justified in terms of the national culture and its values. At the center of the national culture he placed the prophetic ethic, its peculiar expression. "There is almost a general consensus about the moral genius of the Jewish people and that in this area the Jewish people stand above all other nations. It makes no difference as to how the Jewish people attained this talent or how it evolved among them" (in *Shinui Arakhim*). Aḥad Ha-Am obviously avoided a metaphysical explanation for the uniqueness of the Jew and yet at the same time asserted its existence. His definition of the national character, or as he called it the national spirit, saved him from a biological definition of nationality and lent a universalistic humanist dimension to his nationalism. The universal ethic finds its expression in the particularist culture of the Jew. Jewish cosmopolitanism was for Aḥad Ha-Am an inauthentic expression of the Jewish ethical idea. Universal values must be rooted in the concrete experiences of the people and within its culture, otherwise they will remain vapid generalities. Translated in terms of a specific culture, they must be properly assimilated so as to become a part of it.

The nation-society, an organic fact, has a will and a life of its own in his system. Nationhood is axiomatic and must be accepted on faith. The Jew who asked why he was a Jew was already inauthentic. In his past history, the Jew taught theology and played a central role in preserving the nation, but with the breakdown of religious authority the national idea became the rallying point of Judaism. Aḥad Ha-Am saw in Zionism the return to the national idea. The very effort to establish a Jewish settlement in Palestine would serve as a focal point around which the national "will" could rally. He did not believe that a mass return to the national homeland was possible; instead he conceived of the homeland as the future spiritual (cultural) center of the Jewish people wherever it resided. The spiritual center would not only preserve the people but would bring about a national cultural renaissance.

The national revival, however, cannot occur merely because of the practical needs of the nation for migration or for a refuge. Erez Israel was a poor and underdeveloped country and settlement must be preceded by a renewal of the national will. The task of the nationalist intellectuals must be to educate the people toward the difficult struggle for national renewal. For the Jewish intellectuals who had lost their faith in traditional Judaism, Aḥad Ha-Am's cultural-humanist nationalism offered itself as a welcome solution. One could preserve not only one's group loyalty but a great part of Jewish mores and customs by shifting the source of authority from God to history and from community to nation. One could likewise retain the old ethical goals of Judaism by identifying them with the national culture. It is no small wonder that the majority of Hebrew authors rallied to Aḥad Ha-Am's banner.

Aḥad Ha-Am's role in modern Hebrew literature went beyond his ideology. From a literary point of view he is the father of the modern Hebrew essay. His Hebrew style, which draws a great deal on Maimonides' Hebrew, is lucid and well constructed. Moreover, as the editor (1897–1903) of the most influential Hebrew journal of the period, **Ha-Shilo'ah*, he set a high standard of literary taste for an entire generation of Hebrew writers. His conservative literary views, however, discouraged radical experimentation. He also insisted that writers of Hebrew belles lettres should confine themselves to Jewish subjects. These two attitudes ultimately led to a revolt against his literary domination and he finally resigned his editorship of *Ha-Shilo'ah*.

The career of Sholem Yankev *Abramovitsh (Mendele Mokher Seforim) stands at the crossroads between the Haskalah and the nationalist period. Sociologically he still belonged to the Russian Haskalah, but aesthetically he was the harbinger of the new period with its stress on realism and artistic discipline. To Mendele belongs the double crown as the father of the new Hebrew literary style and the first serious writer in Yiddish. He began writing in the biblically orientated Hebrew style of the Haskalah, although even then his work *Ha-Avot ve-ha-Banim* ("The Fathers and the Sons," 1865) was influenced by Turgenev and is cast in a realistic mode. Mendele's penchant for realism led him in 1864 to abandon the inflexible and literary Hebrew of the Haskalah for the more vivid and folk-like Yiddish. He returned to Hebrew in 1886, writing original fiction or translating and recasting his Yiddish works. The style of these later works are a landmark in the development of modern Hebrew literature. The more simple Hebrew prose of mishnaic and talmudic literature and of the Hebrew prayer book replaced the high biblical Haskalah style that had characterized his earlier works, and with it he forged an idiom more akin to the realism which had become dominant in Hebrew fiction. Mendele's long short stories and novels were better structured than any of the prose works of his predecessors. He drew on the modern Hebrew literary tradition for his characters but added a new, realistic subtlety. The picaresque *Sefer ha-Kabzanim* (1909; *Fishke the Lame*, 1960), for example, recalls Smolenskin's description of the society of

beggars in *Ha-To'eh be-Darkhei ha-Ḥayyim*, but the prose and the characterization are infinitely more sophisticated. Mendele satirized the Jewish life of Eastern Europe so mercilessly that later patriotic critics have urged to expunge his works from school curricula because they "desecrate the memory of European Jewry." His portrayal, however, is not one-sided and he often depicts the folk piety and warmth of the Jews of the townlet with deep sympathy. Despite his emphasis upon the grotesque, the world he describes has a Jewish unity which even pervades the natural world; he "Judaizes" nature. Mendele's characters rarely develop beyond typology. Yisrulik, for example, in "Susati" (1911; *The Nag*, 1949) is a typical Jewish external student preparing for state examinations, and Binyamin in *Masot Binyamin ha-Shelishi* (1911; "The Travels of Benjamin the Third") is a typical impoverished and impractical member of the scholarly lower middle class. Mendele never became an active Zionist but his later works reflect the disillusionment with Russian liberalism ("Susati"). His meticulous devotion to the craft of writing became a model for the disciples of his Odessa school. Two of them, Ḥayyim Naḥman *Bialik and Shalom *Aleichem, were to become major literary figures in Hebrew and Yiddish literature respectively.

In contrast to the realism of Mendele's Odessa school, a neoromantic, impressionist center developed in Warsaw whose leading authors are David *Frischmann, I.L. *Peretz, and Micha Josef *Berdycewski. The Polish Haskalah was far less practical and doctrinaire than that of Odessa. It tended to stress form and beauty rather than a central idea. Poland, moreover, if not completely removed from the literary influences of the Russian utilitarians, was drawn to the continent and was more sensitive to the new aestheticism which in the 1880s had captured the European literary imagination. David Frischmann laid great stress on style and form. He was the self-declared European of Hebrew letters, but for him Europeanism had little to do with a materialist view of the universe or even scientism but was a matter of aesthetic values and literary taste. His Hebrew prose has a limpid and almost lyrical quality; his plots are carefully rounded although not devoid of impressionistic lapses. In keeping with his aestheticism, he no longer describes the struggle of the generations in Jewish life as a clash between reason and tradition but as a struggle between beauty and life on the one hand and an unrelenting tradition on the other (*Be-Yom ha-Kippurim* (1881)). Frischmann's characters are often individuals whose irrational passion leads them to break with their tradition. He can also sympathize with the rigid traditionalism of the older generation and at the same time poke fun at the rationalist absurdities of half-baked *maskilim*. His secularist lyrical, biblical "legends" are one of his original contributions to Hebrew literature. Frischmann, through his knowledge of folklore and myth, created stories almost devoid of biblical ethos but which attempt to reconstruct the passionate world of the primitive quasi-pagan Hebrews ("Meholot" = Dances). The mythical-pagan setting contrasts strongly with the biblical stories and poems produced by such writers as Mapu or even Micah Joseph Lebensohn.

I.L. Peretz continues the Polish tradition. Unlike Frischmann, he shifted to Yiddish (in which language he wrote most of his works) in the middle of his career and became the proponent of Yiddishism after the revolution of 1905. His contribution to modern Hebrew literature, however, is also of great significance. Like Frischmann he attacks the realism of the Odessa school, dubbing it anachronistic. "In the world of general literature the sun of realism has set. It has been followed by materialism and then the decadents have raised their banner, but among us, so removed from the battlefield, realism is the new slogan which excites the heart" (*Ha-Hez*, 1884). Peretz earned his place in Hebrew literature primarily as a prose writer of the 1880s and 1890s. His earlier short stories: "*Ha-Dibbuk ve-ha-Meshugga*" ("The Dibbuk and the Madman") and "*Hiztaddekut ha-Ne'esham*" ("The Alibi") were influenced by the sentimentalism of German-Jewish authors who wrote about East European Jewish life. The stories emphasize the individual rebellion of young Jews against the traditionalistic puritanism of their environment. His stories often took a psychological turn: *Be-Leil Zeva'ah* ("Nightmare") and "*Mi Anokhi*" ("Who Am I"), whose characters display a split personality. Peretz's ḥasidic tales, in the main, represent a humanistic-secularist, and especially romantic, reading of ḥasidic themes. Although they have been described as ḥasid-like, rather than authentically ḥasidic, Peretz is nevertheless one of the earliest Hebrew writers to portray Ḥasidism in a positive rather than a critical light. In his folk ḥasidic tales he uses an impressionistic sentimental style in an attempt to capture the pious rapture of his characters (kabbalists) and he often resorts to lyrical monologues or dialogues – "*Ha-Mekubbalim*" ("The Kabbalists"), "*Gilgulo shel Niggun*" ("Metamorphosis of a Melody"), and "*Bein Shenei Harim*" ("Between Two Mountains"). One of his best short stories, "*Oseh Niflaot*" ("The Magician"), is a folktale in which Elijah the Prophet appears as a magician who miraculously provides a *seder* for an impoverished pious family. (All of I.L. Peretz's were published in *Kol Kitvei I.L. Peretz* (1947).)

Perhaps the most skillful proponent of the Polish neo-romantic style was Micha Josef Berdyczewski, whose work reflects the Nietzschean demand for a transvaluation of values. He put into question the entire value system of traditional Judaism with its stress on communal discipline and religious conformism at the expense of individualism. Challenging Aḥad Ha-Am's contention that there exists a mainstream in Judaism and arguing that there is no unified Jewish culture, he advanced the concept of a heterodoxy of Jewish experience. There is no rational evolution of a tradition but rather a series of miraculous and irrational revelations. Tradition always strove toward discipline, it controlled the outbursts of the spirit but was never able to contain them for long. During these periods of restraint Judaism lost its vitality. Berdyczewski insisted that the Judaism of his day was stagnant and must free itself of its restraining legalism and its intellectualism. He opposed Aḥad Ha-Am's attempt to provide a utilitarian-nationalist apology for tradition and to reconstruct a unified nation-

alist culture. Only the creative spark of the individual and the individualist dissent can lead to a national renaissance. The call for individualism and the individualist rebellion against the yoke of tradition and society also form the core of Berdyczewski's fiction. His characters often are Jews who try to escape the narrow world of their childhood but are psychologically incapable of making the break. They are lost souls moving in a limbo between traditional puritanism and modern libertinism, impotent physically and psychologically to live the life they desire. The impotence is often accentuated, not only by feelings of guilt toward their former system of values, but also by their deep group loyalty and their feelings of familial love (e.g., Nathaniel in "*Me-Ever la-Nahar*" ("Across the River" in *Kitvei M.Y. Bin-Gorion* (1960)). In Ḥasidism Berdyczewski discovered a dissenting, individualist movement which had broken with the loyalism and conformism of rabbinism. Stylistically, his Hebrew bears affinities to Frischmann's impressionist lyricism, but unlike the latter, he often cuts the flow of his prose either with impassioned outbursts or to indicate moments of doubt and despair.

The writings of M.Z. *Feuerberg also mirror the tragedy of loss of faith but, unlike the Berdyczewskian hero, the Feuerbergian protagonist, although he rejects the simple faith of his fathers, never crosses the line into the secular world which remains beyond his grasp. Feuerberg's hero lives in an irresolvable crisis. Naḥman in *Le'an* ("Whither," 1927), having lost the living God of Israel (tradition), finds no solace in the God of Aristotle (reason) who to him is lifeless and impotent. His anxieties, resulting from his loss of faith, ultimately drive him mad.

Most of Feuerberg's stories are autobiographical in which the basic concept is a variation of the same theme: the world of childhood secure in its faith is disrupted as the child or young hero experiences life. The process is inevitable. In a letter to Aḥad Ha-Am he wrote: "The new life extends its domain among us without the consent of literature. The old life is disappearing despite its sanctity and sublimity." Feuerberg's outlook, however, was not devoid of hope. He saw his disrupted world in a state of crisis but believed in the ultimate revival of the spirit of man: "Europe is sick now, everyone senses that society is collapsing and that its very foundations are rotten. Human society is weary and yearns for the word of God. The minor prophets who arise, Kant and others, last for only a century. We need a great prophet and lawgiver... Not only do we turn our face eastward, the entire West is journeying to the East. The greatest enemy of Judaism is the West... Therefore when you journey to the East, my brothers, do not go as the enemies of the East but as its sons and lovers" (*Le'an*).

The Age of Bialik. The achievement of Ḥayyim Naḥman *Bialik marks the high point in form and content of the European period in Hebrew literature. Most of Bialik's poetry was written between 1892 and 1917, the turbulent years which immediately preceded the Russian Revolution and the decline of the East European Jewish community. At the brink of ca-

tastrophe, Russian Jewry produced its greatest poet. In the genius of Bialik, a delicate balance is attained between the old traditionalistic culture nurtured on sacred books and on a medieval religiosity and the new European culture to which the products of the old culture now turned.

Bialik consciously accepted the Aḥad Ha-Am view that through cultural nationalism a synthesis between these two polar cultures could be established (“*Al Saf Beit ha-Midrash*,” 1894; “*Le-Aḥad Ha-Am*,” 1905). Baruch Kurzweil and others, however, have demonstrated that Bialik often unconsciously rejected the all-too-pat Aḥad Ha-Am solution and gave vent to the tragic despair that the lost paradise of faith cannot be regained (“*Levadi*” (“Alone”) 1910) “*Lifnei Aron ha-Sefarim*” (“In Front of the Bookcase,” 1910)). He also writes about the clash between traditional Jewish puritanism, with its religious ethical imperatives, and the hedonistic-aesthetical orientation of the secularized Jews (*Ha-Matmid*, 1894–95). In his Zionism poems “*El ha-Zippor*” (“To the Bird”) and “*La-Mitnaddevim be-Am*” (“To the Volunteers”) he castigates both the people and its leaders for their shortcomings and in *Ha-Matmid* nostalgically reflects upon the piety and devotion of the past. The desperate struggle to discover the link between the past and the present is central to Bialik’s poetry.

From the very outset of his career Bialik was totally committed to the national revival. His is therefore a poetry of involvement in his people’s quest for a national identity and it expresses its tragic experience of persecution and massacre: “*Be-Ir ha-Haregah*” (“In the City of Slaughter”), 1904; “*Al ha-Sheḥitah*” (“On the Slaughter”), 1903. These nationalist poems earned him the title of *ha-meshorer ha-le’ummi* (“the national poet”). It would be a mistake, however, to limit Bialik’s achievement to his nationalist themes, as profound as his involvement in them, and expression of them, might be. He was also a great lyric poet whose thematic scope embraced love and nature poems, folk poetry, and even children’s verse. Even these poems, because they could be read on several levels – personal, nationalistic, and universalistic – were often interpreted as nationalistic by the one-sided criticism of his generation. Contemporary criticism has corrected this imbalance.

No modern Hebrew poet possesses Bialik’s command of the vast resources of Hebrew literature. His vocabulary and symbols are drawn from a literary tradition that spans the entire literature of his people from the biblical period to the latest works written by his contemporaries. Bialik’s knowledge served him not simply as a means to reproduce old phrases but to forge a new idiom capable of meeting the literary needs of a modern literature. He freed Hebrew poetry from the bonds of the Haskalah rhetoric and yet his poetry style remained essentially biblical. Unlike his predecessors, his line is not a composite of biblical phrases and half verses. Mastering the source from the inside, he creates his phrasing in the image of the biblical diction. Although he was not a great innovator structurally, and generally preferred the more traditional patterns of meter and rhyme, he developed the Hebrew prose

poem, “*Megillat ha-Esh*” (“The Scroll of Fire,” 1905) and his occasional experiments with symbol and myth (“*Megillat ha-Esh*,” “*Metei Midbar*” (“The Dead in the Desert,” 1902) extended the frontier of modern Hebrew poetry.

Bialik’s impact on Hebrew literature was not altogether positive. His literary genius cast an entire generation into the shadow; its writers were dominated by Bialik’s style and themes. Yet a number of significant Hebrew poets of the period were able to maintain a great degree of artistic independence. Foremost among them was Saul *Tchernichowsky, who by education and temperament was much more “European” than many of his contemporaries. Thematically and structurally he strove to introduce a more European poetry and therefore utilizes a large variety of European poetic structures (sonnets, idylls, ballads) and rhyme patterns. His poetry also expresses revolt against the puritanism of the Jewish tradition and its shunning of the plastic and the physical. Like Berdyczewski, he stresses the individualism of his characters and the revolt of healthy passion against the suppressive puritanism of the Jewish society. More radical than Frischmann, he sought to bring to the fore the pagan undercurrent which he believed had flourished in the biblical period. He found it embodied not only in the erotic passion of the biblical woman (*Ashtorti Li*), but in the suppressed prophecies of the “false prophets.” Yet it would be a mistake to stress only this aspect of Tchernichowsky’s work. As a humanist, he remained committed to the universalist goals of European culture despite the tragedy of terror and war (“*La-Shemesh*,” “To the Sun,” 1919). He rejected, however, the traditionalistic belief that nature, passion, and physical prowess are antithetical to morality. Unlike Bialik, Tchernichowsky wrote extensively after his migration to Erez Israel in 1931. Some of his landscape poems are among the finest composed in Israel (“*Ayit, Ayit*” 1936, “Eagle! Eagle!”). The Erez Israel experience is also reflected in his patriotic verse (“*Re’i Adamah*” (“See Earth”) 1938) and in his profound long poem “*Amma de-Dahavah*” (“People of Gold,” 1937–40).

A third and less significant poet of Bialik’s generation, Zalman *Shneour, expressed a rebellious and individualistic disillusionment with conventional mores. His poetry is often permeated with a pessimistic view of the future of European civilization as in *Yemei ha-Beinayim Mitkarevim* (“The Middle Ages are Approaching,” 1915). In a literature which was in his day extremely puritanical, his verses are marked at times by a comparative erotic boldness. Shneour had a gift for descriptive poetry (“*Be-Harim*,” “In the Mountains,” 1908), but his diction often took on an immature and extravagant tone. His world is one of unbridled passion and instincts experienced by a sensitive poet who would have preferred a more idealist view of man but discovered that such a view is an illusion. Against this backdrop of blood and instinct, he describes the massacres of Jews in the Ukraine following the Russian Revolution and later in World War II. Erotic motifs also appear in his later work, the less successful series of poems on the theme of Israel’s false prophets in biblical times (*Luhot Genuzim*, “Hidden Tablets,” 1941).

A very prolific poet of Bialik's school, Ya'akov Cahan, wrote verse in keeping with the great European Romantics. His poems are highly nationalistic. He frequently wrote closet drama dealing with historical Jewish themes. Bialik's school also produced two poets whose meditative lyrical poems have elicited renewed enthusiasm of contemporary Israel students of literature. Jacob *Fichmann wrote impressive landscape poetry in a terse but simple verse and Jacob *Steinberg, elliptic philosophical poetry. Deeply personal and pessimistic, Steinberg's poetry is almost devoid of the social and nationalist idea which were the earmark of his generation.

THE PALESTINIAN- ĤALUTZIC PERIOD (1905–1948)

The Ottoman Period (1905–1917)

The Second Aliyah brought an increasing number of Hebrew authors to Palestine; they settled mainly in the Jewish part of Jaffa. Among the major writers were: Shlomo *Zemach (1904); S. *Ben-Zion (1905); Yosef *Aharonovitch (1906); Mordecai ben Hillel *Hacohen, Rabbi *Binyamin (Radler), Uri Nissan *Gnessin, David *Shimoni (1907; Gnessin and Shimoni returned to Russia in 1908); S.Y. Agnon, J.Ĥ. *Brenner, *Raĥel (Bluwstein; 1909); Ya'akov *Rabinowitz, Zevi *Schatz (1910); Devorah *Baron, Yeshurun *Keshet (1911); and Asher *Barash, Jacob Steinberg (1914). They were preceded by several Hebrew writers who had settled in Erez Israel during the 1880s (First Aliyah); the foremost among them, Eliezer *Ben-Yehuda, arrived in Jerusalem in 1881. Ben-Yehuda was not only the great advocate of the revival of spoken Hebrew but an important lexicographer who coined hundreds of new Hebrew words, many of which were absorbed by the revived language. He also was the father of modern Palestinian journalism. After serving on the editorial staff of I.D. *Frumkin's **Havazzelet*, he founded his own weekly, *Ha-Zevi*, in 1885 and in 1909 converted it into a daily. The paper often appeared under different names to avoid censorship restrictions. As editor, Ben-Yehuda adopted the sensational journalistic style then current in Paris. The historian and essayist Ze'ev (Wolf) *Jawitz lived in Erez Israel between 1888 and 1897 and published romantic stories about the early agricultural settlements in the Sharon. Moshe *Smilansky, who arrived in 1891, wrote slightly more realistic stories about Palestinian life. He was the first to write Hebrew fiction about Arab life, using the pseudonym "Ĥawajah Musa."

Hebrew literature in Palestine acquired significance during the Second Aliyah, particularly after the founding of **Ha-Po'el ha-Za'ir* (1907), the literary-political organ of the younger pioneers. The Palestinian short story grew out of the landscape of the old-new homeland. Jawitz's romantic picture of God-fearing, observant farmers who tilled their soil peacefully like their biblical ancestors gave way to the more realistic depiction of the hardships of pioneering, the life of disillusioned immigrants in Jaffa or Jerusalem (Brenner, Zevi Schatz, S. Zemach). Stylistically, the development of spoken Hebrew and its extension from the classroom, the library, and the study to the farm and the workshop not only lent a new flexibility to the

language but also broadened its active vocabulary. Thus the poetry of Raĥel strives to capture the rhythms of new speech and, in contrast to the poetry of European Hebrew poets, scans in the Sephardi accent.

The most significant prose writer of the period is J.Ĥ. Brenner who began his literary career in Russia. Brenner was influenced by the Russian psychological school, particularly Dostoevski (he translated *Crime and Punishment* into Hebrew). His main characters are "underground" men, Jewish intellectuals who are unable to free themselves of the society against which they revolt because psychologically they have been thwarted by its restrictions. Brenner's writing, brutally honest, eschews sham or pretense; his sentences, clipped, often broken, and rarely polished, convey the hesitancy and the tension of his neurotic characters. The world he depicts is tragic and helpless, pervaded by a gloomy pessimism which holds no promise for a way out. His Palestinian stories followed those of his Russian period and except for the change of venue, the dark mood is hardly altered. His later works, however, point to a maturing of style and a greater concern for structure. Undoubtedly *Shekhol ve-Khishalon* ("Bereavement and Failure," 1920) is the best of his works.

Brenner's close friend, Uri Nissan Gnessin, spent only one year in Palestine and therefore geographically belongs to the European period of Hebrew literature. His experiments in style, particularly his use of the long, meditative, almost lyrical sentence to express the *Angst* ("anxiety") of his characters, his individual use of the interior monologue, and his psychological insight mark him as a forerunner of the Palestinian school.

S.Y. Agnon, who began writing in his native Galicia, arrived in Palestine in 1909, and at this time published his first mature works, including *Agunot* ("Forsaken Wives," 1909, in: *Ha-Omer*), under the pseudonym Agnon, which in 1924 became his official name. His best works which made such a great impact on Hebrew literature were, however, written after World War I.

The Mandate Period (1917–1948)

The upheavals which racked Russian Jewry in the wake of World War I and the Russian Revolution all but spelled the end of the Hebrew literary center in Russia. Following the revolution there was some attempt to start a Communist Hebrew literature in Russia but Hebrew was soon declared a counter-revolutionary language. Hebrew publications were banned, and many Hebrew writers, including Bialik, were thrown into prison. At the request of Maxim *Gorki, Lenin ordered their release. For a few years the exiled writers established a center in Berlin. In Poland and Lithuania a few writers maintained small subcenters. Some also migrated to New York where they reinforced the already existing U.S. Hebrew press (*Ha-Toren* and later *Hadoar*) and maintained a small center (see below, Hebrew Literature in the U.S.). But a seemingly inevitable process was propelling the majority of Hebrew writers to Palestine.

The pioneers of the Second Aliyah had begun to develop an indigenous Palestinian literature – the so-called “Erez Israel genre.” Their numbers, however, were small and they remained an annex of the European center. With the destruction of the old center, the Hebrew writers of Palestine came into their own. Bialik arrived in Tel Aviv in 1924 and shortly thereafter organized the Dvir Publishing House and the Hebrew Writers Association, and became the undisputed leader of the literary community. However, his contact with the new homeland left little impact upon his writing and the little poetry he wrote in the last decade of his life, which he spent in Palestine, was generally in the mode of his Odessa period. The writers of the Second Aliyah and the older immigrant authors who arrived after World War I formed a cohesive community. The younger writers of the Third Aliyah (1920–24) soon, however, began to question their literary leadership and gave expression to the radical changes in the social, political, and literary views which grew out of the trauma of World War I and the Russian Revolution.

Politically and socially, the younger writers were far more radical than their elders. While their Zionist commitment led them to reject the Leninist denial of Jewish nationalism (at least in the Zionist sense), they embraced the socialist ideal and its call for a radical change of the class structure of Jewish society. Whether Marxists or voluntarist socialists, they dreamt of a new social order often in terms of farm or city communes. Almost all of them were *ḥalutzim* who had come to build a new society. The Ukrainian pogroms and the general breakup of their home communities in Russia found expression in a somber pessimism which often led them to question the ideology they had embraced. Their youthful exuberance and a leap of faith which grew out of the camaraderie of fellow *ḥalutzim*, however, redeemed their idealism. Yizḥak *Lamdan’s poem *Massadah* (1927), for all its expressionist rhetoric, is an honest document of the period.

POETRY. From a literary point of view, the well-rounded, learned phrasing of Bialik’s school and its preoccupation with classical structure and clarity of expression was hardly in consonance with the mood of the younger writers and of European letters. Russian revolutionary writers had broken with classicism: the rhythms and wild images of poets like Aleksandr Blok and Sergei Esenin more aptly expressed the psychological world of these younger writers. At the same time, the new poetic diction of the Russian symbolists, the acmeists, and the German neoromantics (Stefan George, Rainer Maria Rilke, and Hugo von Hoffmannsthal) also left its mark on Hebrew poetry. The latter trends made their appearance in such poets as Avraham ben Yizḥak *Sonne, David *Vogel, and Yehudah *Karni.

The new literary views found expression in *Ketuvim*, a magazine founded by the Hebrew Writers Association in 1926, but soon taken over by the younger generation. Under the editorship of Eliezer *Steinman, who was soon joined by the poet Abraham *Shlonsky, it became the organ of the

modernist group and disassociated itself from the sponsorship of its founders. Among the new writers who published in *Ketuvim* were: Ya’akov *Horowitz, Yizḥak Norman, Yisrael *Zmora, and later Nathan *Alterman, Lea *Goldberg, and Ezra *Sussman.

Abraham Shlonsky, Nathan Alterman, Uri Zevi Greenberg, and Lea Goldberg were the leading poets of the Palestinian period. From the very beginning of his career Shlonsky was the staunch advocate of modernism. As coeditor of *Ketuvim*, and the editor of *Turim* (1933–38), he openly challenged Bialik’s literary authority, calling for a modern, individualistic, “de-theologized” Hebrew poetry and rejecting both the “logical” rationalist poetry of Bialik’s school as well as its collective-nationalist orientation. He demanded the acceptance of spoken Hebrew and even slang usage as a legitimate form of poetic diction. Under the influence of the Russian revolutionary poets, Blok, Esenin, Mayakovski, and the French symbolists (Shlonsky lived in Paris between 1924 and 1925), he wrote poems which gave expression to the ennui and despair of his generation, particularly of the Jew who has suffered so much from war, revolution, and pogroms. “*Devai*” (1923–24), the title poem of his first volume of verse, is a long symbol-laden poem which takes up the malaise and the horror of modern secularized urban life and offers little hope for the future. In other poems Shlonsky returns again and again to the sheltered world of childhood, contrasting it with the lonely, desperate life of the *ḥalutz* torn between his dream of rebirth and the reality of his pioneering hardships (“*Le-Abba Imma*” (1927), *Ba-Galgal* (1927)). In his later works these themes receive a more mature treatment; Shlonsky somehow strikes a balance between the low-key symbolist influences and the more blatant surrealist and even expressionist imagery. His urban hell now also embraces the fascist threat. At the same time, he continuously harks back to the primordial themes of soil and agriculture with their blessings of fertility and security.

Nathan Alterman and Lea Goldberg may be considered Shlonsky’s disciples. Both were discovered by him and he encouraged their writing during their crucial years as beginners. Alterman continued and extended Shlonsky’s experiments with new rhythms and the syntax of the spoken idiom. Simultaneous with his serious poetry, he wrote light verse not only for the musical comedy theaters which staged political satires and enjoyed popularity in the 1920s and 1930s, but especially for his weekly verse column *Ha-Tur ha-Shevi’i* (“The Seventh Column”), which enjoyed great popularity during the struggle against the British. From a stylistic point of view these media enabled him to develop a saucy, slangy diction. In retrospect, like Shlonsky, he did not stray too far from classical Hebrew, perhaps because in the 1920s and 1930s a literal language was needed to fill the lacuna left by the yet inadequate spoken tongue. Alterman’s serious poetry was punctuated with wild expressionist metaphors and slangy or slang-like neologism. At his best he produced a score of impressive modernist poems which in their day had a major impact on the works of his younger contemporaries. Many of his poems have a bal-

lad-like quality and have as themes: the love and death motifs of the romantic agony with the recurring figure of the dead lover returning to haunt his living mate; the poet as a wandering troubadour for whom the world is an inn; the urban ennui of the European city dweller; The raw vitality of Tel Aviv in which the new city is projected against a background of the horror of the European catastrophe and the desperate hope of the reborn homeland.

Lea Goldberg was influenced by the Russian acmeists and the symbolist German poets. She shunned the verbal extravagance of the expressionist, preferring calmer tones. Like the acmeists, she aimed at simple conversational diction and gave preference to more conventional poetic forms. Her themes were modern, however, and her verse expresses the sad wisdom of an urbane and mature artist who, despite her sophistication, was able to experience and give voice to the miracle of the poetry which lies behind the ordinary phenomena of nature and life.

Perhaps the most talented poet of the age, and far less accessible to schematic definition, is Uri Zevi Greenberg. Unlike his contemporaries, Greenberg rejected the humanist socialist ideologies of his contemporaries, positing bold gigantic strokes, a mystic, anti-rational, and quasi-racial conception of the destiny of the Jewish people. He draws the Jew with bold gigantic strokes, a God-elected figure living outside history. His tragedy grows out of his great refusal to fulfill his historic destiny as the bearer of the holy seed. European civilization is a satanic fraud which beguiles him and leads to his massacre. Only by accepting his historic vocation with all the horror and the glory its fulfillment calls into being will the Jew survive. From a formal point of view Greenberg's rejection of Europe leads him to seek poetic forms and cadences which are historically Jewish. His language and metaphors are drawn not only from biblical sources but also from later Hebrew literature, frequently from the Kabbalah. Although he is also capable of writing terse lyrical verse, he prefers the expressive cadences of biblical rhetoric. He, himself, acknowledges his stylistic debt to Walt Whitman.

In his poetry Shin *Shalom wedded a strong nationalist commitment with a mystical individualistic experience which often showed a deep psychoanalytic insight into the world of the self. The increasing momentum of his nationalist enthusiasm in his later poetry overshadows his personal experience and much of his lyrical force is lost. Yonathan *Ratosh successfully endeavors to give formal expression to the cult of Canaanite primitivism and paganism whose first signs appear in the prose of Frischmann and the poetry of Tchernichowsky. Ratosh strove to revive ancient poetic forms and metaphors by reconstructing mythical remnants preserved in biblical narratives and by drawing upon ancient Ugaritic poetry. Ratosh's preoccupation with Canaanite myth is related to his Canaanite political ideology that views Israel as a new nation which is no longer Jewish and must reintegrate itself into the Middle Eastern culture of the Fertile Crescent. This he believes can be done by picking up those strands of ancient

Near Eastern myths which were abandoned after the Jews forsook the Middle East and became Europeans.

PROSE. The two leading prose writers of the period are S.Y. Agnon and Ḥayyim *Hazaz. Agnon's literary achievement is second only to Bailik's and his work encompasses large areas of the Jewish experience: Jewish Galicia of the remote past; the Galicia of his childhood; the Palestine of the Second Aliyah; the Jerusalem of the older traditionalistic settlement; Austria, Germany, and Galicia of the interbellum period; and Jerusalem of the British Mandate. His career marks the high point of the Polish-Galician strain in modern Hebrew literature with its stress on the emotional and nonrational experience of its protagonists. The influence of ḥasidic and Jewish pietistic folk literature are integrated in Agnon with the psychological, symbolistic, and existential mode of Scandinavian and Austro-Hungarian literature. His style is based, in the main, on the rabbinic-ḥasidic prose of the period immediately preceding the development of modern Hebrew but it also owes much to such early Galician Hebrew writers as Menahem Mendel Levin (Lefin) and Josef Perl and in its biblical tone (*Bi-Demi Yamehah* ("In the Prime of Life") for example) even to Erter. To the contemporary Hebrew reader it has a manneristic obsolescence deliberately reinforced by the Yiddish spelling of certain European words (*zucker* instead of the accepted *sukar* or *kahve* instead of *kafe*). Some critics see in his style an attempt to point up the paradox of writing modernistic stories in an ancient sacred tongue. Others explain it as an attempt to preserve the flavor of the Yiddish idiom used by many of his characters in his Galician stories.

Agnon's novels are landmarks in modern Hebrew literature. *Hakhnasat Kallah* (second rev. 1929; *Bridal Canopy*, 1937) is an attempt to depict the spiritual world of 18th-century Galician Jewry. From a structural point of view Agnon develops an indigenous Jewish literary form built around cyclical motifs drawn from pietistic literature (marriage, hospitality, wandering, etc.). It is essentially a character novel, and the hero R. Yidel is a quixotic personality who confronts life with a world view which is nurtured in the past. Traditional folk themes, the treasure and the cock, are imbued with modern symbolic significance. *Ore'ah Nata Lalun* ("A Guest for the Night," 1939), Agnon's attempt to describe the decline of East European Jewry after World War I, has for its hero a hesitant Palestinian Jew who returns to his native Galicia to seek the key to the forsaken synagogue. He is confounded by the realization that after the key turned up, it is he alone who is charged with the responsibility of keeping the synagogue open. *Temol Shilshom* ("The Days Before," 1945), probably the best modern Hebrew novel, is set in Ottoman Palestine and is a tale of two cities – Jaffa (Tel Aviv), symbolizing the new secular *yishuv*, and Jerusalem, representing the traditional Holy Land. Isaac Kummer ("he who comes" or "grief and sorrow") is torn between the two civilizations; unable to orientate himself toward either, he goes mad. The story within the story, that of Balak the dog, is one of the profoundest animal symbolistic fables in

world literature. Agnon's use of fable (also the cock in *Hakhnasat Kallah*) has its roots in medieval Jewish literature and in early modern Hebrew literature (Erter and later in Mendele's "Susati"; "The Nag"). Agnon's range is wide and varied. Side by side with his pietistic fiction, there are modern existential love stories, such as: *Panim Aherot* ("Metamorphosis"), *Givat ha-Hol*, *Ha-Rofe u-Gerushato* ("The Doctor and his Divorcee"), and his posthumously published *Shirah* (1971). They are all animated by a profound understanding of the existential tragedy of modern man. Hayyim Hazaz's realism harks back to the Odessa school but is relieved by a penchant for the grotesque. His early works describe the milieu of Ukrainian Jewry during the period of the Russian Revolution (*Pirkei Mahpekha* ("Chapters of the Revolution") and *Shemu'el Frankfurter*). Ukraine at the brink of the revolution forms the background of *Be-Yishuv shel Ya'ar* ("Forest Settlement"). After his migration to Palestine, Hazaz shifted to halutzic themes and later to the depiction of the life of Israel's Yemenite Jews both in Israel (*Ha-Yoshevet ba-Gannim* and *Mori Sa'id*) and in Yemen before their migration (*Ya'ish*). Central to Hazaz's works is his insistence that Jewish redemption (Messianism and later Zionism) was not realized because the Diaspora Jew and Diaspora Judaism lacked the courage to risk everything for its fulfillment. Some of his characters also express the belief that redemption means the end of Judaism, others declare Zionism to be the negation of Diaspora Judaism: *Ha-Derashah* ("The Sermon") and *Be-Kez ha-Yamim* ("At the End of Days"), a play set in Poland during the time of Shabbetai Zevi (stories of Hazaz in *Kol Kitvei Hayyim Hazaz*, 1968). Like Agnon's, Hazaz's style is literary and its vocabulary and syntax differ from contemporary Israeli Hebrew. Unlike Agnon, he prefers the mishnaic, talmudic style developed by the Odessans which he, however, stamped with his own mark. To convey the speech of his various characters, he distorts his Hebrew, "Ukrainizing" it to record the speech of Ukrainian peasants, or Arabicizing it to convey that of Yemenite Jews.

Other leading prose writers of the Mandate period are Yehuda *Burla, one of the early modern writers of Sephardi descent, who wrote stories depicting Sephardi life in his native Jerusalem and in the Middle East; Asher Barash, a prolific short-story writer and novelist who wrote of Jewish life in his native Galicia and in Palestine; Devorah Baron whose short stories sensitively describe life in her native Belorussia; Gershon *Shofman whose psychological-lyrical short stories and sketches are an original type of narrative.

WOMEN'S WRITING

The Genesis of Women's Hebrew Literature

Only recently has it become known that the history of women's writing in Hebrew literature starts in the mid-19th century, during the Haskalah period. Hitherto, it was generally assumed that as a result of women's ignorance of Hebrew and the canonical texts, the Hebrew Haskalah was a male move-

ment. The very few women who dared to compose poetry or fiction were never considered to have initiated women's literature. That picture has changed as a result of the discovery of Hebrew writings by some 25 women in manuscript archives and Hebrew-language literary periodicals of the Haskalah period. The few known women writers now appear to have been part of a wider phenomenon. Even in this early period, several others not only read Hebrew but also put their knowledge of the language, their ability to express themselves, and their creativity to active use in writing.

Women gained a significant place in Hebrew enlightenment circles only in the latter half of the 19th century, mainly in Russia and Lithuania. Most of them expressed themselves in non-literary genres: various kinds of correspondence, social essays, and translations (of which the best known example is Miriam Markel-Mosessoehn's Hebrew translation of a German-language work of history, which she called *Ha-Yehudim be-Angliyah*, 1869).

The only extant complete archive of a woman's correspondence is that of Miriam Markel-Mosessoehn (1839–1920). However, other letters have survived in men's archives, such as those of Judah Leib Gordon (which contains letters by Rivka Rottner, Sheyne Wolf, Sarah Shapira, Nehama Feinstein, and others), Dr. Judah Loeb Landau, Perez Smolenskin, and Shneur Sachs. Other letters (for example by Sarah Cohen Nevinsky, Bertha Kreidman, and Shifra Alchin) were published in Hebrew Haskalah periodicals or collections of correspondence. Most of the letters demonstrate an excellent knowledge of Hebrew and a strong commitment to Haskalah ideas.

Another way in which *maskilot* sought to participate in maskilic creative endeavor was to publish feminine social essays in Haskalah Hebrew periodicals. Some of these essays (for example Sara Feiga Foner Meinkin's "Ha-Aviv," 1876, and Marka Altschuler's "Thoughts on the Ninth of Av, My Birthday," 1880) focused on conventional maskilic "male" ideological themes. Others (like Taube Segal's "The Woman Question," 1879) expressed specifically female protests and a demand to improve girls' education.

Prior to the end of the Haskalah period, very few women published conventional literary works; we know of only three poets and one significant prose writer. Two of the poets wrote only two poems each: Hanna Blume Sulz of Vilna ("The Play," 1882, and "The Valley of Revelation," 1883) and Sara Shapira ("Remember the One Caught by a Horn," 1886, and "Zion," 1888). These poems display good knowledge of Hebrew and familiarity with canonical texts and Haskalah poetry. However, Sulz's poems are an example of the woman poet's failure when she surrendered to the masculine tastes of the time, losing her feminine authenticity. Shapira's poems are more authentic and therefore more successful, but her writing never developed into mature poetry.

A first poetic expression in Hebrew of the woman's world and her problems may be found in the writings of the Jewish-Italian poet Rachel *Morpurgo (1790–1879), whose works were collected in book form only after her death (*Rachel's Or-*

gan, 1890). Morpurgo's main achievements are in her poems of personal contemplation (including "See, This Is New," "Lament of My Soul," "Why, Lord, So Many Cries," "O Troubled Valley," "Until I Am Old"). A careful reading of these poems reveals a hidden, subtle level of significance, formed by the contrast between the canonical texts to which the poem refers and the poem itself. At this level we hear the voice of a woman describing her suffering and protesting her inferior status in Jewish society and culture.

Only one woman dared to write novels during the 1880s, Sarah Feiga Foner Meinkin, who published four Hebrew books, three of them works of fiction: *A Righteous Love, or The Pursued Family* (first volume 1881; the second was never published) *The Treachery of Traitors* (1891), and a children's didactic story, *Children's Way or A Story From Jerusalem* (1886). The fourth book was her memoirs (*Memories of My Childhood, or A Memoir of Dvinsk*, 1903). *A Righteous Love* is the first Hebrew novel by a woman. Although it seems merely to imitate male Haskalah novel-writing conventions, the author did not abandon her authentic female voice (from which she retreats in her later works). It comes out in the lively, persuasive, and colorful descriptions of the character and world of the heroine, Finnalia, her relationships (especially with other women), and her domestic life. Feminist criticism of her society also finds expression: When describing arranged marriages in Galicia, the narrator critically comments on fathers who use their daughters for business deals, "like horses and donkeys."

Sarah Feiga Foner Meinkin, however, was a unique phenomenon in her own times. Further Hebrew short stories by women were not published in Russia until the first decade of the 20th century. Thus, in 1902 the first stories by Devorah *Baron appeared in *Hamelitz* and in 1909 a small collection of short stories (*Kovez Ziyurim*) by Chava Shapira (1871–1943) was published. Both writers (Shapira wrote only a few more stories but Baron became a dominant writer) centered their stories around women's lives and thus mark the beginning of conscious female writing within a tradition of Hebrew women's writing.

[Tova Cohen (2nd ed.)]

Women's Prose Writing in the Period of the Yishuv (1882–1948)

From the very outset of the Zionist settlement movement, at the end of the 19th and the beginning of the 20th centuries, a smattering of writings by women, setting out their own vision of Erez Israel, can be seen in the pages of the Hebrew-language periodicals of the time. In the Jewish communities of Europe, despite the increasing acquisition of culture and learning by women, very few of them had made so bold as to make their writings public. A woman writer was seen as deviating from accepted social norms, compromising the natural occupations of women as homemakers and mothers, and invading, by way of her creative activity, a realm that was reserved exclusively for men. Those women who nevertheless had the courage to publish their writings were received with

derision and criticism so harsh as to deter others (see Sarah Feiga Foner Meinkin). However, things were different in Erez Israel. Here, too, the creative efforts of women writers were either roundly criticized or ignored, but this no longer put them off writing. To be sure, if the Zionist revolution, particularly in its socialist stripe, had declared its pioneering endeavor to be an equal partnership of men and women, it had retreated from this declaration on the practical level from the moment the settlement effort got underway. In keeping with the traditional conceptions characteristic of the Diaspora, women were kept in the margins of public and nationalist activity and were expected to serve as "helpmeets" rather than equal partners in the leadership of the *yishuv*. However, the women did not keep quiet. Unlike their Diaspora predecessors, they were cognizant of their roles and contributions in advancing the Zionist endeavor, and they set out to fight for their rightful place in both the public and the literary arenas. For the women who took part in that endeavor, as settlers, laborers, or pioneers, the national revival was also a women's revival, and so also a women's literary revival. Women insisted on making their voices heard in the male-dominated public sphere of the *yishuv* and on continuing to publish their creative work, even if they met with rejection.

On the other hand, a perusal of anthologies, historiographies, and Hebrew literary studies concerned with the period of the *yishuv* reveals very little in the way of prose writing by women. Their literary output, it would seem, was largely confined to poetry, including that of *Raḥel Blaustein, Esther Raab, Lea *Goldberg, Elisheva Bichovsky, Anda Pinkerfeld-*Amir, and others. These poets, too, never received the support and encouragement they deserved from contemporary male poets and critics, but their poems nevertheless made their way into the public consciousness and became an inseparable part of the literary repertoire of the period. This fortune was not shared by the women prose writers, notwithstanding their literary productivity, which enriched the Hebrew bookshelf with dozens of novels, novellas, short stories, plays, stories for children and young adults, non-fictional works, essays, memoirs, and biographies. Only the fiction of Devorah Baron attracted the interest of literary critics and scholars. Baron's works certainly were outstanding in their aesthetic quality, but the exclusive focus upon them gave rise to the unfounded historiographical thesis that there was nothing much in the way of women's prose writing from Devorah Baron until Amalia *Kahana-Carmon, who began publishing her work in the 1950s. The impression was of a void during the period of the *yishuv* that began to be filled only in the early period of the state.

Who were the "unknown" women prose writers, and what did they write? They began arriving in Erez Israel with the first waves of settlers, with aspirations not only to give vent to their creative impulses but first and foremost to fulfill their Zionist, or socialist-Zionist, commitment to building the Jewish national homeland. They were working women – their writing always emerged as a secondary occupation – who engaged in public and ideological activity within the rural

or urban frameworks in which they lived: in the kibbutzim (Emma Levine Talmi, Ruhamah Hazanov, Rivkah Gurfein, Yehudit Mensch); in the moshavot (Yehudit Harari, Shoshannah Shababo); in Jerusalem (Shulamit Kelugai); and in Tel Aviv (Rachel Feingenberg, Shoshannah Sherira). Some of them started out in rural communities and later moved on to the city (Batyah Kahana, Sarah Gluzman, Rivkah Alper). In the rural settings, they were usually employed in agriculture or in education, while in the cities, aside from school and kindergarten teaching (Shulamit Flaum, Sarah Levy), they worked as journalists (Bracha Habas, Shoshannah Sherira, Miriam Tal), in the theater (Miriam Bernstein Cohen), or as laborers (Rachel Adiv and Pnina Caspi were factory workers). Devorah Baron was the only woman writer of the period to devote all her time to writing, after becoming a recluse in her home, which she did not leave for over 30 years (1922–56).

Taken together, these writers do not present a uniform typological visage; rather, they represented a multicultural cross-section of the various sectors of the *yishuv*. If most of them were secular, there were those who were religiously observant (Malka Shapira); and if the majority originated in Eastern Europe, there were those who hailed from Western Europe (Hannah Trager) and several from the Yemenite (Sarah Levy, Yonah Wahab) and Sephardi (Shoshannah Shababo) communities. Politically, they belonged to several different streams in the Zionist movement, some to the labor sector (Rivkah Alper belonged to the moderate wing, Emma Levine Talmi to the radicals), and some to the “civil” sector (Ira Yan, Shoshannah Sherira). Most were new immigrants, but a few were born in the country (Hannah Lunz Bolotin, Shoshannah Shababo).

The women prose writers of the *yishuv* can be grouped into three generations. Those of the first generation, born in the second half of the 19th century, immigrated to Erez Israel with the first and second *aliyot*, in the years immediately before and after the turn of the 20th century, and began publishing their works from this period onward (Nehamah Pukhachevsky, Hemdah *Ben-Yehuda, Devorah Baron). Those of the second generation, born in the first decade of the 20th century, immigrated to the country and began publishing their works in the period between the two world wars (1918–1939 – Batyah Kahana, Rivkah Gurfein, and the native-born Shoshannah Shababo). Those of the third generation, born during the second two decades of the 20th century and brought to the country as young children, grew up for all intents and purposes as native Israelis (Sarah Gluzman, Pnina Caspi, Shoshannah Sherira, Yehudit Hendel) and began publishing their works in the 1930s and 1940s.

This diverse community of writers naturally produced a spectrum of women’s narratives that varied in their social, political, and cultural perspectives. The plots ranged around two principal foci: (1) women’s experience qua women: their self-awareness, motherhood, male–female relations, sexuality, relationships among women, the exploitation and oppression of women, and so on; and (2) women’s experience as a func-

tion of their situation in Erez Israel: their encounter with the land, the transition from conservative ways of living to freer ones, the absence of the older generation, women’s isolation within the “united” collective, their struggle for a place in public life, their critique of the masculine character of the Zionist endeavor, and so on. These women’s themes contributed to the creation of a unique female narrative, an integral part of which was a female version of the national narrative that had a distinctly different character from the dominant masculine one. If the latter was one of dramatic struggle, danger, and heroic death, the female narrative was one of gray, ongoing struggle for survival. If the masculine national narrative presented itself as the collective subject, giving every plot the power of a statement of historic vision, the female national narrative focused on the private and the everyday, which it treated in a restrained but critical tone.

A further distinctive quality of the female narrative was the presence, to varying degrees, of critical “feminist” tendencies. From the very outset of women’s prose writing in the *yishuv*, two principal feminist positions may be discerned in it: a constructivist trend, trail-blazed by Hemdah Ben-Yehuda, and a melancholic one, whose first representative was Nehamah Pukhachevsky. According to the constructivist stance, women were destined, with time, to emerge from their marginal position in the society of the *yishuv*. Their increasing acquisition of learning and culture, particularly their reeducation to Hebrew culture and national consciousness, would surely advance their equality and centrality in the evolving national community. Ben-Yehuda spoke primarily of the centrality of women as mothers in constructing the new generation and emphasized how the quality of their mothering conditioned that of the entire nation. This optimistic feminism emerged in a variety of fictional narratives in which alternatives to the conventional portrayal of women posed models of strong-willed, self-confident women, able to stand their ground against patriarchal men (as in the works of Batyah Kahana, Sarah Gluzman, and Shoshannah Sherira).

The melancholic position took the shape of a more critical type of feminism. It excoriated the masculine Zionist activity that in practice replicated all the ills of the past, so that instead of realizing the liberal-nationalist rebirth of the people and of humanity, it rebuilt a reactionary society characterized by overweening hegemonies, new class hierarchies, and indifference to the weaker members of society, such as laborers, members of the Oriental Jewish communities, “others,” and, of course, women. The writers who took this position sought to recount, from the perspective of women, the national narrative of those who stood in the margins of Zionism and the society it was creating and to expose the oppressive situation in which they found themselves. However, this critical protest was not voiced aggressively or stridently. On the contrary; it was muted and introverted, fluctuating between anguish and melancholy in a kind of drawn-out lament (as may be seen in the works of Ruhamah Hazanov, Pnina Caspi, Yehudit Mensch, and Miriam Tal).

These and other features led to the coalescence of a female meta-poetics. Although the writers emerged from different sectors and were informed by different ideological and literary worldviews, they may be seen as belonging to an “imagined community” – one that worked and created, consciously or unconsciously, according to a shared meta-poetics with several distinctive qualities. (1) Unlike contemporary male writers, who devoted little space to representations of women in their pioneering narratives, the women writers completed the missing half of the map by filling that void with their own creations. Moreover, they endowed women in the *yishuv* with a more powerful presence, allowed them to articulate themselves, and gave voice to all those representations of silent or silenced women. (2) Prose-writing in the *yishuv* devoted much discussion to the development of the “new Hebrew,” while continuing to represent the “Hebrew woman” according to men’s traditional conceptions, represented by just two archetypal contrasts: that between Eve and the she-demon Lilith, and that between the lover and the wife-mother. But women’s prose was different; it endeavored to mold a new woman with a female Israeli character, in possession of a female Hebrew culture (anticipating the appearance of the native-born *sabra*). (3) The “literature of the homeland,” as written by men, developed two primary genres: novels on the theme of settling the land, and documentary novels. Women writers, too, dealt in their own way with these genres, but they narrated them along the lines of romance, or “national romance,” interweaving them with elements of legend and fantasy.

It is perhaps because of these gendered differences in poetics that the male literary community showed little understanding for and interest in women’s prose, to the point of excluding and banishing it from the collective memory. That exclusion was not entirely all-encompassing; here and there a few male writers and critics encouraged women writers, particular in the early stages of their careers. Thus, Joseph Klausner read and commented upon the writings of Batyah Kahana; Yitzhak Lamdan, editor of the literary periodical *Gilyonot*, published the work of Shoshanah Sherira; Avigdor Hameiri facilitated the publication of Miriam Tal’s first book; and Asher Barash, as editor of the Mitzpeh publishing house, published works by Rivkah Alper, Shoshanah Shababo, and Miriam Bernstein Cohen. However, this kind of partial, fleeting recognition did not lead to the public embrace of their work, nor were women’s journals like *Ha-Ishah* (1926–29), *Devar ha-Po’et* (1934–70), and *Olam ha-Ishah* (1940–48) successful at keeping the women prose writers of the *yishuv* in the public eye.

Only in the 1980s, when literary scholarship began to take an interest in feminist and gender theory and so also to take up the status of women writers as a topic of study, were these nearly forgotten writers rediscovered, as works by Yaffah Berlovitz, Orly Lubin, Avivah Ufaz, Tamar Hess, and others began restoring their writings to the collective memory of contemporary Israeli culture.

[Yaffah Berlovitz (2nd ed.)]

THE ISRAEL PERIOD (1948–2005)

The year of the establishment of the State of Israel, 1948, is a convenient date to mark the onset of the Israel period of modern Hebrew literature, although it actually began earlier. One of its leading literary figures, S. *Yizhar, published his first short story, *Efrayim Hozer la-Aspeset*, as early as 1938. Most of the younger generation of writers on the literary scene in 1948 were either native Palestinians or had come to Palestine in their childhood. The few who came in their youth or later had been so deeply involved in Zionist or Hebrew youth movements in the Diaspora that they too were culturally Palestinians. Hebrew was the mother tongue of these writers or at least their childhood language. The earlier Palestinian generation had by now forged a spoken language which had rid Hebrew of its somewhat pedantic character and the Hebrew of the new school was a natural language alive with colloquialisms and the echoes of childhood speech. Born into the Palestinian landscape, the younger authors viewed it more realistically than the older generation with its tendency to idealize the land of their Zionist dreams, on the one hand, and to recollect nostalgically the northern climes of their childhood on the other. For the new generation, the East European landscape existed only in the memory of childhood stories which they had read or heard from their parents. The change of geographic locus also affected their Hebrew style. The new secular Hebrew school de-emphasized rabbinic and medieval Hebrew studies and gave primacy to biblical and modern literature. The Hebrew of the new writers was more flexible than that of the older generation but not as learned. Yiddish language and literature hardly affected their style or choice of themes. While the older writers were generally influenced by Eastern or Central European literature, the new school, whose second language was usually English, was affected by British and, especially, American literature. Moreover, unlike many of their predecessors, whose knowledge of a European literature was intimate and acquired in the country in which it was spoken, most Israel writers knew European literature through translations or criticism in Hebrew. Many learned a European language only after they began to publish.

The more “natural” approach of the Israel writers often expressed itself in its questioning of the Zionist-Socialist ideology of the parent generation. This trend was discernible in the earliest of their works. S. Yizhar in *Efrayim Hozer la-Aspeset* questions the kibbutz ideology and whether it really succeeded in establishing an egalitarian society. Uri, the hero of M. *Shamir’s *Hu Halakh ba-Sadot* (“He Walked Through the Fields,” 1947), for all his sense of duty, is hardly representative of the new type of Jew which the kibbutz movement apparently intended to produce. The ideology crisis and its subsequent existential anxiety, already dominant in post-World War II European literature, was delayed in the first phase of Israel literature by the struggle for national independence.

Many of the younger writers were members of kibbutzim and associated with various left-wing movements. They

served in the Palmah, the crack army units of the War of Liberation, and subscribed to a Socialist-Zionist ideology. During this early phase, they embraced Andrei Zhdanov's doctrine of socialist realism which called upon writers to preach socialism but at the same time point out aberrations within the system. They favored an ideological literature with its stress on the collective we rather than on the introspective I. But even in this early phase the rise of existential dissent is discernible. Poets like *Gilboa and *Gouri, for example, speak of the darker side of personal experience found already in their early "life affirming" period.

By the 1950s the ideology crisis had set in: "Utopia" realized came to be seen as "utopia" lost. The enthusiasm of the War of Liberation and its victory gave way to the harsh reality of building the new state. Mass immigration, the unresolved conflict with the Arabs, the shift of Russian foreign policy, the necessity to compromise ideals in order that the state might survive militarily and economically, and the rise of careerism tended to erode the utopian ideals of the soldier-writer. National independence and the creation of the state had not resolved all problems. During the national struggle egoisms had been harnessed, following it, they seemed to burst forth. After the War of Independence some of the idealism that had led to the creation of the state paled and people began to pursue their own private ends. On the literary scene, the writer, his finger on the pulse of the nation, aesthetically expressed what the man in the street unconsciously felt. He chose to no longer subordinate his talent to a national cause to which he had often in the past consciously sacrificed his originality. Writers began to question the possibility of any ideology except subjective expression of their inner world. The prose and poetry in the late 1950s therefore took on an individualistic, existentialist, and even surrealist tone expressing the anxieties of a generation disillusioned with ideologies. Their central theme is the alienation of modern man; their world that of the secularized, non-ideological urbanite. Rarely, except for their cultural or geographical context, does their writing deal with parochial Jewish topics. Yet, even when the Israel writer had rejected ideologies, he could not entirely escape the ethical imperatives of his Jewish tradition. Even before the Six-Day War his conscience had been disturbed by the Arab problem: the plight of the refugees whose solution could endanger the survival of the nation. After the war, which had come as a natural consequence of a long-term conflict, while accepting its harsh reality, he was perturbed by the military atmosphere. Perhaps the crisis following the war had already shifted the pendulum back to ideology.

Poetry

The leading poets of the early Israel period, Haim Gouri, Amir Gilboa, Abba *Kovner, and T. *Carmi are connected in one way or another with the Palmah. Gouri's early verse, *Pirhei Esh* ("Flowers of Fire," 1949), perhaps more than any other poem, expresses the revolutionary Zionist ideology of his generation which "spoke in the first person plural." While throughout his

career he retained his commitment to his youthful ideology (this was reinforced by the experience of the Six-Day War) his later poetry took on a more personal tone. His anguish, however, is often rooted in the lonely feeling of a man who has retained a truth that others have abandoned: "But I guard the walls of a city that died years ago." Amir Gilboa, unlike Gouri, was born in Europe and his poetry, even during the earliest phases, is permeated by the tragedy of the Holocaust in which his family perished. Gilboa also confronted the horror of the Holocaust when as a soldier in the Jewish brigade he encountered the remnants of European Jewry after World War II. Breaking with the Shlonsky-Alterman tradition, he not only introduces his particular individual blend of traditional and colloquial elements but a surrealist atmosphere pervaded by dream sequences and childish memories. In his later phase these characteristics became more pronounced and he added to them a remarkable experimentation with Hebrew sounds, extracting from them poetic implications. Abba Kovner, like Gilboa, is a product of the European Zionist left. Unlike Gilboa, who had arrived in Erez Israel in 1937 and had experienced the Holocaust indirectly, Kovner was in Eastern Europe during the Nazi period. He was the partisan leader of the Vilna ghetto and later became a high-ranking resistance commander. His is a modernist poetry in which he fuses themes of the national struggle and the anti-Nazi resistance with the personal tragedy of the partisan or Palmah fighter. Surrealist symbols and visions which recur throughout his work project a complex image of the war and the Holocaust.

T. Carmi, an American by birth, was one of the earliest new poets to draw upon modernist American and French techniques for his verse. (Simon Halkin had preceded him.) He combines a deep knowledge of European and American poetry with a mastery of traditional sources. Although his earliest volumes deal with "national" themes, the Holocaust, and the war even they, like his later works, have a subjective, existentialist perspective. In the 1950s he moved completely to a personal poetry which is intelligent, playful, and commands all the skills of the trade.

The second phase of Israel poetry is dominated by the work of Yehudah *Amichai in which are integrated the author's German Jewish Orthodox heritage and his Erez Israel experience (arrived in Palestine in 1936). His use of daily speech, irony, metaphysical metaphors, and existentialist *Angst* have become the hallmarks of much of the poetry written by his younger contemporaries, who freely acknowledge their debt to him. These younger writers formed a literary group called *Akhshav* ("Now") which proclaimed the end of ideological poetry and broke with the Alterman-Shlonsky tradition. In later years Amichai personally disassociated himself from the group. Among the many talented poets of this generation are Nathan *Zach, Tuvyah *Ruebner, Dan Pagis, David Avidan, Dalia *Ravikovitch, and David *Rokeah. At the same time, a new generation of poets began publishing; among the most promising are Meir Wieseltier, Mordecai Geldman, Ya'ir Hourvitz, Aryeh Sivan, and Israel Pincas.

Prose

The Palmah generation produced realistic literature dealing in the main with their kibbutz experience and with their experiences during the War of Liberation. Prominent among them is Moshe Shamir, who in his novel *Hu Halakh ba-Sadot*, a best seller set during the War of Liberation, gives a realistic description of a Palmah commander whose sense of duty seemed greater than his ideological commitment. *Pirkei Elik* (1952; *With his Own Hands*, 1970), a quasi-biographical work, is artistically the more interesting. Shamir's historical novel *Melekh Basar va-Dam* (1954; *A King of Flesh and Blood*, 1958) was very popular, while his later works are somewhat more experimental and have not enjoyed the popularity of his earlier novels.

S. Yizhar writes a more lyrical prose and his long novel *Yemei Ziklag* ("The Days of Ziklag," 1958) is undoubtedly the most important novel of the Palmah generation. Despite its amorphous style, its lyrical repetitions, and its rather limited range of characterization, it expresses more than any other work the crisis of belief which shook the entire generation in the wake of the establishment of the State. S. Yizhar is one of the earliest authors who dealt honestly with the Arab question and expressed certain moral reservations with regard to handling the Arab refugee problem ("*Ha-Shavui*" "The Prisoner," 1949) and "*Sippur Hirbet Hizah*," (1949).

Aharon Megged began his literary career by writing seafaring short stories (*Ru'ah Yamim*, "Sea Wind," 1950) but turned to humor in his popular work *Hedvah va-Ani* ("Hedvah and I," 1954) and later to existentialist short stories and novels, such as *Yisrael Haverim* (1955), *Mikreh ha-Kesil* (1960; *Fortunes of a Fool*, 1962); and *Ha-Hai al ha-Met* ("Living off the Dead," 1965). His characters, foiled by their own human weaknesses, are unable to adhere to the ideals (humanist-Zionist-socialist value system) they advocate and are therefore in a constant state of conflict.

Hanoch Bartov, like Megged, depicts the challenge of the value system of the native Israeli confronted by a state he helped to create in which the new immigrants are not ideologically orientated and natives have become careerists: *Ha-Heshbon ve-ha-Nefesh* ("The Reckoning and the Soul," 1953) and *Shesh Kenafayim le-Ehad* ("Each Has Six Wings," 1954). He, too, writes about the Nazi catastrophe, as seen through the eyes of a Jewish Brigade soldier from Israel *Pizei Bagrut* (1965; *The Brigade*, 1968). In his novel *Shel Mi Attah Yeled* ("Whose Are You, Boy," 1969), he returns to his childhood in Petaḥ Tikvah.

Poets like Amichai and Gouri have also written serious fiction. Amichai's *Lo me-Akshav Lo mi-Kan* ("Not from Now nor Here," 1963), set in Jerusalem and in Germany, plumbs the Nazi Holocaust in an attempt to find meaning in it. He also wrote a volume of surrealist stories. Gouri's *Iskat ha-Shokolad* (1965; *The Chocolate Deal*, 1968) approaches the Holocaust theme through the relationship of two refugees. Of the younger prose writers, the more significant are Amos Oz (1939–), whose *Mikhael Shelli* (1968) also alludes to the Arab

problem; and Nissim Aloni who writes brilliantly about his childhood in the Jaffa slums and is by far the most original Israeli playwright. He combines a superb sense of the theater with a talent for the absurd. Benjamin Tammuz writes nostalgically about his childhood in Tel Aviv (*Holot ha-Zahav*, 1950; *Sands of Gold*, 1953); he has published a trilogy which centers around a picaresque hero, Eliyakum. Avraham B. Yehoshua, published three volumes of short stories: *Mot ha-Zaken* ("Death of the Old Man," 1963); *Mul ha-Ye'arot* ("Facing the Forests," 1968); and *Tishah Sippurim* ("Nine Stories," 1970); *Three Days and a Child* (1970) is a collection of five short stories.

Aharon Appelfeld delves into the inner world of his characters, who, like himself, are victims of the Holocaust. His central theme is the psychological residue of the Holocaust experienced by the characters years later. Thus he approaches the tragedy obliquely, writing in a lyrical prose which is simple, but freighted with nightmarish symbols. The deep religious mysticism which dominates Pinḥas Sadeh's prose and poetry is not orthodox and at times takes on Christological overtones. Amaliah Cahana-Carmon's sensitive short stories deal with her childhood.

[Ezra Spicehandler]

The 1970s

The 1970s marked the passing of most of the prolific writers of this generation: S.Y. Agnon (d. 1970) and Ḥayyim Hazaz (d. 1973), two outstanding writers of prose fiction, and Nathan Alterman (d. 1970), Lea Goldberg (d. 1970), and Abraham Shlonsky (d. 1973), three eminent poets. Only Uri Zevi Greenberg, in his eighties, continued to write his exceedingly powerful, expressionist-mystical verse until his death in 1981.

Collected works of these authors appeared either shortly before or soon after their deaths. Most significant were the posthumously published works of Agnon, which were edited by his daughter, Emunah Yaron. These include the novels *Shirah* (1971), depicting Jerusalem's intellectual community of the 1930s and 1940s, and *Be-Hanuto shel Mar Lublin* ("In Mr. Lublin's Shop," 1974), set in Leipzig during World War I, *Ir U-Meloah* ("A City and its Fullness"), a monumental portrayal of Agnon's home town and for that matter of 1,000 years of Jewish life in Poland (1973), and *Sofer, Sippur ve-Sefer* ("Writer, Story and Book," 1978), a collection of traditional vignettes relating to the art of writing. Despite their sometimes incomplete form, these works reinforce the generally accepted view that Agnon was the greatest fiction writer of modern Hebrew literature.

Older poets, like Sh. Shalom (*Ki Panah ha-Yom* – "The Day is Setting"; *Shai Lavan* – "White Gift," 1974) and Avraham Broides (*Kol Od Odi* – "While I Still Am"), continued to publish poetry whose very titles reflect their stage of life. Yehoshua Tan Pai (1975) and Yonatan Ratosh (d. 1981), who 30 years ago were looked upon as innovating trailblazers, published their collected works. Ezra Sussman's (d. 1973) reflective prose poems *Keshet Nisan* ("April Rainbow," 1976) were extolled by the critics. The collected verse of Simon Halkin

appeared in 1977 (*Shirim*). Halkin has also rendered a learned translation of George Seferis' early verse. Gabriel *Preil, the only Hebrew poet of distinction living in the United States who chronologically belongs to this generation, continued to create highly lyrical, subjective poetry. Ephraim *Broido's long awaited translation of Shakespeare's sonnets won critical acclaim (1977).

Writers associated with the "Generation of 1948," such as Haim *Gouri, T. *Carmi, Abba *Kovner, and Amir *Gilboa, were active. In *Mar'ot Geḥazi* ("Visions of Geḥazi," 1973), Gouri seemed to be reliving vicariously the fears, anxieties and the glory of the War of Independence in poems reflecting the Yom Kippur War. Carmi's selected poems *Davar Aḥer* appeared in 1973. In *Hitnazlut ha-Meḥaber* ("The Author's Apology," 1974), he too reacts movingly to the trauma of the Yom Kippur War, and his *El Erez Aḥeret* ("To Another Land," 1977), contains highly sophisticated, ironic lyric poetry reflecting his two-year stay at Oxford. In *Raziti Likhtov Siftei Yeshenim* ("I Wish to Write Sleeping Lips," 1968) and *Ayalah Eshlah Otakh* ("Gazelle, I Dispatch You," 1972). Amir Gilboa moved away from his originally surrealistic poetry to a more realistic and concrete world. There is a thinning out of metaphor, yet at the same time a dazzling display of aural experimentalism. With *Moah* ("Brain," 1975). Dan Pagis moved from a Rilkesque poetry to a more economical and cerebral idiom. Ozer Rabin, a poet who writes comparatively few poems, produced an impressive volume of delicately meditative verse (*Be-Terem Ta'avur*, 1976). *Zelda surprised Israeli readers with moving religious poetry (*Al Tirḥak*, "Do Not Go Far," 1975).

Fiction writers were equally productive. Moshe *Shamir's *Yonah Be-Ḥazer Zarah* ("Pigeon in a Strange Yard," 1975) is part of a trilogy written in a realistic vein which attempts to depict the saga of several generations of Israeli settlers. Aharon *Megged has made a more courageous effort to vary his themes and style. In *Al Eẓim ve-Avanim* ("Just About Everything," 1974), he tries to portray the ugly Israeli without the usual stereotyping. His anti-hero turns out to be a frustrated human torn between the moral values he inherited from his Zionist past and a crass, almost self-destructive realism. Megged explores the theme of disillusionment with Zionist leaders rather than ideology in *Maḥberot Evyatar* ("Evyatar's Notebooks").

Benjamin Tammuz's *Requiem le-Na'aman* ("A Requiem for Na'aman," 1978) also deals with the failure of the Zionist dream to transform Jews into an earth-bound "normal" people. Like many contemporary novelists, Tammuz examines the naive ideals of the early settlers of Israel and the disillusionment of their descendants.

Aharon *Appelfeld's *Badenheim, 1939* (English: Boston, 1981) recaptures the eerie inevitability of the approaching Holocaust as viewed through the eyes of alienated middle-class Jews vacationing at an Austrian summer resort. His novel *Tor ha-Pelaot* ("The Time of Wonders," 1978) tells the story of an assimilated Austrian-Jewish family before, during and after the Nazi period.

Interesting is the *Seneds' (Alexander and Yonat) experimentation with new techniques of novel writing, influenced by the modern anti-novel writers like Natalie Serraut (*Tandu - "Tandem,"* 1974).

THE NEW WAVE. The New Wave is a term coined by the Israeli critic Gershon Shaked for the generation of prose writers which began publishing in the late 1950s and the 1960s but is equally applicable to the poets of this period as well. The movement expressed itself not only in its rejection of the earlier Zionist Socialist certainties but in its proclaimed indifference toward all ideologies. In the words of Shimon Sandbank, there was a "Withdrawal to a no man's land of existential angst." The New Wave not only questioned the patriotic rhetoric which characterized some of the writing of the pre-State period, but called for a written idiom which was more concrete and closer to the spoken language. Their ideology was articulated in the *avant garde* magazines which were founded in the 1950s and 1960s, *Li-Kerat* ("Towards," 1953-54), *Akshav* ("Now," 1957-to date) and *Yokhani* (1961-67).

Among the ideologists of the New Wave were the poet Nathan *Zach and the critic Gavriel Moked. Zach's iconoclastic criticism of poets like Alterman cleared the ground for the new poetry. Zach objected to Alterman's strict and regular metrics and what he called his high-blown diction and advocated the writing of more concrete, low-key poetry.

Zach, together with Yehuda *Amichai who chronologically belong to the 1948 group, and David *Avidan, wrote poetry which reflected the new poetics. When from time to time they had recourse to the phrasing of classical literature they would yank words and phrases out of their original context and give them an ironic twist. As is frequently the case the new style either influenced or was influenced by some of the more sensitive older poets such as Amir Gilboa and Abba Kovner. By the 1970s however, the poetry of the New Wave assumed an "after the battle" air. Nathan Zach almost ceased publishing poetry or criticism. Amichai appeared to be restating completely what he already had said (*Ve-lo al Menat Lizkor* - "So as Not to Remember," 1971; and *Me'ahorei Kol Zeh Mistater Osher Gadol* - "Behind all This is Concealed Great Joy," 1974). David Avidan's troubador pyrotechnics, previously permeated by an air of youthful exuberance, have lost their verve.

The prose writers of the New Wave, on the other hand, played a leading role in Hebrew letters. A.B. *Yehoshua and Amos *Oz, whose short stories have been described by Hillel Barzel as meta-realistic, without entirely abandoning their symbolic proclivities, moved closer to realism. This is evidenced in Yehoshua's bestselling novel *Ha-Me'aveh* (*The Lover*, 1976) and in Oz's *Har ha-Ezrah ha-Ra'ah* (*The Hill of Evil Counsel*, 1976). In *The Lover* the symbolic referents are less concealed. Although universal themes such as loss of innocence and aging underlie the story, it has specific Israeli-Zionist dimensions. There is not only veiled criticism of the failure of the post-1948 society to realize the Zionist-socialist ideologies of the past but an assertion of its inability to comprehend

the present in terms of any ideology. Amos Oz's world is in a constant state of siege. The kibbutz, the fortified towns, are encircled by a primitive, vital and animal-like world which is ready to break in and destroy it. The state of siege is a hidden allegory pointing to the condition of modern man. In the end it is not Jews against Arabs but the clash between the destructive vital forces of the ego breaking against the ethical barriers of the id. In their quest for romantic fulfillment his female characters seem ready to surrender to the vitality of animal passion.

Amalia Kahana-Carmon's work has greater affinity to that of the post-1948 generation. Her first collection of short stories appeared in 1966, *Bi-Khefifah Ahat* ("Under One Roof"), and includes stories written in the late 1950s. With her novel *Ve-Yare'ah be-Emek Ayalon* ("And the Moon in the Valley of Ayalon," 1971) and her collection of three novellas, *Sadot Magneti'im* ("Magnetic Fields," 1977), she emerged as one of Israel's leading writers of fiction. Unlike Yehoshua and Oz, she uses a stream of consciousness technique influenced by Virginia Woolf. Kahana-Carmon's handling of narrative time is not chronological but psychological. Her major theme is the impossibility of sustained human relations, since such relationship means a surrender of that independence which alone can redeem one from the tragedy of the human condition. In the best short story in her latest book *Hadar ha-Hadashot* ("News Room"), Kahana-Carmon's style is elliptical, manneristic, elusive and freighted with all the ambivalences which mark an in-depth probing of the psychology of modern men and women.

Yitzhak Orpaz, like Amalia Kahana-Carmon, belongs to the 1948 age group but his writing is closer to that of the New Wave. While his earlier stories still retain a great deal of the realism of the 1948 group, his writing moves toward the more elliptical, involuted style of the psychological school. This is increasingly apparent in his post Six-Day War novels. *Masa Daniel* ("Daniel's Odyssey," 1969) describes how Daniel, a war-weary veteran, discovers the meaning of life through a mystical encounter with the well-springs of existence on an abandoned beach. His novel *Bayit le-Adam Ehad* ("A House for One," 1975) is existentially religious in tone.

In *Sus Ez* (*Rockinghorse*, 1973) Yoram Kaniuk continues to explore the alienated Israeli. His hero Aminadav Sus Ez, an emigré living in New York, returns to his native Tel Aviv in the wake of the Six-Day War and proposes to make a film about the Tel Aviv of his childhood as an uncommercial exercise in self-examination. Kaniuk is at his best when he evokes the Israel of the 1930s. His artistic control of the spoken idiom and his masterful use of the stream of consciousness technique place him among the more effective writers of his generation. His story concludes with an ironic note; the film was a commercial success.

The achievement of the younger generation was mainly in poetry. The writers of prose have veered away from the fundamentally symbolist bias of their predecessors to a more realistic vein. Yitzhak Ben-Ner, in *Shekiah Kafrit* ("Village

Sunset," 1976), and Y. Koren, in *Levayah ba-Zohorayim* ("Funeral at Noon," 1976), set their stories in the more established communities of rural Israel.

Revolting against the anti-romantic, new-criticism type of poetry of the New Wave, the younger poets strive for a more decorative idiom. In part they take their cue from Amir Gilboa's experiments with sound and syntax. Many evoke a personal mythology in which beauty, music and free association are given free rein thus creating what Aharon Shabbetai called "the new sweet style," in which the logic of words gives way to the harmony of sound. Ya'ir Hourvitz speaks of his preferring "sea time" to "land time."

Yonah Wallach's *Shirah* ("Poetry," 1976) tinkers with the subconscious mechanisms of feeling pushing boldly against the very borders which divide sanity from madness. In contrast, Moshe Sartal takes up the apocalyptic, mystical cadences of Uri Zevi Greenberg in *Basar al Gabei Gehalim ve-Shirim Aherim* ("Meat Over the Coals & Other Poems," 1976). Aharon Shabbetai's *Kibbutz* (1974) was written when he was still much under the influence of the New Wave and is almost devoid of adjectives. His *Ha-Po'ema ha-Beitit* ("Domestic Poem," *Siman Kriah*, 6, 1974) is rich with images.

On the other hand, Mordecai Geldman, whose earlier poetry was suffused with pictorial opulence, began writing a sparser verse, without sacrificing musicality. "I want to say it still more/still more simply." Meir Wieseltier's approach to poetry is eclectic. He criticizes Zach for being "romantic" and "uncommitted." Zach took the "self" to be an autonomous being. Wieseltier considers his "self" exposed in all directions and susceptible to constant charges, to the direct impact of "things." In the title poem of his collected works *Kah* ("Take," 1975), he takes on an anti-poetic, quasi-Mayakovskiesque tone.

Anti-romanticism carried to grotesque parody was characteristic of Hebrew playwright Hanoach Levin. His brutal exposé of the banality of urban living, its ugly loneliness, its cruel division between people "who make it" and "the slob" excludes the slightest ray of hope in his society of the damned. Other playwrights who represent the New Wave in Hebrew drama of the 1970s are Hillel Mittlepunkt and Yehoshua Sobol.

[Avner Holtzman]

The 1980s and After

PROSE. Intense activity characterizes Hebrew prose since the 1980s, with members of various literary generations writing at the same time: From the "Palmaḥ Generation," which marked 60 years at the turn of the century since its appearance on the literary scene, to writers who were born in the 1960s and 1970s and made their debut in the 1980s and 1990s. The prose of this period is many-sided in theme and approach, enterprising and innovative in style and in its use of diverse literary techniques. Ideologically, this prose follows for the most part the long-established tradition which considered Hebrew literature to be a means for examining and grappling with the basic questions of Jewish-Israeli existence by exposing the collective tensions

in individual characters and fates. Among the major concerns repeatedly treated are the making of Israeli identity and its relation to Jewish roots and Diaspora experience; the legitimacy and validity of the Zionist vision and the discrepancy between the initial Zionist project and its implementation; the recurrence of war and acts of terror and the inability to solve the more than 100-year old Arab/Palestinian-Israeli conflict in non-violent ways; the changes in the system of political, social, and moral values and in the mentality of the Israelis; the long shadow of the Holocaust, the inner world of the survivors as well as the duty and need to remember; problems of absorption, socio-ethnic differences and discrimination; and last, but not least, gender issues, primarily the status of women in Jewish/Israeli life and culture, and homoerotic proclivities. Grappling with these issues, writers turned to various genres and narrative modes such as the historical novel, the family saga, realistic allegories, expressionist and surrealist narratives or, more recently, to postmodernist narrative. Moreover, some authors, like Aharon *Megged, Moshe *Shamir, Abraham B. *Yehoshua, Amos *Oz, David *Grossman, Yoram *Kaniuk, and Gadi Taub, went beyond fiction and published collections of essays on social and political topics.

One of the striking phenomena is the astounding creative energy and tremendous output of the older writers, those commonly referred to as the “Palmah Generation” or “Dor Ba-Arez.” Moshe Shamir, one of the seminal voices of that group, completed his historical trilogy *Rahok Mi-Peninim* in 1992, the saga of Zionist settlement and at the same time a sweeping epic following the various stages in the life of Leah Berman, a model type of the idealistic Jewish pioneer. During the last decade of his life, Shamir (d. 2004) published a book of poetry, a collection of stories, and a biographical novel on Avraham “Yair” Stern (2001), the legendary figure of the Lehi underground organization, who in many respects personifies Shamir’s national and political ideal. “The Jewish people faces a new Holocaust, initiated by the Muslim Arab world,” Shamir warned, maintaining further that “the Arab terror has one goal: to annihilate the State of Israel.”

Shamir’s contemporary S. *Yizhar surprised Israeli readers in 1992: After 30 years of self-imposed silence, he published *Mikdamot* (“Foretellings”). This is a lyrical, impressionistic novel reconstructing the author’s early childhood in pre-state Erez Israel. The novel was followed by stories and novellas (*Zalhavim*, 1993, *Malkomiyah Yefefiyah*, 1998) in which the doyen of modern Hebrew prose displays his unparalleled art of storytelling, rich in sensual vivid images.

Two of the leading figures of the veteran generation passed away during the period. David *Shahar, who died in Paris in 1997, added further volumes to his monumental work *Heikhal ha-Kelim ha-Shevurim* (“The Palace of Shattered Vessels”) and left behind a fragment *Har ha-Zeytim* (“The Mount of Olives”). Like Shahar, the other master of the modern Hebrew picaresque, Benjamin *Tammuz (d. 1989), also tried in his later works to view Zionism within the larger context of Jewish history, and to examine Zionist accomplishments and

failings while reevaluating the Jewish heritage (e.g., *Requiem le-Na’aman*; 1987; *Requiem for Na’aman*, 1982). In his last work, *Ha-Zikkat ve-ha-Zamir* (“Chameleon and Nightingale,” 1989), Tammuz presents the chronicles of a Jewish family over 1,300 years, integrating fiction, letters, diaries, and wills from the family archive. Ironically, the generation that celebrated the New Jew, the mythological Sabra, seems to have rediscovered the riches of the Jewish past. Tammuz, once committed to Canaanite ideology, was later fascinated by the mysteries of Diaspora existence. The belated encounter with Jewish life underlies also the works of Aharon Megged, Hanoah *Bartov, Nathan *Shaham, and other representatives of the “Palmah Generation.” Megged depicts the tensions between Hebrew and Jewish culture in his novel *Foigelman* (1987; *Foigman*, 2003); deals with early idealists traveling to the Holy Land in *Duda’im min ha-Arez ha-Kedoshah* (1998; *Mandrakes from the Holy Land*, 2005); describes intrigues in the local literary scene in *Ha-Gamal ha-Me’ofef ve-Dabeshet ha-Zahav* (1982; “The Flying Camel and the Golden Hump”); recounts the joys and agonies of creative writing with humor and a touch of satire that verges on the grotesque in *Ga’agu’im le-Olgah* (1994) and *Nikmat Yotam* (2003). Bartov recollects the past in a realistic style, mingling humor with nostalgic longing (*Be-Emza ha-Roman*, 1988). He writes about loneliness in the big city of Tel Aviv (*Lev Shafukh*, 2001; “A Heart Poured Out”), and outlines the professional as well as personal frustrations of an aging Israeli (*Zeh Ishel Medaber*, 1990; “This is Ishel Speaking”). In 1987, Nathan Shaham published a story about four musicians and a writer in pre-State Israel, *Rosendorf Kevartet* (*The Rosendorf Quartet*, 1991), which many saw as his most accomplished work of fiction. Music figures in the novel as a metaphor for universal understanding and cosmopolitan identity, transcending nationalism and language. In the wake of the novel’s success, both in Israel and abroad, Shaham followed up the adventures of the protagonists in the far less successful *Zilo shel Rosendorf* (2001; “Rosendorf’s Shadow”).

The writers known as “Dor ha-Medinah” (writers born in Erez Israel in the 1930s) were equally prolific as was the movement known as the “New Wave” (G. Shaked) of the 1950s and 1960s. Yaakov *Shabtai’s impressive final work, *Sof Davar* (*Past Perfect*), a masterpiece of Hebrew style and the stream-of-consciousness technique, appeared three years after his death in 1981. In her later works, Shulamit *Hareven (d. 2003) confronted seminal moments in Jewish history, going back to biblical times (*Soneh ha-Nissim*, 1983). Yehudit *Hendel was remarkably successful. Her early novels *Rehov ha-Madregot* (1955; *Street of Steps*, 1963) and *Ha-Hazer shel Momo ha-Gedolah* (“The Yard of Momo the Great,” 1969) were reissued (1998 and 1993, respectively) as was her first collection of stories *Anashim Aherim Hem* (2000; “They are Different”), one of the early literary attempts (1950) to confront the Holocaust. Hendel’s trip to her native Poland resulted in a moving, perturbing book, *Leyad Kefarim Sheketim* (1987; “Near Quiet Places”). The death of her husband, painter Zvi Mairovitch, led to her extraordinary, lyrical memoir *Ha-Ko’ah ha-Aher* (1984;

“The Other Power”). Love, betrayal, loss, and bereavement are recurring themes in her prose, as in *Kesef Katan* (1988; *Small Change*, 2002), *Har Ha-To'im* (1991), and the novella *Terufot shel Rofe ha-Nefesh* (2002; “Crack-Up”). Another female writer, Ruth *Almog, published novels and stories giving prominence to the fate and the concerns of women, elderly people, and immigrants (*Shorshei Avir*, 1987; *Me'il Katon*, 1993). Together with Esther Ettinger, Almog published two bestsellers (*Me'aveh Mushlam*, 1995, and *Estelinah Ahuvati*, 2002).

The vigorous and versatile author Yoram *Kaniuk, published numerous novels and stories such as the family portrait *Post Mortem* (1992), *Od Sippur Ahavah* (1996; “Another Love Story”); the delightful *Hamalka ve-Ani* (2001; “The Queen and I”); recollections of time spent in New York (*Hayyim al Neyar Zekhukhit*, 2003; “I Did It My Way”); a fictitious account of a perturbing journey through Germany (*Ha-Berlinai ha-Aharon*, 2004; “The Last Berliner”); and books for children (*Wasserman*, 1988). Dan *Tsalka published the monumental epic mosaic *Elef Levavot* (1991). Yossel *Birstein (1920–2003), a Yiddish author hailed by some critics as the Hebrew Shalom Aleichem, published the novel *Panim ba-Anan* (1991), among others. Yitzhak *Orpaz, David Schütz, Naomi *Frankel, Ehud Ben Ezer and Amos *Kenan came out with new novels and collections of stories, as did Yitzhak *Ben-Ner with his realistic, often somber portraits of decadent contemporary Israeli society (*Protokol*, 1982; *Boker shel Shotim*, 1992; *Ir Miklat*, 2000).

Special attention was paid by critics and readers to new works by Abraham B. Yehoshua, Amos Oz, Yehoshua *Kenaz, Meir *Shalev and David *Grossman. Yehoshua continued to explore and modify the realistic-psychological family novel and the narrative of mono-dialogues, while constructing parallel plots and playing with hidden ideas and allegories. *Molcho* (1987; *Five Seasons*, 1989) depicts the tumultuous first year in the life of the widower Molcho and the mental process he undergoes in his pursuit of a new life. Jewish history and Zionist dreams underlie the novel *Mar Mani* (1990; *Mr. Mani*, 1992), the story of a Sephardi family over five generations. Jewish history in Spain and in Ashkenaz is featured in *Masa'el Tom ha-Elef* (1997; *A Journey to the End of the Millennium*, 1999). The physical journey as a voyage into the subconscious is a leitmotif in Yehoshua's prose as in *Ha-Shivah mi-Hodu* (1994; *Open Heart*, 1996). In his latest novels, Yehoshua has returned to the political scene: In *Ha-Kalah ha-Meshaheret* (2001; *The Liberated Bride*, 2003) the Orientalist Yohanan Rivlin confronts the traditions and hardships of Israeli Arabs living in Galilee and of Palestinians in the West Bank; in *Shelihuto shel ha-Memuneh le-Mashabei Enosh* (2004) he tells the story of a Russian worker who is killed in a terror attack in Jerusalem as a kind of modern Passion, at times comic, at others serene.

The many shades of the collective Israeli experience are present in the prose works which Amos Oz, the best-known Israeli author abroad, has published over the past two decades. Oz addressed the changes in the political climate in

Israel (e.g., *Menuhah Nekhonah*, 1982; *A Perfect Peace*, 1985; *Kufсах Shehorah*, 1987; *Black Box*, 1989) as well as the relationships between Ashekanzi and Sephardi Israelis (e.g., *Kufсах Shehorah*); His landscapes vary from the Negev desert (*Al Tagidi Laylah*, 1994; *Don't Call It Night*, 1995) to the unappealing cityscapes of Bat Yam (*Oto ha-Yam*, 1998; *The Same Sea*, 2001). In his later novels (*Lada'at Ishah*, 1989, *To Know a Woman*, 1991; *Ha-Mazav ha-Shelishi*, 1991, *Fima*, 1993; *Oto ha-Yam*) he gives prominence to trials and dreams of anti-heroes, men like Fima or Albert Danon. Moving away from his highly symbolical early stories, Oz experimented with narrative modes: He turned to the epistolary novel (*Kufсах Shehorah* or the story “*Ga'agu'im*”), structured his novel *Oto Ha-Yam* as poetic prose fragments which at times even rhyme, and merged the autobiographical with the fictional in his universally acclaimed work, *Sippur al Ahavah ve-Hoshekh* (2002; *A Tale of Love and Darkness*, 2004) which he defined as an “autobiographical novel”.

David Grossman, the outstanding author to emerge during the 1980s, is equally innovative. His wide-ranging works deal with the Arab-Israeli conflict (e.g., *Hiyukh ha-Gedi*, 1983; *The Smile of the Lamb*, 1990) as well as the inadequacy of language to confront the Holocaust (in the highly ambitious *Ayen Erekh Ahavah*, 1986; *See Under Love*, 1989). Grossman also revisits his youth in Jerusalem in the 1960s (*Sefer ha-Dikduk ha-Penimi*, 1991; *The Book of Intimate Grammar*, 1994) and depicts the peculiar love relationship, an affair in writing, between Miriam, a married woman, and the younger Yair in *She-Tihyi li Sakkin* (1998; *Be My Knife*, 2001), an epistolary novel containing intertextual allusions to Kafka's *Letters to Milena*. Time and again Grossman tests the power of language to convey meaning and emotions, and reflects on his own *métier*, the world of fiction. In 2002 he published *Ba-Guf Ani Mevinah*.

Exceptionally popular among Israeli readers is Meir Shalev, who made his literary debut with *Roman Russi* (1988; *The Blue Mountain*, 1991), the chronicle of pioneering settlers in the Jezreel Valley. Shalev's novels (*Esav*, 1991; *Be-Veyto ba-Midbar*, 1998; *Fontanella*, 2002) combine realistic and fantastic elements, and his multi-layered narrative teems with biblical and mythic associations.

Yehoshua Kenaz is one of two prominent Israeli authors who shun publicity, declining interviews as well as all forms of public relations. But this has in no way affected the success and high reputation which he and Yoel *Hoffman have enjoyed. Kenaz, whose first novel, *Aharei ha-Hagim*, appeared in 1964 (*After the Holidays*, 1987), published remarkable novels dealing with the frailty of human relations, the loneliness of individuals in urban society (*Ma'zvir Ahavot Kodmot*, 1997; *Returning Old Loves*, 2001), physical and mental decline (*Ha-Derekh el ha-Hatulim*, 1991; *The Way to the Cats*, 1994), or the disruption of adolescence and rites of manhood (*Moment Musikali*, 1980; *Musical Moment*, 1995). One of his finest accomplishments is the novel *Hitganvut Yehidim* (*Heart Murmur*, 2003), a book which has been compared to Yizhar's seminal *Yemei*

Ziklag: The story of a group of recruits in an Israeli army base in the 1950s presents individual lives and at the same time a kaleidoscope of Israeli society.

Like Kenaz, Yoel Hoffman was born in 1937, but unlike him – Kenaz is a Sabra who grew up in the “Moshava” – Hoffman’s first year of life was spent in Hungary. He presents a world of uprooted Jews, Europeans who escaped the Holocaust by the skin of their teeth, yet remain strangers in Israeli society. They remain German Jews, their acquired Hebrew interspersed with German expressions, their dreams filled with longings for the culture they had to leave behind (*Bernhart, Kristus shel Daggim*). While Kenaz is a virtuoso of realistic style, Hoffman’s prose is postmodern: instead of a traditional, linear plot, he writes an idiosyncratic narrative made up of enigmatic fragments in a private, Joyce-like language. Anecdotes, recollections, and observations both humorous and melancholy form a unique prose texture which poses a challenge to the reader.

The European world left behind and primarily the cataclysm of the Holocaust seem to engross the imagination of Israeli writers the more they recede in time. An attempt to map out the many prose works relating to the Shoah discloses various groups. The first comprises the survivors themselves. Innumerable books recollecting the traumatic years of humiliation, hunger, constant fear, brutal persecution, and above all the loss of family members, have appeared over the last 25 years. Quite a number of these “nonprofessional” authors, such as psychologist Shlomo Bresnitz (*Sedot ha-Zikaron*, 1993), Ruth Segal (*Goyah im Nemashim*, 2002), or Esther Eisen (*Imi Tafrah Kokhavim*, 2003), to name but a few, display remarkable literary subtlety. Established authors such as Uri *Orlev recounted their shattering experiences in the ghetto and the concentration camps in books for adults and young readers. Among the survivor-writers, however, Aharon *Appelfeld is unique in his obsessive descriptions of a world lost forever. In spare, unsentimental yet powerful prose, Appelfeld describes a prewar Jewish community that shut its eyes to reality; men and women who wander alone or in small groups across Europe, hoping to be saved; others who fail to escape death; antisemites, oppressors, and occasionally warm-hearted Christians who empathize with the victims and help them (*Katarina*). It is notable, however, that Appelfeld’s survivors remain strangers in their new home, Israel. They cannot start a new life. Instead they are haunted by the past, or consciously indulge in memories of earlier days. Some even reject any hope for a new beginning, glorifying instead their years in the forests or in the camps, which they consider to have been their finest “heroic” hour.

Israeli writers born in Israel before the war, such as Yoram Kaniuk or Nathan Shaham, focused mainly on the emotional scars of the survivors while European-born authors who came to Palestine before the Holocaust – such as Naomi Frankel, Yehudit Hendel, or Shulamith Hareven – wrote about a childhood world left behind and the “otherness” of the survivors. David Schütz, born in Berlin in 1941, wrote compel-

ling semi-autobiographical novels, such as *Ha-Esev ve-ha-Hol* (1978; “The Grass and the Sand”). Most impressive, however, is the prose written by the so-called “Second Generation”: Israeli writers born after the Shoah who nonetheless felt the need to confront that unique chapter in Jewish history. David Grossman’s novel *Ayen Erekh Ahavah* (1986) is a milestone in the works of Sabra authors on the Holocaust. Savyon *Liebrecht (b. 1948; *Tapuḥim min ha-Midbar*, 1986; *Apples from the Desert*, 1998; *Susim al Kevish Gehah*, 1988), Nava Semel (b. 1954; *Kova Zekhukhit*, 1985, “Hat of Glass”; *Zehok shel Akh-barosh*, 2001, “The Rat Laughs”), Ya’akov Buchan (b. 1946; *Yeled Shakuf*, 1998), Eleonora Lev (*Sug Mesuyam shel Yatmut*, 1999, “A Certain Kind of Orphanhood”), Hannah Herzig (*Temunot Mehapessot Koteret*, 1997), Lizzie Doron (b. 1953; *Lamah lo B’at lifnei ha-Milhamah*, 1998; *Hayetah Po Pa’am Mishpahah*, 2002), Lili Perry (b. 1953; *Golem ba-Ma’agal*, 1987, “Golem in the Circle”), Rachel Talshir (b. 1957; *Ha-Ahavah Meshaheret*, 2001, “Love Macht frei”; *Pegishah bi-Kezeh ha-Erev*, 2003, “Meeting at the Edge of the Evening”), Amir Gutfreund (b. 1963; *Shoah Shelanu*, 2000; “Our Holocaust”), to name but a few, depict the sufferings of the victims and the effect of the parents’ traumatic experiences on their children who were often brought up amidst secrets and untold tales, and had to discover the truth for themselves years later.

The relationship between German persecutors and their Jewish victims is yet another aspect of the complex Holocaust theme, especially in the works of Savyon Liebrecht, Itamar Levy (b. 1956; *Agadat ha-Agamim ha-Azuvim*, 1990, “The Legend of the Sad Lakes”) or Rivka Keren (b. 1946; *Anatomiyah shel Nekamah*, 1993, “Anatomy of Revenge”).

Confronting the Holocaust inevitably sensitized the authors to the “otherness” of the survivors, who could not or would not conform to the model of the New Jew, the self-confident Sabra. The literature of the past decades shows that the survivors were only one group of outsiders who drew the attention of Israeli authors. Another group was the Oriental Jews, who immigrated to Israel from various Arab countries in the 1950s. Among the older generation (Sami *Michael, Shimon *Ballas, Amon Shamosh, Dan Benaya *Seri, Yitzhak Gormezano-Goren, Eli *Amir), recent years have seen many works on the hardships of and discrimination against immigrants and their children in overcrowded transit camp (“*ma’barot*”), in development towns or destitute city suburbs (such as south Tel Aviv). Among these are novels by Albert Suissa (b. 1951; *Akud*, “Bound,” 1990), Sami Bardugo (b. 1970; *Yaldah Shehorah*, “Black Girl,” 1999), Dudu Busi (b. 1969; *Ha-Yare’ah Yarok ba-Vadi*, “The Moon Goes Green in the Wadi,” 2000; *Pere Azil*, “A Noble Savage,” 2003), and Yossi Sucary (b. 1959; *Emilyyah ve-Melakh ha-Arez*, “Emilia,” 2002). In fact, the growing self-awareness of the so-called Oriental writers combined with a feeling of long-suffering injustice have led to the founding of a press (Kedem) as well as a magazine (*Ha-Kivvun Mizrah*) promoting this literature.

Another social group which did not conform to the ideal of the secular, heroic Israeli and was thus ignored, occasion-

ally even denounced by the dominant Zionist narrative, was that of religious and ultra-Orthodox Jews, who have recently become the subject of a growing number of novels and stories. Haim *Be'er (*Nozot, Et ha-Zamir, Havalim*), wrote partly autobiographical novels, often marked by biting criticism, about the ultra-Orthodox Jerusalem milieu in which he grew up. The hermetic world of religious Jews is also depicted by Dov Elbaum (b. 1970; *Zeman Elul*, 1997; *Hayyai im ha-Avot*, 2001), Yisrael Segal (*Ne'ilah*, 1990; *Vekhi Nahash Memit?*, 2004), and by a significant number of women writers, who turned their back on the restrictive *haredi* milieu in which they grew up. Among these are Yehudit Rotem, Yochi Brandes, Mira Magen (with novels like *Al Take ba-Kir*, 1997), Haya Esther (Godlevsky), and Hanna Bat-Shahar (a nom de plume for an Orthodox woman writer).

Indeed, the "other" in his various configurations has ousted the mythologized, self-confident Israeli from his dominant position and moved from the margins of Hebrew literature to center stage. Along with stories about various ethnic minorities (Sephardi, Bukhari, Iraqi Jews, or "yekkes"), the voice of new immigrants from the Soviet Union has made itself heard. Writers like Alona Kimhi, who was born in Lvov in 1966 (*Ani, Anastasia*, 1996, I, *Anastasia*, 2000; *Suzannah Bokhiyah*, 1999, *Weeping Susannah*, 2001), Marina Groslerner, who came to Israel at the age of six (*Lalya*, 2001), or Suzane Adam (*Kevisah*, "Laundry," 2000; *Maymia*, 2002), who was born in Transylvania and came to Israel at the age of 10, have written about their native country and their experience as immigrants in Israel, particularly in their earlier works. Born in Leningrad, Alex Epstein (b. 1971) came to Israel in 1980 and is one of the younger original writers who experiment with various narrative techniques, as in *Ahuvato shel Metapes Harim* ("The Mountaineer's Beloved," 1999) or in his dictionary-like novel *Milon Mahapakh* ("Honey Dictionary," 2000).

Beside these religious and ethnic minorities, women have made a sweeping entrance into male-dominated Hebrew literature, both as fictional figures and as writers. Cynical observers of the contemporary Israeli scene maintain that being a woman and writing about female concerns guarantee the publication and commercial success of a novel. The list of female writers who started publishing over the past three decades is impressive, especially in view of the few women writers in previous generations and the fact that the main issues of Israeli life – war, army life, professional success, political involvement etc. – were almost always represented by male characters. Along with established women such as Amalia Kahana-Carmon – one of the first and most vehement champions of gender issues – and Yehudit Hendel, many new names have joined the literary scene. Among these are Dorit Abusch (1955–), Leah Eini (1962–), Marit Ben Israel, Gail Hareven (1959–), Esty G. Haim (1963–), Yael Hedaya (1964–), Shifra Horn, Avirama Golan, Judith *Katzir (1963–), Ronit *Matalon (1959–), Dorit Rabinyan (1972–), Zeruyah *Shalev (1959–), and Shoham Smith (1966–). Their fiction addresses political and historical issues, social and ethnic themes as well

as "typically" feminine concerns such as love, sexuality, betrayal and abandonment, menstruation, pregnancy, motherhood and female friendship, or the status and role of women in Israeli society.

The new gender-oriented literature also deals with homoerotic love. Yossi Avni (a pseudonym) published stories (*Gan ha-Ezrim ha-Metim*, "The Garden of the Dead Trees," 1995) and novels (*Arba'ah Ahim*, "Four Brothers," 1998; *Doda Farhumah lo Hayetah Zonah*, "Auntie Farhuma Wasn't a Whore After All," 2002) depicting homosexual relations, as have Ilan Schoenfeld (*Rak Attah*, "Only You," 1998), Motti Auerbuch (*Elohim Nekheh Me'ah Ahuz*, "God Is One Hundred Percent Disabled," 2003), Yossi Waxman (*Alexandria Yakirati*, "Dear Alexandria," 1988; *Liebchen*, 2004) and Dan Shavit (*Pitom Ra'iti Oto*, "Suddenly I Saw Him," 2004). Yehudit Katzir recounts a lesbian relationship between a young woman and her teacher in her novel *Hineh Ani Mathilah* ("Here I Begin," 2003).

While the majority of Israeli writers cling to the realistic modes of expression and traditional conventions of characterization, some of the younger writers explore postmodernist techniques. No doubt the most outstanding of these (apart from Yoel Hoffman, mentioned above) is Orly *Castel-Bloom (b. 1960; *Doli Siti, Halakim Enoshiyim*). Particularly popular among younger readers is Etgar Keret (1967–), who has published collections of mini-narratives and comics that shift between the funny and the serious, the real and the imaginary. These and other postmodernist writers are eager to debunk prevailing myths, to experiment and to shock; they play with language, probe metaphors and clichés, and underscore the inadequacy of words while creating their own vocabulary.

Other original voices in contemporary Hebrew literature include Gabriela *Avigur-Rotem (b. 1946; *Mozart Lo Hayah Yehudi*; "Mozart Was Not a Jew"; *Hamsin ve-Zipporim Meshuga'ot*, "Heatwave and Crazy Birds"); Yitzhak *Laor (1948–), Youval *Shimoni (b. 1955; *Me'of ha-Yonah*; "The Flight of the Dove," 1990; *Heder*, "Room," 1999); Dror Burstein (b. 1970; *Avner Brenner*, 2003); Yoav Alvin (b. 1962; *Marak*, "Soup," 2002); Benny Barbash (b. 1951; *My First Sony*, 1994; *Hilukh Hozer*, "Rerun," 2003); Uzi Weill (b. 1964; *Le'an Holekh ha-Zikaron ke-she-Anu Metim*, 1996); Alon Hili (with the historical-fictional novel *Mot ha-Nazir*, "Death of a Monk," 2004); Eran Bar-Gil (b. 1969, with his lyrical, reflective novel about identical twins handed over for adoption soon after their birth, titled *Parsah ve-Kinor*, "Horseshoe and Violin," 2005) and Eshkol Nevo (1971–) with the novel *Arba'ah Batim ve-Ga'agu'a* ("Osmosis," 2004), a fine example of the way collective Israeli experience and questions concerning the Zionist narrative are intertwined with the experience of individual protagonists.

The reproach sometimes voiced is that the new writers are a "private generation," less preoccupied with collective national and political themes than with selfish concerns, materialistic gratification, and immediate pleasure, but this is inaccurate. In some prose writers, the political is clearly present between the lines; others, like Etgar Keret, handle it with

less pathos than previous generations, but with equal urgency. Troubled by recent political developments, Itamar Levy published *Otiyot ha-Shemesh, Otiyot ha-Yare'ah* ("Letters of the Sun, Letters of the Moon," 1991), Semadar Herzfeld recounts a Romeo-and-Juliet love affair between a Palestinian and an Israeli woman in *Inta Omari* (1994). Yitzhak Laor published *Am, Ma'akhal Melakhim* (1993) and *Ve-Im Ruhi Geviyati*, and Boaz Neuman (1971–) wrote an autobiographical account with the ironic title *Hayal Tov* ("Good Soldier," 2001). Asher Kravitz (1969–) wrote a disturbing, albeit funny novel about an Israeli soldier disguised as a Palestinian (*Ani, Mustafah Rabinovitch*, 2004) and Gilad Evron (1955–) published a prose collection titled *Mareh Makom* (2003).

As the discussion on the literary canon continues and critics vary in their opinion of which prose works "qualify" as canonical, there has been a continuous expansion of so-called "popular literature." The weekly list of bestsellers features many writers who are often commercially more successful and popular than the leading canonical ones; their novels (e.g., Irit Linor, *Shirat ha-Sirenah, Benot Braun*) set up a mirror to the prevailing Israeli mentality and create a literary vogue that is later imitated by others (Michal Shalev, *Shevu'at Rachel*, 1997; Sheli Yechimowitz, *Eshet Ish*, 2001; Rakefet Zohar, *Ha-Ahayot Schuster Nikhnasot le-Herayon*, 2002; Semadar Shir, *Roman Amiti*, 2002). Among the reasons for the proliferation of this inferior, titillating prose, is no doubt the ever-growing number of new publishing houses that are willing to take commercial risks and publish unknown young writers, as well as the dictates of a market that is dependent on ratings. Beside the long-standing publishing houses (Schocken, Am Oved Ha-Kibbutz ha-Me'uhad and the associated Ha-Sifriah ha-Hadashah), new publishing enterprises have shot up like mushrooms. Among these are Keter, Zemorah-Bitan, Sifriat Maariv, Yedioth Ahronoth, Miskal, Kinneret and Kedem, Bavel, Hargol, Gevanim, Astrolog and Carmel. Mention should also be made of Keshet, Ram Oren's privately owned press, which began by publishing its owner's commercially successful thrillers and later published also "pop"-literature (Kobi Oz) as well as bestsellers of considerable literary quality such as the novels of Avigur-Rotem and Zeruyah Shalev. Keshet is a major promoter of Israeli detective novels (Ram Oren), though others have followed suit. Amnon Dankner has published a detective novel set against the emergence of Zionism, *Ha-Ish le-Lo Azamot*, "The Man without Bones," 2002; see also *Malkodet ha-Devash*, 1994). On the whole, the sophisticated Israeli thriller, a relatively new genre in Israeli fiction, has had tremendous success and includes writers of international repute such as Batya Gur, Uri Adelman, Shulamith Lapid, Amnon Jackont, and Agur Schiff.

Finally, at the initiative of publishers, editors, and literary scholars, major books by earlier generations have been reissued and some forgotten classics of early Hebrew literature rediscovered. These include the prose of David Vogel, David Kimchi's family saga *Beit Hefetz* ("House of Hefetz"), Aharon Reuveni's trilogy *Ad Yerushalayim*, as well as prose

works by Y.H. Brenner, M.Y. Berdyczewski, D. Frischmann, and A. Hameiri, S. Yizhar, M. Shamir, H. Bartov, B. Tamuz, and others.

POETRY Over the past 25 years Israeli poets have alternated between politically oriented and meditative, personal poetry. The Lebanon War of 1982–83 as well as the First and Second Intifadas produced an impressive protest poetry. Two collections were published following the Lebanon War: *Haziyyat Gevul* ("Crossing the Border") and *Ve-Eyn Tikhlah li-Keravot u-le-Hereg* ("Fighting and Killing No End"). The poetry that emerged in the wake of the Lebanon War and the uprisings of the Palestinians was written by established poets like Nathan Zach, Yehuda Amichai, Meir Wieseltier, Moshe Dor, Aryeh Sivan, and Aharon Shabtai as well as by newcomers to the literary scene: Maja Bejerano (1949–), Rami Ditzany, Yitzhak Laor (1948–), and Rami Sa'ari (1963–). Poets expressed shame, fear, rage, and helplessness. The political poems of Dalia Ravikovitch were particularly impressive (see: *Ima im Yeled*, "Mother with Child"), and focused on the sufferings of the individual victim, especially the agony of mothers and children. The impact of the Gulf War was reflected almost immediately in Hebrew poetry; see, for example, the collections published by David Avidan and Ilan Schoenfeld.

The tendency of contemporary Hebrew poets to reflect on their own medium – language – was seen in two anthologies edited by Ruth Kartun-Blum: *Shirah bi-Rei Azmah* ("Poetry in its own Mirror," 1982) and *Yad Kotevet Yad* ("Self-Reflexive Hebrew Poetry," 1989). Kartun-Blum also edited the volume *Me'ayin Nahalti et Shiri* ("Writers and Poets on Sources of Inspiration," 2002).

The past two decades have also seen the passing of prominent poets of the older generation like S. Halkin, A. Yeshurun, Z. Gilead, K.A. Bertini and *Zelda, as well as of poets belonging to the "Palmah Generation" and the "Generation of the State" such as A. Gilboa, A. Hillel (Hillel Omer), Y. Shalev, A. Kovner, D. Pagis, A. Sachs, and, in 2000, the internationally famous Yehuda Amichai. The "Tel Aviv Circle," which dominated the scene in the 1960s and 1970s, lost two of its seminal figures: Yona Wallach (d. 1985) and Yair Hourvitz (d. 1988). Meir Wieseltier, who belonged to that group, published a number of collections which gave impressive expression to intimate experiences, childhood memories, and current events (*Mikhtavim ve-Shirim Aherim, Mahsan*).

Artistic maturity and a tendency to reflect on time, old age, and transience characterize the writing of veteran poets of the "Palmah Generation" and the "Generation of the State," with new collections coming out as well as the publication of the collected works of H. Gouri, N. Zach, M. Dor, A. Sivan, Moshe Ben Shaul (1930–) and Ya'akov Besser (1934–). A tone of maturity and sobriety prevails also in the poems of Ori Bernstein (who also published a sensitive, melancholy autobiographical novel in the genre of the *Bildungsroman*, *Safek Hayyim*, 2002). Asher Reich, Tuvia

*Rübner, and Israel Pincas (b. 1935; *Geneologia*, 1997) published new books of poetry that tended to avoid abstraction and sentimentality. Instead, subtle reflection is expressed in a poetic language whose deeper connotations are masked by a simple, spoken style.

Blending together the world of scientific thought with recollections and immediate experiences scientist-poet Avner Treinin (1928–) published a number of original collections (*Euclidium*, 1985; *Zikhron ha-Mayim*, 1991). One of the consequences of abandoning the “high” diction used by previous generations was a more intimate access to the psyche and the observation of mental processes and crises. Among the first to turn inward was Yona Wallach, followed by poets like Leah Ayalon (*Daniel, Daniel*, 1988; *Yehudiyot ve-Yehudim*, 2001), Maja Bejerano (1949– ; *Bat Ya'anah*, 1978; *Anaseh Laga'at be-Tabur Bitni*, 1998), and others. Instead of romantic love, male poets (e.g., Aharon Shabtai in *Zivah*) and, more importantly, a considerable number of women depicted the sexual experience, celebrating the authentic erotic element and occasionally transforming their poetry into a manifesto for transsexuality. Indeed, bisexuality as well as homoeroticism figure prominently in contemporary Hebrew poetry as in the writing of Hezy Leskli (1952–1994; *Leah Goldberg ve-ha-Akhbarim*) and in poems by Ilan Schoenfeld (1960– ; *Leta'ah Mekhushefet*, 1981) or in the lesbian poetess known as Shez.

Others who made their debut during the past three decades and publish regularly are M. *Geldman (1946–); Yosef Sharon (1952– ; *Dibbur*, 1978; *Sippur Iti*, 1994), Zali Gurevitch (1949– ; *Shurah Pesukah*, 1984; *Sefer Yare'ah*, 1998), Ronny *Someck (1951– ; *Goleh*, 1976; *Bloody Mary*, 1994), Perez Dror Banay (1947– ; *Hamzan*, 1980; *Turkiz*, 1993; *Gevul Aharon le-Yofi*, 1999), Erez Biton (1942– ; *Minhah Marokait*, 1976; *Zippor bein Yabashot*, 1989), Zvi Azmon (1948– ; *Kortekst*, 1993), Leah Ayalon, Sabina Messeg (1942– ; *Zeh ha-Yam ha-Zeh, Yam Kinneret*, 1998); Hava Pincas-Gan (1955–); Miron C. Izakson (1956–), Yonadav Kaploun (1963– ; *Ha-Keter ha-Afor*, 1987; *Bat Shelomo*, 1994); and Admiel Kosman (1957– ; *Higanu le-Elohim*, 1998), the last two coming from a religious background. Some poets, like Rami Sa'ari (1963– ; *Hineh Maz'ati et Beiti*, 1988; *Kamah ve-Khama Mihamah*, 2002), Dori Manor (*Bariton*, 2005; notably poetry which reverts to traditional forms and rhymed verse), and Amir Or (1956–) have also translated world poetry into Hebrew. An unusual voice is that of Maya Arad (1971–), a linguist living in Stanford, Calif., in the United States, who published a novel in rhymed verse (*Makom Aher Ir Zarah*, 2003), which tells the story of Orit, a soldier who has been asked to write a leaflet about Israeli identity and to help a lonely soldier who has just immigrated from Canada to feel at home. Inspired by Pushkin's *Eugene Onegin*, she spices her unusual poetic text, written in a seemingly old-fashioned rhyme scheme, with wit and humor. The poetry of Agi *Mishol (1947–) has attracted a great deal of attention from literary critics such as Dan Miron and from the media; as a result, she has advanced to the forefront of the contemporary scene. On the whole, however, Hebrew

poetry arouses far less interest than prose. It is read by a coterie of loyal devotees, many of whom write and publish their own poetry. Poems are usually published in the literary supplements of the bigger newspapers, in literary journals such as *Moznayim*, *Iton 77*, *Siman Keriah*, *Keshet ha-Hadashah*, *Akhsahv*, *Dimmu'i*, *Ho!*, and *Mita'am*, or in special journals promoting poetry, such as *Hadarim* and *Helikon*. Publishers are reluctant to take the risk of publishing poetry; among the few who do so are Keshev, Eked, and Ha-Kibbuzha-Me'uhad, Tag, Even Hoshen, and Shufra. An important contribution to the dissemination of Hebrew poetry abroad is no doubt the English-language periodical *Modern Hebrew Literature*, published by the Institute for the Translation of Hebrew Literature, the *Tel Aviv Review*, and the magazine *Ariel*, which has been published intermittently for many years in various languages, including English, German, and French, and is sponsored by the Ministry for Foreign Affairs. Along with the translation of individual poems in various foreign periodicals and anthologies (e.g., T. Carmi's *Hebrew Verse*), a number of poets have had books of poetry published in foreign languages (Amichai, Dor, Reich). The new and updated edition of *The Modern Hebrew Poem Itself* (edited by Stanley Burnshaw, T. Carmi, S. Glassman, Ariel Hirschfeld, and Ezra Spicehandler; Wayne University Press, 2003) is highly recommended. It includes translations, interpretations of individual poems, and general articles on Hebrew poetry and prosody.

Finally, one should mention new editions as well as the collected works of leading poets of previous generations. The two main projects, both directed by Dan Miron, were the scholarly edition of H.N. Bialik's poetry (two volumes: 1983, 1990) and the complete work of U.Z. *Greenberg. Avner Holtzman is responsible for a new edition of Bialik's poems (Devir Publishing House, 2005) marking the 70th anniversary of his death. There has been a new edition of *Kol Kitvei Tschernichovsky* (1990–98), a collection of Lea Goldberg's poems (1989) and a new edition of *Shirei Raḥel* (1997). Yehuda Amichai's collected poems were published in five volumes shortly after his death (2002–04). A previously unknown book of David Vogel's poetry, *Le'ever ha-Demamah*, was published by Menahem Peri in 1983. Other poets whose work was collected after their death are Y. *Katzenelson, A. *Ben-Yitzhak, Y. *Karni, E. *Raab, A. Chalfi, A. *Gilboa, D. *Pagis, and Y. *Hourvitz. A selection of poems by Y. *Orland appeared in 1997.

[Anat Feinberg (2nd ed.)]

DRAMA

Introduction

The drama is one of the least developed forms of literary expressions in Hebrew literature. Some have attributed its modest achievements to the inherent contradiction between the monotheistic spirit of the Jewish religion and the dualism implicit in drama (A.J. *Paperna, I. *Zinberg, and others). Others have stressed the objection of the sages to the ritualistic and “heretical” aspects of the drama (J.H. *Schirmann) which

emerged in the Western World (e.g., the medieval mystery, morality, miracle, and passion plays). Jewish tradition undoubtedly inhibited the development of the drama since the art of the theater was incompatible with the traditional way of life. The secularization of Jewish life, a process which started in the 18th century and stimulated the development of secular literature, did not, however, in its initial phases, mark a rise in dramatic art, nor lead to the establishment of independent Jewish theaters. The revival of spoken Hebrew lagged behind the revival of the written language, impeding the development of the Hebrew drama, a genre primarily dependent on the spoken idiom. Thus until Hebrew became a living tongue, there was little prospect that a vital Hebrew theater might flourish. The Jewish theatergoer, introduced to his secular foreign environment, found satisfaction for his dramatic needs beyond the limits of the Jewish pale.

Amateur and professional Hebrew troupes emerged in Eastern Europe and in Erez Israel only at the close of the 19th century. The amateur Hebrew groups of Brody and Lodz and itinerant troupes, like I. *Katzenelson's, were the harbingers of the Hebrew theater in the Diaspora, where since Abraham *Goldfaden (1840–1906) the Yiddish theater had greatly flourished. The amateur theatrical troupe in Jaffa, on the other hand, was the precursor of the theater in Israel. By the 1920s there already existed in Erez Israel a professional theater while in the Diaspora, *Habimah, the first professional Hebrew theatrical company (established 1917, premiere in 1918) gained a great reputation in Russia. It established itself in Tel Aviv in 1931.

The development of the Hebrew theater in the 20th century is linked with the Zionist movement, the revival of Hebrew as a spoken language, and the Jewish claim for cultural national autonomy. The linguistic and sociocultural reorientation in the attitude of the public to the theater gave new impetus to the Hebrew drama (intended for the stage) and brought about its continuous development in Hebrew literature.

Early Beginnings

Dramatic elements and dialogue are already found in the Book of Job and, at a later period, in the *piyyut* (the Hebrew liturgical hymn), for example "Ozlat Yokheved"; or in some of the polemical verse of Abraham *Ibn Ezra depicting the conflict between body and soul, summer and winter, water and wine. Hebrew drama as such was, however, written occasionally mainly in Italy and Holland as early as the end of the 16th century and during the 17th and 18th centuries. This period in the Hebrew drama is mainly characterized by sporadic isolated plays which failed to lead to a continuous development and by a "literary," nontheatrical structure of the play.

Judah Leone b. Isaac *Sommo's *Zahut Bedihuta de-Kiddushin* ("An Eloquent Marriage Farce"), the first Hebrew play, was written in Italy under the influence of the 16th-century Italian comedy. Though first printed in 1618, it had apparently been written a few years earlier. Schirmann assumes that it was probably staged in connection with Purim. Unlike

Jewish playwrights of the 17th and 18th centuries, Sommo was well versed in theatrical technique (his essay *Trattato sul arte rappresentativa* points to this fact); his language is not purely biblical but contains later Hebrew phrasing and idioms lending the play not merely a visual but also an auditory dimension. The plot, characters, and structure are borrowed from the *commedia dell'arte* and only the Jewish comic subject (related to halakhic problems) and the cultural atmosphere in the play are original.

Most Hebrew playwrights of the 17th and 18th centuries (from Sommo to Moses Ḥayyim *Luzzatto) were unable to free themselves from the influence of the "Mediterranean" culture. They tried to transpose the Italian and Spanish live theater into the Jewish cultural milieu. In their adaptation of dramatic elements to a language and themes remote from the theater, they forfeited the structural authenticity of the play.

Moses *Zacuto in *Yesod Olam* (Altona, 1874), a dramatization of the story of Abraham and Nimrod, imitates the Spanish auto, and in *Tofteh Arukh* (Venice, 1715, 1881²), whose plot is the journey of the dead to hell, he follows the structure and content of medieval Christian allegorical plays. *Asirei ha-Tikvah* ("Prisoners of Hope," Amsterdam, 1673, Leghorn, 1771²), by Joseph Penso de la Vega, is patterned according to the Spanish *commedia*. Both Zacuto and Penso published their plays in Amsterdam, which was then enjoying a late renaissance of Judeo-Spanish culture.

Plays written in Hebrew in Italy during this period drew on their foreign cultural environment for their dramatic form and style without reference to contemporary Hebrew drama, thus failing to create a continuous link. Immanuel *Frances wrote a few occasional plays for festivals, a dramatic dialogue on woman (1670), and a Purim play. The most significant playwright of the Italian school, Moses Ḥayyim *Luzzatto, had a definite effect on the development of the Hebrew drama. He wrote three different types of plays which had been influenced by the Italian allegorical and pastoral drama. *Ma'aseh Shimson* ("The Story of Samson," 1724) serves as a paradigm to illustrate the dramatic genre in his work on literary theory, *Leshon Limmudim* (Mantua, 1727). The play, a monologue interspersed with a chorus and fragmentary dialogue, is not a genuine drama. His other two plays, *Migdal Oz* ("The Mighty Tower," 1837) and *La-Yesharim Tehillah* ("Praise to the Upright," Amsterdam 1743, 1954²⁵), show the influence of Guarini's pastoral drama, *Pastor Fido*. Luzzatto attempted to impose on Jewish moral themes and ethical language the Italian dramatic structure. (It has been suggested that these plays also allude to kabbalistic themes.) *Migdal Oz*, the story of young lovers who prevail over antagonists scheming against them, is an allegorical-pastoral drama. It is the earlier of the two plays and had no decisive influence on the Hebrew dramatic genre. Conversely, Luzzatto's *La-Yesharim Tehillah* greatly influenced the development of the Hebrew play in the 18th and 19th centuries. It is an allegorical drama in which the characters are personifications of positive and negative moral qualities. The theme is the victory of good over evil and the plot – the story

of lovers who separate and then are reunited – represents the struggle of the forces of good to be united as one, and to have their virtue universally acknowledged. “Yosher” (uprighteousness) claims and finally wins “Tehillah” (praise). In his contest against “Tarmit” (deceit) and “Rahav” (conceit), he is helped by “Sekhel” (reason).

Haskalah Drama

La-Yesharim Tehillah was the first Hebrew play which exerted direct influence upon the subsequent Hebrew drama. Its dramatic and didactic elements affected Hebrew authors caught up in the *Haskalah movement as it moved from Western to Eastern Europe. Unrighteousness was viewed as a symbol of the Haskalah – the rational good which struggles against evil – seen as the anti-Haskalah forces. Plays written in this tradition were *Yaldut u-Vaharut* (Berlin, 1786) by the bookseller Mendel b. Hayyim Judah Bresslau (d. 1829); *Ha-Kolot Yehdalun o Mishpat Shalom* (Berlin, 1791) by S.A. *Romanelli; *Amal ve-Tirzah* (Roedelheim, 1812, 1862³) by Shalom b. Jacob *Cohen; *Tiferet li-Venei Binah* (Zhitomir, 1867) by A.B. *Gottlober; *Emet ve-Emunah* (Vilna, 1867) by Abraham Dov *Lebensohn; and *Mashal u-Melizah* (Paris 1867) by Meir Leib *Malbim. While in these plays the *maskilim* were usually the protagonists, Malbim used the genre in order to attack them. All the plays lack real characters, genuine dramatic dialogue, and a proper plot, but were a means through which the Hebrew writer, to whom the dramatic art was still foreign, was initiated into writing dialogue. The Haskalah literature was nontheatrical, even nondramatic, yet it heralded the beginning of a genuine drama.

Another important trend in Haskalah dramatic literature was the translation and adaptation of European plays on biblical themes into Hebrew and the composing of original biblical drama. The first author to develop the technique of adapted translation was the 18th century writer David *Franco-Mendes. In *Gemul Atalyah* (first printed in Amsterdam 1770, 1860³), an adaptation based on Racine and Pietro Metastasio, Franco-Mendes altered the plot and structure of his neoclassic sources but did not write an original play. *Melukhat Sha'ul ha-Melekh ha-Rishon al Yeshurun* (Vienna, 1794), by Joseph *Ha-Efrati, though influenced by the German *Sturm und Drang* movement, Shakespeare, and Albrecht von Haller, is an original work with an ingenious and imaginative structure. The dramatis personae (David, Saul, Michal, and Jonathan), characters in their own right, are protagonists in a dramatic action which is not a struggle between good and evil but between noble heroes who are invested with moral qualities. The structure is defective, yet designed for the stage, and while the text includes “literary” passages unrelated to the plot (e.g., the play ends with Haller’s poem “On Honor”) which detract from the play, it nevertheless (as Paperna, one of the earliest Hebrew drama critics, asserted) paved the way for original Hebrew theatrical works on biblical themes.

Most playwrights, however, followed in the footsteps of Franco-Mendes – translating and adapting into Hebrew

European plays on biblical themes. They were incapable of producing an original viable drama during this early phase of Hebrew literature. Not steeped in a dramatic tradition and lacking experience in the genre, they could not go beyond rhetorical writing. Plays written or adapted during this period were *Ma'asei Navot ha-Yizre'eli* (Roedelheim, 1807) by Shalom b. Jacob Cohen; *On Ben Pelet* and *Hananyah Misha'el va-Azaryah* (in *Kinnor Na'im*, Vienna, 1825), by Samuel David *Luzzatto; *She'erit Yehudah* (Vienna, 1827), an adaptation and translation of Racine’s *Esther*, by S.J. *Rapoport; and *Shelom Ester* (Vienna, 1843), another rendition of the same play and a translation of Racine’s *Athalie* (1835), both by Meir ha-Levi *Letteris. Basically, all these plays are dramatic failures. In his translation and adaptation of Goethe’s *Faust*, which he called *Elisha ben Avuyah* (Vienna, 1865), Letteris deviated somewhat from the accepted practice of adapting neoclassic plays. He judaized the text, renamed the dramatis personae (“Faust” becomes “Elisha b. Avuyah,”) and introduced character changes. Yet he remained faithful to the original dialogue, the general structure and even to certain key ideas, thus aborting his own attempt at genuine Hebrew dramatic creation.

The two didactic biblical plays by Nahman Isaac *Fischman: *Mappelet Sisera* (Lemberg, 1841) and *Keshet Shevna* (Lemberg, 1870), though original in theme, do not differ in structure and didactic purpose from the allegorical dramas of the period.

The Haskalah period did not produce any real dramatists. It is the *Hibbat Zion generation which first prepared the ground for genuine Hebrew theater.

National Renaissance Period (1880–1947)

HISTORICAL MELODRAMA. Some of the trends of the Haskalah continued through the period of the national renaissance. Allegorical plays were still being written (cf. S. Zweibel’s *Milhemet ha-Hokhmah im ha-Sikhkut*, 1895) in the 1890s and some of the later historical and topical dramas also contain allegorical elements. The most common characteristic of the period was, however, the historical melodrama which had evolved from the Haskalah. Among the significant playwrights of the period is Judah Loeb *Landau, whose poetic dramas developed Haskalah themes and were written in the same ornate style. The theme is either the relationship of gentiles and Jews during crises in Jewish history, or the plays are permeated with the ideology of Hibbat Zion, as *Yesh Tikvah* (1893) and *Lefanim o Le'ahor* (1923, 19442). *Bar Kokhva* (1884), and *Aharit Yerushalayim* (1886) are historical plays whose protagonists Rabbi Akiva and Rabbi Johanan b. Zakkai expound ideas about freedom and the glory of Israel which were drawn from Nachman *Krochmal. F. Hebbel’s *Herodes und Mariamne* served as a model for Landau’s *Hordos* which is an attempt at a historical justification of Herod; it takes up his defense against the Jewish historical tradition which Landau felt had unjustly vilified him. The lofty spiritual values propounded by the *raisonneur* characters in the monologues of all three historical plays are neither complemented by the actual episodes in the

play nor realized in the action. The plays are simple, not sophisticated, and their style and structure are as yet unsuited for the theater. His other two historical plays, written in prose, *Don Yizhak Abrabanel* (1919) and *Yisrael Besht* (1923), are patterned on the historical "chronicle" drama. Thus the Hebrew historical play of that period is very much a "melodrama of ideas"; the playwrights were unable to create dramatic action that derived naturally from the cultural milieu it was supposed to represent.

One of the playwrights of the period was Meir Poner (1854–1936), whose *Joseph della Reina* (1904) is a dramatic adaptation of the story of this legendary character. The play is on two levels: the relationship of Jews and gentiles; and the relationship of man and God (in the manner of *Faust*). His other plays *Beit Eli* (1902), *Yemei Hordos ha-Aharonim* (1913), *Mot ha-Melekh Hordos* (1928), *Yehudah ben Yehizkiyyahu ha-Gelili* (1921), and others have as their main theme the freedom of the people of Israel; the plot, however, does not dramatically realize the rich texture of ideas. Poner's prose style, unlike Landau's uninspired, florid language, is quite original.

Hebrew writers of the 1930s and 1940s continued to write "melodramas of ideas," e.g., A.A. *Kabak's *Be-Himmot Mam-lakhah* (1929) and *Bat Sanballat* (1934); and S. *Tchernichowsky's *Bar Kokhva* (1930). *Bar Kokhva* is replete with monologues on liberty by Rabbi Akiva and his wife Rachel; but the action of the plot centers around Bar Kokhba's betrayal of his people because of Havivah, the Samaritan. Tchernichowsky, however, failed to integrate the conceptual and melodramatic planes in the play. The ideas of the play are not realized in the action and therefore lack dramatic validity.

Most of Ya'akov *Cahan's plays are marked by a gap between a high view of existence and sentimental melodrama. In the King Solomon trilogy, *Shelomo u-Vat Shelomo* (1924, 1928), *Shelomo ve-Shulammit* (1942), *Malkat Sheva* (1945), the sentimental melodrama centers around Solomon's love for Shulammit, Ido's love for Solomon's daughter, and Solomon's love for the Queen of Sheba. Its ideological interpretation has a "Faustian" *Weltanschauung*. These plays are also marred by Cahan's inability to activate his ideas; his characters never gain the stature their positions demand, and the tone never rises above the sentimental. Most of his other plays are poetic drama but whether they are biblical like *Hoshe'a* (1956), *David Melekh Yisrael* (1921), *Ha-Nefilim* (1939–40), and *Leyad ha-Piramidot* (1939), or post-biblical plays: *Aher* (1950), *Rabbi Me'ir u-Veruryah* (1952) and *Yannai u-Shelomit* (1955); or nonhistorical prose plays: *Ken ha-Nesher* (1932), *Ha-Shali'ah* (1937), and *Terufo shel Ben Adar* (1939), they are mostly of the same caliber and texture. The style is very conventional and Cahan tends to embellish concrete dramatic reality with very ornate metaphors which are not always in keeping with the subject or theme. Some of Cahan's plays are, however, genuine melodrama: in *Yiftah* (1945) no attempt is made to impose ideas on the plot and in *Be-Luz* (1940) they develop out of the action.

An earlier playwright, I.L. Mekler, in *Pilegesh ba-Givah* (1899), a dramatization of a biblical story, also stressed the

drama of the play rather than its ideas. Yet most of the playwrights of "the melodrama of ideas" (S.D. Goitein, E.L. Jaffe, S. *Zemach, and others) created either stock characters or personifications of ideas which they failed to realize into fully developed dramatis personae. The American Jewish playwright Harry *Sackler made a significant contribution to the Jewish theater. Sackler wrote in Hebrew, in Yiddish, and in English. He was familiar with the theater and with stagecraft. *Yosi min Yokrat* (written in Yiddish, 1917, and translated into Hebrew by Sackler in 1921) is tragic in form. The plot revolves around the conflict between Yosi and his wife Yalta over the conduct of their daughter Ursilla, whose great beauty arouses men to passionate rivalry and ultimately to murder. The tragedy culminates in Ursilla's death. Yosi, prompted by rigid stringent moral convictions, kills his daughter because he believes that her beauty is an evil which spells disaster for all men. Although the play has dramatic impact, the dialogue fails to sustain the tragic intensity of the plot. In a number of other Hebrew plays (e.g., *Rahav* (1934), *Ha-Derekh l-Elohim* (1964), *Yizkor* (1964)), which were printed in Yiddish before they were translated into Hebrew, the effect is basically melodramatic; Sackler fails to involve the characters in deep dramatic conflict. A mixture of humor and melodrama characterizes his Hebrew hasidic plays and playlets: *Nesi'at ha-Zaddik* (1936), *Ha-Hozeh Ro'eh et Kallato* (1932), *Kelappei Mizrah* (1933). Other works by Sackler resemble the chronicle play *Orot me-Ofel* (1936), a historical canvas of the persecution of Jews during the *Fettmilch riots in Frankfurt on the Main and alluding to Hitler's rise to power, and *Mashi'ah – Nosah Amerikah* (Hebrew, 1933), a comic treatment of Mordecai Manuel *Noah's plan to found a Jewish state in the United States. Sackler's plays are well structured, the dialogue is simple and functional, and the stock characters find their actualization in social circumstances and historical garb. Some of them (*Yosi min Yokrat* and *Rahav*) have been produced in the United States and in Israel.

The most frequently staged playwright of the 1930s and 1940s, Aharon *Ashman, began as a "halutzic" writer (e.g., *Min ha-Mezar* (1932); and *Ha-Adamah ha-Zot* (1942, which was successfully staged by Habimah) whose pioneering themes reflect the problems of his generation. He later wrote historical plays: the trilogy *Mikhal Bat Sha'ul* (first part printed in 1941), two parts of which were performed by Habimah; *Aleksandrah ha-Hashmona'it* (1947), used as a libretto for an opera by *Avidom; and *Ha-Homah* (1938), written in the manner of the chronicle play. Most of Ashman's dramas have intricate plot structures in which simple characters become entangled in intrigues. The biblical or historical setting has little significance and serves only as an exotic background to the love story of the dramatis personae. While the melodramatic effects have a strong histrionic impact, his themes are superficial and trivial.

POETIC DRAMA. In contrast to the historical plays in which preference was given to the theatrical aspects over and against the poetic, dramatists like I. *Katzenelson, who is one of the

finest Hebrew lyrical dramatists, stressed the lyricism of play-writing. Katzenelson, a prolific and versatile writer, wrote in a number of literary genres, both in Hebrew and Yiddish. Among the various types of plays he composed are *Tarshish* (1921), a realistic drama, produced in New York; *Ha-Ḥammah! Ha-Ḥammah!* (1907), a poetic, impressionistic one-act play performed at the gala opening of Habimah in Moscow (it later formed part of the trilogy *Anu Ḥayyim u-Metim*, 1913); *Ha-Maḡal* (1911), a bedroom farce performed in Lodz; *Istharah* (1933); the biographical playlets *Ha-Matmid ve-Zillo* (1935) and *Mendele im ha-Kabzanim* (1936); and plays for children about holidays and festivals. Katzenelson's most significant contribution to the Hebrew drama are his verse plays, poetic prose drama, and a number of lyrical dramatic fragments: *Ha-Navi* (*Ha-olam* 1912 – Act I; *Ha-Zefirah* 1918 – Act II; published in book form 1922); *Gilgal* (1911–13); *Amnon* (1938); and *Ḥanniba'al* (1947). While his plays in prose are dramatically effective, their themes and structures are conventional. Katzenelson's value as a dramatist lies in the high literary quality of his impressionistic plays, which are written in poetic prose. Intense dramatic situations are rendered lyrically, though in no way detracting from the interaction of dialogue and plot. His original interpretations of biblical and post-biblical historical themes and their poetic dramatic rendering are most expressive of Katzenelson's dramatic genius. In *Ha-Navi* the relationship between *Elisha and *Gehazi is the inescapable bond existing between a man and his shadow; in *Amnon*, Katzenelson characterizes Amnon, the heir-apparent to David, as a weakling, unfit to be king because he is incapable of rebelling against his father; in *Ḥanniba'al*, Hannibal, who is called upon to revenge the heinous crimes the Aryans committed against the Semites (the play was written in a German concentration camp), recoils from meting out vengeance. Katzenelson's verse plays have great literary merit from the point of view of language, but they are not theatrically effective.

Mattityahu *Shoham, a major figure in Hebrew literature, composed four biblical plays in verse which, because of their original style and structure and imaginative conception of historical events, are landmarks in Hebrew drama. *Yeriḥo* (1924), a dramatization of the fall of Jericho, has for its main characters Achan and Rahab, whose love for each other is symbolic of the attraction between the decadent culture of Jericho and the rigorous, vital Hebrew culture of the desert. In *Bilam* (1925–29), the subplot which portrays the tension between Balaam and Moses embodies the dramatic theme of conflict between the forces of darkness (Balaam) and the forces of light (Moses). The tension is resolved in Balaam's regeneration. *Zor vi-Yerushalayim* (1933) presents the theme of culture polarity through the characters of Jezebel, Elijah, and Elisha. Elisha's dissociation from Jezebel indicates a subtle change from Shoham's earlier view on the attraction between the Jewish culture and a foreign culture. In *Elohei Barzel Lo Tà'aseh Lakh* (1937) Gog, who personifies Aryanism, and Abraham, who represents Judaism, are locked in a relentless struggle which forms an allegorical superstructure to a plot that revolves

around Sarah, Hagar, and Lot's daughters. Shoham through the power of his poetry endows language with a dimension of its own which is revealed in the dramatic tension between his symbols. While the dramatic content is embodied in symbols of fire and water (*Yeriḥo*), light and darkness (*Bilam*), and the vine and the lion (*Zor vi-Yerushalayim*), it is actualized not in the plot, or in the characters who remain mostly symbolic or allegoric, or in the dialogue. Shoham's dramas fall short as theater primarily because his "literary," idiosyncratic language is completely unsuited for the stage. Thus while his literary dramatic achievement is undisputed, his plays are theatrically not successful. Shoham's dramaturgical problems reflect those of contemporaneous Hebrew drama.

EXPRESSIONIST-HISTORICAL DRAMA. Among the writers who attempted to write expressionist-historical drama were Nathan *Agmon, Sh. *Shalom, and Ḥayyim *Hazaz. Agmon broke with the tradition of the conventional plot and in the plays *Yehudah Ish Kerayot* (1930), *Shabbetai Zevi* (1931), and *Be-Leil Zeh* (1934) emotional tension rather than coherent sequence is the cohesive factor. The dialogue is fragmentary and rhetorical; the characters tend to be symbolic and episodes grotesque. The structure of the plays, however, renders them unsuitable for the stage. Years later Agmon rewrote two of these plays: *Shabbetai Zevi* (1936) and *Be-Leil Zeh*, renamed *Leil Yerushalayim* (1953), trying to tone down the expressionistic effects. Although the adaptations are much closer to the realistic school, they lack the verve, spontaneity, and originality of the earlier plays. All three dramas have for theme crisis in Jewish history as manifest in the struggle between traditional conservatism, which acquiesces to exile, and the demand for messianic redemption. *Yerushalayim ve-Romi* (1939), a dramatization of *Josephus, and the Herzl trilogy, *Ḥevlei Gilgul* (appeared in complete form in 1960), are two of his plays which were originally written in a realistic style. Some later plays, *Maḥlefot Avshalom*, *Harostrat*, and *Don Quixote* (1960), while original and interesting in their approach and interpretation of the subject matter, fall short of their theatrical realization.

*Shin Shalom gave full vent to his expressionistic dramatic tendencies in the two poetic playlets *Shabbat ha-Olam* (1945, first appeared as *Elisha ve-ha-Shabbat*, 1932) and *Me'arat Yosef* (1934) which are not intended for the stage but are dialogues giving voice to the *Schrei* (the famous expressionist cry). *Elisha b. Avuyah, the protagonist of *Shabbat ha-Olam*, revolts against tradition and in *Me'arat Yosef* Josephus attempts to return to the primordial forces of life after the destruction of civilization. Shalom's characters are projections of the poet's "I" rather than genuine portrayals of the "I" of the personae of his plays. His characters are never fully rendered as independent human beings. His "ḥalutzic" plays *Yeriyot el ha-Kibbutz* (1940) and *Adamah* (1942) are less expressionistic.

Ḥayyim Hazaz's play *Be-Kez ha-Yamim* (different versions: 1934, 1950, 1968), probably one of the outstanding achievements of contemporary Hebrew drama, is an expres-

sionist play in which the author has carefully kept to the thematic and structural framework. Set in the time of Shabbetai Zevi, the theme of the drama is the tension between the polar concepts of exile and redemption. Yozfa, the “hero of redemption,” attacks the smugness of the community, represented on the one hand by Yost and his friends who prefer the safety of the status quo to the disruptive and revolutionary challenge that redemption offers, and on the other hand by the beggars who misinterpret the significance of the deliverance. While the dramatis personae are infused with an exaggerated intensity, they fulfill their dramatic function as characters. Hazaz is original in his rhetoric style which remains within the confines of the language of the theater.

Hebrew historical drama during the national revival can point to a number of important literary works (e.g., the plays of Shoham). The discrepancy between the ideas of the playwright and his ability to realize them in a theatrical context is the reason why there were no major dramatic achievements during this period. Hebrew historical drama was also affected by a variety of Western literatures. Dramatists were eclectic and were influenced by many schools, plays, and a wide range of dramatic genres extending from French neoclassicism, to German classicism (Goethe), to Polish expressionism (S. Wyspiański).

ZIONIST MELODRAMA. The period of national revival (1880–1947) also saw the development of the play that dramatizes different facets of contemporary Jewish life. This type of play was a vehicle of expression in contemporary Yiddish literature as well, and some playwrights wrote in both languages.

The Zionist melodrama follows the tradition of the didactic Haskalah allegory and the historical “conceptual melodrama.” J.L. Landau’s *Yesh Tikvah* (“There is Hope,” performed in Brody and published in 1893) is an early example. Shulamit, the heroine, is the daughter of the rich man of the town who must decide between Binyamin Ish Nadiv, the Zionist whom she likes, and Max Bilam, the assimilationist whom her father favors. In the end love and Zionism triumph. The play is a Zionist reading of allegories like M.H. Luzzatto’s *La-Yesharim Tehillah*. *Lefanim Le’ahor* (1923), another play by J.L. Landau, is much more complex. Its theme is an ideological struggle between Zionism and assimilationism for the souls of the youth and the whole community. The conflict is embodied in the dramatis personae: the rabbi of the community De Shneur Michal, a spiritual Zionist, and the aristocrat Steinbach, the man who wields power in the small town and whose daughter converts to Christianity at his instigation. In two other melodramas: *Ha-Sorer be-Veito* (printed in 1900) by I.H. *Tawiw and *Ba’t ha-Rav o Giyyoret ha-Ziyyonut* (1904) by Jacob Gordon, Zionism serves as the criterion of the good. The Zionists are the positive characters and good overcomes evil. The structure of the Zionist melodrama thus follows the pattern of the Haskalah allegory where enlightened “nationalists” are juxtaposed with the “enlightened *maskilim*” and the assimilationists take the place of the religious reactionaries.

NATURALISM. Many of the plays of the national renaissance period bear affinity to the trends and forms prevalent in modern European drama, showing the influences of Ibsen’s drama, Maeterlinck’s symbolistic plays, and Hauptmann’s social naturalism. Some of Peretz *Hirschbein’s plays are markedly naturalistic while others are symbolistic. He wrote mostly in Yiddish but translated his own works into Hebrew. *Miryam* (1905), a conventional social melodrama about a poor and simple country girl, is a prime example of the influence of naturalism in Hebrew drama. She is seduced by the “landlord’s” son and ends up in a brothel. The protagonist of the naturalistic play *Nevelah* (“Carrion,” printed in 1905), Mendel Nevelah, is also a victim of society, here represented by his forefathers. Driven by suffering, he murders his own father and sinks into madness. *Bein Yaldei ha-Sadeh* (original Yiddish *Grine Felder*; Hebrew 1922), a comedy staged in Hebrew by Habimah, describes the comic confrontation between country Jews and Levi Yizhak, a scholar from town.

Jacob *Steinberg, primarily a poet and short story writer, also wrote naturalistic social drama. The heroine of *Hankah* (1907), a play in the pattern of *Miryam*, is a pathetic girl who, persecuted by her stepmother, finally commits suicide. In *R. Leib Goldman u-Vitto* (1907), Steinberg dramatizes the eternal conflict of the generations as manifest in his time. *Bayit mul Bayit* (1908) by Zalman *Shneur, who is also mainly known for his poetry and prose rather than his plays, is a social drama in which prostitution is exposed by means of contrast with bourgeois life. Shneur’s *Adam* (1926) is a lyrical dramatization of the story of Adam and Eve. Joseph Hayyim *Brenner’s *Me-Ever la-Gevulin* (1907), a play comprised of a series of dialogue fragments, marks a chapter in the history of Hebrew drama and dialogue. Brenner’s dramas, which he termed “plays and fragmentations of plays,” use the dramatic fragmentation technique, a literary device also found in many of his prose works. Not well structured, the play is nevertheless interesting from the point of view of style, technique in dramatic dialogue, and theme. Its setting is the London of Jewish-Russian emigrants whose social customs and ideological struggles form the dramatic tension in the play. The protagonists, Yoḥanan and Hezkoni, despair of all socialist theories and regard suffering as the ultimate truth. Brenner, attempting to recreate the spoken word, evolved a kind of Hebrew-English dialect which was meant to be analogous to the Yiddish-English dialect in actual use. He thus brought the “language of the theater” closer to the “language of life.” The playlets *Le-Et Attah* (1905) and *Erev u-Voker* (1908), written in a similar style, evince a better control of the medium and dramatically are realized more fully.

REALISTIC HEBREW DRAMA. One of the first exponents of realism in Hebrew drama is Yitzhak Dov *Berkowitz who wrote a number of important plays, among them *Oto ve-et Beno* (1928 and performed by Habimah). The play follows a realistic Ibsenian technique and is a landmark in contemporary Hebrew drama. The theme, the relationship between an

apostate father who wishes to return to Judaism and his son who has become a Jew hater, is comprehended within an analytical design and set against the bloody landscape of Russian pogroms during the Bolshevik Revolution. Two minor realistic plays by Berkowitz are *Ba-arazot ha-Rehokot* (1928), a comedy on the life of Jewish immigrants in the United States whose lives are thrown into comic confusion through the arrival of Anton, a non-Jewish Russian farmer; and the social drama *Mirah* (1934), also set in the United States, and strongly influenced by Ibsen's *A Doll's House*.

Yitzhak *Shenhar also wrote realistic drama, though of a different type. *Al ha-Gevul* ("On the Border," 1943) is about a group of pioneers who attempt to immigrate to Erez Israel. Their efforts lead to a momentary reorientation in the life of a degenerating family; no real change, however, is effected. Chekhov's *Three Sisters* served the author as model. His protagonists are three brothers and the ideal and yearning for Erez Israel replace the nostalgic longing for Moscow. To some extent Shenhar writes in the earlier tradition of translation and adaptation of European themes, topics, and literary structures to a Jewish milieu, ambiance, and cultural ideal. Some of the best authors of Hebrew literature tried their hand at naturalistic-realistic plays, a parallel school of which developed in Yiddish drama. This affinity between Hebrew and Yiddish drama is still more evident in the symbolistic and expressionistic techniques of I.L. *Peretz, H. *Leivick, and D. *Pinski, who wrote mostly in Yiddish.

SYMBOLISM AND EXPRESSIONISM. Isaac Leib Peretz (1852–1915) was one of the first symbolists and expressionists in Hebrew and Yiddish drama. *Ḥurban Beit Zaddik* (1903, had a number of versions, one in Hebrew) is a mystical play which dramatizes the decline of a ḥasidic *zaddik's* dynasty. Germinated in doubt, the degenerative process takes its full course, ending finally in heresy. The symbolistic technique is typical of Peretz's Yiddish plays. His social playlets are written in a naturalistic style, e.g., *Sheḥufei Zerem* (1912) and *Ba-Shefel* (1924). P. Hirschbein also wrote symbolic plays: *Olamot Bodedim* ("Lonely Worlds," 1905) is set in a cellar where a group of wretched and oppressed people live in close proximity without talking to each other but "next to each other." In technique and atmosphere the play resembles M. Maeterlinck's *Les Aveugles* (translated into Hebrew in the same year). *Teki'at Kaf* (*Ha-Shiloah* 18, 1908) bears similarity to S. *An-ski's *Dybbuk*. Its theme of innocent pure love, culminating in a blood bond between the young lovers, is enacted against the background of a contract sealed by their parents which, however, they later break. The breach leads to disaster and the young hero's death. The technique is symbolistic, as in the historical drama *Be-Zel ha-Dorot* (1922) and in the playlets *Al Yad ha-Derekh* (1907) and *Pirḥei Sedeh ha-Kevarim* (1907). Hirschbein's drama is thus marked by two distinct literary trends in European literature – naturalism and symbolism. A number of less important Hebrew playwrights also experimented with symbolism; none however attained the artistic level of the Yid-

dish dramatists. Their contribution to the Hebrew drama was the development of natural Hebrew style.

THE "ḤALUTZ" PLAY. Developed mainly in Erez Israel, the "ḥalutz" play (or "*Mahaze ha-Hityashvut*," "the Settlement Drama") is defined by its subject matter: the story of the settlers in Erez Israel, their problems, and their struggles. The underlying theme of the "ḥalutz" drama is to praise the pioneers and their efforts and to denounce all their opponents. Most of these plays were insignificant melodramas which at best were well constructed. The characters were drawn from the social milieu of Erez Israel. Yehoshua Barzilai in *Ha-Baḥlan* ("The Disdainer" 1919: special edition), one of the early plays in the genre, transposed Molière's *Misanthrope* to the Erez Israel landscape and its problems. "Ha-Baḥlan," the protagonist, hates his urban environment (Jerusalem) but when he comes face to face with the new settlement he has a change of heart. *Allah Karim* (1912), by L.A. Orloff-Arieli (1886–1943), has a more complex plot and is enacted within a pattern of intricate human relationships. The central character, Naomi Shatz, immigrates to Erez Israel during the Second Aliyah and becomes engaged to one of the pioneers. She is, however, disappointed by the Jewish "pioneering" intellectuals and prefers the native Arabs (Ali, the pastry vendor) whom she sees as really belonging to the land. Set against the Arab-Jewish conflict, the play ends with Naomi's hope for a new Jewish generation whose character will be shaped by the native soil. *Allah Karim* heralds the development of "*Mahaze ha-Safek*," "the Doubt play," a sub-genre of the "Settlement Drama" that accentuates the impotence of European newcomers in overcoming the hardships with which the physical and human reality in the Land of Israel confronts them. Although diminishing in number in course of the 1930s, in which the "positive," "optimistic" Settlement plays flourished due to the numerous anniversaries of veteran Jewish settlements and the establishment of new ones, the "Doubt play" prevailed until the ideological "earthquake" following the *Yom Kippur War* in 1973. David *Shimoni is another playwright of the "ḥalutzic" trend who extols the pioneering spirit (*Laylah ba-Kerem*, 1911) as does Haim *Shurer, whose dramatic canvas unfolds against the social problems of the pioneers. *La-Rishonah* (1920) dramatizes the conflict between the viticulturists of the village and their workers and the tension generated by the contradictory social and national views of the laborers themselves. Structured as a family melodrama, the viticulturist's daughter Michal falls in love with a laborer, David, her father's social antagonist. Shurer exposes the unreasonable extremism of the young people as they rebel against their parents. Only as the play draws to a close do the young come to acknowledge the right of existence of their opponents. Various "ḥalutz" plays continue to be written over a long period. *Rohaleh* (1933) by Moshe *Smilansky is but a new version of an old subject. *Ha-Adamah ha-Zot*, by A. Ashman, has also for theme the pioneering spirit, acted out in a confrontation between father and son. Yoel Yosseph, a pioneer, opposes his son who seeks to escape from the village and to

take Hannah, his beloved, with him. Hannah, however, loves Ya'akov, a worker on the moshav; *ḥalutziiyyut* ("pioneering") wins out in the end and overcomes all obstacles. Though the melodramatic structure of the play is different, the class division of characters and concepts is the same, and the basic theme, the triumph of pioneering, remains the focal issue. Other plays written in this vein are *Bein Iyyim* (1928), by Mordekhai *Avi-Shaul, a drama of pathos in which the labor movement values of the protagonist, Yehoshua Ne'eman, are paramount; *Yeriyot el ha-Kibbutz* (1940) and *Adamah* (1942) by Sh. Shalom; *Ḥayyim* (1942) by Menahem Bader which also glorify the value of labor; and *Ha-Zaken* (1942) by Yehoshua *Bar Yosef, a realistic playwright, who draws on the prototype of A.D. *Gordon. In *Medurot* ("Bonfires") Alexander Karmon contrasts the martyr spirit of the hero to the values of his opponents and extols the role he takes in illegal immigration. While many of these pioneering plays are melodramas, some comedies on the subject were also written, e.g., A. Ashman's *Min ha-Mezar* ("Out of Distress," 1932). The comic action revolves around the contention between two parties over the hand of Ellah, a pioneer. She has to choose between the temptation offered by the American family Stevens and the journalist Brown and the pioneering idealism of Yehudah. Ellah, of course, chooses the "good." The comedies *Banim li-Gevulam* ("Sons Return to their Border," 1945, performed by Habimah) by Asher *Beilin and *I Like Mike* by Aharon *Megged (1956) are constructed along similar lines.

Not all plays about Erez Israel have for theme the problems of pioneering. Some dramatize other aspects and problems arising from life in Erez Israel. A central theme is the conflict between generations and the struggle between tradition and those who rebel against it. M. Avi-Shaul in his dramatization of the conflict in *Ha-Maḥarozet* ("The Necklace," 1928) pits the old values of the Diaspora represented by Raphael Ḥai, a member of the Jerusalem Moghrabi (Moroccan) Jewish community, against the new life in Erez Israel to which his daughter Mas'udah is dedicated. Bar Yosef's *Ya'akov ha-Zoḥek* ("Laughing Jacob," 1939) and *Be-Simta'ot Yerushalayim* ("In Jerusalem Alleys," 1941, performed by the *Ohel Theater) have similar themes. The dramatic tension is between the values of traditional Jewry of Safed and Jerusalem, and their children who rebel against the suppression of eroticism in their society. The conflict is not resolved but has its tragic "dissolution" in madness to which some of the characters are ultimately driven. Ithamar Ben-Hur's *Ha-Soreret* (1942) and M. Berger's *Me'ah She'arim* (1943) are similar. A different aspect of Erez Israel was probed by A. Karmon who, in *Ba-Sevakh* ("Entanglement," 1926) and *Neginat ha-Em* ("Mother's Melody," 1928), dramatizes various intricate human relationships in kibbutz life (e.g., incest between a brother and a sister, family and education problems in a collective settlement). Only toward the end of the 1940s were some attempts made at introducing into Hebrew drama contemporaneous Western dramatic elements. Thus Ya'akov *Horowitz, who had earlier written an expressionistic play (*Gesher ha-Lezīm*, 1929), wrote

in 1956 *Ani Rozeh Lishlot* ("I Want to Rule"), a social-universal play which broke with the conventional "ḥalutz" drama, a trend that had continued into the early period of the state, though in a different garb.

Drama in Israel

Hebrew drama gained considerable impetus after the War of Independence. The establishment of the state accelerated the development of the Hebrew theater. The *Cameri (Chamber) Theater, established in 1944, promoted the realistic school. In the wake of the War of Independence a youth cult developed to which the stage also tended to cater. Most of the plays were a continuation of the "ḥalutz" play in theme and form, with the young fighters of the War of Independence replacing the young *ḥalutzim*. Two plays belonging to this category are Yigal *Mossinsohn's *Be-Arvot ha-Negev* ("In the Negev Desert," 1949, performed by Habimah), a melodrama about the defense of a besieged Jewish settlement during the War of Independence; and Moshe *Shamir's *Hu Halakh ba-Sadot* ("He Walked in the Fields," 1947, an adaptation of a novel by the same name), a love story set in a kibbutz. The two lovers are Uri, born on the kibbutz and now a soldier, and Mika, a survivor of the Holocaust. Both plays end in the death of the heroes. Similar plays are *Kilometer 56* (1949) and *Beit Hillel* (1951) by M. Shamir. The only exception to this wave of mythical self-glorification was Nathan *Shaham's *Hem Yagi'u Maḥar* ("They Will Arrive Tomorrow," 1949). In this realistic morality play, Jonah, the commander of an Israeli platoon, sends his comrades and two Arabs to their certain death on a landmined hill. Through this morally dubious act, fiercely condemned by his second in command, Avi (named after Abraham, the first legislator of the monotheist ethos), Jonah liberates himself and the remaining soldiers. The play is thus an early paradigm of the constant vacillation in Israeli drama (reflected even as late as 2005 in Yehoshua *Sobol's *Zeman Emet* ("The Moment of Truth") and in Yael Ronen's *Plonter* ("The Gordian Knot")) between vindication for any atrocities committed by Israelis against Arabs for survival's sake and fidelity to the humane tradition of Jewish morality.

Most of the plays of the 1950s are social dramas – distinguished by realistic-documentary or satirical-grotesque styles – in which the new developing society in Israel is criticized in the light of the values of the labor movement, e.g., A. Megged's *Hedvah va-Ani* ("Hedvah and I," 1964) and N. Shaham's *Kera Li Syomka* ("Call Me Syomka," 1950). The young dramatists of Israel's formative era (early 1950s) were primarily enraged by the "counter-revolutionary" symptoms of the new society. Corruption, bureaucracy, careerism, social inequality, and racial discrimination are criticized in realistic works which are all too often shallow: the new generation had ceased to uphold the cooperative and rural values of the pre-state Jewish population and had instead become bourgeois, trying to achieve its selfish ends at the expense of the young state, while the state on its part has been ungrateful to that part of the young generation that fought for its establishment.

The following list of topical plays shows that many of the best of Israel's writers tried through social drama to grapple with the problems that beset the decade: M. Shamir's *Sof ha-Olam* and *Aggadot Lod* (1958), H. *Bartov's *Shesh Kenafayim le-Ehad* (1954), and N. Shaham's *Heshbon Hadash* deal with the absorption of immigrants; Y. Mosinsohn's *Kazablan* (1958) and Judith *Hendel's *Rehov ha-Madregot* (1955) describe the discrimination of the Oriental community by the hegemonic Ashkenazi veterans; and Ephraim *Kishon's *Shemo Holekh Lefanav* (1953) satirizes the new bureaucracy; Y. Mosinsohn's *Eldorado* depicts prostitution and crime among the socially deprived and stigmatized Oriental sectors (1963), Yosh's *Ani Rav ha-Hovel* deals with the big seamen's strike, and Yoram Matmor's fine Pirandellian play *Mahazeh Ragil* (reminiscent in content and style of *Six Characters in Search of an Author*) denounces society's betrayal of the freedom fighters. The protagonists are usually conventional, typical, and local, representing only their way of life and the immediate situation in which circumstance has cast them. They therefore lack any kind of universality. They are either clerks, new immigrants, or Oriental Jews. The playwrights tried to draw Oriental types but in actuality they only imitated their manner of speech and customs, and not always successfully. The language of these plays comes close to slang and though it is more flexible than the dramatic language of earlier generations, it lacks "style." The episodes are in the form of "reporting" and the playwrights make no attempt at stamping on the world they had created their personal "literary" seal. The plays of the humorist E. *Kishon, *Shaḥor al-gabei Lavan*, *Af Millah le-Morgenstern*, *Shemo Holekh Lefanav*, and *Ha-Ke-tubbah* created a new type of comedy. In a way they were a continuation of the comedy staged by Matateh ("Broom"), a satirical theater founded in the late 1920s.

An outstanding play in its superior aesthetic quality is *Tura*, a psychological-mythical drama by Y. Bar-Yosef (1933–). It is set in the traditional Oriental Jewish community, and depicts the horrendous results of the devaluation of the patriarchal family and its codes in Israel's "melting pot" of the 1950s. The situation is aggravated by the fact that the protagonists become pawns within the tenacious grips of the codes of the traditional community, so that their violation by the young heroine sweeps the dramatic action to a climax which culminates in her "ritual" murder.

New developments in contemporary Hebrew drama were nevertheless apparent, even in the 1950s. Biblical and historical drama is manipulated as a religiously connoted prism for critique of political and moral problems. It gained fresh impetus with *Akhzar mi-Kol-ha-Melekh* (1955) by Nissim *Aloni; *Millemet Benei Or* (1956) and *Ha-Laylah le-Ish* by M. Shamir; *Tamar Eshet Er* (1947) by Y. Mosinsohn; *Yohanan Bar-Hama* (1952) by N. Shaham; *Bereshit* by A. Megged; *Ha-Dov* and *Shalosh Nashim be-Zahov* (both 1966) by Y. Eliraz; *Uriyyah ha-Hitti* and *Sedom Siti* (1959) by B. *Galai; *Massa le-Nineveh* (1963) by Y. *Amichai; and *Keter ba-Rosh* (1969) by Y. Shabtai. These plays are not cast in one mold: some, like Shamir's, are politically topical drama in which contemporary

social problems (revolution, mixed marriages) are projected into the past. Others try to dramatize the past but the protagonists are motivated psychologically (*Tamar Eshet Er*). *Akhzar mi-Kol-ha-Melekh* ("Most Cruel of All – the King") is an interesting social-poetic interpretation of the period of division between the kingdoms of Judah and Israel. Replete with allusions to contemporaneous problems, warning against the dangers of separatism and internal *Kulturkampf*, the play has nevertheless an independent existence as a psychological-poetic drama which is bound neither by time nor place. Some brilliant and pungent parodies on the past were written by modern Israel authors. They follow either the comic-parodic style of contemporary French drama (Eliraz), or are modern poetic reinterpretations of biblical themes which shed a new light on the rather untended facets of the ancient myth (such as the depiction of the old, impotent, and unstable King David, who is nevertheless reluctant to retire and deal with the question of his political legacy in Shabtai's *Keter ba-Rosh*). Playwrights have also tried to achieve comic effects through the treatment of a lofty subject with bathos (Megged, Galai, Eliraz). All these dramatists show a certain originality of expression, form, and approach to the material. Among the finest and most problematic modern Hebrew dramatists is N. *Alterman. Nathan Alterman, primarily a poet, wrote very diverse plays: *Kinneret Kinneret* (1962), a kitsch-nostalgic new "settlement play" devised to idealize the courage of the pioneers; *Pundak ha-Ruhot* (1963), a drama which, through obvious analogies with Goethe's *Faust* and Ibsen's *Peer Gynt*, deals with the dilemma confronting every great artist of having to choose between life, love, and familial happiness, on the one hand, and artistic success, glory, and loneliness on the other; Among Alterman's other dramatic work one should mention *Malkat Ester* (1968), a Purim farce, and *Mishpat Pythagoras* (1966), an allegorical-topical play. The predominant strength of Alterman's plays is their rich and multi-layered poetic language that thrives at the expense of a convincing and gripping dramatic plot and conflict.

The so-called "Holocaust Dramaturgy" is one of the main genres of the Hebrew-Israeli play. It rarely focuses on commemorating the historical catastrophe, but rather contemplates the Shoah's shifting repercussions on Israeli society or uses it as a socio-political metaphor. The Holocaust is presented in the plays written during the 1940s and 1950s as an image of impotence, and is juxtaposed with the sublime convention of the *Sabra*. This is the underlying premise of plays such as the above-mentioned *Hu Halakh ba-Sadot* ("He Walked in the Fields," 1947) by Moshe Shamir, in which Holocaust survivor Mika has to sacrifice her private dream of leading a normal life with her boyfriend, Uri, for the sake of fighting for the establishment of the state. So too in Nathan Shaham's *Heshbon Hadash* ("A New Account," 1952), or Aharon Megged's *Hanna Senesh* (1958) which glorifies the bravery of the woman paratrooper who was executed in Nazi occupied Hungary in her attempt to save Jews, those weaklings who went to their death like "cattle to the slaughter." The only

exception to this orientation is *Ba'alat ha-Armon* ("Lady of the Manor," 1956), by the poet Lea *Goldberg, who focuses on the juxtaposition between European culture and modern civilization (including Zionism). It is acted out against the background of the rescue of European Jewish children from forced conversion. The protagonists are an old Polish nobleman, who represents the declining European culture, and an Israeli woman, who embodies the new civilization. The author's obviously romantic sympathies tend toward the old gentleman and the fading world he embodies. The poetic realistic and allegorical plays of the 1960s manifest a shift in the Israeli attitude toward the Holocaust. They belie the recognition that a society cannot forgo its past, and present the world of the victims and Nazi accomplices as the analogous alter ego of the rootless cult of the mythologized *Sabra*. The foremost accomplishments in this category include Moshe Shamir's *Ha-Yoresh* ("The Heir," 1963), Yehuda Amichai's *Pa'amonim ve-Rakavot* ("Bells and Trains"), as well as Ben Zion Tomer's *Yaldei ha-Zel* ("Children of the Shadow," 1963). This interesting play deals with Holocaust children who do not become rooted in the new reality of Israel, though on the surface they seem to have adapted. The drama is enacted in the garb of a symbolic relationship between the young protagonist Yosef-Yoram and his uncle, Dr. Sigmund Rabinovicz, who had been a *Judenrat* member and a Kapo guilty of the extermination of his own family.

THE SIX-DAY (1967) AND YOM KIPPUR (1973) WARS AS TURNING POINTS. The turning point in the Hebrew drama's attitude to society was the euphoric mentality that overtook Israel after the sweeping victory in the Six-Day War (1967). This was followed by a period of collective self-reckoning, soul searching, and myth shattering in the wake of the humiliating surprise of the Yom-Kippur War (1973). Whereas Israeli drama before 1967 was basically positive toward the ideal of the "New Jew," post-1967 protest plays adopted an asocial, agnostic, and deconstructive position in order to warn society against the dangers of a militarist power-cult and the moral deterioration inextricably connected with the occupation of the Palestinians and the subordination of human values to the imperative of territorial expansion. In fact, one may argue that from 1967 to Rabin's murder in 1995 the core of Hebrew drama was politically mobilized, rhetorically militant, and ideologically leftist. This thematic and stylistic watershed was also accompanied by a higher degree of ripeness and professionalism in Hebrew dramatic writing thanks primarily to the efforts of Oded Kotler as the artistic director of the Haifa Municipal Theater to promote young dramatists.

Hanoch *Levin's satirical revues *At va-Ani ve-Hamilhamah Haba'ah* ("You and I and the Next War," 1968), *Ketchup* (1969, performed in fringe theaters), *Malkat ha-Ambatayah* ("Queen of the Bathtub"), staged in 1970 by the establishment Cameri Theater and swiftly closed due to public outcry, and Levin's censored *Ha-Patriyot* ("The Patriot," Neveh-

Zedek Theater 1982), denouncing the Lebanon War, did not shrink from resorting to profane and provocative devices in order to slaughter the most sacred cows of Israel's collective value system: the ideal of the "justified war"; the cult of the fallen hero; bereavement and the admiration for the military; the avoidance of any chance for peace; the sanctification of land at the expense of life and ethics; and the ingrained racist attitude to Arabs. A.B. *Yehoshua (1936–), one of the foremost young authors of the 1960s, heralded in *Laylah be-Mai* ("A Night in May," 1969) the falling apart of Israeli society through the metaphor of the psychological disintegration of a complex Jerusalem family during the period preceding the Six-Day War. One of the most vehement adversaries of Israel's belligerent orientation, provinciality, and disdain for culture was Yosef Mundy, who, as a deliberate rhetorical provocation, proclaimed his Diaspora-cosmopolitan *Weltanschauung* and anti-Zionist disposition. Mundy's most accomplished play, *Zeh Mistovev* ("It Turns," 1970) takes place in a madhouse (a common dramatic metaphor for Israel): the allegorical megalomaniac Herzl, representative of political and expansionist Zionism, torments the humanist, individualistic Kafka. In the symbolist-surreal play *Moshel Yeriho* ("The Governor of Jericho," 1975), written after the Yom Kippur War, Mundy depicts the racist and demeaning side of Israeli conduct towards the Palestinians through the vulgar, sexist, and despotic figure of the governor of Jericho, the first biblical town to be conquered by the Hebrew tribes as they invaded the Land of Canaan. One of the major genres in which the Israeli reality has been effectively examined and criticized is the docudrama. The most notable dramatists who continuously work in this genre are Yitzhak Laor, Motti Lerner, Edna Mazya, Ilan Hatzor, Daniela Carmi, Hillel Mittelpunkt, Matti Golan, Amnon Levy and Rami Danon, Shmuel Hasfari, Miriam Kainy, and Yael Ronen. They employ the strategy of undermining the accepted "photographic" conventions from within, thereby upsetting the positive self-image of Israeli society traditionally reasserted by the theater. Docudrama was inaugurated in the early 1970s by the American-born Nola Chilton, who created a succession of "living paper" documentaries promoting a spectrum of social causes in "the other Israel." Her partner in these ventures was Yehoshua Sobol, one of Israel's most prolific, politically engaged, and internationally successful dramatists. Sobol was also one of the major dramatists who developed – in the wake of the 1973 War – the mode of soul-searching plays that dissect the national myths and explore their false nature. Sobol's *Leyl ha-Esrim* ("The Night of the Twentieth," 1976), based on a historical episode, analyzes the mistakes of the Zionist founding fathers through the narrative of a group of young pioneers in 1920, engaged in a profound and merciless process of soul searching about their motives and purposes before descending from a Galilean hill to a new settlement where they expect to exchange "murderous blows with the Arab occupants of the Land." Sobol employs and develops similar docudramatic strategies in a number of plays, most notably in *Nefesh Yehudi* ("The Soul

of a Jew," 1982), which deals with Jewish self-hatred and reconstructs the biography of Otto Weininger, the misogynist and genial Viennese Jewish philosopher, and in *Palestinait* ("The Palestinian Woman," 1985). In the latter, Sobol delineates the ordeals of Samira/Magda, a fictional TV-drama character who is the alter-ego of its author. She tries "to crystallize the borders and meeting points between the Israeli Jewish and the Israeli Arab/Palestinian cultural, ethnic, and national identities" (F. Rokem). A relatively late achievement in the docudramatic revisionist vogue is Hillel Mittelpunkt's *Gorodish, o ha-Yom ha-Shevi'i* ("Gorodish, or The Seventh Day," 1993), a chronicle of the rise and fall of General Shmuel Gonen, a hero of the Six-Day War who became the scapegoat of the "defeat" in the Yom Kippur War, thus symbolizing the ideological bankruptcy of all of Israeli society.

Yet although mainly realistic, the trend of post-Zionist drama that began in the mid-1970s did not preclude stylized and fantastic plays. Yaakov Shabtai's *Namer Havarburot* ("The Spotted Tiger," 1974) tells the story of Fink, half dreamer half charlatan, who at the end of the 1920s comes to the tiny township of Tel Aviv, a provincial resort of embittered, materialist, and desperate ex-pioneers. Fink brings with him a whiff of the wide world, hoping to establish an international circus in Israel with all its trimmings, including a spotted tiger, the symbol of speed, courage, and unearthly beauty. Being unable to live up to the imaginary dimensions of Fink's utopian dream, the petty, dystopian settlers of Tel Aviv bring about his death in a duel. In *Shitz* (1975) Hanoch Levin provides a biting satirical grotesque about the cynical Israeli philistines who are transformed by greed into warmongers who thrive on blood. Danny Horowitz's *Cherli Ka-Cherli* (1977) – a parody on the Israeli *Massekhet*-genre in the form of an oratorio for speaking voices and chorus – reflects the spirit of soul searching by offering an ironic dissection of the once sacred *Sabra* myth. The tradition of post-Zionist, non-realistic parables on the shattered ideals of the morally corrupt Israeli society is pursued on the threshold of the third millennium by several dramatists (Yehonatan Geffen, Eldad Ziv, Shlomi Moskovitch). They are, however, surpassed by the theatrical texts of the director and playwright Michael Gurevitch, whose phantasmagorias *Mila Ahat shel Ahavah* ("One Word of Love"), *Heyl Parashim Anu* ("We Are a Unit of Cavaliers") and *Osher* ("Happiness") constitute poetic stage legends that lend themselves to a plethora of interpretations.

THE MOBILIZATION OF HISTORICAL AND BIBLICAL DRAMA. The process of mobilizing the stage for political ends left its mark also on historical and biblical drama. Historical as well as biblical materials have served since 1967 for a critical illumination of local political and existential problems. Aharon Megged's *Ha-Onah ha-Bo'eret* ("The Burning Season," 1967) takes up the theme of Job in order to warn against the hazards of forgiving the Germans by accepting compensation and establishing diplomatic relations with Germany. Instead of being loyal to the biblical characterization

of Job as a righteous and God-fearing patriarch who rightfully lives to see a happy end to his various ordeals, Megged presents him as a blind, "Holocaust-denying" person who deserves the recurrence of his tragic fate. The same biblical myth acquires a radically existential and agnostic interpretation in Hanoch Levin's *Yissurei Iyov* ("The Sorrows of Job," 1981). In the first part of this "Passion"-play we witness the descent and fall of Job presented as a catastrophic succession of episodic events, corresponding to the biblical narrative (apart from the omission of the prologue in Heaven); yet, in contrast to the Scriptures, the chain of events in Levin's play is the result of both human short-sightedness and selfishness as well as of Job's own moral corruption. In the second part we witness the increasing agony of Job on the verge of dying, having been speared on a pole by the Romans for refusing to renounce God. Becoming part of a circus spectacle, without being granted the sanctification of a martyr's death, Job's anti-heroic suffering is rendered as the epitome of the purposelessness of human existence, of the relativity of human happiness, not even an existential gesture of protest against a metaphysical void. Yaakov Shabtai's *Okhlim* ("Eating," 1979) is an updated version of the theft of Naboth's vineyard by Jezebel and Ahab. This canonical parable is directed against the apparently "legal" dispossession of the occupied Palestinian land, while *Jehu* by Gilad Evron (1992) – the story of a ruthless army commander who escapes the death sentence for disobedience, overthrows the reigning monarch, commits hideous crimes, and drives his chief supporter, Ziph, to commit suicide – has been interpreted as a parable on the man who pulls the strings, Ariel Sharon's cynical manipulations of Prime Minister Menachem Begin, which led to the war in Lebanon in the beginning of the 1980s. Rina Yerushalmi's *Bible Project* – consisting of two parts, *Va-Yomer Va-Yelekh* ("And he said and he went," 1996) and *Va-Yishtahu Va-Yar* ("And he bowed and he saw," 1998) – harnesses the biblical text itself to its peculiar political ends. Even a harmless biblical musical such as *Shelomo ha-Melekh ve-Shalmi ha-Sandler* ("King Solomon and Shalmi the Cobbler") by Sammy Groenemann and Nathan Alterman has been deciphered in its Habimah revival in 2005 as an allegory on social exploitation.

THE HOLOCAUST AS SOCIO-POLITICAL METAPHOR. The 1973 Yom Kippur War, which shattered the invincible image of Israel, resulted in a growing awareness that the Holocaust and Israeli experiences are metonymical and interchangeable. The best-known play of the period is Yehoshua Sobol's *Ghetto* (1984). The play dared for the first time to present – through an alienating "German" epic style and a "profane" image of a theater company in the Vilna Ghetto – the symbiotic relations and reversible roles of the Nazi victimizer and the Jewish victim, thereby reflecting on Israel's belligerency against Lebanon and the occupied territories. Similar political attitudes were advocated by Motti Lerner in his docudramatic *Kasztner* (1985), acquitting the hero, Rezso Kasztner, of col-

laborating with the Nazis in liquidating Hungarian Jewry, and in Shmuel Hasfari's family plays *Kiddush* (1985) and *Hamez* (1995). The Acre Theater Center's stunning theatrical event *Arbeit macht frei mi-Toitland Europa* ("Work Liberates from the Dead Land Europe," 1991) marked the beginning of the fourth stage of Holocaust dramaturgy, with the second and third generations exposing and reacting to the deforming influence of the Holocaust experience on the collective psyche, on the socio-political *Weltanschauung* and the ethical norms of Israeli society. The fifth phase of Holocaust dramaturgy denotes a "normalization" in the Israeli attitude to the Holocaust, by either employing the Shoah as a relatively indifferent background for soap operas, as in Edna Mazya's *Sippur Mishpahti* ("A Family Story," 1996) and Savyon Liebrecht's *Sonya Mushkat* (1997) and *Sinit Ani Medaberet Elekha* ("Chinese I'm Talking to You," 2003), or by the complete role reversal between former victims and victimizers, thus disinheriting the Jews of their moral superiority, as in Aliza Ulmert's *Sonata Lifsanter* ("A Piano Sonata," 1994) and Hillel Mittelpunkt's *Madrikh la-Metayel be-Varsha* ("A Warsaw Tourist Guide," 1999) – both preoccupied with the sadistic *vendetta* of Israelis against partly innocent Polish citizens and their property.

ALONI AND LEVIN. The unrivaled poets laureate of Hebrew drama are Nissim Aloni (1926–1998) and Hanoach Levin (1943–1999). Even though their plays are saturated with references and allusions to the local milieu, both Aloni and Levin tend to "distance the evidence" of their theatrical, self-referential phantasmagorias to mythical, literary, and legendary regions, thus serving as vanguards of the universal-existential trend in Hebrew drama. Aloni's signature play *Ha-Nessikhah ha-Amerika'it* ("The American Princess," 1962) delineates, through the detached narrative of a dethroned monarch, murdered by his opportunistic son, the cultural and normative deformation of Israeli society. This small lyrical-ironic masterpiece, strongly affiliated with the French Drama of the Absurd in the 1950s, and some of Aloni's other plays from an opus of 11 plays altogether (for example, *Bigdei ha-Melekh*, 1961; *Ha-Kallah ve-Zayyad ha-Parparim*, 1966; *Ha-Dodah Lizah*, 1969; and *Eddie King*, 1975) mark the playwright's ongoing influence on Israeli drama and theater, as an antidote to the prevailing flat journalistic dramaturgy.

Dramatist and director Hanoach Levin was undoubtedly the most prominent and prolific (60 works) theater practitioner to emerge from the aftermath of the Six-Day War. In the domestic neighborhood comedies that followed his first satirical revues, e. g., *Yaakobi and Leidenthal* (1972); *Ne'urei Vardaleh* ("Vardaleh's Youth," 1974); *Krum* (1975); *Popper* (1976); *Soharei Gummi* ("Rubber Merchants," 1978); *Halvayah Horpit* ("A Winter Funeral," 1978); *Orezei Mizevadot* ("Suitcase Packers," 1983); *Melekhet ha-Hayyim* ("The Labor of Life," 1989), Levin unravels the Diaspora myths underlying the apotheosized Jewish-Israeli family, and develops his image of humankind as a beastly hierarchy of humiliater and humiliated, motivated

exclusively by their basest drives and thanatopsic fears. Levin's final cycle comprises legendary-universal phantasmagorias or "Spectacles of Doom," as, for example *Hoza'ah La-Horeg* ("Execution," 1979); *Ha-Zonah ha-Gedolah mi-Bavel* ("The Big Babylonian Whore," 1982); *Ha-Nashim ha-Avudot mi-Troya* ("The Lost Women of Troy," 1984); *Kulam Rozim Lihyot* ("Everybody Wants to Live," 1985); *Ha-Yeled Holem* ("The Child Dreams," 1993); *Pe'urei Peh* ("Open-Mouthed," 1985); *Kritat Rosh* ("Beheading," 1996); *Ha-Holkhim ba-Hoshekh* (1998). In *Ashkavah* ("Requiem," 1999) he composed his own funeral oration, and *Ha-Bakhyanim* ("The Weepers," 2000), based on the Agamemnon narrative, was conceived on his deathbed.

THE PRIVATIZED ERA. The second substantial reversal in Israeli drama took place in the 1990s and characterizes plays written and performed at the beginning of the third millennium. The interconnected historical and theatrical developments (from the Oslo Peace Accord to Rabin's murder and the second Intifada) produce a complete renunciation of communal ideals along with their formal objective correlatives. The personal, cosmopolitan, and humane note is most clearly evident in the upsurge of women's – not necessarily feminist or gender-conscious – dramaturgy and directing. Most of the female dramatists work in the more established, well-made pattern. Shulamit Lapid's *Rekhus Natush* ("Abandoned Property," 1988) relates the story of an aging, half-blind and bitter mother who was long ago abandoned by her husband, and now tyrannizes her daughters under the pretext of wishing to protect them. Playwright and director Edna Mazia presents provocative, mentally unstable, and attractive heroines, and also directed several of Anat Gov's plays, of which the best and most popular is *Ha-Haverot Hakhi Tovot* (1999), which takes for its theme the inextricable bonds among girlfriends. The opposite pole consists of stylized, poetic dramatic and theatrical texts, such as Yossefa Even-Shoshan's *Ha-Betulah mi-Ludmir* ("The Virgin of Ludmir," 1997), and Ravid Davara's *Ha-Sirpad shel ha-Shakhen* ("The Neighbor's Thistle," 1999).

The idealistic, committed, and selfless Hebrew plays of the early settlement period in Erez Israel have thus reached the extreme opposite pole, as has indeed the entire Zionist ideology which generated them. However, both drama and theater are still engaged in the same quest for social identity.

[Gershon Shaked / Gad Kaynar (2nd ed.)]

CRITICISM

Introduction – Beginnings of Literary Criticism

Hebrew literary criticism as a discipline has existed for the past 200 years only, but the rudiments of literary appreciation can be traced to medieval works on normative poetics and rhetoric. In *Shirat Yisrael* (written in Arabic (*Kitāb al-Muḥādara wa-al-Mudḥākara*), Heb. ed. (1924) by B. Halper), Moses *Ibn Ezra lays down the rules for writing excellent poetry, which he applies to his criticism on the Spanish poets, and discusses the problems of artistic creation. Critical evaluations of the Span-

ish poets are also found in Judah *Alḥarizi's *Taḥkemoni* (Constantinople, 1578; Tel Aviv, 1952) and *Immanuel of Rome, in *Mahberot Immanu'el* (critical edition, Tel Aviv, 1950), devotes a section to poetry. He is either profuse in his praise of poetry or he deprecates it. The prevalent tradition of distinguished personalities prefacing books with *haskamot* ("agreements," i.e., favorable recommendations) can also be considered a forerunner of literary criticism although the *haskamot* were mainly apologetic and couched in a formal conventional style. Often, the authors themselves wrote introductions to their works describing their aims and motives. It was, however, in the 18th century that Hebrew literary criticism as a school began to evolve, growing out of a cultural atmosphere which was able to appreciate Hebrew literature not only for ethical and didactic values but also for its own sake. The centers of Hebrew literary criticism correspond geographically and chronologically to centers of modern Hebrew literature – they shifted from Italy and Germany in the 18th century to Austria-Hungary and Russia in the 19th century. Hebrew literary criticism developed significantly in Russia (including Poland and Lithuania) from 1860 to 1918, and in Erez Israel from the beginning of the century to this day. Literary criticism also evolved in the United States, where, in the main, it dealt with Hebrew literature written in that country between the world wars. Although critical activity usually reflects the development of other literary forms, modern Hebrew criticism in its beginnings lagged far behind the development of the different genres in modern Hebrew literature. The situation, however, began to change with the rise of the Hebrew press, which became the main vehicle of critical expression, in Russia, in the 1860s.

18th Century – Normative-Aesthetic Approach

The development of aesthetic literary appreciation is primarily linked with the study of the Bible. Moses Ḥayyim *Luzzatto in his works on poetics and rhetoric draws mainly on the Bible for the many examples with which he illustrates his theories. His poetic methods and theories, however, are mostly influenced by medieval and contemporary Italian rhetoricians. In the *Bi'ur* (1780–83) project, a translation and exposition of the Bible in German, edited by Moses *Mendelssohn and his circle, aesthetic appreciation of the scriptural text formed an integral part of the exegesis. Influenced by 18th century German aesthetic thought, the introductions and commentaries are often an eclectic combination of neoclassical and sentimentalist views. Sometimes a psychological moralistic approach is in evidence and aesthetic distinctions are made, mainly in the poetical sections of the Bible. The discussion on rhyme and structure in Mendelssohn's commentary on "The Song of Deliverance" adheres to Robert *Lowth's aesthetic distinctions (*De Sacra Poesi Hebraeorum Praelechones...*, 1753; trans. from Latin by G. Gregory, London, 1787) in its emphasis on the connection between rhetoric and emotion. In Joel *Brill's preface to the book of Psalms (2 vols., Berlin, 1787–88) the influence of the author's mentor, Moses Mendelssohn, and that of Johann Gottfried von *Herder (*Vom Geiste der hebraeischen Poesie*,

1782; trans. by J. Marsh, *The Spirit of Hebrew Poetry*, 1833) can be discerned. Despite Brill's declared adherence to the Haskalah, he devotes much attention to the effects of poetry and rhetoric on man's senses and emotions. These are achieved through repetition, deliberate shifts in syntax, and the frequent use of similes and metaphors. Enumerating the qualities of the ideal poet, he distinguishes delicacy of feeling, imagination, wit, and psychological insight. Naphtali Herz (Hartwig) *Wessely in the introductions to sections of his epic composition "*Shirei Tiferet*" (5 vols., 1789–1802) on the Exodus from Egypt discusses the power of poetry and its characteristics. His view on the universality of poetry, the earliest literary form, is in the spirit of neoclassical thought which attempted to harmonize between reason and emotion. Temperate and cautious in his biblical exegesis, Wessely believes, however, that modern poetic interpretation of biblical themes is obviously superior to the biblical source itself, especially in the portrayal of the inner motivation of events and their causal connection. His many attempts at expounding in detail the relationship of his poetry to biblical and midrashic sources indicate his predilection for criticism.

In his discussion on the theory of literature, Isaac ha-Levi *Satanow in *Sefer ha-Hizzayon* (Berlin, 1785) confuses the elements of poetics, rhetoric forms, and general definitions of the essence of poetry. Stressing the didactic significance of poetry in some of the formulations, Satanow, a leading representative of the Haskalah, also points out the sensual and ecstatic elements of poetry which affect the reader. The emotional characteristics of the Sturm und Drang, already discernible in some of the works of Mendelssohn's disciples, became more prominent at the beginning of the 19th century and are given a distinctly personal expression in Solomon Lewisohn's *Melizat Yeshurun* (Vienna, 1816). Lewisohn integrates these elements with Longinus' concepts, gleaned from reading *On the Sublime* which enjoyed widespread popularity in the Germany and England of his day. *Melizat Yeshurun*, a book of normative poetics illustrated with examples from the Bible, but also from Wessely and Lewisohn himself, attempts to define poetic forms. The poet's personal emotional confession, written with dramatic pathos, intrudes on some of the explanations and definitions which are of an apparently prescriptive nature. Poetry, according to Lewisohn, is a phenomenon existing in and of itself and affecting the entire universe. He thus freed himself of the neoclassical distinctions which tried to create a balance between reason and sentiment, and to harmonize between aesthetic experience for its own sake and the didactic objective of the work, the latter, according to neoclassicism, having to guide poetry. Using biblical rhetoric, Lewisohn posits a normative order, in which he demonstrates how the sublime scriptural effects were designed to arouse reactions of wonder and amazement in the reader.

19th Century

CRITICAL REVIEWS. Parallel to normative aesthetic studies, reviews of new books began to appear in *Ha-Me'assef*

(1784–1811), the Haskalah journal in Germany. Its anonymous “News of Books” column was, at times, little more than disguised publicity by the author. On rare occasions, the criticism went into a more detailed discussion of the work, quoting excerpts either for the sake of a polemic argument or for purposes of apologetic praise. Although the annual **Bikkurei ha-Ittim* (1821–1832) published in Vienna was in the spirit of *Ha-Me’assef*, it did not cultivate literary criticism. Two articles in *Bikkurei ha-Ittim* (1832, p. 175–181) and in **Kerem Hemed*, 1839, 45–57, on the satirical writings of Joseph **Perl*, by Solomon Judah **Rapoport*, a major figure of the Galician Haskalah, are of significance. Despite the anti-ḥasidic undertone, Rapoport presents a discerning literary evaluation of the work itself, its relationship to reality, and alludes to the general tradition of satirical literature in Europe. Samuel Joseph **Fuenn’s* review of the poetry of Abraham Dov **Lebensohn* in *Pirhei Zafon* (Vilna, 1844, pp. 90–103) is one of the early important critical works to come from the literary center of Vilna. Fuenn is a precursor of the genetic chronological literary review which considers the background of the author as essential to the understanding of the actual work, thus anticipating later critics, e.g., A.J. **Paperna*, M.L. **Lilienblum*, and H.N. **Bialik*, who also followed the method. Like his Haskalah contemporaries Fuenn advocated the *melizah* style (ornate biblical syntax) as ideal, but was, at the same time, aware of the tension between content and linguistic patterns in poetry. He considered the different stages of Lebensohn’s work from the aspect of the poet’s personal development – tracing his growth from his lyrical subjective period to his more universal meditative poetry. This detailed evaluation led to a well-reasoned textual reading of each poem. Nonetheless Fuenn’s criticism tends toward indiscriminating generalizations and superlatives which were unsupported by a proper theoretical aesthetic foundation.

ENCOMIASTIC AND EPISTOLARY CRITICISM. Besides the satirical parodizing approach to book reviewing by Haskalah writers (mainly **Perl* and **Erter*), literary appreciation also took the form of ornate encomiastic verse which praised the author and his work. This was in fact a continuation of the traditional *haskamah*. S.D. **Luzzatto*, A.D. *Lebensohn*, and J.L. **Gordon* included such eulogies in their collected works and notwithstanding their florid style, these helped shape public opinion concerning the merit of certain works and authors.

While the value of this type of poetry was transitory, critical comments found in literary letters, written often for publication, helped shape contemporary taste. Among these are the letters of Samuel David Luzzatto and Judah Leib Gordon containing relevant critical remarks on their own works and that of their contemporaries. The normative approach to contemporary literature was also prevalent and Luzzatto for one, in discussing A.D. *Lebensohn* and Meir ha-Levi **Letteris*, expressed strong views on the meter, rhyme, and ideas in their poetry.

“POSITIVIST SCHOOL.” An important step in the development of literary criticism was the proliferation of the Hebrew press in Russia in the early 1860s. More liberal censorship regulations led to weekly publications. The unsigned short editorial review was very common in such periodicals as **Ha-Karmel* (1861–1879), **Ha-Zefirah* (1862–1931), and **Ha-Meliz* (1860–1904; and also in the **Ha-Maggid* 1856–1892), as was the topical article which related Hebrew literature to contemporaneous needs. The Hebrew press was also instrumental in disseminating the ideas of Russian positivist criticism of Vissarion G. Belinski and Dmitri I. Pisarev. Iconoclastic in character (major exponents were S.Y. **Abramovitch* (Mendel Mokher Seforim), A.U. **Kovner*, A.J. *Paperna*), Hebrew criticism of the 1860s had revolted against the accepted aesthetic values of German neoclassicism and sentimentalism and had taken on more radical social orientation. Qualitatively (i.e., in the development of analytic and stylistic tools) it achieved little. Common to it was the polemical-sarcastic style, whose dominant feature was its concentration of inimical quotations, and the journalistic tendency to associate sociological matters with literary phenomena. Conversely, however, some critics of the group developed a distinctive personal approach.

UTILITARIAN-SOCIOLOGICAL TREND. With the appearance of A.U. *Kovner* (*Heker Davar*, 1865 (first edition), *Zeror Peruḥim*, 1868) on the Jewish social and literary scene, a utilitarian-sociological trend developed whose aim was not only the evaluation of literature as such, but a social reformation of Russian Jewish life. The new ideas affected the choice of literary genres and critics began to express their reservations regarding poetry on biblical themes, preferring and encouraging literary vehicles such as social satire or the novel. *Kovner* developed the utilitarian tendency already formulated by some Haskalah authors. Challenging the accepted aesthetic concepts in Hebrew literature and rejecting its neoclassicist hypotheses, he distinguished between “idealist” and “realist” poets, as did his favorite Russian critic *Pisarev*. He strongly objected to the lofty and ornate style which he claimed had no real content, and called for the use of simple and natural language which would be intelligible to a wide reading public. As for the function of criticism, it should make bold demands, be unbiased, and not submit to conventional authority.

A.J. *Paperna*, *Kovner’s* contemporary, was an even more fiery advocate of the didactic and theoretical approach to criticism. While fighting the uninspired and ornate conventions of the *melizah* poetry and condemning allegorical drama as obsolete (in his essays “*Kankan Hadash Male Yashan*,” 1867; and “*Ha-Drama bi-Khelal ve-ha-Ivrit bi-Ferat*,” 1868), he took great pains to enunciate the principles of literary theory to the Hebrew reader, and to define literary genres: epic, drama, and novel. His views were inspired mainly by the aesthetic theories of the Russian critic *Belinski*, but they were also rooted in classical aesthetics. Thus his demands for realism in Hebrew literature are aesthetically rather than socially motivated, forming criteria by which to measure the writer’s creative talents.

M.L. Lilienblum's critical essays of the 1870s (and even of his Zionist period in the 1880s) were grounded in superficial positivism and utilitarianism in which ideological considerations led him to confuse literature with social pamphleteering. Reality was for him the sole criterion by which to arrive at "the truth of life." He judged Abraham *Mapu's novels accordingly and in his nationalist period criticized Judah Leib Gordon's poetry in the light of the "real" demands of the Ḥibbat Zion ideology as he understood them.

CULTURAL-HISTORICAL PERSPECTIVE. Simultaneously, the short newspaper article was also extensively cultivated. Its principal exponents were P. *Smolenskin, editor of **Ha-Shaḥar* (Vienna, 1869–1884), and J.L. Gordon, writing for the weekly *Ha-Meliz* (mainly in the 1880s). These reviews, not exclusively on belles lettres, reveal not only a great sensitivity to questions of language and style, but also a more balanced cultural-historical perspective regarding contemporary Hebrew literature. Neither Smolenskin nor Gordon spared those authors whom they considered undeserving. Smolenskin is sometimes apologetic as regards the achievement of the Hebrew language which he considers fundamental to the Jewish national culture. His literary tools are rather superficial, and his comparison of Hebrew works with world classics are sometimes unrealistic. His principles of literary criticism are expressed in his definition: "The ability to describe scenes which are real to life and a style both beautiful and vigorous."

Late 19th Century – The Limits of Hebrew Literature

During the sudden growth of Hebrew criticism in the 1890s, attention focused on the basic problems of Hebrew literature rather than on practical and detailed criticism of individual works. On the one hand, there was a call for a Hebrew artistic revival which would be close to European literature and on the other a hesitancy and a conservatism arising out of a concern for authenticity and for the national objectives of Hebrew literature.

AESTHETIC APPRECIATION FOR ITS OWN SAKE. Two principal figures of this trend were D. *Frischmann and R. *Brainin. David Frischmann declared his criterion to be personal talent and the refinement of aesthetic taste. He tried to realize his goals through a criticism which was essentially negative, resorting not only to irony but even to controversy. Discussing works which he liked, he took on a lyrical pathetic tone, however, which, at times, became even hackneyed. His preference for the feuilleton form (an aesthetically orientated literary column) affected his critical writing since the feuilleton by definition must be playful and humorous, maintaining contact with the reader and underscoring the presence of the author's personality. Frischmann's egocentric tendency was given further free play in his "Letters about Literature" which he wrote at various times. He was particularly skillful in portraying authors and in depicting characteristic elements in their works. The aesthetic notions which he so profusely advocated were, however, rarely implemented in his own articles.

Reuben Brainin, like Frischmann, based his call for a literary revival on criteria drawn from Western literature. But while his tone was egocentric, he lacked the lyrical sentimental and ironic refinement so characteristic of Frischmann. His essays, particularly those written toward the end of the 19th century under the influence of G. Brandes and J.A. Taine, stressed biographical detail and the impact which environment and background have on the literary work. Brainin, rooted in the spirit of European literature, drew his examples and metaphors from the natural sciences. Comparing Hebrew literature with world literature, he was pessimistic as to its possibilities. Like Frischmann, Brainin had a propensity for sketching portraits, interlacing these with memoirs and anecdotes designed to interest readers of Hebrew dailies which began to appear in 1886. Brainin, however, lacked the analytic ability of the practical critic who discusses and relates to the specific work. He was interested in the writer's personal image rather than the literary work under discussion. His detailed article on Mendele Mokher Seforim's works, written at the turn of the century, is illustrated by ample citations from Mendele's writings. Brainin pointed out that Mendele's recording of Jewish life in Russia was of documentary import. (Frischmann used the same approach when writing about Mendele some years later.)

This orientation toward world literature is more clearly manifest in the criticism of Nahum *Sokolow despite the fact that he wrote in a more traditional "Jewish" style. His article (written in the 1890s) on experiments in naturalism in the Hebrew short story is a case in point. Sokolow's discussion of Zola's literary method bears witness to his knowledge of contemporary world literature and his ability to apply it to his own criticism. He makes few pronouncements which call for the cultivation of ties with world literature; instead, he maintains these ties in reality.

THE AHAD HA-AM AND BERDYCZEWSKI CONTROVERSY. While the debate on the orientation of Hebrew literature toward universal culture appears in Frischmann's and Brainin's essays, it takes a more serious turn in the controversy between *Aḥad Ha-Am and the Ha-Ze'irim (The Young Writers) group, headed by Micha Josef *Berdyczewski, which was conducted mainly in the monthly *Ha-Shiloah* (1897–1926) at the end of the 19th century. Though the discussions did not contribute directly to the criticism of specific works, they gave it impetus and inspiration. Aḥad Ha-Am's utilitarian approach, which denies literature its autonomous status, was in consonance with a trend already existing in Hebrew criticism. He considered speculative writing of prime importance. In his view of the historical continuity of Jewish literature, literary form was the product of a nation's conceptual framework. Aḥad Ha-Am, striving "to unite poetry and thought," saw it as a medium through which the existential problems of the Jewish people could be expressed. Yet he did not disregard the quality of a work of art: Literary description, he felt, contributed to animation of thought and to fostering national consciousness.

The purpose of literary criticism was to examine the relation of man's spirit to truth, goodness, and beauty. Aḥad Ha-Am aimed at a harmony between the logical moral elements in literature and its aesthetic quality. Yet he arrived at the paradoxical conclusion that it was not necessary to fulfill aesthetic needs within the sphere of Hebrew literature. These standards he declared in defining the program of *Ha-Shilo'ah*, the literary journal he founded in 1896. Aḥad Ha-Am's preference for a literature of ideas rather than belles lettres reflects the doubts and the reservation of that epoch. Endowing his view of literature with a historic dimension, he claimed that the Jewish people was naturally inclined to ideas. His views were not superficially utilitarian and in fact he recognized the "beautiful" as a value in itself. He tended, however, to limit somewhat the space allocated to creative literature in **Ha-Shilo'ah*. Pointing to the pressing human needs of the Jewish people, Aḥad Ha-Am's antagonist, Berdyczewski, warned against the danger of separating Jewish and universal values in literature. He believed that the time had come for creating a literature which would also fulfill a historical need. In calling for the autonomy of all literature, which he groups under the title "poetry," his views also tend toward the idealistic-romantic. For a literary work to affect reality, the writer does not necessarily have to be inspired by contemporaneous social and historical problems; it is rather the work created in isolation and through the individual author's own motivation that influences. He negates the genetic approach in analyzing an author and his work. The appearance of an author on the literary scene he saw not as the result of development, but as a miracle and he attributed to chance the fact that writers exist in the same environment, creating side by side. Berdyczewski left his mark on Hebrew literary criticism also in his short reviews. Using primarily the illustrative method, he quotes extensively in order to stress and exemplify the essential elements in a work. His criticism, basically subjective, reflects his own spiritual and aesthetic world. While giving striking and concise definitions, Berdyczewski also tends toward biased exaggeration.

SYNTHETIC APPROACH. J. Klausner's approach to the relationship between Hebrew and world literatures is simplistic-synthetic and his comparisons between the works of Hebrew writers and other poets are superficial. He firmly advocated the harmonization of Jewish and universal values and propagated his philosophical principles in his literary criticism. Biographical information is one of the basic elements in his criticism and his critical remarks are substantiated by many textual examples. Though Klausner, unlike Aḥad Ha-Am, stressed the special place of modern Hebrew literature in the life of the people, his evaluations are of a didactic and pedagogic nature. They tend to appraise literary works – of the Haskalah and his own period – in terms of their contribution to the national Zionist movement. Occasional normative ideological demands on contemporary literature can also be found in his criticism.

Early 20th Century – Aesthetic and Ideological Concepts

Among the young critics at the turn of the century M.M. *Feitelson deserves mention. Influenced by Russian 19th-century criticism, his aesthetic criterion was the relationship of fiction to life itself, but he also represents the trend which called for the freeing of Hebrew literature from its conceptual relationship to social ideas. His contemporary I.E. Lubetzki (in his essays as yet not collected) took an even more extreme stand on this issue. He claimed that the critical discipline should not be governed by actual ideological demands and aesthetic criticism should not be concerned with the conceptual and moral aspect of the work. He spoke of the need for "artistic documents" and not for "human documents." In contrast to Frischmann's aesthetic demands characterized by the critic's subjective sentimental attitude, Lubetzki proposed objectivity and pertinent criteria, advocating what he called a "science of literature" as a critical criterion. Lubetzki, however, did not implement his own ideas in his critical writings; instead, like his predecessors, he drew superficial comparisons either between literary works or between authors. He elucidated details but was unable to evolve an analytical system. To clarify literary concepts, he drew on the terminology of painting and music, a method which could not lead him to the realization of his scientific ideal.

CRITICISM BY POETS AND WRITERS. Criticism written by poets and authors at the end of the 19th and beginning of the 20th centuries bears a special stamp. Subjective in its approach, it reflects the private world of the creative writer and his aesthetic concepts, and is lyrical and descriptive in style. The significance of this criticism lies in the fact that it is the product of the creative writer. To this category belong Berdyczewski's short, critical reviews mentioned above. *Bialik in his discussion on the development of Hebrew style and the essence of language points to the significant role played by Mendele Mokher Seforim and his successors in forging a new Hebrew prose. His treatment of the development of Hebrew poetry is not merely genetic but shows contemporary Hebrew literature to be an antithesis to earlier trends. In his article "*Shiratenu ha-Ze'irah*" ("On Our Young Poetry," in *Ha-Shilo'ah*, 16 (1906), 66–76), Bialik rebelled against the poetic and linguistic traditions of Hebrew poetry and hailed the generation of national renaissance. He acclaimed its outlook which sought to fuse the subjective and individualistic aims of the artist with the literary traditions and ideals of the nation. His many allusions to biblical and rabbinic sources often have a rhetorical reversal of meaning. They testify to his profound knowledge of tradition and to his fertile poetic imagination. Bialik also devotes special attention to the problems of literary creation, often projecting his own predicament as a poet. The relationship between author and language he sees as a dramatic struggle of the creative artist with formless matter. J. *Steinberg's literary essays, written in Erez Israel mainly between the two world wars, sometimes appear similar to those written by Bialik. They, too, are highly sensitive to the problems of language and

style, and insist upon verbal purism and idiomatic refinement. According to Steinberg, the essence of a work is to be found in the single syntactical unit which must be carefully scrutinized by the critic. While describing the atmosphere and the essence of the language of literature in general terms, Steinberg fails to deal with any specific work or text. At the same time, in his essays, he focuses mainly on the comprehensive phenomenon of contemporary Jewish culture and its historic roots. An interpenetration of literary criticism and fiction is reflected in Joseph Ḥayyim Brenner's works. Literary criticism relevant to the actual situation sometimes motivates the plot of a story and in some of the introductions to his works, Brenner is ironically critical of his own literary manner but even more so of that of his contemporaries. Conversely, some of his critical and journalistic articles are written in fictional dialogue, thus expressing the author-critic's split personality, his inner conflicts and his fluctuation between hope and despair. Brenner's criticism is expressed in a variety of literary vehicles: the general review, criticism of one specific work, a general overview of all the aspects of an author's writings, and the lecture form. All of them are motivated by the wish to combine the social vision of the revival of the Jewish people and the normative aims of literature. In his attempt to remain faithful to his artistic ideals, Brenner seeks to establish a certain link between literary genres and historical and social conditions. Thus the truth of a work of art depends on the artistic integration of purpose and stylistic expression. His criticism encompasses both the moral teacher and the art critic, moralistic pathos and keen analytical ability which is expressed in an ironical-polemical style. Literature has socio-historical significance and reflects the changes taking place in Jewish society in modern times, but concurrently Brenner strives to uncover the aesthetic forces which go into creative art. This aim of reviving the Jewish people through literature did not always achieve full integration with the artistic ideal.

BEGINNINGS OF CRITICISM IN EREZ ISRAEL. Brenner's literary activity is typical of the literary shift that occurred with the transfer of the literary center from Russia to Erez Israel as far back as the Second Aliyah (prior to World War I). It served as a main link between the literary centers in the Diaspora and the new center evolving in Erez Israel. This process is also reflected in the critical endeavors of Jacob Rabinowitz, Jacob Steinberg, Shlomo Zemach; and following World War I – Jacob Fichmann, Fishel Lachower, Joseph Klausner, and others. The immigration of authors and critics to Erez Israel gave Hebrew criticism a special socio-national quality, though many of the critics preserved their individual character in their aesthetic and stylistic perceptions. The publication of critical articles (among them articles by Klausner, Lachower, and Fichmann) which had originally appeared in Russia were now presented to a new public in a new land and in a different historical context.

CRITICISM IN THE UNITED STATES. Parallel to the evolution of the Erez Israel center since the Third Aliyah (from the

1920s), a literary center evolved in the United States. Inspired by the national movement, the American critics followed the explanatory descriptive critical school (e.g., M. Ribalow's and A. Epstein's articles) reminiscent of Klausner, but they lacked his special personal and public pathos. At the same time, however, it introduced criticism of a more individualistic poetic nature by poets and writers (e.g., S. Halkin and A. Regelson during their American period and E. Silberschlag and Y. Rabinowits). American Hebrew literary criticism, thematic in content, focused mainly on the specific manifestations and problems of Hebrew literature in the United States. This critical attitude was rooted in a wish to encourage the development of Hebrew literature in a foreign cultural environment. Concurrently, interest in world literature, hitherto hardly touched upon by Hebrew criticism, increased. Hebrew critics in the United States did not generally assimilate the methods of modern American criticism, but described in essay form Anglo-American artists, poets, and writers. World literature was analyzed and criticized for its own sake, and not only discussed by way of pronouncements and statements of principles.

EREZ ISRAEL AFTER WORLD WAR I – OLD AND NEW CRITERIA. Hebrew criticism in Erez Israel since the end of World War I in its method has been a continuation of the trends evolved at the beginning of the century, mainly because the same critics continued writing in the new center. Nevertheless, the critical essay has developed as a result of a further crystallization of the Hebrew language which allowed it to lend itself to the tools of modern study. Conversely, as a result of the remarkable growth of the Hebrew press, which served as a forum for the best critics, the brief critical article flourished. Research study of modern Hebrew literature, including different intermediate stages, ranging from the critical review to scholarly research, began in the 1930s. The polarity between the two domains reached its peak in the 1960s with the expansion of academic teaching of Hebrew literature and the persistent impetus of literary scholarly research in the world. Impressionist criticism continues to be one of the main trends, as does the tendency to regard the artistic creation as a continuation of the artist's life. The lines between poetic reality and actual reality are thus blurred and documentary elements are constantly looked for in the work of art under discussion. Accurate depiction thus becomes the artistic criterion. In contrast to this superficial realism there is conceptual criticism which seeks a common denominator for all the components in a work of art, while paying little attention to the influence of genre and style. As to method, there is on the one hand a tendency to deal with various literary components: characterization, description of nature, and conceptual goals, without exhaustively studying any one of them, and on the other hand use is made of examples, the choice of which is completely subjective, being in consonance with the critic's personal reading. Contrary to the above eclectic method, there is also a tendency to isolate each problem and discuss it without functional relation to the totality of the work. But even when discussing a single

defined problem, the critic tends to arrive at a general evaluation of the work, thus reducing all the components to one essence. These trends are parallel, the critics stressing various aspects according to their inclinations, personal talents, and their ability to give their presentation and phrasing original expression. The critic's own personality counterweights the methodic weakness. The poet Jacob Fichmann, spanning the two periods and the two centers of Hebrew literature, was impressionistic in his criticism. He relates to works of art and authors not only by personal association, but also by examining the work in the light of its general significance. He usually describes the work as a whole, showing both sympathy and approval, and refrains from giving the author normative advice. In his essays, Fichmann developed a distinctive style, rich in description and lyrical metaphor, though lacking Bialik's force. Informative biographical elements and a general review of the work are woven into his personal impression of it. Fichmann's essays also possess a certain historical evolutionary dimension and include treatments of poets and novelists of the Haskalah period. He seeks to familiarize the reader with the authors' writings and their poetical value which extends beyond chronological and conceptual criteria. Fichmann's interpretations are generally impressionistic, derived at times from personal experience. He points out the mutual relationship between the critic-scholar and the critic-artist, thus advocating a synthesis between "scholarship and art." Impressionist criticism of this type is also to be found in the critical essays of Fichmann's contemporaries and disciples, but they lack his personal quality and status.

Mid-20th Century – New Perspectives

Hebrew criticism had a strong impetus in Erez Israel in the 1940s. Critics who had started to write before World War I (e.g., S. Zemach, E. *Steinman, Y. *Keshet) had now attained original insight and had cultivated their own style. A number of new influential critics also appeared. D. *Sadan's analytical approach probed the hidden inner world of the author and of his work. He also underlined the recent tendency of extending the domain of Hebrew literature. At the same time, however, he emphasized its various ideological trends and the phenomenon of bilingualism as manifest in the mutual relation of Hebrew and Yiddish literatures. B. *Kurzweil sought to synthesize the intellectual sensitivity to the crisis of Judaism and to the shattering of the Jew's religious tradition in modern times with the artist's aesthetic formulation of this crisis through poetical and fictional symbols and motifs. S. Halkin continued to stress the significance of the secular-humanistic character of modern Hebrew literature. While discussing the author's individual poetical values, he pointed out their relation to trends and values current in Jewish society and emphasized their national pathos which formed a stimulating vehicle in Hebrew literature. A. *Kariv demanded a reevaluation of the literary heritage of European Hebrew literature, accusing its writers and proponents of having distorted in their writings East European Jewish life.

The increasing activity in criticism from the 1950s (after the War of Independence and the establishment of the State of Israel) underlines the tension between personal criticism in essay form and criticism based on scholarly criteria. Demands are made for the autonomous status of criticism as a special creative branch with its own distinctive characteristics extending beyond its interpretative task of "mediating" between the literary work and the reader (S. Zemach, I. *Cohen, and I. *Zmora). On the other hand, there are also normative trends attempting to direct literature from a spiritual and social point of view both as a creation of the contemporaneous generation and as the individual creation of the writer (A.Y. Kariv, A. *Ukhmani). Critics are also seeking to integrate the individualistic essay form, based on creative intuition, and literary analytical methods for examining the formal and literary qualities of a text. The search for such a methodical synthesis is variously approached in the critical works of S. Halkin, D. Sadan, and B. Kurzweil, who taught modern Hebrew literature at universities in Israel from the 1950s. The polarity between essay criticism and literary critical scholarship has intensified among the new generation of critics, most of whom have studied literature at the Hebrew University of Jerusalem. At first they had been influenced by the essay tradition and by the normative-existential trends which they had adopted in their debates on the literature of the post-War of Independence period. At the same time, however, they evinced a certain sensitivity to the social and cultural processes that formed the background to the development of Hebrew literature during the last few generations. But mainly they assimilated methods of textual explication of the New Criticism school current in English-speaking countries and adapted the interpretation systems of the postwar Swiss and German schools. There are also slight traces of the Russian formalism of the 1920s and the 1930s to be found in modern Hebrew literary criticism. These influences led to a special sensitivity to problems of form, rhetoric, and structure, and to the development of genres, while the conceptual and historic aspects have become secondary and marginal. At the same time, there is a tendency to consider exhaustively every problem through maximum use of the textual data.

The tendencies to break completely with traditional literary criticism are growing. At the same time two diverse domains – literary criticism and literary research or study – each based on different principles, are still crystallizing. The process has found expression in *Ha-Sifrut*, a periodical (edited by B. Hrushovsky) which by its own stated purposes, and in fact, is a "Quarterly for the Study of Literature."

[Samuel Werses]

The 1970s and After

In the late 1960s and early 1970s, Hebrew literary criticism was transformed by the inauguration of two new academic journals: *Ha-Sifrut* ("Literature"), which was founded in 1968–69 and published by Tel Aviv University under the editorship of Benjamin Hrushovsky, and *Bikoret u-Parshanut* ("Criticism

and Interpretation”), published from 1970 on by Bar-Ilan University, originally under the editorship of Baruch Kurzweil. If literary criticism until then had appeared alongside poetry and short fiction in literary journals such as *Moznayim*, *Likrat*, and *Akhshav*, it was now upgraded to an academic discipline, empowered and sustained by the use of theoretical literary models and critical tools borrowed from other text-oriented disciplines. Not for naught did Hrushovsky introduce his journal as “the first of its kind in Hebrew,” in that its role was to be “entirely of a scholarly nature.” As he wrote: “The science of literature, as a systematic discipline that has developed a methodology and theory of its own, accumulated clusters of knowledge in various and distinct areas, and generated methods of academic research and instruction, is a relatively young discipline.”

This conceptualization of criticism as a “science” and a “young discipline” stirred up a controversy within the literary and academic communities, of which Kurzweil was the most vocal mouthpiece. In the introduction to his own journal, Kurzweil attacked Hrushovsky for proclaiming innovation where there was none. “Critical reading” and “the art of reading” (as Kurzweil called it) had always employed the methods and the poetic, aesthetic, and interdisciplinary theories that the “innovative” terminology was claiming for the “literary theory” and “scientific writing” of the new discipline. Moreover, if, by speaking of the “scientific” nature of “literary theory,” Hrushovsky was referring to objectivity in the interpretation, and hence to the evaluation of literary texts, this too was deceptive, since objectivity was not “within the confines of what is attainable in the humanities.” This does not mean that there are no restraints to subjectivity in the scholarly study of literature, but they are set by other disciplines in the humanities.

This debate signaled the beginning of a “new age” in the history of Hebrew literary criticism in the State of Israel. From here on, Hebrew literary criticism took three parallel courses, aimed at different types of audiences or consumers of criticism. The first, as discussed above, was that of academic literary journals published by the literature departments of various universities. Their aim was initially to provide a publication venue for their own scholars, though other scholars of Hebrew literature were invited to contribute as well. Thus, for example, Ezra Fleischer, editor of *Mehkarei Yerushalayim be-Sifrut Ivrit* (“Jerusalem Studies of Hebrew Literature”), addressed the readers of the first issue (1981) with the following words:

This first volume ... contains articles written by academic staff members of the Department of Hebrew Literature at the Hebrew University of Jerusalem ... Its gates will be open to all those engaged in the study of Hebrew literature, in Israel and abroad.

The same year saw the founding of *Mehkarei Yerushalayim be-Folklor Yehudi* (“Jerusalem Studies in Jewish Folklore”) and *Mehkarei Yerushalayim be-Mahshevet Yisrael* (“Jerusalem Studies in Jewish Thought”). *Dappim le-Mehkar be-Sifrut* (“Pa-

pers in Literary Research”), published by Haifa University, was launched in 1984; *Sadan: Mehkarim be-Sifrut Ivrit* (“Anvil: Studies in Hebrew Literature”), published by the School of Jewish Studies and the Katz Institute at Tel Aviv University, in 1996; and *Mikan: Ketav Et le-Heker ha-Sifrut ha-Ivrit* (“From Here: A Journal for the Study of Hebrew Literature”), published by Ben-Gurion University of the Negev, in 2000.

Along with these purely academic journals, a number of “mixed” periodicals, publishing both theoretical articles and literary works, began to appear. Some of these were issued with the assistance of educational institutions (universities or research institutes) or were edited by scholars. Among these are *Siman Keriah: Rivon Me'orav le-Sifrut* (“Bookmark, a Mixed Literary Quarterly,” 1972); *Alei Si'ah: Ha-Hugim le-Sifrut Brit Tenu'at ha-Kibbutzim* (“Leaves of Discourse of the Literary Circles of the Kibbutz Movement,” New Series, 1974); *Zehut: Ketav-Et le-Yezirah Yehudit* (“Identity: A Journal of Jewish Creativity,” 1981), later reconstituted as *Mahut* (“Essence, 1989); *Efes Shetayim: Ketav-Et le-Sifrut* (“’02 [the Jerusalem Area Code]: A Journal of Literature,” 1992); and *Rehov: Ketav-Et le-Sifrut* (“Street: A Journal of Literature,” 1994).

A further context that began to be associated with literary criticism in the mid-1980s was that of broader cultural critique. This association was indicative of an effort to break out of the ivory tower of solipsistic intra-disciplinary discussion and open up, by means of critical, theoretical tools, to the multicultural representations of contemporary reality. A prime example of this development is the journal *Te'oriyah u-Vikoret: Bamah Yisre'elit* (“Theory and Criticism: An Israeli Forum”), published from 1991 by the Van Leer Institute in Jerusalem. The journal is devoted to reflexive, “interdisciplinary, systematic, and ongoing” discourse among scholars and writers within the academic world and outside of it, focusing on subjects from the realms of the “locale, society, and culture.” Other such journals, with varying percentages of academic content, include *Alpayim le-Iyyun, Hagut ve-Sifrut* (“2000: A Journal of Inquiry, Thought, and Literature,” 1989); *Dimu'i: le-Sifrut, Omanut, Bikoret ve-Tarbut Yehudit* (“Image: A Journal of Literature, Art, Criticism, and Jewish Culture,” 1990); *Mikarov: le-Sifrut u-le-Tarbut* (“Close Up: A Journal of Literature and Culture,” 1997); *Ha-Kivvun Mizrah: le-Tarbut u-le-Sifrut* (“Eastward: A Journal of Culture and Literature,” 2000); *Keshet ha-Hadashah: le-Sifrut, Iyyun u-Vikoret* (“New Rainbow: A Journal of Literature, Inquiry, and Criticism,” 2002); and *Mita'am: Ketav-Et le-Sifrut u-le-Mahshavah Radikalit* (“On Behalf: A Journal of Radical Literature and Thought,” 2005).

Meanwhile, non-scholarly literary criticism continued to be published in the weekend literary supplements of the daily newspapers and in the periodicals that carried on the tradition of the literary magazine, such as *Iton 77: Yarhon le-Sifrut u-le-Tarbut* (“Journal 77: Monthly of Literature and Culture,” 1977); *Apirion: le-Inyanei Sifrut, Tarbut ve-Hevrah* (“Canopy: A Journal of Literary, Cultural, and Social Affairs,” 1983); *Pesifas: Itton le-Shirah u-le-Meida* (“Mosaic: A Journal of Poetry and Information,” 1987); *Zafon* (“North”), published by the Association

of Hebrew Writers, Haifa (1989); and *Gag* ("Roof"), published by the General Association of Writers in Israel (1998).

The third direction was the publication of reviews in the literary or cultural sections of weekday editions of the daily newspapers. Here critics do not necessarily seek to evaluate or judge a literary work, but rather to share with readers the experience of reading and the impressions a book leaves. This kind of personal critique ultimately became accepted as legitimate, and it contributed, among other things, to the introduction of the bestseller list in the back pages of *Sefarim Haaretz*, the weekly book review supplement (launched in 1994) of the daily newspaper *Haaretz*.

Mention should also be made of the Hebrew-language websites devoted to literary criticism which began cropping up in the mid-1990s. A plethora of articles and essays of varying levels of quality may be found on these sites, some of them run by individuals and others by discussion forums. In some, the articles undergo selection and editing, in others not. These sites are open to a wide range of writers who wish to share their impressions and evaluations of literary works, including scholars seeking a wider audience for their writings.

This array of critical writing with its multiple aspects and directions marks the last three decades of the 20th century, during which it has absorbed the deconstructivist trends as well as the postmodernist theories. The encounter of Israeli literary scholarship with postmodernist theories (drawn from the fields of history, political science, sociology, and cultural studies), and even more so with post-colonialist and post-Zionist theories, shook the hegemonic community of literary critics. It led to new, subversive readings of foundational literary texts, and also to the unearthing and examination of "other" texts, which the critical elite had for years pushed to the literary margins for lack of interest or appreciation. Moreover, together with its gradual permeation by postmodernist critical tools, Hebrew literary scholarship continued to surprise its readers with a steady stream of innovative interpretations arrived at by means of modernist scholarly approaches, in which discussion of the classics of modern Hebrew writing remained a central concern.

Thus, new critiques were written of works by those writers who had heralded the rebirth of modern Hebrew: H.N. Bilik (by Shmuel Werses, Dan Miron, Hillel Barzel, Menahem Perry, Adi Tzemach, Yitshak Bakon, Zvi Luz, Reuven Tzur, Ziva Shamir, Uzi Shavit); Shaul Tchernikhowsky (Yosef Haefrati, Boaz Arpaly, Uzi Shavit, Reuven Tzur, Haim Shoham); Micha Joseph Berdyczewsky (Shmuel Werses, Tzipora Kagan, Joseph Even, Avner Holtzman, Yitzhak Ben-Mordehai); Y.H. Brenner (Yitzhak Bakon, Menahem Brinker, Boaz Arpaly, Nurit Govrin, Ariel Hirschfeld, Adir Cohen); U.N. Gnessin (Dan Miron, Zvi Luz, Dan Laor, Hamutal Bar-Yosef); Gershon Shofman (Nurit Govrin); S.Y. Agnon (Shmuel Werses, Gershon Shaked, Hillel Barzel, Hillel Weiss, Dov Landau, Yitshak Bakon, Dan Miron, Aliza Shenhar, Dan Laor, Nitza Ben-Dov, Yehudith Zweig Halevi); and Devorah Baron (Nurit Govrin).

There were also new treatments of writers active in the period of the *Yishuv* between the two world wars: Uri Zvi Greenberg (Dan Miron, Yehudah Friedlander, Benjamin Hrushovsky, Hillel Barzel, Shalom Lindenbaum, Reuven Shoham, Dov Landau, Ortsion Bartana, Lilian Guri, Hannan Hever); Avraham Shlonsky (Israel Levin, Hagit Halperin, Aviezer Weiss, Abraham Hagorni-Green, Shlomo Yaniv); Nathan Alterman (Dan Miron, Uzi Shavit, Ziva Shamir, Aharon Komem, Ruth Kartun-Blum, Dan Laor, Haya Shoham, Shoshana Zimmerman); Lea Goldberg (Tuvia Rivner, Abraham B. Yaffe, Ruth Kartun-Blum, Ofra Yaglin); and Yonathan Ratosh (Ziva Shamir, Dan Laor). The works of writers who came of age in the 1940s, 1950s, and 1960s (known collectively as "Dor ba-Arez" and "Dor ha-Medinah") are nowadays also considered as classics and therefore are subjected to scholarly discussion and research: Yehuda Amihai (Boaz Arpaly, Nili Gold-Scharf, Yehudit Zweig-Halevi, Yosef Milman, Yair Mazor); Amalia Kahana-Carmon (Abraham Balaban, Lily Ratok, Yael Feldman); Aharon Appelfeld (Lily Ratok, Yigal Schwartz, Yitzhak Ben-Mordehai); Amos Oz (Nurit Gertz, Abraham Balaban, Yair Mazor); Abraham B. Yehoshua (Nili Sadan-Levenstein, Yedidiah Yitzhaki, Nitza Ben-Dov).

Israeli literary research has also been broadened by its extension to several genres (satire, drama, epistle), thematic and prosodic structures of the Hebrew literature of the Haskalah, the 18th and 19th century Jewish Enlightenment (Shmuel Werses, Yehudah Friedlander, Dan Miron, Uzi Shavit, Ben-Ami Feingold, Tovah Cohen, Yehudit Zweig-Halevi, Menuhah Gilboa, Reuven Shoham, Naomi Zohar, Iris Parush).

As mentioned above, suggestions emerged for culturally and politically subversive ways of reading. At the beginning of the 1970s, semiotic reading was in fashion (Itamar Even-Zohar, Nurit Gertz, Zohar Shavit, Ziva Ben-Porat), while from the end of the 1980s political reading was in the ascendant. The latter can be seen in Hannan Hever's analyses of Hebrew poetry between the two world wars, particularly of the work of Uri Zvi Greenberg. Other examples include Nissim Calderon's studies of writings from the 1950s and 1960s (by Natan Zach, Yaakov Shabtai, David Avidan, Dalia Ravikovich, Hanoch Levin, and others); Yohai Oppenheimer's post-colonial readings of several classic works of prose and poetry (by Moshe Smilansky, Avot Yeshurun, and Yehuda Amichai); and Michael Gluzman's political reading of the male national body in the writings of Moshe Shamir and Benjamin Ze'ev Herzl.

A further innovative form of scholarly inquiry impelled by these anti-hierarchical trends was that of feminist and gender critique. The steady flow of new writing by women was accompanied by a burst of feminist and gender research, which undertook the reevaluation of works written by women since the establishment of the state (Lily Ratok, Pnina Shirav, Yael Feldman) and also rediscovered forgotten troves of writings by women in Hebrew. These new studies made it clear that literary women had played their part in the rise of modern Hebrew literature, from the Enlightenment, through the period of *Ha-Teḥiyah* (in the late 19th and early 20th centuries),

and in the pre-state period (Iris Parush, Tovah Cohen, Yaffah Berlovitz, Dan Miron), and had conceived poetic alternatives of their own. Further scholarly inquiries examined the themes and poetics of women's writings, as expressed in modernist and postmodernist poetry and prose (Lily Ratok, Hannah Naveh, Haya Shaham, Orly Lubin).

Various dates were celebrated during the 1980s and 1990s to mark a centennial of Zionist endeavor. Thus, 1982 represented "a century of settlement" from the beginning of the first wave of Zionist settlement in 1882, while 1997 concluded "a century of Zionism," recalling the First Zionist Congress (1897). Likewise, literary critics commemorated a century of Hebrew literature in transition from the Diaspora to the homeland of the Jewish people. This anniversary fueled the attempt to mark the borders of Israel's cumulative written creative activity, with the aim of summing up its literary manifestations and expressions. These interim assessments were meant to systematize and categorize what was known about the past and to offer some insight into the present. The period of summation opened with Gershon Shaked's comprehensive five-volume historiographical work, *Ha-Sipporet ha-Ivrit 1880–1980* ("Hebrew Prose from 1880 to 1980"). Hillel Barzel undertook a history of modern Hebrew poetry, from the period of *Hibbat Zion* to the present, of which six volumes have thus far appeared. A third representative of this effort, Hannan Hever's *Sifrut she-Nikhtevet Mikan: Kizzur ha-Sifrut ha-Yisraelit* ("Literature Written from Here: A Compendium of Israeli Literature") offers a historical-cultural survey of 50 years of literary life in the State of Israel.

Alongside these monumental works, there have been several partial historiographies which have endeavored to chart literary developments, processes, and trends, particularly since the establishment of the State, in the realms of drama (Haim Shoham, Gideon Shunami, Ben-Ami Feingold, Gideon Ofrat, Shimon Levi, Abraham Oz, Dan Oryan), poetry (Benjamin Hrushovsky, Dan Miron, Dov Landau, Aharon Komem, Yair Mazor, Reuven Shoham, Yehudith Bar-El, Rachel Weissbord), and prose (Shmuel Werses, Dan Miron, Hillel Barzel, Hannah Herzog, Hillel Weiss). The same has been done for the country's literary and cultural life, in the 50 years preceding the establishment of the state (Itamar Even-Zohar, Yaffah Berlovitz), in the first few decades of the 20th century (Zohar Shavit, Nurit Gertz, Avidov Lipsker), and in literary circles (in the 1940s, 1950s) like the Dor Ba-Arez group (Nurit Graetz, Hillel Weiss, Reuven Kritz) and the "Canaanites" (Nurit Gertz, Dan Laor).

This process of collection and discovery also posed the challenge of examining the writings of hitherto neglected literary schools, such as Ha-Mahalakh ha-*Hadash* ("New Course"; Joseph Even, Menuhah Gilboa) and the literature of the First Aliyah (Nurit Govrin, Yaffah Berlovitz).

The effort to summarize and categorize a century of modern Hebrew literature also brought forth the publication of numerous monographs on writers of both the early and later periods. Zvi Luz issued a series of monographs on poets, in-

cluding half-forgotten ones from the pre-state period (Yosef Zvi Rimon, Jacob Fichman, Jacob Steinberg) and others from the periods of Dor Ba-Arez (Pinchas Sadeh, Ayin Hillel, Natan Yonatan, Ozer Rabin) and Dor ha-Medinah (Uri Bernstein). Additional monographs worth mentioning in this context are those of Aharon Komem (on David Fogel and Jacob Steinberg), Hannan Hever (on Avraham Ben-Yitzhak Sonne), Ruth Kartun-Blum (on Yocheved Bat-Miriam), Hamutal Bar-Yoseph (on Zelda), Reuven Shoham (on Esther Raab and Abba Kovner), Rachel Frankel Madan (on Jacob Horowitz), and Reuven Kritz (on Rachel Blaustein).

Special mention must be made here of the colossal opus of Dan Miron. Though he has not organized his studies as an ordered historiography, there is no period of modern Hebrew literature, from the Enlightenment through post-modernity, in poetry and in prose, to which he has not turned his scholarly attention (see his studies of such writers as Abraham Mapu, Mendele Mokher Seform (Shalom Jacob Abramowitsch), Hayyim Nahman Bialik, Uri Nissan Gnessin, Shmuel Yosef Agnon, Hayyim Hazaz, Nathan Alterman). Miron has also collected and edited the writings of a number of authors from different periods, adding his own comprehensive introductions and afterwords (as he has done for the writings of Yehudah Karni, Uri Zvi Greenberg, Abraham Halfi, Menashe Levine, K. Aharon Bertini, Ya'akov Orland, and Abba Kovner).

Most of these efforts to collect and summarize, on the one hand, and to open new avenues of research, on the other, were the initiatives of lecturers and scholars of literature at various institutions of higher education in Israel, made for the purpose of preparing textbooks and further reading materials for their students. These instructional aims led them to issue studies of foundational issues, such as genres (the ballad, by Shlomo Yaniv; fantasy, by Ortsion Bartana; the allegory, by Uri Shoam; utopia, by Leah Hadomi; the confession, by Hannah Naveh; the historical novel, by Ruth Sheinfeld; the idyll, by Joseph Ha'efrati, Hamutal Bar-Yosef, Rachel Frankel-Madan); literary schools (the neo-romantics, by Ortsion Bartana; decadence, by Hamutal Bar-Yosef); and prosody (Benjamin Hrushovsky, Uzi Shavit, Dov Landau, Reuven Tsur, Zvi Luz, Ziva Ben-Porat).

Further concerns of theme and genre that came in for scholarly attention at the end of the century include the literature of the Holocaust (Hannah Ya'oz-Kest, Hillel Barzel, Dov Landau, Nurit Graetz, Ben-Ami Feingold, Ruth Sheinfeld, Avner Holtzman, Yitzhak Ben-Mordechai, Yigal Schwartz) and that of the labor and kibbutz movements (Leah Hadomi, Shula Keshet, Pinhas Genosar, Aviva Ufaz). Research on literature for children and young people also developed during this period, with the opening of departments at several universities and colleges and the work of various scholars (Adir Cohen, Aliza Shenhar, Zohar Shavit, Miri Baruch, Maya Fruchtman, Menahem Regev, Shlomo Harel, Menuhah Gilboa, Leah Hovav, Aviva Krinsky, Meira Karmi-Laniado, Ben-Ami Feingold, Bosmat Even-Zohar, Yael Dar). New journals focusing on the study of literature for young readers include:

Sifrut Yeladim va-No'ar ("Literature for Children and Youth"); *Be'emet?* ("Really?"); *Olam Katan: Le-Heker Sifrut Yeladim ve-No'ar* ("Small World: A Journal for the Study of Literature for Children and Youth").

The publication of anthologies was also on the increase towards the end of the century. These include anthologies of critical articles and studies of Hebrew literature based on conference papers and edited by faculty members of literature departments; and collections devoted to the critique of single literary works, such as Shaul Tchernikowsky's corona of sonnets, *La-Shemesh* ("To the Sun"); the short story *Ve-Haya he-Akov le-Mishor* ("The Crooked Shall Be Made Straight") by Shmuel Yosef Agnon; and Abraham B. Yehoshua's novel *Mar Mani*.

[Yaffah Berlovitz (2nd ed.)]

TRANSLATIONS OF HEBREW LITERATURE

The translation of Hebrew literature into foreign languages involves a number of unique problems; some are specific to the art of translation while others concern the publishing, marketing, and diffusion of a translated work. Translation from one European language to another is no small task, despite common linguistic and cultural features. Translation from Hebrew – a Semitic language – into a European language is even more difficult: the entire range of literary associations and cultural realia that in fact provide the literary flavor of the original work can rarely be rendered as is. Echoes of biblical or mishnaic Hebrew, or from the wealth of Jewish liturgy, can hardly be captured, and significant details of the Israeli everyday scene often require footnotes or clumsy explanations. Given these obstacles, literary translations from Hebrew sometimes reflect a variety of compromises and conflicting solutions. It is even difficult to evaluate the quality of a translation, and a number of experts checking a translation for its accuracy and literary value in the target language will generate an equal number of different views. Even so, an excellent translation is considered one that is as close to the original Hebrew as possible, while reading smoothly in the target language and conveying as much as possible of the original texture, music, and diverse layers of linguistic and cultural sources. In recent years, an excellent team of literary translators from Hebrew has crystallized and their highly professional work is the main reason for the outstanding reception of Hebrew literature in translation since the 1990s, mainly in European languages.

The international publishing marketplace provides another angle to the difficulty of introducing Hebrew literature to world readership. Given the limited audience in the writers' mother tongue – Israel has a population of 6.8 million – they naturally seek to expand it. And while authors in general want to be translated into foreign languages, for authors writing in Hebrew it is a must. On the other hand, whereas foreign colleagues writing in a widely known language may submit their work to a publisher in the original, Israeli authors are unable to do so because of the lack of competent readers in Hebrew

at the disposal of foreign publishing firms. Even when a Hebrew title is highly recommended by Hebrew lecturers or attracts international attention, the publisher – especially in English-speaking countries – will generally refrain from a commitment to publish before he receives a complete English translation of the work. Synopses and translated extracts may draw his attention to the book, but it will not necessarily generate a decision to publish. This applies primarily to authors who have already made their reputation in Israel but have yet to make their mark on the international scene. Thus a Hebrew author has to find a qualified translator into English, pay his fee, and prepare a synopsis – without any guarantee that the English translation will arouse genuine interest, and without even knowing whether his efforts will result in an offer to publish the translation.

Publication of translations in other languages is more complicated as the publisher must invest considerable sums in a translation, hence the decision process becomes longer and more complicated. The Institute for the Translation of Hebrew Literature, a non-profit organization founded in 1962, has been entrusted by the Israeli government with the task of promoting Hebrew literature in translation worldwide. It is responsible for a wide range of activities, such as commissioning translations of selected Hebrew literary works, publishing professional catalogues which introduce the titles, providing financial aid to foreign publishers who initiate publication of Hebrew works in translation, publishing a literary journal in English – *Modern Hebrew Literature* – which keeps the foreign reader abreast of the literary scene in Israel, building and maintaining an attractive website, initiating international translation conferences, participating in selected international book fairs. The Institute also maintains a unique Bibliographic Center. Established in 1972, its database lists all translations of Hebrew literature in 66 languages (over 45,000 bibliographic entries).

In recent years, the Institute for the Translation of Hebrew Literature has become more attentive to the buzz of the marketplace, hence a significant rise in the number of Hebrew authors and works in translation, and in the variety of languages in which Hebrew literature has become available.

Facts and Figures

From 1874 to 1974 (100 years), some 500 Hebrew books were published in translation. From 1975 to 2004 (30 years), we see this number increased to about 3,460. Today, the total number of books published in translation exceeds 4,000. The first Hebrew novel in translation was *The Love of Zion* by Abraham Mapu, published in Yiddish in 1874. From then until 1960, an average of five books were published per year. As of the 1960s, figures increased to 27 books per year. During the 1970s, Hebrew literature was translated into 25 languages, and this grew to 40 languages during the 1980s. Today, the number stands at 66 languages. If we compare the figures in the decade 1983–93 to those in the following decade, 1994–2004, we see that the number of books in translation increased from 956 to 1,743.

Furthermore, in certain languages the number of books has increased very significantly. Taking the same two 10-year periods: English increased from 346 books to 396 (+12%); German increased from 185 to 405 (+116%); Italian increased from 39 to 165 books (+350%); French from 107 to 158 (+40%); Spanish from 49 to 87 (+70%); Dutch from 63 to 98 (+50%). Today, nearly 60 Hebrew authors have been published in book form in more than five foreign languages – 20 authors have been published in more than 10 languages, and among these, three have been published in over 30 languages: Amos Oz, Ephraim Kishon, and Uri Orlev.

Translations of Books for Children and Youth

Hebrew literature for children and youth started appearing in translation only in the 1930s: English and German in 1936, French in 1946, Spanish in 1949, Italian in 1958. Translations into Arabic started to be published only in 1966. The largest number of children's books is now being translated into German, with 129 books to date, followed by English with 76, Italian with 50, Spanish with 38, Dutch with 30, Arabic with 29. One tends to assume that interest in adult fiction in a certain foreign market will arouse interest in children's books as well, that a writer of adult fiction who does well in a certain market will have his children's books published there too and that this will bring about more and more translations of other authors. But this is not entirely the case. If we compare the number of adult versus children's books translated over the past two 10-year periods (1983–93 and 1994–2004) we get the following results: In English, in the first 10-year period, children's books made up 6% of the total number of translated books; in the second, the percentage rises to 15%. In German, the percentage has not changed over the past 20 years, and stands at a steady 21%. Spanish increased from 6% to 29%, and Italian from 12% to 27%. As a point of reference, in Israel today, Hebrew books for children and youth constitute about 5% of the total published per year. Hebrew literature for children is now available in book form in 42 languages, 34 of which have been added since 1975. To the earlier eight languages (English, German, Dutch, French, Spanish, Italian, Polish, and Arabic), the following have been added: Afrikaans, Albanian, Asamiya, Bangla, Catalan, Chinese, Czech, Danish, Estonian, Finnish, Greek, Gujarati, Hindi, Hungarian, Japanese, Kannada, Korean, Malayalam, Marathi, Norwegian, Portuguese, Punjabi, Romanian, Russian, Serbian, Slovak, Slovene, Swedish, Tamil, Thai, Telugu, Turkish, Ukrainian, Urdu.

Translations into Arabic

Although literary translation activity from Hebrew into Arabic has developed over the years, it has been overshadowed by the political conflict in the Middle East. This conflict has influenced translation policy in the Arab countries as well as in Israel. The first novel translated from Hebrew into Arabic was Abraham Mapu's *The Love of Zion* (1899). A limited number of translations followed, until 1948. Between 1948 and 1967, translations were mostly published in newspapers and periodicals but a few books were published too, such as Yehuda

Burla's novel, *In Darkness Striving*, an anthology of short stories, and a collection of works by H.N. Bialik. Publication of literary research and translated literary texts emerged in Arab countries only towards the end of the 1960s. A significant increase in number and frequency can be detected from 1967 up to the present. Records reflect some 80 translated books and 21 anthologies published during this period in Israel and Arab countries (mainly Egypt, Jordan, Lebanon, and Syria).

Translation into Special Languages

With the general flourishing of Hebrew literature abroad in the 1990s, new markets have opened up for Hebrew literature, and newly added languages have reflected the growing interest. Since 1990, 57 literary works have been published in Chinese, 63 in Japanese, 25 in Korean, and a few in each of the following: Georgian, Azeri, Armenian, Thai, Assamiya, Bongla, Gujarati, Marathi, Malayalam, Punjabi, Tamil, Telugu, Hindi, Kannada, Urdu. This wave of interest is still developing.

Anthologies and Special Journal Issues on Hebrew Literature

Anthologies and special issues of literary journals are considered to be the best way to enter a new market. Anthologies provide a taste of Hebrew literature and are bound, in the longer term, to generate interest in publishing whole books by the authors introduced in the general anthology. Special literary issues have an even better marketing effect as they usually have their own subscription system and the print run – normally a few thousand – can reach a focused readership which is a priori interested in quality foreign literature. Records show that some 428 anthologies of Hebrew literature are available in 40 languages. Among them, 162 volumes in English, 41 in French, 30 in Spanish, 28 in German, 26 in Russian, 25 in Italian. 105 anthologies were published between 1983 and 1993; in the 1994–2004 period, the number increased to 163 volumes.

All the above statistical data is from the Bibliographic Database of the Institute for the Translation of Hebrew Literature. Figures include whole books and anthologies only; individual poems and stories are not included.

[Nilli Cohen (2nd ed.)]

HEBREW LITERATURE IN THE UNITED STATES

Hebrew writing began in the United States shortly after the arrival of the first Jews in New Amsterdam (1654), but the period of modern Hebrew literature only starts after 1870 when Hebrew writers came to America during the mass immigration from Eastern Europe. They settled mainly in New York and between 1918 and 1940 the city served as a subcenter for modern Hebrew literature. Despite their efforts, the immigrant writers were unable to raise a generation of native American Hebrew authors and the older writers are not being replaced. The rapidly growing center in Israel likewise attracted several of the more talented authors. At present a small, diminishing group of aging Hebrew writers are living in the United States.

Hebrew writing in the United States may be divided into three periods:

- I. 1654–1870 – the period of sporadic publication and literary curiosities
- II. 1870–1918 – the early modern period
- III. 1918–to the present – the modern period

Sporadic Publication and Literary Curiosities (1654–1870)

During the first two centuries of Jewish settlement in North America no major contribution was made to Hebrew letters. The Jewish population was small and unlearned in Hebrew. Sporadic attempts were, however, made to write and publish Hebrew works; and mention must be made of literary curiosities which have survived, such as the unpublished nomenclature by Judah *Monis, a converted Jew who taught Hebrew at Harvard College, and tombstone inscriptions: the elegy to Walter J. Judah who died in 1798 at the age of 20, or the rhymed epitaph on the grave of Samuel Zanvill Levy of New York City. Hebrew language and literature were also kept alive through publications of the Bible and works on Hebrew grammar. The latter were written both by Jews and by gentiles. A publication of the Bible, initiated by Jonathan P. *Horwitz of Philadelphia and continued by Thomas Dobson, appeared in 1814 and a Hebrew-English edition of the Pentateuch by Isaac *Leeser in 1845. Among the works on grammar there is John Smith's *A Hebrew Grammar Without Points* (Boston, 1803), Moses Stuart's *A Grammar of the Hebrew Language* (1835), and Isaac Nordheimer's *A Critical Grammar of the Hebrew Language* (New York, 1838; 1842).

Certain congregations showed a deep concern for the preservation of Hebrew as a language among Jews and for a sound Hebrew education. The New York synagogue Shearith Israel as early as 1731 "maintained some sort of Jewish schooling," and its constitution (1805) provides that "the fixed prayers shall forever be read in the Hebrew language." In 1830, Dr. Daniel L. Maduro Peixotto (1799–1843), a physician who favored the establishment of a Pestalozzi school, recommended that Hebrew should be taught there. These, however, can only be seen as isolated efforts which did not greatly influence the general Jewish cultural atmosphere in colonial America and in the early years of independence. Hebrew was so little known in the community at large that in Newport, toward the end of the 18th century, the Torah was read from a printed, vocalized text and not from a scroll.

Joshua Falk's *Avnei Yehoshua* ("Book of the Stones of Joshua," 1860), the first original work in Hebrew published in the United States, is a homiletic commentary on *Pirkei Avot* which also includes the classical text.

The Early Modern Period (1870–1918)

With the coming of large numbers of East European Jews to America, the influence of European Hebrew writing began to be felt. A small group of Hebraists who wanted to spread Hebrew culture made efforts to establish a Hebrew press. In a period of less than 30 years, 20 Hebrew journals appeared, most of which, however, were short lived, mainly because there was no receptive readership. The number of Jews conversant in He-

brew was limited despite the large waves of immigrants from Eastern Europe. The first independent Hebrew periodical, *Ha-Zofeh ba-Arez ha-Hadashah*, edited by Zvi Hirsch *Bernstein, appeared from 1871 to 1872. It slavishly followed the style and tone of contemporaneous East European Hebrew journals and, to a certain extent, the Anglo-Jewish press in America which had much earlier beginnings (1823). Unfortunately, no complete set of its issues has survived. Other major Hebrew periodicals during that period were *Ner Ma'aravi* (1895–97) and *Ha-Pisgah* (1889–1899 intermittently), which were of a high literary and journalistic standard, aroused hopes for a Hebrew renaissance in America. *Ner Ma'aravi* in its first issue published a poem expressing the ardent longing for the development of Hebrew learning and Hebrew literature. *Ha-Pisgah*, edited by Zeev Wolf Schorr, an ardent lover of Zion, firmly tried to stimulate interest in Hebrew culture, and writers of the caliber of Saul *Tchernichowsky contributed to its literary columns.

Most of the periodicals of the early 20th century, like *Ha-Yom* (1909–13) and *Ha-Le'om* (1901–08), were close in style and character to their predecessors. Not until the appearance of *Ha-Toren* (as a monthly June, 1913–December, 1915; as a weekly March 3, 1916–March 18, 1921; as a monthly again May 1921–December 1925) did a real literary organ appear on the North American scene. But even *ha-Toren* did not rise to its full stature before the end of World War I, for there were not many good Hebrew writers, readers were not numerous, and libraries of Judaica and Hebraica were meager and, with few exceptions, insignificant.

Many of the American Hebrew writers were of East European origin and they were intensely patriotic about their new country. Judah David *Eisenstein translated the Declaration of Independence and the Constitution of the United States into Hebrew. Moses Aaron Schreiber, cantor of the Congregation Shaarey Tefila in New York, wrote a long poem, *Minhat Yehudah* ("Offering of Judah"), for the centennial of American Independence (1876). The poem is a historical account of the American people and describes the mass of stricken humanity that surged to the shores of America. Abraham Luria dedicated a poem to President McKinley.

The fabric of traditional Jewish life changed under the impact of America; rabbinic responsa are flooded with names of towns in the United States. Questions on ritual from Kal-amazoo and Leavenworth found their erudite answers in a halakhic work by Shalom Elhanan Joffe, *Sho'el ka-Inyan* ("Asking to the Point"), which was published in Jerusalem in 1895.

Early American Hebrew writers were not uncritical of the American milieu: its vulgarism, optimism, its predilection for shallow panacea. Their denunciation of internal squabbles and communal ills was particularly keen. They were conscious of the effects of the democratization of society, the attendant ills of the leveling process, and they deplored the organized chaos in Jewish organizations. They could not reconcile themselves to the fact that stature and status were no longer coincidental.

The Jewish *Kulturkampf* was fought out with an intense bitterness in the United States. The war between the Reform and the Orthodox aroused Mayer Rabinowitz to publish *Ha-Mahanayim* ("The Two Camps," 1888). Abraham Moses Shershevsky, rabbi in Portland, Maine, at the turn of the century lashed out against American Jewry:

"Just as our forefathers... crossed the sea and made the Golden Calf, so do their sons after them in this country; after they crossed the Atlantic, they bowed and prostrated themselves before the Golden Calf."

The Golden Calf became a standard metaphor. The poet Menahem Mendel *Dolitzki used it in his introduction to *Shirei Menaḥem* (1900), while another early author complains: "The basis of all things in America is the dollar... it's the method, it's the aim, it's the glory, it's the power..." Most Hebrew writers earned a precarious living. They were rabbis, teachers, or cantors. Some who were not fortunate enough to gain a livelihood as religious functionaries became peddlers. They never acquired wealth or even economic security.

Though American Hebrew literature cannot boast of a single drama or a single novel of importance at the beginning of the 20th century, two writers, Naphtali Herz *Imber and Gerson *Rosenzweig, exhibit a marked individuality. Imber, who became immortalized with the composition of *Ha-Tikvah*, the anthem of the Zionist movement and of the State of Israel, made an impact with his delicate lyricism. A note of mordant wit was injected into Hebrew literature by Rosenzweig with his merciless castigation of Jewish professions and occupations in the United States.

After World War I

The end of World War I marked an important milestone in the development of Hebrew literature. Eastern Europe, the center of creative efforts in the Hebrew language for over a century, relinquished its hegemony: The Communist Revolution had relegated Hebrew literature in Russia into insignificance and with the rise of the Nazis to power the splinter center of Hebrew literature which flourished in Germany after the end of World War I was destroyed. The Nazi occupation of Poland almost obliterated creative Hebrew writing there. The previously insignificant foci of Hebrew literature in Palestine and in the United States thus emerged to new significance.

Anglo-American literature which had exerted a negligible influence before World War I now became a potent factor in Hebrew literature. Hebrew poets in America – B. *Silkner, E.E. *Lisitzky, H. *Bavli, S. *Ginzburg, S. *Halkin, A. *Regelson, M. *Feinstein, H.A. *Friedland, R. *Avinoam (Grossman), A.S. *Schwartz, and Noah *Stern – were not only stimulated by the literary environment of the United States but translated English and American poetry, and even prose and drama, into Hebrew. They translated several plays by Shakespeare; Walt Whitman's *Leaves of Grass* (transl. by S. Halkin *Alei Esev* (1952)); and many poems by Keats, Shelley, Yeats, and Frost.

The Hebrew poets in America led their European colleagues in critical appraisal of English and American literature, thus opening new vistas for modern Hebrew literature. Their subject matter was also drawn from the American milieu. Benjamin Silkner (1882–1933) turned to Indian lore for his inspiration in *Mul Ohel Timmorah* ("Opposite the Tent of Timorah," 1910). He was followed by other poets. Israel *Efras devoted an entire book, *Vigvammim Shotekim* ("Silent Wiggams," 1933), to a love story of a white man and a half-Indian girl. Ephraim E. Lisitzky wrote his *Medurot Do'akhot* ("Dying Campfires," 1937) on the basis of Indian legends. Like Silkner, he struggled with the theme of Indian civilization before its destruction, and like the older poet he tended to idealize the noble savage. Unlike Silkner, he successfully adapted the unrhymed trochaic tetrameter of *The Song of Hiawatha* to his story of the warring sons of the vulture and sons of the serpent.

The greatest impact on Hebrew writers in America was, however, made by the Afro-American civilization: spirituals, folk songs, sermons, and the Afro-American sense of rhythm and flair for music. Hillel Bavli, in his critical article which included translations from Afro-American poetry, pioneered in the field of critical appreciation of the Afro-American. He was followed by Avinoam (Grossman), Simon Ginzburg, and, especially, by Lisitzky, who published a cycle of poems on Afro-American themes: *Be-Oholei Kush* ("In African Tents," 1953). Not only the exotic minorities but the American Anglo-Saxon caught the imagination of Hebrew writers in the U.S. Hillel Bavli's idyll *Mrs. Woods* (1937) is an American version of the idealized country folk. Israel Efras in his narrative poem "*Zahav*" ("Gold") created an American character, Ezra Lunt, against the background of the gold rush of 1849. Stories about Jewish immigrants and American gentiles were written by such writers as Y.D. *Berkowitz, H. *Sackler, H.A. Friedland, A. Soyer, S.L. *Blank, Y. *Twersky, S. Halkin, and R. *Wallenrod. Yitzḥak Dov Berkowitz in his stories about American Jewish life wrote almost exclusively about immigrants. *Ben Erez ve-Shamayim* ("Between Earth and Heaven," 1924), a novel by Harry Sackler, traces the history of an immigrant family from the time it planned to come to the United States to its painful years of adjustment. He also wrote historical novels which depict the struggles of early Judaism against a Canaanite milieu, the conflicts of rabbinic and ḥasidic Jewry, and the strife of early American Jewry with its new environment. Like Sackler, Yoḥanan Twersky culled from the past and present material for his stories and novels. Among these are historical personalities such as Rashi, Uriel da Costa, Alfred Dreyfus, and Aḥad Ha-Am. Simon Halkin, on the other hand, tends to be introspective. The two novels, *Yehiel ha-Hagri* (1928) and *Ad Mashber* ("On the Brink of Crisis," 1945), set in a New York immigrant milieu, are essentially religious novels whose theme is the quest of modern man for faith in a society which has lost its God. Reuben Wallenrod deliberately abandoned the old themes and consciously and realistically explored the life of the first- and second-generation Jew in

America. Daniel *Persky, who for many years wrote a weekly humorous column in *Hadoar*, promoted Hebrew language and literature in the U.S.

Among the more significant literary critics of the older generation are A.A. *Epstein, whose *Soferim Ivrim ba-Amerikah* ("Hebrew Writers in America," 1953) is still a standard work, Menachem *Ribalow, and S. Halkin. Three periodicals of the 20th century fostered high-level essays and critiques of Hebrew and non-Hebrew writing: *Miklat* (1920–21), *Ha-Toren* (1917–25), and *Ha-Tekufah* (1930–31). They became defunct, but periodicals like *Hadoar* and *Bitzaron*, which began to appear in 1922 and 1940 respectively, still publish criticism. *Hadoar* owes its original impetus to Ribalow, an excellent journalist and a serious critic, who was succeeded by M. *Maisels; and *Bitzaron* to the learned and dynamic Rav Tzair (Hayyim *Tchernowitz). These periodicals, particularly *Hadoar*, were supported by a small group of enthusiastic Hebraists. Hebrew journalism in the U.S. is greatly indebted to Reuben *Brainin and Y.D. Berkowitz, the editors of *Ha-Toren* and *Miklat* respectively. The future historian will, perhaps, recognize the Berkowitz/Brainin/Silkiner triad as the fathers of Hebrew literature in the U.S.: Berkowitz as the Hebrew stylist and realist, Brainin as the champion of catholicity and literary tastes, and Silkiner as the author who introduced American themes and motifs into Hebrew literature.

On the whole, Hebrew literature in America became less potent. Gabriel *Preil, a modernist lyric poet influenced by American imagists, also won acclaim in Israel. Isaiah *Rabinovich continued to write serious criticism which questions the growing tendency of some Israeli critics to apply the methods of New Criticism to Hebrew literature. Arnold (Avraham) Band (1929–) published a major work on S.Y. Agnon. Aaron *Zeitlin, who arrived in the United States in 1939, expressed himself with equal ease in Hebrew and in Yiddish in a number of genres. His poetry is reflective and marked by mystical insights.

A number of American-Hebrew writers settled in Israel. S. Halkin and A. Regelson, although born in Eastern Europe, were educated in the United States and their poetry and criticism reflected their American experience. M. Maisels was an essayist and editor of considerable talent. Reuven Avinoam and T. Carmi were native Americans who spent most of their lives in Israel.

There seems to be little prospect that Hebrew writing in America will recover the force it had in its heyday. A small center, however, mainly nurtured by Israelis living in America and a limited American audience will probably survive.

For English translations of Hebrew works, see Goell, Bibliography.

HEBREW THEOLOGICAL COLLEGE (Beis HaMidrash LaTorah), Orthodox rabbinical school and institute of higher Jewish education; founded in Chicago, Illinois, in 1922, by Rabbis Saul Silber, Ephraim Epstein, Abraham Cardon, and Chaim Zvi Rubinstein. It was an outgrowth of the Hebrew high school, Yeshiva Etz Chaim, organized in 1899 and was

the first Orthodox rabbinical institution in America to require courses in Bible, Jewish philosophy, and history, etc., in addition to Talmud and Codes. In 1970, about half of those ordained at the Hebrew Theological College were in the practicing rabbinate. Others served as teachers in yeshivot and religious high schools. Requirements for admission to the rabbinical school include a college degree and extensive preparation in Talmud and related Jewish subjects. Graduates receive a Bachelor’s degree, as well as rabbinical ordination. Among its non-talmudic faculty was Eliezer Berkovits, professor of Jewish Philosophy. Its first president was Rabbi Saul Silber. In 1966 Simon Kramer, who was then president, brought Rabbi Aaron Soloveichik to serve as *rosh ha-yeshivah*. The rabbinical program was extended from two to three years and the course of talmudic study somewhat reorganized.

As of the 1990s the Hebrew Theological College has seen significant growth and development under the leadership of Rabbi Shlomo Morgenstern, *rosh ha-yeshivah*, and Rabbi Dr. Jerold Isenberg, chancellor. As of 2005 the yeshivah had ordained 391 rabbis. The 17 members of the Sam & Nina Bellows Kollel pursue advanced Torah learning, while serving as study partners (*havrutot*) and role models to younger students.

Since 1997 the college has been affiliated with the Higher Learning Commission of the North Central Association of Colleges as an accredited institution. Hebrew Theological College houses two main collegiate divisions on separate campuses: the Beis Midrash (for men) and the Blitstein Institute (for women) with a combined enrollment of 214. Graduates receive a B.A. degree through its department of Talmud and Rabbinics (men only), the Bressler School of Advanced Hebrew Studies, and the Kanter School of Liberal Arts and Sciences. Additional majors are offered in: Accounting, Business, Computer and Information Sciences, Education (both Elementary Education and Special Education are recognized Illinois State Certification programs), English, and Psychology. An expanded science curriculum prepares students for graduate and professional studies in allied health sciences. Students enrolled in the college have the option of participating in a year abroad in Israel through HTC’s Israel Experience Program. Hebrew Theological College also supports an Adult Degree Completion Program that provides accelerated degree programs.

The college’s Saul Silber Memorial Library is the largest rabbinic library in the Midwest with over 75,000 books and manuscripts. The library’s Lazar Holocaust Memorial Wing has significant holdings in Holocaust studies. The college regularly publishes several publications including the *Or Shmuel Torah Journal*, and the *HTC Academic Journal*.

Other programs of the college include a preparatory division, the Rabbi Oscar Z. Fasman Yeshiva High School for young men, whose 2005 enrollment was 173 and two summer camps: *Yeshivas HaKayitz*, a residential summer camp for boys in grades 7–12 and *Midreshet HaKayitz*, a program for girls in grades 9–12. The Community Services division provides annual lectures on campus as well as variety of classes

throughout the community including the Chicago Jewish Medical Forum and an annual Medical Ethics *Yarchei Kallah*. A vibrant alumni association serves the institution's alumni throughout the year.

HTC's 10-acre Skokie campus, constructed in the late 1950s, includes a spacious Beis Midrash, modern classrooms and computer and science laboratories for both the college and high school programs. The campus also houses libraries, dormitory facilities, auditoriums, dining halls, apartments for faculty and married students, computer centers, fitness center, and Memorial Hall. The new, separate Chicago campus for the Anne M. Blitstein Teachers Institute for Women consists of classrooms, computer and science laboratories, library facilities, a student lounge, offices and student residences.

Hebrew Theological College's annual budget for 2004 was \$6,000,000.

[Michael Berenbaum (2nd ed.)]

HEBREW UNION COLLEGE-JEWISH INSTITUTE OF RELIGION (HUC-JIR) is the oldest rabbinical seminary in the United States. Dedicated to Jewish scholarship and the training of religious leadership for the Reform movement, it has campuses in Cincinnati, New York, Los Angeles, and Jerusalem. The school was founded in Cincinnati, Ohio, in 1875, by Isaac M. *Wise to offer "general rabbinical instruction ... for the Jewish ministry." Wise was convinced that "Judaism would have no future in America unless ... it would become reconciled with the spirit of the age" and the Jewish community found it possible to "educate American rabbis for the American pulpit." After a 25-year struggle, Wise succeeded in establishing a Union of American Hebrew Congregations (today: Union for Reform Judaism) whose primary object was the founding of HUC. President until his death (1900), Wise was succeeded by Kaufmann *Kohler (1903–21), Julian *Morgens-tern (1921–47), Nelson *Glueck (1947–71), Alfred Gottschalk (1971–96), Sheldon Zimmerman (1996–2000) and David El- lenson (2001–). Initially intended as a rabbinical school for all American Jews, following adoption of the radical Pitts- burgh Platform by Reform rabbis in 1885, it took on the char- acter of a Reform denominational institution.

In 1922 Stephen S. *Wise founded the Jewish Institute of Religion (JIR) in New York to provide training "for the Jew- ish ministry, research, and community service." Students were to serve either Reform or traditional pulpits. Wise remained president until 1948. Housing JIR next to his Free Synagogue on West 68th Street, he hoped that its graduates would gener- ate other Free Synagogues "animated by the same spirit of free inquiry, of warm Jewish feeling, and of devotion to the cause of social regeneration." JIR from the start inclined to Zionism, in contrast to HUC, which at the time did not favor Jewish na- tionalism. Motivated largely by budgetary difficulties, Wise ac- cepted the prospect of JIR's merger with HUC once the biblical

archaeologist Nelson Glueck assumed the presidency. Nego- tiations were completed in 1948 and in 1950 the two schools merged. In 1954 a school in Los Angeles was chartered and, in 1963, primarily as a result of Glueck's efforts, a Jerusalem campus, initially devoted to archaeology, was opened.

All rabbinical and cantorial students spend the first year of their studies at the Jerusalem campus, which also houses a rabbinical program for Israelis as well as a school and mu- seum of biblical archaeology. The Cincinnati, New York, and Los Angeles campuses all offer a rabbinical program lead- ing to ordination. The Cincinnati campus also has a gradu- ate school for Jews and Christians, which is especially strong in studies focusing on Bible and the Ancient Near East. The Hebrew Union College Annual (founded in 1924) and the Hebrew Union College Press are also located in Cincinnati. The New York campus includes a School of Sacred Music, which trains cantors for the Reform movement, and a doctor of ministries program, whereas the principal School of Edu- cation and the School of Jewish Communal Service are both located in Los Angeles. The HUC-Skirball Museum in Los Angeles possesses a very rich collection of archaeological ar- tifacts and general Judaica.

Situated on the 18-acre Clifton Avenue campus, the Cin- cinnati school also houses the *American Jewish Archives, which publishes its own journal, the American Jewish Peri- odical Center, a small museum of Judaica, the Center for Ho- locaust and Humanity Education, and, in conjunction with the University of Cincinnati, an Ethics Center. The Cincin- nati Library and Rare Book Building contain some 450,000 volumes, 160 incunabula and 6,200 manuscripts, including the Eduard Birnbaum Manuscript Collection in Jewish Mu- sic, making it one of the foremost libraries of Judaica in the world. Smaller, but significant collections are housed at the other campuses.

The HUC-JIR faculty, which has included some of the most notable American and European scholars, has over 60 ranked members, many of them Reform rabbis. Among the scholars of international renown who taught at HUC-JIR in earlier years are the talmudists Moses Mielziner and Jacob Lauterbach, the philosopher David Neumark, the historians Jacob Mann, Guido Kisch, and Jacob Rader Marcus, the se- miticist Julius Lewy, the musicologist Abraham Z. Idelsohn, and the biblical scholar Harry M. Orlinsky.

In 1972 Hebrew Union College became the first rabbinical seminary to ordain women as rabbis, and it regularly ad- mits students regardless of sexual orientation. In the early 21st century the school was strongly oriented toward Zionism and to high academic standards. In recent years its curriculum has placed greater emphasis on practically oriented clinical pastoral education. It remains the only institution within the American Reform movement that prepares men and women for the various roles of spiritual, intellectual, educational, and communal leadership.

Although within Reform Jewry the congregational Union for Reform Judaism and the Central Conference of American

Rabbis are the more activist in taking stands on contemporary American and Jewish issues, HUC-JIR serves as the principal intellectual resource of the movement. By the year 2005 it had ordained more than 2,500 rabbis (of whom about 400 are women), invested 400 cantors, and graduated over 500 communal service workers and 300 educators.

HEBREW UNIVERSITY OF JERUSALEM. The first university established in Israel. The establishment of an institute of higher learning in Erez Israel was first proposed by Hermann *Schapira in 1884 at the Kattowitz Conference of the Hovevei Zion, and again at the first Zionist Congress in 1897. A few years later, a group of young Zionists were inspired by Chaim *Weizmann, then a teacher at the University of Geneva, to make the foundation of such an institution a primary aim of the Zionist movement. The group, which included Martin *Buber and Berthold *Feiwel, brought the question before the Congress of 1901, and Herzl submitted a petition to the Ottoman sultan for permission to establish a university in Jerusalem.

The Congress of 1913 appointed a committee, including Weizmann and Judah L. *Magnes of America, to execute the project, but the outbreak of World War I prevented action. While the war with the Turks was still being waged, Weizmann, who had come to Erez Israel as head of the *Zionist Commission after the issue of the *Balfour Declaration, initiated the establishment of the university. On July 24, 1918, 12 foundation stones of the university were laid on Mount Scopus, north of the Old City of Jerusalem. This site, incomparable in beauty and impressiveness, had been acquired before the war by Isaac *Goldberg from the estate of an English lawyer, Sir John Gray-Hill. The view commanded on one side the Holy City and Bethlehem, and on the other the rugged landscape of the Wilderness of Judea, the Jordan Valley, the Dead Sea, and the Mountains of Moab. Weizmann, the only speaker at the ceremony, concluded: "Here, out of the misery and the desolation of war, is being created the first germ of a new life.... In this university we have gone beyond restoration; we are creating during the war something which is to serve as symbol of a better future. In the university the wandering soul of Israel will reach its haven."

There was an interval of seven years before any faculty of the university could be opened. The first lecture was given in 1923 by Albert *Einstein on his theory of relativity, and he spoke the first sentences in Hebrew, which was to be the language of teaching. He was dedicated to the university, and had accompanied Weizmann to the United States in 1921 to apprise American Jewry of its significance. It was decided that, before undergraduate teaching was initiated, work should be in postgraduate studies and scientific research. Three tiny institutes

of research were opened, in Jewish studies, chemistry, and microbiology. The university was to develop in two directions: on the one hand, it should be the center where the Hebrew tradition would be molded in its original language and in the light of general humanities; on the other, it should be a center of research in the natural and medical sciences, which would help the regeneration of the land. The former development was the work of Magnes, who settled in Jerusalem in 1923, and devoted himself to bringing the university into being. Weizmann and committees in England and the United States launched the effort for scientific research. The university was opened on April 1, 1925, by Arthur *Balfour, at an impressive ceremony attended by the High Commissioner, Sir Herbert *Samuel, General Allenby, Chaim Weizmann, Ḥ.N. *Bialik, *Aḥad Ha-Am, and Chief Rabbi *Kook.

The university did not at that time receive any grant from the Government of Palestine; it was the financial responsibility of the Jews of the world. The supreme governing body included Jews eminent in public or academic life in many countries. Weizmann was chairman of the board, and Magnes chancellor – later president. The university grew quickly. Following the inauguration, new institutions were added: Jewish studies (1924); Oriental studies (1926); mathematics (1927); general humanities (1928): philosophy and history, geography and archaeology, classical literature, English, and other languages; physics (1930); and biological sciences (1931). Demand grew for regular courses of postgraduate studies, leading to a Master's degree. Two faculties were constituted: humanities, and science and mathematics. The first degrees were awarded in 1931. At this stage, however, the authorities were opposed to the opening of professional schools for doctors or lawyers: learning should be acquired for its own sake, and research was the main objective. About half the students were from Palestine, and half from abroad. Some of the teachers now appointed were graduates of the university.

The Nazi persecution of Jews in Germany and their exclusion from institutions of higher learning gave fresh importance to the Hebrew University. It could take its part in the battle for academic freedom, and be a principal place in which exiled scholars and scientists could find a haven. Hebrew remained the language of instruction, and was rapidly adapted to the needs of modern learning and science. Vocabulary, based on biblical and rabbinical Hebrew, multiplied. The library, which was also the Jewish National *Library, grew to half a million books, housed in the principal building on Mount Scopus and containing one of the most valuable collections of Hebraica and Judaica. Before the outbreak of World War II, medical research was developed in laboratories attached to the university hospital, itself a gift of the *Hadasah Women's Zionist Organization. The hospital and medical center did valuable work for the Allies and the civilian population of the Middle East throughout the war. A school of agriculture at Rehovot was added in 1940. At the end of the war, plans were made for large extensions, and new buildings were started on Mount Scopus.

The years between 1945 and 1948 were troubled. Both Jews and Arabs were in revolt and university progress was halted. The outbreak of riots and fighting at the end of November 1947, which followed the United Nations decision to partition Palestine into Jewish and Arab states, caused temporary suspension of academic work. Teachers and students were engaged in the defense of the National Home; and, in April 1948, an Arab mob attack which murdered a convoy of doctors, nurses, and students to Scopus compelled the evacuation of the Hadassah Hospital and Medical Center, in order to avoid further losses and bloodshed. The fighting during and after the War of Independence involved the university. The buildings were held against Arab attacks, but grave damage was done. During the first cease-fire, the United Nations mediator contrived to obtain agreement for demilitarization of Mount Scopus and the Mount of Olives. The university buildings were to remain an Israel enclave, surrounded by Arab land, and were occupied by a small body of Jewish police and caretakers.

The Israel-Jordan *Armistice Agreement, concluded in April 1949, included "an agreement in principle for restoration of the normal functioning of the cultural and humanitarian institutions on Mount Scopus, and free access thereto." An Arab-Jewish committee was to work out details. That, however, was not done, as Jordan refused to nominate representatives to the committee, and the enclave remained inaccessible to teachers and students.

In the summer of 1949 the university resumed its work in western Jerusalem, housed in a number of improvised and unsuitable buildings scattered over the town. The rooms for lectures were bare; there were no laboratories or equipment and very few books. At the same time, the creation of the State of Israel required intensified expansion of the university departments to provide the civil servants, teachers, doctors and lawyers, scientists and agronomists for building rapidly. The pre-faculty of medicine was transformed into a faculty (opened in 1949) for both undergraduate and postgraduate studies. A law faculty was opened in the same year, while the school of agriculture (later, renamed the Levi Eshkol Faculty of Agriculture) and the department of economic and social sciences also became faculties in 1952 and 1953 respectively, and the school of education was opened in 1952. An extensive new campus was dedicated at Givat Ram on a ridge of the Judean Hills in the west of the city. A department of business administration and a school of social work (1958/59) were added; the Institute of Oriental Studies (1926) was developed into a department of Asian and African studies (1962) and the Ben-Zvi Institute for research on the Jewish Communities in the Middle East (founded 1947) was affiliated. Other new departments were the Institute for Contemporary Jewry (1959/60), the institute for research in Jewish Law (1963), and the Library School. A bigger Hadassah University hospital (opened in 1961), a medical school for 500 students, and a dental school for 250 students were built on another site, at Ein Kerem on the outskirts of Jerusalem. Since 1929, the Hebrew University has had its own

publishing house, the Magnes Press, which publishes significant work done at the university and produces two important series, *Scripta Hierosolymitana* and *Textus*, the latter devoted to Bible studies. The number of students rose from 1,000 in 1947/48 to 5,000 in 1958/59 and over 15,000 in 1969/70. During this period the academic staff increased from 200 to 1,430, many themselves graduates of the university. The National and University Library in 1970 contained 1¼ million books and numerous periodicals.

At Givat Ram, 150 acres of eroded limestone have been transformed into a new university campus with more than 50 buildings. This phoenix-like resurgence was made possible by the combined financial help of the state and of Jewish communities and individuals abroad. Government and Jewish Agency grants cover nearly two-thirds of the maintenance budget, and societies of friends of the university have given the funds for new buildings. The university has not, however, become a state institution. The government attaches no conditions to its contribution, has no administrative control, and nominates only a few lay members to the executive council. The university is open to all students without discrimination of sex, creed, color, or nationality. The number of students from abroad steadily mounted, and there was a large influx of Jewish students, most of them American, after the Six-Day War. In 1970, foreign students totaled 3,200, of whom some 1,200 came from the United States and some 50 were Asian or African. In addition, 205 were Arabs or Druze (45) including some from east Jerusalem and the Israel-held territories in Judea and Samaria.

The board of governors, meeting annually in Jerusalem, elects the president for a four-year term, approves the budget, and decides major issues of policy. Half the board consists of members resident in Israel. The control of the university is maintained by a senate, an academic body presided over by an elected rector, and an executive council, composed of a majority of lay members together with some academics. After Magnes, the presidents were: Selig *Brodetsky (1949–51), Benjamin *Mazar (1953–61), Giulio *Racah (acting; 1961–62), Eliahu *Elath (1962–68), and Avraham *Harman (from 1968). As a result of the Six-Day War, the university's original home on Mount Scopus was recovered, and the former building of the humanities faculty was put to immediate use. Studies were restarted in the Rosenbloom building, dormitories designed for 2,500 students, and a residential center for pre-academic studies opened. The original Hadassah-University hospital was rehabilitated and the Harry S. Truman Research Center, endowed by American Friends of the Hebrew University, has been erected on Scopus as part of the university. The faculty of law was transferred in 1969 to Mount Scopus. The university now has four campuses: Scopus, Givat Ram, and Ein Kerem in Jerusalem, and Rehovot. It was invited to set the academic standards for the University College in Haifa, and, together with the Weizmann Institute of Science and the Haifa Technion, to do the same for the University of the Negev in Beer-sheba. In 1958, the Hebrew University opened branches of

its law and social sciences faculties in Tel Aviv; but between 1966 and 1969 these were transferred to the University of Tel Aviv. The high quality of research done in Jewish Studies, the humanities and social sciences on one hand, and the natural, physical, and medical sciences on the other, has won encouragement and financial subsidies from U.S. government departments and private foundations in various countries, and has brought the Hebrew University worldwide recognition. It becomes more and more the university of the whole Jewish people.

[Norman Bentwich]

1970s

The decade of the 1970s was marked by expansion and consolidation. Prior to the Yom Kippur War of 1973, the university's student enrollment climbed to a peak of some 18,000 at the height of a period of growth in tertiary education. At the same time, the academic staff was enriched by the immigration to Israel of many scholars from the Western world as well as from the U.S.S.R.

Concurrently, the rebuilding of the campus on Mount Scopus proceeded apace both with regard to premises to house the academic work of the university and student accommodation, in particular that set aside for married students with young children.

Noteworthy in this period of expansion was the growth in the School for Overseas Students, where enrollment climbed to 1,000, with approximately another 1,000 attending the annual summer courses. The school offered courses varying in duration from one to four years, with teaching in English, French, Spanish and Russian, in addition to Hebrew. It now played a key role in strengthening Israel's ties with the younger generation of Diaspora Jewry.

A number of new research institutes came into being in response to fresh needs and possibilities; these were within the areas of Jewish studies, and those for the history and traditions of Jews in the Eastern and Western Diasporas, Slavic language and literature, international affairs, European studies, Soviet and East European research, Israeli society, economics and politics, energy resources; environmental sciences, lasers, marine sciences, agriculture, medicine, and dental medicine.

In line with the university's policy of serving Israel's needs for trained manpower, it also established, in conjunction with Hadassah, the Henrietta Szold-Hadassah-Hebrew University School of Nursing, the Hadassah-Hebrew University School of Occupational Therapy (both granting a bachelor's degree) and the Hebrew University-Hadassah School of Community Medicine and Public Health, which gives a master's degree. In 1975, the Institute of Advanced Studies was set up to provide a framework for the encouragement of scientific and scholarly leadership and the advancement of top level research. The institute offers fellowships to Israeli and overseas scholars, initially in the areas of mathematics, Jewish studies and economics.

The 1973 war was a turning point which marked profound changes within Israel, including severe cuts in public

spending for tertiary education, and they affected the Hebrew University, where the stress was on consolidating the growth of past years. The Mount Scopus campus became a residential university city, providing accommodation for over 3,000 students and premises for the Faculty of Law, the School for Overseas Students, the Institute of Archaeology, the School of Education, first-year science studies for all the experimental faculties, the Harry S. Truman Research Institute, the Martin Buber Center for Adult Education and the Joseph Saltiel Center for Pre-Academic Studies. There were new buildings for the Faculty of Social Sciences, for the Faculty of Humanities and an undergraduate library for these faculties. These units moved from Givat Ram to Mount Scopus in the fall of 1981 as scheduled. The physical development of the university was thus virtually completed on all four campuses. Enrollment stood at over 15,000, of whom more than a third were engaged in post-graduate work. This latter figure marked the latest phase in the development of the university, making it the Jewish world's foremost center of advanced study. In addition, university extension courses, both on-campus and throughout the country, brought faculty members to the service of a further 12,000 people each year; while under special arrangements with a number of leading universities, notably in North and South America, the university also aided Jewish studies abroad in staffing and curriculum design and planning. With the growth of local universities in other Israeli cities, the Hebrew University, which had 70% of its student body coming from outside Jerusalem, increasingly served as a national institution.

The university's Authority for Research and Development coordinated the work of some 2,500 research projects underway at the university with funding received from over 500 different granting agencies. Much of this work and of the more than 3,000 books and papers issuing annually from the academic community were of direct practical importance to the State of Israel and its economic, scientific, and social development. Taken as a whole, the research record made the university an international center of scholarship which attracted hundreds of visiting academics from all parts of the world.

At the meeting of the board of governors held in May 1980, it was decided, despite the financial stringency prevailing, to proceed with the completion of the rebuilding of the Mount Scopus campus, in order to carry out the move of the Social Sciences and Humanities Faculties from Givat Ram in the spring and summer of 1981. The transfer from Givat Ram to Mount Scopus was completed in the summer of 1981 as scheduled.

[Devorah Getzler]

Developments from 1982

As the university re-established itself in the renovated and greatly expanded campus on Mount Scopus in the early 1980s, the consolidation of units that had been scattered in temporary quarters throughout Jerusalem during the 1948-67 "exile" from Mount Scopus enabled the Givat Ram campus to become primarily the university's science campus, incorpo-

rating lecture rooms and laboratories that had been in other locations. As part of this development, the Avraham Harman Science Library was opened at Givat Ram. At Mount Scopus, the Bloomfield Library for Humanities and Social Sciences opened its doors.

As enrollment continued to expand from the early 1980s level of some 16,000 students to close to 23,000 by the mid-1990s, the university sought ways to provide expanded dormitory facilities. This became a matter of high priority not only because of the natural growth in the number of Israeli students, but also because of the influx of immigrant students, particularly from the Soviet Union. The total number of dormitory accommodations has reached approximately 6,500.

A major development project initiated in 1995 was a new home for the Rothberg School for Overseas Students on Mount Scopus. The school had been located since 1971 in the Goldschmidt building on Mount Scopus, a facility which was unable to answer all the needs of a school that is now serving some 4,200 students a year in a multitude of programs geared to meet the specific needs of students from various countries.

In the Faculty of Science, the Belmonte Science Laboratory for Youth, opened in 1990, provides state-of-the-art facilities for use by high school science classes and their teachers – the only such laboratory in Israel built and operated exclusively for this purpose. The laboratory provides science enrichment for youngsters beyond that which would normally be available to them in their own schools.

At the Ein Kerem medical campus, a full story was added to the existing School of Dental Medicine in the mid-1990s. Besides providing needed additional space for the training of a new generation of dental practitioners and researchers, the new story will also contain the world's most advanced laboratory for experimentation and documentation involving dental implantations.

Also at Ein Kerem, the Faculty of Medicine proceeded with plans for a significant expansion of its facilities. A new building, the National and International Institute of Health, provided an improved infrastructure, enabling the faculty to increase its intake of new students and provide them with optimal learning conditions. It also provided more opportunities in teaching and research for talented Israeli scientists who have been compelled to seek adequate conditions abroad.

A major addition to the cultural life of Jerusalem took place on the Givat Ram campus with the development in the 1980s of the Jerusalem and University Botanical Garden, a facility open to the general public which provides a showcase of plant life from all over the world. The garden also included a Visitors Center in the Hank Greenspan Plaza. Another public attraction in Givat Ram are the windows by the artist Mordecai Ardon, dedicated in 1984. The windows, located in the Jewish National and University Library, conceptualize the prophet Isaiah's vision of peace.

Another development project was the opening in 1987 of the Astrid and Henry Montor Outdoor Sports and Recre-

ation Center of the Mount Scopus campus. The first phase of this center is tennis courts. A soccer field, swimming pool, and track and field facilities were also planned.

NEW ACADEMIC PROGRAMS. An innovation in Israeli higher education was taken in 1985 with the opening of the Koret School of Veterinary Medicine at the Faculty of Agriculture in Rehovot – the country's first-ever school in this discipline. The school, along with the university's Veterinary Teaching Hospital in Rishon Lezion – the largest facility of its type in the Middle East – provide an opportunity for students who formerly were forced to go abroad to study this branch of medical science.

Another innovation in Israeli higher education came in the 1990s with the establishment of Israel's first B.A. programs in communications and journalism and in hotel studies. Israel's first Institute for European Studies was also established during this decade at the university.

Rapid expansion took place, in terms of equipment and numbers of students and faculty, in computer science. This trend was given further impetus due to the large influx of talented students from the former Soviet Union. The growth resulted in the creation of a separate Institute of Computer Science.

East Asian studies gained greatly in popularity among students at the university, bringing with it an expansion of staff and subject matter. In addition to Japanese and Chinese, the study of other East Asian languages and cultures was initiated, including courses in the Vietnamese, Thai, and Mongolian languages.

In the area of programs for students from abroad, the Rothberg School for Overseas Students made great efforts to respond to the wave of immigration from the former Soviet Union. Besides offering courses taught in Russian, the school also initiated a special training program for Hebrew Ulpan teachers to provide a cadre of instructors to the large influx of new immigrants both within the university and elsewhere. Another service to the community was the formation of a special training program to prepare immigrant scientists as teachers of mathematics and science in Israeli high schools.

The Rothberg School for Overseas Students, in cooperation with the faculties of Humanities and Social Sciences, began offering in the mid-1990s new programs taught in English for graduate students around the world. An M.A. degree can now be earned in this manner.

An outreach to the public is the university program of adult education. This program offers a wide range of courses, taught in Hebrew, English, and Arabic, to those who find themselves with increasing leisure hours and a desire to expand their educational/cultural scope of knowledge.

Interdisciplinary study gained impetus throughout the 1980s and 1990s as the pursuit of knowledge and the development of new technologies began to erase old, increasingly artificial definitions of areas of expertise. A prominent example of this was the decision by the university to open a Department of Biotechnology in 1984, a unit jointly administered by the

faculties of Science, Medicine, and Agriculture. Another area of interdisciplinary studies and research that gained increasing emphasis in the 1990s was that of environmental studies.

As an institution which has always stressed research (approximately one-third of the total student body is in graduate studies), the university began in the mid-1980s to institute programs designed to attract the most outstanding students and young researchers to its rolls. This was accomplished through the institution of special scholarships and individualized programs of study. One especially significant vehicle for furthering this goal was the establishment of the Golda Meir Fellowship Fund which, since 1984, has granted many hundreds of fellowships to outstanding graduate students, post-graduates, and young lecturers from Israel and abroad.

Close to 40 percent of all civilian research carried out in the country is conducted at the Hebrew University of Jerusalem. In the closing decades of the 20th century, the university placed increasing emphasis on its role in the development of the Israel high-tech industry. The university's Yissum Research Development Company has grown over the years. The university is also a partner in the encouragement of new high-tech firms through a "scientific incubator" company.

The university was a pioneer in establishing contacts with Palestinian scholars as well as researchers from Arab countries even before the political movement towards peace began in the early 1990s. University units such as the Harry S. Truman Research Institute for the Advancement of Peace, the Sanford F. Kuvin Center for the Study of Infectious and Tropical Diseases and the Faculty of Agriculture were leaders in contacts with their Arab counterparts, much of which earned the financial support of Western governments and institutions. These contacts focused on joint research projects involving such topics as regional economics, water usage, environmental quality, education for tolerance, political solutions, and the overcoming of animal and human diseases endemic to the region.

In 2005 the university included eight faculties: Humanities, Natural Sciences, Social Sciences, Medicine, Dental Medicine, Law, Agriculture, Food and Environmental Sciences. The university had 15 schools: Applied Science, Business Administration, Dental Medicine, Education, Engineering and Computer Sciences, the Rothberg School for Overseas Students, Librarianship, Archive and Information Administration, the Medical School, the Nursing School, Food Sciences, Occupational Therapy, Pharmacy, Public and Community Medicine, Social Work, and Veterinary Medicine. Around 1,200 faculty members teach over 24,000 students, of which about half study in postgraduate programs. University alumni number about 90,000. On the university campuses there are 11 professional libraries in addition to the National Library. The university has 100 research centers. In 2001 university research facilities had sales of \$12 million to industry. In 2005 the president of the university was Menahem Megidor and the chancellor was Haim D. Rabinowich.

HEBRON (Heb. הֶבְרֹן; Ar. *al-Khalil*), city in Erez Israel, 19 mi. (32 km.) S. of Jerusalem in the Judean Hills, 3,050 ft. (930 m.) above sea level. The name Hebron is explained as deriving from the root *hbr* (friend), the name *Hābiru, or the Arabic word *haber* ("granary"). In the Bible, Hebron is also referred to as Kiriath-Arba: "Now the name of Hebron formerly was Kiriath-Arba; this Arba was the greatest among the Anakim..." (Josh. 14:15; see Anak, *Anakim; Ahiman, Sheshai, *Talmi). B. Mazar maintains that the name Kiriath-Arba implies that the city was a member of four (*arba*) neighboring confederated settlements in which the families of Aner, Eshkol, and *Mamre resided around the citadel of Hebron.

Biblical Period

Canaanite Hebron was located to the south of modern Hebron, on the strategic hill known as Jebel al-Rumayda, which was also the site of the later Israelite city. Numbers 13:22 states that Hebron was founded seven years before *Zoan, the capital of the Hyksos which was founded in about 1720 B.C.E. (cf. Jos., Wars, 4:530). Artifacts from this period – the middle Bronze Age – were found in a tomb in Wādī al-Tutāh; these included pottery, alabaster objects, and personal articles. At this time the name Hebron is connected with the Patriarchs, especially the purchase of the Cave of *Machpelah by Abraham from *Ephron the Hittite. Hebron, however, remained a Canaanite city; it was one of the important localities visited by the 12 spies (Num. 13:22). Hoham, the king of Hebron (Josh. 10:3), participated in the Battle of Aijalon against Joshua and was defeated there together with the other kings of Canaan. His city was conquered by Caleb son of Jephunneh (Josh. 15:13; Judg. 1:20).

After the death of Saul, David chose Hebron as his royal city and was anointed there as king over Judah (11 Sam. 2:1–4). In addition, Abner was buried there (3:32) – his traditional tomb is still standing. The assassins of *Ish-Bosheth, the son of Saul, brought Ish-Bosheth's head to David in Hebron, and he ordered that they be hanged next to the pool in the town (4:12). Eventually David was anointed king over all Israel in Hebron (5:1–3). The city was also one of the *levitical cities and a *city of refuge (Josh. 21:13; 1 Chron. 6:42); it was an important administrative center and this was the reason why Rehoboam fortified it (11 Chron. 11:10). In the division of Judah into districts during the Monarchy (cf. Josh. 15:54) Hebron was a city of the mountain district.

Post-Biblical Period

After the destruction of the First Temple the Jewish inhabitants of Hebron were exiled and their place was taken by Edomites, whose border extended to Beth-Zur. According to

Nehemiah 11:25, however, there were still some Jewish families living in the town; nevertheless, the Jews of Hebron did not participate in the construction of the walls of Jerusalem.

In I Maccabees 5:65 it is stated that Edomite Hebron was attacked by Judah Maccabee and its towers set on fire; the incorporation of the town into Judah, however, only took place after the conquest of Idumea by John Hyrcanus at the end of the second century B.C.E. With the conversion of the Idumeans, Hebron again became a Jewish city. King Herod built the wall which still surrounds the Cave of Machpelah. During the first war against the Romans, Hebron was conquered by Simeon Bar Giora, the leader of the Zealots (Jos., Wars, 4:529), and the city was plundered; it was later burned down by the Roman commander Cerealius (Jos., Wars, 4:554), but the Jews continued to live there. It appears that the population did not suffer during the Bar Kochba revolt. There are remains in the city of a synagogue from the Byzantine period. It was during this period that a church was erected over the Cave of Machpelah: the “very large village” of Hebron then formed part (together with the Botna fortress to the north) of the fortified southern border of the country.

[Michael Avi-Yonah]

Arab Conquest

It appears that Hebron fell to the Arabs without offering resistance. The Arabs, who honored the memory of Abraham, named the city Khalīl al-Rahmān (“the beloved [i.e., Abraham] of [God] the Merciful”), or simply al-Khalīl; however, the name Ḥabrā or Ḥabrān is also found in Arabic sources. The first period of Arab conquest (638–1100) was a relief for the Jews of Hebron, as for the other Jews of Palestine, after the cruel Byzantine rule. There is, however, not much evidence about this period, but as more evidence is uncovered it becomes increasingly more probable that there was a permanent settlement in Hebron at that time. The testimony of historians from an earlier period and documents discovered in the course of time in the **Genizah* give a fairly clear picture of the continuity of the Jewish settlement in Hebron. The first evidence is provided by the story which appears in several versions in both Muslim and Christian sources, which tells of the permission *Omar gave to the Jews to build a synagogue near the cave of Machpelah, as well as a cemetery. The popularity of this story indicates that it has a nucleus of historical truth at least. The Arabs converted the Byzantine church over the cave into a mosque. Under their rule the town grew, and the Arabs traded with the bedouin in the Negev and the people to the east of the Dead Sea. According to the tenth-century Arab geographer Al-Muqaddasi they also conducted a far-reaching trade in fresh fruit.

There is no real evidence about the nature and situation of the Jewish settlement in Hebron in the eighth, ninth, and tenth centuries. However, there is evidence of the existence of a *Karaitic community there at the beginning of the 11th century (1001), and tangible evidence from later in that century about continuing Jewish settlement. From inscriptions and

fragments of documents from the *Genizah* it is possible to formulate a genealogical reconstruction for four to six generations of two Hebron families, from which it can be seen that the Jewish population was concentrated around the cave of Machpelah and that the synagogue was built near the cave. One of these two families held the inherited title *he-ḥaver le-kivrei avot*, or *anshei kivrei avot*, and was in charge of maintaining the holy place. This even included the burying of the dead brought by Jews from near and far for burial close to the cave of Machpelah.

Crusader Rule

The Crusader rule (1100–1260) brought a temporary end to the Jewish settlement in Hebron. In 1100 the Crusaders captured the city, turned the mosque and the adjoining synagogue into a church and monastery, and expelled the Jews. There was probably no Jewish settlement in Hebron after that time – at any rate, there is no mention of the existence of Jews in Hebron. *Maimonides, who visited Hebron (1166), as well as *Benjamin of Tudela (c. 1171), *Pethahiah of Regensburg (1176), and Jacob b. Nethanel (second half of 12th century) make no mention of a Jewish settlement or of the existence of Jews in Hebron. It is possible that Jews began to settle again in Hebron toward the end of the period of Crusader rule, and by the beginning of the 13th century (1210) mention is made of a Jewish dyer “and his group” in Hebron (cf. A. Yaari, *Iggerot Erez Yisrael* (1943), 7–83).

Mamluk Rule

The *Mamluks (1260–1517), who expelled the Crusaders finally from Palestine, made Hebron their district capital (c. 1260), at which time the Jewish settlement apparently began to be perceptibly renewed. *Naḥmanides, who immigrated to Palestine in 1267, wrote to his son that he could “go to Hebron to dig a grave for himself there” (Yaari, op. cit., 84). Such an action would have been unthinkable had there not been a Jewish settlement in Hebron.

It appears that the tolerant Muslim attitude toward the Jews which had existed in pre-Crusader times did not continue with the return of the Muslims to Palestine. In 1266 it was decreed that the Jews were not to enter the Cave of Machpelah, and this decree was strictly enforced until the 20th century. A Christian traveler who visited Hebron in the first half of the 14th century reported that “Christian and Jewish people are regarded by them [by the Muslims] as dogs, and they do not allow them to enter such a holy place” (cf. M. Ish-Shalom, *Masei Nozerim le-Erez Yisrael* (1965), 230). The prohibition is mentioned by both Meshullam of Volterra (1481) and Obadiah of Bertinoro (1488), who visited Hebron. They both recount that the Muslims “built a wall at the entrance of the cave, in which they made a small window through which the Jews pray.” The number of the Jews was also small at that time – 20 households according to Meshullam and Obadiah of Bertinoro (A. Yaari, *Masot Erez Yisrael*, (1946) 68–69). Nevertheless, although the Jewish settlement in Hebron was small, it was considered as very important by the Jews. This is seen

in evidence found in both Christian and Jewish sources. At the end of the 15th century Christian pilgrims report about a Jewish pilgrimage to Hebron: “The Jews recognize them [the graves of the Patriarchs] and hold them in great esteem... and make pilgrimage there [to Hebron] from Jerusalem and even from other countries ...” (the traveler Martin Kabatnik (1492), in M. Ish-Shalom, op. cit., 242). Obadiah of Bertinoro wrote in one of his letters that “there is a tradition among all the people of the land that burial in Hebron is better than in Jerusalem” (Yaari, *ibid.*).

The first evidence about spiritual and economic activity by the Jews of Hebron during the Mamluk period appears in the 14th century, but this is fragmentary, is derived from a single source, and is doubtful. R. Isaac Hilo from Larissa (Greece) reported in 1333 that the Jews were engaged in a prosperous trade in cotton, which they themselves wove and spun, and that they were also engaged in all types of glasswork. Some scholars maintain that the Venetian Jews who emigrated to Palestine after the Crusades introduced the art of glasswork to Hebron, but this is not certain (O. Avisar (ed.), *Sefer Hebron*, (1970), 89). R. Isaac Hilo of Larissa also reported about the spiritual activity of the Jews of Hebron, mentioning “an ancient synagogue [in Hebron] in which they prayed day and night.” Some scholars doubt, however, whether this description stems from contemporary testimony or from hearsay.

Ottoman Rule

A definite turn for the better in the situation of the Jews of Hebron occurred during the Ottoman period (1517–1917), which began in Palestine in 1517. However, the Jews of Hebron did suffer misfortune and in this very year a great calamity befell the Jewish population of the town. In a parchment document, written at approximately the time of the event (1518), a man named Japheth b. Manasseh from Corfu tells about the attack by “Murad Bey, the deputy of the king and ruler in Jerusalem,” on the Jews of Hebron. The results were very grave. Many were killed, their property was plundered, and the remainder fled for their lives to “the land of *Beirut.” This same document also attests the stable situation of the Hebron community at that time. The very fact that the sultan’s deputy took the trouble to have his armies plunder and loot Hebron in the hope of gaining wealth proves that the Jews of Hebron had considerable property. Furthermore, from the words in the same document “and they killed many people,” it may be deduced that many Jews were there. The growth of the Jewish population of Hebron at the beginning of the 16th century is explained by the fact that some of those Jews who were expelled from Spain went to Hebron, probably contributing by their strength and wealth to the spiritual and material enrichment of the settlement.

In the course of the 16th century the influence of the Spanish *megorashim* (expellees) began to make its mark, especially in the realm of spiritual leadership. This stems from the emergence of two phenomena of note in the second half of the 16th century: the rising power of the Hebron settle-

ment, on the one hand, and the decline of *Safed as a spiritual and economic center, on the other. The consolidation of the Hebron settlement took place in 1540 when Malkiel *Ashkenazi settled in the town. This multifaceted personality, who combined spiritual and practical greatness, organized communal life in Hebron both practically and spiritually. Ashkenazi’s first act was to buy the courtyard in which the Jews of Hebron lived. This courtyard, which was surrounded by the stone walls of tall buildings, provided the Jewish community of Hebron with a degree of security. Ashkenazi built some additional buildings in the same location as the well-known synagogue, which was named for *Abraham the Patriarch. He also served as Hebron’s first rabbi, and his legal decisions and customs were regarded by the Hebron community as irrevocable *halakhot* not only in his time but in subsequent generations as well. Toward the end of the 16th and at the beginning of the 17th centuries some of the most important kabbalists of Safed moved to Hebron. The most famous among these was Elijah de *Vidas, author of the well-known moralistic work *Reshit Hokhmah* and a student of Moses Cordovero and Isaac Luria, as well as Isaac Arḥa and Menahem b. Moses ha-Bavli, also disciples of Luria.

The teachings of the *Kabbalah and mysticism made a deep impression on the spiritual life of Hebron, and a spirit of asceticism was widespread. Isaiah Horowitz tells about the custom in Hebron of castigation and flagellation (*Ammud ha-Teshuvah*, a commentary on the tractate Yoma), which is an eyewitness description of castigations and a process of atonement which includes lashing, wearing sackcloth, being dragged, and the symbolic performance of the four judicial executions. Kabbalah and asceticism were prevalent in Hebron for approximately 300 years, until the settlement of the *Chabad Ḥasidim in the 19th century. Thus, the settlement in Hebron grew and became stabilized, although not from an economic aspect. The great majority of the population was economically dependent on continuous outside assistance, in the form of donations and contributions from abroad. The money came in two ways: donations which were sent directly to Palestine from abroad and contributions which were collected by emissaries who went abroad specifically for this purpose. Until the middle of the 17th century Hebron did not have its own emissaries; since the community was small and poor, it could not afford the large investment required for sending such an emissary abroad. Hebron was thus dependent on chance contributions from the Diaspora and on the general **halukkah* among the four holy cities (*Jerusalem, Hebron, Safed, and Tiberias), from which Hebron received the smallest share (three parts out of 24). In the 16th century the charitable organization known as *Yahaz* was established. This was a kind of united fund whose name was a combination of the first letters of Jerusalem, Hebron, and Safed. It seems, however, that all these attempts did not greatly alleviate Hebron’s difficult economic situation. This can be seen in “*Kol Kore*” (1616), which proclaimed to the Diaspora the difficult situation of Hebron’s Jews. A central factor in their troubles was the

huge debt owed by the community to the ruling authorities as a result of various decrees. Characteristic of the situation is the legend which tells about a tyrannical governor who forced the community to pay him thousands of grushim (coins whose value was equivalent to the German thaler) by threatening to burn half of the town and sell the other half into slavery (A.M. Luncz, in O. Avisar (ed.), *Sefer Hevron*, 306).

Nevertheless, in spite of the heavy tribulations, which included a plague, locusts, and harsh decrees by the authorities during the 17th century, the Jews of Hebron did not surrender their desire for spiritual survival. In the middle of the 17th century (1659) the famous philanthropist from Amsterdam, R. Abraham Pereira, established the yeshivah *Ḥesed le-Avraham* in Hebron. Distinguished rabbis and *hakhamim* lived in Hebron at that time. The yeshivah *Ḥesed le-Avraham* was a primary factor in the creation of this spiritual prominence of Hebron.

A difficult crisis befell the spiritual leadership of the town in the second half of the 17th century, after the visit of *Shabbetai Zevi in 1663 on his way to *Egypt. His visit made a great impression on the community. His disciples related that the people of Hebron stayed awake the entire night in order to see his wondrous deeds. He gained the adulation of the most important rabbis of Hebron, some of whom, as well as their descendants, maintained their faith in him even after his conversion. People like the kabbalist Abraham Conki and the emissary Meir ha-Rofe, and especially Nehemiah Ḥayon, devoted themselves to Shabbateanism.

The Shabbatean crisis had a very adverse effect on Hebron and led to both its spiritual and economic decline. There was no improvement during the 18th century, which was marked by disease, decrees of expulsion, a blood libel, and upheavals during the rebellion of Ali Bey and the Russo-Turkish War. Despite these troubles, there was a certain increase in population as a result of the breakdown of the Jewish settlement of Jerusalem in 1721 and the immigration of Abraham Gershon of Kutow (Kuty), the brother-in-law of Israel Baal Shem Tov. Abraham Gershon relates that in the single Jewish courtyard there was so little room that they could not even let him bring his family.

In the beginning of the 19th century the Hebron settlement gained some relief. In 1807 and 1811 the Jews bought and leased over 800 dunams of land. Nor was there stagnation in the spiritual life. First and foremost among the *hakhamim* of Hebron in the second half of the 18th and the beginning of the 19th centuries was Ḥayyim Joseph David *Azulai (called *Hida*). Mention should also be made of R. Mordecai *Rubio, the rabbi of Hebron and *rosh yeshivah* of *Ḥesed le-Avraham*, and Raphael Ḥazzan, author of halakhic works. There was a distinct improvement from a financial point of view as well, notwithstanding the robbery and oppression perpetrated by the authorities. Financial help came from several sources. The philanthropist Simon Wertheimer established a large fund which regularly supported the poor of Jerusalem, Hebron, and Safed. In 1814 Ḥayyim Baruch of Ostrava was appointed

as the emissary of Hebron and he succeeded in organizing a network of funds which regularly provided Hebron with considerable amounts (O. Avisar op. cit., 131, 219). Sir Moses Montefiore, who visited Hebron in 1839 and was impressed with its beauty, also made generous contributions to the town. There is even evidence of independent economic progress made by the Jews of Hebron toward the second half of the 19th century. There were Jews who dealt in wine (1838), crafts, and trade (1876 and after).

The most significant development in the history of the Hebron settlement in the 19th century, however, was brought about by Chabad *Hasidim. The community was headed by R. Simon Menahem Ḥaikin who moved from Safed in 1840. Internal life was well organized; an agreement was signed between the Sephardi and Ashkenazi communities (in 1830 and 1842), and a close relationship was maintained between them. In the middle of the 19th century Elijah *Mani founded several public institutions, including the *bet ha-midrash* Bet Yaakov, and reorganized the Sephardi **kolel* in Hebron, freeing it from the administration of the Sephardi *kolel* of Jerusalem. He also revolutionized communal life by instituting a *takkanah* which stated that the *kolel* could subsidize only those actually engaged in studying the Torah. This step encouraged many of the inhabitants to begin to work, thus leading to a greater productivity in Hebron's economic life. There was even a hospital in Hebron by 1895, and the Jewish population reached 1,500 by the late 19th century.

An important contribution to Hebron's spiritual life was made by Ḥayyim Hezekiah *Medini, who founded a yeshivah for young people in Hebron. Four years previously (1900) R. Shalom Baer of Lubavich had established the yeshivah *Torat Emet*. Together with the religious education system, which reached the height of its development at the beginning of the 20th century, there was a parallel development in secular education, and in 1907 the German Hilfsverein set up the first school that included secular studies in its curriculum. Nevertheless, due to limited economic possibilities the Jewish population fell to 700 by 1910.

World War I and British Rule (1917–1948)

The flourishing period of the Jewish settlement in Hebron came to an end in 1914, with the outbreak of World War I. The young men were conscripted into the Turkish army, the channels of financial assistance were blocked, hunger and plagues created havoc among the populace, and the ghetto of Hebron was almost entirely emptied of its inhabitants after the closing of the *kolelim* in the town – except for the Sephardi *kolel*. The Hebron settlement underwent a grave depression. In 1918, however, when Hebron was captured by the British and World War I ended, the Jewish settlement began to recover. The education department of the Zionist organization established schools for boys and girls, as well as a kindergarten. The number of inhabitants was smaller than before the war (430 out of a total population of 16,000 in 1922) but their economic situation was stable. The spiritual situation, on the

other hand, was poor – the yeshivot were impoverished and there were only 17 students. In 1925 the *Slobodka Yeshivah from Lithuania was established under the leadership of Rabbi M.M. Epstein, and the Jewish population rose to 700 in 1929 (out of a population of 18,000).

The year 1929 dealt a heavy blow to the Jewish settlement with the killing of many of Hebron's Jews by Arab rioters. The assault was well planned and its aim was well defined: the elimination of the Jewish settlement of Hebron. The rioters did not spare women, children, or the aged; the British remained passive. Sixty-seven were killed, 60 wounded, the community was destroyed, synagogues razed, and Torah scrolls burned. However, those who remained did not surrender and 35 families went to resettle in 1931. The community slowly began to rebuild itself, but everything was again destroyed in the upheavals of 1936. On the night of April 23, 1936, the British authorities evacuated the Jewish inhabitants of Hebron. The Jewish settlement of Hebron thus ended and only one inhabitant remained there until 1947.

After 1948

In 1948 Hebron was incorporated into the kingdom of Jordan. It was captured by the Israel army in the Six-Day War of June 1967, and Jews again returned to visit Hebron. The old Jewish quarter was found destroyed and the Jewish cemetery almost obliterated. According to the 1967 census, conducted by Israel, Hebron had 38,309 inhabitants, all of whom (excepting 106 Christians) were Muslim. In 1997 the city's population numbered 119,093 inhabitants, 18% of them refugees. Hebron has a smaller percentage of Palestinian Arab refugees than most other places of the West Bank.

On the eve of Passover 1968 a group of religious settlers went to reestablish the Jewish settlement. This new settlement encountered opposition both from the local Arabs and from official Israel sources as their move had not been authorized. The settlers had to fight for official recognition and the right to build a Jewish township in Hebron. In May 1968 the settlers were moved from their temporary quarters to the area occupied by the military government, thus acquiring the protection of the government but not the right to engage freely in economic activity. In 1970 the government decided to permit Jewish settlement in the town of Hebron and to build 250 housing units there. Through the influence of Hebron's mayor Muhammed Ali al-Ja'bari, the town remained relatively quiet under the Israel military government, although in 1968 and 1969 attacks repeatedly occurred on Israel soldiers, visitors, and settlers. There were several attacks on Jews who came to pray at the cave of Machpelah, as well as arguments about the right to pray there.

[Moshe Shapira]

Throughout most of its history Hebron's economy has been characterized by its position on the border of two regions – the farming area and the desert. Therefore, it has served as a marketplace for the exchange of goods between

the peasants and the Bedouin shepherds. Even in the 1970s its economy was based principally on retail trade and on handicrafts such as pottery, glass blowing, and leather tanning. Hebron's built-up area, which expanded after 1948, extends mainly northward along the road leading to Bethlehem and Jerusalem and approaches the village of *Halhul.

[Efraim Orni]

Developments through 1972 and After

The new Jewish quarter adjacent to Hebron continued to develop. The building of the first 250 dwellings was completed and the quarter named Kiryat Arba, a former biblical name for Hebron. Government approval was given for the building of an additional 100 dwellings and at the end of 1972 Kiryat Arba had a population of almost 1,000, and a large industrial zone was under construction. Kiryat Arba was administered by an officer belonging to the military government, with an advisory committee of the inhabitants, under the provisions of the local (Jordanian) municipal law, though as Israel citizens individual residents were subject to Israel law. However, not all the settlers agreed to move to Kiryat Arba, and in 1981 they moved to the old Jewish quarter, which had been abandoned during the 1929 riots, taking possession of Bet Hadasah and the adjacent buildings.

Most of the residents were religious, and there were some disagreements between them and the government as a result of their demand for autonomous municipal status and the right to approve new candidates for housing in the quarter. Another important issue was the question of services at the Tomb of the Patriarchs (Cave of *Machpelah), which had served for centuries as a Muslim mosque. They objected to the agreement between Defense Minister Moshe Dayan and Muhammad Ali al-Ja'bari, the mayor of Hebron, on the scheduling of prayer services and other arrangements between Jews and Muslims, particularly at the Solemn Festivals.

Many Israelis regarded the re-establishment of a Jewish presence in Hebron, one of the Land of Israel's four holy cities, where Abraham had lived and David ruled, as an act of historic justice. There were complaints that the development of Kiryat Arba was too slow, and that it was being held up for political reasons. However, the new quarter was the target of criticism from left-wing and pacifist circles, who feared that its existence might prove an obstacle to an eventual peace settlement. The Jewish presence in the city created tensions between Arabs and Jews. During the first Intifada, Palestinian fire-bombing and rock-throwing attacks on Jews in and around the city were incessant. The tension reached its peak on Purim, February 25, 1994, when Baruch Goldstein, Kiryat Arba's medical doctor, entered the Cave of Machpelah during Muslim prayers and opened fire with an automatic weapon, killing 29 and wounding 100.

[Daniel Rubinstein]

As part of the Oslo Agreements, the majority of the territory of Hebron was handed over to the Palestinian Authority on January 17, 1997, with only some 35 Jewish families and

200 yeshivah students remaining in the city proper. There were some 5,600 Jewish residents in Kiryat Arba. However, the tension between both sides continued and was exacerbated from 2000 with the coming of the second Intifada. At the end of 2002 Kiryat Arba had 6,580 inhabitants and the Jewish settlement in Hebron numbered 500 residents. (See also *Israel, State of: Historical Survey.)

°**HECATAEUS OF ABDERA** (fourth century B.C.E.), Greek historian and ethnographer. He evidently visited Jerusalem and was the first pagan who wrote extensively on the history of the Jews, incorporating it into his account of Egypt. A summary of it has been preserved in Diodorus, the first-century C.E. historian (60:3), via the ninth-century Photius (*Bibliotheca*, 224). The following is a summary of Hecataeus' report.

From time immemorial there lived minorities in Egypt whose manner of sacrificing differed from that of the general population. When a plague occurred, the Egyptians expelled them. Some found refuge in Greece; the majority fled to Judea, then uninhabited. Their leader, Moses, founded Hierosolyma and its Temple, establishing a cult and a constitution which differed completely from any other. Because he believed that God is the master of the universe, Moses prohibited the presentation of the divine in a human form. The laws of marriage and burial differed from those among other groups of men, to whom the Jews adopted a hostile attitude. The Jews never had a king, but Moses assigned a prominent role to the priests, the chief of whom is said to receive messages from God. When he teaches the divine commandments, the assembled Jews prostrate themselves until the high priest concludes with these words: "Moses heard these words from God and he spoke them to the Jews." During the Persian and Macedonian occupations, Hecataeus concludes, many of their ancient institutions were modified.

Hecataeus' account, like those of Megasthenes and Theophrastus, is on the whole sympathetic to the Jews. He stressed the humaneness of such enactments as Moses' prohibition of infant exposure and his equal distribution of the land. His apparently high regard for the Mosaic constitution explains the popularity of pseudonymous books under his name. Hecataeus, according to the Letter of *Aristeas (v. 31), wrote to *Ptolemy II of Egypt asking him to invite 72 priests from Jerusalem to translate the Torah. This passage probably appeared in Pseudo-Hecataeus' book called "On the Jews," from which Josephus has preserved extensive excerpts. The work treated conditions in Palestine during the period of Alexander's successors, the Diadochi, mentioning the high priest *Hezekiah (not elsewhere mentioned) recording the extent of Judea, and describing Jerusalem's Temple and cult. Many scholars, including H. Lewy, Tcherikover, and Guttmann, attribute this work to the genuine Hecataeus. They point, for example, to the statement that the Persians deported the Jews to Babylon, a slip a Jewish forger was unlikely to have made. There is no question, however, that Josephus' *Contra Apionem*, 1, 183–204, is the work of a pseudographer. Hecataeus indirectly criticized the Jews for not mixing with other nations; Pseudo-Hecataeus displays the fervor of an ardent Jew. The suspicion of forgery was already raised in the second century C.E. by Philo of Byblos, who wondered whether Hecataeus had become a Jewish convert. The author of this work may be labeled "Pseudo-Hecataeus I." Also forged, though by a different hand ("Pseudo-Hecataeus II"), is the book "On the Time of Abram and the Egyptians" to which there are two known allusions. Josephus (*Ant.*, 1:159) states that Hecataeus wrote a work about the patriarch, Abraham. Clement of Alexandria (*Stromateis*, 5:113) quotes nine lines from a drama attributed to Hecataeus, portraying the patriarch's smashing of the idols. The quotation was taken from a Jewish anthology of Greek poets and philosophers who purportedly subscribed to the truth or antiquity of biblical tenets. Scholarly opinion is divided over Pseudo-Hecataeus I, but there is a general consensus that Pseudo-Hecataeus II is a forgery. Pseudo-Hecataeus I is certainly earlier than the Letter of Aristeas, and was possibly written in the first half of the second century B.C.E. Pseudo-Hecataeus II antedates Josephus, and is perhaps as early as or even earlier than *Aristobulus.

[Ben Zion Wacholder]

HECHAL SHLOMO, the former official seat of the Chief Rabbinate of Israel in Jerusalem, opened in 1958, Hechal Shlomo was built largely through the munificence of Sir Isaac *Wolfson, who named it in memory of his father.

Hechal Shlomo housed a number of institutions and organizations. The interior of its synagogue was brought from the synagogue of Padua, Italy. It also housed the Central Rab-

binical Library and a Museum of Religious Art. Among the organizations under the aegis of Hechal Shlomo were the Union of Israeli Synagogues and the World Conference of Synagogues. Among its other activities Hechal Shlomo published an annual, *Shanah be-Shanah*. Today the building houses several religious Zionism organizations.

HECHLER, WILLIAM HENRY (1845–1931), Christian Zionist. Hechler was born in Benares, India, where his father served as a missionary of the Evangelical Church. His father was of German origin and his mother was English, and as a result Hechler spoke both languages equally well. In 1871 he served as a missionary in Lagos, Nigeria, and in 1874 became the tutor of the children of *Frederick the grand duke of Baden, an uncle of Kaiser William II. When he failed in his attempts to be appointed Anglican bishop in Jerusalem, he became the chaplain of the British embassy in Vienna and served in that post from 1885 to 1910. He spent the rest of his life in London. Throughout his life, Hechler was engaged in mystical and messianic calculations, and when he became interested in the Jewish problem he sought its solution by calculating the date of the return of the Jewish people to Erez Israel. After the pogroms in Russia in the early 1880s, he visited Odessa, where he met L. *Pinsker. From there he proceeded to Constantinople, bearing a letter to the sultan from Queen Victoria, in which the queen entreated the sultan to grant Russian Jews asylum in the Holy Land. The British embassy, however, refused to submit the letter. In his book *Restoration of Jews* (1884) Hechler traced the link between his mystical calculations and the Return of the Jews; his conclusion was that the redemption of the Jewish people would occur in the years 1897–98. When Theodor *Herzl's *Der Judenstaat* was published, Hechler dispatched a letter to the grand duke of Baden, dated March 26, 1896, to draw his attention to Herzl's work, "the first serious, quiet and practical attempt to show the Jews how they can reunite and form a nation of their own in the Land of Promise, given them by God." Thereafter Hechler devoted his efforts to establishing a close relationship between the grand duke and Herzl, and, through the help of the grand duke, between Herzl and William II. Until recently, these efforts were known only from Herzl's diaries and letters and statements made by contemporaries; their full scope came to light, however, with the discovery of the original correspondence involving Hechler, the grand duke of Baden, Herzl, and the kaiser.

In the second issue of *Die Welt*, Hechler published a comprehensive article containing his conclusion that the time of redemption had come and stating his conviction that Zionism was the ultimate solution. He attended the First Zionist Congress (1897), for which Herzl expressed his public appreciation. Hechler accompanied Herzl on his trip to Erez Israel in 1898, when he was to meet the kaiser, and it was he who welcomed the Jewish delegation that presented the kaiser with an album of photographs depicting scenes from the new Jewish settlements. Another noteworthy effort made by Hechler was his attempt to arrange a meeting between Herzl and the czar

through the czar's brother-in-law, the grand duke of Hesse. He visited Herzl on his deathbed, and it was to him that Herzl whispered the words: "Give my regards to all of them and tell that I gave my heart's blood to my people." Hechler retained his interest in Zionism throughout his life and also met Martin *Buber. He had a museum in his house, which included Montefiore's famous carriage. In his last will, he left it to the "Erez Israel Museum" (the carriage was restored and is displayed in Jerusalem, next to Montefiore's windmill). In 1928 Hechler published his memories of Herzl in *Theodor Herzl, A Memorial* (ed. by M. Weisgal (1929), 51–52). Herzl depicted Hechler in *Altneuland*, under the name of Rev. Hopkins.

HECHT, BEN (1893–1964), U.S. novelist and playwright. Born in New York City, Hecht was brought up in Racine, Wisconsin. He rebelled against a college education and after a variety of jobs became a reporter first on the *Chicago Journal* then on the *Chicago Daily News*. The year he spent in Berlin as a foreign correspondent inspired his first novel, *Erik Dorn* (1921), while *1001 Afternoons in Chicago* (1922) and *Broken Necks* (1924) included pieces originally published in the Chicago press. Hecht first came to prominence as coauthor with Charles MacArthur of *The Front Page* (1928), a tough play about newspaper life. The two writers continued their partnership with a number of very successful film scripts throughout the 1930s and 1940s.

Hecht's portrayal of Jews in his earlier works, such as *A Jew in Love* (1931), was unsympathetic and sometimes even grotesque, but the rise of Nazism, which inspired his antifascist play *To Quito and Back* (1937), resulted in a sensational change in his attitude. In 1941 Hecht publicly proclaimed his Jewish nationalism and became a leading advocate of the dissident underground organization *Irgun Zeva'i Le'ummi, whose activities he championed in the American League for a Free Palestine and the Hebrew Committee of National Liberation. His sympathies were made clear in *A Guide for the Bedevilled* (1944), a controversial analysis of antisemitism, and in *A Flag is Born* (1946). The "illegal" immigrant ship bought by IZL after World War II was called *Ben Hecht*. When during the War of Independence the Israel government ordered the sinking of the *Altalena*, an Irgun ship loaded with arms which arrived off Tel Aviv and refused to surrender them unconditionally to the Israel government, Hecht, who was one of the organizers of its dispatch, withdrew from further Zionist activity. He nevertheless maintained his sentimental attachment to the Revisionist cause, and manifested his partisanship in *Perfidy* (1961), a vitriolic attack on David *Ben-Gurion and the Israel "establishment" and an examination of the *Kasztner affair.

In the course of a 40-year career, Hecht enjoyed success as a controversial writer on many issues. His autobiography, *A Child of the Century* (1954), was a best seller. His other works include *Count Bruga* (1926); *20th Century* (1932); *A Book of Miracles* (1939); *The Sensualists* (1959); *Gaily, Gaily* (1963); and a book of recollections, *Letters from Bohemia* (1964).

[Joseph Mersand]

HECHT, REUBEN (1909–1993). Israeli industrialist and Zionist activist. Hecht, the son of Jacob *Hecht, was born in Antwerp but grew up in Basle, and studied at the University of Heidelberg, receiving his doctorate in political science in 1933. Hecht was engaged in transport and shipping before emigrating to Erez Israel in 1936. An active Revisionist from his student days, Hecht cooperated with Zéev Jabotinsky during his stay in Paris in 1933–34, joined the Irgun Zéva'i Le'ummi, and was sent by David Raziel to Europe in 1939 to organize “illegal” immigration. In 1941 he escaped with his wife from German-occupied Yugoslavia to Switzerland, where he intensively continued his political and rescue work as representative of the Irgun and the Hebrew Committee of National Liberation. After World War II he joined the family shipping combine, Neptun-Rhenania, of which he was president from 1963 to 1970. In Israel he obtained the first concession granted in the state for the erection of port grain silos and in 1951 established the Dagon Silo Company in Haifa. Among his other activities are the foundation of the Shikmona publishing company and the unique Dagon Archaeological Museum, devoted to the means of cultivation and storage of grain since the most ancient times.

Hecht served on numerous governmental, civic, cultural, and educational bodies, including membership in the Archaeological Council attached to the Ministry of Education and Culture, the International Council of Museums, Paris, the Bezalel Academy, the Israel Museum and the Israel Board of the American-Israel Cultural Foundation, of whose subcommittee for art, archaeology, and museums he was chairman until 1976. He was among the founders of Haifa University and a member in its board from 1971 until the day he died. In 1981 he established the Hecht Museum, located inside the university, and donated his private collections. In 1984 he was the first to receive an honorary doctorate from Haifa University.

He was awarded the Kaplan Prize for efficiency in 1960, in 1970 he was made an honorary citizen of Haifa, and in 1977 he was appointed personal advisor to the prime minister. In 1986 he was awarded a special humanitarian prize from the international *B'nai B'rith organization. He was awarded the Israel Prize in 1988 for exemplary lifelong service to society and the state.

HECHT, SELIG (1892–1947), U.S. biophysicist. Hecht was born in Glogau, Austria, and was taken to the United States as a child. He carried out extensive research in physical chemistry and physiology, both in the United States and elsewhere. He taught biophysics at Columbia University in New York from 1926 until his death. Hecht was a pioneer in the physiology of vision and propounded the photochemical theory of vision. His experiments showed that minute quantities of light are sufficient to cause a reaction by the human retina. Measuring the visual properties of insects, he proved that in terms of light sensitivity these are much the same as for creatures with eyes. He was also an exponent of popular science; in particular his *Explaining the Atom* was widely read.

[J. Edwin Holmstrom]

HECKERLING, AMY (1954–), U.S. writer, director, producer. Heckerling grew up in New York City. She attended the High School of Art and Design and though she studied photography during her time there, she opted to pursue a different path upon completing high school, and went to NYU's prestigious Tisch School of Arts to study film. Based on the short films she made as an undergraduate student, one of which starred her NYU classmate and future mega-producer Joel Silver, Heckerling was accepted to the American Film Institute's directorial program, from which she received a master's degree. Despite a slow start at breaking into the movie industry after completing her graduate work, Heckerling's feature film debut was wildly successful. This was *Fast Times at Ridgemont High* (1982), a comic look at modern, suburban teenagers that included such up-and-coming stars as Sean Penn and Jennifer Jason Leigh in its young cast. After *Fast Times*, Heckerling went on to make several consecutive box office duds, including *Johnny Dangerously* (1984) and *National Lampoon's European Vacation* (1985). Following these movies, Heckerling came up with the idea for her next project while pregnant with her daughter Mollie Israel. Heckerling turned her inspiration into *Look Who's Talking* (1987), the box-office smash in which an infant's internal monologue is conveyed by the voice of Bruce Willis. She also wrote and directed the cultural touchstone *Clueless* (1995), which launched the career of Alicia Silverstone. Besides her many career achievements, Heckerling is a politically active liberal and devoted environmentalist.

[Casey Schwartz (2nd ed.)]

HECKSCHER, ELI FILIP (1879–1952), Swedish economic historian. Heckscher was born in Stockholm, where he taught from 1909 to 1944 at the University College of Commerce. His books, which were translated into many languages, were the *Kontinentalsystemet* (1918; *The Continental System, an Economic Interpretation*, 1923), and *Merkantilismen* (1931; *Mercantilism*, 1935). Based largely on new sources, *Mercantilism* presents an analysis of the intellectual world of the mercantile system. The study which occupied the last years of Heckscher's life was *Sveriges ekonomiska historia från Gustav Vasa*

(begun in 1935; *Economic History of Sweden Since Gustavus Vasa*, 1954). The author's death prevented him from continuing the study beyond 1815. Heckscher is regarded as one of the most important Swedish historians of his time.

HEDEGÅRD, OSKAR DAVID LEONARD (1891–1971), Swedish theologian. Hedegård edited and translated *Seder R. Amram Ga'on* for his doctoral dissertation (1951). He held various educational posts in the Swedish church and wrote a series of popular publications and handbooks on sacred history and New Testament theology. He co-edited (with A. Saarilalo) a Swedish interpreter's dictionary of the Bible, *Biblisk uppslagsbok, en handbok för bibelläsare* (1939, 1958³). His two-volume *Nya Testamentet på vår tids språk* (1964–65), consists of several New Testament books translated into modern idiom.

[Ignacy Yizhak Schiper]

HEDER (Heb. הדר; lit. "room"), the common name for the old-fashioned elementary school for the teaching of Judaism. The name first occurs in the 13th century. The *heder* was distinct from the *talmud torah*. Whereas the latter was a communal institution maintained by the community for poor children whose parents could not afford tuition fees, the *heder* was a privately run institution, the teacher receiving his fees from the parents. It was generally housed in a room in the private house of the teacher, called the *rebbe* (Yiddish form of "rabbi") or *melammed*. Usually three classes were held concurrently; while the teacher taught one the children in the others went over their lessons. The age groups were from 3–5, 6–7, and 8–13. The teacher ruled with an iron hand and freely wielded his cane (*kanchik*). No secular studies were taught, the subjects for the three classes being, respectively, reading in the prayer book, the Pentateuch with Rashi, and Talmud. To the *rebbe* was sometimes added an assistant, called the *belfer* ("b-helper"). The *heder* came under the withering attacks of the *maskilim*, who criticized the primitive methods and the restricted nature of the curriculum (cf. P. Smolenskin, *Ha-To'eh be-Darkhei ha-Ḥayyim*, 1 (1868), 4; J.L. Gordon, *Kol Kitvei...* (1899), 112–3) and toward the end of the 19th century attempts were made to introduce a "reformed *heder*" (*heder metukkan*) but without solid results. From the *heder* the pupil proceeded to the yeshivah.

[Louis Isaac Rabinowitz]

HEEGER, ALAN J. (1936–), U.S. physicist and material scientist and Nobel laureate. Heeger was born in Iowa. He was the first of his family to continue his education beyond high school and graduated from the University of Nebraska with a dual major in physics and mathematics. He received his Ph.D. in physics at Berkeley in 1961 while working part time for the Lockheed Space and Missile Division in Palo Alto, California.

He joined the Physics Department at the University of Pennsylvania as an assistant professor in 1962 and was made full professor in 1967. At Penn he served as laboratory director and vice provost for research. In 1982 Heeger moved to the University of California, Santa Barbara, where he held the Presidential Chair and served as professor of physics and professor of materials. He headed a research group at the University's Center for Polymers and Organic Solids. Heeger holds approximately 50 patents, which have broad commercial potential for use in polymer electronics ("plastic" electronics) with applications in areas ranging from electroluminescent displays (for cell phones, PDAs, and laptops) to solar cells and integrated electronic circuits. In 1990 he founded UNIAx, which played a leading role in developing the science and technology of conducting polymers with many important contributions. UNIAx was acquired by DuPont in 2000. Heeger served on the board of directors of Konarka Technologies, Inc., SBA Materials, and RitDisplay (Taiwan), and was a venture partner in NGen Partners. His research efforts continued to focus on the science and technology of semiconducting and metallic polymers. Later interests included biosensors and the detection of specific targeted sequences on DNA.

Heeger is the recipient of numerous awards, including the Nobel Prize in chemistry in 2000, the Oliver E. Buckley Prize for Condensed Matter Physics, and the Balzan Prize for the Science of New Materials. He is a member of the U.S. National Academy of Sciences and National Academy of Engineering. Heeger has more than 700 publications in scientific journals.

[(Gali Rotstein (2nd ed.)]

HEFER (Feiner), ḤAYIM (1925–), Israeli writer of light verse and song lyrics. Born in Poland, Hefer went to Palestine in 1936, served in the *Palmaḥ from 1943, and was one of the founders of Chizbatron, the army's popular entertainment troupe. His verse appeared widely in the Hebrew press, and he also wrote lyrics for satirical works for various theater groups and for literary programs in cabarets which he established together with Dahn *Ben-Amotz. Collections of his verse appeared in *Tahmoshet Kallah* (1956), *Millim le-Manginot* (1962), and *Sefer ha-Pizmonim* (1981). Many Israeli composers, such as Alexander (Sacha) *Argov, Dov Seltzer, Moshe *Vilensky, Nurit *Hirsch, Mordechai *Zeira and Yoḥanan Zarai set his songs to music and they became quite popular. A series of poems on the *Six-Day War, including those he wrote for his weekly column in *Yedioth Aḥaronoth*, appeared in *Misdar ha-Loḥamim* (1968). He also wrote the lyrics for two original Hebrew musicals *Kazablan* (1966) and *I Like Mike* (1968). He was awarded the Israel Prize for Israeli song in 1983.

[Getzel Kressel]

HEFER PLAIN (Heb. עֲמֻקַּת הַפָּר), the central part of the Sharon Plain between the *Ḥaderah sand dunes in the north and

The Hefer Plain.

the *Netanyah-Tul-Karm road in the south. In 1928–29, the *Jewish National Fund (JNF) acquired the Wadi Hawārith lands initially comprising an area of some 8,000 acres. This purchase, one of the largest at the time, was made through aid extended by Canadian Zionists. A continuous chain of Jewish holdings was now created throughout the length of the Sharon to form the backbone of the Jewish settlement network. The first settlers, members of the moshav group “Irgun Vitkin,” who arrived in the Hefer Plain in 1929, drained the swamps of the Alexander River which flows through the region from east to west, and planted trees to prevent the shifting of sand dunes. The legal land transfer was finalized and arrangements made with Bedouin who claimed tenant rights, while obstacles placed in the way by Arab nationalists and British Mandatory officials were dealt with. From 1931, permanent villages were set up, and in 1939–40, a further portion of the Hefer Plain (“Wadi Kabāni”) was acquired, where additional settlements were later founded, partly by veterans of World War II. After the *War of Independence (1948), the settlement bloc was extended also eastward, in the direction of Tul-Karm. The Hefer Plain became one of Israel’s most thoroughly developed and densely settled rural districts, with 32 villages (44, including the newer villages in the east). Farming is highly intensive throughout, with citrus groves and dairy cattle breeding as prominent features. Midrashiyyat Ruppin (named after A. *Ruppin), maintained by the *Histadrut and other bodies, was for a time a center of agricultural study and research. Numerous industrial enterprises were founded in its kibbutzim, and its seaside villages developed as bathing resorts.

[Efraim Orni]

HEFEZ BEN YAZLI’AH (**ha-Ashuri**, “the Assyrian”; probably second half of 10th century), Babylonian talmudic scholar. Few personal details are known about him save that he was a native of Mosul, was blind, and bore the identical titles of *alluf* and *resh kallah*, evidence of his high standing in the Babylonian academies. The claim that Hefez lived in Kairouan,

North Africa, has not been substantiated. The exact dates of his activity are unknown, but it is clear he was already recognized as a scholar at the beginning of the 11th century. Jonah *Ibn Janah, for one, held him in great esteem. Hefez was renowned among the scholars of Spain and Egypt as a grammarian and talmudic scholar, and is cited by such luminaries as *Alfasi, *Maimonides, *Judah b. Barzillai, *Bahya ibn Pakuda, *Nathan b. Jehiel, and the lexicographers, Salomon ibn *Parhon and Judah *Ibn Balaam. Maimonides specifically acknowledges that he was guided by him in his commentary on the Mishnah (*Maimonides’ Letters*, ed. by Baneth (1944), 78). Because he wrote in Arabic, Hefez’s teachings were not known to French and German scholars.

His most important work is his *Sefer ha-Mitzvot* (“Book of Commandments”), probably the first comprehensive book of laws in Hebrew literature, including laws which no longer had practical application. Only fragments of this book are extant (see bibliography). Unlike the earlier *Halakhot Gedolot which follows the order of the Talmud, his book was arranged according to an inner logical system. His numeration of the precepts differed too from that of the *Halakhot Gedolot*. His method was to embark upon an extensive interpretation of each precept as treated in talmudic literature, including in the process many quotations from the Babylonian and Jerusalem Talmuds and the Tosefta with important variant readings, reflecting his closeness to the geonic sources. Statements of *Samuel b. Hophni are to be found in the book, though lack of exact chronological data leaves open the question as to who borrowed from whom. A work attributed to Hefez is a lexicon of the *Halakhot Gedolot* (mentioned in lists of books from the *Genizah), a few quotations of which are to be found in the works of the *rishonim*.

French and German scholars alone refer to a certain *Sefer Hefez*. It is first mentioned by *Eliezer b. Nathan, and later by his pupils and followers: *Eliezer b. Joel ha-Levi, *Isaac b. Abba Mari in his *Ittur*, *Isaac b. Moses of Vienna in his *Or Zarua*, *Mordecai b. Hillel in his *Sefer Mordekhai*, and others. All that is known of it is that it was a book of decisions written in Hebrew and including the orders *Nashim*, *Nezikin*, and *Mo’ed*. The great similarity – mostly as a result of copying – between this *Sefer Hefez* and the anonymous *Metivot*, one of *Alfasi’s sources, led various scholars to regard the *Sefer Hefez* as identical with the book of Hefez b. Yazli’ah. Subsequent study has shown, however, that they have nothing in common but the title. Fragments of the anonymous book have been collected by B.M. Lewin (see bibliography).

[Israel Moses Ta-Shma]

HEFKER (Heb. הֶפְקֵר), ownerless property and renunciation of ownership. *Hefker* is property that is ownerless and can therefore be legally acquired by the person who first takes

possession of it. There are two categories of ownerless property: (1) property that has never been owned before – such as wild animals and birds, fish of the river and ocean, and wild or forest plants (Maim. Yad, Zekhi'ah, 1:1–2); and (2) property that has ceased to belong to its former owner.

Property becomes *hefker* in two different ways, just as *ownership can generally cease in the same two ways:

(1) When it is clear that the property can no more return permanently to an individual's possession – for example, birds which have escaped (Ran on Rif, Hül. beginning of Ch. 11) – provided that no other person has acquired it. Similarly, the property of a proselyte who leaves no Jewish heirs becomes *hefker*, since his gentile relatives do not inherit from him.

(2) When the owner decides not to have it again in his possession, i.e., if he renounces it or if he gives up hope of recovering *lost property. As in all other instances of termination of ownership, such as **ye'ush*, the only formality required in the case of renunciation is the manifestation of the owner's intention, whether by word or conduct, as when he declares "this is renounced in favor of anyone who wants it" (Ned. 43a) or by any conduct to this effect. Thus, for instance, if a Jew purchases land from a non-Jew, the latter may vacate it on receipt of the purchase money, whereas the purchaser may not wish to acquire the land except in the prescribed manner in which it would be acquired from another Jew, i.e., by *shetar* or *hazakah* (see *Acquisition). It is thus possible that in the interval the field becomes ownerless and may be acquired by anyone taking possession of it (BM 54b), although in practice the secular law of the land would usually prevail to make the transfer effective. Similarly, the circumstances in which property is found may indicate that ownership thereof has been renounced, as in the case of "intentional loss" (*avedah mi-da'at*), i.e., when the owner knowingly leaves the property in a place where he is likely to lose it, such as produce scattered on the threshing-floor (BM 21a), or open jars of wine or oil in a public domain (BM 23b). The fact that ownership is relinquished by mental decision means that minors, having no "mind" in law, cannot dispose of their property by renunciation (BM 22b). For the same reason *hefker* created through a mistake of fact (see *Samson b. Abraham of Sens, Comm. Pe'ah, 6:1), or under duress (TJ, Suk. 4:2, 54b) is void.

There is a difference of opinion with regard to *hefker* between the schools of Shammai and Hillel. The former hold that a renunciation in favor of the poor only is valid, comparing it to **pe'ah* ("the corner of the field," Lev. 23:22), while the latter maintain that to be valid the renunciation must apply to rich and poor alike, as is the case with regard to *shemittah* ("the sabbatical year," Lev. 25:1–7). In R. Johanan's view both schools agree that renunciation in favor of all human beings, but excluding animals, or to all Jews, but not non-Jews, is valid, while Simeon b. Lakish maintains that the school of Hillel would regard it as invalid (TJ, Pe'ah 6:1, 19b). It is possible that the difference of opinion centers around the principle that where the renunciation is not of universal application, the renouncer, by preventing the property from being acquired

by certain categories excluded from the renunciation, thereby retains some possession of it which is a bar to renunciation. However, where the owner disregards the possibility of it being acquired by those whom he excludes, he thereupon ceases to guard it and it passes out of his possession. The school of Shammai opines that the owner who renounces his property in favor of the poor has no fear that the rich may take possession of it, while the school of Hillel disagrees.

Ownership of property that has been lost ceases from the moment the owner gives expression to his despair of recovering it (see **ye'ush*). In the case of *hefker* there is a dispute as to whether it takes effect immediately upon renunciation, in which case the owner cannot retract, or upon the acquisition of the property by another (Ned. 43a; TJ, Pe'ah 6:1, 19b). A person may renounce his property for a fixed period, and if it is acquired by another within the stated period it becomes the latter's permanently. At the end of the stated period the renunciation is automatically annulled if the property has not so been acquired (Ned. 44a).

Hefker property is exempt from a number of commandments. It is free from the obligations of the gifts due to priests and levites, as from *terumah* ("heave offering"), tithes, and the giving of the firstborn of animals to the priest. Advantage was sometimes taken of this law to evade these obligations. The owners would renounce their property to evade their liability, subsequently reacquiring it before others could take possession of it. To prevent this an enactment was made restricting the ability to withdraw a renunciation to three days from the time it was made (Ned. 43b); within this period a renounced field remains subject to the various imposts, and owners would be afraid to make the renunciation apply for a longer period lest the field be acquired by someone else. However, there are different opinions as to the details of this enactment. Similarly, it was enacted that renunciation had to be made before three persons (Ned. 45a), so that it could be made public and people would be able to take advantage of it. Some scholars hold that the requirement of three witnesses is based on biblical law; others hold that in biblical law two witnesses suffice for this purpose, and that the need for three is a rabbinical enactment.

In the State of Israel, ownerless property belongs to the State, in accordance with the "State Property Law, 5711/1951." For acquisition of ownerless property, see *Acquisition. For *hefker bet din hefker*, see *Confiscation and Expropriation, **Takkanot*.

Shemittah and Hefker

It has recently been proposed that the law of *hefker* be applied to solve the problem of *shemittah* (the Sabbatical year) in the State of Israel. The approach thus far adopted to solve this problem in practice has been that of the *heter mekhirah*, i.e., the temporary sale of the property on which the produce grows to a non-Jew, so that the law of *shemittah* does not apply. Rabbi Naphtali Zevi Judah Berlin (the *Neziv*, Resp. Meshiv Davar II.56) ruled that the prohibitions of the *shem-*

ittah year do not apply to property that has been made *hefker* by its owner, much like the rule that the prohibition of *hamez* on Passover does not apply to property that has been made *hefker* by its owner. Soon after the establishment of the State of Israel, it was suggested that the Neziv's ruling be used to obviate the application of *shemittah* prohibitions, by making the property *hefker*. This suggestion raises a number of issues, such as whether property can be made *hefker* for only a limited period of time, and whether it is possible to prevent another person from receiving ownership of property that has been made *hefker*; a number of responses were offered to these questions. At the time, the Chief Rabbinate discussed the suggestion but did not issue any ruling. Recently, the suggestion has again been raised.

HEFTER, ALFRED (**Hidalgo**; 1892–1957), Romanian editor, journalist, and author. Born in Jassy and influenced by Marxism, Hefter published a pamphlet in this spirit in 1908 together with his brother, the Socialist journalist Jean Hefter (1887–1974). Alfred Hefter edited the symbolist magazine *Ver-suri și Proză* in Jassy (1912–14), the paper *Arena* in 1918 (suspended by censor), and then *Lumea*, which appeared until 1924. Moving to Bucharest, he edited two papers there, but incurred government opposition and left for France, later moving to Geneva, Switzerland (1931), where he edited the French-language journal *Le Moment*. Having returned to Bucharest he had to leave again in 1941, settling in Jerusalem. In 1948 he left for France, and went to Italy, where he went into business. He died in Rome. His published works include *Cuvinte despre oameni* (“Some Words on People,” 1913), *Din umbră* (“From the Shadow,” 1913), and two dramatic works, *Ariana* (1915) and *Miros de iarbă* (“Smell of Grass,” 1915).

HEFZI BAH (Heb. הֶפְזִי בַּח), kibbutz at the foot of Mt. Gilboa, Israel, affiliated with Ha-Kibbutz ha-Me'uhad. It was founded in 1922 by pioneer youth from Germany and Czechoslovakia, who were soon joined by immigrants from Romania, and later from other countries. On the grounds of the kibbutz, the mosaic floor of the ancient *Bet Alfa synagogue was uncovered and is protected by a hall built over it. Hefzi Bah's economy was based on intensive farming (field crops, fishery, dairy cattle, and poultry), and factories for water meters and plastic duct

installations. The kibbutz also had guest rooms and a fish restaurant. In 1968, Hefzi Bah had 500 inhabitants, dropping to 400 in 2002. The name, Hefzi Bah, biblical in origin (Isa. 62:4), was taken over by the kibbutz from the name of the Haderah suburb where its first members had their transit camp.

HEGEDÜS, ARMIN (1869–1945), **SEBESTYÉN, ARTUR** (1868–1943), and **STERK, IZIDOR** (1860–1935), winners of a competition for the design of Hotel Gellért (1909–1918), an eye-catching example of Secessionist architecture. Its thermal bath and swimming pool were planned later (1927) by Sebestyén whose projects also included buildings outside Hungary, such as cinemas in Odessa and Sofia. He was baptized. Among the main works of Hegedüs was the reconstruction of the Central Municipality building in Budapest, originally serving as barracks for invalid soldiers. Sterk designed factories, apartment houses, and department stores.

[Eva Kondor]

HEGEL, GEORG WILHELM FRIEDRICH (1770–1831), German philosopher and culminating figure of German Idealism. After studies in philosophy (1788–90) and theology (1790–1793) at the Tuebingen seminary, he served as lecturer and professor at Jena (1801–07), Heidelberg (1816–18), and Berlin (1818–31). Hegel is important for Jewish history for two reasons: first, for his attitude to Judaism, which, because of his importance, was of major interest for many Jews throughout the first half of the 19th century; second, for his philosophy of history and religion in general, which influenced Jewish and other thinkers for an even longer period. Unfortunately most of his statements on these subjects were published only after his death, and were compiled based on his lecture notes and notes taken by his students. This circumstance, as well as the complexities of his language and his extraordinarily systematic thinking, makes his thought on Judaism and the philosophy of history and religion difficult to understand. Thus Hegel has become one of the most controversial figures in the history of philosophy.

Initially marked by anti-Judaic bias (in part inherited from Kant), Hegel changed his views on Judaism considerably during the course of his life. In his early writings, never intended for publication, he contrasted Greek folk religion, in which Divinity is immanent as beauty, with Jewish and, to some extent, Christian book religion consisting of positive, externally imposed law (in Christianity, sacred fact). This dichotomy is later abandoned as Hegel, rejecting his youthful romanticism, develops his dialectical method. Greek beauty and Jewish holiness are now on a par. There is truth in the Greek worship of man-made statues, for Divinity is in their beautiful making; yet, being man-made, their infinity is partly false, despite their beauty. Hence they are doubly demythologized – by the Roman Empire in life (the pantheon assembles and destroys all the pagan gods), and by ancient philosophy in

thought. Judaism, in contrast, demythologizes from the start. Its infinite God, transcendent of and over against nature and man, reduces both to nondivine creatures. This achievement too, however, is bought at a price. Recognizing divine human nonunion, the Jew cannot in love be united with, but only in fear serve, a distant, holy Lord. Hence the place of reconciliation is taken by obedience to the law and confidence in the promised reward. Hence too, unlike the Greek-Roman world which universalizes its truth, the Jewish people most stubbornly remain in their particularity, despite the universality of their God, because of His unyielding transcendence. Obviously even Hegel's mature thought repeats once again the traditional Christian opinion since Paul, and fails to do justice to Judaism – to the divine-human union manifest, e.g., in the love of God, the messianic expectation and, perhaps above all, the covenant. This failure is partly due to the Christian component of his thought, partly to his doctrine of total reconciliation, antipathetic, e.g., to Judaism's absolute opposition to idolatry; partly to the restriction of his thought to an idealized biblical Judaism, and to his neglect and ignorance of rabbinic Judaism.

Methodically he developed as a system the “absolute” Idealism by which he tried to explain and reconcile the contradictions and tensions of his time. He saw these processes as part of a comprehensive and rational unity, which evolved through and manifested itself in a steady and dynamic process of contradictions, negations, and (preliminary) syntheses (Hegel himself did not use the term “synthesis,” but rather the “Whole”). He applied this system of dialectics to explain the totality of science, art, history, and religion. In his system, religion and revelation are the same, for God – the “Absolute” – is perceptible only to the thinking mind, so that there is no contradiction between what religion believes and what reason sees.

These ideas had a wide impact, which did not cease with Hegel's death. The subsequent history of philosophy has recognized two opposing camps of successors, the so-called Right Hegelians and the more revolutionary Left Hegelians (the latter, also known as the Young Hegelians, include Bruno Bauer, David Friedrich Strauss, and the young Karl Marx, among others). Among Jewish circles it was the notion of development and progressive perfection of humanity that aroused particular interest, providing a basis for assigning to Israel a particular mission. Hegel thus affected such various Jewish thinkers as Samson Raphael *Hirsch, Heinrich *Graetz, Samuel *Hirsch, and Moses *Hess, a fact testifying to the many-sidedness and adaptability of his thought. These thinkers' critiques of Hegel's attitude toward Judaism, including Samuel Hirsch's profound, full-scale, Jewish critique, have, however, been ignored by all except Jewish scholars.

HEGENHEIM, town in the Haut-Rhin department, E. France, 3 mi. (5 km.) W. of Basle. Fourteen Jewish families were recorded here in the census of 1689; the community increased steadily until in 1784, with 409 persons, it was one of the three largest in Alsace. From then onward, however, the numbers rapidly declined, and in 1936 only 36 Jews remained. The community had owned a cemetery from 1672, which served many other Jewish communities in Upper Alsace and from the 19th century was also used by the Jews of Switzerland. A monument has been erected in this cemetery in memory of the victims of the Nazi persecution.

[Bernhard Blumenkranz]

HE-ḤALUTZ (Heb. הַחֲלוּץ; “the pioneer”), an association of Jewish youth whose aim was to train its members to settle on the land in Israel. The original meaning of the Hebrew word is the vanguard that leads the host on its advance (Josh. 6:13).

Origin of the Movement

The idea of He-Ḥalutz was conceived during the crisis that overtook Russian Jewry in the aftermath of the 1881 pogroms. This awakening was influenced indirectly by the Russian revolutionary movement, which called upon the intelligentsia to “go out to the people.” Two of the societies that were formed at this time – *Bilu, which called for settlement in Erez Israel, and *Am Olam, which advocated settlement in the United States – were pioneer movements that imposed the concepts of “self-fulfillment” upon their members and planned for collective or cooperative settlement. At the beginning of the 20th century, a Jewish youth movement made up of small groups gradually came into being. Menaḥem *Ussishkin gave impetus to this development in 1904, when he called for the establishment of “a general Jewish workers' organization made up of unmarried young people of sound body and spirit. Each member would be committed to settle for a period of three years in Erez Israel, where he would render army service for the Jewish people, his weapons being not the sword and the rifle, but the spade and the plow” (in *Our Program*). Such movements arose under different names in various countries: in America He-Ḥalutz, founded by Eliezer *Joffe in 1905 (see below); in Russia, a number of societies, among them Bilu'im Ḥadashim (new Bilu'im) and He-Ḥalutz. They were encouraged by the Erez Israel workers, who called for the settlement of *ḥalutzim* (A.D. Gordon in 1904, Joseph *Vitkin in 1905, the Ha-Po'el ha-Za'ir in 1908, etc.) and sent emissaries abroad to urge young Jews to settle in Erez Israel.

The *Ze'irei Zion movement included in its platform “the organization of *ḥalutzim* and their training for *aliyah*.”

In the summer of 1906 the *Zē'irei Zion* held a conference of *ḥalutzim* (the *Bilu'im Ḥadashim*) that decided to impose upon the members of the movement the goal of settling in Erez Israel and engaging in manual or intellectual labor in groups or as individuals, as well as studying Hebrew and Arabic. During the 11th Zionist Congress in Vienna (1913), *Zē'irei Zion* decided to establish a center for Russia and Poland and to include among its tasks “the training of *ḥalutzim* who are contemplating settlement in Erez Israel.” At the conference of *Zē'irei Zion* in Russia (Vilna, April 1914), Eliahu Munchik, an emissary from Erez Israel, spoke on *aliyah* (immigration) and *ḥalutziiyyut* (pioneering), and the conference decided to organize groups and establish a mutual aid fund for them. During World War I the movement came to a standstill except in Russia and the United States. In the U.S. David *Ben-Gurion and Izhak *Ben-Zvi attempted to establish a pioneering movement. In their Yiddish pamphlet, “*Printcipen un Oyfgaben*” (“Principles and Tasks,” 1917), the guidelines were formulated as follows: “To create and organize the first workers’ army for Erez Israel” and to impose upon each member the obligation of “settling in Erez Israel when the need arises.” A few hundred youngsters joined the organization. At the end of 1917, when the call came to join the *Jewish Legion, these members of He-Ḥalutz in the U.S. volunteered for military service and went to Erez Israel together with the other volunteers.

Russia

The February Revolution of 1917 opened up new possibilities for Zionist activities in Russia. An article on He-Ḥalutz by Ben-Zvi, published in *Yevreyskaya Zhizn* in April 1917, made a profound impression upon Jewish youth. The second conference of *Zē'irei Zion*, which convened in Petrograd in May 1917, adopted a resolution calling for “the education of the youth to the ideas of *ḥalutziiyyut* and the organization of He-Ḥalutz groups to serve as the basis of Jewish national life in Erez Israel.” The *Balfour Declaration, issued in November 1917, greatly accelerated the process, and groups of *ḥalutzim* developed in Russia, Poland, Lithuania, Latvia, Galicia, Bessarabia, etc. At first the various groups had no connection with one another, but gradually they became part of a national organization and eventually a worldwide movement. In January 1918, the founding convention of the Russian He-Ḥalutz met in Kharkov. At this conference, a controversy, which dominated the movement for a number of years, arose between the “idealists,” who argued that He-Ḥalutz should serve as a vanguard and assume tasks of outstanding importance for the Zionist movement, and the “materialists,” who saw the movement simply as the organization of Jewish workers planning to settle in Erez Israel.

In the spring of 1918, Joseph *Trumpeldor joined the organization of He-Ḥalutz. In July and September 1918, conferences of Zionist organizations and of He-Ḥalutz groups were held, and it was decided that the movement would be Zionist but nonpartisan and would accept for membership Jewish youth over 18 who recognized Hebrew as their national

language and were preparing for settlement in Erez Israel. Trumpeldor formulated these decisions in a Russian-language pamphlet titled *He-Ḥalutz*, which was widely distributed in Russia. On Jan. 6, 1919, the first conference of the movement, in which representatives of 23 groups in central Russia and Belorussia took part, took place in Moscow. Trumpeldor, who had lost hope of creating a Jewish army of 100,000 men in Russia that would march to Erez Israel through the Caucasus, called for the establishment of a “military He-Ḥalutz” of 10,000 men to replace the British garrison in Erez Israel. The conference decided upon a series of general principles: He-Ḥalutz is a nonpartisan association of workers who have resolved to settle in Erez Israel in order to live by their own labor, rejecting exploitation of others’ work; it will train its members for life in Erez Israel, transport them there, and facilitate their absorption in the country; its final goal is the establishment of a sovereign Jewish nation in Erez Israel; it accepts the authority of the Zionist Congress. Trumpeldor was elected president and asked to go to Erez Israel to prepare the ground for the absorption of *ḥalutzim*. An executive body was elected and took up its seat in Minsk. In spite of the chaotic conditions prevailing in Russia during the civil war, He-Ḥalutz entered upon a period of rapid development. A wave of unorganized emigration began; it was made up of various groups of *ḥalutzim* who set out on the way to Erez Israel along different routes – across the Romanian, Polish, Lithuanian, and Latvian borders and by way of the Black Sea and the Caucasian Mountains. The number of groups associated with the center grew to 120. When Trumpeldor fell at *Tel Ḥai (March 1920) the movement lost its natural leader, but he became the symbol of its ideals, as he had realized the aims of He-Ḥalutz – settling in Erez Israel, working there, and being prepared to give one’s life in its defense.

For He-Ḥalutz, the consolidation of the Soviet regime meant the beginning of a process that was to end in the total suppression of the movement. The *Yevseksiya* (the Jewish “section” in the Communist Party) played a role in this process. When the He-Ḥalutz center, then in Moscow, applied to the authorities for official approval of its activities, it received the reply (March 18, 1918) that there was no need for official approval as long as the activities of He-Ḥalutz conformed to the laws of the Soviet Union. This rather equivocal reply (which at the time did not apply to the Ukraine and Belorussia) provided a basis, however uncertain, for the continued existence of the movement. In many places, its training farms dovetailed with the official efforts of “productivization” of those Jews who had lost their source of livelihood, and sometimes He-Ḥalutz was even officially encouraged to continue these training activities. The hasty and unorganized *aliyah* of *ḥalutzim*, however, adversely affected the development of the movement. In October 1920 another conference of He-Ḥalutz, which took place at Kharkov, emphasized the need for training *ḥalutzim* before their move to Erez Israel. During the following years while the Jewish *shtetl* was rapidly being destroyed, the movement continued to develop, even

though many branches, as well as entire areas, were out of touch with the center. In Odessa, for example, a special center for the Ukraine functioned independently. One group that had a considerable influence upon training of *ḥalutzim* in the early 1920s was the Volga Guard at Saratov, which later moved to Yartsevo, near Moscow, and established the J.H. *Brenner Work Battalion. In January 1922, the third He-Ḥalutz conference was held at Kharkov and was attended by delegates from Russia, the Ukraine, and Belorussia. Its participants were arrested and continued their deliberations in jail, but He-Ḥalutz continued its work. At the end of the year a training farm named Tel Ḥai was opened up in the Crimea.

At this juncture, the first signs of a split in the ranks of He-Ḥalutz made their appearance. Some of its members decided to adapt “He-Ḥalutz” to the state ideology in order to achieve official approval of its activities; others, however, felt that He-Ḥalutz should retain its nonpartisan character and disassociate itself from Communism. In April 1923 the Council of He-Ḥalutz met in Moscow and decided upon program guidelines, which included a paragraph defining He-Ḥalutz as an organic part of the Jewish and international working class and, recognizing the inevitability of the class war, declaring that the movement would fight against capitalism in all its forms. Another paragraph stipulated that members who “oppose the idea of the *kevuḏah* and who wish to plan their lives as members of a moshav ovedim would not be admitted to the training groups.” These resolutions caused an uproar in He-Ḥalutz and a bitter controversy broke out. Ben-Gurion, who was in the Soviet Union at the time visiting its agricultural exhibition as a delegate of the *Histadrut, made an unsuccessful attempt to settle the dispute. In August 1923, when the He-Ḥalutz statute was given official sanction, the movement split into two factions: the “legal” faction, advocating class warfare and a collective way of life, and the “illegal” faction, which regarded itself as a national Jewish workers’ movement.

The legal He-Ḥalutz strove to utilize the limited possibilities deriving from its status. Official branches were opened in various places (excluding, however, the Ukraine and Belorussia, where the official approval did not apply); a struggle was conducted, in public, with the Jewish Communist activists, and permission was obtained for the publication of a journal (*He-Ḥalutz*), which printed 3,000 copies and contained news from Erez Israel. Members of He-Ḥalutz participated in official celebrations and holidays (May Day, the anniversary of the Revolution), displaying Zionist slogans and singing Zionist songs. He-Ḥalutz also joined the organizations designed to encourage the agricultural settlement of Jews in Russia (Ozet) and struggled inside these organizations against the design to turn them into instruments against *aliyah*. More training farms such as Maḃan in the Crimea and Zangen near Moscow were established. The illegal faction of He-Ḥalutz carried on its activities underground and also succeeded in establishing training farms of its own, such as Mishmar in the Crimea (1924) and Bilu in Belorussia (1925). At the end of 1925 the factions had a total membership of 14,000.

The year 1926, however, was a turning point for the worse. News of the economic crisis in Palestine had a depressing effect, and many *ḥalutzim* – including some who had been members of the Work Battalion – returned from Palestine as disappointed men. At the same time the settlement of Jews on the land in the U.S.S.R. boasted considerable achievements, and it seemed to many that this was the proper way to the large-scale “productivization” of Russian Jewry. The Soviet authorities now persecuted both factions of He-Ḥalutz. No aid was forthcoming from the Zionist movement or the He-Ḥalutz movement abroad. In March 1928 the government canceled the approval it had given to one faction, and both were now illegal. The training farms of He-Ḥalutz were disbanded and their members had only one course left – to go to Erez Israel after first spending years in jail and exile. Even this course was fraught with difficulties and eventually came to an end. Slowly the movement was suppressed, although efforts to keep it alive continued until 1934. Those members of He-Ḥalutz who had not succeeded in leaving for Erez Israel remained in prison or exile, some to be liquidated during the mass purges (among them Shemu’el Schneurson, one of the leaders of the underground He-Ḥalutz who had returned from Erez Israel in 1926 to take part in the underground work of the movement).

The He-Ḥalutz movement in Russia affected the development of the movement far beyond the confines of the country. Hundreds of *ḥalutzim* from Soviet Russia who passed through Poland, Romania, Lithuania, Latvia, etc., on their way to Erez Israel were of significant help to the movement in those countries. The final severance of the He-Ḥalutz movement in Russia from the outside world and from Erez Israel was one of the severest blows dealt to the Zionist Movement.

Poland

At the same time, the movement spread all over Europe, as well as overseas. In 1921 He-Ḥalutz conferences took place in no fewer than 25 countries in Eastern, Central, and Western Europe, the countries of North Africa and the Middle East, North and South America, and South Africa. With the suppression of all Zionist activities in the Soviet Union, the center of the movement was resituated in Poland. During the 12th Zionist Congress (Carlsbad 1921), the He-Ḥalutz organizations held their first world conference and decided to establish a world federation with headquarters in Warsaw. The movement in Poland began at the same time as in Russia (at the beginning of the century), but only at the end of the war did it become a mass movement. The growth of He-Ḥalutz in Poland was greatly encouraged by the Balfour Declaration and the renewal of ties with Erez Israel, particularly with the workers’ parties, as well as by the pauperization of the Jewish masses and the appearance of a young and inspired leadership that searched for a way to Jewish national freedom and the creation of a new Jewish society.

The program of He-Ḥalutz consisted of three basic, interdependent points: organization, training (*hakhsharah*), and

aliyah. The last was the most difficult to achieve, as the British military authorities in Palestine were largely anti-Zionist and discouraged Jewish immigration. It was also deemed impossible to enter the country illegally by eluding the border control, since peace had not yet been restored and there were no land or sea communications. In spite of these obstacles, individual immigrants and small groups succeeded in entering the country; the groups grew in size and eventually the road of *aliyah* lay open. The first group to enter Erez Israel in this manner was the “Bendin” group, consisting of six *ḥalutzim*. They left Poland in the summer of 1918 and made their way through Odessa and Constantinople, finally reaching Jaffa on Dec. 5, 1918, after they had risked their lives in a daring and arduous trip. A second group left Radom in November 1918. Originally numbering 15 persons, they were joined en route by 90 *ḥalutzim*. Their trip entered Zionist history as “The 105.” Without passports and visas they passed through Czechoslovakia, Austria, Serbia, Croatia, and Italy, and time and again they were arrested, imprisoned, and beaten. Finally they reached Naples, where, lacking entry visas, they were unable to board a ship for Palestine. It was only after great efforts were made in their behalf (in which the author Axel Munthe, then a resident of Capri, also took part) that London authorized the issue of visas. When they landed in Egypt, they were imprisoned by the British military authorities, who suspected them of being “Bolsheviks.” Finally, after six months of hardship, they reached Palestine. On their arrival by train from Egypt during Passover 1919, they were welcomed by almost the entire population of Tel Aviv. “The 105” had in fact inaugurated a new wave of immigration – the Third *Aliyah.

The reports of the arrival of the “Bendin” and Radom groups gave new encouragement to the movement in Poland. Branches were organized and training programs instituted in hundreds of towns and cities. Training was divided into two parts: ideological training (Zionism and social sciences, history and geography of Erez Israel, and Hebrew) and practical training (vocational education, primarily in agriculture). Many *ḥalutzim* were employed by Jewish and gentile landowners (especially in Galicia) as individuals or in groups; but in the main the training was conducted on farms established and maintained by He-Ḥalutz. The largest and best known of the dozens of such farms were at Grochow (near Warsaw), Czestochowa, Grodno, Suwalki, and Bendzin. There were also training facilities in quarries (the best known of them, in Klosow, Volhynia), sawmills, textile factories, etc. The expansion of the training program was followed by an increase in *aliyah*.

In 1918 Russian *ḥalutzim* on their way to Palestine began entering Poland illegally. At first they came in small groups, but in the period 1919–23 the flow took on considerable proportions. The *ḥalutzim* came mostly from Podolia, the Ukraine, Volhynia, and Belorussia, and they converged on Vilna, Baranovichi, Rovno, Pinsk, and Warsaw. In the initial phase the Polish authorities tolerated their illegal entry on the basis of documents furnished by the Palestine Office of the Zionist Movement and provided the *ḥalutzim* with emigrants’ pass-

ports on the assumption that their stay in Poland would be short. When immigration to Palestine was stopped in 1921, however, the Polish authorities took severe measures against the *ḥalutzim*, arresting and deporting them back to the Soviet border. It was only after the Zionist institutions had undertaken to speed up the departure of the *ḥalutzim* for Erez Israel that the situation was alleviated. The Russian *ḥalutzim* established an organization of Russian and Ukrainian *ḥalutzim* in Poland, many of whom were placed in the Polish He-Ḥalutz training farms, while others were in *ḥalutzim* hostels and private employment. These refugees from Russia left an indelible imprint upon the Polish movement. Eventually the Russian *ḥalutzim* were able to go to Palestine, and the last transport of 400 arrived in Jaffa on May 3, 1923.

The Polish He-Ḥalutz movement established within its ranks He-Ḥalutz ha-Za’ir, which maintained close relations with various Zionist youth movements, such as Dror (Freiheit), *Gordonia, *Ha-Shomer ha-Za’ir, etc. The Polish He-Ḥalutz reached the height of its development during the Fourth and Fifth *aliyot*. In 1924, He-Ḥalutz in Poland had a membership of 1,700; in 1925 – 4,600; 1930 – 11,600; 1933 – 41,000. Members enrolled in the training program numbered 712 in 1925, 2,450 in 1926, 2,230 in 1932, 4,450 in 1933, 7,915 in 1935. The Polish movement also published a number of periodicals: *He-Ḥalutz*, *He-Atid*, *He-Ḥalutz ha-Za’ir*, etc. In 1934 He-Ḥalutz inaugurated the “illegal” *immigration movement by dispatching the boat *Velos* with *ḥalutzim* from Poland and the Baltic states. In the late 1930s He-Ḥalutz cooperated with the *Haganah in organizing the *ḥalutzim* as “illegal” immigrants, in their transportation to Palestine, and in the struggle for opening the gates of Palestine. During World War II He-Ḥalutz members were among the most active resistance fighters against the Nazis.

Lithuania

He-Ḥalutz in Lithuania was established after World War I and based itself initially upon cooperative societies (in carpentry, tailoring, food processing, etc.). Due to lack of capital and experience, these cooperative societies did not last long, and they were replaced by agricultural training facilities. The main center of agricultural training was a farm run solely by He-Ḥalutz known as Kibbush. Memel, the German port annexed by Lithuania, was also a center of He-Ḥalutz activities; it had an urban cooperative, the members of which were engaged in a variety of activities, including marine and port operations. Memel was also known in the movement for its outstanding He-Ḥalutz House. Other urban He-Ḥalutz cooperatives existed at Kaunas, Siauliai, Vilkaviskis, Poniviez, etc. The membership of He-Ḥalutz in Lithuania ranged from 1,000 to 1,500.

Latvia

In Latvia, the He-Ḥalutz movement’s main training farm was located at Altasmuza, near Riga. Originally the property of *OZE, it was transferred to He-Ḥalutz and also served as a school, with the teachers receiving their salaries from the state.

Other cooperatives existed at Dvinsk, Tukum, and Libau. In the period 1920–21, 150 *ḥalutzim* settled in Palestine and were followed by many more in the subsequent years.

Romania

He-Ḥalutz came into existence in Romania in 1918, when Bessarabia, Bukovina, and Transylvania were incorporated into the country. It was started by *ḥalutzim* who had fled from Russia and the Ukraine and had to spend periods of varying length in Romania before they were able to proceed to Erez Israel. These *ḥalutzim*-in-transit established cooperatives of their own and also worked in the fields and forests. As a first step, the Romanian He-Ḥalutz acquired two training farms: one was later sold and replaced by the Massadah farm near Beltsy, and the other was near Jassy. Other farms were established near Galati and Bucharest. The capital for the acquisition of the farms and their maintenance was provided by a Friends of He-Ḥalutz Society. Most Zionist youth movements (Ha-Shomer ha-Za'ir, Gordonian, Dror, *Ha-No'ar ha-Ziyyoni, *Bnei Akiva, etc.) participated in the activities of He-Ḥalutz. During the 1930s, when the antisemitic *Iron Guard rampaged the country, the He-Ḥalutz movement grew at a rapid pace, assisted by emissaries from Palestine. An important role was played by the Romanian ports, mainly Constanța, which were used by *olim* from all over Europe on their way to Erez Israel. The passage of many thousands of *ḥalutzim* through the country served to accelerate the *aliyah* of Romanian *ḥalutzim* as well. During the war the Romanian ports made history when no fewer than 40,000 "illegal" immigrants to Palestine, using dozens of boats, set out from them. Romanian *ḥalutzim* functioning under Nazi rule as an underground organization fulfilled a vital task in organizing and safeguarding the "illegal" immigration, often at the risk of their lives.

Central Europe

Early manifestations of interest in *ḥaluziyyut* among a part of the Jewish youth in Germany, Austria, and what was later to become Czechoslovakia came to the fore during World War I. Officially, He-Ḥalutz was established in Germany at the end of 1918, and, as a first step, hundreds of *ḥalutzim* (calling themselves *Praktikanten* and organized in a *Praktikantenbund*) went out to work on farm estates in order to train for life in Erez Israel. This experiment, however, did not last long, and He-Ḥalutz established a number of training farms of its own. The movement's farms were not successful either, and only one ("Ha-Mahpekah" – "the Revolution") was able to maintain itself for any period of time. The lack of Zionist education and of a sizable working class among Central European Jewry prevented the development of He-Ḥalutz along East European lines. There were differences between the members of *Blau-Weiss and the *ḥalutzim* who had not been affiliated with this youth movement; the former had their roots in the German youth movement (e.g., the *Wandervogel*), and the revolutionary spirit of He-Ḥalutz in Eastern Europe was alien to them. This created difficulties in the merger of the two elements in one organization, which was technically achieved by

the efforts of leaders on both sides. The differences between them, however, were never entirely overcome. Czechoslovakia was the country in which He-Ḥalutz was the closest in spirit and methods to the movement in Lithuania and Poland. The movement in Western Europe developed along lines similar to Central Europe.

United States

The first He-Ḥalutz organization in the U.S. was established in 1905, at the same time that a similar organization was formed in Odessa (Crimea). Its founders were a group of Zionist youth, most of whom were Russian immigrants from rural communities, who met in the Ha-Teḥiyah offices in New York and formed He-Ḥalutz to serve as the nucleus of a world movement to revive Jewish settlement in Erez Israel. Anchored in *Po'alei Zion, the organization was led by Eliezer Joffe who wrote articles in several newspapers to enlist the participation of youth in settling in Palestine as pioneers. In 1906 Joffe published an article titled "The People's Road to Its Land," in which he staked the rebirth of the Jewish people on the dedication of young pioneers. Meanwhile, in 1905, Ḥalutzei Po'alei Zion was formed within Po'alei Zion, with branches in New York, Philadelphia, Montreal, Baltimore, and elsewhere. In 1908 the New York He-Ḥalutz group was absorbed into a new organization, Ha-Ikkar ha-Za'ir, whose program remained nearly identical with that of He-Ḥalutz. During World War I, the U.S. He-Ḥalutz movement received a tremendous impetus from the presence of Ben-Gurion and Ben-Zvi, who tried to establish a He-Ḥalutz organization in the U.S. with the help of the Po'alei Zion party and published a Yiddish pamphlet, "*Printsipen un Oyfgaben*" (Sifriyyat He-Ḥalutz, 1917). Several hundred Jewish youth responded to its call for pioneers to rebuild a Jewish homeland through practical settlement rather than political or other means. The original goal of the movement was to settle pioneers at the earliest opportunity. However, when immigration to Palestine was restricted in 1926, the world He-Ḥalutz movement began to focus its emphasis on *hakhsharah* ("preparation" or "training") for potential pioneer youth.

Many Jewish youths were aroused by the Arab riots in Palestine and the subsequent British White Paper in 1929, and in 1932 the He-Ḥalutz Organization of America was formed with headquarters in New York and 20 city and rural branches across the U.S. and in Canada. In 1933 He-Ḥalutz rented its first *hakhsharah* farm, and it subsequently purchased farms at Creamridge, N.J. (1936); Heightstown, N.J. (1940); Poughkeepsie, N.Y.; Smithville, Ont.; and Colton, Calif. (1948) to train its members for agricultural work in Palestine. In 1935 Young Po'alei Zion embarked on a training program within the He-Ḥalutz framework, and in 1939 Ha-Shomer ha-Za'ir joined He-Ḥalutz after nearly a decade of negotiations. By 1940 the He-Ḥalutz Organization of America included nearly all Zionist youth of the Labor and General Zionist wings. After the outbreak of World War II, He-Ḥalutz initiated industrial, aviation, nursing, and other technical training programs, while continuing its agricultural training. By 1948 He-Ḥalutz

had grown from a few hundred members to 1,600, and since its inception several hundred members had emigrated to Erez Israel. When the *hakhsharah* farms were liquidated in the mid-1950s, the activities of He-Ḥalutz were assumed by Ha-Shomer ha-Za'ir, which had always maintained a large degree of autonomy. Nominally, however, the He-Ḥalutz Organization of America still exists. The only American group to support He-Ḥalutz financially was the American Fund for Palestinian Institutions.

Summary

When World War II broke out, He-Ḥalutz had a membership of 100,000. In 1927, according to statistics published by the Histadrut, 43% of all workers in Erez Israel and 80% of the members of kibbutzim had been trained by He-Ḥalutz before settling in Erez Israel. After the war, the world movement of He-Ḥalutz ceased to exist, although the activities that it had conducted were renewed on a smaller scale in Europe, the United States, and other countries. Pioneering youth movements, like all Zionist youth movements, now conduct their work under the auspices of the Youth and He-Ḥalutz Department of the World Zionist Organization.

HE-HALUTZ (Heb. “the Pioneer”), periodical of Jewish scholarship, edited by Joshua (Osias) Heschel *Schorr, which appeared in Lemberg, Breslau, Prague, Frankfurt on the Main, and Vienna from 1852 to 1889. Schorr, a second generation Galician *maskil*, devoted the periodical principally to incisive and radical criticism of the Talmud, attempting to prove by a series of studies that the talmudists had adapted Jewish tradition to their time and that later generations were therefore also permitted to do the same. Accordingly, Schorr argued that the words of the talmudists need not be accepted as necessarily applicable to modern times. Such pointed and bold criticism had almost never before been voiced in the Hebrew language. For his radical stand and the wit of his expression, Schorr was called the “Voltaire of Galicia.” Publishing *He-Ḥalutz* with his

own funds, Schorr, a man of wealth, could be independent. At first others who held similar views, such as Abraham *Geiger and Abraham *Krochmal, contributed to the periodical. Later, however, Schorr himself wrote all the material which included satires directed against the rabbis and topical articles, written in a critical, sarcastic vein, directed against the rabbinic-talmudic tradition. *He-Ḥalutz*, in turn, was denounced by all those it criticized. But this only served to increase the wit and sharpness of Schorr's writing. The scholarly research that appeared in *He-Ḥalutz* had the effect of supporting radical reform, although that was not the editor's intention. *He-Ḥalutz* greatly influenced M.L. Lilienblum and J.L. Gordon, the advocates of religious reform in Russia.

HE-HAVER, Zionist student organization established in 1912. Its membership consisted mainly of Zionist students from Russia who were attending universities in Western Europe, and the organization engaged in Zionist propaganda and led the struggle against assimilationist Jewish students. In Russia itself underground branches of He-Ḥaver existed in various cities, and upper classmen of the high schools also participated in them. In April 1917, when He-Ḥaver had a total of 100 branches, it held its first open conference in Petrograd, but after the October Revolution it had to revert to clandestine activity. The organization had its own organs: the Russian-language *Yevreyskiy student* (“Jewish Student”) which appeared in Berlin from 1912 to 1914, in Petrograd from 1915 to 1918, and in Moscow in 1922 and 1923; and the Hebrew-language *He-Ḥaver*, of which two issues appeared in 1914. It sought to spread the knowledge of Hebrew, Jewish history, and of Erez Israel among its members. In March 1924 the organization merged with the Zionist Students' Organization in the Ukraine and Kadimah in Belorussia to form the United Federation of Zionist Youth in Russia (or EVOSM, the initials of its name in Russian).

HEICHELHEIM, FRITZ MORITZ (1901–1968), ancient history scholar. He taught at the university of his native Giesen in Germany from 1929, but was dismissed in 1933 during the Nazi purge. Heichelheim then became a research scholar at Cambridge, England (1933–42), and later lectured at Nottingham (1942–48). From 1948 he taught Greek and Roman history at the University of Toronto. He was elected fellow of the Royal Society of Canada in 1966.

Heichelheim produced over 600 publications in economic history, numismatics, archaeology, and papyrology. His major work is *Wirtschaftsgeschichte des Altertums* (2 vols., 1938; translated and revised as *An Ancient Economic History from the Palaeolithic Age*, 3 vols., 1958–70). Other important

publications include *Auswaertige Bevoelkerung im Ptolemaerreich* (1925); *Wirtschaftliche Schwankungen der Zeit von Alexander bis Augustus* (1930); "Roman Syria" (in: T. Frank (ed.), *An Economic Survey of Ancient Rome*, 4 (1938), 121–257); *The Adler Papyri* (with E.N. Adler et al., 1939); *Sylloge Nummorum Graecorum*, vol. 4 (1940–65); and *History of the Roman People*, with C.A. Yeo (1962). Heichelheim also wrote extensively on classical Judaism. From 1951 he contributed a column, "Mind and Spade," to the *Jewish Standard* of Toronto and Montreal. He was president of the Jewish Historical Society of Toronto (1951–53), trustee of the Liberal Jewish Congregation "Habonim" (1956–61), and a member of the cultural commission of the Canadian Jewish Congress (1950–54).

[Sydney Eisen]

HEIDELBERG, city in Baden, Germany. Heidelberg is mentioned in the will of Judah b. Samuel he-Ḥasid (d. 1217), but the reference may be a later addition. The first reliable evidence for the presence of Jews in the town dates from 1275. In the years thereafter numerous Jews lived in Heidelberg until the community was decimated during the *Black Death (1349). However, soon afterward the elector Rupert I admitted Jewish refugees from Worms and Speyer in the face of local opposition, in return for a considerable payment. There is evidence that a well-organized community began functioning again, at the latest in 1357. Its development was halted abruptly, however, through the expulsion by elector Rupert II in 1391 of all the Jews in his domain, including those of Heidelberg. Among the 12 families driven out of their homes was Israel of Heidelberg, the copyist of the Darmstadt *Haggadah. Their houses, synagogue, bath, cemetery, and manuscripts were given to the university. From then till the mid-17th century only isolated settlements of individual Jews occurred. In 1660 the *Oppenheimer family arrived; Joseph Süss Oppenheimer, the powerful Court Jew, was born there in 1698. In 1700 11 Jewish families lived in Heidelberg, which was the seat of the chief rabbi of the Palatinate. Their number increased during the 18th century in spite of local opposition, and they were granted full civil liberty by the edict of 1808. They suffered during the Hep! Hep! riots of 1819 and during the revolution of 1848. The Reform movement had little success in introducing prayer in the vernacular into the Heidelberg synagogue. A Jewish elementary school was founded. Heidelberg University was among the first in Germany to accept Jews as students. At the end of the 19th century and beginning of the 20th, some illustrious Jews from Russia studied at the university including S. Tchernichowsky and J. Klausner. Among its professors were H. Schapira and E. Taeubler. The university was also traditionally a center of strong antisemitic agitation, and after 1933 Jewish students and professors were harassed and driven away.

In 1933 there were 1,100 Jews in the city (1.3% of the total population). The April 7 expulsion of Jews from the civil services resulted in the dismissal of 34 Jewish professors. By 1935 there was only one "full" Jewish student at the University, the remaining "Jewish" students were of mixed ancestry. Fourteen

Polish Jews were expelled in October 1938. The synagogues were demolished on Nov. 10, 1938; its religious objects were confiscated and destroyed by university students. One hundred and fifty Jewish men were deported to Dachau, but later released. On Oct. 22, 1940, 339 Jews were transported to Gurs. One hundred Jews were saved from deportation by Protestant Evangelical Pastor Hermann Maas, who got them out of the country. He was subsequently recognized by Yad Vashem as a Righteous Gentile. From 1942 to 1945 a further 103 were deported, mainly to Theresienstadt. Eighteen returned after the war and joined the 50, of mixed marriages, who had outlived the war at Heidelberg. A new community came into being after World War II, numbering 139 persons in 1967. A new synagogue was consecrated in 1958. In 1979 the Central Council of Jews in Germany (Zentralrat der Juden in Deutschland) opened the Hochschule fuer Juedische Studien (University for Jewish Studies) in Heidelberg. From 2001 it offered a program for rabbinical training in cooperation with Orthodox, Conservative, and Liberal rabbinical seminaries in Jerusalem, New York, and London. In 1987 the Central Council of Jews in Germany established the Central Archives for research on the history of the Jews in Germany, which collects documents from Jewish communities, associations, organizations, and individuals. The Jewish community numbered 188 in 1989 and 550 in 2005. The membership increased due to the immigration of Jews from the former Soviet Union. A new community center was opened in 1994.

HEIDELBERGER, MICHAEL (1888–1991), U.S. biochemist and immunologist. Born in New York, he completed his undergraduate and graduate education at Columbia University. After earning his Ph.D. in chemistry in 1911, he joined the faculty of the Rockefeller Institute, where he worked from 1912 to 1927. In 1928 he joined the College of Physicians and Surgeons of Columbia University, where he became first professor of immunochemistry. After his retirement in 1955 he was visiting

professor at Rutgers University until 1964, and subsequently adjunct professor of pathology at New York University. Heidelberger's research dealt with immunological reactions and a wide range of subjects in bio- and organic chemistry. His publications included *Advanced Laboratory Manual of Organic Chemistry* (1923) and *Lectures in Immunochemistry* (1956). Heidelberger was president of the American Association of Immunologists and of the Harvey Society. Heidelberger was also a strong supporter of human rights. He won numerous honors throughout his life, including two Lasker awards in 1953 and 1978, for his work in the development of methods for the quantitative analysis of antibodies.

[Samuel Aaron Miller / Bracha Rager (2nd ed.)]

HEIDENHAIN, RUDOLF (1834–1897), German physiologist. Heidenhain, who was born in Marienwerder, was a convert to Christianity. He was appointed professor of physiology and histology at Breslau University in 1859. Heidenhain was considered one of the greatest of 19th-century physiologists; he laid the foundations for the recognition of the secretory mechanism as a system of intercellular physical and chemical processes. He described the active role of the kidney cells in the secretion of urine and proved that secretions, especially saliva, are products of the glands. This conception was based on his description of the cell structure of the salivary, mammary, gastric, intestinal, pancreatic glands, and in particular, of the histological changes in the glands while functioning. For this, he perfected histological methods, including one for staining the kidney cells, by the injection of indigo-carmin into the bloodstream. He started research into the mechanism of muscle contraction from the point of view of energetics and metabolism, paving the path for muscular physiology in later generations. His books include *Mechanische Leistung, Waermeentwicklung und Stoffumsatz bei der Muskeltaetigkeit* (1864) and *Physiologie der Absonderungsvorgaenge* (1880). His son MARTIN (1864–1949) was professor of anatomy at Tuebingen University and made important contributions to histology; he was one of the first cytologists.

[Joshua O. Leibowitz]

HEIDENHEIM, WOLF (Benjamin Ze'ev; 1757–1832), Hebrew grammarian, masoretic scholar, exegete, and commentator on the liturgy. Born in Heidenheim, Germany, he studied with Rabbi Nathan Adler in Frankfurt. In 1788 he established himself in Offenbach, where he subsequently published Abraham ibn Ezra's grammatical work *Moznayim* (1791), with commentary and notes and part of an edition of the Pentateuch (up to Gen. 43:16) with a carefully corrected text of the Targum and several commentaries, together with explanations and a detailed commentary on Rashi by Heidenheim (*Torat Elohim Meforash*). He was obliged to abandon the project for financial reasons.

In 1798 he received a license to establish a German and

Hebrew press in partnership with Baruch Baschwitz. In 1800 Heidenheim began the publication of his most famous work, the nine-volume edition of the *maḥzor, Sefer Kerovot* (Roedelheim, 1800–02), which went through numerous printings. The work included the first pure German translation (in Hebrew characters) of the liturgical poems for the festivals (individual pieces were translated by his friends Wolf Breidenbach and Baer Bing), a Hebrew commentary and a literary historical introduction, and an alphabetical summary of the liturgical poets. Heidenheim devoted great care to typographical setup as well as to the restoration of the correct text of the prayers. With this objective, he drew on manuscripts and occasionally on old printed texts. The prominent rabbis of his time approved of Heidenheim's work and also contributed notes and comments to many *piyyutim*. Despite the *haskamot* of these rabbis prohibiting the reprinting of Heidenheim's *maḥzor*, many pirated editions appeared in the 19th century.

His other works in the field of liturgy include a small edition of the daily prayers, *Sefat Emet* (Roedelheim, 1806), distinguished for its correctness and typographical beauty, which went through more than 150 printings; a larger prayer book, *Safah Berurah* (1825), with German translation in Hebrew characters; the ritual for Passover eve (Roedelheim, 1822–23); for Purim (1825); for the month of Av (1826); for the night of Shavu'ot and Hoshana Rabba (1830); and penitential prayers (Roedelheim, 1823). In the edition of the prayer book *Siddur li-Venei Yisrael* (1831), which presented his translation in German letters for the first time, Heidenheim made many concessions to efforts for reform in that he omitted individual prayers and printed a preface by Michael D. Creizenach on the prayers. In Orthodox circles, Heidenheim was very much blamed for this, just as his approval of the innovations of the Kassel Consistory (in his foreword to Menachem Mendel Steinhardt's *Divrei Iggeret*, Roedelheim, 1812) had shocked them. Heidenheim also made major contributions to the field of masoretic studies. He published the *Mishpetei ha-Te'amim* (Roedelheim, 1808) on biblical accents; and an edition of the Pentateuch in four different forms, all containing material important to the masoretic text and commentaries, as well as the editions of medieval masoretic texts. Works of later scholars heavily relied on Heidenheim's materials, both printed and manuscripts. Many of Heidenheim's works remained unpublished and most of his manuscripts were acquired by the Bodleian Library in Oxford.

[Sefton D. Temkin]

HEIDINGSFELD, town in Bavaria, Germany. The name of a Jewish woman who perished there during the *Rindfleisch persecutions (1298) is recorded, perhaps reflecting the existence of a Jewish community at that time. In 1391 King Wenc-

eslaus canceled all debts to the Jews, thereby impoverishing the local community. The privilege of *de non tolerandis Judaeis*, granted to the town in 1423, was rescinded eight years later when the Jews were granted residence rights along with the civil and economic privileges enjoyed by their coreligionists in other German cities. In 1498 only seven families lived in the town, but the community grew in numbers and importance in the following centuries. When in 1565 the Jews of the nearby bishopric of Wuerzburg were expelled, many settled in Heidingsfeld, which was exempted from the decree although it was then also under the jurisdiction of the bishop of Wuerzburg. In 1652 there were 19 Jewish households in Heidingsfeld. A year later the community's *pinkas* ("minute-book") was begun, a significant source for Jewish history in Germany from 1653 to 1774, as well as an important source for the community's continuing relationship with Erez Israel in that period. In 1669 the second synagogue was built; a third, erected around 1780, was renovated in 1929. A cemetery was consecrated only in 1810. In the early 17th century Heidingsfeld became the seat of the chief rabbinate for Lower Franconia. However, in 1813 the office was discontinued and Abraham *Bing, then chief rabbi, obtained permission to move to Wuerzburg together with other Heidingsfeld Jews. The community declined from around 600 persons (20% of the total population) in 1805, the second largest community in Bavaria, to 150 (4%) in 1890. Anti-Jewish acts were a source of continuing concern in the early 19th century; riots took place in 1801, while during the *Hep! Hep! disturbances of 1819 homes were burned. In 1930 the town and community were incorporated into Wuerzburg. The synagogue was burned down on Nov. 10, 1938, and the eight Jewish families molested; all left the town soon after. After World War II, the U.S. occupation forces ordered the population to renovate the desecrated Jewish cemetery.

HEIFETZ, JASCHA (1901–1987), U.S. violinist. Born in Vilna, Lithuania, Heifetz started playing at the age of three under his father's tuition, and later studied at the Vilna music school. At seven he played the Mendelssohn violin concerto in public and at 10 entered the St. Petersburg Conservatory, where his teacher was Leopold *Auer. In 1912 he played with the Berlin Philharmonic Orchestra under Nikisch. At the outbreak of the Russian Revolution, the family decided to emigrate and reached America via Siberia and Japan. Heifetz ultimately made his home in Beverly Hills, California. His playing early reached perfection, never relied on excessive display, and was marked by aristocratic restraint. It set a new style in violin mastery. He was acclaimed in the United States, toured abroad with triumphant success, and was received with enthusiasm in Russia in 1934. He appeared in Erez Israel in 1925, and donated his fees for the promotion of music in Tel

Aviv. He first played with the Israel Philharmonic Orchestra in 1950, and again in 1953, when his inclusion of a work by Richard Strauss (whose works were not played publicly in Israel because of his association with Nazism) in his programs provoked a bodily attack on him by an extremist youth, in which Heifetz was slightly injured. In later years he lived in semi-retirement. He was also an accomplished pianist, and made many transcriptions for violin and piano. Composers dedicated violin concertos to him, among them Sir William Walton, Erich *Korngold, Louis *Gruenberg, Joseph *Achron, and Mario *Castelnuovo-Tedesco.

[Uri (Erich) Toeplitz]

HEIJERMANS, HERMAN (1864–1924), Dutch playwright and novelist. Heijermans grew up in Rotterdam, the eldest son of a prominent journalist, and started writing after an unsuccessful time in the rag business. In 1893 he became a theater critic for the Amsterdam-based daily *De Telegraaf*, while exploring the latest fashions in naturalism and symbolism in his plays and stories. After his dramatic encounter with the woman who would become his first wife, he intensified this exploration. He established a periodical called *De Jonge Gids* (1897–1903), largely filled by himself under a dozen pseudonyms and in the most divergent styles, and turned the encounter with his wife into the novel *Kamertjeszonde* ("Little Room Sins," 1898). He also turned to socialism, to which he would remain loyal for the rest of his life.

Heijermans' early works show both his interest in social questions and his struggle with Jewish identity. His concern for the fate of Jewry first manifested itself in *Ahasverus* (1893), a play about a Russian pogrom. A Hebrew version of this drama, *Ha-Noded ha-Nizhi*, appeared in 1917. In two novels, *Sabbath* (1903) and *Diamantstad* ("Diamond City," 1904), and in the play *Ghetto* (1898), Heijermans denounced the backwardness of traditional Jewry in the Amsterdam ghetto. A more compassionate attitude is apparent in the serials he published in newspapers under the pseudonym Samuel Falkland between 1894 and 1915. These stories, more than 800, were collected in 18 volumes.

After 1900 Heijermans slowly moved away from Jewish subject matter and concentrated on writing drama. *Op hoop van zegen* ("The Good Hope," 1900) movingly described the miseries of Dutch fishermen. *Schakels* ("Links," 1903) offered an ironic portrayal of domestic strife. Other plays include *Uitkomst* ("Outlet," 1907), *Eva Bonheur* (1917), and the satirical *De wijze kater* ("The Wise Cat," 1918).

Heijermans became the most important Dutch dramatist of his time, winning international acclaim. *Op Hoop van Zegen* was performed all over Europe. A Hebrew version, *Dayyagim* (1927), by Abraham *Shlonsky, was staged by the *Ohel company. Heijermans cooperated with directors like Konstantin Stanislavski, Max Reinhardt, and Otto Brahm. But after 1910 his international reputation faded and his national successes also decreased. In his last years he returned to the genre of the

novel. *Droomkoninkje* ("King of Dreams," 1924) and its sequel, *Vuurvlindertje* ("Firefly," 1925) appeared posthumously.

[Hans Goedkoop (2nd ed.)]

HEILBORN, ERNST (1867–1942), German author and literary historian. Born and educated in Berlin, Heilborn became the Berlin drama critic of the *Frankfurter Zeitung* in 1901. From 1911 he edited *Das literarische Echo*, a fortnightly of international character which, in 1924, changed its name to *Die Literatur*. He wrote realistic short stories and novels mostly set in the middle-class society of Berlin. The best known of these were *Die steile Stufe* (1910) and *Die kupferne Stadt* (1918). In *Zwischen zwei Revolutionen* (2 vols., 1929), Heilborn dealt with the social and artistic history of the German capital. The first volume, *Der Geist der Schinkelzeit*, surveyed the years from 1789 to 1848, while the second, *Der Geist der Bismarckzeit*, covered the period from 1848 to 1918. Heilborn's other works include *Novalis der Romantiker* (1901), *Das Tier Jehovahs* (1905), *Josua Kersten* (1908), and *E.T.A. Hoffman: der Kuenstler und die Kunst* (1926). He published a critical edition of the 18th-century German romantic poet Novalis' works: *Novalis: Schriften; Kritische Neuausgabe auf Grund des handschriftlichen Nachlasses* (1901). In 1936 he was forbidden to continue to write. In 1937, after a trip to Palestine, he returned to Germany. In 1942 he attempted to flee to Switzerland but was arrested and died in Nazi "protective custody."

HEILBRON, SIR IAN MORRIS (1886–1959), British organic chemist. Born in Glasgow, he joined the staff of the Royal Technical College there. In World War I he was assistant director of supplies in Salonika. In 1920 he was appointed to the chair of organic chemistry at Liverpool University. In 1933 he became professor at Manchester University, and in 1937 professor of organic chemistry at Imperial College, London. In World War II he acted as scientific adviser to the Ministries of Supply and Production. In 1949 he resigned his chair to become the first director of the research association of the brewing industry. Heilborn's original publications deal mainly with a broad range of natural product chemistry. He was a pioneer in the steroid field, cholesterol, ergosterol, fucosterol, and others. He elucidated the structure of Vitamin A, isolated vitamin A² and worked on Vitamin D² and the synthesis of Vitamin A. He also worked on the chemistry of penicillin. His studies extended to polyenes and to acetylenic compounds and other fields of organic chemistry. With H.M. Bunbury he produced the monumental *Dictionary of Organic Compounds*. He was a Fellow of the Royal Society, a recipient of its Royal Medal, and president of the Chemical Society, 1948–50.

[Samuel Aaron Miller]

HEILBRON, DAME ROSE (1914–2005), English lawyer. Born in Liverpool, Rose Heilbron was admitted to the bar in 1939 and rapidly established a reputation as a criminal advocate of exceptional ability. In 1949, she was made a king's counsel and in 1956 she was made recorder (chief criminal judge) of Burnley, the first woman to be appointed a recorder in Britain. Vice president of the British Federation of Business and Professional Women, she was frequently cited as an example of the professional advance of women in a man's world. From 1974 until her retirement in 1988 she served as a Judge of the High Court (Family Division), the second British woman to be appointed to the High Court. She was created a dame in 1974.

[Israel Finestein]

HEILBRONN, city in Baden-Wuerttemberg, Germany. There apparently were Jews living in Heilbronn in the second half of the 11th century, as attested by an inscription found in an old synagogue mentioning Nathan ha-Parnas. By the end of the 13th century, their number must have been significant because on Oct. 19, 1298, the followers of *Rindfleisch massacred 143 Jews at Heilbronn. Jewish learning evidently flourished as the names of scholars and teachers are recorded among the martyrs. Jews had reestablished themselves in Heilbronn by 1316. They possessed a synagogue and a cemetery, and lived on a *Judengasse*, where non-Jews also resided. During the *Black Death persecutions between February and April 1349 the community was expelled and their property transferred to the city. Some returned in 1357 and in 1361 obtained royal protection. After 1411 King Sigismund granted the Jews of Heilbronn protection of life and property, limited taxation, freedom of movement, and judicial autonomy in Jewish lawsuits; a Jewish oath was to apply in cases tried before the city court. The Jews were expelled from Heilbronn three times during the 15th century, the last in 1490 when the synagogue and the cemetery were confiscated.

Subsequently, until the 19th century, there was no organized Jewish community in the city. Individual Jews were allowed into the city during the daytime on payment of a body-toll. Seven Jewish families settled in nearby Sontheim, where they built a synagogue in 1702.

After the grant of civil emancipation to the Jews in Wuerttemberg by the edict of 1828 a number of Jews settled in Heilbronn and became citizens there. The Jewish lawyer, Moritz Kallmann, was active in the revolution of 1848 and became a city councilor. The community, established officially in 1851, numbered 65 persons in 1858, 137 in 1862, 994 in 1885 (3.5% of the total population), 815 in 1900, and 900 in 1925 (2%). In Sontheim there were 88 Jews in 1822 (8.8%), 45 in 1855, 72 in 1870, and 59 in 1880. The Heilbronn community was liberal in its religious affiliation. Jewish children attended the general schools and received additional religious education in schools sponsored by the community. A large synagogue was built in 1877. A separate Orthodox community was established in 1911. At Sontheim a Jewish old-age

home was established in 1907 and cared for 78 persons in 1937. During the Weimar period antisemitism was at a low ebb. There was even an attempt on Hitler's life in Heilbronn in 1926.

After the Nazi rise to power in 1933 the 790 Jews then living at Heilbronn were subjected to restrictions and discrimination, boycott of Jewish goods, vicious agitation in the press, and occasionally physical attacks. In 1936 the community was forced to establish its own elementary school. In October 1938, all Jews of Polish citizenship were deported back to Poland. On Nov. 10–11, 1938, the synagogue was set on fire, the windows of Jewish stores were smashed, and Jewish homes destroyed. Many Jews from Heilbronn were sent to Dachau. In August 1939 the community was officially dissolved. By 1941, around 600 Jews had emigrated. The others were deported to the East, along with 88 Heilbronn Jews who had found refuge in other localities. There were 10 Jews living in Heilbronn in 1967. In 2004 there were about 65 Jews living in Heilbronn who officially belong to the Jewish community of Wuerttemberg in Stuttgart. About 80% of them were immigrants from the former Soviet Union who came to Germany after 1990.

[Zëëv Wilhem Falk]

HEILBRONN, JACOB BEN ELHANAN (16th century), rabbi and mathematician. Born in Italy, Heilbronn studied in Prague and traveled through various German and Italian cities, earning his livelihood from teaching. For some time he was employed as a tutor to the children of Nehemiah Luzzatto in Venice. He finally settled in Padua, where he was appointed rabbi. Many scholars of renown addressed their halakhic queries to him, including Samuel *Archivolti, Simone *Luzzatto, Abraham Menahem *Porto, and Avigdor Civald. Heilbronn is the author of *Seder Melihah* in Judeo-German, on the precept of salting meat, based on Moses *Isserles' *Torat Hattat* (Cracow, c. 1570), issued with a memorial address on the death of Avigdor Civald (Venice, 1602); *Shoshannat Ya'akov* (Venice, 1623), mathematical riddles and elementary arithmetic, edited as a supplement to the *Orhot Hayyim* (Prague, 1521) of R. Eliezer ha-Gadol; *Nahalat Ya'akov* (Padua, 1623), responsa and halakhic novellae, dedicated to his benefactor Simḥah Luzzatto. In his approbation, R. Isaiah *Horowitz praises Heilbronn for his erudition, as did others in their exchange of responsa with him. Other responsa of Heilbronn are included in the *Mashbit Milhamot* (Venice, 1606). He also translated into Italian *Seder Mitzvot Nashim* on women's re-

ligious obligations by Benjamin *Slonik of Grodno (Venice, 1606).

BIBLIOGRAPHY: Ghirondi-Neppi, 173; Fuenn, *Keneset*, 544.

[Jacob Hirsch Haberman]

HEILBRONN, JOSEPH BEN DAVID OF ESCHWEGE (d. 1771), masoretic scholar. He was a private tutor in Frankfurt and later moved to The Hague. He is the author of *Mevin Hidot* (Amsterdam, 1765), on the masorah. It contains a lengthy four-part prologue and is arranged according to the weekly portions of the Pentateuch. The book received the endorsements of the Ashkenazi and Sephardi chief rabbis of Amsterdam. In reply to an accusation by Asher Worms, author of *Seyag la-Torah*, that Heilbronn had either plagiarized his own work or was negligent in textual research, Heilbronn issued a pamphlet in defense of his position. Heilbronn also composed a prayer book on the liturgy of Simḥat Torah (Amsterdam, 1769). He died in Amsterdam.

[Marvin Tokayer]

HEILBRUN, CAROLYN G. (1926–2003), U.S. academic, literary critic, and feminist writer; president of the Modern Language Association (1984). Born in New Jersey, the only child of Archibald and Estelle Roemer Gold, Heilbrun moved to New York City with her family in 1932 and lived there for the rest of her life. Privately schooled in childhood, she received her B.A. from Wellesley College in 1947. She married James Heilbrun in 1945, during her sophomore year. The couple had three children, born while Carolyn worked toward a Ph.D. in English at Columbia University. Heilbrun taught briefly at Brooklyn College, then at the Columbia School of General Studies, moving eventually onto the Graduate Faculty where she taught as a full professor until her resignation in 1992.

While still at Wellesley, Heilbrun published a prize-winning short story in the *Atlantic Monthly* that opened the vexed question of her sense of herself as a Jew. As a result of her parents' rejection of their Jewish identity, Heilbrun had grown up without any attachment to the Jewish community or knowledge of its heritage, observances, and beliefs. She was entirely unaware of the antisemitism endemic at Wellesley in the postwar period until she began to question, years later, her college's indifference to her achievements. In *Reinventing Womanhood* (1979) she wrote of her realization that "Wellesley had ignored me because I was a Jew." Eventually she would turn this new sense of herself toward the development of her feminism: "To be a feminist," she said, "one had to have had the experience of being an outsider."

Between 1961 and 2002, Heilbrun published nine works of non-fiction crucial to the development of feminist thought, including *Toward A Recognition Of Androgyny* (1973); *Reinventing Womanhood* (1979); *Writing A Woman's Life* (1988); *Hamlet's Mother And Other Women* (1990); *The Education Of*

A Woman: The Life Of Gloria Steinem (1995); *The Last Gift Of Time* (1997); and *Women's Lives: The View From The Threshold* (1999). In these works she taught women to recognize the possibilities latent in androgyny, to reinvent themselves as women, to appreciate the distinctive shape of women's lives, to seize control of the boundaries of life, and to reconsider the ambivalent power of male mentors on women's lives (*When Men Were the Only Models We Had* (2002)).

Heilbrun also published more than a dozen popular novels under the pseudonym "Amanda Cross," in which a beautiful academic, a Protestant detective named Kate Fansler, dazzles the world by solving its mysteries. These include *In the Last Analysis* (1964); *The James Joyce Murder* (1967); *Death in a Tenured Position* (1981); and *An Imperfect Spy* (1995).

Although the tensions for women within academic life were always comfortably resolved for Kate Fansler, her fictional alter ego, Heilbrun left Columbia in bitterness in 1992, over a fight to tenure several women in her department. She committed suicide at 77, in 2003.

[Janet Burstein (2nd ed.)]

HEILBUT, ELEAZAR LAZI BEN JOSEPH BEN LAZI (1740–1814), rabbi and author. Heilbut was born in Berlin. He was first a *dayyan* in Posen and then succeeded Raphael b. Jekuthiel Susskind *Kohen as rabbi of the combined community of Hamburg, Altona, and Wandsbeck. He was the teacher of the literary historian and bibliographer, Heimann Joseph *Michael, who married his daughter. Heilbut compiled a work on the Shulḥan Arukh *Hoshen Mishpat*, the first part of which was published by his son Moses under the title *Mishnah de-Rabbi Eli'ezer ve-hu Dammesek Eli'ezer* (Altona 1815). He wrote a polemic against the *Mizpeh Yokte'el* of Saul *Berlin which was published without a title or the name of the author (*ibid.*, 1789). A large number of his works remain in manuscript. They include a work on the Shulḥan Arukh *Even ha-Ezer*, the manuscript of which was stolen from him; novellae and glosses to the Talmud, as well as commentaries on the minor tractates of the Talmud; an exegetical homiletical work on the Pentateuch with expositions of Rashi's commentary; and an alphabetical composition of all the rules of blessings with sources. His glosses to Joseph b. Wolf Heilbut's homiletical commentary to the Pentateuch, *Beitah Yosef*, are still extant (Neubauer, Cat. no. 1387/2).

[Samuel Abba Horodezky]

HEILMANN, YITZHAK (1906–1997), *hazzan* and choir-master. Heilmann, was born in Lvov to a family of Belzer ḥasidim. He sang in the temple choir in Lvov with Cantor Yehoshua Moshe Saitz. Afterwards he was appointed assistant to the choir conductor Yisrael Faiwishis, with whom he learned to read and play music. When Faiwishis moved to Lodz, Heilmann was appointed choir conductor at the Lvov and the Gilead Synagogue. He was conductor of the Polish

military orchestra and teacher at the Lvov Conservatory. In 1935 he moved to Belgium where he conducted the choir at the Central Synagogue of the *Shomre Hadass* community in Antwerp. He performed with his choir on the Belgian radio. During World War II he was in a refugee camp in Switzerland. He immigrated to Israel in 1949, and from 1950 was choir conductor in the Central Synagogue of Haifa for over 45 years. The choir was famous for the old Warsaw-style approach to choral music and performed frequently on *Kol Israel*. At first it was mixed (boys and men) but in the later years it was an adult male choir. He trained many cantors from among the choristers, including David *Ullmann, Moshe *Shavit, Mordekhai Ronen, Dov Keren, and Nahum Malik, and composed hundreds of melodies for sections of the prayer service. In 1997, under the auspices of the Toronto Council of *hazzanim*, a three-volume set of Heilmann's compositions were published under the title *Shirat Itzhak*.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

HEILPERIN, FALK (1876–1945), educator and Yiddish writer. Born in Nieswicz, Belorussia, Heilperin began his teaching career in Minsk in 1904. He first rose to prominence during World War I as director of a Yiddish secular school for refugee children. In 1916 he helped to organize a Jewish teachers' conference at Tambov, which proclaimed Yiddish as the basic language of the Jewish child at the elementary school level, but which also recommended Hebrew as a prescribed language. The Zionists attacked him violently for giving priority to Yiddish, the struggle between the Hebraists and Yiddishists reaching a climax at the first all-Russian conference of Jewish teachers, convoked in St. Petersburg during June 1917. There Heilperin appeared as the spokesman of secular Yiddish schools, maintaining that the mother tongue of the children should be the natural, normal language of instruction, that the government should be urged to provide compulsory elementary education for all children, and that Hebrew should be included in the curriculum for all Jewish classes. In 1918 he served as educational adviser to the Jewish ministry of the short-lived government of the Ukraine. In 1921 he joined the Jewish Teachers' Seminary in Vilna as a teacher of Hebrew and Yiddish and was active in YIVO during its early Vilna period. From 1900 onwards he published his writings in Hebrew and Russian and from 1906 also in Yiddish. He prepared readers, story books, and educational texts in both Hebrew and Yiddish, as well as simplified translations of world literature into Hebrew. He edited the first Yiddish magazine for children, *Grininke Beymelekh* ("Green Trees") and founded a publishing house for children's literature in Jekaterinoslaw. He translated the fairy tales of Andersen and the Grimm brothers into Yiddish as well as novels by Disraeli, Hamsun, Gogol, Twain, Chekhov, Schiller, and Tolstoy. With Max *Weinreich he published a widely used Yiddish grammar (1928), joined the literary circle of "Yung Vilne," and published several volumes of short stories and plays: *Ertseylungen* ("Tales," 1910), *Yidishe Mayses* ("Jewish Tales," 1917), *Oyfn Shvel* ("On the Thresh-

old," 1918), *Mayses fun Fartsaytn* ("Ancient Tales," 1929), *Fun Opgruntn* ("From the Abyss," 1930). In 1938 he settled in Palestine, where the Ohel Theater produced a Hebrew version of his drama "Hordos" ("Herod," in: *Fun Opgruntn*).

[Sol Liptzin / Tamar Lewinsky (2nd ed.)]

HEILPERIN, MICHAEL ANGELO (1909–), Swiss economist. Heilperin was born in Warsaw and educated in Geneva where he settled. He was appointed professor at the Graduate Institute of International Studies in Geneva. His main fields were money, banking, and international economics and he became prominent through his analysis of international monetary crises. His publications include *Trade of Nations* (1947, 1952²); *Studies in Economic Nationalism* (1960); and *Gold and Monetary Order* (1962).

[Joachim O. Ronall]

HEILPERN (Raphael), YOM TOV LIPMAN BEN ISRAEL (1816–1879), rabbi and author. Heilpern was born in Rozan where his father was rabbi, and was appointed rabbi of Krewo in 1836. He later served in Kieidany, Ciechanowicz, Mezshirech, and finally in Bialystok (1859), where he died. His collection of responsa, *Oneg Yom Tov* (2 parts, 1880), was highly regarded in rabbinical circles. He also wrote a homiletical work under the same title (1906). Heilpern played an active role in communal affairs. Because of his opposition to certain communal notables who discriminated against the children of the poor in favor of the rich with regard to the selection for military service, he was accused of disloyalty to the Russian government, tried, and sentenced to several months of imprisonment.

[Samuel Abba Horodezky]

HEILPRIN, U.S. family in 19th and early 20th centuries. **MICHAEL HEILPRIN** (1823–1888), who was born in Piotrkow, Poland, was a linguist, scholar, encyclopedist, and author. In 1842 Heilprin and his family went to Hungary, where he joined the Hungarian liberal movement soon after his arrival, and became well known as a writer and revolutionary poet during the Revolution of 1848. After the suppression of the uprising, Heilprin went into hiding and then fled to Paris for some months. He emigrated to the U.S. in 1856 and taught in Hebrew Education Society schools in Philadelphia until 1858, when he moved to Brooklyn to become an editor and contributor to *Appleton's New American Cyclopaedia* (1858–63). He later worked as an associate editor on the revised work (1872–76). He also wrote for the New York *Tribune* and contributed articles to E.L. Godkin's *Nation* from 1865 until his death, and was considered one of the foremost writers in the U.S. on European literature and politics. In the 1880s Heilprin was active in the work of the Emigrant Aid Society and advocated the establishment of

colonies for Russo-Jewish refugees in Oregon, the Dakotas, and New Jersey (see *Am Olam). He wrote the two-volume *Historical Poetry of the Ancient Hebrews* (1879–80), of which a third volume was begun, but not completed.

Heilprin's elder son, ANGELO HEILPRIN (1853–1907), was a geologist, explorer, and author. He made several trips of exploration including one to the erupting volcano Mt. Pelée. He also went to the Arctic on a mission to bring relief to Peary (1892). His younger son, LOUIS HEILPRIN (1856–1912), who was born in Miskolc, Hungary, was an encyclopedist, too. He assisted his father in the revision of the *American Cyclopaedia* (1872–76), wrote the *Historical Reference Book* (1884), was an editor of *Nelson's Encyclopaedia*, an associate editor of the *New International Encyclopaedia*, and co-edited *Lippincott's New Gazetteer* (1905) with Angelo Heilprin.

BIBLIOGRAPHY: G. Pollak, *Michael Heilprin and his Sons* (1912).

HEILPRIN, JEHIEL BEN SOLOMON (1660–1746), Lithuanian talmudic scholar and historian. Heilprin, the son of the rabbi of Sokolov, studied Kabbalah and, according to legend, performed miracles. He served as rabbi first in Glusck (Bobruisk district), where his compilation of rules and regulations for the *hevra kaddisha* were preserved in his own manuscript for several generations. In 1711 he was appointed head of the yeshivah in Minsk. His method of teaching the Talmud, contrary to *pilpul*, caused friction between him and Aryeh Leib b. Asher *Gunzberg, who was also a *rosh yeshivah* in Minsk. Aryeh Leib later left Minsk, and Heilprin was able to continue in his own yeshivah, unhampered, and with the affection of his pupils.

Heilprin became famous mainly for his historical-chronological book *Seder ha-Dorot* (Karlsruhe, 1769), which is divided into three parts: (a) chronology of events and personages dated from the Creation to 1696; (b) the biographies and chronologies of the *tannaim* and *amoraim* in alphabetical order; (c) the names of Hebrew authors and books, listed alphabetically, up to Heilprin's period. In the first part of this work he made use of stories from the **Sefer ha-Yashar* and the earlier chronological books, including *Zemah David* by David *Gans, *Sefer Yuhasin* by Abraham Zacuto, and *Shalsft ha-Kabbalah* by Gedaliah ibn Yahya. In the third part he used *Siftei Yeshenim* by Shabbetai Bass; Heilprin copied the list of books from this work with all its errors. The second part, devoted to the history of the *tannaim* and *amoraim*, is of utmost importance. Although Heilprin followed *Sefer Yuhasin* in compiling the list of individuals, the history he wrote was the first modern-type biography of the *tannaim* and *amoraim*, being based on original research of the talmudic sources. In the introduction to his book Heilprin discussed the importance of the history of the *tannaim* to halakhic decisions.

Seder ha-Dorot was published a second time (Lemberg, 1858) with comments by Joseph Saul Nathanson, the rabbi of Lemberg. An improved edition of the book with a preface was later published by Naphtali Maskil le-Eitan (Maskileison; War-

saw, 1878). Heilprin also published annotations to the Babylonian Talmud (Vilna, 1880); *Erkhei Kinnuyim* (Dyhernfurth, 1806), a work similar to a concordance, listing the nouns and verbs in the Bible and Talmud: a new edition entitled *Kav Shalom* with notes and comments (letters (A–H) was published by S.Z. Adler (Satu Mare, 1939).

[Zvi Meir Rabinowitz]

HEILPRIN, PHINEHAS MENAHEM (1801–1863), Hebrew scholar and anti-Reform polemicist. Born in Lublin, Poland, he moved to Hungary in 1842 and, in 1859, emigrated to the U.S. Heilprin was opposed to reforms in Judaism and the moderation of his critical views on talmudic literature stemmed from a loyalty to Jewish tradition. In 1845 he wrote a sharp polemical work, *Teshuvot be-Anshei Aven* (signed S.M.N., the last letters of his names), directed against Samuel *Holdheim and his school, in which he expressed the view that Jews have a right to exist as a nation, and not merely as a religious community. Heilprin's second work *Even Bohan* (1846), signed "Peli," contains a penetrating criticism of Abraham *Geiger's *Melo Ḥofnayim*, and a critical edition of Profiat *Duran's *Al Tehi ka-Avotekha*. An article on methods of talmudic textual criticism, "Kevod Ḥakhamim Yinḥalu," was published posthumously in *Bikkurim* (vol. 2, 1865).

[Gedalyah Elkoshi]

HEILPRIN, SAMUEL HELMANN BEN ISRAEL (1675–1765), rabbi of Bohemia. Heilprin was born in Krotoszyn, and studied under Abraham b. Saul *Broda of Prague. He was rabbi of Kremsier (Kromeriz) in Moravia from 1720 to 1726 and from 1726 to 1751 of Mannheim, where he devoted himself particularly to strengthening the education system and established a yeshivah. In 1751 he succeeded Jonathan *Eybeschuetz as rabbi of Metz, remaining there for the rest of his life. While rabbi of Kremsier he was a firm opponent of Shabbateanism, and when in Mannheim he began to take an active part in the controversy against Eybeschuetz. He intensified his battle against him when in Metz as a result of the discovery of five amulets written by Eybeschuetz which increased his suspicion that Eybeschuetz did indeed belong to the Shabbatean sect. In 1752 Heilprin, together with the rabbis of Frankfurt, Amsterdam, and Hanover, excommunicated Eybeschuetz. Only a few of Heilprin's glosses to the Talmud have been published. These are to be found in the *Kol Yehudah* (Amsterdam, 1729) of Judah b. Ḥanina Selig of Glogau (5a, 15c, 52d) and there is a responsum by him in *Shav Ya'akov* of Jacob b. Benjamin Katz of Prague (pt. 2 (Frankfurt, 1742), no. 20). The eulogy on him delivered by Ezekiel *Landau, author of the *Noda bi-Yehudah*, is published in Landau's *Ahavat Ziyon* (vol. 1 (Prague, 1827),

sermon 6). His son, URI SHRAGA PHOEBUS, who died while on a visit to his father's grave in Metz in 1770, served as rabbi of the towns of Hanau, Lissa, and Bonn.

HEILPRUN, ELIEZER LEIZER BEN MORDECAI (1648–1700), Galician rabbi. Heilprun was born in Jaroslaw (Galicia), and studied in Pinczow at the yeshivah of Saul Katzenellenbogen, father of his son-in-law, Moses Katzenellenbogen. His dialectical ability gained him the sobriquet of "R. Leizer Ḥarif" ("the sharp-witted"). He served as rabbi of Mezhirech and of Tomaszow, and in 1700 moved to Fuerth where he died. He left in manuscript glosses to the Talmud, sermons, responsa, rulings, and *hadranim* on tractates of the Talmud entitled *Si'ah ha-Se'udah* ("Conversations at Meals"), the *hadran* being delivered at a festive banquet held on the completion of the study of a tractate.

[Yehoshua Horowitz]

HEIMANN, MORITZ (1868–1925), German author and essayist. Heimann was born into an Orthodox family in Werder. He received his Jewish education at home since his was the only Jewish family in the village. Despite Heimann's devotion to German culture and language, he appreciated Zionist and national Jewish thought. In his essay *Zionismus und Politik* (1917), written under the impression of World War I, he described the Jewish longing for a homeland as mainly a political issue, which should find its pragmatic solution apart from religious visions.

Heimann worked as the chief literary adviser to the Berlin publishing house of S. *Fischer between the years 1895 and 1923. There he had a profound influence on German literature during the first quarter of the 20th century. In those years he discovered and encouraged many talented young writers. His aphorisms, short stories, and psychological novellas were collected and edited by Oskar Loerke as *Prosaische Schriften* (5 vols., 1918–26). Of Heimann's plays, only *Armand Carrel* (1920) was moderately successful. Heimann's poems on Jewish themes include "Der Rabbi und der Fluss," a reworking of the talmudic legend about R. Phinehas ben Jair (Ḥul. 7a). His essays include an appreciation of his friend M.J. *Berdyczewski and a defense of the right of a Jew, Walter *Rathenau, to become a German cabinet minister. Heimann's drama *Das Weib des Akiba* (1922) idealized Jewish womanhood, personified in the wife of the heroic sage R. *Akiva, and was largely

based on talmudic sources. Two posthumous volumes were *Die Spindel* (ed. I. Bin Gorion, 1937) and *Die Wahrheit liegt nicht in der Mitte* (1966), a collection of essays edited by Heimmann's biographer, Wilhelm Lehmann.

[Sol Liptzin / Noam Zadoff and Mirjam Triendl (2nd ed.)]

HEIMWEHR (Ger. “home defense”), a paramilitary organization, closely connected with the *Christian Social Party in Austria. Founded in 1919 on a stridently anti-Marxist platform, its energies were directed mainly against its social democratic counterpart, the *Schutzbund. For this reason it enjoyed the support of such baptized Jews as Rudolf von Sieghardt, the governor of the national bank, and the arms manufacturer Fritz Mandel. There was even a Jewish unit in the late 1920s. In December 1929 Jewish group leaders declared that they could no longer participate because of growing antisemitism which the organization identified with anti-Marxism. In the Korneuburger Program (1930) the organization proclaimed its affiliation to fascism against democracy and parliamentarianism. The Heimwehr became the decisive factor in Austrian politics after the outlawing of the Social Democratic Party (1934). After the collapse of the “Pfrimer coup” in 1931 the Styrian branch of the Heimwehr formed a common front with the National Socialists against the Jews. The Heimwehr was responsible for many of the anti-Jewish riots of the period.

[Meir Lamed / Bjoern Siegel (2nd ed.)]

HEINE, HEINRICH (originally **Hayyim** or **Harry**; 1797–1856), German poet and writer. Though a celebrated romantic poet and a political writer, whose works provoked passionate discussion, Heine produced some of the greatest Jewish verse outside Hebrew or Yiddish. Heine's way of thinking was shaped by the contradictions between his Jewish origin and the intellectual tradition of the enlightenment and is characterized by a specific Jewish perspective on the significance and tradition of Scripture. During his early years his birthplace, Duesseldorf, was part of the Napoleonic Empire (1806–14). The rights of citizenship and equality before the law that the Jews enjoyed under French rule later found expression in works idealizing Napoleon and the achievements of the French Revolution. Although Heine, in childhood and later in his life, was spared the experience

of direct persecution, he remained aware of the stigma of Jewishness. The disappointments that affected German liberalism and Rhenish Jewry after Napoleon's overthrow partly account for the conflicts and paradoxes that mark Heine's career.

The German Years (1797–1831)

Heine's ancestors on his father's side, long settled in northern Germany, included prosperous merchants and bankers. His mother came from a respected family of bankers and scholars who had lived in Duesseldorf since the mid-17th century. Heine's father, Samson Heine, was raised traditionally, but his family life was dominated by the secularized Judaism of his wife, Betty Heine (née Peira van Geldern). Heine received a religious education from a private Jewish school and after attending the regular school (1803–7), he was sent to the first Duesseldorf *lycée*. The founding principal of this institution, which had been established by the French government, Aegidius Jakob Schallmeyer, was an exponent of the late enlightenment in the Rhineland. In his early years Heine experienced the benefits of the assimilated status of the Jews under the French government. Although he was impressed and stimulated by what he heard about the Jewish tradition by his mother's late uncle, the traveler and adventurer Simon van *Geldern, who had visited the Holy Land, his knowledge of Judaism was fragmentary and superimposed on the ideas of the Enlightenment. In 1815 he left school and was sent first to Frankfurt and then later to Hamburg for training in business. In Hamburg he made further acquaintance with his father's family. His uncle Salomon *Heine was one of the wealthiest bankers in northern Germany. Some of Heine's early poems were inspired by a frustrated passion for Salomon's daughter Amalie. Some years later when he fell in love with her sister Therese, Salomon Heine again thwarted his nephew's aspirations. In 1818, after two years in his uncle's business, Harry Heine & Co was established as a branch of his father's Duesseldorf company. The business failed one year later, when his father went into bankruptcy because of the illness that eventually caused his death in 1828. Salomon Heine felt responsible for his nephew's further development and paid for his studies at the universities of Bonn, Berlin, and Goettingen (1819–25). In one way or another he helped him remain financially solvent for many years. In Berlin Heine became a disciple of the philosopher G.W.F. *Hegel, met some of the leading German writers and philosophers at the salons of Rahel (Levin) *Varnhagen von Ense and Elise von Hohenhausen, and published a well-received first verse collection, *Gedichte* (1822). He also joined the reformist *Verein fuer Cultur und Wissenschaft der Juden, becoming its secretary in 1822 and enjoying the friendship of such cultured German Jews as Eduard *Gans, Moses *Moser, Leopold *Zunz, Immanuel *Wohlwill, and Ludwig *Markus. The wider Jewish knowledge that Heine gained in their company was later reflected in works like the fragmentary *Der Rabbi von Bacharach* (1840), which he began in 1824. Berlin Jewry's indifference to the cultural aims and activities

of the Verein led to its collapse, and Heine was incensed and disillusioned by the subsequent apostasy of some of the leading members. After abandoning plans for a journalistic career in Paris, he finally surrendered to the pressure of his environment. He was baptized as a Lutheran in 1825, adopting the Christian name of Johann Christian Heinrich. Heine soon became ashamed of his conversion, which was solely intended to facilitate the gaining of his doctorate of law at Goettingen and the pursuit of his career as a civil servant or academic. He was mistaken, for the doors remained closed: to Jews he was a renegade, to Christians an insincere turncoat or dangerous radical. Although Heine spoke of the baptismal certificate as an “admission ticket (*entrée billet*) to European culture,” it gave him no advantages and for the rest of his life he suffered from the stigma of a convert.

With the *Reisebilder*, published in four volumes (1826–31), Heine, at the end of the romantic period, introduced into German literature a new and sometimes alarming style, which made him a much acclaimed but at the same time controversial writer. These travel sketches combined the characteristic tone of the German Romantic Movement with the ideas that arose from the French Revolution. He satirized religious bigotry and political reaction and pointed to the necessity of constitutions that would provide for parliamentary government and civil liberty. Their publication led to numerous discussions and a ban on the four volumes in several German states. The most incisive disputes arose with the poet August Graf von Platen (1829) and the writer and critic Wolfgang Menzel (1836), both of whom resorted to antisemitic polemics, which were to prove persistent in public opinion and literary criticism up to the first half of the 20th century. It is an irony that Heine found himself a target of massive antisemitic attacks for the first time in public after his conversion. Besides the *Reisebilder*, the collection of his early lyrical works, the *Buch der Lieder*, which was published in 1827, made him one of the most celebrated lyrical poets of the time.

Failing to obtain a chair at the University of Munich in 1828, and fearing sterner police action and a boycott of his works, Heine left Germany. He settled in Paris in 1831, after the liberal July Revolution in France. Four years later, the publication of his works was temporarily suspended by the parliament of the German confederation. Except for two short visits to his family in 1843 and 1844, he never returned to his native country.

The French Years (1831–1856)

In Paris, during the 1830s and 1840s a place of exile for writers and intellectuals from various European countries, Heine found a more congenial atmosphere. He admired the achievements of the 1830 revolution and praised the French capital as a “New Jerusalem.” Through his journalistic contributions to the Augsburg *Allgemeine Zeitung*, the *Morgenblatt fuer gebildete Staende*, *L'Europe littéraire*, and the *Revue des deux mondes* during his first French decade, Heine became an intermediary between the cultural traditions of France and Ger-

many. His writings on France (*Ueber die franzoesische Buehne, Franzoesische Maler*) and Germany (*Die romantische Schule, Zur Geschichte der Religion und Philosophie in Deutschland*) were later collected in the four volumes of the *Salon* (1834–40). These works show that his view of German literature and philosophy was influenced not only by the thinking of Hegel and of Jewish emancipation but also by ideas derived from the Saint-Simonian movement, with which Heine came into contact during his early Paris years.

In the course of the 1830s he became the leading figure of a group of young German writers who were to be known in the history of German literature as *Junges Deutschland* (“Young Germany”). Yet he fell out with Ludwig *Boerne, the other prominent liberal German writer in Paris, who regarded him as a lukewarm revolutionary. Heine’s views of his fellow exile, expressed after Boerne’s death in *Ludwig Boerne. Eine Denkschrift* (1840), provoked enraged reactions by the liberal German writers of the time, for whom Boerne was an exponent of the republican idea. It is one of the paradoxical characteristics of antisemitism in 19th century Germany that in the course of the controversy even the conservative and nationalistic press, while rejecting Boerne’s liberal ideas, accused Heine of being unprincipled and unscrupulous. The spreading of antisemitic stereotypes was thus employed to play off the two exponents of Jewish-German literature in the first half of the 19th century against each other. In response, Heine satirized the younger generation of political writers in the mock epic *Atta Troll. Ein Sommernachtstraum* (1843). His second mock epic, *Deutschland. Ein Wintermaerchen*, written in 1843 after a visit to Hamburg and satirizing reactionary German monarchies, made Heine again a target for nationalistic critics who decried him as frivolous and unpatriotic.

Heine’s circle during his French years included numerous well-known writers and intellectuals of the time, such as Honoré Balzac, Alexandre Dumas, Théophile Gautier, Ferdinand *Lassalle, George Sand, Alexandre *Weill, and Karl *Marx. Another of his acquaintances was James Mayer de *Rothschild. In 1841 he married a non-Jewess, Augustine Crescence Mirat (“Mathilde”), an illiterate Paris shop assistant he had been living with for seven years. Following the death of Salomon Heine in 1844, the poet experienced a serious struggle for a promised annuity, and obtained it only on condition that he refrain from publishing critical memoirs on the Heine family. From 1848 up to his death in 1856 Heine was confined to his “mattress-grave.” He himself believed that he suffered from a spinal disease. As no contemporary diagnosis has been handed down, recent research speculates most frequently about venereal infection. In spite of his condition he continued to work as a writer. The late works – *Romanzero* (1851), *Gedichte 1853 und 1854* (1854), *Gestaendnisse* (1854), *Lutezia* (1854) – poems, autobiographical reflections, and a compilation of his journalistic writings once more show the characteristic features of this style: they combine irony with pathetic metaphors emphasizing the tradition of German romanticism and the necessity of political and religious emancipation.

Heine and Jewish Tradition

Heine's Judaism has been a matter of controversial discussion. From a biographical point of view, one of the questions has been to what extent he saw himself as a Jew and as an exponent of Jewish culture in Germany. The problematic nature of this issue is due mainly to Heine's technique of blending biographical information and fictitious sketches in his works. Confronted with antisemitic attacks after the short period of Jewish emancipation under the French government, he began playing in his writing a confounding though fascinating game of hide-and-seek concerning his Jewish origin, which reveals his attempt to achieve a synthesis of European culture and Jewish tradition and in retrospect exposes the impossibility of his effort to become part of a Christian-dominated society.

The early tragedy *Almansor* (1823) is set in Grenada in medieval Spain and emphasizes the persecution of the Jews and Muslims under the reestablished reign of the Catholic kings. Within the historical setting of a drama, which refers to G.E. *Lessing's *Nathan der Weise* as well as to Heine's own situation in the early 1820s, the author reflected on the problem of Jewish identity within the Diaspora and the conflicts of apostasy. In the fragmentary novel *Der Rabbi von Bacherach*, which was drafted during his time as a member of the Verein fuer Cultur und Wissenschaft der Juden in Berlin, and published in 1840 as a reaction to the *Damascus Affair, he identified himself quite obviously with the cynical, freethinking Don Isaac *Abrabanel, though at the same time stressing the beauty of traditional Jewish ceremonies. He fiercely condemned both French diplomatic intrigues in Syria and the passivity of many French Jews in his "Damascus Letters" for the Augsburg *Allgemeine Zeitung*, but his articles were published anonymously. His book about Ludwig Boerne was not only a justification of his own political ideas; it was also a polyphonic attempt to show his life in Paris, his suffering abroad in the tradition of the exile of Babylon. In the late *Romanzero* he included the *Hebraeische Melodien*, a title consciously borrowed from Lord *Byron's *Hebrew Melodies*; *Prinzessin Sabbat*, a fairy-tale evocation of the Jew's transformation on the day of rest; *Jehuda ben Halevy*, in praise of the great Jewish-Spanish poet and philosopher, and the tragicomic *Disputation. Romanzero* also contained other poems reflecting Jewish themes, as did his earlier collections of verse.

Not only the works that obviously refer to Jewish topics deal with the problem of Jewish identity. Almost every piece of Heine's prose or verse reflects in one way or another the conflict of his Jewish origin. His modernist view of Judaism is poised between identification with the history of the Jewish people, the Jewish tradition of Scripture, and a feeling of strangeness and exclusion. In some of his writings he stressed the curse of Judaism: the Flying Dutchman in the fragmentary picaresque novel *Aus den Memoiren des Herrn von Schnabelewobski* (1834) is but a figuration of Ahasuerus, the Wandering Jew. His early travel sketch *Ideen. Das Buch Le Grand*, which can be seen mainly as an attempt to rewrite romantic themes, plays with the Judaism of its author. Reflecting about

the female figures in Shakespeare's dramatic works (*Shakespeares Maedchen und Frauen*, 1839), he gives Shylock, the Jew, a prominent position. Whereas in his early years Lessing, Shakespeare, Homer, and Cervantes became figurations of his own identity as a writer, in his last years Heine wrote a fragmentary poem, *Jehuda ben Halevy*, which points to the great Jewish poet as one of the ancestors of his writing.

One of the most controversial issues of Heine's Judaism has been the question of whether, in the years of the "matress-grave," he returned to Jewish belief. When he published the epilogue to the *Romanzero*, in which he quite frankly announced his return to a personal god, the reading public and the critics were shocked. Taking into consideration that the reproach of atheism has a long tradition within German literature and philosophy (Moses *Mendelssohn) and furthermore that one of the main features of Heine's writing is the idea of an emancipation of thought through an ironic and provoking style, and looking at his writings, which paradoxically stress the ideas of continuity and tradition rather than change, it seems as if Heine was always a man of faith – but faith without confession.

Reception

Up to the second half of the 20th century Heine remained one of the best-known and most controversial writers in German literature. In the first decades following his death the reading public, the critics, and the scholars emphasized the romantic tone of his early lyrical works and ignored his attempts to renew German romanticism by superimposing the poetical ideas of the romantics on the enlightened conceptions of political and religious emancipation. More than 13,000 recognized musical settings of his poetry supported this attempt. In the course of the decline of nationalism and chauvinism in the late 19th century, Heine's critics emphasized his Jewish descent and his sympathy for the achievements of the French revolution. Resorting to antisemitic stereotypes, critics like Heinrich von Treitschke and Adolf Bartels reviled him as a "Vaterlandsverraeter" (betrayer of his native country), both unprincipled and frivolous. One of the most influential voices in the early reception of his works was Karl *Kraus. In his essay *Heine und die Folgen* (1910) he pointed to the contrast between the depth of German thought and the frivolous French style, which in his view was introduced into German literature by Heine. It is one of the ironies of the reception of Heine's works that another Jewish writer perpetuated the stereotypes of earlier antisemitic judgments. Nevertheless Heine became one of the most influential German poets and writers. His works influenced Richard Wagner's *Flying Dutchman* and *Tannhaeuser* and inspired countless writers, including Matthew Arnold, George *Eliot, George B. Shaw, Charles Baudelaire, Friedrich *Nietzsche, Thomas *Mann, Giorgio *Bassani, Jorge Luis Borges, and Paul *Celan. Heine's influence has been traced in practically all of Western literature, and his poems have been translated into most languages, including English (by Humbert *Wolfe, Louis *Untermeyer, Hal Draper, and Ter-

ence J. Reed) and Hebrew (by David *Frishman and Yizhak *Katznelson). Much of Heine's prose work has been translated into Hebrew by S. *Perlman. Outstanding among the works based on Heine's life is Israel *Zangwill's sketch "From a Matress Grave" (in *Dreamers of the Ghetto*, 1898).

During the era of National Socialism in Germany (1933–45) Heine's writings were excluded from anthologies and schoolbooks, the publication of his works was suppressed, and on May 10, 1933, his works were burned together with the writings of many other Jewish-German writers and liberal thinkers. After the liberation of Germany in 1945 the East Germans proclaimed Heine an early socialist writer, whereas the West German reception stressed his works as part of the heritage of German culture that had not been abused for the ideological purposes of the Hitler regime.

As numerous editions and translations of his works, congresses, exhibitions, and monuments in Germany and many other countries throughout the world show, Heine has, 150 years after his death, been acknowledged not only as an outstanding poet and writer, but as the founding father of Jewish-German literature.

HEINE, SOLOMON (1766–1844), German banker and philanthropist. Heine was born in Hanover, but moved to Hamburg where he opened a successful banking house. After the crisis of 1825 and the great fire of 1842 Heine, the only banker in Hamburg, continued to discount legitimate bills at the usual rate of 4% thus saving the credit of the city's trading community. Despite this public service, a substantial subscription to the city's rehabilitation loan, and numerous charitable contributions, including the establishment of Hamburg's Jewish hospital, he was refused citizenship and denied admission to the Chamber of Commerce. Heine made a provision that gentiles could use the hospital when civil rights were granted to the

Jews of Hamburg, a condition fulfilled in 1864. His heirs moved the bank to Paris where it became one of the leading financial institutions. He was the uncle of Heinrich *Heine, whom he supported with an annual subsidy in his Paris period.

HEINE, THOMAS THEODOR (1867–1947), German graphic artist and cartoonist. Born in Leipzig of a Jewish father and a non-Jewish mother as David Theodor Heine, he studied art at Duesseldorf, and later made his home in Munich. Though he started as a painter, he became known as a poster designer and illustrator. He worked for *Fliegende Blaetter* and *Jugend*, Munich magazines, developing a varied technique and acuteness of expression. He was one of the founders of the satirical review *Simplicissimus* (1896) and its best known political caricaturist for 37 years. His biting caricatures satirizing the Prussian officer class, the German student corps and officialdom, spared no one. A cartoon satirizing Kaiser William II led to Heine's detention for a term. In 1926 Heine published his autobiography as a collection of essays, *Randbemerkungen zu meinem Leben*, in the monthly *Uhu* published in Berlin. When *Simplicissimus* aligned itself with the Nazis in 1933, Heine fled to Prague, where he published *Das spannende Buch* in 1935, a collection of his non-political drawings. Later Heine escaped to Oslo, where he remained in hiding for nine months. Finally he reached Stockholm and settled there. In addition to collections of his drawings, he published a short satirical novel *Ich warte auf Wunder* (1945; *I Wait for Miracles*, 1947). In 1947 the National Museum of Stockholm organized a comprehensive retrospective of the work that Heine had created during emigration.

HEINE-HEIMOWITZ, MORRIS (1853–1943), theatrical organizer. An early member of the *Goldfaden troupe in Romania, he later formed his own company in Warsaw, touring Poland and Russia. In 1883, the czar's ban on Yiddish theater obliged him to leave for London, where the Jewish community helped him to migrate to the U.S. Subsequently Heine-Heimowitz leased theaters in New York and Chicago and managed movie houses. He also produced plays in Italian and Chinese.

HEINEMANN, FRITZ (1889–1970), German philosopher. Born in Lueneburg, he was a student of Hermann *Cohen and

Paul Natorp. He became a lecturer in philosophy at the University of Frankfurt on the Main in 1922 and served as professor there from 1930 to 1933. He was then forced to leave Germany, and taught philosophy at Oxford. His most important earlier works are *Der Aufbau von Kants Kritik der reinen Vernunft und das Problem der Zeit* (1913), *Plotinus* (1921), and *Titian* (1928). Of particular importance was his *Neue Wege der Philosophie: Geist, Leben, Existenz* (1929). In it Heinemann presented the first summary of the development of the philosophical schools, including existentialism, which became prominent after World War I. When he left Germany, he wrote *Odysseus, oder die Zukunft der Philosophie* (1939), and in the same year his book on the foundation of aesthetics appeared. This was followed by *David Hume, the Man and his Science of Man* (1940) and *Existentialism and the Modern Predicament* (1953). In *Odysseus* Heinemann developed a program for present-day philosophy. Contemporary philosophers, he argues, are being tested by experiences unique in the history of mankind. The philosopher has become an Odysseus. Heinemann demands of philosophers that they take advantage of these trials in order to enlarge the range and the tasks of philosophy. Hitherto philosophy has looked backward; now it must look forward. "We are the pioneers of the pioneers." In 1959 Heinemann edited *Jenseits des Existentialismus* (1957) and *Die Philosophie im 20. Jahrhundert* (1959), an encyclopaedic survey of contemporary philosophy for which he wrote some of the main articles. Heinemann holds that the various philosophical systems constitute "alternatives," not in the sense that the one negates the other but rather that it complements the other; they are different perspectives of the one truth which is not given to man directly. In remembrance the city of Lueneburg founded the Heinemann Archive in 1972.

[Samuel Hugo Bergman]

HEINEMANN, JEREMIAH (1778–1855), German writer, educator, and communal leader. From 1808 to 1813 he was a member of the Jewish consistory of Westphalia and from 1825 to 1831 was principal of a school in Berlin. Heinemann was one of the last of the German *maskilim* (see *Haskalah) in the tradition of the *Me'assefim and Moses *Mendelssohn, who sought to adapt Jewish life in Germany to modern times. In 1817 he founded and edited the eight volumes of *Jedidja*, a periodical of Jewish studies in German (1817–31), which appeared in a new series in 1839–41 and later as *Allgemeines Archiv des Judenthums* (1842–43). His Hebrew commentary to the Torah, *Be'ur la-Talmid*, was published in a new edition of the Pentateuch along with Mendelssohn's translation (1831–33). His publications include a collection of articles and letters written by and to Mendelssohn, books on Judaism and Jewish education, a German translation of Isaiah, and essays on the legal and cultural status of the Jews of Prussia.

[Zvi Avneri]

HEINEMANN, YIZHAK (Isaac; 1876–1957), Israel humanist and philosopher. Born in Frankfurt, Heinemann studied at German universities, and at the Berlin Rabbinical Seminary. In the years 1919–38, he lectured in Jewish philosophy and literature at the Jewish Theological Seminary in Breslau, where he reached the rank of professor, and, from 1920 was editor of the **Monatsschrift fuer Geschichte und Wissenschaft des Judentums*. In 1939, he settled in Jerusalem, where he continued to pursue his studies of Jewish philosophy. He was awarded the Israel Prize for Jewish studies in 1955.

Heinemann's works, which deal with Hellenistic and medieval Jewish philosophy, as well as with *aggadah*, include: *Poseidonios' metaphysische Schriften* (1921–28); *Die griechische Quelle der "Weisheit Salomos"* (1921); *Die Lehre von der Zweckbestimmung des Menschen im griechisch-roemischen Altertum und im juedischen Mittelalter* (1926); *Philons griechische und juedische Bildung* (1931–32); and *Altjuedische Allegoristik* (1936). Two of his works were published in Hebrew: *Ta'amei ha-Mitzvot be-Sifrut Yisrael* (dealing with the reasons for the commandments, 1942–57), and *Darkhei ha-Aggadah* (on talmudic methodology in creating the *aggadah*, 1950). He contributed articles to various journals. He also published an abridged edition in English of Judah Halevi's *Kuzari* with introduction and commentary (1947).

Heinemann's clear and well-founded investigations were the result of his facing the problems of contemporary Judaism and standing up to the influences of European culture as well as German nationalistic hatred. He expounded his ideas in lectures, in German, *Zeitfragen im Lichte juedischer Lebensanschauung* (published in 1921), as well as in series of essays, such as *Die geschichtlichen Wurzeln des neuzeitlichen Humanitaetsgedankens* (1930), in which he discusses topical problems like militarism or pacifism, by analyzing historical attitudes which stem from either Greek or Germanic thought, or from Christianity, and comparing them with the Jewish viewpoint as reflected in Scripture. The Jewish attitude, he concluded, is the correct one, and the Jew should refer back to his own sources and find his place in world culture, not by refuting his faith, but rather by adhering to it. This motif recurs especially in his work on *Die Lehre von der Zweckbestimmung des Menschen*, where he attempts to show that while originally Jewish philosophy did accept ideas from Greek sources, this was done only after Aristotle and neoplatonism had been interpreted in a spirit close to Judaism and Christianity, and imbued with eschatological content. Moreover, Greek influence, in spite of creating a conflict, led to the emergence, in Judaism, of original thought which, in its turn, was imparted to European culture. Thus, Jewish thought in the Middle Ages constituted an essential link in the history of philosophy.

[Eliezer Schweid]

HEJAZ (Ar. Hijāz), a region N.W. of present-day *Saudi Arabia, from the Gulf of ‘Aqabah in the north to ‘Asir in the south along the Red Sea. The narrow coastal stripe (*Tihāmah*) is a dry, barren land, while the mountain chain (2100–2400 m and peaks topping 3000 m) is fertile due to plenty of precipitations. Because of its being the site of *Islam’s holy cities *Mecca and *Medinah, it is significant in the Arab and Islamic historical and political landscape. The name *Hijāz* means sequestration, impoundment, signifying the mountain bar between the sea and the hinterland. Scattered oases, drawing water from springs and wells in the vicinity of the wadis, permit some settled agriculture. Of these oases, the largest and most important are Medinah and *Khaybar. According to a legend of Jewish source, but kept in Muslim writings, the first Jews arrived at the *Hijāz* when Moses dispatched an army to expel the Amalekites from the land of Yathrib (in time: Medinah). According to another legend, the second Jewish immigration took place in 587 B.C.E. with the destruction of the First Temple. Jews settled then in Wādī al-Qurā’, Taymā, Yathrib, and Khaybar. However, from epigraphic evidence recently excavated, the earliest Jewish settlement in the *Hijāz* dates from the reign of Nabonidus, son of Nebuchadnezzar of Babylon (6th century B.C.E.). Nothing is known about later times, but Aramaic and Judeo-Arabic inscriptions at ‘Ullā (biblical Dedan) and Madā’in Šāliḥ (Hijrah) from the late third and early fourth centuries C.E. attest to the existence of Jewish settlements in the *Hijāz* at that time. Jewish sages such as ‘Anan b. Hiyya of Hijrah are cited in the Talmud (Yev. 116a). These communities strictly observed Jewish practical commandments and were even much more meticulous in questions of purity and impurity.

At the beginning of the seventh century C.E., there were three Jewish tribes living in Yathrib: Banū *Qaynuqa*, Banū Naḍīr, and Banū *Qurayza. All three tribes were rich and powerful, and, also, were more civilized than the Arabs. Whereas the Arabs were all farmers, the Jews were the entrepreneurs of industry, business and commerce in Arabia, and they controlled the economic life of Yathrib. The two Arab tribes – Aws and Khazraj – were debt-ridden to the Jews perennially. Besides Yathrib, the strong centers of the Jews in *Hijāz* were Khaybar, Fadak, and Wādī al-Qurā’ (Aylah, Maqna, Tabūk). The lands in these valleys were the most fertile in all Arabia, and their Jewish cultivators were the best farmers in the country. Moreover, Arabs settling among the populous Jewish communities of Medinah, Taymā, and Khaybar often adopted Judaism.

The rise of Islam gradually resulted in the complete disappearance of Jews from the *Hijāz*. Already in *Muhammad’s time the three Jewish tribes in Yathrib were destroyed, forcefully converted to Islam or expelled. The Jewish settlement in Khaybar and Wādī al-Qurā’, whom Muhammad recognized as protected people, existed as agricultural centers at least until the 11th century, as attested by letters sent by them to a *gaon* in Iraq regarding religious issues of agriculture. Since then there has not been any Jewish settlement in the *Hijāz*. Islamic tradition even invented a **hadith* ascribed to Muhammad, who said

to his wife before his death: “There shall not be two religions in the *Hijāz*”. In days to come, the 16th to the 18th century, that saying would be the main religious argument for expelling the Jews of *Yemen, based on the claim that in this matter Yemen should be referred to like the *Hijāz*.

[Yosef Tobi (2nd ed.)]

HEKDESH (Heb. חֲקֵדֶשׁ), consecrated property, property dedicated to the needs of the *Temple; in post-talmudic times the term *hekdesch* without qualification (*setam hekdesch*) came to mean property set aside for charitable purposes or for the fulfillment of any other **mitzvah*.

Consecration for the Temple Needs

The consecration of property was the means of providing for the upkeep of the Temple and the sacrificial services as detailed in Scripture (Lev. 2:7; II Kings 12:5–17, et al.). In the Temple period a person could consecrate property to either (1) the Temple treasury (*hekdesch bedek ha-Bayit*) that was utilized for maintaining and repairing the Temple buildings; or (2) the altar (*hekdesch Mizbe’ah*) for the purchase of sacrifices, namely the animals, and meal- and drink-offerings brought to the Temple altar. If a man simply consecrated his property without specifying which of these two purposes he intended and such property included animals fit for sacrifice at the altar, the animals would be sold for sacrifice and the proceeds allocated to the Temple treasury; i.e., “simple consecration to the Temple treasury” (Tem. 7:2; Shek. 4:7; opinion of R. Eliezer; Maim. Yad, Arakhin 5:7).

IRREDEEMABLE AND REDEEMABLE. Consecration (Kedushat ha-Guf and Kedushat Damim)

Property could be consecrated with different degrees of sanctity: i.e., intrinsic sanctity (kedushat ha-guf), embracing all objects consecrated to the altar and fit for sacrificial purposes, such as animals, doves and pigeons, flour, incense, wine and oil; or monetary sanctity (kedushat damim), embracing objects consecrated to the Temple treasury, as well as objects consecrated to the altar that were not fit for sacrifice or disqualified because of blemish from use at the altar. Consecrated property of the former kind could not be redeemed, whereas the latter could and the redemption money applied to the purpose for which the property was consecrated. Redeemed property ceased to be sacred and was relegated to its former secular status; but objects fit for the altar could be redeemed solely for the purpose of sacrifice there, since “anything which is fit for the altar, is never released from the altar” (Men. 101a; Maim. Yad, Arakhin 5).

CREATION OF CONSECRATED PROPERTY. Contrary to the general principle of Jewish law that the transfer of ownership cannot be effected in a merely oral manner but requires the performance of a symbolic act such as *mesirah*, *meshikhah*, or *hazakah* (see *Acquisition), the rule is that simply an oral statement suffices to transfer the ownership of property from the common man (*hedyot*) to *hekdesh* (“Dedication to the Temple by word of mouth is equal to the act of delivery to a common person even if the property is situated at the world’s end”; Kid. 1:6; TB, Kid. 28b–29a). This reference introduces the concept that consecrated property is in the ownership of God (*bi-reshut Gavoha*), and therefore can be transferred to Him by mere oral declaration, since “His is the earth and the fullness thereof” and “the earth is as a courtyard which acquires for Him” (TJ, Kid. 1:6, 61a; *Beit ha-Behirah*, Kid. 28b).

LEGAL IMPLICATIONS OF CONSECRATED PROPERTY. The principle that consecrated property is *bi-reshut Gavoha* and not in the ownership of a neighbor or the common man (*bi-reshut re’ehu* or *hedyot*) had the effect of placing such property to a large extent beyond customary legal relationships. Thus, neither the law of **ona’ah* was applicable to it, “even if a man sold a thousand dinars’ worth for one dinar or one dinar’s worth for a thousand” (BM 4:9; Tosef. BK 4:3; Maim. Yad, Mekhirah, 13:8; Tur and Sh. Ar., ḤM 227:29), nor the prohibition against *usury (BM 57b; Tur, YD 160). Similarly, no compensation was recoverable in *tort under any of the recognized heads of tort (see **Avot Nezikin*), in respect of damage caused by or to consecrated property – in terms of the rule that “there is tort in respect of the common man, but not in respect of consecrated property” (i.e., *Gavoha*; BK 4:3; TB, BK 37b; Tosef. BK 4:1; TJ, Git. 5:1, 46c; Rashi and Tos. BK 6b; Maim. Yad, Nizkei Mamon 8:1). Furthermore a man who stole consecrated property was not liable to pay double compensation and whoever slaughtered or sold it was only required to make good the capital value and was exempted from the four- or five-fold penalty (BM 4:9; Maim. Yad, Genevah 2:1; see also *theft and robbery).

So, too, the law on the different degrees of liability for damage or loss attaching to the four categories of bailees (see **shomerim*) did not apply to consecrated property, a bailee being exempted from taking the judicial oath or from paying compensation in respect of such property (BM 4:9; Shev. 6:5; Maim. Yad, Sekhirut, 2:1; Tur and Sh. Ar., ḤM 301:9). In strict law (*din Torah*) a man was exempt from the need to take the different forms of *oath (BM 4:9; Shev. 6:5; Maim. Yad, To’en 5:1; Tur and Sh. Ar. ḤM 95:1), but the scholars (BM 58a) prescribed that the oath, including the bailees’ oath, was required even in respect of consecrated property in order that such property should not be lightly dealt with; the rabbinical decision on taking the oath had to be regarded – according to some of the **posekim* – as having the severity of biblical law (Maim. Yad, To’en 5:1). Consecrated property was also distinguished from other property in relation to its modes of acquisition. Thus, *hekdesh* could acquire from the common man

and the common man from *hekdesh* by way of money (*kinyan kesef*), whereas one person could only acquire from another in one of the prescribed manners, such as by way of the formality of “drawing” (*meshikhah*; Kid. 1:6; Tosef. Kid. 1:9).

The institution of *hekdesh* bears a certain resemblance to the concept of a legal “*persona*” found in other legal systems. The two are nevertheless distinguishable because of the notion that consecrated property is in the ownership of God and does not belong to any legally created *persona*, as well as by the fact that to a large extent such property is not circumscribed by or subject to the customary legal relationships. Ishmael’s opinion that *hekdesh* funds could be used to purchase wines, oils, and flours, in order that these could be sold to those requiring them for sacrificial purposes and the profits set aside for the sacred funds, was disputed by Akiva, who stated that there could be no trading for profit with the sacred funds (Shek. 4:3) – since “there must be no poverty where there is wealth” (Ket. 106b; see also Rashi (*mahadura kamma*) *Shitah Mekubbezet*, Ket. 106b and “lest loss be caused to the sanctuary” (Maim. Yad., Ar. 6:5)). The custodian of *hekdesh* was the treasurer of the temple (*gizbar*). It was his task to collect all consecrated property, supervise it, buy and sell according to the needs of the sacred funds, represent *hekdesh* at law, and “all *Melekhet ha-Kodesh* was done by him” (Tosef. Shek. 2:15; Maim. Yad, Kelei ha-Mikdash 4:18).

CONSECRATION AS A MITZVAH. Although it was considered a *mitzvah* for a man to contribute part of his assets for *hekdesh* purposes “in order to subdue his inclination to be parsimonious” (Maim. Yad, Arakhin 8:12, with ref. to Prov. 3:9), failure to do so involved no blame, in accordance with the biblical injunction, “But, if thou shalt forbear to vow, it shall be no sin in thee” (Deut. 23:23; Yad, Arakhin 8:12). Moreover, according to Maimonides, it was forbidden for a man to consecrate all his property, and “whoever did so acted contrary to the requirements of the law and committed a foolish rather than a pious act ... placing himself at the mercy of his fellow beings ...” (Yad, Arakhin 8:13). If a person nevertheless did so, the clothing of his wife and children would be excluded by law from the effect of his consecration (Ar. 6:5; Yad, Arakhin 3:14). Similarly, it was a *mitzvah* to fulfill an undertaking to consecrate by not later than the first festival after such an undertaking had been given and failure to do so after three festivals had passed was a transgression against the negative precept of “thou shalt not be slack to pay it” (Deut. 23:22; Yad, M’aseh ha-Korbanot 14:13).

MISAPPROPRIATION OF CONSECRATED PROPERTY (I.E., SACRILEGE, ME’ILAH BE-HEKDESH). Deriving a benefit from consecrated property – of either degree of sanctity – was forbidden for as long as it retained its sanctity, the enjoyment of such benefit being considered sacrilege (*me’ilah*; Me’il. 15a; Yad, Me’ilah 1:1). The inadvertent misappropriation of consecrated property of “monetary” sanctity (see above) by its transfer to another as *hullin* (“secular property”) put an end to its sanctity and rendered it *hullin*; consecrated property of

“intrinsic” sanctity (see above) retained its sanctity, however, and did not become secular (Kid. 55a; Me’il. 20a; Maim. Yad, *Me’ilah*, ch. 6).

Hekdesh after the Destruction of the Temple

After the destruction of the Temple the *tannaim* laid down that a man must no longer consecrate his property as this could give rise to complications if someone were to derive benefit from it, resulting in *me’ilah*. If a man did this, however, the property would be duly consecrated, but certain precautions would be taken: “if an animal – the door should be locked before it, so that it die of itself; if fruits, garments, or vessels – they should be left to rot; if coins or metal vessels – they should be thrown into the Dead Sea or the ocean so as to lose them” (Av. Zar. 13a and Rashi *ibid.*; Yad, Arakhin, 8:8). The Talmud records an incident from amoraic times where people ceased to frequent a bathhouse that had been consecrated, for fear of committing possible *me’ilah* (BM 6a–b).

CONSECRATION FOR THE POOR, OR FOR THE PURPOSE OF ANY OTHER MITZVAH. In post-talmudic times the term *hekdes*h was principally used, theoretically and in practice, to signify the dedication of property for a charitable purpose or for the fulfillment of some other *mitzvah*: “Since we no longer have the Temple, the unqualified consecration of property means consecration for synagogues or the poor” (Nov. Ri, Migash, BB 102b; see also Resp. Rashba vol. 5 no. 135; *Sefer ha-Terumot*, 46:4 and 8; *Beit ha-Be’irah Av. Zar.* 13b); “... even if he said ‘consecration to heaven,’ his intention is for charity” (Duran, Solomon b. Simeon, *Sefer ha-Rashbash*, no. 361). Only if a person stated that he intended consecration proper to the altar or the Temple funds would the sanctity of *hekdes*h apply to the property concerned, as well as the prohibition against benefiting from it (Nov. Ri Migash, BB 102b. *Rama*, YD 258:1). Other scholars expressed the opinion that even in the post-Temple period the law was that if a man simply stated that he was consecrating property, without specifying for what purpose, the sanctity of *hekdes*h with the prohibition against deriving any benefit it would still be applicable – even if such a person in his heart envisaged an appropriation for the needs of *talmud torah* and the like. In the 13th century the example was quoted of a book found in Russia bearing the inscription that it had been given to *hekdes*h by a certain individual, and therefore studying from it was prohibited lest a benefit be derived from consecrated property (*Or Zaru’a*, Av. Zar., nos. 128 and 129). It was held that the proper way to overcome the prohibition was to approach a scholar with a request for the property to be “released” from its consecration on the grounds that the consecrator had repented of his undertaking – as in the case of a *vow (see Sh. Ar., YD, 258:1).

COMPARISON BETWEEN CONSECRATION FOR THE TEMPLE NEEDS AND CONSECRATION FOR THE POOR. The special rules laid down for consecration for the needs of the Temple did not generally apply to consecration for the poor or for the purposes of some other *mitzvah*; the latter were sub-

ject to the same laws as those governing the property of the common man (Tur ḤM, 95, in the name of R. Isaiah; see also Resp. Rosh 13:1) and “certainly there can be no question” of the law of *me’ilah* applying to consecration for the poor (Resp. Maharashdam, YD 208). In certain matters, however, the law of consecration for the Temple needs was extended to consecrations of the other kind. In the opinion of most halakhic scholars, the rule that “a mere declaration to the sanctuary is equivalent to transfer to the common man,” was applicable also to *zedakah* (see *charity) and “whoever states ‘I give such and such an object to charity’... may not retract” (Rif, *Hala-khot*, BK 36b; Ran. Nov. Ned. 29b; Resp. Radbaz, no. 802; Sh. Ar., YD 258:13). Similarly, the laws of *zedakah* were applied in the case of consecration for the poor or for some other *mitzvah*, and in several respects these laws are similar to those of *hekdes*h; for example, the negative precept, “thou shalt not be slack to pay it” applies also to *zedakah*, with certain variations (RH 6a and Codes). It was also decided that the act of consecration would be effective even if couched in the language of *asmakhta* – since “the law of *asmakhta* does not apply to vows and consecrations” (Resp. Rif, no. 247; *Sefer Teshuvot ha-Rashba ha-Meyuḥasot le-ha-Ramban*, no. 255; see also Sh. Ar., YD 258:10).

LOANS AT INTEREST FROM HEKDESH FUNDS. The analogy between consecration for charitable purposes and consecration for the Temple needs – despite their substantial difference – provided the halakhic scholars with a solution to the problem of the permissibility of deriving profit from *hekdes*h monies (*ma’ot*), namely, the consecration (by endowment) of a capital fund whose income was to be set aside for the consecratory purpose. The customary and virtually the only means of deriving income from such monies, was by their loan against interest; however, if this was permissible with regard to consecration for the Temple, funds consecrated for the poor (i.e., *zedakah*) were regarded as property of the “common man” (see e.g., BK 93a) and could not therefore be lent at interest (Raviah, quoted in *Or Zaru’a*, Hilkhot *Zedakah*, sec. 30 and in Resp. of Meir of Rothenburg, ed. Lemberg, no. 478). At the beginning of the 14th century *Isaac b. Moses of Vienna, a pupil of Eliezer b. Joel ha-Levi (Raviah), decided that only such *zedakah* money as had already been allocated for distribution to a particular individual fell within the prohibition since thereafter it was as if the money already belonged to this individual; until such allocation, however, “the law of *hekdes*h applies [to *zedakah*] and there is no prohibition against earning interest. Accordingly, when people contribute money and stipulate that the capital is to be preserved but the income distributed to the poor, the law of *hekdes*h certainly applies to such capital and it may be lent against fixed interest which is prohibited by biblical law [*ribbit kezuzah de-oraita*] since it is not about to be distributed ...” (*Or Zaru’a*, *ibid.*: the author at first states that this was his opinion prior to knowing that Raviah had laid down a prohibition on the same matter, but he gives no hint at all that he subsequently retracted). This

problem, a vexatious one for medieval scholars and communal leaders, was also resolved by Solomon b. Abraham *Adret along similar lines, but on the basis of a different halakhic distinction. In reply to the question whether it was permissible to “lend at interest money contributed for the poor and held by treasurers” – which was customary at that time (Resp. Rashba, vol. 1, no. 669) – Solomon b. Abraham Adret replied that “the Law has only prohibited interest coming directly from the borrower to the lender,” and here there is no lender since these monies have no specific owners and there is no specific share that any poor individual may recover from the treasurers, who distribute as they see fit – much, little, or none at all; hence lending at interest was prohibited only in respect of money consecrated for the specified poor, but “in the consecrations customary in our areas the poor are not specified and interest is permissible” (*Sefer Teshuvot ha-Rashba ha-Meyuhasot le-ha-Ramban* no. 222). Solomon b. Abraham Adret added, however, that he instructed thus in theory only but not in practice, and “it is not desirable that this be done, lest the fence be breached” (*ibid.*; but cf. *idem*, Resp. vol. 5, no. 249).

The far-reaching innovation contained in the two above-mentioned decisions was not accepted by other scholars. *Meir of Rothenburg took the view that the lending of *zedakah* money at fixed interest was a *mitzvah* stemming from a transgression, but in view of the prevailing custom he refrained from instructing the *hekdesher* trustee to act in any other way: “By reason of our sins, the matter has spread to become permissible throughout the kingdom, and the *gabba'im* sin but not for their own sake, because it is the sin of the whole community; I have not the power to protest and it is better that it be done by them inadvertently and not intentionally” (Resp. Meir of Rothenburg, ed. Lemberg, no. 479.) However, he wrote to questioners that thenceforth they were to refrain from the practice (cf. *ibid.*, secs. 234 and 425) and in his opinion money consecrated for the poor could only be lent at interest when the prohibition stemmed solely from rabbinical law, as was the law with regard to orphan money (*ibid.*, see also BM 70a). The same opinion was expressed by the latter’s pupil, *Asher b. Jehiel, who added that this was “plain law requiring no proof” (Rosh 13:17, and 8 and also 10). This view was also accepted as the law in the Tur and Shulhan Arukh (YD 160:18). It may be surmised that after the rabbis had prescribed a *hetter iska*; i.e., permission to take interest on loans of money given from any source whatever (see “*Shetar Iska*” in: Samuel b. Moses David ha-Levi, *Naḥalat Shivah*, no. 40; see also *Usury); this general permission reduced the need for the special permission innovated by Isaac b. Moses and Solomon b. Abraham Adret in respect of funds for the poor.

PURPOSES OF HEKDESH FUNDS. From the geonic period onward, the term *hekdesher* came to be widely used to denote the dedication of property for public or communal needs, for the benefit of the poor or the fulfillment of other *mitzvot*. The purposes for which such funds were endowed were many and diverse, as can be gathered from the responsa of

the *geonim* and later scholars, and included such beneficiaries as: “the poor in general” (as early as the time of the *geonim*, Hai and Sherira, see S. Assaf, *Teshuvot ha-Ge'onim* (1927), 69, no. 59); “the poor relatives of the donor”; “synagogal needs” (Scrolls of Law, cantor’s salary, etc.); “the ransom of captives” (e.g., Resp. Rif, no. 6); “*talmud torah*” and “those who cling to *Torat ha-Shem*” (presumably the same, Resp. Rashba, vol. 1, no. 1100); “the burial of the dead”; “dowries for orphans about to be married”; and many others. In various places it was laid down in *takkanot* that a portion of the fine imposed on a person convicted of a criminal offense was to go to *hekdesher* (see e.g., *Zikhron Yehudah*, 36). Many funds took their names from their particular localities, such as *Hekdesher Kahal Tortosa* (Resp. Rashba, vol. 1 no. 656), *Hekdesher le-Aniyey Saragosa* (*ibid.* 617), *Hekdesher Ashkelona* (Resp. Rosh 3:13), etc. Testamentary bequests were also commonly expressed in wills in terms of *hekdesher*. The term was further used to describe particular institutions which served as *talmudei torah*, homes for the poor or the aged, hospitals, hospices for travelers, etc. (see e.g., Resp. Ranaḥ, no. 84, giving a detailed description of such *hekdesher* institutions in Constantinople). Halakhic literature, *takkanot* collections, and Jewish communal documents of the Middle Ages are richly studded with varied references to matters of *hekdesher* and its different purposes, offering material of much historical interest.

CHANGING THE PURPOSE OF HEKDESH FUNDS. A frequent question concerned the permissibility of changing the original purpose for which the *hekdesher* funds and the fruits thereof were designated. With regard to *zedakah* monies it was laid down that “the townsmen may convert the soup kitchen to a charity box and vice versa, and to divert their use to any purpose they think fit” (BB 8b, and Codes); in the opinion of Jacob b. Meir *Tam, the townsmen were at liberty to divert the funds even toward a purpose that was permissible but not obligatory (*devar ha-reshut*) such as the maintenance of the town guard (Tos. to BB 8b). On the other hand, it was decided that funds explicitly contributed for a specified purpose could not be diverted (Resp. Rambam, ed. Blau, no. 206; Resp. Ritba no. 206); a standing local custom relied on by the communal leaders for the diversion of funds from their stated purpose justified the assumption that a contribution was given subject to the said custom (S. Assaf, *Teshuvot ha-Ge'onim* (1927), 69, no. 59; *Sefer Teshuvot ha-Rashba ha-Meyuhasot le-ha-Rambam*, no. 268), unless the contrary had been expressly stipulated (Resp. Rambam no. 206; Rema YD 259:2). In the discussions on this question, the nature of the charitable purpose played an important role and the principle was accepted that there could only be a change in charitable objects from a less to a more important one: e.g., funds for the synagogue or cemetery could be applied to the needs of a house of study or those of *talmud torah*, but not vice versa (Sh. Ar., YD 259:2). The same principle applied in the case of a field contributed for the purpose of the annual distribution of its produce to the poor, even when seven prominent townsmen agreed to a change of purpose,

since the contributor had declared his intention that the field be used for this particular purpose only and any change would amount to “robbing the poor” (Resp. Rashba, vol 5, no. 269; in this case the change was prohibited even for the purpose of *talmud torah*, Sh. Ar., YD 259:2; see also PDR 1:359f.). However, diverting funds was held to be permissible even of those destined for *talmud torah* or the support of the poor, for the purpose of redeeming captives, since this amounted to saving life and took precedence over all other charitable purposes (Sh. Ar., YD 251:14; 252:1).

ADMINISTRATION AND LEGAL PROCEDURE. *Hekdesh* is administered by an **apotropos* (“guardian” or “trustee”) or *gizbar* (“treasurer”) appointed by the benefactor or the court; the court is the higher guardian of *hekdesht* and in the administration the *apotropos* is subject to the court’s supervision (*Sha’arei Uziel*, 1 (1944), 108–15; PDR, 2:34). The trustee must be godfearing, trustworthy, and experienced in negotiating transactions (Resp. Rambam no. 54), his task being to guard the *hekdesht* assets from all loss and to administer them faithfully in accordance with the purposes for which they were endowed and the instructions of the court (PDR 1:359f.) If there is a strong suspicion concerning the good faith of his administration of the assets, the court is obliged to dismiss him from his position (PDR *ibid.*) but if he was appointed by the benefactor himself, he cannot be dismissed unless proved to have been derelict in his duties (PDR 2:27ff.). In many places it was customary to appoint special supervisors, called *avi yetomim* (“father of orphans”), as a board of control over trustees, and this has been considered appropriate also for *hekdesht* assets (*Taz* to Sh. Ar., YD, 258:5; PDR loc. cit.).

Contrary to the rule evolved from talmudic law, that a three-year period of undisputed possession does not confer the title of *hazakah* (“presumptive ownership”) in respect of *hekdesht* for public needs – because there is no one to protest on its behalf – it was decided by Solomon b. Abraham Adret that in his time *hekdesht* assets were so organized as to make it possible for them to be acquired by *hazakah*, “since here there are known owners and appointed treasurers, who have a part in such property and buy, sell, and barter with the knowledge of the *havurah*” (i.e., society or corporate body; Resp. Rashba, quoted in *Beit Yosef*, H̄M 149, n. 37). It was also thus decided in respect of all *hekdesht* property supervised by treasurers (Sh. Ar., H̄M 149:31 and see Isserles’ gloss thereto). On the question of the extent to which a charitable fund of such kind could be regarded as having a separate legal identity, see *Legal Person.

EVIDENCE IN MATTERS OF HEKDESH. In the post-talmudic period *hekdesht* was associated with an interesting development in the rules of evidence in Jewish law. In talmudic times the law was that persons connected with or having an interest in the matter under dispute were disqualified from testifying in regard to it (see *Witness) and a townsman could not therefore testify in a matter concerning the property of his

town, unless he had renounced all benefit from such property (BB 43a and Codes). In terms of this halakhic ruling it was decided, as late as the beginning of the 11th century, that those who worshiped in a particular synagogue were disqualified from testifying in regard to *hekdesht* contributed for the benefit of that synagogue (Resp. Rif nos. 163 and 247). With the proliferation of public institutions and particularly as far as the community was concerned, the observance of the prohibition in matters involving the interests of such bodies represented an ever-increasing burden, with the result that new customs and **takkanot* established and confirmed the competency of such witnesses, “in all public matters, including *hekdesht*, for if it were not to be so, who would there be to testify?... there would be no remedy where public needs are concerned ... if competent witnesses have to be brought from outside ... there would be found but one in a thousand” (Resp. Rashba, vol. 1, no. 680). This custom became the decided law enshrined in the Shulḥan Arukh (H̄M, 37:22; see also **takkanot ha-kahal*; taxation).

The concept of *hekdesht* in its later meaning was a creation of the post-talmudic historico-social situation, and was accompanied by a number of legal developments corresponding to the changes in the social fabric of Jewish life. The phenomenon of a term bearing two different meanings, of which *hekdesht* is an interesting example, offers evidence of one of the paths along which Jewish law has developed. Adherence to a common appellation for a concept with alternative meanings, despite the substantial difference between them, permitted the application of laws pertaining to the concept within one of its meanings – *hekdesht* or consecration for the Temple needs – to the concept within its alternative meaning – *hekdesht* or endowment for charitable purposes – for the purpose of solving certain problems emanating from the changing realities of everyday life.

In the State of Israel

In Israel *hekdesht* exists in two forms. First is endowment of property as approved by a religious court and administered in terms of religious law. Originally, Muslim law was applied, even in respect of non-Muslim endowments of this kind. In terms of the Palestine Order-in-Council, 1922, the Jewish community, as well as several Christian communities, were empowered to found *Wakf* or religious endowments and to administer them according to the religious law of the community in question. The second is the endowment of property for charitable purposes according to the civil, as opposed to the religious law, namely in terms of the “Charitable Trusts Ordinance.” The ordinance subjects the charitable trust and the trustee administering it to the supervision of the courts and defines “charitable trusts” as “including all purposes for the benefit of the public or any section of the public within or without Palestine [now to be read “the State of Israel”], of any of the following categories:

- (1) for the relief of poverty;
- (2) for the advancement of education or knowledge;

(3) for the advancement of religion or the maintenance of religious rites or practices;

(4) for any other purpose beneficial, or of interest to, mankind.

[Menachem Elon]

In the Middle Ages the *hekdes*h was a communal shelter and infirmary for the poor, transient, and the sick. The term does not appear until the late Middle Ages, though Jewish *hospitals are found much earlier. By the 17th century every important community in Central and Eastern Europe had a *hekdes*h for the sick and the poor. The institution persisted into the 19th century. The size of the hospice ranged from a rented room to a house or group of small buildings. Most often it was located out of town near the cemetery. The *hekdes*h was administered by a local **hevrah*, usually named *bikkur ḥolim*, and supervised by the *kahal*. The **gabbai* of the association, often a local merchant, was expected to visit the hospice as often as several times a day and to supervise the work of the beadle, the physician, the surgeon, and the *hekdes*h^{leyt} (“attendants”). The *hekdes*h was usually so unsanitary and dirty that a person would view with horror the prospect of staying there. The patients in Altona, about 1764, described themselves thus: “We the poor, fathers with children, lying-in women with their offspring, nursing mothers with their sucklings, old men and young men, all of whom are cast upon the bed of sickness, enduring our ailments, crushed, wasted; also we who are insane and distraught...” A British missionary who visited Minsk in the early 19th century writes: “In the Jewish Hospital we saw 45 young and old of both sexes, seemingly without any classification of disease, placed in several small rooms. They certainly presented one of the most appalling scenes of wretchedness I ever witnessed; filth, rags, and pestilential effluvia pervaded the whole place.” Thus in Yiddish *hekdes*h became synonymous with disorder and disarray in the home, in a room, or concerning a person. Not until the modern hospital came into its own did the situation improve.

Levitats, *Jewish Community in Russia* (1943).

HEKHSHER (Heb. הֶקְשֵׁר, “approbation” or “attestation”), certificate issued by the rabbinate or by individual rabbis certifying that a certain food product has been prepared under their supervision and in accordance with the traditional dietary *laws, hence declaring it *kasher*. Such an attestation is also required for all foodstuff prepared for consumption on *Passover in which case it must also be free from all leaven (**ḥamez*). The *hekhsher* certificate is now usually printed on the package of the product. Restaurants which are under the supervision of a rabbinate need a *hekhsher* (which is displayed

on the premises), testifying that the food served by them is prepared in accordance with the traditional dietary laws and that a **mashgi'ah* oversees the kitchen. In some countries specific symbols have been adopted to indicate that the product is under supervision. The Union of Orthodox Hebrew Congregations in the U.S. uses Ⓞ (a “u” inside an “O” – Union of Orthodox) and in that country there is also widespread use of various other *kashrut* supervising bodies that employ the letter “K”, alone or in combination with other communally recognized symbols. In England the seal of the *bet din* is used. In certain states of America it is illegal to declare a product *kasher* if it is not, but for observant Jews that does not obviate the need for a rabbinic *hekhsher*.

HELBO (third–early fourth century C.E.), *amora*. Ḥelbo was apparently a Babylonian who migrated to Erez Israel. In Babylon he studied under Huna (Ber. 6b, et al.) and under Ḥama b. Gurya, the pupil of Rav, in whose name he transmits Rav’s statements (Shab. 37a, et al). In Erez Israel he studied under Samuel b. Naḥman (TJ, Meg. 1:1, 70b, et al.) and transmitted sayings in his name (Gen. R. 78:1; Theodor-Albeck, 916 note). He was an associate of *Ammi (TJ, Kil. 9:4, 32c), Ulla Biraah (Meg. 4a), and Isaac Nappaḥa (Git. 59b–60a), and among his colleagues was apparently also the *nasi* Yudan (TJ, Ta’an. 2:1, 65a). Ḥelbo was childless and lived a lonely life (Yev. 64b; Ned. 39b–40a). His pupil was Berechiah (Gen. R. 78:1, et al.) who frequently transmitted his sayings, particularly in *aggadah* (TJ, Ber. 1:1, 2d, et al.). Among his noteworthy sayings are the following: “One must always be regardful of the honor due to one’s wife, because blessings rest on a man’s house only on account of his wife” (BM 59a); “whosoever partakes of the wedding meal of a bridegroom and does not cause him to rejoice transgresses the five voices mentioned in Jeremiah 33:11” (Ber. 6b); and “Proselytes are as injurious to Israel as a scab” (Kid. 70b) – an individual opinion presumably reflecting contemporary conditions which nevertheless in future generations influenced the attitude with regard to the acceptance of proselytes.

HELD, ADOLPH (1885–1969), U.S. communal and labor leader and Yiddish journalist. Held, who was born in Borislav, Poland, was taken to the United States in 1892. He joined the staff of the Yiddish-language *Jewish Daily Forward, where he served as news editor from 1907 to 1912 and then as business manager from 1912 to 1917. From 1917 to 1919 he was a Socialist member of New York City’s Board of Aldermen. In 1920 he was appointed European director of the Hebrew Immigrant Aid Society (HIAS), in which capacity he assisted hundreds of thousands of Jewish immigrants to the United States. Returning to America in 1924, he became president of the Forward Association, the paper’s governing body, and of the Amalgamated Bank, whose main function it was to provide

financial aid to the garment industry. In 1938 he was chosen national chairman of the Jewish Labor Committee. Held resigned his presidency of the bank in 1945 in order to become welfare director of the International Ladies Garment Workers Union. He was made general manager of the *Jewish Daily Forward* in 1962. In the years before his death he was also active in senior citizens' groups and took part in the campaign for the extension of Social Security benefits and the establishment of Medicare.

[Hillel Halkin]

HELD, ANNA (1873–1918), French actress. Born in Paris, Anna Held made her debut at the Folies Manguay, Paris, in 1895, and soon afterward was engaged by Florenz Ziegfeld for his first New York production. Later the two were married and she appeared in many plays, including Jean Richepin's *Mam'selle Napoleon* (1903). She toured the U.S. in 1903 in the title role of *The Little Duchess*.

HELD, MOSHE (1924–1984), Bible scholar. Held was born in Poland, brought to Mandatory Palestine in 1935 and raised in Tel Aviv. He entered the Hebrew University of Jerusalem in 1943. His studies, interrupted by service in the British army in World War II, were resumed in 1946, but delayed once again by Israel's War of Independence. He completed his M.A. in Hebrew literature at the Hebrew University, studying Hebrew and Arabic with D. Baneth, S.D. *Goitein, and H. Polotsky, studies which he later described as "sins of his youth." His academic direction took a new turn thanks to Umberto Moshe David *Cassuto, an Italian Jewish scholar, and a pioneer in the study of the *Ugaritic tablets of the second millennium B.C.E. unearthed in 1929. Cassuto urged Held to study Ugaritic at Johns Hopkins with W.F. *Albright. Albright, in turn, sent Held to study Akkadian (Assyro-Babylonian) at the University of Chicago under the great Assyriologist Benno *Landsberger, himself a German Jewish émigré of the Hitler years. After completing his Ph.D. at Hopkins (1957), Held came to Dropsie replacing Cyrus *Gordon who had moved to Brandeis. In 1959 Held began his visits to the Jewish Theological Seminary, where he was to continue as adjunct professor of Bible for 25 years. The JTS connection brought Held under the tutelage of H.L.*Ginsberg, to whom Held always referred as "my mentor." In 1966 Held came to the Middle East Department at Columbia, where he taught until his death. The two positions enabled Held to concentrate on the study of the Bible in its larger Near Eastern context. Held was a superb comparative philologist who, in accord with his teachers Albright and Landsberger, insisted that etymological comparisons had to take a backseat to contextual comparisons, or better, "interdialectal distributions." A passionate teacher, Held's Columbia position enabled him to train Jewish students at JTS and Christians at Union Theological Seminary in the serious reading of biblical texts against the background of the ancient Near East.

HELDMAN, GLADYS MEDALIE (1922–2003), leader in women's tennis and sports media and founder of the professional women's tennis tour. Heldman was born in New York City, daughter of well-known New York attorney and judge George Z. Medalie. She married Julius Heldman, a 1936 U.S. junior tennis champion, in 1942 and later her whole family became involved in tennis. Heldman, who earned a B.A. from Stanford University in 1942 with Phi Beta Kappa honors, and an M.A. in medieval history from the University of California, Berkeley in 1943, started playing tennis after her two daughters were born. She achieved No.1 amateur ranking in Texas and No. 2 in the Southwest in 1954; she competed at Wimbledon in 1954 and participated in the U.S. Championships at Forest Hills. In 1951, Heldman received the Service Bowl awarded to "the player who yearly makes the most notable contribution to the sportsmanship, fellowship and service of tennis." She founded *World Tennis* magazine in 1953, serving as the publisher and editor-in-chief, and as a writer. She sold the magazine in the 1970s.

Heldman championed the founding of the women's professional tennis tour to provide more equity in prize money for women in a male-dominated sport. In 1970, nine top players, including Heldman's daughter JULIE (1945–), played in the first Virginia Slims Circuit tournament in Houston in 1970. The Virginia Slims Circuit later merged with the U.S. Tennis Association (USTA). Legendary tennis champion Billie Jean King wrote that, "With the invaluable help, support and guidance of Gladys Heldman" women tennis players were able to revolutionize their sport by establishing their own tennis tour.

Heldman and her family maintained an active role in tennis. In recognition of her tremendous contributions to the world of tennis, Gladys Heldman was inducted into the International Tennis Hall of Fame and the International Jewish Sports Hall of Fame. Julie Heldman won medals in singles and doubles tennis exhibition events at the 1968 Olympics and also won three gold medals in the 1969 Maccabiah Games. She was inducted into the International Jewish Sports Hall of Fame in 2002.

HELENA (first century C.E.), sister and wife of *Monobazus I, king of *Adiabene (cf. Jos., Ant., 20:17–96). Helena and her son *Izates became converts to Judaism in about 30 C.E. through the influence of Ananias, a Jewish merchant. When her husband died, she appointed Izates as king in accordance

with his expressed wish. As was customary in the East, the other sons of Monobazus were imprisoned and were in danger of being put to death, but Helena and Izates sent them to Rome – a humane act probably dictated by their new religion. Only her son Monobazus II, who ruled for a short time after his father's death, remained in Adiabene. Helena spent the latter part of her life in Jerusalem, where she built herself a palace (Jos., Wars, 5:252; 6:355). When a famine raged in Judea at the time of Claudius (Ant., 20:51), she bought grain and figs in Egypt and Cyprus for the starving people. Echoes of this are found in the Talmud (BB 11a; TJ, Pe'ah 1:1, 15b; Tosef., *ibid.*, 4:18). Helena also made gifts to the Temple (Yoma 3:10), and was meticulous in the observance of the precepts of Judaism (Naz. 3:6). She died in Adiabene but her remains and those of Izates were transferred to Jerusalem by Monobazus, and interred in the mausoleum she had built at a distance of three stadia to the north of the city, known today as “the Tombs of the Kings” (Jos., Ant., 20:95; Jos., Wars, 5:55, 119, 147). Pausanias (*Graec. Descrip.* VIII, 16:4–5 (358)) provides a description of the Tomb of Helena and refers to a special mechanism that kept the door of the tomb closed. The inscription on the sarcophagus found by De Saulcy in the Tomb of the Kings was of great value in identifying Helena's tomb. The first line has the words מלכתא א צדן and the second line מלכתא א צדה. The language of both lines is Aramaic, but the script of the first line is Syrian and of the second, Hebrew. This proves that at least the second queen mentioned was Jewish and that she came from a Syrian royal family.

[Abraham Schalit / Shimon Gibson (2nd ed.)]

HELENA AUGUSTA (c. 255–329 C.E.), mother of the Emperor Constantine and a pious convert to Christianity. In the writings of Geoffrey of Monmouth (c. 1100–1154) she is described as the daughter of the British King Coel of Colchester (“Old King Cole”), but this seems highly unlikely. Having originated from a modest background, serving for a while in Diocletian's court at Nicomedia, Helena was later at Constantine's side at the imperial court in Trier and was accorded great honor there. In the aftermath of Constantine's defeat of Licinius in September 324 C.E., Helena, who was about 80 years of age, made a journey to the Holy Land (between c. 325 and 327) to offer prayers at the holy places (described in Eusebius' *Vita Constantini*), and is said to have founded churches on the Mount of Olives (the Eleona Church) and at Bethlehem. Although not mentioned by Eusebius as having played any part in the building operations next to the Tomb of Jesus at Gol-

gotha, it is difficult to make a sharp division between churches ascribed to Constantine and those attributed to his mother. Helena is also credited with the discovery of the true cross (*lignum crucis*) on which Jesus was crucified in a cistern not far from the place of his tomb, but scholars have questioned the authenticity of this tradition. Indeed, Eusebius does not mention the discovery at all and his absolute silence on this matter is quite telling (20 or so years later the first references appear mentioning the relics of the cross, e.g. Cyril of Jerusalem in 350 C.E.). Ambrose of Milan, however, in c. 395 C.E., is the first to mention Helena as the discoverer of the cross (*De Ob. Theod.* 46–48). According to Ambrose, Helena “...opened up the earth, scattered the dust, and discovered three crosses in disarray (*confusa*).” The holy cross still retained the inscription (*titulus*) and nails were also found. Thereafter, various embellished versions of the story exist, with faith rapidly ousting the facts from the tradition. Some versions refer to the holy cross being found lying between two crosses with an inscription (John Chrysostom, *Hom. In Joh.* 75:1, PG 59, 461) and others to the authenticity of the cross being verified by its ability to cure a sick woman (e.g., Rufinus, *Hist. Eccles.* 10:7–8). None of these early sources provide information regarding the exact find-spot of the cross. Recent archaeological researches show that the traditional place where the cross was supposed to have been found, at the Cave of the Invention of the Cross in the Church of the Holy Sepulchre, was a subterranean cavity that was converted into a cistern no earlier than the 11th century. Helena died soon after her return to court. In the fifth and sixth centuries C.E. Helena was highly praised by Church historians and pilgrims for her discovery of the true cross and for her part in the Christian rebuilding of Jerusalem. In later tradition Helena was said to have been responsible for the foundation of most of the important churches in the Holy Land, notwithstanding the fact that some were built centuries after her death.

[Shimon Gibson (2nd ed.)]

HELEZ (Heb. הֶלֶז), site of Israel's first oil field, which exploits oil-bearing strata discovered in 1955. It is located near a moshav of the same name in the southern Coastal Plain of Israel, 7½ mi. (12 km.) S.E. of *Ashkelon. In the later stages of the *War of Independence (1948), a hard battle was won there against the invading Egyptian army. The moshav, affiliated with Tenuat ha-Moshavim, was founded in 1950. Its first settlers came from Yemen, but later immigrants from Tun-

sia took over. In 1968, the moshav *Ḥelez* had 510 inhabitants. Its economy was based on intensive field crops, vegetables, citrus, and dairy farming. The name *Ḥelez* – connected with the Hebrew root meaning “to extricate” or “to pioneer” – was regarded as similar to that of the nearby abandoned Arab village *Ḥulayqāt*. After a drop in population, the moshav began to expand, its population rising from around 340 in the mid-1990s to 433 in 2002.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

HELFMAN, ELḤANAN (1946–), Israel economist. Born in the U.S.S.R., he lived in Poland until the age of 11, when his family moved to Israel. He studied economics and statistics at Tel Aviv University. He received his doctorate from Harvard in 1974 and became a professor at Tel Aviv University, holding the chair in International Economic Relations. In 1988 he was elected a member of the Israel Academy of Sciences. In 1989–91 he was the president of the Israeli Economic Association. In 1991 he was awarded the Israel Prize for social sciences. In 1995 he was awarded the Feher Prize from the Jerusalem Institute for the Study of Israel and in 1998 he was awarded the Bernhard-Harms Prize from the Kiel Institute for World Economics. In 2000 he was the president of the Econometric Society. In 2002 he was awarded the EMET Prize from the AMN Foundation for the Advancement of Science, Art and Culture and the Rothschild Prize from the Yad Hanadiv Foundation.

HELFMAN, HESSIA MEYEROVNA (1855–1882), Russian revolutionary. Born in *Mozyr* near Minsk (Belorussia) into a rich family, Hessia Helfman left home at the age of 16 and joined the revolutionary movement in Kiev. In 1875 she was arrested and was one of the accused in the “Trial of Fifty.” She was sentenced to two years imprisonment and on her release was banished to *Staraya Russa*. She escaped, however, and joined the terrorist *Narodnaya Volya* party in St. Petersburg where she helped to run a clandestine press and distributed propaganda among students and workers. In 1881 Hessia Helfman was sentenced to death, together with five other revolutionaries, for complicity in the assassination of Czar Alexander II. Because she was pregnant at the time, her execution was delayed, and as a result of protests from abroad, the sentence was commuted to life imprisonment. She died in the Peter-and-Paul Fortress in St. Petersburg shortly after the birth of the child, which was taken from her. Hessia Helfman did not take part in the assassination itself and was the only Jewish person among the six condemned. Nevertheless antisemitic groups blamed the Jews for the murder of the Czar.

°**HELIIODORUS** of Antioch, chancellor of *Seleucus IV Philopator (187–175 B.C.E.). The official title of chancellor (ὁ ἐπὶ τῶν πραγμάτων), by which he is described in II Maccabees 3:7, is also found in an official inscription (W. Dittenberger (ed.), *Orientalis Graeci inscriptiones selectae*, 1 (1903), no. 247). When Simeon, “head of the Temple” in Jerusalem, denounced the

Jews before Apollonius, commander of the Syrian army, claiming that there were treasures in the Temple which belonged to the king, Heliodorus was sent to Jerusalem to remove these treasures. Attempting to break into the Temple, he was suddenly smitten by two angels (II Macc. 3:7–40). It is probable that in fact Heliodorus was driven from the Temple by force. In 176 B.C.E. Heliodorus murdered Seleucus IV, and placed the king’s young son upon the throne. Subsequently he had him removed also in order to obtain the throne for himself. However, Antiochus Epiphanes put an end to his rule. These events are perhaps reflected in *Daniel 7:7–8 and 11:20.

[Abraham Schalit]

HELIOPOLIS (Gr., meaning “city of the sun”; Egyptian, **Junu**; Heb., **On**), ancient city of lower Egypt situated about six miles N. of Cairo on the site of the modern village of El Matariyah. From earliest times Heliopolis was the cult center for the worship of the sun god, usually in his manifestation as Re, but also as Re-Horakhty and Atum. Although some form of sun worship existed from the beginning of recorded Egyptian history, it was not until the Fifth Dynasty (c. 2480–2340 B.C.E.) that the Heliopolitan cult of Re achieved its preeminent position in the cosmogony of the Egyptians, a position which it retained well into the third century B.C.E.

Heliopolis is specifically mentioned four times in the Bible: Genesis 41:45, 45:50 and 46:20, where Joseph is given as wife Asenath, the daughter of Poti-Phera, the priest of On (who must have been the high priest of Re of Heliopolis); and Ezekiel 30:17, where the prophet foretells the destruction of Egypt by the hand of Nebuchadnezzar, the Babylonian king, and mentions Heliopolis among the great cities to be destroyed. The prediction of the destruction of Beth-Shemesh, “the House of the Sungod,” in Jeremiah 43:13 is also probably a reference to Heliopolis. Another possible reference to the city is Isaiah 19:18, where, in view of the Egyptian context of the passage, the reading *ir ha-heres*, or “city of the sun,” as attested by Symmachus and Vulgate, is preferred by many scholars to the present masoretic text *ir ha-heres*, or “city of destruction.”

[Alan Richard Schulman]

°**HELLADIUS OF ANTINOUPOLIS** (fl. c. 310 C.E.), Greek grammarian, who notes, in a passage derived from the Alexandrian antisemitic Exodus tradition, as do *Nicarchus and *Ptolemy of Chennos, that Moses was called “Alpha” because of his leprous spots (alphoi), but cites Philo as a source (in no extant work, however).

[Louis Harry Feldman]

HELLENISM, term generally used by historians to refer to the period from the death of Alexander the Great (323 B.C.E.) to the death of Cleopatra and the incorporation of Egypt in the Roman Empire in 30 B.C.E. Egypt was the last important survivor of the political system which had developed as a consequence both of the victories of Alexander and of his premature death. The word Hellenism is also used to indicate more generically the cultural tradition of the Greek-speaking part of the Roman Empire between Augustus and Justinian and/or the influence of Greek civilization on Rome, Carthage, India, and other regions which were never part of the empire of Alexander. Finally, Hellenization is used with reference to Judea, Persia, etc. to indicate the penetration of elements of Greek civilization into territories which, though subject to Greco-Macedonian rule for a certain period of time, preserved their national culture with conspicuous success.

The words Hellenism and Hellenistic have a long history in which the text of the Acts of the Apostles 6:1 plays a central part because it opposes *Hebraioi* to *Hellenistai*. At least from the 16th century onward (J. Scaliger) this text was interpreted to imply a contrast between Jews who used Hebrew and Jews who used Greek in the synagogue service. D. Heinsius developed the notion that Jewish *Hellenistai* used a special Greek dialect (*lingua hellenistica*), which is reflected in the Septuagint translation of the Bible. C. Salmasius denied the existence of such a special dialect (1643), but the notion of a special *lingua hellenistica* to indicate the Greek of the Old and New Testaments remained in circulation until the middle of the 19th century. In the 18th century in Germany, J.G. Herder used *Hellenismus* to indicate the way of thinking of Jews and other Orientals who spoke Greek. In 1820 in France J. Matter specifically connected the word *Hellénisme* with the thought of the Greek-speaking Jews of Egypt. J.G. Droysen stretched the meaning of the word to signify the period of transition from the pagan to the Christian world which started with Alexander. In 1833 he published a volume on Alexander the Great; and in 1836 and 1843 he published two volumes of *Geschichte des Hellenismus* embracing the century 323–222 B.C.E. He intended to continue his work in further volumes, but never did so, and it is not quite clear from what he says whether his original intention was to reach the age of Muhammad or to stop with Augustus. In 1877–78 he published a second (considerably modified) edition of these three volumes under the title of *Geschichte des Hellenismus* (which now included the reign of Alexander). The second edition, both in the German text and in the French translation by A. Bouché-Leclercq, became authoritative, and consolidated the notion of Hellenism as a special period of the history of antiquity characterized by a mixture of Greek and Oriental elements. Since Droysen, many historians have reexamined the political and constitutional history of this period; they include B. Niese, K.J. Beloch, A. Bouché-Leclercq, J. Kaerst, W.W. Tarn, E. Bickerman, and E. Will. But research has been particularly intense and productive in the field of economic and social history (U. Wilcken, M. Rostovtzeff, W. Otto, C. Préaux, and C. Schneider) and in the

field of the history of religions (F. Cumont, R. Reitzenstein, H. Usener, P. Wendland, W. Bousset, A.D. Nock, and M.P. Nilsson). Droysen's notion of Hellenism has also deeply influenced the work of literary historians such as U. Wilamowitz-Moellendorf, F. Susemihl, F. Leo, E. Norden, and R. Pfeiffer.

The study of Greek influence on Judaism has developed into a special branch of research on which E. Bickerman, H. Lewy, S. Lieberman, V. Tcherikover, and M. Hengel, among others, have written with distinction. Research on Hellenism has been helped by archaeological discoveries, new inscriptions, and the constitution of a new branch of research, papyrology, since the beginning of the 20th century. Papyrology is especially relevant to the study of the Hellenistic period because a considerable portion of the papyri discovered in Egypt belongs to the last three centuries B.C.E.

However, a knowledge of the political history of Hellenism is hampered by the fragmentary nature of the surviving sources. The works of the great historians of the Hellenistic age (Hieronymus of Cardia, Duris, Timaeus, Agatharchidas, Phylarchus, and Posidonius) are all lost, with the exception of Polybius, and only fragments of his work remain. The only continuous account of the Hellenistic age is found in the short summary of the *Historiae Philippicae* by *Pompeius Trogus (end of the first century B.C.E.) written by Justinus in the second century C.E. Plutarch's *Lives* of some Hellenistic kings and politicians are of the utmost importance. Books I, II, and III of Maccabees are invaluable for Jewish history and must be supplemented by the relevant sections of Josephus' *Jewish Antiquities*. Strabo, Pliny the Elder, Pausanias, Galen, Athenaeus, and Diogenes Laertius, though all writing in the Roman Empire, provide essential information on Hellenistic science, social life, and customs.

The empire of Alexander the Great was the result of the military and intellectual cooperation of Greeks and Macedonians, who constituted the ruling class in the states emerging from the struggles of Alexander's successors. This collaboration was precarious in Greece alone, where consequently there was no political stability. The rivalries between Greek cities and the interference of the great Hellenistic states in Greek affairs led to Roman intervention at the end of the third century and ultimately contributed to the transformation of Greece into a direct Roman dependency in 146 B.C.E. The great Hellenistic states – Macedonia, Syria, Egypt, Thrace (for the brief period until 281 B.C.E.), Pergamum (at least after 240 B.C.E.) – though much stronger, had other sources of difficulty: they were faced by dynastic struggles in their midst, by frequent wars with their neighbors, and above all they had large native populations to control. The third century was the period of the greatest power and prosperity of these kingdoms. Almost everywhere during the second century B.C.E. the increasing inability of the Greco-Macedonian ruling class to prevent internal dissolution is noticeable. The Romans took full advantage of the difficulties of the Hellenistic states, played on the fear of social revolution among the wealthy Greeks, and exploited rivalries and native rebellions, with the result that

they defeated and ultimately absorbed all the Hellenistic states. Macedonia, first defeated in 197, was reduced to impotence in 168 and transformed into a province in 149. Syria (the Seleucid state) was first deprived of some of its best Oriental regions by native rebellions (such as those leading to the creation of the Parthian and Bactrian states about 250 B.C.E.). Later it was defeated and mutilated by the Romans (188). The Jewish rebellion of the Maccabees contributed to the further decline of the Seleucid state, which was transformed into a Roman province in 64 B.C.E. Pergamum became a Roman province (province of Asia) in 129 B.C.E., Bithynia in 74. Egypt (the kingdom of the Ptolemies), as already noted, was incorporated by the Romans in 30 B.C.E. The last strong resistance of the Macedonian-Greek elements against the Romans was provoked and supported by Mithridates VI Eupator about 80 B.C.E. and ended in violent repression by the Romans. The last act of resistance against the Romans during the Hellenistic period in the East was not Greek, but Jewish.

In all the Hellenistic states Greek was the language of the aristocracy and the administration. The foundation of new cities (especially in the Seleucid kingdom) and of new villages (particularly in Egypt) contributed to the spread of Greek, but the peasants and the native priests kept the indigenous languages alive. Except in Judea, which had an original literature in Hebrew and Aramaic even under Greek rule, the important developments in literature were all in Greek. Even natives of Egypt and Babylonia wrote their histories in Greek (Manetho, Berossus; cf. Fabius Pictor in Rome). The schools and the gymnasia were organized according to Greek tradition: Homer, the tragedians of the fifth century (especially Euripides), and the orators and historians of the fourth century were the models of the new classicism. Erudition developed for its own sake and, notably in Alexandria and Pergamum, was under royal protection. The libraries of Alexandria were centers of research, besides containing extraordinary collections of manuscripts (apparently not confined to texts in Greek). Classicism notwithstanding, literature and art developed new styles, characterized by realism of detail and a tendency toward the idyllic and the pathetic. Modern scholars have recognized local trends not only in literature but also in art. They are, however, not so important as the essential unity of Hellenistic culture. Philosophy remained centered in Athens, but the great philosophic schools of the academy (Platonists), Peripatos (Aristotelians), Stoa (disciples of Zeno), and Porch (Epicureans) spread everywhere. There was also a revival (perhaps a transformation) of Pythagorean groups, which began to look like a religious sect. Natural sciences made enormous progress, and so did mathematics. Euclid, Apollonius of Perge, and Archimedes represent the culmination of Greek research in geometry and mechanics. Eratosthenes applied mathematics to geography and Aristarchus developed the heliocentric theory, but Hipparchus (who made fundamental discoveries in astronomy) persuaded the succeeding generations with his new version of the geocentric system. Scientific medicine flourished in Alexandria and

elsewhere: The advances in anatomy (Herophilus), physiology (Erasistratus), etc., remained unsurpassed until the Renaissance. Pytheas explored new regions in the north. The philosopher Posidonius explained the tides.

Everywhere the new literature and art interested large strata of the Greek-speaking public, which was predominantly middle-class. If some poets were obscure and full of subtle allusions to the literature of the past (Callimachus, Lycophron, Euphorion, and to a certain extent Theocritus), others were easily comprehensible (Menander, Herodas, and perhaps Apollonius Rhodius). New prose genres, such as the erotic novel, were meant to appeal to a large public. There are signs that much of the literature now lost was fairly popular in character. Figurative art certainly had a wide appeal, as can be deduced from the amount of cheap, but graceful, figurines of this period. Improved techniques of work affected the lives of the many, and town-planning together with the easier economic conditions of private persons produced better housing in many places. But neither philosophy nor science meant much even to the middle class in the Greek-speaking cities. In religion the stronger influences came from the native populations, not from the upper (Greek or Hellenized) stratum. There was no sign that the gods of the Greek Olympus were dying: they went on performing miracles and acquiring new festivals and new sanctuaries. However, a progressive transformation of the old city cults was noticeable, with a new emphasis on free associations of devotees of a specific god, on mysteries, on spiritual notions such as philanthropy and purification. Dionysus became distinctly popular. At the same time Oriental gods – either with their original names (Osiris, Isis) or by identification with Greek gods (Hermes – Thot; Jupiter – Dolichenus) – were widely worshiped outside their original countries, with appropriate modifications of their cults. A curious case of a new god with old Egyptian roots was Serapis. Babylonian astrology gained many believers, even among philosophically educated Greeks. The Greek idea of Fortune (*Tyche*) increased in importance and was worshiped as a goddess, partly owing to Oriental influences. No doubt there were educated people who cared little for gods, either Greek or Oriental. Epicurus preached the indifference of gods to human events and Euhemerus reduced the gods to ancient human benefactors; yet the climate of the age was religious.

With all its regional and chronological differences, Hellenism is a cultural unity which corresponds to the existence of a uniform upper stratum of society and is reflected in the remarkable uniformity of the Greek language (the so-called *koiné*) from India to Gaul, wherever there was a Greek settlement. International trade both favored, and was favored by, this uniform upper stratum; Greek-speaking traders moved round the world. They were joined by more or less Hellenized Orientals and later by Italians. The slaves, the native peasants, and the Greek proletariat neither contributed much to, nor enjoyed the advantages of, this civilization.

It is much more difficult to speak of Hellenism as a political and institutional phenomenon, because conditions var-

ied so profoundly from region to region. Monarchy was the unifying institutional fact. The king was supposed to own his own state by right of conquest (patrimonial monarchy). He was surrounded by a hierarchy of officials with specific functions. Monarchy was connected with religion by a dynastic cult. The army in each country was modeled on the Macedonian prototype which had ensured Alexander's victories. New military features included the use of elephants, the improvement of siege-engines, and the construction of bigger ships. The fact remains, however, that the political organization of Egypt was different from that of Syria, and both Egypt and Syria were of course different from Pergamum (where the king was much more the head of a Greek community) and from Macedonia, not to speak of the Greek city-states and leagues (Aetolia, Achaëa, etc). Economic production, taxation, relations between natives and Greeks, and religious institutions varied greatly from state to state. The Ptolemies organized a state-controlled economy in Egypt which had no parallel elsewhere and slowed down urbanization. The Seleucid state included territories which differed from each other economically and socially. They were kept together (when they were kept together) by the royal army and the militarized Greco-Macedonian colonies. The Seleucids never made any serious attempt at central control of the economic affairs of their state.

The great paradox of the Hellenistic age is that a Greek-speaking man could move easily from country to country with a reasonable expectation of finding work and being well received everywhere – and yet he would not find himself at home anywhere outside his native city. Furthermore, from the end of the third century onward any Greek would also increasingly feel the presence of a new intimidating power – Rome. The structure of Hellenistic civilization was not weak, for it survived the defeat of Hellenistic states, but daily life seemed dangerous; and indeed wars and rebellions were frequent and increasingly catastrophic. Philosophy and religion both provided escape from worldly commitments and consolation for disappointments.

Here the Jews presented a remarkable exception. Confronted with Greek ideas, some attempted to combine Greek intellectual values with Hebrew ones; such efforts were more successful in Egypt than in Judea. However, even in Judea the Hellenizing movement under Antiochus IV came near to prevailing. Ultimately the Jews organized their culture and their political life on their own terms, as witnessed by the rise of the Essenes and Pharisees. The independence of Jewish intellectual life in the Hellenistic age is partly explained by the fact that while Jews took a great interest in Greek ideas, the outside world took relatively little interest in Hebrew ideas. The translation of the Bible into Greek did not mean that the Greeks read the Bible. The isolation in which the Jews lived, especially in Judea, was conducive to the creation of a style of thought and life which can be (and was) considered competitive with Hellenistic civilization.

[Arnaldo Dante Momigliano]

Hellenism and the Jews

Contact between Greeks and Semites, probably including Jews, seems likely to have occurred in Mycenaean times, as remains of Greek pottery in Palestine and Syria testify. Several interesting parallels between early Greek, especially that of Homer, and biblical vocabulary have been suggested, such as Homeric *amumôn* ("without blemish") and biblical *mum* ("blemish"), Homeric *machaira* ("sword") and biblical *mekherah* (Gen. 49:5), Homeric *erebos* ("darkness") and biblical *erev* ("evening") and *ma'ariv* ("west"), and Greek *kados* ("pitcher," in Archilochus) and Hebrew *kad* ("pitcher"). Parallels between Homeric and biblical motifs are generally less striking. The possibility of a link between the even earlier Minoan civilization and Jews, or at any rate Semites, suggested by the presence of Minoan pottery at Ugarit and supported by bilingual (Greek and Northwest Semitic) inscriptions in Crete dating from 600 to 300 B.C.E., awaits the decipherment of Linear A.

It was not until the time of *Alexander the Great, however, that the contacts between Greeks and Jews were revived and intensified. The fact that for two centuries Palestine was part of Hellenistic kingdoms, first of Ptolemaic Egypt and then of Seleucid Syria, made Greek influence on Jewish thought and life inevitable. In the first third of the second century B.C.E., a group of Hellenizing Jews came to power in Jerusalem. They were led by wealthy Jewish aristocrats such as Joseph son of Tobiah, and his son Hyrcanus, who were apparently attracted to the externals of Hellenism; their Hellenization was, at first, primarily social rather than cultural and religious. *Jason the high priest carried his Hellenizing to the extent of establishing Greek educational institutions, the gymnasium and *ephebeion*, and of founding Jerusalem as a Greek city, Antioch-at-Jerusalem. But Jason was only a moderate Hellenizer compared with *Menelaus, whose succession as high priest occasioned a civil war between their factions, with the *Tobiads supporting Menelaus and the masses of the people standing behind Jason. As the scholars Bickermann, Tcherikover, and Hengel have shown, it was the Hellenizers, notably Menelaus and his followers, who influenced Antiochus Epiphanes to undertake his persecutions of Judaism so as to put down the rebellion of the *Hassideans, who were supported by the masses of Jerusalem and who rebelled against the Hellenizers. Perhaps the account in the *Dead Sea Scrolls of the war between the sons of light and the sons of darkness reflects this struggle.

In the following year the fight of the Maccabees against the Hellenizers began. This struggle highlights the antagonism between the rich and highborn in the towns, who believed in finding a *modus vivendi* with Hellenism, and the peasants and urban masses, who could brook no compromise with their religious traditions. In victory the Maccabees were particularly ruthless toward the Greek cities of Palestine (of which there were 30) and their inhabitants, but their struggle was against the Greek cities as a political rather than as a cultural force. It is a mistake to regard the Hellenization of the Palestinian Jews as so deep that they would have been absorbed had not

Antiochus' persecution aroused a fanatic reaction. Similarly it is a mistake to look upon the Maccabees as despisers of Greek culture. In point of fact, Jonathan the Hasmonean, far from hating Greek culture, renewed the treaty of friendship with Sparta (Jos., Ant., 13:164–170) that the high priest *Onias I is said to have negotiated about 300 B.C.E. Alexander Yannai employed Greek mercenaries in his army (*ibid.*, 13:387), and from his time onward coins are inscribed with Greek as well as with Hebrew. The very Aristobulus who forced the Itureans to become Jews called himself “philhellene” (*ibid.*, 13:318). The rise of the Pharisees may be seen, to some degree, as a reaction against the Greco-Roman culture favored by the Sadducees, who were allied with the phil-Hellenic Hasmoneans. The Hellenic influence increased under Herod, who built a Greek theater, an amphitheater where Jews wrestled naked with Greeks, and a hippodrome in or near Jerusalem. Even Agrippa I, who is so highly regarded in rabbinic sources (Bik. 2:4, etc.), built a theater and amphitheater at Berytus (Jos., Ant., 19:335) and himself attended the theater at Caesarea (*ibid.*, 19:332–4).

Jews came to Egypt just before the end of the kingdom of Judah in the sixth century B.C.E. and fought as mercenaries, in all probability side by side with Greeks who had come for the same purpose. But large-scale emigration began with *Ptolemy I after the death of Alexander. Philo (*In Flaccum*, 43) reports that in his day the Jews in Egypt numbered a million. By that time there were large Jewish communities in Syria, especially Antioch (Jos., Wars, 7:43), Greece proper (Philo, *Legatio ad Gaium*, 281–2), Asia Minor (Jos., Ant., 14:213, 255–64; Philo, op. cit., 245), Cyprus (Jos., Ant., 13:284), Rome (Cicero, *Pro Flacco*, 67), and Cyrene (Jos., Ant., 14:115), all of which were primarily Greek speaking.

The Hellenization of the Jews, both in Palestine and the Diaspora, consists in the substitution of the Greek language for Hebrew and Aramaic, the adoption of Greek personal names, the adoption of Greek educational institutions, the growth of a Jewish Hellenistic literature and philosophy, and religious deviation and syncretism as seen in legal institutions and in art (see *Diaspora). In Palestine, the predominance of Greek in ossuary inscriptions (the dates vary) so that of 168, 114 are in Greek only, the discovery of Greek papyri in the Dead Sea caves, and of Greek letters from leaders of the Bar Kokhba rebellion, and the presence of perhaps as many as 2,500–3,000 Greek words in the talmudic corpus, especially in the homiletic Midrashim composed for popular consumption, testify to what degree the Greek language had gained currency (see Rabbinical Knowledge of *Greek and Latin). The contact with Greek influenced, moreover, a number of developments in Hebrew phonology and syntax and led to the establishment of a number of Hebrew roots derived from Greek. Simeon b. Gamaliel went so far as to praise Greek as the only language into which the Torah could be perfectly translated (Esth. R. 4:12). Judah ha-Nasi remarked, “Why talk Syriac in Palestine? Talk either Hebrew or Greek” (Sot. 49b). It was said (Hag. 19b) of the second-century rabbi Elisha ben Avuyah, that he never ceased reciting Greek poetry. In the next century R. Abbahu

knew Greek so well that he was able to pun in it (Gen. R. 14:2), and justified teaching his daughters Greek since it served as an ornament (TJ, Pe'ah 1:1, 15c). The fact that the Mishnah (Sot. end) records that during the war of Lusius *Quietus (117 C.E.) a decree was passed banning the teaching of Greek to one's son indicates that the rabbis regarded the use of Greek as a real danger, but the language continued in vogue.

It can hardly be maintained that Greek was used only by the upper classes and was restricted to commerce, or that it was restricted to those who needed it to communicate with the governing authorities; the Christian Hellenizers (Acts, 6:1), who apparently spoke Greek only and were thus more deeply affected by Hellenization, were not restricted to the higher classes. Josephus (Ant., 20:264) clearly indicates that ordinary freemen and even slaves in Palestine had learned many languages. However, his statement (*ibid.*, 20:263) that it had proven difficult for him to master Greek, especially the pronunciation, and the faulty Greek in many inscriptions indicate that the level of knowledge of Greek was not high. Even Josephus (Apion, 1:50) had to employ assistants to polish the Greek of his *De Bello Judaico*. The knowledge of Greek possessed by Jewish Christians in Palestine, however, because of their closer contact with Diaspora Jews and with non-Jews outside Palestine, must have been better; and recent scholarship has concluded that it is probable that Jesus himself sometimes spoke Greek.

In the Diaspora, the earliest Jewish inhabitants of Alexandria in the fourth century B.C.E., to judge from the papyri, spoke Aramaic; but so thoroughgoing was the victory of the Greek over the Hebrew language that after the third century B.C.E., with the exception of the Nash Papyrus, until 400 C.E., all papyri from Egypt pertaining to the Jews are in Greek. Similarly, of the 116 Jewish inscriptions from Egypt only five are in Hebrew, and they are, it appears, of late date (see *Alexandria; *Egypt, Hellenistic Period; *Zeno Papyri). Even in the Jewish community of Rome, which seems to have had a stronger identification with Judaism, only five of the 534 inscriptions are in Hebrew or Aramaic. Because the *Septuagint was regarded as divinely inspired, there appeared to be no need to learn Hebrew. Indeed, there is a very real question as to whether Philo, by far the greatest of the Alexandrian Jewish writers, knew more than a modicum of Hebrew; it is surely significant that whereas he tells so much of his Greek education he tells nothing about his Hebrew education.

Another aspect of Hellenization is the choice of Greek personal names. In Palestine the percentage is much lower than in the Diaspora, but the names of rabbis such as Abtolemus, Alexander, Antigonos, Symmachus, and Theodosius indicate that the process was at work even there. The fact that at least three-fourths of the personal names of the Jews of Hellenistic Egypt are of Greek origin is striking. The Jews often tried to choose Greek names similar in meaning or sound to their Hebrew names, but names derived from those of Greek or Egyptian deities are common. In Rome about half of the names of the Jews in inscriptions are of Latin origin, about a

third are of Greek origin, and only about a sixth are derived from Hebrew or Aramaic.

Education was a key area of Greek impact. After the establishment of the gymnasium and *ephebeion* by Jason the high priest in pre-Maccabean times, there is no further information on Greek educational institutions established by Jews. However, in the first century Rabban Gamaliel had 500 students of Greek wisdom in addition to 500 students of Torah (Sot. 49b, et al.), although this permission to study Greek was granted to the house of Rabban Gamaliel only because of their special relationship with the Roman government. In Egypt the only known schools with Jewish content were the Sabbath schools, intended for adults, which, according to Philo (Spec., 1:62), taught the traditional Greek four cardinal virtues. On the other hand, there is mention of the eagerness of Jews to enroll their children of secondary school age in Greek gymnasia; and apparently, until they were excluded by the Emperor *Claudius in 41, they had succeeded in their efforts. Such an education initiated youths into the Greek way of life, especially athletics, its most characteristic feature. No Jew could have attended a Greek gymnasium without making serious compromises with his religion, for the gymnasia had numerous busts of deities, held religious processions, sponsored sacrifices, and participated in the athletic games associated with the festivals. Similarly, the fact that the 72 translators recommended that King Ptolemy watch plays (Letter of Aristeas, 284) and that Philo himself often attended the theater (Ebr., 177) shows that Hellenization had made deep inroads. It is not surprising that the rabbis (Av. Zar. 18b) forbade attendance at theaters, for ancient dramas were performed only at festivals of the gods in the presence of the altar and priests of the gods.

The most obvious instances of Greek influence are to be seen in Jewish literature of the Hellenistic period. In Palestine, even *Ben Sira, whose opposition to Hellenism before the Maccabean rebellion is manifest, has a number of aphorisms which seem to be derived from Aesop, Theognis, and Euripides. The *Testament of Joseph and the Book of *Judith show Greek influence in the introduction of erotic motifs found in Greek romances. Similarly, the Book of *Tobit, composed either in Palestine or Antioch in the second century B.C.E., shows Hellenistic influence in the form of its romance. Aside from Justus of Tiberias and Josephus, no Palestinian author is known who definitely wrote in Greek, and indeed there is no apparent Greek influence in the first century B.C.E. "Biblical Antiquities" of Pseudo-Philo. But in his paraphrase of the Bible, Josephus, in his eagerness to answer antisemitic charges, makes numerous changes. Thus his Abraham is presented as worthy of Greek political and philosophical ideals: he possesses skill in persuasion, the power of logical deduction, and scientific knowledge, and, in a show of liberalism, he offers to be converted by the Egyptians if he fails to convince them. Samson is an Aristotelian-like *megalopsychos* ("great-souled man"); Saul is a kind of Jewish Achilles; and Solomon a kind of Jewish Oedipus. Finally, Josephus' portraits of Moses and of Esther are in the tradition of Hellenistic romance, with em-

phasis on erotic elements. Indeed, the life of Moses used by Artapanus, Philo, and Josephus contained details borrowed from the legendary life of Pythagoras.

There has been much debate on the degree of Hellenic influence on the rabbis themselves. A number of tales about Hillel recall Socratic and Cynic anecdotes. Joshua b. Hananiah's discussions with Athenians, Alexandrians, and Roman philosophers (Bek. 8b; Nid. 69b; Sanh. 90b), Meir's reported disputations with the Cynic *Oenomaus of Gadara (Gen. R. 68:20) – a city a little east of the Jordan which also produced three other famous ancient Greek writers, Menippus the satirist, Meleager the poet, and Philodemus the Epicurean philosopher and poet – as well as Judah ha-Nasi's discussions with "*Antoninus"; Av. Zar. 10a–11a, etc.) and rabbinic condemnation of Epicureanism (Mish. Sanh. 11:1; Avot, 1:3; etc.), all reflect rabbinic interest in and concern about Hellenism (see Classical *Greek Literature). We know of only one rabbi, however, *Elisha b. Avuyah, upon whom Greek influence was so great that he actually became a Gnostic heretic.

It has been suggested that *Platonism influenced the rabbis with its theory of ideas, the notion that the soul possesses perfect knowledge before birth, and, above all, the method of dialectic. Moreover, a number of striking parallels in content and form between the Epicureans and the rabbis have been noted. The *Stoic ideal of the sage, as well as Stoic techniques of allegorizing and expounding law, influenced Philo, but it is doubtful to what extent they influenced the rabbis. The rabbis mention only two philosophers – Epicurus and Oenomaus – by name, and they do not use any Greek philosophical terms. The fact that they never mention Plato, Aristotle, or Philo would indicate that their information was probably drawn second-hand. Similarly the proverbs in rabbinic literature which have classical parallels probably represent contact not with Greek literature but with Greek speakers. The alleged influence of Hellenistic rhetoric upon rabbinic methods of interpretation is in the realm of terminology rather than of substance. The "fence" which the rabbis created around the Torah (see Avot 1:1) succeeded, on the whole, in keeping the masses of the Jews from succumbing to Greek culture, as the complaints about Jewish religious and social separateness (cf., e.g., Tacitus, *Histories*, 5:4) indicate. As to sectarian groups, it has been argued, with some degree of probability, that the communal organization and the strict rules for the administration of the Essenes and the Dead Sea brotherhood were directly influenced by Pythagoreanism and its revival, neo-Pythagoreanism. Josephus (Ant., 15:371), in any case, remarks that the Essenes followed the Pythagorean way of life.

The influence of Greek thought on Diaspora Jews starts with the Septuagint (the alleged meeting of a Jew with *Aristotle (Jos., Apion, 1:176–82) is fictitious). Recent investigators, on the whole, agree that there is no systematic pattern of Hellenizing, and that the Greek elements tend to be superficial and decorative rather than deep-seated and significant. Again, it was formerly thought that the language of the Septuagint was a kind of Jewish Greek which would be unintelligible to

non-Jews; but the papyri show that the language is that of Hellenistic Egypt. Yet the fact that, for example, “Torah” was translated as *nomos* (“law”), *emunah* as *pistis* (“belief”), and *zedakah* as *dikaioσynē* (“justice”) brought the connotations, especially Platonic, of these words to the Greek reader ignorant of the original. Hence Paul could preach antinomianism to an audience that looked upon the Torah as a law which could be repealed rather than as a way of life, and when the injunction *Elohim lo tekalel* (Ex. 22:24) was interpreted to mean “Thou shalt not curse the gods,” it became a text for Philo (*De Vita Mosis*, 2:205; Spec., 1:53) and Josephus (Apion, 2:237; Ant., 4:207) to preach liberalism toward other religions. Apparently because they saw the danger in the adulation of the Septuagint by the Hellenistic Jews, the rabbis changed their initially favorable reaction to the translation (Meg. 9b) to a bitter comment (Sof. 1:7) comparing the completion of the Septuagint with the making of the golden calf. The stature of the Septuagint is obvious in the fragments of the Greco-Jewish historian *Demetrius, who already in the latter part of the third century B.C.E. followed the Septuagint’s patriarchal chronology rather than that of the Hebrew text, though his Septuagint was not quite identical with any of our versions.

The Letter of *Aristeas, supposedly written in the third century B.C.E., but more probably about 100 B.C.E., apparently by an Alexandrian Jew who was a propagandist for the cooperation of Hellenism and Judaism, is addressed not merely or even primarily to non-Jews but rather to fellow Jews. The 72 elders to whom the translation of the Torah was entrusted are depicted as having had a good Greek education, and engage with the king in a symposium on ethics and politics reminiscent of those described by Plato, Xenophon, Athenaeus, Plutarch, and Macrobius. “Aristeas” (16) even goes so far as to identify Zeus with God. Social isolation is not a corollary of Judaism in his view. Among his contemporaries only the author of III Maccabees opposed the drive for citizenship of the Alexandrian Jews.

Other Alexandrian Jewish writers attempted to show that the Greeks had borrowed from the Jews. Thus the Jewish Peripatetic philosopher Aristobulus, in the second century B.C.E., asserts (in Eusebius, *Praeparatio Evangelica*, 13:12, 1–16) that Homer, Hesiod, Pythagoras, Socrates, and Plato were all acquainted with a translation of the Torah into Greek which had been made before the Persian conquest of Egypt (525 B.C.E.). The historian Eupolemus (c. 150 B.C.E.), perhaps a Palestinian, reports that Moses taught the alphabet to the Jews, who in turn passed it on to the Phoenicians, who transmitted it to the Greeks. The historian Artapanus (c. 100 B.C.E.) identifies Moses with the semilegendary Greek poet Musaeus and with Hermes-Thoth, and makes him the founder of navigation, architecture, strategy, and philosophy; Moses thus, far from hating mankind, as antisemites had charged, is a benefactor in the Hellenistic sense. Cleodemus (or Malchus), perhaps a Jewish historian, boasts that two of the sons of Abraham accompanied Heracles in his campaign against Libya and that Heracles married the daughter of one of them (Jos., Ant., 1:240–1).

Among the most obvious instances of Greek influence on Jewish writers are *Philo the Elder’s epic poem *On Jerusalem* (c. 100 B.C.E.) in Homeric hexameters, and that of his presumed contemporary *Theodotus, a Samaritan, on the rape of Dinah. Ezekiel the poet, at about the same time, composed tragedies, of which a portion of one, *The Exodus*, is extant, a veritable exercise in Euripidean trimeters. Among Apocryphal books the Wisdom of Ben Sira, dating from perhaps the second century B.C.E., uses a number of technical terms drawn from Platonic and Stoic philosophy; and such a view as the preexistence of the soul is apparently drawn from Plato. It and its presumed contemporary, IV *Maccabees, are reminiscent of Cynic-Stoic diatribes. Furthermore, the latter shows Greek influence in its presentation of the Torah as teaching the four cardinal virtues; the arguments are pervasively Stoic, and the form of the disputation is modeled on Plato’s *Gorgias*. Of Philo it was said already by Jerome (*De Viris Illustribus*, 11), “Either Plato philonizes or Philo platonizes.” That his Hellenization transcends mere language can be seen in his description of Moses’ education, which is presumably held up as an ideal. His Egyptian instructors are said to have taught him arithmetic, geometry, harmonics, and philosophy (*De Vita Mosis*, 1:23–24), the very subjects which constitute the higher education of Plato’s philosopher-king (*Republic*, 521c–535a), while his Greek teachers are said to have taught him the rest of the regular school course – presumably, grammar, rhetoric, and logic. In his profound debt to Platonism Philo is similar to the author of IV Maccabees, his presumed contemporary.

Evidence of Greek influence on Jews of the middle and lower classes is largely dependent upon *papyri and art objects that have been discovered. The papyri show many instances of Jews using common Hellenistic law in their business life. The documents are drawn up as Hellenistic documents in a government notary’s office. The most obvious violations of *halakhah* are seen in the loan documents: of the 11 that have come down only two do not charge direct interest. One of them is in a highly fragmentary condition and the other is subject to the interest of 24% if not repaid within a year. The one divorce document follows non-Jewish formulas completely; and, in direct violation of *halakhah*, there is no statement that it is the husband who is divorcing the wife.

Greek influence, as Goodenough has amply shown, is clearly to be seen in Hellenistic Jewish art and architecture. Thus Josephus tells that the courts and colonnades of the Temple built by Herod in Jerusalem were in the Greek style. Pagan and syncretistic art has been discovered in the synagogues of both Palestine and the Diaspora (especially at *Dura-Europos in Mesopotamia), in direct violation of stringent biblical and rabbinic prohibitions. It cannot be argued that these motifs were merely decorative, since they were employed in a similar way by earlier and contemporary pagans and by contemporary and later Christians. Goodenough has concluded that these figures had meaning as symbols; that these symbols constituted a sub-rational lingua franca among Jews and non-Jews alike, just as the Greek language provided a rational bond

among them; and that they represented a kind of allegorization through art, of the sort that Philo had attempted through philosophy. Additional evidence that some Jews adopted certain pagan elements can be seen in the charms (that is, verbal incantations) and apotropaic amulets (or the material objects themselves containing graphic symbols used to ward off evil) which Goodenough has collected.

It is not surprising that contact with Hellenism should have produced deviations from Jewish observance. Philo (*Post.*, 35–40) mentions the extreme allegorists, who insisted on interpreting the ceremonial laws as only a parable: these are undoubtedly forerunners of Pauline antinomianism. Others relaxed their Jewish observance in order to become citizens of Alexandria, an act that involved worship of the city gods. Actual apostasy was apparently rare, though there is mention of the case of Philo's nephew, *Tiberius Julius Alexander, as well as those of Dositheos and Helicon, all of whom pursued careers at the imperial court. Philo on one occasion (*Spec.*, 3:29) does attack intermarriage, but the virulent *antisemitism in Alexandria must have served as a deterrent. A more common reaction to the challenge of secularism was for Jews to cease religious observance except on the Day of Atonement (Philo, *Spec.* 1:186). Finally, there is some evidence that the one city where Christianity seems to have made real inroads in converting Jews was the one most deeply influenced by Hellenism, Alexandria.

Spiritual Resistance

One aspect of the contact between Hellenism (and Rome) and Judaism deserves special treatment, the spiritual resistance against their rule. The struggle of the Jewish people against Greek and Roman domination was accompanied by a literature which encouraged and intensified resistance. After military defeat it became frequently the only weapon, an important instrument of hope and survival. A significant trend in recent scholarship considers much of Jewish literature between Alexander the Great and the conquest of Islam as spiritual or religious resistance.

Resistance of this type was found among all the larger nations of the ancient Near East: the Babylonians and Egyptians under the Persians and the Egyptians and Persians under the Greeks who, in turn, developed a preponderantly cultural resistance under the Romans. The eastern pattern, however, was religious: foreign conquest destroys the sacred and just world order by which native king, cult, nature, and people function under the ruling god, a belief which was strengthened by the frequent misrule of the conqueror. A future cataclysmic reestablishment under a kingly redeemer must therefore right all wrongs. Meanwhile, a hereafter would punish or reward the individual. This apocalyptic scheme existed throughout the Near East: e.g., the *Oracle of Hystaspes* and the later *Bahman Yasht* (Persian), Sesostris and Ramses legends, *Demotic Chron-*

icle, Oracle of the Potter (Egyptian), *Babylonian Chronicle*, Ninos-Semiramis legend (Babylonian). Archaizing styles (e.g., script and literature, cf. *Coins, *Dead Sea Scrolls), clerical organization, and proselytism were also aspects of resistance.

Jewish spiritual resistance differed in some respects from this general pattern; here it was the weapon of a small people lacking the glory of an imperial past. It differed, further, in its intensity and perpetuity, its monotheism (though dangerously attenuated in the apocalypse) and, at times, its appeal to all classes from aristocracy to peasantry. It differed in a stronger stress on social justice inherited from biblical prophecy and the constant reference to past liberations in sacred scriptures. In his glorification of the Augustan restoration *Virgil may have combined classical concepts with eastern "Empire" apocalyptic ones (*Eclogue* 4; cf. Horace, *Epode* 16; Dan. 2 and 7). Oppression created obscure allusions (to Antiochus, Pompey, Nero, etc.) and secret code words in both *apocalypse and Talmud (e.g., Edom or Babylon for Rome adopted from here by Christian apocalyptic writers (Rev. 16:5) and perhaps in the Dead Sea Scrolls ("Kittim" in the Habakkuk Peshar)). Finally, Jewish resistance created an incomparably greater variety of literary sources and forms. Alongside the detailed apocalypse, with its violent cosmic vision, the psalm remained popular as a vehicle of resistance (Dan. 9:4–19; II Macc. 1:24–29; Psalms of Solomon, perhaps the heading of Ps. 30, et al.). Martyrology emerged, and many of its features were borrowed by emerging Christianity (II Macc.; IV Macc.; talmudic examples collected in *Midrash Elleh Ezkerah*, cf. H.A. Fischel, in *JQR*, 37 (1946/47), 265–80, 363–86). Alongside Diaspora historiographies, Palestinian works treated both biblical and contemporary history in the spirit of religious resistance (I Macc.; Jub.; *Pseudo-Philo*). Many talmudic dialogues ("Antoninus" versus Rabbi Hadrian and the Athenian wise men versus Joshua b. Hananiah), Alexander legends (Tam. 31b. ff., et al.), parables, and fables (Akiva, fox and fishes, Ber. 61b) have resistance aspects. Spiritual resistance is also manifest in the Hebrew examples of the erotic Greco-Oriental romance (Esth., Judith, Testament of Joseph, III Macc., Moses Romance). The talmudic sermon interpreted biblical passages, such as those of the unclean animals, as referring to Greece and Rome (Lev. R. 13, 5, et al.). The resistance aspects of liturgy, still little explored, may be considerable. Resistance is obvious and probably intentional in the symposiastic *seder* ritual (cf. S. Stein, in *JJS*, 8 [1957], 13–44).

The resistant writer freely added materials from foreign literature. Judith, some details of the Greek Lindus chronicle and Daniel and the Sibylline Oracle (Oriental prophecies) are among prominent examples. Similarly, the Midrash seems to have been acquainted with the Hellenistic critique of Rome's materialism and cruelty (cf. Shab. 33b and Cicero, *Academica* 21, 137; Meg. 6b; Pes. 119b, et al., and Dio. 13, 16, 31, 41 ff., 121) and its "scandalous" foundation legend (Shab. 56b; Esth. R. 3, 5 and Justin 28:2, 8 ff.; Horace, *Epode*, 16). Occasionally, resistance consisted in quietism, and the talmudic sage resembled (and was acquainted with) the Greco-Roman philosopher-

rhetor who also often had to choose between martyrdom and withdrawal. The rabbis created much **halakhah* of decisive resistance value, especially legislation against emperor worship, later used by Tertullian among others. Naturally, resistance never excluded periods of accommodation, objective insights into the virtues of Greece and Rome (Avot 3, 2; Av. Zar. 2b; 18a; Gen. R. 9 end, 16, 4, et al.), and useful borrowings. Strangely enough, much earlier non-Jewish scholarship condemns Jewish resistance, totally oblivious to the fact that without it there would be no Western civilization as we know it.

HELLENISTIC JEWISH LITERATURE. To a general historian the term “Hellenistic” describes the literature of the period from the death of Alexander the Great (323 B.C.E.) until Rome’s predominance in the Mediterranean (c. 30 B.C.E.). Sometimes the same general term is used to refer to Jewish material as well; thus, the Book of Ecclesiastes, early rabbinic literature, and the *Dead Sea Scrolls are sometimes referred to as “Hellenistic.” More precisely, however, the term Hellenistic Jewish literature does not describe a historical period – nor even characterize a movement – but rather applies to a specific body of literature that was written in the Greek language; was transmitted only in the Greek language; or was preserved in one or more secondary versions derived from the Greek (though a number of these works have now been found in the original). Its two main centers were Palestine and

Alexandria (Egypt), although other localities of the Diaspora may have contributed (see *Jason of Cyrene). Its temporal limits extend into the second century C.E., for the educated classes of the major cities of the Roman period continued to use Greek rather than Latin as the language of culture. Since the term Hellenistic Jewish literature refers to a subclass of the literature of a period, it is difficult to discuss it historically or in terms of genres in isolation from the rest of the literature of the same period. Traditionally, the material of this literature has been divided into Apocrypha, *Pseudepigrapha, and individual authors. Schuerer presents the material as either Palestinian or as Diaspora literature. Only recently, in the works of Joshua Gutmann, has there been an attempt at a systematic historical presentation.

The fundamental book of this literature is the Greek translation of the Bible, the *Septuagint. Although the story of its origin as told in the Letter of *Aristeas is probably propaganda, in fact an early date for this translation, at least of the Pentateuch, is very probable (the reign of *Ptolemy Philadelphus, 285–246 B.C.E.), testifying to the rapid loss of knowledge of the Hebrew language by the Alexandria Jewish community. The rest of the literature is greatly dependent on this text. In historical writing, for example, retelling of biblical history is found in the fragments of *Demetrius, *Eupolemus, *Artapanus, Aristeas, *Cleodemus, and *Thallus, in Pseudo-Philo’s *Biblical Antiquities*, and in the first half of the *Antiquities* of *Josephus, all couched in the language of the Greek translation with little or no reference to the Hebrew original. In more contemporaneous histories, such as I and II *Maccabees, *Philo’s *Embassy to Gaius*, and Josephus’ *Jewish War*, there is an obvious debt to the models of Thucydides and Polybius. With the exception of I Maccabees (probably), Pseudo-Philo, and the original of Josephus’ *Jewish War*, all these histories were composed in Greek. The folkloristic elaborations on the biblical text found in this literature are more often translations from a Semitic original. Some are insertions into the biblical text, perhaps stemming from the original copy, such as the story of the three youths in I *Esdras 3:1–5:6 or the insertions in the Greek *Esther; others are additions, such as **Sussanna or Bel and the Dragon, to the biblical Book of Daniel; still others, separate books in themselves, such as *Jubilees, *Tobit, *Judith, and the Ascension of *Isaiah, are further examples of stories told in a biblical manner. Artapanus and II and III Maccabees come closer to the dramatic manner of a Greek romance.

Books such as the Wisdom of *Ben Sira (Ecclesiasticus) continue the tradition of biblical wisdom literature. Little or no direct influence of Greek philosophy can be discerned in them; but in books like the Wisdom of *Solomon, especially in the latter half, and in IV Maccabees, Platonic and Stoic terminology and ideas are present. *Aristobulus and Philo explain Mosaic law as an anticipation of Greek philosophy, and they employ the Greek technique of allegory to reconcile these two traditions. Apocalyptic literature, as found in *Enoch, the Assumption of *Moses, IV Esdras, the Syrian and Greek *Baruch,

and the Testaments of the *Twelve Patriarchs, owes much to the prophetic tradition, as well as to Greek popular lore, Stoicism, and Platonism. The Testament of Abraham, for example, is reminiscent of Plato's vision of Er at the end of the *Republic*. In poetry, at least in form, the Greek and the Semitic elements can be clearly distinguished. Semitic poetry uses parallelism; Greek poetry uses syllabic metrics. The Psalms of *Solomon and parts of the Wisdom of Ben Sira represent a continuation of the tradition of Psalms; the writings of *Philo the Elder and those of *Theodotus are in Homeric hexameters; *Ezekiel the poet writes in iambics. The Prayer of *Manasseh, however, shows how the Greek and Hebrew elements are not always clearly delineated, for this book, although probably written in Greek, is more akin to biblical poetry.

Finally, there is the question of the extent to which this literature was addressed to a pagan audience. Most of these books are too deeply steeped in Jewish tradition to have been meaningful except to either traditional or partially Hellenized Jews. Some books, such as Josephus' *Contra Apionem*, seem to be addressed specifically to non-Jewish audiences. The Pseudepigrapha which are ascribed to pagan authors, such as the *Sibylline Oracles, Pseudo-Hecataeus, or Pseudo-Phocylides, also belong to this category.

[Marshall S. Hurwitz]

HELLER, U.S. Reform rabbinical family. **MAXIMILIAN HELLER** (1860–1929) was born in Prague and lived in the heart of the ghetto. He came to the United States in 1879, two years after his parents. Heller was ordained by Hebrew Union College in 1884, the second class of ordainees. After two years in Chicago, where he was assistant to Rabbi Bernhard *Felsenthal, and then Houston, Texas, for a year, he was named to the pulpit of Temple Sinai, New Orleans, and remained there for the rest of his life. Firmly grounded in Jewish scholarship, Heller was an able preacher and a felicitous writer. Though identified with the Reform movement, he took a position independent of the majority of his contemporaries, and in particular was an early adherent of Zionism. Out of respect for Rabbi Isaac Mayer *Wise, who was a mentor, Heller did not declare his Zionism until after Wise's death in 1900. Heller was active in furthering social causes in Louisiana and was a prolific writer for the Jewish press. During 1909–11 he was president of the Central Conference of American Rabbis, a position that was almost denied him because of his Zionism. He sought to reconcile Reform Judaism and Zionism at a time when most Reform rabbis were strongly anti-Zionist. He stressed that Zionism was the fulfillment of the prophetic vision and that the people and Zionism were "one and inseparable." His position, widely unpopular at the time, gained adherents over time. In 1912 he became professor of Hebrew at Tulane University.

His son, **JAMES GUTHEIM HELLER** (1892–1971), was born in New Orleans, receiving his B.A. from Tulane and his M.A. from the University of Cincinnati (1914); he was ordained at Hebrew Union College in 1916. His first position, interrupted by war service as an army chaplain, was as assistant rabbi at Congregation Keneseth Israel in Philadelphia. In 1919 he went to Little Rock, Arkansas, and in 1920 to the Isaac M. Wise Temple in Cincinnati, where he remained until his career in the pulpit came to an end in 1952. Like his father he was a devoted disciple and later a biographer of Wise, but also like his father his adherence to Zionism was strong. Heller was active in the Central Conference of American Rabbis, serving as president during 1941–43. At the 1942 convention he helped secure the adoption of a resolution favoring the creation of a Jewish division to fight in World War II, which brought about a crystallization of the anti-Zionist element that established the American Council for Judaism. A graduate of the Cincinnati Conservatory of Music, Heller was a keen musician and his compositions include several pieces for the synagogue. He received a prize from the Society for the Publication of America Music for a string quartet that he composed. Upon retirement he became president of the Labor Zionist Organization of America, and then joined the Israel Bonds organization as executive director. In 1965 he published *Isaac Mayer Wise, His Life, Work and Thought*.

ADD. BIBLIOGRAPHY: J.G. Heller, *As If It Were Yesterday: A History of Isaac M. Wise Temple K.K. B'nai Yeshurun 1842–1942* (1942); idem, *Isaac M. Wise: His Life, Work and Thought* (1965).

[Sefton D. Temkin / Michael Berenbaum (2nd ed.)]

HELLER, ARYEH LEIB BEN JOSEPH HA-KOHEN OF STRY (1745?–1813), Galician rabbi, a descendant of Yom Tov Lipmann *Heller. Heller was born in Kalisz, and studied under Meshullam Igra of Pressburg. In his youth he served as rabbi of the small town of Rozhnyatov, Galicia, where he lived in poverty, and there he wrote his works. He went from there to Lemberg where he was a teacher of Talmud. The publication of his *Keẓot ha-Hoshen* brought him fame, and in 1788 he was elected rabbi of Stry (Pol. Stryi), where he established a large yeshivah. Stry was a center of Ḥasidism, and although Heller violently opposed the Ḥasidim, the ḥasidic rabbis themselves held him in great esteem and referred to him as a "prince of the Torah." The *dayyan* David ha-Kohen attacked him and even published a work *Ahavat David vi-Yhonatan* in criticism of the *Keẓot ha-Hoshen* but the work had no repercussions.

Heller's *Keẓot ha-Hoshen* (2 pts., Lemberg, 1788–96), on the Shulḥan Arukh, *Hoshen Mishpat*, was acclaimed by scholars and students of yeshivot with unusual enthusiasm as soon as it appeared and to the present day is regarded as a classic work of halakhic *pilpul*. Jacob Lorbeerbaum, one of the important *posekim* of his generation, devoted a considerable portion of his *Netivot ha-Mishpat* (Zolkiew, 1809–16) to a polemic with Heller. Heller replied to the criticisms in a special work, *Meshovev Netivot*. Heller died before he completed the work, which covers only chapters 1–133 of the *Hoshen Mishpat*. As a

result of this profound work Lorberbaum made considerable changes and additions to his work, even though he does not mention the name of his opponent. Beside Lorberbaum many other well-known contemporary rabbis discussed the *Kezot* in their own works, which in itself is an unusual phenomenon. Heller's other works were also enthusiastically received by scholars: *Avnei Millu'im* (Lemberg, 1816) on the Shulḥan Arukh, *Even ha-Ezer*, and the *Shev Shemateta* (*ibid.*, 1804), an examination and clarification of the laws concerning cases which involve doubt. All his works have gone through many editions and all still serve as a cornerstone of the method of Torah learning in the yeshivot, despite the radical changes in method effected in the Lithuanian yeshivot by Ḥayyim *Soloveichik. These three works may therefore be regarded as classics in the accepted sense of the word. It is worthy of note that his method of study gained adherents both in Poland and Lithuania despite the difference in method in both places. The *Kezot* combines great acumen with logical reasoning, and is distinguished by its scintillating analysis, and its emphasis on the inner logic of the *halakhah*. Specially worthy of note are the introductions which Heller wrote to his works, particularly that to his *Shev Shematata*. It freely combines sound logic, extensive erudition, and a profound acumen in its explanation of aggadic topics and ideas and morals. Heller had three sons: DAVID, who published the *Shev Shematata*; JOSEPH DOV, rabbi of Weicislaw; and HIRSCH, who was rabbi of Uzhgorod. His son-in-law Solomon Judah *Rapoport (Shir), edited Heller's later works, prepared them for publication, provided them with indices, and attached his own comments. Heller's brothers, whom he mentions frequently in his works, were also outstanding talmudists. His brother Judah *Heller appended to the *Kezot ha-Hoshen* his *Kunteres ha-Sefekot*.

Kamelhar, *Dor De'ah* (1953²), 126–9; *Sefer Stry* (1962), 32, 111; S. Raz, in: *Shanah be-Shanah* (1963), 515–9; N. Ben-Menahem, *Mi-Sifrut Yisrael be-Ungaryah* (1958), 295–329.

HELLER, BERNARD (1897–1976), rabbi, teacher, author. Heller was born near Kishinev, Russia, and shortly after the pogrom there in 1903, came to South Philadelphia. He received a B.A. degree at the University of Pennsylvania in 1916, an M.A. degree in 1917 from Columbia University, and was ordained at Hebrew Union College in Cincinnati in 1920. After ordination Rabbi Heller served in Scranton, Pennsylvania, from 1920 to 1930 and became widely known for his religious, civic, and communal work. From the Scranton pulpit, he went to serve the B'nai B'rith Hillel Foundation at the University of Michigan, where he was awarded a Ph.D. degree in 1932. He was also awarded an honorary Litt.D. degree from the Jewish Theological Seminary of America.

In 1943 Heller was appointed to a commission established to eliminate prejudicial references to Jews in Catholic and Protestant textbooks. In 1949 he was named director of Restitution of Jewish Cultural Reconstruction, Inc., the agency

charged with restoration of cultural property seized by the Nazis from Jewish people and institutions. From headquarters in Frankfurt-am-Main, Heller handled the distribution of the more than 30,000 confiscated volumes, many of them rare and valuable, which the Nazis had assembled for use in antisemitic institutes they hoped to establish after their victory.

In the early 1950s Heller traveled to India, where he served as rabbi of the liberal community of Bombay and then to Australia, and other parts of the world, where he lectured on Jewish topics and established Jewish study groups. From 1952 until his retirement he taught Jewish ethics and religion at the Hebrew Union College-Jewish Institute of Religion and lived in New York in close association with students and faculty of this institution and of the Jewish Theological Seminary, where he was awarded an honorary D.D. degree.

Heller published a number of works. His *Epistle to an Apostate* (1951) was an answer to the attempts of apostates to belittle and even defame Judaism, emphasizing, however, that it was not to be regarded as an attack on Christianity but only as an attempt to enlighten without counter-proselytizing. In his *Dawn of Dusk?* (1961) Heller showed how the antisemitic ideas of medieval Europe had prepared the ground for Nazism, but he avoided blaming all Germans for the Holocaust. His best-known work, however, is *The Odyssey of a Faith* (1942).

After years of rabbinic service, Dr. Heller pursued his interests in business as one of the founders of the predecessor to the United Brands Corporation and also of the West Indies Investment Company in the U.S. Virgin Islands.

Dr. Heller was deeply concerned with the survival of the Jewish people and with the transmission of Jewish religious and cultural heritage. His life reflected his abiding interest in philosophy, in Jewish thought, and in scholarship. By the terms of his Last Will and Testament, Dr. Heller established the Dr. Bernard Heller Foundation for the benefit of Jewish education and for the welfare of the Jewish people in Israel. To date, the Foundation has distributed close to \$10 million for these purposes. Dr. Heller frequently referred to himself as a trustee of his wealth for Israel.

[Milton Ridvas Konvitz / Michael Berenbaum (2nd ed.)]

HELLER, BERNÁT (1871–1943), Hungarian scholar, Arabist, folklorist, and literary historian. Heller was born in Nagybicse, Hungary. He was ordained at the rabbinical seminary in Budapest, in 1896. From 1896 to 1919 he taught French and German and sometimes also Hungarian literature in a non-Jewish high school in Budapest. In 1919 he was appointed director of a newly established Jewish high school in Budapest. From 1922 to 1931 he taught Bible at the rabbinical seminary in Budapest, and thereafter he became superintendent of the Jewish schools in Budapest. Heller was a member of the ethnographical and Oriental societies of the Hungarian Academy of Sciences. Deeply influenced by his teachers W. *Bacher and I. *Goldziher, Heller devoted his life to the study of *aggadah* and

Islam. He tried to interpret aggadic literature by comparing its themes, motifs, and sources to the literatures of other peoples. He was particularly interested in tracing themes common to *aggadah* and early Christian literature and *aggadah* and Islamic legendary literature. As a folklorist and general literary historian, he also wrote comparative studies on Western European literature, particularly on Jewish influences on Western European and Hungarian novelists and poets. Heller was the author of most of the articles on the legends of Islam and the legends surrounding biblical personalities for the *Encyclopaedia of Islam* (4 vols., 1913–36) and for the German *Encyclopaedia Judaica* (10 vols., 1928–34). During the last years of his life Heller devoted himself to the study of the Apocrypha. He translated the Book of Tobias and the Additions to Daniel for A. Kahana's *Ha-Sefarim ha-Hizonim* (1947). Among Heller's works are *Die Bedeutung des arabischen Antar-Romans fuer die vergleichende Literaturkunde* (1931) and "Das hebraeische und arabische Maerchen" (in J. Bolte and G. Polivka's *Anmerkungen zu den Kinder-und Hausmaerchen der Brueder Grimm*, 4 (1930), 315–418). He was a frequent contributor to the *Revue des Etudes Juives*, the *Jewish Quarterly Review*, and the *Monatsschrift fuer die Geschichte und Wissenschaft des Judentums*. His devotion to his teacher I. Goldziher is reflected by his editing a volume in honor of his 60th birthday entitled *Keleti tanulmányok* ("Oriental Studies," 1910). He translated Goldziher's *Vorlesungen ueber den Islam* into Hungarian as *Előadások az iszlámról* (1912), and prepared a bibliography of Goldziher's works, *Bibliographie des oeuvres de Ignace Goldziher* (1927).

A gentle person, Heller greatly influenced many Hungarian rabbis. On his 70th birthday he was honored by a multilingual jubilee volume edited by A. Scheiber, *Jubilee Volume in Honour of Bernat Heller* (1941), which contains a bibliography of his writings.

[David Samuel Loewinger]

HELLER, BUNIM (1908–1998), Yiddish poet. Born in Warsaw to a ḥasidic family, Heller became a devoted communist and was forced to flee Poland for Paris in 1937 because of his political activities, returning to Warsaw in 1939. After the Blitzkrieg, Heller fled to Bialystok, where he lived for two years before escaping to the interior of Russia, living for the balance of the war in Alma-Ata, Kazakhstan, before moving to Moscow for a brief period. In 1947, Heller returned to Poland, where he lived in Lodz and Warsaw and became active in several Yiddish literary organizations. In 1956, he left Poland for Brussels and, in 1957, settled in Tel Aviv where he lived the remainder of his life. A life-long committed communist, Heller contributed his poems, essays, and translations to the radical Yiddish press in France, Poland, America, Argentina, Uruguay, Brazil, and Israel. Heller is perhaps best known for his poems of his hometown Jewish community, including "In

Varshaver Geto Iz Khoydesh Nisn" ("It Is the Month of Nisan in the Warsaw Ghetto," 1948).

[Josef Schawinski / Marc Miller (2nd ed.)]

HELLER, ḤAYYIM (1878–1960), rabbinical and biblical scholar. Heller was born in Bialystok. From 1910 Heller served as rabbi in Lomza, Poland. In 1917 he settled in Berlin, where in 1922 he established a new type of yeshivah (Bet ha-Midrash ha-Elyon) for research in Bible and Talmud; his yeshivah attracted a number of graduates of Eastern European yeshivot, such as Samuel *Bialobocki and J.B. *Soloveitchik. In 1929 he joined the faculty of the Isaac Elchanan Theological Seminary, New York. After a short sojourn in Palestine, he returned to the United States, living first in Chicago and then New York. He published several volumes of novellae, including: the two-volume *Le-Ḥikrei Halakhot* (1924–1932); *Peri Ḥayyim* (Schulzinger edition of Maimonides' Yad, 1947); and *Kunteres be-Hilkhoh Lovah u-Malveh* (1946). Other works, which are of great scholarly value, are: his critical edition of Maimonides' *Sefer ha-Mitzvot* (1914, 1946²), based on two different translations (Mss. Munich 213, and Margoliouth, Cat, 2 (1904), nos. 503–5), the Arabic original, early editions, and others; an annotated edition of the *Peshitta* version of Genesis and Exodus in Hebrew characters (1927–29); the Samaritan Pentateuch (1923); a critical essay on the Palestinian Targum (*Al ha-Targum ha-Yerushalmi la-Torah*, 1921); and on the Septuagint, critical annotations to Mandelkern's Bible Concordance *Al Targum ha-Shivim ba-Konkordanzyah Heikhal ha-Kodesh* (1944), with an introduction in English. In German, Heller published *Untersuchungen ueber die Peshitta*, 1 (1911) and *Untersuchungen zur Septuaginta*, 1 (1932). Heller was one of the very few modern scholars who combined a vast and deep talmudic erudition of the traditional type with a thorough competence in the methods of textual research. He defended the traditional masoretic text against the Bible critics.

HELLER, HERMANN (1891–1933), German political scientist. Born in Austria he was active in the Socialist movement, and contributed to a non-Marxian social democratic theory, believing that it would more easily fit the framework of national traditions. He warned against the danger of Fascism and dictatorship and had to leave Germany early in 1933. He died that year in Madrid where he had been offered a professorship. Heller was one of the small group who revived political science in Germany in the 1920s, after it had stagnated through legal positivism and normativism from the middle of the 19th century. He was regarded as one of the leading politi-

cal scientists of his time; as such he contributed the article on political science for the *Encyclopedia of Social Sciences* (1934). He placed political science firmly among the social sciences, stressed social power relationships as one of its major focuses, while denying the contention that political science is necessarily devoid of moral content. His major work, *Staatslehre*, was published posthumously and unfinished (1934).

[Edwin Emanuel Gutmann]

HELLER, JEHIEL BEN AARON (1814–1863), Lithuanian author and preacher. Heller was rabbi of Glusk (district of Volkovisk) before he became rabbi of Plungian where he remained until his death. Like his brother Joshua, Heller was a disciple of R. Israel *Salanter to whose journal, *Tevunah*, he contributed. He became a popular preacher of the *Musar movement, on various occasions delivering his sermons in German. His published works are *Shenei Perakim*, or *Kevod Melekh* (St. Petersburg, 1852), “published by order of the Russian government” and translated into German by Leon *Mandelstamm, dealing with the duty of loyalty to the ruler and obedience to the laws of the country, as laid down in the Bible and Talmud; *Ammudei Or* (1855), responsa, in his introduction to which Heller deplors the general neglect of Talmud study and expresses his apprehension of the attacks on Jewish beliefs by the protagonists of the *Haskalah; *Or Yesharim* (1857), a commentary on the *Haggadah* of Passover; and *Oteh Or* (1865), a commentary on the Song of Songs.

[Jacob Hirsch Haberman]

HELLER, JOSEPH (1923–1999), U.S. novelist and dramatist. Heller was born in Brooklyn, New York, and during World War II joined the Air Force. He attended college after the war and received a Fulbright to study at Oxford. He later worked as an advertising writer and manager for leading magazines and published short stories before turning seriously to literature. His bestselling novel *Catch-22* (1961, and later made into a film) was an outstanding satire on the military mind, based on World War II experiences. It was – and is – so popular that the phrase “catch-22” won a place in the English language. (Heller returned to the characters of *Catch-22* with *Closing Time* [1994]). He also wrote the play *We Bombed in New Haven* (1968). His memorable dark novel about business culture, *Something Happened* (1974), was comically offset by his satirical portrait of an American-Jewish English professor in *Good as Gold* (1979). *God Knows* (1984) is the imaginary death-bed autobiography of King David, whose voice is shrewd, world-weary, as well as flamboyant. A recovery from illness led to Heller’s *No Laughing Matter* (with Speed Vogel, 1986). His posthumous novel, *Portrait of an Artist as an Old Man* (2000), a mixture of large and often biting humor, traces the struggles of Eugene Pota to find his commanding theme before his reputation diminishes. Heller’s

own autobiography is *Now and Then: From Coney Island to Here* (1998).

[Lewis Fried (2nd ed.)]

HELLER, JOSEPH ELIJAH (1888–1957), Hebrew writer. Born in Ponivezh, Lithuania, Heller was a graduate of Berlin University, and lived in Russia and Germany, where he was one of the editors of the *Encyclopaedia Judaica* (German) and of the *Enziklopedyah Yisreelit “Eshkol”* (1929–32). In 1938 he moved to London, where he taught and edited the Zionist Organization’s journal, *Tarbut*. Heller published studies of Jewish and general philosophy in German, English, and Hebrew, and was a contributor to various Hebrew periodicals including *Haolam*, *Hadoar*, and others. His analysis of Aḥad Ha-Am’s philosophy was published in *Aḥad Ha-Am, ha-Ish, Po’alo ve-Torato* (ed. by L. Simon, 1955). He also wrote *The Zionist Idea* (1947), *H.N. Bialik* (1944), and translated several of Plato’s works into Hebrew.

[Getzel Kressel]

HELLER, JOSHUA BEN AARON (1814–80), Lithuanian rabbi and author. Heller was a preacher in Grodno and became successively rabbi of Polangen and of Telschi. He was a disciple of Israel *Salanter and played an important role in the *Musar movement. Heller fought against the inroads of secularism menacing Jewish religious life in Russia. He emphasized that teaching methods at the yeshivah must imbue the students with strong religious convictions. Heller contributed to the Hebrew periodical *Ha-Levanon* and published the following works: *Divrei Yehoshu’a* (1865), on Jewish ethics and philosophy outlining a full ethical “training program”; *Toledot Yehoshu’a* (1866), a commentary on *Avot*; *Ma’oz ha-Dat* (1873), a defense, in dialogue form, of the oral tradition extolling the wisdom of the talmudic rabbis; *Hosen Yehoshu’a* (1872), a guide to Torah study.

[Jacob Hirsch Haberman]

HELLER, JUDAH (d. 1819), Hungarian talmudist. Heller was born in Kalisch, Galicia. He was a publican in one of the nearby villages but after losing his wealth and facing starvation, he moved to Lemberg, where he acted as tutor to the children of well-to-do parents. He met Joseph Teomim, author of the *Peri Megadim*, who was also a tutor in Lemberg. There Heller compiled his *Kunteres ha-Sefekot* and was in frequent contact with his brother, Aryeh Leib *Heller, author of the *Kezot ha-Hoshen*, who at the time lived in Rozhnyatov near Lemberg. The brothers decided to publish the *Kezot ha-Hoshen* pt. 1 (Lemberg, 1788) and to attach to it the *Kunteres ha-Sefekot*. The appearance of the work brought fame to the

brothers, and as a result Judah was appointed rabbi in Hungary, first in Munkacs and then in Nagyszollos. In 1802 he was appointed rabbi of Sziget. In 1805 he refused an invitation to become rabbi of Grosswardein since, although it was a smaller community, he was unwilling to leave Sziget, where he remained for the rest of his life. Heller was an intimate of Moses *Sofer. Apart from his *Kunteres ha-Sefekot*, his *Terumat ha-Keri*, on the Tur and the Shulḥan Arukh, *Hoshen Mishpat*, has also been published (1858). He is also known to have compiled a work on the Bible, but the manuscript appears to have been lost.

[Naphtali Ben-Menahem]

HELLER, STEPHEN (1813–1888), Austrian pianist and composer. His first name originally was Jacob; he was baptized when his parents converted to Catholicism. Heller, who was born in Budapest, studied in Vienna, and became a virtuoso pianist. When illness interrupted his career, he accepted a post as a music teacher in Augsburg and turned to composing. In 1838 he settled in Paris, where he earned the respect of his contemporaries, especially Schumann. Heller wrote for the piano in a subtle, romantic, and evocative mood, and produced more than 150 short compositions. These were frequently played by pianists of his day, but since they were not suited for concert halls they were later rarely played.

[Claude Abravanel]

HELLER, THEODOR (1869–1935), Austrian psychologist. Heller, who was born in Vienna, was among the pioneers of *Heilpaedagogik*, a form of clinical psychology devoted to the application of therapeutic techniques in an educational framework, operating generally under Freudian thought and theory. He founded the Heilpaedagogische Anstalt in Vienna, and wrote *Grundriss der Heilpaedagogik* (1904; 1925³). His research covered the fields of child, adolescent, abnormal, and educational psychology. His published works include *Studien zur Blindenpsychologie* (1904), *Paedagogische Therapie fuer praktische Aerzte* (1914), and *Ueber Psychologie und Psychopathologie des Kindes* (1911; 1925³). He was coeditor of *Enzyklopaedisches Handbuch des Kinderschutzes und der Jugendfuersorge* (2 vols., 1911).

[Aaron Lichtenstein]

HELLER, YOM TOV LIPMANN BEN NATHAN HALEVI (1579–1654), Moravian rabbi, commentator on the Mishnah. Heller was born in Wallerstein, Bavaria. He received his education in the home of his grandfather, Moses Wallerstein, as well as, among others, from *Judah Loew b. Bezalel

(the Maharal) of Prague. Besides his great talmudic knowledge, he engaged in the study of Kabbalah, religious philosophy, and Hebrew grammar and also acquired an extensive general knowledge, particularly of mathematics, astronomy, and natural sciences. In 1597, when only 18 years of age, he was appointed *dayyan* in Prague, and served in this office for 28 years, during which period he acquired renown for his profound knowledge and for his integrity. In 1625 he was appointed rabbi of Nikolsburg (Moravia) but in that same year moved to Vienna where he was elected *av bet din*. Through his endeavor the suburb of Leopoldstadt (at that time still outside the boundaries of Vienna) was confirmed as a special residential quarter for Jews. Heller saw to its communal organization and orderly administration, until the settlement became “a city filled with the qualities of wisdom, wealth, and honor” (*Megillat Eivah*). In 1627 he returned to Prague.

When, during the Thirty Years' War (1618–48), it was decreed that the Jews of Bohemia must pay a heavy tax to the government, the leaders of the Prague community, including Heller, imposed taxes upon its members to repay the loan which the community had borrowed to pay the impost. Several of the poor who opposed the assessment accused Heller of favoring the wealthy and, when their plot to remove him from office failed, slandered him to the emperor Ferdinand II, accusing him of contempt of the state and of insulting Christianity. He was imprisoned on June 25, 1629, and transferred to Vienna. When during the investigation he was asked how he dare defend the Talmud since it had been ordered to be burned by the pope, he replied: “Jews are obliged to obey the Talmud which is the main Oral Law.” The sentence of death passed upon him by a court of Catholic priests was, “by grace of the emperor,” commuted to a large monetary fine. Through the efforts of the Jews of Prague the other heavy penalties imposed were partly reduced. Instead of his books being banned, only the fragments on which he was condemned were erased, and the prohibition imposed on his serving in the rabbinate throughout the Austrian Empire was limited to the district of Prague. After spending 40 days in prison he returned to Prague in August 1629. He appointed the fifth of Tammuz, the day on which the order for his arrest was issued, as a fast day for all the members of his family. The details were described by Heller in his autobiography, *Megillat Eivah*.

In 1631 he removed to Poland, living first in Lublin and subsequently in Brest-Litovsk and Nemirov (among other things he composed a eulogy on the destruction of Nemirov in the *Chmielnicki massacres). From 1634 to 1643 he served as rabbi of Vladimir-Volynski. Heller took part in the rabbinical activities of the *Council of Four Lands and was one of the members of the permanent *battei-din* and one of the chief speakers at the conventions during the fairs in Lublin, Jaroslaw, and other places. He demanded that the **takkanot* and bans of 1587 prohibiting the purchase of rabbinic office be renewed and strengthened. This incited against him the anger of “those that hate without cause, and mendacious enemies.” As a result of a calumny, a decree of expulsion from

Vladimir was issued against him, but this decree too was rescinded through the efforts of his influential friends in Warsaw. In 1643 he was called to serve in the Cracow rabbinate and after the death in 1648 of *Joshua b. Joseph, author of the *Meginnei Shelomo*, he also headed the Cracow yeshivah. During his residence in Cracow, Heller prepared a second edition of his *Tosefot Yom Tov* (Prague, 1614–17; Cracow 1643–44²). Following the persecutions of 1648–49 he concerned himself with the amelioration of the lot of **agunot*. On his death Zelig Margulies testified of him that “he did not leave the where-withal to purchase shrouds even though he was the *av bet din* of Cracow... all this, because he never took dishonest money” (Introd. *Hibburei Likkutim* (Amsterdam, 1715)). Contrary to popular belief, Heller was married only once. His wife’s name was Rachel. In his commentary *Tosefot Yom Tov*, Heller mentions in various places his four sons, Moses, Samuel, Abraham, and Levi.

Heller’s attitude toward non-Jews was very different from that of his teacher the Maharal of Prague. According to the Maharal, the election of the Jewish people by God reduced the divine image and innate spirituality of non-Jews. Heller disagreed, asserting that everyone, Jew and gentile, is judged by God according to his deeds. In addition, Heller did not believe that the talmudic proscription against “Greek wisdom” included all secular knowledge. He was particularly inclined toward all knowledge that increases the understanding of the world, including natural sciences and astronomy.

Along with his success as a rabbi, Heller failed at a number of his endeavors, which speak volumes concerning his character. He failed to expand the educational curriculum of Ashkenazi Jewry. He attempted but later abandoned his efforts to block the acceptance of Joseph *Caro’s *Shulḥan Arukh*. His demand to prohibit the purchase of rabbinic office led to his arrest (see above), and he failed to pass on to the next generation his love of philosophy, astronomy, and science.

Of Heller’s many works, which testify to his diversified scholarship, his commentary to the Mishnah is the most famous. He named this *Tosefot Yom Tov* because its purpose was to serve as an addition (*tosefet*) and exposition, supplement and work of source reference to the Mishnah commentary of Obadiah of *Bertinoro. Heller traced the sources of the Bertinoro commentary, explained obscurities, examined and also criticized its conclusions in the sphere of *halakhah*, and made linguistic comments. He explained the words grammatically, noted the *halakhah* on the basis of the Talmud and the **rishonim* and **aḥaronim* and took care to establish accurate readings, most of which he added to the second edition of his commentary, through clarification and elucidation of the text on the basis of various manuscripts and earlier published works. Heller endeavored to reconcile the contradictions between one Mishnah and another by means of straightforward and logical rationalization. All his comments are formulated with the utmost simplicity – and here he follows in the footsteps of his teacher Judah Loew b. Bezalel, who opposed the method of **pilpul*. Despite his positive attitude to Kabbalah, he

refrained from relying upon it in deciding the *halakhah*, since “in explaining the Talmud, we have no dealings at all with esoteric matters” (*Ma’adanei Yom Tov*; Ber. 1). Heller even tried at one point to prevent the publication of kabbalistic works. When making halakhic decisions, he refrained from relying on kabbalistic leniencies or stringencies that ran counter to the plain sense of the Talmud. In his opinion the Mishnah might be interpreted differently from the explanation given in the Talmud, “providing no decisions which contradict the view of the authors of the *Gemara* are given” (*Tosefot Yom Tov* to Naz. 5:5). In his introduction he formulated his attitude to the commentary of Bertinoro: “My task, however, is to examine carefully in the Mishnah in order to see whether anything requires explanation that has not been explained in the commentary of the Rav [Bertinoro], or whether there is a contradiction from some other Mishnah to which he has not drawn attention, and also whether there is anything in his commentary for which an explanation and reason has to be given, as well as if there be any contradiction in the commentary itself, and more so from the Mishnah.”

In his interpretation of the Mishnah, Heller endeavored to put into effect what Judah Loew impressed upon him in investigating the *halakhah*: the deduction of the halakhic ruling in the Mishnah. Through his examination of the text of the Mishnah he arrived at halakhic decisions since he was of the opinion that the Mishnah was to be accepted as the basis of the *halakhah*, while *Asher b. Jehiel (the Rosh) was to be regarded as a general decisor. He stressed this view in his *Ma’adanei Melekh ve-Lehem Hamudot* (pts. 1 and 4, Prague, 1628, 1619; pts. 2 and 3 still in Ms., also entitled *Ma’adanei Yom Tov*). In his introduction to part 4 (entitled *Ma’adanei Melekh u-Filpula Ḥarifta*) he summarizes the development of the *halakhah* and deals especially with the importance of Isaac Alfasi, Maimonides, Asher b. Jehiel, and the latter’s son Jacob, author of the *Turim*. After differentiating between the method of those who amplify, like Alfasi, and those who curtail, like Maimonides, he summarizes the contribution of Asher b. Jehiel and Jacob b. Asher and remarks that it is fitting that the work of the Rosh should be a guide for halakhic decision. In his exposition he seeks to supplement Asher b. Jehiel, to explain the contents of his writing, and to add new laws to them so that “all the children of Israel will turn to listen to Rabbenu Asher.” A digest of the commentary, entitled *Ikkar Tosefot Yom Tov*, was published by Meshullam b. Joel Katz (Lemberg, 1790).

Of his other works, all of which are distinguished by their clarity of language and outstanding style, the following of his expository works should be mentioned: (1) a commentary on the *Behinat Olam* of Jedaiah ha-Penini (Prague, 1598); (2) *Zurat Beit ha-Mikdash* (*ibid.*, 1602) on the plan of the Temple according to the prophecy of Ezekiel; (3) glosses to the *Givat ha-Moreh* of Joseph b. Isaac ha-Levi (*ibid.*, 1611); (4) *Malbushei Yom Tov* (1895–97), **hassagot* and novellae on Mordecai Jaffe’s *Levush* on *Orah Ḥayyim* in two parts.

The following works have remained in manuscript: (5) *Tuv Ta’am*, a commentary on the kabbalistic part of *Hiyya*

b. Asher's commentary on the Pentateuch; (6) expositions on Abraham ibn Ezra's Pentateuch commentary; (7) *Leket Shoshannim* on the *Arugat ha-Bosem* of S. *Archivolti, who sent Heller the book for examination (*Tosefot Yom Tov*, to Tam. 7, end); (8) *Torat ha-Asham* on the *Torat Ḥattat* of Moses *Isserles; (9) *Parashat ha-Ḥodesh* on the laws of the new moon in Maimonides' *Mishneh Torah*; (10) *haggahot* to the *Kaftor va-Ferah* of Estori ha-Farhi.

Beside his responsa (published in collections: *Ge'onei Batra'ei* (Turka, 1764), *Bayit Ḥadash ha-Ḥadashot* (Koretz, 1785), and *Zemaḥ Zedek* (Amsterdam, 1675)), a sermon (Prague, 1626), and approbations given in connection with his activities in the Council of Four Lands, Heller compiled various *piyyutim* and *seliḥot*, in connection with the massacres of 1618–20 in Prague and of 1648 in the Ukraine, which express with great fidelity the worries and sufferings of the Jews during the persecution in his lifetime. Exceptionally well-known is his autobiography *Megillat Eivah* (Breslau, 1818) which appeared in many editions (among others, with a German translation by Seligmann Kisch, Prague, 1849, with Yiddish translations, 1864, 1880, and with an English translation, 1991; see bibliography). This work, containing vivid descriptions of events in Heller's life and also of the communities of his time, serves as a valuable source for Jewish history in the first half of the 17th century. Of his Yiddish works intended for "the common people and women," his *Berit Melah* (Prague, 1552?; Cracow, 1665) on the laws of salting and rinsing meat, and the Yiddish translation of Asher b. Jehiel's *Orḥot Ḥayyim* (Prague, 1626) should be noted. A letter of 1619 in Yiddish from Heller to a female relative, dealing with family matters, was published in 1911.

HELLER, ZĚVI HIRSCH (1776–1834), Galician and Hungarian rabbi. Born in Zamoszcz, Galicia, Heller was already noted for his acumen in his youth and was designated "Hirsch Ḥarif" ("Hirsch, the sharp-witted"). His first rabbinate was in Brugl, Silesia, and in 1817 he was appointed head of the yeshiva in Brody, Galicia, and many of his students later became renowned talmudists, among them Zevi Hirsch *Chajes. Because of a calumny he was expelled from Brody and moved to Hungary. He first became rabbi in Ungvar, and c. 1820 was appointed rabbi of Bonyhad, where he served for 13 years. During this period the Reform controversy began, and its adherents in the town fought against him. As a result he accepted the invitation of the Ungvar community to return there in 1833, but later that year he was elected rabbi and *av bet din* of the community of Obuda (= Old Buda); however, after seven months there, he fell ill and died. Responsa to him are found in Moses *Sofer's *Ḥatam Sofer* (*Even ha-Ezer*, 1:94, 2:30).

HELLERSTEIN, ALVIN K. (1933–), U.S. federal judge. Hellerstein was born in New York City in 1933. He received his B.A. from Columbia College in 1954. After graduating from Columbia Law School in 1956, he clerked for the Hon. Edmund Palmieri of the U.S. District Court for the Southern District of New York, and served in the Judge Advocate General's Corps of the U.S. Army from 1957 to 1960. He practiced law with the firm of Strook and Strook and Lavan in New York City for nearly four decades.

In 1998 President William J. Clinton nominated him to serve on the U.S. District Court for the Southern District of New York. In less than a decade on the federal bench, Hellerstein demonstrated skill in resolving complex issues. For example, he sustained the regulations issued by the administrator of the fund to compensate victims of the attack of terrorists on the World Trade Center in New York City on September 11, 2001.

Judge Hellerstein also displayed a strong commitment to the independence of the judiciary. He presided over the 2005 case in which, under the Freedom of Information Act (FOIA), the American Civil Liberties Union (ACLU) requested all the photos and videos that touched off the prisoner abuse scandal at Abu Gharib prison in Iraq. The government argued against disclosure on two grounds: national security and human rights, stating that publication of the photos would have the effect of causing American military personnel in Iraq to die and that "releasing the photos would reveal the prisoner's identities, a violation of their rights under the Geneva Conventions." After viewing eight of the photos, Judge Hellerstein concluded that civilians and detainees could be protected against insults and public curiosity by blocking facial characteristics, and ordered the production of the 144 pictures and

videos in this redacted form. Judge Hellerstein wrote: “No one is above the law. . . . my task is not to defer to our worst fears, but to interpret and apply the law, in this case, the Freedom of Information Act, which advances values important to our society, transparency and accountability in government. . . . they are at the very heart of the values for which we fight in Afghanistan and Iraq. There is a risk that the enemy will seize upon the publicity of the photographs and seek to use such publicity as a pretext for enlistments and violent acts. But the education and debate that such publicity will foster will strengthen our purpose and, by enabling such deficiencies as may be perceived to be debated and corrected, show our strength as a vibrant and functioning democracy to be emulated. . . .”

Judge Hellerstein also rendered strong opinions on the First Amendment. In 2000 he ruled that postal employees may post political messages on a union bulletin board. In 2002 Hellerstein joined Judge Harold Baer of the federal court in Brooklyn in an opinion requiring the City of New York to allow the Ku Klux Klan to demonstrate, wearing their masks, in lower Manhattan. The two judges were of the view that the New York Anti-Mask law violated the First Amendment rights of Klan members to anonymous speech and that the city had engaged in discrimination on the basis of the viewpoint of the speakers, by enforcing the statute selectively. The appellate court reversed this view, and the Supreme Court declined to hear the case.

[Edward McGlynn Gaffney, Jr. (2nd ed.)]

HELLINGER, MARK (1903–1947), U.S. columnist and playwright. A reporter for the *New York Daily News*, in 1923 Hellinger became the first columnist to write regularly about Broadway. In 1930 he moved to the *New York Daily Mirror*. He wrote musicals, plays, film scripts, and novels, and the last *Ziegfeld Follies* to be produced by Ziegfeld himself in 1930.

In 1937 he went to Hollywood as a producer and became known as a master of screen violence. Some of the films he produced include *They Drive by Night* (starring George Raft, 1940); *Torrid Zone* (James Cagney, 1940); *High Sierra* (Humphrey Bogart, 1941); the comedy *Affectionately Yours* (Rita Hayworth, 1941); *Manpower* (Edward G. Robinson, 1941); the musical *Thank Your Lucky Stars* (Eddie Cantor, 1943); *Between Two Worlds* (John Garfield, 1944); *The Killers* (Burt Lancaster, 1946), which won the Edgar Allan Poe Award for Best Motion Picture; *Brute Force* (Lancaster, 1947); *The Two Mrs. Carrrolls* (Bogart, 1947); and *The Naked City* (Howard Duff, 1948).

In 1931 *Moon over Broadway*, a collection of his short stories, was published. To find material and to add verisimilitude to the articles and stories he wrote, Hellinger researched real-life crimes, with the aid of such friends as gangsters Al Capone, Lucky Luciano, Bugsy Siegel, and Dutch Schultz.

In 1944 he worked as a war correspondent for Hearst newspapers.

In 1949 a theater on Broadway that had been built in 1930 was renamed in his honor. The Mark Hellinger Theater showcased such Broadway classics as *Two on the Aisle*, *My Fair Lady*, *The Sound of Music*, *On a Clear Day You Can See Forever*, *Sugar Babies*, *Merlin*, and *Tango Argentino*.

[Ruth Beloff (2nd ed.)]

HELLMAN, CLARISSE DORIS (1910–1973), U.S. historian of science. Hellman was born and raised in New York City. She studied astronomy and mathematics at Vassar College, received an M.A. in the history of science from Radcliffe College in 1931, and her Ph.D. from Columbia University in 1943. Her dissertation, *The Comet of 1577: Its Place in the History of Astronomy*, was published by Columbia University Press in 1944 (rev. ed., AMS Press, 1971). Hellman taught as an adjunct professor of history of science at the Pratt Institute from 1951 to 1966 and also briefly at New York University from 1964 to 1966. From 1966 until her death she was professor of history at Queens College and the CUNY Graduate Center. A specialist in the history of Renaissance science, particularly astronomers and astronomy, Hellman edited and translated Max Caspar's biography *Johannes Kepler* (1959) and published articles and reviews on Tycho Brahe and Georg Samuel Doerffel, as well as Kepler. She was a fellow of the Royal Astronomical Society and the American Association for the Advancement of Science. As secretary of the U.S. National Committee of the International Union of History and Philosophy of Science (1958–60), she served as a delegate to the Ninth International Congress of the History of Science in Barcelona, Spain, in 1959, representing the National Academy of Sciences and the National Research Council. Her papers are found in the Columbia University Rare Book and Manuscript Library.

HELLMAN, ISAIAS WOLF (1842–1920), U.S. banker. Hellman was born in Rickendorf, Bavaria. He immigrated to Los Angeles in 1859 with his younger brother, Herman. For six years he clerked in a cousin's dry goods store until in 1865 he bought a dry goods and shoe store of his own. Hellman early began to buy real estate, ultimately dealing in city lots, subdivision property, and ranch lands, and in time he became the largest single owner of property in Los Angeles. Allowing friends to keep gold dust and other valuables in his safe, he soon established the Hellman Temple and Company Bank (1868), which he sold to his partners a few years later. Hellman founded the Farmers and Merchants Bank of Los Angeles in 1871, beginning a career in banking which was to make him president or leading stockholder of a large number of

banking enterprises in the Los Angeles area. Because of his staunch conservatism and unquestioned probity, Hellman was able to maintain the soundness of his banks in depressions and panics. He single-handedly brought an end to the boom of 1887 by restricting credit on speculative real estate, thus saving the city from serious potential damage. Hellman founded the Main Street Railway trolley line in Los Angeles, which he later merged into the Huntington and the Pacific Electric Street Railway Systems. In 1900 he moved to San Francisco to become president of the Nevada National Bank of San Francisco, later consolidated with the Wells Fargo Bank (1905), then with the Union Trust Company (1924), which was founded by Hellman in 1893.

A major philanthropist of his era, Hellman founded the first synagogue of Congregation B'nai B'rith in 1872, serving as its president (1871–82). In 1865, together with a Catholic and a Protestant associate, he contributed land for the establishment of the University of Southern California. He was especially generous in contributions to orphanages in the Los Angeles and San Francisco areas. Hellman served on the Board of Regents of the University of California (1881–1918). He was president of the Los Angeles Clearing House Association (1887–1900).

HERMAN WOLF (1843–1906) was the brother of Isaias, with whom he immigrated to Los Angeles. Like his brother, Herman was a pioneer in the economic development of Los Angeles. After working in a grocery business, he served as cashier in his brother's Farmers and Merchants Bank, then established the Merchants National Bank. It became one of the principal banks of southern California, later managed by his sons MARCO (b. 1878) and IRVING (b. 1883) until it closed in the depression of the 1930s.

[Max Vorspan]

HELLMAN, JACOB (1880–1950), labor Zionist leader and editor. Born in Talson, Latvia, Hellman studied at yeshivot, and from 1897 at Frankfurt and the University of Marburg (where he was a pupil of Hermann *Cohen), completing his studies at the University of Berne in 1910. He took part in Zionist activities from his early youth, after having displayed some interest in the Territorialist movement and the Social Revolutionaries. He lived in Berlin and Riga and during the war years in Russia, where he became one of the founders of the *Ze'irei Zion movement. When he settled in Riga in 1919, he became one of the prominent leaders of Latvian Jewry, especially of the Zionist Socialist movement, and in 1920 was elected to the Latvian parliament. He edited various periodicals in Riga, including the Yiddish daily *Frimorgen* and as one of the founders of *Hitahadut he traveled on its behalf in various countries and became a member of the central body of the World Union of Po'alei Zion. In 1933 Hellman served

as editor in chief of *Dos Naye Vort*, the Po'alei Zion organ in Warsaw, and remained in that post until 1936. After attending the 21st Zionist Congress (1939), he went to Argentina as the representative of the *World Jewish Congress. There he also became active in Zionist and general Jewish affairs and was a regular contributor to the press. His book *Yerusholaim* (in Yiddish) was published posthumously (1951; Hebrew translation, 1957). In 1952 his remains were transferred from Argentina and he was reinterred in Jerusalem.

[Getzel Kressel]

HELLMAN, LILLIAN FLORENCE (1905–1984), U.S. playwright. Sources vary about the year of her birth. The Library of Congress lists it as 1906. The *New York Times*, the newspaper of record, in its obituary for her in 1984, listed her age as 79. She first worked for a publishing house and wrote short stories. Turning to the theater, she won instant fame with *The Children's Hour* (1934), a psychological tragedy about a school-girl's accusation of lesbianism against two of her teachers. The play ran for 691 performances in New York and was later made into a movie; it was banned in England. Her reputation was enhanced by *The Little Foxes* (1939), which portrayed a reactionary Southern family striving to maintain its position in face of social change. The play was adapted for the screen two years later and made into a successful opera, *Regina*, by Marc *Blitzstein (1949). She wrote an outspokenly anti-Nazi drama, *Watch on the Rhine* (1941), partly inspired by her experiences in Spain during the Spanish Civil War. Hellman's gift for dialogue and her remarkable stage technique were allied to a skill in handling strong, even unpleasant, themes. After *The Searching Wing* (1944), set in pre-World War II Europe and wartime America, came *Another Part of the Forest* (1946), a sequel to *The Little Foxes*. In the 1950s Hellman's career was arrested as a result of her refusal to incriminate fellow artists when called before the U.S. Congress's House Committee on Un-American Activities in 1952, at the height of the McCarthy era. Declaring that "I cannot and will not cut up my conscience to fit this year's fashions," she thereby resigned herself to several years of relative anonymity. *Toys in the Attic* (1960) dealt with problems of race and sex in her native New Orleans. Together with Richard Wilbur and Leonard *Bernstein, she also wrote *Candide* (1957), a comic opera based on Voltaire's satirical classic. Her own interpretation of her political history – which was and is controversial – is easily found in her memoirs: *An Unfinished Woman* (1969), *Pentimento* (1973), *Scoundrel Time* (1976), and her meditation, *Maybe, A Story* (1980). (In 1979, Mary McCarthy called Hellman "dishonest" as a writer and in 1980, Martha Gellhorn argued that *An Unfinished Woman* was, in the main, fiction.) Hellman's life and personality enjoyed renewed interest when her semi-autobiographical story of the wartime relationship between two

women was made into a film, *Julia*, with Jane Fonda playing the part of Hellman.

For years, the great love of her life was Dashiell Hammett, a writer of classic crime novels such as *The Maltese Falcon* (1930) and *The Thin Man* (1934).

[Joseph Mersand / Rohan Saxena and Lewis Fried (2nd ed.)]

HELMSLEY, LEONA (1920–), U.S. hotel operator and real estate investor. Leona Mindy Rosenthal Helmsley was born in Marletown, N.Y. A high-school dropout, she was a model as a young woman under the name Leni Roberts, and a successful real-estate saleswoman. She was a real-estate agent when she met and began her involvement with Harry Helmsley (who would become her third husband), a then-married multimillionaire real-estate investor who amassed his fortune as sole owner or in partnership with others in real estate worth about \$5 billion. At his zenith, he held or controlled some of the most famous and admired office buildings in New York, including the Empire State Building; the Helmsley Building at 230 Park Avenue; the Lincoln Building at 60 East 42^d Street; the Graybar Building at 420 Lexington Avenue; 1350 Broadway; the Flatiron Building; the Toy Center; and the Fisk Building at 250 West 57th Street. There were also large residential developments: Tudor City and Park West Village in Manhattan, Parkchester in the Bronx, and Fresh Meadows in Queens. He also had a stake in such major industrial properties as the Bush Terminal in Brooklyn and the Starrett-Lehigh Building in Manhattan. By 1989 he had become just as well-known for his hotels, particularly the Helmsley Palace on Madison Avenue. Leona was featured in many advertisements for the hotel as its demanding "queen," standing guard over the welfare of her guests. Other Helmsley hotels included the Park Lane on Central Park South and the Helmsley Windsor on West 58th Street. A supremely self-made man, Helmsley began his career in 1925 as a \$12 a week office boy and ended it with great wealth as the head of far-flung Helmsley Enterprises but in the shadow of his forceful second wife, Leona, whom he married in 1972. Both were indicted for income tax evasion but Harry was found mentally unfit to stand trial. After legal moves to avoid prison failed, Leona began serving a four-year prison term in April 1992; she spent 18 months in a Federal prison in Danbury, Conn., before being transferred to a halfway house in Manhattan. She completed her sentence under curfew in the Helmsley apartment in the Park Lane. Harry died in 1997. He had no children and he left Leona his vast fortune.

With Leona in charge, Helmsley Enterprises began to divest itself of some non-hotel investments, including Brown, Harris, Stevens, Inc., a residential brokerage that Helmsley

bought in the early 1960s. In 2002 she was sued by Charles Bell, a former employee, who said he was discharged solely for being homosexual. A jury agreed and ordered her to pay Bell \$11.7 million in damages; a judge reduced this amount to \$554,000. The story of her adult life was dramatized in the 1990 TV movie *Leona Helmsley: The Queen of Mean*.

[Stewart Kampel (2nd ed.)]

HELPERN (Halperin), MICHAEL (Mikhl) (1860–1919), socialist Zionist in Russia and pioneer in Erez Israel. Born in Vilna, Helpern received a large legacy from his wealthy father and decided to devote it to the welfare of the Jews. He joined the Hovevei Zion after the pogroms in southern Russia (1881) and visited Erez Israel in 1885. He traveled the length and breadth of the country on foot, and upon his return to Russia (1886) he suggested that the Hovevei Zion use his financial resources to establish an industrial enterprise in Erez Israel. The suggestion was rejected, but Helpern accepted Judah Leib Pinsker's idea that he donate a large sum of money to purchase the lands of Yesud ha-Ma'alalah. In 1886 he returned to Erez Israel and settled in Rishon le-Zion, where he supported the workers' struggle against Baron Edmond de Rothschild's management, which resulted in the resignation of the chief official, Y. Osovitzky. After a visit to Russia at the end of 1890, he made a substantial contribution toward the purchase of land near Wadi Hanin in order to found a workers' settlement, Nes Ziyonah.

In Russia he promoted Labor Zionism among Jewish youth. His major preoccupation, however, was the plan to organize a Jewish military force to conquer Erez Israel and establish a Jewish government there. After the *Kishinev pogrom (1903), he played an important role in organizing Jewish self-defense in Russia. He collected money, gathered arms, and organized and headed fighting groups in Vilna and other towns. Helpern returned to Erez Israel at the end of 1905, fought for the rights of Jewish labor in Jewish villages, and joined the small group founded by Joseph *Trumpeldor to establish a collective settlement. From his return until his death, he was a laborer and defense guard in various localities. He was wounded by Arabs one night when on guard duty in Tel Aviv.

Helpern continued to deliver speeches, devise plans, and compose memoranda to the Zionist movement on the political redemption of Erez Israel by military means. Although he was admired by young people in Russia for his romantic idealism, he became increasingly alienated from the pioneers who had to face the struggles of existence in Erez Israel at the beginning of the Second Aliyah period, so that in his last years he was almost completely isolated. He wrote several unpublished poems and plays in Yiddish on the theme of the destiny of the Jews. Givat Mikhael, a moshav near Nes Ziyonah, is named after him. His colorful personality was the subject of a musical play "Days of Gold" by Shlomo Shva, presented by the Haifa Municipal Theater in 1965.

[Shlomo Breiman]

His son YERMIYAHU (Irma; 1901–1962), seaman and *Betar leader, was born in Smolensk, Russia, and was taken to Erez Israel in 1913. In the late 1920s he joined Betar and became head of its school for instructors, leading it as a defense unit in Tel Aviv during the Arab riots in 1929. He later became a member of the world leadership (*shilton*) of Betar, organizing self-defense courses throughout Europe that trained thousands of Betar members. In 1934 he organized and headed Betar's naval training school at Civitavecchia, Italy. After the establishment of the State of Israel Helpern founded the marine museum in Eilat. He wrote pamphlets on military training, short stories, and several books: *Avi Michael Helpern* ("My Father Michael Helpern," 1964); *Via Dolorosa* (Heb., 1960); *Tehiyat Ha-Yamma'ut ha-Ivrit* ("The Jewish Maritime Revival," 1961).

HELPERN, MILTON (1902–1977), U.S. forensic pathologist. Helpern was born in East Harlem, New York, and educated in New York City public schools. He received his B.Sc. from City College in 1922 and M.D. from Cornell University Medical College in 1926. From 1954, he served as chief medical examiner of the City of New York and professor and chairman of the Department of Forensic Medicine at the New York University School of Medicine (1954–74) and was on the Faculty of Cornell University Medical College. He was co-founder of the American Academy of Forensic Sciences and the National Association of Medical Examiners.

Helpern was consultant in forensic pathology to many governmental agencies and lectured extensively. He brought attention to public health issues such as malaria among drug users, carbon monoxide poisoning, and Sudden Infant Death Syndrome. From 1968 he was president of the National Association of Medical Examiners, editor of the *International Microfilm Journal of Legal Medicine* from 1965, and coauthor of *Legal Medicine, Pathology and Toxicology* (1954²). The Milton Helpern Library of Legal Medicine, established in 1962, was one of the finest of its kind. Helpern's basic philosophy held that forensic pathology cannot cure socioeconomic ills but it may be able to help society understand and prevent their tragic effects.

[Fred Rosner / Bracha Rager (2nd ed.)]

HELSINGFORS PROGRAM, a system of Zionist policy and activities in Russia and other Diaspora countries adopted at the third conference of Russian Zionists, which took place in Helsingfors (Helsinki) on Dec. 4–10, 1906. The Finnish capi-

tal was chosen as the site of the conference because conditions in Russia proper restricted meetings and the exercise of free speech. The conference dealt with fundamental problems of Zionism in general, and Russian Zionism in particular, as they appeared after *Herzl's death and the fading of his "diplomatic" Zionism and in view of the upheavals and constitutional changes in czarist Russia after the 1905 Revolution. The conference, which was meticulously prepared by meetings of Russian Zionist editors and journalists, formulated the idea of "synthetic Zionism," which stood for the simultaneous integration of parallel political and practical work in Zionism. It postulated the principle that the achievement of international recognition for a Jewish Erez Israel would be the end, not the precondition, of systematic *aliyah* and settlement work. It was, however, the conference's resolution on "work in the present," i.e., among the Jewish masses in the Diaspora, that became famous both because of the innovation that it represented in Zionism and its practical consequences, particularly in Eastern Europe. The principal speaker on this subject was Isaac *Gruenbaum, who, with the experience of Jewish and Zionist work in Poland behind him, submitted the following formulation: Zionism opposes the Exile (*galut*), but does not oppose the Diaspora (*golah*). This principle was of particular importance for the Jews of Russia, who were then exposed to a variety of ideological influences besides Zionism. Other speakers on this subject included Vladimir *Jabotinsky and Leo *Motzkin. The "work in the present" resolution was based on Paragraph Two of the *Basle Program ("The organization and binding together of the whole of Jewry by means of appropriate institutions, both local and international, in accordance with laws of each country"), interpreting it as a directive to Zionists to organize the Jewish masses in the Diaspora as a national minority and lead them, in the Zionist spirit, in their daily life. The conference felt that such activity would "strengthen Diaspora Jewry and provide it with new cultural, material, and political means in its struggle for the creation of a sound national life in Erez Israel." It envisaged a liberalized, democratic Russia with wide, autonomous rights for its non-Russian peoples, including the Jewish nation, which, through a comprehensive organizational framework, would exercise its political rights and its cultural, educational, and, in certain respects, even administrative autonomy both in Hebrew and Yiddish. The implementation of this program would transform Zionism from an activity remote from the Jewish masses – confined in the "diplomatic" and pioneering sphere – into a dynamic movement concerned with the actual needs of the Jews, particularly in Russia, as one national-cultural entity among many others. The spirit of the Helsingfors Program engendered and fostered new forms of Zionist activity, as, e.g., the wide network of modernized *hadarim* and secular Hebrew schools, active participation in the political life of the country wherever possible, etc.

In Russia, the Zionist movement was able to apply the political aspect of the new program only after the overthrow of the czar (1917), and then only for a short period, until the

Soviet regime liquidated the Russian Zionist movement. Unsuccessful attempts were made to apply this program in Galicia in the parliamentary elections during the period 1907–11. It was, however, implemented in Poland and the Baltic states after World War I. “Work in the present” remained a controversial program in Zionism. Its opponents contended that it caused a waste of effort in the Zionist movement, and that instead of being a means to an end – the creation of a Jewish nation in Erez Israel – it could, in the course of time, become an end in itself.

[Getzel Kressel]

HELTAI, JENŐ (originally **Herzl**; 1871–1957), Hungarian poet, playwright, and novelist. A cousin of Theodor *Herzl, Heltai studied law in his native Budapest but became a journalist. Between 1914 and 1918 he was the director of a Budapest theater and from 1916 was chairman of the Association of Hungarian Playwrights. A leading figure on the Hungarian literary scene during the first half of the 20th century, Heltai (who converted to Christianity) published his first verse anthology *Modern dalok* (“Modern Poems”) in 1892. His themes were taken from urban life – an innovation in Hungarian poetry, which until then had been a rustic, folk type – and his poetry is a synthesis of the French chanson and Hungarian folk poetry. Heltai’s plays include the comedy *A néma levénte* (1936; English adaptation by Humbert *Wolfe, *The Silent Knight*, 1937) and *Egy fillér* (“One Penny,” 1940), based on the life of Ferenc *Molnár. Heltai voiced his criticism of contemporary Hungarian society in a number of humorous plays and short stories. Several of his works, including the novel *Csárdás*, have been translated into English, Hebrew, and other languages.

[Baruch Yaron]

HEMAN (Heb. הֵמָן), orchestral leader in Israel in biblical times. According to the Book of Chronicles, Heman was related, through the prophet Samuel, to the levite family of Korah and Kohath (1 Chron. 6:18). The affiliation of Heman with Samuel indicates the increasing prestige of Heman’s house. At first he worshiped together with Jeduthun (*ibid.* 16:41–42; cf. 11 Chron. 29:14–15) on the high places of Gibeon where the remains of the *Tabernacle were preserved. In taking the Ark up to Jerusalem (1 Chron. 15:2–3), David participated together with the two families of singers, Asaph and Ethan; when the Temple was built by Solomon (*ibid.* 6:16ff.), David had already arranged to transfer Heman to Jerusalem (*ibid.* 25:1), where, together with the families mentioned, he

could make music in the Temple, directing his sons (cf. *ibid.* 25:4–6). Heman and his sons, dressed in linen, made music (11 Chron. 5:12), and performed their rites at the east of the altar. In one instance (1 Chron. 25:5) Heman is called “the king’s [David’s] seer.” 1 Chronicles 25 reflects the rise of the Hemanites at the expense of the Asaphites during Second Temple times.

Heman the Ezrahite

In the superscription of Psalm 88 the name Heman the Ezrahite is mentioned (similarly, the singer of Psalm 89 is called: Ethan the Ezrahite). “Ezrathite,” the native, may indicate continuity with older Canaanite psalmody. According to this genealogy, which relates Heman to “sons of Korah,” it appears that the writer establishes a relationship between Heman the Ezrahite and “the sons of Korah,” such as exists between them and Heman in Chronicles (see above). But contrary to this 1 Kings 5:11 mentions Ethan the Ezrahite as well as Heman, Calcol, and Darda, “the sons of Mahol,” as great sages who were surpassed in wisdom only by Solomon; and in 1 Chronicles 2:6 these four are taken as belonging to the family of Zerah b. Judah (“the sons of Zerah: Zimri, and Ethan, and Heman, and Calcol, and Dara”). Various theories have been advanced to reconcile these discrepancies, but it seems that the most probable view is that Ezrahite is identical with Zarhi (agreeing with 1 Chron. 2:6); Heman the Ezrahite is to be regarded as the father of the singers and related to the “sons of Korah.” In ancient Israel singing and wisdom were associated. See, e.g., Psalm 49:4–5.

The Sons of Heman

According to 1 Chronicles 25:5 Heman had “fourteen sons,” all of whom assisted “their father in song in the house of the Lord, with cymbals, psalteries, and harps.” Since 1 Chronicles 6:18 establishes Heman’s relationship to Korah, the sons of Heman are to be identified (see Abraham ibn Ezra to Ps. 42:1) with the sons of Korah, to whom Psalms 42–49 and 84–88 have been ascribed and who also are described as singers in the war chronicle dating from the days of Jehoshaphat (11 Chron. 20:18). The sons of Heman are spoken of in the days of Hezekiah (11 Chron. 29:12); they are not mentioned in the days of Josiah (*ibid.* 35:15); nor is anything said of them (and “the sons of Korah”) in the genealogical lists of Ezra and Nehemiah. Perhaps this reflects a tradition that they were removed from office during the days of Josiah.

[Yehoshua M. Grintz]

HEMAR (Hescheles), MARIAN (1901–1972), Polish author, satirist, and writer for the stage and screen. Born in Lemberg, Hemar began his career around 1920 as a poet and writer of revues. He wrote material for several Warsaw theaters and cabarets, among them the *Quid Pro Quo*, where he worked in collaboration with Julian *Tuwim. Together with such outstanding poets as Tuwim, Antoni *Slonimski, Jan Lechón, and Konstanty Galczyński, Hemar – who wrote under several other pseudonyms – produced many famous political

skits and trenchant satires. He also wrote two comedies and a number of screenplays.

In 1939 Hemar left Poland and settled in London where, during World War II, he worked for the BBC's European Service and the Polish exile press and ran a Polish cabaret, the Bialy Orzel (White Eagle). In 1967, like many other uncommitted Jews, he felt the impact of the *Six-Day War and publicly affirmed his Jewishness and support for Israel and wrote the poem "Sciana płaczu" ("The Wailing Wall").

Hemar's verse collections include *Dwie ziemie święte* (Two Holy Lands, 1942), *Lata londyńskie* (The London Years, 1946), *Pisanki* (Ornamented [Easter] Eggs, 1946), and *Satyry patetyczne* (Pathetic Satires, 1947). Other works are *Adolf Wielki* (1943; *Adolf the Great*, 1943); a satirical diary, *Marchewka* (The Carrot, 1943); and a translation of Shakespeare's sonnets, *Sonety Szekspira* (1968).

[Stanislaw Wygodzki]

HEMDAT YAMIM (Heb. הַמְדַּת יָמִים; "The Best of Days"), a major 18th-century Hebrew work of homiletics and ethics, comprising three volumes in the first four editions and four in the last two editions. Its impact on Jewish life and letters, first among the Ashkenazim, and later among the Orientals and Sephardim, has been very great. In modern Hebrew literature, the writings of S.Y. *Agnon have been especially influenced by the work's language and ideas. As it has come down, *Hemdats Yamim* is probably incomplete. The extant part deals with the halakhic observances and ethical behavior of a pious Jew who tries to attain the maximum religious elevation during the various holidays, fasts, and special days of the year. It is possible that a part of the work treating the ordinary days was lost because it was never printed.

Each section of the work is a homily in which the author substantiates his ideas by interpreting biblical verses and talmudic and midrashic sayings in homiletical sequences. The writings offer examples of some of the best rhetoric in Jewish homiletics, and the beauty of the sermons helped to endear the work to all readers. Although the author frequently raises halakhic problems, he does not deal with them in a purely halakhic manner – his main objective being to instruct the reader in the ḥasidic or pious way of life. A product of ethical kabbalistic literature, *Hemdats Yamim* was especially influenced by the Lurianic Kabbalah (see *Kabbalah, *Ethical Literature), which flourished in both Eastern and Western Judaism from the beginning of the 17th century. Accordingly, each chapter of the work stresses the mystically symbolic significance of the 613 commandments and of every custom and tradition carried out within the framework of Jewish religious life. The deeds performed in this world are seen as a reflection of mystical processes in the divine world. Through his religious acts the pious, observant Jew participates in a mythical drama of war between the mystical powers of good and evil. In a Jewry which accepted the Lurianic Kabbalah almost without exception, *Hemdats Yamim* had literary and practical value – people enjoyed both reading it and following its teachings.

The work was first printed by Israel Jacob b. Yom Tov *Al-gazi in Smyrna in 1731–32 (and subsequently five more times in the next generation). Although a major work and written only a few years before its publication, the author is unknown and the question of authorship remains one of the great mysteries in Jewish bibliography. That the work was written in the early 18th century and studied in depth by many of the best Jewish scholars and bibliographers heightens the irony of its anonymity. One fact seems clear, though some scholars have contested it in recent years, namely that the author was a *Shabbatean. Scholars have detected many Shabbatean ideas and allusions hidden in the work; the most obvious, pointed out in the 18th century by R. Jacob *Emden, the fanatic enemy of Shabbateanism, are the *notarikons* of *Nathan of Gaza, the prophet of Shabbetai Zevi, included in some of the work's *piyyutim*. This fact gave rise to the belief, accepted especially in the East, that Nathan of Gaza was the author of the entire work. Accordingly, Nathan is sometimes known as *Ha-Rav Hemdat Yamim* because of the common practice of calling an author by the name of his major work.

Although the book was written by a Shabbatean, it has been proved that Nathan of Gaza was not the author. First to disprove Nathan's authorship was Menahem Heilperin in *Kevod Hakhhamim* (Jerusalem, 1896). Heilperin went even further, though unsuccessfully, in trying to demonstrate that the author had no connection with the Shabbatean movement. A recent effort to discover the author was made by Avraham Yaari in *Ta'alumat Sefer*, where he tried to prove that the author was Rabbi Benjamin ha-Levi, one of the major kabbalists in 17th-century Safed, who, according to Yaari, wrote the work during his old age in 1671–72. G. Scholem, in a thorough analysis, cited – among the many bibliographical and historical facts making Yaari's thesis unacceptable – the fact that *Hemdats Yamim* was written after R. Benjamin died.

Further insight into the work was provided by I. Tishby, who proved conclusively that the author of *Hemdats Yamim* made extensive use of works published in the beginning of the 18th century. Thus, the book could not have been written before the second, or even the third decade of that century, a time approximating the date of its publication. The comparison between *Hemdats Yamim* and the sources on which it is based reveals that many chapters of the work are in fact anthologies gleaned from many books. But by changing numerous details and transforming the special character of the individual sources, the author integrated his diverse sources into a new whole. The author quoted ancient and medieval sources faithfully, but used the subject matter of contemporary sources in any way which suited the literary character of his work. Many "personal" experiences reported by the author were in fact taken from other works and adapted to the demands of his style and purpose.

[Joseph Dan]

HEMLOCK, the plant *Conium maculatum*, probably the Heb. שָׂרָא or רוֹשׁ (*rosh*) of the Bible. *Rosh* is mentioned 11 times in the Bible, five together with *la'ناه* ("wormwood"), as a simile for wickedness and for something evil and poisonous. The Authorized Version renders *rosh* as "gall," i.e., snake venom, but the Bible explicitly refers to it as a plant that puts out roots (Deut. 29:17) and flourishes in the fields (Hos. 10:4). Its poisonous fruits are called "grapes of *rosh*" (Deut. 32:32; which by transference was applied there to snake venom). It is a tall plant with which the elegist of the Book of Lamentations (3:5) sees himself surrounded and whose poison he fears. From this plant a poisonous potion was prepared (Jer. 8:14, 9:14). On occasion it was eaten, the psalmist (Ps. 69:21–22) describing the wicked surrounding him as coming to comfort him in his mourning and, instead of the mourner's meal, giving him *rosh* to eat. There is no exegetical or philological evidence by which to identify the scriptural *rosh*. A number of poisonous plants have been suggested for it as, for example, the colocynt. Among those deserving consideration, is the poppy (*Papaver somniferum*; see *Spices), for whose round seeds the name *rosh* ("head") is apt, and from the juice of which opium is prepared. This is mentioned in the Jerusalem Talmud (Av. Zar. 2:2, 40d) as a dangerous substance. Others have identified *rosh* with the plant *Hyoscyamus aureus*, which contains a poisonous and intoxicating juice. In Aramaic it is called *shikhrona* ("intoxicator"), a term also found in Josephus (Ant. 3:172ff.). The latter compares the crown above the gold plate of the high priest (Ex. 28:36) to its calyx, describing this plant in all its detail, the first morphological description of a plant in ancient Jewish literature.

Of all those proposed identifications the most reasonable is hemlock (*Conium*), a plant of the family of Umbelliferae, with a large inflorescence like an umbrella for which the name *rosh* ("head") is apt. It grows wild in fields and on the roadside in various parts of Israel. It contains a powerful poison.

[Jehuda Feliks]

HEMP, the plant *Cannabis sativa* called *kanbus* in talmudic literature. The Mishnah speaks of its fibers as being woven with or without linen (Kil. 9:1). The prohibition of *sha'atnez* ("the mixture of wool and linen") did not apply to coarse garments and felt shoes, the products of overseas lands, the presumption being that they were sewn with hempen thread (Kil. 9:7). The Jerusalem Talmud (Kil. 9:5, 32d) notes that while in mishnaic times hemp was an important commodity because of the difficulty of cultivating linen, in the days of the *amoraim* linen replaced it. An interesting comment on the cultivation of linen and hemp in Europe at the end of the 12th century is given by Samson of Sens in his comment on the Mishnah in *Kilayim* (*ibid.*) that in his region linen was more expensive than hemp, whereas in Normandy and England it was very

cheap. From another strain of hemp (*Cannabis sativa var. Indica*), grown in southern Asia, hashish is extracted. The use of hemp as a narcotic is extremely old. Herodotus (*Historia*, 4:75) mentions that the Scythians scattered hemp seeds on heated stones and inhaled the fumes. Hashish is not mentioned however in Jewish sources.

[Jehuda Feliks]

HEMSI, ALBERTO (1897–1975), composer, ethnomusicologist, and music publisher. Born in Turgutlu (Cassaba), *Turkey, he attended l'Alliance Israélite Universelle (AIU) school and the local yeshivah. In 1907, he attended the Société Musicale Israélite (SMI) in Izmir, studying composition with Shemtov Shikayar and cantorial music with Isaac *Algazi. In 1913, he won a scholarship to the Royal Conservatory of Music (Milan), where, from 1914 to 1915 and from 1917 to 1919, he studied piano with Guglielmo Andreotti, theory and composition with Renzo Bossi and Ettore Pozzoli, and musicology with Giusto Zampieri. In those intervening years, while serving in the Italian Army, he was wounded during a battle in north-eastern Italy. In 1919, he returned to Izmir to teach piano and vocal music at the AIU and directed a youth orchestra at the SMI. From 1920, he became intensely interested in the traditional secular and liturgical music of the Sephardim, which he began to collect in Turkey, and from 1923 more intensively in Rhodes, where his family settled after the great fire in Izmir. In 1927, he moved to *Alexandria, where he founded Édition Orientale de Musique, the first Egyptian music-publishing house, and published a booklet, *La Musique Orientale en Egypte* (1930). He also founded a conservatory to propagate his ideas about Middle-Eastern music, served as music director of the Grand Eliahu ha-Navi Synagogue (1927–57), established the Alexandria Philharmonic Orchestra (1928–40), and continued his fieldwork (publishing the first-five fascicles of his *Coplas sefardies*). In 1957, fearing Nasser's political policies, he left for Paris to teach at the Séminaire Israélite de France. From 1958 he simultaneously assumed the music directorships of the Berith Shalom and Isaac Abravanel Synagogues. He studied ethnomusicology under Claudie Marcel-Dubois (1961–65) and was also active in French radio. His musical manuscripts and unpublished works are deposited in the Music Department of the Jewish National and University Library in Jerusalem. These works include *Coplas sefardies, 10 fascicles* (Alexandria-Paris, 1932–1973); *Cancionero sefardi* published posthumously, edited by E. Seroussi et al. (Jerusalem, 1995), and *Maḥzor sefardi*, an edited collection of 200 liturgical melodies).

HENDEL, NEĤAMA (Helena; 1936–1998), Israeli folk singer. Born in Jerusalem, Neĥama Hendel started her career as a singer in *Lehakat ha-Nahal*, the military entertainment troupe.

After her army service, she went to Paris for singing and acting studies. In 1957 she returned to Israel and was a member of the *Batzal Yarok* (Green Onion) entertainment troupe. A year later she participated as an actor in the American movie *Amud ha-Esh* and formed one of the first Israeli folk-style duos with Ran Eliran ("Ran and Nama"). She was known especially as a performer of old folk songs (Israeli and others in several languages), the first Israeli singer to evolve a soprano folk-style intonation, breaking a convention established by the "Yemenite altos" such as Bracha *Zefirah and Shoshana *Damari. In 1969 she left Israel for Germany with her husband and from 1984 she lived in Australia until her return to Israel in 1994. Among her recordings are songs of Ḥ.N. *Bialik, *Outside the Storm* (1997). A collection of most of her recordings was published in two CDs in 1998.

[Israella Stein (2nd ed.)]

HENDEL, YEHUDIT (1926–), Hebrew writer. Born in Warsaw to a rabbinic family, Hendel came to Palestine as an infant. The family settled in Haifa, the setting of many of Hendel's prose works. Hendel's stories were first published in *Mi-Bifnim* (1942), and subsequently appeared in various Israeli literary journals. Her first collection of stories, entitled *Anashim Aḥerim Hem* ("They are Different") appeared in 1950, followed by her first novel *Reḥov ha-Maderegot* (1956; reissued 1998; *Street of Steps*, English translation 1963), a social novel, depicting the disparity between two classes in the new Jewish state: the poverty-stricken, disadvantaged Oriental Israelis, living in downtown Haifa, and the established, influential Ashkenazi elite, living on Mount Carmel. Hapless Oriental characters, traumatized Holocaust survivors, and weary immigrants are the anti-heroes in Hendel's second novel, *Ha-Ḥazer shel Momo ha-Gedolah* ("The Yard of Momo the Great," 1969; reissued as *Ha-Ḥamsin ha-Aḥaron*, "The Last Hamsin" in 1993) which is set again in downtown Haifa shortly before the Six-Day War. Hendel, commonly associated with the "New Wave" in Hebrew literature, was one of the first Israeli novelists to foreground the fate and sufferings of ethnic minorities and of women in Israeli society. The novel *Ha-Koah ha-Akher* ("The Other Power," 1984) is a lyrical elegy to her late husband, the painter Zvi Mairovitch, in which Hendel describes and contemplates on the nature and meaning of the creative process. No less personal is her next work, *Le-yad Kefarim Sheketim* ("Near Quiet Places," 1987), a moving account of a voyage she undertook to Poland, juxtaposing pastoral landscapes and the awareness of the shattering past, the concentration camps and a Jewish world lost forever: "One cannot avoid the feeling that Poland is a great cemetery," she writes. Sickness, death, loss and bereavement became major themes in Hendel's works. In the collection *Kesef Katan* (1988; *Small Change*, 2002) she tells of a woman dying of cancer ("My Friend B's Feast," included also in R. Domb (ed.), *New Women's Writing from Israel*) and of a man twice widowed; in *Har ha-To'im* ("The Mountain of Losses," 1991) she critically reflects on the state-organized ceremonies in military cemeteries, pleading for a genuine and

heartfelt private ritual of mourning. Following the collection of stories *Aruḥat Boker Temimah* ("An Innocent Breakfast," 1996), Hendel published the novel *Terufo shel Rofo ha-Nefesh* ("Crack Up," 2002), a skillfully narrated psychological novel describing the disintegration of a man who marries the wife of his deceased best friend, the woman he had always loved. The marriage is marred by hallucinations and guilt feelings, overshadowed by the imaginary presence of the dead.

Some of Hendel's prose works have been adapted for stage, screen, and television. She was awarded the Jerusalem Prize and the Bialik Prize and is one of the few women writers to be awarded the prestigious Israel Prize for literature (2003). "A Story with No Address" is included in G. Abramson (ed.), *The Oxford Book of Hebrew Short Stories* (1996); "Small Change" is included in G. Shaked (ed.), *Six Israeli Novellas* (1999). For further information concerning the translation of Hendel's prose into various languages see the ITHL website at www.ithl.org.il.

[Anat Feinberg (2nd ed.)]

HENDRICKS, U.S. family. **URIAH HENDRICKS** (1737–1798), who was born in Amsterdam, Holland, emigrated from London to New York in 1755. In 1764 he established a metals business there which his grandson Uriah continued as Hendricks Bros., the oldest Jewish business concern in America. He was one of the Tories who in 1776 signed a Loyalist address to the British general William Howe. Hendricks was a president of the Sephardi congregation Shearith Israel, in which his family was active for generations. Uriah's only son, **HARMON** (1771–1838), was born in New York and graduated from Columbia College. In 1812 he established one of the first copper-rolling mills in the United States in Soho, New Jersey, with his brother-in-law, Solomon I. Isaacs. This firm developed metal parts for warships, which were useful in the War of 1812. When the government issued war bonds in 1813, Hendricks subscribed \$40,000. Hendricks was the leading New York Jewish philanthropist of his time, and he was president of Congregation Shearith Israel from 1824 to 1827. His sons, **URIAH** (1802–1869), **HENRY** (1804–1861), and **MONTAGUE** (1811–1884),

carried on the copper firm, which then was handed down to Uriah's four sons, including JOSHUA HENDRICKS (1831–1893). Joshua's son HENRY HARMON HENDRICKS (1860–1904) was born in New York City. After some years as a practical chemist, he joined Hendricks Bros. and remained an active partner. A trustee of Congregation Shearith Israel, Hendricks belonged to many Jewish and secular organizations, including the National Arts Club and the American Association for the Advancement of Science. Another of Joshua's sons, EDGAR (d. 1894), married Lillian Henry. Their son HENRY S. HENDRICKS (1892–1959), born in New York City, associated himself with the law firm of Cardozo and Nathan. From 1926 to 1938 he practiced privately, then joined Hendricks, Robbins & Buttenweiser; he resumed private practice in 1947. Active in the Jewish Historical Society, for 25 years he presided over Congregation Shearith Israel, later becoming its honorary president.

HENGSTENBERG, ERNST WILHELM (1802–1869), German Bible scholar. He earned his Ph.D. at Bonn (1823) after studying Hebrew and Arabic with G. Freytag, the prominent Orientalist. As editor of the *Evangelische Kirchenzeitung* (1827–69) he led an anti-rationalistic crusade which upheld the doctrine of infallibility in regard to the fundamental beliefs of Protestant Christianity. Hengstenberg belonged to the group of orthodox Christian scholars known as “Confessionals,” because of their adherence to such formularies as the Augsburg Confession. He is remembered principally for his *Christologie des Alten Testaments* (1829–35; *The Christology of the Old Testament*, 1854–58), a strictly Christian orthodox presentation of the Bible, which views the messianic prophecies on a spiritual plane and totally ignores their original historical setting. Adaptations of the hermeneutical principles of the Reformation are found throughout his biblical commentaries which include *Kommentar über die Psalmen* (4 vols., 1842–47; *Commentary on the Psalms*, 3 vols., 1845–48); *Prediger Salomo* (1858; *Commentary on the Book of Ecclesiastes*, 1860); *Weisungen des Propheten Ezechiels* (1867–68; *The Prophecies of Ezekiel*, 1869); and *Beiträge zur Einleitung ins Alte Testament* (1831; *Genuineness of the Pentateuch*, 2 vols., 18547), a defense of the unity of the Pentateuch. He also wrote *Geschichte des Reiches Gottes unter dem Alten Bunde* (2 vols., 1869–71; *History of the Kingdom of God under the Old Testament*, 2 vols., 1871–72), *Die Opfer der heiligen Schrift* (1859), and *Egypt and the Books of Moses* (1843). Twelve of his books were translated into English to combat the inroads that critical scholarship was making among English readers.

Rogerson, in: *DBI*, I, 494–95.

[Zev Garber / S. David Sperling (2nd ed.)]

HENKIN, JOSEPH ELIJAH (1880–1973), rabbi. Henkin was born in Klimovichi, Belorussia, where his father Rabbi Eliezer Henkin was head of the yeshivah. Leaving his native town, he studied for six years at the yeshivah of Slutsk under Isser-Zalman *Meltzer, who together with Baruch Baer *Leibowitz and Jechiel Michael *Epstein ordained him. After serving as rabbi in Kavkazskaya and as head of the yeshivah in Sokolov, Henkin immigrated to the United States in 1922 and settled in New York City. In 1925 he was appointed director of Ezras Torah, an organization founded in 1915 by the Union of Orthodox Rabbis to provide assistance to rabbinical scholars in war-torn Europe. Under his direction, Ezras Torah expanded into a general charity distributing hundreds of thousands of dollars annually to thousands of needy persons, raising funds honorably, and disbursing funds fairly. Paid a modest salary, he insisted that when he aged and cut down his hours of work, his salary be reduced accordingly. His stature derived from his person and not from the positions he held. Henkin was one of the leading authorities on Jewish law and was continually called upon to decide points of Jewish law. He was particularly authoritative on divorce procedure and on laws of Sabbath as they relate to the new technology. His writings also include such issues as the Holocaust, Zionism, and Jewish communal life. Originally opposed to the State of Israel, once it was established he gave it support. His published responses appear in Chaim Bloch's *Even me-Kir Tizak* (1953) and in his own *Perushei Lev Ivra* (c. 1925). His son LOUIS HENKIN (1917–) became professor of international law and diplomacy at Columbia University.

[Aaron Lichtenstein / Michael Berenbaum (2nd ed.)]

HENLE, ELKAN (1761–1833), an early advocate of emancipation in Bavaria. Son of a wealthy Fuerth court agent, Jacob Buttenwies(en) Henle, he published a number of books and pamphlets demanding the spread of education and enlightenment (Haskalah) among his coreligionists and opposing the view that the Jews were not ready for emancipation. His writings include *Ueber die Verbesserung des Judenthums* (Frankfurt, 1803); *Ueber die Verfassung der Juden im Koenigreiche Baiern und die Verbesserung derselben zum Nutzen des Staates* (Munich, 1811); *Die Stimme der Wahrheit in Beziehung auf den Kultus der Israeliten* (3 vols., Fuerth, 1827). His last work sharply criticized the reformist catechism of Alexander *Behr and opposed the formulation of a secular consistency in Bavaria.

BIBLIOGRAPHY: F. Babinger, in: *MGWSJ*, 62 (1918), 223–30.

HENLE, JACOB (Friedrich Gustav; 1809–1885), German anatomist and pathologist. Henle, who is considered one of the outstanding histologists of his time, was a member of a well-known family in Bavaria and the grandson of the rabbi of Fuerth. He was baptized at the age of 11 by his parents. He stud-

ied medicine at Bonn, and was the outstanding pupil, and later assistant, of Johannes Mueller. He moved with the latter to Berlin, where he was appointed lecturer of anatomy in 1837. From 1840 he served as professor of anatomy and physiology at Zurich, from 1844 at Heidelberg, and from 1852 at Goettingen.

Henle was a great anatomist and one of the founders of modern medicine. The scope of his research work, from his first study of the cornea of the eye (1832) until the final one on the growth of man's nail and the horse's hoof (1884), was astonishing in its variety. His book, *Allgemeine Anatomie* (1841), was the first in which the study of the cell was presented as a professional branch, thus taking a definite step forward in medicine. While at Zurich, he founded the *Zeitschrift fuer rationelle Medizin*, in opposition to the obscure romantic medicine of his day.

His anatomical discoveries were numerous and at least a dozen microscopic structures in anatomy were named after him. He summed up his life's work on anatomy in his great book *Handbuch der systematischen Anatomie* (1855–71). He also made contributions to pathology. His book, *Pathologische Untersuchungen* (1840) included, among others, a chapter on miasmas and infections, in which he first expressed (long before ways were found to stain and identify microbes) the theory that infectious diseases were caused by specific microorganisms, a contention that was to be proved 40 years later by his pupil Robert Koch.

[Joshua O. Leibowitz]

HENLE, MORITZ (1850–1925), cantor and composer. Born in Laupheim (Wuerttemberg), Germany, Henle became cantor and choral conductor and worked in various cities. In 1879, he was appointed chief cantor in the reformed Israelitischer Tempelverband of Hamburg, where he reintroduced biblical cantillation and Ashkenazi pronunciation. In 1905 he was among the founders of the Standesverein der juedischen Kantoren in Deutschland, which later became the Allgemeiner Deutscher Kantorenverband. His works include *Liturgische Synagogen-Gesaenge* (1900), for solo, mixed choir, and organ; a revised edition of the *Gesangbuch* of the Hamburg Synagogue (1887); and a setting of Byron's *Hebrew Melodies*. His leaning toward the East European style is discernible in the settings of prayers *Halokh ve-Karata*, *U-Netanneh Tokef*, and *Adonai Mah Adam*. Henle wrote articles on synagogue music, the training of cantors, and similar subjects, and was an advocate of moderate Reform.

[Joshua Leib Ne'eman]

HENNA (Heb. כִּפֹּר, *kofer*), the plant *Lawsonia alba* whose leaves yield a much-used dye. Its English name is derived

from Arabic. Henna is included among the spices growing in the garden of tropical spices to which the beloved maiden is compared in Song of Songs (4:12–13), while she compares her beloved to “a cluster of henna in the vineyards of Engedi” (*ibid.* 1:14). The Mishnah mentions henna alongside the rose among the aromatic plants that grow in Erez Israel (Shev. 7:6). The henna of “Ashkelon in Judea” was praised by Pliny (*Historia Naturalis*, 12:51) and Dioscorides (*De materia medica*, 1:117). According to Josephus (Wars 1:181), the name of Herod's mother was Cypros (Κύπρος), that is *kofer*, and he called a fortress which he built “Cypros” after her. Henna is a shrub which is grown in various places in the Jordan Valley and in the Shephelah. Its aromatic flowers are arranged in clusters (hence the “cluster of henna”). From its root or leaves a powder is prepared which is soluble in water and produces a reddish-orange dye. Throughout the ages the peoples of the East prized this beautiful, fast dye which was used for dyeing the hair, the palms of the hand, the nails, and even the teeth. With it the Egyptians dyed mummies. The Talmud (TJ, Git. 69b) mentions henna as a remedy for a disease of the urinary organs. In Yemen, Jews smeared a bride's body with henna dye (the person doing it pays for the privilege with a wedding gift) and hence the name “henna night” given by them to a marriage. The custom is still maintained by several communities in Israel.

HENOCHSBERG, EDGAR SAMUEL (1894–1966), South African Supreme Court judge. Born in Durban, he became king's counsel in 1939, and was raised to the bench in 1955. Maintaining a constant interest in Jewish affairs, Henochsberg was a founder, executive officer, and president of the Durban Jewish Club, Durban Hebrew Congregation, and Council of Natal Jewry. Active on behalf of many undenominational and humanitarian causes, he was emeritus commissioner of the South African Scout Council, a chairman of Adams College Educational Trust (for non-whites), and president of the Durban Bantu Children's Welfare Society. He served in Egypt during World War I. In World War II he was judge advocate with the South African forces, and later senior law adviser with the rank of lieutenant colonel.

[Lewis Sowden]

HENRIQUES (Quixano Henriques), Anglo-Jewish family. The family progenitor was MOSES HENRIQUES of Kingston, Jamaica, who married Abigail Quixano in 1768. The eldest son of this marriage, ABRAHAM QUIXANO HENRIQUES (18/19th cent.), immigrated to London, where he established himself as a West India merchant. His sons DAVID (1804–1870) and JACOB (1811–1898) were prominent communal workers and were among the founders of the Reform congregation in London in 1840.

Later members of the family include: HENRY STRAUS QUIXANO HENRIQUES K.C. (1864–1925), lawyer, communal worker, historian, president of the Board of Deputies of British Jews (1922–25), and author of the standard works *The Jews and the English Law* (1908) and *Jewish Marriages and the English Law* (1909). CYRIL QUIXANO HENRIQUES (1880–1976) was a civil engineer. He served in the Indian Civil Service before going to Palestine, where he was engineer for the Zionist Executive from 1925 to 1928. Returning to England he was active in Zionist affairs and a leader of the Nazi boycott movement of the 1930s.

SIR BASIL LUCAS QUIXANO HENRIQUES (1890–1961) was a social worker, a leading authority on juvenile delinquency, and an advocate of progressive Judaism. Born in London, Basil Henriques was educated at Harrow and Oxford, where he helped to edit a prayer book for the synagogue services conducted by the undergraduates. An officer during World War I, he wrote sermons and prayers, later issued in booklet form, for Jewish troops. Henriques devoted his principal efforts to helping underprivileged and delinquent youth in the East End of London. In 1915 he founded his first boys club. After World War I, Henriques and his wife established the St. George's Jewish Settlement. A gift of £65,000 from Bernhard *Baron enabled them to build more spacious premises, and they made their home there so that they could be close to the Settlement's members, who numbered in the thousands. As a magistrate and later chairman of the East London Juvenile Court, Basil Henriques' chief purpose was to understand the causes of juvenile delinquency and develop preventive social action. He visited boys' homes and prisons, suggested reforms, and took a great interest in the care of young Jewish offenders after their discharge. He made lecture tours throughout the world to spread his views on the prevention of juvenile delinquency and to advance the cause of progressive Judaism. After World War II he headed the anti-Zionist "Jewish Fellowship" which however dissolved on the establishment of the State of Israel. Basil Henriques was knighted in 1955 for his services as social worker and magistrate. He described his career in *The Indiscretions of a Warden* (1937) and *The Indiscretions of a Magistrate* (1950). He also wrote *The Home Menders* (1955). Sir Basil's wife LADY ROSA LOUISE HENRIQUES (1889–1972), a sister of Herbert Loewe, was a gifted artist and herself a noted social worker. She was chairwoman of the British *OSE, vice president of English *ORT, and chairwoman of the German section for Jewish Relief Abroad.

ROBERT DAVID QUIXANO HENRIQUES (1905–1967) was an author and soldier, who devoted his most productive years to writing, farming, and Anglo-Jewish affairs. Robert Henriques joined the British regular army, retiring in 1933. His first important novel, *No Arms, No Armour* (1939), was awarded various prizes. He returned to the army on the outbreak of World War II and served in the artillery and the commandos before reaching the rank of colonel as a planning officer on the combined operation staff of Field Marshal Montgomery. His awards included the U.S. Silver Star. His novel *Through*

the Valley (1950), published in the U.S. as *Too Little Love*, was awarded the James Tait Black Memorial Prize. A member of the London Reform Synagogue and originally a vigorous opponent of political Zionism, Henriques underwent a "conversion" to Zionism at the time of Israel's *Sinai Campaign of 1956, which he recorded in his *100 Hours to Suez* (1957). He subsequently built himself a cottage in kibbutz Kefar ha-Nasi and paid annual visits to Israel. In his later years, he was president of The Bridge in Britain, an organization established to promote friendship between Britain and Israel. Robert Henriques' autobiographical novel, *The Commander* (published in 1967), deals with his commando career in World War II. Henriques' biographic fragments appeared in 1969 in *From a Biography of Myself*.

His other works include biographies of two Anglo-Jewish oil tycoons, *Marcus Samuel, First Viscount Bearsted* (1960) and *Sir Robert Waley-Cohen, 1877–1952* (1966).

Members of the Kingston, Jamaica, branch of the Henriques family, distinguished themselves in the development of Jamaica's industry and by their activity in civic affairs.

[Zvi Hermon / Harold Harel Fisch]

°HENRY IV (1056–1106), German emperor. His measures defined the status of the Jews in Germany, sometimes in opposition to canon law (e.g., he allowed them to employ Christian wet nurses, and from 1097 permitted baptized Jews to revert to Judaism). In 1074 he exempted the Jews of *Worms from custom dues in imperial towns. His charters granted in 1090 to the Jews of *Speyer and later to those of Worms gave them far-reaching privileges, including the right to travel and trade throughout the empire. In the Worms charter Henry specifically stated that the Jews should come under no jurisdiction but his own, since "they belong to Our chamber." While in Italy during the First Crusade (1096), he urged the German princes to protect the Jews and begged the bishop of Speyer to shelter the survivors of the massacres; later he opened investigation on the theft of Jewish property during the riots. In 1103 Jews were included for the first time in a *Landfrieden* ("peace proclamation") of Mainz – along with clerics, women, and merchants – in which the emperor and his lords pledged to protect certain classes of people for a specified period of time.

[Meir Lamed]

HENRY, BUCK (Zuckerman; 1930–), U.S. screenwriter and actor. Born in New York, Henry began his career at age 16 in the cast of the long-running Broadway production *Life with Father*. Henry saw military service with the army during the Korean War and afterwards found work writing jokes for the Steve Allen and Garry Moore television shows. Although he gained national attention as a writer/performer on the TV satire *That Was the Week That Was* (1964–65), his first big success was as co-writer with Mel Brooks of the hit comedy series *Get Smart* (1965–70). Henry became a member of the screenwriters' elite when he shared credit for the script of the feature film *The Graduate* (1967), and subsequently wrote the screenplays for such films as *Candy* (1968), *Catch-22* (1970), *The Owl and the Pussycat* (1970), *Is There Sex after Death?* (1971), *What's Up, Doc?* (1972), *The Day of the Dolphin* (1973), *Protocol* (1984), *To Die For* (1995), and *Town and Country* (2001).

In 1978 he co-produced and co-directed *Heaven Can Wait* with Warren Beatty, and in 1980 he directed *First Family*, which he also wrote. As an actor, Henry appeared in many of his films, as well as making cameo appearances in a long string of other movies. Films in which he played a significant role include *Taking Off* (1971), *The Man Who Fell to Earth* (1976), *The Absent-Minded Waiter* (1977), *Strong Medicine* (1979), and *Curtain Call* (1999).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

HENRY (Lyon), EMMA (1788–1870), English poet. The daughter of the Rev. S. Lyon, who opened at Cambridge England's first Jewish boarding school, Henry was one of the first English Jews to attract attention as a writer. Her *Miscellaneous Poems* (Oxford, 1812), dedicated to the Princess of Wales, carried a subscription list headed by the Prince Regent. Her son, Michael Henry, was an early editor of *The Jewish Chronicle*.

HENRY, JACOB (c. 1775–1847), North Carolinian of Bavarian parentage. Henry represented Carteret County in the state's lower chamber in 1808 and 1809, despite constitutional restrictions against non-Protestants. In December 1809, a motion denying him his seat on religious grounds was countered by Henry in an eloquent letter, possibly inspired by Judge John L. Taylor, asserting that "man ought to suffer civil disqualification for what he does... not for what he thinks." Holding that non-Protestants could make the laws, though not interpret or execute them, the House let Henry retain his seat. He later moved to Charleston, South Carolina.

[Stanley F. Chyet]

HENRY, JULES (1904–1969), U.S. anthropologist. Henry taught at various institutions in the United States and Mexico and from 1947 taught at Washington University, St. Louis,

Missouri. He served in various governmental agencies, such as U.S. Department of Agriculture and Office of War Information. As research associate and consultant he also served various national and international organizations, e.g., the World Health Organization and the National Institute of Mental Health. His special interests were in the interrelations of personality and culture; the anthropological approach to the study of education; the analysis of social structure and function; and the emotional problems of children and adolescents. He wrote *Culture Against Man* (1963), and *Jungle People...* (1964).

HENRY, MICHAEL (1830–1875), British journalist. Born in London, son of the poet Emma *Henry (Lyon), he worked in a Paris bank. Later he was a patent agent in London and then assistant to Abraham *Benisch, editor of the *Jewish Chronicle*. On Benisch's retirement in 1868, he succeeded him as editor and held the position until his death. Interested in Jewish education, he was secretary to the Stepney Jewish Schools. His collected essays, *Life Thoughts*, appeared in 1875.

HENRY OF WINCHESTER (13th century), the most notorious convert to Christianity in the medieval Jewish community of England. King Henry III was involved in the conversion of Henry of Winchester and ensured that he received at baptism his own name Henry. The king then also knighted him. In 1252 Henry was granted an allowance of 12 pence a day for life at the Exchequer and appointed king's notary at the Exchequer of Jews, apparently with responsibility for compiling the Hebrew plea roll, but this appointment was short-lived or wholly ineffective. His wife, Clarice, was also a convert. From the mid-1250s he was involved in buying and selling Jewish bonds in partnership with Moses of Clare and in 1261 commissioned to inventory bonds in six chests on behalf of the King. In 1278–79 he played an important part in a secret, but officially-approved, scheme for the purchase of silver made from coin-clippings, in order to accumulate evidence against those involved in this illegal activity to be used at their trials. He was subsequently allowed to purchase some of the forfeited property of those executed in the trials for resale at a profit in England and abroad.

[Paul Brand (2nd ed.)]

HENSCHEL, SIR GEORGE (Isidor Georg; 1850–1934), conductor, singer, and teacher. He was born in Breslau and was active until shortly before his death as a conductor and singer. He was successively during his career a tenor, baritone, basso, and basso profundo. Henschel was the first conductor of the Boston Symphony Orchestra (1881–84), founded the

London Symphony Concerts (1886–97), conducted the Scottish Symphony Orchestra (1893–95), and taught singing at the Royal College of Music and the Institute of Musical Art in New York. He composed an opera, a requiem mass, and songs, and wrote *Personal Recollections of Johannes Brahms* (1907) and the autobiography *Musings and Memories of a Musician* (1918). He converted to Christianity in his youth. He was knighted in 1914.

HENSCHEL BROTHERS. Four artist brothers – AUGUST (d.1829), FRIEDRICH (d. 1837), MORITZ (d. 1862), and WILHELM (d. 1865) – who went from Breslau, Germany, and worked in Berlin from c. 1806 to 1829, when August committed suicide. They worked as a team, signing their work “the brothers Henschel,” producing portraits in pastel and miniatures and also engravings which won them popularity. The subjects of their engravings included famous personalities, such as Fichte, scenes from the theater, patriotic illustrations, and “Scenes from the Life of Goethe.” When August committed suicide, his brothers returned to Breslau where they lived in obscurity.

HENSEL, KURT (1861–1941), German mathematician. Professor of mathematics at Marburg from 1901, Hensel wrote on number theory and algebra. He edited *Crelle’s Journal fuer Mathematik* (1901–36) and wrote the authoritative article “Arithmetische Theorie der algebraischen Funktionen” for *Encyklopaedie der mathematischen Wissenschaften* (1921).

HENSHEL, HARRY D. (1890–1961), U.S. industrialist and sports administrator. He was born in Rochester, New York, joined the Bulova Watch Company in Flushing, New York, in 1918, and by 1930 was one of its principal executives. Henshel devoted his spare time to sports administration; in 1911 he became chairman of the basketball committee of the Metropolitan Association of the Amateur Athletic Union. Henshel served as chairman of the United States Olympic Basketball Committee from 1952 to 1956. In World War II Henshel was a colonel with the U.S. Army in Europe. Henshel organized the U.S. Committee Sports for Israel and was a zealous worker on its behalf. He established a school of watchmaking for paraplegic war veterans. His son HARRY B. HENSHEL (1919–), who became president of Bulova, introduced the first successful phototimer for sporting events.

HENTOFF, NAT (1925–), U.S. music critic, journalist, novelist, author. The roots of Hentoff’s dazzlingly variegated career are to be found in his boyhood in Depression-era Boston. The son of Russian Jewish immigrants, he grew up in the predominately Catholic city in the era of Father Coughlin, the virulently antisemitic “radio priest,” whose broadcasts were followed avidly by Hentoff’s neighbors. As a result, he was ex-

posed early and often to antisemitism. Yet at the same time, commuting from the Jewish enclave of Roxbury to school at the famous Boston Latin, he heard and fell in love with jazz and was equally intoxicated by the city’s fabulous libraries. This combination would lead him to a lifelong passion for social justice, a deep commitment to freedom of expression and the wonders of the written word, and a profound attachment to the music of America’s dispossessed, both black and white.

By his own amused recollection, Hentoff was much too young for admission to the city’s liquor-serving jazz clubs, but managed to sneak in anyway to hear the music. It was the beginning of a much-requited love affair, as jazz criticism became the launching pad for his writing career. He would work variously as a critic, disk jockey and columnist (later New York editor) for *Down Beat*. He was, typically, fired by the magazine in 1957 after he lobbied aggressively for them to hire African-American writers. He then wound up at the nascent *Village Voice*, where he agreed to work for free if they would let him write about anything but jazz. He remained at the weekly from then on, writing on education, race, and civil liberties. He also wrote regular columns on civil liberties for publications as radically different as *The Progressive* and the *Wall Street Journal*.

Hentoff’s interest in race and jazz led him to yet another career path as a frequently honored author of books for young adults. In 1960 he wrote his first YA novel, *Jazz Country*, and followed it with several more, including *This School Is Driving Me Crazy* (1976) and *The Day They Came to Arrest the Book* (1982). He also wrote adult fiction, non-fiction, and a charming memoir, *Boston Boy* (1986).

[George Robinson (2nd ed.)]

HEP! HEP!, a derogatory rallying cry against the Jews, common in Germany; also the name given to a series of anti-Jewish riots that broke out in August 1819 in Germany and spread to several neighboring countries. Opinions differ as to the origin of the slogan. Some believe that it was the crusaders’ rallying cry, derived from the initials of *Hierosolyma est perdita* (“Jerusalem is lost”). However, more likely it was originally an exhortatory cry for driving domestic animals, particularly goats, in Franconia.

The causes of the 1819 riots are highly complex and are rooted in the social and economic condition of Germany in the early 19th century. The Jewish demand for civil rights at the Congress of *Vienna aroused vicious opposition in academic circles. The antisemitic fulminations of J. *Fries were read aloud in the beerhouses and the anti-Jewish extremism of F. *Ruehs was vigorously supported by the nationalistic *Burschenschaften* (see *Students Associations). Romantic writers and liberal nationalist politicians such as H. *Hundt-Radowsky, E.M. *Arndt, Father Jahn, etc., identified the Jews with the conservative, anti-nationalist policies of *Metternich,

Sites of major Hep! Hep! riots in 1819. Shaded area denotes disturbances in rural districts of Bavaria, Baden, Hesse, and Wuerttemberg.

who was accused of being in the pay of Jewish financiers. The bitterness of the population toward the new “upstart” class of Jewish financiers and bankers was expressed by K.B.A. *Sessa in a popular play, *Unser Verkehr* (“Our Crowd,” 1815). The situation was further complicated in the rural areas of Baden, Hesse, and Bavaria by the indebtedness of the peasants to Jewish livestock traders and moneylenders. 1816 had been a year of severe famine, and serious unemployment plagued German factories. An entire series of postwar economic misfortunes was blamed on Jewish financiers and entrepreneurs.

The first anti-Jewish outburst occurred on Aug. 2, 1819, in Wuerzburg, after a period of tension between Jews and Christians over commercial and civil rights, and was initiated by students. The Jews fled as window smashing and looting continued, and returned only after troops had restored order. The riots spread to Bamberg, Bayreuth, and other localities in Bavaria. In Frankfurt, where the dispute over civil rights had been particularly bitter, the houses of the Rothschilds became a special object of attack. The senate with difficulty restored order by means of police and troops. Troops had to be called in at Leipzig, Dresden, and Darmstadt; riots occurred in Mannheim, Pforzheim, and the rural areas of Baden. In Heidelberg a volunteer contingent of students restored order. Danzig (Gdansk) was the only place in autocratic Prussia where riots took place; they were also rare in Austria. Anti-Jewish disturbances also took place in Riga, Cracow, and Prague. The serious riots in Hamburg on September 1 spread to Copenhagen, where rioters were sailors and burghers, and to the neighboring villages. They had to be suppressed by troops.

The authorities utilized the riots to argue that emancipation must be withheld from the Jews because of the obvious ill-will this aroused among the people. At the same time

they did their best to suppress all details on the course of the riots. Jews also sought to suppress the details, and the significance of the riots was belittled in Jewish Enlightenment and Reform circles, the periodical *Sulamith barely taking note that they occurred lest this “weaken our coreligionists’ love for our Christian fellow citizens.” However, Jewish banks refused to do business with Christian merchants suspected of participating in the riots, and large numbers of Jews stayed away from the September fair in Frankfurt. Even more forceful had been the threat of the Rothschilds to leave both Frankfurt and Germany if the riots did not cease. The riots were a factor in speeding the process of assimilation and conversion among some Jews. Conversely, they influenced the foundation of the Verein fuer Kultur und Wissenschaft der Juden.

The Hep! Hep! cry was raised a few more times in Germany in the following decades and was again heard during the revolution of 1830. A. *Stoecker’s antisemitic movement tried to revive the rallying cry but it was outdated, having been replaced by more virulent slogans.

[Henry Wasserman]

HEPHER (Heb. הֶפְרָה). (1) A royal Canaanite city mentioned in the list of kings defeated by Joshua (12:17); it appears between Tappuah (Sheikh Abu Zarad in the hill country of Ephraim) and Aphek (Ras al-‘Ayn at the sources of the Yarkon). The “land of Hopher” is included in one of Solomon’s administrative districts together with Aruboth and Socoh (Ra’s al-Shuwayka near Tulkarm; 1 Kings 4:10). On the basis of these topographical details, most scholars locate Hopher in the northern Sharon, in the area formerly known as the Wadi Ḥawārith, a region sparsely populated in antiquity, containing mostly swamps and woods. The Israelites were apparently unable to subdue the few Canaanite cities in this area until the time of David. The appearance of the name Hopher in the genealogies of Manasseh (Num. 26:33; 27:1; Josh. 17:2) has led various scholars to assume that some of the former Canaanite population had become integrated into the Israelite clans. Since Zelophehad, son of Hopher, had no male descendants (Num. 27:1; Josh. 17:3), and the names of some of his daughters correspond to known localities in the vicinity of Samaria, it has been suggested that these families were grafted onto the Israelite tribal system. The exact location of the city of Hopher is uncertain. Alt has proposed al-Ṭayyiba (Ophrah) south of Tūl Karm, and Mazar has suggested Tell al-Ifshār in the western Sharon, where pottery from the 16th century B.C.E. to the Roman period has been found. Others, however, locate Hopher in the northern part of the hills of Samaria on the assumption that all the clans of Manasseh were settled in this region.

(2) A city mentioned in the Talmud as the home of Tanḥum b. Ḥiyya, a pupil of Manna (TJ, Shev. 6:1, 36c). It was some 12 mi. (19 km.) from Sepphoris. The city has been identified with *Gath-Hepher, the traditional home of Jonah (II Kings 14:25) whose tomb is still venerated in the nearby village of Mashhad. Jerome (*Praefatio in Jonam*) and Benjamin of Tudela also locate the tomb in this vicinity (cf. Gen. R. 98:11).

HEPPNER, ARON (1865–1938), German rabbi, historian, and archivist. Born in Pleschen, Posen province, Heppner served as rabbi at Koschmin from 1890, also at Jarotschin from 1906, administering both rabbinate until 1920 when Posen became Polish once more. Heppner settled in Breslau, where he continued to act as rabbi and teacher, but also founded and directed the archives of the community (from 1924). His scholarly interest was devoted to local Jewish history, first of his native province and later of Breslau. His main publications, apart from contributions on the history of Jewish families to periodicals and newspapers, were *Aus Vergangenheit und Gegenwart der Juden und der juedischen Gemeinden in den Posener Landen* (with I.J. Herzberg, 1909–29) and *Juedische Personallichkeiten in und aus Breslau* (1931). Between 1900 and 1926 he published a “Jewish-Literary Calendar.”
