TABLE OF CONTENTS

Initial letter "I" of the phrase In diebus unius iudicis *at the beginning of the Book of Ruth from the Latin Bible of Charles the Bald, Rheims, ninth century. The illumination shows Ruth and Boaz above the letter and Naomi seated in the middle of it. Paris, Bibliothèque Nationale, Ms. Lat. 1-88v.*

IN-ZIKH, the Introspectivist movement in American Yiddish poetry, arose in 1919 and centered on the literary organ *In Zikh* ("In the Self," 1920–40). The founders of the movement included A. *Glanz-Leyeles, Jacob *Glatstein, and N.B. *Minkoff, who in their first volume declared: "The world exists and we are part of it. But for us, the world exists only as it is mirrored in us, as it touches *us*. The world is a nonexistent category, a lie, if it is not related to us. It becomes an actuality only *in* and *through* us." In contrast to *Di Yunge, the Inzikhists espoused all themes, rhythms, and vocabulary, so long as the poetry reflected the poet's individuality. They declared that free verse and social realities must be combined, that poetry required the poet to look into the self (*in zikh*) and thus present a truer image of the psyche and the world. Urbane modernists, the Inzikhists considered associations and allusions as the two most important elements of poetic expression. Dedicating themselves to the Yiddish language and poetry, they published some of the most important poets and prose writers of the 20th century.

[Sol Liptzin / Anita Norich (2nd ed.)]

IOANNINA (**Janina**), name of town and region in Greece, N.W. of Athens. According to an old tradition, there was a Jewish community in Ioannina as early as the ninth century; the archaic Greek spoken by the Jewish inhabitants suggests that this may be true. During the first half of the 13th century the town was part of the despotate of *Epirus and the Jewish community suffered from persecutions. Jewish serfs are mentioned in two bulls, dated 1319 and 1321 respectively, issued by Emperor Andronicus II Palaeologus (1282–1328). During his reign the emperor placed the Jews under his direct protection. In 1431 when the town was taken by the Turks, there

was a sizable Jewish community, which continued to grow in succeeding generations. When Jewish refugees from Spain settled there, they assimilated into the local Romaniot population and adopted their Greek dialect. There were two synagogues, one known as the "old community," the other as the "new." Apulian and Sicilian Jews also settled in Ioannina and retained special circumcision and Purim customs. In 1612 the Jews were falsely accused of having handed Bishop Dionysios, the leader of a revolt, over to the Turkish authorities, who executed him. Ali Pasha, who was governor of the area from 1788 to 1822, imposed a heavy tax burden on the wealthy Jews. In 1821 when the Greek rebellion broke out, some Jews found refuge in Ioannina. In 1851, the community suffered a major blood libel. The 1869 fire ruined half the Jewish shops in the market. In 1872 there were anti-Jewish riots in the town. The local wealthy banker Effendi Davitchon Levy was one of four Jews in the Ottoman Empire elected to the first national assembly in 1876. The Hebron emissary Rabbi Ḥayyim Shemuel Halevy (Ha-Ḥasmʾal) remained in Ioannina for more than three decades (1848–81) and prophesied that the redemption of Israel would take place in the year 5708 (1948). Ioannina Jews maintained trade relations with Europe and the East, and also engaged in silk weaving and the manufacture of scarves, veils, and silver belts for sale to the Albanians; there were also goldsmiths, dyers, glaziers, tinsmiths, fishermen, and coachmen among them. The wealthy merchant Meir Gani moved to Jerusalem in 1880 and initiated Jewish settlement in the Christian Quarter of the Old City of Jerusalem owing to his close connections to the Greek Orthodox Church, and he also purchased much land from the latter for the Jewish National Fund in Jerusalem in the Rehavia neighborhood as well the site of the present-day Israel Museum and land in the Dead Sea region (where Kibbutz Bet ha-Aravah was located). At the beginning of the 20th century, there were 7,000 Jews in Ioannina, but due to fear of political instability, compulsory military service, and economic decline, several thousand Jews began emigrating, heading to New York City. In 1910 the Jewish population was 3,000 and on the eve of the Holocaust it was 1,950. In the Depression of the early 1930s, many Ioanniote Jews migrated to Athens for economic betterment. The local Jewish poet, philologist, and teacher Joseph *Eliyia (1901–1931) is remembered and highly revered in contemporary Greece for his prose and poetry. On March 24, 1944, 1,860 Jews were seized by the Nazis and deported to Auschwitz. In 1948 there were 170 Jews living in the town, and by 1967 their number had dwindled to 92. The Ioannina community has continued to maintain the Romaniot prayer rite. A Ioannina synagogue, Bet Avraham ve-Ohel Sarah, exists in Jerusalem in the Maḥaneh Yehudah quarter.

[Simon Marcus / Yitzchak Kerem (2nd ed.)]

IONESCO, EUGÈNE (1912–1994), Romanian-born French playwright. Ionesco's mother, Thérèse Icard, was a French Jewess who, while teaching in Romania, married a non-Jewish lawyer, Eugène Ionesco. In 1913 the family moved to Paris, returning to Romania in 1925, and a few years later the father abandoned his wife and two children. The young Eugène specialized in French studies. He became a teacher and literary critic, studying in Paris (1938–40). When he returned to Romania he encountered the Fascism which he was later to attack in the bitterest terms, and in 1942 he fled back to France with his wife.

Ionesco's first two books, written in Romanian and published in 1934, were a volume of lyrical poems, *Elegii pentru fiinţele mici* ("Elegies for Little Souls"), and *Nu* ("No"), a collection of essays criticizing established Romanian authors. Ionesco's plays, which reveal the influence of *Kafka and of the important Romanian dramatist Ion Luca Caragiale, are mostly one-act caricatures of middle-class smugness and philistinism. A mixture of comedy and tragedy, surrealistic and grotesque, they attack what Ionesco terms "the universal petty bourgeoisie … the personification of accepted ideas and slogans, the ubiquitous conformist." This "Theater of the Absurd" (Ionesco himself preferred the designation "Theater of Derision") had its birth in the highly successful play *La Cantatrice chauve* (1949; *The Bald Soprano*, 1958). The best known of the many plays that helped to consolidate Ionesco's reputation were *La Lyçon* (1950; *The Lesson*, 1958), *Les Chaises* (1951; *The Chairs*, 1958), *Victimes du devoir* (1952; *Victims of Duty*, 1958), *Le Nouveau Locataire* (1953; *The New Tenant*, 1958), *Tueur sans gages* (1957; *The Killer*, 1960), *Rhinoceros* (1959), which appeared in an English translation in 1960, and *Le Roi se meurt* (1962; *Exit the King*, 1963). Ionesco's plays were collected in four volumes (1954–66) and have been translated into nearly 30 languages. A series of essays appeared in book form as *Notes et Contrenotes* (1962; *Notes and Counternotes*, 1964), and he also wrote the scripts for several distinguished films. Later plays included *Macbeth* (1973), *Man with Bags* (1975), and *Journey Among the Dead* (1980).

He visited Israel and made declarations in favor of the state on the eve of the Six-Day War. After it was over he wrote about his family history for the first time in the second volume of his memoirs, *Présent Passé, Passé Présent* (1968), a sequel to *Le Journal en Miettes* (1957, *Fragments of a Journal*, 1968), expressing a new awareness of his Jewish origin. Ionesco, whose qualities of wit and mordant satire had led to his being referred to as "the Molière of the Twentieth Century," was elected to the French Academy in 1970.

IOSIFESCU, SILVIAN (1917–   ), Romanian literary historian and critic. A former illegal Communist, he decided in favor of an academic career and was, from 1948, professor of Literary Theory at the Bucharest University. He wrote on the Romanian classics and problems of aesthetics, and, after a short period of dogmatic Marxist esthetic, Iosifescu became an eminent literary analyst of modern prose. His works include *Drumuri literare* ("Literary Paths," 1957), *In jurul romanului* ("On the Novel," 1959), *Literatura de frontieră* ("The Frontier Literature," 1969), *Mobilitatea privirii* ("The Mobility of Sight," 1976), *Trepte* ("Steps," 1988). Iosifescu translated (partially in collaboration with Vera Călin) from Romain Rolland, H. Taine, John Steinbeck, Robert Graves, and published anthologies of French and English humor.

IOWA, state in midwestern U.S. In 2005 Iowa had a Jewish population of 6,100 out of a total of 2,944,000. The largest Jewish community was in Des Moines (3,500), the state capital, where there were four synagogues – Orthodox, Conservative, Reform and Chabad – a Jewish Federation which is situated on the community campus and includes Iowa Jewish Senior Life Center, a synagogue, and the Community Hebrew School. There were also organized Jewish communities with one or more synagogues in Ames, Cedar Rapids, Waterloo, Council Bluffs; Davenport (450); Dubuque (105); Iowa City (200), Sioux City (300), and Postville, now home to 450 Jews, most associated with the kosher meat processing plant, AgriProcessors.

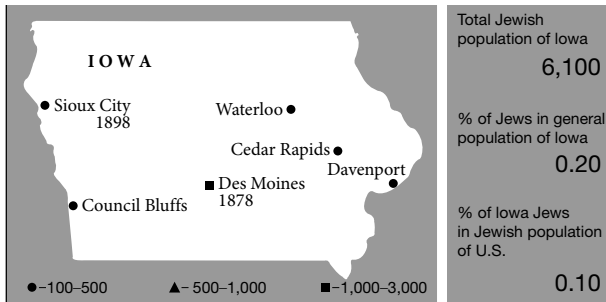
The first mention of Jews in connection with Iowa appeared in a memoir published in London in 1819 by William Robinson, a non-Jewish adventurer and land speculator, who proposed mass colonization of European Jews in Iowa and Missouri. The first known Jewish settler was Alexander Levi, a native of France who arrived from New Orleans in 1833 and established himself in Dubuque in the year the town was laid out. Credited with being the first foreigner naturalized in Iowa (1837), Levi helped develop the lead mines first worked by Julien Dubuque, for whom the town was named. One of Dubuque's leading citizens for 60 years, Levi was elected justice of the peace in 1846. In the late 1830s and early 1840s Jewish peddlers from Germany and Poland reached Dubuque and McGregor, key points for traffic across the Mississippi, in eastern Iowa, as the immigrant tide began pushing westward.

Solomon Fine and Nathan Louis were doing business at Fort Madison in 1842. In that year Joseph Newmark opened a store at Dubuque. Among the early settlers in McGregor were the parents of Leo S. Rowe (1871–1946), director-general of the Pan-American Union (1920–46), who was born there. Samuel Jacobs was surveyor of Jefferson County in 1845. In the 1850s Jews were also settled at Davenport, Burlington, and Keokuk. William Krause, the first Jew in Des Moines, arrived with his wife in 1846, when it was still known as Raccoon Forks. His brother Robert came to Davenport about the same time. Krause opened Des Moines' first store in 1848, a year before Joseph and Isaac Kuhn arrived there. Krause was one of the incorporators of Des Moines, helped found the town's first public school, contributed toward the building of Christian churches, and was a leading figure in having the state capital moved from Iowa City to Des Moines. Other pioneer Jews were Michael Raphael, paymaster of the Northwestern Railroad while it was building west from Davenport; Abraham Kuhn, who went to Council Bluffs in 1853; Leopold Sheuerman, who had a store at Muscatine in 1858; and Solomon Hess, who represented Johnson City at the 1856 convention at which the Iowa Republican Party was organized.

The first organized Jewish community was formed at Keokuk in 1855 in the home of S. Gerstle under the name of the Benevolent Children of Israel. This society maintained a cemetery from 1859 on and four years later was incorporated as Congregation B'nai Israel. In 1877 it erected Iowa's first synagogue. Other communities grew up in Dubuque and Burlington in 1857 and in Davenport in 1861. There was a handful of Jews in Sioux City on the banks of the Missouri River in the 1860s, but no congregation was formed until 1884. The Council Bluffs community dates from the late 1870s and that in Ottumwa from 1876. Davenport's Temple Emanuel is the oldest existing congregation (the one in Keokuk went out of existence in the 1920s). Des Moines' pioneer congregation, B'nai Jeshurun, was founded in 1870 and erected the state's second synagogue in 1878.

The best-known Jews in Iowa in the 1880s were Abraham Slimmer, of Waverly, and Moses Bloom, of Iowa City. Slimmer, a recluse, endowed hospitals, schools, and orphanages throughout Iowa and other states and was a generous contributor to synagogues. Bloom was elected mayor of Iowa City in 1869 and 1874 and served in both houses of the state legislature in the 1880s. Benjamin Salinger served on the Iowa State Supreme Court from 1915 to 1921. Joe Katelman was elected mayor of Council Bluffs in 1966. David Henstein was mayor of Glenwood (1892) and Sam Polonetzky was mayor of Valley Junction (1934).

[Bernard Postal]

Des Moines remains the largest center of Jewish life in Iowa. Its Federation, located on a community campus which includes the Jewish Community Relations Commission, the Greater Des Moines Jewish Press, Jewish Family Services, the Iowa Jewish Senior Life Center, and Tifereth Israel, the Conservative synagogue which houses the Federation-run com-


Jewish communities in Iowa, with dates of establishment of first synagogue. Population figures for 2001.

munity Hebrew School, is very active and influential. The Des Moines Jewish Academy, a day school started in 1977 by three families, merged in 2004 with a secular private school to become The Academy, Des Moines' only secular private school. The Academy offers an after-school Jewish curriculum. An additional Federation facility for social, cultural, and recreational activities, the Caspe Terrace, located in nearby Waukee, Iowa, is the site of the children's camp, Camp Shalom, as well as the museum of the Iowa Jewish Historical Society, a committee of the Federation founded in 1989.

Des Moines boasts four synagogues, and ritual practice in most has become more traditional over time. The Reform Temple, B'nai Jeshurun, has the largest membership with Shabbat services now held on both Friday night and Saturday morning. Ritual at the Conservative synagogue, Tifereth Israel, has remained largely unchanged. Beth El Jacob, the Orthodox synagogue which allowed mixed seating beginning in the 1950s, now has a *meḥizah* in both its small chapel and its main sanctuary. Lubavitch of Iowa/Jewish Resource Center, operating with its current rabbi since 1992, holds Shabbat services and publishes a monthly magazine, *The Jewish Spark*, and contains a *mikveh*, as does Beth El Jacob synagogue, less than half a mile away. Beth El Jacob synagogue and Lubavitch of Iowa clashed over a bequest, which resulted in a civil law suit. The resulting settlement led to the establishment of a Chabad-run kosher deli, Maccabee. The Jewish population in Des Moines has moved westward. With the purchase of land west of Des Moines, plans are under discussion for moving the campus that contains both the Federation and Tifereth Israel synagogue.

Perhaps the most interesting development in Iowa has been the growth of an ultra-Orthodox community in rural Postville, where once there were only Christians. Heshy Rubashkin moved to this town of 2300 in 1989 to set up AgriProcessors, a kosher meat processing plant. Five years later, when they opened a Jewish school, more hasidic families followed. Today 75 ḥasidic families live in Postville, which offers K-8 Jewish education for girls and K-11 Jewish education for boys. The Postville Jewish community boasts a Jewish doctor, a family-run kosher cheese manufacturing business, Mitzvah Farms, and a kosher grocery store and adjacent restaurant. Tensions developed between the ḥasidic newcom-

ers and their Christian neighbors. The cross cultural conflict became the subject of much national press coverage, a best-selling book, and a PBS movie. Though tensions still persist, Jews and non-Jews are learning to live with each other. One member of the hasidic community was elected to a term on the Postville City Council. Recently the Lubavitch community, which houses Postville's only synagogue where all types of Ḥasidim pray together, including those of Ger and Bobov, opened a Jewish Resource Center. The JRC, open to all comers including non-Jews, contains a Jewish library, meeting room, gift shop and offers Jewish tutorials for the few non-observant Jews in Postville.

One Postville resident, observing the harmony among diverse Ḥasidim described life in Jewish Postville as "moschiah time."

Sioux City, which was at one time Iowa's second largest Jewish community, now numbers only 300. To address the crisis of a Jewish population decreasing through death and not replenishing with new families, the Conservative and Reform synagogues merged in 1994, maintaining in congregation Beth Shalom affiliation with both the Conservative and Reform movements. Ritual observance at Beth Shalom generally follows the Reform tradition, though Conservative traditions apply to both Shabbat morning and second day holiday prayer. Beth Shalom maintains a K-12 religious school and employs a full-time rabbi, ordained at a trans-denominational seminary.

In Iowa City, home to the University of Iowa, the Reform and Conservative synagogues also merged, and congregation Agudas Achim, with a membership of 200 families, is affiliated with both the Reform and Conservative movements. Services, led by a Conservative-ordained Rabbi, generally follow the Conservative ritual, though once each month Reform services are held. The University of Iowa with a Jewish population of roughly 600 undergraduates and 200 graduate students runs a Hillel in which about 10% of the students are active.

Nearby, Temple Judah of Cedar Rapids, a Reform Congregation, has maintained a stable Jewish community with 125 families and a school enrollment of 53 students.

Davenport, one of the Quad Cities, has a Jewish population of about 450 people, most affiliated with either the Reform Congregation, Temple Emanuel, or a Conservative synagogue across the river in Rock Island, Illinois. An Israeli *shali'aḥ* sent to Davenport's Federation for one year, has helped revitalize Jewish life and promote outreach to the non-Jewish community.

Ames, the home of Iowa State University, maintains the Ames Jewish Congregation, a community of 62 families, affiliated with the Reform Movement since 1962.

IPSWICH, town in southeastern England. A medieval community existed there until 1290 with its own *archa. However, relatively little is known about it. Jews began to resettle in the mid-18th century. A synagogue was built in 1792 and a cemetery acquired in 1796. During the French Revolution, the Jews were suspected of Jacobin sympathies and the magistrates had to intervene to save them from attack. The community ceased to exist during the 19th century. At the outset of the 21st century, no Jewish institutions existed in Ipswich.

[Cecil Roth]

IQUITOS, city in Peru. Surrounded by the Amazon River and two of its tributaries, and separated from other cities by the vast tropical rain forest and the high Andean summits, Iquitos, located 1,200 miles from Lima, was the most isolated city in South America until the coming of the airplane. Nevertheless, like Manaus and Belén do Pará, it was the hub from which representatives of foreign industries administered their businesses during the rubber boom of the 19th century. Hence, starting in 1870, around 150 Sephardi Jews, mainly from Morocco but also from places such as Gibraltar, Malta, Alsace, and the city of Manchester, made their way to Iquitos in search of quick fortunes working as traders and owners of commercial houses that provided services to the people who exploited rubber in the jungle. In a few years the little town founded by Jesuits became a cosmopolitan city that boasted the only organized Jewish community in Peru besides the one in the capital city of Lima.

In 1905 the Jewish immigrants, who initially had no intention of staying long in the city, built a cemetery to accommodate the inevitable loss of life in a frontier area while refraining from building such permanent structures as a synagogue or a school. By 1909, they had founded and formally registered with the local authorities of the city the Israelite Society of Beneficence of Iquitos in order to provide assistance to fellow Jews, although, they only met for the Jewish high holidays and scarcely developed a Jewish life. Most of the Jews, like all the immigrants, married or had children with local Amazonian women. During the 1910s, with the decline of rubber prices, most of the Jews left the city. The few who stayed, together with the first generation of their descendants, met occasionally for Sabbath services in private homes. Though they continued to intermarry with local Christian natives, the descendants of Jews preserved a strong sense of Jewishness, kept up some Jewish traditions, and made several attempts to sustain a fragile community, which made its first contacts with Lima's Jews during the 1950s, especially after the visit of the Jewish Peruvian geologist Alfredo Rosenzweig, who in 1948 got to know the first generation of Jewish descendants during

a trip to the Amazon region. In an article published in 1967 Rosenzweig provided the first detailed account of the presence of Jews in Iquitos, telling about the economic contribution of the big and famous Kahn, Israel, and Cohen commercial houses, among others, and obtaining a copy of the statutes of the Israelite Society and a list with 29 documents concerning community members buried at the Israelite cemetery, where "Israelite," "Hebrew," or "Jewish" is explicitly written as the faith of the deceased.

In 1995 Dr. Ariel Segal visited Iquitos in order to research the syncretic identity of the Jewish descendants of the city after learning that there was still an organized community of self-proclaimed Jews who celebrated the main Jewish holidays. These had been visited twice by Rabbi Guillermo Bronstein of the Conservative Jewish congregation of Lima and by officials of the Jewish Agency who helped those members who expressed an interest in learning about Judaism and immigrating to the State of Israel and whose cases fell under the Law of Return, to make *aliyah*. Their Judaism has been also debated in Orthodox circles after they were visited by a member of Israel's Rabbinate.

Iquitos descendants of Jews still bury members of their congregation in the Israelite cemetery, they celebrate *Kabbalat Shabbat* services – although some of them also attend churches – and speak proudly of their Jewish heritage while a few of them practice some local Amazonian and Christian rituals. They define themselves as members of the "chosen people" with Jewish blood. This sense of lineage and identity is part of the fascinating historical consciousness that Dr. Segal, in the book *Jews of the Amazon*, categorized as *Marranic*, claiming that the identity of the "Jewish *Mestizos*" – *Mestizaje* is understood as biological and cultural miscegenation – resembles the identity of many descendants of Jews forced to convert to Christianity in the Iberian Peninsula, and of other communities that combined Judaism and another religion, such the *Bene Israel of Bombay.

Defining *Marranism* also as an identity, a product of isolation rather than exclusively a result of compulsory conversion to another religion, is, however controversial, useful in understanding the sense of peoplehood of the Iquitos community after living almost 100 years without a rabbi, a synagogue, or a Jewish school.

[Ariel Segal (2nd ed.)]

IRAN (official name: Islamic Republic of Iran), country in S.W. Asia, before 1935 known as Persia. Iran covers an area of 1,648,195 square km and includes 28 provinces, 714 districts, 718 towns, and 2,258 villages. Up to 1948 Jews were scattered in about 100 towns and villages, their number was then estimated at between 100,000 and 120,000.

The name Iran for the entire Iranian plateau has been in

usage since the Sasanian period (224–650 C.E.) and also in classical literature, e.g., in the *Shāhnāmeh* of Ferdawsi (about 10th century). Persia as a name for the country was used by foreigners; geographically it referred to the Province of Fārs in the south from which the Achaemenian kingdom of Cyrus the Great emerged. It was officially changed to Iran in 1935, most probably under the influence of strong German-Iranian relations during the 1930s. The many German agents in Iran emphasized the so-called Aryan origin of the Iranians, which appealed to the nationalist mood of the time. This type of nationalism in Iran did not allow any social and political activities with ties to foreign countries, and thus Communist and Zionist activities were forbidden in Iran during Reza Shah's reign (1925–41). There were also difficulties faced by Jews who wanted to immigrate to the Land of Israel. However, it must be said that Reza Shah's reign proved to be the beginning of an era of relative freedom and socioeconomic opportunities for Jews and other non-Muslim communities. In this period, Jews were active in trade, industry, and tourism. Several Jews reached the highest levels of fame and prosperity in the modern history of Iran. Among them were Haim Moreh, Morteza Mo'allem, and Soleiman Haim in education and scholarship; Iraj Lālehzāri and Shemooil Rahbar in science; Morteza Ney-Dāvoud and Yonah Dardashti in music; Morād Ariyeh, Habib Elghanaian, Ebrāhim Rād, and many others in economics.

With the occupation of Iran by Russia and Britain in August 1941 and the abdication of Reza Shah in September, Iran experienced a new era of relative democracy and freedom such as it had never had before. Jews began to take advantage of the situation and from 1942 on they started to renew their Zionist and social activities. During the 1940s, a dozen Jewish organizations emerged in *Teheran and in other major cities, such as *Shiraz, *Isfahan, *Hamadan, *Kermanshah, and Sanandaj. Among these organizations were the following: several youth organizations named Kānun-e Javānān; Ha-Histadrut ha-Ẓiyyonit; the Ḥalutz Movement; the Jewish Hospital; the Oẓar ha-Torah Educational Schools; the Women's Organization; ORT Schools; newspapers, such as *Ālam-e Yahud, Yisrāel, Sinā,* and so on. State universities, colleges, elementary and high schools became more accessible to Jewish students and teachers. Jews were able to find employment in governmental offices with less difficulty than before. This relative freedom also gave rise to fascist parties such as the Pan-Iranism Party that regarded the Jews as an undesirable Semitic foreign element in Iran. The Tudeh Party favored the Jews, whose intellectuals, in general, were sympathetic to it, and a few hundred of them became active members of the party.

Population

The earliest report of a Jewish population in Iran goes back to the 12th century. It was *Benjamin of Tudela who claimed that there was a population of about 600,000 Jews. This number was later reduced to 100,000 in the Safavid period (1501–1736), and it further diminished to 50,000 at the beginning of the 20th century, as reported by the *Alliance Israélite Universelle

Jewish settlements in Iran, 1967 and 2001. 1967 data based on E. Spicehandler, Yahadut Iran*, Jerusalem, 1970.*

(AIU) emissaries in Iran. The drastic decrease in number was the result of persecution, forced conversions, Muslim laws of inheritance (which encouraged conversion and allowed the convert to inherit the properties of his Jewish family), and massacres. These problems continued at least up to the Constitutional Revolution in Iran (1905–09). According to unofficial statistics released by the Jewish Agency in Teheran, there were between 100,000 to 120,000 Jews living in Iran in 1948. The following numbers, with some variation, were reported for the Jews of major cities: Teheran, about 50,000 Jews; all Iranian Kurdistan, between 15,000 to 20,000; Shiraz, 17,000; Isfahan, 10,000; Hamadan, 3,000; Kashan, 1,200; *Meshed, 2,500; Kermanshah, 2,864; Yazd/Yezd, 2,000 (uncertain). There are no reliable statistics for other communities scattered in many small towns and villages, such as Borujerd, Dārāb, Fasā, Golpāygān, Gorgān, Kāzrun, Khunsār, Lahijān, Malāyer, Nowbandegān, Rasht, and many more. There were also censuses carried out once every 10 years by the government, beginning in 1956. These censuses usually were not reliable as far as the Jewish communities were concerned, since Jews were not enthusiastic about being identified as such. For example, the official census of 1966 cites 60,683 Jews in Iran, but the Jewish sources put the number much higher than 70,000. The data provided by different sources, especially by those involved or interested in Iran's Jewish community affairs, differ greatly from one another.

Occupation

We do not possess a reliable source regarding the occupations of the Jews in different towns and settlements in Iran. The data varies in time and place, but one may nevertheless find similarities in the reports. We have more reliable statistics concerning the second largest community in Iran, the Jews of Shiraz

which may, to some degree, represent the Jewish occupations in other major cities – with the exception of the goldsmiths and musicians who made Shirazi Jews famous. The following was reported by Dr. Laurence Loeb, who resided in Shiraz from August 1967 through December 1968, as investigated and reported on the distribution of occupations. (See table: Occupations in Shiraz.)

Table 1. Occupations in Shiraz, 1967–1968

Occupation	Number	Percentage
Peddler	49	12.10
Cloth store	42	10.37
Goldsmith	27	6.67
Haberdasher	25	6.17
Doctor	19	4.69
Nurse, hospital worker	17	4.17
Teacher, principal	16	3.95
Engineer	12	3.46
Musician	12	2.96
Liquor seller	12	2.96
Moneylender	12	2.96
Spinner	12	2.96
Merchant of gum tragacanth	11	2.72
Druggist	9	2.22
Grocer	9	2.22
Fruit and vegetables	9	2.22
Smith	8	1.98
Mason	7	1.73
Carter	6	1.48
Office worker	6	1.48
Real estate	6	1.48
Butcher	4	0.99
Technician	4	0.99
Tailor	4	0.99
JDC worker	4	0.99
Industrial worker	4	0.99
Household goods shop	4	0.99
School janitor	4	0.99

In addition to what was reported above, Loeb found in Shiraz 41 persons who were dentists, cooks, carpenters, barbers, seed merchants, laborers, librarians, mullas, restaurant workers, bath attendants, leather tanners, photographers, beauty parlor attendants, appliance store clerks, lambswool merchants or dairy store attendants. They constituted 10.12 percent of the work force of the community. There were also 8 unemployed persons (1.98%).

Education

Modern Jewish education in Iran was in general in the hands of the Alliance Israélite Universelle (AIU) from 1898. The AIU was active only in major cities such as Teheran (from 1898), Hamadan (1900), Isfahan (1901), Shiraz (1903), Sanandaj (1903), and Kermanshah (1904). In the second decade of the 20th century it opened schools in Kashan and Yazd, and also in some small towns close to Hamadan, such as Tuyserkān, Borujerd, and Nehāvand. Parallel to the AIU schools, community schools were established in a few towns, such as Koresh

in Teheran and Koresh in Rasht. During the Pahlavi regime, some Jews also studied in non-Jewish schools.

In 1946/47, the Oẓar ha-Torah schools were opened in Teheran and other cities. Rabbi Isaac Meir Levi, a Polish Jew who had come to Iran in 1941 to organize the dispatch of parcels to rabbis and synagogues in Russia, was appointed by the Oẓar ha-Torah center in New York to establish a network of schools in Iran.

Given the great wave of immigration to Israel which swept the Jews of Iran in the 1950s, most immigrants being poor and unskilled, the economic prosperity which Iran enjoyed in the 1960s and 1970s, and the rise to wealth of a large segment of the remaining Jewish community, more attention was devoted to education. In 1977/78 there were in Teheran 11 Oẓar ha-Torah schools, 7 AIU schools, and 6 community schools, including one ORT vocational school and the Ettefāq school belonging to Iraqi Jews resident in Teheran. This picture changed drastically with the mass exodus of Jews resulting from the Islamic revolution. Prior to the Islamic Republic of Iran (= IRI) there were three Jewish schools in Shiraz and one Jewish school in each major city. By the end of the 20th century there were generally three Jewish schools in Teheran, one in Shiraz, and one in Isfahan. Most of these schools were funded and sponsored by Oẓar ha-Torah (Netzer, 1996).

Aliyah

Immigration to Israel was facilitated and accelerated through the Zionist Association in Teheran (founded in 1918) and its branches in 18 major cities. The following official statistics published by the Government of Israel show the rate of Iranian Jewish immigration to Israel (the number 3,536 below for the years 1919–1948 does not accurately reflect reality, since thousands of Iranian Jews immigrated to Israel illegally and were consequently not registered by the British Mandate or the Jewish Agency). It is believed that on the eve of independence there were about 20,000 Iranian Jews living in Israel.

Table 2. Immigration of Iranian Jews to Israel, 1919–2001

Period	Number of Immigrants
1919–1948	3,536
1948–1951	21,910
1952–1960	15,699
1961–1964	8,857
1965–1971	10,645
1972–1979	9,550
1980–1989	8,487
1990–2001	257
Total	78,941

In the past, the majority of Iranian Jews lived in Jerusalem, while at the beginning of the 21st century they were to be found primarily in Tel Aviv, Holon, Bat-Yam, Rishon le-Zion, Kefar Saba, Nes Ẓiyyonah, and Reḥovot. A smaller number chose to reside in Jerusalem, Netanyah, Haifa, Ashkelon, Ashdod, and Beersheba. Since 1948, the Jews of Iran have founded several moshavim: Agur, Amishav (now a quarter in Petaḥ Tikvah),

Avdon, Dovev, Eshbol, Givati, Givolim, Hodayah, Margali-yyot, Maslul, Melilot, Nes-Harim, Netiv ha-Shayarah, Neveh Yamin, Nogah, Pa'mei TaShaZ, Patish, Kadimah, Talmei Bilu, Zerufah, and others.

With the change of the regime and *Khomeini's rise to power, about three-quarters of Iran's 80,000 Jews left. Many immigrated to Israel and the United States, but a part preferred to settle in European countries. The official statistics of Israel show that in 2001 there were 135,200 Jews who were considered Iranian either as *olim* or as individuals one of whose parents was Iranian-Jewish. The above figure includes 51,300 who were born in Iran and 83,900 who were born in Israel. Iranian Jews in Israel became active and reached high ranks in academic life, in the socioeconomic realm, politics, and the military. Since 1955, they have had about a score of university teachers; Rabbi Ezra Zion *Melamed, professor of Talmud at the Hebrew University of Jerusalem was granted the Israel Prize. There have been several Knesset members, two chief commanders of the Air Force (General Eitan Ben-Eliyahu and General Dan Ḥaluẓ), two army chiefs of staff (Major-General Shaul *Mofaz and Major-General Dan Ḥaluẓ); one defense minister, Shaul Mofaz; one Sephardi chief rabbi (Rabbi *Bakshi Doron); and the president of the State of Israel, Moshe *Katzav.

Jewish Representation in the Majles

The Jewish representatives in the Iranian Parliament (Majles) since its inception (1907) were the following: Azizollah Simāni, a merchant (replaced by Ayatollah Behbāhni after only a few months); Dr. Loqmān Nehoray, a physician (1909–23); Shemuel Haim, a journalist (1923–26); Dr. Loqmān Nehoray (1926–43), Morād Ariyeh, a merchant (1945–56); Dr. Mussa Berāl, a pharmacologist (1956–1960), Morād Ariyeh, (1960–64), Jamshid Kashfi, a merchant (1964–68), Lotfollah Hay, a merchant (1968–75), and Yosef Cohen, a lawyer (1975–79).

Iran-Israel Relations

Relations between the Yishuv and Iran began in 1942, when the Jewish Agency opened a Palestine Office in Teheran, with the aim of assisting the Jewish-Polish refugees from Russia and arranging for their immigration to the Land of Israel. This office continued to function until 1979. Iran voted, together with the Muslim and Arab states in the UN against the partition of Palestine (November 29, 1947). In the Israel-Arab conflict, Iran sided with the Arabs. However, Iran's need for socioeconomic reforms drove it to establish closer relations with the West, especially with the U.S. Consequently, after the Shah's trip to the U.S. in 1949, Iran recognized Israel de-facto in March 1950. The relations between the two countries remained "discreetly unofficial," even though diplomatic missions were operating in Teheran and Tel Aviv. These continued to function until early 1979. Practical relations between the two states existed in a variety of fields such as trade, export-import, regular El-Al flights to Teheran, supply of Iranian oil to Israel, and student exchanges. They developed especially strong relations in three major fields: agriculture, medicine, and the military. Israeli experts assisted Iran in various development projects such as the

Qazvin project in the 1960s. The Six-Day War is regarded as the high point of friendly Israel-Iran relations, particularly in the area of the Intelligence Service. The Shah and his military were surprised by the swift Israeli victory over *Syria, *Jordan, and *Egypt. Likewise, the Israeli setback in the Yom Kippur War (1973) induced the Shah's pragmatic diplomacy to develop amicable relations with Anwar *Sadat of Egypt. It has been said that it was this policy of the Shah that encouraged Sadat to make peace with Israel. With the coming to power of Khomeini in February 1979, the friendly relations between the two states changed into strong enmity. In 2006 the growing Iranian nuclear threat and President Ahmadinejad's declaration that Israel should be wiped off the face of the earth led to increasing talk of a preemptive military strike against Iran.

Jews in the Last Year of the Pahlavi Regime

The economic boom of the 1960s and the 1970s in Iran benefited the Jews too. Many Jews became rich, which enabled them to provide higher education for their children. In 1978 there were about 80,000 Jews in the country, constituting one-quarter of one percent of the general population. Of these Jews, 10 percent were very rich, the same percentage were poor (aided by the Joint Distribution Committee) and the rest were classified as from middle class to rich. Approximately, 70 out of 4,000 academicians teaching at Iran's universities were Jews; 600 Jewish physicians constituted six percent of the country's medical doctors. There were 4,000 Jewish students studying in all the universities, representing four percent of the total number of students. Never in their history were the Jews of Iran elevated to such a degree of affluence, education, and professionally as they were in the last decade of the Shah's regime. All this changed with the emergence of the Islamic Republic of Iran (IRI).

Iranian Jews in the IRI

On January 16, 1979, the Shah was forced to leave Iran. Two weeks later Ayatollah Khomeini entered Teheran to assume power, after having lived in exile for almost 15 years. On February 11, 1979, for the first time in the history of Iran, the government of the Ayatollahs came into being, and the kingdom of Iran turned into the Islamic Republic of Iran (IRI). This political phenomenon has significantly changed the demographic map of the Jewish community of Iran. By the end of 20th century – that is to say, at the end of 20 years of the Islamic regime in Iran – taking into consideration the birthrate, there were about 30,000 Jews in Iran, of which 25,000 lived in Teheran, 3,000 in Shiraz, 1,500 in Isfahan, while the rest were scattered in other cities and settlements. In the IRI, Jews as well as other religious minorities were regarded as the supporters of the royal regime, because it was under the Pahlavi dynasty that they had enjoyed prosperity and some measure of relative freedom. When the revolution broke out, Israel-Iran relations and the diplomatic, economic, and military cooperation between the countries were markedly strong. Consequently the situation of the Jews became precarious, because of the anti-Zionist attitude and character of the revolution. The Jews of Iran were accused of being the supporters of the Shah, Israel,

the Mossad, the CIA and the U.S. All were defined as "Satan." A few wealthy Jews, among them the former head of the Jewish Community of Teheran, Habib Elghanian, were tried by the revolutionary courts and sentenced to death (May 9, 1979). Jewish-owned property worth at least one billion dollars was confiscated by the regime. This alarming situation caused many Jews to leave Iran.

Under the Islamic Republic of Iran, the following persons represented the Jewish community in the Majles: Eshāq Farahmandpour, a teacher (a few months in 1979 and then Jews had no representative until 1982); Khosrow Nāqi, a lawyer (1982–84); Dr. Manouchehr Nikruz (1984–92); Dr. Kuros Keyvāni (1992–96); Dr. Manouchehr Elyāsi (1996–2000); Moris Mo'tamed, an engineer (2000–).

Iranian Jews Abroad

It is estimated that during the first 10 years of the Islamic regime about 60,000 Jews left Iran; the rest, some 20,000, remained in Teheran, Shiraz, Isfahan, and other provincial cities. Of the 60,000 Jews who emigrated, about 35,000 preferred to immigrate to the U.S.; some 20,000 left for Israel, and the remaining 5,000 chose to live in Europe, mainly in England, France, Germany, Italy, or Switzerland. The spread of the Iranian Jews in the U.S. provides us with the following demographic map: of the total 35,000, some 25,000 live in California, of whom about 20,000 prefer to dwell in Los Angeles; 8,000 Iranian Jews live in the city of New York and on Long Island; the remaining 2,000 live in other cities, mainly in Boston, Baltimore, Washington, Detroit, or Chicago.

In every city abroad, the Jews of Iran tried to establish themselves in their own newly founded organizations and synagogues. In Los Angeles alone, they set up more than 40 organizations, 10 synagogues, about 6 magazines, and one television station. The Iranian Jewish community in the U.S. is, for the most part, well-educated and financially stable. Education is one of the strongest values stressed by the Iranian Jewish community, which considers itself the cream of all immigrant groups in the U.S. The Iranian Jews brought with them money, doctors, engineers, upper-class educated businessmen, and professionals in almost all fields. Many of them became wealthy in their new homes in the U.S., Europe, and Israel.

[Amnon Netzer (2ⁿᵈ ed.)]

Musical Tradition

The musical patrimony of the Iranian Jews contains several different styles. The nature of their non-synagogal music, and the general approach to music and the way it is performed, are identical with those of their non-Jewish neighbors. The attachment to poetry and music which has been characteristic of Iranian culture from its earliest days is also found among the Jews, with similar attention devoted to the cultivation of these arts, the special connection of music with the expressions of sorrow, meditation, and mystical exaltation, and the same ideal of voice color and voice production. Some of these characteristics have of course been transposed in order to suit the specific conditions of a Jewish culture. The tendency to-

ward mysticism finds its fullest expression in a predilection for the *Zohar, which is recited with a special musical intonation. The great importance attached to lamentations for the dead, which constitute a rich and interesting repertoire, may be analogous with the *ta'ziya-t* of the Persian Shi'ites, which are a kind of vernacular religious drama commemorating the tragedies which marked the birth of the Shi'a sect.

Notwithstanding some analogies in style and form, the Iranian influence is, however, hardly traceable in the Iranian synagogal tradition. In the structure of the melodies of free rhythmical or recitative character, A.Z. *Idelsohn found a strong resemblance to the synagogal tradition of the Yemenite Jews. Their tradition of Pentateuch cantillation is among the more archaic ones, being centered almost exclusively on the major divisive accents (see *Masoretic Accents, Musical Rendition). On the other hand, most of the metrical *piyyutim*, mainly those of the High Holidays, are sung to melodies common to all Near Eastern, i.e. "Eastern Sephardi," communities.

In the paraliturgical and secular domain, the poetry and music of the Iranian Jews are simply a part of the general culture, with a few exceptions. Among these are the works of non-Persian Jewish poets, such as Israel *Najara, of which a Judeo-Persian translation is in wide use, and which are sung on such occasions as *se'udah shlishit* and *bakkashot* (among Persians Jews, contrary to other communities, these are performed at home and not in the synagogue).

The most impressive production was in the domain of epic songs. Here, the Persian Jews closely followed the Persian model in language, meter, and musical rendition, though the Jewish poets and musicians naturally sang of the achievements and history of their own people. The chief representative of epic poetry is *Shahin, a Persian Jewish poet of the 14ᵗʰ century. His poetic paraphrase of the narrative parts of the Pentateuch, called in brief *Shāhīn*, is sung in public on Sabbath afternoons and at festive gatherings by specialized "epic singers." The public, although knowing every word by memory, expresses its enthusiasm anew each time. The *Shahīn* also became a favorite in Bukhara, which was considered a cultural province of Persian Jewry. Shahin himself and after him other poets, especially 'Amrani, wrote other epic songs on Jewish topics which also attained great popularity.

Another branch of poetry, but one of a more folkloristic nature, consists of the songs which are improvised in an impromptu competition of poets. These are performed at family celebrations, after wine-drinking bouts, and the competition between the two singer-poets adds to the atmosphere of good cheer. (For the music of the Kurdistan region of Iran see *Kurdistan.)

IRAQ, country in S.W. Asia (for period prior to 634 C.E. see *Mesopotamia and *Babylonia).

The Diaspora of Iraq was one of the most ancient of the Jewish people. The Jews came to Babylon after the destruction of the First Temple (586 B.C.E.), or even 10 years earlier, with the exile of Jehoiachin. They integrated into their land of captivity and took part in its economic and cultural development.

The contribution of Babylonian Jewry to molding the spirit and character of the Jewish people in the Diaspora was channeled through its famous academies (yeshivot) of *Sura and *Pumpedita. There, the Babylonian Talmud was composed and sealed. The heads of those academies functioned as the leaders of Babylonian Jewry and of other Jews. They continued to do so until the conquest of the country by the *Mongols in 1258 C.E. The decline of the Jewish communities of *Baghdad and *Basra continued for many generations. Only at the end of the 18th and the beginning of the 19th centuries did Baghdad begin to recover economically and culturally and start to function again as a religious center for the Jewish communities of *Kurdistan, *Persia, *India, and *Aden.

Under Islamic Rule

The Jews of Babylonia, who had suffered from persecutions at the end of the rule of the Persian Sasanid dynasty, welcomed the Arab conquest of the land, which became known as Iraq.

The legal status of the Jews, as *dhimmīs, was defined by the *Shariʿa* (the Islamic Law), under which they had certain rights including the right to worship and to administer their own religious law. On the other hand they were required to pay the *jizya* (poll tax) in exchange for protection by the Islamic rulers. They were also exempted from serving in the Muslim armies.

UNDER THE UMAYYAD CALIPHATE (661–750). The extant information on the attitude of the caliphs of the *Umayyad dynasty (661–750) toward the Jews is very limited. During this period the Jews suffered from the political disputes and controversies which took place in Iraq. In the times of the caliph Omar II ibn ʿAbd al-Azīz (717–720) the Jews suffered, with other *dhimmīs*, intolerance toward their religion. He forbade the governors to appoint members of non-Muslims as tax collectors and scribes; he also prohibited the *dhimmīs* from dressing like Muslims and sought to degrade them socially (The Covenant of *Omar).

UNDER THE ABBASID CALIPHATE (750–1258). The situation of the Jews during the *Abbasid period was not stable. Some of the rulers were tolerant to them while others oppressed them variously. The caliph Hārūn al-Rashīd (786–809) persecuted the Jews and sought to humiliate them. He imposed heavy taxes and discriminated against them in regard to their dress, commerce, and other matters. The attitude changed under his son, the caliph al-Maʾmūn (813–833), who was a devotee of the sciences. At the beginning of his rule he revealed a tolerant attitude toward the Jews, but at its end he changed this policy for the worse as a result of his advisers' influence. During the reign of the caliph al-Mutawakkil (847–861) the Jewish situation was severely aggravated. This caliph issued, in 850, decrees which degraded the Jews and other non-Muslims. He instituted a yellow head covering and, for the servants and the poor, a yellow patch to be prominently worn on their clothes, on the chest or on the back. Four years later he added some new decrees on the color of clothes and on women's clothing. Various restrictions concerned with living quarters, taxes, and other matters are also attributed to him (see Covenant of *Omar). It may be assumed that not all these decrees were applied. In spite of all the restrictions, many Jews adapted themselves to the values of the Muslim culture. They distinguished themselves as physicians and writers, played important roles in the economic life and held government positions. The fact that it was necessary from time to time to renew the decrees on clothing proves that they were not generally enforced.

During the terms of office of the *gaon* *Aharon b. Joseph ha-Cohen Sargado, Baghdad was conquered by the Buwayhid emirs who ruled Iraq for more than a century (945–1055). This Persian Shiʾite dynasty was extremely fanatic and cruelly persecuted the Sunni Muslims, the Jews, and the Christians. They abolished the former rights of the exilarch to collect the poll tax, and the Jews were compelled to pay it to Muslim collectors who oppressed them severely. The situation of the Jews improved during the rule of the *Seljuks (1055–1150). After the

Seljuks the Abbasid caliphs restored their power, and a change for the worse occurred during the reign of caliph al-Muqtadī (1075–1094), who adopted a harsh attitude toward both the Jews and the Christians. He imposed heavy taxes upon them and compelled them to live according the discriminatory decrees issued by the caliph al-Mutwwakil. After him the situation of the Jews improved and their former autonomy was restored.

*Baghdad was founded by the caliph al-Manṣūr (754–775) and became the capital of the Abbasids. The Jewish community begin to expand until it became the largest one in Iraq and the seat of the *exilarch.

Under Muslim rule the academies of *Sura and *Pumbedita began to prosper. The heads of these academies were known, from then on, as *geonim. The golden age of the *geonim* parallels the days of splendor of the Abbasid caliphate.

According to the traveler *Benjamin of Tudela, who visited Iraq in about 1170, the caliph was most favorable to the Jews; there were many Jewish officials in his service. The traveler R. *Pethahiah of Regensburg, who visited Iraq at the beginning of the reign of the caliph al-Nāṣir (1180–1225) greatly admired the erudition of the Jews of Babylonia: "… Babylonia is an entirely different world, their occupation consisting of Torah study and the fear of heaven, even the Ishmaelites are trustworthy … in Babylon there are 30 synagogues in addition to that of Daniel …" (*Sibbuv Rabbi Petahyah* (1905), 8, 24).

After the death of R. Hai the offices of the head of the academy (*rosh yeshivah*) and the exilarch (*resh galuta*) were both held by *Hezekiah b. David (1038–1058).

The academies of Sura and Pumbedita had been transferred to Baghdad during the 9th and the 10th century. In the middle of the 11th century they ceased to exist and were replaced by the Academy of Baghdad.

Under Mongol Rule (1258–1335)

Following *Mongols' occupation of Iraq in 1258, which caused total destruction and disaster all over the south and the center of the land, the Jewish communities of Baghdad and Basra did not recover for many generations. The attitude of the new rulers toward the Jews at the beginning of their reign changed for the better. Some of them advanced to high positions of state. The first of these was *Saʿd al-Dawla who was appointed a physician of the sultan Arghun Khan (1284–91) and then as a finance minister of the Il-khan kingdom. However, in 1291, when the sultan was in his sickbed, Saʿd al-Dawla was executed. The same fate was met 27 years later by another Jewish personality, *Rashid al-Dawla (1247–1318), who was a physician, capable financier, historian, and philosopher. He attained high rank and was appointed as physician of the khan and the chief minister (vizir); his enemies accused him of having poisoned the khan and had him executed. The situation of the Jews began to worsen when Ghazan Khan (1295–1304) converted to Islam. At that time a number of Jews were compelled to follow suit. In 1333 and 1334 the synagogues of Baghdad were destroyed, Jewish property was looted and, again, a number of Jews converted to Islam.

The occupation of the country by Tamerlane in 1393 caused destruction of a large part of Baghdad and other towns. The Baghdad community did not recover until the end of the 18th and the beginning of the 19th century.

Under Ottoman Rule

The Ottomans occupied Baghdad in 1534; their rule continued until 1917, except for 15 years (1623–38) when the Persians ruled the country and dealt very harshly with the Jews.

The *shari'a* (the Islamic Code) was the law of the *Ottoman Empire, so the *dhimmīs* were treated according to this religious code. Jews suffered from minor discrimination under the Ottomans, and the Iraqi Jews, in general, lived under a tolerant regime. They paid a moderate poll tax and enjoyed relative freedom. Nevertheless, anti-Jewish crime or agitation on a petty scale was ready to appear. At times the Turkish governors oppressed the Jews and the poll tax was collected with many abuses by the highest bidder.

From 1830 to 1917, 42 Turkish valis governed Iraq. Mustafa Nuri Pasha (1860–61) tried to confiscate the shrine of the prophet *Ezekiel (traditionally considered buried in the village of Kifil) from the Jews; and Mustafa ʿAsim Pasha (1887–89) made false accusations against the Jews. In the time of the last vali, Khalil Pasha, 17 Jewish notables of Baghdad were accused of having engaged in illegal commerce. They were cruelly tortured and then executed. Conversely, there were some enlightened officials who restored order and brought peace to the country. The most prominent of these were Midhat Pasha (1869–72) and Hüseyin Nazim Pasha (1910–11). During their rule the Jews enjoyed security and tranquility.

DEMOGRAPHIC CHANGES. The Jewish population of Baghdad in 1824 was estimated at about 1,500 Jewish families. In 1831 it was reported that about 7,000 Jews were dwelling in a special quarter of the city and that they were employed in various governmental jobs. In 1845 the population of Baghdad was estimated at about 16,000 Jews, 40,000 Muslims, and 4,000 Christians. The traveler R. *Benjamin II (1848) put the number of the Jewish families in Baghdad at 3,000 with nine synagogues.

Scores of small Jewish communities were scattered throughout northern Iraq. The largest was in Mosul, which in 1848 had about 450 Jewish families. The figure of 3,000 Jews in this city remained stable until approximately the beginning the 20th century. The decline of the economic standing of Mosul seems to have contributed to the departure of Jews for Baghdad. According to official figures, there were in 1919 in all the northern districts (Mosul, Arbil, Suleimania, and Kirkuk) 13,835 Jews. According to the census of 1947 there were in the northern districts 19,767 Jews.

The main demographic changes occurred from the mid-19th century on. A considerable internal emigration from north to south followed the opening of the Suez-Canal (1869), which shifted the commercial pathway from the overland route (from Europe to India via *Aleppo in *Syria and Mosul in northern Iraq) to the naval route, thus favoring the Iraqi port of Basra. Economic conditions in the north begin to deteriorate. The

Jews, like others, started to move southward. North to south emigration was also encouraged by changes introduced during the reign of the Vali Midhat Pasha (1869–72), who succeeded in pacifying the tribes of central and southern Iraq and protecting the cities from their attacks. The two small Jewish communities in southern Iraq (Basra and Hilla) had grown larger, and additional communities settled in 'Amara, Qal'at Salih. 'Ali al-Gharbi, and Musyab. The Jewish movement to the south, however, declined after World War I, except for Basra.

The Jewish community of Baghdad continued to increase. In the year 1860 there lived in Baghdad about 20,000 Jews among 70,000 non-Jews. In 1889, they were estimated at about 25,000 among a population of 100,000 Muslims and 5,000 Christians. An account by the British Consul in Baghdad, in February 1910 stated, "The Jewish community at Baghdad is, after that of Salonica, the most numerous, important, and prosperous in Turkey." At the beginning of the 20th century the Jewish community of Baghdad numbered about 45,000, In 1919 the British put the figures of Iraqi Jews at 87,488 among a total population of 2,849,283; that is to say 3.1%. In the Baghdad district there were about 50,000 Jews in a total of 250,000 inhabitants. Official Iraqi statistics, based on the 1947 census, put the total number of Iraqi Jews at 118,000 or 2.6% of the total population of 4.5 million. In spite of this official census, some studies suggest that the real number of Jews in the late 1940s was higher. During the years 1948–51, 123,500 Jews immigrated to Israel, with several thousand others leaving during this period for other countries. About 6,000 Jews remained in Iraq after the mass immigration. This led to the conclusion that the total number of Jews in Iraq in the late 1940s was about 135,000.

Major Jewish Settlements in Iraq, based on the official census of 1947

Provinces	1920	1932	1947
Amara	3,000	2,540	2,145
Baghdad	50,300	42,799	76,825
Basra	6,928	7,260	9,388
Diyala	1,689	2,252	2,850
Diwaniya	6,530	531	809
Dulaym	2,600	897	1,661
Hilla	1,065	1,000	1,893
Irbil	4,800	3,090	c. 4,226
Karbala	—	—	—
Kirkuk	1,400	2,633	c. 4,025
Kut	381	346	359
Mosul	7,635	7,537	c. 8,696
Muntafiq	160	555	644
Sulaimaniya	1,000	1,343	c. 2,256
Total	87,488	72,783	115,777

SOCIAL CHANGE. The reforms in the Ottoman Empire that took place in the second half of the 19th century (*Tanzimat*) improved the legal status of the Jews. Theoretically they became equal in rights and obligations. The traditional poll tax (*jizya*), which symbolized the inferiority of the *dhimmis* and their subject status, was rescinded. The fiscal change was,

however, cosmetic in a sense, since the *jizya* was replaced in 1855 by a new levy, *Bedel-i 'Askari* or military substitution tax, which exempted the non-Muslims from military service, for which they had become technically liable with the granting of civil equality. In 1909, shortly after the Young Turks' coup, this tax was canceled, and about 100 young Baghdadi Jews applied for admission to officers training school.

When World War I broke out, several thousands of Iraqi Jews were drafted into the Ottoman Army and sent to distant fronts, from which many of them did not return.

The most far-reaching of the reforms came in the reorganization of the millet all over the Empire. In Baghdad the post of the *Nasi* (the leader of the Jewish community) was suppressed in 1849, and the community was recognized as a millet. Its leadership was vested in a religious personality (the ḥakham bashi), "the chief rabbi." Later on, in 1931, under the British Mandate a new law was enacted to replace the Ottoman one. This law permitted the vesting of the leadership of Baghdad's Jewish community in a secular personality. Relying upon this law, it was possible in 1949 to replace Chief Rabbi *Sassoon Kadoorie with Heskel Shemtov.

As a result of the improvement in their civil status deriving from the reforms, the Jews were appointed to positions of judges, lecturers in the universities, officials in governmental service, and police officers. They also were appointed as members of city councils.

In 1869, when Midhat Pasha carried out the vilayet system, he appointed a leading Jewish notable, Menahem *Daniel, as council member of the Baghdad vilayet (*Majlis al-Idāra*). Daniel was also elected to parliament, which was opened in 1877 in Istanbul. This was a precedent which was followed in 1908 by the election of Heskel *Sassoon (1860–1932) to parliament.

The changes in the status of the *dhimmis* did not sit well with the traditionally minded Muslims. Anti-Christian violence erupted in many places in the Middle East, but not in Iraq. However, when the Young Turks tried to bring into force their notions of liberty, equality, and justice in Iraq, the Muslims greeted them with shock and dismay. They reacted on October 15, 1908, with violence against the Jews of Baghdad, which resulted in 40 wounded Jews. This event disabused the Jews of Baghdad of any illusions of equality.

Education and Literature

RELIGIOUS EDUCATION. In 1832 Midrash Talmud Torah was founded in Baghdad, which continued its activity until the mass immigration in the mid-20th century. In 1840 a religious academy, "Yeshivat Bet Zilkha," was founded after 100 years during which there was no such institution. This yeshivah educated rabbis for the Iraqi communities and those of its neighboring countries.

The founding of modern schools accelerated the secular trend in education among Iraqi Jews. The role of the *bet midrash* and the yeshivah was steadily undermined and became insignificant by the 1940s.

SECULAR EDUCATION. The first school of the *Alliance

Israélite Universelle for boys was founded in Baghdad in 1865 and for girls in 1883. More elementary schools were later opened in the provincial towns of Iraq. Those schools introduced modern methods of teaching and included foreign languages in the curriculum alongside Arabic, French, English, and Turkish. It created a real gap between the educational level of the Jews and that of the non-Jews. It qualified the Jews to be businessmen, clerks, and employees in the governmental offices and banks. This gap prevailed until the mass emigration and aroused the jealousy of the non-Jews in the country, causing friction between the Jews and their neighbors.

By the 1920s numerous schools had been established, mostly by Jewish philanthropists, and maintained by both Jewish community funds and regular contributions by the Iraqi government.

The number of the schools supervised by the Jewish community in Baghdad continued to rise, reaching 20 at the time of the mass exodus of 1950–51. In addition to the regular schools, a number of other institutes were established, including a school for the blind, orphanages, a music school, vocational centers, and charitable organizations.

Jewish students began attending universities in Iraq and abroad after World War I, and government schools were open to Jews as well as to other religious and ethnic minorities. In the 1930s there was no restriction on the number of Jewish students in governmental schools and colleges. Later, in the 1940s, a preferential quota introduced for scientific and medical colleges affected Jews' chances of entering these colleges.

The liberal and secular trend brought about a stronger association of Iraqi Jews and Arab culture and led Jews to take a more active role in public and cultural life. A considerable number of prominent Jewish writers and poets emerged, whose works in Arabic were both well known and well regarded; among them were the poet and historian Meir *Basri (1911–) and the poet Anwar *Shaʿul (1904–1984). Jewish journalists founded a number of newspapers and magazines in Arabic, such as *al-Misbah* (1924–1929) and *al-Hasid* (1929–1937). Jewish journalists contributed to the Iraqi press and occasionally wrote for the Arabic press outside Iraq.

From the 1920s a number of Jews were also prominent in the Iraqi theater and performed in Arabic. Many Jews in Iraq distinguished themselves in music as singers, composers, and players of traditional instruments.

Some works by the Jewish intelligentsia were Arabic in essence and expressed the cultural life of the country.

[Abraham Ben-Yaacob and Hayyim J. Cohen / Nissim Kazzaz (2ⁿᵈ ed.)]

British Occupation and Mandate (1917–1932)
The Jews under the British occupation (1917–21) enjoyed full rights of equality and freedom as well as a feeling of security. The majority of the Jews considered themselves as British citizens. Some grew rich, others were employed in the British administration, especially in Baghdad and Basra. They were interested in the continuation of British rule, and they expressed

this in 1918, only a week after the armistice went into effect, when the Jewish community of Baghdad presented a petition to the civil commissioner of Baghdad, asking him to make them British subjects. Twice again, in 1919 and 1920, the Jews of Iraq appealed to the British high commissioner and asked him not to allow an Arab government to come to power or at least to grant British citizenship to the Jewish community en masse. The British authorities rejected this request, and the Jews were eventually appeased by personal assurances that ample guaranties would be afforded. However, when in April 1930 the League of Nations decided to adopt the mandate, the Jewish leaders decided to support the establishment of an Iraqi state under the British Mandate.

The Jews were given further assurances by Amir Faysal (1883–1933), who was the leading British candidate for the Iraqi throne. The new monarch-to-be made numerous speeches, including one before the Jewish community of Baghdad on July 18, 1921, one month before his coronation, in which he emphasized the equality of all Iraqis, irrespective of religion.

King Faysal continued to maintain cordial personal relations with individual members of the Jewish elite through his 12-year reign. As his first finance minister, he appointed Sir Sasson *Heskel, the only Jew who ever held cabinet rank in Iraq. Four members represented the Jews in the Iraqi parliament. In 1946 their number increased to six. In the Senate Menaham Salih *Daniel represented them and after him his son, Ezra *Daniel.

Because of their generally superior educational qualifications, Jews and Christians could be found in the civil service during the first decade of the kingdom while it was still under the British Mandate. However, as early as 1921, a strong Arab nationalist element rejected the employment of foreigners and non-Muslims. This opposition intensified after Iraq had gained full independence in 1932 and became even stronger after the death of Faysal the following year.

ZIONIST ACTIVITY DURING THE BRITISH MANDATE. Zionist activity resumed in Iraq about a year after World War I ended; though still unorganized, serious fundraising was undertaken through the initiatives of a few individuals. Despite the substantial sums donated by a few wealthy philanthropists for development projects in the Holy Land, most of the Jewish mercantile elite of Iraq remained unattracted by Zionism. The first organized Zionist group in the postwar period included a schoolteacher, a law student, and a police officer. In 1920 they founded an association in Baghdad with the innocuous name of "Jamʿiyya Adabiyya Isrāʾiliyya" ("Jewish Literary Society"), which published a short-lived journal in Hebrew and Judeo-Arabic, *Yeshurun*. In early 1921, a group within the Jewish Literary Society founded a separate Zionist society, "Al-Jamʿiyya al-Sahyuniyya li-Bilād al-Rāfidayn" ("The Mesopotamian Zionist Society) under the presidency of Aaron Sassoon b. Eliahu *Nahum, who was also known as "ha-Moreh" (the teacher). The society received a permit from the government. Ha-Moreh was very active together with his deputy, the lawyer Joseph Elias

Gabbai, and others. The organization's headquarters were in Baghdad and branches existed in Basra, Khanaqin, Amara and Arbil. Fundraising was the principal object of the Zionists in Iraq during the 1920s. Emissaries from the Holy Land were well received and helped by the authorities of the British Mandate and senior Iraqi officials. The Zionists enjoyed considerable sympathy from the poorer Jewish masses, who demonstrated their support in vocal public gatherings, which offended Arab public opinion, but failed to attract any influential community figures. The unrestrained behavior of the Zionists caused anxiety among members of the upper class such as Menahem Salih Daniel, a leading Baghdadi Jewish notable and later, as noted above, a senator in the Iraqi Senate. In reacting to the request for help in promoting Zionist activities in Iraq, he foresaw the danger to the community because of the political style the Zionists endorsed. Zionist ideology was attacked by another prominent figure, Joseph al-*Kabir, a Baghdadi Jewish lawyer, in a letter published in the *Iraq Times* in November 1938.

British officials and the native Arab authorities also warned both the Zionists and the visiting representative of the movement against public activities and indiscreet statements. The nationalist press was more emphatic in this regard. Therefore, even though no actual ban was imposed upon their activities in Iraq until 1929, the need to maintain a low profile increased when the Zionist committee found it could not renew its permit in 1922, although it was allowed to continue operating unofficially until 1929.

In 1923 a "Keren Hayesod" committee was founded in Baghdad; contributions to the national funds passed through this committee. The size of contributions increased during the early years of British rule (1920–1924), but declined steadily afterwards, and Iraqi Jews were not represented at any international Zionist Congress after 1927. Evidence also shows that Congress representatives of the community before that date were actually foreigners who had succeeded in selling in Iraq the number of shekels required for representation by Zionist Congress rulers.

Short-lived Zionist societies were established at the end of the British Mandate, such as "Agudat Aḥiʾever" (1929), whose aim was to spread the Hebrew book; the "Maccabi" sport society (1929–1930); "Histadrut ha-Noʿar ha-Ivri" (1929) and others. Hebrew teachers from the Holy Land were invited to teach Hebrew and Jewish history.

The visit of Sir Alfred Mond (a well-known Zionist) to Baghdad, in February 1928, marked the first anti-Zionist demonstration in the city. Some Jews who passed by were beaten.

The Palestine disturbances, which erupted in August 1929, aroused a widespread and highly vocal reaction in Iraq. The press published exaggerated reports placing the Arab casualties in the thousands. A leading national paper claimed that the Jews had thrown a bomb into a mosque, killing 70 worshipers at Friday prayers. On August 30 some 10,000 Arabs gathered in a Baghdad mosque, where prayers were recited for the victims of British and Zionist aggression. After the speeches, the crowd poured out into the streets for a demonstration march, which turned into violent clashes with the police. Some of the speakers did not differentiate between Zionists and other Iraqi Jews.

From that time the Iraqi government began to persecute Zionism, Palestinian Jewish teachers were expelled. In 1935 ha-Moreh was arrested and forced to leave Iraq for Palestine. After that there was no legal Zionist activity in Iraq.

Fascism and Antisemitism (1933–1941)

Iraqi Jews did not know the kind of *antisemitism that prevailed in some Christian states of Europe. The first attempt to copy modern European antisemitic libels was made in 1924 by Sādiq Rasūl al-Qādirī, a former officer in the White Russian Army. He published his views, particularly that of worldwide conspiracy, in a Baghdadi newspaper. The Jewish response in its own weekly newspaper, *al-Misbah*, compelled al-Qādirī to apologize, although he later published his antisemitic memoirs.

At that time the press drew a clear dividing line between Judaism and Zionism. This line became blurred in the 1930s, along with the demand to remove Jews from the genealogical tree of the Semitic peoples. This anti-Jewish trend coincided with Faysal's death in 1933, which brought about a noticeable change for the Jewish community. His death also came at the same time as the Assyrian massacre, which created a climate of insecurity among the minorities. Iraqi Jewry at that time had been subject to threats and invectives emanating not only from extremist elements, but also from official state institutions as well. Dr. Sāmī Shawkat, a high official in the Ministry of Education in the pre-war years and for a while its director general, was the head of "al-Futuwwa," an imitation of Hitler's Youth. In one of his addresses, "The Profession of Death," he called on Iraqi youth to adopt the way of life of Nazi Fascists. In another speech he branded the Jews as the enemy from within, who should be treated accordingly. In another, he praised Hitler and Mussolini for eradicating their internal enemies (the Jews). Syrian and Palestinian teachers often supported Shawkat in his preaching.

The German ambassador, Dr. F. Grobba, distributed funds and Nazi films, books, and pamphlets in the capital of Iraq, mostly sponsoring the anti-British and the nationalists. Grobba also serialized Hitler's book *Mein Kampf* in a daily newspaper. He and his German cadre maintained a great influence upon the leadership of the state and upon many classes of the Iraqi people, especially through the directors of the Ministry of Education.

The first anti-Jewish act occurred in September 1934, when 10 Jews were dismissed from their posts in the Ministry of Economics and Communications. From then on an unofficial quota was fixed for the number of Jews to be appointed to the civil service.

Pro-Palestinian, anti-British, anti-Jewish, and anti-Zionist sentiments rose to new heights in Iraq in 1936. The Arab general strike and the revolt, which erupted in Palestine that year, gave the conflict a new centrality in Arab politics. The atmosphere in Baghdad became highly charged. The Committee for the Defense of Palestine circulated anti-

Jewish pamphlets. Over a four-week period, extending from mid-September to mid-October, three Jews were murdered in Baghdad and in Basra. A bomb, which however failed to explode, was thrown into a Baghdadi synagogue on Yom Kippur (September 27). Several other bombs were thrown at Jewish clubs, and street gangs roughed up a number of Jews.

The president of the Baghdadi Jewish community, Rabbi Sassoon *Kadoorie, who was himself a staunch anti-Zionist, issued a public statement, in response to a demand from the national press, affirming loyalty to the Arab cause in Palestine and dissociating Iraqi Jewry from Zionism. This did not bring about any real improvement in the situation and, in August 1937, incidents against the Jews were renewed, fostered then and later by Syrians and Palestinians who had settled in Iraq.

THE ANTI-JEWISH POGROM ON JUNE 1–2, 1941 – "AL-FARHUD." On June 1, the first day of Shavuʿot, which in Iraq was traditionally marked by joyous pilgrimages to the tomb of holy men and visits of friends and relatives, the Hashemite regent, ʿAbd al-Ilāh, returned to the capital from his exile in Transjordan. A festive crowd of Jews crossed over the west bank of the Tigris River to welcome the returning prince. On the way back, a group of soldiers, who were soon joined by civilians, turned on the Jews and attacked them, killing one and injuring others. Anti-Jewish riots soon spread throughout the city, especially on the east bank of the Tigris, where most of the Jews lived. By nightfall, a major pogrom was under way, led by soldiers and paramilitary youth gangs, followed by a mob. The rampage of murder and plunder in the Jewish neighborhoods and business districts continued until the afternoon of the following day, when the regent finally gave orders for the police to fire upon the rioters and Kurdish troops were brought in to maintain order.

In the "Farhud," 179 Jews of both sexes and all ages were killed, 242 children were left orphans, and 586 businesses were looted, 911 buildings housing more than 12,000 people were pillaged. The total property loss was estimated by the Jewish community's own investigating committee to be approximately 680,000 pounds.

The "Farhud" dramatically undermined the confidence of all Iraqi Jewry and, like the Assyrian massacres of 1933, had a highly unsettling effect upon all the Iraqi minorities. Nevertheless, many Jews tried to convince themselves that the worst was over. A factor in this was the commercial boom during the war, of which the Jewish business community was the prime beneficiary. Another factor was the tranquility which prevailed during the next years of the war. But the shadow of the "Farhud" continued to hover for years.

The pogrom caused a split between the youth of the Jewish community and its traditional leadership. The new generation turned to two separate directions: the Communist and the Zionist movements, the activity of both being underground.

The Jewish Youth Between Zionism and Communism

IN THE COMMUNIST PARTY. The Communist underground was joined by some young Jewish intellectuals who believed that by changing the regime of the state salvation would come to them as a minority. During the 1940s they played an important part in organizing demonstrations and anti-government activities. Two of them reached the top ranks of the party and were hanged in 1949. In 1946 ʿUṣbat Mukāfaḥat al-Ṣahyūniyya' (the Anti-Zionist League) was authorized by the Iraqi government. This League succeeded in attracting many intellectuals. Its meetings were well attended and its daily newspaper, 'al-ʾUsba', was widely read. The League soon established itself as an outspoken representative of the Iraqi Jewish community on the issue of Palestine. It distinguished between Judaism and Zionism, terming the latter a "colonialist phenomenon." In June 1946 the League organized a large demonstration in Baghdad against "the injustice in Palestine." Three months after granting permission, the authorities banned 'al-ʾUsba' and closed it. Its leaders were arrested and sentenced to various terms of imprisonment.

The role of Jewish communists was visible in the daily demonstrations of February 1948, which erupted against the Portsmouth Agreement, endangered the regime, and brought down the government. The Jewish communists succeeded in convincing many Jews, including the leadership of the Jewish community, to participate in the demonstrations. By their behavior they stirred the anger of the government, which removed its protection from its Jewish subjects and began to display an official antisemitic policy.

THE ZIONIST UNDERGROUND. The Zionist Movement renewed its activity in March 1942 by forming the youth organization called Tenuʾat he-Ḥalutz (the Pioneer Movement) and paramilitary youth, Haganah, among Iraqi Jews. Contrary to the Communist underground, the Zionists did not work against the regime. They concentrated on teaching Hebrew and educating the young generation to Zionism and pioneering. A main purpose was to convince the Jews, mainly the youth, to immigrate to Erez Israel.

The ranks of the Zionist movement in Iraq increased when World War II was over, and the Iraqi press began to address the Palestine question. The Zionist underground organizations in Iraq, despite some crises, were flooded, from 1945 until 1951, with requests for joining. The most dangerous crisis was that of October 1949, which nearly wiped out the Zionist movement in Iraq. The Iraqi authorities arrested about 50 Jews who were accused of Zionism and court-martialed. The second crisis was that of May–June 1951. When the evacuation of the Jews was nearing its end, the Iraqi government uncovered a spy ring in Baghdad, run by two foreigners, Yehuda Tajir and Rodny, who were arrested. The authorities also discovered explosives, guns, files, typewriters, presses, and membership lists hidden in synagogues or buried in private homes. As a result, the police arrested about 80 Jews, 13 of them were sentenced to long terms of imprisonment, two others (Yosef Basri and Shalom Saleh) were sentenced to death and hanged on January 19, 1952. By June 15, 1951, the order was given to the Zionist underground to cease its activity in Iraq.

Official Antisemitism

When World War II was over the former pro-Nazi followers were released and began anew their activities and incitement against the Jews. The General Assembly vote in favor of the partition of Palestine on November 29, 1947, increased tensions between Arabs and Jews in Iraq and the authorities started to oppress the Jews.

The declaration of martial law, before sending Iraqi troops to Palestine, marked the beginning of official antisemitism. At first it was directed mainly against Communists but soon was used against Jews, when it became clear that the Arab offensive in Palestine was encountering serious difficulties. Now the Iraqi authorities seemed increasingly willing to accommodate anti-Jewish demands as a mean of diverting the attention of the Iraqi population from the failure in Palestine and from concern with social and political reforms. From now on, abuses and restrictions characterized the life of the Jews in Iraq. Restrictions were imposed on travel abroad and disposal of property. Hundreds of Jews were dismissed from public service; efforts were made to eliminate Jews from the army and the police; they were prohibited from buying and selling property; they were also discriminated against in obtaining the necessary licenses granting access to some professions.

At the same time the nationalist press opened with aggressive attacks against the Jews, practically daily. The long-standing distinction between Judaism and Zionism was fast becoming blurred. The Jews were held responsible for the economic hardship faced by Iraq in 1948–49, and their leaders were threatened by the national press. The most important effect, which shook the Jewish community to the core, was the hanging of Shafiq Adas, one of the wealthiest Jews in the country, in front of his house in Basra on September 23, 1948. Adas was condemned on the unlikely charge of having supplied scrap metal to the Zionist state.

When Adas was executed about 450 Jews were in the jails; added to these were those arrested the following year, in early October 1949. The detainees were sentenced to terms of imprisonment ranging from 2 to 10 years. In carrying out the arrests the police also arrested another 700 Jews and released them after investigation, most of them were relatives of those who were brought before martial courts.

The Exodus – Operation Ezra and Nehemiah

Throughout 1949, the general disaffection of Iraqi Jewry was exacerbated. With this atmosphere Jewish youths were fleeing the country. The clandestine crossing of the Iranian border began to assume major proportions. Within a few months in 1950, about 10,000 Jews fled Iraq in this way. Once in Iran, most Iraqi Jews were directed to the large refugee camp administered by the Joint Distribution Committee near Teheran, and from there they were airlifted to Israel.

In an attempt to stabilize the situation and to solve the Jewish problem, the government introduced a bill in the Iraqi Parliament at the beginning of March 1950 that would in effect permit Jews who desired to leave the country for good to do so after renouncing their Iraqi citizenship. The bill also provided for the denaturalization of those Jews who had already left the country. The bill was duly passed in the Chamber of Deputies and the Senate as Law No. 1 of 1950.

Iraqi government officials thought that only about 6,000–7,000 and at most 10,000 Jews would take advantage of the new law. The British diplomats in Baghdad and the Israelis shared this view as well. They were all mistaken. The Jews were tired of life in Iraq. And when the Zionist organization in Iraq issued a call at the end of Passover (April 8, 1950) for Jews to come forward and register for emigration in the centers which had been set up at the major synagogues, the call was highly effective. The overwhelming majority of the Jewish community preferred to leave their birthplace. By July 5, 1951, about 105,000 had arrived in Israel.

On March 10, 1951, only one day after the registration deadline had passed, while nearly 65,000 Jews were waiting for departure, the authorities enacted a law which froze the assets of all departing Jews and placed them under the control of a government bureau. Parliament passed a second law, which declared that those Iraqi Jews who were abroad and did not return home within a specific period would forfeit both their nationality and their property. Although some individuals succeeded in smuggling out some money after March 10, 1951, many more were reduced to paupers, being allowed to take out only 50 dinars ($140) per adult and 20 to 30 dinars ($56 to $84) per minor, depending upon the age.

After the Mass Emigration

About 6,000 Jews preferred to remain in Iraq after the mass emigration. Over the years this number fell to about 4,700 in 1957 and about 3,000 in 1968 when the Baʿth Party came to power in Iraq. Their number continued to decline and in the early 21st century there were only a handful of Jews still living in Iraq. Most of those remaining were from the elite and the rich families, who believed that the violent storm which had marked the life of the Jews in Iraq before and during the mass emigration would pass.

The Jewish community, which consisted before the mass emigration of about one quarter of the population of Baghdad, now became a small and unimportant one. These Jews no longer dominated the economic and the financial life of the country, and Jewish youth posed no danger to the regime through activities in the communist underground. So the regime removed some of the restrictions, and the pressure upon them was lightened to some degree. But in principle, the antagonistic attitude to them remained. Still in force were the restrictions on Jews registering in the universities and the sanction of taking away Iraqi nationality from those who did not return to the country within a limited time, which was marked in their passports. In 1954 the authorities nationalized the Jewish Meir Elias Hospital, which was the most modern and largest in Iraq. The Iraqi government also expropriated from the Jewish community the Rima Kheduri Hospital, which treated eye diseases.

Relief came under Brigadier ʿAbd al-Karīm Qāsim (1958–1963), who toppled the monarchy by a military revolution on July 14, 1958. Qāsim canceled all the restrictions against the Jews. He also released Yehuda Tajir and let him go back to Israel. The Jewish golden age under Qāsim was affected however by the confiscation and destruction of the Jewish cemetery, located in the middle of the capital, in order to build a tower to immortalize his name.

Qāsim was assassinated by Colonel ʿAbd al-Salām ʿĀrif, who carried out a successful coup on February 13, 1963. The new rulers reinstated all the restrictions which had been in force before Qāsim, and added others: Passports were not to be issued to Jews; the Jews were prevented from discounting their promissory notes and it was prohibited to grant them credit in the then-nationalized banks; again, Jewish students were not to be admitted to government colleges; a warning was issued to all Jews abroad to return to Iraq within three months, otherwise they would be denationalized and their movable and immovable property in Iraq would be sequestrated; Jews were not allowed to sell their landed property.

After the Six-Day War, the situation of the Iraqi Jews worsened more. They were terrorized and cruelly persecuted. The government opened with a series of detentions, enacted laws, and issued instructions which brought the Jewish community to the threshold of starvation. The measures taken against the small isolated Jewish community of Baghdad after the Six-Day War included: warning the public not to cooperate with them; expelling them from all social clubs; depriving Jewish importers and pharmacists of their licenses; forbidding all transactions with Jews (including access to the banks); prohibiting them from selling their cars and furniture; and cutting off all telephone communications from their homes, offices, or stores.

Under the Baʿth regime (1968–2003), persecution increased and many Jews reached starvation level. Some were jailed, accused of spying or held without any formal charge. Within one year (January 1969–January 1970), 13 were hanged; up to April 1973 the total number of Jews hanged, murdered, kidnapped, or who simply disappeared reached 46; dozens more were jailed.

The shock following the executions of the innocent Jews caused repercussions throughout the world and the world conscience was aroused. The Iraqi government responded to the world reaction by relaxing, for a while, some of its anti-Jewish discriminatory measures, including those limiting travel in Baghdad and throughout Iraq, too. At the same time a peace treaty was signed (March 1970) between the Iraqi government and the Kurdish rebels. Some Jews seized the opportunity and escaped across the Kurdish Mountains, in the summer of 1970, to the Iranian frontier. Up to 300 Jews fled the country in this way. In September 1971 the authorities began to issue passports to the Jews, and about 1,300 Jews left Iraq legally. They sought refuge mainly in England, Canada, the United States, and Israel. In 1975 the Jews in Iraq numbered about 350; over time this figure declined further, reaching c. 120 in 1996. At the beginning of the 21st century, as stated, there were only a handful of Jews there. Thus came to its end the most ancient Diaspora of the Jewish people.

[Nissim Kazzaz (2nd ed.)]

Iraq and Israel
*Jordan and *Syria, including 440 mi. (700 km.) of desert and steppe, come between Iraq and Israel, making Iraq's interests and fears vis-à-vis Israel less realistic than those of the Arab states that border directly upon the latter. Iraq has no territorial questions to settle with Israel, and its own internal and foreign problems (the Kurds, the Persian Gulf, conflicts with *Iran, social and economic unrest, the absence of a stable and representative government) are more pressing and important than the conflict with Israel. The position taken by Iraq toward Israel has been a function of its inter-Arab aspirations and relations; the importance of the Pan-Arab factor among active Iraqi circles, especially the Sunnis, who, under Ṣaddām, were the basic support of the Iraqi authorities; and its interest in an outlet on the Mediterranean Sea. Under both Hashemite and republican rule, Iraq nonetheless displayed active and extreme hostility toward Israel.

There were, however, certain differences in Iraqi policy toward Israel between the Hashemite period and the revolutionary republic established in 1958. During the Hashemite monarchy and Nūrī al-Saʿīd's rule, the latter proposed (in his "Blue Book" of 1943) a certain degree of autonomy for the Jewish community in Palestine in the framework of his plan for a federation of the Fertile Crescent. This period was also characterized by the special ties between Hashemite Iraq and Jordan and the need to justify the alliance between Iraq and Britain by displays of anti-Israel extremism and anti-Israel influence on Britain. On the other hand, in his contacts with the British, Nūrī al-Saʿīd was willing to discuss a compromise solution in Palestine on the basis of the UN partition plan. At the time leftist circles in Iraq did not show any special hostility toward Israel. ʿAbd al-Karīm Qāsim (July 1958–February 1963) exploited anti-Israel positions and support for the Palestinians in his inter-Arab struggles, but he did not actually turn his attention to a struggle against Israel and personally was not particularly extreme in relation to this subject. After Qāsim's fall the combination of a military government and the Pan-Arab ideology of the ruling Baʿth Party exacerbated hostility toward Israel.

Iraq became increasingly one of the most extreme forces in Arab deliberations and often called for the destruction of Israel. This extremism was motivated by Iraq's competition with *Egypt for supremacy in the Arab world and the desire to place Egypt in an untenable position by proposing initiatives that Egypt could not accept and thus making the latter seem to be weak and hesitant. Anti-Israel extremism also served the Iraqi regimes as (a) a pretext for initiatives and intervention in the countries of the Fertile Crescent and competition with Syria, one of the most outspoken of Israel's enemies; (b) in the struggle with the opposition nationalist factors within Iraq, which tend toward Pan-Arabism and hostility toward Israel; (c) as a justification of government policy among the Iraqi public and to deflect attention from more pressing internal

problems. It was also motivated by feelings of injured prestige and the longing for revenge, especially among the army following the defeats in the wars against Israel.

Despite the logistical difficulties, Iraq participated in two wars against Israel (1948, 1967), and during the Sinai Campaign (1956) sent troops into Jordan. As early as December 1947, it demanded that regular Arab troops invade that country, following the UN decision to partition Palestine. When irregular Arab forces were waging war in Palestine (end of 1947–May 14, 1948), Iraqis stood out among the officers and soldiers of the Arab "rescue force." The Iraqi deputy chief of staff, General Ismāʿil Ṣafwat, was appointed head of the Palestinian forces and volunteers, and Ṭāhā al-Hāshimī was appointed inspector general of the "rescue force." With the invasion of Palestine by regular Arab forces (May 15, 1948), the Iraqi general Nūr-Din Maḥmūd was appointed acting commander. The Iraqi force that invaded Palestine waged hard-fought battles against the Israel Defense Forces in the Jenin area at the beginning of June 1948. Just before the Six-Day War a token force came from Iraq to Egypt (May 31) and after hostilities broke out an Iraqi brigade entered Jordan (June 5) and an Iraqi plane bombed Netanyah (June 6). The Iraqi brigade that entered Jordan at the beginning of the war was not withdrawn with the cease-fire and was added to later on until the Iraqi expedition force reached 12,000 soldiers. In March 1969 an Iraqi force of 6,000 men entered southern Syria in the framework of the Eastern Arab Command against Israel. The Iraqi contingent in Jordan participated in bombardments of Israel territory a number of times after the Six-Day War.

Iraq objected to the cease-fires of June and July 1948, and refused to conduct negotiations on an armistice with Israel (as Egypt, Jordan, Syria and Lebanon did). In June 1949 Iraq withdrew its forces from the "triangle" sector (Shechem-Jenin-Ṭūl-Karm). It also avoided expressly agreeing to the 1967 cease-fire, replying on June 15, 1967, that its forces were under joint command with Jordan, which agreed to the cease-fire. Iraq strongly opposed the Security Council resolution of Nov. 22, 1967 and any political settlement in Palestine.

Except for times of war there has been a large gap between the ostensible extremism of Iraq and its actual contributions to Arab belligerence against Israel. Among the factors that precluded more active Iraqi participation were internal struggles and difficulties, the extended battles against the Kurds, and tension regarding Iran and the Persian Gulf. Iraqi propaganda also accused Israel of lending support to the Kurds. Iraqi hostility to Israel continued unabated; a symptom was its firing 39 scud missiles into Israel in the 1991 first Gulf War (although Israel was not a participant in that war). The downfall of Saddam Hussein in 2003 did not produce any normalization of Israel–Iraq relations.

Iraq was one of the leading forces in the Arab economic boycott of Israel. On the eve of the UN resolution to partition Palestine, it demanded that the Arab states cancel all Western oil rights. In April 1948, it closed off the IPC oil pipeline to Haifa, and its consequent losses in the period 1948 to 1958

were estimated at more than $400,000,000. In 1967 Iraq was again among the more extreme forces in its desire to use oil as a weapon in order to prevent Western support for Israel (see also *Arab Boycott).

Musical Traditions

In view of the antiquity of the community, one could assume that ancient elements have been preserved in their traditional music. A long period of cultural decline, however, and contact with the powerful and flourishing music of the Muslim world, of which Iraq was for a long time an influential center, deeply marked their music and somehow altered their pre-Islamic heritage. Although it is difficult to trace a borderline between the older and the more recent elements, it would appear that older elements have been preserved only in the biblical cantillations and some of the synagogal melodies.

The second volume of A.Z. *Idelsohn's *Thesaurus of Hebrew-Oriental Melodies* (1923) contains the Babylonian traditions. Idelsohn classified the synagogal melodies according to 13 basic "modes," but these are fairly common to many of the Near Eastern communities. However, the Babylonians also had a number of melodic patterns peculiarly their own. One of these is the "lamentations mode," for which Idelsohn could find an analogy only in the chants of the Syrian Jacobites and the Copts (cf. *Thesaurus* II, no. 17). It has become possible to identify still another Babylonian "lamentations mode," which shows similar archaic features (see A. Herzog and A. Hajdu in: *Yuval I*, 1968, pp. 194–203). In this context it is surely significant that *Al-Ḥarizi in his *Taḥkemoni* (ch. 18) emphasized the mournful character of their songs, while denigrating the Babylonian poets.

From the early Middle Ages the Babylonian rabbinic authorities were known for their strict adherence to traditional liturgical chant. One of the oldest masters of post-talmudic synagogal chant was *Yehudai b. Naḥman Gaon of Sura (eighth century), whose tradition was supposed to go back to the talmudic period. Two of the earliest documents concerning Jewish music come to us from Babylonian Gaonic circles. The first is a paragraph in *Saadiah Gaon's Sefer *ha-Emunot ve-ha-Deʿot* ("Book of Beliefs and Opinions") where he speaks of the influence of the rhythmic modes on the soul; the second is by R. Hai Gaon and it proposes an answer to a question put by the Jews of Gabes (Tunisia) concerning the use of singing and playing during the marriage ceremony. A vivid description of responsorial and even choral singing in tenth-century Baghdad is given in *Nathan b. Isaac ha-Bavli's description of the installation of the Exilarch Oukba, who was himself a poet-musician having composed and performed songs in honor of the caliph. Benjamin of Tudela reports from his travels (c. 1160–80) that Eleazar b. Ẓemaḥ, the head of one of the ten rabbinical academies of Baghdad, and his brothers "know how to sing the hymns according to the manner of the singers of the Temple." Another traveler of the same period, *Pethahiah of Regensburg, gives a most picturesque description of the simultaneous talmudic chanting of the 2,000 pu-

pils of Samuel b. Ali's Yeshivah at Baghdad. He also reports that the Jews there "know a certain number of traditional melodies for each psalm," and on intermediate days (*ḥol ha-mo'ed*) "the psalms are performed with instrumental accompaniment." The instrumental skill went side by side with the creation of a rich repertoire of folk and para-liturgical song in Judeo-Arabic by Babylonian poets. A great number of talented instrumentalists and singers rose to prominent positions in the musical life of the surrounding culture. The best known of these, in the 19th and 20th centuries, were the *kamān* player Biddūn, the singers Reuben Michael Rajwān and Salmān Moshi, the santour player Ṣaliḥ Raḥmūn Fataw and his son, and the composer and *ʿud* player Ezra *Aharon. All of them were highly proficient in the performance of the prestigious classical genre known as the *Iraki maqam*. Ezra Aharon led the official group of such distinguished specialist performers who represented Iraq in the first International Congress on Arab music held in Cairo in 1932. This group comprised six Jewish instrumentalists and an Arab vocalist. Not long after this congress, in 1936, composer and violinist Saleh *Kuwaiti and his brother (*ʿud* player) founded the first official musical ensemble, that of the Iraq Broadcasting service. Among the finest executants of S. Kuwaiti's works was the famous Umm Kulthum who sang his compositions.

FOLK MUSIC. Folk music was an inseparable part of all events including two main categories: (1) Events connected with the annual cycle (especially those concerning the general religious life affairs of the community); (2) Those connected with life cycle (events chiefly concerning the life of the individual). The rich repertory of folk music comprises men's songs and women's songs whose texts are in Hebrew and in Judeo-Arabic dialect and they are performed either by amateurs or by professionals accompanied by various musical instruments. A special genre held in great favor among Jews is the group of Station's songs in Judeo-Arabic called Kunag sung at the pilgrimage to the Ezekiel and Ezra graves. Jews from many parts of the country were accustomed to spend several days there, during which time music and dance played a prominent role. Since the Kunags are religious in content they were accepted into the category of *piyyutim* and were accorded the status of sacred songs.

Another two popular Hebrew pilgrimage songs to the mentioned graves and another one for Lag ba'Omer were composed by the venerable religious authority R. Yoseph Hayyim (1839–1909). His Lag ba'Omer song (*we-amartem ko leḥay*) and two songs for Simḥat Torah were introduced into the repertory of Israeli songs and published by Idelsohn.

Until 1950 there existed in Baghdad a famous group of four or five woman singers and players on various drums called *Daqaqāt* (Drummers), who performed at Jewish and non-Jewish family rejoicings and festivities. There were also the woman wailers, both professional and private. Their most notable appearances were at the mourning ceremonies for young people not yet married: two groups of women chanted antiphonally, first wedding songs and then lamentations, beating their breasts and scratching their faces.

Many folk songs were written down and are to be found in manuscripts with musical indications, such as the **maqāma* or the name of the song to the melody of which the poem has to be sung (see especially Ms. Sassoon 485). Sometimes the poets composed according to the rhythm, rhyme, and even used the first verse of a given song with slight changes. A number of the songs in Judeo-Arabic have an introduction in Hebrew in the form of a prayer or of a laudatory nature. The public as a refrain usually sings this introduction after each verse sung by a soloist. Almost all the folk songs are performed in this sort of responsorial style.

For the musical traditions of Iraqi Kurdistan, see **Kurdistan, musical tradition.

°IRĀQĪ, ELEAZAR BEN AARON HA-KOHEN (d. 1864),

Yemenite-*Indian scholar and printer. Though born in Cochin, India, before 1816, ʿIrāqī was of Yemenite parentage. He spent most of his life in Calcutta where he served as teacher, *ḥazzan*, and *shoḥet* in the new Jewish community. He opened a printing press in Calcutta in 1841, becoming the first Jewish printer in India; during the next 16 years he printed 25 ritual books for the use of the Jewish communities of India and the East. He made special efforts to print the works of Yemenite scholars and poets. In the *Sefer ha-Pizmonim* ("Book of Hymns," 1842) which he printed, some of his own poems are also included.

BIBLIOGRAPHY: A. Yaari, *Ha-Defus ha-Ivri be-Arẓot ha-Mizraḥ* (1940), 9–13.

[Yehuda Ratzaby]

IRĀQĪ, SHALOM HA-KOHEN (al-Usta; 18th century), com-

munity leader in *Yemen. His family originated in *Egypt. He was appointed governor of the mint and he also supervised the collection of taxes and the royal properties at the courts of the Imam al-Mahdī and his successor Imam al-Mansūr (1731–61). During his period of office, the Jewish community enjoyed a brief period of peace and tranquility; this was due partly to his personality and status, and partly to his silencing slanderers by means of bribes. He built synagogues in several towns. The best known was the beautiful Kanīsat al-Usta synagogue in *Sanʾa, the capital of Yemen, which was in use until the dissolution of the Yemenite community. He also made use of his political status to influence decisions in religious and communal affairs. The spread of the Sephardi version of prayer (*Shāmī*) in the communities of Yemen was caused by his generous distribution of printed prayer books to replace the handwritten *maḥzorim* which were in use until then. ʿIrāqī lost his influence in 1761 when the new imam removed him from office, imprisoned him, and levied a heavy

fine on him, while at the same time the Jewish community was attacked by the Muslims.

[Yehuda Ratzaby]

ʿIRĀQĪ, SHALOM JOSEPH (1843–1917), leader of the Ye-

menite community in Jerusalem. Born in Sanʾa (Yemen), in 1882 ʿIrāqī immigrated to Palestine, together with all his family. In Jerusalem he earned his living as a goldsmith, at the same time devoting himself to study in the Sephardi yeshivah of the Old City, and acting as rabbi and leader of the Yemenite community. Because of his relationship with the ʿIrāqī family in India, he was sent to India, together with R. Meyuḥas, as an emissary of the Sephardi *kolel* (congregation). With the separation of the Yemenites from the Sephardi *kolel* in 1908, he was appointed as one of the three leaders of the independent congregation.

[Yehuda Ratzaby]

IRBIL (or Erbil; formerly Arbil), one of the four important

towns of Assyria and now situated in Iraq to the E. of *Mosul, in the fertile plain between the Great Zab and the Small Zab. A Jewish community existed in Irbil continuously from the end of the Second Temple period when it was the capital of the *Adiabene kingdom until the 1950s. At the end of the 12th century and during the first half of the 13th century, Irbil was the capital of an independent principality. During that period there was a large community there; it was considered as one of the most important in northern *Babylonia. In the dispute between the exilarch Samuel and the famous *rosh yeshivah* *Samuel b. Ali at the end of the 12th century the community of Irbil supported the exilarch. At that time there was no lack of intellectuals in the community. Judah *al-Ḥarizi, who visited Iraq at the beginning of the 13th century, mentions poets among the Jews of the town, as well as the "noblemen of Irbil." During the middle of the century the *Gaon* Eli b. Zechariah, the Irbilite, lived in the town. In 1275 *Maimonides' *Guide of the Perplexed* was copied from its Arabic original by Joseph ha-Kohen b. Eli b. Aaron in Irbil (Neubauer, 1237).

There was also an important community in Irbil under the Turkish rule. During the second half of the 16th century Irbil was mentioned by the author-traveler Zakariyyā al-Ẓāhirī, in his *Sefer ha-Musar* ("Book of Ethics"); information on the community during subsequent generations has been preserved in the letters of the Ereẓ Israel emissaries who frequently visited the town. In 1767 the emissary of Tiberias, R. Solomon Aznati, stayed in Irbil. In 1848 the Jerusalemite emissary, R. Pethahiah, died in Irbil, and the Kurds who resented the respect shown to him by the Jews exhumed his body and abused it. However, the Jews also suffered numerous times at the hands of Turkish soldiers. After one such case in 1895 the matter was taken up by R. Isaac Abraham Solomon, the *ḥakham bashi*, with the commander of the army in *Baghdad,

where due justice was executed in favor of the Jews of Irbil. The Jews of the town were engaged in commerce and crafts: dyeing, shoemaking, building, and porterage. According to an official estimate made in 1919 some 4,800 Jews lived in the district of Irbil of whom about 250 spoke *Aramaic. This number dwindled to 3,109 in the first census of population taken in 1947. Out of this last number 1,300 lived in the city of Irbil and in 1951 all the Jews of the town emigrated to Israel, in the great exodus of Iraqi Jewry.

[Eliyahu Ashtor]

IRELAND, island W. of Britain comprising the Republic of Ireland (Eire, 26 counties) and Northern Ireland or Ulster (part of the United Kingdom, six counties). The *Annals of Inisfallen* record that in 1079 five Jews (apparently a delegation to secure the admission of Jews) went to Ireland bringing gifts for King Toirdelbach of Munster, but were sent back. The beginning of a Jewish settlement dates from the 12th and 13th centuries. The few Jews who established themselves there as merchants and financiers probably had to leave on the expulsion from England (1290). Some refugees from Spain and Portugal settled in Ireland at the close of the 15th century. In the 16th and 17th centuries, persons of Jewish origin held office in Ireland under the English crown. The founding of Trinity College, in its capital *Dublin, in 1591 witnessed the birth of Hebrew studies in the city.

Five or six years after the resettlement in England (1656), a handful of ex-Marranos from Holland, who were engaged in the export trade, went to Dublin as "foreign Protestants." A synagogue is said to have been established in 1661. England's Glorious Revolution (1688) gave a considerable impetus to the tiny community of Dublin. In 1690 Isaac Pereira, a London Sephardi, was appointed commissary general to William III's expeditionary force and employed in his commissariat other Jews who later established themselves in Dublin. At the turn of the 18th century, some Ashkenazi families from Poland and Germany settled in Dublin. During the second half of the 18th century, further Jewish immigrants arrived from Germany, Poland, Holland, Bohemia, France, and England, and the Dublin community increased to approximately 40 families, engaged largely in the jewelry trade, with a few pencil-makers. Some richer Jews were accepted into Christian society, while Freemasonry provided an important sphere for contacts between Jews and the Protestant minority. A number of Jews also established themselves outside Dublin. As early as 1702 a Sephardi Jew was granted the freedom of the city of Waterford. A congregation was established in Cork, as an offshoot of the Dublin community, in about 1725, with its burial ground in Kemp Street. In the 18th century, Cork Jews imported wines and merchandise from Spain and Portugal in their own ships, while others exported preserved meat, certified by the local *shoḥet*, to England and the West Indies. By 1796 the Cork community was defunct, to

Modern Jewish communities in Ireland.

be revived only some 60 years later. In the latter half of the 18th century, an organized community may have existed in *Belfast where the presence of individual Jews is attested already in the second half of the 17th century. Throughout the 18th century, missionaries were active among the Dublin Jews, some of whom became converted to Christianity. By 1791 the Jewish population had decreased to such an extent that the synagogue had to be closed. Abraham Jacobs (1656–1725?), "priest" of the Dublin Jews, who was baptized in 1706, translated the Anglican Book of Common Prayer into Hebrew in 1717.

From 1743 to 1748 four bills were introduced in the Irish parliament to facilitate the naturalization of foreign Jews, but all were rejected because of the hostility of the peers. Acts of parliament passed in 1780 and 1783, granting aliens the right of naturalization, expressly excluded the Jews. It was not until 1816, when there were only three Jewish families in Dublin and a few others in the rest of the country, that the Irish Naturalization Act of 1783 was repealed.

In 1822, with the arrival of Jews from Germany, Poland, and England, the Jewish community in Dublin was reestablished. By 1881, the number of Jews in the country had grown from a mere handful to about 450, rising by 1901 to 3,769, the majority living in Dublin. This increase was the result of the immigration of Russian Jews after 1881, reinforcing the Dublin, Belfast, and Cork communities and leading to the establishment of new ones such as *Limerick, Waterford, and Londonderry. In 1901 the Jews of Dublin were mainly occupied as

petty traders and moneylenders, but they have since played a leading role in the manufacture of clothing, furniture, and jewelry. Apart from some anti-Jewish rioting in Limerick in 1884 and in Cork in 1894 (JC, April 11, 1894), the most serious anti-Jewish agitation took place in Limerick in 1904, when a Catholic priest attacked the local Jews from the pulpit. This resulted in an economic boycott, which remained in force until 1906, and led to the decline of the Jewish community there from 200 to less than 40 people. The antisemitic campaign ceased only with the removal of the priest. During World War I, Limerick had again a congregation of about 40 families.

Modern Period

When in 1921 Southern Ireland became independent of Britain, first as the Irish Free State and later as the Republic of Ireland, the majority of its Jews became, at least *de jure*, independent of the Anglo-Jewish community, under their own chief rabbi and with their own representative council (1938). The 1937 Constitution of the Republic recognized Judaism as a minority faith and guaranteed Jews complete freedom from discrimination. In 1968 the Jewish population numbered 4,000 out of a total population of 2,800,000, of whom 95% were Roman Catholics. There were three main Dublin congregations and four smaller synagogues at the time, and all other Jewish institutions were unified under the Orthodox auspices of the chief rabbi. The Jewish Progressive Congregation of Dublin, comprising about 60 families, functioned independently. The chief rabbinate has been held by Isaac *Herzog (c. 1926–37), Immanuel *Jakobovits (1949–58), Isaac Cohen (1959–79), David Rosen (1979–84), Ephraim Yitzhak Mirvis (1984–92), Gavin Broder (1996–2000), and Yaakov Parlman (from 2002). Community affairs were coordinated by the Jewish Representative Council of Ireland, which was established in 1938 and is responsible for the appointment of the chief rabbi and the *bet din*. The council represents the views of the Jewish community in government departments and in the general public. Autonomous bodies in Dublin administer *sheḥitah*, Hebrew education, welfare, burial, Zionist affairs, youth activities, and student societies. In 1968, 400 pupils, constituting 90% of all Jewish schoolchildren, received Hebrew education in Jewish day schools (primary and secondary) and afternoon classes. In Cork, a rapidly dwindling community of about 50 Jews existed in 1970, dropping to just 21 in the late 1980s. Although friendly relations existed between the Jewish communities of Northern Ireland (see below) and Eire, there was no common activity between them, the former regarding themselves as part of English Jewry, under the authority of the chief rabbi of Great Britain, while the latter operate as an independent body.

The salient feature of Irish Jewish life in the modern period has been the decline of the Jewish population, due both to a fall in the birth rate and to emigration, from 3,255 in 1961 to 2,633 in 1971, 2,127 in 1981, and around 1,300 in the mid-1990s, though in 2004, about 1,790 Jews were recorded, with 1,500 in Dublin. At the turn of the 20th century there were five Orthodox synagogues and one Liberal in Ireland, with four in Dublin and one each in Belfast and Cork. The two major Orthodox synagogues in Dublin were Adelaide Road (which celebrated its centenary in 1992) and Terenure; the two smaller congregations were Machzikei Hadass (formerly St. Kevin's Parade, which celebrated its centenary in 1983) and the Abraham Gittleson synagogue in the Jewish Home for the Aged, opened in 1991. The Dublin Jewish Progressive congregation marked its 40th anniversary in 1986. The Greenville Hall synagogue was sold in 1986 but the developers have retained the original perimeter walls, windows and cupola, and welcome visitors. The *mikveh* was restored in 1984.

The main educational facility, Stratford College, was rebuilt after an arson attack in 1983, and its three-tier educational complex remained in full operation. It was awarded the Jerusalem Prize for Jewish education in 1989. The Edmonstown Golf Club built a new 6,000-square-foot clubhouse, opened in 1990. The old Jewish cemetery at Ballybough, which was in use from 1718 to 1890, was reopened to the public in 1990. An extension to the Jewish Home for the Aged was opened by the Irish president, Mary Robinson, in 1992. The old headquarters of the Board of Guardians and former Talmud Torah premises in Bloomfield Avenue were sold in 1983.

A number of new organizations were founded in the 1980s and 1990s: the Irish Council of Christians and Jews in 1983; the Ireland-Israel Economic and Business Association in 1992; while the Irish-Israel Friendship Association was revived in 1989.

A number of international conferences of Jewish interest were held in Dublin. These included the International Council of Jewish Women (1985); the International Council of Christians and Jews (1985); the International James Joyce Symposium in 1991, which held a session at the Irish Jewish Museum; while the first Irish Genealogical Congress in 1991 held a workshop on Irish Jewry.

Relationships with the authorities continued to be cordial. The president of Ireland, the lord mayor of Dublin, and many dignitaries were guests of honor at Jewish occasions and delegations from the Jewish Representative Council of Ireland have reciprocated with courtesy visits. The chief rabbis continued to make TV appearances on major Jewish festivals.

There has also been a rise in Jewish participation in the top sectors of public life. Throughout various general elections, three Jewish TDs (members of the Dail, the Irish parliament) retained their seats – one for each of the main parties. Ben Briscoe, who represented Fianna Fail, was also lord mayor of Dublin in the city's millennium year (1988), following in the footsteps of his father, Robert *Briscoe. Gerald Goldberg was lord mayor of Cork in 1977. Alan Shatter of Fine Gael was also appointed his party's environment spokesman. Mervyn Taylor of the Labour Party in 1993 became Ireland's first Jewish cabinet minister.

Antisemitism was very low-key, although occasionally exacerbated by casualties suffered by Irish troops serving in

UN units in Lebanon. The tiny Nationalist Socialist Irish Workers' party, which exported anti-Jewish pamphlets to the United Kingdom in 1984, has not surfaced for years. Nevertheless, Ireland has taken high-profile positions at international bodies like the UN which have seen it come into conflict with Israel. A survey by St. Patrick's College, Maynooth, found only 40% of the respondents would marry or welcome Jews into their family (which should be seen partly against religious backgrounds) while 13% did not welcome them as Irish citizens.

Apart from Dublin, the only other community that still exists in the Republic of Ireland is in Cork, which has a burial ground and synagogue. However, services take place only during the High Holy Days when the *minyan* is brought up to strength by volunteers from Dublin. Park Shalom was dedicated by Cork Corporation and the Irish Gas Board, 1989, in fond memory of the city's Jewish community, and is appropriately situated in the area where they lived.

The disused Limerick Jewish cemetery (early 20th century) was restored in 1990 by the Limerick Civic Trust. The ceremony was attended by many church and civic leaders.

[Asher Benson]

In recent years there has been a good deal of interest in the history of the Jews of Ireland, with such works as Dermot Keogh's *Jews in Twentieth-Century Ireland* (1998) and Ray Rivlin's *Shalom Ireland: A Social History of the Jews of Modern Ireland* (2003).

Relations with Israel

Ireland accorded de facto recognition to Israel on Feb. 12, 1949, but only established full diplomatic relations with Israel in 1975 and a residential embassy in 1996. Relations between the two states have been friendly, and Ireland has frequently supported Israel at the United Nations. Trade relations developed satisfactorily; in 1969 Israel exported $800,000 worth of goods to Ireland and imported $700,000 worth.

Israel's president Chaim *Herzog, who was born in Belfast and educated in Dublin, paid a state visit to Ireland in 1985. On this occasion he opened the Irish Jewish Museum in the former Walworth Road Synagogue. A pro-PLO Palestine Information Office was established in Dublin in 1986.

Northern Ireland

By the Anglo-Irish treaty of 1921 the six northwestern counties of Ireland (Ulster) became a self-governing province of the British Crown under the name of Northern Ireland, with the Jewish community recognizing the authority of the British chief rabbi.

The Jewish population was mainly concentrated in its capital, Belfast; a smaller community existed in Londonderry from the 1880s to World War II. The 1964 census recorded about 1,200 Jews living in Northern Ireland. The decrease to 968 recorded in 1971 can be linked to the outbreak of disturbances between the Catholics and Protestants and has continued, with quiet but steady emigration to Australia, Britain, the United States, and Israel. The community is now estimated at about 200 families, maintaining an active communal life.

IRGUN ẒEVA'I LE'UMMI (Heb. "National Military Organization" – **I.Ẓ.L., Eẓel**, or the **Irgun**], a Jewish underground armed organization founded in Jerusalem in the spring of 1931 by a group of *Haganah commanders, headed by Avraham Tehomi, who had left the Haganah in protest against its defensive character. Joining forces with a clandestine armed group of *Betar members from Tel Aviv, they formed a parallel, more activist defense organization.

In April 1937, during the Arab riots, the organization split over the question of how to react against Arab terrorism, and about half its three thousand members returned to the Haganah, which was controlled by the *Jewish Agency. The rest formed a new Irgun Ẓeva'i Le'ummi, which was ideologically linked with the Revisionist movement and accepted the authority of its leader, Vladimir *Jabotinsky. Rejecting the "restraint" (Heb. *havlagah*) policy of the Jewish Agency and the Haganah, the organization carried out armed reprisals against Arabs, which were condemned by the Jewish Agency as "blemishing the moral achievements of the Jews of Ereẓ Israel, hindering the political struggle, and undermining security." Many members and sympathizers were arrested and one of them, Shelomo *Ben-Yosef, was hanged for shooting at an Arab bus, but IZL intensified its activities. It also cooperated with the Revisionist movement in *"illegal" immigration, succeeding in smuggling many thousands of Jews into Palestine.

After the publication of the *White Paper in May 1939, IZL directed its activities against the British Mandatory authorities, sabotaging government property and attacking security officers. The British retaliated with widespread arrests, and at the outbreak of World War II, when hundreds of Revisionists and members of IZL (including its commander David *Raziel and his staff commanders) were in prison, IZL declared a truce, which led to a second split (June 1940) and the formation of a new underground group (*Loḥamei Ḥerut Israel, or Leḥi) led by Avraham *Stern. IZL members contributed to the war effort against the Nazis by joining the British Army's Palestinian units and later the Jewish Brigade. During a clandestine operation by an IZL unit, in cooperation with British Intelligence, against the pro-Nazi regime of Rashid Ali in Iraq, David Raziel fell at Habbaniya, near Baghdad, on May 20, 1941. Ya'akov Meridor took command, and was succeeded in December 1943 by Menahem *Begin. By this time, the full extent of the Holocaust in the Nazi-occupied territories had become known, and in February 1944 IZL declared war against the British administration, which continued to implement the White Paper. It attacked and blew up govern-

ment offices, several CID headquarters, and four police stations, also capturing weapons and ammunition.

The British authorities made many arrests, and 251 prisoners (including Leḥi members) were deported to Eritrea on Oct. 20, 1944. No organized reaction to the deportation was possible because of the repercussions following the assassination of Lord Moyne by Leḥi in Cairo (Nov. 6, 1944). The Jewish Agency and the Haganah moved against the IZL in a campaign nicknamed by the underground the "saison" ("hunting season"), during which some of IZL's members (including several leaders) were kidnapped and handed over to the British authorities. The "saison" limited the scope of IZL's activities, but did not halt them; after the war it began attacking military installations, bridges, and the vital Kirkuk-Haifa oil pipeline (May 25, 1945).

When the British Labour government's anti-Zionist policy disappointed post-war hopes, Haganah, IZL, and Leḥi formed a united front, sabotaging bridges, railways, and patrol boats. IZL again attacked CID and police stations, as well as seven army camps, gaining control of their ammunition stores, and damaged planes at two military airfields. The IZL attacks culminated in blowing up a wing of the King David Hotel in Jerusalem, headquarters of the Palestine government and the military command, on July 22, 1946.

The united fighting front disintegrated in August 1946, after the arrest of the Jewish Agency leaders, but IZL and Leḥi continued their attacks on military and governmental objectives. The British increased their military strength to a hundred thousand men and reacted with increased ferocity: curfews, arrests, deportations, floggings, and hangings. IZL reacted by flogging British officers and kidnapping hostages. It also extended its activities abroad, the most striking act being the bombing of the British embassy in Rome on Oct. 31, 1946. Four members of IZL – Dov Gruner, Yeḥiel Drezner, Mordekhai Alkaḥi, and Eliezer Kashani – were hanged in Acre prison on April 16, 1947, and another two – Meir Feinstein and the Leḥi member Moshe Barazani – who were due to be hanged in Jerusalem, blew themselves up in the condemned cell on April 27. IZL broke into the fortress at Acre on May 4, and freed 41 IZL and Leḥi prisoners. Under the pressure of the continual attacks, the British retreated to security zones where they lived in a state of siege. When three other IZL members, Meir Nakar, Ya'akov Weiss, and Avshalom Ḥaviv, were condemned to death by the British, IZL kidnapped two British sergeants and hanged them in July, when the three were executed. The IZL revolt was given wide publicity in the United States, where the Hebrew Committee for National Liberation, led by Peter Bergson (Hillel Kook), was established. In Palestine publicity was conducted through a clandestine radio station, newspapers, and leaflets bearing the IZL emblem, a hand holding a rifle on the background of a map of Erez Israel including Transjordan.

After the United Nations resolution of November 29, 1947, on the partition of Palestine, IZL gradually came out of hiding, helped to repulse the Arab attacks, and continued to attack British army camps in order to capture weapons. On April 25, 1948, it began a large-scale attack on Arab Jaffa; the capture of the town was completed by the Haganah. After the Declaration of Independence, the high command of IZL offered to disband the organization and integrate its members into the army of the new Jewish state, but, until integration was achieved, it acted independently in various sectors, particularly in Jerusalem, where its activities were loosely coordinated with the Haganah. Its attack on the Arab village of Deir Yasin near Jerusalem, which caused many civilian casualties and led to panic among the Arabs, was denounced by the Jewish Agency. On June 20, during the first Arab-Israel cease fire, an IZL ship, *Altalena*, clandestinely reached the shores of Israel, carrying a huge quantity of weapons and ammunition and about eight hundred young people, some of whom had received military training. During negotiations with the newly established provisional government of Israel, IZL demanded 20% of the arms for the use of its units in Jerusalem. IZL rejected a government ultimatum to hand over the ship, and when it appeared off the shore of Tel Aviv it was blown up by Israel artillery. The Jerusalem units of IZL fought in most sectors of the city and joined the national army on Sept. 21, 1948, on the orders of the provisional government.

[David Niv]

IR HA-NIDDAḤAT (Heb. עִיר הַנִּדַּחַת, the "subverted" or "apostate" city). Deuteronomy 13:13 ff. enjoins the utter destruction of a city, including its inhabitants, its animals, and its inanimate contents, the citizens of which have been "subverted" (*va-yadiḥu*) by "scoundrels" (sons of Belial). In essence it is an extreme example of the **Ḥerem* but in the Talmud it is regarded as belonging to a special category. The punishment meted out to an *Ir ha-Niddaḥat* was never applied in practice in talmudic times, and in fact the Tosefta (Sanh. 14:1) enumerates it as one of those things that "never was and never will be," but which was enjoined only so that one should receive the reward for its study. The discussion on it (Sanh. 10:4–6 and the *Gemara* on these passages) is therefore purely theoretical. A city could be declared an *Ir ha-Niddaḥat* only if the majority of its male inhabitants were found guilty of collective apostasy and only the Great Sanhedrin could make the declaration (Sanh. 16a). Jerusalem, however, could never be declared an *Ir ha-Niddaḥat*. The destruction of Jericho and the ban against its rebuilding (Josh. 6:26) were taken as the model. There is a difference of opinion as to whether the verse "it shall not be built again" (Deut. 13:17) meant that it was to be left completely waste, or whether the prohibition of rebuilding referred only to a city, but the site could be turned into gardens and or-

chards. The wholesale destruction applied to all the property of the transgressors, whether it was in the city or beyond its borders, and to the property of the innocent residents within the city only. With regard to consecrated objects a distinction was made. Animals dedicated to the altar and *terumah* and second tithe were left to rot. Dedications for the repair of the Temple, first fruits, and the first tithe could be redeemed. R. Simeon explains the destruction of the property of the innocent ("righteous") inhabitants of the city by pointing out that since it was the desire for wealth which brought them to reside there, that wealth is destroyed (Sanh. 112a).

[Louis Isaac Rabinowitz]

IRKUTSK, city in Russia. Several Jews settled in Irkutsk at the beginning of the 19th century, of whom the majority were sent there as prisoners or exiles. Subsequently, Jewish soldiers discharged from the army of Nicholas I (see *Cantonists) settled in the city. The Jewish population grew from 1,000 in 1875, to 3,610 in 1897 (7.1% of the total), and 6,100 in 1909 (5.6%). Jews played a considerable role in the city's commerce and industry and in the development of the gold mines in the vicinity. After the 1917 Revolution, a Jewish political exile, P.M. Rubinstein, was appointed president of the newly founded Irkutsk University. There were 7,159 Jews in Irkutsk in 1926 (7.2% of the total population), 7,100 (2.8%) in 1939, and 10,313 in Irkutsk oblast in 1959. In 1970 the city's Jewish population was estimated at about 15,000. There was one synagogue, but no rabbi or cantor. In the early 21st century there were an estimated 5,000 Jews still in the city, with community life revolving around the synagogue and Chabad rabbi Aaron Wagner.

[Yehuda Slutsky]

IR-NAHASH (Heb. עִיר נָחָשׁ), biblical locality in Judah established by Tehinnah, son of Eshton (1 Chron. 4:12). Ir-Nahash ("Serpent City") was probably originally called Ir Neḥoshet ("Copper City") after Tehinnah's craft – brass artisan. It has been tentatively identified with the village of Deir (Dayr) Naḥḥās, 2 mi. (3 km.) northeast of Bet Guvrin, but only remains from the Roman period and later have been discovered there. These include cisterns, remains of a pool, and a tomb with *loculi*. Leases drawn up in the name of Bar Kokhba and dated to 133, which were found in the Murabbaʿāt caves in the Judean Desert, mention that Eleazar the Shilonite, Ḥalifa, son of Joseph, and Judah, son of Rabba, leased land in Ir-Nahash from Hillel, son of Garis, the representative of Bar Kokhba at Herodium. These leases indicate that Ir-Nahash was situated in a crown domain; rent for the land was to be paid in grain.

IRON (Heb. יִרְאוֹן), city in the territory of Naphtali mentioned in the Bible only in Joshua 19:38. It may possibly occur in the inscriptions of Tiglath-Pileser III, among the cities conquered in his campaign of 733 B.C.E., in the fragmentary form Ir-ru-[na], but the reading is uncertain. The Arab village of Yarun on the Israel-Lebanon border is situated near an ancient mound containing Iron Age and later pottery. Iron was apparently one of the cities founded by the Israelites in the mountainous and wooded area of Galilee.

IRON GUARD, right-wing, antisemitic movement and party in Romania. In 1927 nationalist students, headed by Corneliu Zelea Codreanu, founded the Legion of Archangel Michael, which fostered the Iron Guard mass movement in 1930 and merged with it. The Iron Guard became a political party with a Christian-nationalist and totalitarian platform combining elements of fascism, Nazism, and Christian-Orthodox mysticism and symbolism. The Iron Guard press, *Buna Vestire* ("The Annunciation"), and the press under its influence, *Porunca Vremii* ("The Command of Our Times"), instigated antisemitism in the vein of *Der Stuermer*. The Iron Guard held conferences and student rallies that were often accompanied by anti-Jewish riots in which synagogues and Jewish newspapers and shops were destroyed, as in Oradea-Mare and Cluj (1927), and in Timişoara (1938). In the mid-1930s, the Iron Guard, known as *Totul pentru Ţară* ("All for the Fatherland"), became the third largest party in Romania; but it was temporarily dissolved in 1938 by King Carol. On the eve of the dissolution of Greater Romania, the Iron Guard, reconciled for the time being with King Carol, carried out mass slaughters of Jews, especially in Moldavia (June–September 1940). On September 6, the Iron Guard proclaimed a National-Legionary State under joint rule with Ion *Antonescu. Anti-Jewish legislation was enacted to eliminate the Jews of Romania from economic, political, and cultural life. The final goal of Iron Guard policy was the deportation of the Jews (see *Romania, Holocaust).

A struggle for hegemony led to the Legionnaire rebellion in Jan. 19–20, 1941, in which 120 Jews were killed in Bucharest and some 30 in the countryside (notably in *Ploieşti and *Constanţa). The rebellion was quashed by Antonescu; Horia *Sima and other leaders of the rebellion fled the country. Following the outbreak of war against the Soviet Union (June 1941) the German forces and Antonescu's police, joined by Iron Guard elements, committed anti-Jewish outrages, including the *Jassy pogrom (June 29, 1941) and "death train," and other such attacks in Moldavia with thousands of victims. The Romanian anti-Nazi coup of August 1944 put an end to the Iron Guard in Romania, and the Germans set up in December 1944 a Legionnaire government-in-exile in Vienna led by Sima. For more than 25 years after the liquidation

of the Iron Guard, Legionnaire emigrant groups were still in existence in some western countries, and post-Communist Romania.

IRVING, AMY (1953–), U.S. actress. Irving was born in Palo Alto, California, the daughter of influential stage director/ producer Jules Irving and actress Priscilla Pointer. Although her father was Jewish, Amy was raised a Christian Scientist like her mother. As a young woman she trained at the American Conservatory Theater in San Francisco before moving to England to study at the prestigious London Academy of Music and Dramatic Art. When Irving was only 17, she made her off-Broadway debut. She appeared in guest roles on several TV shows before landing the role of Sue Snell, the sympathetic supporting character in Brian De Palma's supernatural thriller *Carrie* (1976), launching her career. Romantic leads in such films as *Voices* (1979), *Honeysuckle Rose* (1979), and *The Competition* (1980), not to mention her deep blue eyes and long curly locks, made Irving the idol of young men around the globe. Irving went on to star in mostly mature and independent productions such as *Crossing Delancey* (1988)*, Deconstructing Harry* (1997), and *Yentl* (1983), for which she won the Academy Award nomination for Best Supporting Actress. All are popular films that addressed Jewish identity in their own way. Irving remained loyal to the stage, appearing in many acclaimed Broadway productions, most notably *The Heidi Chronicles, Amadeus,* and *The Road to Mecca,* for which she won an Obie Award in 1988. After several years of courtship, Irving married film director Steven *Spielberg in 1985 and had one child with him before their marriage ended in 1989.

[Max Joseph (2nd ed.)]

°**IRVING, JULES** (**Jules Israel**; 1925–1979), U.S. theatrical director. Born in New York, Irving was professor of drama at San Francisco State College. In the early 1950s he co-founded – with his wife, actress Priscilla Pointer, Beatrice Manley, and Herbert *Blau – the Actors' Workshop, which represented the United States at the Brussels Exposition of 1958. In 1965 he and Blau were named directors of the Lincoln Center Repertory Theater, New York. When Blau resigned in 1967, Irving continued as sole director until 1973.

On Broadway, Irving directed such plays as *The Country Wife* (1966); *The Caucasian Chalk Circle* (1966); *Galileo* (1967); *The Little Foxes* (1967); *Tiger at the Gates* (1968); *A Cry of Players* (1968); *Camino Real* (1970); *An Enemy of the People* (1971); *Man of La Mancha* (1972); and *A Streetcar Named Desire* (1973).He was the father of actress Amy *Irving, director

David Irving, and singer Katie Irving, and the brother of producer/director Richard Irving.

[Ruth Beloff (2nd ed.)]

IRVING V. LIPSTADT, legal case initiated by Holocaust denier David Irving against defendants Deborah Lipstadt and Penguin Books, tried in a London court from January to March 2001, and resulting in the defeat of Irving. At stake was not the truth of the Holocaust but the quality and nature of Irving's historiography.

David Irving was a Holocaust denier who had written many books on the Third Reich. Deborah Lipstadt was a history professor who had written, among other works, a book about Holocaust denial, *Denying the Holocaust*. It described Irving as a Holocaust denier. He did not care for the description, because he understood it to mean that he was something less than a reputable historian. Therefore he sued Lipstadt and her publishers, Penguin Books, for defamation. He might have sued in the United States, where the book was first published, but then Irving would have had to prove a reckless disregard of truth by Lipstadt. Instead he chose to sue in England because English law gives certain advantages to libel claimants. The defendant must prove the truth of their statements. The case came to trial on January 11, 2000, and lasted five weeks. The evidence of expert witnesses dominated the proceedings. In accordance with defense decisions: no Holocaust survivors were called, for the Holocaust was not on trial; Lipstadt herself did not testify. The case was heard without a jury by Mr. Justice Charles Gray. A 335-page judgment was delivered on April 11, 2000.

The judge decided the case in favor of the defendants, Lipstadt and Penguin. Irving's falsifications and distortions were so egregious, and his animus towards Jews so plain that he won the case for them. They had proved the truth of their allegations against Irving by demonstrating Irving's manipulation of the historical record (which became *the* issue in the case). The multiple concessions made by Irving during the course of the trial did not save him from the judgment that he was indeed a Holocaust denier. The judge also decided that he was an antisemite, a racist, and a falsifier of the historical record. Penguin Books published the judgment, and donated the sale proceeds to a hospital specializing in the treatment of cancer patients. An interim costs order was made against Irving in the sum of £150,000.

Irving, who had represented himself at the trial, instructed lawyers to represent him on his appeal. The appeal was heard in June 2001 and dismissed. Penguin then enforced the costs order and when Irving did not pay, bankrupted him. After the trial, he was asked, "Will you stop denying the Holocaust on the basis of this judgment?" Irving replied, "Good Lord, no." The case attracted a great deal of attention, and large claims continue to be made for its significance. Deniers dismissed it. "Gray's verdict," said a denier, "was predictable, given the display of naked Jewish power during the trial."

David Irving

David Irving (b. 1938) had been writing history books for over 40 years. His first book, published in 1963, was about the bombing of Dresden in February 1945. It wildly overstated the numbers killed, relying in later and foreign editions on a document known by Irving to be a forgery. The intended effect of the book was to narrow the moral distance between the Allied and Axis powers. It introduced into the historiography of World War II the novel concept of the German nation as victim. His principal work, *Hitler's War* (1977; 1991), told the story of World War II from what Irving supposed to be Hitler's perspective, and it thereby made a case for him as an intelligent and even estimable leader. Irving has always been protective of Hitler, and in the earlier part of his career as a writer tended to put the responsibility for the regime's crimes on Hitler's subordinates. He proposed that the Holocaust was executed behind Hitler's back. Irving thus ignored, or explained away, Hitler's own statements about the Jews, the reports on the killings destined for him, and the statements of subordinates that the policy of genocide was determined at the highest level. This special pleading has its own momentum and in due course Irving came to embrace Holocaust denial (among other places, evident in the 1991 edition of *Hitler's War*). Irving came to denial, and then persisted in it, out of tenderness for Hitler and hostility to Jews, and out of a misplaced bravado and a deficient moral sense.

Holocaust Denial

Irving had at various times asserted that the number of Jews killed by the Nazis was far lower than commonly asserted, that gas chambers were not used or used on only an experimental and limited basis, that the killing of the Jews was not systematic, that the Holocaust was an invention of the Allies and that it was then exploited by the Jews to swindle the Germans, to procure a state, and to distract attention from their own crimes. In advancing these theses, he joined a small, ignominious group of published deniers – charlatans, cranks, dedicated haters of Jews. The object of these deniers, or "negationists," is to unwrite the history of the Holocaust.

Deborah Lipstadt

Deborah Lipstadt (b. 1947), a professor at Emory University, Atlanta, was not the first to write about Holocaust denial. She was not even the first to write about Irving's career as a denier, but was the first defendant in a denial libel trial. *Denying the Holocaust* described Irving as a writer of popular historical works. He believed that Britain made a mistake, Lipstadt said, in going to war against Germany, and he regarded the Allies and the Nazis as equally at fault. It was a "disturbing new development," she proposed, that he had "joined the ranks of the deniers." Lipstadt summarized criticisms of his use of evidence and assessed him as being "one of the most dangerous spokespersons for Holocaust denial." She did not allege that Irving was an antisemite, though the charge was implied in the libel proceedings and the defense expressly pleaded his antisemitism.

The Legal Proceedings

In September 1996 David Irving issued a writ against the author and her U.K. publishers, Penguin. He complained that the book represented him to be a Nazi apologist, a manipulator of the historical record, a Holocaust denier, a racist, and an antisemite, and a consorter with racists and antisemites. The defendants broadly agreed that that was indeed what the book maintained, and they insisted that this was the truth about him. The bad history was a consequence of his bad politics, his alliance with the Far Right and his assumed role as apologist for Hitler and the Nazi project. Irving also claimed that he was the victim of an international Jewish conspiracy to silence and discredit him. Here the defendants did not agree, nor did the judge.

In the 3½ years between the start of the legal action and the trial, Irving lost control of his claim. Required to disclose his library of speeches, diaries, and other written materials, he thereby secured the defendants' case against his politics. Confronted by expert reports by scholars such as Richard Evans, Christopher *Browning, Peter Longerich, and Robert Jan Van Pelt that he was unable to counter, he thereby conceded their case against his historiography. The disclosure hanged him; the expert evidence hanged him a second time over. The contribution made by the experts to the defendants' case was considerable, though not in itself determinative of the outcome.

While the disclosure was plainly objectionable, proving the sin of his books required experts. This was hard work, but not difficult work. It needed much checking of sources. The experts demonstrated that Irving mistranslated documents, disputed, overstated or ignored or dismissed adverse, impeccable witnesses and relied upon unreliable witnesses, all to one end. The pattern of deceit was clear: the only witnesses to the Holocaust Irving accepted were those who saw nothing. Euphemistic or otherwise evasive documents were taken at face value; documents that were candid about the extermination process were dismissed as forgeries or otherwise explained away or ignored. An unattainable standard of proof was demanded to "prove" the Holocaust; yet anything, however flimsy and unreliable, was accepted to "disprove" it. There was no consistency to his methodology, only to his politics. It was by the systematic application of "double standards" that Irving honored Hitler's memory.

The Nature of Irving's Antisemitism

The trial exposed the nature of Irving's antisemitism. It was evident both in his performance at the trial itself and in the materials obtained from him in consequence of pre-trial hearings. There was, of course, the desire to rehabilitate Hitler and the Third Reich, and there was the fantasy of a Jewish conspiracy. Irving made wild allegations – Churchill was in the pay of the Jews, the Jews dragged Britain into the war, Jews dominated many of the postwar Communist regimes, the world is in great measure controlled by Jews. There were also lies, including lies told to the judge.

However, so short is the memory, so limited is the understanding, of English newspapers that within a short while of the trial Irving was being referred to by them once again as a historian, his opinions solicited on matters of current controversy. Still, the judgment diminished, though it did not eliminate, Holocaust denial. For the duration of the trial and especially upon the decisive and stinging judgment, the morale of some survivors was lifted. There was the sense that battle had been joined with an antisemite in which the oppressor, for once, did not have the upper hand. Jews and non-Jews of good will came together in defense of the historical truth of the Holocaust, and thereby repelled the attack of an antisemite. It was an act of resistance. And though it was merely one among countless others, it had its own, distinctive merit.

In 2006 an Austrian court sentenced Irving to three years' imprisonment for Holocaust denial.

[Anthony Julius (2nd ed.)]

ISAAC (Heb. יִצְחָק, יִשְׂחָק), son of *Abraham and *Sarah, second of the *patriarchs of the people of Israel. Isaac was born when Abraham was 100 years old (Gen. 21:5) and Sarah 90 (17:17), exactly a quarter of a century after the family had migrated from Haran, its ancestral homeland, in response to divine prompting and promise of offspring (12:4). By his birth, which took place long after his mother had passed the normal childbearing age (18:11), and in his very person, Isaac represented the fulfillment of the oft-repeated divine assurances of posterity. He alone was the true heir of the Abrahamic tradition and covenant (17:19, 21; 21:12). His name had been preordained by God (17:19), and at the age of eight days he became the first to be circumcised (21:4) in accordance with the divine command (17:12). Further emphasis is given to Isaac's role as Abraham's sole heir by the expulsion of his half-brother *Ishmael in resolution of the domestic crisis which Isaac's birth precipitated (21:9–14).

Nothing is related of Isaac's childhood except the celebration held on the day of his weaning (21:8). Not mentioned as having participated in the burial of Sarah (chapter 23), the only other recorded incident of Isaac's life prior to his marriage is the episode known as "the binding of Isaac" (*Akedah, Aqedah; chapter 22), where he is the potential victim of child sacrifice. His age at this time is not given, but since he was able to recognize a sacrifice and to ask an intelligent question, he must have been a lad (cf. 22:5).

God ordered Abraham, in a test of his constancy, to sacrifice Isaac, his favored son, the object of his love (22:2; cf. 22:12, 16), as a burnt offering on one of the heights in the land of Moriah. Observing the firestone and the knife in his father's hand, while he himself carried the wood, Isaac asked, "Where is the sheep for the burnt offering?" (22:7–8). From Abraham's evasive reply, "God will see to the sheep for His burnt offering, my son," Isaac must surely have sensed the truth. Although the *Aqedah* was the climactic event in the tales of Abraham, who demonstrated his willingness to obey God even when God contra-

dicted himself (see Rashi to Gen. 22:12), the fact that "the two of them walked on together" (22:8; cf. 22:6), and that Isaac fell completely silent, must be taken as an implication of the lad's surrender to God's purposes. As it is, the narrative closes with a reaffirmation of the divine blessings. Isaac is thus inextricably bound up with God's promises and their fulfillment.

At the age of 40 (25:20), Isaac married *Rebekah, daughter of Bethuel, nephew of Abraham. The story of the marriage, arranged by Abraham who had sent his servant to Haran to bring back a suitable wife, is told in extraordinary detail (chapter 24) and in a manner calculated to show the intervention of Divine Providence in the sequence of events.

Unique among the patriarchs, Isaac remained monogamous, and he was also exceptional in that he did not have concubines (see *Patriarchs) even though Rebekah was barren during the first 20 years of their marriage (25:20, 21, 26). After "Isaac pleaded with the Lord on behalf of his wife" (25:21), Rebekah gave birth to twins, *Esau and *Jacob, who early became rivals (verses 25–34). During her pregnancy, which was very difficult, Rebekah received an oracle from God concerning the destiny of her progeny (verses 21–23).

Isaac's wanderings were restricted to the area around Gerar (26:1, 17), Beer-Sheba (21:32; 22:19; 26:23, 33; 28:10), and Beer-Lahai-Roi (24:62; 25:11). He had wanted to go down to Egypt in time of famine, but was forbidden to do so by God (26:1–2) and, in fact, he never left the land of Canaan (cf. 24:5, 8). At both Gerar and Beer-Sheba he received divine affirmation of the Lord's promise of protection, numerous progeny, and the land (26:3–5, 23–24), and in Beer-Sheba he built an altar and invoked the Lord by name (verse 25) just as his father had done before him (cf. 21:25–33). Unlike the other patriarchs Isaac engaged in agriculture with great success (26:12), becoming a wealthy man, possessed of flocks and herds and a large retinue. On the whole, his relationships with his neighbors were peaceful, but he did arouse their envy (26:13–16). On one occasion he felt compelled to pass off his beautiful wife as his sister, fearing the men of Gerar would murder him in order to possess Rebekah (verses 6–11). On another occasion he clashed with them over watering rights (verses 15, 18–22; cf. verses 25, 32–33). His status and power were such that Abimelech, king of the Philistines in Gerar, came to Beer-Sheba to conclude a pact of mutual nonaggression (verses 28–31).

The final episode in Isaac's life was the oral testament (chapter 27). Old and blind and not knowing how soon he would die, he decided to communicate his blessing to Esau for whom he had quite early shown partiality (25:28), even though Esau had married Canaanite women, of which Isaac and Rebekah, like Abraham before them (24:3–4), had disapproved (26:34–35; cf. 27:46; 28:8). At Rebekah's direction, however, Jacob deceived his father by assuming the guise of Esau and succeeded in gaining the birthright for himself (27:1–29), a situation in which Isaac finally acquiesced (verse 33; cf. 28:3–4). To insure that Jacob would not marry a Canaanite woman Isaac sent him to the home of his wife's family in Paddan-Aram to find a wife (28:1–2).

Isaac lived on for another 20 years. Like the other patriarchs, Isaac lived a fantastically long time, dying in Hebron at 180, "a ripe old age" (35:27–29). His two sons buried him in the cave of Machpelah beside his wife (49:31).

The biblical data concerning Isaac are relatively sparse, and followers of the documentary theory regard them as an amalgam of J and E with an admixture of P (see *Pentateuch). In any event, it appears likely that numerous traditions have been lost. Thus, in treaty negotiations with Laban, the fact that Jacob employed a divine name, *Paḥad Yizḥak* ("Fear [or "Kinsman"?] of Isaac"; 31:42), not otherwise attested, implies that there once existed some historic framework in which this epithet had special meaning. Although the narratives of Isaac are set in a time that would in our chronology correspond to the early or mid-second millennium, individual markers such as the encounters with the Philistines, marriage ties with Arameans, and the founding of the city of Beersheba indicate that the oldest Isaac traditions cannot be earlier than the late second millennium, and are probably later. No independent traditions about Isaac have been preserved outside of the Pentateuch. In some respects, Isaac, like Abraham and Jacob, is an allegorical figure whose actions reflect historical personalities and situations of the monarchic period (Sperling).

The triad of Abraham, Isaac, and Jacob appears with great frequency throughout the Pentateuch, and became enshrined in the cultic traditions of Israel. Amos actually employs "Isaac" as a synonym for Israel (7:9, 16), though it is uncertain whether this is the sole biblical remnant of a once more extensive usage, or an oratorical device invented by the prophet for purposes of wordplay.

Although no explanation for Isaac's name is given in Genesis (cf. Gen. 17:19; 21:3), the recurrent association of the laughter of the aged Abraham and Sarah when foretold of the birth of a son (17:17; 18:12–15; 21:6) has suggested the popular etymology that the name comes from *saḥak* (*saḥaq*, "laugh"). In actuality, the name is a verbal form, probably originally accompanied by a divine subject and meaning, "may (God) laugh," i.e., look benevolently upon.

[Nahum M. Sarna / S. David Sperling (2ⁿᵈ ed.)]

In the Aggadah

Isaac was born on the first day of Passover (RH 11a). At his birth, many other barren women were also blessed with children. The sun shone with unparalleled splendor, the like of which will only be seen again in the messianic age (Tanḥ. B, Gen. 107; PR 42:177a–177b). To silence the accusations of slanderers who questioned Abraham's paternity, which they ascribed to Abimelech, Isaac was given the exact appearance of his father (BM 87a). As his name was given by God before his birth (Gen. 17:19), he was the only one of the patriarchs whose name was not later changed (TJ, Ber. 1:9, 4a).

The *Akedah* of Isaac was the result of Satan's complaint after Abraham's celebration of the weaning of Isaac. Satan said to the Almighty: "Sovereign of the Universe! To this old man Thou didst graciously vouchsafe the fruit of the womb at the age of a hundred, yet of all that banquet which he prepared, he did not sacrifice one dove or pigeon to thee!" God therefore decided to show Satan that Abraham would offer up even Isaac to Him. According to another tradition, it was Isaac, then 37 years old, who himself suggested the *Akedah* in response to Ishmael's claim that he was more virtuous since Isaac was circumcised at eight days, whereas he was 13 years of age at the time and could have refused (Sanh. 89b; Gen. R. 55:4). On the way to the *Akedah*, Satan unsuccessfully attempted to dissuade Isaac from obeying his father and, when he failed, tried to impede their journey (*Sefer ha-Yashar*, Va-Yera, 77–78; Gen. R. 56:4). Isaac cooperated fully with his father in the proposed sacrifice, even begging him to bind him tightly lest he might involuntarily struggle and render the sacrifice invalid (Gen. R. 56:8). When Abraham lifted up his knife, the angels cried for Isaac. Their tears fell into Isaac's eyes and they caused his subsequent blindness, which was also attributed to his having looked directly at the *Shekhinah* while on the altar (Gen. R. 65:10). Others attribute it to his constantly looking at his wicked son, Esau. His lack of vision later kept him at home and spared him from hearing people say, "there goes the father of the wicked Esau" (Gen. R. 65:10. According to one tradition, during the *Akedah* Abraham drew one fourth of a log of blood from Isaac which symbolized the essence of life (Mekh. SbY, p. 4). According to another version, Isaac actually lost his life as a result of the terror he experienced when Abraham lifted his knife. He was revived by the heavenly voice admonishing Abraham not to slaughter his son, and he then pronounced the benediction, "Blessed are Thou, O Lord, who quickenest the dead" (PdRE 31). God therefore accounted Isaac's deed as an actual sacrifice, and his harsh judgments against Israel are constantly mitigated when he recalls "Isaac's ashes heaped up upon the altar" (Lev. R. 36:5; Ta'an. 16a). Abraham also prayed that God should mercifully recall his binding Isaac whenever the children of Isaac give way to transgressions and evil deeds (Lev. R. 29:9). The *Akedah* therefore became a central theme in all penitential and *selihot* prayers. Isaac is also depicted as the patriarch possessing the deepest feelings and compassion for his descendants. He pleads for them even when they are sinful, and the verse "For thou art our father, for Abraham knoweth us not, and Israel doth not acknowledge us" (Isa. 63:16) is applied to him (Shab. 89b). The institution of the *Minḥah* prayer is attributed to Isaac (Ber. 26b). Like Abraham, he observed the Commandments (PR 25, p. 127b) and made God known in the world (Men. 53a). He was one of three who had a foretaste of the future world while in this world; one of six over whom the angel of death had no power; one of seven whose bodies were not devoured by worms; and one of three upon whom the "evil inclination" had no influence (BB 17a).

[Aaron Rothkoff]

In Christian Tradition

Isaac appears in the New Testament as a type and prefiguration of Christ: "Now to Abraham were the promises spoken, and

to his seed. He saith not, And to seeds, as of many; but as of one, And to thy seed, which is Christ" (Gal. 3:16). In the same epistle, Paul also explains that Isaac and Ishmael symbolize the old and the new covenants and thus represent Christians and Jews respectively. Isaac is the heir of the spiritual inheritance and messianic blessing implied in God's promise while Ishmael, the son of the slave, is turned out of his father's house. In the same way, the Christians are delivered from the fetters of the Old Testament commandments and enjoy the freedom granted to God's children (*ibid.* 4:22–31). Isaac's sacrifice, which is interpreted typologically in the Epistle to the Hebrews, prefigures both the Passion by offering, and the resurrection of Jesus.

The Church Fathers developed this typology further: Isaac's miraculous birth by a sterile woman is a prefiguration of the virginal maternity. They also drew more detailed parallels between the sacrifice of Isaac and Jesus on the Cross: in the same way as Isaac was offered by his father Abraham and carried the sacrificial wood, so Jesus was offered by his Father and bore the Cross. Both obey the divine order of death and, because of that, triumph over death. The vicarious death of Jesus is compared to the substitution of the ram for Isaac. The ram represents the visible sacrifice of the flesh and Isaac prefigures the Eternal Word (Christ). Like Philo before them, the Church Fathers also interpreted the marriage of Isaac and Rebekah symbolically, though they did so in a specifically Christian manner. Rebekah symbolizes the Church waiting for a long time; she sees Isaac (i.e., the Messiah) coming toward her as announced by the prophets, and their union is consecrated.

In Islam

Isḥāq (Isaac) and Yaʿqūb (Jacob) were the descendants of Ibrāhīm (Abraham) and both were prophets and righteous men (Koran, Sura 19:50–51; 21:72–73; and in other places such as 6:84). The tale of the binding (37:99–110) does not mention the name of the one destined to be the sacrifice. According to the Ḥadīth which is quoted by al-Ṭabarī (*Taʾrīkh*, 1 (1357 A.H.), 184–5), Muhammad himself declared that the intended one was Isaac. This is also the opinion of Muhammad's colleagues: the caliphs Omar ibn al-Khaṭṭāb and Ali ibn Abī Ṭālib and the members of the second generation (*tābiʿūn*), e.g., *Kaʿb al-Aḥbār (Thaʿlabī, 76). In his *Taʾrīkh* (history) and his *Tafsīr* (commentary) Ṭabarī quotes the Ḥadiths of all the Arab masoretes and exegetes, who were divided as to whether the object of the binding was Isaac or Ishmael. Umayya ibn Abī al-Ṣalt, a contemporary of Muhammad, gives a description of the binding (29:9–21) as it is told in the Bible and in the Midrashim (Hirschberg, in bibl., pp. 58–61, 124–9). In spite of its similarity to the Koran, it is definitely an original poem. In a fragment of the *genizah of al-Samawʾal al-Kuraẓī there is the mention of the *dhabīḥ* ("the bound one") as he is also referred to in Arab legend; he was redeemed for a lamb, specially created for this purpose.

[Haïm Zʾew Hirschberg]

In the Arts

In most literary treatments of the patriarch Isaac the theme of the binding of Isaac predominates (see *Akedah). This is the case with the medieval English miracle plays (Chester, York, Towneley, Dublin, Brome cycles; the many religious *autos* of the Spanish Renaissance; Metastasio's *Isacco figura del Redentore* (1740); and Laurence Housman's *Abraham and Isaac*, one of the English writer's fiercely anti-biblical *Old Testament Plays* (1950)). The *Akedah* theme inspired a drama in the Aztec language of Mexico (1678), which was later translated into Spanish; and two Italian plays of the 18th century, Pietro van Ghelen's *Isacco, figura del Redentore* (Vienna, 1740) and *Isacco al monte* (Padoya, 1766), a *sacra rappresentazione* in verse by Ferdinando degli Obizzi.

In other works dating from the Middle Ages onward the Sacrifice of Isaac is incidental or omitted. The 12th-century *Ordo de Ysaac et Rebecca et Filiis Eorum* makes Esau the representative of "pharisaical Judaism" and Jacob the spokesman of Christianity. Dramatic works of the 16th–18th centuries include a *Farsa de Isaac* by Diego Sanchez (c. 1530); Francesco Contarini's tragedy *Isaccio* (Venice, 1615); *Izsák házassága* ("The Marriage of Isaac," 1703), a Hungarian play by Ferenc Pápai Páriz; a drama by the Spanish Marrano writer Felipe *Godínez; and *Isaac* (1779?; Eng. 1807), a comedy for young people by the French author Félicité Ducrest de Saint-Aubin, countess de Genlis. The subject declined in importance during the 19th century, an exception being Julius *Zeyer's Czech drama *Z dob růžového jitra* ("From the Times of the Rosy Dawn," 1888), based on Gen. 26, the first of several fresh treatments by Jewish writers. Thus, Edmond *Fleg's poem "La Vision d'Isaac" (in *Ecoute Israël*, 1913–21) dealt with Isaac's traditional plea to God for Israel's preservation. A 20th-century treatment is in Soviet writer Yosif *Brodski's "*Isaak i Avraam*," which only appeared in the West in the verse collection *Stikhotvoreniya i poemy* (1965).

In art, the chief episodes represented are the *Akedah*, the meeting of Eliezer and Rebekah, the marriage of Isaac and Rebekah, and the blessing of Jacob and Esau. The meeting of Eliezer and Rebekah (Gen. 24:15–28) has generally been more popular with artists than the marriage of Isaac and Rebekah. In medieval Christian iconography Isaac was equated with Jesus, and Rebekah with the Virgin Mary, who symbolized the Church. There is a charming early representation of the meeting of Eliezer and Rebekah in the sixth-century Vienna Genesis. It is later found in 12th-century mosaics in the Capella Palatina at Palermo and the cathedral of Monreale, in Sicily; in the St. Louis Psalter (c. 1256); and in the 14th-century English *Queen Mary Psalter*. There are Renaissance and later paintings of the subject by Paolo Veronese at Versailles, by Nicolas Poussin in the Louvre, and by Bartolomé Murillo in the Prado, Madrid. The marriage of Isaac and Rebekah (Gen. 24:63ff.) occurs in an illumination in the *St. Louis Psalter*. A noteworthy representation is the spacious landscape ("The Mill") by Claude Lorrain (1648 National Gallery, London). In the Raphael Loggia in the Vatican there is a representation of Isaac and Rebekah intercepted in their lovemaking by Abimelech (Gen. 26:8–11).

The lyrical subject of Isaac's marriage with Rebekah, pre-

ceded by Eliezer's mission, has been treated in several musical works, mainly oratorios. Some examples are G.C. Arresti's *Lo sposalizio di Rebecca* (1675); A. Sacchini's *Lo sposalizio d'Isaaco con Rebecca* (1739); Michael Haydn's *Rebecca als Braut* (also called *Eliezer*), a "Singspiel," i.e., a kind of operetta (1766); Ferdinand *Hiller's *Rebekka*, an "idyll" for solo choir, opus 182 (date unknown); César Franck's *Rebecca*, produced as an oratorio in 1881 and as a one-act "sacred opera" in 1918; and Maurice Jacobson's *Rebecca's Hymn* for choir and orchestra (1930). The meeting of Eliezer and Rebekah at the well was set as a simple children's dialogue song by the Israel composer Yedidya *Admon-Gorochov in the early 1930s (*Na'arah tovah, yefat einayim*), and has remained popular with Israel children.

ISAAC (middle of the second century), *tanna*. He is not mentioned in the Mishnah but is often cited in *beraitot*, especially those dealing with halakhic exegesis in the Talmuds, and in the halakhic Midrashim of the school of R. Ishmael: *Mekhilta, Sifrei Numbers*, and *Sifrei Deuteronomy*. It appears that he was a Babylonian, and if so he was one of the earliest known *tannaim* hailing from Babylonia. During the period of persecution following the Bar Kokhba War, when Hananiah, the nephew of R. Joshua b. Hananiah, attempted to proclaim leap years and to sanctify new moons in Babylonia, and thereby make Babylonia independent of Erez Israel, Rabbi (the *nasi* at the time, perhaps *Simeon b. Gamaliel) sent him "three communications through R. Isaac and R. Nathan" so as to restrain the Diaspora from taking this step (TJ, Sanh. 1:2). Isaac moved to Erez Israel, where he debated halakhic matters, particularly with the disciples of R. Ishmael. He also associated with R. *Simeon b. Yoḥai (Gen. R. 35:16), and engaged in dispute with Judah ha-Nasi and others (Ber. 48b, Git. 27b, etc.). Among his expositions of biblical verses some are of an aggadic character: "Remember the Sabbath day, i.e., count not [the days of the week] as others count them, but count them with reference to the Sabbath" (Mekh., Jethro, 7). He also engaged in mystical studies (Ḥag. 13a).

[Zvi Kaplan and Shmuel Safrai]

ISAAC (seventh century), *gaon*, head of the academy in Firuz-Shapur in Babylonia. In 658 the city was captured by Caliph Ali. Isaac, together with other Jewish notables, at the head of 90,000 Jews, welcomed the caliph upon his entry; the conqueror in turn gave the Jewish delegation a cordial reception. No responsa or decisions written by this *gaon* are extant. The commentaries and decisions mentioned in the responsa of the *geonim* and other early authorities and attributed to a R. Isaac (*Sha'arei Teshuvah*, no. 217; Zedekiah *Anav, *Shibbolei ha-Leket*, no. 225; *Abraham b. Isaac of Narbonne, *Sefer ha-Eshkol*, 2 (1868), 158; Aaron ha-Kohen of Lunel, *Orḥot Ḥayyim*, ed. by M. Schlesinger, 2 (1902), 414, et al.) originated with another R. Isaac, a *gaon* of Sura, who was also known as Isaac Zadok.

[Simha Assaf]

ISAAC, Jewish merchant of Aachen, the first Jew in Germany to be mentioned by name. In 797 he was appointed by Charlemagne as guide and interpreter to an official delegation to Harun al-Rashid, entrusted with a delicate and important mission. Charlemagne's ambassadors died on the way and Isaac completed the journey and was received in audience when he returned four years later. He brought with him precious gifts from the caliph, including an elephant. According to one account *Machir, the Babylonian scholar credited with founding a Jewish academy in Narbonne, traveled from the East to Europe with Isaac.

ISAAC (**Ishak**; late 12th or early 13th century), Spanish-Hebrew poet. Isaac is only known from his *Mishlei Arav* or *Mishlei Musar*, a translation of an Arabic text which is no longer extant, comprising proverbs, ethical poems, and prose passages. The material is divided into 50 sections called "gates." The last gate includes admonitions and proverbs in poetic form. The most interesting of them is *Ḥidat ha-Nazir ve-ha-Soḥer* ("The Riddle of the Nazirite and the Merchant"), an allegorical tale which in character and presentation is reminiscent of *Ben ha-Melekh ve-ha-Nazir* ("The Prince and the Hermit") of Abraham *Ibn Ḥasdai. These proverbs are of great importance for research into the motifs of Hebrew proverbs and poetry, and they also shed light upon the literary taste of Isaac's time. Several of them are already cited by Menahem b. Solomon *Meiri (1249–1316) in his *Kiryat Sefer* (Smyrna, 1863–1881). The proverbs and poems in the supplement to *Mivḥar ha-Peninim* of *Jedaiah ha-Penini Bedersi (Venice, 1546) are taken in their entirety from the *Mishlei Arav*. In those poems written in the form of an acrostic the name Ishak appears. According to Steinschneider, the author of the *Mishlei Arav* was in fact

Isaac b. Krispin, author of the *Sefer ha-Musar* mentioned in the *Taḥkemoni* of *al-Ḥarizi, in which case he lived at a much earlier date. His book has been published once only in serial form by S. Sachs in *Ha-Levanon* (vols. 2–6, 1865–69).

[Abraham David]

ISAAC (Isak), AARON (Aron; 1730–1816), founder of the Jewish community in Sweden. Born in Treuenbrietzen, a small city in the Duchy of Mecklenburg, Isaac started his career as a peddler at the age of 18. Yielding to an artistic impulse, he taught himself seal-engraving, achieving some success in this craft, and settled in Buetzow. During the Seven Years' War (1756–63) he did business with the Prussian and later the Swedish armies. Learning from the Swedish soldiers that there were no seal-engravers in Sweden, Isaac decided to settle in that country, although no Jew had lived there previously. When he arrived in Stockholm in June 1774 after a difficult journey, he was informed that permission to settle would be granted only if he accepted baptism. This he refused to do and petitioned the king, whom he impressed by his sobriety and persistence. His request was granted and Isaac, his brother, and his partner in Germany, with their families, received permission to settle in Stockholm. After these early struggles the fledgling settlement began to flourish, Isaac remaining head of the Stockholm community for many years. His memoirs in Yiddish, completed in 1804 with an introduction in Hebrew, *Sjelfbiografi* (1897), are important not only historically but also for Yiddish philology and have been frequently republished.

[Hugo Mauritz Valentin]

ISAAC, JULES MARX (1877–1963), French historian. Born in Rennes, he became chief inspector of history teaching at the Ministry of Education. Isaac wrote history textbooks for French secondary schools; his research works concerned the origins of World War I and the problem of the origins of superstitions and popular prejudices. From 1943, traumatically influenced by the Nazi persecutions and the deportation and death of his close relatives, including his wife and daughter, Isaac began to study Christian antisemitism, to which he dedicated the remainder of his life. He did not content himself with the publication of the result of his studies and vigorous polemics against his critics, but also assumed a militant role as founder and member of the executive committee of the Amitié Judéo-Chrétienne. He took an active part in the Judeo-Christian meeting of Seelisberg (1947), whose resolutions called for a revision of the attitude of the churches toward Ju-

daism. After the accession of Pope *John XXIII, the Vatican sought Isaac's advice; upon the request of Cardinal *Bea and after an audience with Pope John in 1960, he drew up a record of the history of the relations between the Catholic Church and Judaism. Isaac's writings had a great influence on the decision to introduce a statement on relations with the Jews at the Vatican Council that ended in 1965.

In his historical works, Isaac points out the falsehood and the tendentious intentions of the claim that the dispersion of Israel was the result of its rejection of the messianism of Jesus. At the same time, he reached the conclusion that there was no reason whatsoever to maintain that antisemitism was as old as Judaism itself. On the contrary, he showed that the Church promoted a system of degradation by gradually burdening the Jews with a lengthy series of restrictions, exclusions, and humiliations which were decreed by the secular governments subjected to ecclesiastic influence. This system was based on the "teaching of contempt," which was essentially the work of the Church Fathers of the fourth century C.E. and whose most harmful thesis was that of describing the Jews as a "deicidal people." Isaac developed his arguments in *Jésus et Israël* (1948; Eng. tr., 1971), *Genèse de l'antisémitisme* (1956), and *L'Enseignement du mépris* (1962; *The Teaching of Contempt*, 1964).

ISAAC, TESTAMENT OF, pseudepigraphical work. There is no reference to an apocryphal book of Isaac in the ancient lists of *apocrypha, such as that of Nicephorus. The Apostolicae Constitutiones 6, 16 may, however, refer to it by its mention of the "apocryphal books of the three Patriarchs." A text entitled *The Testament of Isaac* was published in an English translation from the Arabic by M.R. James. Ethiopic and Coptic texts of the work also exist (see S. Gaselee in bibliography). The book opens with a homiletic preface which is followed by the story of how an angel, resembling Abraham, announces to Isaac his imminent death and commands him to instruct his sons. The instruction that follows is similar in tone to that encountered in some parts of the Testaments of the Twelve Patriarchs, such as those relating Isaac's instructions to Jacob (Test. Patr., Levi, ch. 9). Jubilees 21 also contains similar materials, as do the Greek fragments of the Testament of *Levi and other associated texts. This section of moral instruction is followed by an apocalyptic vision which features the punishments of hell, and in particular the river of fire which can distinguish between the righteous and the wicked. The text concludes with an exhortation for the commemoration of Isaac. It seems that older material may be embedded in the moral instruction, but in its present form the work is probably a late imitation of the Testament of Abraham.

[Michael E. Stone]

ISAAC BAR DORBELO (12th century), one of the best-known pupils of Jacob *Tam. Isaac transmitted details of the various personal practices of Jacob Tam and other scholars, incorporating them in the *Maḥzor Vitry*, which he apparently edited. The book describes the conduct and the teachings of *Rashi and his school ("*de-Vei Rashi*") and there is no doubt that Isaac's share in it amounted to much more than the passages quoted in his name. Many of his "additions" do not bear his name at all but are simply signed with the letter *tav* (*tosefet*, "addition"). Isaac traveled extensively in France, Germany (*Maḥzor Vitry*, ed. S. Hurwitz (1923), 388), Russia, and Bohemia, where he met *Isaac b. Jacob ha-Lavan (*ibid.*, 243). He also visited Worms where he saw the text of the two queries sent by the Rhenish scholars to Ereẓ Israel – one on the subject of the Messiah, and the other concerning the question of the ritual implications of a cardiac adhesion of the lung in an animal – as well as the replies received. This is the oldest extant German-Jewish document of its kind.

The origin of the name Dorbelo is not certain. It may indicate that his father came from the town Ourville in northern France, but Isaac is not to be identified with the scholar Isaac of Ourville – author of the *Sefer ha-Menahel*, an abridgment of which is included in the ritual compendium *Kol Bo*. It is quite possible that Dorbelo is a personal name, a person of this name appearing in the list of the martyrs of Mainz of 1096 (cf. also responsa of Meir b. Baruch, ed. Prague (1608), no. 501). It may be that both of these are identical with the scholar of this name to whom Rashi addressed a responsum in deferential terms, or that Isaac is his son.

[Israel Moses Ta-Shma]

ISAAC BAR ISRAEL IBN AL-SHUWAYK (c. 1167–1247; known in Arabic as **Fakhr al-Dawla Abu al-Fatḥ Is ḥaq**), head of the *Baghdad academy from 1221 to 1247. Isaac was born in Baghdad. In addition to his erudition, Isaac was a prominent *paytan*. He wrote six *vidduyim* and *tokhaḥot* (penitential *piyyutim*) for the Day of Atonement, which were published in the *maḥzorim* of Sephardi rites. According to the testimony of the historian Ibn al-Fuwaṭī, he also possessed a wide knowledge of astronomy and mathematics. Judah Al-Ḥarizi mentions him in his work *Taḥkemoni* (ed. by A. Kaminka (1899), 190) and praises his noble character. In a letter to him R. Abraham b. Moses b. Maimon refers to him as "the sage of our generation, unequaled in our time, the crown of our heads, the head of our academy…." In a eulogy written for him by the contemporary poet R. Eleazar ha-Bavli, it is said of him that "he was like Koheleth in wisdom." His remains were interred on the Mount of Olives.

[Abraham Ben-Yaacob]

ISAAC BAR JOSEPH (first half of fourth century C.E.), Palestinian *amora*. Isaac was a pupil of *Abbahu and of *Jeremiah who transmitted to him the teachings of *Johanan (Pes. 72a; Git. 11b). He may have studied under Johanan himself in his youth (cf. Yev. 64b). He was among the *neḥutei, the rabbis who brought to Babylonia the doctrines, traditions, and customs of the Palestinian *amoraim (Ber. 9a; RH 30a; Av. Zar. 73a; et al.). Statements by him are quoted in the Babylonian Talmud but he is not mentioned in the Jerusalem Talmud. Although on one occasion Abbaye relied upon him in an important matter (Yev. 64b), he was considered less reliable than Rabin, also one of the *neḥutei. They said: "Rabin is reliable, Isaac *sumka* ['the red'] is not *sumkha* ['reliable']; Rabin *yeshno ba-ḥazarah* ['revises his learning,' so Rashi, *ibid.*], Isaac *sumka* does not revise his learning." According to another interpretation given by Rashi, "Rabin is well acquainted with any change [in the view of R. Johanan] but Isaac 'the red' is not so acquainted."

BIBLIOGRAPHY: Hyman, Toledot, 793–5.

[Zvi Kaplan]

ISAAC BAR RAV JUDAH (end of the third and beginning of the fourth century), Babylonian *amora*. Isaac was the son of *Judah b. Ezekiel, head of the academy of Pumbedita. He studied under his father (Shab. 35b; Pes. 104b; et al.) and was already a distinguished scholar during his father's lifetime, being appointed by him to preach in the *bet ha-midrash* (Ta'an. 13b). He also studied under *Huna (Nid. 17b), *Rabbah b. Naḥamani, who succeeded his father as head of the yeshivah of Pumbedita (Shevu. 36b), *Rami bar Ḥama, and *Sheshet (Zev. 96b). Both halakhic and aggadic statements by him are given in the Talmud (Shab. 21a; Er. 84a; et al.). One of his sayings was: "A man should always pray not to fall sick; for if he falls sick, he is told, 'Show thy merits and be quit'" (Shab. 32a). Isaac refrained from marriage in his youth because he sought a woman of good family and unsullied descent, for which he was rebuked by Ulla (Kid. 71b). His granddaughter, a daughter of his son Isi, was the beautiful Ḥomah, wife of Abbaye (Yev. 64b).

BIBLIOGRAPHY: Hyman, Toledot, 792f.

[Zvi Kaplan]

ISAAC BEN ABBA MARI OF MARSEILLES (1120?–1190?), rabbinical scholar in Provence and Spain. Isaac studied under his father, *Abba Mari b. Isaac, and when only 17 years of age composed a work on the laws of *sheḥitah and forbidden foods, at his father's behest. Later he went to Barcelona, where he was received with great honor and, at the request of Sheshet *Benveniste, wrote a commentary on chapter 4 of the tractate *Menahot* which deals with the laws concerning *ẓiẓit, *mezuzah, and *tefillin. He corresponded with the most illustrious figures of his generation, such as *Abraham b. David of Posquieres and Jacob *Tam, whom he frequently mentions and quotes. His place in the first rank of rabbinic authorities is due to his encyclopedic work, *Sefer ha-Ittur*, a compilation

of the main halakhic laws which are of practical application. Part one deals with the various laws of bills, both financial and of divorce. It is arranged according to subject matter but following a mnemonic acrostic *Tashkef be-Geza Ḥokhmah.* תשקף בגזע חכמה ("Consider the Root of Wisdom"), each letter representing a certain concept. Thus ת stands for *tenai* ("condition"), ש for *shover* ("receipt"), ק for *kiyyum* ("authentication"), etc. Part two includes the laws for the preparation of meat, *sheḥitah*, circumcision, *tefillin*, marriage benedictions, *ẓiẓit*, and a separate section entitled "Ten Commandments" containing ten positive commands which must be performed at specific times. This arrangement is unique in halakhic literature. Isaac b. Abba Mari made use of his vast knowledge of geonic literature and his work is still an important source for that literature. He also made extensive use of Spanish authorities and those of Germany and northern France. He used the Jerusalem Talmud to a considerable extent and also engaged in establishing the correct text of the Talmud on the basis of ancient sources, some of which are no longer extant.

The *Sefer ha-Ittur* was accepted as an authoritative halakhic treatise by the great rabbinical authorities of Spain and Germany and even such renowned talmudic scholars as Naḥmanides made frequent use of it without specifically mentioning it. Both the manuscript and the printed editions (Pt. 1: Venice, 1608; Warsaw, 1801; Pt. 2: Lemberg, 1860) of the text of the *Sefer ha-Ittur* are faulty to the extent of the deletion of entire lines, rendering its study difficult. A new edition of the entire work, together with a commentary, was prepared and published by Meir Jonah (1874–85). Additional fragments, entitled *Tashlum ha-Ittur* were published (from manuscripts) in the Festschrift in honor of Dr. Jakob Freimann (1937) by Alfred Freimann. Besides this work Isaac b. Abba Mari wrote a short treatise on Isaac Alfasi called *Me'ah She'arim* (printed at the end of some of the talmudic tractates in the Romm-Vilna edition).

ISAAC BEN ABRAHAM (**Riẓba**; 12th century), French tosafist. Isaac is variously referred to as Riẓba, Riba, and Isaac ha-Baḥur of Dampierre. He was the pupil of Isaac b. Samuel ha-Zaken and also studied for a time under Jacob *Tam. He was not a pupil of *Judah b. Isaac-Judah, Sir Leon, as a number of scholars have thought (see Urbach, Tosafot, 269 n. 29). His brother was *Samson of Sens and his maternal grandfather, *Samson of Falaise. He succeeded his teacher as head of the yeshivah of Dampierre.

No complete work by him has survived, but his statements are cited in the *tosafot* to various tractates, chiefly *Eruvin, Yoma, Mo'ed Katan, Yevamot, Ketubbot, Kiddushin, Nedarim, Bava Kamma,* and *Zevaḥim.* He wrote numerous responsa, some of which are quoted in the *Haggahot Maimuniyyot,* the *Or Zaru'a* and in other works. During the Maimonidean controversy, Meir b. Todros Abulafia, an opponent of the books of Maimonides, approached him in 1202 to express his opinion. Among those who addressed problems to him

was Jonathan b. David, the leading scholar of Lunel. There is mention of a work by him on the Passover *seder*, entitled *Yesod Rabbenu Yiẓḥak b. Avraham be-Leilei Pesaḥ.* His pupils included Nathan b. Meir and *Judah b. Yakar, the teachers of Naḥmanides, and Samuel b. Elhanan.

[Shlomoh Zalman Havlin]

ISAAC BEN ABRAHAM DI MOLINA (d. before 1580), Egyptian rabbi. Isaac's surname probably derives from the town of Molina in southeast Spain, and it may be assumed that he came to Egypt with the Spanish exiles. His father was a wealthy person and was on friendly terms with the *nagid*, Isaac *Sholal. Isaac appears to have headed the yeshivah of Solomon *Alashkar. R. Isaac himself was wealthy and for a time was the head of the Egyptian mint, a position which was held by other Jews as well in Egypt in the 16th century. He is mentioned in the responsa of Moses di *Trani (Resp. Maharit, vol. 2, no. 16) and of Joseph *Caro (Resp. *Beit Yosef,* EH *Dinei Ketubbot,* 14) as being exceptionally strict with regard to (*Gershom b. Judah's) ban on bigamy, in contrast to Joseph Caro, Moses di Trani, Israel di *Curiel and others, who took a more lenient view. Caro complains that Isaac slighted him and his work *Beit Yosef* in stating that it was a mere digest of the rulings of his predecessors. Isaac is the author of a commentary on the Mishnah. One of his responsa was published in the *Avkat Rokhel* (130) of Caro. A number of his responsa have remained in manuscript and three of them have been published (see bibliography). Isaac's name came to the fore during the scandal surrounding the *Besamin Rosh* (Berlin, 1793), by Saul *Berlin, who falsely claimed the book to contain responsa by *Asher b. Jehiel and his contemporaries which had been collected, annotated, and prepared for publication by Isaac di Molina.

[Abraham David]

ISAAC BEN ABRAHAM HA-GORNI (13th century), Hebrew poet. Born in the city of Aire (i.e., "threshing floor," Heb. *goren*, hence the name Gorni) in southwestern France, Gorni seems to have spent part of his life in Luz (Hautes Pyrénées) and Lucq (Basses Pyrénées). From his verses, it seems that he led a wandering life and he was constantly dependent on patrons. He was, among other places, at Arles, Aix-en-Provence, Manosque, Carpentras, Draguignan, and Perpignan, complaining almost constantly about the shallow culture and the parsimony of their inhabitants. Because of various love affairs he was bitterly persecuted by his compatriots. Several features of his poetry could have been taken from troubadour poetry, and although he uses the meters and rhymes of classical Andalusian poetry, he is far removed from most of its poetical

conventions. According to Neubauer, Gorni was on intimate terms in Perpignan in about 1280–90 with Abraham *Bedersi, to whom he addressed many complimentary poems, but received an answer only after a long delay. Their friendship does not seem to have lasted long: Bedersi composed a series of blunt, poetical lampoons ridiculing Gorni and did not consider him worthy of inclusion in his poem, *Ḥerev ha-Mithappekhet* (publ. in *Ḥotem Tokhnit*, 1865), in which he lists the names of the famous contemporary poets. Their way of understanding poetry was too different, and apparently for not a few intellectuals of the time Gorni's poetry, far removed from Andalusian traditions, was not highly esteemed. Gorni was involved in another literary quarrel with Isaiah Debash of Aix, whose friend Shiloni he had violently attacked.

Although in some places his style is uneven and at times awkward, Gorni was undoubtedly a poet of unusual talent and originality. The poem on his fate after death, a kind of "last will and testament," replete with both sarcasm and anxiety, is unique in the literature of the Middle Ages. Two centuries later, his fame was still firmly established: Jacob ben David *Provençal names him together with Al-Ḥarizi and Sulami as the best Hebrew poets of Provence (Letter of the year 1490, ed. by E. Ashkenazi in *Divrei Ḥakhamim* (1849), 70). Gorni's poems were published by M. Steinschneider, H. Gross, A.M. Habermann, and J.H. Schirmann, but they deserve a new critical edition. We know today 18 of his probably much more numerous poems: praising the generosity or fustigating the heartlessness of several Provençal communities, invectives against other poets, etc. He represents himself as one of the wandering jongleurs of his time, going from place to place with his musical instrument, as shown by J.H. Schirmann and A. Brenner.

[Jefim (Hayyim) Schirmann / Angel Sáenz-Badillos (2nd ed.)]

ISAAC BEN ABRAHAM OF NARBONNE (13th century), halakhist of Provence. Almost no biographical details on him are known. He was a pupil (according to some, a colleague-disciple) of *Naḥmanides and Jonah *Gerondi and one of the teachers of Solomon b. Abraham *Adret. Some identify him with Isaac of Carcassone, who is mentioned in a work on *Pesaḥim* ascribed to Yom Tov *Ishbili (Ritba), in novellae to *Avodah Zarah* by the pupils of Jonah Gerondi, in *Nimmukei Yosef* to *Ketubbot*, and in responsa by Simeon b. Ẓemaḥ *Duran. There is, however, insufficient evidence to establish this identification. Meir (Introduction to *Beit ha-Beḥirah* to *Avot*,

ed. by B.Z. Prag (1964), 57) states that Isaac compiled commentaries on *halakhot* by Isaac *Alfasi. Some scholars have attempted to ascribe various commentaries preserved in manuscript to Isaac, but their evidence is doubtful. Benedikt claims that the commentaries ascribed to a pupil of Naḥmanides on the tractates *Beẓah, Megillah, Ta'anit, Pesaḥim*, and *Makkot* are by Isaac; his opinion is shared by Blau and Chavel, but rejected by B. Naeh. A manuscript comprising a commentary by Alfasi to *Ḥullin* has been ascribed to Isaac by Marx, as well as another manuscript comprising a commentary by the same author to *Pesaḥim* (by Sassoon). Naeh has raised serious doubts about these ascriptions, and they cannot be accepted with certainty. Isaac of Carcassone is said to have written commentaries on *halakhot* by Isaac Alfasi to *Pesaḥim, Avodah Zarah, Bava Meẓia*, and *Bava Batra*.

[Shlomoh Zalman Havlin]

ISAAC BEN ABRAHAM OF POSEN (d. 1685), rabbi and author. Isaac was a pupil of Jonah Teomim and Abraham Meir of Bar. He was on friendly terms with the kabbalist Moses *Zacuto. His first position was as rabbi in Lutsk. In 1664 he was appointed rabbi of Vilna and from there he went to Posen in 1667. His extensive knowledge of the Talmud and Kabbalah earned him the title of R. Isaac the Great, his opinion on halakhic questions being frequently sought by contemporary scholars (see *Magen Avraham* to Sh. Ar., OḤ, 1:7; 32:35; *Gaon Ẓevi* of Ẓevi Hirsch Horowitz (Prague, 1737), 2a–3a). His novellae are mentioned in *Sha'arei Shamayim* of Jehiel Michael ha-Levi (Prague, 1675), 94b; in *Lev Aryeh* of Judah Aryeh Hotchke (Wilhelmdorf, 1674 – on the weekly portion *Toledot*), 16a; *Leket Shemu'el* of Samuel Feivush Katz (Venice, 1694); and in *Even ha-Shoham u-Me'irat Einayim* of Eliezer Goetz b. Meir (Dyhernfuerth, 1733), nos. 11 and 48. Part of his responsa collection was published under the title *Be'er Yiẓḥak* (Vienna, 1894), and part of the remainder was published at the end of Asher b. Jehiel's commentary to *Sukkah* (1903). The whole collection of responsa was in the possession of R. Spira of Munkacs. Isaac died in Posen.

[Samuel Abba Horodezky]

ISAAC BEN ASHER HA-LEVI (known as **Riba,** initials of **R**abbi **I**saac **B**en **A**sher; second half of 11th and beginning of 12th century), talmudist of Speyer, the first of the German tosafists. He was a pupil of *Rashi and the son-in-law of Rashi's colleague Eliakim b. Meshullam ha-Levi. Contemporary scholars

addressed their problems to him and treated him with great respect. His pupils referred to him as "*ha-Kadosh*" ("the Saint," cf. Eliezer b. Nathan, *Sefer Rabban* (Prague, 1610), 149a; Sim-leul-Silvaniei edition, 1926, 298b). This appellation may be connected with the manner of his death, it being related that he became very ill on the Day of Atonement and on being told by the physicians that if he fasted he would certainly die, but if he ate he might live, he decided to fast and succumbed to his illness (Menaḥem of Recanati, *Sefer Recanati* (*Piskei Hala-khot*), Bologna, 1538, no. 166). He compiled *tosafot* to most tractates of the Talmud, but only extracts included in the later collections of *tosafot* are extant. Some of his statements are likewise quoted in subsequent halakhic literature (*Sefer ha-Yashar* of Jacob Tam, *Or Zaruʾa* of Isaac b. Moses of Vienna, Meir of Rothenburg, and others). He compiled halakhic collections on loans, on usury, on the tractates *Ḥullin, Bava Ba-tra* chapter 4, *Avodah Zarah, Gittin,* and *Ketubbot.* It is stated that before teaching he went over the *halakhah* by himself four times (Aaron Ha-Kohen, *Orḥot Ḥayyim,* pt. 1, Law of Mondays and Thursdays, no. 20, Jerusalem, 1956 ed., 49). It is also stated that he and his pupils endeavored to create a *Golem by the aid of practical Kabbalah (Commentary to *Sefer Yeẓirah* attributed to Saadiah Gaon, 2:4, Grodno, 1806 ed., 42b). Among his pupils were Isaac b. Mordecai (the Riẓbam), Moses b. Joel Saltman, and Shemariah b. Mordecai.

Isaac b. Asher had a grandson of the same name (first quarter of the 12th century–1195) who is known as Riba II, to distinguish him from his grandfather. He was also known as Riba ha-Baḥur ("The Younger"). He was born in Speyer on the day his grandfather died and they applied to him the verse (Eccles. 1:5), "The sun also ariseth and the sun goeth down" (see Eccles. R. to 1:5; *Daʾat Zekenim* to Ex. 7:25). He studied under Shemariah b. Mordecai and Abraham b. Moses of Regensburg. He was a member of the *bet din* among whose other members were Meir b. Kalonymus and alternately Meir's brother Judah. His signature appears with theirs on a responsum to R. Joel. Among his pupils were *Eliezer b. Joel ha-Levi (the Ravyah) and Simḥah b. Samuel of Speyer. He met a martyr's death in 1195 after rioters abused the dead body of his daughter (Narrative of Ephraim of Bonn in *Quellen zur Geschichte der Juden in Deutschland,* 2 (1892), 74f.).

[Shlomoh Zalman Havlin]

ISAAC BEN AVDIMI (late third–early fourth century C.E.), Babylonian *amora.* Almost all Isaac's sayings in the Babylonian Talmud are in the sphere of biblical exegesis and aggadic or halakhic Midrash. His interpretations were regarded as so authoritative that in the following generation *Rava stated that "any biblical verse not explained by Isaac b. Avdimi remains unelucidated" (Zev. 43b). Most of his statements and his discussions on biblical exegesis are given together with the differ-

ing view of *Ḥisda (Sanh. 56b) on the verse under discussion. The main figures of the following generation, such as *Abbaye and Rava, transmit his sayings (Zev. 28a, 43b). It would therefore appear that Isaac went from Sura, where Ḥisda lived, to Pumbedita, to the academy of Rabbah, and there Abbaye and Rava heard him. Abbaye introduces the statements of Isaac with the words: "When Isaac b. Avdimi came, he said" etc. (Zev. 28a). The usual meaning of this wording is that he came from Erez Israel to Babylonia, but it cannot have this meaning in this instance since his name is found neither in the Palestinian sources nor in connection with Palestinian scholars. The reference must be to his arrival in Pumbedita from Sura.

[Shmuel Safrai]

ISAAC BEN BEZALEL OF VLADIMIR (d. 1576), Polish rabbi. To Isaac, as to his contemporaries *Shalom Shachna and Kalman of Worms, belongs the credit for the expansion of talmudic studies in Poland. He was considered a front-ranking authority in the halakhic field (cf. resp. Solomon *Luria, nos. 1, 15, 35ff.; resp. Sheʾerit Yosef (Joseph Kohen), 17; resp. Moses *Isserles, 91). An opinion of Isaac on an *agunah matter is included in the "new" responsa of Joel *Sirkes (no. 4). He also wrote annotations to the Talmud, to *Asher b. Jehiel, and *Mordecai b. Hillel. Numerous decisions of Isaac are quoted by his grandson, *David b. Samuel ha-Levi (*Turei Zahav,* OḤ no. 153; YD no. 113; EH no. 129; ḤM no. 3).

BIBLIOGRAPHY: Ḥ.N. Dembitzer, *Kelilat Yofi,* 1 (1888) 48a–49b; Zunz, *Ir ha-Ẓedek,* n. 28; Fuenn, Kenesset, 601; Kahana, *Anaf Eẓ Avot,* 34; Lewinstein, *Dor Dor ve-Doreshav* (1900), no. 795.

[Samuel Abba Horodezky]

ISAAC BEN ELEAZAR, name of two Palestinian *amoraim.* The first lived during the second half of the second century C.E. He was a relative of R. Johanan and an associate of R. Isaac and of Ḥiyya b. Abba. Although referred to in the Babylonian Talmud as Isaac b. Eleazar, he is also identical with the Isaac Ḥakola or Ben Ḥakola mentioned in both the Talmuds (cf. Ket. 109a; TJ, *ibid.* 13: 1, 35b); the correct reading in *Pesaḥim* 113b (see Dik. Sof., p. 354, no. 100) is "Isaac b. Ḥakola is identical with Isaac b. Eleazar."

The second *amora* of this name lived in the second half of the fourth century. He was a native of Caesarea, and several of the halakhic and aggadic teachings transmitted by him are connected with the town. When R. Mana went to Caesarea he turned to him with a halakhic question (TJ, Dem. 2:1, 22c). Jacob of Kefar Nibburaya, in his sharp criticism of the *nasi* for appointing *dayyanim* because of their wealth, contrasted them with Isaac: "But 'The Lord is in His holy Temple' (Hab. 2:20), is to be applied to Isaac b. Eleazar in the Maradata [turbulent] Synagogue of Caesarea" (TJ, Bik. 3:3, 65d). The leading halakhists and aggadists of the following generation, such as Mana and Tanḥuma, quote sayings in his name (*ibid.,* TJ, Bik. 1:3, 63d). His most distinguished pupil was Oshaya b. Sham-

mai, also a native of Caesarea, who transmitted several *halakhot* in his name. When Oshaya was about to undertake a sea voyage, Isaac instructed him in the *halakhah* of travel by sea during the intermediate days of the festival (TJ, MK 2:3, 81b). Among his aggadic dicta are "That which wisdom has placed as a crown upon its head [i.e., the fear of God] humility has made the heel of its shoe" (TJ, Shab. 1:5, 3c; cf. Tanh. B. Num. 52); and "The prophets know that their God is true. Hence they do not flatter Him" (TJ, Ber. 7:4, 11c).

[Shmuel Safrai]

ISAAC BEN ELIAKIM OF POSEN (17th century), Yiddish moralist and author. Isaac wrote *Lev Tov* (Prague, 1620), an ethical-religious work in 20 chapters, providing rules for prayer and correct observance of *mitzvot*, and proper behavior for home and synagogue. It was reprinted with additions by Ḥayyim b. Jacob Orbach (Cracow, 1641). Unlike other Yiddish ethical works, *Lev Tov* was addressed to both men and women. It counseled the men to honor their wives – since they educate the children to keep a Jewish home – and, despite a traditional view of gender relations, stressed that men and women have equal rights. This work became very popular but was criticized in the anonymous Yiddish book, *Hasoges* (*Hassagot*; Amsterdam, c. 1710). Isaac was apparently attracted to Kabbalah. From Venice, Moses *Zacuto sent him his treatise on the laws of writing Torah scrolls, *Tikkun Soferim*, for approval (Oxford, Bodleian Library, Ms. Opp. 554, which also contains Isaac's reply).

BIBLIOGRAPHY: Fuerst, Bibliotheca, 2 (1863), 140f.; Zinberg, Sifrut, 4 (1958), 82f.; M. Erik, *Geshikhte fun der Yidisher Literatur* (1923), 294–301. **ADD. BIBLIOGRAPHY:** J. Winter and S. Wünsche, *Juedische Literatur*, 3 (1896), 541–2; J.C. Frakes, *Early Yiddish Texts: 1100–1750* (2004), 536–40.

ISAAC BEN ELIEZER (known as *segan Leviyyah* – meaning a levite; d. 1070), one of the great "scholars of Worms" and a teacher of *Rashi. Isaac b. Eliezer apparently originated from *Vitry (see Asher b. Jehiel, to Ḥul 4:7). He studied at the yeshivah of Mainz under *Eliezer b. Isaac of Worms and thereafter went to Worms, where he headed the yeshivah and where he introduced several regulations into the local liturgy. Of his many disciples there, the most noteworthy were Rashi, Eliakim b. Meshullam, and *Meir b. Samuel. Rashi states that "he was leader and guide of the generation, nothing being done without his approval." Some of his responsa and rulings, written in an unusually terse manner, appear in the books of the "School of Rashi" and in the responsa of Rashi and the scholars of France and Lorraine, along with some of his scriptural interpretations. In his commentary on the Talmud, Rashi refers to him as *Leviyyah* and elsewhere (*Likkutei ha-Pardes*, Munkaes ed. (1897), 36b) "our holy teacher," apparently in allusion to his saintliness and asceticism (cf. *Sefer Ravyah*, ed. by V. Aptowitzer (1964²), part 2, 659: no. 886). *Piyyutim* by him

are also extant. Of his three sons, whom the *rishonim* called "our levite teachers," the best known is Jacob, called *Ya'vez*, whose halakhic rulings are included among those of the *rishonim* and whose elegy on the massacres of 1096, beginning "*Oi li al shivri*" has been preserved.

[Israel Moses Ta-Shma]

ISAAC BEN ḤAYYIM BEN ABRAHAM (c. 1500), Spanish-Hebrew poet. Isaac left Spain, according to his own testimony, in the summer of 1492, together with the exiles from the city of Jativa. Later he came to Naples and Apulia. In Adar 1501 he was in Constantinople, where in 1503, he composed a parody on a marriage contract. Isaac's works *Ma'yan Gannim* and *Eẓ Ḥayyim* (manuscript in the Bodleian Library) contain, among others, a detailed work on prosody, *Melekhet ha-Shir*, poems by himself and by his grandfather, Isaac b. Joseph.

BIBLIOGRAPHY: Neubauer, Cat, 2 (1906), 186, no. 2770; M. Drechsler, *Mekonen Evlenu* (1932); Davidson, Oẓar, 4 (1933), 420.

[Jefim (Hayyim) Schirmann]

ISAAC BEN JACOB HA-KOHEN (second half of 13th century), Spanish kabbalist. He was born in Soria and was related to *Shem Tov b. Abraham ibn Gaon. He traveled through Spain and Provence together with his brother *Jacob and also on his own and collected the traditions of the elder kabbalists there. Isaac was among the leading spokesmen of the Gnostic circle in Spanish Kabbalah; his books are full of important material having no counterpart in his colleagues' works; but some of it was incorporated as well as freely edited by his pupil *Moses b. Solomon of Burgos.

Isaac's writings include (1) a treatise on *azilut* ("*emanation"; *Madda'ei ha-Yahadut*, 2 (1927), 244–64; other excerpts in *Ha-Ẓofeh*, 13 (1929), 261 and in *Kitvei Yad be-Kabbalah* (1930), 69–70). Another edition of this treatise was edited with additions and elaborations of several passages by Moses of Burgos (*Tarbiz*, 5 (1934), 190–6); (2) *Perush al Merkevet Yeḥezkel* ("Commentary on Ezekiel's Chariot," *Tarbiz*, 2 (1932), 188–218, and additions from the elaborations of Moses of Burgos; *Tarbiz*, 5 (182–90)). This commentary was mistakenly inserted in the commentary of *Moses de Leon on the *Merkabah in his *Mishkan ha-Edut* in some manuscripts; (3) *Ta'amei ha-Nekuddot ve-Ta'amei ha-Te'amim* ("On vowels and accents") on which no author's name appears but whose content and language prove the identity of the author (*Madda'ei ha-Yahadut*, 2 (1927), 265–75); (4) *Inyan Gadol Meva'er Keẓat Ma'aseh Merkavah* ("An important theme, which explains part of the mystery of the chariot"; *ibid.*, 279–84); (5) a commentary on the Torah seen by Isaac b. Samuel of Acre; (6) a speculative work which belonged to Shem Tov *Ibn Shem Tov explaining the doctrine of the *Sefirot* and connecting it with neoplatonic ideas; some quotations from it are quoted by Shem Tov ibn Shem Tov (*ibid.*, 276–9).

Isaac *Albalag mentions Isaac among the three most famous and most authoritative kabbalists of his generation and indeed in several manuscripts of his major treatise he is called "Paragon of the Generation." His treatise on emanation contains the first formulation of the doctrine of left emanation (see *Kabbalah) according to pseudepigraphic sources. This article is composed of different parts, apparently letters which he wrote to his colleagues at different times, and they contain parallel and different versions of this doctrine. As can be seen from his commentary on Ezekiel 1 and remnants of his theoretical book, he had a complete system on the hierarchy of the worlds which came to him from neoplatonic sources in different channels: *olam ha-mitboded* ("the transcendent world of divine unity"), *olam ha-yezirah* ("the world of formation") which is also called *olam ha-madda* ("the world of cognition"), *olam ha-nivdal* ("the world of separation," i.e., separate intelligences) or *olam ha-nevu'ah* ("the world of prophecy"), *olam ha-tekhunah* ("the world of astronomy") and *olam ha-behinah* ("the world of trial") which is *olam ha-shafel* ("the terrestrial world," *Tarbiz*, 2 (1939), 436–42).

BIBLIOGRAPHY: G. Scholem, in: *Madda'ei ha-Yahadut*, 2 (1927), 163–293; idem, in: *Tarbiz*, 2–5 (1931–34); Toledano, in: *Ha-Zofeh* 13 (1931), 261–7; G. Scholem, *Les Origines de la Kabbale* (1966), 310–4, 376–82.

[Gershom Scholem]

ISAAC BEN JACOB HA-LAVAN OF PRAGUE (12th century), tosafist of Bohemia. It has been maintained by some that he was called "ha-Lavan" ("white") because of his white hair and by others that the name is derived from the river Elbe. He was also known as Isaac of Bohemia and Isaac of Regensburg. He was a brother of the well-known traveler *Pethahiah of Regensburg. Isaac lived in Germany and in France, where he studied under *Isaac b. Asher ha-Levi, and under Jacob b. Meir *Tam. He was the author of *tosafot* to *Ketubbot* and *Yoma* which have been published on the basis of various manuscripts – *Ketubbot* (1954) by P.J. Kohn; *Yoma* by D. Genachowski (1956) and by P.J. Kohn (1960) in a different reading of the manuscript. *Eliezer b. Joel ha-Levi possessed a collection of Isaac's responsa. He is known also to have compiled various *piyyutim*. The *Sefer ha-Yashar* of Jacob Tam, containing sayings of Tam preserved by his pupils, also contains traditions transmitted by Isaac (Urbach, *Tosafot*, p. 82 n. 27). Isaac is mentioned in the *tosafot* in the printed editions of the Talmud to *Yevamot, Ketubbot* and *Zevahim*, as well as in the following works of the *posekim: Yihusei Tanna'im ve-Amora'im, Arugat ha-Bosem, Roke'ah* (which includes a responsum by Isaac to *Judah b. Kalonymus b. Moses), the responsa of Isaac Or Zarua, and *Meir b. Baruch of Rothenburg (which quotes a complete responsum by him), *Orhot Hayyim, Kol Bo*, and others. According to Aptowitzer, Isaac died before 1188 but according to Zunz and Tykocinski, after 1193.

[Shlomoh Zalman Havlin]

ISAAC BEN JACOB MIN HA-LEVIYYIM ("of the levites"; b. 1621), Italian rabbi. He was orphaned at an early age and was brought up in the house of his grandfather, Leone *Modena. He was a printer, proofreader, cantor, and preacher in his native Venice. He was the author of *Ma'asei Hakhamim* (Venice, 1647), talmudic *aggadot* based on Jacob ibn *Habib's *Ein Ya'akov*, Leone da Modena's *Beit Yehudah*, with commentaries; *Medabber Tahpukhot*, memoirs (published by L. Blau); *Yizhak Mezahek*, an anthology of poems, apparently no longer extant (several of Isaac's poems have been printed in other works, e.g., Yom Tov Valvason's *Hed Urim*, Venice, 1662); extracts from Moses *Cordovero's *Pardes Rimmonim* (Salonika n.d., Venice, 1586); and *Pesikta Rabbati*, a collection of decisions (neither of the latter works is extant). Isaac also wrote introductions to numerous works by others, including his grandfather's *Magen va-Herev*. He was one of those who took part in the inquiry against *Nathan of Gaza (see Samuel *Aboab, *Devar Shemu'el*, no. 375).

Blau (ed.), *Leo Modenas Briefe und Schrift-stuecke* (1905), 74 (Ger. section), 165 (Heb. section); idem, in: HHY, 2 (1912), 168–71; 3 (1914), 45–54, 69–96; Scholem, Shabbetai Zevi, 2 (1957), 417–9; Leone (Judah Aryeh of) Modena, *Ziknei Yehudah*, ed. by S. Simonson (1956), 44 (introd.).

[Umberto (Moses David) Cassuto]

ISAAC BENJAMIN WOLF BEN ELIEZER LIPMAN (d. before 1698), German rabbi. Isaac's father, ELIEZER, was called Goettingen, a name taken from the city of that name in Germany. Isaac studied under Isaac b. Abraham, *av bet din* of Vilna and Posen. He served as rabbi of Landsberg an der Warthe. From 1687 he was rabbi of Slutsk and then of Olyka. While still young, he wrote *Nahalat Binyamin*, a work in four parts; only the first part was published (Amsterdam, 1682). The book is a pilpulistic commentary on 147 precepts, positive and negative. In the introduction he praises his brother JUDAH, known as Judah Kazin ("leader"), one of the heads of the Berlin community. Judah assisted him in covering the cost of the publication of the first part of the work. Isaac's approach is explained in the introduction. He based all his works "on what was possible, without coming to any halakhic decision. That is why I have reviewed all aspects in the hope of arriving at the truth at least in one matter." His novellae to *Bava Mezia* were also published (1686). Of his sons, ELIEZER, LIPMAN GOETTINGEN, the rabbi of Coblenz, and Aaron, known as ARND BENJAMIN WOLF (1670–1721), who was born in Landsberg, are known. The latter's uncle and father-in-law, Judah Berlin, founded a *bet ha-midrash* in Berlin and appointed Aaron as its head. In 1697 Aaron was appointed deputy to the aged rabbi of Berlin, Shemaiah b.

Abraham Issachar Ber, and when the latter died in 1709 he was appointed the official rabbi of Alt-Mittel-Neumark. From 1713 he served as rabbi of Frankfurt on the Oder and his brother-in-law, Michael (Mikhol) Ḥasid, succeeded him in Berlin.

[Yehoshua Horowitz]

ISAAC BEN JOSEPH OF CORBEIL (known as **Semak** after his main work; d. 1280), one of the great French codifiers of the 13th century; son-in-law of *Jehiel of Paris. Isaac was renowned for his piety which is reflected in his *Sefer Mitzvot Katan* (*Se-Ma-K*), "Small" Book of Commandments, for which he is mainly known. In this work, he provided the masses with a compendium of contemporary *halakhah*, interspersed with ethical homilies, parables, and *aggadot*. He divided the precepts into seven "Pillars," corresponding to the seven days of the week, apparently intending that the work be read through every week. In his enumeration of the precepts and their details, though not in his division of the work, Isaac was guided by the *Sefer Mitzvot Gadol* of *Moses of Coucy, but he omitted the extensive halakhic discussions of that work. The *Semak* achieved wide popularity, receiving recognition from outstanding scholars of France and Germany and even being included by some early authorities in the prayer book "so that the precepts could be recited daily… in place of supplications (see *Teḥinnah) and the reading of psalms." *Meir b. Baruch of Rothenburg's encomium gained wide circulation for the book in Germany, and it soon became an accepted source for the *posekim* ("codifiers"), particularly *Aaron ha-Kohen of Lunel and Joseph *Colon. In the course of time many annotations (the best known being those of *Perez b. Elijah of Corbeil) were added; in later editions, these were sometimes merged with the original text and printed as one. The glosses of Moses of Zurich were known (but never published) as "The *Semak* of Zurich;" this consists of a selection from the works of German and French scholars which were added to the *Sefer Mitzvot Katan. Sefer Mitzvot Katan* was first published in Constantinople (1510) and many times later. Many manuscripts still exist, evidence of its wide popularity. Isaac's other writings include his "decisions," collated by one of his disciples from his responsa. His *tosafot* to several tractates are also referred to in rabbinic literature.

[Israel Moses Ta-Shma]

ISAAC BEN JUDAH (c. 1080), liturgical poet. While it is not known where Isaac flourished, his *piyyutim* have been included for the most part in the *Maḥzor Romania*; for that reason Zunz assumed that Isaac must have originally come from the Byzantine Empire. Isaac composed *yoẓerot* with the corresponding *zulatot* (hymns) for the four special *Sab-

baths, for Shabbat *ha-Gadol, and for Shabbat *Bereshit. He may also have composed an *ofan*, as well as a *seliḥah*, for the Fast of *Esther. Content, structure, and stylistic peculiarities of Isaac's poetry indicate that he belonged to the old paytanic school.

BIBLIOGRAPHY: Zunz, Lit Poesie, 91, 142–4, 248; Davidson, Oẓar, 4 (1933), 419. **ADD. BIBLIOGRAPHY:** E. Fleischer, *Ha-Yoẓerot be-Hithavutam ve-Hitpatteḥutam* (1984), 616, 624, 690.

[Jefim (Hayyim) Schirmann]

ISAAC BEN JUDAH HA-SENIRI (i.e., of Mount Senir; end of 12th century-beginning of 13th), Provençal *paytan*. He was one of five sons of the scholar *Judah b. Nethanel of Beaucaire whom Judah *Al-Ḥarizi met on his travels. Isaac's brother, Samuel b. Judah, was also a liturgical poet. The dates 1208 and 1220 appear in three of his poems and the poet's productive period can be determined according to them (Zunz, Lit Poesie, 472 nos. 1, 8, 9). In the acrostic of one poem he speaks of himself as "living on [or "at"] Mount Senir." There has been much discussion as to the meaning of Mount Senir, but it almost certainly refers to Mount Ventoux in the region of Carpentras.

Isaac is one of the few non-Spanish poets whom Al-Ḥarizi praises without reservation ("Isaac makes the stars turn pale," *Taḥkemoni, sha'ar* 46). Similarly, Isaac's poems are praised lavishly by his friend *Meshullam de Piera, by Abraham *Bedersi in *Ḥerev ha-Mithappekhet* (verse 139), Menahem de *Lonzano (16th century) in *Shetei Yadot* (Venice 1618). He wrote only liturgical poetry. About 59 of his religious poems have been preserved; most of them formed part of and were printed in the rite of Carpentras and the Comtat Venaissin. Individual poems were also used in the rite of Tripoli (*Siftei Renanot*), Algiers, and others. B. Bar-Tikva (1996) published a complete edition of Ha-Seniri's *piyyutim*. Isaac cultivated almost all styles of the *piyyut*: Bar-Tikva's edition includes nine *yoẓerot* (*me'orah, ofan, zulat, geulah, mi-khamokha*), three *kedushta'ot* and *silluk* for the *amidah*, eight *reshuyyot*, some Spanish preferences, such as four *nishmat, kaddish, barekhu* and three *shillum* of Provençal style; 20 of his poems are *seliḥot* of different genres, including four *tokhaḥot*, three *mustagāb*, three *rehuṭot*, one *bakashah*, one *teḥinnah*; two *kinot* for Tishah be-Av, eight *hoshanot* for Sukkot (he devoted a large composition, preserved in the *Carpentras Maḥzor,* to Hoshana Rabba which embodies one of the most lengthy and elaborate acrostics on record), and one *petirat Moshe* for *Simḥat Torah*. In some cases, different forms of the same poem have been preserved, reflecting the changes of the time (Einbinder). Sometimes he drew on halakhic material and converted it to poetic form. He is also a witness of the historical conditions of his time and shows in some poems his perceptions of ritual violence. About half of his poems use the Spanish meter, in particular the syllabic one; not a few take strophic patterns. Other poems are written using the language and the technique of the old Palestinian *piyyut*, with stress or word meter. E. Fleischer considers Ha-

Seniri the best and the most representative of the Provençal *paytanim*.

[Angel Sáenz-Badillos 2nd ed.)]

ISAAC BEN JUDAH OF MAINZ (11th century), German scholar; teacher of *Rashi. Practically no biographical details are known of him or his family. The description given by J.N. Epstein (see bibliography) of the characteristics of the yeshivah of Mainz during the period that Isaac was its head, and the manner in which it differed from the contemporary yeshivah of Worms, has been rejected by Aptowitzer (see bibliography). Isaac was head of the famous yeshivah in Mainz founded by his teacher *Gershom b. Judah, to whom he was apparently related, as he was to Rashi. He seems to have come from France (Zedekiah b. Abraham ha-Rofe, *Shibbolei ha-Leket* ed. by Buber (1886). 66 no. 93). He was also a pupil of *Eliezer ha-Gadol of Metz who was also one of the heads of the Mainz yeshivah. In addition to Rashi, he numbered Eliakim b. Meshullam among his distinguished pupils. Eliakim refers to him as *Moreh Ẓedek* ("the righteous teacher") whenever he mentions him in his commentary to *Yoma* and Rashi uses the same title on *Yoma* 16b and in his responsa. According to Abraham Epstein, the commentary attributed to Rabbenu Gershom in the Romm (Vilna) editions of the Talmud to the tractates *Menaḥot, Bekhorot, Arakhin, Temurah, Keritot, Me'ilah, Tamid, Ḥullin, Ta'anit*, and *Bava Batra* was compiled in Isaac's *bet midrash*. Eight of his responsa are included in the *Teshuvot Ḥakhmei Ẓarefat ve-Loter* (1881), and in the introduction to this work J. Mueller gives a list of 17 of his responsa and novellae which are scattered throughout the literature. I. Elfenbein's edition of Rashi's responsa (1943) contains 38 of Isaac's, mainly directed to Rashi.

Gershom Me'or ha-Golah* (1956), introd. 26–33.

[Shlomoh Zalman Havlin]

ISAAC BEN MEIR (**Ribam**; mid-12th century), one of the first tosafists. Isaac was the brother of *Samuel b. Meir (the Rashbam) and of Jacob *Tam, all of them grandsons of Rashi.

No biographical details are known of him. He died during his father's lifetime and left seven orphans. In a responsum to Eliezer b. Nathan, his brother Jacob lamented him: "I cry in the bitterness of my spirit… because the holy ark has been taken" (*Sefer ha-Yashar* (responsa) by F. Rosenthal (1898), 71). His widow later married Judah b. Yom Tov, a grandson of Judah b. Nathan, Rashi's son-in-law (see Urbach from a Ms.). The well-known tosafist *Isaac of Dampierre was his pupil; he subsequently married the daughter of Isaac b. Meir's wife by her second marriage, and asked his mother-in-law for details of various decisions given by her first husband. *Tosafot* written by him on the tractates *Yevamot* and *Nedarim* are referred to. His opinions are frequently quoted in the *tosafot* to many tractates. His appellation Ribam is the same as that of Isaac b. Mordecai, and consequently the two have sometimes been confused.

BIBLIOGRAPHY: V. Aptowitzer, *Mavo le-Sefer Ravyah* (1938), 376f.; Urbach, Tosafot, 52f.

[Shlomoh Zalman Havlin]

ISAAC BEN MELCHIZEDEK OF SIPONTO (c. 1090–1160), the first Italian commentator on the Mishnah. It is unknown whether his commentary covered the whole of the Mishnah, since only the commentaries on *Zera'im* and *Tohorot* are known. The former is printed in the Romm Vilna Talmud, while the latter is quoted by the *tosafot* in the *Sefer ha-Makhri'a* (Leghorn, 1779) of Isaiah di Trani (nos 62, 86, et al.) and by other rabbis. Abraham b. David of Posquières refers to him as "*ha-rav ha-Yevani*," "the Greek rabbi," part of southern Italy being at that time Byzantine. Isaac's commentary is based on the Babylonian and Jerusalem Talmuds, and he quotes from the *Tosefta*, the *Sifra*, the *Sifrei Zuta*, and mentions R. Nissim, R. Daniel of Rome (brother of Nathan, the author of the *Arukh*), the *Arukh*, and Hai Gaon. He often translates Hebrew words into the vernacular, making use of Greek, Italian, and Arabic. His commentary is brief and clear, like that of Rashi, and he does not give halakhic decisions.

[Hirsch Jacob Zimmels]

ISAAC BEN MENAHEM THE GREAT (11th century), French scholar of the generation of *Rashi's teachers. In his youth Isaac studied in Mainz at the yeshivah of *Eliezer b. Isaac of Worms. Later he settled in France and the correspondence thereafter between Isaac and his teacher shows that the two were very closely attached and contains great praise by Eliezer for Isaac. Rashi made extensive use of Isaac's teachings, both written and oral, particularly in determining the correct text of the Talmud. Isaac had apparently copied out in his own hand several orders of the Mishnah and the Talmud while still in the yeshivah, and Rashi, in at least one case, preferred Isaac's text to that of his own teachers and "of all the manuscripts" (Suk. 40a). Rashi also made use of Isaac's work to explain dif-

ficult words (Shab. 67a; BM 7b; et al.). At the same time, Rashi did not hesitate to disagree with one of his rulings and to set it aside completely (J. Mueller (ed.), *Teshuvot Ḥakhmei Ẓarefat ve-Loter* (1881), 10a–b, no. 17), and some of Isaac's other rulings met with opposition from authorities of the time (Tos. to Git. 21b; S. Hurwitz (ed.), *Maḥzor Vitry* (1923²), et al.). His text and explanation of words were generally relied on by scholars, in that they were based on the traditions of the main yeshivah in Mainz (*Maḥzor Vitry*, 610, 635). Many scholars accepted as authoritative the example of the religious practices of his sister, Bella, who apparently grew up in his house and thus learned them from him (*ibid.*).

[Israel Moses Ta-Shma]

ISAAC BEN MERWAN HA-LEVI (11th–12th centuries), Provençal communal leader and halakhist. He headed the *bet din* and the yeshivah in Narbonne. His father, Merwan, was described as a "man of great piety and rich in material things and good deeds, who applied his wealth for the benefit of his brethren and thus obtained the repeal of several oppressive edicts" (addition to the *Sefer ha-Kabbalah* of Abraham ibn Daud, Neubauer, Chronicles, 1 (1887), 83). Isaac studied under Judah b. Moses (ha-Darshan of Toulouse?), a pupil of *Gershom b. Judah of Mainz. In a ruling cited by Menahem b. Solomon Meiri (Pes. 42a, *Beit ha-Beḥirah al Massekhet Pesaḥim* ed. by J. Klein (1964), 142) which bears the signatures of "five scholars of world standing," Isaac's is the first. The five scholars apparently constituted the *bet din* of Narbonne (B.Z. Benedikt, in *Tarbiz*, 22 (1951), 107). It is not certain whether Isaac left anything in writing; his words are usually quoted as "having been heard," but sometimes it is stated that "he wrote." Some of his statements were cited by his pupil Abraham b. Isaac, the author of the *Eshkol*; Zerahiah b. Isaac ha-Levi Gerondi in *Ha-Ma'or*; Joseph b. Migash in *Temim De'im*, and Moses ha-Kohen in his *hassagot to Maimonides' *Mishneh Torah* (Shabbat 6:5; S. Atlas, in: HUCA, 27 (1956), 60), in the *Shibbolei ha-Leket* (Pt. 1, no. 48 and 51, ed. by S.K. Mirsky (1966), 256, 260), etc. Among his pupils were some of the greatest scholars of Provence in the following generation, Moses the son of his brother Joseph, Moses b. Todros ha-Nasi, and Abraham b. Isaac "Av Bet Din." Joseph studied under him. Isaac left no descendants, and he must have died before 1134, since in that year his brother Joseph lodged a claim in connection with his estate (Isaac ha-Sardi, *Sefer ha-Terumot*, 14:5, Prague 1605, 26a).

Isaac of Narbonne, *Ha-Eshkol*, 1 (1935), introd. 3; B.Z. Benedict, in: *Tarbiz*, 19 (1948), 19, n.7, 22 (1951), 96, n. 109, 107; I. Twersky, *Rabad of Posquières* (1962), 236, 239.

[Shlomoh Zalman Havlin]

ISAAC BEN MORDECAI (known as **Ribam,** initials of **R**abbi **I**saac **B**en **M**ordecai; 12th century), German tosafist. Isaac was also known as Isaac b. Mordecai of Bohemia and Isaac b. Mordecai of Prague. The abbreviated form of his name, Ribam, led to his being confused at times with *Isaac b. Meir (see Urbach, Tosafot, 170 no. 37). Active in the community of Regensburg, he served as head of its *bet din* and was regarded as the greatest scholar of the town and its leader (as described by Jacob b. Meir *Tam in *Sefer ha-Yashar*, part of responsa ed. by F. Rosenthal (1898), 178 no. 80). He was a pupil of *Isaac b. Asher ha-Levi (Riba I) of Speyer and of Jacob Tam. He compiled *tosafot* to most tractates of the Talmud, a large part of them while with his teachers. A considerable part of his *tosafot* to *Bava Batra* are included in the printed edition of the Talmud and in the *tosafot* of *Isaiah di Trani. He is known to have written *tosafot* to the tractates *Pesaḥim, Mo'ed Katan*, and *Bava Kamma* compiled before his teacher, Isaac, and to *Shabbat, Ketubbot, Gittin, Sotah, Nazir,* and *Bava Meẓia.* He is quoted in the printed *tosafot* to *Yoma, Ḥagigah, Sanhedrin, Zevaḥim,* and *Ḥullin*, and in *Sefer ha-Ravyah* and *Or Zaru'a.* *Eliezer b. Nathan of Mainz sent his book to him and his colleagues *Ephraim b. Isaac and Moses b. Joel on the *bet din* of Regensburg. They criticized many of his statements and in his reply Eliezer treated them with great respect. He also sent them the well-known responsum on *ḥallonot* ("windows," i.e., the prohibition against disturbing the privacy of a neighbor by opening a window facing his premises).

BIBLIOGRAPHY: Eliezer b. Nathan, *Sefer Rabban*, ed. by S. Albeck (1904), introd. p. XI; V. Aptowitzer, *Mavo le-Sefer Ravyah* (1938), 29, 42 f., 288, 378 f.; Epstein, in: *Tarbiz*, 12 (1940/41), 200–2; Urbach, Tosafot, 167–70.

[Shlomoh Zalman Havlin]

ISAAC BEN MOSES OF VIENNA (c. 1180-c. 1250), halakhic authority of Germany and France. He is usually referred to as Isaac Or Zaru'a, i.e., by the title of his important halakhic work. Isaac was born in Bohemia which he usually refers to as "the land of Canaan." In his youth he suffered from "poverty and wanderings" (*Or Zaru'a* pt. 1, 6d), but as a result of his peregrinations he came in contact with contemporary German and French scholars, by whose teaching he was influenced. Among the scholars of Bohemia under whom he studied were Jacob b. Isaac ha-Lavan of Prague and *Abraham b. Azriel, author of *Arugat ha-Bosem*. In Regensburg he studied under Judah ben Samuel he-Ḥasid and Abraham b. Moses. His chief teachers, "on whom he waited," were, according to him, *Simḥah b. Samuel of Speyer, Eliezer b. Joel ha-Levi (the Ravyah), and *Judah b. Isaac Sir Leon of Paris. He noted their decisions and learned from their conduct and customs. In Wuerzburg he studied under Jonathan b. Isaac, and in France was a pupil of Samson of Coucy. He transmitted a ruling in the name of Samson of Coucy in connection with the decree in 1215 of Pope Innocent III compelling Jews to wear the yellow *badge (*ibid.*, pt. II *Hilkhot Shabbat* 84:3).

Isaac's monumental work *Or Zaru'a* shared the fate of similar halakhic works which were apparently not sufficiently copied because of their extensive nature, and as a result did not achieve large circulation. Only 600 years after his death were

the first two parts of the work published (1862) from a manuscript in the possession of Akiva *Lehren of Amsterdam (the adventures related in connection with the manuscript are pure legend). The first part deals with blessings, laws connected with the land of Israel, *niddah* and *mikva'ot*, laws of marriage, and a collection of responsa, mostly by the author, but some by other scholars. Part II contains topics which are now included in the *Oraḥ Ḥayyim* section of the Shulḥan Arukh. Two further parts were published at a later date (1887–90) from a manuscript in the British Museum. These contain halakhic rulings derived from the tractates *Bava Kamma, Bava Meẓia, Bava Batra, Sanhedrin*, and *Avodah Zarah*. A supplement to this section, comprising decisions based on the tractate *Shevu'ot*, which had not been published in the previous collections because they were thought to pertain to tractate *Shevi'it*, was published by A. Freimann (in *Festschrift zu I. Lewy…* (1911), Heb. pt. 10–32). A number of abridgments have been made of the work, the best known of which is that by Isaac's son *Ḥayyim b. Isaac Or Zaru'a, entitled *Simanei Or Zaru'a* which achieved a wide circulation although this work too was not at the disposal of all scholars. The quotations from Isaac Or Zaru'a in the *Haggahot Asheri* of *Israel of Krems are from this abridgment. Although the work did not have a wide circulation, later authorities quote his views to a considerable extent from secondary sources, such as the *Mordecai*, the *Haggahot Maimuniyyot*, etc. The complete work constitutes a valuable collection of the halakhic rulings of German and French scholars as well as being of great value for the history of Jewish communities in Europe during the Middle Ages (for instance, he discusses whether "our brothers in Bohemia" are permitted to carry arms on the Sabbath when they have to guard the city). A great part of the work (according to Aptowitzer, a third) is derived from his teacher *Eliezer b. Joel ha-Levi, whose *Ravyah* was already available to Isaac. There is no definite information as to how the work was composed and edited, or the order in which the various parts were written. One reason pointed out by Urbach (Tosafot, 367 n. 61) is that an examination of the manuscripts indicate that the existing text is not the original. Urbach came to the conclusion that copyists made copies of the work in sections, which were subsequently combined into a unified book. The book itself was compiled over a long period, the author adding various supplements. As a result there are mutual cross references between passages and it is impossible to determine which was written first. Before compiling the book, the author made notes and assembled data which were later written up, as he himself states (*Or Zaru'a*, pt. II, no. 38). He was still engaged in its compilation in 1246 (idem, Av. Zar. no. 107).

[Shlomoh Zalman Havlin]

ISAAC BEN NOAH KOHEN SHAPIRA (late 16th–early 17th century), Polish rabbi and author. Isaac received his talmudic education at the yeshivah of his uncle, Ḥayyim b. Samuel, rabbi in Kremenets. At an early age he was appointed rabbi in Gorodnitsa, later serving in Mezhirech. He was the author of an alphabetically arranged compendium in rhymed verse of the four parts of the Shulḥan Arukh under the title *Sefer Zikkaron* (also called *Zikhron Dinim* or *Kiẓẓur Pirkei Dinim*, Cracow?, 1559?). He further published *Petiḥat ha-Lev* (Cracow, 1645?), kabbalistic homilies on the Pentateuch, consisting of extracts from his larger unpublished work "*Harḥavat ha-Lev.*"

BIBLIOGRAPHY: Zunz, Gesch, 299; Carmoly, in: *Ha-Karmel*, 6 (1866/67), 301–2; Fuenn, Keneset, 666.

[Jacob Freimann]

ISAAC BEN SAMSON HA-KOHEN (d. 1624), talmudist of Bohemia. Isaac was born in Prague and married the daughter of *Judah Loew b. Bezalel of Prague. He served as a rabbi in Vienna and Nikolsburg, later becoming *dayyan* and leader of the Prague community. He was renowned both for his extensive talmudic knowledge and philanthropic activities. His opinions on halakhic questions, as well as his approbation of contemporary works, were widely sought. He is believed to be the author of a Yiddish translation of the Pentateuch that first appeared in Basle in 1583, or to have supplemented this work with midrashic explanations appearing for the first time in the Prague edition (1610), which contains a poem with his name in acrostics. He wrote a supplement to the *Ḥatan Damim* of Solomon *Runkel on the Pentateuch (Prague, 1606); published Isaac b. Judah ha-Levi's *Pa'ne'aḥ Raza*, with his own introduction (*ibid.*, 1607) and commentary on *Midrash Psalms, Midrash Proverbs*, and *Midrash Samuel* (*ibid.*, 1613). He edited the sermon delivered by his father-in-law on the festival of Shavuot, in Posen in 1592, entitled *Derush al ha-Torah*, adding to it notes, an index of sources, and three introductory poems (*ibid.*, 1953). He also wrote introductions to *Ḥayyim b. Bezalel's *Sefer ha-Ḥayyim* (Cracow, 1593) and to Meir of Rothenburg's responsa (Prague, 1608). A work called *Sidrei Bereshit* remained uncompleted. He accompanied his father-in-law when he was received in audience by the emperor Rudolph in 1592 and reported on the interview. His sons Ḥayyim and *Naphtali also served as rabbis; his daughter Eva married Samuel Bachrach of Worms.

Schulmann, *Sefat Yehudit-Ashkenazit ve-Sifrutah* (1903), 10 f; I.Z. Kahana, in: *Arim ve-Immahot be-Yisrael*, 4 (1950), 262 f.

[Samuel Abba Horodezky]

ISAAC BEN SAMUEL HA-LEVI (1580–1646?), Polish talmudist and grammarian. Isaac was the elder brother and teacher of *David b. Samuel ha-Levi. He was born in Ludomir, and studied under Joshua *Falk at Lemberg. He served

as rabbi of Chelm and in 1627 was appointed *rosh yeshivah* in Posen. He was one of the leading talmudic scholars and sages of his generation and was recognized as a halakhic authority, linguist, and grammarian. He had a sound knowledge of geometry and of German. He was kind and never adopted a didactic attitude toward his questioners, not even to his own students. Isaac is the author of *She'elot u-Teshuvot ve-Ḥiddushei Mahari ha-Levi* (Neuwied, 1736). These show him to have been considerate, balanced in judgment, and inclining toward leniency whenever possible. In his novellae he does not hesitate to attack the views of such outstanding authorities as Solomon *Luria, Samuel *Edels, *Judah Leib b. Bezalel and Levi *Ibn Ḥabib. He possessed a concise style and penetrated to the very heart of the problems under discussion. In his halakhic decisions he takes into consideration the rules of grammar, attaching great value to a knowledge of Hebrew and its grammar. He published *Siaḥ Yiẓḥak* (Basle, 1627) on the rules of grammar and the conjugation of the verb. To it he appended *Beit ha-Levi*, discussing all compound and doubtful words in the Bible. In its introduction, Isaac complained of "the lack of attention paid to the knowledge of Hebrew. Its study is neglected and its origins are not investigated." He pointed out that the meanings of some words were not known because even scholars had no knowledge of the conjugation being used. Instead of devoting themselves to a thorough study of grammar, they disparaged it as being a mere routine task, requiring no intelligence. Even were this so, he writes, it is still a highly skilled accomplishment, essential for all scholarship, and a prerequisite for all sacred study, since, without it, no one can write or speak Hebrew correctly. The book carried an approbation by Yom Tov Lipman Heller, and was highly praised by Samuel David *Luzzatto. An abbreviated edition, *Derekh Siaḥ* (Frankfurt, 1693), was published by J.L. Oppenheim. A poem of Isaac's, *Shir Ge'ulim*, commemorating the freeing of Lemberg Synagogue from the hands of the Jesuits, was published in 1609. He left an unpublished manuscript, *Elleh Toledot Yiẓḥak*, a supercommentary on Rashi. Many of his ideas and opinions are incorporated in his brother's *Turei Zahav* and one of his responsa in *Bayit Ḥadash he-Ḥadash* (Korzec, 1785), no. 78. In the 1646 edition of *Turei Zahav* he is referred to as being no longer alive.

[Abram Juda Goldrat]

ISAAC BEN SAMUEL OF ACRE (late 13ᵗʰ–mid-14ᵗʰ century), kabbalist. In his youth Isaac of Acre studied in the yeshivah of Solomon Petit in Acre and he quotes Petit's story in which Aristotle is ridiculed by the wife of Alexander the Great. In 1291 Isaac left Acre for Italy, traveling from there to Spain (where he apparently arrived in 1305). There he met numerous kabbalists and he quotes many of their writings. Of great importance was his meeting with *Moses b. Shem Tov de Leon, whom he questioned concerning the *Zohar – asking whether it had been written by *Simeon b. Yoḥai or whether it was Moses de Leon's own work. Even after the death of Moses de Leon, Isaac continued his investigations, which he described in *Divrei ha-Yamim* (see below). Isaac was close to the circle of Solomon b. Abraham *Adret, but his knowledge of Adret's kabbalistic writings was vague and his testimony should be treated with great reservation. At least three statements which he attributes to Adret were made by *Ezra and *Azriel of Gerona.

Four of Isaac's works have been preserved:

(1) *Me'irat Einayim*, a major commentary on Naḥmanides' mysticism, incorporating a large collection of writings from the Gerona circle and other groups which are not part of his explications of Naḥmanides. Isaac criticizes commentators who discovered ideas in Naḥmanides' writings which were far from the intention of the author – yet he himself deliberately does the same. *Me'irat Einayim* contains references to books and personalities otherwise unknown. Many copies of the work are in existence. Considerable use was made of it by the kabbalists of the 15ᵗʰ and 16ᵗʰ centuries and it has also been an important source for scholars of the 19ᵗʰ and 20ᵗʰ centuries.

(2) *Oẓar Ḥayyim*, a kind of mystical diary of visions and revelations; not an intimate diary, but one written with the object of describing revelations to the reader. Dealing with the *ẓerufim* ("combinations") which he considers essential for prophecy, he sets store on visions, thoughts, and automatic utterances. Most of his revelations came while he was in a state of trance, and many things were revealed through his dreams. Isaac was especially interested in outlining the way to attain prophecy, a subject he had already treated at length in *Me'irat Einayim*. He notes three states in the ladder of ascent leading to the Holy Spirit:

(a) devotion, which means the performance of two actions, one visual. In his mind's eye man sees the letters of YHWH "as if they were written before him in a book," while at the same time he concentrates his thoughts on the aspect of the Divinity, called by the kabbalists *Ein-Sof ("the infinite"); (b) indifference, i.e., acquiesce in any occurrence in earthly life, except that which is concerned with the Divinity. Only a man who has reached this level of indifference, who is insensitive to the honor or scorn with which men regard him, is able to reach the state in which his soul becomes one with the Divinity; (c) solitude – a complete emptying of the mind of any matter which is not divine. The central focus of Isaac's prophetic ideal is individual spirituality. He applies sayings from the realm of national redemption to the realm of the redemption of the soul, and considers that the public mission of the prophet hampers his intimate contact with the Divinity. The work remains almost in entirety in Ms. 775 of the Guenzburg Collection, Moscow. Selections from it are in *Leket Shoshannim* (Neubauer, Cat, no. 1911). Many extracts are found in various manuscripts (Sassoon Ms. 919, Adler Ms. 1589, et al.).

(3) A commentary on the *Sefer *Yeẓirah* (ch. 1 only), published by G. *Scholem (ᴋꜱ, vol. 31, 1955/56).

(4) A shortened free translation of the Arabic commentary of Judah b. Nissim ibn Malka on **Pirkei deRabbi Eliezer*. Isaac's comments occupy the main place in the work, which is to be found in Sassoon manuscript 919b.

There is evidence that other works by Isaac also existed, the most important being *Sefer ha-Yamim*, as it is called in *Sefer ha-Yuḥasin* which quotes the large section concerning the composition of the Zohar. No other author who quotes from *Sefer ha-Yamim* is known, but there is no doubt that such a book did exist, since Isaac himself refers to it in his *Oẓar Ḥayyim*, where he calls it *Sefer Divrei ha-Yamim*. Sachs' description of manuscript 775 in the Guenzburg collection led to the belief that this was *Sefer ha-Yamim*, but apparently this is not so. There are no means of knowing from which works the author of *Reshit Ḥokhmah* took the four quotations which he cites in the name of Isaac of Acre. Similarly the nature of the mystical book mentioned in *Novelot Ḥokhmah* by Joseph Solomon *Delmedigo of Candia is not known. David Azulai writes that he saw treatises of Isaac of Acre, according to which he was visited by angels who revealed to him secrets and acts of practical Kabbalah. It is possible that the reference was to the treatises of *Oẓar Ḥayyim*, but this is not certain.

[Efraim Gottlieb]

ISAAC BEN SAMUEL OF DAMPIERRE (usually referred to by the initial letters of his name as **Ri** (initials of **R**abbi **I**saac) or **Ri the Elder**, or **Ri of Dampierre**, d. c. 1185), one of the most important of the *tosafists and leading authority of Franco-German Jewry in the second half of the 12th century. Isaac was the nephew and pupil of Jacob *Tam. His father was the son of Simḥah b. Samuel of Vitry, and his wife the daughter of Judah b. Yom Tov, great-grandson of *Rashi. He was thus related to the distinguished Jewish families of scholars and communal leaders of his time. He lived in Ramerupt for many years, accompanying his teacher, Jacob Tam, and helping him with his ramified correspondence. After R. Tam left Ramerupt, Isaac went to live in Dampierre. For some time he also lived in Joinville. Even after leaving his teacher, Isaac regarded himself as completely subordinate to R. Tam until his death, and rarely deviated from his rulings. Together with R. Tam, he is the central pillar of the entire *tosafot* activity, there being hardly a page of the printed *tosafot* where he is not mentioned. His *tosafot* have not survived in their original form except for fragments in some manuscripts and quotations in the works of the *rishonim*. His teachings were interwoven in the published *tosafot*, being handed down by a line of his pupils. Ḥ.J.D. *Azulai still had Isaac's *tosafot* to *Kiddushin* and quotes them in his *Petaḥ Einayim*. However the commentary published in the editions of the Talmud on *Kiddushin* with the title *Perush Ri ha-Zaken* is not by Isaac but by *Abraham b. Isaac of Montpellier. Especially abundant use of Isaac's *tosafot* was made by his pupil, *Samson b. Abraham of Sens, who based his own *tosafot* on them. Another important source for his teachings is the *Haggahot Asheri* of *Israel of Krems. There are historical testimonies (see introduction to the *Ẓeidah la-Derekh* of *Menahem b. Aaron ibn Zeraḥ, as well as a tradition cited by Solomon *Luria in the introduction to his *Yam shel Shelomo* on tractate *Ḥullin*) to the effect that the school of Isaac was the main creative center in which the *tosafot* were developed as a system of study and as a literary genre, and it was there that the system of study whose foundations had been laid by Rashi's sons-in-law reached its peak.

Many of Isaac's responsa are preserved in the works of the *rishonim*. These contain historical and cultural material of great value for a knowledge of the internal lives of the Jews and their relations with their neighbors. Despite his central position in the Jewish world of his time, his responsa lack the note of polemic, controversy, and vehemence that characterizes the responsa of the great tosafists, particularly of R. Tam. Great humility and an exceptionally gentle approach are especially conspicuous. His piety and uprightness were renowned and already in the 14th century there was a legend that he had ascended on high and received information from the angels. A tendency toward mysticism is discernible in his writings, and it is possible that he was in contact with *Samuel, the father of *Judah ben Samuel he-Ḥasid. *Elhanan b. Yakar of London, who wrote a commentary on the *Sefer Yeẓirah* (published by Vajda in *Kovez al Yad*, 6 pt. 1 (1966), 147–97) in the succeeding generation, quotes statements he heard in his name. Among his important pupils were *Abraham b. Nathan ha-Yarḥi, who acted as the intermediary between him and *Asher b. Meshullam of Lunel, and his own son *Elhanan who died during his father's lifetime. Noteworthy among his other pupils, all of whom were important tosafists, are *Baruch b. Isaac of Worms, *Isaac b. Abraham, and the above-mentioned Samson of Sens. Isaac's rulings were also known to the early scholars and manuscripts of them are still extant. His *Hilkhot ha-Get*, which he apparently composed toward the end of his life, has recently been published (Kupfer, in *Kovez al-Yad*, 6 pt. 1 (1966), 123–44). It is very doubtful whether he wrote a commentary on the *Hilkhot ha-Rif* of Isaac *Alfasi, its ascription to him being due to a printer's error (Responsa of the Rosh (Asher b. Jehiel), Kelal 85, no. 10 (ed. Zolkiew, 1803), 84b).

[Israel Moses Ta-Shma]

ISAAC BEN SHESHET PERFET (known as **Ribash** from the initials of **R**abbi **I**saac **B**en **Sh**eshet; 1326–1408), Spanish rabbi and halakhic authority. Perfet was born in Barcelona, where he studied under such eminent scholars as *Pereẓ ha-Kohen, Ḥasdai b. Judah Crescas (the grandfather of the philosopher), and *Nissim b. Reuben Gerondi, and where he later acted unofficially as rabbi. In 1370, Isaac, together with Nissim and five other Jewish notables, was arrested on a false charge and imprisoned for several months. After acquittal, he moved to Saragossa, where he accepted the position of rabbi, only to be involved in the first of the many controversies and family tragedies that were to embitter his career. In Saragossa he made strenuous efforts to secure the abolition of certain objectionable customs. He did not succeed, but brought upon himself the opposition of the local scholars. Finally he decided to leave for Calatayud but was persuaded to change his mind. Faced with continued disharmony in the community, he moved to Valencia, where from 1385 he acted as rabbi.

The anti-Jewish riots of 1391 drove him to North Africa. A close reading of the Valencia court records reveals that the authorities asked Perfet to convert as a way to stop the riots. After he refused, they trumped up a charge against him that would have resulted in his death unless he converted. This time Perfet relented and he converted, thereby becoming a Marrano. He was baptized on July 4, 1391, which was the Ninth of Av. A year and a half later, he managed to leave Valencia for North Africa and resume his life as a Jew. A number of his responsa deal with the issue of those compelled to convert to Christianity. After a short stay at Miliana, he finally settled in Algiers, where he was enthusiastically welcomed. Fresh vexations awaited him; however, as another refugee, jealous of Isaac's prestige, launched a violent campaign against the newcomer in the hope that he would leave Algiers. Thanks to the intervention of *Saul Astruc ha-Kohen, the civil authorities put an end to the conflict by appointing Isaac *dayyan* or communal rabbi. Their action, however, antagonized a celebrated refugee from Majorca, Simeon b. Ẓemaḥ *Duran, who declared the appointment invalid, no government having the power of jurisdiction in Jewish communal affairs. Duran relented when he was convinced that Isaac harbored no thoughts of personal aggrandizement, and the latter was left free to enjoy general affection and respect in his last years. On the anniversary of his death pilgrimages were made to his tomb until recent years.

Perfet's most important work is his responsa (Constantinople, 1546). They exercised considerable influence on subsequent *halakhah*, and were one of the pillars upon which the Shulḥan Arukh rested. They contain a vast amount of halakhic material – part derived from sources which are no longer extant – together with much valuable information about popular customs in Spain and North Africa. The collection is of very great importance for knowledge of the history of the Jews in those countries in the 14th century. Perfet was involved as a halakhist and decisor in the great controversy con-

nected with the French chief rabbinate (see *Trèves (Trier)); he was one of the first to discuss the status of *Marranos from the halakhic point of view, which had become one of the crucial problems of Spanish and North African Judaism. He was one of those who established the *minhag* of Algiers regarding the financial rights connected with matrimonial law. Perfet recognized five categories of *minhag*: (a) Those acts that are halakhically acceptable but deemed prohibited by custom, thus creating a defensive "fence" around the Torah; (b) those acts that are halakhically acceptable but which certain communities deemed prohibited by custom; (c) a prohibitive custom based on one opinion in a rabbinic dispute; (d) those behaviors that are not customs but for which the sages avowed that whoever acts in such a way will be blessed; and (e) when a person errs thinking that what he does is correct. Perfet argued that one cannot change the custom in categories (a) through (c). However, the last two categories do not constitute *minhag* and can therefore be changed. On three occasions, Perfet accepted customs based on Islamic customs (see responsa nos. 94, 158, 102, and 148). In each case, the practice was not in violation of *halakhah* and thus acceptable.

Perfet also wrote an extensive commentary on several talmudic tractates, and a commentary on the Pentateuch. Poems and *kinot* composed by him were published in *Ẓafenat Pa'ne'aḥ* (1895). His work shows some knowledge of philosophy, even though he opposed its study and regarded the philosophical preoccupations of *Maimonides and *Levi b. Gershom with misgiving. He also dissociated himself from the Kabbalah. The responsa *She'elot u-Teshuvot ha-Ribash ha-Ḥadashot* (Munkacs, 1901) are not all his.

[Hirsch Jacob Zimmels / David Derovan (2nd ed.)]

ISAAC BEN SOLOMON (1755–1826), prominent *Karaite scholar and spiritual leader from Chufut-Qaleh, a reformer of the Karaite calendar system, and authority on religious law. He was a disciple of Isaac ben Joseph *Kalfa. At the age of 17 he worked for Benjamin *Aga and went with him to St. Petersburg. After returning to Chufut-Qaleh he engaged in commerce but went bankrupt. In 1776 he was appointed by Benjamin Aga to teach at the school in Chufut-Qaleh and soon was appointed as a *hakham* of the community at the age of 21. In 1795 he traveled with Benjamin Aga and some other community leaders to St. Petersburg with a special mission to the government, which achieved exemption for Crimean

Karaites from the double taxation imposed on all the Jews of the Russian Empire, and the attainment of other rights. Isaac was a physician, who cured Jews and non-Jews of Chufut-Qaleh and the surrounding area. He had a wide knowledge of astronomy, which he studied for six months during his stay in St. Petersburg. In 1806 he was one of the founders of a publishing house in Chufut-Qaleh. He read proofs of Karaite books and prayer books that were printed there and sometimes added introductions to them. Isaac was a prominent religious authority in his generation, establishing several new regulations of Karaite *halakhah*: He forbade the ritual purification of golden and silver vessels without passing them through fire; forbade moving things in the public domain on Shabbat; permitted weddings during the Ten Days of Penitence and so on. His most important innovation was calendar reform (1779). It was an attempt to establish a uniform permanent system of calendation among the Karaites, which was not based on observation. It was supported by most scholars in Crimea and some other communities. His initiative led to a fierce dispute among the communities of Constantinople and the Crimea that lasted 18 years. The opposition to this reform was headed by *Benjamin ben Elijah Duwan, a Karaite leader from Evpatoria. In 1781 Benjamin Duwan came to Chufut-Qaleh at the head of a group of Karaite worthies of his town in order to conduct a debate with Isaac ben Solomon. According to Isaac's report, Benjamin was defeated, and Isaac's calendar calculation was supported by the majority. His book *Or ha-Levana* (Zhitomir 1872) is a detailed exposition of his calendar reform. Isaac also wrote the following works: *Iggeret Pinnat Yiqrat* (Evpatoria 1834), a theological treatise based on the ten principles of faith formulated by Elijah *Bashyazi in *Adderet Eliyahu* (with a Tatar translation of the principles; Nemoy published an English abridged translation of the work, with a detailed appraisal [see bibl.]); it includes many refutations ("replies") of philosophical positions, in which he actually criticized Bashyazi for his theological innovations; *Moladot* – lunar calculations for 34 years for the years 1806–40 (Chufut-Qaleh, 1806) and a commentary on the Song of Songs (Ms B 316 at the St. Petersburg Institute of Oriental Studies of the Russian Academy). He also wrote many liturgical poems, which were included in the Karaite *Siddur*. Many letters, responsa, and short treatises by him are preserved in manuscripts the St. Petersburg Institute of Oriental Studies of the Russian Academy and the Russian National Library.

[Golda Akhiezer (2nd ed.)]

ISAAC BEN TODROS (mid-fourteenth century), known as **Isaac Tauroci** (**ben Todros**) in Latin; French physician. Isaac ben Todros practiced in Carpentras and audited the accounts of the Jewish community in 1367. He was the pupil of

the astronomer, Emmanuel b. Jacob *Bonfils, with whom he calculated the constellations in Avignon during the month of Nisan (April) 1373. Isaac possessed a profound knowledge of theology and philosophy. He wrote a work dealing with the plague in Avignon entitled *Be'er la-Ḥai* ("Source of Life"). This work included a study of the dietetics and the therapeutics of the sick, as well as of the healthy. He declared that there were many Jewish victims of the epidemic. This treatise was published by Baron David *Guenzburg from the only existing Hebrew manuscript on the occasion of the 90th birthday of Leopold *Zunz. Isaac also wrote another medical work on facial convulsion (*Avit ha-Panim*; Oxford, Bodleian Library, Heb. Ms. 2141, 31).

BIBLIOGRAPHY: E. Wickersheimer, *Dictionnaire Biographique des Médecins en France au Moyen Age* (1936), 311 f.; Kaufmann, Schriften, 3 (1915), 482–6.

[Isidore Simon]

ISAAC BEN TODROS OF BARCELONA (c. end of the 13th, beginning of the 14th century), Spanish talmudist, a pupil of Naḥmanides. Isaac occupied himself with the *Kabbalah to a considerable extent. No biographical details of him are known. His signature appears on the well-known ban on the study of philosophy promulgated in Barcelona in 1305 (Responsa Rashba 1, nos. 415–6). He was the author of a commentary to the *maḥzor*, remnants of which were discovered by G. Scholem in manuscript (H. Zotenberg, *Catalogues des manuscrits* (1866), 839:11); a commentary to the *seliḥot (M. Steinschneider, *Die hebraeischen Handschriften… in Muenchen* (1895[2]), 237); a commentary to the *azharot of Solomon ibn Gabirol (see bibl. Freimann, introd. 10 (99), n. 45). The work *Be'er la-Ḥai* edited by D. Guenzburg (in: Jubelschrift… L. Zunz; 1884) is not by him (see Freimann p. 11). E. Gottlieb too has shown that the ascription of the commentary on the *Ginnat ha-Bitan* attributed to Isaac is a forgery. Among his pupils were *Shem Tov Gaon b. Abraham who describes his relation with his teacher in the introduction to his *Keter Shem Tov* (not in the printed edition but in the Ms., see bibl., Loewinger, p. 30 and Gottlieb, p. 65). His kabbalistic teachings are included in the works of Naḥmanides' disciples, e.g., *Ibn Shuaib's commentary to the *Sodot ha-Ramban*, Meir b. Solomon Abi *Sahula, *Keter Shem Tov, Me'irat Einayim*, and *Ma'arekhet ha-Elohut*.

BIBLIOGRAPHY: Nathan b. Judah, *Sefer ha-Maḥkim*, ed. by J. Freimann (1909), introd. 9–11 (= *Ha-Eshkol*, 6 (1909), 98–100); Loewinger, in: *Sefunot*, 7 (1963), 11, 27, 38; Gottlieb, in: *Studies in Mysticism and Religion Presented to Gershom G. Scholem* (1967), Heb. pt. 63–86.

[Shlomoh Zalman Havlin]

ISAAC BEN YAKAR (12th century), *paytan*. In two acrostics of his *seliḥot* Isaac adds to his signature *yeled meshu'sha* and in two other acrostics, *millul*. The first designation is probably an allusion to his family name (according to Jer. 31:33), while the second seems to indicate his place of residence. *Gross reads מלוך (*milokh*) for מלול (*millul*) having in mind a French

village, probably Luc in the Pyrenees; Lille could hardly have been meant. Six of Isaac's *seliḥot*, with the complete acrostic of his name, are extant; three have appeared in print, among them a very ingeniously constructed *seliḥah*, *Ḥatanu*, consisting only of "ring" words. One of the remaining three *seliḥot* was rendered into German by *Zunz.

ISAAC THE BLIND ("**Sagi Nahor**"; c. 1160–1235), a central figure among early kabbalists, the son of *Abraham b. David of Posquières. He was usually referred to as "He-Ḥasid" and *Baḥya b. Asher called him "the father of Kabbalah." No biographical facts or details of his life are available, but apparently he lived in Posquières for a time. His name meant hardly anything to 19th century Kabbalah scholars; so little was known of his personality or his work that several incorrect conclusions were drawn about him; for example, that he was the author of Sefer ha-*Bahir (Landauer). In fact, a considerable amount of information concerning Isaac can be gleaned from traditions preserved among his disciples and their disciples, as well as from his pamphlets and those fragments of his other writings that have been preserved.

The question of whether he was born blind remains undecided. His direct disciples do not mention his blindness, but a kabbalistic tradition from the 13th century testifies that "his eyes never saw anything during his lifetime" (*Me'irat Einayim*, Munich Ms. 17, 140b). Several fragments of his writings contain long discussions on the mysticism of lights and colors, which might seem to refute the assumption that he was born blind, but most of his mysticism is not essentially visual. However, as it appears that he was well-versed in books and even states, "this I found in an ancient manuscript," it is possible that he became blind only after reaching maturity.

Shem Tov b. Abraham ibn Gaon (1287–1330) mentions that Isaac could sense "in the feeling of the air" whether a person would live or die (Recanati, *Perush la-Torah, Ki-Teẓe*), and "whether his soul was among the new [meaning that it had not undergone transmigration] or among the old" (*ibid., Va-Yeshev*). To his mystical powers should be added testimonies that he had received "the revelation of Elijah," and magical power in prayer (*ibid., Ki-Teẓe*).

The fragments of his writings about *kavvanah* ("intention") and the various forms of meditation which should be employed in different prayers are constructed on a complete system of the *Sefirot*, the attributes of God, which emanated from Ancient Divine Thought (*Maḥashavah*) as found in *Sefer ha-Bahir*. Isaac speaks of three levels within the Divine: *Ein-Sof, Maḥashavah* ("Thought"), and *Dibbur* ("Speech"). His views on *Ein-Sof* or "the Cause of Thought" avoid any positive attributes or personal characteristics and are intentionally couched in unclear, vague language. *Ein-Sof* is "that

which cannot be conceived of through thought" or the "annihilation of thought," a realm which is mysterious and transcendent even in relation to Divine Thought itself (which is a certain kind of revelation). In contrast with his brief discussion of the *Ein-Sof*, Isaac deals at length with the first *Sefirah, Maḥashavah*. It appears that he based his system on the theory that *Maḥashavah* should not be included among the ten *Sefirot*, and he adds, in order to complete the number of *Sefirot*, *Haskel* (the "Intellect") – the hypostasis of the intellectual act – placed between the levels of *Maḥashavah* and *Ḥokhmah* ("Wisdom"). The Divine Will, as a force which activates thought and is superior to it, is absent from his system. Thought is the sphere with which every mystic aspires to unite and thence derive sustenance, the object of *kavvanah* around which the religious aspiration is centered. Thought is the revelation of the hidden God; it is called the *Ayin* ("Nothingness," a paradoxical appellation which is used as a symbol of the first emanation). Nothingness symbolizes the higher existence of the Divine in its most hidden manifestation, as well as the annihilation of human thought which desires to contemplate it.

The world of *Dibbur* begins with the *Sefirah Ḥokhmah*. Isaac often uses the concept *devarim* ("words") or *dibburim* ("speeches" or *logoi*; in the language of *Sefer ha-Bahir, ma'amarot*, "sayings") as a synonym for *Sefirot*. This outlook, which underlies Isaac's system, views the development of the world as a linguistic development, the Creator's expression in His language. He sees the materialization of the Divine Speech in all areas of creation. The apparent letters are nothing but a manifestation of the inner letters by which the Divine Words came into being, and they are the bases of the world.

The *Sefirot* are not only attributes of God but are the principles of the world outside the world of the *Sefirot*, which is called the *olam ha-nifradim* ("world of the separables," in the sense of the world of multiple being). There is a continuous stream of emanation from the Divine Transcendence to the "world of the separables"; Isaac's main aim was to show the way (by contemplation, intention, and devotion) to communication with the world of the Divine Attributes. This is the secret of the whole Torah and of prayer. The internal connection between all essences and stages of creation is *ẓepiyyah* ("contemplation"). All things contemplate one another and are connected with one another, and there thus exists a universal dialectical process of emanation and spreading out to the limit of lower existence on the one hand, and contemplating upward (*teshuvah*, "repentance") on the other. The return of things to their origins is an ontological process from unity to plurality and vice versa which exists in every moment of creation and it contains within itself an eschatological significance, for creation is seen as an act of contemplation by God within Himself, and finally a return to the source.

Isaac's writings include commentary to *Sefer Yeẓirah* (many Mss.; first published by G. Scholem at the end of *Ha-Kabbalah be-Provence*, 1963); a mystic treatise on sacrifice (several Mss.); commentary on the beginning of *Midrash*

Konen (Ms.; New York, Jewish Theological Seminary); letter to Naḥmanides and Jonah Gerondi (in *Sefer Bialik* (1934), 143–4); detailed instructions on meditation in prayer (*Reshit ha-Kabbalah* (1948), 245–8).

[Esther (Zweig) Liebes]

ISAAC FROM OURVILLE (second half of the 13th century), rabbinic author. No biographical details are known of him. According to Gross, he originated from Ourville in Normandy, but Schwarzfuchs is of the opinion that the town of Orville on the border of the Champagne district north of Dijon is more probable. Isaac studied under Ḥayyim of Blois. He wrote a halakhic work called *Sefer ha-Menahel* which is no longer extant; however, extracts from it appear in the *Kol Bo* and the *Orḥot Ḥayyim*. The *Kol Bo* has a section (no. 143) headed: "The Laws of Isaac, of blessed memory, author of the *Menahel*." There have also been published: "Ancient *ḥaramot* of Rabbenu *Gershom, copied from the *Sefer ha-Menahel* of Isaac of Ourville" (Schwarzfuchs, see bibl.). Some (including Rapoport and Hurwitz) have tried to identify him with the Isaac b. Durbal mentioned in the *Maḥzor Vitry* who was a pupil of Jacob *Tam. However, there is no basis for such identification, which would be impossible.

[Shlomoh Zalman Havlin]

ISAAC NAPPAḤA (third century), Palestinian *amora*. A R. Isaac, without epithet, is frequently mentioned in the Babylonian and Palestinian Talmuds and in the Midrashim. There was another contemporary scholar called Isaac Nappaḥa (i.e., "the smith") who is mentioned in the Babylonian Talmud and in the late Midrashim. Many of the sayings quoted in one source in the name of Isaac are attributed in the parallel passages to Isaac Nappaḥa, and most scholars regard the Isaac without qualification to be Isaac Nappaḥa (for the name of his father, see the vague tradition at the bottom of Pes. 113b, Dik. Sof., *ibid.*, and Rabbenu Hananel and the commentators). Isaac studied under R. Johanan in Tiberias and transmitted many statements in his name in *halakhah* and in *aggadah*. He was highly regarded by his colleagues and Resh Lakish once remarked with reference to the explanation of a verse on which R. Johanan and R. Isaac differed: "The interpretation of the smith [Isaac] is better than that of the son of

the smith" (i.e., Johanan; Sanh. 96a). He also transmitted sayings in the names of Resh Lakish and R. Eleazar (Av. Zar. 14a, 70b), and was an older colleague of *Ammi and *Assi (BK 60b). He also served as *dayyan* and halakhic authority in Tiberias and Caesarea together with Ammi, *Abbahu and *Ḥanina b. Pappa (BK 117b; Ned. 57b). He was one of the *neḥutei* who brought teachings of Erez Israel to Babylonia (Er. 27a; et al.), and similarly transmitted some of the teachings of the Babylonian scholars, Rav and R. Judah (Ber. 43a; TJ, Shevu. 4:1, 35c). There is mention of his preaching in the house of the exilarch (MK 24b) and disputing with Naḥman b. Jacob (Ber. 7b), R. Ḥisda, and R. Sheshet (Ber. 27a; Shab. 43b).

Many Babylonian *amoraim* transmit *halakhah* and *aggadah* in his name. On one of his visits to Babylon Isaac was the guest of R. Naḥman. When he was about to take his departure Naḥman requested Isaac to bless him. He replied with a parable: "A man was once journeying in the desert. He was hungry, weary, and thirsty, and chanced across a tree whose fruits were sweet, its shade pleasant, and a stream of water flowed beneath it… When he was about to resume his journey he said: 'Tree, with what shall I bless thee?… That thy fruits be sweet? They are sweet already; that thy shade be pleasant? It is already pleasant; that a stream of water should flow beneath thee? It already flows beneath thee; I pray that all the shoots planted from you be like you'" (Ta'an. 5b). Isaac was renowned both as a halakhist and an aggadist, and the following story is told. Once Ammi and Assi were sitting before him. One of them asked him to expound a *halakhah* and the other an *aggadah*. "He commenced an *aggadah* but was prevented by the one, and when he commenced a *halakhah* he was prevented by the other. He said to them: This may be compared to a man who has two wives, one young and one old. The young one used to pluck out the white hairs to make him appear young and the old one his black ones, to make him appear old. He thus became completely bald" (BK 60b). He devoted himself, however, particularly to the *aggadah* and is numbered among the most important aggadists. He saw in it a means of encouraging the people during the difficult period through which they were passing, as is evident from his saying (PdRK 101): "In the past when money was plentiful people used to crave to hear the words of the Mishnah and the Talmud. Now that money is in short supply and moreover we suffer from the government, people crave to hear the words of Scripture and of the *aggadah*." It was his custom to give an introduction to the homilies he delivered in public and the expression, "Isaac opened (i.e., "his discourse")" is frequently found (see Gen. R. 1:7; et al.). He interlaced his homilies with parables and proverbs and engaged much in biblical exposition. His *aggadah* reflects contemporary events (e.g., Meg. 6a).

The following are some of Isaac's sayings: "If you see fortune favoring the wicked, do not contend with him" (Ber. 7b); "a man should always divide his wealth in three parts, [investing] one in land, one in merchandise, and [keeping] one ready to hand" (BM 42a); "if a man says to you: 'I have labored and not found,' believe him not; 'I have not labored, yet found,' be-

lieve him not; 'I have labored and found,' believe him" (Meg. 6b); "a leader should not be appointed over the community without the approval of the community" (Ber. 55a). He was opposed to those who took vows to abstain from permitted worldly pleasures, saying of them: "Are not those things forbidden by the Torah enough, without you wanting to add to them?" (TJ, Ned. 9:1, 41b).

[Yitzhak Dov Gilat]

ISAAC OF CHERNIGOV (12th century), one of the first rabbinical scholars in Eastern Europe. Originating from Chernigov, Ukraine, Isaac toured the Jewish communities in Western Europe, and probably also reached England. In rabbinical literature he is also mentioned as Isaac (b. Ezekiel) of Russia, a disciple of R. *Judah he-Ḥasid.

[Yehuda Slutsky]

ISAAC OF EVREUX (first half of 13th century), brother of *Moses and Samuel of *Evreux, the three of whom were referred to as "the scholars of Evreux." Their well-known school in Evreux, Normandy, was attended by students from various countries, including Spain; among them were some, such as Jonah *Gerondi, who were to become the leading scholars of the next generation. Greater freedom in teaching than was customary at the time was one of the characteristics of the school, the pupils being permitted to study independently and even to disagree with their teachers, provided they produced proof for their statements. Isaac was apparently the youngest of the brothers. His teachings are interwoven with those of his brothers in the collections of *tosafot* that emanated from their school, known among early scholars as *Shitot me-Evreux* ("Opinions of Evreux"). His commentaries on several tractates are also quoted in the printed *tosafot*. According to Urbach, the printed *tosafot* to tractate *Nazir* were edited by Isaac, and those to *Kiddushin* by one of his pupils; while those to *Nedarim* are based upon the *tosafot* of Evreux.

BIBLIOGRAPHY: Urbach, Tosafot, 397–8, 493–5, 519–20; Y. Lipschitz (ed.), Tosafot Evreux (1969), 32–4.

[Israel Moses Ta-Shma]

ISAAC OF SOUTHWARK (d. 1289/90), English lawyer and financier. Isaac appears as a possibly professional lawyer, speaking on behalf of clients, in the Exchequer of the Jews in 1268 and 1270, but later only as a financier lending money. In 1285 he was accused of the murder of Maud of Worcester, but was subsequently cleared of this charge. Not long before his death in 1289/90 he sold his house in Southwark, just south of the river Thames opposite London, to Richard Clerk and his wife, Alice, but his widow, Zipporah, was able to con-

tinue living in a house in St Lawrence Jewry in the City of London.

[Paul Brand (2nd ed.)]

ISAACS, U.S. family prominent in New York City. Founder of the family was SAMUEL MYER ISAACS, born in Leeuwarden, Holland, who immigrated to the United States in 1839 from London, where he had been the principal of an orphan asylum. He was the first *ḥazzan* and preacher of Congregation B'nai Jeshurun in New York. After the congregation split in 1847 Isaacs became rabbi of Congregation Shaarei Tefila, remaining there until his death. In *Jewish Messenger*, a weekly newspaper which he founded (1857), Isaacs took a stand against Reform Judaism, but called for certain minor ritual changes. A supporter of the abolition movement, Isaacs lost southern subscribers as a result. He was associated with the founding of Mount Sinai Hospital in 1852 and became its first vice president. Isaacs also helped found the Hebrew Free School Association of New York City in 1864 and Maimonides College in Philadelphia, the first, though short-lived, American rabbinical school, in 1867. In 1859 he was one of the organizers of the Board of Delegates of American Israelites, an organization that worked for Jewish civil and religious rights in the U.S. and abroad. He helped organize the United Hebrew Charities in 1873 with his eldest son, MYER SAMUEL ISAACS (1841–1904), New York lawyer and community leader. Myer Samuel was born in New York, graduated from NYU (1859) and NYU Law School (1861), and was admitted to the bar in 1862. He then started his own office, founding the family firm M.S. and I.S. Isaacs. In 1880 Isaacs was appointed judge on the City (then Marine) Court to fill an unexpired term. Later he received nominations to the Superior Court (1891) and the Supreme Court (1895). He lectured on real estate law at New York University Law School from 1887 to 1897. Active in community affairs, Isaacs helped his father found the Board of Delegates of American Israelites and the Hebrew Free School Association, serving in leadership positions in both organizations. In civic affairs Isaacs was one of the organizers of the Citizens' Union in 1897 and was instrumental in creating Seward Park for the crowded East Side of New York City. He was a leader in many other Jewish charitable and educational efforts, particularly to aid East European Jewish immigrants, and was editor of the *Jewish Messenger*, which he helped his father found.

ABRAM SAMUEL ISAACS (1852–1920), another son of Samuel Myer Isaacs, who was a rabbi, writer, and educator. Educated at New York University, the University of Breslau (1874–77), and the Breslau rabbinical seminary, Isaacs taught Hebrew, German, and postgraduate German literature at NYU between 1885 and 1906. He was named professor of Semitic languages in 1906, a post which he held until his death. Isaacs was also a preacher at the East 86th Street Synagogue in New

York City and rabbi of the B'nai Jeshurun Congregation in Patterson, N.J. (1896–1906). Following his father's death in 1878 he became an editor of the *Jewish Messenger* until its merger in 1903 with the *American Hebrew.* Isaacs wrote several books for adults and children, including *A Modern Hebrew Poet: The Life and Writings of Moses Chaim Luzzatto* (1878) and *What is Judaism* (1912).

LEWIS MONTEFIORE ISAACS (1877–1944), son of Myer Samuel Isaacs, lawyer and musician. Born in New York City, Isaacs joined the family law firm in 1903. Isaacs was secretary and treasurer of the Beethoven Association, and director of the Musicians Foundation and the Edward Macdowell Association. He wrote songs and compositions for piano and orchestra as well as books about music, notably (with Kurt J. Rahlson), *Koenigskinder, a Guide to Engelbert Humperdinck's and Ernst Rosmer's Opera* (1912) and *Haensel und Gretel, A Guide to Humperdinck's Opera* (1913). He was also a trustee of the family's West End Synagogue (Congregation Shaarei Tefila) and a member and officer of several bar associations. His wife, EDITH JULIET RICH ISAACS (1878–1956), was active in the theatrical world. Born in Milwaukee, she became a literary editor of the *Milwaukee Sentinel* in 1903 and wrote drama criticism for periodicals. Later she was the editor and business manager of the quarterly *Theatre Arts Magazine*, which became the *Theatre Arts Monthly* in 1924. Edith Isaacs edited *Theatre* (1927), a collection of essays; *Plays of American Life and Fantasy* (1929); and *Architecture for the New Theatre* (1935), another collection of essays. She wrote *American Theatre in Social and Educational Life; a Survey of its Needs and Opportunities* (1932) and *Negro in the American Theatre* (1947).

Another son was STANLEY MYER ISAACS (1882–1962), lawyer and New York City official, who practiced law from 1905 until 1919, when he went into the real estate business. A longtime member of the Republican Party, Isaacs was a leading supporter of municipal reform and was elected president of the Borough of Manhattan on the La Guardia fusion ticket in 1937. Failing to be renominated by his party in 1941 as a result of a controversy started when he appointed a Communist to the post of confidential examiner, Isaacs ran and was elected to the New York City Council, where he served until his death, for many years as its only Republican member. An exemplar of civic leadership, Isaacs' many progressive causes included slum housing improvements, laws prohibiting racial discrimination in housing, and the Committee for a Sane Nuclear Policy. He was also active in the settlement houses, notably the Educational Alliance, and in 1934 was president of the United Neighborhood Houses. A trustee of the Federation for the Support of Jewish Philanthropic Societies, Isaacs worked also for many other charitable, civic, and political organizations.

ISAACS, EDITH JULIET (1878–1956), editor of *Theater Arts* magazine from 1919 to 1945. Isaacs tried to make American theatergoers aware of people and movements in the European theater and to make them familiar with the London Old Vic and the Moscow Art Theater. She printed early plays by Eugene O'Neill, Thornton Wilder, and others, and work by American designers. Her magazine also encouraged the growth of pioneer progressive groups. Isaacs was active in the Federal Theater Project and supported black culture. She was married to LEWIS MONTEFIORE ISAACS (1877–1944), a real estate lawyer and accomplished musician who was one of the founders of the Musicians Foundation of New York and the MacDowell Artists Colony in Peterborough, New Hampshire.

Books she edited include *Theater: Essays on the Arts of the Theater* (1927); *Plays of American Life and Fantasy* (1929); and *Architecture for the New Theater* (1935). She wrote *The Negro in the American Theater* (1947).

[Ruth Beloff (2nd ed.)]

ISAACS, SIR ISAAC ALFRED (1855–1948), Australian lawyer and politician who became governor-general and chief justice of Australia. Isaacs' father emigrated from Poland to England and then to Australia at the time of the gold rush (c. 1851). Isaac Isaacs was born in Melbourne. He entered the Government Law Department and studied law at Melbourne University, graduating in 1880. His legal acumen and astute mind soon earned him recognition, and he advanced rapidly. In 1892, Isaacs entered politics and was elected as a member to the state parliament. In the following year he became solicitor general and in 1894 attorney general. He was acting premier of Victoria for a short time in 1899. Active in the debates of the inter-state conventions which led to the formation of the federal government of Australia, Isaacs was elected for the constituency of Indi, in Victoria, when the first federal parliament was formed in 1900. In the federal parliament, he served with distinction as attorney general and in 1906 was appointed a justice of the federal High Court in which he served for 24 years. In 1930, Isaacs became chief justice of Australia. He held strong views on the need for strengthening the power of the federal government as against that of the states and although he did not secure this in the framing of the constitution, his subsequent judgments did much to influence events in that direction. In 1931, after a lengthy public controversy, the Australian Labor government decided on the appointment of an Australian-born governor-general and Isaacs was chosen as the first Australian for this post, which he occupied with dignity, decision, and leadership. He became a privy councillor in 1921 and was knighted in 1928.

Isaacs remained a conscious and practicing Jew but he saw his Jewishness as a religion, rejecting completely its national and political side. Strongly opposed to political Zionism, he engaged in a vigorous public controversy at the age of 90 in which he took a strong anti-Zionist line. He supported the official British government policy on Palestine in 1945–47 as laid down by Ernest *Bevin. Isaacs died a few months before Israeli independence, so that it is impossible to know whether, like many of his non-Zionist associates, he would have fundamentally altered his views on the Jewish state; those who knew him are divided on this point. Even in the last years of his long life, Isaacs preserved his brilliant qualities as a politi-

cal speaker. The man who, many years later, became Australia's second Jewish governor-general, Zelman Cowen, wrote the authoritative biography, *Isaac Isaacs* (1967).

BIBLIOGRAPHY: M. Gordon, *Sir Isaac Isaacs* (1963). **ADD. BIBLIOGRAPHY:** Australian Dictionary of Biography; H.L. Rubinstein, Australia I, index; W.D. Rubinstein, Australia II, index.

[Isidor Solomon]

ISAACS, ISAIAH (1747–1806), U.S. merchant, communal leader, and public official. Isaacs, who was born in Germany, went to Richmond, Virginia, by 1769, and was Richmond's first permanent Jewish resident. A silversmith by trade, he entered into a prosperous partnership later with Jacob I. Cohen, as merchants and owners of land, houses, and slaves. A founder of Beth Shalome Congregation, he gave part of his land to the congregation for cemetery purposes in 1791. Active in political affairs, Isaacs was appointed clerk of the market (1785), later became a tax assessor, and served as a member of the original Common Council of Richmond along with John Marshall.

[Saul Viener.]

ISAACS, JACOB (c. 1730–1798), U.S. inventor. He lived in Newport, Rhode Island, and was listed as a member of the Jewish community. In 1758 he became involved in a law case against John Merritt of Providence and the king's council decided in his favor. In 1759 he was one of the ten signatories to a letter of thanks sent to the congregation of the Shearith Israel synagogue in New York for their help in the building of the synagogue in Newport. Here the name appears as Jacob Isaacks. In 1760 his name (in the form of Isaacs) appeared in a list of Newport Jews made by Ezra Stiles. His family was listed as five souls and in 1762 he was registered as the owner of a brig. In 1783 he made an offer to build ships and in 1791 he invented a method of water desalination and petitioned the House of Representatives to take over the discovery for payment. He interested George Washington and though Thomas Jefferson recommended it, Congress set the matter aside.

BIBLIOGRAPHY: Friedenwald, in: A.J. Karp (ed.), *The Jewish Experience in America*, 1 (1969), 222–8.

[Samuel Aaron Miller]

ISAACS, JACOB (1896–1973), literary scholar. Born in the East End of London, Isaacs was educated at Oxford and specialized in Shakespearean studies. He was interested in the Hebrew Bible as a literary source, which was reflected in his contribution to H. Wheeler Robinson's *The Bible in Its Ancient and English Versions* (1940). He was the first professor of English at the Hebrew University of Jerusalem (1942–45) and from 1952–64 was professor of English at London University. Isaacs became a well-known broadcaster on English literature on BBC radio and wrote *The Background of Modern Poetry* (1951).

ADD. BIBLIOGRAPHY: ODNB online.

ISAACS, SIR JEREMY (1932–), English producer and arts executive. Isaacs was educated at Oxford, where he was president of the Union in 1955. In television, his main interests were in documentaries and current affairs, and he was responsible for celebrated series and programs both for BBC (Panorama) and Independent Television as producer, controller, editor, and sometimes journalist. The 26-part series *The World at War* about World War II, which received worldwide praise, was initiated and produced by Isaacs in 1974. As an independent, he produced "A Sense of Freedom" for Scottish TV and a series for BBC, *Ireland – a Television History.*

He became founding chief executive of Channel 4 in 1981, serving until 1987. Isaacs created a much envied model for cultural television. He was a major influence in the arts by attaching a high priority to opera and ballet as well as literature and the visual arts.

In 1988–96 Isaacs was general director of the Royal Opera House, Convent Garden, where he had served as a member of the board since 1985. Despite great financial difficulties in the arts and much media criticism of the Royal Opera House, Isaacs brought Covent Garden back to internationally acclaimed artistic levels.

A private and somewhat reserved personality, he is also a distinguished TV interviewer of singular discretion, allowing recognition for the personality being addressed (he rarely appears on the screen himself). He suffered a personal tragedy when his brother was killed by a terrorist bomb in Jerusalem in 1975.

Isaacs has been the recipient of many honors and awards and was a governor of the British Film Institute from 1979. France made him a Commandeur de l'Ordre des Arts et de Lettres in 1988. He also became chairman of *Artsworld,* a non-commercial cable television station. Isaacs was kighted in 1996 and is the author of *Storm Over 4: A Personal Account* (1989).

[Sally Whyte]

ISAACS, JORGE (1837–1895). Colombian novelist and poet. The son of a converted English Jew and a Colombian mother, Isaacs was born in Cali and educated as a Catholic; in 1868 he became a Freemason; he nevertheless assumed what he defined as his "racial" Jewish identity. After publishing a collection of poems (1864), he won instant fame with his novel *María* (1867), a tragic love story in which the partial Jewishness of the main characters plays an important role. The novel became a classic of Latin American literature; it was translated into many languages and an English version by Rollo Ogden appeared in 1890. Some of his poems, such as "La tierra de Córdoba" ("The land of Cordoba"), "A Cali" ("To Cali") and "Río Moro" ("Moro River"), contain allusions to his Jewish origins. Isaacs subsequently entered politics and became a Colombian diplomat, but achieved no further distinction as a writer.

[Kenneth R. Scholberg / Florinda F. Goldberg (2nd ed.)]

ISAACS, JOSEPH (1659–1737), New York pioneer. Colonial records afford only glimpses of Isaacs' career. It is known that he enlisted in the provincial militia in 1691 during King William's War; that as a resident of the North and East Wards of New York City he was made a freeman of the city in 1698; that he was a merchant and a butcher, and that he unsuccessfully petitioned the municipal authorities in 1702 for permission to manufacture rum. In addition Isaacs was a party to numerous lawsuits, including one in which he was charged with possessing illegal weights. The assessment rolls of the city indicate that he was one of its less affluent businessmen, yet he contributed to the building of the Shearith Israel synagogue in 1729–30.

[Leo Hershkowitz]

ISAACS, NATHAN (1886–1941), U.S. lawyer, educator, and author. Isaacs taught law at the university of his native Cincinnati (1912–18; interrupted by service in the U.S. Army during World War I), at Harvard (1919–20 and from 1924) and at the University of Pittsburgh (1920–23). He also lectured at Yale Law School (1937–39). Isaacs was active in Jewish affairs and was an American delegate to the first World Jewish Congress in Geneva (1936). His books include *The Law of Business Problems* (1921, revised 1934), and *Course in Business Law* (1922). He co-edited the National Law Library with Roscoe Pound (1939).

ISAACS, NATHANIEL (1808–1872), South African trader and explorer, regarded as one of the founders of Natal. He left a record of his visits to the kraal of the Zulu kings, Chaka and Dingaan, *Travels and Adventures in Eastern Africa*, 1–2 (1836), which is an important contemporary account of Zulu life and customs. Isaacs was a nephew of Saul Solomon, merchant of St. Helena, and was sent from England at the age of 14 to join his uncle's countinghouse. In 1825, befriended by J.S. King, commander of the brig *Mary*, he accompanied him to Port Natal, and decided to explore the interior. His party reached the royal kraal of Chaka 130 miles inland, and was received by the monarch, who already knew King. Isaacs observed tribal life at close quarters and was later able to describe the tyrannical rule of Chaka with much horrifying detail. He traded in ivory and accompanied the Zulus in an expedition against a Swazi tribe (in which he was wounded) and was given the name "Tamboosa" (Brave Warrior). He was granted a concession of land at what is now Durban, which he surrendered to H.F. Fynn, another Na-

tal pioneer. Much of our knowledge of Chaka Zulu derives from him.

After Chaka's assassination by Dingaan, Isaacs vainly urged upon the Cape Government the advisability of colonizing Natal. He was then only 20, and he spent two more years in Natal where he trained the Zulus in cultivation and cattle raising. In 1831 he returned to England, still hoping Natal would be declared a colony, but received no encouragement. Natal was annexed by the British in 1843, but by then Isaacs was in West Africa, trading in Sierra Leone.

ISAACS, SUSAN (1943–), U.S. author. Brooklyn-born Isaacs, a novelist, essayist, and screenwriter, was educated at Queens College. She left before she earned her degree to work as an editorial assistant at *Seventeen* magazine. She rose to senior editor but resigned to stay home with her children. At the same time, she freelanced, writing political speeches and magazine articles. She used her work background in her novels. While living on Long Island, a suburb of New York City, she published her first book, *Compromising Positions*, a comic novel, in 1978. It was a main selection of the Book-of-the-Month Club and was the first of 10 novels, all of which made the bestseller list. The whodunit told the tale of a suburban housewife who investigates, and solves, the murder of a philandering periodontist. In 1985, Isaacs adapted the book into a successful film, with Susan Sarandon playing the investigator-housewife. She also wrote and co-produced a comedy, *Hello Again*, in 1987, with Shelley Long and Judith Ivey.

Isaacs's second novel, *Close Relations*, was a love story set against a background of ethnic, sexual, and New York Democratic Party politics. It was published in 1980 and was a selection of the Literary Guild. Her third, *Almost Paradise*, in 1984, was also a Literary Guild main selection. In this work Isaacs used the saga form to show how the people are molded not only by their histories but also by family fictions that supplant truth. Her fourth novel, *Shining Through*, published in 1988, was set during World War II and a film adaptation starred Michael *Douglas and Melanie Griffith. Her other books include *After All These Years, Lily White, Red White and Blue, Long Time No See,* and *Any Place I Hang My Hat*. Her fiction has been translated into 30 languages.

Isaacs served as chairman of the board of Poets & Writers and was a president of the Mystery Writers of America. She was also a member of the National Book Critics Circle, PEN (Poets, Essayists and Novelists) and served on various educational and family guidance organizations.

[Stewart Kampel (2nd ed.)]

ISAACSOHN, SIEGFRIED (1845–1882), German historian. Isaacsohn wrote a three-volume work on Prussian history, *Geschichte des preussischen Beamtenthums vom Anfang des fuenf-*

zehnten Jahrhunderts bis auf die Gegenwart (1874–84, reprint 1962), and together with Harry Bresslau, *Der Fall zweier preussischer Minister, des Oberpraesidenten Eberhard v. Danckelmann 1697 u. des Grosskanzlers C.J.M. v. Fuerst 1779. Studien zur brandenburgisch-preussischen Geschichte* (1878). He was editor of the tenth volume of the series devoted to the documents of the Elector Frederick William of Brandenburg (1620–1688), *Urkunden und Actenstuecke zur Geschichte des Kurfuersten Friedrich Wilhelm von Brandenburg. Auf Veranlassung Sr. koeniglichen Hoheit des Kronprinzen v. Preussen* (1880).

ADD. BIBLIOGRAPHY: H. Bresslau, Preface to *Geschichte des preussischen Beamtentums*, 3:v-viii (biogr. and bibliogr. notes).

ISAACSON, JOSE (1922–). Argentinian writer, essayist, and lyric poet of Sephardic origin. Many of his works have received awards, including *Amor y Amar* ("Love and To love," 1960), *Elogio de la poesía* ("Praise of Poetry," 1963), *Oda a la alegría* ("Ode to Joy," 1966), and his essay *El poeta en la sociedad de masas* ("The Poet in Mass Society," 1969). Other noteworthy works were *Kafka: la imposibilidad como proyecto* ("Kafka: Impossible as a Project," 1974) and *Cuaderno Spinoza* ("The Spinoza Notebook," 1977) a philosophical poem on the apogee of 18th-century reason before the advent of the crisis of contemporary thought and the alienation of 20th century man. In 1980 he received the Latin American Prize for Intellectual Jewish Merit, conferred by the Latin American Jewish Congress. From the Jewish perspective Isaacson writes about the post-emancipation period and from the perspective of Argentine history; his literary production belongs to the most pluralistic and humanist tradition generated by Liberalism. Thus he appealed both to Jewish intellectuals and to the non-Jewish cultural world which appreciated his human, universal, and abstract values. He was president of the Argentine branch of the International Pen Club. From 1953 to 1970 he was board secretary of the Jewish-Argentine quarterly *Comentario*.

ISAIAH (Heb. יְשַׁעְיָהוּ ,יְשַׁעְיָה, "Salvation of YHWH"), one of the eight books (as the Rabbis and the Masorah count them) of the *Nevi'im*, or Prophets, the second division of the Hebrew canon (see *Bible, Canon).

INTRODUCTION

Outside the Book of Isaiah itself, the prophet is mentioned in II Kings 19–20 and II Chronicles 26:22; 32:20, 32. He is called the son of Amoz, who is otherwise unknown. According to a tradition in the Babylonian Talmud (Meg. 10b), Amoz was the brother of *Amaziah, king of Judah. A contemporary of *Micah, Isaiah was preceded slightly by Hosea and Amos, both of whom preached in the Northern Kingdom.

The pseudepigraphical Ascension of *Isaiah relates that Isaiah was "sawn asunder" by the wicked *Manasseh (5:1ff., cf. also Heb. 11:37). A variation of this theme is found in the Babylonian Talmud (Yev. 49b), which relates that a genealogical record in Jerusalem reports the death of Isaiah by the hand of Manasseh: Isaiah was "swallowed by a cedar tree, and the tree was sawn asunder." Also in the Jerusalem Talmud (TJ, Sanh. 10:2, 28c), Isaiah is said to have hidden in a cedar tree which was then "sawn asunder." The tradition is therefore consistent that the prophet was martyred in the days of Manasseh.

For other biblical figures with the name Isaiah see Ezra 8:7; 8:19; Neh. 11:7; I Chron. 3:21; 25:3, 15; 26:25.

SURVEY OF VIEWS OF THE AUTHORSHIP OF ISAIAH. Ben Sira attests that by 180 B.C.E. Isaiah had already reached its present form (Ecclus. 48:17–25). This is corroborated by the Isaiah scroll discovered in the area of the Dead Sea which contains all 66 chapters of Isaiah (but see W.H. Brownlee, *The Meaning of the Qumran Scrolls for the Bible* (1964), who believes, on the basis of a gap following chapter 33 in the Isaiah scroll, that a literary division should be made at that point). On the basis of this evidence, it is highly unlikely that some portions of Isaiah date from the Maccabean period (see R.H. Kennett, *The Composition of the Book of Isaiah in the Light of History and Archaeology* (1910)). The New Testament speaks of the entire book as Isaianic: John 12:38 refers to Isaiah 53:7 by the formula "spoken by the prophet Isaiah" while the next verse, 12:39, refers to Isaiah 6:9, 10 with the statement "For Isaiah again said…" (see further E.J. Young, *Who Wrote Isaiah*? (1958), 11ff.). According to *Bava Batra* 15a, Hezekiah and his colleagues "wrote" Isaiah. However, it was generally axiomatic among the rabbis that the Book of Isaiah was the work of one prophet, and they answered the apparent time discrepancy by attributing the latter chapters to the outcome of prophetic powers. Abraham ibn Ezra, anticipating modern criticism, hints that because chapters 40–66 of Isaiah contain historical material subsequent to the time of Isaiah, it is likely that these chapters were not written by Isaiah ben Amoz (see M. Friedlaender, *Commentary of Ibn Ezra on Isaiah* (1873), 170). Modern criticism began with J.B. Koppe's observation, in the German edition of Lowth's *Commentary* (1780), that chapter 50 may not have come from the prophet. In 1789, J.C. Doederlein denied the Isaianic authorship of chapters 40–66. Taking up the issue, J.G. Eichhorn and E.F.K. Rosenmueller defined the criteria for distinguishing between genuine Isaianic and non-Isaianic portions. By the middle of the 19th century, these views had a very wide following, although they were challenged by C.P. Caspari, J.A. Alexander, and, in his early years, F. Delitzsch. More and more scholars began to write on the subject, refining and correcting previous positions. Among these were G.A. Smith (1889) and B. Duhm, who, in 1892, labeled chapters 40–55 and 56–66 of the book Deutero-Isaiah and Trito-Isaiah, respectively. In 1914, H. Gressmann applied the method of *Formgeschichte* to the study of Isaiah (in: ZAWB, 34 (1914), 254–97). This method, introduced by H. Gunkel and

H. Gressmann, is concerned with identifying the *Gattungen* (literary types) of a given book and placing them in their *Sitz im Leben* (life situation, historical context). C.C. Torrey maintained that chapters 34–66, excluding 36–39, were the work of one author, writing that "the paring process, begun with a penknife, is continued with a hatchet, until the book has been chopped into hopeless chunks" (*The Second Isaiah: A New Interpretation* (1928), 13). There has been a trend toward synthesizing the methods of literary criticism and the methods of *Formgeschichte* in the manner of Childs' *Isaiah and the Assyrian Crisis*, 1967. Y.T. Radday has attempted to utilize computers in determining the authorship of the work (Y.T. Radday, in: *Tarbiz*, 39 (1969/70), 323–41; idem, in: JBL, 89 (1970), 319–24; idem. in: *Computers and the Humanities*, 5 no. 2 (1970), 65 ff.). Radday's work concludes that there was at least one other author for the second part of Isaiah. J.H. Hertz put the traditional Jewish viewpoint on this subject thus: "This question can be considered dispassionately. It touches no dogma, or any religious principle in Judaism; and, moreover, does not materially affect the understanding of the prophecies, or of the human conditions of the Jewish people that they have in view" (*The Pentateuch and Haftorahs* (1956), 942). For a more recent survey of Isaiah scholarship see J. Sawyer, DBI I, 549–54.

The virtually unanimous opinion in modern times is that Isaiah is to be considered the work of two distinct authors: First Isaiah (chs. 1–39) whose prophetic career in Jerusalem covers the years c. 740–700 B.C.E., and that of an unknown prophet (Deutero-Isaiah, chs. 40–66; see below) whose prophecies reflect the experience and events of the Babylonian Exile (c. 540 B.C.E.).

The beginning of (First) Isaiah's prophetic career (6:1; "the year of the death of King Uzziah," c. 740 B.C.E.) coincided with the onset of a highly critical period in the fortunes of both the kingdoms of Israel and Judah, and the events of this period furnish the immediate background of Isaiah's prophecies. The march of conquest of both Babylonia and Syria, launched by Tiglath-Pileser III upon his accession to the Assyrian throne (745 B.C.E.), raised a looming threat to the future independence and, indeed, to the very existence of both kingdoms. The coming to power of the usurper Pekah (736 B.C.E.) in Israel marked a concerted effort, in which he was joined by Rezin, king of Damascus, and a few other neighboring principalities, to throw off the yoke of Assyrian domination. Upon King Ahaz of Judah's refusal to join the alliance, his kingdom was invaded by the leaders of the anti-Assyrian alliance who proposed to depose him and replace him with a pro-Aramean puppet, the "son of Tabeel" (II Kings 15:37; 16:5; Isa. 7:1 ff.). In that critical hour, in a meeting with the panic-stricken monarch, Isaiah urged the king to be confident and calm. Ahaz spurned the prophet's quietistic counsel and, instead, sent an urgent appeal for help, accompanied by tribute, to Tiglath-Pileser (II Kings 16:7). Thus, the independence of Judah was surrendered. For Isaiah, the fateful act, while buying temporary security for Judah, ultimately invited disaster at the hands of its rescuer. King *Hezekiah (c. 715–687 B.C.E.), Ahaz's son and successor

to the throne, cautiously stayed aloof, for a time, from abortive attempts initiated by Egypt to throw off the Assyrian yoke. Perhaps it was the insistence of the prophet on the futility of an alliance with Egypt that prompted this attitude; Isaiah dramatized his insistence by going about barefoot and naked for three years as a symbol of the fate that would overtake Egypt and its ally Nubia at the hands of the Assyrians (ch. 20). Some years later, internal troubles in Assyria apparently persuaded Hezekiah that, despite the prophet's warnings and dire predictions (39:5–7), the hour was ripe to break the yoke of vassalage. Isaiah's warning that dependence upon Egyptian aid could only lead to disaster went unheeded (31:3). In 701 B.C.E. Sennacherib invaded Palestine, after defeating an opposing Egyptian and Nubian force at Eltekeh. The countryside was quickly overrun (22:7), and much of its population deported. Soon afterward Jerusalem was besieged. Isaiah, prompted by his faith in the inviolability of Jerusalem, encouraged Hezekiah to refuse to surrender the city to the invader despite the threats and demands of Sennacherib's high officer (36:4 ff.; II Kings 18:17 ff.). The prophet predicted that Jerusalem would not be taken and that God would "turn back the invader the way by which he came" (37:22–29). The siege of Jerusalem was lifted, an event credited to a divine visitation (37:36; II Kings 19:36) that devastated the camp of Sennacherib. (For Sennacherib's account see Pritchard, Texts, 287–8; COS II: 302–3; L.L. Honor, *Sennacherib's Invasion of Palestine*, 1926.) Though the political and military events of the prophet's time, briefly described above, help to illuminate a number of passages in Isaiah (essentially, those already cited), the major portion of the book is devoted not to Judah's foreign policy but to the inner state of the nation, its social order, and its religious situation. Isaiah's career began at a time of growing prosperity that brought comfort and luxury. Material growth was accompanied by the territorial expansion of the Kingdom of Judah, achieved by military power cultivated by King Uzziah (II Chron. 26:6–15). The economic and political situation never seemed brighter. A national sense of complacent self-satisfaction and pride could hardly be avoided. Isaiah, however, saw that wealth had been purchased at the price of oppression. Corruption was rife in high places (1:23); the guilty were acquitted for bribes and the innocent were denied justice (5:23); the fatherless went undefended (1:23); the mansions of the rich contained the spoils of the poor (3:14); the poor farmer was evicted from his land to make room for the estate of the plutocrat (5:8). The aristocratic women of Jerusalem, in their elaborate attire and jewelry, especially served the prophet as target for his denunciations and predictions of doom (3:16–24). Foreign trade and imports apparently brought with them idolatrous religious practices and superstitions; at least, the prophet links the two (2:6–8) and he charges that "Everyone worshippeth the work of his own hands" (10:10 f.). The prophet does not repudiate the sacrificial cult carried out in the Temple; indeed, he seems to have been a frequent Temple visitor, for it is here that he receives the divine call to prophecy in a vision. However, sacrifice and oblations brought by hands "full of blood" are "vain" and an

"abomination" (1:11–15). If the divine demand "to seek justice, relieve the oppressed, judge the fatherless, plead for the widow" (1:17) is heeded, "ye shall eat the good of the land"; if not, "ye shall be devoured by the sword" (1:19, 20). The coming of God in His fierce anger to punish Israel and the nations is a recurrent theme (5:15, 16, 24, 25; 9:14–19; 13:11–13; 30:27, 28; cf. 9:20; 10:4). Yet, the divine anger is but an instrument wherewith to humble the arrogant and punish the evildoers. Once it has accomplished its purpose, God will show His graciousness and mercy (10:25; 26:30; 30:18). The latter are presumably meant for the "holy seed" that will remain when the work of destructive purification has been fulfilled (6:13). Only a remnant of Israel shall return (8:18; 10:21, 22; Heb. *She'ar Yashuv*, the symbolic name of the prophet's son, 7:3). In addition to the concrete historical hope of the survival of a remnant, the prophet holds out an eschatological hope, one to be consummated at the end of days when the whole world will be transformed. Isaiah's eschatology is grounded in his faith in God's permanent attachment to Israel and to Zion (28:16). God's design for the history of the nations is to reach its fulfillment in Zion, to which the nations will repair to learn the ways of God and to walk in His paths (2:2–4, 5; 33:20; 28:16; cf. Micah 4:14). The denouement of history will see the abolition of war and the turning of the nations to peace. Closely linked to Isaiah's eschatology are his visions of the messianic figure. Sprung from the root of Jesse (father of David), he will be endowed with the spirit of God in its fullness. With unblurred vision, he will intervene on behalf of the poor and deliver them from their persecutors, establishing thereby a reign of righteousness and truth. Under his reign, even the ferocity of the wild beasts will be transformed into gentleness (11:1–10). In a similar passage, the prophet invests the messianic king with extraordinary traits, calling him "Wonderful in counsel… the everlasting father, the prince of peace" (9:5ff.). In summary fashion, the essential doctrines of Isaiah may be described as

(1) an emphasis on the holiness of God;

(2) a rejection of human schemes and wisdom as the means of working out the destiny of Israel and, in their stead, a total reliance on God;

(3) an ardent faith in Jerusalem as the inviolable city of God and its proclamation as the future site of universal acceptance of the God of Israel by the nations;

(4) the delineation of the messianic king under whose reign final justice and peace will be inaugurated;

(5) the doctrine that only a remnant of Israel shall emerge out of the doom to be visited upon it;

(6) the primacy of the moral dimension of the religious life without which ritual observance becomes an abomination in the sight of God.

Chapters 40–66 of the Book of Isaiah constitute the prophecies of an unknown prophet of the Babylonian Exile, commonly referred to as Deutero-(Second) Isaiah. Fairly widely accepted critical opinion (but with exceptions) attributes chapters 56–66 to a different prophet conveniently called Trito-Isaiah. (Since the essential ideas of these latter chapters

form a consistent whole with chapters 40–55, for purposes of this article they will be considered in conjunction with them.) The dramatic turn of events of his time, the impending conquest of Babylonia by Cyrus, the Persian king of Anshan (539 B.C.E.), to which the prophet alludes (45:1ff.; 47:1), enables the prophet's utterances to be dated with approximate accuracy to 540 B.C.E. In the light of the predicted downfall of Babylonia, and hence presumably an end to exile, the prophet's message to his people who are in despair over the ruin of Judah is, in the first instance, one of hope and consolation. He speaks in vivid terms of "the waste and desolate places, the land that has been destroyed" (49:19). Zion is a widow bereaved of her children (49:19ff.) or a barren mother without offspring (54:1; cf. 51:18–20). It was not only the thought of Zion in ruins that weighed heavily on the mind and heart of the prophet; hardly less oppressive was the fact that thousands of his fellow countrymen, owing to a variety of circumstances, had been widely scattered and were to be found at all points of the compass (43:5; 49:12, 22). To judge from repeated references, the exiles in Babylonia were subject to contempt and hostility (41:11; 51:7, 13, 23; 54:15). A pervasive despair and fear, coupled with a sense of abandonment by God, had overcome the exiles (40:27; 49:14; 50:1). Here and there, some, despairing of the God of Israel's power to deliver them (40:28; 45:24; 46:12; 50:2), had readily succumbed to the lure of Babylonian idolatry (44:17; 48:5). In the midst of the depressing situation, the anonymous prophet reaffirms with striking emphasis and clarity the ancient faith that the God of Israel is not only the creator of heaven and earth (40:26; 44:24; 45:7), but the ultimate arbiter of the destinies of the proud empires, to do with them as he would (40:15ff.). It was the God of Israel who directed history (43:12) and who, even now, was guiding the course of events in bringing overwhelming victory to Cyrus (41:2ff., 25). Incisively, he predicts the collapse of the idols of Babylon (46:1ff.) and sets forth again and again the exclusive divinity of the God of Israel besides whom there is no redeemer (43:10; cf. 44:24; 45:6, 18, 21; 46:9; 48:11f.). True, Israel had sinned (43:27f.; cf. 48:1ff.), but divine wrath and punishment were things of the past, and God had freely pardoned Israel's sins (40:2; 44:22; cf. 48:9; 51:22; 54:6ff.). As expressions of God's love and His assurance that they had not been abandoned, the prophet employs a whole series of endearing epithets for Israel (43:7; 44:1, 5, 21; 51:4, 16; 54:17). In precise terms, the exiles would be released from Babylonia when that empire had vengeance wreaked upon it for its oppression of Israel (45:1ff.; 47:1ff.). It is Cyrus, heir to Babylonia's throne, who would let the exiles go free (45:13; 52:11ff.). The return to Zion would be led by God Himself (40:9ff.). The Temple would then rise upon a new foundation, and Zion would gain a new, incomparable splendor (54:11f.). There would also be a vast ingathering of Israelites out of the lands to which they had been scattered (43:5f.; cf. 49:12; 51:11; 53:12). Non-Israelites would join the House of Israel in allegiance to its God (44:5). The prophet speaks warmly of the aliens who associate themselves with the faith of Israel and assures them that they will

receive an "everlasting memorial" (56:4–8). In a burst of exaltation at the thought of Israel's forthcoming restoration, he sees Israel as supreme over the nations and the latter as subservient to it (43:3; 45:14; 49:22f.; 54:3). A group of passages in Second Isaiah (42:1–4; 49:1–6; 50:4–9; 52:13–53:12) are known as songs of the Servant of the Lord. Around the question of the identity of the figure described in these passages, a vast literature has grown up. The preponderance of scholarly opinion inclines to the conclusion that the Suffering Servant is to be identified with the people of Israel and, at the same time, perhaps with an "individual who both represents the whole community and carries to its supreme point the mission of the nation" (H.H. Rowley, *The Faith of Israel* (1953), 122). The mission of the servant is not only "to raise up the tribes of Jacob" but to be a "light to the nations" (49:6). His task is to set justice in the earth, bringing it forth in truth (42:3, 4), and to serve as liberator (42:7; see *Servant of the Lord).

[Theodore Friedman]

FIRST ISAIAH

Within this can be distinguished (1) the core, chapters 1–33, and (2) the historical appendix, chapters 36–39. The latter, a variant of II Kings 18:13, 17–20:19, does not purport to be by Isaiah, and was only copied from (a variant recension of) the Book of Kings and appended to Isaiah 1–33 because it tells about Isaiah. Even within chapters 1–33 there are some pericopes which are about, rather than by, Isaiah (e.g., ch. 20) and some which are neither by Isaiah nor about him. For the authentic utterances of Isaiah, the dating by the (not Isaian, but editorial) superscription 1:1 "in the reigns of Kings Uzziah, Jotham, Ahaz, and Hezekiah of Judah" is reliable, and the modern student of Isaiah does well to add: "and of Kings Tiglath-Pileser (III, 745–727), Shalmaneser (V, 726–722), Sargon (II, 722–705), and Sennacherib (705–681) of Assyria."

Divisions and Content of Chapters 1–33
The block Isaiah 1–33 falls into two main divisions of unequal length: A. The Diary, chapters 1–12; B. The Archive, chapters 13–33. The Diary has been so named by Ginsberg (1964) because despite deviations (which can be accounted for) its arrangement is chronological (c. 740–715 B.C.E.) in principle, with the result that when read in light of the most up-to-date knowledge of the relevant history it resembles a diary. The Archive, on the other hand, is a repository of prophecies of which only a minority at the end seem to be arranged chronologically.

THE DIARY, CHAPTERS 1–12. The Diary, Chapters 1–12, may be likened to a triptych with a narrow inner panel, chapter 6, and two broad outer panels, chapters 1–5 and 7–12, each of which is divided (horizontally or vertically, according to the reader's preference) into two fields. Panel 1 dates basically from before the death of King Uzziah; Panel 2 – as 6:1 states – from "the year that King Uzziah died"; Panel 3 – as stated by 7:1 – begins in the reign of Ahaz, whether it continues into

the reign of Hezekiah depends on whether Ahaz's reign was short (some date his death as early as 727, see below) or long (some have him live till 715). The somewhat detailed discussion which follows will serve as an introduction to the person, background, style, and outlook of Isaiah and will make possible considerable economies of space in the treatment of the Archive.

Panel 1, Field A, Chapter 1. *Ewald titled this chapter "The Great Arraignment." More apt would be "The Great Exhortation" for it appeals for reform (vv. 16–18), and offers total remission of even grave past sins on condition of reform (18–20). S.D. Luzzatto pointed out that *Lekhu na* (note the precative particle *na!*) *ve-nivvakheḥah* (*we-niwwakheḥah*) can only mean "Come, let us reach an understanding," since that is the only meaning that fits both here and in the only other undamaged passage in which the *nifal* of *ykḥ* occurs, Job. 23:7 (Gen. 20:6b is obscure). And escape is offered to everyone in Zion who reforms: verse 27: "In the judgment, Zion shall be saved (as in Job 5:20); in the retribution (so *ẓedakah* (*ẓedaqah*) is also to be rendered in 5:16; 10:22; 28:17), those in her who turn back." Only the rebels and sinners will perish, verse 28. The implication is that they will be a minority. When it is noticed that nowhere else does Isaiah summon to repentance, but only expects it after an ever greater depopulation (even in 31:6, the continuation in the third person in the same verse and in the following one show that *shuvu* [imperative, "turn back!"] is to be emended to *we-shavu*, "The children of Israel will then turn back to him to whom they were so false"), it is clear that chapter 1 belongs exactly where it is, at the beginning of the book; only verses 5–9 (10?) have been added – by Isaiah – either after the extinction of the Kingdom of Ephraim in 722 or after Sennacherib's invasion of Judah, his transfer of some of its territory to the Philistines, and his imposition of a heavy tribute on Hezekiah in 701. The fact that 1:2–20 (apart from the verses just mentioned) is Isaiah's maiden composition may explain its heavy dependence on earlier models. The models in question are the Song of Moses and the message of Amos. Isaiah 1:2 may be said to summarize the whole of Deuteronomy 32:1–18. Isaiah 1:2a = Deuteronomy 32:1–4 minus the elaborate adornment: Let heaven and earth give respectful attention, for these are the words of no other than the Lord. Isaiah 1:2b = Deuteronomy 32:5–18 in a nutshell: children nurtured and reared (Deut. 32, less restrained, also uses five verbs of engendering, Deut. 32:6b, 18) by the Lord have defected from him. Isaiah 1:3 merely repeats the preceding thought: ox and ass acknowledge their master and feeder, Israel does not. In turning from heaven and earth to address Israel reproachfully, Isaiah 1:4 takes its cue from Deuteronomy 32:6, but two of its epithets are inspired by Deuteronomy 32:5: "corrupt children" (Heb. *banim mashḥitim*) goes back to Deuteronomy 32:5a, which even in its mutilated condition has preserved the elements *banaw* and *shiḥet* and which originally may have read very much like *banim mashḥitim yalad*, "He gave birth to corrupt children," while *zeraʿ mereʿim*, "brood of evildoers," is

synonymous with Deuteronomy 32:5b, "a crooked and twisted generation." Here the echoes of Deuteronomy 32 in content and diction cease, but its form persists through Isaiah 1:20. For just as in Deuteronomy 32 the speaker alternately utters his own "discourse" (*lekaḥ, leqaḥ*, verse 2), verses 1–18, 36a, 43, and introduces and quotes YHWH, verses 19–35, 36a–42, so Isaiah 1:2–20 gives the following alternation: Isaiah introduces and quotes YHWH, 2–3; Isaiah adds his own comment, 4–9 (but 5–9 were added by him later); Isaiah introduces and quotes YHWH, 10–18; Isaiah adds his own interpretation, 19–20. The idea of disloyal children is repeated in 30:1, 9. The last cited verse is preceded (30:8) by an introduction remarkably reminiscent of the introduction to the Song of Moses, Deuteronomy 31:19, for as the Targum, among other versions, realized, *lʿd* in the former is to be vocalized *le-ʿed*, "for a witness"; but in this case it is hard to decide which passage is dependent on which. As for the message of Isaiah 1:10–17 – the protest against the topsy-turvy scale of values applied to cult and justice – its dependence on Amos 5:21–25 is obvious, and the identical or equivalent elements can be picked out. The themes of the oppression of the poor and the subversion of justice occur again both in Isaiah and in Amos, and it is not difficult to recognize in Amos 2:6b–7a; 3:15; 5:11–12 the elements of Isaiah 5:8–10 (cf. 1:29–30, which speak not of cult gardens but of luxury gardens in view of verse 31 *he-ḥason… u-foʿalo* ("treasure… and he who amassed it"); 5:23, 10:1–2). Not dependent on either the Song of Moses or the words of Amos is the glorification of Jerusalem, Isaiah 1:21–27. Disappointed as he is in her present state, Isaiah firmly believes that she was a faithful city where justice dwelt in the past, and will be such again in the future. He may well have idealized the past unduly. Jerusalem's judges had probably been officials appointed by the king ever since David's conquest, and it seems that in the Ancient Near East it was understood that an official derived much of his income from the gifts of the private persons who needed his services. From the start, therefore, a judge was exposed to a powerful temptation (1) to be too busy to hear an action brought by a widow or an orphan, who could not afford to bring an adequate gift (Isa. 1:23), (2) not only to hear but also to favor a litigant who did bring such a gift. However, Isaiah is to be judged as a prophet, not as a historian. The initial impression of nobility of thought and language is confirmed by the following chapters.

Panel 1, Field B, chapters 2–5. Furnished with a superscription of its own, 2:1, this collection dates from a slightly later period than Field A, as explained above, but the last pronouncement in it, 5:25 ff., dates still from the reign of Uzziah, since the latest misfortune it speaks of as having already occurred (though it is not destined to remain the last) is the famous earthquake of Uzziah's reign (Amos 1:1; Zech. 14:5). The pericope 9:7[8]ff., which begins its survey further back in history, also knows of later calamities as having already been endured: it comes to the earthquake in 9:18[19]a, and goes on in 9:18b–20a [19b–21a] to speak of Ephraim's savage civil wars – see II Kings 15:9–16,

23–25 – and of its ensuing attack on Judah, for which see II Kings 16:5–6; Isaiah 7:1ff. The date of this last event is 733, and if there were any merit to the argument that Isaiah 5:25 (with or without 5:26ff.) belongs in the context of 9:7[8]ff. "because it has the same refrain" it would follow that Isaiah 5:25(ff.) likewise dates from 733. However, the said argument begs the question; for a stich that occurs only once is not a refrain, and in chapter 5 the stich "Yet his anger has not turned back, and his arm is outstretched still" (5:25b) occurs only once. No time need be wasted on R. Kittel's egregious suggestion (*Biblia Hebraica*, 1929³, which is not peculiar to him) that the statement at the beginning of 5:25 to the effect that God's anger has been roused against his people and that he has extended his arm to strike it, presupposes four previous occurrences of "Yet his anger has not turned back and his arm is outstretched still." But it is also the opposite of probable that Isaiah contemplated repeating "Yet his anger has not turned back, etc," and going on to depict still further slaughter either in Israel or in Judah at the time when he announced (5:26–29) the coming with uncanny speed "from the end of the earth" of a legendary nation of barbarians equipped with the fangs (for *wšʿg* [so the consonantal text] read *wšnym, we-shinnayim*), the voracity, and the irresistibleness of lions. (The description no more contemplates a specific, real, nation – like the Assyrians – here than in Deut. 28:49–51; Jer. 5:15–17.) What more was necessary for making the land desolate (Isa. 6:11–12)? See also Panel 3, Field A.

Excursus: The Zion Vision, 2:2–4. This is one of the most remarkable pericopes in the entire Book of Isaiah. It reads as follows (verse 2): "In the days to come, the Mount of the Lord's House shall stand firm above the mountains and tower above the hills; and all the nations shall gaze on it with joy. (3) And the many peoples shall go and shall say: 'Come, // Let us go to the mount of The Lord,/to the House of the God of Jacob;// That he may direct us according to his ways,/And that we may walk in his paths'//For direction shall be forthcoming from Zion,/And words of the Lord from Jerusalem.// (4) Thus he will judge among the nations/And arbitrate for the many peoples,//And they shall beat their swords into plowtips/and their spears into pruning hooks://Nation shall not take up/Sword against nation;//They shall never again know war."//The use of the verb "to direct" (*horah*) of the issuing of messages by the Lord and of the delivering of such messages by prophets is characteristic of Isaiah (9:14; 28:9, 26; 30:20 [bis]), and the use of the noun "direction" (*torah*) of messages from superhuman sources is even more characteristic of him (1:10; 5:24; 8:16, 20; 30:9). This is true of ad hoc prophecy that is characteristic of Isaiah, though occasionally emulated by Habakkuk (2:19). Not merely characteristically Isaian but specifically Isaian is the parallelism "direction//word of the Lord" (or, once, "utterance of the Holy One of Israel"): 1:10; 5:24. In this as in other matters (see below), Isaiah's weaknesses lie in the field of practicality. Isaiah 2:2–4 is unmistakably Isaian not only in its diction but also in its ideology. For both its Zion-centeredness

and its concern that other nations beside Israel may be spared the horrors of war (contrast Lev. 25:18; 26:5; Jer. 30:10; 46:27; Hos. 2:20) are in line with much else. Although the prophecy occurs again in Micah 4:1–4, its uniquely Isaian "*Torah*//word of the Lord," which has already been commented upon, makes it unlikely that it is the work of some anonymous genius who preceded both Isaiah and Micah; and both this feature and the ideological congruence with Isaiah and clash with Micah – who cancels the universalism of the passage in the very next verse (Micah 4:5) as well as in 5:7–8, and its Zionism (he was a provincial from Morashah, 1:1) in 3:12 – preclude the priority of Micah (see Kaufmann on Micah).

Panel 2, chapter 6. Both the rabbis and modern research regard this as Isaiah's earliest prophecy (his "inaugural vision"); but Kaplan and Kaufmann have dissented, as have Milgrom, Knierim, and Schmidt. There is a new harshness here. God tells Isaiah to go and harden the hearts of "that people" (*ha-ʿam ha-zeh*, verses 9, 10) – the first occurrence of this deprecating designation; contrast "my people," 1:3 (though God is here reproaching Israel); 3:15 – in order that it may not (*pen*) "turn back and be healed" (cf. 19:22). To Isaiah's shocked question, "How long, O Lord?" – with which is to be compared Ezekiel's horrified exclamation (Ezek. 11:13b), "Oh, Lord ʏʜᴡʜ, You are completely destroying the remnant of Israel!" – ʏʜᴡʜ replies, just as He does to Ezekiel (Ezek. 11:14–21), that a small remnant shall turn back to the Lord and be spared. Unless *we-hayetah levaʿer* is moved, for purely stylistic reasons, to the end of verse 11, Isaiah 6:13 is to be rendered thus: "But while a tenth part still remains in it, it shall turn back (cf. *Sheʾar-yashuv* (Shear-Jashub), "a remnant shall turn back," the name of the son with whom Isaiah appears, a year or two later, in 7:3; see also 10:21). For it shall be ravaged (*we-hayetah levaʿer*) like the terebinth and the oak, of which stumps remain even when they are felled; its stump shall be a holy kindred." The only interpolation in Isaiah 6 is verse 12a, "The Lord will remove the population," which – referring to the Lord in the third person in the midst of a speech by the Lord – stems from a post-Exilic glossator who thought the prediction of devastation was a prediction of the exiling of the population to Babylonia (a century and a half later). In the inaugural visions Exodus 3:2–4:17; Jeremiah 1:4–9 (verse 9 makes this a vision); and Ezekiel 1:1–3:13, there are no participants but God and prophet (in the last cited vision the Lord does not address the creatures that bear His throne), and there is no call for a volunteer: the prophet is assigned his mission willy-nilly. The true analogue to Isaiah 6 is I Kings 22:17 ff.; in the former, however, the prophet is purged by a peculiar visionary rite (Isa. 6:6–7) so that he, as well as the celestial creatures of the Lord's council, may participate (imitated in Zech. 3:4–7). No wonder he believes that not only he but also his unnamed wife (she is simply "the Prophetess," perhaps herself a prophet, 8:3) and his children (8:11 ff., 18) – the last word in 8:16 is probably also to be emended to *ba-ye-ladim*, "in the children" – are something set apart from "the masses" (*rabbim*, 8:15)!

Panel 3, Field A, chapters 7–9. The Arameo-Ephraimite Attempt to Depose the House of David, 734–732. The Arameo-Ephraimite attack is the occasion for 9:7 [8]ff., whereas it is only the starting point of 7:1 – 9:6 [7], which in 8:23 [9:1] alludes to the Assyrian annexation of Sharon (in 734) and of Gilead and Galilee (732) as having already taken place (cf. II Kings 15:29). But 7:1–9:6 [7] was attracted to the vicinity of chapter 6 by the similarity of the openings 6:1 and 7:1. To the attempt to dethrone the Davidic dynasty, Isaiah reacted with the fury of a devout "legitimist." For to him the divine election of the House of David was as axiomatic as the divine election of Zion (see above). Recalling Amos 4:6–12, in which his predecessor had traced a series of disasters which had failed to induce repentance in the Northern Kingdom, because of which he had threatened it with ominous vagueness (Amos 4:12), with something much worse than anything that had preceded, Isaiah first repeated the last two of the disasters to which Amos had already looked back and then paraphrased Amos' threat for the future with appalling explicitness. For in Isaiah 9:7 [8] the Septuagint is unquestionably right in interpreting the consonants of the first two Hebrew words as *dever shillaḥ* ("let[past tense] loose pestilence"), and Ehrlich in changing *we-nafal* to *we-negef* ("plague"). Isaiah 9:7[8] alludes to the same pestilence, and Isaiah 9:10–11[11–12] to the same military disaster(s), as Amos 4:10. For the military disasters, this identity is confirmed by Haran's observation that Amos 1:6 speaks of Gaza (i.e., Philistia generally) handing over Israelite captives to Aram (so read for "Edom"). Then in 9:12[13], Isaiah paraphrases the final clause of Amos 4:10. Accordingly, Isaiah 9:13, 16a[14,17a] spells out the vague threat of Amos 4:12, and the beginning of it must be translated, "The Lord will exterminate from Israel head and tail, palm branch and reed, in one day." After that, Isaiah 9:17–20[18–21] traces the stages in the fulfillment of this threat that have been realized between the time that Amos uttered it (see Amos 1:1) and Israel's attack on Judah. Unlike Isaiah 5:25 ff., therefore, Isaiah 9:7[8] ff. resembles Amos 4:6 ff. in looking back on not one but a whole series of past blows, and so this passage (emphatically not Isa. 5:25ff.) does, like Amos, employ a refrain. The roughly parallel block 7:1–9:6[7] has preserved the reason for this implacable attitude of Isaiah toward the sister kingdom: the purpose of the attack on Judah was to put an end to the reign of the Davidic dynasty in Judah, 7:6. Isaiah is convinced that Aram and Ephraim have thereby dug their own graves. That Judah will be ravaged by a cruel foe is the gist of 5:26ff., which has already been dealt with, and presently Isaiah will substitute for this legendary people the Assyrians (8:7–8a); but the Davidic dynasty is inviolable. That its subjects are greatly outnumbered by those of either one of the two attacking kings makes no difference. The entire world outside the Davidic polity is a world without God, whereas ʏʜᴡʜ is an integral part of the Davidic polity; and what could even all the nations in the world do against God? (8:8b–10 belongs between 7:9a and 7:9b; see *Immanuel.) But Judah – through its king Ahaz – must exhibit the same faith as Isaiah. If it solicits the aid of heathen Assyria, it

thereby implies that it does not credit the Lord with the ability to dispose of Aram and Ephraim unaided. ("You treat my God as helpless," 7:13.) One obvious advantage of taking Isaiah's own word for it, instead of imputing to him the astute diplomatic motive so dear to rationalists who like to believe that the prophets were rationalists like them, is that the same irrational reason explains why Isaiah later opposed enlisting the aid of Egypt in disposing of Assyria, whereas for this the rationalizers have to discover still another secret rational motive. The fact is that only in the latter case can the course advocated by Isaiah also be justified by practical considerations (though they were foreign to Isaiah's thinking). Of the three premises of those who justify on practical grounds the policy advocated by Isaiah in the face of the Arameo-Ephraimite attack, two are at least doubtful: the premise that Tiglath-Pileser had not already imposed his suzerainty on Judah either when he defeated the *Uzziah-led coalition in 738 or when he swept into Philistia in 734; and the premise that although he had not moved betimes against the same *Pekah – who had perhaps been aided by the same *Rezin – when he rebelled against *Pekahiah, the presumably loyal son and successor of Assyrophile *Menahem, he would certainly, and without being solicited, attack Pekah and Rezin in time to save the House of David. The third premise is nonsense: that stronger powers do not subjugate weaker ones which do not either attack them first or solicit their protection! By procuring the aid of Assyria, Ahaz probably saved his dynasty and possibly his nation. Isaiah, however, bitterly confirmed his prediction of chapter 6, of an appalling devastation and added that the very power – Assyria – that Judah had hired to save her would be the instrument of her devastation (7:20). The best farmland (7:23, corresponding to the most hairy parts of the body, verse 20) would be reduced to thornbrakes infested by dangerous beasts. Just the marginal farmland, which could only be tilled with the hoe because too rocky for the plow (corresponding to areas of the body with scant hair), would escape infestation by dangerous beasts and would serve as pasture, the shrunken population being dependent on cows, sheep, and goats for its subsistence. (See also *Immanuel.) Chapter 8 begins, like chapter 7, with a piece of narrative; but unlike chapter 7 and like chapter 6, it is first person narrative. Isaiah's wife bears him a son whom the Lord instructs him to name Maher-(to be vocalized rather *Mihar*?) Shalal-Hash-Baz, "Pillage hastens, looting speeds," in token of the early plundering of two cities: "(4) For before the boy has learned to call 'Father!' and 'Mother!' the wealth of Damascus and the spoils of Samaria (6b) and the delights of Rezin and the son of Remaliah (the respective kings) (4b) shall be carried off before the king of Assyria." Isaiah is also instructed to symbolize this fact by writing an "undertaking ('*nwš*, which in 33:8 is parallel to '*edim* [so manuscript 1QIsa**a**] and *berit*; perhaps in both passages read '*mwn* [i.e., *emun*], since confusion of *sh* and *m*, which resemble each other in the Paleohebraic script [see *Alphabet] is frequent in First Isaiah) to Maher Shalal Hash Baz," and having it formally witnessed. But as in chapter 7, Judah's want of

faith must also be punished and through the same agent, Assyria. Unlike Aram and Israel, however, Judah would only be imperiled, not destroyed (8:5–8a). In this connection the opprobrious epithet "that people" is again applied to Judah (8:6), and twice more in 8:11, where Isaiah tells how, when the Lord singled him out (*be-ḥezqat* (*be-ḥezkat*) *ha-yad*, "when He grasped me by the hand"; cf. Isa. 45:1; Jer. 31:31[32]; Job 8:20), He warned him and his household not to walk in the path of "that people" (and here, as verse 14 makes clear, he means "both Houses of Israel," both Ephraim and Judah) so as not to stumble like the masses (verse 15; *rabbim*, as e.g., in Mal. 2:8, means "the many, *hoi polloi*"). On 8:16ff., see Ginsberg 1956, except that verses 20b–22 are to be arranged as follows: "(20b) For him who speaks thus there shall be no dawn. (21bc) Whether he turns upward, (22b) or looks downward (*el ereẓ* = Aram. *laʾaraʿ*<*leraʿ*), behold, distress and darkness with no day-break (reading *meʿif* with 1QIsaa), straitness and gloom with no dawning (read *mi-negoah*). (21a–bb) He shall walk in it wretched and hungry, and when he is hungry he shall rage and revolt against his king (better "kings"; vocalize *bi-mlakhaw*) and his divine beings." The sense of 8:23[9:1] is "For if (read *lu* with 1QIsaa) there were to be drawn for her that is in straits, only the former [king, i.e., Pekah] would have brought disgrace on the land of the Zebulunites and the land of the Naphtalites (read *ereẓ ha-zevuloni we-ereẓ ha-naftali*) but the latter [king, i.e., Hoshea] would have brought honor to the other side of the Jordan and Galilee of the nations." In other words, the failure of Hoshea to regain the provinces lost by Pekah shows that the decree of the sack of Samaria (8:4) has not been revoked; its execution has merely been postponed, which dates at least 8:19–23 in the reign of Hoshea (732–725). Verse 5:30 (But on that day there will resound over him (i.e., over the subject of 8:20b–22, once he has learned to spurn his kings and his divine spirits) a roaring like that of the sea; and when he then looks down, behold, distressing darkness with light, darkness with dawn [*beʿefah*]) belongs here and (in a manner analogous to 29:5bb–6) it creates a transition from 8:20bff. to 9:1ff. The latter's message is: Following the final liquidation of the Northern Kingdom, its people shall enjoy freedom and happiness again – in a Davidic kingdom which shall again embrace them and be headed by a model king whose reign shall be blessed. Improved restoration and rendering of verses 5–6[6–7] are: "For a child has been born to us, a son has been given to us, and prosperity (?) has become the import of his name (read *shemo*). He has been named 'The Mighty God is planning grace, the Puissant One of Jacob intends well being' (*avir yaʿaqov ʿoseh shalom*), (6) in token of abundant prosperity and measureless well being, etc." (Explanations: Meaning of *hmṣrh* unknown. 1QIsaa reads המשורה, perhaps cf. מְשׂוּרָה "liquid measure." *Avir Yaʿaqov* is synonymous with and commoner than *Avir Yisraʾel* [Isa. 1:24], which, however, is to be restored in 43:15. For the synonymous parallelism of *yʿẓ* and *ʿsy*, cf. 5:19; 29:10. The root *ʿsy* also has this meaning in 5:12; 22:11; 32:6; 37:26. For *peleʾ* ("grace" see 25:1, and Psalms 88:11, 13; 89:6 and Qumran Hebrew.)

Panel 3, Field B, chapters 10–12. Isaiah 10:1–4a is a social protest in the style of 5:3–10. 4b is not a conclusion of what precedes – since 1–4a is not a recollection of a past blow but a threat of a future one. It is rather a repetition of the last clause of chapter 9 intended to serve as a link between the latter and the former (since its key words *af*, "anger," and *yad*, "arm, hand," occur again in 10:5). Since 10:16–19 is a threat against Israel (note, among other things, the resemblance of 10:16 to 17:4) and it originally followed directly on 9:16a [17a] (note, among other things, "in one day," 9:13 [14] and 10:17), what originally stood in its present position may very well have been 14:24–27; note among other things the antithesis between the Lord's purpose (*dimmiti*, 14:24) and Assyria's purpose (*yedammeh*, 10:7). Isaiah 10:5–15; 14:24–27 is a remarkable display of concern for the right of nations – not just Israel – to exist that is worthy of the man who authored 2:2–4; see above, panel 1, field B. The *terminus post quem* is given by the reference in 10:9 to the Assyrian annexation of Carchemish, which took place in 717 B.C.E. At the same time, verses 27bff. can best be understood against the background of Sargon's Arabian campaign of 715. The date of 10:5–15; 14:24–27 is therefore probably 716. Since the time when Isaiah assigned to Assyria the missions of liquidating the states of Aram and Ephraim and severely chastising Judah (see above), between ten and 15 years have elapsed, and he has been sickened by the ruthlessness (born, like every vice, of pride) of the Assyrian, who is not content to attack the nation he is commissioned to attack but conquers insatiably, and is not content to plunder (in accordance with 8:4; 10:6) but needs must annihilate (10:7), namely by expatriation (10:13bc; the Karatepe inscriptions confirm that *horid* means "to exile [populations]"). Assyria has still to carry out its mission of chastising Judah (8:5–8a), but after that the "Lord… will punish the majestic pride, and overbearing arrogance of the king of Assyria" (10:12). And 14:24–27 tells us in what manner: (24) The Lord of Hosts has sworn this oath: "As I have designed, so shall it happen;/What I have planned, that shall come to pass://(25a) To smash Assyria in my land,/ To trample him on my mountain (i.e., in my country; vocalize *hari* in view of Isa. 11:9; 25:6, 7, 10; 65:25; Ex. 15:17; Ps. 78:54)."/ //(26) That is the plan that is planned/For all the earth;//That is what an arm is poised for/Over all the nation.//(25b) And off them his yoke shall drop,/And his burden shall drop from their backs.//(27) For the Lord of Hosts has planned,/ And who can foil it?//It is His arm that is poised,/And who can stay it?//In 10:27bff. the prophet anticipates that the predicted imperilment of Judah by Assyria will take place by Sargon marching up the road from the Jordan Valley to Ai but turning southwestward before reaching Ai in order to advance on Jerusalem by way of Michmas and Geba. The only time when Sargon could be expected to march on Jerusalem by way of the Jordan Valley was when he was campaigning in, or returning from, North Arabia, in 716 or 715. The ravaged forest of verses 33–34 is, of course, no less than that in verses 17–18a*a*, 19 and in 9:17[18], the local population, not the invading army. In this passage, however, the ravaging is done

with the ax, not with fire, and stumps – including notably the stump of Jesse, 11:1ff. – can produce new crowns of foliage, and so they shall, 11:1ff. The stump of the tallest tree of all, "the stump of Jesse shall, in regenerating, produce a marvelous shoot; a prince with a charismatic gift of justice. For he shall be endowed with the charismas of wisdom, resourcefulness and valor, and piety (*daʿat* being, as in Hos. 4:6; Prov 1:29, short for *daʿat elohim/*YHWH, "devotion to, or mindfulness of, God/YHWH"). He shall know the rights and wrongs of a case by instinct, and destroy the wicked by his mere utterance. (For *ruaḥ* (lit. "spirit"), "charisma," cf. e.g., II Kings 2:8–9, 14–15; Hos. 9:7; Micah 3:8). Down to this point, the doctrine of the election of the House of David had merely asserted that his family would reign forever; here the attention is transferred from the perpetuity of the dynasty to the marvelous qualities of the individual ruler. One might therefore say that Isaiah's concern, which has already been noted, about the social ills of his time, particularly the judicial oppression of the poor, has led him (most strikingly here but also in 9:5–6 (1–6) and 16:4b–5) to combine the peculiarly Judahite – really peculiarly Jerusalemite – doctrine of the perpetuity of the Davidic line with the common West Asiatic ideal of kingship as expressed in Israel's wisdom literature (Prov. 16:21b; 20:28; 25:5b; 29:14). By taking this step Isaiah made possible the evolution of the post-biblical idea of "the *Messiah." There followed visions of peace in the animal kingdom (at least within the borders of the Land of Israel, 11:9), the reconciliation of Judah and Ephraim under the Davidic dynasty (11:10, 13), and the reconquest of the dependencies of David (14); finally, the redemption of the Israelites exiled by the kings of Assyria.

THE ARCHIVE, CHAPTERS 13–33. This falls into three parts: I. The Book of Pronouncements *(Massaʾot)*, 13–23, minus the two misplaced "*ah*'s" 17:12–14; 18:1–7 (place these after chapter 33); II. "The Isaiah Apocalypse," chapters 24–27; III. The Book of *Ah*'s: 17:12–18:7, chapters 28–33. (30:6–7 is not a misplaced "pronouncement"; the first three words are corrupt for *bmšwʾt* (Job. 30:3; 38:27) *hngb*, "in the wasteland of the Negev").

The Book of Pronouncements. That there is no chronological arrangement here is easily demonstrated: 14:28ff. is dated "in the year that King Ahaz died," for which the earliest possible identification is 727 B.C.E.; yet 17:1ff., which predicts a total and definitive destruction of Damascus, which was taken but not destroyed in 732, cannot date from later than 732 B.C.E. (note that the depopulation of Israel is also still in the future, 17:4–6). The arrangement is actually geographical, namely, in two arcs beginning at Babylon and ending in the West: (a) chapters 13–21 (Babylon, 13:1, 19; 14:4; Assyria, 14:24–27; Philistia, 14:28ff.; Moab, chapters 15–16; Damascus and Israel, 17:1ff. [on the two "*ah*'s," 17:12ff.; 18:1–7, see above]; Egypt, chapter 19; Egypt and Nubia, chapter 20); (b) chapters 21–23 (Babylon, 21:1–10; Dumah, 21:11–12; Northwest Arabia, 21:13–17; Jerusalem, chapter 22; Tyre-Sidon, chapter 23). The material may be classified in four categories:

1. Definitely or probably Isaian. (i) 14:4b–21, a magnificent ode composed in the summer of 705, when the Assyrian defeat and the ignominious death of King Sargon seemed, even though they took place hundreds of miles northeast of "my land//my mountain" (14:24–25, see above) to be the fulfillment of Isaiah's prediction of the crushing of Assyria and the liberation of "all the nations" (14:26, see above). (ii) 14:24–27 (dealt with above, under The Diary, Panel 3, Field B). (iii) 14:28–29, 30b–31 (32, 30a [read be-kharo, "in His – YHWH's, referring to 32b – pasture"] belong after 16:5). It would seem that Ahaz died in the same year as Tiglath-Pileser; in any case, not Ahaz but the latter, who invaded Philistia both in 734 and in 733, is the rod of him [i.e., Assyria] that beat Philistia. (iv) 17:1–11 clearly 733–732. (v) 19:1–15. In Isaiah's time the nomes (districts) of Lower Egypt were governed by hereditary princes, which is why his contemporary Sennacherib speaks of defeating "the kings (plural) of Egypt." In line with this is Isaiah's reference to the nomes of Egypt as kingdoms (19:2). In addition, the rhythm and diction of 19:1–15 are typically Isaian; for the presumable occasion see on chapter 22. On verses 16 ff., see below. (vi) chapter 22. The background of this chapter is the situation after the fall of Azekah to the Assyrians in 712 B.C.E., and the feverish preparations in Jerusalem for the eventuality of a siege (whose non-materialization is probably to be ascribed to timely submission). The main target of the Assyrians was Ashdod which headed a revolt of vassal states against Assyria in the years 713 and 712 until it was besieged and captured. As can be seen from Isaiah 20:4 ff., the rebels hoped for help from Nubia and Egypt. Isaiah opposed Judah's involvement for the same reason as he had 20 years earlier opposed soliciting the aid of Assyria against Aram and Israel: it signified that Judah relied on the might of heathen Egypt and Ashdod because it had no faith in the Lord's ability to dispose of Assyria – as he surely would, in his own good time. (vii) 23:1–14. The diction is Isaiah's, and the period is the Assyrian one. (The corrupt verse 13 is to be restored something like this: The land of Kittim itself, which [this is one of the instances of the use of zeh as a relative pronoun] Sidonians founded – whose turrets they raised, whose ramparts they erected – is a people no more; Assyria has turned it into a ruin.) On verses 14 ff., see below.

2. Not by but about Isaiah, chapter 20. The year of the Assyrian capture of Ashdod is 712 (see above on chapter 22). The account is in the third person, but it obviously contains a historical core. As already mentioned, Isaiah disapproved of his own people's attempting to throw off the Assyrian domination with the help of Egypt and Nubia, and he was convinced that both Egypt and those who relied on her would come to grief. That he took off his clothes and sandals to dramatize – and thus quasi-magically effectuated – the ignominious end of Egypt that he predicted is entirely conceivable (cf. the Maher-Shalal-Hash-Baz sign, 8:3–4). That Isaiah's regular attire was a loincloth, and that he went entirely naked and barefoot for three years are not impossible data; but they may be a distorted recollection that so long as the rebellion lasted he went

about in sack-cloth and sandals, and when Ashdod fell he took these off and went naked and barefoot for a while.

3. Definitely neither by nor about Isaiah. (i) 13:1–14:4a, 22–23. Both Isaiah 13 and Zephaniah 1:7, 14 ff. announce a day of divine wrath and stress that it is close at hand, but only the latter likens it explicitly to a day of a private sacrificial slaughter, and feast of which one notifies one's guests in advance and "has them cleanse themselves (ritually)" (hikdish, hiqdish, Zeph. 1:7; cf. kiddesh, qiddesh, Job 1:5, of having persons on whose behalf burnt offerings are made cleanse themselves ritually). Consequently it is only Zephaniah 1 that enables us to understand why the armies summoned by the Lord to execute the carnage of the day of His wrath are styled by him in Isaiah 13:3 "My ritually cleansed ones." Moreover, the age of prophecies that Media would overthrow Babylon was the Babylonian age; Jeremiah 51 is an indication for Isaiah 13 and Isaiah 21:1–9; naturally, for it was the Median empire whose power balanced that of the neo-Babylonian until the year 550, when King Astyages of Media was defeated and captured by his vassal Cyrus of Anshan, the founder of the Persian empire. For 14:1–2, a comparison with Zechariah 1:12–16 is suggestive, and 14:3–4a, 22–23 are clearly an editorial framework from the Babylonian period to verses 14b–21, representing it as an Isaian prediction of what the Jews will say on the death of the Babylonian tyrant rather than as the expression of Isaiah's own satisfaction – on the ignominious death of the Assyrian king, Sargon II, and the apparent collapse of Assyria, in 705 B.C.E – that it is (see above). (ii) chapter 21.21:1–10 is to be judged in light of what has just been said about predictions about the fall of Babylon to the Medes, and a presumption is thereby created against the enigmatic "pronouncements" 21:11–12 and 21:13 ff. as well.

4. Tantalizing in-betweens. (i) The Moab Pronouncement, chapters 15–16 (with 14:32, 30a restored to its original position after 16:5, as indicated under 1). It seems equally clear that on the one hand the bulk of this composition must be old, and on the other, that it cannot be an Isaian composition pure and simple. As regards the basic text, its dating must take account of the fact that the Moabites are represented as fleeing southward from as far north as Heshbon and Elealeh. However, it is known (from the Mesha inscription) that Moab recovered (from the Israelites, who had dispossessed the Amorites) much of the anciently Moabite territory north of the Arnon; and when Israel was forced out of Transjordan, Moab may very well have emulated Ammon (Amos 1:13), so that the old suggestion, most recently defended by Rudolph, that the basic lament was composed on the occasion of Jeroboam son of Joash's reconquest of Transjordan "from Lebo of Hamath to the Sea of the Arabah (i.e., the Dead Sea)" (II Kings 14:25) still has to be considered. For one has the impression that the old lament already had at 16:1 counsel to the Moabite refugees who have reached the southernmost point in Moab, Zoar (15:5), to cross over to Edom (Moab's southern neighbor) and send messengers from Sela in Edom to Jerusalem requesting asylum; only 16:4b–5; 14:32, 30a; 16:6 seem to have been added

by Isaiah. In 4b–5 the speaker explains to Moab why asylum in Judah would be particularly desirable; "For violence (read *ḥamaẓ*, equivalent to *ḥamas*) has vanished, rapine is ended, /and marauders have perished from this land: //and a throne shall be established in goodness/in the tent of David//and on it shall sit in faithfulness/a ruler devoted to justice/and zealous (read *we-shoḥer*, Ginsberg 1950; *mahir* would require a different construction, see Prov. 22:29; 7:6) for equity." But then in 14:32, 30a; 16:6 he reveals how this ruler will react to the Moabite's petitions (14:32). "And what will he reply to a nation's messenger?// That Zion has been established by YHWH; in it the needy of His people shall find shelter (14:30). In His pasture (read *be-kharo*, see 30:23b) such as are poor may graze/and such as are destitute may lie down secure."// The immediately preceding sentence seems to imply that non-Israelites who seek asylum will be welcomed, but only if they are poor and humble. Verse 5 then explains – and it makes no difference whether the speaker is still the Davidic king or the poet who reports the former's answer – why Moab is not welcome: "We have heard of Moab's pride-/most haughty is he-//of his pride and haughtiness and fury,/and of the iniquity in him" (16:6). There is no such word as bad "falsehood," or "prating." *Baddaw* is the suffixed form of the preposition *bede* (Jer. 51:58; Nah. 2:13; Hab. 2:13; Job 11:3, and what *bdnm* is in the Eshmunazor inscription (Phoenician), line 6). Now if one takes the above translations bit by bit, it is not difficult to find striking parallels to every bit. 16:4b–5 is insistently reminiscent, in content and partly in diction, of 9:3–6 [4–7] and 14:32, 30a, reminiscent of 3:15, of 5:17 (especially if we emend וְרָעוּ כְבָשִׂים כַּר בְּרִיִּים, "and the lambs shall graze the pasture of the fat (rams), etc." – but even also as it stands), and of 11:4a, 9a; while to 16:6 the closest single parallel is 10:7a, 12–15 (cf. 37:23–25), but see also 2:10–17; 3:16–17; 5:15–16; 28:1ff. Indeed, anyone who has not been struck by the importance in Isaiah's thought of the doctrine that pride is the root and essence of wickedness has never done more than skim his book; cf. further 16:5b (reading *we-shoḥer* as above) with 1:17a (reading *shaḥaru ẓedeq* for the insipid "guide the robbed").

(ii) and (iii) the prose, or mainly prose, appendices to the Egypt and Tyre Pronouncements, i.e., 19:16–25 and 23:15ff. The latter does not sound like Isaiah either in diction or in sentiments, but the former is occasionally reminiscent of Isaiah in its diction and is tantalizingly suggestive of events in Isaiah's time by which they could have been suggested to Isaiah: 19:19–20 of the stele Tiglath-Pileser erected on the border of Egypt in token of his sovereignty over it, and verse 23 of Sargon's forcible opening of Egypt to trade with Assyria. And certainly the universalism of 19:24–25 ("my [YHWH's] people Egypt," "Israel… third to Egypt and Assyria") is worthy of Isaiah.

"The Isaiah Apocalypse." (Isa. 24–27). It may be admitted that though the language and the ideas are often Isaian, frequent divergences from Isaiah's style, spirit, and outlook argue that the resemblances are due to imitation of Isaiah rather than

Isaian authorship. On the other hand it is unwise to descend below the Babylonian exile, and at least the key passage 25:6–12 sounds like nothing so much as an assurance by an early seventh-century writer that Isaiah's prediction 14:24–27 (translated above in connection with The Diary, Panel 3, Field B) of the liberation of the nations as a result of the Lord's destroying Assyria by trampling it on "his mountains," i.e., in the Holy Land, will yet come true. For consider what 25:1–6 says: It says that the Lord's trampling of a certain entity "on this mountain" is going to result in a feast for "all the peoples" (verse 6) because of the destruction of "the shroud that is drawn over the faces of all the peoples and the covering that is spread over all the nations" (verse 7) and the "destruction of 'death' [i.e., the Assyrian killing of whole peoples, 10:7 (and 14:20, where "countries" and "peoples" should be read for 'your country' and 'your people' of MT)] forever and the wiping away of tears from all faces and the end of the reproach of peoples [so for MT's "his people"] over all the earth" (25:8). – Let who will try to escape the conclusion that first, "this mountain" here is identical with "my mountain" in 14:25 (which stands in parallel with "my country," – and means the Holy Land), and that, secondly, the entity that is to be trampled to death by the Lord on the said mountain must be, here as in 14:25, Assyria. Moab was never of such international importance. The received reading "Moab" might be taken as a cryptogram for "Assyria," though *atbash*, the system by which *ššk* represents *bbl* in Jeremiah 25:26; 51:41 and *lbqmy* represents *kśdym* in Jeremiah 51:1, is of no use here. However, the better explanation of מואב is simply that it was a misreading for אשור (confusion of ב and ר was possible and occurred in all periods, and confusion of שׁ and מ was possible in the Paleohebraic script in which it has occurred a number of times throughout chapters 1–33. A well-known instance is אמרו for אַשְׁרֵי ("Happy is"; 3:10), Kaufmann has very plausibly emended עַמֵּךְ to עֹשֶׂךְ ("your Maker"; in 2:6); Another possibility is to read אָמוּן (with the surmised meaning "undertaking" [cf. *amanah*]) for אֱנוֹשׁ in 8:1; 33:8. Further תָּשֹׁא is to be emended to אֹתָם (read וֶאֱלִילֵיהֶם אֹתָם ("and their idols along with them")) in 2:9, מַיִם to שִׂמְלָה ("clothing,) in 3:1, and the inapposite שִׁיד of 33:12 to שָׁמִיר ("brambles"; the מ omitted by haplography after the שׁ which it resembled in the Paleohebraic script) so as to parallel קוֹצִים, cf. 32:13. (The resemblance between *m* and *š* in the Protohebraic script also played a part in the loss of a *m* in *mšlwḥ*), 11:14, and in the double writing of the *m* in *wmmšltk*, 22:21, for *wmš'ntk*.) As has been shown, we must now add *mw'b*, 25:10, for *'šwr*; but we must also add, in the same verse, *khdwš tbn* for *khdwš mtbn* (the *m* is a dittogram of the preceding *š* and *md(w)šh* for *mdmnh*). For the sense required is not the remarkable "as a *pile* of straw chips [the meaning of *matben* in the Mishnah] is threshed to bits in a dunghill" (?; as a common noun *madmenah* is not otherwise attested) but "as straw chips are threshed to bits in threshing (21:10)." This confusing of *m* and *š* does not extend to Deutero-Isaiah. Consequently the incorporation of "the Isaiah Apocalypse" in the Book of Isaiah antedates that of Deutero-Isaiah. Consequently, though "Assyria" in our verse may conceivably

refer, as e.g., in 52:4, to the neo-Babylonian empire and date from after 605, it cannot refer to the Persian Empire and date from after 539. Finally, the meaning of 25:11 is, "Then he will spread out his hands in their (i.e., the Assyrians') homeland as a swimmer spreads out his hands to swim, and he will humble their pride along with their citadels (read *armenotaw*). Yea, the secure fortification of their walls (read *ḥomotaw*) he will lay low and humble, will raze to the ground, to the very dust." Of course the same – Assyrian or Babylonian – cities are meant in 26:5–6; 27:10.

The Book of "Ah's," chapters 28–33, 17:12–18:7. The background of 30:1ff. and 31:1ff. is obviously Judah's negotiations with Egypt for aid in a contemplated or ongoing revolt against Assyria's suzerainty, and the only doubt is whether the revolt in question is that of 713–712 against Sargon or that of 705–701 against Sennacherib. Skinner still favored the former because of 30:4 (which could be read immediately after verse 2) "For his [Pharaoh's] officers are present [read *yihyu*?] in Tanis [in the eastern Delta], and his monarchs [read *melakhaw*] reach as far as Heracleopolis magna [in Middle Egypt]." That would be a fair description of the eastern and southern limits of the realm of Tefnakhte and Bocchoris, the Pharaohs of the 24th Dynasty, whose residence was Sais in the western Delta and whose rule was terminated in the year 710. If correct, this would mean (so Skinner) that there is no evidence that Isaiah again condemned the policy of attempting to win independence from Assyria with the help of heathen allies during the revolt of 705–701, at the end of which he definitely encouraged Hezekiah, 37:5, 38:6. If chapters 30–31 are nevertheless dated, as with the majority of critics, to the revolt of 705–701, 30:4 must be regarded as formulaic. The Masoretic Text's *mal'akhaw*, "his messengers," cannot be made to refer, along with "his officers," to Hezekiah's delegation (where is Hezekiah mentioned?). That the displaced block of "*Ah's*" 17:12–18:7 belongs after chapter 33 is suggested by the similarity between 33:21–23 (we shall be as inaccessible to enemies as if surrounded by an impassable sea) and 17:12–14 (the multitudes of our enemies may create a tumult like that of the seas, but they shall be terrified into flight by the roar of YHWH (like the primeval waters, Ps. 104:5–9)). Chapter 33, for its part, seems to date from after the final subjugation of Judah in 701 (Judah's past and future situations (3–6 and 10ff. respectively) are enviable, but the present (7–9) deplorable). There is thus no obstacle in the way of regarding the arrangement of the entire Book of "*Ah's*" as basically chronological.

THE HISTORICAL APPENDIX, CHAPTERS 36–39. It is of course nothing but a parallel version of II Kings 18:13–20:19, mostly shorter (the most important omission is Hezekiah's abject surrender, II Kings 18:14–16) but with Hezekiah's Psalm, Isaiah 38:9–20, added. It relates three incidents in which Isaiah played a part: (1) the deliverance of Jerusalem, chapters 36–37; (2) Hezekiah's illness and recovery, chapter 38; and (3) the visit of the ambassadors from Babylon, chapter 39.

(1) Within the first, two versions of the manner of Jerusalem's deliverance have been combined: (a) 36:2–37:9a (plus *wa-yishmaʿ*), 37–38; (b) 37:9b (minus *wa-yishmaʿ*)–36. The former is full of circumstantial details and virtually dispenses with miracles: Sennacherib, at Lachish, sends the *Rabshakeh (it is a title, not a proper name) with a force to Jerusalem to demand that its people surrender so that they can at least eat decent food and drink decent drink while awaiting Sennacherib's inevitable return to carry them off into an exile which is also tolerable, instead of continuing to put up with the terrible conditions of siege that they are enduring. The Rabshakeh deliberately shouts this, in the Judean language, to the men on the walls of Jerusalem and over the heads of the Judahite officials – their names and offices are given – who were sent out to parley with him in Aramaic. Hezekiah then sends a delegation to Isaiah, who sends back an assurance that a disquieting report will compel Sennacherib to withdraw to his own country, where he will fall by the sword. Returning to Sennacherib, the Rabshakeh finds that he has already moved northward to Libnah, which is to the north of Lachish, because of a report that King Tirhakah of Nubia is advancing upon him. Sennacherib, as a matter of fact, withdraws all the way to his capital Nineveh, and there (some 20 years later but telescoped in the narrative; see *Adrammelech) two of his sons assassinate him; another son, Esarhaddon, succeeds him on the throne. The other version (37:9b–36), on the other hand, is short on details and long on the miraculous: Sennacherib sends anonymous messengers with a written demand of surrender, addressed not to the people but to Hezekiah and supported by the argument not that YHWH Himself has sent the Assyrians because Hezekiah has offended Him but that the Lord is helpless to save him. Isaiah spontaneously sends Hezekiah a reassurance that Sennacherib will never even lay siege to the city but will return to his homeland, and that night an angel of the Lord kills 185,000 men in the Assyrian camp. Although this second account is manifestly farther removed from actual history than the first, it contains in 37:22b–29 what sounds, in thought and in diction, like a genuine Isaian composition. As for the first account, either it refers to an (unlikely) second invasion of Judah by Sennacherib which, occurring after the year 697, the last one that is covered by his annals, is unattested by any Assyrian source, or else its divergences from the course of events in 701 (Tirhakah was then not yet king of Nubia but only a boy who had never left Nubia; Sennacherib did not retreat from Lachish to avoid the advancing Nubian army but met and defeated the Nubian and Egyptian forces at Eltekeh-which is north of Lachish and even of Libnah-apparently before advancing further south and dispatching a force to Jerusalem. See *Hezekiah, *Sennacherib.

(2) Hezekiah's illness and recovery. The legendary sun miracle had an antecedent in the reign of Ahaz, as the rabbis guessed from 38:8; see *Immanuel.

(3) The visit of the ambassadors from Babylon, chapter 39. Since Merodach-Baladan, who had been driven out of Babylon by Sargon in 710, returned on the latter's death in

705 from the Chaldean country by the Persian Gulf to reign in Babylon again until expelled in 703 by Sennacherib, and then successfully eluded him in the southern marshes, the visit by a delegation from the leading anti-Assyrian of the east to the leading anti-Assyrian of the west is presumably historical, but hardly the conversation between Isaiah and Hezekiah reported in 39:3–8.

[Harold Louis Ginsberg]

CHAPTERS 34–35

Chapters 34–35 of Isaiah constitute an independent unit. Chapter 34 contains a prophecy of wrath and destruction of the nations in general and Edom in particular, and chapter 35 deals with the Redemption of Israel and the Return to Zion. Since the beginning of modern biblical criticism scholars have held that chapters 34–35 do not relate to Isaiah son of Amoz, either in terms of content or style, and even certain conservative critics do not attribute them to Isaiah son of Amoz. There is no consensus, however, regarding their inclusion within prophetic units, or their exact time. Some scholars suggested joining these chapters to Isaiah 13–14 and regarding them as the product of a single author (Gesenius); some suggested joining them to Jeremiah 50–51 and regarding them as the product of a single author (Ewald); but the majority tend to relate them to Isaiah 40–66 (but esp. Torrey, who not only related them to Isaiah 40–66 but maintained that originally 34–35 were joined to, and served as, an introduction for 40–66; Steck regards 34–35 as a redactional bridge between First and Second Isaiah when the book was almost complete; the later account of Sennacherib's campaign against Judah, chapters 36–39, was added to them). Most critics tended to attribute them to the time of Deutero-Isaiah, i.e., the second half of the sixth century B.C.E., but some date them later, to after the time of Malachi, i.e., the middle of the fifth century B.C.E. (M.H. Segal), while still others dated them even later, to the fourth century (Pfeiffer). The injunction to "search in the book of Yahweh, read! Not one of these failed" (Isa. 34:16) points to the existence of a collection of written prophecies of destruction that have now materialized (Cf. Blenkinsopp a.l. 454).

Together with the question of the placing and dating of these chapters, scholars also began to doubt that these two chapters are a single unit, and some of them distinguished between them. Graetz was the first (1891) who separated them, attributing chapter 35 to Deutero-Isaiah. He regarded it as an integral part of Deutero-Isaiah and even inserted it into chapter 51 between verses 3 and 4. As for chapter 34, he attributed it to Jeremiah. When a distinction began to be made between Deutero- and Trito-Isaiah (see below), some scholars joined chapter 35 to 40–55, which are seen as part of Deutero-Isaiah (see Olmstead), while some joined it to 56–66, which are seen as part of Trito-Isaiah (Scott). Actually only the dating of these chapters, but not their relation to any particular prophet, can be determined. These two chapters are only part of a multifaceted literature which grew and flourished after the destruc-

tion of the First Temple and before the Return of the Exiles, of which Isaiah 40–66 are but the most important part. It was concerned, on the one hand, with announcing the downfall of Babylon the destroyer of Judah and the downfall of Edom the ally of Babylon, and, on the other, with announcing the Redemption of Israel and the Return to Zion. The contents of Isaiah 34–35 bears witness to their time of origin, i.e., after the destruction of Judah and on the eve of the Return to Zion (between c. 580 and 540 B.C.E.). The acts perpetrated by Edom against Judah during the period of the destruction, which were denounced by the prophets (Ezek. 35; Obad.) and poets (Ps. 137; Lam. 4:21–22), are still very much in the mind of the prophet and his audience and are expressed here with extreme wrath (cf. Isa. 63:1–6). Edom is the people whom God has doomed (34:5). The time is a "day of vengeance for the Lord, a year of recompense for the cause of Zion" (34:8), and perhaps there is also an allusion to the destruction of Edom (which also took place in the sixth century). The anticipated and desired destruction of Edom is total, in accordance with the literary tradition of maledictions against breakers of alliances (see esp. Hillers' work, but his attribution of the chapter to the time of Isaiah son of Amoz has been criticized in terms of historical background). Chapter 35 completes the picture and expresses the yearning for the Redemption of Israel and the Return to Zion which will follow the downfall of Israel's enemies. In light of its subject and content it is related in terms of content and style to Isaiah 40–66.

DEUTERO-ISAIAH

DIFFERENTIATION BETWEEN CHAPTERS 1–39 AND 40–66. Hints of a dichotomy between chapters 1–39 and chapters 40–66 of Isaiah are to be found even in medieval Jewish Bible exegesis (see e.g., *Ibn Ezra, Ibn *Gikatilla, and others). The question of the dichotomy between these chapters was revived at the beginning of modern biblical research, in 1775, by the German scholar J.Ch. Doederlin, and since then the dichotomy has been generally maintained as an incontrovertible fact. This differentiation between the two groups is based on a conclusive combination of historical, conceptual, stylistic, and linguistic evidence. One of the characteristics of chapters 40–66 is the scarcity of historical data and the vagueness of the historical background. However, some distinctly historical information (such as the two explicit references to Cyrus, 44:28; 45:1), and the mention of Babylon and the Chaldeans (43:14; 47:1; 48:20), and reflections of the historical background (the Exile and Redemption, the return to Zion and Jerusalem, the exiles and their "joiners"), attest another background which is more than 150 years later than the time of Isaiah son of Amoz. Similarly, there are conceptual differences between the two groups. For example, in the first part the idea of rebuke is predominant, while in the second consolation is the major idea; in the first part there are central motifs such as the idea of the remnant, of the end of days, and of the future king, while in the second these are not mentioned; and, in contrast, the central

idea which dominates the second part, the "Servant of God," is neither mentioned nor hinted at in the first. Furthermore, despite important similarities of diction, there are clear and distinct differences between the two parts, which prove that not only were these two parts not written by the same person, but they are not even products of the same period. It appears that there were a number of reasons for joining chapters 40 ff. to the group attributed to Isaiah son of Amoz. The first and decisive reason was apparently the intention of the editors of the Prophets to conclude them with chapters of comfort. An additional reason is that despite the differences between the two parts in language and style, there is some relationship between them. Another contributive factor was the paucity of historical data in chapters 40–66. Although they did sense that the two groups were from different periods, the editors' faith in the prophet's ability to envision the distant future allowed them to overcome this difficulty. This view is still held in certain circles, especially fundamentalists. Although the distinction between the two parts has been accepted in biblical research as a fact, several writers in the 20th century have maintained the unity of the book and have attempted to disprove most of the arguments of those who distinguish between the two parts (Zlotnick, Kaminka, et al.).

Structure of 40–66 and its Composition. Critics of the Book of Isaiah have raised the question of whether chapters 40–66 all stem from a single prophet or are the products of two, three, or more prophets. B. Duhm was the first to divide these chapters into two blocs (40–55 and 56–66). According to him, the two blocs are distinct in historical background, conceptual content (attitude to ritual, polemic against the Samaritans), language and style, and place and time of authorship. The first bloc belongs to "the Second (Deutero-) Isaiah," who lived during the time of Cyrus, while the second bloc, 56–66, belongs to another prophet whom he called "the Third (Trito-) Isaiah," who lived in Jerusalem close to the time of Ezra and Nehemiah. This differentiation into two blocs and two prophets was accepted, with various modifications, by many scholars – E.S. Sellin and Elliger held that the "Third Isaiah" was a disciple of the "Second" and edited his prophecies, that he lived at the end of the sixth century, the time of Haggai and Zechariah, and that the prophecies were written in Jerusalem. Some scholars follow Duhm in maintaining that the group is divided into two blocs, but they hold that it is impossible that chapters 56–66 were the work of one author and were produced during the lifetime of one prophet. Rather, they maintain that there are in this bloc prophecies from different periods, differing, however, in the times they assign to the prophecies. Some limit the period of time reflected in these prophecies to that between Ezekiel and Ezra-Nehemiah (Cheyne, Smith, Kittel). Some expand it to the period from the seventh to the third centuries B.C.E. (Budde, Volz, Eissfeldt). Other scholars, such as Glahn, Klausner, Segal, Kaufmann, and Haran, defend the unity of chapters 40–66. Kaufmann made the greatest attempts to disprove the arguments of those who maintained

division into blocs and into separate prophets or prophecies, by determining that the historical background of chapters 40–66 is explicitly before the building of the Second Temple. He also emphasized that these prophecies contain no reflection of what befell those who returned from the Babylonian Exile to Palestine. Kaufmann concluded that these prophecies date from before the building of the Second Temple and their location is in Babylon. Segal also supported the unity of the book and its author, but unlike Kaufmann he held that the background reflected is that of Palestine. M. Haran has argued for the unity of the book and the author, but not of the place, as did Segal and Kaufmann. It is Haran's opinion that chapters 40–48 originated in Babylon. In the return to Palestine, which the prophet had foretold, he too returned to Jerusalem with the exiles, and chapter 49 on reflects the Palestinian background. This is expressed especially in these chapters in which there is a direct address to Jerusalem (49:14–26; 51:17–23; 54:1ff.; 60:1ff.; 62:1–9). More recent study has moved in the direction that chapters 56–66 do not come from one hand or one time period (Blenkinsopp (2003), 59).

SONGS OF THE SERVANT OF THE LORD. In dividing chapters 40–66 into two blocs and two authors, Duhm also maintained that there are additions and editing of other authors in both blocs. The word *ʿeved*, "slave," "servant," occurs 20 times in chapters 40–55 (once in the plural in 54:17). In 13 of these instances the servant is Israel the people. From the first bloc, 40–55, Duhm first separated four poems which he called "Songs of the Servant of the Lord," maintaining that they are by a different prophetic personality, not by Deutero-Isaiah. The four songs according to Duhm, are (1) 42:1–4; (2) 49:1–6; (3) 50:4–9; and (4) 52:13–53:12. According to Duhm and his followers, the servant is not Israel, but an idealized figure who is predestined by God for a function on account of which he suffers greatly. (Although "Israel" is found in most versions of Isa. 49:3, it is inconsistent with the mission to Israel in 5–6, and is probably a gloss; see Blenkinsopp, a.l. 297–98.) Some scholars who agree with the isolation of the "Songs of the Servant of the Lord" and their unity of content did not accept Duhm's method of dividing them and rightly added to what is called the first song, 42:1–4, verses 5–7 of the chapter, whose subject matter is similar to that of the preceding verses. Some scholars consider verses 1–9 as a unit, despite the differences in person and approach. Similarly, verse 7 is added to what is called the second song, 49:1–6, and there are some scholars who attribute to it even some of the following verses. There is also doubt about the inclusion of what is called the third song, 50:4–9, among the other songs. It seems that there are verses outside these four songs which may be identified with verses of the four songs, both in terms of content and in terms of style (e.g., 41:8; 42:1–25; 44:1–2, 21–22, 26; 50:10; 51:16; 61:1–3). Furthermore, a detailed analysis of the language and style of what are called the "Songs of the Servant of the Lord" within the other chapters shows no differences among them (see Ch. North, *The Suffering Servant in Deutero-Isaiah*, 1956²). In

consequence, it has been argued that any distinction between these units and their contexts is somewhat arbitrary (cf. also Haran). The "servant" of Duhm's fourth song (52:13–53:12) received special attention because of the New Testament's identification of him with Jesus (directly in Acts 8 8:26–40 and implied elsewhere, e.g., Mark 10:45).

LITERARY UNITS IN 40–66. The analysis of the boundaries and scope of the literary and prophetic units that comprise chapters 40–66 has gone through several stages. The stage that preceded Gunkel and Gressmann recognized a prophetic unit of the length of a chapter or more. Skinner, for example, divided the first section, chapters 40–48, into six units, each of which was delivered at a different time, and whose order reflects the prophet's reactions to the events of his time. Budde regarded chapters 40–66 as a planned book which included four prophecies with a prologue and epilogue. This was followed by the approach associated with Gunkel, who originated the method of "form criticism." Gunkel maintained that the prophetic books are composed of small units of separate "oracles," which were joined together by editors. He determined the limits of the units by the formal criteria of opening and conclusion. Gressmann applied this method of Gunkel to Deutero-Isaiah, and in his literary analysis (1914) attempted to prove that chapters 40–55 are composed of 49 small independent units. Gressmann also classified the prophecies into about 12 "types," comprising nine prophetic *Gattungen* and three non-prophetic ones. This method played a major role in German biblical criticism. Koehler distinguished 70 units in chapters 40–55, while Volz distinguished 50 units (apart from the "Songs of the Servant of the Lord"). Mowinckel divided these chapters into 41 units (excluding the "Songs of the Servant of the Lord"), while Begrich pointed to the existence of more than 70 units. The protagonists of the small unit attempted to discover the system according to which these units were arranged. Mowinckel stated that these small prophecies, which were at first separate, were later organized according to the principle of "key words" (*Stichwörter*). Similar words or expressions appeared at the beginnings and ends of prophecies and served the editors as guides. Sometimes this principle of verbal associations was combined with, or varied by, conceptual associations. In the third stage there appeared a reaction to the method of *Gattungen* and small units, and several scholars attempted to show that the prophetic units are longer. Kaufmann strongly rejected the "form critical" method and maintained that "the error of this approach is the confusion of the formal or typological unit with the unit of composition." An author can fashion his creation out of many separate units formally joined together, which nevertheless combine into one composition. Kaufmann holds that Mowinckel's theory of "key words" is a mechanical approach which is unacceptable. The verbal linkings are not a matter of technical arrangement, but rather a phenomenon of composition: it is the author, not an editor, who is fond of such associations and more than once strains the meaning of a word in order to be able to

repeat it. Kaufmann maintains that the prophecies in Isaiah 40–66 – both the units of the books and the separate prophecies within each unit – are arranged chronologically. According to him there are 14 prophecies in the first unit, 40–48; in the second unit, 49–57, he counts about 20 prophecies; while in the third unit, 58–66, he finds nine prophecies. According to him the traditional division into three sections is primary and reflects the stages in which these prophecies came into being. Similarly Muilenburg maintains that the literary units are large. According to him section 40–48 contains 14 prophecies (the same number as that of Kaufmann but with minor divergences). He maintains, however, that the prophecies of Deutero-Isaiah are made up of strophes which are joined in various ways by means of openings and conclusions, and, in this way, Muilenburg sought a formal structure in each and every prophecy. Haran affirmed the system of the long prophetic units, but according to him the criterion for the division of the prophecies has to be based not on formal mechanics but rather on the context of the individual cycles: formal linguistic considerations can be added subsequently by way of confirmation. The construction of the complete prophecies is accomplished by linking a concatenation of short sections, each of which contains a new idea or a new poetic image. The combination of the separate parts results in a kind of sum total of ideas and images, subjects and motifs, which is repeated several times throughout the first division 40–48. Each consecutive set of strophes which approaches a sum total makes up a whole literary unit. Each image or motif serves as a typical component of a prophecy, while the total prophecy is made up of a set which includes most of the components. It is not necessary, according to Haran, that the internal order of the components be uniform. The prophet can combine the typical components in a different order every time. There is a certain consistency in the total content of the set but not within the arrangement of components within it. The number of prophetic units in division 40–48, according to Haran, is 10, including the satirical lamentation for Babylon in chapter 47. More recent work (see Sweeney 1993, Sawyer) has focused on redactional analysis that studies the connections between the prophetic speeches and the extant prophetic book at the literary level, with the goal of explicating independent literary layers, the original foundation, and added-on layers not only in Deutero-Isaiah but in the entire canonical book (Kratz, Steck, Vermeylen). Other approaches are those of Baltzer, who views chapters 40–55 as liturgical drama, and Lau, who understands chapter 56–66 as a composite collection of texts brought together as "scribal prophecy" by scholars working within circles of transmitters of prophetic tradition.

CONCEPTUAL ASPECTS. *Exile and Redemption.* The Book of Ezekiel attests the frame of mind of the exiles of Judah and Jerusalem. The depression and despair of the exiles are expressed in the words of the people in the vision of the dry bones: "Our bones are dried up and our hope is lost" (Ezek. 37:11). This same pessimistic view of the relationship between

the people and its God and of the future of the people persisted among the exiles. Some time (about 20 years) later, when the prophet who is called Deutero-Isaiah appeared, he found that the people believed that God was "hiding His face" from them and that their case was hopeless: "Why do you say, O Jacob, and speak O Israel, My way is hid from the Lord, and my right is disregarded by my God" (40:27). Against the background of this depression and despair, the prophet of comfort and encouragement arose and, like Ezekiel in his later years, he began at the outset of his career to comfort and encourage the exiles of Judah and Jerusalem and breathe new life into them. He brought the people tidings of the end of the time of wrath and the beginning of God's goodwill. The sin of Jerusalem was expiated, since she had atoned doubly for all her transgressions. The prophet tirelessly wove into all his early prophecies (40–48) words of comfort and tidings of redemption, describing God as the creator and director of history who has erased the guilt of His people and is about to redeem them from the captivity and exile, by both natural and supernatural means, according to His will and power. Despite the miraculous and eschatological nature of the described redemption, it is no mere consolation for the end of days but is rather based on, and connected with, current events. In the same way that God, the guide of history, created Babylon "to punish His obedient people, to destroy Jerusalem, and burn its Temple, so He has set up Cyrus" to promote the redemption of the Israelite people, to rebuild Jerusalem, and reestablish its Temple (44:28; 45:13). The prophet proclaims that the time has come for Babylon and Chaldea to be punished (43:14; 46:1; 47:1ff.), and actual events serve as proof of the truth of his words. The defeat of Babylon by Cyrus is seen as evidence that just as God fulfilled the "first promises" (probably the fall of Babylon; see Haran, *Bein Rishonot le-Ḥadashot*, 1963), so he will fulfill the "new promises" – the tidings of redemption, of the revival of the people, and of their return to Zion. The description of the redemption is not limited to the redemption of the people but includes also the redemption of Judah and Jerusalem. The redemption of the forsaken Jerusalem, the forgotten and widowed, the "bereaved and barren" (49:14, 21), is described in poetic and hyperbolic terms. She will shake herself out of the dust of her mourning, she will put on her power and her glory, her justice and her salvation will be seen by the nations and the kings, she will draw exiles to her from all corners of the land until there will not be room to contain them, and all the nations will stream to her to render her honor and glory (see 49:14–26; 51:17–23; 52:11ff.; 54:1ff.; 60:1ff.; 62:1ff.). Actually, the dreams of redemption foretold by the prophet were not fulfilled and realized, and there is, in fact, a discrepancy between the redemption as envisioned by the prophet and the actual Return. Apparently the prophet was among the first returnees, fulfilling what he had foretold. From Jerusalem he called on the people still in exile to forsake their exile (52:11). Although Jerusalem, the holy city, did not become the mother city of all the lands and nations, the returnees did rebuild its ruins.

Comfort and Rebuke. Prophecies of comfort and salvation predominate among the prophet's first prophecies, especially in the first section, chapters 40–48. The sin of the people was forgiven and the transgressions erased and pardoned, but even these first prophecies contain a tone of rebuke. Together with the notion that the sin was forgiven because they had paid "double for all their sins," there is the view that God pardoned the transgressions of Israel and would not bear their sins in mind not because of Israel's merit but for the sake of God's name (43:25). The words of comfort and tidings of redemption apparently did not arouse within Israel the anticipated reaction, and for this they are rebuked by the prophet (see 42:18–20; 43:8; 46:9–13). The wrathful rebuke, which is not merely implied but elaborated, is contained in the last chapter (48:1–11) of the first group, which is replete with prophecies of comfort, and which is also intended for those of little faith. Beginning with chapter 50, the prophet appears as an instrument of rebuke, and the rebuke overshadows the element of comfort. The subjects of rebuke are many and varied: he repeats his rebuke against those of little faith (chapter 50), against the forsaking of God (51:12–13). Whether or not chapters 56–66 are the words of this prophet, rebukes continue against the wicked among the people (chapter 56), against giving priority to ritual over social morality (chapter 58), against social transgressions (chapter 59), and against idolatry (chapter 65).

The Servant of the Lord. The biblical descriptions of the Servant are not unequivocal – he is sometimes portrayed as an individual, either biographically or autobiographically, while at other times he appears as a collective figure, identified with the People of Israel. This lack of clarity gave rise to varied and ramified interpretations among both Jews and Christians in all generations. The methods of interpreting the image of the Servant of the Lord have varied. The Servant has been seen as an individual personality, as a collective, and as a figure of myth with associated ritual. The individual approach is based on the assumption that what is written about the Servant is a description of an individual figure. Those who adopt this method disagree about the identity of this figure. In attempting to identify him, they identify him variously, as a figure from the past (the historical approach); as a contemporary of the prophet, including possibly the prophet himself; as one whom the prophet envisions as destined to appear in the future (the eschatological approach). These methods are intimated in early interpretations, and explicitly stated and argued in modern studies and commentaries. Numerous varied and strange proposals have been advanced concerning the identification of the Servant of God with historical figures from the Bible. The Servant was identified with various kings of the House of David and their descendants, whose biographies include some feature or features suggestive of the Servant, such as – among the Kings – Uzziah's leprosy, Hezekiah's dangerous illness, Josiah's untimely death despite his righteousness, or Jehoiachin's captivity. Among the post-Exilic members of the House of David with whom he is identified are Zerubba-

bel, the object of unfulfilled messianic hopes, Elioenai (a scion of the House of David, I Chron. 3:23), and Anani (last in the list of the Davidic line, 3:24). Other individuals with whom the Servant of the Lord has been identified were selected from among the prophets: e.g., Isaiah son of Amoz, who, according to the *aggadah*, was killed by Manasseh; the much-suffering Jeremiah; or Ezekiel, who bore the burden of the sin of the House of Israel (Ezek. 4:4–8). Still others are historical figures such as Moses or Job. According to the biographical approach, the prophet was describing a contemporary figure, known to himself and his listeners. The figures proposed for identification were Cyrus, Zerubbabel, or an anonymous person. Some maintained that the prophet was describing himself, or that he was being described by a disciple. According to the eschatological approach, the Servant of God is the destined redeemer, the Messiah. The approach is found at first in Targum Jonathan ("my servant the Messiah," at 52:13), but it has left few traces in Jewish exegesis, in contrast to its important role in Christianity, which identified the Servant of God with Jesus (beginning with the New Testament; see above). According to the collective method of interpretation, the Servant is Israel. If there are any personal elements in the description they are merely allegorical. It is explicitly stated in a number of places that the Servant is Israel (see e.g., 41:8; 44:1, 2, 21; 45:4; 59:1). While there are some who maintain that this refers to all of Israel, the real Israel, this is difficult since the real Israel is sinful and the Servant, free of sin. Therefore the Servant is identified with an ideal Israel, not the Israel of the present but the Israel of the future. Some adherents of the collective method hold that it is not all of Israel which is being referred to, but rather an elite within Israel, and there are varied opinions regarding the nature of this elite. Some maintain that it refers to the prophets, while others maintain that it refers to the priests. Still others speak of an undefined minority, "the righteous of Israel," and there are some who see the Servant as a visionary figure, the symbol of the righteous Israel. According to the mythological method, in portraying the figure of the Servant of God the prophet utilized a mythological figure, ignoring certain mythological traits and adopting several other characteristic traits. The image is that of a god who died and is resurrected, like the god Tammuz or Adonis (Baal). The central part of the Songs of the Servant of the Lord, 52:13–53:12, basically corresponds to the hymns sung during the Mesopotamian ritual of mourning the death of the god. According to this view there existed in Israel the ceremony of mourning for Tammuz and there was also the "bewailing of Hadadrimmon in the plain of Megiddo" (Zech. 12:11) which is assumed to have originated in the tragic death of Josiah at Megiddo (II Kings 23:29). These two wailing rites were combined into one ceremony and served as the basis for the description of the figure of the Servant of the Lord. Thus, the description of the Servant was influenced by a historical figure (Josiah) and a mythological figure (Tammuz). This method was associated with the Scandinavian school of myth and ritual. The "individual approach" and the "collective ap-

proach" are both plausible. It is, however, possible to interpret what is written about the Servant of the Lord in other ways. Some point to a lack of firm distinction in Hebraic thought between the particular or the individual – the prophet – and the general or the many – the people. Such fluidity could give rise to prophecies having both an "individual" and a "collective" style, i.e., the prophet Deutero-Isaiah, like his predecessors Hosea, Isaiah, Jeremiah, and Ezekiel, saw himself as a symbol of, and an "examplar" and model for, the people. His personal life was interwoven with the life of the people, the private domain became commingled with the public, and events from his personal life were interpreted by him as allegories of the people. There was also an opposite process, i.e., the image of the Servant of the Lord refers both to the prophet and to the people. At times, the individual type of description predominates, while at others, the collective style is prominent, referring also to Jacob and Israel. In the same way that the preceding prophets had interpreted their private and family lives as a sign and model for the people, so biographical details of the prophet were interwoven with the description of the Servant. The above hypotheses are based on the assumption of a unified conception of the Servant on the part of a writer or editor, which is far from certain.

Israel and the Nations. The relationship between Israel and the nations had political significance as well as religio-social significance. With the political victory of Babylon, Judah lost its political and territorial framework, and there was a danger that, as in the case of other nations, Israel's loss of a state would lead to its loss of religious identity, and that the people would assimilate among the nations. In the face of this danger, the prophet called Deutero-Isaiah played a decisive role in the crystallization of a well-informed national-religious group and the later crystallization of Judaism. Earlier biblical writings stressed monolatry, the principle that Israelites must serve Yahweh alone, but left open the possibility that other gods existed and might be worshipped by gentiles (Ex. 20:3; Deut. 4:19). It is in Deutero-Isaiah, followed by Trito-Isaiah, that we find for the first time a militant full-blown monotheism that denies the existence of all other gods but Yahweh, and calls gentiles to his service (Isa. 42:8; 43:10–11; 44:6–8; 45:5–7, 18–22; 46:9; 49:6; 56:1–8; 66:21–3). The victorious, conquering gods, the advanced material culture, and the impressive idolatrous ceremonies of Babylon constituted a danger that the exiles in Babylon would be attracted to assimilation. This prophet described in harsh polemic and with mockery and loathing the practices of idolatry and its followers (e.g., 40:17, 26; 44:6–20). He placed Israel vis-à-vis the gods of the nations, emphasizing the opposition between them. Israel and its God are lined up against the nations and their gods for "battle" and judgment. Opponents who strive and contend against Him rise up against Israel (41:11–12; 45:24). Some of the nations taunt and revile Israel (49:7; 51:7) and some of them blaspheme the name of the God of Israel (52:5). This religious-national battle recurs a number of times. But this is only for the present.

Chapters 40–66 are replete with the faith that the law of God will be disseminated by His Servant, Israel, among the nations which will be led from darkness to light. Israel will be "a light (or rather, 'a salvation') unto the nations" and Jerusalem will be the place of God's shining glory to which all the nations will stream with song and praise. They will emerge from spiritual darkness to the light which will shine for them in Zion. In Israel's redemption the world will also be redeemed and in the end of days all men will come to bow down before God (66:23). Traces of the envisioned end of days were already seen at this time. Israel's presence among the nations gave rise to the phenomenon of the "joiners" (chapter 66) who forsook idolatry and joined the religion of Israel. Questions were raised with regard to their status within the people of Israel and its future. The prophecies found in Isaiah 40–66 confront these problems and provide a positive response.

[Isaac Avishur]

IN THE AGGADAH

Amoz, the father of Isaiah, was also a prophet, for "when the name of the prophet's father is given, the father was likewise a prophet" (PdRE 118; Lev. R. 6:6). Isaiah came from Jerusalem, for "whenever the city of a prophet is not specified, he hailed from Jerusalem" (Lam. R., proem 24, beginning). An ancient *aggadah* reports that Amoz and Amaziah, king of Judah, were brothers (Meg. 10b.). "Because Isaiah was the king's nephew, he used to chastise Israel" (PdRK, 117). Isaiah uttered words of censure at the very outset of his prophecy. When the call came to him (Isa. 6:8), God said to him, "Isaiah! My children are obstinate and troublesome, are you ready to be beaten and degraded by them?" (PdRK, 125). As he stood bewildered he uttered words saying, "I am a man of unclean lips, and I dwell in the midst of a people of unclean lips" (Isa. 6:5), whereupon the Holy One blessed be He said to him, "You are permitted to say 'I am a man of unclean lips,' since you are your own master, but are you the master of My children that you refer to them as a people of unclean lips?" He was punished on the spot; Isaiah 6:6–7 are interpreted to mean that his mouth was scorched (PR 33:150), for having transgressed "Slander not a servant to his master" (Prov. 30:10). When Sennacherib besieged Jerusalem, Shebna and his companions wished to submit and conclude peace with him: "King Hezekiah, afraid lest the Holy One blessed be He be with the majority, was told by Isaiah, 'It is a conspiracy of wicked men, and a conspiracy of wicked men is to be disregarded'" (Sanh. 26a; cf. Isa. 8:12). When Hezekiah fell ill and was told by Isaiah that he would die (II Kings 20:1) because of his refusal to beget children, he attempted to justify himself by explaining that it had been foretold to him that he would beget a wicked son; whereupon Isaiah proposed to him that he marry his daughter in the hope that a worthy son would result from the union. In spite of this, however, only a wicked son was born to him (TJ, Sanh. 10:2, 28b–c). Of that wicked son, Manasseh, it is written that he "filled Jerusalem (with blood) from one end to the other" (II Kings 21:16). Scripture is silent as to the victims of

Manasseh and the reason for his killing. According to Josephus (Ant., 10:38) "Manasseh killed all the righteous men among the Hebrews, nor did he spare even the prophets, everyday putting some to death." Many aggadists, however, see Manasseh's blood spilling as confined to Isaiah alone (TJ, Sanh. 10:2, 28c). According to the *aggadah* Manasseh accused Isaiah of being a false prophet. Isaiah, knowing that whatever he said in his defense would not be accepted, said nothing, both to absolve Manasseh and his people from the responsibility for deliberately murdering a prophet, and to prevent his blood from bubbling like that of the prophet Zechariah. Isaiah's silence was regarded as a confession and he was sentenced to death. When the sentence was about to be carried out, however, he uttered the ineffable name and was swallowed by a cedar tree. The tree was sawn, but the saw was powerless against Isaiah's body, which had become like a pillar of marble. One organ, alone, his mouth, was vulnerable, because of its having uttered the words, "And I dwell in the midst of a people of unclean lips." As a result, when the saw reached Isaiah's lips, he died (Yev. 49b).

[Elimelech Epstein Halevy]

Christian View

For discussion of the Christian use of Isaiah see *Immanuel, and Servant of the Lord (above).

IN ISLAM

Slightly altering the version in II Kings 18:13–21 the authors Tabarī and Thaʿlabī, related that Shaʿyā (Isaiah) ibn Amaṣyā (Amaziah) (!) the prophet was sent during the reign of Zedikah (Zedekiah) to lead the king along the righteous path and to warn the people of Israel to repent. Allah sent the Assyrian king Sennacherib with a force of 600,000 soldiers against them. At the command of God, Shaʿyā informed the king that his death was imminent and that he should make his will and appoint a successor. Zedikah prayed to Allah, who lengthened his life by 15 years and also delivered him from Sennacherib. Sennacherib's army was annihilated and only he and five dignitaries and scribes escaped to a cave, where they were found by the king of Judah. Sennacherib confessed that he had heard of God, even before he left his country, but weakness of his mind had prevented him from reaching the right conclusion. The king of Judah let Sennacherib and his scribes circle the Temple for 70 days, giving them two loaves of bread made of barley daily. He sent Sennacherib home, according to God's command, in order that he might serve as a sign of warning. However, Tabarī (p. 381) also knew the correct name of the king, which was Hezekiah. In their tales on Isaiah, Umāra and Thaʿlabī quote paraphrases of his prophecies (ch. 1, etc.). After Hezekiah, his son Manasseh ruled for 55 years (II Kings 20:21–21:1). Tabarī also knew of Amon and Josiah, who reigned after Manasseh. Concerning Isaiah's end, Tabarī and Thaʿlabī relate that the people of Israel persecuted him for his prophecies and rebukes and that he escaped into a tree. Satan however held the fringes of his garment, which thus could be seen from without. They then brought a saw and

cut through Isaiah. This tale was handed down by Wahb ibn Munabbih; its Jewish source is evident.

[Haïm Ze'ew Hirschberg]

IN THE ARTS

The prophecies of Isaiah have found stronger echoes in art and music than in literature. In the 12th-century Anglo-Norman *Jeu d'Adam* Isaiah is one of the Old Testament prophets consigned to Hell after submitting reluctant evidence to the truths of Christianity; and he also figures in the medieval *Ordo Prophetarum*. Thereafter, Isaiah played only a minor part in literature until the 19th century, when the French writer Victor Hugo produced an appreciative sketch in his apocalyptic study *William Shakespeare* (1864; Eng. tr. 1864). The first Jewish writer to deal with the theme was Abraham *Mapu, the creator of the modern Hebrew novel; his *Ahavat Ẓiyyon* (1853, *In the Days of Isaiah*, 1902) was remarkable less for its characterization than for its Haskalah ideas and local color. *Ahavat Ẓiyyon* enjoyed amazing success and was translated into several languages, including no less than three English versions. Mapu later wrote another historical novel set in the times of Isaiah, *Ashmat Shomeron* (1865–66). In the 20th century, various plays were devoted to the subject. A modern Jewish treatment of the theme was *Der Novi* (1955; *The Prophet*, 1955), a novel about Deutero-Isaiah by Sholem *Asch.

Isaiah was represented by artists from early Christian times onward and owed his great popularity in the Middle Ages to three biblical passages thought to foretell the Incarnation and Nativity. More than any other prophet, Isaiah benefited from the cult of the Virgin. The passage, "the young woman shall conceive and bear a son" (Isa. 7:14), was seen as a prediction of the birth of Jesus. Even in the oldest surviving representation of the prophet, a second-century mural from the catacomb of Priscilla, Rome, Isaiah is shown seated opposite the Virgin and Child. Another prophecy, that of the "twig" that "shall grow from the roots of Jesse" (Isa. 11:1), gave rise to genealogical trees purporting to trace the ancestry of Jesus to the house of David. The distinguishing symbols of Isaiah in art are these "Jesse Trees" or one of his prophecies inscribed on his phylactery. Scenes from the life of Isaiah are found in Byzantine and premedieval art. Figures of the prophet often appear among the sculptures of 12th-century French Romanesque churches such as Vézelay and Moissac. The most striking example is the tempestuous swirling image from the abbey church at Souillac. There are also 13th-century sculptures of Isaiah in the great Gothic cathedrals of Chartres, Amiens, Burgos, and Bramberg. At the same period, his image adorned the wing of a painted "life of Christ" by the Sienese artist Duccio (1282–1319). In the 15th century, Isaiah appeared chiefly in painting and sculpture. Naturalistic sculpture by Claus Sluter adorns the fountain of the Chartreuse at Dijon. Renaissance treatments of the subject include a round painting by Perugino (Nantes Museum); and figures of Isaiah from the fresco by Raphael in Sant' Agostino, Rome, and from the Sistine Cha-

pel ceiling by Michelangelo. A painting of the subject by Fra Bartolommeo is in the Uffizi Galleries, Florence. The German Renaissance artist Matthias Gruenewald included a figure of Isaiah in his painting of the Annunciation, which forms part of his Isenheim altarpiece in the Colmar Museum. Although the subject later lost favor, the 18th-century artist Tiepolo painted a figure of Isaiah for the ceiling of the Archbishop's Palace in Udine. Artists have also illustrated a number of episodes from the Book of Isaiah. There is an amusing painting called *Isaiah Rebuking the Women of Jerusalem* (on Isa. 3:16ff.) by the 19th-century English artist *Salaman. Isaiah's vision of God enthroned amid the Seraphim (Isa. 6:1–4) was quite a common theme in Byzantine and medieval art (see *Cherubim and *Seraphim). The purification of the prophet's lips with a burning coal (Isa. 6:5–7) is illustrated in premedieval and medieval manuscripts, including the 15th-century breviary of the Duke of Bedford (Bibliothèque Nationale); in murals; and in the 13th-century stained glass of La Sainte Chapelle, Paris. The visits of the prophet to the dying Hezekiah and the miraculous prolongation of the monarch's life (Isa. 38:1–8) are treated in an eighth-century fresco at Santa Maria Antiqua, Rome, where Isaiah is shown standing by the bedside of the sick king. The rabbinic tradition that Isaiah met his death by being sawn asunder in the hollow of a cedar is illustrated in various murals, including a sixth-century Coptic fresco, and in medieval sculpture and manuscripts.

In music, composers have dealt either with the "Triple Sanctus" or with the inspiring figure of the prophet himself. The "Thrice Holy" acclamation of the angels in the vision of Isaiah (Isa. 6:3) is the main text of the *Sanctus* section of the Roman Catholic mass; it is followed by the jubilant *Hosanna in excelsis*, the mystically interpreted *Benedictus*, and by a repetition of the *Hosanna*, the combination having been adapted from Matthew 21:9, Mark 11:9–10, and John 12:13. It has 21 traditional ("Gregorian") chant melodies dating from the tenth to the 13th centuries. In some of these, the initial "*Sanctus*" is rather florid and its reiterations are expressed in progressively rising phrases. This restrained attempt at word painting was carried much further in the *Sanctus* of the mass compositions, which date from the 14th century onward. Although these works naturally reflect the varieties of individual expression and the style of their era, certain conventions in the setting of the *Sanctus* can, nevertheless, be identified. The angelic acclamation is interpreted either as an outpouring of sweet sounds, often by two or three high solo voices (as in most of the 16th-century works), or as a mighty thundering of massed praise (as in Bach's *Mass in B Minor*). The *Sanctus* in Beethoven's *Missa Solemnis* (1823) is an exception, since it begins with a whispered stammering of awe. All composers take advantage of the differences in mood suggested throughout the sequence of *Sanctus, Hosanna, Benedictus*, and *Hosanna*. For the Protestant liturgy Martin *Luther created the rhymed "German Sanctus" (*Jesaia dem Propheten das geschah*, 1526), the melody of which is also attributed to the reformer. There are two settings by Bach of simple chorale tunes, based on

the "Gregorian" melodies, with the Latin or German (*Heilig, Heilig, Heilig*) text. The many works for concert performance based on extended passages from the Book of Isaiah include Antonio Caldara's oratorio *Le profezie evangeliche d'Isaia* (1729; text by A. Zeno); Granville Bantock's *Seven Burdens of Isaiah* for men's choir *a cappella* (1927); Willy Burkhard's oratoria *Das GesichtJesaias* (1933–36; première 1936); Alexandre *Tansman's oratorio *Isaïe le prophète* (1951); Bernard Rogers' cantata *The Prophet Isaiah* (1954; published 1961); Robert *Starer's *Ariel, Visions of Isaiah* (1959); Bohuslav Martinu's cantata *The Prophecy of Isaiah* (première in Jerusalem, 1963); and Ben Zion *Orgad's *Isaiah's Vision*. Another modern work was Jacob *Weinberg's *Isaiah* (1947), an oratorio for solo voices and chorus with organ accompaniment and trumpet obbligato. The first part of Handel's oratorio *The Messiah* (première in Dublin, 1742), for which the text was compiled by Charles Jennens, contains so many passages from Isaiah (beginning with "Comfort ye, comfort ye my people") that it may almost be considered an Isaiah oratorio. Some of the most striking parts of Brahms' *Deutsches Requiem* (1857–68), for which the composer himself compiled the text from the Old and New Testaments, also originate in this biblical book. Settings of single verses or brief passages for liturgical or concert use are numerous. There are also traditional tunes from the various Jewish communities, ḥasidic melodies, and modern Israel folksongs.

ISAIAH, ASCENSION OF, early Christian apocalypse, containing the Jewish apocryphon t*he Martyrdom of *Isaiah.* The *aggadah* about Isaiah's violent death was already known at the beginnings of Christianity (see Acts 8: 34). Thus the Jewish apocryphon was expounded by Christians as early as in the first century of Christianity. Of the Greek original only a papyrus fragment is extant and parts of Latin, Slavonic, and Coptic translations have been preserved. The whole work exists only in an Ethiopic translation. The apocryphal description of Jesus' birth, life, and resurrection (11:1–21) is a later interpolation lacking in the Latin version and in the three Slavonic versions. In the Christian part of the book Isaiah is described as a seer according to the spirit of apocalyptic literature. His violent death is regarded as revealing the coming of Jesus and the early history of the Church (3:13–31). This passage and the following chapter (4) containing a description of the *Antichrist are very important witnesses for the oldest Christian history and beliefs. The author sees inter alia the degeneration of contem-

porary Christianity in the small number of Christian prophets, an institution which disappeared in the second century. He is the oldest witness to Peter's martyrdom by Nero (4: 3). At the end of days Beliar (Belial), "the great prince, the king of this world," will descend from heaven in the shape of Nero; he will do many wonders and lead humanity astray, but he will finally be destroyed. This description reflects an Antichrist tradition more or less independent of the New Testament, whose main motifs are taken from Jewish sources.

It is very probable that the description of Isaiah's ascent to the seven heavens was also written by the same Christian author (chapters 6–11). The similarities between this vision and similar visions in Jewish apocalyptic literature and old Jewish mysticism are noteworthy. According to the book, Isaiah also saw the miraculous descent of Jesus from the seventh heaven and his future ascent after his resurrection. This description resembles the similar motifs of the *Epistola Apostolorum* ("Letter of the Apostles"), a Christian work of the beginning of the second century. The mystical theology of the Christian parts of the *Ascension of Isaiah* is imbued by Jewish mystical and apocalyptical material, and its opinion about the heavenly nature of Jesus is close to gnostic speculations, although the book is, compared with contemporary Christian products, not heterodox. Later, when orthodox Christian tenets were firmly established, the book was used by Christian sects with gnostic elements and even by Arians.

[David Flusser]

ISAIAH, MARTYRDOM OF, one of the source documents discerned by scholars in the *Ascension of Isaiah* (see *Isaiah, Ascension of), relating Isaiah's persecution and eventual martyr's death at the hands of *Manasseh, king of Judah. From the first publication in 1819 of the Ethiopic version with Latin translation (the most important text) by R. Laurence, the martyrdom legend was recognized as of Jewish origin. Gesenius in 1821 first distinguished two parts (1–5, 6–11) and the two most important divisions of the material were those of A. Dillmann (*Ascensio Isaiae, aethiopice et latine*, 1877) and R.H. Charles (*Ascension of Isaiah*, 1900). Dillmann considers that the material falls into (1) a Jewish martyrdom of Isaiah (2:1–3:12 + 5:2–14); (2) a Christian ascension of Isaiah (6:1–11:1 + 23–40); (3) Christian editorial reworkings of these two (ch. 1, except 1, 3, 4 and 11:42–43); (4) a final Christian editing which added the apocalypse (3:13–5:1) and certain other passages. Charles concluded that the work is composed of three documents: (1) martyrdom of Isaiah (1:1, 2, 6–13; 2:1–8, 10–3:12; 5:1–14 – substantially identical with Dillmann's first document); (2) testament of Hezekiah (3:13–4:18); and (3) vision of Isaiah (6:1–11:14). Both the latter are Chris-

tian. Charles' hypothesis has been widely accepted, although C.C. Torrey, for example (*The Apocryphal Literature* (1945), 133–5) queries the existence of the martyrdom as a separate work.

In view of the obviously composite nature of the *Ascension* and the wide circulation of the story of the martyrdom in Jewish sources (e.g., Yev. 49b; Sanh. 103b; TJ, Sanh. 10:2, 28c; PR 84:14, cf. Ginzberg, Legends (1928), 373 ff.), it seems likely that the work is of Jewish origin. It is probably to be connected with the traditions about the deaths of prophets (Mart. Isa. 5:12 and parallels; Jub. 1:12; cf. II Chron. 24:19, I En. 89:51–53, 4Qp–Hosb 2:4–6; et al.) and with a type of hagiographic literature of which the *Vitae Prophetarum* is an example. Eissfeldt relates it to the martyrdom legends of the period of Antiochus Epiphanes, such as those of Eleazar and of the mother and her seven sons (II Macc. 6:18–7:42). Flusser (IEJ, 3 (1953), 30–47) interprets the work as a typological representation of the story of the Qumran Teacher of Righteousness. This interpretation is carried to great extremes by M. Philonenko (*Pseudépigraphes de l'Ancien Testament et manuscrits de la Mer Morte* (1967), 1–10). Certainly notable is the use of the name Beliar (2:4 et al.) along with Satan (e.g., 2:2) and Sammael (1:8). The name Belchira (with variants) for the false prophet, Isaiah's opponent, remains without conclusive explanation. The book may supply important information about the life and mores of apocalyptic seers, and is an example of little-known Jewish hagiographic writing. The transmission of the work is complex and is dealt with by Charles, E. Tisserant (*Ascension d'Isais*, 1909), and others. As well as the Ethiopic text, there are fragments or versions in Greek, Slavonic (Vaillant, in *Revue des Etudes Slaves*, 42 (1963), 109–21), Latin, and Coptic (Lacau, in *Le Muséon*, 59 (1946), 453–67).

[Michael E. Stone]

ISAIAH BEN ABRAHAM (d. 1723), rabbi and kabbalist, grandson of *David b. Samuel ha-Levi. He wrote *Ba'er Heitev*, a commentary on the Shulḥan Arukh, *Oraḥ Ḥayyim*, which the title page describes as "a digest of the legal decisions of all the early and later halakhic authorities, and of all extant responsa." The book, which contains many kabbalistic quotations, particularly from Isaac Luria, achieved immediate acclaim, many editions appearing within a few years (first ed. in Shulḥan Arukh, *Oraḥ Ḥayyim*, Amsterdam, 1708). In 1742, however, Judah *Ashkenazi, *dayyan* of Tiktin, published a book serving the same purpose, with the same form and content and even the same name. Because the later book treated the material in greater detail, the earlier one lost its popularity, and whereas Ashkenazi's edition was published with the Shulḥan Arukh, Isaiah's was forgotten. His work on the other

sections of the Shulḥan Arukh was never published. Isaiah, his wife, and his daughter met their death in an inn fire in Mogilev, on their way to Ereẓ Israel.

[Abram Juda Goldrat]

ISAIAH BEN ELIJAH DI TRANI (**the Younger, "Riaz"**; d. c. 1280), rabbinical scholar; grandson of Isaiah b. Mali di *Trani (the Elder). Little is known of his life, and even his works have remained mostly in manuscript. His novellae are known mainly from quotations in Joshua Boaz' *Shiltei ha-Gibborim* on the *Halakhot* of *Alfasi. Isaiah's halakhic works on a few tractates (*Berakhot* and *Shabbat* (Jerusalem, 1964) and on *Eruvin, Pesaḥim, Yoma*, and *Sukkah* (*ibid*., 1966)) have been published and several fragments appear in the *Me'at Devash* of D. Sassoon (1928). He frequently quotes his grandfather, and his own *Kunteres ha-Re'ayot*, apparently an extensive work in which he enlarged on his brief decisions. In his halakhic works Isaiah disputes philosophical interpretations while he deals with the *aggadah*. Isaiah adopted a less tolerant attitude toward philosophy and the general sciences than did his grandfather. The *Perush Rabbenu Yeshayah*, printed in *Mikra'ot Gedolot*, as well as the commentaries on the Prophets and Hagiographa recently published as the work of his grandfather, should apparently be ascribed to him.

BIBLIOGRAPHY: Guedemann, Gesch Erz, 2 (1884), 189ff. (= A.S. Friedberg, *Ha-Torah ve-ha-Ḥayyim* (1898), 165–8); Joel, in: ᴋs, 10 (1933/34), 545–52; A.I. Wertheimer, *Perush Nevi'im u-Khetuvim le-Rabbenu Yeshayah ha-Rishon mi-Trani* (1959), 11–56.

[Israel Moses Ta-Shma]

ISAIAH BEN MALL DI TRANI (**the Elder;** c. 1200–before 1260), early Italian halakhist, scion of a well-known rabbinic and scholarly family. Born in Trani, he is mainly known as the author of extensive commentaries and *pesakim* ("decisions") on the Talmud. Isaiah was a pupil of Simḥah of Speier and kept in contact with German scholars. His responsa are to be found in the *Or Zaru'a* of *Isaac b. Moses of Vienna, who greatly esteemed him. He traveled in the Mediterranean countries, spending some time in Greece and in Ereẓ Israel. Among the scholars whom he quotes mention should be made of Baruch "of Greece" (see *Baruch b. Isaac of Aleppo) while Zedekiah b. Abraham *Anav, author of *Shibbolei ha-Leket*, quotes him extensively.

Isaiah's works cover a wide range. They include (1) *Pesakim* on the Talmud, containing a summary of the subject under discussion, along the lines of *Alfasi, with additional comments on unresolved difficulties and a final decision on the conflicting views in the manner of *Hananel b. Ḥushi'el. The following *pesakim* have been published: on *Berakhot* and *Shabbat* (1964); on *Eruvin, Pesaḥim, Yoma*, and *Sukkah* (1966); on *Sukkah* alone in *Sam Ḥayyim* (Leghorn, 1801); on *Beẓah* (in *Maḥaneh David*, 1889, wrongly described as *Tosafot Rid*); on

Rosh Ha-Shanah, Ta'anit and *Ḥagigah* (in *Oholei Yiẓḥak*, Leghorn, 1821); on *Yevamot* (called *Tosafot Rid*, 1931); on *Ketubbot* and *Gittin* (in margin of ᴛʙ, Vilna edition, wrongly described as *Tosafot Rid*); on *Kiddushin* (1965); on *Makkot* (in: *Talpioth*, 8, 1963); on *Horayot* (*ibid*., 9, 1965); on *Ḥullin* (first chapter, in *Ha-Segullah*, 1940), and on *Niddah* (1963). His *pesakim* on the *Halakhot Ketannot* have also been published (Leghorn, 1801). The remainder are still in manuscript. (2) *Sefer ha-Makhri'a* (Leghorn, 1779) deals principally with important *halakhot* in regard to which the codifiers were in dispute, and which Isaiah attempts to resolve. (3) *Sefer ha-Leket* (not extant) is similar in nature to *ha-Makhri'a*. (4) *Tosafot Rid*, novellae to the Talmud. Extant are his novellae to the tractates: *Shabbat, Eruvin, Pesaḥim, Yoma, Sukkah, Beẓah, Rosh Ha-Shanah, Megillah, Ḥagigah, Mo'ed Katan, Nedarim, Nazir, Bava Kamma, Bava Meẓi'a, Bava Batra, Avodah Zarah*, and *Niddah* (Lemberg, 1862–68; new edition in preparation partly printed); *Kiddushin* (Sabionetta, 1553, and subsequent editions, such as, New York, 1965); *Ta'anit* (at end of *Sefer ha-Makhri'a*). *Tosafot Rid* was compiled in several "editions" in the form of pamphlets in which Isaiah retracted or supplemented his previous statements. The exact relationship between this book and his *pesakim* has not been established, as much of the material is common to both and in addition the printers added to the confusion. (5) Responsa (1967). (6) Commentary on the Pentateuch. Extracts from this commentary were published by Ḥ.J.D. *Azulai in his *Penei David* (Leghorn, 1792). The commentaries on the other books of the Bible, published under his name in Jerusalem in 1959, are apparently to be ascribed to his grandson. (7) *Piyyutim*.

Isaiah was an independent thinker with considerable originality of approach and with a critical attitude to the opinions of his predecessors. Occasionally he sharply rejects the teachings of *geonim*, such as *Hai Gaon and *Samuel b. Hophni, and of other distinguished predecessors. He even criticizes his own works, commenting, "All that I have written is valueless (*hevel*)." He is not awed by authority and is concerned only with examination of the source material. His books are distinguished by clarity of explanation, careful choice of correct readings, and methodological approach to talmudic principles and lines of reasoning.

[Israel Moses Ta-Shma]

ISAIAH BEN UZZIAH HA-KOHEN, medieval Karaite scholar of uncertain date (12th–15th centuries). He was the author of a work in Arabic known under the Hebrew title *Siddur*

or *Sefer ha-Mitzvot*, of which two different versions are known. The first part deals with prayer and ritual matters (fasts and feasts, Sabbath, circumcision, marriage, diet, etc.). The second part deals with dogmatic theology, Hebrew grammar, etc., as well as with some subjects already covered in the first part; this second part refers to Isaiah in the third person, and may therefore be by another hand. Isaiah is generally referred to in Karaite sources by the title *al-Muʿallim al-Fāḍil* ("the excellent preceptor").

[Leon Nemoy]

ISAIAH ḤASID FROM ZBARAZH

ISAIAH ḤASID FROM ZBARAZH (17th–18th centuries), Shabbatean scholar, the son-in-law of *Judah he-Ḥasid. In 1700 Isaiah Ḥasid immigrated to Jerusalem with his father-in-law and his companions. When the kabbalist Abraham *Rovigo arrived in *Jerusalem in 1702 and founded there a *bet midrash* for ten select members, he took Isaiah Ḥasid's advice as to who should be admitted to it. Isaiah's name occurs among the signatories of a letter sent from Jerusalem to Breslau seeking help for the Ashkenazi community in Jerusalem. As a result of falling under the influence of Shabbatean beliefs and performing "strange deeds," he was compelled, apparently before 1706, to leave Jerusalem. Settling in Mannheim, Germany, he installed himself in the Shabbatean *bet midrash* of the philanthropist Asher Lemmle Regenheim. From there, together with others of the sect, he spread Shabbatean propaganda in the communities of Germany and Poland. He became a follower of the Shabbatean leader Loebele *Prossnitz, who he believed to be the Messiah. In 1725, when Moses Meir Kamenker, the emissary of the Polish Shabbateans, came to Mannheim, he entered into a conspiracy with Isaiah. The two disseminated writings condemning the Talmud and hinting that adherents of the Talmud did not believe in the God of Israel. They even wanted to proclaim Jonathan *Eybeschuetz as the Messiah. When their activity became publicly known the rabbis of Frankfurt excommunicated them, a ban which was also proclaimed in Altona, Amsterdam, Mannheim, and other communities.

[David Tamar]

ISAIAH MENAHEM BEN ISAAC

ISAIAH MENAHEM BEN ISAAC (d. 1599), rabbi in Poland. In accordance with the custom prevalent in his time, his father-in-law's name was added to his and he was referred to as "Mendel [Menahem] Avigdors." Isaiah Menahem was one of the chief spokesmen of the *Council of Four Lands. He served as rabbi of Praga (a suburb of Warsaw), head of the yeshivah of Szczebrzeszyn, rabbi of Lodomeria, and in 1591 succeeded *Meir of Lublin as rabbi of Cracow. While rabbi of Lodomeria, he drew up a new formula for the *hetter iska* (permitting the lending of money on interest), which was opposed by Mordecai *Jaffe and Joshua *Falk. As a result, when he became rabbi of Cracow, he amended the formula. This amended formula, known as *Shetar Hetter Iska ke-Tikkun Muram* (Morenu Rav Mendel), was wrongly attributed to Moses *Isserles. In his *Naḥalat Shivah*, *Samuel b. David ha-Levi defends the formula and highly praises Isaiah Menahem. Isaiah Menahem was among the signatories of the *takkanah* adopted by the Council of Four Lands at Lublin in 1587, prohibiting anyone from acquiring rabbinic office by payment or other unjust means. He is referred to in the responsa Baḥ of Joel *Sirkes (no. 77) and in the *Matenat Kehunnah* on the *Midrash Rabbah* (Lev. R. 2) of Issachar Ashkenazi who acknowledges his indebtedness to him for the explanation of a certain passage. Together with his son Moses he wrote notes to the *Ammudei ha-Golah* of *Isaac of Corbeil which were published with the text (Cracow, 1596). He wrote a supercommentary on Rashi's commentary on the Pentateuch (*Beʾurim Kabbedu ha-Shem*, Cracow, 1604). One of his *piyyutim* was published in the *Ḥag ha-Pesaḥ* of J. Kitzingen (Cracow, c. 1597).

[Abram Juda Goldrat]

ISBAKH, ALEXANDER ABRAMOVICH

ISBAKH, ALEXANDER ABRAMOVICH (**Itzhak Bakhrakh**; 1904–1977), Russian writer and literary scholar. Isbakh was born in Daugavpils, Latvia, and graduated from the Literary Department of Moscow University in 1924. He published poems and novels about the Red Army, including descriptions of Jewish soldiers. During World War II he was an army correspondent. He was also a member of the editorial staff of the journals *Oktober* and *Znamia*, and taught in the university. In 1949 he was arrested as a "cosmopolitan" and sentenced to 10 years in forced labor camps. He was released in 1959, rehabilitated, and returned to writing. He published a number of autobiographical novels and a book about the French Resistance (1960), always using Jewish imagery and themes. He also published a personal account of the Nazi offensive, *Front* (1941). His literary studies include one on Louis Aragon (1957) and *Na literatunykh barrikadakh* ("On the Barricades of Literature," 1964). He later wrote the fictional family chronicle *Masterovoy* ("The Artisan," 1966).

[Shmuel Spector (2nd ed.)]

ISCANDARI

ISCANDARI (originally **Al-Iscandari,** from al-Iscandria = *Alexandria, also written as **Ascandarani, Scandarani,** and **Scandari**), family of talmudists and authors, heads of the *Mustaʿrab (Arabic-speaking Jews) community who were in close touch with government circles in Ereẓ Israel and Egypt in the 17th and 18th centuries. According to Joseph *Sambari, the family originated in *Spain, the first of the family to immigrate to *Egypt being a certain Joseph who settled in Alexandria and, on moving to *Cairo, was called Scandari. This

is, however, doubtful; it is almost certain that the Iscandaris were an ancient Musta'rab family.

(1) JOSEPH BEN ABRAHAM ASCANDARANI (1430?–after 1507) lived in *Jerusalem. He studied together with Obadiah of *Bertinoro and according to Jacob *Berab was a most erudite scholar. He moved to *Safed, c. 1491, where he became the head of a Musta'rab yeshivah; he spent the rest of his life there. He wrote commentaries on the *Yad* of Maimonides and on the *Tur* of *Jacob b. Asher. The letter he sent in about 1507 to the *nagid*, Isaac ha-Kohen *Sholal, in Egypt, is one of the most important documents about the Jewish community in Erez Israel after the expulsion from Spain. He described the yeshivah, and asked for Sholal's intervention in a dispute he had with Moses ha-Dayyan who was responsible for its administration.

(2) JOSEPH SCANDARI (after 1527), rabbi and physician. He is said to have lived first in Alexandria before moving to Cairo, where he became one of five appointed leaders of the Musta'rabim community.

(3) ABRAHAM THE ELDER, son of Joseph (2), was also a rabbi and physician, and succeeded to his father's post in the community. Ḥayyim Joseph David Azulai possessed a manuscript of his halakhic rulings.

(4) ELEAZAR B. ABRAHAM SCANDARI (d. 1620; called Aba, after the initials of his name), son of Abraham, court physician of Sinan Pasha, the Turkish governor of Egypt. He healed Sinan of a severe illness, whereupon the latter appointed him finance minister of his dominion. Eleazar was the head of the Musta'rabs. In 1591 when Sinan was appointed chief vizier, Scandari moved to Constantinople where he became the leader of the Jewish community. As a result of his participation in the formulation of Turkish policy in Moldavia and Transylvania, he became involved in a dispute with the Moldavian governor, Aron-Wodah, who did not fulfill the promises he had made to Scandari. On one occasion when Scandari accompanied Sinan Pasha to Jassy, he was arrested by the governor and held captive in Transylvania until 1596. On his release he returned to Cairo and in 1618 was awarded the Turkish title, *chelebi*. He was put to death on the orders of the Turkish governor of Egypt after he had been falsely accused by the Muslims. According to Joseph *Sambari, he was the author of glosses on the *Yad* of Maimonides.

(5) ABRAHAM B. ELEAZAR ISCANDARI (1565?–1650), one of the four sons of Eleazar, was one of the greatest Egyptian rabbis and halakhists. He was a pupil of Abraham *Monzon I. He maintained a yeshivah in his own home and possessed a large and valuable library, containing many manuscripts. Through him an impressive collection of the responsa of Maimonides was copied. From his responsa, copies and digests were made, some of which were published in the books of the scholars in Egypt, Palestine, and Turkey. The historians Joseph Sambari and David *Conforte resided with him and assisted with his library. He also engaged in the study of Kabbalah and copied the *Sifra de-Ẓeni'uta* with the commentary of Isaac *Luria, adding his own glosses (Benayahu collection). Collections of his sermons are extant in manuscript (Ms. Guenzburg, Moscow, no. 1055).

(6) JOSEPH HA-LEVI ISCANDARI (d. 1768) was head both of the Musta'rabim and the general Egyptian community where he also served as a tax collector. Ḥayyim Joseph David Azulai was one of his friends. He was executed by Ali-Bey.

ISENSTEIN, KURT HARALD (1898–1980), Danish sculptor, born in Hanover. Isenstein directed an art school in Germany, which he reestablished when he moved to Denmark. His works include portraits of Einstein, Hindenburg, and Pirandello. He carved a monument in memory of the Danish refugees in Sweden (1943–45) and two memorials to the Norwegian Jews who perished at Auschwitz. The latter are found in the Jewish cemeteries in Oslo and Trondheim, Norway.

ISER, JOSIF (1881–1958), Romanian artist and draftsman. Iser, who studied in Munich and then in Paris under Derain, began his career as a draftsman. However, after World War I, he devoted himself entirely to painting, working until 1928 at Neuilly-sur-Seine. Iser's work is characterized by the almost linear manner in which he emphasizes the contours of people and objects. His style is a mixture of neoclassicism and impressionism, influenced by Cézanne. Some of his recurring themes are the Oriental landscapes of Romania (Doboudja), old Turks in cafés, and interiors with odalisques.

[Isac Bercovici]

ISFAHAN, city in Iran on the route from Teheran to the Persian Gulf. The origin of the Jewish settlement in Isfahan, one of the oldest in Persia, has been ascribed by Pehlevi, Armenian, and Muslim sources to various early historical periods. Though not mentioned in the Talmud, the city's Jewish community is first recorded in the time of the Sassanid ruler Firūz (472 C.E.) who, according to Ḥamza al-Iṣfahānī, put to death half the Jewish population in Isfahan on a charge of killing two Magian priests. When the Arabs conquered Persia (641), they found a strong Jewish community in Isfahan. The Arab chronicler Abu Nuʿaym reported that at that time the Jews were celebrating, dancing, and playing music in expectation of a "Jewish king." Under the caliphate, the Jewish quarter in Isfahan, known as *Jayy*, had grown to such a degree in number and size that Arab and Persian geographers called it *al-Yahūdiyya*, "the city of the Jews." Isfahan was the birth-

place of the first Jewish sectarian movement, led by *Abu ʿIsā of Isfahan, in the time of the Umayyad caliph ʿAbd al-Malik (685–705). Abu ʿIsā, claiming to be a messiah and a religious reformer, gained a considerable following among the Jews of Isfahan and other places and it is reported that his followers, known as "Isavis" or "Isfahanis," still existed in Isfahan in the tenth century.

*Maimonides mentioned the Jews in Isfahan in his *Iggeret Teiman* (Epistle to Yemen); the city was regarded as a center of Hebrew grammar and exegesis. About 1166 *Benjamin of Tudela estimates their number at 15,000 and also mentions the chief rabbi Sar Shalom, who had been appointed by the exilarch of Baghdad, with authority over all the communities of Persia. When the Safavid dynasty made Isfahan its capital (1598), the Jews prospered economically and were engaged as craftsmen, artisans, and merchants in drugs, spices, antiquities, jewelry, and textiles. They suffered greatly when the persecution and forced conversion, initiated under Shah *Abbas I and renewed under Shah *Abbas II, swept throughout the Jewish communities of Persia in the 17ᵗʰ century. Their sufferings were described in the Judeo-Persian chronicles of *Babai ibn Luṭf and *Babai ibn Farḥad, and by Carmelite, Jesuit, and other eyewitnesses.

Religious life in Isfahan had a rigid traditional rabbinical basis, with the Sabbath and dietary laws strictly enforced. There existed several synagogues, schools, and other communal institutions, and the community was well organized. A *Karaite group also existed there. On the instructions of *Nādir Shah (d. 1747), the Isfahani Jew Bābā ibn Nuriel translated the Psalms and the Pentateuch into Persian in 1740. Bible manuscripts in Judeo-Persian were found in Isfahan at the beginning of the 17ᵗʰ century by the Italian scholar and traveler G. Vechietti, who cooperated with Jewish scholars there in the transliteration of Judeo-Persian manuscripts.

With the advent of the Qājār dynasty (1794–1925) and the transfer of the capital to *Teheran, Isfahan and its Jewish population lost much of its cultural and political prominence. European travelers of the 19ᵗʰ century, such as *David d'Beth Hillel (1828), *Benjamin II (1850), and E. *Neumark (1884), estimated the number of Jews in Isfahan at between 300 and 400 families. Jewish cultural life in Isfahan was threatened by the activities of the *Bahai movement and the Christian missionary societies, who, exploiting the plight of the Jews, began to work in the Jewish ghettos and established a missionary school in Isfahan in 1889. These inroads were counteracted in 1901 by the establishment of a Jewish school in Isfahan by the *Alliance Israélite Universelle. Isfahan is the seat of some revered "holy places," especially the alleged burial place of Serah bat Asher b. Jacob (granddaughter of the patriarch mentioned in Num. 26:46), situated in the vicinity of Pir Bakran, 20 miles (30 km.) south of Isfahan and a popular place of pilgrimage for all Isfahan Jews, who bury their dead there, with an inscription dated 1133 C.E.

[Walter Joseph Fischel / Amnon Netzer (2ⁿᵈ ed.)]

Contemporary Period

Of the 10,000–12,000 Jews who lived in Isfahan in 1948, about 2,500 remained in 1968. Many had settled in Israel, while others moved to Teheran. According to the census of 1956, Isfahan was the third-largest Jewish community in Iran, after Teheran and Shiraz. The number of synagogues had dropped from 18 to 13 by 1961. Most Jews were poor peddlers; in 1952 it was estimated that only 1% lived in reasonable circumstances, while 80% were poverty-stricken, and the rest lived on the verge of poverty. Most of the poorest left for Israel. In 1968 the town had an Alliance Israélite Universelle school with high school classes, and schools run by *ORT and *Oẓar ha-Torah. In 1961, 150 pupils attended Jewish high school; 897 attended elementary school; other children attended government schools, while there were about 50 Jews at Isfahan University. However, even in 1967 many Jewish children did not attend any educational institution. In 1968 Isfahan had a branch of the Iranian Jewish Women's Organization and of the Zionist youth organization He-Ḥalutz, founded before 1948. At the beginning of the Islamic regime in Iran (1979) there were an estimated 3,000 Jews in Isfahan, reduced to 1,500 by the end of the 20ᵗʰ century.

[Hayyim J. Cohen / Amnon Netzer (2ⁿᵈ ed.)]

ISH-BOSHETH (Heb. אִישׁ־בֹּשֶׁת), son of *Saul; reigned over Israel for two years (II Sam. 2:10), at the same time that David reigned over Judah in Hebron. The name Ish-Bosheth is a dysphemism (*Baal* = *Boshet*; see *Euphemism and Dysphemism) for his true name, Eshbaal (Heb. אֶשְׁבַּעַל, I Chron. 8:33; 9:39). The meaning of the syllable *ʾesh* is unclear. It is possibly derived from the root איש, whose meaning (as in Ugaritic) is "to give [a present]"; the name would then mean "given by Baal" (cf. the Phoenician name Matanbaal and the Hebrew names Mattaniah, Nethanel, et al.). Others explain the name as meaning "man of Baal" or see in the radical אשׁ a form corresponding to ישׁ.

After Saul and his three sons (including his firstborn) died in the battle against the Philistines at Mount Gilboa

(I Sam. 31), *Abner son of Ner, the uncle and general of Saul, took Eshbaal (Ish-Bosheth), the son of Saul, and proclaimed him king "over Gilead, and over the Ashurites [= Asherites], and over Jezreel, and over Ephraim, and over Benjamin, and over all Israel" (II Sam. 2:8–9). The capital was fixed in Mahanaim on the eastern bank of the Jordan, at a distance from the Philistine garrisons, who controlled western Israel (I Sam. 31:7), and from the borders of Judah, where David reigned. By enthroning Ish-Bosheth, Abner intended, on the one hand, to prevent David from reigning over the whole of Israel and, on the other, to govern, in fact, the northern tribes; Ish-Bosheth, the legal successor of Saul, would be king in title but dependent on the will and mercy of Abner, the general of the army. Indeed, Abner concentrated the full authority of the government in his hands and led the war against David (II Sam. 2:12–17; 3:6). It is a measure of Abner's power and Ish-Bosheth's impotence that Abner dared to cohabit with *Rizpah daughter of Aiah, the concubine of Saul. It is not surprising that Ish-Bosheth reproached him for it; for he might well regard it as not only an affront to the memory of Saul, but also reason for suspecting Abner of ambitions to the throne (cf. 16:21–22; I Kings 2:17–22). Abner for his part regarded Ish-Bosheth's rebuke as an act of ingratitude for his efforts in preventing David from reigning over all Israel (II Sam. 3:8). It is also possible that Abner, realizing that the military situation was in favor of David (3:1), welcomed Ish-Bosheth's rebuke as a pretext for coming to terms with David and thus assured his continuing in the position of army commander in Israel (3:12–21). The dispute sealed Ish-Bosheth's fate. He had lost his main supporter (4:1) and the hope of remaining in power. According to II Samuel 4, Ish-Bosheth was murdered by two officers, Rechab and Baanah. It can be assumed that the conspirators, who came from the town of Beeroth, one of the four Hivite towns (Josh. 9:17), murdered Ish-Bosheth in order to avenge the execution of the Gibeonites by Saul (II Sam. 21:1).

[Bustanay Oded]

ISH-KISHOR, EPHRAIM (1863–1945), one of the first followers of *Ḥibbat Zion and of political Zionism in England. Born in Ponjemon, Lithuania, he lived from the beginning of the 1880s in England, where he taught Hebrew. He was one of the first to promote Ḥibbat Zion in England through essays, stories, and poems in Yiddish newspapers that he published and edited at the end of the 1880s and the beginning of the 1890s. Ish-Kishor adhered to Herzl upon his first appearance in England, and in his diary, on July 15, 1896, Herzl mentions that Ish-Kishor came to see him and proposed the establishment of an organization to be headed by Herzl: "A hundred persons will gather in the East End; they will enlist members in all the countries and they will create propaganda for a Jew-

ish state." Ish-Kishor later participated in the First Zionist Congress and was active in the Zionist Federation of Great Britain. In 1907 he went to the United States, where he continued his Zionist work. He was also among the founders of the Judea Insurance Company and worked for it when he settled in Palestine in 1933. His daughter, SHULAMITH ISH-KISHOR (1896–1977), who lived in New York, was a noted children's writer whose work included *Our Eddie* (1970).

[Getzel Kressel]

ISHMAEL (Heb. יִשְׁמָעֵאל; "God hears," wordplays on the name occur in Gen. 16:11–12; 17:20; 21:13, 17), the first son of Abraham, born to him when he was 86 years old. Ishmael's mother was the Egyptian *Hagar, the maidservant of Sarah (Gen. 16). After Hagar had conceived, she became insolent toward her barren mistress, and Sarah treated her harshly. She fled to the wilderness but eventually returned and submitted to Sarah's torments, as commanded by an angel of the Lord. However, after the birth of Isaac many years later, Abraham, with divine consent, acceded to Sarah's demand and expelled Hagar and Ishmael (Gen. 21). The relationships among Abraham, Sarah, and Hagar have analogs in ancient Near Eastern family law and practice. Ishmael is the eponymous ancestor of the *Ishmaelites. His circumcision at age 13 (Gen. 17:25) reflects a practice among Arabs of circumcision as a rite of puberty. The reference to him as a bowman (Gen. 21:21) reflects the tradition that Arabs were marksmen (Isa. 21:17). According to Gen. 25:9, Isaac and Ishmael together buried their father Abraham.

In the New Testament (Gal. 4:21–31) Paul treats the banishment of Hagar and Ishmael as an allegory for the replacement of God's old covenant with the Jews through law by God's new covenant with the Christians through promise.

[Yehuda Elitzur / S. David Sperling (2nd ed.)]

In the Aggadah

Abraham tried to train Ishmael in the right way (Gen. R. 148:13), but failed, his excessive love for him causing him to "spare the rod and spoil the child" (Ex. R. 1:1). Abraham closed his eyes to Ishmael's evil ways and was reluctant to send him away (Gen. R. 53:12). Sarah, on the other hand, fully recognized the true character of Ishmael, for he dishonored women, worshiped idols, and attempted to kill Isaac (Gen. R. 53:11; Tosef. Sot. 6:6). He also mocked those who rejoiced at the birth of Isaac (Gen. R. 53:11). Ishmael is identified with one of the two lads who accompanied Abraham to the *Akedah. He was left behind with *Eliezer and the ass at the foot of Mount Moriah because he could not see the divine cloud which enveloped the mountain (Lev. R. 26:7). When abandoned by Hagar, Ishmael prayed for a quick end rather than a slow torturous death from thirst (PdRE 30). The angels hastened to indict Ishmael, exclaiming to God, "Wilt Thou bring up a well for one

whose descendants will one day slay Thy children with thirst?" Nevertheless, God provided the well that was created during the twilight of the Sabbath of Creation for Ishmael since he was at that time righteous, and God judges man "only as he is at the moment" (Gen. R. 53:14; PdRE 30).

Ishmael's skill in archery was so great (Gen. 21:20) that he became the master of all the bowmen (Gen. R. 53:15). He married a Moabitess named Ayesha. When Abraham later visited them, Ishmael was away and his wife was inhospitable. Abraham thereupon left a message with her that Ishmael should "change the peg of his tent." Ishmael understood the message, divorced his wife, and married a Canaanite woman, Fatima. Three years later, when Abraham next visited, Fatima received him kindly and Abraham declared that the peg was good. Ishmael was so pleased with his father's approval that he moved his entire family to the land of the Philistines so that they could be near Abraham (PdRE 30; *Sefer Yashar, Va-Yera*, 41a–b. Ayesha ('Ai'sha) and Fatima are the names of Muhammad's wife and daughter respectively, and the Midrash is obviously a late one). Ishmael became a genuine penitent at the end of his father's lifetime and he later stood aside out of deference for Isaac at his father's funeral (BB 16b). A man who sees Ishmael in a dream will have his prayers answered by God (Ber. 56b; cf. Gen. 21:17). Gradually Ishmael became identified not only as the ancestor of the Ishmaelites but also of the Arabs, who were often named Ishmael in the Middle Ages (see Ginzberg, Legends, 5, 223, 234).

In Islam

Ismāʿīl was a prophet (Sura 19:55; 21:85; 38:48), but it was only in *Medina that it became known to *Muhammad that he was the son of Abraham, one of the founders of the cult at the Kaaba in Mecca, one of the forefathers of the Arabs, and, like Abraham, Isaac, and Jacob, one of the worshipers of Allah, even though he was neither Jew nor Christian (Sura 2:119, 127, 130; 3:78; 14:44; 19:55). In the tale of the binding (Sura 37:99–110) Muhammad identified the son who was to be sacrificed as Ishmael and, indeed, the opinions of the traditionalists were also divided on this subject (cf. *Isaac). It is related that a renowned traditionalist of Jewish origin, from the *Qurayẓa tribe, and another Jewish scholar, who converted to Islam, told the caliph Omar ibn Abd al-Azīz (717–20) that the Jews were well informed that Ismāʿīl was the one who was bound, but that they concealed this out of jealousy (Tabarī, *Taʾrīkh*, 1:189; idem, *Tafsīr*, 23:54; Thaʿlabī, *Qiṣaṣ*, 77). Muslim legend also adds details on Hājar (Hagar), the mother of Ismāʿīl. After Abraham drove her and her son out, she wandered between the hills of al-Ṣafā and al-Marwa (in the vicinity of Mecca) in her search for water. At that time the waters of the spring Zemzem began to flow. Her acts became the basis for the hallowed customs of Muslims during the Ḥajj. According to Arab genealogists, Ismāʿīl was the progenitor of the northern Arabs, the *Mustaʿriba, i.e., Aramite tribes which were assimilated among the Arabs.

ISHMAEL, son of Nethaniah son of Elishama, one of the military commanders in the period after the destruction of the First Temple (II Kings 25:25; Jer. 41:1). Ishmael, a descendant of the Judahite royal family, assassinated *Gedaliah son of Ahikam (Jer. 40:13–14), who presided over the Judean puppet government set up by Nebuchadnezzar. It would appear that Ishmael's assassination of Gedaliah at Mizpah was both personally and politically motivated. Ishmael may have been jealous of Gedaliah, who had been appointed by the Babylonians as head of the remnant of the population in Judah, and therefore may have wished to kill him for that reason alone; but he could hardly have hoped that the Babylonians would reward him for the murder by appointing him in Gedaliah's stead. His only hope to gain a positive advantage lay in continued resistance to Babylon, which would, if successful, result in his succession to the throne of David. *Baalis, the king of Ammon, with whom Ishmael found refuge, apparently encouraged Ishmael, because Gedaliah was a collaborator whereas the Ammonites were in open revolt against Babylon (cf. Ezek. 21:24–27, and Zedekiah's attempt to flee across the Jordan, II Kings 25:4–5), and not, as some scholars maintain, because they hoped that after the murder of Gedaliah, the Babylonians would punish the Judahite remnant and attach what was left of the territory of Judah to Ammon. After killing Gedaliah (and 70 other Israelites who had later come to Mizpah to worship), Ishmael attempted the forcible transfer to Ammon of the remnants of the Judean population left at Mizpah (Jer. 41:2–10). However, this plan was frustrated by *Johanan son of Kareah and the military commanders with him. They met Ishmael and his captives at Gibeon and took them back to Mizpah; only Ishmael and eight of his men escaped to the Ammonite king (Jer. 41: 11–15).

ISHMAEL BEN ABRAHAM ISAAC HA-KOHEN (1723–1811), Italian rabbi. Ishmael ha-Kohen, rabbi of Modena, enjoyed a high standing in the Jewish world generally and was the last Italian rabbi who was accepted throughout the rabbinic world as a halakhic authority. He was among those to whom Naphtali Hirsch *Wessely appealed in his *Divrei Shalom ve-Emet* (Berlin, 1782) to defend the introduction of secu-

lar studies in Jewish schools. Though formally disassociating himself from the ideology of the *maskilim*, in practice he concurred with it. It is of note that he occasionally wrote secular poems. Ishmael was among those invited by Napoleon to answer questions put to the *Assembly of Jewish Notables which took place in Paris in 1806. From his replies on this occasion as well as from his other halakhic rulings, both published and in manuscript, he emerges as a rabbi alive to the needs of the times and inclined to narrow the gap between them and traditions. His realistic and moderate approach is clearly revealed in his responsa published under the name *Zera Emet* (pt. 1, Leghorn, 1785; pt. 2, *ibid.*, 1796; pt. 3, Reggio, n.d.), see especially pt. 1, nos. 69, 74, and 89; pt. 2, no. 107; and pt. 3, nos. 32, 33, and 42. Many responsa remain unpublished.

[Moshe Shraga Samet]

ISHMAEL BEN ELISHA (first half of the second century C.E.), *tanna*, the Ishmael generally mentioned without patronymic. Ishmael was one of the sages the stamp of whose personality and teachings had a permanent effect on tannaitic literature and on Judaism as a whole. He was a kohen (Ket. 105b), and in a *baraita* (Tosef., Ḥal. 1:10) it is stated that he once took an oath "by the [priestly] garments worn by my father and by the miter which he set between his eyes"; this suggests that his father was a high priest, but since no high priest called Elisha is known during the relevant period, he may have had an ancestor in mind. Still a child at the time of the destruction of the Second Temple, he was taken captive to Rome and ransomed by R. Joshua (Git. 58a), whose pupil he became (Tosef., Par. 10:3). He also studied under Neḥunyah b. ha-Kanah, who was his teacher in halakhic Midrash (Shev. 26a). Ishmael lived at Kefar Aziz, south of Hebron near Idumea (Kil. 6:4; Ket. 5:8), and appears to have taken local tradition into account in his decisions (Ket. 5:8). One of the chief spokesmen among the sages of *Jabneh, he took part in and expressed his view at all its meetings and assemblies and was present, too, on the day when Eleazar b. Azariah was appointed in the yeshiva (Yad. 4:3). In the debate concerning the commandments for which one should suffer martyrdom rather than transgress, he was of the opinion that it was permissible to transgress the prohibition against idolatry in order to save one's life, as long as it was not done in public (Sifra, Aḥarei Mot. 13:14).

His most intimate colleague was *Akiva, and he disputed with him on *halakhah*, *aggadah*, and in halakhic expositions of the Bible. Both of them laid down and evolved different systems of exposition and the derivation of the *halakhah*, and different schools were named after them: De-Vei ("the house (or school) of") R. Ishmael and De-Vei R. Akiva. Most of the extant halakhic Midrashim belong to one of those schools, the *Mekhilta de-R. Ishmael* on Exodus, and the *Sifrei* on Numbers coming from Ishmael's school, the *Sifra* on Leviticus and the *Sifrei* on Deuteronomy coming from Akiva's school. For

the fundamental differences between these two schools see *Midreshei Halakhah*, section II.

Many of the actions and ethical sayings ascribed to Ishmael testify to his love of mankind, and especially of every Jew. On one occasion, when mentioning "the children of Israel," he added: "May I be an atonement for them" (Neg. 2:1); on another he said: "All Israel are to be regarded as princes" (i.e., there can be no distinctions between Jews; BM 113b). He declared that mourning over the destruction of the Second Temple would demand abstinence from meat and wine, were it not for the principle that no restriction is imposed on the public unless the majority can endure it; similarly the prohibition instituted by the Roman authorities against the study of the Torah and the observance of the *mitzvot* would require that one should not marry or beget children, so "that the seed of Abraham might cease of itself. But let Israel go their way. Better that they err unwittingly than presumptuously" (BB 60b, and parallels). The following story is told in the Mishnah (Ned. 9:10): "It once happened that a man vowed to have no benefit from his sister's daughter (i.e., not to marry her); and they brought her to the house of R. Ishmael and beautified her. R. Ishmael said to him, 'My son, didst thou vow to abstain from this one?' And he said, 'No!' And R. Ishmael released him from his vow. In that same hour R. Ishmael wept and said, 'The daughters of Israel are comely but poverty destroys their comeliness.' When R. Ishmael died the daughters of Israel raised a lament saying, 'Ye daughters of Israel, weep over R. Ishmael!'" His very human approach is evidenced in his aphorism: "Receive all men joyfully" (Avot 3:12). From his school came the dictum, "One should always use decorous language" (Pes. 3a), as well as an ethical explanation of why the whole ear is hard and only the lobe is soft – "so that if one hears anything improper, one may stop up the ear with the lobe" (Ket. 5b).

According to the Talmud he opposed the extreme view of Simeon b. Yoḥai, who encouraged men to refrain from mundane pursuits, such as plowing, sowing, reaping, threshing, and winnowing, in order to fulfill the literal interpretation of the verse, "This book of the law shall not depart out of thy mouth" (Josh. 1:8). For his part, Ishmael recalled that the Bible states, "Thou shalt gather in thy corn" (Deut. 9:14), thus teaching that the study of the Torah is to be combined with a worldly occupation (Ber. 35b). Yet the Talmud states that he prohibited Eleazar b. Dama, his sister's son, from learning Greek wisdom because this would be at the expense of studying the Torah (Men. 99b). He adopted an uncompromising attitude toward the Christian sectarians, then still within the Jewish fold, and several of his statements against them and their writings are couched in harsh terms (Shab. 116a, and see Av. Zar. 27b).

It is doubtful whether Ishmael survived until the Bar Kokhba revolt. His name is apparently included among the first martyred sages killed in the persecutions which followed that revolt (Mekh. Nezikin 18; and parallels, but cf. Tosef., Sot. 13:4). Later *aggadot* combined various traditions on the mar-

tyrs into a single literary work, making their martyrdom take place simultaneously (see *Ten Martyrs) and dwelling in legendary terms on the personality of Ishmael. This legendary figure of the high priest's son (see Tosef., Ḥal. 1:10 above), who is said to have himself been a high priest, knew the Tetragrammaton, by means of which he was able, at the request of his companions, to ascend to heaven to learn whether the decree of death had indeed been issued from on high. While Akiva, the leading figure among the "four who entered the *pardes*," served as the protagonist of the early *heikhalot* text, *Heikhalot Zutarti*, it was R. Ishmael who took over this role in later works like *Heikhalot Rabbati*, and similar works relating to *Ma'aseh Bereshit*, and *Ma'aseh Merkavah* (see *Kabbalah and *Merkabah Mysticism). Among his pupils were Illai, the father of R. Judah (Git. 6b), Meir (Er. 13a), Jonathan, and Josiah (Men. 57b), who are most mentioned in the halakhic Midrashim of the school of Ishmael.

[Shmuel Safrai]

ISHMAEL BEN JOHANAN BEN BEROKA (middle of the second century), *tanna*. He was a contemporary of *Simeon b. Gamaliel II, and he is often quoted as being in agreement or disagreement with him (Tosef., Er. 5 (4):2; Tosef., Yev. 13:5). He is mentioned three times in the Mishnah (BK 10:2, San 11:1, Avot 4:5), about 30 times in the Tosefta, in all areas of *halakhah*, and about the same number of times in Babylonian Talmud and the Jerusalem Talmud. He is mentioned several times in connection with the scholars of Jabneh (Tosef., Yev. 6:6, 10:3). His only aggadic teaching is included in *Avot* (4:5): "He who learns in order to teach, Heaven will grant him the opportunity both to learn and to teach; but he who learns in order to practice, Heaven will grant him the opportunity to learn and to teach, to observe and to practice."

[Harry Freedman]

ISHMAEL BEN PHIABI (Phabi) II, high priest, appointed by Agrippa II in 59 C.E. He is not to be confused with a high priest of the same name appointed by the procurator Valerius Gratus in 15 C.E. The Phiabi family was one of the few from whose ranks the high priests were chosen. The name suggests an Egyptian origin and the immigration of the family to Erez Israel seems to have taken place in the time of Herod, when Joshua b. Phiabi held office as high priest (Jos., Ant. 15:322). According to Josephus, Ishmael was a member of the delegation sent to Rome in connection with Agrippa II's opposi-

tion to the wall erected at the Temple by the priests (see Sabina *Poppaea). Though Nero upheld the appeal (Jos., Ant. 20:194–6), Ishmael was detained in Rome as one of the hostages and Joseph b. Simeon was appointed to succeed him. He apparently held office for a period of two years only. An Ishmael b. Phiabi is mentioned on various occasions in the Talmud as a righteous man, but it is not clear which of them is referred to. A well-known *baraita* (Pes. 57a; Ker. 28b; Tosef., Men. 13:21) states: "Woe is me because of the house of Ishmael b. Phiabi, woe is me because of their fists," etc., but it continues that "the Temple court cried out, 'Lift up your heads, O ye gates, and let Ishmael the son of Phiabi, Phinehas' disciple, enter and serve as high priest.'" The Mishnah also states that with his death the glory of the high priesthood departed (Sot. 9:15). He was one of those who prepared the ashes of the *red heifer, of which only seven (or nine) were prepared in the whole history of the Second Temple (3:5). A slightly different version is given in the Tosefta (Par. 3:6; cf. Num. R. 19:10), which suggests that he prepared two, the first not in accordance with the Pharisaic requirements, whereupon he prepared the second. According to Buechler, this accounts for the favorable mention of a Sadducean priest by the Talmud. Derenbourg is of the opinion that this act is to be ascribed to the first Ishmael.

[Lea Roth]

ISHMAEL BEN YOSE BEN ḤALAFTA (end of the second century C.E.), *tanna*. He is not mentioned by name in the Mishnah (apart from *Avot*, see below), and most of the halakhic sayings transmitted by him in the Tosefta are in his father's name (Tosef. Ter. 4:2, Maas. 1:2, Kel. BK 5:16; Oho.18:14; Nid. 4:12. Ṭoh. 10:12). He was mentioned as a member of a *bet din* (along with R. Eleazar Hakappar and R. Pinhas ben Yair) who discussed the establishment of *halakhot* and *takkanot* (Tosef., Oho. 18:18). According to the Talmud Ishmael was the eldest son of *Yose b. Ḥalafta (Shab. 118b) and succeeded him in the leadership of the town of Sepphoris (Er. 86b). The sources note Ishmael's extensive knowledge of the whole of the Bible (TJ, *ibid.*). He was greatly occupied with civil law and much is related of his exceptional care to maintain his impartiality and not to allow any suspicion or hint of bribery to attach to him, so that to him was applied the verse (Isa. 33:15): "That shaketh his hands from holding of bribes" (Mak. 24a). His great experience as a judge made him say: "He who shuns the judicial office rids himself of hatred, robbery, and vain swearing; but he who presumptuously lays down decisions is foolish, wicked, and of an arrogant spirit." He used to say: "Judge not alone. For none may judge alone save God" (Avot 4:8). Ishmael was appointed by the government, against his will, to head the local police. He is criticized for

not fleeing abroad in order to avoid having to deliver Jews to the government (BM 83b). According to the Talmud he died prior to the death of Judah ha-Nasi (Pes. 118b). The great pupils of Judah, such as *Ḥanina b. Ḥama in Ereẓ Israel and *Rav in Babylon, transmitted some of his teachings and customs (Kid. 71a; Ber. 27b). One of his aggadic sayings is: "The older scholars grow, the more wisdom they acquire … but as for the ignorant, the older they become the more foolish they become" (Shab. 152a).

[Shmuel Safrai]

ISHMAELITES (Heb. יִשְׁמְעֵאלִים), a group of nomadic tribes related according to the Bible to *Ishmael, son of Abraham and Hagar. In Genesis 25:13–15 and I Chronicles 1:29–31 there is a list of "the sons of Ishmael," which requires special consideration (see below). Apart from this list, the designation "Ishmaelite(s)" is found in Genesis 37:25–28; Judges 8:24; Psalms 83:3; I Chronicles 2:17 and 27:30. To date no mention of Ishmaelites as a designation of nomads has been found in other sources of the biblical period. The assumptions concerning the identification of the name Sumu(')ilu in the inscriptions of Sennacherib and Ashurbanipal, kings of Assyria, with Ishmael (J. Lewy, R. Campbell Thompson) are based on incorrect interpretations of these texts.

Knowledge of the area and the characteristics of the nomads called Ishmaelites can be derived, therefore, only from the biblical references to the Ishmaelites (apart from the list of the "sons of Ishmael"), as well as from what is related in Genesis about Ishmael. The "father" of these nomads is definitely connected with the desert regions between Ereẓ Israel and Egypt, and he is the son of Hagar, the Egyptian maidservant (Gen. 16:1, 3). Hagar's meeting with the angel of God who brought her tidings of Ishmael's forthcoming birth and his destined greatness is connected with the "spring of water in the wilderness, the spring on the road to Shur," which is later called Beer-la-hai-roi, and "is between Kadesh and Bered" (*ibid.*, 16:7, 14). After having been expelled by Abraham, Hagar and Ishmael are saved by an angel of God in the wilderness of Beer-Sheba (21:14–19). When he grew up and became a bowman, Ishmael lived in the wilderness of Paran, and his mother got a wife for him from Egypt (21:21). The Ishmaelites' area of habitation is defined in Genesis 25:18: "from Havilah, by Shur, which is close to Egypt …" This area includes the region in which Saul defeated Amalek: "from Havilah as far as Shur, which is east of Egypt" (I Sam. 15:7). The exact location of the Havilah mentioned in these passages is unknown, but according to the description of Saul's battle with the Amalekites it can be established with certainty that this place is in southern Palestine.

The Ishmaelites are described as Bedouin who live in the desert, raise camels (see especially the inclusion of Obil the Ishmaelite, who was "over the camels," among David's officers, I Chron. 27:30), are desert robbers (cf. Gen. 16:12), and periodically overrun the permanent settlement and plunder it

(Ps. 83:7; Judg. 8:24). In addition, the Ishmaelites engaged in caravan trade (Gen. 37:25). (For relations of kinship and intermarriage between the Ishmaelite groups, who were close to the borders of settled areas, and the permanent inhabitants cf. Gen. 28:9, 36:3; I Chron 2:17.)

At the time when the Midianites, Amalekites, and Bene Kedem had become a rare sight in the land of Israel a biblical writer explained to his contemporaries that these were a species of Ishmaelites (cf. Judg. 6:3, 33; 7:12; 8:10, 22, 26 with 8:24). The account of the sale of Joseph mentions an Ishmaelite caravan on its way from Gilead to Egypt (Gen. 37:25, 27; 39:1). The same account also calls these traders Midianites (37:28) or Medanites (37:36). The identification of the Midianites, Medanites, and Amalekites with the Ishmaelites, as well as the inclusion of the latter's areas of habitation with that of the Amalekites, support the assumption that during a specific period the Ishmaelites were the principal group of nomads on the borders of Palestine (cf. Gen. 16:12: "He shall dwell alongside of all his kinsmen"; 25:18: "they camped alongside of all his kinsmen"; and 21:18: "… for I will make a great nation of him"). It is also possible that groups that were not directly related to the Ishmaelites were sometimes called by their name (Midian and Medan are listed among the sons of Abraham and Keturah, Gen. 25:2; I Chron. 1:32; Amalek is listed among the descendants of Esau, i.e., Edom, Gen. 36: 12, 16; I Chron. 1:36). It appears that this period ended no later than around the middle of the tenth century B.C.E., from which time on there is no mention of the Ishmaelites in the historiographic and literary sources in the Bible.

Genesis 25:13–15 and I Chronicles 1:29–31 contain the list of "the sons of Ishmael," in which 12 groups are listed by name: Nebaioth, Kedar, Adbeel, Mibsam, Mishma, Dumah, Massa, Hadad, Tema, Jetur, Naphish, Kedmah (for the number of the 12 sons of Ishmael cf. also Gen. 17:20). Of these, Kedar, Mibsam, Mishma, Dumah, Massa, Jetur, and Naphish are mentioned in other passages of the Bible. Assyrian and North-Arabian inscriptions mention Nebaioth, Kedar, Adbeel, Dumah, Massa, and Tema; while Greek sources from the second century B.C.E. on mention also the sons of Jetur. It should be noted that apart from the genealogical list, not one of these groups is mentioned in any source from the period preceding the tenth century B.C.E. In light of what is known about the peoples just mentioned, especially from Assyrian sources, it can be seen that they are not connected with the unified framework of the Ishmaelite tribes mentioned above: the scope of their wanderings is much greater than that of the Ishmaelites and covers an area from northern Sinai (Adbeel) to the edge of Wadi Sizhan (Duma) and the western border of Babylonia (Kedar, Nebaioth, and Massa). The collective name for these groups in all the sources is "Arabs" (Aribi, Arabu, Arbaia, etc.), and there is no doubt that this is the name by which they called themselves. On the other hand, the Assyrian sources make no mention of an ethnic framework called Ishmael; and there is no evidence that the nomads were called by this name.

According to this view the list of "the sons of Ishmael"

is composed of nomadic peoples who dwelt on the borders of Palestine and in the wide desert area in North Arabia and the Syrian-Arabian desert from the eighth century B.C.E. on, and who were called the "Sons of Ishmael" although the ancient Ishmaelites by this time – as a result of the battles of Saul and David with the nomads on the borders of their kingdom and the appearance of new nomadic groups who forcefully pushed them away from the areas adjacent to Palestine – no longer inhabited this area.

[Israel Eph'al]

ISHMAEL OF ʿUKBARA (Ar. **Ismāʿīl al-ʿUkbarī**; ninth century), sectarian teacher from ʿUkbarā, near *Baghdad. *Al-Qirqisānī asserts that Ishmael dubbed *Anan b. David, the titular founder of *Karaism, an ass, yet some of his own teachings were so absurd as to cause ridicule. Nevertheless, when he felt his end approaching, he instructed his followers to inscribe upon his tombstone "The chariots of Israel and the horsemen thereof" (II Kings, 2:12). Ishmael did not recognize the Masoretic emendations (*keri*) in the biblical text, and ruled that it should be read as written (*ketiv*), yet at the same time he asserted that some passages reflect a corrupt reading. He permitted the consumption on the Sabbath of food cooked or gathered on that day by persons of other faiths. He permitted a person to use the income of a business operating seven days a week, such as a bathhouse or a shop, provided he devoted the proceeds of each seventh and forty-ninth or fiftieth day for charity (on the analogy of the Sabbatical and Jubilee years for agricultural produce). He also prohibited the consumption of meat.

His followers appear to have been comparatively few, and Al-Qirqisānī states that in his day (tenth century) none was left. They were presumably absorbed in the slowly consolidating Karaite sect. In ʿUkbarā, Ishmael was succeeded by Mīshawayh al-ʿUkbarī, who organized a separate group of his own disciples.

[Leon Nemoy]

ISIDOR, LAZARE (1814–1888), French rabbi. Born in Lixheim, Lorraine, he became rabbi of Pfalzburg in 1838, of Paris in 1847, and chief rabbi of France in 1867. While rabbi of Pfalzburg, he refused to permit a member of the congregation of Saverne to pronounce the humiliating *oath *more Judaico*, in the synagogue of Saverne when requested by the tribunal of Sarrebourg. As rabbi in charge, Isidor closed the synagogue, and was consequently prosecuted (1839). A brilliant defense by Adolphe *Crémieux brought about Isidor's acquittal. This

and similar cases contributed to the final abolition of the oath *more Judaico* in France (1846).

°**ISIDORE OF SEVILLE** (**Isidorus Hispalensis**; c. 560–636), archbishop of Seville, theologian, and encyclopedist; one of the last Church *Fathers. Isidore was probably born in Cartagena, but when he was still a child his family moved to Seville. He was educated by his elder brother Leander, archbishop of Seville, and after his brother's death in 600, Isidore succeeded him in the episcopate, which he held until his death. In his numerous writings Isidore encompassed all the sciences of his time; his great erudition was mainly expressed in his book *Originum, sive etymologiarum*. His most important historical work is *Historia de Regibus Gothorum Vandalorum et Suevorum*.

During his episcopate, Isidore presided over several regional and national church councils in Visigothic Spain, most important of which was the fourth national council of Toledo in 633, which determined the authority of the Visigothic kingdom and the status of the Church. Though the council agreed with Isidore's fundamental views against forced conversion of Jews, it may be assumed that he prompted the numerous laws decreed by this council against converts of Jewish origin who had remained faithful to Judaism. While Isidore was strictly opposed to forced conversion, he believed that the political status of the Jews should be exploited to bring about their voluntary conversion, an attitude he expressed in his polemical writings against Judaism. In the first of these, *Isaiae testimonia de Christo Domino*, he tries to prove that Isaiah's prophecies herald Jesus as Messiah. In his main apologetic book *De fide catholica ex Veteri et Novo Testamento contra Iudaeos*, he tries to find evidence for the truth of Christianity in all the biblical books. Despite its title, the book does not contain any dogmatic evidence against the Jews from the New Testament. In both these works Isidore does not refer to the original Hebrew text of the Bible nor does he appear to have any knowledge of talmudic literature. His information in this field is based mainly on the writings of the Church Fathers, *Jerome in particular. Despite his missionary fervor, his writings are characterized by their moderate and restrained language, contrary to the prevailing anti-Jewish polemics.

In his exegetical works Isidore generally preferred mystical and allegorical interpretations, especially in *Mysticorum expositiones sacramentorum seu quaestiones in Vetus Testamentum*, where he tries to reconcile divergencies between the Old and New Testaments. This work was designed to support Christian arguments in anti-Jewish disputations. His book *Liber de variis quaestionibus adversus Iudaeos*, attributed by some scholars to a later period, was aimed at bringing back into the fold of the Church those converts who had returned to Judaism.

Isidore's works were widely read in the Middle Ages, as attested by the great number of manuscripts remaining as well

as the translation into German of *De fide catholica…*, made at a relatively early date. Up to the 12th century all anti-Jewish apologetic writers in Western Europe were inspired by Isidore's writings and his influence on the anti-Jewish disputations in Spain lasted even longer. Isidore's writings are collected in Migne's *Patrologia Latina* (vols. 81–84, 1850–62).

ISIS, Egptian deity, at whose instigation, it was said, the Jews were forced to leave Egypt. Cheremon, the enemy of the Jews, asserted that the goddess Isis had appeared to the Egyptian king Amenophis, and had censured him because her sanctuary had been destroyed; whereupon the priest Phritibantes told the king that the terrible vision would not recur if he would purge Egypt of the "foul people." Then the departure of the Jews from Egypt took place (Jos., Apion I, 32). Tacitus has a different version, according to which the Jews were natives of Egypt, and had emigrated during the reign of Isis (Hist. V, 2–5). In the Epistle of Jeremiah (30–40) either the cult of Isis or that of Cybele is described. The violation of the chaste Paulina in the Temple of Isis at Rome was one of the reasons for the expulsion of the Jews from that city by Tiberius (Jos., Ant. XVIII, 3:4). After the destruction of Jerusalem, Vespasian and Titus celebrated their triumph in the Temple of Isis at Rome (Jos., Wars VII, 5:4).

ISKENDERUN (formerly **Alexandretta**), harbor town on the Mediterranean coast of Turkey on the gulf of the same name; population (2004), 173,900. The town (along with its district), first attached to Syria under the French mandate, was annexed to Turkey in 1939. Jews settled in Iskenderun in the Middle Ages. They were expelled by the Crusaders in 1098, but returned during the 16th century. During the 17th century the Jews of Iskenderun were among the supporters of Shabbetai *Ẓevi. The community was small and numbered some tens of families. After World War I about 20 families remained in Iskenderun. Most of the Jews emigrated from Iskenderun to Israel with the establishment of the State.

ISKOWITZ, GERSHON (1921–1988), Canadian painter. Iskowitz was born in Kielce, Poland. He registered at the Warsaw Academy of Art in 1939. With the German invasion of Poland, he was put to forced labor. In 1942, his parents and sister were taken to Treblinka. A year later, he and his brother were transported to Auschwitz. In the fall of 1944, he was transferred to Buchenwald. Liberated on April 11, 1945, he was the only member of his family to survive the Holocaust. In 1947 he studied at the Munich Academy of Art and privately, for a short time, with Oskar Kokoschka. In September 1949 he

emigrated to Canada and settled in Toronto. He held his first solo exhibition in Toronto in 1957.

Only a few of Iskowitz's early sketches recording life in the ghetto and the camps survived. His memories and the horrors of the war, however, remained a principal focus of his drawings into the 1950s. In 1952 Iskowitz began taking sketching trips into the countryside around Toronto. This work became the basis for the development of the dramatic, painterly abstract canvases for which he is best known, a direction that was confirmed on the first of several trips into the Canadian north; the first, by helicopter, was funded by a Canada Council grant. These large-scale abstractions, which begin with the perception of landscape, have been described as radiant and joyful expressions that transform the immediacy of vision into colored light.

Iskowitz exhibited regularly in Toronto; after 1964, with the Gallery Moos. He was one of two artists selected to represent Canada at the 1972 Venice Biennale. In 1982, the Art Gallery of Ontario held a major retrospective of his work. In 1985, he established the Gershon Iskowitz Foundation that continues to award an annual prize to experienced, professional Canadian artists.

ISLAM. The word conveys the sense of total and exclusive submission to Allah and is the name of the religion enunciated by the Prophet *Muhammad in the city of Mecca at the beginning of the seventh century C.E. An adherent of it is called a Muslim, a person who submits to Allah totally and exclusively. While the word is normally used in this sense, in traditional Muslim usage the word also denotes the ancient monotheistic faith associated with *Abraham. It is in this sense that Abraham is explicitly designated as Muslim in *Koran 3:67; the same designation is implicit for the Old Testament prophets and for Jesus as well. Liberal-minded modern Muslims tend to interpret this as a reflection of Muslim tolerance and recognition of the prophets of Judaism and Christianity; viewed from a different perspective, the idea may also be construed as an appropriation of Jewish and Christian religious history by Muslims.

In contradistinction to other religions whose names were frequently given to them by outsiders (cf. W.C. Smith, *The Meaning and End of Religion*, (1963), 80–82), the name Islam is indigenous and appears in the Koran eight times; moreover, the Koran maintains that Allah himself approved of Islam (Koran 5:5) and it is "*the* religion in the eyes of Allah" (Koran 3:19). Conversely, "whoever desires a religion other than Islam, it will not be accepted from him, and he will be in the hereafter one of the losers" (Koran 3:85). Muslims use Islam as the only name for their religion; other names by which Islam has been known until recently in European languages – such as "Mohammedanism" or "Mahométanisme" – are totally unacceptable to them. Nevertheless, in medieval Muslim texts one

occasionally encounters expressions such as "Muhammadan way" (*ṭarīqa muḥammadiyya*) in a sense identical with Islam. In the literature of tradition, the terms Islam and Muslim are sometimes also given a more sublime significance; playing on the various meanings of the Arabic root *s-l-m*, a tradition says that "a Muslim is someone by whose hands and tongue the Muslims are not harmed" (al-Bukhārī, *Ṣaḥīḥ, Kitāb al-īmān*, 4; ed. Krehl, vol. 1, 11). Recent interpretations according to which Islam is related to *salām* ("peace") seem to have no basis in traditional literature, though the linguistic root of the two words is identical.

In the pre-Islamic period (called the era of barbarism and ignorance, *al-Jāhiliyya*), Arab inhabitants of the Peninsula believed in a multiplicity of gods but were not unaware of Allah whom they believed to be the strongest among these. In the Muslim tradition, this is called "associationism" (*shirk*), the belief that Allah has associates (*shurakāʾ*) in His divinity. These associates were believed to have an essential mediatory role between human beings and Allah. Muslim tradition maintains, nevertheless, that pre-Islamic Arabs understood that Allah was more powerful than all other gods and in times of extreme danger they placed their trust in Him alone, becoming, in a manner of speaking, "temporary monotheists" (cf. Koran 29:65–66, 31:22; Izutsu, *God and Man*, 102–103). In the Peninsula there were also Jewish and Christian communities. The Jews lived in the northern city of *Khaybar and in *Medina where the Prophet Muhammad was active from 622 C.E. until his death ten years later. The Christians inhabited the town of Najrān and also lived elsewhere: the Christian tribe of Taghlib lived first in the Najd region of the Peninsula and later on the lower Euphrates (M. Lecker, "Taghlib" EIS², s.v.). Small Zoroastrian communities probably existed in the eastern part of the Peninsula. Islam developed out of polemics with these religious communities and a substantial part of Muslim belief and ritual can only be understood against this background.

"The Pillars of Islam" (arkān al-islām)

In contradistinction to Judaism which speaks of 613 (*taryag*) commandments, the Muslim tradition does not keep count of the commandments incumbent on a Muslim. However, five of these have acquired a special standing in Islamic tradition. One of them is related to the manner in which an unbeliever embraces Islam, while the other four belong to the ritual aspect of the religion. Each of these commandments is mentioned several times in the Koran, but there they do not appear as a separate group. However, in the literature of prophetic tradition (*ḥadīth*), the five commandments are grouped and designed as the pillars on which Islam stands. In the collection compiled by al-Bukhārī (d. 870 C.E.), we read: "Islam is built on five (pillars): Witnessing that there is no god but Allah and that Muhammad is the messenger of Allah, and the performance of prayer, and giving of alms, and pilgrimage, and the fast of Ramaḍān" (al-Bukhārī, *Ṣaḥīḥ, Kitāb al-īmān*, 2; ed. Krehl, 1, 10).

1. The double formula saying that "there is no god but Allah and Muhammad is the messenger of Allah" (called in Arabic *shahāda* ("witnessing"), *kalima* ("word"), or *kalimat al-ikhlāṣ* ("the word of exclusive devotion") does not appear in the Koran as one unit. Its first part appears with slight modifications several times. Koran 3:18 reads: "Allah witnessed that there is no god except Him." (Cf. Koran 2:255, 37:35 and elsewhere.) The second part appears only once, in Koran 48:29: "Muhammad is the messenger of Allah. And those who are with him are hard against the unbelievers, merciful one to another…" This formula is the most distinctive expression of Muslim monotheism and of the central position accorded in Islam to the Prophet Muhammad. It is an important part of worship, appearing in the call to prayer and in the prayer itself. It is also the formal requirement for joining the Muslim community. Like other Muslim rituals, this formula seems also to have undergone certain developments before reaching its final form. The tradition maintains that the first part of the *shahāda*, affirming the oneness of Allah, was sufficient to indicate the conversion of Arab polytheists to Islam because it is unambiguous in the rejection of their former belief in multiple gods. When the call to Islam was directed at Christians and Jews, this part of the *shahāda* was no longer sufficient: an affirmation of Allah's oneness by monotheist Jews or Christians does not indicate their conversion to Islam because Christians and Jews may identify with the first part of the *shahāda* without changing their religious affiliation. For a Jew or a Christian, therefore, the acknowledgment of Muhammad's prophethood was considered essential. And since some Jewish groups were willing to acknowledge Muhammad's prophethood but restricted its validity to Arabs alone (see Y. Erder, "The Doctrine of Abū Īsā al-Isfahānī and Its Sources," in: *Jerusalem Studies in Arabic and Islam*, 20 (1996), 162–99), Jews and Christians were obliged – according to some traditions – not only to pronounce the double *shahāda*, but also unequivocally to renounce their former faiths.

2. Prayer (*ṣalāt*): Pre-Islamic Arabs did not observe an obligatory daily routine which could be seen as an inspiration for the Islamic prayer. It is therefore significant to observe that *ṣalāt* ("prayer") is an Aramaic loan word which means bowing or prostration. Nevertheless, prayer is mentioned as an obligation of the believer already in the Meccan period of the Koran (Koran 108:1–2; 107:4–5). It seems that in the first stage of the development, the Prophet spoke of two daily prayers: in the evening and at dawn. Koran 17:80 enjoins the Muslims to "perform the prayer at the sinking of the sun to the darkening of the night and the recital of dawn (*Koran al-fajr*)…." Later developments in this field are not very clear, but it appears that after the *hijra* to *Medina an additional prayer, called the "middle" one, was added when the Koran says: "Be watchful over the prayers and the middle prayer…" (Koran 2:239). The "middle prayer" is variously explained as the noon or the afternoon prayer.

If we assume that the prayers mentioned in the first part of the verse are the two prayers which had been referred to in

the Meccan period, we reach the conclusion that after the *hijra* the number of prayers reached three. Though there is no hard evidence to substantiate this notion, some scholars tend to speculate that this happened under the influence of the Jews with whom the Prophet came into contact in Medina. The number of the Muslim prayers eventually reached five, but we do not know exactly when this development took place. There is some evidence to suggest that during the *Umayyad period in *Syria the number of the obligatory prayers was not generally known, and at the time of the Umayyad caliph ʿOmar b. ʿAbd al-ʿAzīz (r. 717–720 C.E.) the proper time for prayer was not known either (Goldziher, *Muslim Studies*, 2, 39–40). As for the reasons why the Muslims eventually decided on the number of five daily prayers, these are not clear. Goldziher maintains that the number was influenced by the Zoroastrian tradition which had five daily prayers. Islamic tradition connects the establishment of the five prayers with Muhammad's miraculous nocturnal journey to heaven (*isrāʾ, miʿrāj*). According to this tradition, Allah intended to impose on the Muslim community 50 daily prayers, but after some negotiations (which Muhammad conducted with Allah in compliance with the advice of Moses), the number was reduced to five. The tradition maintains, however, that these five prayers have the value of fifty.

In any case, post-Koranic Muslim tradition established five daily prayers: morning (*fajr*), noon (*ẓuhr*), afternoon (*ʿaṣr*), evening (*maghrib*), and night (*isha*). Before each prayer it is necessary to perform an ablution (*wuḍu*), which involves washing the hands up to the elbows, rinsing the mouth and nose, and washing the feet including the ankles. If water is not available, sand may be used; in this case the procedure is called *tayammum* (Koran 5:8–9). In preparation for the Friday prayer washing the entire body (*ghusl*) is required. The prayer itself consists of a prescribed sequence of bodily movements (*rakʿa*), including bending, standing, prostration, and half-kneeling, half sitting. The only texts which are essential for the prayer being valid are the formula *Allāhu Akbar* and the *Fātiḥa*, the opening chapter of the Koran.

Three elements associated with Muslim prayer will serve as an illustration of the idea that Islam developed out of polemics with, and attempts to differentiate itself from, Judaism and Christianity. As is well known, Muslims now pray barefoot. However, there is evidence to suggest that in the early days of Islam, Muslims prayed with their shoes on. This was recommended, even enjoined, in order to distinguish between Muslims and Jews who are said to have prayed barefoot. The second element is the *adhān*, the call preceding each prayer. The tradition maintains that in the beginning the Prophet used a horn "like the horn of the Jews" for this purpose. Later he disliked this and ordered the clapper (*nāqūs*) to be used to summon the believers, in emulation of Eastern Christians. Eventually, ʿOmar b. al-Khaṭṭāb, the second caliph, had a vision in which he was told: "Do not use the clapper, rather call to prayer (with human voice)." In this way the characteristic Muslim call to prayer is said to have emerged. This call now

consists of pronouncing the formula "Allahu Akbar" four times, the *shahāda* twice, the formula "come to prayer, come to success" twice, "Allahu Akbar" twice again, and, finally, the *shahāda*.

The development of the Muslim direction of prayer (*qibla*) is the most famous reflection of the progressive dissociation of Islam from Judaism. The Muslim direction of prayer underwent several changes. The relevant traditions are reasonably clear, but there is no way to verify their historicity. Koran 2:216, considered by some commentators to be abrogated, seems to belittle the importance of the direction of prayer, saying that "To God belong the East and the West; wherever you turn, there is the face of God." On the other hand, we have three traditions concerning the direction of prayer in Mecca before Muhammad's migration to Medina in 622. According to one of them, in Mecca the Prophet faced the Kaʿba while praying; according to another, he faced Jerusalem; according to a third, which constitutes an attempt to harmonize between the first two ones, he faced Jerusalem, but took care to have the Kaʿba on the straight line between himself and Jerusalem. In this way, the tradition maintains, he faced both sanctuaries.

Regarding the period of the Prophet's sojourn in Medina (622–632 C.E.), the tradition is unanimous and maintains that for the first 16 or 18 months of his stay in Medina, the Prophet and the Muslims with him prayed toward Jerusalem; this is why Jerusalem came to be known in Islam as "the first *qibla* and the third sanctuary" (after Mecca and Medina) (*ūlā al-qiblatayn wa thālith al-ḥaramayn*). There is no record of a divine command to do this; nevertheless, some commentators think that such a command was issued, while others maintain that praying in the direction of Jerusalem was the Prophet's own decision. Some suggest that the Prophet was commanded to pray toward Jerusalem "in order to conciliate the Jews." Frequently we read that at some point in time the Prophet became averse to this direction of prayer, and Koran 2:150, which commands the Muslims to pray in the direction of Mecca, was revealed in response to the Prophet's desire. The change of the *qibla* to Mecca introduced a crucial Arabian element into Islam and was a major step in its disengagement from Judaism.

The five daily prayers may be performed in public or in private, though according to the tradition public prayer is always preferable. The only prayer which must always be performed in public is the noon prayer on Friday (*jumʿa*).

Naturally, no congregational prayer was held before the *hijra* in Mecca because of the precarious position of the few Meccan Muslims in that period. Though there are some references to the *jumʿa* prayer in Medina before the *hijra*, it is clear that the *jumʿa* prayer acquired its central standing in Muslim ritual in the Medinan period of the Prophet's career. The choice of Friday as the Muslim day of congregational prayer was explained in various ways. Some thought that it was just to differentiate Islam from Judaism and Christianity; but this argument is good for any day except Saturday and Sunday. A classical tradition observes that although the Jews and the

Christians were given their holy books before the Muslims, the Muslims precede them in their day of prayer, in order to do them justice. The most widely accepted scholarly explanation was given by S.D. Goitein ("The Origin and Nature of the Muslim Friday Worship," *Studies in Islamic history and institutions* (1968), 111–25). Goitein suggests that Friday was chosen because on that day the Jews of Medina used to prepare provisions for the Sabbath; because of this Friday became a market day on which not only the inhabitants of Medina, but also the inhabitants of the adjacent areas assembled in the city and engaged in commerce. Since Koran 62:9–11 clearly says that commercial activity must cease when the call to prayer is sounded, this explanation sounds convincing.

The Friday prayer is the only prayer during which a sermon (*khuṭba*) is delivered. The sermon normally includes praise of Allah, a prayer for the Prophet, exhortation to good deeds, and a chapter from the Koran. It is also customary to mention the ruler. This custom has great political importance: it is a symbol of the worshipers' allegiance to the government in power. Mentioning the ruler's name in the sermon is considered indicative of the preacher's (and the congregation's) political loyalty, while its omission is considered a symbol of rebellion. *Mutatis mutandis*, sermons are at times used for political statements in the modern period as well. Religiously speaking, Friday is not a day of rest like the Jewish Sabbath. As is clear from Koran 62:9–11, work is prohibited only during the prayer itself; after the prayer is concluded, all activities may be resumed. Nevertheless, Friday has acquired in Islam the characteristics of a holiday and is the official day of rest in many Muslim states.

3. Pilgrimage (*ḥajj*): In contradistinction to prayer, the Muslim pilgrimage has clear antecedents in the pre-Islamic period. Muslim tradition maintains that pre-Islamic Arabs performed pilgrimage to the Kaʿba in Mecca, which was then a pagan place of worship, with images of idols. The transformation of the Kaʿba into a Muslim sanctuary and of the pilgrimage into a Muslim ritual necessitated an infusion of monotheistic elements into the history of both. This was achieved by describing the pilgrimage as a ritual which had begun long before Arabian idolatry came into being and was a part of the ancient monotheistic religion associated with Abraham "who was neither a Jew nor a Christian but a *ḥanīf* Muslim and was not of the idolaters" (Koran 3:67). According to the Koranic account, Abraham was the man who built the Kaʿba together with his son Ishmael and made it into a pure place of worship (Koran 2:125, 3:95–97).

Hence the Kaʿba, an idolatrous sanctuary in the pre-Islamic period, became the holiest place in Islam. The way was now open for the next step, transformimg the pilgrimage to Mecca into an Islamic commandment: "It is the duty of all people to come to the House as pilgrim, if he is able to make his way there" (Koran 3:97). Thus the pilgrimage is a case in which Islam did not abolish a pre-Islamic ritual, but rather filled it with new content and significance. The identity of the Muslim rituals with the pre-Islamic ones caused misgivings

among some early believers and at least in one case a special revelation was needed to give legitimacy to such a ritual.

The pilgrimage is held annually in the month of Dhū al-Ḥijja, the last month of the Islamic year. It is obligatory for every Muslim once in a lifetime, if he has the means to perform it. At the outskirts of Mecca, the pilgrims enter into the state of sacredness (*iḥrām*), symbolized by the white, seamless garment worn during the pilgrimage. The uniform clothing is understood as symbolizing the equality of all believers. When the pilgrim reaches Mecca, he starts the ritual by circumambulating the Kaʿba seven times (*ṭawāf*). Then he covers seven times the distance between the hills of al-Safā and al-Marwa (*saʿy*). This is understood as commemorating Hagar's search of water for her son Ishmael. The collective rituals, so characteristic of the annual Muslim pilgrimage, begin on the 8th of Dhū al-Ḥijja, when the pilgrims set out for the plain of ʿArafāt, east of Mecca. On the 9th of the month the pilgrims stand there and listen to a sermon at the time of the noon-prayer. This is the central ritual of the pilgrimage (*wuqūf*). On the way back to Mecca, the pilgrims throw stones at Minā; this is meant to symbolize the stoning of the devil. On the 10th, 11th, and 12th of the month the Feast of Sacrifice (*ʿīd al-aḍḥā*) is celebrated. The sacrifice of an animal is obligatory on every free Muslim who can afford it. After this, the pilgrims return to Mecca and can come out of their state of sacredness.

The pilgrimage has acquired tremendous importance in Islam. It allows millions of Muslims from all parts of the world to meet, exchange ideas, and get acquainted with each other. The pilgrimage is therefore an extraordinary event: in recent years, about two million Muslims participate in it. It gives the Muslims a sense of belonging to a large, universal community and strengthens the feeling of unity in the Muslim world.

4. Fasting (*ṣawm*): The development of the Muslim commandment of fasting began with the migration of the Prophet to Medina in 622, when the Prophet instructed the Muslims to fast the *ʿāshūrāʾ* (cf. *ʿasor*, Lev. 16:29) on the 10th of Muḥarram, the first month in the Muslim calendar. One version of this tradition maintains that this was in emulation of, or in competition with, the Day of Atonement. Other traditions deny any Jewish connection and hold that the *ʿāshūrāʾ* commemorates the saving of Noah during the flood, or a fast observed by the tribe of Quraysh in the pre-Islamic period. In 2 A.H./624 C.E., Koran 2:185 was revealed, instituting the month of Ramaḍān as the month of fasting, from sunrise to sunset. This is another example of the progressive dissociation of Islam from the Jewish tradition. Henceforth, *ʿāshūrāʾ* was downgraded to a voluntary fast, but there are indications for its persistence into the Muslim period. Later the fast of *ʿāshūrāʾ* merged with the Shīʿī commemoration of the death of al-Ḥūsayn, the Prophet's grandson, in Karbalāʾ in 680 C.E.

Throughout Ramaḍān, the believer must refrain from food, drink, and sexual relations during the daytime. *Imsāk* is the beginning of the fast at dawn, while *ifṭār* signifies the breaking of the fast after sunset. Unrelated to Ramaḍān is fasting of various durations as expiation for failing to fulfill

an oath (Koran 5:92), for repudiating a wife in a forbidden way (*ẓihār*, Koran 58:4), for failing to perform the pilgrimage rituals properly (Koran 2:196), or for an accidental killing of a believer (Koran 4:91).

5. Alms-giving (*zakā*). The pre-Islamic secular value of generosity was transformed into mandatory almsgiving in Islam. In the early Sūras of the Koran, the commandment is phrased in very general terms (Koran 13:24–26). In the late Medinan period, the tone is much more specific and the purposes for which the collected money may be used are specified: "The alms are for the poor and the needy, and those who collect them, and those whose hearts are to be reconciled, and to free the captives, and the debtors, and for the sake of Allah and for the wayfarers; a duty imposed by Allah" (Koran 9:60). Those "whose hearts are to be reconciled" are understood to be people who needed economic incentive to join Islam, while "for the sake of Allah" is interpreted as the *jihād* (q.v.). This suggests that the Prophet used the alms money not only as help for the needy, but also for political purposes. According to some prophetic traditions, the payment of the alms "purifies" the property retained by the payer. The Qurʾan does not specify the amount to be paid as alms. Koran 2:219 seems to indicate that one should give as alms whatever is his surplus (for details on this in Islamic law, see A. Zysow, "Zakāt," EIS², 11, 406–22).

The Expansion of Islam

The first wave of conquests by Muslim Arabs, completed at the beginning of the eighth century C.E., included the Fertile Crescent, *Iran, *Egypt, North Africa, *Spain, the western fringes of *India, and some parts of Central Asia. From the 10ᵗʰ century Turkish people originating on the steppes between the Caspian Sea and the Altai mountains became increasingly important as political and military champions of Islam. The conquest of South Asia (comprising today India, *Pakistan, and Bangladesh) began with the Indian campaigns of Maḥmūd Ghaznawī in the early 11ᵗʰ century, and was almost completed by the Delhi Sultanate in the 13ᵗʰ. The conversion of the *Mongols to Islam which began in the 13ᵗʰ century significantly extended the boundaries of Islam. The manner in which Islam came to South East Asia has not been satisfactorily described so far, but it is clear that it was not by way of conquest. The presence of Muslims in the Indonesian archipelago has been attested since the late 13ᵗʰ century. Muslim merchants and mystics are normally credited with bringing Islam to these areas. It is clear that Muslim conquests and the establishment of Muslim dynasties are not coterminous with the spread of Islam among the population and that the former aspects of Muslim history are known much better than the processes by which Islam became the religion of a substantial part of Asian and African populations.

The number of Muslims was estimated in 2000 at 1,262 million, 77% of these living in countries where the majority of the population is Muslim. The largest concentration of Muslim population is found in the three countries of South Asia (In-dia, Pakistan, and Bangladesh) which are home to 384.3 million Muslims. Indonesia is the largest single Muslim political unit, with 212.1 million Muslims. The Arabic-speaking countries of North Africa (including the Sudan) and the Middle East comprise 257 million Muslims. Turkey follows with 66.5 million, Iran with 62.2 million, the five Muslim states of Central Asia (Uzbekistan, Turkmenistan, Tajikistan, Kirgyzstan, and Kazakhstan) with 41.5 million, and Afghanistan with 22.5 million. In Africa 58.9 million Muslims live in West Africa (south of the Sahara) and 47.1 in East Africa. The Muslim minority of China is estimated at 19.2 million, of Russia at 14.7 million, and of Europe (including the Balkans, France, and the U.K.) at 8.1 million. The number of Muslims in the U.S. and Canada is put at 2 million, although some Muslim organizations in the U.S. speak of 6 million Muslims in the U.S. alone. Reference to religion in demographic statistics is not universal, and these figures must therefore be viewed with caution. It is estimated that the number of Muslims will reach 1.8 billion by 2025; the Muslims are then expected to form almost a quarter of the global population.

General Characteristics

The general character of Islam is determined by two main factors: its foundational literature and its global expansion. The foundational literature – including the Koran, the prophetic tradition (*ḥadīth*), the jurisprudence (*fiqh*) and mysticism (*taṣawwuf*) – should be seen as unifying factors. The global expansion of Islam, the diverse conditions in the various areas, the different degrees to which the classical sources of Islam were internalized, the different degrees of modernization – all these explain the distinct characteristics of Islam in various areas of the world.

In addition to its fierce monotheism, the universal, global appeal of Islam seems to be its most conspicuous general feature. It is based on the firm belief that in contradistinction to all other prophets who had been sent to specific communities, Muhammad was sent to all humanity. Furthermore, Muḥammad is considered the last prophet to be sent to earth. Consequently, Islam and the Koran – the consummate embodiment of the divine will – will remain valid until the end of days: no prophet will ever be sent in order to bring another revelation or another sacred law. Therefore, Islam does not countenance the establishment of any new religion after the coming of Muhammad. Also, the Koran is considered to be the only scripture which was transmitted reliably and suffered no interpolation, while the Torah and the New Testament had allegedly been tampered willfully by the Jews and the Christians (*taḥrīf*). As a result of these and similar considerations, Muslims are "the best community ever brought forth to mankind" (Koran 3:110), and "Islam is exalted and nothing is exalted above it" (*al-Islām yaʿlū wa lā yuʿlā* (al-Bukhārī, *Ṣaḥīḥ*, *Kitāb al-janāʾiz 80*; ed. Krehl, 1, 337–38). The idea of Islamic exaltedness has numerous ramifications for the relationship between Islam and other faiths (Friedmann, *Tolerance and Coercion*, 34–39).

The Muslim ideas relevant to this relationship have been subject to significant changes since the earliest period of Islam. Even the Koran includes divergent ideas about the relationship between Islam and other religions. On the one hand, it includes verses which seem to promise divine reward for the Jews and the Christians without mentioning their conversion to Islam as a precondition (Koran 2:62; cf. 5:69). On the other hand, it speaks about the humiliation inflicted upon them (Koran 2:61, 3:112), instructs the Muslims not to forge alliances with them (Koran 5:51), and calls upon the Muslims to fight them "until they pay the poll-tax (*jizya) out of hand while being humiliated (Koran 9:29). These and verses of similar import have been extensively commented upon in Muslim tradition and jurisprudence. The Muslim attitude to the Jews and Christians gradually moved from an initial conciliatory approach in the direction of increased rigor. (See Friedmann, *Tolerance and Coercion*, 194–99.)

The Koran and the prophetic tradition (*ḥadīth*) (q.v.) constitute the major unifying factors in Islam. The Koran is considered to be the literal word of Allah. Muslim theologians debated whether it has existed since all eternity and is uncreated (*ghayr makhlūq*), or was created (*makhlūq*) at a certain point in time. Perceived as divine in origin, its style is considered inimitable (*muʿjiz*) in the sense that no human being is capable of producing a book of so sublime a stylistic standard. This is the dogma known as *iʿjāz al-Koran*, the idea that the Koran renders human beings unable to imitate it. The distinctive character of Koranic style is unmistakable; from the secular vantage point it may derive from the fact that the Koran is the only extant literary work from seventh-century Arabia. In any case, the Koran has always been the subject of boundless veneration by Muslims. Although the Koran considers itself as "a book in which there is no doubt" (Koran 2:2) and as a revelation in "clear Arabic language" (Koran 26:195), many verses are difficult to understand and the book has inspired a vast literary corpus of exegesis (*tafsīr*). Once the meaning of a verse was agreed upon by mainstream exegetes, the accepted meaning acquired an uncontested normative value in Muslim law and piety.

The prophetic tradition (*ḥadīth*) has developed out of the conviction that a pious Muslim should emulate the Prophet in whatever he did, recall whatever he said, and even keep a record of things which gained his tacit approval. This attitude is based on the firm conviction that Muhammad possessed a perfect personality and should be treated with utmost respect. Any action which is judged incompatible with this basic idea is rejected with great severity. Therefore, one of the most meritorious actions which a Muslim can do is to revive a custom of the Prophet (*sunna*) which for some reason fell into disuse. The customs of the Prophet were recorded in the *ḥadīth* which has become a major part of Muslim religious literature, a major source of Muslim law and an important vehicle through which later generations could influence the development of Islam. The desire to emulate the Prophet brought about a tremendous proliferation of the *ḥadīth*, which soon became an extensive branch of Muslim religious literature.

According to the traditional Muslim view, a considerable part of the *ḥadīth*, which has a reliable chain of transmitters and thus can pass the traditional test of authenticity, was actually pronounced by the Prophet and has therefore a normative value second only to the Koran itself. Modern scholarship, on the other hand, maintains that the authenticity of this material is unverifiable: since we have no extant books of *ḥadīth* from the lifetime of the Prophet, there is no reliable method which can establish whether a certain saying was pronounced by the Prophet, or originated in a later period and was attributed to the Prophet in order to prove a point of law or an idea in the religious thought of a Muslim group. In some cases it is possible to discern the religious tendency or political interest embedded in a tradition; but in the countless traditions of general ethical content lacking a point of historical reference this is frequently impossible. In the brilliant formulation of *Goldziher, whose study of the *ḥadīth,* written in the late 19th century, is still an indispensable masterpiece, "the *ḥadīth* will not serve as a document for the history of the infancy of Islam, but rather as a reflection of the tendencies which appeared in the community during the maturer stages of its development. It contains invaluable evidence for the evolution of Islam during the years when it was forming itself into an organized whole from powerful mutually opposed forces. This makes the proper appreciation and study of the *ḥadīth* so important for the understanding of Islam in the evolution of which the most notable phases are accompanied by successive stages in the creation of the *ḥadīth*" (Goldziher, *Muslim Studies*, vol. 2, 19).

The third unifying factor is Islamic jurisprudence (*sharīʿa*, *fiqh*). From the very beginning, Islam strove to control the life of the community in all fields. Like Judaism, Islam is not satisfied with regulating man's obligation toward God, but also aspires to regulate his daily behavior and legislates in matters which in other cultures belong to the field of civil or secular law. Legal matters do not constitute a major part of the Koran, though topics such as the law of marriage, divorce, inheritance, and penalties for a restricted number of transgressions (theft, highway robbery, wine drinking, unlawful sexual intercourse and false accusation thereof) are discussed in some detail. Beginning in the last decades of the 8th century C.E., major compendia of Muslim jurisprudence began to emerge. Numerous schools of legal thinking (*madhhab*, pl. *madhāhib*) came into being in the formative period of Islam. Four of them (Ḥanafīs, Ḥanbalīs, Mālikīs, and Shāfiʿīs) survived and are regarded as valid versions of the religious law of Islam. The Ḥanafī school, which originated in the Iraqi city of Kūfa, is the most widespread. It was the dominant school in the *Abbāsid empire, in the *Ottoman empire, in the *Moghul empire in India and in Central Asia. The Mālikīs school was predominant in Muslim Spain, and still is in North Africa. The Shāfiʿīs school is deeply rooted in Egypt and has many adherents in the Fertile Crescent. The Ḥanbalīs have official status in *Saudi Arabia and numerous adherents elsewhere.

While the division into schools of law may indicate some measure of diversity, the common denominator between the schools is more than sufficient to consider the law as a unifying factor in Islam. The law is administered by a judge (*qāḍī*), sometimes assisted by a legal specialist authorized to issue legal opinions (*fatwā* pl. *fatāwā*).

The formative period of Islam was characterized by immense worldly success. The great conquests of the first century of Muslim history, in which Muslims took control of vast areas in the Middle East, in the western fringes of India, in Central Asia, in North Africa and in the Iberian peninsula, transformed the history of these regions and brought them under the aegis of Islam. Later expansion and conquests did the same for other areas of the world. The chronicles of the early conquests abound in descriptions of the wealth accumulated in the course of these events, and the conquerors do not seem to have had any qualms about the riches which they amassed. Mainstream Islam legitimized this and regulated the ways in which booty may be taken and used. This reflects a positive approach of Islam to worldly success (cf. Smith, *Islam in Modern History*, 22–23). Yet at the same time, one can discern in early Islam a completely different trend of thought: a trend which is contemplative, stresses the uselessness of this world and sees it only as a corridor through which one must pass, but which has no real value when compared with the everlasting bliss promised to the believers in the hereafter. This was the attitude of early Muslim ascetics (*zuhhād*, sg. *zāhid*) who spared no effort to revile this world, to describe it as "a corpse pursued by dogs," as a place of unbearable stench, a place which is a prison for the believer and Paradise for the infidel. These were the precursors of the Ṣūfī movement (see *Sufism) which developed into a major trend in Muslim religiosity. Since the 10th century C.E., Ṣūfī thinkers produced numerous manuals in which they described the path (*ṭarīqa*) to God and which served as guides on the seeker's (*murīd*) way to spiritual perfection. These manuals, of which "The book of (mystical) flashes in Ṣūfism" (*Kitāb al-lumaʿ fī al-taṣawwuf*) by Abū Naṣr al-Sarrāj (d. 988 C.E.) is a prime example, surveys the practices and modes of thinking of the Ṣūfīs. The book speaks about the standing of the Ṣūfīs among the believers and reaches the conclusion that they are more assiduous than others in observance and do not try to avoid the inconvenient commandments by seeking allegorical explanations and legal evasions. Thus, they not only obey the letter of the law, but go beyond it and reach degrees of religiosity which can not be attained by jurists and others. They leave aside all irrelevant matters and cut every connection which may interfere with attaining their objective, which is God alone. The book also describes in great detail the spiritual stages on the Ṣūfī's way to God.

In a later stage, from the 12th century onward, the Ṣūfīs were not only individuals exploring divine mysteries, but also organized themselves into Ṣūfī orders (*ṭuruq*, sg. *ṭarīqa*) which spread all over the Muslim world from the Maghrib in the West to Indonesia in the East. These orders developed around

Ṣūfī masters (*shuyūkh*, sg. *shaykh*, or *pīr* in the eastern part of the Muslim world). These orders were of considerable importance in the life of the Muslim communities everywhere. It stands to reason that participation in the Ṣūfī ritual, such as the communal *dhikr* (the constant repetition of God's name), gave the common man a spiritual satisfaction unachievable by other means. Trimmingham (*The Ṣūfī Orders,* 229) sees a similarity between the spiritual role of a Ṣūfī order and that of a local church in Europe; another possible comparison is with the Ḥasidic movement in Judaism.

While the orders developed numerous disparate characteristics in the various parts of the Muslim world, the similarities between them are sufficient to include Ṣūfism among the unifying factors of Islam. The more unified picture of Islam can be found in Islamic literature, while its diversity can be most profitably studied in anthropological research. Anthropological fieldwork in various areas of the Muslim world has revealed numerous characteristics which show the extent to which Islam was influenced by local cultures, especially in rural areas. In almost every Muslim house in the Indian district of Purnea a little shrine existed in which prayers were offered both to Allah and to the Indian goddess Kālī. In the same place, a part of the Muslim marriage ceremony was conducted in a shrine of the goddess Bhagvatī (Mujeeb, *The Indian Muslims,* 13–14). There is substantial literature about the existence of caste system among Indian Muslims, despite the classical Islamic principle of equality of all believers (Ahmad, *Caste and Social Stratification…*). Geertz (*Islam observed*, 66) maintains that in Indonesia, "the mass of the peasantry remained devoted to local spirits, domestic rituals and familiar charms. … Christians and pagans apart, all these people, gentry and peasantry alike, conceived themselves to be Muslims." Muslims for whom the classical literature of Islam is the only guide as to what constitutes Islam will probably consider such phenomena as cases of incomplete Islamization; but, of course, there is no guarantee that the Muslims in question will ever be transformed into believers conforming to the ideal of Islam as embodied in the classical tradition.

Modern Islam

Barring a few exceptions, classical and medieval Muslim thought developed against the background of a dominant Muslim civilization. Both in the formative period of Islam and in the later pre-modern centuries, Muslim thinkers were active in areas which were part of secure and relatively stable political systems, headed by Muslim rulers. This situation began to change with the first Western incursions into the Muslim world and with the gradually developing sense that Islam had lost its erstwhile primacy in its relationship with other civilizations. The reaction of Muslim thinkers to this evolving situation was manifold. During the second half of the 19th century, the Muslim modernist movement came into being. In Egypt, the prominent intellectual figure was that of Muhammad ʿAbduh (1849–1905). At various times, he was teacher, journalist, and judge; his career culminated between 1899 and

1905, when he served as the *muftī* of Egypt. His leading ideas included the insistence on the compatibility of Islam with reason and modern science, since the Koran encouraged the study of the physical universe; the preference of reason when it conflicts with traditional knowledge; rejection of the blind following of the tradition (*taqlīd*); and the revitalization of independent reasoning (*ijtihād*). He also maintained that the restrictions placed in Islam on polygamy (the obligation to treat the wives with equality and justice; cf. Koran 4:3) are such that they amount to prohibition, and advocated the education of girls. Among his numerous followers, mention should be made of Qāsim Amīn (1865–1908), who became famous because of his advocacy of women's rights, and ʿAlī ʿAbd al-Rāziq (1888–1966), who maintained that Islam "is a religion, not a state" (*dīn lā dawla*). In other words, and in contradistinction to the prevalent view, he advocated the separation of religion and state in Islam. This idea aroused serious opposition and caused him to be expelled from the ranks of the ʿulamāʾ and from his position as a religious judge.

In the Indian subcontinent, the modernist movement was launched by Sir Sayyid Aḥmad Khān (1817–1898). Having been knighted for his loyal behavior during the Indian uprising of 1857, he devoted his life to the improvement of the Indian Muslims' relationship with the British rulers and to the advancement of modern education among Indian Muslims. In 1875 he established (with British support) the Anglo-Muhammadan Oriental College, which came to be known since 1920 as Aligarh Muslim University, and served as an important Muslim institution of higher learning in which modern science was taught alongside the humanities. He promoted the idea that there can be no contradiction between the word of God and laws of nature which are God's doing. Therefore, there can be no contradiction between the Koran, Islam, and the laws of nature, and there can be no objection in Islam to the study of modern Western sciences. Aḥmad Khān also devoted considerable effort to the demythologizing of Islam and interpreting its leading ideas as conforming to human intellect. In his attempt to improve the relationship between Islam and Christianity, he disagreed with the classical Muslim accusation that Christians and Jews had falsified the Scriptures, maintained that the books of the Bible are to be considered genuine and denounced the Indian Muslim custom of refusal to dine with Christians. Like Muhammad ʿAbduh, he maintained that Islam actually prohibited polygamy by insisting on the equal treatment of all wives, an attitude of which men are emotionally incapable.

Sayyid Aḥmad Khān's views found support among numerous Indian Muslim thinkers. Chirāgh ʿAlī (1844–1895) devoted much attention to the interpretation of *jihād* and argued that "all wars of Mohammad were defensive." He argued that "there are certain points in which the Mohammadan Common Law is irreconcilable with the modern needs of Islam, whether in India or Turkey, and requires modification. The several chapters of the Common Law, as those on political institutes, slavery, concubinage, marriage, divorce, and dis-

abilities of non-Moslem fellow-subjects are to be remodeled and rewritten in accordance with the strict interpretations of the Koran…." He also opposed the blind following (*taqlīd*) of the Islamic schools of jurisprudence which were "never intended to be either divine or finite." It may be said that Chirāgh ʿAlī was one of the most radical reformers in Indian Islam. His definition of the *sharīʿa* as "common law" which may be changed by human intervention is a major departure from traditional norms.

The most famous among Indian Muslim modernists was Muhammad Iqbal (1875–1938). A poet, a philosopher and a political thinker – he is a towering figure among the Indian Muslims in the 20th century. He enjoyed immense popularity among the Indian Muslims, mainly because of his powerful and compelling poetry in Urdu and Persian, although his philosophical and political ideas also played a role in the development of his popularity. His *Reconstruction of Religious Thought in Islam*, which reflects his Islamic upbringing as well as his knowledge of European philosophy, is the most systematic formulation of his thought, though some of the arguments proffered in it are not clear. A substantial part of this work is dedicated to the description of Islam as a dynamic force in human history and to the analysis of the reasons which caused its stagnation in modern times. In Iqbal's view, the stagnation of Islam was caused by several reasons. One is the failure of the Muʿtazila which he considers a rationalist school of thought. Like other modernists, Iqbal is severely critical of Ṣūfism which preferred other-worldliness and caused the Muslims to neglect the concrete world which had been, in his view, at the center of the Koran's attention. He maintains, however, that Islam is capable of renewal and maintains that the belief in the finality of Muhammad's prophethood is a powerful intellectual tool that can be used for this purpose. In contradistinction to the classical interpretation, which used this belief as a proof of the eternal validity of the Koran and of Islamic law, Iqbal maintains that "in Islam prophecy reached its perfection in discovering the need for its own abolition." Finality of prophethood means that after the completion of Muhammad's mission nobody can ever claim personal authority of supernatural origin. Man has reached a stage in which he can open new horizons without being hampered by any constraints. The ideal believer is, therefore characterized by creativity, vitality, abhorrence of stagnation, and love of perpetual movement. Together with the use of the reinterpretation of Islamic law (*ijtihād*), these are the qualities which can revitalize Islam and restore its original dynamic character.

The modernist movement, which aimed at bringing Islam into conformity with the modern world and was characteristic of Islamic thought in the second half of the 19th century and the first half of the 20th, gradually lost its primacy and was replaced by radical trends of thought. Driven by the acute sense that modernity failed to deliver on its promise and stands in sharp contrast with the traditional Islamic ideal, radical Muslim thinkers, such as Abū al-Aʿlā Mawdūdī (1903–1979) in India and Sayyid Quṭb (1906–1966) in Egypt,

initiated scathing attacks on the modernist approach. A central component of these attacks has been a categorical rejection of modern Western civilization which is seen as corrupt, licentious, irreligious and dangerous for Islam. The *leitmotif* of Mawdūdī's thought is that all sovereignty in the world belongs to God alone; no other source of authority, such as the will of the people, or laws promulgated by elected legislative assemblies is legitimate. In 1941, Mawdūdī juxtaposed obedience to divine law – which is Islam – with obedience to man-made laws and customs; the latter he called Jāhiliyya, a term traditionally used for the pre-Islamic, pagan period in Arab history. When Pakistan was established in 1947, Mawdūdī (and the "Islamic Group," Jamāt-i Islāmī organization which he founded) immersed himself in a struggle to enhance as much as possible the Islamic characteristics of the newly established state. While he saw himself as the vanguard of opposition to things modern and desirous of implementing the classical ideal of Islam, in many details modern ideas and modern conditions influenced his understanding of the ideal. Sayyid Quṭb, the leader of the Muslim Brethren in Egypt (executed in 1966), gave much currency to the dichotomy between Islam and the Jāhiliyya which is, in his as well as in Mawdūdī's view, not only a specific historical period but also a state of affairs and a mentality which allows people to choose a way of life different from the one prescribed by God and by the Prophet Muhammad. Jāhilī society is not only that which denies the existence of God, but also that which does not deny it, but relegates God to the kingdom of heaven and does not apply His law on earth. Such societies, including those which are nominally Muslim, have to be replaced by societies living under the divine Muslim law. The radical Muslim trends which we exemplified by reference to Abū al-Aʿlā Mawdūdī and Sayyid Quṭb have gained much currency since the middle of the 20th century.

As a religion and a civilization, Islam has been in existence since the seventh century. At the beginning of the 21st century, Muslims live in dozens of countries in most areas of the world. These plain facts go a long way to explain the diversity of the Islamic experience. Islam has always been many things. Muslims have been warriors, rulers, mystics, writers, poets, artisans, and scholars in various fields; they have been, and still are, engaged in the whole range of human activity in widely differing circumstances. Within one century of Muslim history, they conquered a substantial part of the then known world. During the first three centuries of that history, Muslim writers produced a rich historiography, extensive literature in linguistics and lexicography, literary criticism, poetry, and jurisprudence. They stood for a long period at the cutting edge of scientific development. In its formative period, Muslim religious thought was characterized by a wide variety of views on numerous subjects. The variety of views and the nature of the arguments marshaled by their protagonists testify to the vibrant intellectual life of Islam in the early period of its history. Muslims have differed on questions such as determinism versus free will; the existence of the Koran since

all eternity versus its being created at a certain point in time, with the rest of creation; the equality of all prophets versus the unquestioned superiority of Muhammad; the validity of personal reasoning versus the irrefutable authority of the prophetic tradition in jurisprudential matters; the identity of unbelievers who may be offered the status of protected communities (*dhimmīs*) rather than being forced to embrace Islam; the extent of tolerance to non-Muslims living under Muslim rule and the measure of humiliation to be imposed on them. The list of these much debated issues could easily be augmented. This diversity of Muslim thought and experience has crucial significance. It means that all Muslims, in any place and historical period, must choose the type of Islamic thought and belief most appropriate to the circumstances of their lives and to their world view. It also means that the Muslim tradition includes material capable of substantiating almost any interpretation of Islam which a Muslim may want to develop. He may choose to be a fundamentalist or a modernist. He may choose to view Judaism and Christianity as basically illegitimate and corrupt versions of the divine will, or adopt a more pluralistic view of religious diversity. Professional men of religion tend to promote the view that their interpretation is the only legitimate one, and they are frequently supported by the autocratic regimes in many Muslim states. Such attitudes are belied by the long history of intellectual controversy in Islam and by the various forms which Islam took on in various times and places. Since the middle of the 20th century, radical interpretations of Islam have held sway in some of the most important areas of the Muslim world, but there is no doubt that the building bricks for a different version of Islam are readily available in the Muslim tradition.

[Yohanan Friedmann (2nd ed.)]

Polemics against Judaism

Islamic polemics directed against Judaism and Jews are substantial neither in quantity nor in quality. The great masses of Christian subjects within the Islamic domain and the Christian powers outside caused Islamic polemics to focus on Christianity. On the whole, Arabic lore and literature reflect a negative attitude toward the Jews, one of distrust and suspicion, contempt and animosity. It is argued that from the days of the Prophet the Jews were enemies of Islam, either in direct military confrontation with the Prophet, or in plots to undermine Islam through heresy, subversion, and cunning ill will. An 11th-century admirer of *Samuel b. Joseph ha-Nagid or the 14th-century mystic al-Jīlī (I. Goldziher in jzwl, 11 (1875), 68 ff.) are exceptions in their positive attitude toward the Jews. The prevailing attitude may have come from Christian polemics which in turn were rooted to some extent in classical anti-Jewish lore. This holds true even concerning the Koran (T. Andrae, *Ursprung des Islams…* (1923–25), 198 f.; cf. Waardenburg in *Liber Amicorum, Studies… C.J. Bleeker*, 1969). It is not surprising that the ever-growing mass of Christian converts to Islam should have contributed to the anti-Jewish mood. As early as the ninth century, al-Jāḥiz stated that although Juda-

ism may seem closer to Islam than Christianity, Muslims are more negative in their attitude toward Jews than toward Christians (ed. and tr. by J. Finkel, in JAOS, 47 (1927), 311–34).

Polemic remarks appear in the Koran and the Ḥadith (G. Vajda in JA, 229 (1937), 57–127) and in numerous theological works. Systematic treatment appears in courses and manuals on theology, heresies, and comparative religion. Muslim scholars displayed a very limited knowledge of Judaism and were not acquainted with original Jewish sources, and only rarely with translations. For example, the historian Ibn Khaldūn (14th century) even quoted the Bible from the 10th century historian al-Masʿūdī. The judgments and references of the polemists were usually based on sets of passages, presumably supplied by Jews converted to Islam, and, in the critique of post-biblical Judaism, possibly going back to some *Karaite material. Sometimes polemics may have been geared to social-political public agitation and mob riots. For example, the enemies of the family of Samuel ha-Nagid accused Jewish dignitaries and officials of selling *terefah* meat to the believers. The Moroccan al-Maghribī (G. Vajda in *Étude à la mémoire de Lévi-Provençal*, 2 (1962), 805–13) voiced a similar argument.

CONTENT. The subject matter of polemics can be reduced to a few points. Islam claims to be the final dispensation, following the abrogation (Ar. *naskh*) of Judaism and Christianity, and regards the development of Judaism, after its abrogation, as abnormal and as a human invention (*bidʿa*) contrary to divine dispensation (*sharʿ*). This is demonstrated by a critique of the Bible. Jews are charged with tampering (*tabdīl*) and distorting (*taḥrīf*) the texts, either in reading or in interpretation. Indeed, the Scriptures contain accounts unworthy of and senseless in a divine book (e.g., the stories of Lot, Judah and Tamar, kings of Edom, stations in the wilderness). Many of the numerical computations seem faulty; contradictions and anthropomorphisms (*tajsīm*) abound. Conversely, the Scriptures fail to elaborate on reward and punishment in the hereafter. Disrupted by the Babylonian captivity, the transmission of events (*tawātur*) is defective. Finally, if the Scriptures are authentic, they must contain annunciations (*aʿlām*) of the advent of Muhammad. The latter are gleaned from *gematria, the interpretation of the numerical value of significant words (Muhammad = 92 = *bi-meʾod meʾod* in Gen. 17:2; Paran wilderness = Mecca) etc. (cf. Strauss-Ashtor, in *Sefer ha-Zikkaron le-Veit ha-Midrash le-Rabbanim be-Vinah* (1946), 182–97).

HISTORICAL SURVEY. A tenth-century compendium by the theologian Bāqillānī presents a discussion of Judaism (Brunschvig, in *Homenaje a Millás Vallicrosa*). Partly provoked by the high position attained by Samuel ha-Nagid, the philosopher and historian Ibn Ḥazm (11th century) composed a substantial attack on Judaism in vitriolic language (M. Perlmann, in PAAJR, 18 (1948/49), 269–90). In the 12th century, a Jewish convert to Islam, *Samuel ibn Abbas al-Maghribī produced the most important polemic work (idem, in PAAJR, 32, 1964), which was often used and plagiarized by later polemists such as Qarāfī (13th century) and Ibn Qayyim ibn al-

Jawziya (14th century). The Egyptian Jew Saʿīd b. Hasan of Alexandria who converted to Islam in 1298 (I. Goldziher, in REJ, 30 (1895), 1–23; S.A. Weston, in JAOS, 24 (1903), 312–83) and the Moroccan convert ʿAbd al-Ḥaqq al Islāmī (14th century) wrote popular tracts. In about 1360, Abu Zakariyyā Yaḥyā al-Rāqilī, a Morisco in Christian Spain, wrote a manual of disputation against the Jews who "loosen their tongues… against our prophet" (as in Palacios, in *Mélanges Hartwig Derenbourg* (1909), 343–66). As late as the 19th century, the account of Tabātaʾī's disputation and the pamphlet *Risāla Sabʿiyya* appeared in Egyptian editions of Samuel's aforesaid tract (1939, 1962²).

Jewish replies to the Islamic contentions began to appear in the tenth century and their authors include the philosophers *Saadiah Gaon, *Judah Halevi, Abraham ibn Daud, and *Maimonides. The former three were also outstanding polemists against the Karaites. Separate tracts against Islam were rare. *Maʾamar ʿal Yishmaʾel* (13th century), ascribed to Solomon b. Abraham Adret (J. Perles, 1863; M. Zikier, in *Festschrift A. Kaminka*, 1937), and *Keshet u-Magen* (M. Steinschneider, in MWJ, 7 (1880), 1–48) of R. Simeon b. Ẓemaḥ Duran (d. 1444) came from the Jewish milieu peculiar to Christian Spain. While Jewish polemists were bitter about oppression and humiliation under Islam, they were aware that Islam showed greater affinity to Judaism than did Christianity, despite the biblical background shared with the latter.

[Moshe Perlmann]

Judaism and Islam

Centuries before the rise of Islam many Jewish communities were scattered over *Arabia, so that Judaism, in its normative and also sectarian versions, was known to the sedentary population and even to the Bedouin tribes. It was especially widespread in South Arabia, where Judaized groups and proselytes were very common. The deciphering of the South Arabian inscriptions, some of which were discovered only in the 1950s, confirm the many accounts and reports of early, pre-Islamic Christian writers about Jewish missionary activities and the persecutions of the Christians, especially in *Najrān by *Yūsuf Dhū Nuwās, the Jewish (proselyte) king of *Himyar. Raḥmān, the Merciful, as a name of God, without any other attribute, has been found many times in those inscriptions and indicates their Jewish origin. Arab historians and biographers of Muhammad's life describe the Jewish communities and tribes living in Hejaz generations before his rise. The years spent by Muhammad the Prophet and Messenger of God in the Jewish Yathrib-Medina gave him many opportunities (positive and negative) to come into close contact with the Jewish tribes living in that group of oases. This historical background explains the fact of the strict uncompromising monotheism preached by Muhammad (who objected to the Christian belief that Jesus was the son of God). Most of the *Bible tales to be found in the Koran and the normative form of Islam based on precepts are to be traced to the Bible and to the Oral Law. At the same time, some descriptions of the Last Judgment and of escha-

tological events which preoccupied Muhammad in his early period in Mecca, and also some historical tales, stem from Christian sources and inspirations. But the main eschatological beliefs belong to the common Jewish-Christian heritage, even though they were transmitted by Christian monks. In a Ḥadith ʿAisha, Muhammad's wife, is said to have heard the tradition about the punishment in the grave (ḥibbuṭ ha-kever) from two old Jewish women in Medina. More Jewish elements can be found in those beliefs after Jerusalem was accepted as the location of the Last Judgment.

Nonetheless, the Arabian character of the Koran must always be stressed as it was Muhammad's genius which founded and established Islam. The fact that some of his contemporaries, prophets, and ḥanifs tried unsuccessfully to spread monotheism in Arabia cannot lower Muhammad's stature. A large number of Jewish teachings, sayings, and normative and ethical precepts have been included in the *Ḥadith literature, sometimes in the name of Jews or Jewish converts to Islam although most were inserted anonymously. Much of the narrative material gathered in the Qiṣaṣ al-Anbiyāʾ ("Legends of the Prophets") goes back to *Kaʿb al-Aḥbār, the Jewish convert to Islam who accompanied the caliph *Omar during his visit to Jerusalem, or to *Wahb b. Munabbih, also a convert or son of a Jewish convert. All of this Ḥadith literature (and the legends are also systematically arranged like the oral tradition) shows an astonishing knowledge of the *halakhah and *aggadah as laid down in talmudic and midrashic literature. As in Judaism, at first there was opposition in Islam to writing down the sayings and teachings which were transmitted, by isnād (lit., leaning, ascription of an oral religious tradition), a chain of traditioners (see below). The caliph Omar disapproved of the literary fixing of the sunna (the sayings and exemplary actions of Muhammad): "Would you like to have a [written] mathnat like the mathnat [Aramaic: mathnitha – Heb. Mishnah] of the Jews?" (Ibn Saʿd v, p. 140).

It is not always possible to postulate a clear-cut dependence of Islamic teachings and methods on Judaism. The fundamental similarity of Judaism and Islam, both based on religious laws in principles, methods, and legislation, caused parallel developments in later centuries. It is a well-known fact that the *geonim, the heads of the two famous talmudic academies in *Sura and in *Pumbedita, received questions concerning legal and social matters; there are many tens of thousands of their responsa extant. This was also the practice of the Muslim muftis, a category of jurists from whom every Muslim could ask a fatwā, a legal opinion based on the religious law. The fatwā and the responsum both possessed legal power. It is difficult to decide if the development of this branch of literature in both religions was independent or whether this was an example of mutual influence. For example, at the end of the typical question one finds in the fatwā and in the responsum the formula: "May our rabbi (or mufti) give his instruction [= decision] and his reward will be doubled by Heaven [= God]." Goldziher (ZDMG 52, p. 645) sees an Islamic influence in this formula of the responsum.

In the first centuries of Islam the jurists were allowed to use their independent judgment (ijtihād) in their decisions, but had to base it on primary sources. Later they were restricted in their freedom of independent decision and were obliged to follow the taqlīd (precedent) and to rely on former judgments. One finds a parallel development in rabbinic Judaism, in which even the geonim were obliged to follow the authority of their predecessors. Nonetheless, social and economic transformations sometimes demanded departure from accepted laws and rules. Thus the geonim and the later generations of rabbis were obliged to establish ordinances adjusted to the new situation. A similar principle was current in the madhhab (legal school) of Mālik b. Anas, i.e., the istiṣlāḥ, the adaptation (or correction) of laws, for the benefit of the community.

The influence of *fiqh (Islamic jurisprudence) is clear in the systematic dealings of the geonim with halakhic materials according to their contents, e.g., the laws of inheritance, gifts, deposits, oaths, usury, witness and writs, loans, and obligations, as they were arranged by Saadiah, Hai, Samuel b. Ḥophni, who wrote their works in Arabic. This is especially clear in Maimonides' code, Mishneh Torah, written in Hebrew and preceded by Sefer ha-Miẓvot (Book of Precepts), the first exposition of the 613 precepts. Maimonides' arrangement of these works indicates knowledge of the methods and principles of the fiqh literature and of the Ḥadith collections of al-Bukhārī, Muslims, and others. Maimonides applied the ijmāʿ (consensus), one of the four uṣūl al-fiqh (roots of fiqh), in his code. In his introduction to this code he gives the chain of the teachers and rabbis who during 40 generations transmitted the Oral Law from Moses to R. Ashi. This is a classic illustration of how the isnād – the method of verification of the sayings of Muhammad and his companions – was taken over by early Islam from Judaism, which traced the chain of tradition from Moses to the Men of the Great Synagogue (Avot 1); and in turn was used by Maimonides as a principle to verify the halakhah.

But Islamic influence was not restricted to methodology. Some Muslim customs concerning ablutions, prostrations, and general behavior during prayer were accepted by Maimonides and his son Abraham, and aroused disagreement among the majority of the Jewish society. Jewish apocalypses ascribed to R. Simeon b. *Yoḥai, and pseudepigraphic works such as Pirkei de Rabbi Eliezer and Targum Jonathan show traces of Islamic influence. Note should be made of the book of R. Nissim b. Jacob (Kairouan, first half of the 11th century) called Ḥibbur Yafe me-ha-Yeshuʿah ("A Fine Treatise on Salvation"), which in its Hebrew translation was known for centuries and was often reprinted because of its popular religious contents. Its Arabic original (the exact title of which is unknown) was found in the last decade of the 19th century (ed. by J. Obermann, 1933). In Jewish literature it is the only representative of a type known in Islamic literature as Kutub al-Faraj baʿda al-Shidda ("Books of Comfort after Disaster"). A detailed comparison between the Ḥibbur and the Muslim books shows that Nissim, who was

head of the talmudic academy in *Kairouan, knew the stories then current in his non-Jewish environment, whether in literary form or as folktales.

Islamic culture, which had absorbed the legacy of Greece and the Hellenistic world, made a tremendous impact on some aspects of Jewish thought and science. After centuries of complete disruption between that world and Judaism, the works of the Greek philosophers and scientists came back to the orbit of Jewish thinkers and scholars through Arabic translations (from earlier translations in the Syriac language). From the tenth century on, Aristotle, Plato, and Neoplatonism influenced Jewish philosophers of religion, theologians, poets, and scientists. The most famous include: Saadiah, Isaac Israeli (from Kairouan), *Ibn Gabirol, Baḥya ibn *Paquda, Judah *Halevi, *Abraham ibn Daud, Maimonides, and his younger contemporary Joseph ibn Aknin (not to be mistaken for Maimonides' pupil of the same name). As S.D. *Goitein has shown, early *Sufism was also supplemented by Jewish sources. In its higher and later states, Sufism was inspired by Greek philosophy. Sufi influence is to be found in the poems of Ibn Gabirol, but the classic work which wholeheartedly advocates asceticism is Baḥya ibn *Paquda's *Ḥovot ha-Levavot*, which was written in Arabic. Although there is a great deal of eclecticism in this work, it is modeled mainly on Muslim sources. The most prominent representative of Sufism in Judaism is Abraham b. Moses b. *Maimon. In his book *Kifāyat al-ʿĀbidīn* Sufi traces are discernible, even more than in the work of Baḥya. Abraham recommends study and contemplation in order to perfect the soul engaged in the service of God. He used the term "highways" as a means that lead to perfection. In its highest degree, perfection culminates in ecstasy through the praise of God in love. Pure, humble, and sincere souls have access to the esoteric, inner mystical sense of the Torah. Baḥya's *Ḥovot ha-Levavot* and Abraham's *Kifāyat al-ʿĀbidīn* especially influenced the Jewish communities in the East, and played an important role in some later mystic movements; sometimes these mystics found common ways with Muslim Sufis (cf. also *Isrāʾīliyat, *Naḍīr, *Qurayẓa, *Qaynuqāʿa).

ISLE-SUR-LA-SORGUE, L' (Heb. לישלאה), town in the Vaucluse department, S.E. France. The L'Isle community, smallest of the four communities of *Comtat Venaissin, was formed at the latest at the close of the 13ᵗʰ century. During the French Revolution, the *carrière* (Jewish quarter) of L'Isle was all but abandoned. At the time of the Reign of Terror, when there was a controversy over the sale of the silver belonging to the synagogue, no Jew intervened; it can therefore be assumed that the community had ceased to exist. Known scholars of L'Isle were the brothers Isaac and Jacob Gard (mid-16ᵗʰ century) and Ḥayyim Judah b. Jacob Segre, who died in L'Isle in 1633.

[Bernhard Blumenkranz]

ISOU (Goldstein), ISIDORE (1925–), poet. Isou immigrated to France from Romania. He wrote verse and created *Lettrisme*, an ephemeral literary theory which advocated the dislocation of the word and a return to the original letter; in this some critics have seen an unconscious echo of the Kabbalah. In his essay, *L'agrégation d'un Nom et d'un Messie* (1947), Isou pessimistically foretold a second Auschwitz that would engulf surviving Jewry.

ISRAEL (Heb. יִשְׂרָאֵל).

(1) The name of honor given to *Jacob after his mysterious struggle with the angel, "Thy name shall be called no more Jacob but Israel, for thou hast striven [*sarita* from the root *sarah*, שרה] with God [*El*, אֵל] and with men and hast prevailed" (Gen. 32:28, 29). The explanation of the name is not etymological, and was probably not meant to be. More likely, the name literally means "El-is-Just/ Straight/ Upright." It may be noted that the name occurs in Ugaritic as a proper name, and is spelled with *shin*. Despite the apparent prohibition contained in this verse against the subsequent use of the name Jacob, in the following scriptural narrative the names Jacob and Israel are both used indiscriminately with regard to the father and his sons (cf. Gen. 49:2 and 46:5): "and the sons of Israel carried Jacob their father." The discrepancy between Genesis 32:28–29 and the subsequent use of the name is due to different sources. The Talmud specifically states that both names may be employed; Israel, however, shall be of greater importance (Ber. 13a).

(2) When the immediate descendants of Jacob, "the children [*benei*, "sons"] of Israel" (Ex. 1:1), grew into a people, they were called "the people of the children of Israel" (idem, 1:9), and henceforth, until the division of the kingdom under *Rehoboam, "Israel" or "the children of Israel" were the only designations for what is now known as the Jewish people. If the "Israel" mentioned in the inscription of Merne-ptah (king

of Egypt, c. 1225 B.C.E.) is to be identified with Israel and not, as some have suggested, with Jezreel, it is the earliest known use of the name outside the Bible.

(3) With the division of the kingdom during the reign of Rehoboam, the Southern Kingdom, consisting of the two tribes which remained loyal to the House of David, Judah, and Benjamin, took the name Judah; the Northern Kingdom, consisting of the 10 defecting tribes, was called the Kingdom of Israel (cf. I and II Kings with regard to the respective kings, and Amos 2:4, 2:6).

(4) After the Kingdom of Israel fell in 721 B.C.E., only the southern Kingdom of Judah remained, the inhabitants of which were referred to as "Judahites" (*Yehudim*), from which derives the alternative name "Jew." Thus Esther 2:5 reads "There was a certain *Yehudi* in Shushan, whose name was Mordecai … a Benjamite," *Yehudi* being his people and Benjamin his tribe. The designation becomes reinforced by the fact that under Roman rule the land was designated as the province of Judea. Nevertheless, the name Israel continues to be used in the Bible in the books written after the end of the Northern Kingdom as well as in rabbinic literature, especially in the *aggadah*, to denote the Jewish people as a whole, and continues in the post-talmudic period.

(5) The term "Erez Israel" ("Land of Israel") to denote the country of the people of Israel is first used in the Mishnah.

(6) Although the name Israelites was revived in some Western countries in the 19th century to designate the Jews, it is of little historical or theological significance, and is primarily due to the pejorative association which the word Jew had acquired in literature.

(7) The word Israel is also used to designate a Jew who is neither a *kohen nor a *levite.

(8) When the Jewish state was established, the decision was taken to call it the State of Israel. Since 1948, therefore, Israel has become a national connotation and Jew a religious one. The term Israeli applies to all citizens of the state, irrespective of religion.

(9) Mention should also be made of the native Indian Jews, who call themselves *Bene Israel, and of the Ethiopian Jews who call themselves *Beta Israel.

ISRAEL. This entry is arranged according to the outline below. Bibliography for a section is indicated by (†).

LAND OF ISRAEL

GEOGRAPHICAL SURVEY

Names

The name Erez Israel (the Land of Israel) designates the land which, according to the Bible was promised as an inheritance to the Israelite tribes. In the course of time it came to be regarded first by the Jews and then also by the Christian world as the national homeland of the Jews and the Holy Land. The concept of *ha-Arez* ("the land") had apparently become permanently rooted in the consciousness of the Jewish people by the end of the Second Temple period, at which time the term Erez Israel also became fixed and its usage widespread. Prior to this there was no name in existence, or at any rate in general use, to denote the land in its entirety. At different periods there were names that designated parts of the country, either alone or together with an adjacent territory; in some periods it was regarded as part of a wider geographical unit.

During the Egyptian Middle Empire and the beginning of the New Empire (up to the 19th Dynasty), Erez Israel together with part of Syria (and the Lebanon) was called Retune (Rtnw). In the New Empire period, especially from the 19th Dynasty (14th–13th centuries B.C.E.) onward, Erez Israel and (central-southern) Syria were referred to as Ḫurru (Ḫù-rú) chiefly as an ethnic term, after the Horites who inhabited the country, especially Syria. The term *pa-Ḫurru* ("[Land of] the Hori[tes]") is still found as late as 238 B.C.E. (Ptolemaic period) in the Greek text of the Canopus inscription as the synonym for "Syria." An additional name employed from the late 14th to the 12th century B.C.E. is PꞫ-Knʿn. For two important designations of pre-Israelite Erez Israel, *Erez ha-Emori* (Land of the Amorites) and *Erez Kenaʾan*, see *Amorites, *Canaan, and *Phoenicia.

With the Israelite conquest began an entirely new period in the history of Erez Israel, as is expressed in its names. An early term with a widespread usage is *Erez ha-Ivrim* ("land of the Hebrews" – Gen. 40:15). Even later writers, especially Josephus and Pausanias (second century C.E.) sometimes employ this term. After the Israelite conquest, the name Canaan became merely an historical concept but many generations passed before the term Erez Israel became standard usage. The expressions "*erez bene Israel*" ("land of the children of Israel") in Joshua 11:22 and Erez Israel in I Samuel 13:19 refer only to the area inhabited by the Israelites and not to the country as a single geographical entity within its natural boundaries.

Saul, David, and Solomon reigned over the kingdom of Israel, but it is doubtful whether their dominions had an official designation. The biblical references to Erez Israel in the days of David (I Chron. 22:2; II Chron. 2:16) apparently reflect the later period of their composition. After the first split of the united monarchy early in David's reign, "Judah and Israel" sometimes appear side by side to indicate the territory of all the Israelite tribes, but this expression is also considered an anticipation (Josh. 11:21; II Sam. 3:10; 5:5; I Kings 4:20; 5:5). With the final division of the kingdom the name Israel was restricted to the area of the kingdom of Ephraim while the kingdom of the Davidic dynasty was known as the land of Judah. The land of Israel mentioned in II Kings 5:2 refers to the kingdom of all the tribes. In Ezekiel, Gilead and Judah in one reference are explicitly excluded from the territory of Erez Israel; in another Jerusalem, though in Judah, is included in Erez Israel (27:17; 40:2; 47:18).

The shortened form *ha-Arez* is already found in Leviticus 19:23; Joshua 11:23; 12:1; Ezekiel 45:1; Ruth 1:1; but the Mishnah, which also uses it, is the first to employ the term Erez Israel to denote the "land of the children of Israel." After the Assyrian Exile, when the remnants of the people in the country centered in Judah, the name Jew (*Yehudi*) became a synonym for Israelite and Hebrew (Jer. 34:9). In the post-Exilic period, Judah (*Yehud* in Aramaic) was the official name of the autonomous area of Jewish settlement and later of the Hasmonean and Herodian kingdoms, even though these extended over a much larger area than that of Judah in the First Temple period. The Persian authorities in their Aramaic documents used the name Yehud and it also appears on coins struck by

the province; the Greeks (Iouda, Ioudaia) and the Romans (Judaea) continued it. After the Bar Kokhba War (132–135), the Romans changed its name to Palaestina so as to emphasize that the rebellious Jewish nation had lost its right in its homeland. Coins from the Hasmonean period do not mention Israel but only *Ḥever ha-Yehudim ("Council of the Jews"), which perhaps designates the governing body of the nation and not the territory. On the other hand, coins issued during the Jewish and Bar Kokhba Wars bore the inscription Israel (e.g., *Shekel Yisrael,*" "*Le-Ḥer[ut] Yisrael*") but whether this referred to the people or the country is unknown. The name Judah in its broader meaning disappeared almost entirely from Hebrew literature and the Aramaic language and in the end it was replaced by the terms Erez Israel and the Aramaic Ar'a de-Yisra'el and the name Erez Israel entered all the languages spoken by Jews throughout the Diaspora.

The name "*Palestine" was originally an adjective derived from Philistia (*Peleshet*). It is first mentioned by Herodotus 1.105 in the form Συρία ἡ Παλαιστίνη, i.e., "the Philistine Syria"; it was subsequently shortened, the adjective "Palaistinei" becoming a proper noun. The emperor Hadrian, who applied it to the whole country in order to eradicate the name Judea, revived it and from Byzantine times became the accepted name of Erez Israel in non-Jewish languages. (For fuller details, see *Palestine.) On May 14, 1948, the Jewish-held part of Western Palestine was given the name the "State of Israel" in the declaration of independence promulgated by the People's Council. Transjordan, together with Arab-inhabited parts of Western Palestine, the so-called "West Bank," later became the Hashemite Kingdom of *Jordan, and a strip on the southwestern coast, occupied by Egypt, became known as the *Gaza Strip. The *Six-Day War brought the whole area, including the *Golan Heights, which were captured from Syria, under Israeli control, though only the formerly Jordanian-occupied part of Jerusalem and the Golan Heights were formally annexed by Israel. Internationally, all these areas were commonly referred to as the "occupied territories." On part of them the Palestinians established the *Palestinian Authority, which embraced most of the Gaza Strip and certain areas, including the Arab towns, of the West Bank. The common Israeli terms for these areas are "Judea and Samaria" (Yehudah ve-Shomron) for the West Bank and Ḥevel Aza (the Gaza District) for the Gaza Strip.

[Abraham J. Brawer]

Boundaries

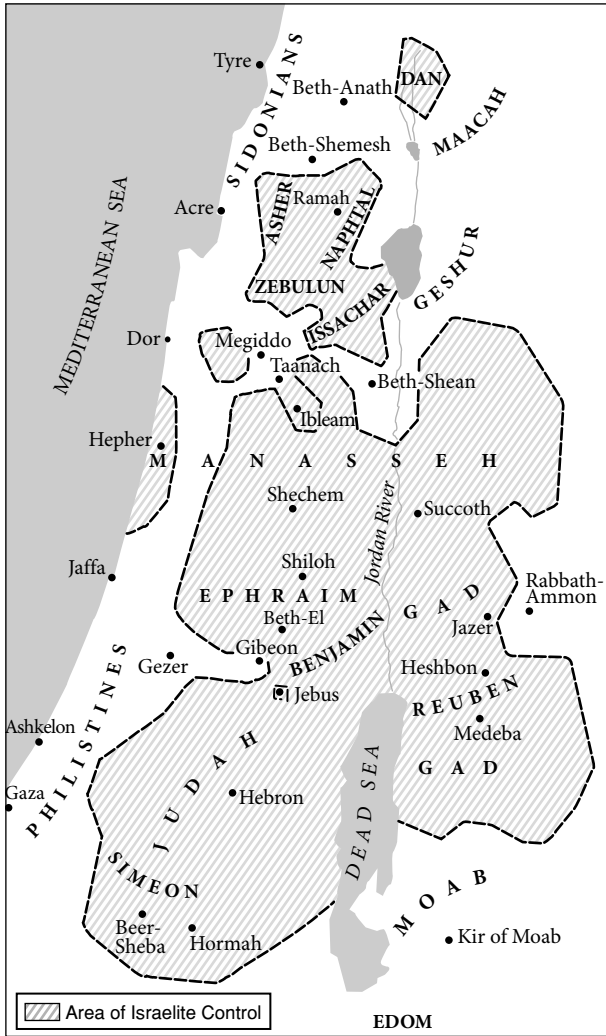
according to bible and talmud. Eretz Israel is an abstract geographical name. Its boundaries were never agreed upon and up today, there are lots of definitions concerning the dispersion of the area. Jewish sources distinguish between three borders of Erez Israel:

(1) "the boundary of the Patriarchs," based on Genesis 15:18–21: "from the river of Egypt (the Nile) unto the great river, the river Euphrates…"; (2) "the boundary of those coming out of Egypt," based on Deuteronomy 1:7–8; 11:24; Joshua 1:4; 13:2–5, which was interpreted as extending from the coastal Galilee

(not including Acre-Akko) to the Brook of Egypt (Wadi el-Arish; Tosef., Ter. 2:12; Tosef., Ḥal. 2:11; Git. 8a, et al.); and (3) "the boundary of those returning from Babylonia," within which the halakhic rules for Erez Israel applied, i.e., this is the actual area of Jewish settlement in talmudic times (Tosef., Shev. 4:11; Sif. Deut. 51; TJ, Shev. 6:1, 36c). According to this definition, the border extended from the coast of the Mediterranean Sea in the western Galilee (south of Acre) to the Golan, continued to the Hauran in the east, followed the desert road down to Amman and Petra, returned to the coast along the Roman *limes,* excluding the southern coastal cities up to, and excluding, Ashkelon.

The biblical expression "from Dan even to Beer-Sheba" is used in II Samuel 24:2 and I Kings 5:5 to designate Erez Israel in its limited sense corresponding to the area "from the valley of Arnon unto mount Hermon" in the lands beyond the Jordan (Josh. 12:1). The term Holy Land (Terra Sancta) which is used in Christian sources also never defines the exact limits of this area.

natural features in historical sources. The ancient texts do not mention all of the country's natural geographical features. Those found include the principal rivers of the Coastal Plain, Litas (Egyptian *Ntn*, cf. Theophanes, *Chronography*, 6235), Belus (Jos., Wars, 2:189), Kishon (Judg. 5:21; I Kings 18:40), Chorseus (Ptolemy, *Geography*, 5:14, 3), Shihor-Libnath

Map 1. The borders of the Egyptian province of Canaan (early 13th century b.c.e.). After Y. Aharoni, Carta's Atlas of the Bible, *Jerusalem 1964.*


Map 2. The limits of Israelite control in the time of the Judges (12ᵗʰ century B.C.E.). After Y. Aharoni, Carta's Atlas of the Bible.

(Josh. 19:26), and Yarkon (Josh. 19:46). In the central mountain range, termed the "hill country of Naphtali" (Josh. 20:7), Mts. Tabor and Moreh are prominent landmarks (Josh. 19:22; Judg. 7:1). South of the Jezreel Valley (Judg. 6:33), also known as the "Great Plain" (I Macc. 12:49), are Mt. Carmel, the *rosh kadosh* ("sacred promontory," as it is already called in inscriptions of Thutmosis III, c. 1469 B.C.E.) in the west, and Mt. Gilboa in the east (I Sam. 28:4). These mountains are outcrops of Mt. Ephraim (Josh. 17:15) whose most outstanding peaks are Mts. Gerizim and Ebal (Deut. 11:29). Baal-Hazor (II Sam. 13:23) marks the beginning of the Judean mountains, where the famous Mount of Olives stands (Zech. 14:4). The Sharon and the Shephelah extend to the west of the central mountain range which ends in the Negev (Isa. 65:10; Josh. 9:1; Deut. 1:7). The four main rivers of Erez Israel east of the Jordan are the Hieromices (Yarmuk; Pliny, *Natural History*, 5:16, 74), Yabbok (Josh. 212:2), Arnon (Deut. 2:24), and the Zered (Num. 21:12), of which the latter two empty into the Dead Sea. The Jordan it-

self flows through Lake Semechonitis (Lake Ḥuleh, Jos., Wars, 4:3) and Lake Gennesareth or Chinnereth (Num. 34:11 – modern Lake Kinneret) and completes its course in the Salt Sea (Num. 34:3, now known as the Dead Sea) which is also called Lake Asphaltitis (Pliny, *Natural History*, 5:12, 72; Jos., Wars, 4:476). The term Aravah is applied to the whole of the Jordan Valley and the area south of the Dead Sea (Deut. 1:7; 34:1–3). The latter area is also called the Valley of Salt (II Sam. 8:13). To the east beyond the Jordan are the mountains of Bashan (Ps. 68:16), Gilead (Gen. 31:25), Seir (Gen. 14:6), and the most prominent – Mt. Nebo (or Pisgah, Deut. 32:48–50; 34:1) from which Moses beheld the Promised Land.

HISTORICAL BOUNDARIES AND SUBDIVISIONS. The earliest complete description of the boundaries of Erez Israel is contained in Numbers 34. Scholars regard this description as
Map 3. The limits of Saul's kingdom (end of 11ᵗʰ century B.C.E.). After Y. Aharoni, Carta's Atlas of the Bible.
*Map 4. The limits of the kingdom of David and Solomon (10th century
B.C.E.). After Y. Aharoni,* Carta's Atlas of the Bible.

a definition of the limits of the Egyptian province of Canaan
as established in the peace treaty between Ramses II and the
Hittites (c. 1270 B.C.E.). The province of Canaan included the
entire area west of the Jordan, Phoenicia up to Mt. Hor north
of Byblos, and the Bashan, Hauran, and Hermon areas. No
subdivisions of this area are known – the system of Canaanite
city-states did not lend itself to any clear administrative orga-
nization. The next detailed account of the borders appears in
Joshua 13–19. Scholars dispute the date of this source and of
the various fragments of lists from which it was compiled. It
is nevertheless evident from the list of unconquered Canaan-
ite cities in Judges 1:21–35 that the ideal and actual limits of
Israelite power did not coincide. The theoretical boundaries
extended from Sidon in the north and Lebo-Hamath in the
northeast to the Brook of Egypt and the Negev in the south
and included east of the Jordan the Bashan and Hauran, and
Gilead and Moab down to the Arnon. In actual fact, however,
the area occupied by the Israelite tribes before the time of
David was limited to the mountains of Galilee and Ephraim,
Judah to the southern end of the Dead Sea, and most of the
area between the Yarmuk and the Arnon, excluding Ammon.
In the Coastal Plain Israelite control was tenuous and Ca-
naanite enclaves in the Jezreel Valley and around Jerusalem
virtually cut Israelite territory into three separate parts. South
of Jaffa the entire Coastal Plain remained the domain of the

Philistines who threatened to encroach on the territory held
by the Israelites.

The lands of the tribes were divided as follows: the Bil-
hah tribes, Dan and Naphtali, held eastern Galilee (Dan being
a latecomer to the area after an unsuccessful attempt to take
possession of part of the Shephelah west of Jerusalem); three
tribes of the Leah-Zilpah group, Issachar, Asher, and Zebu-
lun, settled western and southern Galilee; the central group
of tribes, the House of Joseph (Ephraim and Manasseh) to-
gether with the allied Benjamite tribe – all three of the Ra-
chel group – occupied the hill country from Jerusalem to
the Jezreel Valley, with Manasseh overspilling into Issachar
and east of the Jordan (Josh. 17:11; Judg. 1:27; Num. 32:33); the
*Map 5. The divided kingdom of Israel and Judah in the time of Jeroboam
and Rehoboam (end of 10th century B.C.E.). After Y. Aharoni,* Carta's At-
las of the Bible.

southern group included the Leah tribes of Judah, centered upon Hebron, and the weak tribe of Simeon on the borders of the Negev; Reuben, Gad, and half of Manasseh occupied the lands east of the Jordan with Reuben subject to Gad as was Simeon to Judah.

From the time of King David onward, the ideal borders of Ereẓ Israel came much closer to realization. According to the Bible, David closed the gaps dividing the tribes by conquering Jerusalem, the Jezreel Valley, and the coastal area between Jaffa and Acre. Jerusalem, originally within Benjamin, was made a royal domain outside the tribal system. David, moreover, subdued all the lands up to Lebo-Hamath, annexed Ammon, Moab, and Edom (thereby reaching the Arabah and the Red Sea) and dominated the kings of Hamath and the Philistines by means of vassal treaties. David's kingdom thus extended from the Brook of Egypt to Tiphsah on the Euphrates, although not all his entire domain was regarded as Ereẓ Israel proper. He established a network of levitical cities to serve as administrative centers uniting the kingdom. Solomon reorganized the kingdom into 12 districts (excluding Judah), unequal in size, but equal in economic importance. Each district was to supply his court with its needs during one month of the year. Some of these districts were identical with the old tribal areas while others were new units. According to I Kings 4:7–19, the districts included:

(1) Mount Ephraim;
(2) Makaz (from Beth-Shemesh to the coast);
(3) Hepher (the Sharon coast);
(4) Dor and its region;
(5) Jezreel Valley;
(6) northern Gilead;
(7) southern Gilead (Mahanaim);
(8) Naphtali;
(9) Asher;
(10) Issachar;
(11) Benjamin;
(12) Gad.

Judah's exclusion from this tax-paying area was one of the causes of the subsequent split of the monarchy. As to the external boundaries of the kingdom, Solomon gained Gezer, but gave Cabul to Hiram of Tyre as well as *Aram-Damascus, which deprived him of access to the Euphrates.

With the division of the monarchy under Rehoboam, the northern kingdom of Israel consisted of Ephraim, Galilee, Gilead, and the rest of Israelite territory east of the Jordan. The southern kingdom of Judah retained Benjamin. The subject areas of Ammon, Moab, and Edom soon liberated themselves from the overlordship of weakened Israel and Judah. Apart from some futile attempts by Abijah of Judah to advance into Israel (c. 911 B.C.E.) and of Baasha of Israel to push the frontier closer to Jerusalem, the boundaries of the two kingdoms remained fairly stable. Their external borders, however, changed according to the vicissitudes of their power. On the northern front the house of Omri, and of Ahab in particular, waged several wars with Aram-Damascus and in the

end lost Ramoth-Gilead (c. 850 B.C.E.). With the weakening of Aram under Assyrian pressure, *Jehoash and Jeroboam II (c. 790–770) advanced to Damascus and Lebo-Hamath, almost restoring the boundaries of David. Moab was definitely lost to Mesha in approximately 855 B.C.E. In Judah, Asa or Jehoshaphat (c. 860 B.C.E.) advanced to Elath, which, together with Edom, was later lost but reconquered in the days of Uzziah (c. 750 B.C.E.) who also extended the frontier of the Judahite monarchy in the direction of Philistia (II Chron. 26:6). As to the internal administration of the two kingdoms, the capital of Israel was first at Shechem, then – perhaps already under Jeroboam in the tenth century B.C.E. – at Tirzah, and from

the time of Omri (882–871 B.C.E.) at Samaria. Ostraca found at Samaria provide information on the division of the kingdom into districts in the eighth century B.C.E. The division of the Judahite monarchy into 12 districts is preserved in Joshua 15:21–62; 18:25–28. From the eighth century onward, the Assyrians began reducing the boundaries of Israel. In 732 B.C.E.

Tiglath-Pileser III captured Galilee and Gilead, leaving only Samaria to Israel. In the conquered territory he established the Assyrian provinces of Megiddo, Dor, Karnaim, Hauran, and Gilead. Sargon II (722–705 B.C.E.) conquered the rest of the Northern Kingdom (721 B.C.E.) and Philistia and organized them into two additional provinces: Samaria and Ashdod. Assyria's decline in the seventh century enabled Josiah of Judah (639–609 B.C.E.) once again to extend the rule of the Davidic dynasty over most of Samaria and Galilee, but the Babylonian conquest in 587 B.C.E. brought about the final downfall of Judah. The Babylonians diminished its borders and established an additional province in Edom south of Judah.

After the establishment of Persian rule (539 B.C.E.) all of Erez Israel was included in its fifth satrapy called ʿAbarnaharah ("beyond the river," i.e., the Euphrates). Its satrap residing at Damascus had under his control the various provinces as inherited from the Assyrians and Babylonians. The province of Judah (officially called Yehud) extended from Beth-El in the north to Beth-Zur in the south and from Emmaus and Keilah in the west to the Jordan in the east. The province was subdivided into six districts (called *pelekh* in Hebrew), each with a capital and subcapital. These included Jerusalem with Netophah as its subcapital in the center of Judah; Beth-Cherem (Ein Kerem) in the west Zanoah as its subcapital, Keilah with Adullam in the southwest; Beth-Zur with Tekoa in the south; Jericho with Hassenaah in the east; Mizpah (Tell en-Nasbeh) with Gibeon in the north. The Persians continued the Babylonian provinces but added the province of Ammon

which was administered by the Jewish Tobiad family (see *Tobias). The coastal area was divided between the Phoenician cities Tyre and Sidon.

The Hellenistic conquest (332 B.C.E.) did not alter the country's internal subdivision for the time being. The Ptolemies, kings of Egypt, who ruled the whole of Ereẓ Israel from 301 to 198 B.C.E., granted autonomy to the coastal cities and gave Greek names to various cities (e.g., Acre became Ptolemais, Rabbath-Ammon became Philadelphia, etc.). The Tobiads were restricted to the Western part of their district. All of Ereẓ Israel was administered from Alexandria. When the Seleucid monarchy under Antiochus III conquered Ereẓ Israel, larger units, eparchies, were established, each of which included several smaller districts or hyparchies. Thus Samaria now ruled over Judea and Galilee and Perea of the Tobiads. Idumea remained a separate district, the coastal cities were joined into one district, and Paralia and all the lands east of the Jordan were combined into Galaaditis, except for Perea. The Seleucids, who were energetic Hellenizers, particularly Antiochus IV (175–164 B.C.E.), founded many Greek poleis, such as Scythopolis (Beth-Shean), Pella, Gerasa, Gadara, and Hippus. Samaria had been a Macedonian colony since the time of Alexander.

The main events in the period between the outbreak of the Hasmonean revolt (167 B.C.E.) and the death of Alexander Yannai (76 B.C.E.) were the expansion of the Jewish state, paralleled by the disintegration of Seleucid rule. In 147 B.C.E. Jonathan, the first ruler of the Hasmonean dynasty, received Ekron and the three districts of Lydda, Arimathea, and Aphaerema. Some time before 144 B.C.E. he was also ceded Perea. His brother Simeon (142–135 B.C.E.) annexed Jaffa and Gezer, thus open the sea for his state. Simeon's son John Hyrcanus I (135–104 B.C.E.) extended his sway over Idumea, Samaria, Scythopolis, and the inner Carmel, as well as Heshbon and Medeba east of the Jordan. Judah Aristobulus I, the son of Hyrcanus, who barely reigned one year, added Galilee. The last of the conquering Hasmoneans, Alexander Yannai (103–76 B.C.E.), captured the whole coast from Rhinocorura (El-Arish) on the Brook of Egypt to the Carmel promontory, all of Western Gilead from Paneas (Banias) to Gerasa, and all the lands around the Dead Sea. Only Acre-Ptolemais, Philadelphia, and Ascalon remained outside his rule, the last with Yannai's consent. In their internal organization of the state, the Hasmoneans preserved the basic subdivision – toparchy – of which there were 24, corresponding to the 24 *ma'amadot* (literally, "place of standing") of the Temple service. They also followed Ptolemaic practice by establishing a larger administrative unit called *meris*, and divided the country into five of them: Galilee, Samaria, Judea, Idumea, and Perea.

Roman intervention under Pompey put an end to the expansion of the Hasmonean State. Under Pompey's settlement of 63 B.C.E. the Jewish State was reduced to Judea, including Idumea and Perea, and to Galilee. The Greek cities conquered by the Hasmoneans were "freed." Those cities along the coast were placed under the supervision of the Roman governor of Syria and those east of the Jordan were united into a league of ten cities, known as the Decapolis. The Samaritans regained their independence, the Itureans obtained the Golan and Paneas, and the Nabateans, the Negev and the lands around the Dead Sea. Pompey's harsh arrangements were somewhat alleviated by Julius Caesar, who in 47 B.C.E. restored Jaffa and the Plain of Jezreel to Judea. When Herod replaced the Hasmonean dynasty in 40 B.C.E., he was given, in addition to the lands held by Mattathias Antigonus, the last Hasmonean ruler, the region of Marisa and the lands of the Samaritans. In 30 B.C.E. Augustus granted him the coastal area from Gaza to Caesarea (originally called Straton's Tower) as well as Samaria (renamed Sebaste), Gadara, and Hippus in the interior. In 23 B.C.E. Herod received Batanea (Bashan), Trachonitis, and the Hauran, and in 20 B.C.E. Augustus finally added Paneas and the Gaulan. Herod's kingdom was administered on a dual basis: the Greek cities were more or less autonomous, while the remainder, the "King's country," was ruled directly by royal officials. Herod retained the division into *merides* and toparchies. Two lists of his toparchies have been preserved: one by Pliny (*Natural History*, 5:15, 70) who enumerates them as follows:

(1) Jericho;
(2) Emmaus;
(3) Lydda;
(4) Joppa (Jaffa);
(5) Acrabitene;
(6) Gophna;
(7) Thamna;
(8) Betholeptephene (Beit Nattif);
(9) Orine (Jerusalem);
(10) Herodium.

To this list Josephus adds Idumea, En-Gedi, and Jamnia (Wars, 3: 54–55). After Herod's death (4 B.C.E.) his kingdom was divided among his three sons. Archelaus received Judea, Idumea, Samaria, and Caesarea; Herod Antipas received Galilee and Perea; Philip received Caesarea Philippi and the lands east of the Jordan. The Greek cities were placed under the governor of Syria. When Archelaus was deposed in 6 C.E., his lands were administered by a Roman procurator. This was the situation in Jesus' time. After the death of Philip, his nephew Agrippa I received his inheritance, to which were added the lands of Antipas in 39 C.E., and in 41 C.E. also those of Archelaus. When Agrippa I died in 44 C.E., part of his kingdom was reserved for his son Agrippa II (Philip's share and eastern Galilee) but most of it was administered by Roman procurators up to the Jewish War (66–73).

After the siege and destruction of Jerusalem, the Provincia Judaea was under the rule of Roman governors. Urbanization progressed rapidly in the following centuries. Vespasian turned the lands of the Samaritans into the city of Neapolis; Hadrian set up Aelia Capitolina on the ruins of Jerusalem; Septimius Severus turned Lydda into Diospolis and Bet Guvrin into Eleutheropolis until finally only Upper Galilee, the Gaulan and, and the Jordan Valley remained non-urban ar-

eas. Under Diocletian (284) the southern part of the Roman province of Arabia was attached to the province of Palaestina, which was partitioned in Byzantine times. In 358 the Negev and southern Transjordan were detached and formed into Palaestina Salutaris. In approximately 400 the remainder was subdivided into Palaestina Prima (with its capital at Caesarea) and Palaestina Secunda (with its capital at Scythopolis) and the third province, Palaestina Salutaris, was now called Palaestina Tertia; its governor resided in Petra.

This threefold division continued under the Arabs who conquered the area in the 7th century: Palaestina Prima became Jund Filastīn, Palaestina Secunda, Jund al-Urdunn, and Palaestina Tertia was abandoned to the Bedouins. The province of Filastīn was administered from the new city of Ramleh and Urdunn from Tiberias. The Crusaders who came in 1099 first established themselves on the coast and to the west of the Jordan; at the zenith of their power their kingdom (the Kingdom of Jerusalem) included all of Erez Israel west of the Jordan to Deir el-Balah, the Jordan Valley, and the Seir Mountains down to Elath. Their feudal administration was centered on a royal domain around Jerusalem with royal vassals in the rest of the country: the principality of Galilee, the seigniories of Jaffa and Ashkelon, Caesarea, St. Jean d'Acre (Acre), Naples (Nablus), St. Abraham (Hebron), Toron (northern Galilee), and Outre Jourdain. After the debacle at the hands of Saladin in 1187, Richard the Lion-Hearted in 1192 reconstituted the Crusader kingdom along the coast from Jaffa to Tyre and included western Galilee. In 1228 Frederick II added a corridor to Jerusalem and Bethlehem, and Richard of Cornwall (1240/41) added the area southward to Ashkelon and Beit Guvrin and eastward to the Jordan near Jericho and in Galilee. From 1250 the kingdom gradually shrank under Mamluk attacks which finally led to the capture of Acre, the Crusader capital, in 1291. The Mamluks (1250–1516) divided Erez Israel into a number of "mamlakas": Ghazza (coast); Safed (Galilee); Dimashq (Damascus; Samaria, Judea, northern Transjordan); and el-Kerak (southern Transjordan). Under the Turks, who took over the country in 1517, a Wali (governor) at Acre ruled from the Carmel to Galilee, while his colleagues at Esh-Sham (Damascus) held the rest of Erez Israel, which was subdivided into the sanjaks of Nablus (including Al-Salt), Al-Quds (Jerusalem), Gaza, Hauran, and Kerak. From 1874 Jerusalem with southern Judea was administered directly from Constantinople as a separate sanjak or *mutessarifliq*. The Turks reestablished their rule over the Negev, but in 1906 the British, who ruled Egypt from 1882, forced them to cede the Sinai Peninsula to Egypt. The British, who took over Palestine in 1917, were the first to establish it as a modern political entity with clear boundaries. The Zionist Organization requested a more extensive area, including the lower Litani River and Mt. Hermon in the north, a line just west of the Hejaz Railway in the east, and a line running from Aqaba to El Arish in the southwest. The British, in agreement with the French, established a boundary which ran from Ras el Naqura between Acre and Tyre on the Mediterranean shore to Metullah and then to El

Hama, east of the Sea of Galilee. In the east the Jordan River, the Dead Sea, and the Arava Valley marked the boundary line, while in the south the British adopted the 1906 line between Egypt and the Ottoman Empire. Thus the Mandatory area of Palestine (from which Transjordan was detached in 1922) extended from Dan (Metullah) to Umm Rashrash (today Eilat), and from the Mediterranean coast at Ras en-Naqura to the sources of the Jordan River. This area is seen today by most people dealing with the area as Palestine or Erez Israel. During the 30 years of the British Mandate, the subdivision of the country varied from six districts to two (with a separate Jerusalem division). In 1946, at the end of the Mandate, there were six: Galilee, Haifa, Samaria, Jerusalem, Gaza, and "Lydda," so called because, although it contained the largest city in Erez Israel – Tel Aviv – the Mandatory officials refused to honor it with the name of a district.

From 1949 to 1967 the State of Israel was bounded by the lines of the Armistice Agreements (the "Green Line"). The Six-Day War established ceasefire lines on the Suez Canal, along the Jordan River, and east of the Golan. These lines were partially changed after the *Yom Kippur War of 1973. As stipulated by the peace treaty between Israel and Egypt (1979), both countries accepted the Mandatory line (Rafah – Taba) as the international boundary between them. The peace treaty between Israel and the Hashemite Kingdom of Jordan (1994) also adopted the Mandatory line, with some modifications, as the international boundary. (See also Israel, State of: Historical Survey below.)

ETHNOGRAPHY. The earliest inhabitants of Erez Israel of whom there is historical documentation are the West Semitic tribes known as Amurru (Amorites). In the Bible they are subdivided into a large number of groups, known collectively as Canaanites, a name properly belonging to the Phoenicians. In the Bronze Age, peoples of Indo-Aryan origin (Hittites and Mitanni) became the rulers of various cities in Erez Israel. The Israelite conquest and the Philistine entrenchment on the southern coast (c. 1200 B.C.E.) produced a change in the population balance. The Canaanites were gradually absorbed by the Semitic Israelites, while the Philistines retained their separate character. The Assyrian deportations created a new mixed element, the Samaritans, in Mt. Ephraim. Under Babylonian rule, the Edomites settled in southern Judea, the Nabateans occupied the Negev and southern Transjordan, and a remnant of Jews clung to Jerusalem. In Persian times Jews returned from captivity in Babylonia and the Phoenicians and some Greek settlers inhabited the coast. Hellenistic rule brought an influx of Greeks as officials, soldiers, merchants, and estate owners and the coastal areas and part of the inland cities became Hellenized. At that time there was an overspill of Jews northward into Samaria and eastward into Perea. The Hasmoneans made the Idumeans (Edomites) and the Galileans assimilate with the Jews. During Herod's rule Jewish settlements in northern Transjordan expanded, while a sprinkling of Romans and Greeks settled in Judea and Galilee. After the Bar Kokhba War,

the Jews were expelled from Judea and replaced by Syrian and Arab colonists; Galilee, however, remained Jewish up to the end of Byzantine times.

Arabs gradually began to infiltrate into Ereẓ Israel in the late Byzantine period, even before the Arab conquest. After their conquest the Christians in the country slowly became Islamized. The Crusader period brought an incursion of West Europeans, mainly French, Normans, and Italians, but they were unable to root themselves in the country and withdrew after the Crusader collapse. From the ninth century onward, Seljuk, Kurdish, and Turkish mercenaries settled in the country, remaining its rulers until the World War I. The German Templars resumed European colonization on a small scale in the late 19th century, and many other Europeans and Americans settled in the cities in that period for religious or commercial reasons. The Jews, who had clung to the "Four Holy Cities" (Jerusalem, Safed, Tiberias, and Hebron) and were reinforced from time to time by newcomers from Europe and the Ottoman Empire, began to expand their settlement from 1878 onward, assisted first by the Rothschilds and later by the Zionist Organization. From a population of 55,000 in 1918 they increased to 5.5 million in 2003, mostly by immigration from Eastern and Central Europe, Asia, and North Africa.

For natural boundaries, see Israel, Land of: *Physiography.

Physiography

INTRODUCTION. (Official transliteration of place-names can be found in *The New Israel Atlas*; 1969.) Despite its historical origin and usage, the name Ereẓ Israel (Land of Israel) may very appropriately be applied to designate a major regional entity within the Fertile Crescent, wedged between the Mediterranean on the west and the Syrian and Arabian Deserts on the east and southeast. Throughout historical and very likely also prehistorical times, this area served as a bridge between adjacent African and Asian regions. It is adequately defined by "natural boundaries," i.e., major physiographical features beyond which relief configuration or climatic conditions and associated surface phenomena change markedly, as postulated by regional geography for the concept of a major unit of the earth's surface. The region is distinctively delimited on the west by the vast expanse of the Levantine Basin of the Mediterranean. Moreover, along this particular section of the coastline there are no islands, which could complicate proper delineation. Similarly, the coast of Eilat, by which Ereẓ Israel has access to the Indian Ocean, clearly demarcates the maximum extension toward the south. On the east, northeast, southeast, and southwest, Ereẓ Israel is bounded by extensive tracts of the

great global, subtropical desert belt (Syrian Desert, Arabian Desert, and Sinai Desert). The marginal areas of this desert belt, in which the climatic conditions undergo a change from semiarid to fully arid, form the historical border zone of Ereẓ Israel as well. In the Sinai Peninsula, the Negev plains continue without interruption up to the Wadi el-Arish, the Brook of Egypt according to the tradition. To the east, an adequate, though not continuous, delineation is afforded by a watershed zone between rivers west and east of it. Although it is not a prominent relief feature, this zone also denotes a sort of a border between the semiarid and Mediterranean areas to the west and the arid ones to the east. The northern boundaries of Ereẓ Israel are fairly well defined. There the valley of Qasimiye – the lower course of the Leontes (Litani) River – and, further east, the towering Hermon Massif form a marked natural boundary between Ereẓ Israel and the Lebano-Syrian region.

Ereẓ Israel, however, is not considered a regional entity merely because of its natural confines. These are mainly concomitant consequences of the fact that the area is morphogenetically a very consistent surface unit in almost all its physiographical aspects. The area is decidedly influenced by a singular major phenomenon: the Jordan-Dead Sea-Arabah Rift Valley, which also forms the meridional axis of Ereẓ Israel along its entire length. The morphogenetic impact of the Rift Valley is outwardly expressed by the main drainage pattern of the region. About 70% of Ereẓ Israel's rivers (and far more of its overall runoff, if the quantities of the inflow are considered) discharge into the Rift Valley, in relation to which the areas with river outlets into the Mediterranean form a sort of foreland. From the hydrographical point of view alone, Ereẓ Israel thus represents primarily the catchment area of the Rift Valley, which, within this region, is characterized by some unique topographical features. It is the deepest continental depression on the earth and contains an inland sea (the Dead Sea) whose level is about 1,300 ft. (400 m.) lower than that of the Mediterranean with one of the highest mineral contents of any body of water in the world. Its second large body of water is Lake Kinneret, which is the lowest freshwater body on the earth's surface, about 660 ft. (200 m.) below sea level. The two bodies of water are connected by a river (Jordan River) whose bed, accordingly, is the lowest in the world. This hydrographical condition, namely the predominance of the endoreic area (i.e., an area without outlet into an ocean or a major body of water connected with it), is only one of the many influences exerted by the formation of the Rift Valley upon almost all of the surface configuration of Ereẓ Israel.

From the anthropogeographical point of view, however, the Rift Valley has proven a rather disuniting element. Due to its relative depth, and still more to the height and steepness of the mountain slopes ascending from it to highlands more than 3,300 ft. (1,000 m.) above its floor, enclosing it wall-like with a single wider breach giving access to it only from the west, the Rift Valley was throughout history one of the main factors for the division of the region into two parts, very infrequently – and then only partially – united into a single state.

The Rift Valley is thus the prime cause of Ereẓ Israel's subdivision into two main parts: a western one – Mediterranean-oriented Cisjordan (referred to as western Palestine in political and historical geography) – and an eastern one – Transjordan (eastern Palestine). The first may be regarded from the geographic point of view as the mainland, the second as the backland of the entire region.

Situated between the Mediterranean on the west and an almost continuous desert belt on the south and east, and being long and relatively narrow – about 280 mi. (450 km.) in length and about 110 mi. (180 km.) at maximum width – Ereẓ Israel also morphogenetically represents a transition zone. It contains almost all the major relief elements characteristic of the adjacent countries, although generally on a much smaller scale and in somewhat subdued form; coastal plains; mountain ranges, partly continuing the systems of folds fully developed and culminating in Lebanon-Syria and Asia Minor; plateaus, much smaller and more discontinuous here than in the neighboring countries; and basins of all kinds, most of which are greatly affected by and subordinated to the dominant relief feature – the Rift Valley. The same is true of lithological conditions. Outcrops of most kinds of rocks, from basement (magmatic, metamorphic) to sedimentary ones of most recent ages, form its bedrock. Volcanic rocks (basalts, tuffs) are also widely distributed there, as are evaporites (i.e., sediments mainly generated by deposition in outletless inland seas given to intensive evaporation and thus to concentration and consequent consolidation of their solutional contents).

Located between the Mediterranean and the deserts, Ereẓ Israel exhibits complex climatic gradations and transitions ranging from conditions mainly influenced by the sea and manifested primarily by the amount of precipitation to those which already show all the characteristics of a fully desert region – manifested, inter alia, by the relatively extensive surfaces composed of evaporites. A most important characteristic of the region, and particularly of Cisjordan, is therefore the proximity of greatly differing landscapes within relatively small areas resulting mainly from the structural, lithological, and climatic conditions changing over very small distances. The region's very mosaic-like quality is also crucially important as physiographical background to its history, illuminating, e.g., the tendency to regional particularism throughout the area. Notwithstanding the great number of small, highly different regions, it is customary to subdivide Ereẓ Israel into only four major units: (1) the Coastal Plains, (2) the Western Mountain Zone, (3) the Rift Valley, and (4) the Transjordan Plateau.

THE COASTAL PLAINS. *The Coastal Zone.* Ereẓ Israel is bordered on the west by the Mediterranean Sea. The length of its coastline is about 170 mi. (270 km.) from the mouth of Wadi el-Arish to that of the Qasimiye River. From the morphogenetic and typological points of view, the coast of Ereẓ Israel represents a transition between the coasts of Egypt and Sinai, which are mainly deltaic, and the Lebano-Syrian coast, whose configuration is primarily determined by faulting. The coast of Ereẓ Israel is fairly smooth, without any islands representing detached parts of the mainland. A shelf zone, relatively wide at the southern portion and progressively narrower toward the north, extends along the coast up to about 500 ft. (150 m.) in depth. The coastal zone (i.e., the areas adjacent to the coastline that are directly influenced by the sea) consists of two main parts: a rather uniform southern part, extending from the mouth of the Wadi el-Arish to Tel Aviv-Jaffa, and a northern one that extends up to the mouth of the Qasimiye River. The northern part is far more complex in its origin and consequently in its outline. The southern part of the coastline is almost straight, and its course accords with that of the series of anticlines that form the mountainous backbone of Cisjordan. Sandy beaches, attaining several hundreds of meters in width, extend along the coastline, broken only at the alluvia-filled valley-exits of the rivers discharging into the Mediterranean. Breaks also occur at four other spots: Deir al-Balah, a portion of the coast south of Gaza, Ashkelon, and Mīnat Rūbīn (south of the mouth of the valley of the River Sorek), where coastal cliffs border almost immediately on the sea. The beaches are covered almost exclusively by quartz sands brought from the Nile delta and from the coast of Sinai by currents running close to the shore. Inland, the beach zone is delimited mainly by low ridges composed of sand grains cemented by calcareous material – a rock type called *kurkar* in the vernacular – and passes into areas covered by shifting dunes. The sands of these dunes are mainly of marine origin, i.e., they were brought to the coast by shore currents and waves and then transported inland by winds. The width of the sand-dune belt varies considerably; it attains its maximum – about 4.5 mi. (7 km.) – in the vicinity of Rishon le-Zion.

The northern coastal zone is rather different, in some aspects even opposite, in configuration. It is no longer straight throughout, but indented at some sections by small embayments, several of which form coves (e.g., at Dor and Athlit). Off-branchings of the inland mountains, the Carmel and the Ḥanitah Range (Rosh ha-Nikrah), border immediately upon the sea, forming high and steep headlands, north of which the coastline recesses to form wide embayments. Only the first of these, at Haifa, represents a true bay, extending southeast for about 4 mi. (6 km.) and even forming a small secondary bay at its northern extremity at Acre. The rest of the northern coastline is bordered along its entire length by cliffs of *kurkar*. These cliffs are high as far north as Athlit – attaining a maximum height of about 130 ft. (40 m.) in the vicinity of Netanyah – and then becoming progressively lower. A very discontinuous small abrasion platform, i.e., a rocky, narrow shore-plane generated by progressive down-and-back erosion of the cliff faces, extends along the greater part of the coast. Waves undercut the cliffs at their bases, and as the cliffs are worn back, their bases form a progressively widening plane. The seaward parts of the platform, subject to the continuous and generally very intensive impact of the waves, in turn gradually become destroyed, with only small isolated remains –

reefs – evidencing the earlier extension of the coast 1.2–1.8 mi. (2–3 km.) west of its present course. Beaches are very poorly developed along this northern portion of the coast zone. They exist mostly around coastal indentations or along the bases of cliffs, where they are somewhat protected against the onslaught of waves by an outlying strip of reefs close to the shore or tiers of beachrock (i.e., coarse sands, pebbles, and shells cemented into rocks). Areas of sand dunes are small and can be found only where the valleys of rivers discharging into the Mediterranean breach the cliffs, creating sufficiently wide gaps for the landward intrusion of wind-borne sands accumulating on the shore. Thus only at the bay of Haifa are beach and dune areas fully developed.

The Coastal Plains. In the narrow sense, the Coastal Plains are lowlands covered mainly by alluvial soils that extend from the coastal dune areas and the coastal cliff zone, respectively, to the bases of the inland mountains. The plains exhibit a large number of minor relief features, particularly isolated hillocks or those forming small ridges composed of *kurkar* and a fairly well-developed drainage net, which is more dense toward the north and sometimes exhibits minute gorge-like valleys where traversing the *kurkar* ridges. The ridges extend without a major break from the mouth of Wadi el-Arish to the headland of the Carmel, and from there to the Rosh ha-Nikrah promontory, recurring on a very small scale as far as the valley of the Qasimiye River. From the earliest times the Coastal Plains were one of the most densely populated and intensively cultivated parts of the country, although secondary in historical importance to the mountainous interior regions. They may be rather arbitrarily subdivided into seven units: the Southern Plains (frequently referred to as the Negev Plains); the Judean Plain (including the Philistine Plain as its southern part); the Sharon; the Carmel Coast Plain (usually referred to only as Carmel Coast); the Haifa (Zebulun) Plain; the Galilean Plain (Acre Plain); the Tyre Plain, north of the cape of Rosh ha-Nikrah. Each of the last three units is usually referred to in Hebrew as *emek*, i.e., valley or narrow lowland, because of their limited width.

The Southern Coastal Plains. These plains are separated from the Mediterranean by a relatively narrow belt of sand dunes, 2 mi. (3 km.) wide on the average. Their most important characteristics are determined by climatic conditions. They receive the smallest amount of precipitation in comparison with the other units of the Coastal Plains – El-Arish, approximately 8 in. (200 mm.); Gaza, somewhat less than 16 in. (400 mm.). Due to its proximity to the desert areas, the soils of this plain are composed predominantly of wind-borne loess, probably redistributed by surface flow, and exhibit many intermixing gradations with sands in the southern parts of the plains and with the red-sand soils (called *ḥamra* in the vernacular) at its northern limits. Only two main ephemeral streams (Naḥal Besor and Naḥal Shikmah), about 12 mi. (20 km.) apart at their debouchures into the Mediterranean, traverse the region. Naḥal Besor and its tributaries have turned part of the loess

zone into spectacular "badlands," i.e., intensively dissected surfaces that form a microrelief landscape of miniature hillocks and gullies of the most variegated shapes.

Three major topographical zones may be distinguished more or less parallel to the coast. East of the coastal sands, where some dunes attain heights of several tens of meters, a relatively low zone extends, delimited to some extent by discontinuous *kurkar* ridges. This zone forms a gradual ascent to a hillock region in the east and to relatively large areas covered by inland sands of eolian origin in the southeast. Because of its narrowness, elongated shape, and low topography (in comparison with the bordering zones), this area is frequently referred to in the regional geography of Ereẓ Israel as the *marzevah* ("corridor"). This is also a major topographical feature on the plains farther north and had a decisive influence in the past on the sites of settlements and communication lines (Via Maris).

Judean Plain. Rather wide in its southern part – about 15 mi. (25 km.) – the Judean Plain narrows progressively toward the north – about 10 mi. (17 km.), a characteristic common to all the plain regions described below. The plain is separated from the sea by a dune belt, which attains its maximum width – about 4 mi. (7 km.) – here. The "corridor" between the sand zone and the base of the hill country to the east of the plain (the "Shephelah") is more distinct and forms a fairly uniform surface with far fewer and smaller remains of *kurkar* ridges than are found in the Negev Plain. Climatic conditions are fully Mediterranean – 16–20 in. (400–500 mm.) annual average precipitation – and are reflected in the soil cover – loess in the southernmost part and *ḥamra* covering almost the whole remaining area with rather large enclaves of heavy soils of alluvial and swamp origin. The genesis of the latter types of soil is connected with the greater number of rivers draining the plain. Although only four of these rivers reach the sea, their courses are frequently deflected to run meridionally by the extension, width, and continuity of the dune belts.

Sharon Plain. Lengthwise, the Sharon Plain extends from the Yarkon, the largest river in Cisjordan discharging into the Mediterranean, up to the Zikhron Ya'akov spur of Mount Carmel. Its width varies considerably, generally narrowing northward to a minimum of about 2½ mi. (4 km.). It also exhibits a distinct meridional zonation, far more pronounced than that of the Judean Plain. Dune areas between the sea and the plain proper, as mentioned before, are rather sporadic there, narrow and short, and restricted to the cliffless parts of the coast, i.e., to the vicinity of the river exits into the sea. Elsewhere, the plain begins immediately behind the zone of the cliffs, which attain considerable height and are continuous, thus preventing the ingress and accumulation of sand further inland. More or less parallel to the sea cliffs appear two major, though discontinuous, closely spaced *kurkar* ridges which indicate the former coastline. Between them are situated elongated and narrow lowlands, of which only the eastern one attains a width

of about 2 mi. (3 km.), whereas the western one is much narrower. East from the *kurkar* ridge zone the "corridor" extends up to the outliers of the Samarian Highland. In contrast to the two above-mentioned intermediate areas between the *kurkar* ridges, with their prevailing *ḥamra* cover, the soil of the "corridor" is mainly alluvial. The amount of precipitation is approximately 4 in. (100 mm.) greater than in the Judean Plain, exceeding an annual average of 24 in. (600 mm.) in some places. This was one of the main preconditions for the large forested areas characteristic of the Sharon in the past. The river network is relatively dense, with far more rivers discharging into the sea than on the Judean Plain. The exits of the rivers here have also been largely blocked both by the dune areas and the *kurkar* ridges. Consequently, large tracts of the Sharon became swampy, particularly in the environs of Ḥaderah and the Ḥefer Plain (the latter was drained by Jewish settlers only in the 1930s).

Carmel Coast Plain. About 22 mi. (35 km.) long, 2–2.5 mi. (3–4 km.) wide at its southern end and a few hundred meters wide at its northern limit, the Carmel Coast Plain ends prominently at the Carmel Headland. The shape of this land unit would fully justify the omission of the term "plain" or even "valley" in its usual meaning. Like the Sharon, a considerable part of this plain consists of *kurkar* ridges, the westernmost of which is almost entirely transformed by marine erosion and ingression into reefs and abrasion platforms and is mainly characterized by several kinds of indentations, including some coves and minute headlands. The other two ranges of *kurkar* ridges are still preserved, particularly in the southern portion, and greatly impede the passage of the numerous streamlets descending from the Carmel, so that in the past artificial outlets had to be cut into the ridges. Another characteristic of this plain is the relative scarcity of *ḥamra* in comparison with the alluvial soils that are derived mainly from Mount Carmel by erosion and river deposition.

Haifa Bay Plain. Tectonically, this plain represents the westernmost component of the Beth-Shean–Harod–Jezreel Valley system that traverses the entire width of Cisjordan from the Jordan Rift Valley to the Mediterranean. Flanked on the southeast by the high and steep slopes of the Carmel, it exhibits several features absent from the adjacent parts of the coastal plain north and south of it. Along the coast a relatively wide and continuous beach reappears, followed by a belt of sand dunes about a mile wide; no cliff formations are interposed between the plain and the sea. Farther inland it borders the relatively low and gently sloping Yodefat Hills – outliers of the Lower Galilee Mountains. The eastern part of the plain is covered by heavy alluvial soils, partly in consequence of the extensive swamps that existed here in the past. The southern portion of the plain is drained by the sluggishly meandering Kishon River; the northern part is drained by the Na'aman River, fed by springs and extensive swamps behind the sand area. For several kilometers the Na'aman flows parallel to the coastline and along the inland margin of the dune belt.

Acre-Tyre Plain (Galilean Coastal Plain). The coastal plain north of Acre terminates abruptly in the promontory of Rosh ha-Nikrah. It bears some resemblance to the Sharon and still more to the coastal plain of the Carmel. Here the coast is bordered by cliffs (albeit inconsiderable in height) accompanied by an extensive abrasion platform, disjointed parts of which can be discerned in the form of reefs at a distance of 1.2–1.8 mi. (2–3 km.) from the coastline. There are several very small indentations in the coast, which is subject to strong marine erosion. The paucity and smallness of beaches and their predominant cover of coarse sands are also the result of wave erosion. No larger dune-sand accumulations intervene between the coast and the plain, and there are only few and small remnants of *kurkar* ridges. The narrow plain – 4 mi. (7 km.) maximum width – is bordered on the east by interfluves, i.e., mountain spurs created by the numerous rivers from the Upper Galilee Mountains discharging into the Mediterranean. These rivers also supply the bulk of the heavy soil material that forms the cover of the plain almost exclusively. The promontory of Rosh ha-Nikrah (the biblical "Tyrian Ladder"), the seaward scarp of an Upper Galilean mountain range along which the present-day border between the State of Israel and Lebanon runs, sharply delimits the Acre Plain. The headland, of a type frequently encountered along the Lebano-Syrian coast and bordering immediately on the sea for a length of about 7 mi. (12 km.), consists of calcareous rock, and its base contains deep sea caves cut in by wave erosion. Beyond the promontory the coastline curves gently in and out, and along it extend beaches and even a continuous, although very small, dune belt. Of specific interest here is Tyre, formerly situated on a reef island but now connected to the mainland as if by a tombolo. This transformation was caused by the accumulations of sand at the dam constructed during the siege of this harbor town by Alexander the Great, and it is one of the countless instances of major landscape transformations effected by man in the Middle East. The coastal plain east of the sand zone is narrower than the Acre Plain and irregularly confined by the east-west-oriented spurs of the Lebanese-Galilee Mountains. It is traversed by a relatively great number of ephemeral rivers which are the main suppliers of the predominantly alluvial soil cover of the plain.

THE WESTERN MOUNTAIN ZONE. Often referred to metaphorically as the backbone of Cisjordan, the Western Mountain Zone extends from Eilat to the Valley of Qasimiye along the entire length of the region. Within the Levant, it tectonically represents the southernmost outliers of the great Alpine orogenic system and accordingly consists mainly of rather simple and short fold structures generally of medium height. The latter characteristic is also reflected in the term "Hills" (Judean Hills, Samarian Hills, etc.), which is frequently used in this region. In addition to folding, the formation of these mountains was strongly affected by faulting, particularly in the vicinity of the Rift Valley and in Galilee. Despite its moderate elevation above sea level and in relation to the lower surround-

ings (valleys and basin floors), the relief of this mountainous region, which occupies more than two-thirds of the Cisjordan area, is very pronounced. Steep slopes often appear as major and minor scarp and cliff faces, and surface roughness even on moderate slopes is frequently accentuated, particularly in the southern part of the Mountain Zone, by the almost complete absence of soil and vegetation cover. In the central and northern parts, large tracts were once covered by forests (now largely reduced to sporadic maquis and garigue – brush-and-thorn vegetation), and the slopes were terraced, creating a main area of cultivation. These terraces, now largely disused and in disrepair, form one of the most conspicuous external features of the slopes. The slopes that were not terraced and the mostly flat or gently domed summit surfaces are covered by coarse detritus of different sizes or are pitted by mostly small and shallow depressions, as a result of strong weathering (especially solutional) of the bare surfaces (which are composed mainly of limestone).

The bold relief of the Cisjordan Mountains is mainly a result of deep incisions by the watercourses, which created valleys that frequently take the form of gorges or even canyons. In the other types of valleys as well, most of the slopes are very steep, and often no valley floors developed along the river beds. The relatively high frequency of intramontane basins of all sizes is another very important characteristic of the overall relief that contributes greatly to the multiformity and mosaic-like composition of the mountainous region. The extremely variegated pattern of the mountainous zone, resulting in a large number of small regions – and thus contributing to the particularist tendencies of its inhabitants throughout history – was brought about by the complexity of its tectonic, lithological, and climatic conditions. Tectonically, the most characteristic aspect of Cisjordan – in sharp contrast to Transjordan – is the most intensive intermixing of major features originating through up- and downfolding, mostly with subsequent forms produced by faulting. In the southern and central parts of the Mountain Zone the first group of processes determined – mainly in the form of anti- and synclines – the buildup, extension, and course of the principal ranges, whereas the latter played a decisive role in their disruption. Particularly in the northern part, faulting and associated features virtually obliterate the former structures, creating a relief mainly characterized by intramontane tectonic valleys and ranges, the extent and orientation of which is determined by these valleys. The role of some major subsidence regions (Rift Valley, Beth-Shean-Harod-Jezreel Valley and Haifa Bay) in relation to general exterior configuration has already been pointed out. Fault zones and lines also exert decisive influence upon the drainage system of a greater part of Cisjordan.

The lithology of the Cisjordan Mountain Zone is rather diversified, considering the small size of the area. Most of the mountains consist of calcareous rocks, with only small areas of outcropping sandstones, magmatic, metamorphic, and volcanic rocks. Due to the great differences in their composition (limestone, dolomites, chalk, calcareous marls, etc.) and fre-

quent intercalations – each responding rather dissimilarly to denudational processes – these calcareous formations greatly contribute to the diversification of the landscape, determining major and minor morphological features specific to the predominant bedrock. The influence of climatic factors, mainly the amount and type of precipitation, is even greater. The southern part of the Cisjordan Mountain Zone, although consisting predominantly of the same types of rock as the central and northern parts, differs greatly from the latter in its morphological physiognomy. Weathering processes are dissimilar here in degree and even to some extent in kind. For example, farther north solutional processes exert the greatest influence upon the surface configuration by creating karstic features that dominate the landscape, particularly in Galilee. These processes are almost entirely lacking in the southern highlands. Runoff is much greater and consequently erosion is much more intensive here than in regions receiving much larger amounts of precipitation. The eastern flank of the central area is semiarid and arid (the Judean Desert), due to its location leeward of the Judean Mountains, with the precipitation caused by the moisture-bearing winds from the Mediterranean consequently decreased. This area also exhibits a specific set of morphological features, in many respects similar to those of the Negev, which is also mainly affected by climatic conditions.

Mainly in accordance with the three criteria mentioned above (tectonic, lithological, and climatic conditions), the mountain region of Cisjordan can be subdivided into the following major physiographical units: the Negev Highlands, the Central Mountain Massif, and the Galilean Mountains. Each of these units comprises several subregions determined by geological, tectonic, lithological, climatic, and consequently morphological conditions. Each is very different from the others in the overall character of its landscape. The width of the Mountain Zone varies proportionately with that of Cisjordan as a whole (i.e., the distance from the Mediterranean coast to the Rift Valley), decreasing from about 50 mi. (80 km.) in the Negev Highlands to about 22 mi. (35 km.) in Galilee.

Negev Highlands. In many respects, the Negev Highlands represent a direct continuation of the plateau and mountainous regions of the Sinai Peninsula, exhibiting great similarity of tectonic, lithological, and climatic conditions and, consequently, relief. The similarities are most evident in the southern part of the Highlands, the Eilat Mountains, which extend from the Gulf of Eilat to Bikat Sayyarim and Bikat Uvdah in the north. Here, though confined to a comparatively small area, are found ranges and blocks composed of magmatic and metamorphic rocks that build up the larger part of the southern apex of the Sinai Peninsula and are not found in any other region of Cisjordan, with the exception of Makhtesh Ramon. Similarly, outcrops of Nubian Sandstone, exposed only on the floors and the foot of the slopes of the *makhteshim* (see below), are relatively widely distributed here as surface rocks. These

types of rock are in very close contact with calcareous ones, creating relief forms of singular diversity and even contrast. The extremely variegated composition of the crystalline rocks makes them particularly susceptible to granular weathering, exfoliation, and sheeting. These processes result in steep, serrated, and crenulated ridges (Jehoshafat, Shelomo, Roded, Sheḥoret), separated from one another by steep fault-conditioned valleys. Even more spectacular are the relief features that developed from Nubian Sandstone. Columnar jointing – of which the Solomon Pillars in the Timna region, about 15 mi. (25 km.) north of Eilat, are but one outstanding example. Column relicts in the form of mushroom rocks, castellated rocks, rocking stones, and intensive alveolation, producing cave-like tafoni and canyons – deeply incised in the multicolored sandstone by the extremely strong erosive action of the many river courses (the Red Canyon, Naḥal Amran, etc.) carrying only flash floods once or twice within a year – give rise to landscapes even far more diversified in ever-changing micro-features than those which developed in the crystalline bedrock. In sharp contrast to these landforms are those which developed on other bedrock, limestone in particular. The relief in limestone is generally far more uniform and massive and is mainly characterized by flat-topped ranges and small plateau-like elevations covered by angular gravels. The latter are produced by weathering, which imparts to the surfaces covered by them the appearance of typical *ḥamada* (block-strewn desert surfaces).

The Paran Plateau. This area comprises mainly the Cisjordan catchment area of the Paran River, a major tributary of the Arabah, which is the collecting stream of the Rift Valley south of the Dead Sea. The headrivers of the Paran drain the parts of the Sinai adjacent to the Eilat Mountains in a relatively dense network of wide channels filled with sand and pebbles. The highest elevations of the Paran Plateau – some of which form mountain blocks or ridges – are on its northeastern side – Har Nes, 3,329 ft. (1,015 m.); Har Saggi, 3,229 ft. (1,006 m.). In the eastward direction, elevations become lower and surfaces generally more uniform. In strong contrast to the variegated lithology of the Eilat Mountains, the tableland here is built up almost exclusively of calcareous strata: limestones interbedded with chalk, marls, and thin layers of chert. The surface of the plateau features the widest areas of "desert pavement" found in Cisjordan, i.e., areas covered by angular gravels (*ḥamada*) or rounder pebble-like debris (a desert surface type morphologically known as "serir"). At the southern periphery of the plateau, Bikat Sayyarim and the far larger Bikat Uvdah represent typical intramontane desert basins covered and filled by sands. They are subject to occasional flooding and drain – albeit through very indistinct channel beds – into the Ḥiyyon River, a major tributary of the Arabah River, running about 12 mi. (20 km.) south of the Paran. To the northeast the tableland is delimited by the gravel-covered Ha-Meshar Basin, which, from the hydrographical point of view, belongs to the Central Negev region.

The Central Negev Highlands. The anticline of Ramon is essentially the only major structure of the Central Negev Highlands. This upfold extends approximately 43 mi. (70 km.) in length from the biblical Kadesh-Barnea in the Sinai almost to the very escarpments bordering the western side of the Arabah Rift. It is not only the highest portion of the Negev Highlands – Har Ramon, 3,395 ft. (1,035 m.) – but also structurally and morphologically the most complex. This is very evident in one of the most pronounced occurrences of relief inversion, i.e., the conversion of a major structural element into a morphologically "negative," i.e., reverse form. Here the anticline was transformed, chiefly by erosion, into a wide, elongated, valley-like basin, about 28 mi. (45 km.) in length, enclosed by almost perpendicular slopes, some of them about 1,000 ft. (300 m.) high. This specific form, which also occurs in some anticlines of northern Sinai and in the northern part of the Negev Highlands, is referred to in Hebrew as *makhtesh* ("mortar" or "mixing bowl"), which in the geomorphology of arid regions is now becoming a general term to denote affinite landforms. The greatest influence upon the formation, lithology, and configuration of Makhtesh Ramon was exerted by faulting along its southern flank. Accordingly, magmatic-volcanic rocks are exposed here. Wherever the enclosure is composed of these rocks, it assumes the form of a serrated range, resembling those in the crystalline Eilat Mountains and strongly contrasting with the other enclosured portions of the *makhtesh*, which consist of Nubian Sandstones in the lower and hard limestone in the upper parts of their slopes. The floor of Makhtesh Ramon, covered mainly by detritus of Nubian Sandstone, reveals many small elevations, preponderantly in the form of flat-topped basalt-covered remains of former surface levels. The *makhtesh* is drained by the multichanneled Ramon River, which breaches the eastern enclosure in a narrow steep gorge to join the Arabah River system. To the northwest of the *makhtesh*, its foreland forms a rather level, or gently undulating, tableland up to its very rim; only at the periphery of the plateau does the relief become mountainous (Har Loz, Har Ḥorshah, Rekhes-Nafḥa).

The Northern Negev Highlands. On the northeast, the Central Negev Highlands are separated from the Northern Highlands by the wide, deeply incised Valley of the Zin River. This tectonically conditioned valley begins as a wide erosive cirque, the southwestern side of which forms precipitous, almost perpendicular, scarps. At a small distance from the northern side of the valley two *makhteshim* are situated: Ha-Makhtesh ha-Gadol (the "Big Makhtesh") and Ha-Makhtesh ha-Katan (the "Little Makhtesh"). They differ from Makhtesh Ramon not only by their smaller size and almost regular oval shape, but also in structure, lithology, and consequently morphology. Not affected by faulting, they represent upfolds turned into deep valley-basins, on the floors of which older sedimentary strata became exposed through erosion by the watercourses draining them. Their almost perpendicularly sloping walls of Nubian Sandstone are overlaid by much more resistant lime-

stones and dolomites. The Ḥatirah and Ḥazevah Rivers, running parallel to the long axes of Ha-Makhtesh ha-Gadol and Ha-Makhtesh ha-Katan, respectively, breach their eastern walls in impressive gorges to join the Zin River. Toward the west and northwest elevations become progressively lower, although there are several upfolds rising above their surroundings as short ridges with moderate slopes, frequently worn down to isolated table-hills. In the west the plateau margins are partly covered by relatively large areas of sand dunes (Ḥaluzah, Agur), which form a transition zone to the Plain of the Negev. On the northern side, the highlands terminate in the wide Beersheba Basin and its much narrower eastern continuation, the Valley of Arad. Structurally, and in particular climatically, these two intramontane depressions form a marked border zone between the arid Negev Highlands and the mountains north of it, where Mediterranean conditions prevail. In the Beersheba Basin, the mean annual precipitation is 10 in. (250 mm.), a quantity indicating the transition from semiarid to subhumid conditions. The thick loess cover and the amount of precipitation together give rise to the most convenient conditions for agriculture within the Negev. The main drainage artery of this part of the Negev is the Beersheba River (a tributary of the Besor River), and several of its confluents originate in the Hebron Mountains, although its almost annually recurring floodings are mainly caused by the tributaries crossing the relatively impervious loess areas.

The Central Mountain Massif. This range extends from the Beersheba Basin up to the Beth-Shean–Harod–Jezreel Valley sequence in the north. It represents the most compact and continuous mountain region of Cisjordan. Its basic structures are relatively large, meridionally trending anticlinoria, i.e., systems usually composed of one major upfold flanked by downfolds and smaller anticlines. Faulting does not exert a great influence upon the configuration of the southern part of the area; its effect is far stronger in the northern portion, though not yet as decisive in determining the landscape as in Galilee. According to climatic, lithological, and hypsographical conditions, this area can be subdivided into several major units. The most important difference exists between the western part, which is fully exposed to the climatic influences of the Mediterranean, and the eastern flank descending into the Dead Sea and Jordan Valley. The landscape of the eastern portion, which is leeward of the precipitation-bearing winds, is consequently semi-desertic and desertic in character (Judean Desert). The difference is accentuated by lithological variance. The western flank is built predominantly of limestone and dolomite strata, whereas in the eastern one chalks and marls prevail. To the west a subregion or different lithology and elevation is interposed between the southern part of the Central Mountain Massif and the Coastal Plains. Considerably lower and built mainly of chalky rock, it is a hill region gradually rising toward the massif but separated from it in a very pronounced manner by a series of valleys running parallel to the foot of the massif. Toward the north, two major protrusions

of the massif can be regarded as distinct mountain regions: a smaller one – the Gilboa – separating the valleys of Harod and Jezreel, and another, much larger and more complex in structure – the Carmel, in the broad sense – which, as already mentioned, delimits the southern Coastal Plains. According to the criteria enumerated above, the Central Mountain Massif can be subdivided into the following regions: Judean Mountains, comprising the Mediterranean southern portion of the massif; Judean Desert; Shephelah (the hill region to the west of the Judean Mountains); Samarian Highlands (the northern part of the massif) and its two subunits, Gilboa and Carmel.

The Judean Mountains. The core region of Cisjordan, the Judean Mountains consist structurally of two consecutive large anticlinoria, whose axes – in contrast to the upfolds in the Negev, which trend mainly southwest-northeast – run almost meridionally. Built up of limestone and dolomite strata with chalky and marly intercalations (the latter very important as groundwater horizons), the mountains' main topographical features are an almost continuous watershed zone (rather uniform in height and delimiting them toward the Judean Desert) and the many interfluves (i.e., ridge-like mountainous spurs separated by deeply incised valleys) extending mainly westward. The watershed zone is generally flat and widens considerably in many places. Its topography thus provided suitable conditions for defense and the development of communications by means of a highway between the cities that were built in this area from earliest times.

Not far from this divide, watercourses begin to incise progressively deeper valleys, the steep slopes of which almost fully converge at the narrow rocky river beds; generally there are no accompanying floodplains. The slopes rising from the valley floors are, for the most part, intensively terraced and end in almost flat or only slightly domed tops separated by wide gentle saddles. Both the mountain tops and the slopes (where not terraced) are densely covered by block detritus, deeply corroded by solutional processes, which also produced the many rounded depressions, holes, and cavities in the slope surfaces as well as many caverns and caves. The prevalent terra rossa is mainly another product of this weathering process, here strongly effective due to the considerable amounts of precipitation – about 20 in. (500 mm.) on the annual average. From the orographic point of view, three parts of the Judean Mountains, very unequal in size, are distinguished: Hebron Mountains, Jerusalem Mountains, Beth-El (Ramallah) Mountains.

The Hebron Mountains extend from the Beersheba Basin up to the Wadi Arṭās in the north (a valley belonging to the drainage area of the Dead Sea), the site of the Solomon Pools. They rise steeply from the Beersheba Basin (one of the southward protrusions of these mountains separates the latter from the Arad Basin) to heights of about 2,600 ft. (800 m.), culminating in summits near Ḥalḥul (north of Hebron) that rise to 3,300 ft. (1,000 m.). The Hebron Mountains are also the largest constituent of the Judean Mountains, with an area

greatly exceeding the total of the two other subunits. From the morphological point of view, the southern portion of the Hebron Mountains can be subdivided into two main parts, separated by the relatively wide, mostly flat-floored, and not very deeply incised valley of the Hebron River, a tributary of the Beersheba River, which runs for about 18 mi. (30 km.) almost parallel to the meridional axis of the mountains. The mountains here thus consist of two main ridges. An eastern, higher one is called the Eshtemoa (Samūʿ) Range after one of the villages, the name and site of which have remained virtually unchanged since biblical times. Along this ridge extends the divide between the dry valleys (except at times of flood) descending into the Dead Sea Rift and the southern and western ones that drain into the Mediterranean. The western ridge is named after the village of Adoraim (Dūrā), also mentioned in the Bible. The highway connecting Beersheba with the townships and villages of the watershed zone runs along this ridge. Also characteristic of the Hebron Mountains are several topographic depressions, the largest of which, the valley of Berachah, is distinguished by an abundant spring. The waters of this spring, together with those of others issuing in the vicinity, feed the Solomon Pools, which were the most important source of water for Jerusalem in the past. Near Hebron the two ridges merge to form a single watershed zone that continues along the entire length of the Judean Mountains. Climatically, the Hebron Mountains represent a transition zone from semiarid to Mediterranean conditions. Whereas at al-Ẓāhiriyya, the southernmost village along the main highway, the annual precipitation is only about 12 in. (300 mm.), it increases to 20 in. (500 mm.) in Hebron, and 28 in. (700 mm.) in the region of the highest elevations, where snowfall is frequent. Accordingly, the larger part of the soil cover (where preserved) in the Hebron Mountains is terra rossa.

The Jerusalem Mountains are about 500 ft. (150 m.) lower on the average than the Hebron and Beth-El Mountains – highest elevation, al-Nabī Samwīl, 2,870 ft. (875 m.) – and form a wide saddle-like region between these sections. This topographical feature somewhat facilitates the ascent from the Coastal Plains to the watershed region, with its settlements and highway, and the descent into the Rift Valley, in particular to Jericho, the most important township of the Valley region throughout history. The Jerusalem Mountains are also intensively dissected into interfluvial ridges. One of these, Mount of Olives – Mount Scopus, immediately east of Jerusalem, forms a conspicuous border with the Judean Desert. The Judean Mountains are drained mainly by the Sorek River, one of the major watercourses of the Central Mountain Massif. The Sorek River discharges into the Mediterranean, and its markedly meandering valley proved sufficiently wide for the construction of the railway connecting Jerusalem with the Coastal Plains.

The Beth-El Mountains, covering an area similar in size to that of the Jerusalem Mountains – about 9 mi. (15 km.) in length – rise to summit heights exceeding 3,300 ft. (1,000 m.) – Baal-Hazor, 3,332 ft. (1,016 m.). One of their most important

characteristics is that the watershed attains considerable width there. A road along one of the interfluves extending to the west (Beth-Horon Ridge) was formerly the main approach to Jerusalem from the Coastal Plains and consequently of particular strategic importance.

The Judean Desert. According to its appearance, the Judean Desert could be regarded as a northward extension of the arid Negev lands that border on it at the valley of the Ḥemar River. Genetically, however, it belongs to the orographic types of deserts, whose aridity – much less pronounced than in "true" deserts – is due mainly to the fact that the area is situated on the leeward side of the massive and high Judean Mountains, which intercept the rain-bearing winds. This effect is made more pronounced by the steepness of the eastern flank of the Judean anticlinoria toward the Dead Sea–Jordan Rift Valley, about 1,000–1,300 ft. (300–400 m.) below sea level. Actually, only the lower portions of this flank are arid. Even there, the larger part of the area receives more than 4 in. (100 mm.) of rain per annum – Jericho receives about 6 in. (150 mm.) – whereas on the upper portions the precipitation decreases gradually from about 16 in. (400 mm.) near the watershed region to the amounts mentioned above. The Judean Desert also comprises the eastern flank of the Samarian Mountains up to the wide valley of Wadi Fāriʿa and the spur of Qeren Sartaba protruding from the Samarian Mountains into the Jordan Rift Valley. It differs markedly from the Judean Mountains in lithology as well as in structure and is composed predominantly of chalky formations younger in origin than those forming the bulk of the Judean Mountains. In contrast to the latter, faulting – syngenetical with that which created the Dead Sea-Jordan Rift Valley – exerted a great influence upon the configuration of this desert, particularly by creating the step-like descent toward the Rift Valley. The relative imperviousness of the bedrock, the much lower resistance to erosion, and the steep overall declivity caused by a difference in elevation of about 4,000 ft. (1,200 m.) from the watershed zone to the Dead Sea, over a distance of only 19 mi. (30 km.) result in most of the precipitation turning into highly erosive runoff. Consequently, the Judean Desert represents a "mountain wilderness," an apparently chaotic landscape of innumerable valleys of all kinds. Many of them are canyons cut in harder rock exposed along the flexures and fault lines (Ẕeʾelim, Agurot, Mishmar), whereas the higher-lying portions form a maze of mostly flat-topped hills (some of which are famous as sites of ancient fortresses such as Herodium and Masada). In the Ḥatrurim area these hills impart to the landscape the appearance of badlands. It was mainly this type of relief, the absence of productive soils of the terra rossa type, and the very short duration and scantiness of the vegetation cover – almost excluding trees and actually confined to a few weeks during the rainy season – that throughout historical times rendered it a region of "desolation" and a refuge for fugitives from the law and prevented any permanent settlement or the establishment of communication networks.

Shephelah. Topographically, the Shephelah represents a transition zone between the Coastal Plains and the Hebron and Jerusalem Mountains. It is relatively narrow – about 8 mi. (13 km.) – in proportion to its south-north extension – about 35 mi. (60 km.). Though they form the foothills of the Judean Mountains, the Shephelah hills differ from the former in almost all respects. Structurally, they form a major synclinal part of the south Judean anticlinorium, composed mainly of chalky formations of Senonian-Eocene origin. Hypsographically, the Shephelah consists of two parts: a western one (the "Low Shephelah"), rising to a height of about 600 ft. (200 m.) above the Coastal Plains, and an eastern one (the "High Shephelah") about 600 ft. (200 m.) higher than the former. On the north the Shephelah borders on the tectonically conditioned Aijalon Valley, one of the main natural approaches to the Judean Mountains. The Shephelah is a region of gently sloped hills separated by the confluents of the major rivers descending into the area from the Judean Mountains. At their entrance into the Shephelah, these rivers, and several of their tributaries, form relatively wide-floored valleys that run for a considerable stretch along the border between the hill and the mountain region. Passage between these longitudinal valleys is relatively convenient, and this natural communication channel has been very important throughout history.

The Samarian Mountains. Morphotectonically, the Samarian Mountains (less frequently referred to as the Ephraim Mountains) form a transitional link between the massive Judean Mountains, which are influenced little by faulting, and those of the Galilees, where faulting has all but obliterated the other tectonic elements. No topographic features form any pronounced boundary between the two parts of the Central Mountain Massif, and it is only by convention that the upper reaches of the Shiloh River – a tributary of the Yarkon – are used for this demarcation. Structurally, the Samarian Mountains consist of two main parts: an eastern anticlinal one, built up of Cretaceous formations, and a synclinal western one, consisting mainly of rocks of Eocene origin. Characteristically, the highest elevations are found in the latter part. Here the twin mountains of Ebal and Gerizim attain heights of 3,083 ft. (940 m.) and 2,890 ft. (881 m.), respectively. Northward, approaching the valleys of Beth-Shean and Jezreel, respectively, elevations become progressively smaller – about 1,300 ft. (400 m.) above sea level. The structure and its morphological expression are mainly influenced by faulting, which produced tectonic valleys and almost enclosed basins (the latter additionally affected and shaped by solution processes). Sequences of short ranges and mountain blocks thus rise steeply above their flat surroundings, which sometimes form relatively extensive intramontane plains. Thus, the wide tectonic valley of Shechem (Nablus) separates Ebal from Gerizim and continues eastward as Wadi Fāriʿa, which separates the southern, higher part of the Samarian Mountains from the spurs of a much lower northern part. The broad, tectonic valley of Dothan delimits the Samarian Mountains, in the

narrow sense, in the direction of the Carmel, whereas in the interior parts, several wide alluvia-filled basins (Emek Shiloh, the Lubban Valley, Emek Hamikhmetat, and the largest of them, Marj Sānūr) endow the region with some features characteristic of Lower Galilee. The shorter distance between the Samarian Mountains and the sea, with no intervening foothill region, the many and wide valley openings, and the smaller amount of depression in the Rift Valley bordering it to the east resulted in a Mediterranean climate for almost all of Samaria, except for a narrow belt adjacent to the Jordan Rift, where semiarid conditions still prevail. Samaria receives larger amounts of precipitation than the Judean Mountains – 28–36 in. (700–800 mm.) annual average rainfall – and the soil cover (terra rossa and rendzina) is also much more continuous. There is a great deal of evidence that considerable parts of Samaria were once covered by woods.

Mount Gilboa. According to its situation and structure, Mount Gilboa represents a direct continuation of the Samarian Mountains, although almost separated from the main body of these mountains by the Jenin Plain – an extension of the Jezreel Plain. It is bordered on the east and southeast by steep fault-scarps, which, together with some outcrops of volcanic rocks, indicate the complex tectonic processes that caused the separation of the Samarian from the Galilee Mountains, also resulting in the formation of the Harod-Jezreel Valley. Composed of Eocene strata, with outcrops of Senonian ones on the northeast side, the surface here is mostly barren, block-strewn, and covered by soil in patches only – probably as the result of intensive slopewash and consequent soil erosion, mainly caused by the difference in elevations of about 1,600 ft. (500 m.) over a distance of only about a mile between the mountain crest and the floor of the surrounding valleys. Precipitation amounts to about 18 in. (450 mm.) on the annual average. The barrenness of the Gilboa, in such strong contrast to the once forested landscapes of Samaria, may serve as the factual background to the explanation of the well-known biblical curse laid upon this mountain. Nowhere in Cisjordan is there such a concentration of springs, some very abundant in discharge, as is found at the bases of the fault escarpments of the Gilboa (Ein Moda, Ein Ḥumah, Ein Amal, En-Harod). These are now one of the most important sources of irrigation for the Harod and Beth-Shean Valleys.

Carmel Mountain. To the northwest a highland body branches off from the Samarian Mountains, differing from the latter in many respects, particularly in structure. In the regional literature of Cisjordan, this branch is usually referred to as the Carmel, although it consists of three very distinct parts of very different structure, lithology, topography, and consequent relief features. The Carmel, therefore, represents a triplet mountain body about 35 mi. (60 km.) long along its median axis and stretching southeast-northwest – a single major occurrence within Cisjordan, although recurring in some lesser ranges. Its general shape is that of an elongated triangle, the relatively short base of which is formed by the Dothan Valley, separat-

ing it from Samaria, with the two long sides facing the northern Sharon Plain on the west and the Plain of Haifa and the Jezreel Valley on the northeast. The apex of this triangle – the Carmel headland – abuts almost immediately on the Mediterranean; this is a feature that recurs only at Rosh ha-Nikrah. All the flanks of the mountain, as well as those of its parts, exhibit high and steep slopes, mainly created by faulting, rising abruptly above the adjacent plains. The three subunits of the Carmel (from southeast to northwest) are the Umm al-Faḥm Block, separated from Samaria by the wide Dothan Valley; the Manasseh region, disjointed from the former by the tectonically conditioned Iron Valley; and the Carmel, in the narrow sense, its largest component, separated from the Manasseh region by the Jokneam–Tut Valley sequence, also of tectonic origin.

The Umm al-Faḥm Block (lately also called the Amir Range) forms a quadrangle-shaped plateau, whose undulating surface provides a gradual descent toward the southwest. Toward its northeast confines, the plateau becomes higher, with bolder relief, and ends in a scarp descent facing the Jezreel Valley. Structurally, it represents an upwarped and uplifted part of the Carmel and accordingly consists of resistant Cenomanian limestone and dolomite formations framed at the periphery of the block by formations of Turonian age. Relatively large areas are covered by basalts and volcanic tuff, a lithological feature recurring in the two other subunits of the Carmel. It receives a mean annual precipitation of about 20 in. (500 mm.) and the prevailing soils are of terra rossa type. There are very scanty remains of forests, and still larger areas covered by maquis, their degraded forms, indicate that in the past extensive areas here were wooded. With the exception of its southernmost part, the area is drained almost exclusively by tributaries of the Kishon River.

The region of Manasseh, similar in its quadrangular outline to that of Umm al-Faḥm, contrasts with it in almost all other respects. Composed predominantly of soft Eocene chalks, which also accounts for the scantiness of terra rossa and the wide distribution of rendzina soils in this area, its originally tabular surface became intensively dissected. The dominant relief features of the region are thus hills with moderate slopes rising to relatively small heights above the valley floors. The overall height of the region above sea level is about 600 ft. (200 m.) less than than Umm al-Faḥm Block and still less than that of the Carmel. Its slopes to the Jezreel Valley are also far lower and less steep and continuous than those of the two adjacent units. Due to the relative impermeability of the surface rock, and consequently the considerable percentage of runoff and particularly the erodibility of the bedrock, the drainage net is rather dense, flowing to the Kishon River in the north and to Ha-Tanninim ("Crocodile") and Daliyyah Rivers in the south, both of which discharge directly into the Mediterranean.

The singularity of the Carmel within Cisjordan – used in the Scriptures, together with Mount Tabor, as a paradigm of beautiful mountainous scenery – is based on the following factors: it appears as a very regularly shaped mountain block, well defined on all its sides, and conspicuously elevated above the surrounding plain; it is the only major mountain – about 22 mi. (35 km.) long along its central axis – in Cisjordan with an extended slope rising only a small distance from the Mediterranean; its apex forms a most conspicuous headland, and beyond its northern flank the coastline recedes, forming the only true bay of the country; fully exposed on both its flanks to the Mediterranean, it receives large amounts of rain – about 32 in. (800 mm.) per annum – and dew; arboreal vegetation persisted here, due to its great regenerative power, mainly as a result of favorable climatic conditions. Structurally the Carmel represents a sort of counterpart to the Umm al-Faḥm Block. It, too, was upwarped and uplifted and is mainly composed of Cenomanian-Turonian limestones and dolomites. Volcanic outcrops, in particular tuff, are relatively widespread, and the latter greatly influence the form of valleys. Whereas the valleys incised into the hard, intensively jointed calcareous rocks are deep, narrow, and have steep slopes – frequently actually minor canyons (Naḥal Me'arot, Daliyyah, Oren), those which developed in the tuffs are conspicuously wide and flat-floored, and exhibit relatively gentle valley slopes (Kerem Maharal, Shefeyah Valley). The calcareous parts are strongly affected by solutional weathering. Thoroughly corroded blocks cover large portions of the surfaces, and many of the almost perpendicular valley slopes contain caves, some of which are of considerable prehistoric importance. The Carmel is strongly affected by faulting, which not only gave rise to the almost uninterrupted slopes descending steeply to the Haifa Plain and to the Jezreel Valley and less pronounced ones along the Jokneam trough, which separates it from the Manasseh region, but also strongly influenced the relief of its interior parts. Faulting here gave rise to several depressions and had a major influence upon the course of some of the valleys. The Carmel, like its adjacent mountain units, consists of two topographically differentiated parts: a higher one, its summit region, along its northeast flank – from Rosh ha-Carmel, 1,790 ft. (546 m.), to the somewhat lower Keren ha-Carmel – referred to in regional literature as the "High Carmel," and a far larger part sloping down to the Carmel Coast, the "Low Carmel." The latter consists mainly of broad interfluves, created by the many valleys descending to the Coastal Plain. The drainage net is characteristically varied in catchment area and pattern, in close accordance with the relief differentiation described above. The divide between the watercourses descending on the northeastern slopes and tributary to the Kishon runs a very small distance from the scarp rim. The valleys of these watercourses are short and relatively straight and are joined by very few tributaries. The watercourses running west and draining more than three-quarters of the total area of the Carmel are more numerous and intensely ramified, particularly the Oren and Daliyyah Rivers. Toward the south the Carmel juts out into the Plain of Sharon and up to the valley of the Ha-Tanninim River in a large spur separated from the main body by the valley of the Daliyyah River. Called the Zikhron Ya'akov

Mountains, after the principal settlement, the spur encloses the Carmel Coastal Plain to the west and separates it from the Plain of Binyaminah, a northward extension of the Sharon.

THE VALLEY SEQUENCE. From the Jordan Rift Valley to the coast of the Mediterranean, Cisjordan is traversed by an east-west sequence of large, interconnected, elongated basins that are of preeminent physio- and anthropogeographical importance. These are the Harod Valley, named after its main water artery, the Harod River; the Jezreel Plain, the largest component of the sequence; and the Plain of Haifa, which, genetically, forms the continental terminal part of this tectonic trough and continues westward as the Bay of Haifa. The three basins form relatively wide plains, enclosed on their southern and northern sides by abruptly rising, steep mountains, and constitute a marked discontinuity within the Cisjordan highlands north of the Beersheba Basin. The vale sequence subdivides the highlands very conspicuously into two main mountain complexes: a larger, southern one (Judean Mountains, Samarian Mountains, and Carmel) and a northern one, approximately one-third the size of the former, the Galilees.

The Harod Valley. The Harod Valley – the easternmost component of the sequence – represents, hypsographically, topographically, climatically, and lithologically, a westward salient of the Beth-Shean Valley. There is no major relief feature that could serve as demarcation between these two units; therefore the travertine terraces, more correctly their remnants near Beth-Shean, are used by convention for this purpose. Their correlative characteristics are as follows: the surface of the eastern part of the funnel-shaped vale gradually descends to below sea level and merges imperceptibly with the depression of the Beth-Shean and Jordan Valleys; temperatures and precipitation (in both amount and distribution) are very similar to those of the Beth-Shean Valley; a close likeness of the soil cover in two valleys, particularly in the types resulting from decomposition of basalts and travertine; the already mentioned abundance of springs, particularly at the foot of the Gilboa scarps. In the past the Harod Valley was partly covered by swamps due to the relative impermeability of some of its soil cover, heavy flooding by the many watercourses reaching it from the nearby high, steep mountain enclosure, and the incapacity of the bed of the Harod to contain the floodwaters. The many springs were an additional cause of swamp formation.

The Jezreel Valley. The largest of all intramontane basins in Cisjordan is the Valley of Jezreel, formerly also known as the Plain of Armageddon (after the fortress of Megiddo, which was renowned in the annals of the Fertile Crescent). Roughly triangular in shape, it is bordered on the southwest by the Carmel, Manasseh Plateau, and the Umm al-Faḥm Block; on the north by the Lower Galilee Mountains; and on the east, discontinuously, by Mount Tabor, Givat ha-Moreh, and the Gilboa Mountains. The shape of this valley is straight only along

the Carmel; at the other borders there are several embayment-like extensions of the plain into the surrounding mountains. The largest of these extensions is the Plain of Jenin, enclosed on the east by the Gilboa and joined on the southwest by the Dothan Valley. Eastward, the Jezreel Valley downgrades imperceptibly in the vicinity of Afulah into the Harod Valley and intrudes deeply into the Lower Galilee Mountains, separating their outliers, Mount Tabor and Givat ha-Moreh, by the wide Chesulloth Plain. The Jezreel Valley is connected at its apex with the Haifa Plain by a narrow passage 1,600 ft. (500 m.) wide created by the valley of the Kishon (at Kiryat Ḥaroshet) near the site of Bet She'arim, between the Carmel and the Lower Galilee Mountains. The winding course of the Kishon River begins near Afulah, less than 230 ft. (70 m.) above sea level and at a distance of about 25 mi. (40 km.) from the Mediterranean, into which it discharges. In the past it was inadequate to drain the valley, particularly in the rainy season. Its many affluents from the enclosing mountains, which receive about 8 in. (200 mm.) more precipitation than the Jezreel Valley, together with the many local topographic depressions and poorly permeable alluvial heavy soil cover, turned a large part of the valley into swamps. Consequently, it was sparsely populated and little utilized agriculturally. Only after the marshes were drained and malaria, once endemic in this area, eradicated, did the valley become the area of the most intensive and continuous cultivation within the mountain zone of Cisjordan. The physiognomy of the Jezreel Valley, and to some extent also of the Harod Valley, is largely determined by the two massive, high mountain blocks rising abruptly above the plain; Mount Tabor and Givat ha-Moreh. Pronouncedly isolated from each other and from the highlands to the north and south, their summits attain heights of over 1,600 ft. (500 m.) above sea level and only slightly less above the surrounding plain. Because of the almost perfect dome shape of Mount Tabor, it was, together with the Carmel, often used to exemplify the beauty of mountainous scenery. Differing as they do in lithological structure (limestones and dolomites in Mount Tabor, outcrops of volcanic rocks in Givat ha-Moreh), these two mountains probably represent remnants of a highland zone connecting the Samarian Mountains with those of the Galilees that was shattered by the tectonic movements, which also formed the entire basin sequence.

Haifa Plain. Despite its being a part of the Coastal Plains, according to its situation and surface configuration, the Haifa Plain (formerly referred to also as the Zebulun Plain) morphotectonically represents the westernmost unit of the vale sequence. The plain continues in its submerged part as the Bay of Haifa. Accordingly, the interior part of the plain, east of the dune belt, is covered by heavy alluvial soils with very little ḥamra. Drainage here was also greatly impeded, mainly by the dune belt (as evidenced by the deferred debouchures of its two main streams, Kishon and Na'aman), and marsh areas persisted up to the time of Jewish colonization.

THE GALILEE MOUNTAINS. Occupying a smaller area than the Judean or the Samarian Highlands, the Galilee Mountains are nevertheless far more complex in lithology, structure, and consequently morphology. Basalts (there is even a remnant of a true volcano – Karnei Ḥittin, the "Horns" of Ḥittin) cover large tracts in the eastern parts, a feature recurring only in Transjordan. This cover imparts to several of its landscapes a peculiar plateau-like relief of great uniformity, in vivid contrast to areas of much more variegated configuration in the west, where the surfaces consist of calcareous rocks. Faulting, however, has exerted a far more decisive influence. In the Negev and in the Central Highlands, fold structures are found almost everywhere and are visually recognizable as the most important tectonic element that determines the relief of the region even in its minor features. In the Galilees, however, the influence of fold structures upon the relief is largely upset, permuted, and even inverted by faulting. Tectonic activity seems to be continuing at present, as evidenced by the relatively frequent, and sometimes strong, earthquakes affecting the region. Generally characteristic of the landscape of the Galilees as a whole are closely spaced sequences of basins or valleys and mountain ranges that are uplifted unequally and thus tilted, so that one slope is much steeper than the opposite. Here mountain blocks, separated from their surroundings by faults and upthrusting, constitute some of the highest summit regions of Cisjordan. Since the prevailing direction of the major fault lines is west–east, the general trend of Galilean ranges follows this direction, in strong contrast to the Central Mountain Zone's prevailing meridional trend and particularly to the Judean Mountains, where a continuous watershed zone running south–north emphasizes the compactness of this body. Tectonic conditions, resulting in an increase of rock exposures, and the relatively large amounts of precipitation produced relatively abundant karst features in the Galilees. Among these there are simple and complex dolines (small solution basins), sinkholes, even a large polje, and caves several of which contain speleothems (stalactites, stalagmites, etc.) or, they are caves which are of prime importance as prehistoric sites. Thus, lithologically, and still more so morphologically, the Galilees form the most contrasted and variegated mountain province (excluding the Eilat Mountains) of Cisjordan. Although strongly disjointed by the numerous basins, tectonic valleys, and uplifted blocks, the Galilee may be clearly subdivided into two main regions: a southern one of comparatively moderate height, Lower Galilee, and a northern one, separated from the first by an extended tectonic valley (Valley of Beth-Cherem), and rising immediately behind it to maximum summit heights in Cisjordan, Upper Galilee.

Lower Galilee. The Lower Galilee Highlands, which rise abruptly and steeply from the vale sequence in an in- and outcurving front, are markedly subdivided into an eastern part and a western one. The first is characterized by a widespread basalt cover of considerable thickness that buried a former, probably intensively sculptured relief, turning the area into

groups of plateau-topped mountain bodies. This landscape, which is geologically recent, is now subject to vigorous dissection by rivers (many of them perennial) that discharge into Lake Kinneret or into the Jordan (Ammud, Ẓalmon, Ha-Yonim and Tabor Rivers). They flow through deeply incised gorges created by their great erosive power, resulting from very considerable height differences between their respective source regions and their places of debouchure, which are respectively about 700 ft. (200 m.) above and 800 ft. (250 m.) below sea level and are only 12 mi. (20 km.) apart. The rivers also subdivide eastern Lower Galilee into many units, several of which form small plateaus, rising steplike, one above the other (Kokhav – the site of the Crusader fortress of Belvoir – and the Jabneel-Kefar Tabor plateau are the largest of them). In the other two-thirds of Lower Galilee, the surface rock consists of limestone (subject to strong solutional processes and to the formation of karstic features, such as dolines, sinkholes, caverns), chalk and marl, generally intensively interbedded. In this part of Lower Galilee almost all of the landforms bear visible evidence of the decisive role played by faulting in determining the relief of the present landscape.

Central Galilee consists of a series of basins, separated by generally narrower ranges, usually representing remnants, partially uplifted portions, of the former highland surface. The series begins with the Plain of Jezreel, which, from the general morphotectonic point of view, represents the foreland of Lower Galilee. It is separated from the Tiran Basin by the abruptly rising, steeply sloping Nazareth Mountains. Beyond the Tiran Basin lies that of Beit Netofah (the largest one), separated from the Tiran Basin by the Tiran Range. The Tiran Basin now contains a large storage lake, part of the National Water Carrier System. It is bordered on the north by the Yodefat Range, which, in turn, separates it from the Sakhnīn Basin. The Shezor (Sājūr) Ridge extends north of the Sakhnīn Basin, near the boundary valley of Beth-Cherem, beyond which the first group of the Upper Galilee Mountains rises, wall-like to heights exceeding 3,280 ft. (1,000 m.). The interbasin ranges are not compact, but rather form series of rounded hills separated by wide saddles, being the short fluviatile valleys of tributaries of the major rivers that drain the basins (Ẓippori and Ḥillazon Rivers). The rivers draining the basins, however, were inadequate to collect and carry off the waters flowing down to them from the enclosing ridges. Large areas of them were flooded during the rainy season and the thick cover of heavy soils, mainly a product of slope erosion, greatly impeded infiltration. In addition to the flatness of the basin floors, the sluggishness of the flow of waters in their main channels, due to the very small gradient, strongly enhanced marshy conditions.

Upper Galilee. Most of the essential differences between the Lower and the Upper Galilee are conspicuous at their boundary, Valley of Beth-Cherem, one of the most distinct morphotectonic border zones of Cisjordan. Here, without any transition, the slopes of several mountain blocks rise abruptly to

the highest summit heights in Cisjordan – Mount ha-Ari, 3,434 ft. (1,047 m.), Mount Kefir, 3,221 ft. (982 m.) – culminating slightly to the north in the three summits of the Meron Block with heights of 3,621, 3,745, and 3,962 ft. (1,104, 1,151, and 1,208 m.). Structurally these mountains, as well as the majority of the mountains throughout Upper Galilee, are horsts, i.e., blocks separated from their surroundings by faults and partially uplifted to very considerable heights. The relative abundance of the horsts, which predominate over other tectonic structures, seems to be a result of the variety of fault directions. Whereas in the Lower Galilee the major fault lines generally trend east–west, conditioning the pattern of basins and intervening ranges that follow the same directions in Upper Galilee, faults running in these directions are intersected obliquely or even at right angles by other faults. This is one of the prime causes of the isolation of the individual blocks and their apparently random pattern. The difference in height between the blocks is primarily the result of the amount of uplift rather than of different rates of denudation. The Upper Galilee Highlands, as a whole, slope down to the northwest, and their lowest parts, already within the boundaries of Lebanon (Lebanese Galilee), are adjacent to the Qasimiye Valley. Faults also strongly influence the pattern and the individual courses of the valleys, which form almost parallel gorges only several kilometers apart (Ga'aton, Chezib, Bezet Rivers within Israel; Shama' and 'Arriya in the Lebanese Galilee). In contrast to Lower Galilee, Upper Galilee is predominantly built up of Cenomanian and Turonian limestone formations, framed in the west by a belt of less resistant Senonian ones, which also form the surface rock of the region's intramontane basins. Eocene formations, generally consisting of hard rock sequences, are more extensive in the eastern part of the region. Another important difference between the Lower and Upper Galilee is the much smaller surface covered by basalts in the latter, where they are virtually restricted to some small plateaus (Dalton, Ram Plateaus).

Upper Galilee, being northernmost of all the mountain regions of Cisjordan, with only a narrow coastal plain interposed between it and the Mediterranean to "intercept" the early rains, in particular, and affect their amounts, as in the case of the Judean Mountains, is the region with comparatively the highest precipitation within Cisjordan. Very few parts of the region receive less than 24 in. (600 mm.), while the amount of precipitation on its summit areas exceeds 40 in. (1,000 mm.) annually. Snowfall occurs almost yearly. The large amounts of precipitation combined with the hard, intensively jointed limestone bedrock and the abundance of exposed surfaces (the result of tectonic shattering and fracturing and of the erosive activity of the watercourses) have made Upper Galilee the region most strongly affected by solution processes. Accordingly, it contains almost a full inventory of subaerial and subsurface karstic features. This is the only area where a sort of "holokarst" has developed, i.e., landscapes whose surfaces are primarily affected by solution and that display almost the whole gamut of specific features. Large surfaces are rilled

and corroded into a maze of small, sharp-crested ridgelets separated by even narrower minute channels (lapies). Dolines are widespread (particularly in the vicinity of Sa'sa and Alma) as are sinkholes, many of which are tens of meters deep. This is also the site of the only large "true" polje within Cisjordan, i.e., a basin of considerable size (Kadesh Naphtali), mainly a product of solution. Upper Galilee is, in addition, the site of the most abundant and intricate caves in Erez Israel (some of which include a full inventory of speleothems – stalactites, stalagmites, stalagnates, dripstone-draperies, etc.).

The same basic conditions – the large amounts of precipitation and the prevalence of limestone-dolomite surface rock – produced a relatively continuous cover of terra rossa on most moderately sloping areas. These conditions also apply to the relatively large areas of forest, which have great regenerative ability, so that even in the past, when forests were utterly depleted through man's agency, considerable parts of Upper Galilee remained covered by high-grade maquis.

Upper Galilee is an analogue of Lower Galilee in its physiographic subdivision, on the basis of lithological and morphotectonic conditions. The eastern part of Upper Galilee was apparently affected by faulting to a smaller extent, imparting to the landscape a more uniform aspect than in the adjacent parts. Several areas form small plateaus, mainly due to their basalt cover. Basins of considerable size, as well as relatively long mountain ranges, running almost unbroken and not partitioned into isolated blocks, are found here. One of these, the Naphtali Range, with summits over 2,900 ft. (900 m.) high, extends almost due north up to the Qasimiye River. Its eastward slope is precipitous – 1,600 ft. (500 m.) difference in height over a distance of only about a mile – a marked fault-scarp facing the upper Jordan Valley, the Huleh Basin and the Marj 'Ayyūn Basin farther north. Plateau-like on its top surfaces, and strongly affected by karstification, the Naphtali Range forms a wall-like enclosure around the Huleh Basin, uninterrupted by major valleys, and a pronounced watershed zone between this basin and the rivers draining to the Mediterranean. South of this range lies the Safed region, flanked on its east by Mount Canaan and on the west by the dominant Meron Block. Here the surface is divided into individual mountain groups, due largely to the numerous steeply incised valleys of the tributaries of the Ammud River. The central Upper Galilee Highlands are separated from the eastern Highlands by the gorge of the Ammud River, running almost due north-south. Here, as in the portion extending southward to the Beth-Cherem Valley, typical Mediterranean mountain scenery reaches its climax within Cisjordan. Slopes, mostly terraced, rise from deep valley gorges to heights surpassing 3,000 ft. (1,000 m.) above sea level. Covered by patches of trees or scrub growth, they culminate in the gently domed summits of large mountain bodies such as Mount ha-Ari, Mount Hillel, and Mount Addir, which are overshadowed by the summit region of the massive Mount Meron. The western part of Upper Galilee, much lower in absolute and relative heights, is characterized primarily by a large number of valleys (origi-

nating in the Central Highlands). As noted earlier, the valleys are very closely spaced, and form deep gorges in their upper and middle reaches (Chezib and Beẓet in the Israeli part of the area and Samara, Shamaʿ, and ʿAzziyya in the Lebanese). These intensively dissected highlands mainly form extended interfluve ranges, the widest of which, the Ḥanitah-Rosh ha-Nikrah Range, ends with a headland into the Mediterranean (Rosh ha-Nikrah).

RIFT VALLEY. The Rift Valley, within Erez Israel, is part of the approximately 3,700 mi. (6,000 km.) Rift Valley system that begins in Africa near the Zambezi Valley and peters out north of the Amanus Mountains. The Red Sea and its two gulfs, Eilat and Suez, are submerged parts of the system, whereas in Erez Israel, as mentioned earlier, the Rift Valley is the prime determining factor of a complex of morphotectonic features unique in the world. Some of the tectonic movements that generated the Rift Valley seem to be still active here, as proved by the frequent earthquakes affecting the valley and the adjacent regions. Other evidence is provided by the many hot springs along the boundaries of the Rift Valley, indicating the presence of near-surface magmatic bodies. Geologically recent volcanic activity also played a major role in forming the basic surface configuration of the valley and its adjacent regions. Streams of lava, extruding mainly in the Bashan (particularly in the Hauran and Golan), formed an almost continuous basalt cover extending as far as to the south of the Yarmuk Valley. The lava moved down into the northern part of the present Jordan Valley, consolidated, and dammed up the valley, thus differentiating it into the Ḥuleh Valley – the head part of the Jordan River system – and a section lying about 800 ft. (250 m.) lower, at present occupied by Lake Kinneret. A vast inland sea covered the Rift Valley floor in the Middle Pleistocene, extending from the present Lake Kinneret to far beyond the southern shores of the Dead Sea. It is termed the Lashon (Lisān) Lake after the wide peninsula, or "tongue" (Heb. *lashon*; Ar. *lisān*), that protrudes into the present Dead Sea and divides it into two basins connected by a narrow strait. The level of the Lashon Lake was once about 700 ft. (200 m.) higher than that of the Dead Sea. Sediments deposited on the floor of the Lashon Lake (accordingly called the Lashon formation) – overlying very thick sediment accumulations of former lake formations, which appeared and disappeared in accordance with climatic variations during the Pliocene and Lower Pleistocene eras, and other fill-in material – are of very specific character. They consist of thinly layered clastic material, particularly clays, and evaporites, i.e., sediments produced by chemical precipitation caused mainly by evaporation. With the gradual regression of the Lashon Lake (evidenced by the many terraces along the Dead Sea slope enclosures marking the former coastlines), the Lashon formation sediments were bared. These sediments, covering the floor and the slope bases of the Rift Valley from Lake Kinneret in the north to Ein Ḥaẓevah about 20 mi. (30 km.) south of the Dead Sea, are easily eroded and thus condition microreliefing processes of the

highest intensity. These processes create mazes of badlands containing almost the entire gamut of configuration features in miniature, due mainly to the innumerable gullies that dissect this former floor of the Lashon Lake. Another extremely important lithological characteristic of the Rift Valley is the abundance of rock salt and gypsum forming the bedrock of prominent features (e.g., Mount Sodom).

The Rift Valley, sunk in, troughlike, in some places to considerable depths below the sea level, forms a unique climatic region with very distinct characteristics and exerting great influence upon its adjacent zones. Climatic conditions in the Rift Valley have a decisive influence on the surface relief of its southern and central parts, i.e., from the Gulf of Eilat to Lake Kinneret. The Rift Valley receives very small amounts of precipitation, as it is leeward of the moisture-bearing winds coming from the Mediterranean, due to the interposition of the highlands of Cisjordan. Precipitation averages 1 in. (25 mm.) annually at Eilat, 2 in. (50 mm.) at the southern end, and less than 4 in. (100 mm.) at the northern end of the Dead Sea and gradually increases to approximately 12 in. (300 mm.) annually at Lake Kinneret, the terminal area of the depression below sea level. North of Lake Kinneret, where the Rift Valley floor is well above the level of the Mediterranean, precipitation is 16 in. (400 mm.) annually, imparting to this section subhumid characteristics. The topographical conditions that influence the amounts of precipitation are also the major reason for the generally extreme temperatures and their variations in the Rift Valley. Geomorphologically more important than the temperatures themselves, which frequently reach the highest values within Erez Israel, is the extreme evaporation potential they cause, which greatly influences the bedrock and the processes affecting it, particularly weathering. The above-mentioned climatic conditions, together with particular lithological conditions (the high proportion of evaporites), have resulted in large parts of the Rift Valley being devoid of proper soil and vegetational cover, and these develop here only under specific hydrographic or hydrological conditions. The Jordan, for instance, from its exit from Lake Kinneret almost up to its debouchure, is accompanied by a dense gallery forest covering its floodplain. In the vicinity of springs and in areas where topographical conditions cause the formation of salt marshes a type of tree oasis is common.

Hydrographically, the Rift Valley is a vast endoreic basin (i.e., without a discharge outlet to the sea), presently in a state of equilibrium between the amount of inflow from its catchment area – about 15,500 sq. mi. (40,000 sq. km.) in area – and the amount of loss caused by evaporation and infiltration. The level of the Dead Sea, its discharge terminal, does not change in height appreciably from year to year. From the physiographical, and particularly morphotectonic, points of view, the portion of the Rift Valley within Erez Israel may be subdivided into the following major units (dealt with here according to their south-north sequence, which to some degree also follows their genetical order of succession): Arabah, Dead Sea Region, Ḥuleh Basin, and the Jordan Sources Region.

Arabah. North of the Red Sea and the Gulf of Eilat, the Great Rift Valley again becomes a continental feature. Its first portion here extends for about 100 mi. (160 km.) up to the Dead Sea, constituting the longest and largest Rift unit within Ereẓ Israel. It is relatively narrow, as its maximum width is only about 12 mi. (20 km.), and, according to its topography (especially its hydrographic conditions), it consists of two parts. The southern part, about 43 mi. (70 km.) long, ascends gradually from the Eilat coast to a divide between the latter and the Dead Sea about 600 ft. (200 m.) above sea level. From here the valley floor slopes down to below sea level in its last third and merges with the large salt marsh at the southern shore of the Dead Sea. This northern area is drained by the Arabah River and its many tributaries, whereas the southern area lacks any organized drainage, particularly any distinct river channel discharging into the Gulf of Eilat. Another significant characteristic of the southern portion of the Arabah is several major topographical depressions that function as discharge terminals for various very short, sporadic watercourses flowing in shallow, indistinct, rill-like beds and for the sheet floods occurring after each heavy rain.

Southern Arabah. The southern section of the Arabah is bordered by the coast of Eilat-Akaba, which is less than 6 mi. (10 km.) long and runs southwest-northeast. This coast differs in several respects from that bordering the Mediterranean. It is covered by coarse sands and shingle, created by the disintegration of magmatic rocks and Nubian Sandstone, which compose the mountains framing the Gulf of Eilat and the Arabah and by fragments of corals and associated organisms that populate the Gulf. The widely distributed beachrock consists mainly of pebbly material deposited on the coast by the rivers descending from the crystalline Eilat Mountains and their Transjordanian counterpart, the Edom Mountains, in addition to the above-mentioned organogenic material. After somewhat protracted or concentrated rainfall, the coastal part of the Arabah is frequently flooded. In the absence of discharge channels it becomes a kind of playa (i.e., salty marsh) that, after its ensuing desiccation, exhibits wide areas of polygonal clay shards encrusted by salt crystals. Farther north the floor of the Arabah is covered by detritus of various sizes reaching a depth of more than 3,300 ft. (1,000 m.). This layer has been deposited by numerous streambeds that carry only floodwaters (from Roded, Shekhoret, Amram, Reḥam, and Timna on the western enclosure and Yitm, Mulghān, and Muhtadī on the eastern one). Another very important depositional factor is slope wash and gravitational movements (rockfall, sliding, slumping, particle creep) that continuously take place on the mountain slopes flanking the Arabah, which lack stabilization by soil and vegetational cover. These slopes, as mentioned earlier, are lithologically heterogeneous. In the southern part of the Cisjordan Arabah, they are composed mainly of magmatic-metamorphic rocks and Nubian Sandstone (Eilat and Timna Massifs); farther north limestones and dolomites prevail. The Transjordanian side of the mountainous enclosure consists predominantly of crystalline rocks and Nubian Sandstone.

The floor of the southern part of the Arabah is not flat. It is differentiated by many rises and wide shallow depressions. The former originate in alluvial fans spreading out widely into the Arabah at the exits of all the valleys. The fans on the east side are generally more numerous, larger, and longer as a result of the larger supply of detritus. The abundance of this supply is conditioned by several factors. The mountains bordering the Arabah to the east are much higher than the Negev Highlands and receive far larger amounts of precipitation because of their westerly exposure. These two factors endow the watercourses descending from the eastern side with considerably greater erosive power. In addition, the bedrock there, which consists of crystalline rock and sandstones almost along the entire extension of this flank, is subject to intensive disintegration under the prevailing arid conditions and supplies the watercourses with the bulk of the coarse material that is borne down and deposited at their exit into the Arabah. Thus, on the east side an almost continuous detritus apron of coalesced fans envelops the bases and the lower slopes. Where the fans extend farther into the Arabah or meet fans formed by watercourses from the west side (generally smaller in size), rises or topographical swells originate. The floor between the rises is basin-like; runoff is deflected into these basins with consequent flooding and salt marshes of short duration are formed. In several of these basins (Avronah, Yotvatah, and Saʾidiyin are the largest), halophytic vegetation has developed and even trees are able to subsist on brackish subsurface water. Another characteristic of both the southern and northern Arabah is the relatively wide areas of dunes, particularly between the basins of Yotvatah and Saʿīdiyīn.

Northern Arabah. The northern, larger part of the Arabah, which begins with a wide protrusion of the Paran Plateau into the trough valley, differs in several respects from the southern part. The latter is relatively narrow, limited on the east by the relatively straight and continuous fault scarps of the Edom Highlands and on the west by the irregular outline of the southern Negev Highlands with their many mountain outliers and riverhead cirques. The influence of faulting is less pronounced there. Conversely, the northern Arabah often widens into the mountains bordering it, which are in turn frequently interrupted by wide valleys intruding deeply into the confining mountain flanks. The most significant difference between the southern and the northern parts of the Arabah, however, is the presence of a river course almost throughout the length of the latter. It is very indistinct and erratic, functioning mainly as a collecting artery of the many tributaries joining it from the east and west. The existence of this relatively dense drainage net, although it carries flash-flood waters almost exclusively, precludes the existence of any major basins turning into a salt marsh or extensive dune areas. The bed of the Arabah River, several hundred meters wide, is not contained by any permanent or continuous banks and is defined mainly by the accu-

mulation of pebbles and associated fluviatile material. It does not run along the median axis of this part of the Rift Valley, but consistently deviates westward due to the fans growing and spreading out from the eastern side of the valley. These fans receive more alluvial material than those spreading out from the Negev, due to the greater height, larger amounts of precipitation, and consequently greater erosive and tractive capacities of the Transjordanian affluents.

The northernmost part of the Arabah was covered in the Middle Pleistocene by the Lashon Lake. Its surface accordingly consists mostly of laminated, highly erodible marls. The Arabah River and several others (in particular the Amazyahu River, almost parallel in course to the former) have cut spectacular canyons into these sediments, accompanied by labyrinthal badlands. The Arabah River does not reach the Dead Sea through a clearly defined bed channel, but disappears in the Sodom playa – the salt marshes south of the Dead Sea – which is flooded periodically by any considerable rise of the Dead Sea and/or by the rivers that discharge into the Dead Sea. Only one river in this area, however, the Zered (Ḥasāʾ) – delimiting Edom from Moab – has a direct debouchure into the Dead Sea. It drains an area in Transjordan that reaches heights of over 3,280 ft. (1,000 m.), receives over 10 in. (250 mm.) precipitation on the annual average, and is fed by numerous springs. Due to these factors, the Zered exhibits perennial flow up to its entrance into the Rift Valley, and after rains it discharges very large quantities of floodwater. A large spring is also located in that section of the valley through which the Zered flows, and this northeast corner of the Arabah (the region of Zoar) forms a sort of an enclave, characterized by plentiful, almost tropical vegetation.

Dead Sea. The deepest part of the Rift Valley is covered by an inland sea about 50 mi. (80 km.) long, 10 mi. (17 km.) wide, and generally similar in shape to the rift lakes in East Africa. With no outlet to the sea and an inflow of river water balanced by evaporation from its surface area of over 380 sq. mi. (1,000 sq. km.), the salt contents of the sea (mainly magnesium, sodium, and calcium chlorides), carried as solutions by the rivers and the other sources of discharge into it (such as springs with a high mineral content), became progressively concentrated. This salt content now amounts to about 28–33%, depending on the depth of the water layer. The Dead Sea consists of two widely differing parts: a southern, small, and very shallow basin – 20 ft. (6 m.) deep – with a higher percentage of salinity; and a northern basin, over three times the size of the southern one, and considerably deeper than it – about 1,300 ft. (400 m.). The two basins are connected by a strait about 2 mi. (3 km.) wide, formed by the westward protrusion of the Lashon Peninsula into the sea. According to topographical and historical indications, the strait was formerly shallower and probably narrower, and it is assumed that in the geologically recent past the two basins were virtually separated. The Lashon Peninsula rises about 200 ft. (60 m.) above the Dead Sea and was probably formed by diapiric movements of un-

derlying deep-seated salt masses (i.e., an upward thrust of salt deposits rendered plastic and mobile by the pressure exerted on them). Its tabloid surface consists of Lashon Marls, as do the steep sides of the peninsula, which are subject to strong wave abrasion. Except for its northern and southern coast and small stretches along its sides, the Dead Sea does not have any shore flats. It is almost immediately bordered along its entire length by steep slopes that sometimes protrude into the sea and form bold capes (Rās Fashkha, south of the site of Qumran, is the most pronounced). Conversely, many rivers, particularly those coming from the Judean Desert, create rather extensive deltas quite close to the exits of their canyons (Kidron, Daraja, the combined deltas of Mishmar, Ẓeʾelim and Masada). These deltas impart to the western coast its sinuous outline, in contrast to the relatively straight coastline on the eastern side, where the deltas built out into the sea are fewer in number and generally far smaller in size. Thus, e.g., the delta of the Arnon River, second only to the Jordan in the amount of water it supplies to the Dead Sea, is small; when the sea is at its high-water stage, its waters even extend up to the river's canyon exit. Even less pronounced is the subaerial delta of the Zarqā Māʿīn River, the third most important contributor to the Dead Sea. This variance in delta size seems primarily to be the result of the greater depth of the sea floor near its eastern coast, probably a consequence of the major fault line running close to it.

A singular relief feature found on the southeastern side of the sea is Mount Sodom. It rises over 600 ft. (200 m.) above the sea, with jagged, almost perpendicular slopes, close to the water line, and gradually slopes down on its western flank. About 6 mi. (10 km.) long, it is composed mainly of salt and gypsum layers capped by Lashon Marls. The mountain is of diapiric origin, i.e., salt and other evaporites have been squeezed upward along an elongated fault, thus uplifting the overlying sediments and then spreading them out sideways. The great solubility and erodibility of the evaporites, augmented by their strong tendency to form cracks as a result of the enormous stresses exerted on the rock masses when they are thrust up and intensively contorted, resulted in the formation of this almost unique mountain ridge. Closely spaced fissures (continually widened and deepened by solution), washout, and corrasion by gully waters created a multitude of pillar-like features ("Lot's Wife"). Their surfaces are pitted by innumerable hollows, crisscrossed by rills ("salt-lapies"); in their flank facing the Dead Sea caverns developed, one of them an actual cave, connected with the upper mountain surface by a chimney-like conduit. The interior of this cave exhibits a rich inventory of speleothems (stalactites, etc.), somewhat more elaborate than those found in limestone caves.

The Lower Jordan Valley. The Lower Jordan Valley morphogenetically represents the floor of the Lashon Lake laid bare after its recession. The valley of the Jordan progressively developed on this floor, as did the lowermost courses of its tributaries, which formerly discharged into the Lashon Lake.

Hypsographical, lithological, and climatic conditions resulted in the formation of a unique riverscape, connected with and focused on the course of the Jordan River from its exit from Lake Kinneret to its debouchure into the Dead Sea. The Jordan and its tributaries are deeply entrenched in the layers of the Lashon formations, which thicken progressively southward. They did not succeed, although greatly aided by the innumerable gullies that developed on the former Lashon Lake floor, in dissecting and reducing it considerably, so that two distinct surface levels exist along the Lower Jordan Valley. The higher one, generally flat, featureless, and only moderately affected by river dissection, is the remnant of the Lashon Lake floor and is referred to as the Ghor (Kikkar ha-Yarden in Hebrew). On both sides it borders high and steep mountainous slopes, formed mainly by scarps and composed predominantly of hard limestones and dolomites. Near the Jordan course, however, the Ghor becomes intensively dissected by innumerable gullies that turn it into intensive and characteristic badlands. Tens of meters below the Ghor extends the alluvial valley of the Jordan formed by its vertical and lateral erosion and much narrower than the Ghor. The Jordan valley, in the narrow sense, consists of the riverbed, about 80–100 ft. (25–30 m.) wide when not in bankful or overflooding stage, and a discontinuous floodplain covered by a dense gallery forest. Walled in by the steep, intensively gullied badland slopes, it contacts the bases of the mountain slopes enclosing the Rift Valley in only a few places.

The length of the Rift Valley between Lake Kinneret and the Dead Sea is about 65 mi. (105 km.); the course of the Jordan along this part of the Rift Valley, however, is approximately 125 mi. (205 km.). The near doubling in length is the result of the river's intricate meandering, despite the great drop in height between its exit from Lake Kinneret and its entrance into the Dead Sea. Despite its tortuous course, the river's gradient and the velocity of its current are still quite considerable, endowing it with great erosive power – factors which are generally adverse to the full development of a meandering course. The intensive meandering of the Jordan – often cited as an example of the phenomenon – seems causally to be connected with the tributaries joining it, which built out progressively, growing fans into its valley, and thus deviate from its course. The rivers contributing the greatest amounts of discharge to the Lower Jordan are its affluents from the Transjordanian side: the Yarmuk contributes about 17 billion cu. ft. (480 million cu. m.) annual discharge, compared with about almost 18 billion cu. ft. (500 million cu. m.) of the Jordan flowing at their confluence; the Jabbok provides approximately 2 billion cu. ft. (about 60 million cu. m.); the Arabah River, over 1 billion cu. ft. (30 million cu. m.); and the other major tributaries contribute only 210–350 million cu. ft. (6–10 million cu. m.) Because the tributaries coming in from the western side of the valley discharge far less, the Jordan is permanently deflected westward. Another factor in determining the river's course is the larger amounts of river-borne material supplied by the eastern affluents (particularly at the flood stages), due to the greater height at which these rivers originate, the larger amounts of precipitation their catchment areas receive, and consequently their far greater erosive and tractive capacities. In addition, exceedingly large amounts of material are delivered to the river from the Rift floor, particularly from the badland zone. Since this material is deposited within the riverbed, where the current is extremely unequal, irregular, and frequently deviated in its course by the outbuilt fans, the large discharge injections are an additional major factor behind the meandering tendency. Finally, waste movements, activated by undermining the river erosion banks, or even – although far more rarely – by earthquakes, bring vast amounts of debris down into the riverbed. According to both historical and contemporary eyewitnesses, this activity has even caused temporary cessation of the river's flow for some time.

The Lower Jordan Valley is fringed on its eastern side by the high scarp-slopes of the Transjordanian plateaus, which are only insignificantly punctuated by the canyon exits of the rivers descending into the Rift Valley. Less linear in outline is the western enclosure, in which the Jordan tributaries created wide valleys, extending far into the eastern flank of the Judean and particularly the Samarian Mountains (ʿAwjā and Fāriʿa Rivers). Some 18 mi. (30 km.) south of Lake Kinneret, the western mountain enclosure is broken by the tectonic valley of Beth-Shean, which begins the valley sequence traversing the width of Cisjordan. Hypsographically and climatically it represents a transition zone. The valley's level rises progressively from about 800 ft. (250 m.) below sea level at its eastern limit – the Jordan River – to about 300 ft. (100 m.) above sea level at its conjunction with the Harod Valley. Two surface levels exist within this embayment of the Rift Valley: a higher one adjacent to Mount Gilboa and predominantly composed of travertine, precipitated mainly from the many fault-conditioned springs at the base of this mountain; and an eastern, lower one, separated from the former by a step slope (now indistinct because of cultivation), merging imperceptibly with the Ghor. The Beth-Shean and Jordan valleys exhibit semiarid characteristics, mainly as a result of the amounts of precipitation (exceeding 12 in. (300 mm.) on the annual average). Conversely, the prevailing temperatures are still very similar to those in the southern part of the Lower Jordan Valley.

Kinneret Region. The Kinneret Region comprises Lake Kinneret (also called the Sea of Galilee or Lake Tiberias) and the narrow plains situated between it and the high, steep mountain slopes enclosing it to the west and east. To the south the plain into which the Jordan exits from the lake and in which the embouchure of the Yarmuk into the Kinneret is situated merges imperceptibly with the Beth-Shean Valley. The lake, however, covers a larger area – about 70 sq. mi. (170 sq. km.) – than all its surrounding plains combined. Lake Kinneret itself, whose maximum depth is only about 200 ft. (60 m.), was created by complex and protracted tectonic movements involving faulting and volcanic activities (the mountains enclosing the lake are to a large extent covered by basalts). These move-

ments, which seem to continue to this day, as may be inferred from the earthquakes of considerable strength that affect the region from time to time (the town of Tiberias was heavily damaged and about 700 people were killed in the earthquake of 1837) and from the presence of hot springs (Tiberias, al-Ḥamma, the ancient Hammath-Gader, in the Yarmuk Valley). Another indirect source of evidence is the many mineral springs issuing from the lake bottom and contributing considerably to the relatively high salinity of the waters – 300 mg./liter. Fault lines are the main factor behind the pronounced asymmetry of the shoreline. Whereas the eastern shore, conditioned by a fairly meridional fault sequence, runs relatively straight, the western one curves out sharply due to crescent-shaped fault lines. Asymmetry is also characteristic of most of the other features of the lakescape. Steep, high slopes rising almost immediately from the eastern and western sides of the lake face littoral plains on the opposite shores. The northern and southern shores of the lake are also very different in configuration. At its northern tip the Jordan River enters the lake in a complex braided course; several branches of it split up and join alternatively, uniting into a single bed only a small distance from the embouchure. The small river plain thus formed is the head of the al-Buṭayḥa (Bet Ẓayyada) Plain, which extends farther southeast and is composed mainly of the alluvial deposits of six small streams descending from the Golan Heights into the lake. South of this plain, and separated from it by a steep mountain spur, extends the shore plain of Ein Gev, dominated by Mount Susita and progressively widening and finally merging with the Yarmuk Plain.

In bold contrast to the northern and eastern sides of the lake, where alluvial plains are prograded into the lake, the southern shore is subject to incessant, strong abrasion and thus to regrading by the wave activity caused by the prevailing north winds. The recession of the shore is strongly aided by the high erodibility of the Lashon formation materials framing the lake. Into this bedrock, which also contains many basalt outcrops, the Jordan has cut its bed in a course that meanders almost from its exit from the lake. The west side of Lake Kinneret is fringed from the exit of the Jordan up to the debouchure of the Arbel River by a steep slope rising in several steps to about 600–800 ft. (200–250 m.) above the level of the lake – 700 ft. (212 m.) below sea level. A large littoral plain – the plain of Ginnosar – developed only at its northwest corner. This plain was created by the coalescence of deposits brought down from Eastern Galilee by several rivers (Arbel, Zalmon, Ammud).

Huleh Basin and Jordan Source Region. At least two subsequent lava flows, descending from the Golan Heights into the Rift Valley north of the present Kinneret Lake and consolidating there, formed a basalt sill that dammed up the flow of the Jordan southward. A result of this stoppage was the formation of a lake whose waters quickly reached a level higher than the sill and finally began to overflow it. This process resulted in the formation of a riverbed incised progressively deeper into

the basalt block, and the lake eventually became greatly reduced in surface area and depth. This reduction was probably accomplished in a relatively short time because of the considerable difference in height between the floor of the basin and the surface of Lake Kinneret that must have existed before the up-damming. At present the difference in height amounts to about 900 ft. (270 m.) over a distance of only 10 mi. (17 km.) – the steepest gradient in the Jordan's course, giving it great erosive power, despite the hardness of the basaltic bedrock (as evidenced also by the steepness of the banks along the bed cut into it). The Ḥuleh Lake, which was small – about 5 sq. mi. (14 sq. km.) – and only about 20 ft. (6 m.) deep, and the adjacent Ḥulatah swamps, which occupied an area of about 12 sq. mi. (30 sq. km.) covered by papyrus and kindred hydrophilic plants and populated by waterfowl, buffalo, etc., represented the natural remnants of the former lakescape. Drained off by the lowering, widening, and straightening of the Jordan bed and by artificial channels dug through the marshy areas in the 1930s – uncovering soils extremely rich in organic matter and thick layers of peat – the region underwent one of the most pronounced anthropogenous landscape transformations within Ereẓ Israel. At present it is one of the most intensively cultivated areas in the country (with the exception of a small reservation where the former conditions are preserved); however, it faces the problem of surface subsidence due to the progressive shrinkage of its underground, caused by the draining off of its interstitial water contents into the channels.

North of the former swamp area and lake, which occupied the lowest part of the basin, the land surface gradually rises to the Hills of Metullah, interposed between the Naphtali Range in the west and the Golan Heights in the east. This region is characterized mainly by its many watercourses – the headrivers of the Jordan: namely, from west to east: the Senir (al-Ḥaṣbānī), Dan, and Hermon (Banias) Rivers. All these rivers, as well as several brooks that discharged independently into the Ḥulatah swamps – like the Ijon (ʿAyyūn), which drains the basin bearing the same name farther north – are fed mainly by spring waters. The springs are partly supplied by rainfall and snow melting on the Hermon and fed by subterranean conduits, created by solution. The three above-mentioned headrivers, of which the Senir has the longest course, beginning at the northwest base of the Hermon, flow in deeply incised, precipitously sloped valleys in beds with very irregular gradients, which at times become highly steep and form waterfalls. There are several waterfalls along the course of the Hermon River and some smaller ones along that of the Dan. The most impressive waterfall within Cisjordan, however, is the *Tannur* ("Chimney") of the Ijon River near Metullah.

The Hermon River first joins the Dan, and only some distance from their confluence with the Senir does the Jordan River begin its course in a single bed. Before the swamps were drained, this united flow continued for only a small distance, after which the flatness of the basin bottom and the marshes covering it caused a division of the Jordan's course into several indistinct branches that discharged into the swamps and con-

tributed to their existence. Thus the Jordan proper, in terms of the continuity of the river, and the singleness of its bed, began only at its exit from the Ḥuleh Basin. All these conditions were essentially changed by the draining of the Ḥulatah swamps and the regulation of the river courses discharging into it. The numerous watercourses perennially flowing down from the Hermon foothills, the Golan Heights, and the Naphtali Range – totaling an average annual inflow of over 26 billion cu. ft. (about 740 million cu. m.) – and the abundant springs (among them the largest in Ereẓ Israel) impart to the source region of the Jordan hydrographic characteristics infrequently encountered in the Levant.

Ijon Region The 8.5 sq. mi. (22 sq. km.) basin of Ijon (Marj ʿAyyūn) which is situated within Lebanon, is separated from the Ḥuleh Basin by the Metullah Hills. It represents the northernmost portion of the Rift Valley drained by the Jordan, and also of the endoreic part of the Great Rift Valley System. The basin is over 1,600 ft. (500 m.) above sea level and it also is a tectonically conditioned depression. It is much smaller than the Ḥuleh Basin, with which it shares some properties, particularly its considerable marsh areas and associated vegetation. On its north the Rift Valley continues in the Beqa, which divides the Lebano-Syrian region into two main physiographical parts: a western one (Lebanon, Ansariye, Amanus Mountains) and an eastern one (Antilebanon, Syrian Plateau). In this area as well, both structure and hydrography are largely conditioned by the Rift, but drainage is essentially different from that of the Rift Valley within Ereẓ Israel: the two collecting trunk rivers (Leontes and Orontes) flow in opposite directions and discharge into the Mediterranean.

TRANSJORDAN. The other main part of Ereẓ Israel, Transjordan, comprises the regions east of the Rift Valley from the Gulf of Eilat in the south up to the Hermon and the Damascus Basin in the north. The eastern confines of Transjordan are not marked by any distinct relief features, and most of it gradually merges with the Syrian Desert. Thus only the zone adjacent to the Rift Valley, where the climate is still Mediterranean to semiarid and the water-courses discharge into the Rift Valley, may actually be regarded as the eastern part of Ereẓ Israel, according to its definition as a major natural unit. The zone averages only about 25 mi. (40 km.) in width and has always been politically, culturally, and economically connected with and dependent upon Cisjordan. The Rift Valley is more than just an external disconnection between Cisjordan and Transjordan. In spite of their spatial juxtaposition and the relatively narrow Rift Valley separating them, several differences, although not fundamental, do exist between these two areas. These differences pertain to lithology, tectonics, and consequently to surface features. Lithologically, almost all rock formations (except for the *kurkar* outcropping in Cisjordan) are present in Transjordan, although their areal distribution varies greatly. Formations that form the bedrock of relatively small surfaces in Cisjordan cover large areas in Transjordan, and vice versa. For example, basement rock of magmatic-met-

amorphic origin, found almost exclusively in the southernmost tip of Cisjordan (the Eilat Mountains), constitutes the surface of a large section of southern Transjordan, extending about 60 mi. (100 km.) north of the Gulf of Eilat. The same is true of Nubian Sandstone and various massive sediments of Paleozoic origin. Similarly, volcanic formations, which are of major importance as surface rock in Cisjordan only in Eastern Galilee, cover much larger areas of Transjordan. North of the Yarmuk they form the almost exclusive surface rock and create in the Bashan a volcanic region, also in all the morphological aspects. Volcanic formations are also widely distributed farther south in Transjordan, i.e., in regions whose counterparts in Cisjordan are almost entirely composed of calcareous rocks. Although the latter is also the most widely distributed type of rock in Transjordan, its predominance in Cisjordan is far more outstanding. These facts, together with studies of tectonic features (mainly the prominence and continuity of the fault lines bordering the Rift Valley to the east), have recently led to the following hypothesis: the formation of the Rift Valley, which continued through several geological ages, involved horizontal displacement and a northward movement of about 60 mi. (100 km.) of the eastern flank of the Rift Valley, whereas the western flank was apparently not affected by a similar movement.

The lithological conditions described above are indicative, albeit indirectly, of tectonic variances between Cisjordan and Transjordan. In Cisjordan, beginning with the Central Negev, folding played a decisive role in determining structure and relief; in Transjordan it appears to have been of subordinate importance, although large-scale up- and downwarping participated in the formation of the region. In the interior of Transjordan, faulting did not produce the basins and tectonic valleys so characteristic of Cisjordan, where it formed the most pronounced features, culminating in the valley sequence of Beth-Shean-Haifa Plain and a large number of small individual regions. In no part of Transjordan did faulting, subsidence, and uplifting influence small-scale relief as strongly as it did in the Galilees. In a general morphological sense, Transjordan can be defined as a plateau, very uniform in surface configuration and elevations. As no large intramontane basins exist there, lowlands covered by alluvial soils can be found only in Ghor, east of the Jordan. The ascent from the valley to the plateau is extremely steep, almost wall-like, interrupted only by the gorges of rivers exiting into the Rift Valley. These gorges are so narrow and steep that nowhere do they provide convenient access to the surfaces of the plateaus.

It is probable that together with the subsidence of the Rift Valley, its eastern flank was subject to strong uplifting, which particularly affected the immediately adjacent zone. This theory would explain why the eastern zone reaches great heights and gradually slopes down eastward at a small distance from Rift Valley. Only the western zone was transformed into a mountainous relief by numerous deeply incised rivers; eastward, as the elevation gradually becomes smaller and the relief flatter, or only gently undulating, the plateau character of the

terrain becomes more marked. Further east, the surfaces generally rise again, forming a sort of a broad rise where the major rivers that cut into the plateau and discharge into the Rift Valley originate. Only at Edom does the rise become a mountainous range, from which the plateau gradually slopes down eastward to the large desert basins at the border between Transjordan and Arabian Desert and the riverine lowlands of the Euphrates. This configuration, which represents the general watershed zone between the Rift Valley and the Syro-Arabian Desert, extends only up to the Yarmuk River, beyond which the landforms are primarily volcanic in origin.

The most significant topographical feature of almost all regions of Transjordan is thus the tablelands, which attain greater heights than those facing them on the west. This feature is accentuated by summits several hundred meters higher than the highest ones in Cisjordan. As the highest parts of the plateau almost abut on the Rift Valley, only a relatively narrow zone is effectively exposed to the rain-bearing, mainly westerly winds. This zone is only 20–30 mi. (30–50 km.) wide (broadening considerably only in the Bashan) and its climate is Mediterranean, although the amounts of precipitation it receives exceed those of the opposite regions in Cisjordan only in the highest areas of Edom – 16 in. (400 mm.) as against 2–4 in. (50–100 mm.) in the Negev Highlands. Another significant difference between this part of Transjordan and the highlands of Cisjordan is that most of the main rivers of Transjordan carry flow throughout the year, mainly as a result of the deep valleys reaching aquiferous strata and a large number of springs that feed the rivers.

Climatic and topographic conditions strongly influence the prevalence and distribution of soil types. Due to the relatively smaller areas of limestones and the narrowness of the zone receiving at least 16 in. (400 mm.) mean annual precipitation, the cover of terra rossa is less extensive and continuous here than in Cisjordan. Rendzina soils, ḥamra soils, and loess are not found frequently here. In contrast, however, large areas, particularly north of the Yarmuk, are covered by heavy soils produced by the decomposition of volcanic rocks. Alluvial soils form a rather continuous belt on the Rift Valley floor along the course of the Lower Jordan, whereas on the plateau, due to the narrowness of the fluviatile valleys and the absence of intramontane basins, the distribution of alluvial soils is rather patchy. Farther east and south, yellow and gray soils, peculiar to desert-like conditions, become more extensive. Topographic and more extreme climatic conditions produced the natural vegetational cover in Transjordan, which is considerably different both in character and in spatial distribution from that in Cisjordan. Whereas in the latter, whole regions were covered in early historical times by forests, which persisted for many centuries, relatively small areas south of the Yarmuk, characteristically including the highest parts of Edom (Seir), seem to have been forested.

Transjordan may be subdivided physiographically into four main regions and a transitional one. These are, from south to north: Edom, Moab-Ammon, Gilead, and Bashan.

The Hermon Massif (which, because of its position, orography, and particularly hydrography, morphotectonically constitutes a part of the Antilebanon system) forms the terminal and transitional arch between the two flanks of the endoreic Rift Valley.

Edom. Like its western counterpart, the Negev, Edom is the longest unit of Transjordan. No major natural feature distinguishes Edom from the northern part of the Arabian Peninsula (the biblical Midian), whereas, on the north the Zered (Ḥasaʾ) River – one of the major watercourses traversing the entire width of Transjordan and draining into the Dead Sea – forms a marked border between Edom and Moab. Nowhere else in Erez Israel are basement rocks Paleozoic sediments, and particularly Paleo-Mesozoic Nubian Sandstone so widespread or exert such influence upon the landscape as in this region. Even the name Edom (red) is thought by some to be derived from the prevalent color of the granite and the predominant reddish-brown hues of the Nubian Sandstone. Farther east the formations are younger (up to Eocene) and the topography is progressively lower, so that structurally the area bears resemblance to a pan. This description applies particularly to the Maon (Maʾon, Maʿān) Basin in the central-eastern part of Edom, where this structure is strongly accentuated by a drainage pattern that converges centripetally toward its lowest part.

As in southern Sinai and the Eilat Mountains, the areas of crystalline rocks in Edom have serrated crenulated ridges and bold dome-shaped summits. The slopes of these ridges are very steep and their bases are buried in debris, mainly produced by weathering under arid conditions. The rock waste progressively fills up the valleys between the ridges and individual mountain blocks. Conversely, the parts composed mostly of horizontally bedded Nubian Sandstones form broad flat-topped ridges, frequently dissected into isolated blocks, mesas, and buttes (i.e., larger and smaller table-mountains, the uppermost beds of which consist of resistant rock that preserves the flatness of the surface). Their steep slopes are pitted by alveoli of various sizes and are strongly subject to disjointing, giving rise to pillar-like columns, mushroom rocks, etc. In contrast, the forms developed by the calcareous formations, which are far less subject to disintegration, usually appear massive, and generally exhibit characteristics of plateaus, mountain-like only where dissection by rivers was more intensive. The climate of Edom is like that of the Negev – as a whole arid. Nevertheless, several regions within it are still exposed to Mediterranean influence, due to their considerable height above sea level and still more – over 1,000 ft. (300 m.) on the average – above the Negev Highlands, which interpose between Edom and the sea. The mean annual precipitation on these summits therefore amounts to more than 12 in. (300 mm.), and even snow is frequent. The precipitation also accounts for the relatively dense drainage net, the rivers of which (with the exception of Zered) carry water only immediately following rain and in the form of flash floods. The great

difference of elevation between the head areas of these rivers and the Arabah on the west and the topographical depressions (described later) into which the rivers discharge on the east endows them with very great erosive power, manifested in the deep, almost perpendicularly walled gorges and the very large debris fans at their mouths; these fans coalesce to form an almost continuous waste apron at the foot of slopes along the Arabah. Edom can be subdivided physiographically into the following three parts: Southern Edom, including the al-Ḥismā depression; Central Edom, generally referred to as the Seir (al-Sharaʾ), and including the Maon (Maʿān) Basin on the east; and Northern Edom, also called the Jebel (al-Jibāl) region.

Southern Edom The scarp slopes of the highland of Southern Edom rise abruptly above the Arabah. There are no major breaks in their continuity except for the valley exit of the al-Yitm River discharging into the Gulf of Eilat, which facilitated the construction of the only road (Akaba-Maʿon) traversing the entire width of the Edom Mountains. The plateau reaches heights of more than 5,000 ft. (1,500 m.) at a distance of no more than 6 mi. (10 km.) from the Rift Valley: Jebel Bāqir, 4,020 ft. (1,592 m.); Jebel al-Aḥmar, 5,220 ft. (1,588 m.). In Southern Edom the belt of basement rocks is the widest in all of Ereẓ Israel – about 12 mi. (20 km.) – as are the areas covered by sandstones. Within the latter zone lies the Ḥismā depression, an elongated, triangularly shaped, tectonically conditioned basin running northwest-southeast. It also contains the head-valley of the Yitm and merges gradually with the plateau of Midian. Considerably lower than the adjacent tableland, the floor of the basin contains a sequence of local depressions (sing. qāʿ) that become saline marshes in the rainy season. Many plateaus bordered by steep slopes – the remains of a former continuous table-mountain surface – still stand high above the basin floor but are subject to incessant reduction by weathering and fluviatile erosion. Notwithstanding its much higher elevation, climatic conditions in Southern Edom are generally similar to those of the southern Negev, as evidenced by the scarcity of soil and vegetational cover and the complete lack of permanent settlement throughout historical times.

Central Edom. The central part of Edom, also referred to as the Seir Mountains (al-Sharaʾ), represents the area's largest region in both meridional and east-west extension. It is, except for the Hermon, the highest land unit within Ereẓ Israel, with large surface areas exceeding 3,500–5,000 ft. (1,200–1,500 m.) in height and several summits above 5,500 ft. (1,700 m.). In contrast to Southern Edom the Seir Mountains proper appear as a continuous range towering high above the Rift Valley, only 12 mi. (20 km.) from their summit region, and sloping down far more gradually towards the east to the Basin of Maon. Relevant lithological differences also exist between Southern and Central Edom. Basement rocks in Central Edom are less widespread than Nubian Sandstones or Mesozoic calcareous rocks, and most significantly the belt of highest elevations extends along the zone of sedimentary formations. Structurally the area differs from Southern Edom by its greater frequency of fault lines, which greatly contributed to the prevailing pattern in the magmatic zone of isolated mountains and to the frequent interspersing of areas composed of magmatic-metamorphic rocks with those consisting of Nubian Sandstones and even of Mesozoic calcareous formations. The Seir Mountains form a very distinct watershed between the relatively short watercourses descending to the Arabah and those – far greater in number – discharging into the Maon Basin in a very pronounced concentric pattern. Due to the extremely steep gradient of the westward-flowing rivers and the prevalently hard bedrock into which they are incised, their valleys usually form very deep and narrow canyons, at times widening into small, intramontane, cirque-like basins (e.g., the Wadi Mūsā at Petra, accessible only through the spectacular al-Siq gorge).

Central Edom rises about 1,900 ft. (600 m.) higher than the Negev Highlands and thus receives relatively large amounts of precipitation, rather frequently in the form of snow. Consequently areas covered, albeit patchwise, by productive soils and vegetation are abundant in comparison with Southern Edom, particularly in the vicinity of the relatively numerous springs. These conditions allowed for the existence of some permanent settlements in the area throughout most historical times, the most important of which was Petra (near the Mūsā spring), the famous Nabatean center. A great deal of natural and historical evidence also leads to the conclusion that up to the first decade of the present century some parts of the Seir Mountains were forested. Toward the east the slopes of the Seir Mountains descend into the Maʾon Basin, which is enclosed on the north by large outcrops of volcanic rock. As most of the precipitation that falls on the Seir Mountains runs off into this basin, whose floor is wide and flat, the valleys descending into it become progressively wider and indistinct after forming vast fans at their entrance into the basin. The widespread deposits of large amounts of alluvia brought by the rivers created considerable tracts of cultivable soils, particularly in the vicinity of Maʾon (Maʿān) the capital of Edom, throughout history.

Northern Edom. Northern Edom, the Jebel (al-Jibāl) region, differs in many regards from Central Edom. Its mean elevation is considerably lower, although some summits still exceed 3,300 ft. (1,000 m.). There is no range-like alignment such as the Seir Mountains, but individual, small mountain bodies are separated by valleys, many of which have wide floors. The significant difference in lithology between the two areas is a major cause of this configuration. Crystalline rocks, widely distributed in the other parts of Edom and constituting the backbone of its structure, and the bulk of the ramparts sloping down to the Arabah occupy far smaller areas in Northern Edom than do sedimentary rocks. The scarp-slopes facing the Arabah consist mainly of Nubian Sandstone and are thus less steep than those composed of crystalline rocks. The greater erodibility of the Nubian Sandstone and certain other sedi-

mentary rocks is also an important explanation for the relative prevalence of wide valleys in this area. The orientation of the valleys is largely determined by intensively developed and complex fault lines. Northern Edom also receives relatively considerable amounts of precipitation. Because of this factor, as well as the many springs, the wide valley floors, and the location, i.e., the relative proximity of the area to the core region of Transjordan (Gilead), Northern Edom became the most densely populated part of Edom.

Moab-Ammon. The Edom Highlands descend gradually to the valley of the Zered River (Wadi al-Ḥasaʾ), the first major river, deeply incised into aquiferous strata and draining a large catchment area – 675 sq. mi. (1,750 sq. km.) – far larger than any catchment area in Cisjordan. The Zered flows throughout the year, discharging into the Sodom Sabkhah (salt marsh), and its course traverses the whole width of the Transjordanian plateau south of the Dead Sea, with head rivers beginning as far as 45 mi. (70 km.) from the Rift Valley. The Moab-Ammon region is delimited on the north by the Jabbok (Nahr al-Zarqaʾ) Valley – one of the most pronounced canyons in Transjordan. Morphologically, this area represents the most compact and homogeneous part of Transjordan. This effect seems mainly to be the result of lithological conditions, namely the prevalence of almost horizontally bedded sedimentary rock formations (sandstones and calcareous rocks) and larger areas of volcanic extrusions (even a major extinct volcano). The elevation of the plateau is relatively high, averaging 3,300 ft. (1,000 m.) with some summits exceeding 4,000 ft. (1,200 m.). Moab is separated from Ammon by the Heshbon (Ḥisbān) River and borders on the Dead Sea along its entire length. With the exception of the low, tabular Lashon Peninsula – morphogenetically a part of the Rift Valley floor – the plateau rises abruptly from the sea, with almost no intervening shore flats, so that it attains a height of 3,300 ft. (1,000 m.) at a distance of only 6–9 mi. (10–15 km.) from the Dead Sea in the southern portion of Moab and of 2,300 ft. (700 m.) at a distance of 6 mi. (10 km.) in the northern one. The ascent to the Ammon Plateau from the Jordan Valley bordering it on the west is much more gradual, although the mean elevation of Ammon is about 600 ft. (200 m.) greater than Moab.

The western parts of Moab and Edom – which are about 18 mi. (30 km.) wide – exhibit the main, albeit marginal, characteristics of the Mediterranean zone. Not only do relatively large amounts of precipitation – more than 24 in. (600 mm.) – fall on their higher parts, but the variations in the amounts of precipitation from year to year, so characteristic of the Edom, are far smaller. Due to the topography and the prevalence of calcareous surface rock, terra rossa and rendzina soils are relatively widely distributed and utilized. Also quite a large number of springs contribute to the perennial flow of the Arnon River, which drains most of Moab – 1,650 sq. mi. (4,460 sq. km.) – and subdivides the region into southern and northern Moab (almost equal in size). Similar hydrographical conditions are responsible for the perennial

flow of the Zarqāʾ, Māʿīn, and Heshbon rivers. Topographic and climatic conditions and the considerable areas of cultivable soils, which in the past even produced grain surpluses, were reasons for the area being densely populated in comparison with the southern regions, a large percentage of the population being concentrated in several townships. One of these Rabbath-Ammon (Amman), the capital of the present Hashemite Kingdom of Jordan, is connected to Jerusalem by a highway via Jericho. Kerak (Kir Moab), the principal town of Moab, Madeba, and most of the nearby villages lie along the highway running almost straight and parallel to the Dead Sea coast at a small distance from the prevalently wide watershed between the rivers draining into the Rift Valley and those discharging to the east.

Gilead. The Jabbok (Zarqāʾ) River – after the Yarmuk the most important tributary of the Jordan – whose catchment area is about 1,100 sq. mi. (3,000 sq. km.), with about 2 million cu. ft. (70 million cu. m.) mean annual discharge, divides Gilead from Ammon. Gilead represents one of the largest regions of Transjordan south of the Yarmuk, not so much because of its length – which, between the Jabbok and Yarmuk rivers, is 46 mi. (75 km.) – as by its width, which averages 35 mi. (60 km.). It exhibits some morphotectonic similarities to the central mountains of Cisjordan due to the influence exerted upon its morphogenesis by fold structures and by its mountainous appearance, resulting from relatively intensive dissection by rivers. The larger and higher southern part of the region is traversed by four major, perennially flowing tributaries of the Jordan: Rājib, Kafranjī, Yābis (Jabesh), and Siqlāb. In the northern part, which is only about 1,600 ft. (600 m.) high and is drained only by the Arab River, the relief is far less pronounced. The east-west oriented valleys of the rivers and of their many confluents – which are increasingly numerous farther east – give rise to a landscape of mainly short, interfluvial ranges composed of rounded hills whose slopes are terraced to a considerable extent. These ranges do not attain great heights; the highest summit in Gilead, Umm al-Daraj, is somewhat less than 4,100 ft. (1,250 m.). This configuration also reflects the prevalent lithological and climatic conditions. The southern part of Gilead is composed of mainly Cenomanian-Turonian calcareous formations, whereas in the northern one, younger (Senonian-Eocene), generally less resistant strata form the bedrock. Immediately south of the Yarmuk there are several outcrops of volcanic rocks – outliers of the Bashan basalt cover.

Despite its considerably lower elevation (than more southerly regions of Transjordan), Gilead receives the relatively largest amounts of precipitation – more than 20 in. (500 mm.) annual mean on most of the area, whereas in the highest regions in the south precipitation amounts to about 28 in. (700 mm.). Moreover, the 16 in. (400 mm.) isohyet, still the most useful means of delineating regions of Mediterranean-type from those of semiarid climate, runs here at a distance of about 30 mi. (50 km.) from the Rift Valley. Conse-

quently, soils (mainly of terra rossa type) are rather common and extensively cultivated here, which again accounts for the population throughout history being much more dense than in other parts of Transjordan. There is strong evidence that considerable parts of Gilead were forested in the past. The area is relatively easily accessible from the Rift Valley, particularly along the Siqlāb Valley, where the gentle relief near the watershed greatly facilitates communication along the entire length of the region. The divide conditioned the site of a relatively large number of townships ('Ajlūn in the south and Irbid in the north are the most important) and villages situated along or near the meridional highway and at the springs, particularly abundant in the plateau parts adjacent to the Rift Valley. In the past, Gilead was the region most closely connected with Cisjordan historically, particularly during the Roman era, when Geresh (Gerasha; Ar. Jarash), Arbel (Irbid), and Gadera (Umm Qays) formed part of the Dekapolis.

Bashan. The deeply incised valley of the Yarmuk, the second largest river of Erez Israel – with a catchment area about 2,670 sq. mi. (7,250 sq. km.) – forms a prominent natural border between central Transjordan and its northern region, Bashan. The latter covers about 4,600 sq. mi. (12,000 sq. km.) and differs in almost all physiographical aspects, primarily in morphotectonics and lithology, from the regions south of the Yarmuk. The landscapes of Bashan were formed mainly by volcanic activities that probably persisted from the Pliocene up to prehistoric times. Consequently, almost the whole of the Bashan is covered by extrusive rocks, in many places attaining a thickness of several hundreds of meters. The relief is also determined by these activities, which resulted primarily in vast plains built of consolidated lava sheets that are overtopped by elevations of eruptive origin. Large parts of the terrain still exhibit the characteristics of block fields. Others are covered by heavy soils formed through the decomposition of the basaltic bedrock or from the disintegration of the volcanic tuff. Since the Bashan is the northernmost region of Transjordan, and because its eastern most part is considerably high, the Mediterranean type of climate prevails over an area two to three times wider and extending far further east than the regions having a similar climate south of the Yarmuk. Topographically, Bashan can be subdivided into three major regions: Golan, Bashan Plain, and Hauran.

Golan. The plateau of Golan, situated between the Hermon Massif and the Upper Jordan Valley on the west and the Ruqqād River (a tributary of the Yarmuk) on the east, is only about 15 mi. (25 km.) wide. Its continuous steep slopes rise abruptly above the Ḥuleh Basin and are even steeper in the region of the sources of the Jordan, attaining heights of 3,300 ft. (1,000 m.) at a distance of only about 9 mi. (15 km.) from the latter. Morphotectonically the Golan represents a plateau of lava sheets whose prevalent flatness is accentuated by a number of isolated cones rising without any transitional forms above the vast surrounding plain. These cones are composed mainly of volcanic cinder and extend in a more or less straight line from north to south. This orientation indicates their causal connection with a meridionally running fissure system, along which they originated at spots where lava extrusions and cinder ejections were more intensive, persistent, or recent. The most pronounced of these cones are Tell al-Sheikha, about 4,000 ft. (1,300 m.) high, in the northern part of Golan and Tell Abu Nidā', which contains a crater with a circumference of about 2½ mi. (4 km.), followed by lesser ones (Tell Abu Khanzīr, Tell Yūsuf, and Tell Faras) in the south. In the northern part of Golan a small shallow lake of almost perfect oval shape, Birkat Rām, was in ancient times thought to be one of the sources of the Jordan connected with the Banias Spring by subterranean conduits. It is not, however, a crater lake – as was also formerly assumed, as a part of its enclosure consists of sedimentary rock – but is probably a depression produced by subsidence of pyroclastic material.

According to topographic and surface-rock conditions, two main subregions can be distinguished in the Golan Plateau: a higher, northern one, adjacent to the Hermon, and a considerably lower, south part, consistently sloping down to the Yarmuk Valley. Volcanic cones and extensive block fields with intermittent soil and plant cover characterize the former, whereas most of the surface of the latter is covered by extensively utilized heavy basaltic and tuff soils. Golan receives comparatively large amounts of precipitation, exceeding 32 in. (800 mm.) annual mean in some areas; consequently, large tracts were once covered by forests. Because of the amount of precipitation and the relative impermeability of the bedrock, it has a rather dense net of watercourses, although few of them flow perennially. The northern part of this net drains into the Jordan through a series of almost equidistant and parallel valleys. These are not yet incised deeply in the plateau proper and form gorges only at their entrance into the Rift Valley, where they can erode the far less resistant calcareous formations underlying the plateau basalts. A large part of the southern Golan belongs to the catchment area of the Yarmuk and is drained mainly by the deeply incised Ruqqād and its affluents. The western portion drains into Lake Kinneret in a series of short watercourses, the most important of which is the Samak River.

Bashan Plain. The largest and lowest regional unit of the Bashan – as indicated by its current Arabic name, al-Nuqra ("The Hollow"), the Bashan Plain is situated between the Golan Highlands on the west and the still higher Hauran Massif on the east. The plain is about 40 mi. (60 km.) wide and it is not uniform in elevation. Its slopes descend gradually both from north to south and from east to west where they abut on the Hauran. Unlike in the Golan, no volcanic cones were formed here, but the same difference exists between its northern and southern parts. The former contains large expanses of lava-block fields, whereas the latter exhibits an almost continuous cover of volcanic soils, which rendered the region one of the granaries of the Mediterranean lands in ancient times. Although it is on the leeward side of the Golan Heights, the

Bashan Plain still receives an annual mean precipitation exceeding 16 in. (400 mm.) and its main rivers, Wadi ʿAllān and Wadi al-Iḥrayr, affluents of the Yarmuk, flow perennially.

Hauran. In the eastern part of Bashan, Hauran (the ancient Auranitis, now usually referred to as Jebel al-Druze), relief forms originating in volcanic activities are the most pronounced within Ereẓ Israel. This oval-shaped massif, about 60 mi. (100 km.) long from south to north and 25–30 mi. (40–50 km.) wide, is mainly composed of extinct volcanoes, many of which contain craters and rise to heights above 5,500 ft. (1,700 m.) – the highest summit is Tell al-Janynā, 5,900 ft. (1,800 m.). The massif exhibits two main levels: a lower – up to 4,500 ft. (1500 m.) – comprising most of its southern portion; and a northern portion – 650 ft. (200 m.) higher, in which the relief forms are also much bolder. Due to its height, the Hauran still receives considerable quantities of precipitation, and snowfall is frequent in winter. On the north and east the Hauran Massif is surrounded by lava deserts called *al-ḥarra* in the vernacular. They consist of consolidated "ropy" lava, which forms labyrinth-like serrated ridges of blocks separated by oblong depressions. Only the northwestern lava field, al-Lijaʾ (the ancient Trachonitis), is at least historically connected with Ereẓ Israel.

Hermon. Morphotectonically, the Hermon Massif, the main source area of the Jordan and the northernmost element of the endoreic Rift Valley within Ereẓ Israel, is the southernmost part of the Antilebanon upfold system, strongly affected by faulting, uplifted along their lines, and thus turned into a pronounced horst structure. It is separated from the Antilebanon proper by the Valley of Zabadānī, where the source springs of the Barada River issue. This river irrigates the Ghūṭa (oasis) of Damascus. Composed predominantly of calcareous Jurassic strata, it forms an oblong dome-like mountain block whose three main summits rise to heights of 6,760 ft. (2,465 m.), 7,720 ft. (2,810 m.), and 7,350 ft. (2,680 m.) respectively. It exhibits a rather subdued topography of rounded summits separated by wide and flat saddles. Although the area receives a mean annual precipitation of more than 60 in. (1,500 mm.) and snow cover persists on its higher parts until August, its surfaces have not yet been affected by river erosion, with the consequent formation of deeply incised valleys and associated slopes, nor does it seem to have been glaciated in the Pleistocene as has been assumed.

Climate

INTRODUCTION. Ereẓ Israel is situated between subtropical arid (Egypt) and subtropical wet (Lebanon) zones. This location helps to explain the great climatic contrast between the light rainfall in the south and the heavy rainfall in the north in all three orographic belts: Coastal Plain, Western Mountain Ridge and Jordan Valley. In the rainy season the centers of the barometric depressions crossing the eastern Mediterranean from the west normally pass over Cyprus. Most of Egypt and southern Ereẓ Israel lie in and partly outside this area of cloudiness and precipitation, whereas northern Ereẓ Israel is nearer to the center of the vortex. The cyclonic depressions of the eastern Mediterranean are usually smaller, both in area and in axis length, than the Atlantic depressions. The difference in pressure between the center and the periphery does not exceed 10–13 millibars, with differences between highs and lows not exceeding 17–20 mb. Pressure gradients in winter storms in Ereẓ Israel, however, are just as steep as those in Europe or America.

In the winter, depressions arrive in Ereẓ Israel from the west along two trajectories. The first, of decisive influence on the climate of the country, comes from northern Italy along the Adriatic Sea to Greece and the Aegean Sea. There it divides into two sections, one leading to the Black Sea and the other to Syria. The second leads from southern Italy and Sicily to the central Mediterranean and thence to the southeastern corner of the Mediterranean and Ereẓ Israel. A rare path extends along the North African coast through Egypt to Ereẓ Israel. Depressions sometimes pass along a narrow belt from the Red Sea northward and cause sudden cloudbursts accompanied by torrential floods in the normally dry Sinai Desert, Negev, Jordan Valley, and Syrian Desert. Mediterranean depressions are prevalent in the eight months from October until early June, when cold air penetrates from Eastern Europe through the Balkans to the Mediterranean, influencing the activity of the depressions. Rainfall in the eastern Mediterranean, including Ereẓ Israel, is directly related to the intensity of cold airstreams over Eastern Europe in the winter. The lower the temperatures fall in Eastern Europe, the stronger the influence of the cold airstreams on the depressions moving into the eastern Mediterranean. A narrow belt of high pressure descends from the Balkans and pushes depressions lying to the east. If, simultaneously, a second area of high pressure zones, connected to the great Siberian winter high-pressure system, extends over northern Iraq and Turkey, the activity of the eastern Mediterranean depression increases. Depressions are followed by high pressures, normally centered over northern Syria and Turkey, which are usually connected to the winter anticyclones of central Asia. In such cases, cold air descends from the high mountains of Armenia, which, though warming in descent – sometimes through tens of degrees – is often cold enough upon reaching Israel to cause freezing and frost. Visibility is exceptional. Snowcapped Mt. Hermon and the mountains of Lebanon are then visible from Mt. Carmel – a distance of 60 mi. (100 km.) – and even from Tel Aviv and

high points west of Jerusalem – over 100 mi. (nearly 180 km.) away. Barometric pressures are higher in winter than in summer, being low only on stormy days. The difference between winter and summer pressures is smaller in Erez Israel than in Turkey or Iraq.

Lower summer pressures result from Erez Israel's location on the western periphery of the extensive low-pressure system of southern Asia, which causes the Indian monsoon. There is a summer monsoon in Erez Israel too, though it is not accompanied by the heavy precipitation typical of Indian monsoons. The latter, however, affect summer conditions in Erez Israel. Normal monsoons in India result in normal summers in Erez Israel; insufficient pressure gradients and abnormal Indian monsoons cause "abnormal summers" in Erez Israel and the entire eastern Mediterranean. In a normal summer, strong, humid, westerly and northwesterly sea breezes prevail continuously for weeks or months, resulting in extensive dew formation. These are the "etesian winds" known to the ancient Greeks. Other airstreams arise only in the transition months of spring and fall, arriving chiefly from the hot and dry deserts in the east. These are the *hamsin* (or *sharav*) winds (see below). *Sharav* winds from July to October are abnormal in summer, indicating undeveloped Indian monsoons.

CLOUDINESS. The frequency of depressions between October and May and their scarcity or total absence between June and September result in marked differences in cloud forms. Between October and May, or sometimes even June, all forms of high, medium, and low clouds occur. In summer only low clouds form through condensation of marine air currents ascending the mountain slopes. Toward the end of September, high ice clouds, then medium, and finally water-laden low cumulus clouds form. Summer clouds are also of the cumulus type, but they are higher than winter clouds. In summer low clouds also approach from the west, carrying more humidity than in winter, but they do not cause rain, lacking ice crystals and the necessary conditions for rainfall. Over high mountains, such as Mt. Hermon and the Lebanon range to the north, these summer clouds reduce penetration of the sun's rays. An afternoon mist that rises from the sea mostly covers the western, seaward slopes and valleys. Clouds over the mountains of Erez Israel at night are very low, while during the day they occur at altitudes of 6,500–10,000 ft. (2–3 km.). Mist clouds are found in mountain valleys on summer mornings and disappear after sunrise. In Upper Galilee summer cloudiness exceeds that in the south, and morning mists are more prevalent. In the winter, cloudiness in the mountains exceeds that in the coastal region; the opposite is true in summer. The Jordan Valley differs from the rest of the country in this respect as few clouds occur even in winter.

There are no completely overcast days in summer: a quarter of the summer days are partly cloudy; the rest are completely clear. Mist occurs in the Coastal Plain in winter and the transition months. In the inland valleys, such as the Jezreel

Valley, mists occur mostly in summer. Heavy morning fogs cover the coast on *sharav* days, while morning mists in inland valleys are the result of temperature inversion. Low places in the Jezreel Valley have mist on clear winter mornings and on summer mornings with no easterly wind. Unique fogs rise in the winter from the Ḥuleh Basin and the Dead Sea. The former is covered by heavy mists on cold nights; over the latter, fogs form after sunrise in the wake of depressions, when cold air flows in pushing the local air up the slopes of the Judean Mountains in the west and the Moab Mountains in the east. After sunrise, these fogs ascend to the mountains tops, over altitude differences of 4,000–5,000 ft. (1,200–1,500 m.). They reach Jerusalem late in the morning, thicken toward noon, and scatter in the late afternoon, though they sometimes remain until evening or even throughout the night. Fogs do not cross the mountain crests to the west, but remain stationary in the strong westerly wind as a westward-pointed wedge hundreds of meters thick.

RADIATION. Erez Israel is a sunny country because of its location in the subtropical zone, its low degree of cloudiness, and its extensive desert areas. In the long summer days the sun ascends to over 80° above the horizon, and radiation reaches the ground in 98% of all potential hours of sunshine; in the winter the sky is cloudy, on the average, through half the day. The annual mean daily radiation is 5 million calories on each square meter. On a summer day it is about 7.5 million, on a clear winter day 3 million, and on a cloudy winter day 1 million. Few countries can compete with Erez Israel in abundance of sunshine. Horizontal surfaces receive illumination of some 90 kilo-lux-hours at noon in summer, and an area perpendicular to the sun's rays receives over 130 k.l.h., nearly the absolute maximum the sun can provide. These quantities are reduced by one-third in the winter. Southern slopes as well as southern-oriented walls and rooms receive the greatest amount of sunshine in the winter. In other directions, no marked differences exist between the various seasons.

RAIN. Rainfall normally begins in Erez Israel in November, increases in intensity to about January-February, and decreases again to May, which is sometimes completely dry. First rains sometimes fall earlier and sometimes later. Likewise, the rainy season may end before Purim (March), though small quantities of rain may fall until Shavuot (around the end of May). Most of the rainfall, some 72% of the seasonal total, occurs in December, January, and February. Five types of yearly rainfall can be discerned: (1) normal, with even distribution; (2) rainy in early winter and dry in its second half; (3) dry in early winter and rainy later; (4) heavy rains in the middle of winter with relatively dry early and late seasons; (5) twin – (or even multiple) – peaked season, with dry intervals between peaks. The first type occurs in Jerusalem in about 33% and in Haifa in some 42% of the winters. The second type is found in Jerusalem and the Judean Mountains in about 20% of the winters and only in 6% in northern Israel.

The third type is more frequent in the north (31% in Haifa) than in the south (13% in Jerusalem). The fourth type is rare, occurring in 2–3% of all years. The fifth type is most frequent in the Judean Mountains (35%), with some 24% in Haifa. Regional differences in rainfall are much larger in Erez Israel than in other countries of comparable size. In Israel there is an absolute desert with under 1.2 in. (30 mm.) rain per annum – the Arava: semi-desert areas with 2–3 in. (50–75 mm.) to 6–8 in. (150–200 mm.) – the Negev and Dead Sea Valley; agricultural regions with 12–18 in. (300–600 mm.): and mountain areas with 20–32 in. (500–800 mm.) in Judea and Samaria and up to 44 in. (1,100 mm.) in Upper Galilee. Mountains receive more rain than the Coastal Plain or the Jezreel Valley. Amounts of rainfall increase from south to north in all regions: the Coastal Plain, the western and eastern mountain ridges, and the Jordan Valley. Similarly, the number of rainy days in northern Erez Israel exceeds that in the south. In dry years both the amount of rain and the number of rainy days are reduced; in very wet years both may be doubled. Most cultivated areas are those with over 12 in. (300 mm.) rainfall per annum. Contrary to common belief, the amount of rainfall in agricultural areas in Erez Israel is no less than that in agricultural countries in the temperate zones. The difference lies not in the annual amount of rain, but in the number of rainy days and in the intensity of rain per hour or per day. In Erez Israel the entire annual amount falls in 40 to 60 days in a season of seven to eight months. In temperate climates precipitation occurs on 180 days spread over 12 months.

DEW. The formation and amount of dew are dependent both on meteorological conditions – relative humidity and nocturnal cooling – and on the properties of the cooling surfaces – soil and vegetation. The regional distribution of the number of dew nights and the amount of dew is greatly diverse. Richest in dew are the northwestern Negev and the western and central Jezreel Valley, followed by the Coastal Plain from Gaza to Binyaminah. The central Ḥuleh Basin and parts of the lower Beth-Shean Valley also have large amounts of dew. The Golan and the Naphtali Mountain slopes, which are dry on most nights of the year, surround them. Hilly coast regions (Mt. Carmel), regions near the mountains (Western Galilee), and the Jezreel Valley have smaller amounts of dew and fewer dew nights per month and per year. Still smaller is the amount of dew in the mountains of Jerusalem and Galilee. The eastern slopes of the mountain ridge descending into the Jordan Valley, as well as the western foothills, receive smaller and sometimes negligible amounts of dew. The Carmel foothills and those of western Galilee, Ephraim, and Judea have almost no dew at all. The mean annual number of dew nights exceeds 200 in the entire Coastal Plain and the Jezreel Valley and 250 in the northwestern Negev. The mountains have only 150–180 dew (and fog) nights per year; the western foothills have 100, and the Jordan Valley (excluding lower Beth-Shean Valley and central Ḥuleh Basin) has fewer than 50. An abundance of dew is important for agriculture and settlement. For

example, as a result of the dew formation on most summer nights, the vicinity of Khan Yunis in the western Negev, which receives only scanty winter rainfall, is a center for growing watermelons, a typical summer crop. Unirrigated summer field crops (sorghum, corn, and sesame) can be grown only in areas with sufficient dew.

SNOW. In certain mountain areas snow is a normal occurrence. Mountains of 2,500–4,000 ft. (800–1,000 m.), such as those of Hebron and the Upper Galilee – elevation 4,000–5,500 ft. (1,300–1,700 m.) – have snow nearly every year. Mt. Hermon, rising to some 10,000 ft. (3,000 m.) above sea level, receives most of its precipitation as snow, which feeds a relatively large number of perennial streams. Most snow falls in Erez Israel in January or February, but it has been known to occur in November and December and even in March and April. The heaviest snowfall recorded in Jerusalem in the last century was 38 in. (97 cm.) in February 1920.

TEMPERATURE. Air temperature depends on elevation and distance from the sea. Valleys have higher, mountains lower mean temperatures; the higher the location, the lower the air temperature. The highest temperatures are recorded in the Rift Valley, a few hundred meters below sea level, with peak temperatures in the Arava, south of the Dead Sea. The lowest mean temperature is found in Upper Galilee. The mean annual temperature in the coastal regions is 68°–70° F (20°–21° C) with differences between coastal plains that are near mountains and coastal plains that are not. Haifa has lower temperatures than Acre, Netanyah or Tel Aviv. Coastal temperatures vary only slightly in summer, and even in winter their fluctuations are smaller than elsewhere. The Maximum temperatures in summer are not high and winter minima not very low. Fluctuations increase with the distance from the sea; the maximum rises and the minimum decreases markedly. The annual mean temperature is 3° C lower in Jerusalem than in Tel Aviv – difference in elevation 2,624 ft. (800 m.) – but in the winter the difference is larger.

The annual means in the Jezreel Valley and the Coastal Plain are similar, but monthly fluctuations inland, as well as differences between maximums and minimums, are larger than on the coast. Temperatures are lower in the Ḥuleh Basin than around Lake Kinneret or the Dead Sea. The mean annual temperature at the southern end of the Dead Sea is 78.3° F (25.7° C); at the northern end, 74.3° F (23.4° C); at Tirat Ẓevi 71.6° F (22.0° C); and at Kinneret, 72.1° F (22.3° C). The annual mean in the Ḥuleh Basin is similar to that on the coast – 67.8° F (19.9° C) – though the extremes differ widely. Great climatic differences are hidden by a similarity of mean annual temperatures; evaluation of climatic conditions must also take into account the extremes of diurnal cycles and of hourly differences.

DIURNAL CYCLE. Regional differences are most outstanding in the daily temperature cycle. On the coast temperatures reach their maximum values long before noon. The sea breeze

prevents any further increase and the temperature remains almost constant until late afternoon. A flat ridge thus replaces the temperature peak. The same is true of the minimum at night, which lasts for several hours after midnight. But, with increasing distance from the sea, both maximal and minimal temperatures decrease in duration. In the Jordan Valley the diurnal cycle is different. Near the northern Dead Sea in the summer there are two peaks. There is an early morning and a late afternoon maximum near the Dead Sea. At Ein Gev on Lake Kinneret the two daily peaks are less developed but still quite prominent. Along the entire Jordan Valley the afternoon peak in temperature results from the adiabatic warming of the westerly wind that descends from the western mountain ridge into the deep Jordan depression. On the southern shore of the Dead Sea the cycle is similar to that near the Mediterranean coast, but the basis temperature values are entirely different. The mountains to the west of this area are not as high and adiabatic heating of the descending air does not increase the temperature above that prevailing locally. The shallow water at the southern end of the Dead Sea has an equalizing effect on daytime temperatures and also maintains high values at night.

HEAT WAVES. A *ḥamsin*, or heat wave, occurs when depression approaches Israel from the west, with easterly winds backing first to south and later to west. It is broken when cool and humid maritime air replaces the hot air; when this occurs temperatures may fall by 45° F (20° C) or more. During a *ḥamsin* the temperature always rises and the humidity decreases. In midwinter, clear days with temperatures rising by 10° C or more in a day are a pleasant phenomenon. Such a temperature rise in spring or fall, however, is far from pleasant, since air temperature may reach body temperature. Mountains are hit first by a heat wave and, although temperature rises are relatively small, it is felt strongly because it lasts longer than in the valleys near sea level. When a *ḥamsin* reaches the valleys temperatures are always higher than in the mountains and reach the absolute maxima recorded in Ereẓ Israel. In May and June and in October and November there are often such severe days with high temperatures. But they may occur in the rainy season, with its centers of low and high pressure arriving from the west.

Another type of *ḥamsin* develops with rising barometric pressure under anticyclonic conditions. A northeasterly wind, turning easterly, blows toward the area from a center of high pressure over Iraq, Syria, and sometimes also Turkey. Such a strong east wind in winter is referred to in the Bible as *kadim* (e.g., Ex. 10:13; Ps. 48:8; Jonah 4:8). Owing to the very low humidity, the air is very clear. At first the temperature is low, but it rises daily while the air becomes both dry and hazy. When pressure begins to fall, the conditions are similar to those occurring in a depression *ḥamsin*, but an anticyclonic *ḥamsin* is not only as hard to bear, but it is often stationary and of longer duration. The action of the sun's rays is weakened during such days, and there is only a slight wind. Humans and other warm-blooded creatures feel unwell because the normal functioning of the body's cooling processes are impaired. Delicate winter plants wither in a spring *ḥamsin* because high evaporation causes excessive loss of moisture and the winter green vanishes as if by magic. The *ḥamsin* is harder to bear near the coast than in the mountains, chiefly because of the high relative humidity of the hot air, which prevents the evaporation of perspiration.

COLD WAVES Every barometric depression is followed by a high-pressure system generally centered over Syria or Turkey. Air flowing in from the northeast usually comes from Siberia in winter, reaching Ereẓ Israel after some warming over the mountains of Armenia, Iran, and Turkey, or, if coming from the north, northwest, or west, over the Black and Mediterranean seas. Such cold waves bring air at a temperature of 14°–19° F (-7° to -10° C) to the Euphrates Valley and 23° F (-5° C) in the Transjordanian Mountains. Each cold wave from the east penetrates first into the Jordan Valley before reaching the Western mountain ridge. In such cases, temperatures near the Dead Sea start to fall some 12 hours earlier than in Jerusalem. The danger of frost in winter is thus greater in the northern Jordan Valley than in the western valleys or the Coastal Plain.

TEMPERATURE EXTREMES. The highest temperature ever recorded in Israel was 131° F (54° C, Tirat Ẓevi, Beth-Shean Valley, June 1942). On the same day the temperature was 122° F (51.5° C) at the Dead Sea, 113° F (45° C) on the Coastal Plain, and 118° F (48° C) in the Jezreel Valley. In the mountains, temperatures exceeding 111° F (44° C) have not been recorded for the past 100 years. In most heat waves, temperatures rise to 110°–113° F (43°–45° C) in the Jordan Valley and 97°–100° F (36°–38° C) on the Coastal Plain; 100° F (38° C) is considered very hot for the mountains. The lowest temperature recorded in Jerusalem in the past 100 years was 19.4° F (−7° C). Even in the Jordan Valley 28°–32° F (-2° to 0° C) was repeatedly recorded. The Coastal Plain, however, seems to be immune to frosts; only twice on record did temperatures fall below freezing. In early 1950, all of northern and central Ereẓ Israel down to the Mediterranean was covered by snow.

HUMIDITY. The relative humidity of the air is highest near the coast and higher at night in summer than in winter. Humidity reaches its daily minimum around noon. Mountain areas are drier, and the humidity there in winter exceeds that in summer, in spite of the dry easterly winds. Conditions in the Jezreel Valley are similar to those near the coast, with high nocturnal humidity in summer. Humidity is lowest in the Rift Valley, especially in the Arava, and around the Dead Sea. The Dead Sea has higher humidity at the northern end than at the southern end; but the diurnal cycle is different at each end. In all areas the daily cycle is simple, with a minimum at noon and a maximum late at night or throughout the night. At the northern end, however, the relative humidity rises to its maximum at noon in summer when the Dead Sea breeze

lowers the temperature. In the afternoon and near sunset, when temperatures reach a maximum, the humidity is minimal due to the western breeze that warms up while descending into the valley.

Absolute humidity in the valleys is higher than in the mountains. The Coastal Plain not only has a high relative but also a high absolute humidity, which causes physical discomfort in summer. Absolute humidity near the Mediterranean is similar to that near the Dead Sea, or even exceeding the latter in summer, although temperatures near the coast are lower. In the Beth-Shean Basin the absolute humidity is also high because of the very high summer temperatures. Since a low humidity facilitates evaporation of perspiration, conditions in the mountains are more pleasant.

WINDS. Simple wind conditions prevail on the Coastal Plain. In summer, a sea breeze blows all day and a land breeze blows at night. Wind conditions on clear winter days are similar to those in the summer, but when a barometric depression covers the sea, easterly winds blow at first, slowly backing to the south and southwest. These winds bring clouds and sometimes rain from the sea, until northerly winds disperse the clouds and the sky clears. In summer northwesterly winds blow over the mountains for weeks and even months on end. The strength of the wind rises from near calm in the morning to a maximum in the late afternoon. Local winds are rare in the mountains, where mainly regional winds blow. These winds are dependent upon pressure distribution around centers of high or low pressure. Local winds occur in summer around the lakes of the Jordan Valley as well as near the Mediterranean. The latter receives the sea breeze throughout the day, while the inland lakes generate land breezes only at certain hours. This is a result of the Mediterranean breeze neutralizing all local activity on reaching the Jordan Valley, so that even the lakes become involved in the general climatic conditions. The landward breeze from the lakes is of biological importance in the hot season. The Mediterranean's sea breeze generally has a cooling effect; but upon descending into the valleys lying hundreds of meters below the surrounding mountains and even below sea level, the breeze undergoes such a rise in temperature that, instead of cooling, it heats the area. In summer the westerly winds in the entire Jordan Valley are thus hot and dry. The biological cooling effect of the westerly winds in the Jordan Valley seems to vary. A moist and perspiring body is cooled by it; but upon drying, only the effect of moving air remains, imparting a false sensation of cooling.

Weak winds prevail in the Coastal Plain, the Jezreel Valley, and the Negev. The mountains and the Rift Valley, especially the southern Arava, experience strong winds. Average wind force is higher in summer than in winter throughout the country; but in a winter storm, velocities in January and February equal or surpass those in the summer. Isolated cases of high winds in winter often lead to a general impression of high winter averages. Wind speeds may reach 50 mph. (80 kph.) and even more in winter, but between storms near calm

may prevail. In summer, on the other hand, strong winds blow regularly at certain hours. While these are not as strong as the winter storms, summer averages are generally higher than winter ones. In the Manarah ridge in Upper Galilee, e.g., winds of "winter force" blow on summer days, especially at dusk. The diurnal cycle of wind strength in the mountains reaches its maximum in the afternoon, and on the coast and in the Jezreel Valley at noon. Mornings are usually calm in most areas of the country, as are nights, except in the mountains and the southern Arava.

HISTORY OF CLIMATE RESEARCH IN ISRAEL. Scientific climate research in Palestine started in the mid-19th century. The first instruments for weather observation were used at the English Hospital in Jerusalem in 1845, where regular observations were taken until World War I. The records of the first 14 years have been lost, but those for 1860–1913 have been preserved intact. The Scottish Mission also took observations at various places, which were supervised from 1860 by the Palestine Exploration Fund and its meteorologist, G. Glaisher (until 1903). M. Blanckenhorn took meteorological observations for the Deutscher Palaestina-Verein from the mid-1890s.

The first results of these observations are assembled in F.M. Exner's work *Zum Klima von Palaestina* (1910), including the first rainfall map of Ereẓ Israel and the adjacent areas. French and American convents, schools, and scientific institutions also set up meteorological stations in Palestine, Syria, and Lebanon. Jews entered the field of climatic research in Ereẓ Israel only in the 20th century. In 1910 the Palestine Office of the World Zionist Organization set up rainfall stations in several towns and villages. Soon after World War I Dov Ashbel set up a network of meteorological stations in Jewish villages from Metullah to the Negev, and a number of stations were installed by the British Mandatory administration. Meteorological research after 1937 was conducted at two centers. One was at the meteorological station maintained by the government Department of Civil Aviation at Lydda Airport, where upper-air conditions were studied with advanced technical equipment. The other was run by the department of meteorology of the Hebrew University of Jerusalem, which controlled the network of meteorological stations in Jewish settlements. The government set up stations in parts of the country populated by Arabs, formerly inaccessible to Jewish research. During World War I, the opposing air forces studied upper winds and upper-air meteorology in Palestine. In World War II, the Allied air forces in the whole Middle East theater systematically collected a mass of meteorological data resulting in a revision of concepts of the conditions in the area. The network of Jewish stations was extended in the latter years of the Mandate.

After the establishment of the State of Israel, both the civil authorities and the Israeli Air Force developed meteorological operations on a national scale for both civilian and military needs. These operations include extensive upper-air observations with radio-sondes as well as meteorological sat-

ellite research in collaboration with other countries. The universities in Israel, especially departments of geography, earth science, and geophysics undertook extensive research on climatic conditions for human needs. Their research placed Israel in the front ranks of meteorological and climatic research in the academic world.

Geology

STRATIGRAPHIC EVOLUTION. *The Precambrian Basement.* Upper Tertiary to Recent faulting and uplift led to many exposures of the basement rocks along the flanks of the Arabah graben, the southeastern corner of the Dead Sea, the Eilat area, and eastern Sinai. The morphology of the Precambrian basement rocks is characterized in Sinai and in the Ḥejaz, situated opposite Sinai, by a conspicuously barren and rugged relief (e.g., Mount Sinai, Wadi Yitm), contrasting remarkably with the tabular landscape of the Paleozoic-Mesozoic sedimentary cover. Varieties of granite and granite-porphyry, syenite, diorite, and gabbro, interchanging with gneiss and mica schists, constitute the principal plutonic and metamorphic basement rocks. Volcanic tuffs and lava sheets also occur, as well as abundant acid and basic dikes. Swarms of dikes invade the whole of the crystalline complex, as well as the unmetamorphosed sediments of the Saramūj series.

The Saramūj series consists principally of multicolored conglomerates analogous in rock character and deposition to the Molasse and Verucano of the Alps. Like these Alpine formations the Saramūj series are of simple fold structure, giving reason to assume strong mountain building during the late Precambrian. The Precambrian "Alps" were then leveled on a regional scale, only a few monadnocks remaining on the enormous erosion and abrasion surface of the Lipalian peneplain. Ore deposits of economic importance have not yet been discovered in the basement complex. The feldspar-, barite-, and mica-bearing pegmatites are of very limited economic value.

Paleozoics. Above the Lipalian peneplain (principal unconformity) there is an extensive cover of continental and marine sediments of Paleozoic to Recent age. The sedimentary material is derived either from a landmass in the east, the "Arabo-Nubian" shield, or from the transgressive "Tethys" sea in the west. The few marine Lower Paleozoic outcrops known from Timna, Eilat, and Petra or from Wadi al-Ḥasaʾ and Zarqā Māʿīn at the Dead Sea all appear as thin beds of shallow epicontinental limestone-dolomite, shales, and littoral sands; these are intercalated between sandstones hundreds of meters thick. This continental, as well as littoral, sandy complex is included in the Nubian Sandstone. Reminiscent of the "Old Red" of Europe or the "continental intercalaire" of Africa, the Nu-

bian Sandstone has built the impressive colorful rock escarpments of Petra and the eastern cliffs of the Dead Sea. Erosion and corrosion have sculptured these sandstones to fantastic rock forms, especially well developed in the Ḥismā plains and in the Wadi al-Rūm of the Ḥejaz province. It is also in this region that the complete atmospheric disintegration of the Nubian Sandstone has supplied the sandy fillings of the present extensive valleys of the Ḥismā; in the region outside our map it has provided the material for the large belts of dunes of the Dahna and Nafūd of inner Arabia. Copper of an average 1.5% is found as a cementing carbonate in the Paleozoic Nubian Sandstone and is mined at Timna. In the same area, manganese deposits have been mapped (mostly psilomelane) but their economic value is still under discussion.

Mesozoics. Dating the Nubian Sandstone is a persistent difficulty, particularly where there are no marine intercalations. This is the case in the Arabah and Dead Sea graben. Thus in the north-south canyons and steep western slopes of Moab, Sodom, and Midian and in the area opposite, between Eilat and Timna, Triassic and Jurassic marine interbeds are remarkably absent. There the massive sandstone rests directly on the Precambrian or the marine Lower Paleozoic Cambro-Silurian beds and is overlaid by marine Cenomanian strata. In this part of the country the Nubian Sandstone may therefore be of any age from Paleozoic to Mesozoic. Fossil plants found in the uppermost layers of sandstone (here somewhat clayey and shaly) are of continental Lower Cretaceous or Wealden character. Genuine marine Triassic in the Transjordanian part of our map is known from the surroundings of the northeastern corner of the Dead Sea and from the deeper wadi-cuts of the Jabbok River. In the high Negev of Sinai and Israel, Triassic is exposed in the erosion windows of Mt. Arif and Ramon. The predominantly calcareous, occasionally marly beds display lithological affinities with the "Germanic" epicontinental Trias – the Muschelkalk – though their fauna also contain many "Mediterranean" elements. Quasi-continental conditions during the Upper Triassic led to the deposition of gypsum evaporites and to faunistically sterile dolomite varves and Keuper-like variegated marls. The lowermost outcropping strata of the marine Triassic again appear in the "Nubian" facies.

Marine Jurassic is recorded from the neighborhood of the Triassic outcrops of Transjordan and on the Cisjordanian side from the anticlinal cores in Makhtesh Ramon, Ha-Makhtesh ha-Gadol and Ha-Makhtesh ha-Katan; yet none of the calcareous and marly epicontinental formations of the Jurassic or Triassic in Transjordan and in the Negev are completely devoid of sandy intercalations, demonstrating shallow sea conditions in the vicinity of a dune-framed continent. At Ramon, terrestrial influence is also marked by residual deposits of bog-iron and flint clays (up to 55% Al_2O_3) at the Jurassic-Triassic boundary, as well as by a few hundred meters of continental Nubian Sandstone containing some thin intercalations of marine Jurassic. Striking gravel formations recorded

from the Jurassic-Cretaceous transition beds of the Ramon in the Negev, as well as of the Lebanon, indicate uplift and widespread erosion at the end of the Jurassic.

The Ramon outcrops are finally distinguished by numerous trachytic dikes and sills of possibly Upper Jurassic age, since they penetrate both Jurassic and Triassic sediments. The syenite-essexite plutonics of the anticlinal core have also been assigned to the Jurassic. The "intermediary" magmatics differ somewhat in rock type from the more basic volcanics, which are extensively represented in the Hermon-Lebanon mountains. In contrast to the continental and epicontinental Jurassic of the Negev and Transjordan, the Middle and Upper Jurassic of Lebanon and Hermon are developed as a 1,000–1,500-meter-thick marine complex prevalently of dolomite and limestone, suggesting deposition in an oceanic basin fairly remote from shore and land.

The recent material obtained from oil-exploration drilling in Israel leads to the conclusion that the Mid-Upper-Jurassic marine sedimentary troughs of Lebanon-Hermon extended south and southwest to Galilee, Carmel, Judea, the Coastal Plain, and the western Negev lowlands. The continental sphere of influence during this period is restricted to the Negev proper and to Transjordan. This paleogeographic zoning of sedimentary conditions persists to a greater extent in the following epoch, during the Lower Cretaceous. Thus in Transjordan and in the Negev-Arabah, the principal representative of the Lower Cretaceous is a uniform sandstone of continental habitus assigned in the map to the "Nubian" complex. Mostly regarded as the time-equivalent of the Wealden, this Lower Cretaceous Nubian Sandstone (kaolinic at the base) is again well exposed in the erosion windows of Ramon, the Makhtesh ha-Gadol, and the Makhtesh ha-Katan. There are, howevever, a few thin marine intercalations.

In the western regions, in the Coastal Plain as well as on Mount Carmel and in Galilee, evidence of the hegemony of the Tethys sea during the Lower Cretaceous is found in the cuttings and core samples from the recent wells at Ḥeleẓ, Tel Ẓafit, Moẓa, Zikhron Yaʿakov, Caesarea, Haifa, Ein Naʿaman (Kurdāna), Mount Tabor, and Tiberias, as well as in the outcrops of central and northern Galilee (Sartaba-Tabor, Bet Netophah, Har Ḥazon, Har ha-Ari, Manarah) and of eastern Samaria (Wadi Māliḥ-Fāriʿa). The lithology of the Lower Cretaceous is predominantly marly and occasionally sandy. Limestones are less frequent and like the other formations are of shelf and littoral character. The presence of lignite in the sandy beds also indicates the proximity of the continent. The abundance of hydroxides and oxides of iron gives the Lower Cretaceous rocks of Galilee their dominant and characteristic brown colors. Enrichment in a shallow sea led to the deposition of oolitic iron ores. The best ore (28% Fe) was found in the "minette" of the Aptian of Manarah in northernmost Israel (30,000,000 tons of minable ore have been evaluated).

Cenomanian-Turonian. Whereas the Triassic, Jurassic, and Lower Cretaceous appear in restricted outcrops in the anti-

clinal erosion cirques, Makhtesh Ramon, Ha-Makhtesh ha-Gadol, and Ha-Makhtesh ha-Katan, in the wadi-cuts at Ramallah and Wadi Māliḥ-Fāriʿa, and in the uplifted fault blocks of Galilee, more than half of the exposed mountain formations of Israel belong to the marine Cenomanian-Turonian. Thus the prominent mountain bodies of the northern Negev, Judea-Samaria, Carmel, and Galilee are built of Cenomanian-Turonian rocks up to 2,500 ft. (800 m.) thick. The principal strata, hard limestone and dolomite, weather to a rough and rocky karstic landscape characteristic of Mediterranean calcareous terrains. Subdivided by very thin marly (e.g., Moẓa Marl) or by thicker flint-bearing chalk beds (e.g., the Carmel promontory of Haifa), these dolomites and limestones have become the main groundwater aquifer exploited during the last few decades in Israel.

In the central Transjordan section, in the Arabah-Dead Sea Rift Valley, and in the southernmost Negev (Timna), the Cenomanian limestone protrudes as a hard, vertical cliff overlying the rim of Nubian Sandstone escarpments. In southern Transjordan, the lower stage of the Cenomanian is still in the Nubian Sandstone facies. The main Cretaceous transgression starts there only with the Upper Cenomanian, or even, in places, with the Turonian. In northern Transjordan, however, in the upwarped region of the Jabbok-ʿAjlūn, the marine development of the Cenomanian is again complete, of considerable thickness and surface distribution. The landscape here is very reminiscent of the Judean-Samarian uplands. In the Carmel and Umm al-Faḥm mountains, submarine lavas and tuffs are interspersed in the Cenomanian-Turonian.

Senonian (Including Paleocene). The Cenomanian upwarps and anticlines of the Israeli mountain bodies are everywhere framed on their flanks by narrow strips of Senonian, which continue in larger extension in the synclinal areas. Flint-bearing hogbacks and flat-irons are characteristic morphologic features of the asymmetrical slopes of the Negev and Judean anticlines. The greatest surface extension, however, is that of the synclinorial downwarps of the Judean Desert, the Desert of Zin, and the Paran (Jirāfi) and Ẓenifim deserts in the southern Negev. The dominating Senonian of these regions is also distinguished in the landscape by a white to light gray color and badland dissection of its principal rock type, the chalk. Where unexposed to the atmosphere, the Senonian chalk is usually bituminous. Intercalated flints and the now exploited phosphatic limestones are other representative rock-types of the Senonian. In the Negev section of Sinai and of Edom, opposite, the harder flints are the principal components of the pebble pavement of the large Ḥamada plains and plateaus.

Eocene. The surface occurrence of the Eocene is similarly associated with the downwarped regions. The anticlinal ridges of the Cenomanian-Turonian, including their asymmetrical flanks, are practically devoid of Eocene. Eocene is of great extension west of the Ramon and Dimonah ranges in the structural depressions which start from the Avedat plateau down

to Niẓẓanah, Revivim, and Beersheba. From Beersheba to the north it extends along the western foothills as far as Ḥuldah. Eocene is likewise extensively represented in the downwarped fold region of Paran and ʿAqof (ʿIqfi) in the southern Negev.

The folds of these synclinorial regions (and this applies also to those of the north) are usually smaller, shallower, more symmetric, and frequently of the brachy-anticline type. Undulations of this kind are developed in the uplifted high plateaus of Transjordan. In Samaria the exposed Eocene is distributed between Ebal-Gerizim and the Umm al-Faḥm range and in Ephraim proper between Umm al-Faḥm and Mount Carmel. A large area of Eocene is analogously situated (though disturbed by faults of the Kishon Valley) between Carmel and southwestern Galilee (Shepharam to Nazareth). In spite of the strong block-faulting which dissected the Galilee in the Pleistocene and the extensive basalt and Neogene cover, it is nevertheless possible to trace the Eocene on the southeastern flanks of the Galilean upwarp. On the western flank of this upwarp, parallel to the Senonian-Paleocene sedimentary girdle, Eocene appears in sporadic outcrops, intimating that its major portion lies hidden below the Coastal Plain and the sea. The Eocene in the foothill region of the Negev and Judea, western Galilee, and Ephraim consists primarily of chalk interspersed with flint and chalky marl. Lithologically it frequently resembles the Senonian and is accordingly marked by a common egg-shaped smooth hill-morphology. Harder limestones in the higher Negev (Avedat plateau) and in Sinai produce an esplanade landscape with enormous regional plateaus and cuestas. In the Lower Eocene table landscape of Edom-Moab, there is much interstratification of phosphatic limestone. Harder limestone and marble limestone of uppermost Lower to Middle Eocene age are widely distributed in central and eastern Galilee, evolving a pronounced karstic rough-hewn landscape which differs sharply from the smoother relief forms found in the foothill regions of Israel. There, rare occurrences of Upper Eocene are still developed in the chalky marly facies of the Middle to Lower Eocene foothills. Some of Galilee's largest springs derive from the Eocene karst, e.g., Gilboa, Migdal, Naḥal Ammud, Kinnerot (al-Ṭabigha), Kefar Giladi.

Oligocene. The Oligocene Tethys sea never reached far inland. The few limited outcrops in the foothills of Bet Guvrin, Ramleh, and Ephraim, as well as the drilling samples of the Coastal Plain, all point to shore deposits of chalky and detritic character. Marine Oligocene, therefore, plays no significant role in Israel's surface formations; continental Oligocene has not, so far, been discovered. Israel's emergence from the sea may have commenced in the Late Eocene from submarine ridges which already existed here and there in the Senonian; but the major elevation and hence the final anticlinal-synclinal fold pattern came about at the end of the Oligocene or earliest Miocene.

Marine Neogene. The beginning of the Neogene coincides with the most widespread rising of the region above the sea

since the end of the Precambrian, i.e., since before the first appearance of the Paleozoic Tethys (Lipalian interval). Emergences had taken place before, such as at the end of the Triassic and Jurassic and the end of the Lower Cenomanian, but the whole of the country was not affected then, as shown by the results of recent deep borings in the Coastal Plain.

With the approach of the Miocene, the Tethys ceased to exist, its waters merging with and filling the Atlantic and Indian Oceans. At a later time, this region became connected with these two oceans only by means of small sea branches. Europe and Africa-Arabia were then united by isthmuses or divided by inland seas and the Mediterranean originated. In place of the widespread Mesozoic and Eocene transgressions of the Tethys, marine ingressions are henceforth limited to local embayments of the Mediterranean. These occurred primarily during the two Neogene stages, the Miocene Vindobonian and the Pliocene Astian-Plaisancian. Surface outcrops of the marine Neogene are very small in Israel and restricted to the foothill area or to the Beersheba and Kishon plains. Marine Neogene thus plays a very minor role in the morphology of the country.

The littoral Miocene is found today from Haifa Bay and the Ephraim Hills (Ein ha-Shofet) in the north to Beersheba and Dimonah in the Negev, up to a height of 1,600 ft. (500 m.) above sea level. In all the known exposures, it appears with sharp erosional unconformity on folded Eocene and Cretaceous rocks. The marine Miocene strata consist of lagoonal, sandy marls, beach sands, coarse-grained sands, and coral limestone. Both the facies and the fauna point to a connection with the Red Sea and the Indian Ocean. After the retreat of the Miocene sea, due to uplift in the Pontian of some 700–1,000 ft. (200–300 m.), there followed a new subsidence, accompanied by the Pliocene ingression.

The Pliocene sea in the north again occupied the Kishon Valley, the Jezreel Valley, and eastern Galilee as far as Tiberias. In the south it reached Nevatim, east of Beersheba, and again washed the foothills bounding the present Coastal Plain. The character of the Pliocene (Astian) littoral sediments is similar to the Miocene, except for the absence of coral reef limestone, indicating disconnection from the Red Sea and Indian Ocean. Uplift movements at the end of the Pliocene and during the Pleistocene brought the Pliocene littoral beds to their present height of 700–1,000 ft. (200–300 m.) and the Miocene to 1,600 ft. (500 m.). Where subaerial erosion has removed the Neogene sediments, the ancient abrasion planes often appear as tilted "peneplains."

The marine Miocene-Pliocene lying below the Quaternary of the Coastal Plain has been studied in hundreds of water wells and in many petroleum-exploration drillings. As so-called Sāqiyya beds, it consists of several hundred meters of plastic clays, silty marls, and marly sands; there are some local lumachelle layers and even basalt flows. In the deeper horizons it becomes markedly lagoonal, with several gypsum horizons, but this part of the section may be assigned to the Miocene-Oligocene.

Continental Neogene. The varying relief of Israel and neighboring Levant countries demonstrated by the Neogene irregular gulf and headland coastal configuration is also expressed by the development of large intermontane depressions, with their fill of predominantly continental deposits. Limnic freshwater and brackish sediments, evaporites (Menaḥemiyyah gypsum, Sodom salt), fluviatile gravel, red beds, and desert sands attaining hundreds of meters of thickness have been described under various formation names: Herod, Sodom, Ḥazevah (Ḥoṣeb), etc. They occur in the Jezreel Valley, the Jordan Valley, the Negev, and near the Dead Sea. Although of lesser thickness and geographical extension, these inland sediments may be compared in facies and age with the Bakhtiyārī and Fars series of Iran, Iraq, and Syria.

The continental Neogene, like its contemporaneous marine Mio-Pliocene, rests discordantly upon all pre-Miocene formations, frequently starting with a basal conglomerate, e.g., Kefar Giladi, Har Hordos, al-Dhrāʿ, Dimonah, etc. In the folded mountains of the Negev it is associated with synclinal basins (as in the Palmyra chains of Syria), e.g., Naḥal Malḥata (Wadi Milḥ) east of Beersheba, synclinal valleys between Yeroḥam and the Ha-Makhtesh ha-Gadol (Ḥatirah) anticlines, the Ḥazevah-Sodom-al-Dhrāʿ basin, and the Upper Paran downwarp. In the Jezreel Valley and eastern Galilee the continental Neogene occurs as filling masses within the huge fault depressions that extend from the Kishon to the Tiberias area. This is the same region of tectonic tension in which Upper Miocene and, more visibly, Upper Pliocene continental basalt eruptions took place and even continued during the Pleistocene. Pleistocene and Pliocene sheet lavas have built up the extensive volcanic plateaus of Hauran and eastern Galilee. They cover Neogene and pre-Neogene sediments, which, due to Pleistocene block and rift faulting, are exposed along the slopes of the Jordan graben and in the transversal fault valleys of Naḥal Tabor (Wadi Bīra), Harod, and eastern Dayshūn.

Quaternary. Uplift and desiccation of the inland lakes not only brought the marine and continental Pliocene into a higher topographic position, but was also accompanied by the complete retreat of the sea far to the west of the present Levant shores. Contemporary with this uplift, fault-dissection on a regional scale produced the graben-trough of Eilat-Arabah, the Dead Sea, and the Jordan Valley and accompanying step-fault blocks. The branching off of diagonal faults both in Cis- and Transjordan gave origin to transversal fault valleys and fault-block mountains, which are especially well developed in Samaria and the Galilee. The Negev, south Judea, Shephelah, and Sharon were far less affected by fault tectonics, and thus the mid-Tertiary fold pattern of anticlinal ridges and synclinal valleys, upwarps and downwarps, remained well preserved. In the synclinal valleys and on the ḥamada-plateaus of the Paran hinterland, continental deposition may have continued from Upper Tertiary to Recent.

Along the western border of the Judean Mountains, gravel fans and terraces plunge below the Coastal Plain (as

far west as the Mediterranean) and are found in groundwater exploration wells at depths of 330 ft. (100 m.) overlying the Neogene strata. These clastics are assigned to the Lower Pleistocene or Villafranchian, indicating the extremely high precipitation of this Pluvial stage, synchronized with the Guenz-Mindel glacial time of Europe. Younger gravels of Mid-Upper Pleistocene age interfinger the fossil indurated dunes of the Coastal Plain, known as *kurkar* sandstone. The *kurkar*, which constitutes another important aquifer, is frequently subdivided by a terra-rossa-like, sandy, loamy soil, the *ḥamra* (Ar. *ḥamrāʾ*) or "red sands" of our citrus belt. The unconsolidated dunes are of Recent age. They run along the Coastal Plain and extend into the northern Negev, as far inland as the neighborhood of Beersheba. The undifferentiated Quaternary signifies the loamy, loess, and swampy soils, as well as recent gravels and silts blanketing the coastal and interior alluvial plains. Pleistocene marine sediments are found as foraminiferal limestone in the Haifa-Acre plain (e.g., Kurdaneh) and as marine *kurkar* around the western Carmel border. The water boreholes in the Coastal Plain encountered marine Pleistocene only as far inland as Rishon le-Zion, but this is missing in the Jezreel Valley and the Shephelah foothills. The lower Pleistocene is thus the most insignificant of the ingressions of the Cenozoic Mediterranean Sea. During the Upper Pleistocene, Mousterian man already lived near the present shores.

In the newly formed Quaternary Dead Sea-Jordan graben, the Lower to Middle Pleistocene is distinguished by gravel and freshwater lake and swamp deposits. At the southern end of Lake Tiberias (ʿUbaydiyya), many extinct mammals, skeleton remains of primitive man, and implements both of pebble culture and of Abbevillian were discovered. Slightly younger, but not older than Middle Pleistocene, were the proto-Acheulean tools and extinct fauna found at the Jordan, south of Lake Ḥuleh. During this period volcanic activity was renewed and many basalt layers accumulated, derived in part from the Hauran district. They were partly responsible for separating the Ḥuleh graben section from the Tiberias and southern Jordan graben and for the accumulation of thick peat deposits in the Ḥuleh Valley. The Tiberias region, the middle and southern Jordan valley, the Dead Sea, and the northernmost Arabah valley were occupied during the Upper Pleistocene (some 60,000 years ago) by a large brackish inland lake in which were deposited fine-bedded clays, gypsum, and chalk, called the Lashon (lisān) formation. This formation is interfingered with large fluviatile deposits of gravel and silt. At the end of the Pleistocene (some 20,000 to 15,000 years ago), the ancient Lisān lake receded from its highest stand at the -720 ft. (-220 m.) level to about -1,300 ft. (-400 m.), the present level of the Dead Sea. Young rivers spread their gravels upon the dried-up Lisān lake and cut out the present floodplain of the Jordan River. The raising of the Sodom salt mountain also started in the Lower Pleistocene.

STRUCTURAL PATTERN. The tectonic structures formed by the folding movements that modeled their final features dur-

ing the Mid-Tertiary are best preserved in the dry climate of the Negev. However, south of the Yotvatah area, the influence of the Plio-Pleistocene graben faulting with its step faults, parallel and transversal to the Arabah graben depression, markedly disturbs the fold pattern that is still well observable at Ẓenifim. From Naḥal Paran as far as Makhtesh Ramon the direction of the folds is close to east-west and this trend persists into Sinai. The folds then turn in a northeast-southwest direction and dominate the central and northern Negev. Their anticlines are mostly asymmetrical on the eastern flanks and frequently limited by reverse strike-faults. These folds are grouped into one unit forming the main anticlinorial uplift, with culminations in the Makhtesh Ramon and Ha-Makhtesh ha-Gadol. In the structurally low areas, such as the central Arabah Valley and the synclinorium of Ḥaluẓah, the folds are smaller and more symmetrical, representing small domes and brachy-anticlines.

The mountainous region of Judea and Samaria is a broad arch, rising to a considerable height, that is subdivided into folds by the anticlines of Maon, Yatta, Ẓāhiriyya, Modi'im, etc. and the synclines of Netiv ha-Lamed-He and Ẓorah. The arch and its folds, again with a northeast–southwest trend, are distinctly asymmetrical, descending unequally to the Coastal Plain in the west and to the Jordan-Dead Sea graben in the east. Thus the pronounced northwest asymmetry observed on the western slopes of the Judean arch contrasts with the southeast asymmetry of the dominant folds of the Judean Desert and the northern Negev. These asymmetrical anticlinal folds are difficult to relate to pressure exerted by the Arabo-Nubian massif, but are apparently connected with the mechanism of epeirogenic and taphrogenic uplifts.

As in most rift valleys of regional extent, it is not always possible to define the exact location of the main border faults. In the case of the Pleistocene Jordan–Dead Sea graben, a throw of a thousand meters or more has been determined at a number of places. The western cliffs of the Dead Sea graben and the graben slopes between Beth-Shean and Lake Kinneret are, moreover, divided by numerous step faults that run parallel to the main border fault. They are also hidden to some extent by *en échelon* faults that have their origin in the main graben. A number of transversal faults, such as those between Wadi Fāriʿa and Jericho, as well as in the foothill region near Tulkarm, cut the anticlinorium of the Judean Mountains.

On the Coastal Plain, just as in the northern Negev and the southern part of the Judean Mountains, the structural lines are directed northeast-southwest. It is not yet clear whether this direction applies only to the folds or, as in the Ḥelez area, to deep-seated faults as well. Petroleum wells of the Ḥeleẓ-Beror Ḥayil ridge indicate the presence of a wide and deep depression filled with Tertiary sediments, constituting the regional (Ashkelon) fault-conditioned trough.

In the Sharon a number of small transversal faults have been observed. It is possible that these constitute the continuation of faults exposed in the foothill area. There are no surface indications of a main, larger border fault, as found along the Jordan graben. Nevertheless one may assume that the great thickness of Tertiary sediments in the Sharon Plain is the outcome of a downfaulted coastal depression that began during or at the end of the Mid-Tertiary, as presumed also for the Ashkelon trough. If the existence of main faults below the young fill on the Coastal Plain and the continental slope area of the Mediterranean should be proved, then a general tectonic picture would evolve presenting Judea as a major horst limited on both sides by major grabens or by downfaulted depressions.

Mount Carmel forms a structural unit by itself. It is an extensive faulted uplift. The direction of some of the smaller anticlines (ʿUsifiyyā, Oren) is northwest-southeast. That is to say, they are not in harmony with the strike of other fold structures in the country. The view has been expressed that the major faults that limit Mount Carmel to the north have been responsible for producing the small anticlinal bends of this exceptional direction. Although the folds in Upper Galilee are more or less obliterated by the predominance of faulting, a certain east-southeast asymmetry of the rudimentary folds, and especially of the central upwarp, is still noticeable. Whereas in eastern Galilee faults are primarily directed northwest-southeast and their fault escarpments face north, in western Galilee, i.e., west of the main watershed, the faults run principally east-west, and their tilted block escarpments usually face south. The region of the watershed thus serves as a structural backbone where both the western and eastern fault systems meet. It is here, at Mount Tabor, Ḥazon, Ha-Ari, Meron, and Addir, that the faults frame the horst blocks on all sides.

In geological maps of Transjordan, many faults are indicated. Among the principal ones, there is the northeast-southwest Wadi Shuʾeib fault, which turns into a north-south fault in the Dead Sea, thus becoming the eastern boundary fault of the graben. Between Wadi Ḥasaʾ and Petra, sets of faults in various directions build an extensive series of blocks in which the influence of the graben tectonics is heavily felt. The most outstanding of these faults extend southward from Petra, forming the eastern boundary fault of the southern Arabah graben and the western boundary of the Midian horst.

Flora and Fauna

FLORA. The flora of Erez Israel is among the richest and most varied of any country in the world. On both sides of the Jordan River there are close to 2,300 species belonging to about 700 genera, which in turn belong to 115 families of flora. To these should be added scores of species found in Golan. No other place in the world has such floral wealth concentrated within such a comparatively small area. This density of species is due to several factors. Among them are the varied history of the region's landscape, the diversity of its topography and climate, the lengthy period of its agriculture, and especially the fact that it is the meeting place of three phytogeographic areas: the Mediterranean, the Irano-Turanic, and the Saharo-Sindic, with enclaves here and there of the Sudano-Deccanic.

The Flora of the Mediterranean Area. Of the three phytogeographic areas, the most important is the Mediterranean, which includes agricultural land in the mountains and valleys. In it the amount of water precipitation varies from 14–40 in. (350–1,000 mm.). This precipitation, the result of winter rains (with a small additional amount of melted snow from the high mountains), makes the nonirrigated cultivation of plantations and of winter and summer crops possible. The area is subdivided into mountain and coastal subareas.

The Mountain Subarea. This was once agriculturally the most developed area (having since been superseded in importance by farming lands in the valleys and the Coastal Plain). The intensive agricultural cultivation of mountain lands has curtailed or prevented the development of forests in this, their natural habitat, so that only remnants of forests and groves are left. In this subarea several types of forests are to be found containing the common *oak, the Palestine *terebinth, the mastic terebinth, the *carob, the arbutus, and the rhamnus, as well as many shrubs and wild grasses. The *Aleppo pine (*Pinus halepensis*), thought to be native to the country, is mainly a newcomer, brought by human activities in the last 500 years. Most of the woods in Israel consist of the group of the common oak (*Quercus calliprinos*), and the Palestine terebinth (*Pistacia palaestina*), which can reach a considerable height but are usually shrubby as a result of having been cut or gnawed by sheep and particularly goats. This bush grows extensively on mountains of an altitude between 1,000–4,000 ft. (300–1,200 m.) above sea level. There is also the gall oak (*Quercus infectoria* (*boissieri*)), a deciduous tree with a tall trunk, alongside which grows the hawthorn (*Crataegus azarolus*). Under favorable humid conditions there also grow in this subarea the sweet *bay (*Laurus nobilis*) and the Judas tree (*Cercis siliquastrum*), which in spring adorns the mountains with its lilac flowers. On the western ridges of the Carmel and Western Galilee and on the western slopes of the Judean mountains, there is maquis, where grow the group of the carob (*ceratonia siliqua*) and the mastic terebinth (*Pistacia tentiscus*), along with many species of shrubs, climbers, annuals, and perennials. A third genus of oak – the Tabor oak (*Quercus ithaburensis*) – predominates on the western ranges of the Lower Galilean mountains, accompanied by the *storax tree (*Styrax officinalis*). In the northern Ḥuleh Valley it grows alongside the Atlantic terebinth (*Pistacia atlantica*). These two species of trees are the largest in Israel, some in the neighborhood of Dan having trunks 20 ft. (6 m.) in circumference and reaching a height of c. 65 ft. (20 m.).

All these are types of forest trees. Another genus of Mediterranean plant comprises flora groups called garrigue, which in Israel consist predominantly of shrubs and dwarf shrubs no taller than a man. The characteristic plants of the garrigue are the calycotome thorn bush (*Calycotome villosa*), the rock rose (*Cistus villosus*), and the salvia (*Salvia tribola*). At times the garrigue flora groups are the developing stage of a forest, at others an indication of the former presence there of a forest since destroyed. Characteristic of the unforested Mediterranean landscape are dwarf shrubs, of which the most widespread is the poterium thorn (*Poterium spinosum*). Reaching a height of less than half a meter, it grows densely and is one of the principal factors in preventing the erosion of mountain soil. Where being used either for firewood or for burning lime has destroyed these plants, the eroding effects of wind and rain have denuded the ground.

The Coastal Subarea. The soil here is sandy or a mixture of sandy chalk and sandy clay, which, being poor in organic substances and in its capacity to retain rainwater, is unsuitable for the growth of plants (unless irrigated). In this subarea grows flora that strikes deep roots, and desert and Aravah plants that can exist on small amounts of water, as well as annuals which sprout and ripen during the rainy winter months. Here can be found flora of Israel's three phytogeographic areas, as well as that of the Sudanoz-Deccanic, such as the *sycamore (*Ficus sycomorus*) and the wild *jujube (*Zizyphus spina-Christi*). Sand flora is in constant danger of being covered by moving sands and of having the sand under its roots blown away by the wind. Yet many sand plants are able to survive under such conditions, either by striking deep roots or by developing new shoots above the branches covered by sand. Near the sea, where the winds carry sea spray onto the flora, plants grow which are insensitive to sea water, such as the Russian thistle (*Salsola kali*) and species of fig marigold (*Mesembryanthemum*). Most of the sandy-clay soil is planted with citrus groves. The flora group of the love grass (*Eragrostis bipinnata*) and of the thistle (*Centaurea procurrens*) grow extensively here, as do the group of the cistus and of the calycotome on the brittle sandy-chalk hills in the Coastal Plain area, and the group of the carob and of the mastic in the hard sandy-chalk soil.

The Flora of the Irano-Turanic Area. This is concentrated in the loess or arid soil of the northern Negev and the Judean Desert. Here the climate is dry, with a rainfall varying from 8–14 in. (200–300 mm.), these being the limits for nonirrigated plants which thrive in rainy years (cf. Gen. 26:12). In this area there are almost no forests, but only sparse trees, such as the plant association of the Atlantic terebinth and the lotus

jujube (*Zizyphus lotus*). Characteristic of the slopes bordering on the Jordan and Beth-Shean Valleys is the *Retama duriaei* association. Here the most important plant association is of a species of *wormwood (*Artemisia herba-alba*) which grows extensively in the Negev and in the Judean Desert.

The Flora of the Saharo-Sindic Area. This area, which extends over most of Israel but has the poorest flora, includes the southern Negev and the Aravah. Its rainfall, which is limited to a shorter period in winter, does not exceed c. 8 in. (200 mm.) and is usually much less, and there are even parts which in some years are almost completely rainless. The soil here is infertile and includes hammada, desert, gravel, and rocks. Trees grow only in wadi fissures. There are saline tracts bare of all flora, which is in any event very sparse here. The most typical plant in the hammada is the small shrub *Zygophyllum dumosum*, which is capable of surviving in areas with a rainfall of less than 2 in. (50 mm.). Since desert plants have to contend with a severe shortage of water, only those with special properties are able to survive here. Most of them spring up and flower quickly after a shower of rain; some of them, only a few weeks after germinating, scatter their seeds, which are capable of preserving their power of germination for many years. Other species here are bulbous plants that hibernate in dry periods. Generally, desert flora has long roots so as to utilize the sparse amount of water over a wide area, and hence the infrequency of these plants. Many species of desert flora have a great ability to absorb groundwater; one species, the *Reaumaria palaestina*, developing an osmotic capacity of more than 200 atmospheres. Other desert plants shed their leaves in a dry season, thereby curtailing the area of evaporation. Still other species are succulents, which are equipped with cells that in the rainy season store water for the dry period.

In sandy desert regions the flora is usually more abundant, the predominant species here being the haloxylon and the broom (*Retama roetam*). In the Aravah and in the lower Jordan Valley, where there is widespread salinity, saline flora, including species of atriplex and salicornia, grows densely.

In desert regions near sources of water there are oases, where tropical Sudano-Deccanic flora grows, the characteristic plants here being species of acacia, wild jujube, etc. These also grow in wadi fissures in desert regions. In places where the ground becomes sodden from winter floods, crops can be grown and plantations established.

Hydrophylic flora grows near expanses of water in all the areas of Israel. Large numbers of the poplar (*Populus euphratica*), as well as species of the *willow (*Salix*) and of the *tamarisk (*Tamarix*), grow on river banks, as do the *plane (*Platanus orientalis*) and the Syrian ash (*Fraxinus syriaca*) on the banks of streams in the north. Alongside these trees there usually grows the *oleander (*Nerium oleander*), together with numerous species of annuals and perennials. The reed and the cattail are found near almost every expanse of water. The papyrus once flourished extensively in the Ḥuleh swamps, but

since they were drained it grows in extremely limited areas. Due to the draining of swamps in Israel and the piping of river water, hydrophytic flora has progressively decreased. On the other hand, some species of riparian plants flourish near fishponds, the area of which has greatly increased.

Cultivated Plants. Ereẓ Israel has a long and varied history of *agriculture. In addition to the older plants cultivated in the country for centuries, many have been introduced from various parts of the world, especially from Australia (mainly many species of the eucalyptus and the acacia) and from America, among these being numerous ornamental plants. Together with these plants, their companion wild grasses have also come into Israel and have flourished alongside the older wild grasses, in particular the prickly species which are a characteristic feature of Israel's landscape, especially in the burning hot days of summer.

FAUNA. *History.* The history of the fauna of Ereẓ Israel is a long one, going back to the earliest geological periods. Of these the Pleistocene epoch was the most dynamic and decisive in this respect by reason of the considerable changes which took place in its zoological character, mainly as a result of the influx of animals from various regions. In this period, fauna at present characteristic of East African savannas predominated in the country. To this period belong the bones, uncovered in the country, of animals no longer extant in Israel, such as warthog, hippopotamus, rhinoceros, and striped hyena, as well as various species of gazelle. The bones of elephants and of mastodons, brought to light in the Jordan Valley, belong to the Lower Pleistocene Age. In later periods animals penetrated to the country from Western and Central Asia, among them the wild horse, the wild ass, gazelles, wolves, and badgers. From the north there was a limited influx of animals as a result of the Ice Age in Europe.

During the Upper Pleistocene Age a tropical climate, warm and humid, predominated in Ereẓ Israel. This was followed by a dry period, which led to the destruction of the tropical fauna. And indeed an examination of the bones of animals found in the caves of prehistoric man in the Carmel shows that the principal game hunted by him consisted of mammals still extant in Israel. This is true also of the bones of birds brought to light in Early Stone Age caves, although several mammals and birds are of species extinct in the country in historical times. As early as the end of the Stone Age (4,000 B.C.E.) there was to be found in the country the fauna characteristic of it since biblical days.

With the enlargement of the settled area in the biblical and later in the Byzantine period, changes took place in the distribution of animals, now forced into the uninhabited areas (see *Animals of the Bible). The invention of rifles led to the extinction of the large carnivores as well as of the large ruminant game.

The present-day Jewish agricultural settlements have altered the distribution of the various animals. Some of them

have disappeared, while others, finding favorable conditions in developed farming areas, have begun to multiply. Thus the increase in waterfowl is due directly to the increase of fishponds, in which aquatic mammals (such as the marsh lynx) have also begun to establish themselves. New species of birds have started to nest in plantations and citrus groves. The State of Israel's fauna preservation laws have saved several mammals from threatened extinction and some have begun to multiply greatly, such as the *gazelle, at present to be found in various parts of the country. The *ibex, too, has increased in number and herds of it may be seen in the mountains of En-Gedi and Eilat. On the other hand, toxic substances used to exterminate agricultural pests and jackals have led to the extinction of birds, particularly carrion-feeding ones. In this way the griffon *vultures, found in large numbers in the country up to the 1930s, have become almost extinct, only a few surviving at present.

The Zoogeography of Erez Israel. The fauna in the country is extremely varied, the reason for this being, as in the case of the flora, that Israel is the meeting place of three climatic and floral regions. The regional distribution of the fauna corresponds almost exactly to that of the flora. To the Mediterranean fauna belong the *hare, chukar *partridge, swallow, agama, and others; to the Saharo-Sindic, the desert mouse, desert lark, sandgrouse, *gecko, cobra, and many other species; to the Irano-Turanic, animals that inhabit the northern Negev and the Judean Desert, such as the tiger weasel (*Vormela*), bustard, isolepis, and agama.

The Sudano-Deccanic animals inhabit the Jordan Valley as far as the Aravah. Here are to be found representatives also of tropical fauna, such as the cheetah, honey badger, tropical cuckoo, and carpet viper. In contrast to these animals that love the warmth, there are also representatives of the Holarctic fauna, such as the shrew and meadow pipit.

The catalogue of the names of animals thus far studied testifies to a wealth of fauna. At present approximately 100 species of mammals are known, nearly 400 of birds, more than 70 of reptiles, more then 400 of sweet and salt water fish, and seven of Amphibia. Much larger is the number of invertebrates. These are extensively represented among the insects, of which some 8,000 species are known in the country, their aggregate number being 22,000 according to Bodenheimer, who maintains that there are about 900 species of other *Arthropoda*. Of the invertebrates, other than the *Arthropoda*, some 300 species are known, their total number being estimated at about 2,750.

HISTORY

For Prehistory see *Archaeology; for Biblical and Second Temple periods, see *History.

Destruction of the Second Temple until the Arab Conquest (70–640 C.E.)

THE EFFECTS OF THE WAR OF 66–70 C.E. The Jewish war against the Romans, which lasted more than four years and encompassed the entire country, the continuing siege of the fortresses of *Machaerus, *Herodium, and *Masada, the last falling only in 73, the capture of *Jerusalem and the destruction of the *Temple – all these gravely affected the Jewish people and the cities and villages of Erez Israel. Josephus (Wars, 6:420) states that during the siege of Jerusalem alone more than a million Jews fell, while his contemporary Tacitus places the number at 600,000 (*Historiae*, 5:13). To these figures are to be added those killed at various stages of the war in Judea, Galilee, and Transjordan. Many fell in the battles fought and the massacres perpetrated by the inhabitants of the Greek cities against the local Jews, such as in *Caesarea, *Beth-Shean, *Acre, and *Ashkelon. In addition to the slain, many were taken captive before the siege of Jerusalem; tens of thousands were sold into slavery, sent to toil in ships and mines, or presented to the non-Jewish cities adjacent to Erez Israel to fight against wild animals in the theaters. While the figures given by the early historians are undoubtedly exaggerated, it is certain that tens upon tens of thousands of Jews were killed or taken prisoner. Cities and villages were burnt and destroyed either in the course of the war or as an act of revenge and intimidation. Agriculture in particular suffered. Fruit trees on the mountains and in the valleys were cut down by the army for use in the siege or by military detachments in order to cow the population. That they might not be utilized by the enemy, many fruit trees were uprooted by the Jewish fighters, as were also the groves of balsam trees in the vicinity of Jericho which, of a quality unequaled in the world, were deliberately destroyed by the Jews, according to Pliny. Several cities and villages, which were demolished and of which Josephus tells that they were razed to the ground and burnt, were not actually destroyed but were damaged in one form or another. Some, like Jaffa, were already rebuilt during the war, others were completely destroyed or never restored.

With the destruction of the Temple, Jerusalem, although continuing to be inhabited by impoverished Jews, completely lost not only its spiritual significance but also its importance as a populated and economic center. Contemporary sages give distressing accounts of the plight of the surviving members of wealthy Jerusalem families (Mekh., Ba-Ḥodesh, 1; TJ, Ket. 5:13, 30b; TB *ibid.*, 67a). A considerable proportion of the inhabitants of Jerusalem and its immediate vicinity had derived their livelihood from the service and the supplies as also from other public duties associated with the Temple, as well as from the pilgrimages. With the destruction of the Temple and of Jerusalem they lost their sole means of support. The protracted

war greatly increased the hostility of the soldiers and the authorities toward the Jews, undermining their position and bringing religious persecutions in its wake. The sources attest to the destruction of synagogues and the building of theaters on their sites or with their plunder, "so as to wound the feelings of the Jews." More grievous were the tortures inflicted on the Jews to compel them to transgress the commandments of their religion (Jos., Wars, 2:150 ff.; Apion, 1:43). For a time after the destruction of the Temple the Jews had the legal status of *dediticii*, that is, of a people that had unconditionally surrendered itself, its property, territory, and towns to the Roman state; they were deprived of their communal and religious rights by imperial edict; and were the arbitrary victims both in theory and in practice of unrestrained acts of lawlessness, as were also the Jewish communities in the immediate neighborhood of Erez Israel. The authorities searched out the Jewish families descended from the house of David in order to destroy them and thus eradicate the last remnant of the nation's hope of the restoration of the Davidic kingdom. There was also *Vespasian's decree that, instead of the half shekel which each Jew contributed to the Temple in Jerusalem, a tax of two drachmas was to be imposed on every Jew in Erez Israel and the Diaspora, and given annually to the imperial treasury for Jupiter Capitolinus, the Roman god, whose temple was on the Capitol. More than being a serious financial burden, this tax, which was paid also by women and children, was humiliating and oppressive, in addition to indirectly enforcing idolatry on the Jews. Although levied until the days of Julian the Apostate in the middle of the fourth century, its connection with Jupiter was discontinued some years after the destruction of the Temple. The memory of the war against the Romans and of the subjugation of Judea, with all that these implied, was kept alive by the Flavian emperors who throughout that dynasty's reign struck coins commemorating the victory and emphasizing the fact that Judea had been conquered.

THE ORGANIZATIONAL AND SPIRITUAL CRISIS. No less grave were the consequences in the spiritual and organizational spheres. The destruction of the country, the capture of Jerusalem, the burning of the Temple, and in their wake the abolition of the leading institutions – the high priesthood and the Sanhedrin – brought stupefaction and confusion in spiritual and communal life. Associated with the Temple and its divine service were communal and judicial institutions that had their seat in the Temple. There was the Sanhedrin, which administered justice, proclaimed the new months, and intercalated the year. There was the high priesthood, which had lost none of its commanding spiritual splendor despite its diminished prestige during the generations preceding the destruction of the Second Temple, its curtailed power, and the widespread criticism leveled at it. The destruction of the Temple brought an end to the sacrifices that atoned for Israel's sins and to the pilgrimages, and many categories of *mitzvot* connected with the Temple and its service fell into disuse, and so to some extent did numerous other *mitzvot* associated with festivals, such

as the blowing of the *shofar* on the New Year and the waving of the *lulav* on Tabernacles, which were mainly observed in the Temple and only partially outside it. The Temple was also the political, juridical basis of the Jewish communal structure. Centering round it in the Persian and Hellenistic periods, Judea derived its constitutional power from the Temple, the nation's glory as far as the outside world was concerned and the focal point of the Jewish people both in Erez Israel and in the Diaspora. In the Second Temple period Jerusalem was not only the capital of the state but also the theater of every spiritual creativity and political occasion. Coalescing as it were with the Temple, the city was intertwined in the practical life of the people and in the complex of the basic values of the nation's thought. The destruction of the city and of the Temple left a vacuum in the spiritual and practical life of the Jews. The crises that followed the revival and the fervent hopes aroused during the war against the Romans were calculated to undermine the nation's faith both in its teachings and in its future. One senses in the tannaitic literature and in the apocryphal works, composed in the generation after the destruction of the Temple and Jerusalem, the somber sorrow and pain that afflicted many contemporary circles. Some abstained from flesh and wine, for the altar had been destroyed on which flesh had been offered and wine poured out in libations. Many lived in caves and in fasting and self-mortification awaited the messianic era, which would soon dawn. There was no speedy transition to the spiritual, religious reality necessary to rebuild the sole basis of a hope of redemption – the life of the nation, now deprived of its Temple and its political framework.

THE ADMINISTRATIVE CHANGES AND THE REGIME AFTER DESTRUCTION. With the destruction of Jerusalem and the Temple, Judea, except for those settlements (like Caesarea) which, within the confines of Jewish Erez Israel, enjoyed city status, passed under the direct control of the Roman administration. At Motza a colony was set up consisting of 800 Roman veterans, who received confiscated Jewish land. Jaffa and Flavia Neapolis, founded near Shechem, were granted city rights. No new cities were established within the limits of Jewish settlement, except *Tiberias and *Sepphoris which, having previously had city status, in the course of time regained their rights. The province of Judea, *provincia Judaea*, which was now founded, included all the coastal cities from Caesarea to Rafa, the whole of Idumea, Judea, Samaria, Perea in Transjordan, Galilee, and all the cities of the Decapolis, except Damascus and Canatha. After the death of *Agrippa II (92), the last ruler of the Herodian dynasty, a considerable part of his kingdom, comprising territories in Perea, Tiberias, Magdala, and Gaulanitis, was added to Judea. In contrast to the period preceding the destruction, the province was now subject to the authority of a Roman senator who had formerly served as a *praetor* and whose title was *legatus Augusti pro praetore provincia Judaea*.

Contrary to the prevailing Roman imperial practice of stationing legions only in the provinces bordering on the em-

pire, *Vespasian stationed in Judea, an "internal" country, a permanent garrison, the tenth legion, *legio decima Fretensis*, that had taken part in the war against the Jews. During the entire period of the Roman imperial rule of Ereẓ Israel this legion was permanently stationed in the country, and inscriptions and seals of it have been uncovered at its various encampments. Its main camp, located on the city's ruins, was in Jerusalem; its commander was the governor, who resided in Caesarea. To facilitate contact between the military headquarters in the center of the country and the administrative seat of government at Caesarea, a branch of the coastal road was built from Antipatris to Jerusalem. Encamped near the legion were other military units, auxiliary troops, etc., that had been brought from distant lands. The auxiliary forces which had been stationed in Ereẓ Israel before the destruction and which, consisting of soldiers from Caesarea and from Sebaste, were distinguished for their hatred of the Jews whom they had provoked to acts of war, were transferred by Vespasian to other provinces. Assisting the governor was a procurator who was in charge of financial affairs. It is doubtful whether the province of Judea became independent after the destruction and was not annexed to Syria, as it had been before the war, since civil, legal, and military issues of decisive importance still required the decision of the Syrian governor who resided in Antioch. Josephus tells that Vespasian ordered that all Jewish territory was to be hired out, for he founded no city in it (Wars, 7:216). Since in point of fact many Jewish farmers remained on their land as owners, Josephus' statement refers to that land which was confiscated and which indeed constituted a considerable proportion of Jewish territory. Contemporary literature echoes a poignant cry against the Roman tax-collectors (*conductores*) who held land throughout Ereẓ Israel. Some was actually transferred to non-Jews, such as to the 800 veterans, and its former owners were dispossessed. Other land was given to favorites and loyal friends of the Jewish and non-Jewish authorities or to large tenants, the *conductores*. The former owners were not ejected from most of the confiscated land but cultivated their own as tenant farmers, for which they had to pay a high rental in kind, expecting nevertheless to be evicted at any time on the pretext of not paying the rent or some other excuse.

Taxes. On unconfiscated land a tax was levied which was increased after the destruction and from which only a few imperial court favorites, such as Josephus in the days of Domitian, were exempted. But whereas some in the territories of the Roman Empire were liable to a land but not to a poll tax, the Jews in Ereẓ Israel had to pay both. A Roman writer of a generation or two after the destruction states that, because of their rebelliousness, the tax imposed on the Jews of Ereẓ Israel was more severe than that demanded of the inhabitants of the neighboring countries. After the destruction the tax for the provision and maintenance of the army and of the enlarged Roman officialdom in the country, levied in kind (*annona*) from dough, animals, and all locally produced or imported ag-

ricultural and industrial products, was increased. There were bitter complaints against the excessive demands and the harshness employed in collecting them, as also against the various forms of forced labor, whereby the authorities and especially the army compelled the population, both urban and rural, to perform work, such as haulage, or repairing and making roads, with their own persons and with the help of their temporary or permanently requisitioned draught animals. A short time after the destruction small watchtower stations were erected along the borders and along the main roads in many places in Ereẓ Israel. In the years following the destruction, under the Flavian dynasty (until 96), a system of defense, known by its latter name of *limes Palaestinae* was established in southern Ereẓ Israel. Extending from Menois, north of Rafa, to the Dead Sea, the *limes* consisted of a series of fortresses connected by a road, along which, on allotments of land, military colonists enjoying a special status were settled. In the rear of the *limes* were two military bases: *Carmel and *Hebron. While its establishment brought security to the country's southern settlements, it further increased the already large non-Jewish population in the country.

THE INCEPTION OF A CENTRAL LEADERSHIP. The renewal in post-destruction Ereẓ Israel of Jewish communal life – which also reconstructed Judaism in the Diaspora – without the framework of a state and without a Temple which was the foundation of Jewish religious and spiritual existence, is associated with the name of Rabban *Johanan b. Zakkai and with his activities in the semi-Greek city of *Jabneh. One of the greatest Pharisaic sages in Jerusalem before the destruction, he vehemently opposed the Sadducees and the Sadducean high priesthood. He was deputy to the president of the Sanhedrin, Rabban *Simeon b. Gamaliel, who was the leader of the government set up after Cestius Gallus had been forced to retreat and with whom he signed the letters sent throughout Ereẓ Israel and the Diaspora in connection with tithes and the intercalation of the year (Mid. Tan. 26:13). To him is ascribed the abolition of the ceremony of the bitter water in the examination of a wife suspected of infidelity (Sot. 9:9). Although a priest, he is depicted as a scholar and teacher who in his statements and teachings protested and strove against the priests' haughtiness and aloofness. It is possible that he gave no support to the revolt against Rome. At any rate, warning the rebels against fanaticism and impetuous acts, he called on them to display moderation in their relations with gentiles and toward their sacred objects: "Be not precipitate in tearing down the altars of gentiles that you do not have to rebuild them with your own hands, that you do not tear down those made of brick and be ordered: Make them of stone...." (ARN² 31, 66). He was in besieged Jerusalem, but left the city during the siege, apparently in the spring of 68 when Vespasian was closing in on the city. His departure then left a deep impression on talmudic tradition, and there are different versions of his appearance before Vespasian when he prophesied that the latter would become the emperor (which Josephus ascribes to himself,

and various sources to different persons in the east). According to later traditions in the Babylonian Talmud, he obtained from the emperor "Jabneh with its sages" and "the dynasty of Rabban Gamaliel" (Git. 56b). But this tradition, which contains much taken from somewhat later circumstances, reflects the time when "Jabneh with its sages" was already established under the leadership of Rabban *Gamaliel, the son of Rabban Simeon b. Gamaliel, and the foundations had been laid for the succeeding dynasty of *nesi'im* who presided over the Sanhedrin and led the nation for more than 300 years. The earlier traditions embodied in the Erez Israel literature (Lam. R. 1:5, no. 31; ARN¹ 40, 22–23; ARN² 60, 19–20) indicate that Johanan b. Zakkai was first held in custody at Gophna and later transferred, apparently under duress, to Jabneh, which was used together with other cities such as Ashdod, on account of their large non-Jewish population, as a place for concentrating and imprisoning the Jews, and especially the prominent ones, who had surrendered to the Romans. According to one source, he only requested of the emperor, who granted his request, that certain persons be saved; according to others he succeeded in obtaining Jabneh "to teach his pupils" or "to observe the *mitzvot* and study the Torah" there.

The general circumstances prevailing during the war against the Romans, as also the usual procedures adopted by Vespasian and his son *Titus, support these earlier versions of the origin of Jabneh. When requesting "Jabneh with its sages," Johanan b. Zakkai did not presumably ask of and receive from Rome permission to establish a national or even merely a spiritual center. Although the official permission he received was extremely restricted, he in effect began, with or without the authorities' knowledge, to rehabilitate Jewish life theoretically and to fill in practice the vacuum created by the destruction. He reestablished the *Sanhedrin, and in Jabneh commenced to proclaim the new months and intercalate the years, on which the entire calendar of Jewish festivals depended. The proclamation of the new month, based on the testimony of witnesses, and the intercalation of the year, dependent on the decision of the *bet din,* which were previously done in the Temple in Jerusalem, were now transferred to Jabneh, and the information was transmitted to all the cities of Erez Israel and the Diaspora. By this action alone Jabneh became the leading center and place of assembly for all Israel. To it was transferred some of the authority and activities that pertained to the Temple courtyards in Jerusalem. Several of Johanan b. Zakkai's regulations deal with the proclamation of the new month at Jabneh. He decreed that the *shofar* was to be blown at Jabneh also on a New Year that fell on a Sabbath, which had previously only been done in the Temple and in Jerusalem. Another regulation lays down "that even if the head of the *bet din* is in some other place, the witnesses (who testify when the new moon appeared) should still go only to the place of the assembly" (RH 4:4). His other regulations were likewise intended to fill the void created by the destruction and to rebuild Jewish life while retaining a remembrance of the Temple, so as to rehabilitate the former without the lat-

ter. He instituted that the *lulav* be waved all the seven days of Tabernacles, contrary to the situation that obtained during the existence of the Temple when it was waved seven days in the Temple and only one day in other parts of the country (*ibid.* 4:3). He ordained that the priests bless the people during prayers in the synagogue without their shoes on, as had been done at the end of the service in the Temple. According to the *halakhah,* a proselyte, on his conversion, had to bring a sacrifice to the Temple, but with its destruction he set aside a quarter shekel for a sacrifice to be offered when the Temple would be rebuilt, a regulation abolished by Johanan b. Zakkai (*ibid.* 31b). To the people, shaken by the destruction of the Temple, "where the sins of Israel were expiated," he taught: "My son, be not grieved. We have another means of expiation like it. What is it? It is deeds of loving-kindness" (ARN¹ 4, 21). He laid the foundations for the structure of organized life by instituting or renewing the ordination of sages and the title of "rabbi" for ordained sages, a fact of great significance not only for the religious life, law, and leadership in Erez Israel, but also for the country's hegemony over the Diaspora, since the right of granting ordination was restricted to the leading institutions in Erez Israel. The title of rabbi also indicated that its bearer was a member of the Sanhedrin and acted in its name. Furthermore, Johanan b. Zakkai began to work for the consolidation and unity of the nation amid the various trends and movements which appeared in all their destructive virulence during the last days of the Temple's existence. Nevertheless Johanan b. Zakkai's activities are limited in comparison with those that marked the days of Rabban Gamaliel. This is not to be ascribed only to the difficult external conditions then prevailing and the Roman Empire's nonrecognition of the leadership at Jabneh. It is also due to the fact that many sages dissociated themselves from Johanan b. Zakkai and his actions at Jabneh. Conspicuous by their absence were not only the priestly sages who ministered in the Temple and ranked among the influential members of Pharisaic circles, but also many others, some of whom went to Jabneh after the days of Johanan b. Zakkai. Of his five pupils, only two, *Eliezer b. Hyrcanus and *Joshua b. Hananiah, accompanied him to Jabneh. Apparently a considerable number of the sages were unable to reconcile themselves with him, with his leaving besieged Jerusalem, his surrender to the Romans, and his throwing himself on the emperor's mercy. These circles, however, cooperated with Rabban Gamaliel, his successor and a member of the dynasty of the *nasi.*

IN THE DAYS OF THE NASI RABBAN GAMALIEL. A change in the status of Judaism in Erez Israel took place when the Flavian dynasty came to an end with the murder of Domitian (96). The policy of encouraging informers in Rome against those suspected of Judaism was abolished, as was that of persecuting proselytes. To this period is to be assigned the accession of Rabban Gamaliel to the position of *nasi* after having previously been compelled to go into hiding from the Romans. In contrast to Johanan b. Zakkai who according to the evidence

had no contact with the authorities during his tenure of the office of *nasi*, Rabban Gamaliel traveled to Antioch where he obtained authorization from "the governor in Syria" (Eduy. 7:7). Roman imperial emissaries were sent to ascertain the nature of Hebrew civil law, then reintroduced and extensively in vogue. There were the journeys to Rome undertaken by Rabban Gamaliel together with the leading members of the Sanhedrin, Eliezer b. Hyrcanus, *Eleazar b. Azariah, Joshua, and *Akiva, their meeting with the authorities, and their visit to the Jews in the city. Under Rabban Gamaliel the center in Jabneh assumed most of the functions fulfilled by the Sanhedrin in Second Temple times. To it questions were addressed from all the cities of Ereẓ Israel and the Diaspora. During this period missions were reintroduced on behalf of the *nasi* and the Sanhedrin to the communities of Ereẓ Israel and the Diaspora, some of the most eminent sages, such as Eliezer b. Hyrcanus, Joshua b. Hananiah, Akiva, and *Ishmael, acting as emissaries and being sometimes accompanied by the *nasi* himself. These missions also had great economic importance, since the emissaries brought back with them the money collected in the Diaspora for the maintenance of the central authority in Ereẓ Israel. The ties that the emissaries formed with the cities of Ereẓ Israel and with the Diaspora had not only an organizational significance but also established a personal link between these places and the great teachers of the Torah acting in the name of the *nasi*. Wherever they went, they gave practical decisions on the questions submitted to them, brought with them the innovations decided upon in the *battei midrashot* in Ereẓ Israel, supervised the communal arrangements and institutions, and established those essential for the life of a Jewish community, such as charitable, educational and other similar ones. The emissaries decisively influenced the appointment of leaders in the cities and villages of Ereẓ Israel and the communities of the Diaspora, and even had the power to depose them if their leadership was found to be defective. During this period the character of the Sanhedrin assumed definite form as a *bet midrash*, a legislature and a dominant executive body.

Many discussions and actions that marked those years until the Bar Kokhba revolt (132) had not only then a decisive effect on the life of the Jews in Ereẓ Israel and in the Diaspora but shaped and directed the existence of the nation throughout all subsequent generations. Amid much argument and conflict the *halakhah* was decided according to Bet Hillel, a fact of great influence on the entire history of the *halakhah*. A final decision was taken on numerous problems concerned with proselytization, priestly dues, tithes, and other subjects. In this period the concept crystallized that study is greater than action, since "study leads to action" (Kid. 40b). At one assembly which took place at Lydda in keeping with the custom of meeting on occasion elsewhere than at the permanent center at Jabneh, it was decided that a Jew, if forced to transgress the *mitzvot* of the Torah, may do so to save his life except in the three instances of idolatry, murder, and incest. But at a time of open religious persecution intended to compel Jews to sin against their religion, a Jew should suffer death and not transgress even a minor custom (TJ, Sanh. 3:6, 21a). At Jabneh the form of the festivals was laid down under the circumstances prevailing after the destruction, when there were now no pilgrimages, sacrifices, or Temple. The order was also fixed of the four fasts instituted after the destruction of the First Temple but either observed partially or totally disregarded in the Second Temple period. Under the direction of the sages of Jabneh, *Aquila the proselyte of Pontus translated the Bible anew into Greek. The earlier Septuagint did not mirror the later halakhic and aggadic interpretation of the Pentateuch and the Prophets, thereby creating a barrier between the Jews who used it and the halakhic and aggadic expositions they heard from the sages. That the Septuagint had been adopted and canonized by the Church and several of its passages were used as a basis for the Church Fathers' interpretations may have influenced the sages to produce a new translation. The Jews did not entirely discard the Septuagint but Aquila's version was adopted in synagogues and in Jewish life. On Rabban Gamaliel's explicit instructions the order was fixed of the prayer of Eighteen Benedictions, known already in Second Temple times (see *Amidah). While it is not certain what precisely was done in the days of Gamaliel, at all events from this period the prayer was permanently instituted for private and public worship two or three times daily.

In the days of Jabneh, too, the breach and separation between Judaism and *Christianity took place. Pharisaic Judaism had in the Second Temple period shown tolerance alike to Gentile and Judeo-Christians. But after the destruction came the separation. The Judeo-Christians dissociated themselves from the war against the Romans and from the tragedy that had come upon the nation. Nor did some share the hope of deliverance, which had, in their view, been fulfilled with the advent of their Messiah. Many of them saw in the destruction of the Temple and of Jerusalem a proof of the truth of Christianity, in that Israel had been punished for killing their Messiah, and Jesus' prophecy regarding the destruction of the Temple had been fulfilled. Some even held that with its destruction and the discontinuance of many commandments, all the *mitzvot* had been annulled and Judaism's hour had passed. Thus they used the destruction of the Temple for propagating Christianity. To this the sages of Jabneh answered with actions calculated to bring about a breach and a separation between the Jews and Judeo-Christianity and especially those trends in Judeo-Christianity that approximated to Gentile Christianity. A notable factor that had a decisive influence in the Jewish community's rejection of Judeo-Christianity was the introduction in the Eighteen Benedictions of an additional blessing directed against its adherents: "To apostates let there be no hope if they return not to Thy Torah, and may the Nazarenes and the sectarians perish as in a moment" (such or something similar was the ancient Ereẓ Israel version). This prayer in effect excluded Judeo-Christianity from the Jewish people.

THE EDUCATIONAL ACTIVITIES OF THE SAGES OF JABNEH INSIDE THE CONFINES OF THE HOUSE OF ASSEMBLY.

The sages of Jabneh succeeded not only in reconstructing the life of the nation but also in achieving the efflorescence of its spiritual and social existence. This was largely due to the activities of the leaders of the *bet midrash* and the Sanhedrin as also to the great personalities with whom that period was favored. Most of them were ordained rabbis and functioned officially as members of the Sanhedrin. But there were also those – and some of them represented the most outstandingly creative and constructive forces – who, unordained, continued as "disciples" and worked as itinerant teachers of the Torah in Erez Israel unhampered by any official obligations. Almost none of the personalities who established and consolidated the institutions of the communal national leadership at Jabneh emanated from the circles that, during Second Temple times, had constituted the social elite, whether of the priestly or the social-economic aristocracy. Some of the sages were indeed priests and even well-to-do or rich, but many, and they included some of the most eminent figures, were poor and of undistinguished birth, their standing being determined only by their learning and their rich personalities. In addition to the *bet midrash* at Jabneh, others flourished in the towns and villages, being found in all parts of the country from the south to the north, at Kefar Aziz in the south, where Ishmael was active; at *Bene Berak, where Akiva lived; at Lydda, the seat of Eliezer b. Hyrcanus and of *Tarfon; at Peki'in, which was under the leadership of Joshua b. Hananiah; and in Galilean cities, such as at Sepphoris, where *Ḥalafta was active, at *Sikhnin, the seat of *Ḥananiah b. Teradyon, and at Tiberias, where *Yose b. Kisma taught. The heads of the local *battei midrashot* came regularly to Jabneh which some made their main place of residence, paying only short visits to their own *battei midrashot*.

RESETTLEMENT AND ECONOMIC RECOVERY. Despite the considerable suffering endured as a consequence of the war, Jewish Erez Israel made a rapid recovery. Many captives, freed with the help of the local Jewish population or by other means, returned to their homes. As a result of the teachings of the contemporary sages, the significance of Erez Israel, its settlement, and the redemption of its land now assumed the character of a basic principle in Jewish thought and action. Large tracts of land were redeemed from the non-Jews, plantations were restored, and new ones planted. Agricultural knowledge increased, and industry in Erez Israel, consisting of processed agricultural products, quickly recovered. Craftsmen's associations plied their trades; farmers reaped bounteous harvests; agricultural and industrial products were exported. Already toward the end of the first century C.E. the economic position had improved considerably. In general, Jewish cities destroyed during the war were rebuilt and rehabilitated. All the Greek cities, whose Jewish settlement had been destroyed during the war, were repopulated by Jews. By the end of the first century C.E. there were flourishing Jewish communities in places like Caesarea, Ashkelon, Acre, Beth-Shean, and elsewhere. Great assistance in the speedy rehabilitation of the Jewish nation in

Erez Israel was rendered by those cities which had not revolted against Rome or had at an early stage in the war stopped fighting, while the basis for the restoration of a normal economic life was provided by those cities and circles which had not participated in the war. By reason both of postwar military requirements and of the economic and commercial prosperity of the Roman Empire under the Antonines (96–180), the network of roads in Erez Israel was extended and many bridges were built. In 106 the *Nabatean kingdom was annexed to the Roman Empire, and in 111 a start was made with constructing a road linking Damascus and Akaba. A large part of the foreign trade with the Arabian Peninsula and with India passed along this route, to the benefit of the cities, including the Jewish settlements, adjoining this road and of the Jews in the Greek cities in Transjordan. The Jewish population increased, too, in Akaba, that is, Ezion-Geber.

THE WAR OF QUIETUS. In 115–117 the Jews in the Diaspora rose in a widespread revolt which, embracing Libya, Cyrenaica, Egypt, Cyprus, and Mesopotamia, was marked both by battles between the Jews and the Greeks and uprisings against Roman rule in the east. The focal point of the revolt was in the Diaspora and the early historical sources speak explicitly only of the revolt and the destruction of Diaspora Jewry and especially of North African countries. But epigraphic evidence about military missions sent at that time to Erez Israel and fragmentary literary information indicate that there were uprisings on a considerable scale in Erez Israel too. In Jewish tradition these uprisings are known as "the war of Quietus" (Sot. 9:14), after the Moorish commander Lusius Quietus, who, having ruthlessly suppressed the revolt of the Jews in Mesopotamia, was sent to stamp out the revolt in Judea and was then appointed its governor until recalled to Rome, where he was executed at the beginning of Hadrian's rule (118).

Talmudic traditions tell of meetings on the Temple Mount in Jerusalem, of the revolt spreading to *Galilee, the destruction of various cities in Erez Israel, and the execution of its leaders, *Pappus and Lulianus, whose activities extended also to the Diaspora (Sifra 8:9). With the suppression of the revolt religious persecutions were reinstituted. In an act of deliberate provocation, an idol was set up on the Temple Mount (Ta'an. 4:6).

THE BAR KOKHBA REVOLT. The accession of *Hadrian (117) brought with it a trend to restore peace in the east and to rehabilitate and reconstruct the region on an extensive scale. Apparent in Hadrian's actions was a regard for the national character, predilections, and needs of the provinces. Erez Israel and the Jews, too, benefited from this trend. In his efforts to restore devastated areas, the emperor promised the Jews that he would rebuild and return Jerusalem to them, and permit the rebuilding of the Temple. Jews began to flock to Jerusalem, and organizational and financial preparations were made for rebuilding the Temple (Or. Sibyll. 5:252–4; Epistle of Barnabas, 16: 1–5; Epiphanius, *Liber de Mensuris et Ponderibus*, 170; Gen. R. 64:10). A few years after his accession Hadrian, changing

his mind, abandoned the plan of rebuilding Jerusalem as a Jewish city and instead decided to continue its construction as a pagan Roman city. Even the coins struck in Erez Israel in those days show a tendency to ignore the prevailing facts of Jewish existence. It is difficult to determine Hadrian's motives for this change of mind. He may have been prompted to adopt this new course by the profound echo which his promise produced among the Jews and by the political fears he entertained at restoring Jerusalem to the Jewish people. His attitude to Judaism may also have changed, for during his reign and already at the beginning of the twenties he displayed indubitable pan-Hellenistic tendencies, his policy being aimed at introducing in the empire and particularly in its eastern regions the later universal Hellenistic outlook and mode of life. This found expression alike in the erection of buildings and monuments, the passing of laws against Oriental usages, and, inclusion in the ban against castration which was punishable with death, the prohibition of circumcision.

This last was not specifically directed against Judaism, since its practice was also forbidden to others in the east who circumcised their sons. But for no other people did circumcision occupy so significant a place in its thought. Nor did any other people so scrupulously insist on circumcising every single boy. Hadrian, who before becoming emperor had been the governor of Syria and had come into contact with the Jews and their sages, was undoubtedly aware of what these arrangements of his meant for the Jews. But in his resolve to reshape and reconstitute life in Erez Israel, he deliberately ignored the Jewish nation and its past in the country. No wonder that one historian, *Dio Cassius, mentions this resolve of Hadrian as the cause of the revolt: "For it was terrible in the eyes of the Jews that non-Jews should dwell in their city and that gentile temples should be erected in it" (*Historia Romana*, 69:12–14), while another source gives the prohibition of circumcision as the reason for the revolt (*Historia Augusta*: Hadrian, 14). These actions, coming as they did after the spiritual elation engendered by the permission to rebuild Jerusalem and the Temple, led to a profound agitation among the Jews and to military preparations against Rome, to the surreptitious construction of various fortifications, and to the accumulation of arms. Dio Cassius tells that the Jews purposely damaged the weapons they made for the Romans, so that these should be rejected and remain in the possession of the Jews without their stockpiling arousing suspicion. While Hadrian was in Erez Israel and its neighborhood (128–132) the Jews did not openly rebel, but the grave terrorist acts then committed in the country found the permanent Roman forces there insufficient to cope with the situation. An additional legion, the *Sexta Ferrata*, was brought to Erez Israel, and remained in the country after the revolt, being stationed in Kefar Otnai at the entrance to the Valley of Jezreel. The authorities were also compelled to reinforce the tenth legion by recruiting soldiers from nearby countries. When Hadrian left the east, the revolt broke out and assumed large proportions, since "the Jews throughout the entire world were in an uproar too, and joined them, in-

flicting openly or by stealth great losses on the Romans. They were moreover helped by non-Jews" (Dio Cassius loc. cit.). The *Samaritans, or at least some of them, also joined.

In contrast to the rebellion against the Romans in 66–70, the revolt was distinguished by national unity and centralized leadership. There are references to local heroes and to various messiahs and pretenders to the royal title who flourished in the first stages of the revolt, but conspicuous during its course and until its end were the leadership and the central figure of *Simeon bar Kokhba. It is he who is mentioned in the historical sources, round whose personality are centered talmudic traditions and legends, and in whose name – Simeon, Nasi of Israel – coins were struck. Documents and letters, dating from the time of the war and found in the caves of the Judean Desert, were taken there by fugitives from En-Gedi and its vicinity. In them it is "Simeon bar Kosiba, Nasi of Israel," who issues instructions and commands; in his name public lands are leased out. Christian sources state that he was called Bar Kokhba by reason of the messianic traits ascribed to him. Akiva, too, acknowledged his messiahship and declared: "This is the King Messiah" (tj, Ta'an. 4:8, 68d). With Simeon the Nasi there also appears on some coins "Eleazar the priest," apparently *Eleazar of Modi'in, a sage of Jabneh, whom talmudic tradition associates with Bar Kokhba. The headquarters of Bar Kokhba and of the commanders of the Jewish fighters was at *Bethar situated at the extremity of a mountain ridge to the southwest of Jerusalem. In the intervening period between the war against the Romans and the Bar Kokhba revolt, the town, having been rebuilt after its destruction, flourished as a commercial and inhabited center for the region in place of Jerusalem. Shortly before the revolt, the Sanhedrin and the household of the *nasi* moved to Bethar, in which not only schools for study of Torah were established but also one for Greek learning. It is not known what connection the household of the *nasi* had with the revolt or with Bar Kokhba, or to what extent the Sanhedrin was associated with the revolt, but it is clear that the sages supported it.

The revolt began with a great offensive. Bar Kokhba succeeded in gaining control of the whole of Judea, including Jerusalem, as well as of a considerable part of the rest of Erez Israel, and in introducing in the territory under his rule an independent Jewish order. The rebels defeated Tinnius Rufus, the Roman governor, and Publius Marcellius, the governor of Syria, who arrived with the legions stationed in Syria and to whose assistance the legions stationed in Egypt and Arabia had been dispatched. The 22nd Legion, which had come from Egypt, was annihilated. At this juncture the Jewish fighters invaded the coastal region and the Romans engaged in sea battles against the Jews. In those days Rome enjoyed complete security, peace prevailed on its borders, and hence it was able to mobilize large numbers of men and forces even from distant places. Hadrian summoned Julius Severus, the governor of Britain, who arrived with his forces and with legions from Danubian countries. There were about 12 legions in all, composed of their full complement or of detachments of them.

Julius Severus, "refraining from engaging in open warfare," forced the Jewish fighters back step by step amid heavy losses to the Roman army, compelled them to retreat to fortresses which were taken one by one. "Fifty strongholds … and 985 of the most important settlements were destroyed"; hundreds of thousands were killed. In the first stage, Galilee, which was not seriously affected, was captured, and the main burden of war fell on Judea. Eventually, the Jewish fighters were thrust back to their last stronghold, Bethar, which fell after a protracted siege. Tradition records that Bethar was captured on Av 9 (the summer of 135), on the anniversary of the destruction of the First and Second Temples (Ta'an. 4:6). With its fall and the death of Simeon bar Kosiba there came an end to the struggle which had lasted three and a half years, although there were sieges and skirmishes in the region of the Judean Desert caves to which the fighters had escaped in the final stages of the revolt, even as had been the case with the fortress at Masada after the war against the Romans. In conformity with Roman custom, Jerusalem was now plowed up with a yoke of oxen, and thus the limits were fixed of the Roman colony, henceforth called *Colonia *Aelia Capitolina* in Roman sources.

Consequences of the Revolt. In addition to the destruction of populated areas and the large-scale massacre, there were great numbers of Jewish captives who filled the slave markets in Erez Israel and in distant lands. Especially notorious was the market under the terebinth near Hebron where a Jewish slave was sold for the price of a horse's feed. Many settlements, especially in Judea, were not rebuilt. The central Judean Mountains were largely depopulated of their Jewish inhabitants. In Galilee, which suffered less from the aftermath of the revolt, the olive plantations were destroyed (TJ, Pe'ah 7:1, 20a). Hadrian now resolved to launch a war of annihilation against the Torah and to expunge the name of Israel from the land. To this end decrees were issued against the observance of the *mitzvot*, gatherings in synagogues for the purposes of prayer or study were prohibited, *battei din* were forbidden to meet. In a description of those times a contemporary Babylonian sage commented: "'Of them that love Me and keep My commandments' (Ex. 19:6) – 'These are the Jews who live in Erez Israel and jeopardize their lives for the sake of the *mitzvot*.' 'Why are you being led out to be decapitated?' 'Because I circumcised my son.' 'Why are you being led out to be burnt?' 'Because I read the Torah.' 'Why are you being led out to be crucified?' 'Because I ate unleavened bread.' 'Why are you being whipped with the scourge?' 'Because I performed the *mitzvah* of the *lulav*'" (Mekh., ba-Ḥodesh, 6). Jews were forbidden to stay in Jerusalem and only once a year, on Tishah be-Av (Av 9), were they permitted to enter the city to weep over the remains of their holy places. Desirous of blotting out, too, all reference to the Jews' association with Erez Israel, Hadrian changed the name of Judea to Syria Palaestina, by which it henceforth came to be known in non-Jewish literature. The authorities confiscated land on an extensive scale on the strength of martial law or of offenses against the new decrees, such as the prohibition

of circumcision. Large tracts of land lay waste, their owners having been taken captive or compelled to flee. The Jews in the country underwent a harsh period of persecution. Many, and they included the nation's most eminent men and sages such as Akiva, Ishmael, Hananiah b. Teradyon, Tarfon, and others, were killed in the persecutions, many went into hiding in Erez Israel, large numbers fled abroad and never returned or did so only after several years. There were numerous martyrs, this being the generation that bequeathed to the Jewish people the tradition of martyrdom (see *Kiddush ha-Shem*). From the end of the revolt until the close of Hadrian's reign (i.e., from 135 to 138) the Jews of Erez Israel bore the full brunt of the anti-religious decrees.

The repressive measures were somewhat relaxed only on the accession of *Antoninus Pius. He neither annulled them nor immediately restored to the Jews the status they had enjoyed before the revolt. Gradually, however, their situation improved. Apparently at the beginning of Antoninus Pius' reign, circumcision was permitted, a law enacted by him having allowed the Jews to circumcise their sons but not slaves or proselytes. For the Samaritans the prohibition remained in force, and for a long time they circumcised their sons at great risk. But alike in the days of the Antonines as in those of Hadrian, a harsh military regime prevailed in Erez Israel.

Recovery After the Revolt: Usha. The first signs of the recovery of communal life appeared in Galilee, to which the center of Jewish life henceforth passed and where the main population as also the seat of the Sanhedrin and of the *nasi* remained until the end of the period. The Sanhedrin had first gone to *Usha, whence it moved for a short time to *Shepharam and from there to *Bet She'arim and Sepphoris. In the third century it finally settled at Tiberias, the capital of Galilee. But Judea still had its Jewish population, its *battei midrashot*, and sages – at Lydda there was a large *bet midrash*, which enjoyed independence in many spheres of Jewish life. But the central authority and the focal point of spiritual creativity were in Galilee, where the main work of collecting and of finally redacting the tannaitic and amoraic literature was done.

The leaders who restored the religious and communal life comprised several of Akiva's younger pupils who survived the massacre and who had not yet gained renown in the generation of Jabneh: *Meir, *Judah b. Ilai, *Jose b. Ḥalafta, *Simeon b. Yoḥai, and *Nehemiah. The early meetings of the Sanhedrin were still held in temporary quarters and under semi-underground conditions in the Valley of Bet Rimmon, and only after many years, at "the end of the religious persecutions," did it meet at Usha (Song R. 2:5 no. 3). Among its first decisions was to declare the levitical cleanness of Tiberias. From its foundation at the beginning of the first century C.E. many Jews and especially priests refrained from living there for fear that it had been built on a cemetery. Hadrian had wanted to give the city a pagan character but the temple which he had begun to build was not completed. After the revolt Tiberias was almost entirely Jewish. Simeon b. Yoḥai sought to

declare it levitically clean and following protracted discussions it was recognized as such (TJ, Shev. 9:1, 38d). This facilitated the city's growth and enabled it to serve during the years as the spiritual center. Simeon b. Gamaliel, the son of Rabban Gamaliel of Jabneh, did not take part in the Sanhedrin in the early stages of its reestablishment, for he, too, had been compelled to go into hiding for several years. After some time he is mentioned as the head of the Sanhedrin at Usha.

The period not only of his tenure of the office of *nasi* (c. 140–170) but of the entire reign of the Antonines (until 193) was a difficult one both politically and economically. The authorities showed a growing contempt and suspicion of the Jews, and when Marcus Aurelius passed through Ereẓ Israel in 175 he expressed himself in opprobrious terms about them. They, for their part, displayed considerable rebelliousness, hoping as they did for the downfall of Rome, a hope that grew with the latter's clashes and preparations for war with the Parthians. Simeon b. Yoḥai asserted: "If you see a Persian horse tied in the burial places of Ereẓ Israel, expect the Messiah" (Song R. 8:9). This rebelliousness was responsible for the fact that the Jews of Ereẓ Israel, like the other peoples of the east, supported Avidius Cassius who had proclaimed himself emperor and was assassinated shortly before Marcus Aurelius' arrival in the country. Brigandage, too, increased greatly at this time, and although this was due to economic difficulties, it also had overtones of political insurrection. In Ereẓ Israel as a whole the economic situation was quite good during this period, although the country suffered in 166 from a plague which spread in the east. Like other provinces, Ereẓ Israel profited from the expanded international trade. Roads were built and bridges constructed, public institutions were established, markets and grain exchanges were set up and wells dug, creating a sense of security and promoting commerce, so that many cities flourished at this time. There were Jews, too, who benefited from this prosperity.

In Rome two inscriptions of Jews from Tiberias have been found that testify to commercial stations in the city, and some Jews, who were imperial court favorites, rose to positions of eminence. But the Jewish community as a whole lived in dire poverty. Thus reference is made to "the generation of R. Judah b. Illai … six of whose pupils covered themselves with one garment and studied the Torah" (Sanh. 20a). The nonrecognition of the Jews' religious rights brought in its train economic difficulties. Up to the Bar Kokhba revolt the authorities had exempted the Jews from land taxes during the sabbatical year, when they had no income from agricultural produce. After the revolt they had to pay these taxes, and were hard put to find a way of meeting the burden of taxation while observing, at least to some extent, the sabbatical year (Sanh. 3:3 et al.). This circumstance is the background to the *halakhah* which lays down that "if at the present time a man wishes to become a proselyte, he is to be addressed as follows: 'What reason have you for wanting to become a proselyte? Do you not know that at present Jews are persecuted and oppressed, despised, harassed, and burdened with afflictions … and do

not conduct themselves in public like other peoples?'" (Yev. 47a; Tractate *Gerim*, beginning). As a result of the harsh conditions, there was an increasing emigration, either temporary or permanent, from Ereẓ Israel. Seeking to stem it, the sages enacted *halakhot* to curtail this tendency.

Despite the difficult political conditions and the imperial nonrecognition, the sages of the generation of Usha and Rabban Simeon b. Gamaliel succeeded in consolidating the leadership of the central authority and in restoring to Ereẓ Israel its hegemony over the Diaspora. During the persecutions, when the house of assembly ceased to function, one of the Ereẓ Israel sages, *Hananiah, the nephew of Joshua, who had been sent to Babylonia, began to proclaim the new months and intercalate years there, and would not desist even when the central authority was reestablished in Ereẓ Israel. Only by resolute persuasion, by appeasement, and with the support of the Babylonian sages was the *nasi* able to make the separatist circles in Babylonia cease their activities, whereupon the Jews there once again submitted to the authority of Ereẓ Israel. In the days of Rabban Simeon b. Gamaliel, the office of *nasi* assumed the form of a triumvirate, consisting of the *nasi* himself, the *av bet din*, and a sage, who was the authorized halakhist. For some time, *Nathan, the son of the exilarch in Babylonia, was the *av bet din*, thereby enabling the *nasi* to associate with his office also a representative of that large Diaspora community. This set an example for future generations, the great majority of those occupying the position of *av bet din* in the tannaitic and amoraic period having been sages who immigrated to Ereẓ Israel from Babylonia.

In the generation following the Bar Kokhba revolt the Samaritans began a large-scale expansion beyond the confines of "the land of the Cutheans." Their expansion to the north having been halted by the Beth-Shean and Jezreel Valleys, they spread northwest along the coast and especially southwest along the southern coastal plain. The reasons for this may have been the Jews' diminished power as well as the plight in which the Samaritans found themselves on account of religious persecution. They therefore sought refuge among the Jewish population, perhaps because of the close contacts established between them during the Bar Kokhba revolt. The Samaritans' expansion into the Jewish areas led to considerable friction, and there were assertions by sages that, since leaving their villages, they had become lax in the observance of *mitzvot*. In contrast to the earlier *halakhah*, they were now more and more adjudged as non-Jews.

THE SEVERAN DYNASTY. R. JUDAH HA-NASI. A period of political and economic efflorescence came to the Jews of Ereẓ Israel under the Severan emperors (193–235), coinciding largely with the tenure of the office of *nasi* by Judah I, the eldest son of Rabban Simeon b. Gamaliel and known as Rabbi. After the murder of Commodus (192) an armed struggle broke out between Pescennius Niger and Septimius *Severus which divided the east, including Ereẓ Israel and the legions stationed there. Pescennius Niger had, as governor of Syria, been

ruthless in his attitude to the Jews. When they had asked him to lighten the burden of taxation, he had answered that were it possible he would tax the very air they breathed. He severely punished the cities which supported his rival. While the tenth legion sided with him, the house of the *nasi* and the Jews of Erez Israel supported Severus, whose victory was regarded as a deliverance. The good relations that existed between the Jews of Erez Israel and the Severans, which continued throughout that dynasty's reign, influenced several Severan emperors in their predilection and love for Judaism and for a syncretism in which it, too, was included. Alexander *Severus was derisively called *archisynagogus* (head of the synagogue). The political position of the Jews in Erez Israel improved and they were able to occupy notable positions in the Greek and Roman cities. Their more influential status found expression mainly in an increased autonomy, both public and judicial. The *nasi* was permitted to levy taxes for the maintenance of the central authority, civil and criminal cases were tried, and judgment could be enforced against the guilty party. When necessary, the *nasi* could also try capital cases. While this right was not officially recognized by Roman law, it was not exercised surreptitiously (Origen, *Epistola ad Africanum*, 28:14).

The relations between the Roman Empire and *Judah ha-Nasi were particularly good. Extensive areas of state land in the Valley of Jezreel, Golan, and elsewhere were given to him as a gift or on lease. The *aggadah* frequently mentions the close ties between him and the Roman emperor *Antoninus, but since several Severans bore this name, it is difficult to determine which of them is meant. From what is known of the stay of the emperors in the neighborhood of Erez Israel and their association with Judaism, this reference is probably to *Caracalla (198–217 C.E.) or Alexander Severus (222–235 C.E.). The Jews were grateful to the Severan dynasty and both in Erez Israel (at Kaisan in Upper Galilee) and in the Diaspora synagogues dedicated to the emperors of that dynasty have been found. In their days there was a great expansion of settlement. Thus at this time there were included within the halakhic limits of Erez Israel areas in the north and south, which halakhically had not belonged to Erez Israel since the majority of their inhabitants had been non-Jews and to which the commandments applicable to Erez Israel, such as those relating to priestly dues and tithes, had not previously applied. At this time, too, there was established in Jerusalem a permanent Jewish settlement, known in talmudic tradition as the "the holy community in Jerusalem" (*kehilla kadisha de-bi-Yrushalayim*). While presumably the prohibition against Jews' settling in Jerusalem was not officially rescinded, the authorities chose to ignore it. At this time, too, the economic position of the Jews of Erez Israel improved. The extensive urbanization initiated by the Severan emperors had favorable economic repercussions. Septimius Severus bestowed city rights on *Bet Guvrin, now called Eleutheropolis, and granted it large areas which included the whole of Idumea. Land was even detached from Aelia Capitolina and the *limes* and given to it. Lydda, too, obtained city status, was named Diospolis, and granted con-

siderable areas of land. In 220–221 C.E. the district of *Emmaus was made a city and named Nicopolis. This completed the urbanization of western Erez Israel. Except for the part of Upper Galilee known as Tetracomia (the four villages) and the imperial estates in the *limes* and in the Valley of Jericho, the whole of western Erez Israel became a city area enjoying special privileges.

Emigration from Erez Israel was now replaced by immigration from the Diaspora, among the immigrants being people with expert knowledge, initiative, and money, who developed new branches of the economy, such as flax-growing, and of agricultural industry, such as the manufacture of clothes and dyeing.

The improved economic and political position found expression in splendid *synagogues which were built throughout the country and remains of which have been uncovered, chiefly in Galilee, such as at Kefar Naḥum (*Capernaum), Korazim (*Chorazin), Baram, and elsewhere.

The Jewish people in Erez Israel saw in the enlargement of their power and in the aggrandizement of the *nasi* the beginnings of the redemption. A messianic aura surrounded him. From the days of Judah ha-Nasi and onward the *nasi*'s court was distinguished by an outer splendor, great opulence, and regal pomp. He succeeded in attracting to his court and to a participation in public leadership the heads of the large cities and the financial aristocracy, whom he prevailed on to accept the responsibilities of public office and national discipline. This led to a protest on the part of the popular *Ḥasidean sages, the extremists among whom became estranged from Judah ha-Nasi. In internal affairs, too, Judah ha-Nasi's authority was extensive. The right to grant ordination and the control of the Sanhedrin were concentrated in his hands. Under him the central authority exercised increased supervision over the cities and communities in the Diaspora. Under him, too, there was considerable legislation in the spheres of communal religion, of apportioning the burden of taxes, and the manner of levying them. While not charged with collecting the taxes, he, by virtue of the authority of his office and of being a rabbi, gave decisions on various financial problems, among them being some which impressed their stamp on Jewish communal arrangements for generations, such as exempting scholars, who devote themselves wholly to the study of the Torah, from taxes and civic obligations. He also exempted areas in southern and northern Erez Israel from priestly dues, tithes, and from the laws of the sabbatical year, from which last-named he sought to grant a total exemption, but due to the opposition of *Phinehas b. Jair, a Ḥasidean sage, the question was not brought up for discussion and a final decision.

His activities included the final redaction of the *Mishnah, which constitutes the summary and crystallization of most of the halakhic material of the Oral Law. Judah ha-Nasi was not the first to undertake the task of committing the *Oral Law to writing and of summarizing it in an halakhic compilation. Already in Second Temple times, and especially in the generation of Jabneh, this was done by *tannaim*, but their Mishnah col-

lections were incorporated, either wholly or in part, in that of Judah ha-Nasi, whose compilation is the more comprehensive and extensive. Assembling the teachings and collections of preceding generations, he arranged them in *sedarim* and tractates according to subject matter, *Shabbat, Pesaḥim, Gittin, Kiddushin*, etc., and subdivided these into chapters, generally set out in a logical development of the subject. The final redaction of the Mishnah constitutes a compilation of the Oral Law without deciding between the various views but including also the decisions arrived at and the laws enacted in Judah ha-Nasi's *bet midrash*. His humility in teaching the Torah and in halakhic judgments, his readiness to pay heed to and examine different opinions, his spiritual independence, his exalted status, and his lengthy tenure of the office of *nasi* – all these contributed to the compilation of the Mishnah and its acceptance as the basic work for the study of the Oral Law and as the principal foundation of Jewish jurisprudence. Within a short time his Mishnah, having superseded and consigned to oblivion earlier or contemporaneous collections, became the basis and the prototype of the continued creation of the Oral Law. The close of the Mishnah represents a turning point and a landmark in the history of the Oral Law, which was further elucidated and defined throughout the generations. The literature created up to the close of the Mishnah, even if redacted shortly afterward, is the tannaitic, that which followed it the amoraic, literature. All *halakhot* mentioned in the Mishnah and in the other tannaitic productions are more authoritative than those in the amoraic works. Except for a number of Aramaic and Greek words and expressions, the language of the Mishnah is mishnaic Hebrew, reflecting the prevailing circumstances in Ereẓ Israel from Second Temple times onward. The death of Judah ha-Nasi (c. 225) initiated a process that led to a separation between the office of *nasi* and the Sanhedrin. The last testament ascribed to him states that Rabban *Gamaliel, his eldest son, was to be the *nasi* and the sage *Ḥanina b. Ḥama the president of the Sanhedrin (TJ, Taʾan. 4:2, 68a).

In the following generation the separation was almost complete. Then the Sanhedrin, presided over by Johanan (from c. 240), had its seat at Tiberias, while the office of *nasi* occupied by *Judah ha-Nasi II, had its seat for a considerable time at Sepphoris. Under normal circumstances a sage was the president of the Sanhedrin or the Great Bet Din, which was independent, but not entirely so, of the *nasi*, since the latter was theoretically its president, and in certain areas, as also in particular instances, its dependence on the *nasi* was maintained. Thus the ordination of sages was contingent on the sanction of the *nasi*, who continued to exercise the sole right to enact regulations. There was also cooperation between them in political matters. Alongside the central *bet midrash* or the Sanhedrin at Tiberias there were in amoraic times other *battei midrashot* which, as the centers of instruction and leadership for their immediate vicinity, taught the Torah and appointed *dayyanim* for the neighborhood. At Lydda there was the center, founded by *Joshua b. Levi, for the southern settlements; at Caesarea one established by *Hoshaiah; and a smaller one

in Upper Galilee at Akbara, under the leadership of *Yannai, where a considerable nucleus of his companions lived a communal life for several generations. Each of these *battei midrashot* was distinct in its teachings and method of instruction, but in special instances their heads were invited to assemblies, the sages of the south (Lydda) in particular often meeting with the members of the Sanhedrin at Tiberias.

THE PERIOD OF ANARCHY (235–289 C.E.) In this period of the frequent change of emperors, of chaos and collapse throughout the Roman Empire, Jewish Ereẓ Israel in particular suffered. There was indeed no religious persecution of the Jews, and even when the Christians and Samaritans were compelled to participate in emperor worship, the rights of the Jews were recognized and respected. The contemporary diatribes against the evil "Esau" who oppressed "Jacob" were mainly directed against Esau, the robber and plunderer, a circumstance conspicuous, too, in the non-Hebrew sources of the nations neighboring on Israel. The rural population suffered greatly from economic hardship, from taxation, and from oppression at the hands of soldiers, and since the economy of Jewish Ereẓ Israel was largely agricultural, the Jews were affected more than the non-Jewish population. During the period of anarchy there was a decline in agriculture, not because of the diminished fertility of the soil but because of the corrupt administrative arrangements that led to a neglect of the land and lack of interest in fostering the cultivation of the soil. During this period, too, the country suffered from privation and an extremely severe famine. Emigration increased, and although there was also a considerable immigration to Ereẓ Israel, it was not large enough to balance the number of those leaving the country. Despite the upheavals and wars which occurred in the east with the accession and onslaught of the Sassanid kings, there were increasing contacts between Ereẓ Israel and the Diaspora, especially that in Babylonia. In the days of the principal generations of the *amoraim* the contacts between these two Jewish communities were considerable, numerous, and frequent. As a result of the situation created by the fact that the Roman Empire was in the process of disintegration and by the Persian attacks, the kingdom of Palmyra (Tadmor) enlarged its power. This buffer state, situated between Persia and Rome, and subordinate to the latter, first forged ahead from 260 C.E. under Odaenathus within the ambit of the Roman Empire. Later, under Queen Zenobia (267–272), having proclaimed its independence and freed itself from Roman suzerainty, it initiated a policy of conquest and expansion directed against the countries of the east, including Ereẓ Israel. The Palmyrene regime was not only a continuation of Roman rule but also contained elements conducive to creating an independent eastern state. Although wide circles in the east supported it, at the decisive moment, when Rome reconquered the east from Zenobia, the great majority of them refrained from coming to its assistance and instead helped the Romans. When Odaenathus was a client king under Roman patronage, Jewish tradition charged him with being "a brother" (because

of the eastern elements in his regime) who had come to the aid of "Esau" (Rome) in the latter's hour of weakness. "Happy is he," declared R. Johanan, the leader of that generation of Jews, "who witnesses the downfall of Tadmor [Palmyra]" (TJ, Taʾan. 4:8, 69b). But with Zenobia, whose attitude toward them was one of protectiveness and esteem, the relations of the Jews were friendlier, the clash between her and Rome even raising messianic hopes in some circles.

STABILITY RETURNS TO THE ROMAN EMPIRE. At the end of the third century (284) Diocletian became emperor and succeeded in transforming the regime and the system of the Roman Empire into a despotic monarchy on the Byzantine pattern with its exaggerated hierarchy and extensive bureaucracy. By dividing each of the provinces into two or three, their number was increased. Erez Israel, one of the smallest among them, was likewise subdivided into several parts, so that from 358 to the beginning of the fifth century (429) it comprised Palaestina Prima, which consisted of Judea, Samaria, the Coastal Plain, Idumea, and Perea (Jewish Transjordan), and whose capital remained Caesarea; Palaestina Secunda, which embraced Galilee, the *Decapolis, and *Golan, and whose capital was Scythopolis (Beth-Shean); and Palaestina Tertia, which comprised the Negev and whose capital was *Petra. As in other provinces, the civil ruler, the *praeses*, was distinct from the military head, the *dux*. Instead of reforming the corrupt government system, the new regime perpetuated it, increasing its sway over the population. Participation in all the associations became compulsory and was enforced, ranging from performing municipal duties to the organization of craftsmen's unions from which all workmen were excluded, and to the obligation of children to continue in their parents' occupation. All the associations were at the disposal of the empire for levying taxes and providing services. During this period land tenancy assumed such proportions that the petty independent farmer, typical of Jewish Erez Israel, all but disappeared. The land passed into the possession of the proprietors of large estates and its former owners became tenant farmers. The imperial law of the *colonatus* was introduced, binding the farmer in perpetuity to the soil. This perpetual tenancy was hereditary and was marked by several expressions of the tenant farmer's servitude to the landlord. The imperial tenant farmers were similarly bound in perpetuity to their tenancy and their holdings. Because land in Erez Israel was retained in the possession of petty farmers for a longer time, the *lex colonatus* was introduced in the country at a comparatively late period, 383–388, about 50 years later than in the other provinces. At the beginning of the fourth century, the Jews were progressively becoming a minority in their ownership of land.

With the stabilization of the imperial regime, a new force emerged in the world: Christianity was gaining a commanding position, commencing with Constantine's recognition of the Christian religion (313). This was destined to have a decisive effect on the status of Erez Israel and of its Jews, henceforth called upon to undertake a joint political self-defense.

Hitherto the Jews had struggled culturally against a pagan world, which by its very nature acknowledged the existence of national religions. Even the Roman regime recognized in theory, and for most of the time in practice too, the Jewish religious reality in Erez Israel. Christianity, which within a short period became the imperial religion, did not, as is the way of a monotheistic religion, recognize or tolerate other religions, and in this displayed a greater bigotry and inflexibility than Judaism. Although the Christian Church had a special interest in converting Jews, and particular those in Erez Israel, Judaism was not declared illegal either in that country or in the Roman Empire, which nevertheless fostered an enmity toward and a contempt for Judaism. In addition to the hostility originating in the separation between them the Roman Christians were the object of much of the contempt for Jews prevalent in circles of the pagan Roman aristocracy. The hostile attitude to Judaism was expressed in the emperors' anti-Jewish legislation with its insulting language, and in the attacks of fanatics on Jews and their institutions, such as the campaign of the bigoted monk Bar Sauma of Nisibis who, with his band, passed through Erez Israel in 419–422 C.E. destroying synagogues. Not only did Christianity have an interest in the *holy places, such as the site of the Crucifixion, the sepulcher of Jesus, and others, it also based its gospel on the destruction of Jerusalem and God's rejection of the people of Israel, so that the whole of the patriarchal blessing, including Erez Israel, now belonged to it. Henceforward it was not the Jews alone who sought to have possession of Erez Israel. Many Christian congregations were established in the country. The inhabitants of villages and of the large cities, most of which remained faithful to *Hellenism, had to fight for their continued pagan existence. Constantine and his mother Helena, who was devoted to Christianity and even immigrated to Erez Israel in her old age, set about building magnificent churches, one – the Church of the Nativity – at *Bethlehem, and two – those of the Holy Sepulcher and of the Ascension – in Jerusalem, as also at Abraham's Oak. The Church Father Epiphanius has preserved a detailed account of the manner in which the emperor helped the apostate Joseph to build churches in the Jewish centers, at Tiberias, Sepphoris, and other localities holy to Christianity, such as Kefar Naḥum (Capernaum) and Nazareth, places inhabited exclusively by Jews. The Jews fought Joseph who consequently succeeded only in building a small church at Tiberias (Epiphanius, *Panarion adversus Haereses*, 1:2, xxx, 4). The Christian population increased by reason of the conversion of non-Jews in Erez Israel and of the arrival of Christians or pilgrims who settled in the country. The many monasteries which were first built in the fourth century and multiplied in the fifth and sixth also attracted devout Christians from abroad. There were instances of Jews who were converted to Christianity, as in the case of Joseph, but the number was not large either among them or among the Samaritans.

THE REVOLT AGAINST GALLUS. In June 351 a revolt of the Jews broke out at Sepphoris against Gallus, the Roman ruler in the east. The rebels had heard of various uprisings in the

west and of Constantius' reverses in his campaign to suppress them. They also relied on obtaining assistance from the *Persians whose attacks, some of them successful, had increased at that time. Having appointed a leader named Patricius, of whom little is known, the Jews defeated the Roman army in the city. From there the revolt spread through Galilee and reached Lydda in the south. It bore no anti-Christian character, nor were Christians or their institutions attacked, the revolt being directed solely against Gallus' corrupt rule. Ursicinus, an experienced commander, was dispatched against the rebels. The decisive battle took place near Acre. From there the enemy advanced against centers in Galilee inhabited by Jews, and several Jewish settlements and cities were destroyed. Some of them, such as Tiberias, Sepphoris, and Lydda, were rebuilt shortly after the revolt, but there were places like Bet She'arim which were now left with only a meager population. It is not known where the seat of the Sanhedrin and of the *nasi* was during the revolt, but not long after it they were once again engaged in their usual activities. During the years immediately following the revolt the authorities interfered with assemblies for the intercalation of the year and especially with emissaries sent to inform the Diaspora of it (Sanh. 12a). It was therefore apparently decided to draw up a permanent calendar (TJ, Er. 3:11, 21c) which, according to a later tradition, was done by *Hillel II in 359 (*Sefer ha-Ibbur*, 97). Even after the calendar had been laid down and until it received its definitive form, questions were addressed to the sages of Erez Israel to elucidate various problems. In Erez Israel they continued even afterward to proclaim the new month and to celebrate the occasion as had formerly been done when its proclamation was made by the Great Bet Din.

JULIAN THE APOSTATE. Excitement mounted in Erez Israel and the Diaspora during the brief reign of *Julian (360–363) who endeavored to resuscitate Hellenism, to which he was devoted, by diminishing the image of Christianity in the empire. Wishing to reinstitute the sacrificial service of the Jews, which he regarded as more important than anything else in their Bible, he announced and promised in his letters to the "Community of the Jews" and to the *nasi* that he would rebuild "with great diligence the Temple of the supreme God" and "the holy Jerusalem which you have for many years longed to see rebuilt and which I shall restore." When he set out to fight the Persians, a special emissary, Alypius of Antioch, was appointed who filled important duties in connection with the rebuilding and to whom large sums of money were allocated. By this act the emperor may have sought, as he departed for war, to win over the Babylonian Jews, and assure their support, but all his letters are marked by friendship and sympathy toward the Jews. Moreover, he revoked the decrees relating to the special Jewish taxes, such as that of the two drachmas, and even asked the *nasi* to reduce the tax levied for the needs of his high office from the Jews. Julian's proclamations and actions created a ferment among the Jews, who flocked to Jerusalem and began to collect money from Italy and as far afield as Babylonia

and Persia. Jews settled in the city, started to expel Christians from certain parts of it, and set up a synagogue in one of the colonnades on the Temple Mount. The Christians were furious, and their writers tell of a fire that broke out when the pagan shrines, abandoned with the rise of Christianity, were removed from the Temple site. It is possible that the Christians, desirous of interrupting the work of building, started the fire. When Julian was killed, apparently by a Christian Arab soldier, on the Persian front, the matter was ended.

After Julian's death, the Christians began to attack the Jewish settlements in the south where the Jews were greatly in the minority. Christian sources report the destruction "in the south of 21 cities of pagans, Jews, and Samaritans, who had had a share in Julian the Apostate's sin." Even after this the Jewish settlements in the south did not cease entirely but were reduced in number and impoverished. In the period between the death of Julian and the accession of *Theodosius I (379) there was no anti-Jewish legislation, and several laws were even enacted which enhanced their status and that of the *nasi*, one law exempting officials of the communities subject to "the illustrious *nasi*" from sitting on municipal councils, another of 368 prohibiting the billeting of soldiers in synagogues. This period was a congenial one for the Jews either because Julian's personality and activities had fostered a tolerant attitude toward other religions and arrested the Church's domination or because the emperor Valens (364–378) acted with moderation due to his not wishing to add to his enemies, since the adherents of Arianism, of which he was one, were already then in the minority. Under Theodosius I and his sons Honorius and Arcadius as also under Theodosius II until the abolition of the office of the *nasi* (i.e., from 379 to 428) there was intensified anti-Jewish legislation which assigned an inferior status to Judaism and the Jews.

THE CLOSE OF THE JERUSALEM TALMUD AND THE ABOLITION OF THE OFFICE OF THE NASI. In the second half of the fourth century C.E. the Jerusalem *Talmud was finalized and redacted in Erez Israel, for the most part at Tiberias. In it was summarized all that was said, initiated, and thought in the world of Erez Israel's sages in the century and a half that elapsed since the close of the Mishnah. No tradition is extant of the time taken to redact it or who its redactors were. The date of its redaction is fixed on the basis of the last sages and of the latest historical events – the revolt against Gallus and the emperor Julian's activities – mentioned in it (TJ, Meg. 3:1, 74a; TJ, Ned. 3:2, 37d). Dating from the end of the fourth century are evidences which combine to portray the firm status of the office of *nasi*, his right to collect money and to appoint and depose the leaders of communities in the Diaspora. At the beginning of the fifth century the position of the last *nasi*, Rabban *Gamaliel VI, was undermined. Accused of contravening the imperial laws by building synagogues, circumcising Christian slaves, and acting as a judge in cases involving Christians, he was deposed from the rank of "Honorary *praefectus*." The existence of the office of *nasi*, who claimed descent from the

house of David, was not to the liking of the Church, which tried to diminish his image and spiritual stature. An order in the *Codex Theodosianus* of the year 429 mentions the death of the *nasi* and instructs the Sanhedrins in the two Palestines to transfer to the imperial treasury the money previously collected on behalf of the *nasi*. Taking advantage of the death of Rabban Gamaliel VI and of the "babes who died" (according to Jewish tradition), the authorities refrained from approving the appointment of another *nasi*. With the abolition of this office, the nation lost its leading institution which had persisted for three and a half centuries after the destruction of Jerusalem and the Temple. The Sanhedrin continued to exist, money was sent to it even without official permission, and Jewry was obedient to it and its leaders who were called "the heads of the school" (*rashei ha-perek*), but it progressively lost its hegemony over the Diaspora. With the accession in 520 of Mar *Zutra, the son of the exilarch Mar Zutra, the title of Head of the Sanhedrin was bestowed on him, and until the Arab conquest his descendants continued to occupy that position.

BYZANTINE RULE IN EREZ ISRAEL. During this period the economic position of the country improved. Many Christians, among them men of wealth and influence, immigrated to Erez Israel. The visits, too, of Christians, as also the existence and export of the bones of patriarchs, prophets, and saints, whose graves were purported to have been discovered, brought much wealth to the land. In this period agricultural settlement, particularly in the Negev, was extended to areas never previously nor subsequently tilled, as evidenced by the remains not only of agricultural cultivation but also of cities in the Negev which flourished at this time. The period from the second half of the fifth century until the revival under *Justinian (527–565) of the aggressive Christian policy was a tranquil one for the Jews in Erez Israel. The Christians were absorbed in a theological controversy between the orthodox and the monophysites on the relation between the human and the divine nature of Jesus, a controversy which was associated with political, military, and communal clashes, so that they had no time to concern themselves with the Jews. The latter benefited from the economic prosperity that had come to the country, as attested by the building, extension, and renovation of synagogues whose remains have been found in the north (Bet Alfa, Hammath-Gader, and elsewhere) and in the south (Jericho, Naaran, Ashkelon, Gaza, and in other places). Although the erection and renovation of synagogues were prohibited, the Jews were able to circumvent various repressive laws. The difficult position of the Samaritans and their hopes of receiving help from the Persians emboldened them to organize in 485 and in 529 two large revolts. At first successful, they set up their own brief government in a small area around Samaria, but the revolts were speedily suppressed with such ruthlessness that the Samaritans were considerably reduced in number. There followed a relentless religious persecution. Justinian's reign was the last glorious period of Roman-Byzantine rule in Erez Israel. He fortified the borders, provided

the cities with a water supply, and built magnificent churches in various places in the country. But his reign was marked by the beginning of a harsh legislative attack on Judaism and by the Church's growing obduracy in its policy toward the Jews. When the old laws were selected from the *Codex Theodosianus* for inclusion in Justinian's new legal compilation, several which confirmed the rights of the Jews were omitted, while others depriving them of rights were added.

THE PERSIAN INVASION. In 603 the Persians renewed their attempt to assail the Roman Empire. In 611 they arrived at Antioch, in 613 they entered Damascus, in 614 they reached Erez Israel. The approach of the Persians inspired messianic hopes. Contact was made with the conquerors and the Jews gave them effective help in capturing Galilee. From there the Persians marched on Caesarea; proceeding along the coast, advanced against Lydda, and wound their way up to Jerusalem (May 614), in whose capture Jewish forces also took part. The Persians handed the city over to the Jews who, settling in it, began to remove from it the Christians and their churches. The leader in Jerusalem was one known only by the name of Nehemiah b. Ḥushi'el b. Ephraim b. Joseph, his messianic designation, and a beginning may even have been made to reintroduce sacrifices. His rule in Jerusalem lasted for three years. In 617 the Persians retracted, perhaps in order to gain the support of the Christians for their rule. The Jews did not acquiesce in this and the Persian regime was compelled to fight against them. Nehemiah and some of his closest adherents were killed by the Persians (*Sefer Zerubbabel*). In the meantime *Heraclius, the *Byzantine emperor, having begun to grow powerful, set out in the spring of 622 on a campaign of conquest against Persia. In 627 the Persians, accepting their defeat, agreed to withdraw to their own country and the Byzantine army regained control of Erez Israel. In 629 Heraclius appeared at the gateways of the country. The Jewish leaders made a vain attempt to enter into a compact with him. They presented him with many gifts, he promised to overlook their past actions, and even made an agreement with them, binding himself by oath to observe it. One of the Jewish leaders, *Benjamin of Tiberias, who was extremely wealthy, lodged the emperor in his home there, maintained him and the army accompanying him, and even joined him on his journey to Jerusalem. On March 21, 629, the emperor entered Jerusalem in a typically magnificent Byzantine procession and restored to their site the remnants of the cross given to him by the Persians. The emperor, who was not an antisemite, wished to keep his promises but under pressure from the Church revoked them. A decree was issued expelling the Jews from Jerusalem and its vicinity, and Jews were put on trial. Many were killed and many fled. In the period between Heraclius' return and the Arab conquest there were forced conversions and persecutions by the Byzantine Empire. The Arab conquest brought relief to the Jewish population, but in the Arab period the Jews of Erez Israel lost their central position in the leadership of Jewry.

[Shmuel Safrai]

Arab Period (634–1099)

THE ARAB CONQUEST. The raids against Syria and Ereẓ Israel carried out by Arab tribes from the Hejaz toward the end of *Muhammad's lifetime differed little from the attacks mounted by the inhabitants of the Arabian desert against the agricultural and trading settlements of the border lands from the ancient period on. The Byzantines, heirs of Roman power in the Near East, founded an Arab "state" embracing the territory that had formerly belonged to the Nabateans and Palmyra. In reality, though, it was a drifting camp of nominally Christian (Monophysite) Bedouin of the Ghasn tribe that constituted a buffer between the settled lands and the desert. These semi-barbarians were hired to stand guard against the barbarians of the hinterland, but after defeating the Persians and expelling them from Ereẓ Israel (628) and other lands they had conquered, Heraclius did not think it necessary to spend any more on his Bedouin mercenaries. The Byzantines did not grasp the impact of the rise of Islam in Arabia and did not regard the events seriously. The advance of Arabian bands probing their frontier and raids and incursions into Transjordan, and even into Ereẓ Israel, seemed no more than the usual Bedouin border attacks.

In 629 the Arabs suffered a defeat near Mu'ta (east of the southern extremity of the Dead Sea). According to Arab historians, after the death of Muhammad (632) three commanders were assigned the mission of occupying Syria and Ereẓ Israel. 'Amr ibn-al 'Aṣ was given the task of conquering "Filasṭīn," i.e., Judea and the southern Coastal Plain; Shuraḥbīl ibn-Ḥasana was to take Galilee and the valleys of the upper Jordan and Jezreel, an area later called Jund Urdunn (the military district of the Jordan); and Yazīd ibn Abī-Sufyān marched on Damascus. 'Amr invaded Palestine by way of Elath, while the other two advanced along the caravan route from Tabk to the Balqā' between the Jabbok and Arnon winter streams. The Byzantines suffered three serious defeats in 633–634, as the Arabs relentlessly pushed them back toward the sea from the east and south, and retreated to Beisan (Beth-Shean). For six months the Arabs raided towns and villages without capturing a single fortified city. When they marched on Beisan, the Byzantines withdrew to Fiḥl (or Faḥl-Pella) in Transjordan after destroying the Jordan River dams to impede the enemy's progress. Defeated near Fiḥl, the Byzantine troops fled to Damascus, with the Arabs in pursuit. The Arabs then briefly occupied Damascus, which they abandoned – along with other cities taken in Syria – when they received news of a large Byzantine force gathering at Aleppo and Antioch. This army, however, composed of about 50,000 Armenian and Arab mercenaries, was crushed in a decisive engagement at the confluence of the Ruqqād and Yarmuk rivers (in Golan) on August 20, 636. By the end of the year, all of Syria as far north as Aleppo was in Arab hands.

In Ereẓ Israel, Jerusalem, Caesarea, and Ashkelon were still garrisoned by Byzantine troops. Jerusalem surrendered in 637 or 638, after the Byzantine commander deserted, ending a two-year siege. Patriarch Sophronius conducted the
Map 1. *The Land of Israel under Arab rule (8ᵗʰ century c.e.). After* Atlas of Israel, *Survey of Israel, 1970.*

negotiations with the Arabs, who promised not to harm the Christian churches there. Caesarea was apparently taken by Mu'āwiya in 640, ending a seven-year siege, after a Jew showed the Arabs a secret passage into the city. (According to an Arab historian, there were 700,000 "Roman" soldiers, 200,000 Jews, and 300,000 Samaritans inside the city.) The

fall of Ashkelon followed soon after (641). The Arab conquest of Ereẓ Israel was a major event in the history of the Western world. It opened a gateway to the West for the inhabitants of the desert and brought them into direct contact with a 2,000-year-old culture. Had they been satisfied with their conquest of the Persian Empire, it is doubtful whether their influence on civilization would have been any greater than that of the Sassanids or Zoroastrians.

The conquerors did not change the administrative system in Ereẓ Israel. Northern Ereẓ Israel (the Byzantine Palaestina Secunda) became the military province (*jund*) of Urdunn (Jordan), with Tiberias as its capital, and southern Ereẓ Israel (the Byzantine Palaestine Prima) became *Jund Filasṭīn*, with Lydda as its capital. The latter province comprised Judea and Samaria and, according to the Arab geographers of the tenth century, the Negev, as well as the southern districts of Transjordan, were annexed to it. The conquest was followed by the migration of Arabs into the area. When taking a town, the Arabs sometimes stipulated that half of its area be handed over to them. Arabic historians record that this was the case in Tiberias and Beisan. At first, most of the Arabs lived in great camps, e.g., al-Jābiya in Golan and Emmaus in the Judean plain, where they soon began to acquire estates and settle down. The number who became landlords and engaged in agriculture increased when Muʿāwiya became governor of Syria and Ereẓ Israel. Arabs bought estates, settled down and became peasants throughout the country. Muʿāwiya also founded colonies of Arabs and other Muslims in the coastal towns as a military safeguard against Byzantine attacks on this vulnerable area.

The Ummayyads also granted lands to Bedouin tribes. Whereas most of the Arabs living in Transjordan and regions to the north before the Muslim conquest belonged to south Arabian Kalb tribes, under Ummayyad rule the North Arabian Qays tribes became predominant. Many Qaysites moved into Galilee, Golan, Hauran, and al-Balqāʾ. On the other hand, the Arabs who settled in Tiberias and Bet Guvrin were Kalbites. The majority of the Arabs of southern Palestine belonged to the Lakhm and Judhām tribes (South Arabians). In the course of the ninth century, the number of Qaysites continued to increase in northern Ereẓ Israel and Transjordan. After the dissolution of the military camps, their inhabitants dispersed and settled in the established towns, and both Islam and the Arabic language proliferated. Nevertheless, these towns did not change completely: a great portion of the town dwellers remained Christians, as borne out by Al-Maqdis (985) in his account of Jerusalem. Ramleh was probably the one exception. Founded by the caliph Suleiman (715–17), who resided there, it became the flourishing capital of the south.

The decline of the Abbasid caliphate began in the ninth century, when Turkish princes established semiautonomous principalities. Aḥmad ibn-Ṭūlūn founded an independent kingdom in Egypt (868) and ten years later conquered Ereẓ Israel and Syria; his son defeated the caliph's brother in battle at the Yarkon River (*nahr* abī Fuṭrus – Antipatris) in 885. Af-

ter Aḥmad's death, the Qarmatians – one of the Shiʿite sects from the Syrian desert – began to carry out fierce raids against Syria and Ereẓ Israel in 906. A bit later, Ikhshidi princes became masters over Egypt (935) and Palestine (942) and set out to engage forces with the Turkish rulers of Aleppo. In the second half of the tenth century, the Fatimid Shiʿite dynasty assumed power in Egypt. The Ikhshidis attempted to prevent the Fatimids from taking control of Palestine, but were defeated in a battle near Ramleh in 969.

FATIMIDS AND SELJUKS. During the early period of Fatimid rule in Palestine, the enemies of the dynasty carried out a number of incursions into the country. The first to invade Palestine were the Qarmatians, who captured the entire country except the coastal fortresses in 971. Although their attempt to penetrate into Egypt failed, they remained in control of Palestine for three years. In 974 the Qarmatians were driven out by Fatimid troops, but after a short time they managed to re-establish their authority for a few months. The confusion in Palestine was exploited by the Byzantines, who attacked the Abbasid caliph and, under the emperor Tsimiskes, undertook what modern scholars have called the Byzantine Crusade, penetrating as far as Beisan in 975. They were compelled to retreat from the areas conquered in Syria, but meanwhile the Qarmatians renewed their attacks. After joining forces with the Turkish leader Alptekin, the ruler of Damascus, the Qarmatians defeated the Fatimid troops near Ramleh and laid siege to Ashkelon; however, they were vanquished in 977 by the Egyptian caliph al-Aziz in a battle near Ramleh.

Even after defeating the Qarmatians, the Fatimids could not establish a stable government in the country because of the rising power of Ṭayyiʾ Bedouin, who had been supported by the Egyptian caliphs in the hope that they would be useful against their governors in Damascus. In effect, the Bedouin chiefs of banū Jarrāḥ, who lived in Ramleh, were the real masters of the country, and the governors of the Fatimid regime were content to maintain their authority only in the coastal towns. In 998 the Bedouin chief Al-Mufarrij ibn Danfal ibn al-Jarrāḥ revolted against the caliph Al-Ḥākim and installed the sharif of Mecca as caliph at Ramleh. Later, the Bedouin were reconciled with the government, but Al-Mufarrij's power continued until his death in 1013, when the Egyptian Fatimid authorities sent a large army to Palestine to put an end to Bedouin rule. At first the caliph Al-Ẓāhir maintained peaceful relations with Al-Mufarrij's son and successor, Hasan; however, when relations again deteriorated, Hasan concluded an alliance with a league of Bedouin tribes ruling Syria, intending to make himself master of the entire region from the Taurus to the Egyptian border. Initially, the Bedouin scored a number of victories, taking Ramleh in 1024 and ruling the country for five years. In 1029, however, they were defeated by a Fatimid army near Lake Kinneret. In 1042 the banū Jarrāḥ again attempted to conquer the country. Fatimid power was already unstable at this period and the first Seljuk forays into Ereẓ Israel had begun.

The Seljuks were a Turkish people that had established an empire in Western Asia in the middle of the 11ᵗʰ century. In 1071 the Seljuk general Atsiz captured Jerusalem and most of the rest of Erez Israel. Although his invasion of Egypt ended in failure, the rebellion that broke out in Jerusalem while he was occupied there was later suppressed. The Seljuk conquest brought an end to Arab rule in Erez Israel, although the struggle between the Fatimids and the Seljuks lasted until the end of the 11ᵗʰ century; the Fatimids held the Coastal Plain and in 1098, a year before the arrival of the Crusaders, even recaptured Jerusalem.

The detailed description of the political events in the 10ᵗʰ–11ᵗʰ centuries indicates a gloomy picture of the living conditions in that period, which is also confirmed by contemporary letters found in the Cairo *Genizah*. Agriculture was predominant in the economic life of the country. The dams near Beisan were quickly repaired and the region soon became famous for its dates, rice, and indigo. Other sectors lost importance, compared to previous periods and neighboring countries. Erez Israel was self-sufficient in the growing of cereals and exported olive oil, dried figs, and raisins. In the Jordan Valley and the Coastal Plain sugar plantations developed considerably, and the Arabs introduced the lemon and orange to Erez Israel. In spite of the flourishing agriculture in the first centuries of Arab rule, heavy fiscal pressure exacerbated the peasants and provoked revolts, e.g., the uprising of Abu-Ḥarb, who in 842, caused turmoil in Erez Israel. The volume of industry decreased, however, when the coastal towns shrank in size as a result of the loss of overseas markets. The interruption of international trade in the Mediterranean area was a foremost phenomenon in the economic history of Syria and Erez Israel under the caliphs. Industry, therefore, produced mostly for local markets, although soap (made from olive oil) and glass vessels were sold in Egypt and Transjordan. On the whole, the decay of maritime trade in the Mediterranean world was outweighed by the intensification of commercial relations with countries that had belonged to other economic regions before the Arab conquest. Erez Israel's economy thus remained intact under the caliphs. Its decline and the subsequent general impoverishment of the population began in the tenth century, due to changes in the political structure, as described above.

In the south (the Negev), however, the deterioration of the economy began even earlier. With the consolidation of the Muslim empire from Spain to India, it became safe for travelers to journey by land, a permanent postal system was established, and new overland trade routes between Europe and the East came into being. These developments eliminated the Negev trade routes, which had functioned as a factor in international commerce, during the Roman and Byzantine periods, and the Negev's key position disappeared for centuries to come. Its cities declined as their inhabitants lost the transit trade and their livelihoods from dyeing and weaving, and the population dwindled. As the markets for agricultural products disappeared, the farmers also moved away, and villages ceased

to exist. Ramleh, the headquarters of the administration, was then an important commercial center, and other larger cities were Ashkelon, Caesarea, and Jerusalem. These cities, however, declined like the rest of the country during the period of Fatimid rule. The constant Bedouin raids made life quite difficult for the inhabitants, and, in addition to man-made disasters, earthquakes, which occurred in 1016 and 1033, contributed still further to the country's impoverishment.

The Muslim population of Palestine was for the most part Sunni, and the Shiʿite propaganda of the Fatimid government met with little success. There were large groups of Shiʿites in Tiberias and a number of other places. Most of the inhabitants of Nablus and its environs were Samaritans. In Jerusalem, Bethlehem, Nazareth, and Tiberias, the majority of the population was Christian and enjoyed the protection of the Byzantines who cared for the Christian shrines. The spoken language of all the inhabitants, regardless of religion, was Arabic, although Arabic culture had not struck roots in the country. The intellectual level of the population was lower than that of the neighboring countries. In 985 the Jerusalem geographer al-Maqdisī wrote that it was difficult to find a Muslim intellectual in Erez Israel in his time. The cultural level of the Christians was higher than that of the Muslims, which explains the fact that Christians held most of the government positions. Talented and ambitious members of the population immigrated to the adjacent countries, where the chances of advancement in a number of fields were much greater.

THE JEWISH POPULATION. In the period preceding the Arab invasion, there were Jewish agricultural and trade settlements in the Negev, south of the Dead Sea, along the shores of the Gulf of Elath, and in Transjordan. Delegations sent to conclude protective treaties with Muhammad, once his fame had begun to spread, included Jews from Transjordan and the Gulf of Elath, Maqnā, a small port along the southern portion of the Gulf, was a Jewish community inhabited by the banū Janbā, warriors who earned their livelihood from agriculture, fishing, trade, and home crafts. From the clothing they pledged to deliver to Muhammad, it is apparent that they were wealthy. The delegation from Elath was accompanied by groups of Jews from the neighboring communities of Adhruḥ and Jarbā, between Petra and Maʿān in Transjordan. The region between Edreʿi and Jericho was inhabited by Jews as late as the 10ᵗʰ and 11ᵗʰ centuries, but they disappeared completely during the Crusades. *Estori ha-Parhi, however, mentions a Jewish community in Edreʿi in his time (13ᵗʰ century).

The southern coastal towns continued to flourish after the Arab conquest. In the 11ᵗʰ century there were still Jewish communities in Gaza, Rafa, and El-Arish, but they disintegrated with the Crusades, when the population as a whole declined. Many villages and small towns were destroyed in the Crusader wars against the Fatimids and the Ayyubids, but the disappearance of much of the population in the borderland was also due to the complete cessation of transit trade in the Negev during this period. Controversial reports exist

about the resettlement of the Jews in Jerusalem after the Arab conquest. According to Arab sources, the treaty between the caliph *Omar and Patriarch Sophronius about the surrender of Jerusalem to the Arabs contained the condition that the Jews should not be allowed to settle in the city. On the other hand, a document in the Cairo *Genizah* testifies that Omar gave 70 Jewish families from Tiberias permission to settle in Jerusalem. A later Arabic source reports that Jewish families attended the Mosque of Omar in the Temple area. The sources about Jerusalem as seat of the academy do not indicate the date of this event (see section on Religious and Spiritual Life below).

In general, Jewish and Christian communities in Erez Israel prospered during the first 50 years of Arab rule. The founder of the Ummayyad dynasty, Caliph Muʿāwiya (661–680), devoted himself to organizing and expanding his realm. His regime displayed tolerance toward the people under Muslim protection and afforded numerous opportunities to both Jews and Christians. Muʿāwiya settled Jews in Tripoli because he regarded them as loyal to the Arabs and wanted to strengthen reliable elements there. The situation changed for the worse when Omar II (717–720) became caliph and introduced numerous restrictions against non-Muslims (see *Omar Covenant). These laws severely affected the public conduct, religious observances, and legal status of the people under Muslim protection. During the Abbasid rule, Jews were sometimes forced to wear yellow turbans, Christians, blue ones, and Samaritans, red ones. These regulations, however, were not strictly observed and had to be stressed from time to time in public proclamations. In 1009–13 the Fatimid caliph *Al-Ḥakim issued severe restrictions against the dhimmi (protected non-Muslim population) that affected the Christians more than the Jews. He also revived the regulations about prescribed garb and ordered the destruction of churches and synagogues. Finally, Jews and Christians were presented with the ultimatum of either adopting Islam or leaving the country. During this period, the Church of the Holy Sepulcher in Jerusalem was demolished. Soon afterward, however, while Al-Ḥakim was still alive, the orders were rescinded and permission was granted to rebuild the houses of worship and allow persons who pretended to adopt Islam to profess their own religions openly.

Economic Conditions. Because of the heavy land taxes imposed on non-Muslim farmers, Jews ceased to cultivate the soil. They settled in the towns, where economic conditions were better and they were safer, and engaged in crafts such as dyeing and tanning, which became exclusively Jewish occupations for centuries to come. With the exception of Al-Ḥakim's decrees, the attitude of the authorities toward the Jews in the Fatimid period was generally favorable and better than the treatment accorded to the Christians, who sometimes provoked the Muslims with their arrogance. Whereas it was strictly forbidden to employ members of the protected faiths in government posts during the Abbasid period, under Fatimid rule, Jews and Christians were in the service of the caliphs, who had come to learn that the protected peoples were more loyal to them than the Sunni Muslims.

The Jews of Ramleh derived benefits from the trade caravans passing through the city. They traded with Egypt and Syria, as well as with North Africa. However, Bedouin depredations and severe earthquakes, which caused unusual damage to Ramleh, undermined the city's position. The economic status of Jerusalem was less satisfactory because of the city's distance from trade routes and its proximity to the desert. Whenever disorders and highway robberies increased, the number of Jewish and Christian pilgrims to the Holy City fell off. In addition, the tax burden in Jerusalem was heavier than in other Palestinian cities. Most of the Jewish population lived off contributions from foreign Jewish communities or visitors. Whatever Jewish merchants there were in Jerusalem were dependent on those in Ramleh. A number of copyists supported themselves from copying manuscripts to be sold abroad.

Religious and Spiritual Life. In the last century of Byzantine rule, Tiberias was again the center of Jewish spiritual and religious leadership. Mar *Zutra, a scion of the exilarchs, settled there in 520 and was appointed head of the academy. Even the persecutions of the emperor Justinian (527–565) could not destroy the community that had fostered the development of Jewish scholarship. Tiberias was the center of the masoretes (see *Masorah) and the inventors of the Tiberian system of vocalizing Hebrew, the most important cultural achievement of the period. This system superseded two others, the Babylonian and the Palestinian, and came into current use in all Jewish communities. The Tiberian pronunciation became famous for its precision and clarity, and many scholars went to Tiberias to study the proper tradition of reading the Torah. The city also attained renown for its liturgical poets. One of the most famous of them was *Yannai b. Yannai, several hundred of whose *piyyutim* have remained. Fragments from a halakhic work *Sefer ha-Maʿasim li-Venei Erez Yisrael* ("Book of the Deeds of the Erez Israel Jews"), in which important decisions on religious, social, and economic matters have been collected, provide a glimpse into the life of the period. Although the exact date of the collection is still controversial – the end of the Byzantine or beginning of the Muslim period – there is no doubt about its importance as one of the few halakhic works of that period from Erez Israel to have survived. It is not known exactly when the academy passed from Tiberias to Jerusalem and Ramleh. From some hints in the letters of the Erez Israel *Gaon* *Aaron b. Meir (a contemporary and an opponent of *Saadiah Gaon), it can be assumed that the move occurred in the ninth century. It may also be ventured that the transfer of the academy to Jerusalem was caused at least partially by the settlement of the *Karaites (see below) in the city. Among the outstanding heads of the academy during the period, in addition to Aaron b. Meir, were R. *Solomon b. Judah (1025–1051) and *Daniel b. Azariah (1051–1062), a scion of the Babylonian exilarchs who signed with the title "*gaon* of Tibe-

rias," although his seat was in Jerusalem. The last *gaon* whose seat was in Jerusalem was *Elijah b. Solomon. After the Seljuk conquest of Jerusalem (1071) he had to move the academy to Tyre, where it remained until the Crusades. It then moved to Ḥadrak near Damascus and subsequently to Damascus itself. The academy existed in Syria for about a century and was still known as the Academy of the Holy Land.

The Karaites in Jerusalem. In the ninth century a number of Karaites left Iraq and Persia and settled in Jerusalem, which became an important center of Karaism. A letter written by Aaron b. Meir testifies that among them were *nesi'im* (princes), so styled because they belonged to the exilarchic family. The Karaites occupied a special quarter and called themselves "mourners of Zion"; the foremost among them were styled "*shoshannim*" (lilies). A genealogical list of Karaite Davidides published by Mann (Texts, 2 (1935), 131) tells that Ẓemaḥ the prince (third generation after Anan) was also head of the academy, whereas his brother Jehoshaphat was called "head of the academy, the pride (*Gaon*) of Jacob." Abramson (Merkazim, 27) is inclined to assume that Ẓemaḥ was head of the academy in Jerusalem. In any case it seems that the rivalry between the Rabbanites and Karaites in Jerusalem was one of the reasons for the reestablishment of the seat of the Rabbanite academy in Jerusalem (for later developments, see *Karaites: in Palestine).

Leadership. After the extinction of the patriarchate (c. 429), the leadership of the Jewish population passed to the scholars and heads of the academy, rather than to descendants of the Davidic dynasty, although the Karaites attempted to revive the office of the *nasi (patriarch) from the family of Anan, of the family of the exilarchs who were of Davidic stock. In the 11th century a Rabbanite descendant of the exilarchs, R. *Daniel b. Azariah who styled himself "patriarch (*nasi*) and *Gaon*," ascended to the leadership of the community. In an epistle to Egypt, he wrote: "Since we came to this holy place, we guide Israel, with God's help, in the whole of Palestine and Syria, and administer justice even to those in distant places. In all towns and settlements prayers are recited for us. The *Ḥaverim* and judges in every place are authorized by us. Nobody else has any influence even over a small town.…" (Mann, Egypt, 1 (1920), 179; 2 (1922), 216). Daniel concentrated the powers of the exilarch and the *gaon* in Iraq in his hands. From the many letters of Solomon b. Judah, Daniel's predecessor in the office as head of the Palestinian academy, it is assumed that he was the acknowledged representative of the Jewish population vis-à-vis the Muslim authorities. The *geonim* *Elijah b. Solomon and his son *Abiathar also assumed leadership beyond the boundaries of Erez Israel.

The *ḥaverim* mentioned in Daniel b. Azariah's epistle were authorized to head the local communities and sometimes also served as *dayyanim*. The judges were paid by their communities, but it is learned from many letters that they did not always receive their fixed emoluments or collections made

to pay their salaries. In one of his letters, Solomon b. Judah mentions how the Jerusalemites induced him to become their *ḥazzan* before he became the head of the academy, because he was satisfied with a small livelihood; but two years passed and his services went entirely unrewarded, due to the great distress prevailing in the Holy City (Mann, Texts, 2 (1935), 318). One of Solomon b. Judah's main tasks was to request support for his communities and their functionaries from the Erez Israel congregations in Egypt. The *Gaon* Josiah remarks in a letter (Mann, Egypt, 2 (1922), 69–70) that the academy used to be maintained by the Fatimid government, but this support ceased (during the Al-Ḥākim persecutions?), and the academy was in great distress. These financial problems increased with deteriorating political and economic conditions. At the end of the 11th century the Jewish population in Erez Israel diminished and lost its firm organizational and spiritual features.

[Haïm Z'ew Hirschberg]

Crusader Period (1099–1291)

In 1095 Pope Urban II appealed to the French at Clermont to rescue the Holy Land and recover it for Christendom. The response was instantaneous: Peter the Hermit, a Fleming from Amiens, harangued crowds; fanatical bands of peasants streamed eastward, passing through southern Germany, Hungary, and the Balkans, destroying the Jewish communities on the way; but this first mob "army" did not reach the Holy Land and was destroyed by the Turks (July–October 1096). Two years elapsed before the mailed Christian chivalry could be organized, and it took another year before that military expedition reached the coastal road leading from Lebanon into Erez Israel (May 1099). The coastal cities agreed, out of fear, to furnish the advancing expedition with provisions and funds. The army made its way from Caesarea to Ramleh (whose population fled) on the way to conquer Jerusalem, the proclaimed aim of the *Crusade movement. The Crusaders besieged Jerusalem from June 7 to July 15, 1099, and the city capitulated after Godfrey de Bouillon's troops had broken through the northern wall and Raymond of Toulouse's men had broken through at "Mt. Zion." The conquerors carried out a mass massacre of the population, which numbered between 20,000 and 30,000. The Jews, who had heroically defended their quarter, were in part killed and burned in their synagogue and in part taken captive and sold into slavery in Italy. Only few managed to flee to Ashkelon and Egypt.

Having conquered the capital, the Crusaders proceeded to occupy the rest of the country. Bethlehem had surrendered even before the conquest of Jerusalem; the city was in fact handed over to the Crusaders by its Eastern Christian inhabitants, who constituted the majority of its population. Jericho and Nablus had also surrendered when Tancred took both Tiberias and Beisan without a battle, turning the former into the capital of a new principality. The last serious Fatimid attempt to combat the Crusaders ended in the defeat of the Fatimids at the battle of Ashkelon (August 1099), and the Crusaders were thus free to proceed with the occupation of the coastal

cities. Like Ramleh, Jaffa was abandoned by its Muslim population and for a while served the Crusaders as their main port; during this first stage in the existence of their state, they were totally dependent on the supply of men, horses, arms, and provisions from overseas. It took the Crusaders ten years (1100–10) to conquer most of the coastal cities. *Haifa, then a small fortress (1100), was important because of its shipyards; the Jewish community, which resided there by special arrangement with the Fatimids, played an important role in its defense. Arsūf (April 1101), Caesarea (1101), Acre (May 1104), Beirut (1101), and Sidon (December 1110) followed suit. The conquest of the port cities facilitated the renewal of military and commercial ties with Europe and also provided the main residential centers of the Crusader community, which never struck roots in agricultural areas. Ashkelon constituted a serious danger to the Crusaders and was finally captured from the Egyptians in 1153.

Crusader expansion into the southern part of Transjordan had begun by 1100. In spite of the deterring efforts of the rulers of Damascus, the Crusaders succeeded first in establishing control over the local nomad population. In 1107 they captured Wadi Mūsā; in 1112 they fortified Shawbak, calling it Montreal; in 1113 they conquered Elath; and, finally, the fortification of Le Crac (Kerak), captured in 1142, secured their control over the area, the land connection between Syria and Egypt, and the "Pilgrims' Road" from the north to Mecca and Medina. Omitting further details it should be pointed out that from the standpoint of territorial expanse, the Kingdom of Jerusalem (or the Kingdom of David and even Israel, as it was called during the period of *Saladin's rise to power in Egypt (1174)) was at its height. Its border in the north went along the Muʿāmalatayn River (or Nahr Ibrahim) between Giblet (which belonged to the principality of Tripoli) and Beirut and continued in the west along the coast southward to Dayr-al-Balaḥ (Daron of the Crusaders). It extended eastward from Beirut to encompass the sources of the Jordan and reached the foot of Mount Hermon. From there the border turned southward and encompassed parts of Horan and Bashan, Gilead, and all the territory of Moab up to Elath. The desert region of the Negev (Grande Barrie, from the Arabic *bariyya* (desert)) completed the borderline between Elath and Daron.

Saladin, Ayyub's son, directed his policy toward the unification of Syria and Iraq with Egypt, a goal that was fulfilled with his conquest of Aleppo (1183). His halting attempts to attack the Crusaders' borders during the lifetime of Nur al-Din (Gaza, 1170; Montreal and Elath, 1171; Crac, 1173) took on the appearance of a planned mission in 1177, when he attacked southern Gaza, captured Ramleh, besieged Lydda, and reached Arsūf. But at the battle of Gezer (Montgisard, as it was called by the Crusaders), he was routed by Baldwin IV, and his attempts to impose a sea blockade on the Crusaders (1179–82), accompanied by attacks on Montreal, Galilee, Beisan, and Beirut, ended in yet another Crusader victory in the battle of Forbelet (1182). In 1183 Saladin captured Beisan and Zarʿīn, besieged Crac, and destroyed Nablus, Samaria, and

Jezreel. His victories terminated in the battle of Hattin (July 1187) with the crushing defeat of the Crusader camp, which had left Sepphoris to come to the aid of besieged Tiberias. As a result of this battle, all the Crusader cities and fortresses, including Jerusalem (November 1187), surrendered to Saladin almost without a fight. Tyre, which was not conquered due to Conrad Montferrat, now became the center of the remaining Crusaders, under the leadership of their king, Guy de Lusignan. The prolonged siege imposed on Acre by the Crusaders (August 1189–July 1191) and their conquest of the city constituted the beginning of a renewed conquest under the leadership of Richard the Lion-Hearted; but, as a result of the conflict between the kings of France and England, this endeavor produced poor results. According to the peace treaty of September 1192, the Crusader state was established in the area between Tyre and Jaffa (the Lydda-Ramleh area was divided between the two sides); in addition, the Christians obtained the right of pilgrimage to Jerusalem, which remained in Muslim hands.

Upon Saladin's death (1193), the Muslim empire was once again broken up. The Crusaders, however, were no longer able to exploit this situation, despite the fact that their state continued to expand by virtue of the various Crusades (such as the German Crusade that succeeded in capturing Beirut in 1197). The treaty of 1204 returned Jaffa (which fell to the Egyptians in 1197), as well as part of the territories of Sidon and Nazareth, to the Crusaders. The Fourth Crusade, which might have brought aid to the Crusaders in Ereẓ Israel, turned to the capture of Constantinople and resulted in the diversion of the European forces to Cyprus (captured by Richard in 1189). The military Crusade of the kings of Hungary and Cyprus in 1217 spent itself in undirected missions in the Galilee, Beisan and Mt. Tabor, and its only positive results were the fortification of Caesarea and the founding of Athlit (Château Pélerins). The remnants of this Crusade joined the daring attempt to attack Egypt (the Fifth Crusade). Fear of the Crusaders prompted the Muslims to destroy their fortresses at Tibnīn, Banias, Belvoir (Kawkab al-Hawā), Safed, Mt. Tabor, and Jerusalem simultaneously.

The Crusaders now awaited the arrival of Frederick II, emperor of Germany and king of Sicily. His departure was delayed until 1228, when, meanwhile excommunicated by the Pope, he reached Acre. In the interim, the Crusaders had captured parts of Sidon, built the walls of Caesarea, and fortified Qalʿat al-Qurayn (Montfort). As a result of his connections with Al-Malik al-Kāmil, the sultan of Egypt, Frederick succeeded in acquiring the Crusaders' territorial sovereignty without entering battle. Sidon (with the exclusion of Beaufort), Tibnīn, Sepphoris, Nazareth, Lydda, Ramleh, Bethlehem, the Ramleh-Jerusalem road, and Jerusalem itself – excluding the Temple area, which remained under Muslim jurisdiction – were transferred to the Crusaders. The kingdom now included two enclaves connected to the coastal region: Nazareth and Jerusalem. Frederick proclaimed himself king of Jerusalem and then left the country. Frederick's excom-

munication, self-coronation, and departure from the country brought about civil war, with the opposition to Frederick under the leadership of the House of Ibelin. The war raged intermittently from 1231 to 1243 and depleted the strength of the kingdom of Jerusalem. The Italian communes and military orders carried out their own policy, and the country remained bereft of a true ruler.

The Crusaders' attempt to reconstruct the ruins of Ashkelon terminated with their defeat in the battle of Gaza (November 1239). Meanwhile, the sultan Ismail of Damascus convinced them to enter into a treaty with him against Ayyub, ruler of Egypt and stipulated he would return to them Beaufort (Qal'at al-Shaqīf), Safed, and Tiberias in Galilee. During the period of mutual political intrigues, Egypt called upon the assistance of the Khwarizmian Turks, who were then in flight from the Mongols. They overran the country, captured Jerusalem from the Crusaders (August 1244), and dealt them a crushing blow at the battle of Hirbiya (Forbie) near Gaza (October 1244), later destroying Galilee. Jerusalem, which was annexed to Egypt, and Judea and Samaria, which were annexed to Transjordan, were never again returned to the Crusaders. Later still (1247), the Egyptians also captured Tiberias and Ashkelon.

The days of the Crusader coastal kingdom were now numbered by the rise of the Mamluks in Egypt (1250), which brought to power a strong military class. With the appearance of a new factor in the Middle East – the Mongols, whose commander (Hulagu) conquered Baghdad in 1258 – it appeared that a Mongolian-European Christian pact that would help the Crusaders withstand the Muslims (rumors circulated that there were numerous Christians among the Mongols) was in the offing. The Crusaders, however, did not exploit the presence of the Mongols and adopted a neutral stance in the severe clash between the latter and the Mamluks of Egypt. In 1260 the Mongols suffered a blow in the battle of Gaza and later a crushing defeat at 'Ayn-Jālūt (En-Harod), which routed their army. A result of the neutral stance of the Crusaders was that they now faced Baybars, the great ruler of Egypt, who slowly but surely captured one fortress after another. Once again the remnants of the Kingdom of Jerusalem did not cooperate with each other and made separate treaties with the conqueror, in order to preserve their meager possessions. Eventually Acre, the center of the kingdom, fell, after a period of siege (April–May 1291), to Al-Malik al-Ashraf the Mamluk. The last fortress, that of Atlit (the Castle of the pilgrims), was abandoned soon after. The period of the Crusades thus came to a close in Palestine.

THE JEWISH POPULATION. During the period of Crusader conquests, the Jews cooperated with the Fatimid forces and the urban Muslim population. Rumors of the murder and pillage perpetrated by the Crusaders upon the Jewish communities in the Rhine area reached the East and gave rise to messianic expectations, which were in turn nourished by the naive belief that the First Crusade served only to gather the nations of

the world into the Holy Land in order to destroy them in war ("the war of *Gog and Magog"). Christian sources from that period first mention Jews in connection with the defense of Jerusalem. The Jewish quarter, founded in the 11th century in the northeastern section of the city (between Damascus Gate and the Valley of Jehoshaphat), was the first to be attacked and invaded by the troops of Godfrey of Bouillon. Only a very few survived the terrible carnage and the burning of the synagogues (together with those who sought refuge within them). The Jews are mentioned again in connection with the defense of Haifa in 1100. The Jewish community there enjoyed special conditions conferred upon it by the Fatimids. It is said that Tancred, who retreated from the walls of Haifa, did not attempt to besiege it again until he was admonished that failure to conquer this city defended by Jews would make a mockery of the God of the Christians. The Crusader armies and the Venetian sailors likewise slaughtered the Haifa community.

Contemporary letters and edicts and fragments thereof discovered in the Cairo *Genizah* (some of which have been published by S.D. Goitein; see bibliography) provide more than a glimpse into the life of the Jewish community in Erez Israel under the Crusader rule; they add much to the (sometimes) later descriptions from the non-Jewish sources. A letter found in the *Genizah* describes the fall of Jerusalem, the ransoming of the captives, and the relief efforts on behalf of the refugees who fled with the Fatimid commander. Leaders of the Jewish community in Ashkelon dispatched the letter to the Alexandrian community, begging it to cover the debts incurred by the Jews of Ashkelon in connection with their relief work. A second letter was written by a pilgrim to Erez Israel, who, it may be presumed, came from the Maghreb (North Africa) or Spain. He proceeded as far as Cairo but could not move to Jerusalem because the Holy City had been captured by the "Franks … who murdered all who were in it – Ishmaelites and Israelites. The few who remained after the slaughter have been captured. Some of those have been ransomed and some are still in captivity." He goes on to express the hope that the sultan will defeat the enemies and he will be able to visit Jerusalem soon. Another letter, written in the winter of 1099/1100 by the *av bet din* of the academy, a scion of the Ben Meir family, deals with ransoming members of his family. The writer regards the conquest as an affliction. Indeed, a long letter sent from Erez Israel to Egypt in the first decade of the 12th century informs that conditions changed for the better for those who remained in the country, and the writer would like to renew business relations with his relative and friend. A letter written (in Tyre) to the *dayyan* of Fostat in 1100 includes a short description of the siege of Beirut as related by a fugitive who left the city by night. It seems that all of the 35 Jewish families who lived there were massacred.

Tyre and Banias in the north and Ashkelon and Rafa in the south, which still withstood the Crusaders, absorbed many of the refugees from the massacred communities, while others fled to Egypt. It may be assumed that the communities located in the agricultural region, such as Galilee, suffered minimally from the Crusader conquests. Despite their generally difficult situation, the Jewish settlements still made their influence felt and instances of conversion to Judaism were recorded, such as that of Obadiah the Norman, who remained for a time at Banias and Tyre (when those cities were in Muslim hands). Once the period of military conquest had ended, the Jewish communities began to reconstruct their lives. Their status was enhanced somewhat by the immigration movement from Europe, which was in turn encouraged by improved maritime transportation between the two areas. The legal status of the Jews under the Crusader code, which did not differ from that of Syrian-Christians and Muslims, also helped renew Jewish life in Erez Israel, for inasmuch as the Muslims constituted the majority of the population and the Crusaders' continued existence depended upon them, the Crusader code was very tolerant with respect to infidels. This was in contrast to the hostile attitude of European Christianity toward the Jews that was taking shape in the 12th century. Only in Jerusalem did the Crusaders revive the Byzantine edict that forbade Jews to live within the holy city, and, indeed, only a few families settled there by special permission of the king of Jerusalem.

Various travelers (including *Benjamin of Tudela) who visited Palestine during the second half of the 12th century left descriptions of the conditions of the Jewish communities there. These descriptions are confirmed by the finds in the Cairo *Genizah*. The most important of these communities was Tyre, which apparently continued to exist even after the Crusader conquest. It was an organized community whose leaders and scholars exchanged letters with Maimonides in Egypt on halakhic matters. Next in importance was the Acre community, whose scholars also maintained contact with Maimonides, and third came the Jewish community in Ashkelon, which may not have been destroyed after the surrender of the city to the Crusaders in 1153. The remainder of the Jewish settlements of the period were very small. There were small communities in the coastal cities of Beirut, Sidon, and Caesarea. The cities of Galilee had only the isolated communities of Tiberias in the 12th century and Safed in the 13th century. A letter that mentions the "regnant Dame" of Tiberias (the allusion being to Eschive, who ruled in Tiberias before 1187) has been found in the Cairo *Genizah*. There were also rural Jewish settlements in Galilee: Gush Ḥalav, Almah, Kefar Baram, Amkah, Kefar Ḥananyah, Kefar Tanḥum, Meron, Dalta, Biriyyah. The small communities of Zarʿin, Nablus, Belt Nuba, and Bet Guvrin were scattered in Judea and Samaria. Although the Jewish community in Erez Israel did not intentionally abandon its former settlements, it increasingly concentrated in the Christian area of the coast cities. This move may have been motivated by economic factors, as opportunities for artisans and tradesmen were more abundant in the ports.

Saladin's conquests and those of his successors, the *Ayyubids and the *Mamluks, diminished the territorial scope of the Crusader kingdom and wakened messianic hopes among the Jews in Europe and the East. An important manifestation of the period was the immigration to Palestine from the Dias-

pora. Many of the refugees of the Crusades longed to return to the Holy Land. The scant information that has been preserved about the 12th-century immigration deals not so much with actual immigration as with visits to the Holy Land (in the 1260s and 1270s) by travelers such as Benjamin of Tudela, *Pethahiah of Regensburg, and R. Jacob b. Netanel Hacohen. Parallel to the unceasing flow of visitors during the 13th century (Judah *Al-Ḥarizi), a trickle of immigrants began to settle. Furthermore, two rather short-lived spiritual centers were created in Jerusalem and Acre. This new movement was probably encouraged by the Crusaders' inability to defeat Saladin and was likewise sustained by the waves of persecution that plagued European Jewry at that time. The Jewish population in Jerusalem, which was limited to a few families during the Crusader occupation, expanded markedly after Saladin's conquest (1187). According to Judah Al-Ḥarizi, who visited Jerusalem (1218), Saladin immediately published a proclamation calling the Jews from all over the world to come and settle in the capital. In his time the Jerusalem community consisted of scholars from France; a fine congregation from Ashkelon (apparently refugees from the Jewish community destroyed there in 1191), led by a Yemenite "prince"; and a large congregation from North Africa, where there was an increase in persecution at the end of the 12th century.

Sources from the Cairo *Genizah* add interesting details to the observations made by Judah Al-Ḥarizi. The fragments published by Braslavi (*Erez Yisrael*, 4 (1956), 156–9) include the names of other French scholars who lived in Jerusalem during the period. A proclamation by Saladin reducing the custom duties to be paid by non-Muslims by half, mentioned in a letter, was no doubt an invitation for Jewish merchants to settle in the conquered area. A letter from 1214 clarifies some of Al-Ḥarizi's remarks about the Jerusalem community. It expressly mentions the synagogue of the "Son of the Yemeni" and ends with greetings for the "Ashkeloni and Maghrebi elders." The first immigration wave from Europe included the "300 French and English rabbis" who immigrated in 1210–11 and settled in Acre. Among them were learned scholars from the ranks of the tosafists, such as R. *Jonathan ben David ha-Kohen from Lunel and R. *Samson of Sens.

The renewed Jerusalem community was short-lived. During the occupation of Jerusalem by the Christians (1229–39, 1243–44), the Jews were not initially allowed access to the city. In about 1236 a special agreement permitting them to visit the Holy City was arranged; it included a special permit for Jewish dyers to settle in Jerusalem, and their presence in the city is mentioned by Benjamin of Tudela and Pethahiah from Regensburg. It may be assumed that the destruction of the city in 1244 by the Khwarizmian Turks caused the simultaneous demise of its Jewish inhabitants. Naḥmanides' immigration to Jerusalem in 1267 stimulated efforts to revive the community, and many students flocked to him from distant places in the East. He completed his commentary to the Pentateuch in Jerusalem. He left Jerusalem for Acre and his death in 1270 apparently brought the Jerusalem community's revival to a halt. At a later period a legend arose about the "Naḥmanides synagogue" in Jerusalem that attempted to ascribe the revival and uninterrupted existence of the Jerusalem community to Naḥmanides.

The development of the Acre community stood out in contrast to Jerusalem's deteriorated condition. Part of the 1210–11 immigration settled in Acre, and later waves were also absorbed there for the most part. Among its important settlers was R. *Jehiel of Paris, who immigrated after 1257 and apparently succeeded in founding a yeshivah in Acre called "*midrash ha-Gadol*" of Paris. Emissaries from the city collected funds in various European communities. The Acre community also maintained connections with R. Solomon b. *Adret and R. *Meir b. Baruch of Rothenburg and played an important role in the second disputation on the writings of Maimonides. The *nagid* *David ben Abraham, grandson of Maimonides, lived in Acre for a considerable time during his exile from Egypt (1284–89) and there met R. Solomon Petit, the most active opponent of Maimonides' doctrines. David used all his influence to procure the issue of a ban (1287) against Solomon by the *nasi* of Damascus as well as a letter against him from *Samuel ben Daniel ha-Kohen, the *Gaon* of the Baghdad Academy (1288). This controversy confirms the existence of a religious center at Acre. The community was almost completely wiped out during the conquest of the city by Al-Malik al-Ashraf in 1291.

As to the economic activities of the Jewish community at the time, the majority of the Jews were artisans, particularly dyers of woven fabrics (dyeing was then a royal monopoly). Another skill practiced particularly by Jews was the blowing of the famous Tyre glass. They also figured among ship owners, as well as druggists and physicians. In contrast, Jews played a minor role in the great Mediterranean international trade (an Italian monopoly), although there were Jewish merchants and peddlers among the local tradesmen.

[Haïm Z'ew Hirschberg / *Encyclopaedia Hebraica*]

Mamluk Period (1291–1516)

When the country again returned to the total rule of the Muslims, its importance in international politics was lost for hundreds of years. Al-Malik al-Nāṣir Muhammad was ruler in Egypt and his governor, Tangiz, longtime omnipotent ruler in Syria and Ereẓ Israel, maintained order and security in the country and constructed waterways and public buildings. Mamluk rule was undermined after the death of Al-Malik al-Nāṣir, and at the beginning of the 15th century disagreement among the chief ministers led to civil wars that wreaked havoc in the Syrian territories. In the middle of the same century, during the rule of the sultans Al-Malik al-Ashraf Barsbāy (1422–38) and Al-Ẓāhir Sayf-al-Dīn Jaqmaq (1438–53), Ereẓ Israel again enjoyed a short period of respite, followed by the increased disintegration of Mamluk rule.

The two-and-a-half centuries of Mamluk domination in Ereẓ Israel brought about little change in the administration of the country. Syria and Ereẓ Israel were divided into large

provinces (*niyāba*), which in turn were divided into districts. Each province was headed by a "deputy king" (*nāʾib*) and each district (*wilāya*) by a governor (*wali*). The province of Safed included the districts of Safed, Nazareth, Tiberias, Tibnīn, Athlit, Acre, Tyre, al-Shāghūr, al-Iqlīm al-Shaqīf, and Jenin. It was, in effect, an enclave in the larger province of Damascus, which included a great part of Erez Israel, i.e., the northern districts of eastern Transjordan (Edrei, ʿAjlūn, al-Balqāʾ, Banias), the Beth-Shean district, and the districts of central and southern Erez Israel (Shechem, Qāqūn, Jerusalem, Hebron, Ramleh, Lydda, and Gaza). Various changes were introduced in the administration of the southern districts in the second half of the 14th century. The status of the governor of Jerusalem was raised, and Hebron was added to his district; a special governor, directly responsible to the government in Cairo, was appointed for Ramleh, and Lydda and Qāqūn were added to his district. Because Gaza periodically became an independent province, the status of this district underwent frequent changes. Eastern Transjordan was under the jurisdiction of a special province, Kir Moab (al-Kerak).

Sources from the 14th and 15th centuries attest that the economic structure of Erez Israel remained essentially unchanged during the last centuries of the Middle Ages. The author-prince Abu al-Fidāʾ, who visited the country in 1312, describes the fruit of Erez Israel as export produce. The geographer Al-Dimashkī and a traveler, Ibn Baṭuṭah, both of the 14th century, report that olive oil and soap made from it were the most important products of Erez Israel. Al-Qalqashandī (15th century) relates that there were sugar plantations in the Jordan Valley, and the Burgundian traveler Bertrandon de la Broquière, who visited in 1432, recounts that cotton was cultivated in the Beth-Shean Valley. When the last vestiges of Crusader rule were eliminated, Erez Israel again had no share in the international spice trade, which in the past had been a source of great profits for its inhabitants.

The Mamluks destroyed Acre, Jaffa, and the other coastal cities for fear that they would be used as aids in renewed Crusades. Jaffa remained in ruins until the end of the Middle Ages, while a small settlement was established in Acre in the 15th century. Tiberias and Ashkelon were also partly in ruins at the end of the Middle Ages. Fabri, who visited Erez Israel in 1480 and 1483, found many places in Jerusalem in ruins. According to Obadiah of *Bertinoro, who reached Jerusalem in 1488, the city contained about 4,000 householders, among whom the 70 Jewish heads of families were the poorest of all, lacking any livelihood (A. Yaari, *Massaʿot Erez Yisrael* (1946), 127). According to information from the period of early Mamluk rule, Ramleh was a large city with a flourishing trade; but visitors to Ramleh from the end of the 15th and to the beginning of the 16th century related that it, too, was progressively declining into ruin. All the sources attest that Gaza was a flourishing trading town, about twice the size of Jerusalem. Gaza, Ramleh, and Nablus (Shechem) were apparently the largest towns in Erez Israel at the end of the Middle Ages.

Erez Israel did not play an important role in Arabic cul-
Map 3. The Land of Israel under the Mamluks (14th century C.E.). After Atlas of Israel, Survey of Israel, 1970.

tural life during the period, but various sources attest that there was no lack of learning and education in its towns. The Mamluk sultans and their ministers continued to establish *madrasas* (schools) for instruction in religion and allocate funds for the maintenance of their teachers and students. The number of *madrasas* established in Erez Israel by the end of the

Middle Ages reached 50, of which 43 were in Jerusalem. From a religious point of view, the Mamluk period stamped Ereẓ Israel with the characteristic that has distinguished it up to modern times. It became an orthodox Muslim country, while the number of its Shiʿites progressively decreased. Its distance from the ruling centers, on the one hand, and the espousal of religious fanaticism in the *madrasas*, on the other, gave rise to the prominent role played by religion in the daily life. There were periodic complaints by Muslim extremists, which often resulted in lengthy controversies, that the Christians had enlarged their churches in disregard of the Muslim law. Similarly, Jerusalem (from 1473 on) was the scene of a prolonged controversy between the Muslims and Jews over the latter's right to a particular synagogue, which was eventually destroyed by the Muslims (see below). At the same time, the more gifted among the inhabitants would leave Ereẓ Israel for Egypt and Syria. Arabic sources mention a number of Muslim religious scholars who were born or were active in Ereẓ Israel and several local Arabic writers in different areas. Only a few of them, however, were of any significance. Among these, special mention should be made of Mujīr al-Dīn al-ʿUlaymī (1456–1521) who was a judge in Jerusalem and Ramleh and wrote a work on the history of Jerusalem and Hebron.

A number of magnificent buildings were constructed by the Mamluk sultans and their representatives out of a desire to perpetuate their names, even in a forsaken province such as Ereẓ Israel. Fine examples of Muslim architectural art of the period are the tower on the site of the White Mosque in Ramleh, of which only remnants have remained. Others are Bāb al-Qattānīn in the Haram area of Jerusalem ("the cotton-workers' gate"); Qāʾit bāy Sabīl ("the fountain of Qāʾitbāy") on the Temple Mount; and the Tankiziyya *madrasa* near the Western Wall (first half of the 14th century). Also worthy of mention are the Mamluk bridge, the "Jisr Jindās" (second half of the 13th century), which still serves traffic near the town of Lydda.

At the end of the Mamluk period, the security of Ereẓ Israel was undermined, and a worsening of the economic situation ensued. The wars against the Ottomans compelled the Mamluk rulers to seek additional sources of income (e.g., confiscating oil from the farmers in the Nablus district and then forcing the residents of Jerusalem, Hebron, and Ramleh to buy it at exorbitant prices) and to conscript the Bedouin tribes for military service. Such actions caused rebellions among the populace who sometimes even left their permanent places of residence to hide in the mountains and deserts. In the last decade of the 15th century the Bedouins in the Beth-Shean district and Transjordan rebelled. Apart from political and economic upheavals, there were also natural disasters. Arabic sources record the outbreak of plagues in 1438, 1469, 1476, and 1492; a locust plague in 1484, which laid the land waste; and earthquakes in 1458 and 1497. The hardships endured by the people and their dissatisfaction with the authorities gave rise to the general hope that the annexation of Ereẓ Israel to the Ottoman state would result in a change for the better.

JEWISH COMMUNITY. After the wave of bloodshed perpetrated by the Crusaders at the beginning of their conquests, there was a period of respite and gradual recovery among the small and impoverished Jewish communities that managed to survive the difficult times. Gradually, pilgrims began to visit the land and refugees returned to settle there. However, as the Mamluks destroyed the ports that had served the Crusaders as important centers of trade with Europe and the inland towns lost their importance in overland international commerce, the Jews had difficulty in supporting themselves in the large settlements and were scattered in small towns and villages throughout Ereẓ Israel and even Transjordan. R. *Estori ha-Parḥi, a refugee from France (1306) who settled in Beisan during the first half of the 14th century and was the first to study the land, several times makes mention of small Jewish communities in Ereẓ Israel in his book *Kaftor va-Feraḥ.* He even made trips into Transjordan and became acquainted with the communities in Edrei, ʿAjlūn, Salka, Ḥabram (Amrawa). In western Ereẓ Israel he found Jews in Jerusalem (where he lived for some time), Lydda, Ramleh (which he calls Gath), Gush Ḥalav, and Safed. In addition to Rabbanite Jews, he also mentions the Ṣadducees, i.e., Karaites, as well as the Samaritans. He makes special mention of *pilgrimages to Jerusalem from the neighboring countries: Sin (i.e., Syrian Tripoli), Hama, Aleppo, Damascus, Cairo, and Alexandria. There is information from the second half of the 14th century about Jews who lived in Miẓpeh Shemuel (i.e., Nabī Samwīl) near Jerusalem. It is evident, however, that these settlements lacked the economic basis required for peaceful development.

Despite the difficult political and economic conditions in Ereẓ Israel, the Jewish community began to strengthen and consolidate from the beginning of the 15th century, especially in Jerusalem. This caused a reaction on the part of the Franciscan friars, who held the cenaculum above the Tomb of David on Mt. Zion. Properties belonging to the Jewish community were also situated on Mt. Zion. The *Franciscans accused the Jews of having dispossessed them of their share of the tomb, and in 1428 the pope issued an order forbidding the fleets of Italian towns to transport Jews to Ereẓ Israel. The dispute over the ownership of the Tomb of David continued for an extended period (see *Jerusalem) and resulted in great difficulties in Jewish immigration by sea and the renewal of the prohibition against transporting Jews in Christian ships (c. 1468). R. Isaac Sarfati (second half of the 15th century), in a famous letter (whose exact date is unknown), calls on the Jews to settle in Ereẓ Israel, suggesting that they make their way overland for "indeed the way of Turgemah is the way to the land of life, all of it overland until Jerusalem, there is only a passage of six miles through the sea" (A. Jellinek (ed.), *Zur Geschichte der Kreuzzuege* (1854), 20–21). The German traveler Ruter (1479) gives the details of this route: "Following is the description of the overland route from Nuremberg and its neighboring districts to Jerusalem, as described to me by a Jew in Jerusalem who took this road a long time ago. The route can be traveled in great safety. Most of the Jews who come from the

lands of Germany to Jerusalem make their way overland …
from Nuremberg to Posen … Lublin … Lemberg … through
Wallachin to Chocim (?) … Akerman (on the shore of the
Black Sea) … Samsun (Turkey) … Tukat … Aleppo … Da-
mascus … Jerusalem" (J. Braslavsky, *Le-Ḥeker Arẓenu* (1954),
142; R. Roehricht and H. Meisner (eds.), *Deutsche Pilgerrei-
sen nach dem Heiligen Lande* (1880), 112–3). This description
explains the presence of settlers from Central and Southern
Europe in Jerusalem.

The suffering of the Jews of Spain and the Balearic Islands
at the end of the 14th and the beginning of the 15th century, even
before the expulsions in 1492 and 1497, increased the immi-
gration from hostile countries. Members of their communi-
ties could be found in the major cities of Ereẓ Israel even be-
fore the Ottoman Turks conquered it. It appears that some of
these settlers were Marranos. Obadiah of Bertinoro explicitly
states that he found Marranos in Jerusalem and Hebron who
had "returned to the fold" (the Spanish refugees in Safed will
be discussed below). Many of the details about the popula-
tion at this time are known from the letters and travelogues
of Italian Jews who were then living in Ereẓ Israel: R. *Elijah
of Ferrara (1435); R. *Meshullam of Volterra and R. Joseph
de Montagna (both 1481); R. Obadiah of Bertinoro and his
anonymous disciple (1490–95); R. Israel of Perugia (1517–23);
R. Moses *Basola (1521–23). In addition to the settlements al-
ready noted, mention should also be made of Kefar Kannā
(near Nazareth), where about 38 families lived. R. Obadiah
records that 70 families were living in Gaza. According to R.
Joseph de Montagna (A. Yaari, *Iggerot Ereẓ Yisrael* (1943), 91)
in 1481 there were 300 Jewish families in Safed, more than
four times the size of Jerusalem's Jewish population. A "letter
about the matter of *shemittah* from the sages of Safed to the
rabbis of the holy yeshivah of Jerusalem" from 1504 has been
preserved and shows that even before the great influx of refu-
gees from Spain into Safed, there were revered scholars in the
town, headed by R. Perez Colombo (for Safed, see also Yaari,
ibid., 152), and R. Joseph Saracosti (of Saragossa), teacher of
David ibn Abi Zimri.

According to the detailed description by Obadiah of Ber-
tinoro, the economic situation of the Jews of Jerusalem was
severe. The heavy tax burden led the wealthy and the schol-
ars of the community to leave the city. Out of 300 Ashkenazi
and Sephardi families, only 70 of the poorest remained, of
whom only the artisans – strap makers, weavers, or smiths –
and traders in spices and medicines made a scant living. The
burden of taxes and levies, to the extent that Torah scrolls
and religious objects had to be sold, was connected with fines
and bribes that the community had to pay in order to save
the synagogue (named after Naḥmanides, near the Ḥurvah
Synagogue) from the Muslims, who destroyed it in 1474 (see
*Jerusalem).

In view of the poor moral and economic situation, the
nagid Nathan *Sholal also left Jerusalem and returned to
Egypt, where he met Obadiah of Bertinoro. Nevertheless,
Obadiah praises the relations between Muslims and Jews in
Jerusalem and emphasizes that in all his travels he did not
come across Muslim hostility toward the Jews. According to
him, if there had been a wise Jew possessing political acu-
men in Ereẓ Israel, he could have been "a minister and judge
both for the Jews and for the Ishmaelites" (Yaari, *ibid.*, 128).
Obadiah also reveals some of the ignorance and crudeness
rampant in Jerusalem in his time. Learning had decreased in
these generations, and the scholars who are still remembered
are very few. At the beginning of Mamluk rule, Tanḥum b. Jo-
seph ha-Yerushalmi (d. 1291 in Cairo), an exegete and gram-
marian who wrote his works in Hebrew, lived in Jerusalem.
He also composed a lexicon to Maimonides' *Mishneh Torah*,
of which only the introduction is extant. The importance of
R. Estori ha-Parḥi's work *Kaftor va-Feraḥ* lies not only in the
geographic-historical information it contains, but also in the
opinions and decisions on the *mitzvot* of Ereẓ Israel discussed
therein. R. Elijah of Ferrara (settled in 1435) disseminated the
teachings of Maimonides, the Mishnah, and the Talmud with
tosafot in Jerusalem and was also appointed a *dayyan* and
received questions from Cairo, Alexandria, and Damascus.
Obadiah of Bertinoro, according to his own account, served
as a gravedigger, for there was no one to perform the rites of
burial. He was, in effect, the rabbi of Jerusalem – where he also
wrote his commentary to the Mishnah. Two Sephardi pupils
studied with him regularly, and there were two Ashkenazi rab-
bis in the city. According to the testimony of his anonymous
pupil, the situation in Jerusalem greatly improved because of
Obadiah's activities.

The system of *takkanot* in Jerusalem continued after
Obadiah's death (c. 1500) and lasted until the Ottoman con-
quest. The extant version of the *takkanot* was preserved by R.
Moses Basola (d. 1572) who copied them from the calendar
of the synagogue in Jerusalem. One of the most important
takkanot was that according to which scholars were exempt
from taxes, even if they were wealthy, except for the head tax.
In matters of controversy their cases would be brought to the
court of the *nagid* in Egypt. This *takkanah* was apparently
first formulated by the *nagid* R. Isaac *Sholal (nephew of R.
Nathan Sholal) in 1509.

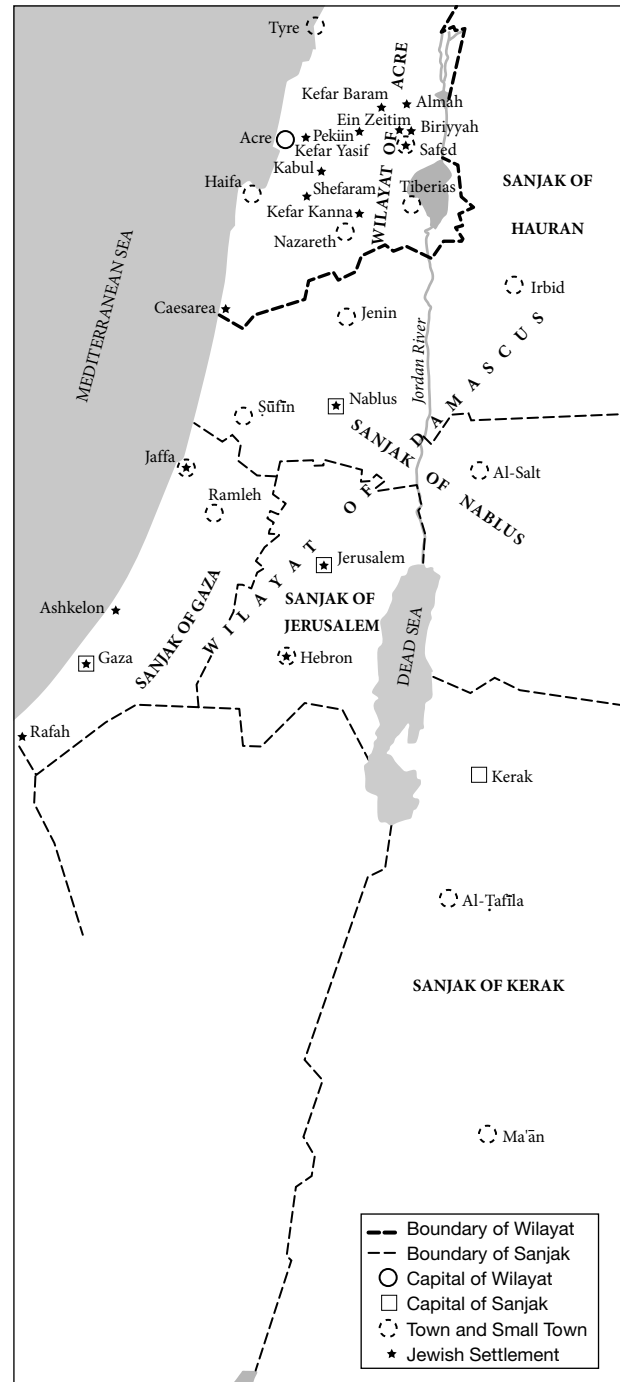
Isaac Sholal went to Jerusalem a short while after the
Ottoman conquest of Cairo. R. Abraham ha-Levi had settled
there even earlier and had been known before his immigra-
tion as an outstanding scholar and kabbalist. The expansion
of the Ottoman Empire in the time of Selim I indicated to him
the forthcoming downfall of the "Edomite" kingdom, and he
prophesied the coming of the messiah in 1530 or 1531.

[*Encyclopaedia Hebraica*]

Ottoman Period

THE GOLDEN PERIOD OF OTTOMAN RULE (1517–1574). Se-
lim I (1512–20), who manifested the same qualities as his
grandfather, Muhammad (II) the Conqueror, did not con-
tinue his predecessor's attack on Europe. He was "a man of the
Eastern front," as one historian describes him, and during his
rule the Ottoman territories were doubled through conquests

in Asia and Africa. His first campaign was waged against the Persian shah Ismail I, founder of the Safawid dynasty. After defeating him in 1514, Selim pretended he was preparing for a second military campaign against Persia and complained that the Mamluk sultan was conspiring against him together with the "infidel" Safawids, who belonged to the Shiʿite sect. Selim apparently received authoritative reports about the decline of the government in Egypt and intended to entice the Mamluks into leaving their country, extending far from their supply bases in Africa, and attacking him in Asia. This stratagem succeeded: in May 1516 the aged Mamluk sultan Qanṣūh al-Ghawri went to Syria to fight against Selim and in the battle that broke out on Aug. 24, 1516, in the Valley of Dābiq (near Ein Tāb) in northern Syria, the Egyptians were decisively defeated. As a result, Selim gained all the large cities of northern Syria: Aleppo, Ḥama, Homs, and Damascus. From Damascus, Selim sent out commanders to take control of the neighboring districts. Druze chiefs and Bedouin sheikhs from all over Syria arrived there to swear allegiance to the new ruler and the great vizier Sinān Pasha, who left Damascus to conquer Gaza. Even before the end of 1516, the entire country was apparently under Selim's control. At the beginning of 1517, when Selim embarked on his campaign against Egypt (of which he gained control after a military victory), he visited Jerusalem.

At the beginning of the rule of Selim's son, *Suleiman (I) the Magnificent (the Law Giver in Arabic) (1520–66), the wali of Syria and Ereẓ Israel, Jan-Birdi al-Ghazālī, rebelled against him, believing the time had come to overthrow the yoke of Ottoman rule and establish a sovereign kingdom in Syria and Ereẓ Israel. Some scholars maintain that he exploited the ferment among the population that resulted from the poor economic situation. However the wali was killed by the Ottomans, and his head was sent to Constantinople. Calm was restored in the rebellious districts, the roads that had been impassable during the war were again safe, and the movement of trading caravans to Egypt was renewed. A letter by R. Israel of Perugia (written shortly after the conquest) indicates that the Jerusalem community suffered from the general disorder that resulted from the rebellion (A. Yaari, *Iggerot Ereẓ Yisrael* (1943), 177). Subsequent to the rebellion, all native-born walis were removed from their posts, and thereafter all responsible positions in the government were held only by Ottomans. The military and civilian administration was established according to the Ottoman system evolved by Suleiman the Magnificent. The conquered territories were divided among the Ottomans as military feudal states, and the feudal lords were required to join the battle as cavalry, bringing with them auxiliaries in proportion to the size of their states. The cavalries of the entire region were united under a standard (Turk. *sanjak*, Ar. *liwāʾ*) and in battle were under the command of the *sanjak bey* (Turk. "lord of the standard") or the *mir-liwāʾ* (same in Ar.). This commander was at first appointed from among the cavalry. The external symbol of his position was a banner, with a golden ball on top and a horsetail below it.


Map 4. *The Land of Israel under Ottoman rule (17ᵗʰ century C.E.). After* Atlas of Israel, *Survey of Israel, 1970.*

With the growth of the Ottoman Empire and its expansion beyond the regions of Anatolia, it was necessary to adapt the administrative organization to the new conditions. The number of the sanjaks increased, and it was useful to appoint deputies to the sultan with a rank higher than that of the *sanjak bey*. They were placed in charge of an area including a number of sanjaks and served as intermediaries between the

highest authority and the districts. The first 50 years after the conquest of Ereẓ Israel were the decisive years in the evolution of the new organizational framework of the empire. The organizational framework of the *iyāla* (i.e., the authority) or the *wilāya* or vilayet (the "rule" of the district) was probably also established then.

Ereẓ Israel was divided into four sanjaks: Jerusalem, Gaza, Nablus, and Safed. Each sanjak was an organizational, military, economic, and judicial entity. For practical purposes the sanjak was divided into a number of rural regions (*nāḥiya*). In the sanjak of Jerusalem there were two regions: Jerusalem and Hebron. The sanjak of Gaza was at first divided into three regions: Gaza, Ramleh, and Lydda, but according to the second *deftar* (assessment), Lydda was joined to the Ramleh region. In the sanjak of Nablus (Shechem) there were four regions: Jebel Shāmī (the northern mountain, i.e., Mt. Ebal), Jebel Qiblī (the southern mountain, Mt. Gerizim); Qāqūn, and Banī Saʿab. The *deftar* of 1533–39 also mentions the region of Marj Bani ʿAmir (Valley of Jezreel), but according to the *deftar* of 1548/49 this was annexed to the Tiberias region. In the sanjak of Safed there were at first six regions: Safed, Tibnīn, Tyre, Shaqīf, Acre, and Tiberias; later Tyre was annexed to Tibnīn.

The constitution of the province of Damascus, which included Ereẓ Israel, was established in the *qanun-name* of Suleiman (1548). In contrast to the disorganization and lack of security that characterized the end of the Mamluk period, Ereẓ Israel now enjoyed a secure rule and regulated organization. The improvement in the general condition was also manifested in agriculture, which was improved where it previously existed but was not expanded into desolate areas. Censuses conducted during the first 50 years after the conquest show that the population of Ereẓ Israel doubled, reaching approximately 300,000, and only a fifth to a quarter of the population lived in the six towns: Jerusalem, Hebron, Gaza, Ramleh, Nablus, and Safed. The remainder were primarily farmers living in villages, and some were Bedouin and seminomad who worked the land only seasonally and temporarily. The Bedouin also engaged in collecting a variety of plants for medicine, resin, and the burning of the kali, using its ashes for the manufacture of soap. The major agricultural products of the field were wheat, barley, maize, and different strains of beans (which served as food for man and beast (vetch)), vegetables, cotton, and sesame. The orchards produced dates, figs, pomegranates, berries, olives, apples, pears, and nuts. Fruit was also used for fruit honey. The Jews and Christians produced grape wine, as well as grape honey, which were permitted for the Muslims. The sources also make frequent references to beehives. Cattle breeding was undertaken mainly by the Bedouin, as well as by the fellahin and the residents of urban settlements. There were many jamus (buffalo) in the area of the Ḥuleh swamps, and fishing was popular in the settlements near the Ḥuleh and Lake Kinneret, as well as a few points on the shores of the Mediterranean (Acre, Jaffa).

The growth of the population, the expansion of cultivated lands in villages and the outskirts of cities, and the cultiva-

tion of orchards and olive trees led to the expansion of agriculture. There was an increase in the number of oil presses for the production of olive and sesame oils and for extracting fruit juices for the preparation of fruit honey. Together with oil production came the manufacture of soap, which was well known for its quality throughout the Middle East. The windmills operated regularly. Apparently at the initiative of the Jewish immigrants, new branches of industry were established in Safed, e.g., the manufacture and dyeing of cloth and felt. Information about these fields is also supplied by the tax lists in the canuns and the *deftars* of private censuses of the centers of these industries and the countries to which the products were exported. Especially noteworthy were the taxes that were levied on olive oil produced in Jerusalem and Ramleh and on the soap from Jerusalem exported to Egypt. The soap factory in Hebron was the property of the *waqf*. The center of the weaving and cloth dyeing industry was in Safed and its environs, although dyeing was also carried out in Kafr Kann, Nablus, and Gaza. In addition, there were tanneries in Nablus and Ein Zeitim. The fact that a special tax was levied on berry trees indicated that they were apparently cultivated for the feeding of silkworms. In fact, silk spinners are mentioned in a number of places. With the expansion of the cultivation of cotton in Ereẓ Israel, spinning began in Majdal, Lydda, Nablus, and Acre. Apart from the crafts undertaken by the Jews during the period of Mamluk rule, the Christians in Jerusalem, Bethlehem, and neighboring villages engaged in the home manufacture of religious objects (from wood and shells), which were sold to pilgrims on their visits to Ereẓ Israel or exported for sale abroad.

New Developments in the Jewish Communities. The writings of R. Moses Basola (who visited Ereẓ Israel in 1521/22) testify that Jerusalem grew in his time as a result of the Spanish immigration. According to his estimate the Jews of Jerusalem numbered about 300 families, not including widows, who numbered no more than 150 and were not subject to taxes, thus enjoying a comfortable income. About 200 people were supported by charity from public funds and from funds collected in the Diaspora. From 1502 to 1524 the community was headed by the *nagid* R. Isaac Sholal. The detailed Ottoman *deftar* of 1525–26 dealing with the *jamʿāti yahudyin* (the Jewish community) contains a detailed listing of 199 names of householders, excluding bachelors, and it can be assumed that not all of Jerusalem's Jewish residents were included in this census. The community was then composed of four groups: (1) the Ashkenazim, numbering 15 families descended from the Ashkenazim who had lived there since the time of Maimonides, joined by immigrants from Europe (the Italians were counted together with the Ashkenazim at that time); (2) the Sephardim, refugees of the expulsion who were the majority in the city; (3) immigrants from North Africa, known as Maghrebis; and (4) *Mustaʿrab (the Moriscos), longtime residents, descendants of the local inhabitants who had never left Ereẓ Israel. Among the *dayyanim* and scholars, includ-

ing members of all the communities, there were often differences of opinion regarding the arrangement of prayers, the synagogue, etc. According to R. Israel Ashkenazi, after the conquest spiritual hegemony passed from the Mustaʿrabs and Maghrebis to the Sephardim.

In the center of the country there was still a Jewish settlement in Nablus, and in the south there were settlements in Hebron and Gaza. The community of Safed comprised more than 300 householders, whose economic situation, according to R. Moses Basola, was good. There were three synagogues: a Sephardi, a Mustaʿrab, and a Maghrebi. With the aid of the Jews of Egypt, the Jews of Safed managed to survive the difficult transition period of Mamluk retreat and Ottoman conquest. Jews also lived in the villages of Galilee: Ein Zeitim (four householders); Birya (Biriyyah, 19 families); ʿAlmāh (18 families); Peki'in (33 householders); Kafr Kannā (40–50 families); Kefar Ḥananiah (14 families); and Kefar Yasif, Shepharam, and Kābūl. It is estimated that there were about 1,000 Jewish families (i.e., 5,000 persons) in Erez Israel at the beginning of the Ottoman conquest. The transition period gave rise to messianic hopes among the Jews of both Erez Israel and the Diaspora. In 1523 David Reuveni and Shelomo (Solomon) Molcho arrived in Jerusalem bringing tidings of the forthcoming redemption. When he was in Portugal (1526), David Reuveni asked the king John III: "Help us and let us go out to battle against the provoking Suleiman and take the Holy Land from his hands" (Joseph ha-Kohen, *Emek ha-Bakha*, ed. by M. Letteris (1895), 113). Such hopes, as well as the improvement in the economic situation, gave rise to increased immigration, especially among the refugees from Spain. A few of them went to Jerusalem, whose population, according to official Turkish *deftars*, increased from approximately 200 families in 1526 to 338 families in 1554. R. Levi b. Ḥabib also settled there and cared for the spiritual and material needs of the community. Among the great teachers who lived for a long or short period in Jerusalem were R. *David ibn Abi Zimra (c. 1485; died in Safed, c. 1575) and R. Bezalel *Ashkenazi, a native of Jerusalem (beginning of 16ᵗʰ century) who headed the yeshivah in the city.

The majority of the new immigrants settled in Safed, which developed into an important commercial and industrial town. According to R. David de Rossi, who settled in Safed in 1535: "Whoever saw Safed ten years ago and sees it again now is amazed, for the Jews are constantly coming in and the clothing industry is expanding daily…. There is no *galut* here like in our country [Italy] and the Turks respect the important Jews. Here and in Alexandria [cf. Egypt], those appointed over the taxes and incomes of the king are Jews" (A. Yaari, *Iggerot Erez Yisrael* (1943), 184, 186–7). In the middle of the 16ᵗʰ century, the Jews of Safed apparently numbered 10,000, i.e., the majority of the Jewish population of Erez Israel was concentrated in Safed and its environs – Ein Zeitim, Birya, and other villages in Galilee. During the 16ᵗʰ century Safed became known as a large and important center of Torah and teaching. In 1524 R. Jacob (1) *Berab settled there and sought to renew

the system of *ordination, which had not been used for hundreds of years. His plans aroused the violent opposition of the sages of Jerusalem, especially R. Levi b. Ḥabib, guardian of the spiritual and material needs of that community. They argued, inter alia, that the renewal of ordination required the authorization of all the scholars of Erez Israel. Nevertheless, R. Jacob (1) Berab ordained four of the great scholars of his day, who were his students and colleagues: R. Joseph *Caro, author of the *Shulḥan *Arukh*; R. Moses *Trani (the Mabbit); R. Abraham *Shalom; and R. Israel di *Curiel (1538). Furthermore, these four ordained a number of their own disciples. This attempt to renew ordination and reinstate the full authority of the *battei din* of Erez Israel ultimately failed, but the spiritual influence of the scholars of Safed continued, as evidenced by Caro's *Shulḥan Arukh*, which has been accepted by the Jewish world.

Safed became the center of mysticism during this period. In fact all the great halakhic scholars who lived there at the time studied Kabbalah and the Zohar. *Maggid Mesharim*, dialogues between the author and the mystical inspiration (*Maggid*) who guided him, was written by R. Joseph Caro. Before the arrival of R. Isaac *Luria (ha-Ari) in Safed (1569?), mystical scholars and formulators of new methods, such as R. Moses *Cordovero and R. Solomon *Alkabez, author of the Sabbath hymn *Lekhah Dodi*, became known there. The system of practical Kabbalah established by Luria soon acquired many adherents throughout the Diaspora. His teachings were disseminated by his outstanding disciple, R. Ḥayyim *Vital, and other disciples known as "gurei ha-Ari."

The yearnings for redemption and messianic hopes which increased during this period, especially among the Spanish refugees, found ultimate expression in the bold attempt by Doña Gracia Mendes *Nasi and her nephew Don Joseph *Nasi, the wealthy Marrano statesman and Jewish leader, to rebuild Tiberias from its ruins. Don Joseph and Doña Gracia leased from the *sultan the area of Tiberias, which was then desolate. Joseph sent his representative Joseph b. Ardict, or Joseph Pomar (presumably identical to Joseph Cohen, his secretary at about this time), to deal with the settlement of Jews in Tiberias. The area, intended to become a city, was surrounded with a wall (1564). As there are but few sources, it is difficult to determine whether Don Joseph intended to establish a Jewish state in Erez Israel or create a limited haven for the Spanish refugees and derive economic benefit from the establishment of a new economic center in which wool and silk cloth would be manufactured. Whatever the original intent, the rebuilt Tiberias began to attract settlers from near (even from Safed) and far (Yemen). At the end of his life, Don Joseph displayed less enthusiasm in dealing with Tiberias. After his death, Solomon *Abenaes received new rights over Tiberias from the sultan Murad III and erected a number of buildings in Tiberias. Finally, however, the plan to reconstitute the city disintegrated and was abandoned because of various political and economic factors.

In connection with these messianic trends and hopes during the time of Sultan Suleiman, when Ottoman rule was at its peak, Christian priests in Syria, still adhering to Crusader ideas, suggested to Emperor Charles V that he conduct a campaign to regain the *holy places. This plan was never realized. Once again, during the rule of Selim II, the Greek patriarch Sophronius (1570) asked the German kaiser to deal mercifully with Jerusalem by renewing Christian rule there.

BEGINNINGS OF THE DECLINE. During the rule of Murad III (1574–95), his son Muhammad III (1595–1603), and succeeding sultans – Ahmed I (1603–17), Mustafa I (1617–18; 1622–23), and Murad IV (1623–40) – the Janissary army lost the strict discipline instituted by Selim I and became a constant source of danger to the sultan by its frequent rebellions and exaggerated demands over salaries and various grants. The situation in the political center was quickly reflected first on the borders of the desert through signs of overthrowing the yoke of the empire. Sheikhs and small princes began to entertain a hope of rebuilding from the ruins wrought by the Ottoman rulers. Prominent among the emirs of the *Druze who ruled in Lebanon was the Maʿan family, whose head, Fakhr al-Din II (1590–1635), conquered the Safed region and ʿAjlūn in eastern Transjordan while Muhammad III's army was engaged in battles with the Persians. Fakhr al-Din successfully uprooted the robbers who had spread throughout the land, and he turned Galilee into a tranquil and secure area. The same period saw the growth of the idea to establish an independent Christian Crusader state in Syria, Erez Israel, and Cyprus. Fakhr al-Din utilized this idea to expand the scope of his influence in Erez Israel with the help of the Christians. He occupied territories in the area of Jenin, came close to Mount Carmel, and signed agreements with the Bedouin in the mountains of Hauran. This activity aroused a violent reaction from the Turkish throne. In 1613 the great vizier Mansur instructed the wali of Damascus, Ahmad al-Ḥāfiz, to engage Fakhr al-Din in battle. The Druze emir passed on the administration of his political affairs to his brothers and left for Italy, where he spent a number of years in the courts of the prince of Tuscany and other rulers; he visited the knights of Malta and returned to Lebanon in 1618. Immediately upon his return, he renewed his efforts to regain all the territories lost while he was in exile. Eventually, he conquered the sanjaks of Safed, ʿAjlun, Shechem, and Gaza. At that time the sultan had no statesman or commander who could instill fear into the Druze emir, who even dared to renew the plan for establishing a Christian state in Erez Israel through negotiations with the representatives of the king of Spain.

The expansion of the Maʿan family's rule over almost the entire area of Erez Israel led to clashes with other local rulers, especially the members of the Ṭarbāyā. According to tradition, they received the Jenin region from the conquering Sultan Selim and expanded their sphere of influence gradually to Haifa, along the seacoast, and up to Gaza, sometimes even enforcing their rule over certain areas in Galilee. The al-Furaykh family,

a Bedouin family from the Lebanon valley, established their rule by force in Safed, Nablus, and ʿAjlun. Under their influence, the wali of Damascus, Ahmad Kūtshuk ("the Small") was ordered by the central authorities to wage battle against Fakhr al-Din whom the *kapudan pasha* (commander of the fleet), Jaʿfar, was ordered to besiege from the sea, thus preventing Christian boats from rendering assistance. Fakhr al-Din attempted to conciliate the wali of Damascus by giving him Sidon (Saida) and Beirut, and in the meantime he sent Bishop Maroni to Italy to seek aid. Disappointed by his allies, he decided to surrender to the Ottoman rulers. In 1634 he was imprisoned in Constantinople and a year later was killed together with his two sons, who had been taken captive with him. His death, however, did not terminate the Druze's attempts to gain control of Erez Israel. The settlements in Galilee, especially Safed and Tiberias, suffered from the renewed attempts by several Druze emirs to reconquer the region.

The total defeat of the Maʿan family did not improve the situation in the country. The gradual decline of the Ottoman Empire was reflected in repeated rebellions by the Janissaries, the increasing burden of taxes, and the loss of large areas in Europe. Clearly the general situation had a negative influence on the population of Erez Israel in general and on the Jews in particular.

Jewish Population. During the last quarter of the 16th century the security situation of Erez Israel deteriorated. Safed and Galilee suffered particularly from robbery raids by Bedouin and Druze tribes eager for the wealth of this industrial commercial town. Several sources give evidence that such acts were repeated several times. An Ottoman decree of 1576 ordered the expulsion of 500 or 1,000 wealthy Jewish families of Safed, forcing them to move to Cyprus. This decree was annulled later, but the very existence of the order undermined faith in the authorities. Safed began to be depleted of its wealthy residents, a phenomenon that sometimes took on the form of actual flight. The scholars also began to abandon the town, including R. Joseph Trani (son of R. Moses Trani, in 1599), who went to Constantinople. R. Ḥayyim Vital moved to Damascus. R. Isaiah ha-Levi *Horowitz (kabbalist, author of the famous moralistic work *Shenei Luḥot ha-Berit*) decided not to settle in Safed and went to Jerusalem in 1621.

Although Safed was not totally abandoned, as was the case with Tiberias (where not one Jew remained by the end of the 17th century), the decline was evident.

A short time after R. Isaiah Horowitz' arrival in Jerusalem, the community was harmed by the greed of a Bedouin sheikh, Muhammad ibn Farukh, who achieved the position of *sanjak bey* of Jerusalem (1625) and began to tyrannize the population, and especially the Jews, through the imposition of heavy taxes. After a year of persecution, the pasha in Damascus finally dismissed ibn Farukh, but the heavy debts remained in force and many emissaries went out to the Diaspora to collect funds to save the community. The situation was not as favorable as envisioned by R. Isaiah Horowitz, but Jerusalem

was rebuilt to some extent, as were other communities in the south – notably Hebron, in which a few of the disciples of R. Moses Cordovero and R. Isaac Luria settled.

During periods of trouble in Jerusalem, Hebron and Gaza served as a temporary refuge from persecution and oppression. The number of Jerusalem's residents increased especially after the decrees of 1648, when some Jewish war refugees from the Ukraine arrived in Erez Israel. The rulers of the city exploited the situation by imposing a heavier burden of taxes on the Jews, especially affecting the poor. Many awaited aid that was usually sent regularly by the Diaspora communities. When this assistance did not arrive in time and was insufficient, emissaries would be sent abroad to arouse the sympathy of the Jews. One of these emissaries was *Shabbetai Zevi, who left Jerusalem shortly after his arrival there in order to collect funds in Egypt (1664). On his way to Egypt he stopped in Gaza. The Gaza community was very important at that time because the city was regarded as the capital of the Negev and Sinai and was a large commercial center and a stopping place on the route between Africa and Asia. It was an asylum for Jewish refugees because it enjoyed an independent administration and was also even a refuge in times of plague. In the 16th–17th centuries there were outstanding scholars there. Shabbetai Zevi also made the acquaintance there of *Nathan of Gaza. It was in Gaza that Shabbetai Zevi saw his visions, and the city became an important center for the dissemination of Shabbeteanism.

Jerusalem, which was then the center of most of the scholars of Erez Israel and even attracted some of the great scholars from the countries of the East, again took over the spiritual leadership, which it had relinquished during the previous century to Safed. Despite the difficult material situation and the harsh attitude of the local rulers, in the 17th century the Jewish population succeeded in consolidating its position in Jerusalem and in the entire southern section of the country.

NEW DEVELOPMENTS IN THE 18TH CENTURY. At the turn of the century, during the reign of Mustafa II (1695–1703), there was a change in the political status of the Ottoman power in Europe. The Treaty of Karlowitz (Jan. 26, 1699) forced the sultan to make many territorial concessions in his border regions. Russia demanded, inter alia, control of the holy places in Jerusalem and all Orthodox Christians in the Ottoman Empire, be they Greeks, Serbs, Bulgarians, or others. This control was expected to provide personal immunity and exemption from taxes and Muslim jurisdiction. With the decline in the military power of the Janissaries, the central authority was compelled to allow its walis to conscript soldiers in another way, in order to put them to use locally. Thus cavalry and infantry troops, composed of Albanian, Bosnian, and Maghrebi mercenaries, were founded. Their salaries were derived from the incomes of government estates and special taxes levied on the population, usually without basis in religious tradition and regarded as illegal by religious scholars. These private armies were one of the sources of the anarchy in Turkey during the

18th century. The walis used them for the purposes of tax collection and expanding their rule at the expense of weaker neighboring provinces.

At the beginning of the 18th century, Zāhir al-Omar, a local Bedouin ruler, received the *iltizām* (the right to levy taxes) for most of the districts of Galilee (in the regions of Nazareth, Tiberias, and Safed) from the tribe of Zaydān. He very soon overcame some of his opponents and extended his rule over the district of Tiberias, where he fortified himself as the tax farmer of the pasha of Sidon. In 1742 the pasha of Damascus was ordered by the sultan to fight against Zāhir. This episode was described in Hebrew by the son-in-law of R. Ḥayyim *Abulafia, who rebuilt the Jewish community in Tiberias (1740). The attack on Tiberias failed, and in 1743 the pasha tried again. A short while later he died. Thereafter Zāhir was able to overcome his remaining opponents and annexed their estates (such as Shepharam) to his territories. He then turned to the sea and conquered Acre. His control of Acre and Haifa (and economically also of Dar-Ṭanṭūra) brought him in direct contact with the traders and agents of Europe who had established bases in the coastal towns to conduct trade with inland regions.

Zāhir formed an alliance with the ruler of Egypt, Ali Bey, and the Russian fleet, which arrived in the Mediterranean to the surprise of the Ottomans. In 1771 almost the entire country was under his control, and his Egyptian allies captured Damascus. Zāhir captured Gaza, Lydda, Ramleh, and Jaffa, but the Egyptian commander joined the sultan's army, regaining what Zāhir had captured and perpetrating a massacre in Jaffa (1775). The Ottomans attracted to their side Zāhir's mercenary forces, who betrayed their master and murdered him (1775). On the same day the sultan's army captured Acre and Ahmad Pasha al-Jazzār ("the Butcher") was appointed *sanjak bey* of the Sidon area.

Ahmad Pasha was wali of the Sidon area, whose capital he transferred to Acre, for 29 years (1775–1804). He also became the ruler of the Tripoli area and in 1790–99 and 1804 was the wali of Damascus. He organized a private army of Albanians, Bosnians, Maghrebis, and Bedouin and fortified the walls of Acre, and the value of these fortifications was proven during Napoleon's siege.

Napoleon's invasion of Egypt in 1798 came as a complete surprise for Istanbul, which had considered him an ally when he was conquering Malta and putting an end to the activities of the pirates. At the beginning of 1799, Napoleon's army was advancing toward Erez Israel. He attempted to bribe Ahmad al-Jazzār into joining his side, but the pasha refused to receive Napoleon's delegation. The French then conquered Gaza, Ramleh, Lydda, and Jaffa without difficulty, but had to unleash a fierce attack on Jaffa because of the presence of a large garrison there. Most of the city was destroyed during and after the siege. The population welcomed the conquerors, for Napoleon had incurred their affection through various promises and a humane attitude. Napoleon's army did not turn to Jerusalem because he was interested only in strategic conquests that would open the way to the centers of the Ottoman Empire

(for the international constellation, see The Land of Israel in International Affairs). The French conquered Haifa and then besieged Acre. The English fleet came to the aid of al-Jazzār and remnants of the Ottoman army engaged the French in battle but were ambushed near En-Harod by the French general J.G. Kleber. This victory opened the way to Safed, but the opportunity was not exploited. In contrast, Acre defended itself, and Napoleon could not destroy its fortifications because the British fleet destroyed his navy and he lacked heavy cannons. In the meantime, plagues broke out in the French camp, and the famous commander was forced to retreat with his army to Egypt and from there he returned to France.

The situation of the farmers who worked the lands of the government was, at the beginning of Ottoman rule, not unfavorable. The "miri," or the land of the emirate that was taxed, was not a burden on the fellahin, while the land was populated and they benefited, directly or indirectly, from profits made through international trade. With the impoverishment of the Ottoman Empire, however, the tax burden increased and the people began to abandon the villages for the towns. The various payments demanded from the villages became an intolerable burden in the absence of working hands. Furthermore, the Bedouin harassed the villagers in the plains and the valleys and robbed them of the fruits of their labors, which was an added reason to abandon the fertile lands.

According to the French traveler C.F. de Volney (in 1783–85), the decisive majority of the population were fellahin. Nevertheless, this traveler, and others who visited the country, noted the strange contrast between the fertility of the land and the poor state of the few farms. This was the situation in the southern plain (between Gaza and Ashkelon and Hebron) and in the area between Bethlehem and Jerusalem. The broad Acre plain and the region around the Kinneret, which were known for their abundance of water, were overgrown with reeds. The naturalist T. Shaw (1722), who investigated the flora and fauna of North Africa and the Middle East, records that the soil of many valleys was fertile and good. He mentioned that if the land had been cultivated as in the past, it would have yielded a larger crop than the best lands on the shores of Syria and Phoenicia. According to him, cotton grown in the valleys of Ramleh, Jezreel, and Zebulun was of a better quality than that cultivated near Sidon or Tripoli. It was difficult to find beans, wheat, or other grains superior to the produce sold regularly in Jerusalem. The desolation about which travelers sometimes complained was not a result of the natural character of the country, but rather of the sparseness of the population and the indolence of the inhabitants.

Ẓāhir al-Omar attempted to improve the condition of agriculture in Galilee. He encouraged the fellahin to work their lands by granting loans and he especially tried to protect them from bandits. He favored the settlement of Jews and they reestablished themselves in Peki'in, Shepharam, and Yasif. In contrast, a traveler accuses Ahmad al-Jazzār, Ẓāhir's successor in Galilee, of not being concerned with the development of agriculture in the Acre plain, which remained a swampland.

Reconstruction of the Jewish Community. The messianic ferment that increased in the Diaspora at the end of the 17th century was connected with increased immigration to Ereẓ Israel. At the beginning of the 18th century it was headed by *Judah Ḥasid and Ḥayyim *Malakh, both Shabbeteans – the former covertly and the latter overtly – who arrived in Jerusalem at the end of 1700 at the head of a convoy organized in Europe. Before their arrival, the Jewish community of Jerusalem numbered 1,200, of whom 200 were Ashkenazim weighed down by a burden of debts. Of the people who left with this convoy, which took two routes (one through Venice and the other through Istanbul), about 500 died on the way and only about 1,000 reached Jerusalem. Its leader, Judah Ḥasid, died almost immediately after the convoy's arrival, and conflicts arose with the veteran settlers, who were opposed to the Shabbatean movement. The new arrivals were a heavy burden on the Ashkenazi community, for the Arabs had lent money to the members of the convoy and now demanded reimbursement from the veteran Ashkenazim. They appealed to the *Council of the Four Lands for the aid of the Polish communities in their battle against the Shabbateans and sent emissaries to Frankfurt and Metz, where financial help for the poor of Ereẓ Israel was concentrated. Help did not arrive, due to political reasons unconnected with Ashkenazi Jewry. The Arab creditors broke into the Ashkenazi synagogue on a Sabbath (Nov. 8, 1720), set it on fire, and took over the area, which they held until 1816. For several years after the burning of the synagogue, Ashkenazi Jews, who were recognizable by their dress, could not settle in Jerusalem for fear of being held for the old debts. Those who dared to do so a generation later had to disguise themselves as Jews from Oriental communities. The European immigrants settled mainly in Hebron, Safed, and even Tiberias.

At that time the Jews lived mainly on charity received from abroad and, in a few cases, on income from businesses in their lands of origin. Any slight change in the situation of the contributors, or any delay in sending aid, could bring disaster upon the poor. The extreme poverty led R. Moses b. Raphael Mordecai *Malkhi, a scholar and famous physician in Jerusalem (end of 17th century), to speak out against the immigration of very poor people, arguing that Ereẓ Israel needed immigrants who could be self-sustaining. In order to supervise the distribution and use of funds and also facilitate the payment of the numerous debts burdening the Jerusalem community, the "officials for Jerusalem" in Istanbul, sent a special *parnas* to act as a kind of administrator for the community and take care of Jewish pilgrims. For those Jews who wanted to devote themselves to the study of the Torah, yeshivot were established in Jerusalem, where outstanding scholars studied. Ḥayyim Joseph David *Azulai, R. Sar Shalom *Sharabi, and R. *Abraham Gershon of Kutow (brother-in-law of Israel b. Eliezer Baal Shem-Tov) were in the yeshivah Beth-El, where kabbalistic studies were also pursued.

The Jews of Hebron suffered because of constant civil wars between the Arabs of Hebron, who belonged to the

Qays faction (of north Arabian origin), and those of Bethlehem, who belonged to the Yemen faction (from south Arabian tribes). The Istanbul officials extended their activities to include Hebron, whose situation had been aggravated by debts owed by the community. Ḥayyim Joseph David Azulai went to Western Europe in 1753 and in 1773 on behalf of the Hebron community. Another emissary was Ḥayyim Isaac *Carigal, who reached North America. In the 1880s the number of the Jews in the city of the patriarchs reached about 300.

The community of Gaza was smaller than that of Hebron and suffered from repeated incursions made by the various armies. It was decimated after the conquest of the town by Napoleon (1799), and in 1811 no one remained there. Many Ashkenazim from Poland and Lithuania settled in Safed and Tiberias, which were centers of Ḥasidism from the second half of the 18th century, establishing a new link with the greatest Diaspora community of the time. Immigrants from Eastern Europe thus settled Galilee and Tiberias, which had been almost depleted of inhabitants during the 17th century. Tiberias was rebuilt by R. Abraham *Abulafia (1740) with the help of the sheikh Ẓāhir al-Omar. After the *Ḥasidim came a wave of their opponents, disciples of R. *Elijah, the *Gaon* of Vilna. According to tradition, the *gaon* himself wanted to immigrate but halted his journey in the middle. In 1770–72, his most important disciples, R. Ḥayyim of Vilna and R. *Israel b. Samuel of Shklov, arrived and a few years after his death many of his disciples, called *perushim*, immigrated. The immigration of the *perushim* was brilliantly described by R. Israel of Shklov.

1800–1917. The beginning of this period saw the end of the district system of administration, during which time Ereẓ Israel displayed all the characteristics of a neglected province of a disintegrating empire but after 1840 there was a turn for the better. The population increased appreciably. The administration of the country was changed and there was an increase in Western influence, resulting from the revolution in means of communication, which brought the Ottoman Empire closer to Europe. The increased rivalry among the European powers turned Ereẓ Israel into a focal point of the "Eastern problem."

According to estimates, which tend to be exaggerated, the number of the inhabitants in Ereẓ Israel in 1800 did not exceed 300,000. The number of Jews apparently did not exceed 5,000, most of whom were Sephardim. Most of the Jewish population was concentrated in the "Four Holy Cities," Jerusalem, Safed, Tiberias, and Hebron. The Christians, who apparently numbered about 25,000, were scattered over a wider area. Their main concentrations – in Jerusalem, Nazareth, and Bethlehem – belonged primarily to the Greek Orthodox, Greek Catholic, and Roman Catholic Churches. The remaining inhabitants were Muslims, almost all of them of the Sunni sect. As more Jews immigrated to the country, the size of the Jewish population doubled by about 1840, with the Christian and Muslim elements unchanged. Between 1800 and the end

of 1831, Ereẓ Israel was divided into two Ottoman vilayets (pashaliks). The borders of these changed from time to time, but in general the eastern central mountain region from north of Nablus to south of Hebron (including Jerusalem) belonged to the vilayet of Damascus (al-Shām) and Galilee and the Coastal Plain, to Khan Yunis, belonged to the vilayet of Acre. The coastal region from Khan Yunis to Caesarea was divided into three *nāḥiyāt* (sub-districts): Gaza, Ramleh, and Jaffa. Most of the Negev was at that time under the vilayet of Hejaz, centered in Medina, in the Arabian Peninsula.

The structure of the Ottoman state should not be analyzed from a Western point of view. Even during its zenith, no attempt was made to Ottomanize non-Turkish conquered regions. The children of ruling groups often married local women and assimilated into the local population. Thus local traditions and officials were maintained in Ereẓ Israel and a subject of the Sultan had to maintain his prime allegiance not to the imperial government, but to the religious group or the social class into which he was born. The Christians and Jews, as members of special millets, even had limited direct contact with the Ottoman government. Even the head tax, which exempted one from military service, was collected by means of the millet. Only those non-Ottoman subjects belonging to the Sunni sect of Islam could identify to some extent with the higher (though only nominal) function of the sultan: the defense of the Muslim faith against apostasy.

The vague connection between Ahmad al-Jazzār and the supreme authority continued during the rule of Ahmad's successors – Suleiman, Ismail, and Abdallah (1804–32), who were less active and cruel than he. Of a similar nature were the relations between the supreme authority and the pashas who ruled in Damascus and Gaza. Public welfare had no significance in the view of the rulers, who regarded as their prime function the collection of taxes derived from three major sources: the "miri" land tax (from Muslims); the "kharj," head tax; and customs. When these sources proved insufficient, various crop taxes were levied arbitrarily on Muslims and non-Muslims alike.

At the beginning of the 1780s, Ramleh and Acre derived their income from the sale of raw cotton and plain cotton cloth to the French traders in the Levant. Clothes, dyes, sugar, and coffee (from the West Indies) were bought from the French traders. These traders, however, disappeared from the country after the French Revolution and returned only after the Napoleonic wars. The (British) Levant Company, which filled the gap created by the disappearance of the French traders, was not interested in the cotton of Ereẓ Israel. When the French traders returned to the East after 1815, they did not succeed in reestablishing their former trade connections. In 1821, when the long-fibered strain of cotton was introduced into Egypt, the manufacture of cotton in Ereẓ Israel became relatively useless, except during the U.S. Civil War, when it enjoyed a brief revival. Acre and Ramleh never regained their primary position in the economy of the country. In 1825, when the concession to the Levant Company and privileges granted

the Trade Bureau of Marseilles were abolished, the way was opened for free trade.

The period of Egyptian rule in Syria and Ereẓ Israel, which lasted nine years (1832–40), marked the peak of provincial government. This was the first time that an independent pasha had rebelled against the Sublime Porte, conquered territories from other pashas, and compelled the sultan to admit the "legality" of his conquests. Nevertheless, after consolidating his position in Syria and Ereẓ Israel, *Muhammad Ali, the pasha of Egypt, agreed to pay to Sultan Mahmud II the "accepted quota" of the tax (1834). Ibrahim Pasha (stepson of Muhammad Ali), who successfully conducted the military campaign, became the general ruler of the conquered area and established his residence in Damascus. The whole of Ereẓ Israel, whose northern border reached Sidon, now became one district. The few forests remaining in the valleys and on the mountain slopes in central Ereẓ Israel were cut down to supply wood for Muhammed Ali's fleet. Ibrahim Pasha forced the Muslim farmers to join the Egyptian army. Rebellions, which occurred in most of the towns, were put down by force and law and order established. Swiftly executed punishments halted the incursions of the Bedouin. Even a blood revenge feud between the Qays and the Yemen factions was put down and travelers from Jaffa to Jerusalem no longer had to pay taxes to the Circassian sheikhs of *Abu Ghosh. Attempts were made to eradicate bribery in the courts, institute a fair division of taxes, and avoid discrimination against the Jews in favor of the Muslims.

For more than a decade before Egyptian rule in Ereẓ Israel, Protestant missionaries from Britain and the United States tried to obtain permission to establish regular institutions in Jerusalem and other parts of the country. These attempts met with the strong opposition of the provincial rulers and their representatives. Ibrahim Pasha allowed the missionaries not only to preach but even to establish schools. The Egyptian period also saw the beginning of extensive activity in biblical geography and archaeology, especially by the U.S. scholar Edward *Robinson. Moreover, in 1838 the Egyptian government permitted Britain to open a regular consulate in Jerusalem; previously, consular representations were limited – apart from ephemeral French attempts in Jerusalem in 1699–1700 and 1713–15 – to the coastal towns (Acre, Haifa, Jaffa) and Ramleh, and even in these places the powers would appoint local agents as their representatives. Twenty years later, all the important Western nations, including the United States, were represented in Jerusalem by regular consular delegations.

The intervention of the European powers in 1840–41 in the Egyptian-Ottoman conflict forced Ibrahim Pasha and his forces to leave Ereẓ Israel and Syria, which returned to the direct control of the Ottoman Empire. Egyptian rule did not last long enough to have any lasting influence, but thousands of Egyptian farmers who had settled in the southern parts of the country remained there after the retreat of the Egyptian Army. The Qays and the Yemen factions again caused disturbances in the rural areas and the people of Abu Ghosh reinstated the collection of taxes from travelers (lasting until 1846). Former pashas, however, were not returned to their posts and a new administration was established on the basis of strict centralization.

The increasing administrative changes were finally expressed in the Vilayet Law of 1864, which unified the whole provincial administration into one framework. Most of Ereẓ Israel was covered by the sanjaks of Nablus (which, until 1888, included the area of Balqā', east of the Jordan) and Acre, which were part of the vilayet of Beirut, and the independent sanjak or mutaṣariflik of Jerusalem (previously part of the vilayet of Damascus), which was now placed directly under the authority of Istanbul. Each district was divided into sub-districts (Ar. qaḍā', plural aqḍiya) and each qaḍā' into subdistricts (Ar. nāḥiyāt). The provincial administration was composed of a strict hierarchy of Ottoman officials: *mudīr* (head of a *nāḥiya*), *qāymaqām* (head of a vilayet). Each official was subordinate to the head of his administrative region, while the Wali was subordinate to the ministry of the interior in Istanbul (established in 1860). A council (*majlis*) representing all sectors of the population, both Muslim and non-Muslim, aided Ottoman officials of every grade who headed an administrative unit. This administrative system, of course, did not terminate all corruption and abuse or institute representative rule, but it greatly curtailed the arbitrary actions of the provisional rulers and even granted the various religious communities a small measure of influence in public affairs.

Missionary organizations, representing almost every sect in Western Christianity, increased quickly after the departure of the Egyptians. They were concentrated mainly in Jerusalem, which had, toward the end of the 19th century, the greatest proportion of missionaries per capita of any city in the world. Some of the missionary groups developed an increasing number of educational, medical, and charitable institutions. The number of those converting to the new faith, even among Eastern Christians, was negligible, but the establishment of schools and clinics by Protestant missionaries stimulated the Latin and Greek Orthodox communities, as well as the Ottoman government and even the Jewish community, to establish similar institutions.

Political considerations led to increased rivalry among the missionary groups from various countries. The great European powers, which made attempts to gain areas of influence in every part of the Ottoman Empire as potential holding points in a future division of the empire, exploited the missionary activities of their subjects in Ereẓ Israel for the advancement of their political aims. Austria-Hungary, France, Prussia, and Russia rendered financial assistance to missionary activities. After the signing of the Treaty of Kutchuk-Kainarji (1774), Russia claimed the right to protect the Arabs who belonged to the Greek Orthodox Church and even granted its protection to the Greek Orthodox patriarchate in Jerusalem. The czarist government, which was aided by the Russian Orthodox Company for Palestine and the delegation of the Rus-

sian church in the country, contributed funds for the establishment of schools, churches, and hostels. France, claimed similar rights in relation to the Roman Catholic community, institutions, and holy places. The Pope reinstituted the Roman Catholic patriarchate in Jerusalem in 1847. The status of France as the protector of Roman Catholicism in the Ottoman Empire was officially confirmed in Article 62 of the Treaty of the Congress of Berlin (1878). This status, however, aroused increasing rivalry on the part of other Catholic countries. In 1841 the Protestant missions of England and Prussia established a joint bishopric in Jerusalem, which the Germans stopped supporting in 1881.

The activities of the Protestant powers within the Ottoman Empire were conducted under less favorable conditions than those of Russia and France since the former had no millets in Erez Israel to "adopt" for religious reasons. Thus, during the Ottoman-Egyptian War of 1839–41, Britain became the "defender" of the Jewish and Druze communities in Erez Israel, as a sort of countermove to France's identification with the Christian Maronite community of Lebanon. One of the causes for the outbreak of the Crimean War (1853–56) was the conflicting claims of France and Russia to the guardianship of the holy places. After 1868 the German *Templer movement established settlements in Jaffa, Sarona, Haifa, and Jerusalem, reaching over 500 in the course of time. The Templer settlements, which continued to expand, later supplied William II with the means of political penetration. Of the U.S. groups of Millennarians who lived in Artas (near Bethlehem) in 1852, in Jaffa in 1866/67, and in Jerusalem in 1881, only the last remained. This was called the "American Colony," although after 1896 it comprised more Swedes than American subjects. Archaeological investigation of the biblical period expanded. A U.S. naval unit headed by Lt. W.F. Lynch explored the Jordan and the Dead Sea. The *Palestine Exploration Fund, established in 1865, completed a survey map of the area west of the Jordan, before embarking on the exploration of ancient sites. The American Palestine Exploration Society, which was short-lived (1870–81), concentrated on eastern Transjordan.

With the appearance of steam boats in the Middle East in the 1830s, regular communications between Erez Israel and Europe were established for the first time. In 1837 Austria and France gained licenses to operate postal services in the Asian provinces of the Ottoman Empire. The Turkish-Tatar postal messengers, who traveled between Istanbul and the capitals of the provinces at approximately six-week intervals, were finally replaced in the mid-19th century by an Ottoman service which, although more frequent, was no less confused. In 1865 telegraphic communications were set up in Jerusalem and other important towns of Erez Israel with the capital of the empire and Europe. Three years later the provincial administration completed the first road in Erez Israel (between Jerusalem and Jaffa) that was suitable for wheeled carriages. Improvements in transportation and communications led to an increase in the number of pilgrims and tourists, who brought new sources of income. By 1880 the population of

Erez Israel had increased appreciably, reaching 450,000, of which 24,000 were Jews and 45,000 were Christians. Jerusalem, which had expanded beyond the walls of the Old City following the Crimean War, became the largest town in the country. Its population was estimated as at least 25,000; more than half of them were Jews.

The Jewish Population. In the history of the Jews of Erez Israel there is a distinct contrast between the periods 1800–40 and 1841–80. In the first 30 years of the 19th century the corruption of Ottoman rule reached heights of perversion. The eight years of the Egyptian conquest (1832–40) were a kind of transition period. After 1840 the Jews were drawn into international conflicts connected with the Eastern problem, but began to enjoy the protection of Western powers. Their numbers increased considerably, as did their economic and cultural influence, although Napoleon's campaign in Egypt and Erez Israel and his call to Eastern Jewry to come to his aid and thus pave the way for the political renaissance of Erez Israel – if such a proclamation was indeed made – made little impression on the Jews of the country. The restraining influence of Ḥayyim Salim *Farḥi, scion of an ancient Jewish family from Damascus, was felt in the country for 20 years. As the financial official and general adviser of Aḥmad al-Jazzāar and his successors in the pashalic of Damascus, Farḥi somewhat eased the lives of not only the Jews, but the Muslims and Christians as well. After 20 years of rule he was murdered in 1820 by Abdallah Pasha, whom Farḥi had aided in his rise to the status of governor.

At that time most of the Jews of the country lived in the four holy cities: Jerusalem, Safed, Tiberias, and Hebron. Although they were sustained by funds from the *ḥalukkah, they labored under a heavy yoke of taxes imposed by the Ottoman officials. Thus J. Conder wrote in 1831: "The extortions and oppressions were so numerous that it was said of the Jews that they had to pay for the very air they breathed." Nevertheless, the population continued to increase, especially as a result of immigration from Europe. This flow increased with the introduction of steamboat transportation on the Odessa-Jaffa and other routes. The age-old attraction of Erez Israel, which was then felt especially among Eastern European Ḥasidim, brought a constant stream of ḥasidic settlers to Jerusalem and other holy cities. The first Ashkenazi community was established in Hebron in 1820 by Ḥabad Ḥasidim influenced by Ber, the son of R. Shneur Zalman of Lyady. Jaffa, which had been rebuilt by the Ottoman ruler Mohammed Abu Nabut in 1800–20, attracted a considerable number of Jews from 1830 on. The development of the community, interrupted by the bad earthquake of 1837, was renewed after 1839 and especially after the establishment of the rabbinate in 1841. Most of the Jaffa Jews came from North Africa; in 1857 there were only three Ashkenazi families there. In 1874 their number increased to 20, and the total Jewish population of Jaffa numbered 500. Safed, which competed with Jerusalem for spiritual hegemony, suf-

fered greatly in the earthquake of 1837, when some 2,000 Jews lost their lives, and never regained its former position of leadership. The first Hebrew printing press in Erez Israel, which was established there in 1831, moved to Jerusalem after nine years.

Egyptian rule did not greatly ease the burden of taxes, but Muhammad Ali's efforts to institute Western methods opened the way for vital internal and external changes. Although the promises in the sultan's decree of 1839 to grant equal rights to members of the three faiths – Jewish, Christian, and Muslim – were never fulfilled, there was a considerable improvement in the situation of the Jews. The high-flown proclamations of the Ottomans, such as that of 1841 ("Muslims, Christians, Israelites, you are all the subjects of one ruler, you are all the sons of one father"), also had some influence on the status of the oppressed minorities. Of similar significance was the fact that the Western powers, in their struggle for the hegemony of the Middle East, displayed a certain interest in the Jews of Erez Israel. According to the system of *Capitulations (agreements granting special rights to foreign powers in the Ottoman Empire), the Western consuls in the country "protected" the interests of their citizens. Great Britain, and often Russia as well, became (for the reasons mentioned above) the patrons of the Jews of Erez Israel. Britain intervened on behalf of Jews who were Ottoman subjects, but primarily on behalf of Jews from European countries when their own consuls refused to provide assistance. This was so not only during dramatic events, such as the *Damascus Affair of 1840 and the Christian massacre in Syria in 1860, but even under normal conditions. The British government even ventured, in connection with the Damascus Affair, to suggest that the sultan allow the Jews of the "ra'āyā" class (non-Muslim subjects of the sultan) to address their complaints against local Ottoman authorities to him through the mediation of the British consuls.

Although the Ottomans rejected this suggestion, the British consular authorities found opportunities to intervene on behalf of the Jews. In 1849 R. Isaiah *Bardaki, the leader of the Russian Jews of Jerusalem, requested that the British consul in Jerusalem grant protection to Jews who had become stateless as a result of discriminatory legislation in Russia. Thirty years later Russia relented in its hostile attitude toward the Jews of Erez Israel and even granted them some protection, while persecuting the Jews in Russia itself. Laurence *Oliphant reflected: "Had Russia encouraged Jewish immigration to Erez Israel and protected the immigrants, she could have had an excellent pretext for political interference in the country."

The idea of establishing a Jewish state or, at least, an autonomous Jewish settlement under supreme Ottoman control became a subject for serious discussion. In 1839, during the second of his visits in Erez Israel, Sir Moses *Montefiore opened negotiations with Muhammad Ali to gain a charter for Jewish settlement in Erez Israel in return for a large loan to Egypt. These negotiations failed, however, because of the downfall of Muhammad Ali, in 1841. The idea of establishing a

Jewish buffer state between Egypt and the rest of the Ottoman Empire, however, gained supporters during the conflict between the two powers. The first who advocated this solution was Rev. Wilson Filson Marsh. A detailed plan for Jewish settlement was advanced at that time by Abraham *Benisch, a Bohemian Jew who became editor of the London *Jewish Chronicle*. The memorandum he composed on the question was made available to the Foreign Office by the British consul in Jerusalem, William Young, and gained the support of Montefiore and other British Jewish leaders. Similar plans, though less detailed, were offered at that time on the European continent. The idea was supported by English notables such as Col. Charles Henry Churchill (1840–56), Col. George Gawler (1845), Laurence Oliphant (1879), and others.

Relations between Jews and non-Jews in Erez Israel were not at all amicable. Religious disputes were always common and the Jews were in a state of conflict with the missionaries, who were prohibited by law to convert Muslims, although the London missionary society for the dissemination of Christianity among Jews usually fought for the rights of Jews in Erez Israel. This group was supported by British consuls such as James *Finn, whose autobiographical account, *Stirring Times* (1878), is an important source of information. Although contemporaries often remarked that missionary progress in Erez Israel was slow, Ludwig August Frankel, who visited Jerusalem in 1856, found 131 converts there. According to the estimation of Goodrich-Freer, no fewer than 523 Jews converted in 1839–96, and the expenses for baptizing one Jew amounted to £1,000. In their battle against the missionaries, the Jews often came into conflict with the British and other consuls.

There were also serious internal conflicts within the Jewish community itself. Recipients of ḥalukkah funds often complained about discrimination, real or imagined, in their treatment by the ḥalukkah officials. The Jews of Germany and Holland were the first to establish a separate *kolel* for themselves, known as "Kolel Hod" (Holland-Deutschland), which served as a model for *kolelim* established by other factions of the community. By the beginning of the 20th century, there were 30 such *kolelim*. This division aroused internal controversies and also damaged the work of the *meshullaḥim (see *Sheluḥei Erez Israel) sent to collect money for the welfare funds. In 1886 the Ashkenazi *kolelim* in Jerusalem organized a general council under the leadership of Meir *Auerbach and Samuel *Salant.

Although the authority of the Ashkenazi rabbis was solid within their own community, they did not enjoy the legal recognition accorded the Sephardi ḥakham bashi, as most of the Ashkenazim were foreign subjects. The first Sephardi chief rabbis, including Solomon Moses *Suzin (in the time of Muhammad Ali), Jonah Moses *Navon (1836–40), and Judah Navon (1840–41), lacked governmental recognition, but from the time of Ḥayyim Abraham *Gagin (1842–48), the ḥakham bashi received an official status by governmental appointment, or rather by the sultan's confirmation of his election by the Sephardi community of Jerusalem. After Gagin,

the post of *ḥakham bashi* was held by Isaac Kovo (1848–54), Ḥayyim Nissim *Abulafia (1854–61), Ḥayyim David *Ḥazzan (1861–69), and Abraham *Ashkenazi (1869–80) who came from Larissa, Greece.

The number of Ashkenazim gradually exceeded the Sephardim in most of the communities of Ereẓ Israel, and while the old settlements grew from decade to decade, new ones were established. Nablus, the old center of Samaritanism, began to attract Jews when it became a trading center. In 1864 there were in Nablus about 100 Jews, 150 Samaritans, 600 Christians, and 9,400 Muslims. According to Ludwig August Frankl, there were about 100 Jews in the renewed community of Haifa in 1856. The influence of the Jews grew, especially in Jerusalem, which came to have a Jewish majority. When the Old City could no longer contain them, the Jews set up the first suburb outside the walls in 1860 (Mishkenot Sha'ananim, established by Sir Moses Montefiore). During the twenty succeeding years they established more than ten additional suburbs, including Naḥalat Shiva (1869) and Me'ah She'arim (1872), which became the nucleus of the New City.

The economic situation of the Jews of Ereẓ Israel remained generally unchanged, despite several attempts to settle some Jews on the land and teach them useful trades. In 1839 and again in 1849 Montefiore responded to requests by the Jews of Ereẓ Israel to implement far-reaching plans to settle Jews on the land. Montefiore, together with the Rothschilds of Paris, who worked mainly through their adviser, Albert Cohen, and other European philanthropists, helped to establish a Jewish hospital in Jerusalem (1854) and supported the Laemel school, founded by Frankl in 1856 to teach Jews professions and to remove Jewish children from the mission schools. Since the teaching methods of this school were new from several points of view, and since European languages were also taught there, it met with the fierce opposition of extreme Ashkenazi Orthodox Jews and their supporters in the Diaspora, so that Frankl had to turn over the administration of the school to Sephardim, who were more tolerant.

The process of the Jewish community's transformation into a productive factor did not cease but rather increased in pace. Even the missionaries thought of establishing an agricultural settlement for apostate Jews. In 1861 the first land purchase by Jews for agricultural purposes in modern times was made by the Yehuda family at Moẓa. Finally, in 1870, the *Alliance Israélite Universelle established the *Mikveh Israel agricultural school near Jaffa. Agricultural settlements were established at *Moẓa (1873), Petaḥ *Tikvah (1878), and Jauni (Rosh Pinnah), which, although they were abandoned after a short time, opened the way for future development and were reestablished later. In 1881 the U.S. consul wrote that about 1,000 Jews in Ereẓ Israel earned their livings through agricultural labor, and therefore many of them were no longer "paupers and beggars." On the other hand, the appearance of the first Hebrew journals – *Ha-Levanon* in 1863 and *Ḥavaẓẓelet* in 1870 – attested to the expansion of the cultural horizons.

In this way the population became ready to open its gates to new immigrants, ways of life, and ideas, which were brought to Ereẓ Israel by the *Ḥibbat Zion movement.

STATE OF ISRAEL

HISTORICAL SURVEY: THE STATE AND ITS ANTECEDENTS (1880–2006)

Introduction

It took the new Jewish nation about 70 years to emerge as the State of Israel. The immediate stimulus that initiated the modern return to Zion was the disappointment, in the last quarter of the 19th century, of the expectation that the advancement of European civilization would solve the "Jewish question." In Central and Western Europe, the hopes of the Jews to be not only formally emancipated but really absorbed as equals in their respective "host" nations were shattered by waves of social and intellectual antisemitism. In Eastern Europe, particularly in the Russian Empire and Romania, not only did the technical formalities of emancipation seem to be unobtainable, but Jews repeatedly served as the scapegoats of the reactionary regimes in murderous pogroms initiated and organized by the authorities themselves.

In the second half of the century, the traumatic experiences of Jewish intellectuals in East and West produced a movement based on the reaffirmation of Jewish identity, mostly in a secular, nationalist form (e.g., Leon *Pinsker and, later, Theodor *Herzl), and the conviction that the Jewish

question would remain insoluble unless the Jewish masses moved out and settled in an autonomous Jewish state to form an independent nation. This rational approach of the intellectuals at first did not necessarily regard Ereẓ Israel as the most desirable territory for the purpose of nation building, particularly in an era when many new nations had emerged on other continents in seemingly empty territories.

The modern Jewish nationalism of the intellectuals soon merged with another powerful trend, deeply rooted in the traditionalist Jewish masses, mainly in Eastern Europe. The latter intuitively sought ways and means of preserving Judaism and Jewish tradition in spite of the rapid disintegration of the self-contained Jewish societies in the ghetto, or shtetl, which were beginning to break up under the impact of the new scientific, urbanized civilization. For the masses of Jewry, any country outside Ereẓ Israel would always be *galut* (exile) even if its population should prove to be predominantly Jewish; a Jewish national renaissance was conceivable only if it was consciously rooted in the Hebrew language and Jewish culture and aimed at the revival of Jewish nationhood in Ereẓ Israel.

The merging of the two trends – the rationally intellectual and the emotionally traditional – gave birth not only to *Zionism as an organized political effort, but also to the beginnings of the pioneering movement of the late 19th century, which laid the foundations, on the soil of Ereẓ Israel, for the economic, social, and cultural rebirth of the Jewish nation. The land itself seemed eminently suitable for the purpose: a marginal province of the weak Ottoman Empire, sparsely inhabited by a population consisting of various religious groups and seemingly lacking any national consciousness or ambitions of its own; a motherland waiting to be redeemed from centuries of neglect and decay by its legitimate sons.

The rebirth of the nation began almost simultaneously from two ends, in Ereẓ Israel itself and in Eastern Europe. Tiny groups of "rebels" against the old *yishuv,* mainly in Jerusalem, decided to break out of the stifling confines of the idle *halukkah* regime and create a national renaissance by tilling the ancestral soil "with their own hands" and reviving the Hebrew language, as the living vernacular of a modern nation, instead of merely a sacred tongue and an inter-community lingua franca. At the same time, small groups of Jewish youth (mostly students) in the Russian *Pale of Settlement and in Romania were so deeply disenchanted with the idea of attaining security, dignity, and equality in any Diaspora country that they decided not to join the mass emigration of Jews overseas, nor to participate in revolutionary endeavors in the countries where they lived, but to make themselves into pioneers in the establishment of the first modern Jewish villages in Ereẓ Israel, which would eventually serve as the cornerstone of an independent, "normal" Jewish nation.

The efforts of this First Aliyah to create new agricultural settlements under a corrupt, hostile regime and in a malaria- and robber-infested environment might have ended in both economic and social failure. The pioneers were in imminent danger of economic collapse from sheer inexperience and complete lack of capital, and, by employing cheap Arab labor, they might have become a thin stratum of "colonists" whose land was in fact tilled by non-Jewish hands. The first danger was averted in time by the philanthropic aid of the Russian *Ḥibbat Zion movement and Baron Edmond de *Rothschild, and later by the more modern methods of the Zionist Organization. The second was eventually avoided by the Second Aliyah, a wave of several thousand new Jewish pioneers who arrived in Ereẓ Israel after the abortive Russian revolution of 1905, determined to create a Jewish working class and to "conquer" by their labor not only the soil but also labor itself, including all manual aspects and forms of it, to ensure the creation of a new Jewish society with a full-fledged productive, self-sufficient structure, rather than an "unproductive," Diaspora-like community.

Some of the men who led this movement (e.g., David *Ben-Gurion and Izhak *Ben-Zvi) lived to see their dream fulfilled in the form of the independent Jewish state. Many despaired of the difficult economic and health conditions and returned to Russia, but a sufficient number of them persisted and remained to lay the foundations of a new, productive, and Hebrew-speaking Jewish society. A few years after their arrival, they established the first clandestine armed self-defense organization (Bar-Giora, later *Ha-Shomer) and the first collective workers groups and "self-labor" settlements. This endeavor, though still very small in size, was large enough to become the focus of a wide Hebrew educational network and a mass movement in world Jewry and to fulfill an important role in the political events during World War I that led to the *Balfour Declaration and the international recognition of the Jewish people's right to establish its National Home in Palestine.

In spite of the more favorable conditions of the British period (1917–48), as compared with the Ottoman era, the fundamental moving forces of the First and Second Aliyah did not change much. Mass immigration, as distinct from the *aliyah* of pioneering groups and individuals, occurred mainly when the condition of Jewish communities in the Diaspora became economically or physically unbearable. The Soviet regime, which cut the Jews of Russia off from the rest of the Jewish people, deprived the reviving nation in Palestine of its main human reservoir; but Jews from Poland, the Baltic states, Romania, and Central Europe exploited almost every conceivable opportunity, "legal" or "illegal," to settle in Palestine, particularly after the closing of the gates to the United States in 1924.

Meanwhile, the "self-labor" principle of the Second Aliyah stimulated the creation of a widespread network of mutual aid institutions combined in a powerful labor federation (the *Histadrut), which enabled the Jewish workers to maintain a bearable standard of living even under adverse conditions. The collective and cooperative settlements of the labor pioneers, as well as urban centers built by Jewish labor with middle-class capital and initiative, soon created a belt of continuous Jewish settlement increasingly resembling a nucleus of national

territory. The Hebrew educational system raised a generation of tens and later hundreds of thousands of native-born young people (the "sabras") for whom language, historical tradition, native soil, and national allegiance became one harmonious whole. To protect the *yishuv*'s physical security and prevent pogrom-style Arab violence, a clandestine nationwide defensive militia, the *Haganah, was established. Gradually, self-governing institutions emerged, gaining partial official recognition (such as *Keneset Israel, municipal councils, etc.) and partly serving the Jewish population by mutual consent (e.g., the Jewish magistrates' courts (*batei-mishpat ha-shalom*), voluntary taxes, etc.), which enhanced the independent national character of the expanding community.

After a brief honeymoon, illuminated by the illusion of British benevolence in the beginning of the 1920s, the essential principle of the nation building process remained unchanged: only what the Jews created themselves, despite the unfriendly regime and the hostile environment – by their own initiative, with their own physical efforts, defending themselves with their own arms, at the cost of their own blood – gradually made the new Jewish nation a reality. This principle remained valid during World War II and its aftermath. The new nation was still too small and dependent to save European Jewry during the Nazi *Holocaust, but it made serious efforts to do so. It also prepared itself for all-out self-defense in case of a Nazi conquest of Palestine and, when this danger was averted, for a systematic struggle for national independence against British opposition and Arab violent aggression by "illegal" mass immigration, rapid enlargement of the settlement network, armed sabotage, and so forth.

The establishment of the State of Israel in 1948 was an historic breakthrough into international recognition and national sovereignty, but in historical perspective it proved to be only a "great leap forward" and not the terminal point in the process of nation building. The main developments since the establishment of the state have been the accelerated growth of the population, mainly through the ingathering of the exiles – paradoxically, from those countries which were, or became, Israel's declared enemies (i.e., the Arab countries and those of the Soviet Bloc, including latterly the former Soviet Union itself); the systematic settlement of empty spaces, particularly in the south; economic development through modernization of agriculture, industrialization, and application of modern science; the implementation of genuine democracy on all levels of government and the protection of civil liberties, in spite of an almost permanent military emergency; and pragmatic, compromise solutions for explosive internal problems, such as the antagonism between religious and secular concepts of Jewish nationhood, the strains and stresses between Jews of European origin and those from the "Oriental" countries, and the conflict between the socialist, cooperative, and egalitarian trends of the labor movement and the need to attract private capital and introduce incentives for economic efficiency. An outstanding success was the maintenance of a highly efficient citizen's army, free of militarist trappings, preserving the old spirit of a people's militia and also serving for collective agricultural pioneering and other pacific purposes.

The central and dominant problem however, proved to be more and more the antagonism between Israel and the Arab world, which ostensibly centered on the plight of the Palestinian Arab refugees, who had fled en masse from the territory of Israel during its *War of Independence. Almost immediately, but particularly from the middle 1950s, the great powers began to exploit this antagonism in their own interests, reinforcing its destructive features instead of working toward constructive solutions, until the *Six-Day War (1967) created an entirely new territorial and political situation, fraught with the danger of a new "round" but also opening perspectives for Arab-Israel peace. This situation placed Israel more firmly at the center of world Jewry's attention and devotion than ever before. In the immediate postwar period the two greatest Jewish communities, in the United States and the Soviet Union, which in the recent past had seemed to be irretrievably on the road to complete assimilation, also began to stir toward Jewish revival. While in the United States, after a short spurt of immigration, it became clear that large-scale *aliyah* was not to be expected, massive *aliyah* from the former Soviet Union would become the miracle of the 1990s. Thus, from several scores of pioneers at the outset of the Zionist enterprise, the revived Jewish nation in Erez Israel numbered in the early 1970s over 2.5 million people and in the early years of the 21st century edged toward 5.5 million, poised to become the largest Jewish community in the world.

However, the euphoria of the Six-Day War was relatively short-lived, unleashing processes that would agitate Israel's national life in the coming decades. The nation's pent-up energies, confined within narrow physical borders and a culture of economic austerity for 20 years, burst forth in a recrudescence of economic activity that created new wealth and new inequalities. A new political regime under Menaḥem Begin hastened the demise of the old-style socialism that had dominated the country for so many years and accelerated the transformation of Israel into a modern Western consumer society. Politically, the country underwent severe polarization as the right and left, hawks and doves, became hardened in their respective positions, while the trauma of the *Yom Kippur War initiated a tortuous process that saw peace treaties signed with Egypt and Jordan and years of unabated Arab terrorism destroying innocent lives.

Israel at the outset of the 21st century stood at a new crossroads, facing challenges that only the resiliency and moral fiber of its people might meet. The challenge of the new millennium was to recapture the sense of a common past and a common destiny that had always sustained the nation.

The Land of Israel in International Affairs, 1798–1923

After the Crusades, the European powers attached no great significance to the Land of Israel, and its conquest by the Ottoman Turks reduced its importance still further. The name "Palestine" had only a historical, archaeological, or antiquar-

ian connotation; it did not denote any clearly defined political entity, or even a separate administrative subdivision of the Ottoman Empire. The country was part of the empire; sometimes it was regarded as a part of Syria. As far as international affairs were concerned, it was no more than a remote territory, a bone of contention among unruly pashas and a prey to Bedouin banditry. Although certain European commercial interests, such as the Levant Company, did pay some attention to it at one period, their operations were designated to extend to the Ottoman Empire as a whole, and Palestine did not play a special role in their plans; nor has this competition been shown to have had any appreciable effect on the policies of the powers.

NAPOLEON'S CAMPAIGN. This situation underwent a drastic change when *Napoleon made his surprising move to land an expeditionary force in the East and succeeded in conquering Egypt (1798; see above), followed by an invasion of Palestine in 1799. The invasion, after initial success, was frustrated by the failure of his efforts to take Acre. The reasons that presumably prompted Napoleon to undertake this campaign are of great significance, for they were the same that were henceforth to induce all major European powers to vie with one another for influence in the area.

The predominant consideration was the territory's geographical position at the crossroads of the three commercial and strategic routes of the modern world, which link the Atlantic Ocean and Mediterranean Sea with the Indian and Pacific Oceans, the Mediterranean with the Persian Gulf, and the Eurasian continent with Africa. When Ottoman rule in Asia entered into a decline at the end of the 18th century, every power felt obliged to deny exclusive control of the crossroads to any of its rivals. For Napoleon, the country was of equal importance for both defense and attack: its conquest would enable him to defend Egypt against Anglo-Turkish attempts to wrest it from his hands and provide him with a springboard for campaigns directed at Anatolia and Istanbul, the Persian Gulf, and India.

Another factor that was to enter into the considerations of every power planning to replace the Ottoman Empire in the control of the area was the presence of ethnic and religious minorities that would presumably be prepared to accept the protection of a European power. At the time of Napoleon's campaign in Palestine, the idea of establishing a Jewish state in the area was mooted in Paris. During the siege of Acre Napoleon was said to have issued a proclamation to the Jews, apostrophizing them as "rightful heirs of Palestine" and calling upon them "to take over that which had been conquered" (some scholars, however, regard the proclamation as apocryphal). Napoleon was known to have had plans for fomenting unrest among the Druze and Maronites in the north and exploiting the existence of Christian and Muslim holy places for his purposes.

MUHAMMAD ALI'S CAMPAIGNS. For these and other reasons the future of Palestine became an issue of general European importance during the wars conducted by Muhammad Ali, who was sent to Egypt by the sultan in 1800 in order to reorganize Egypt after Napoleon's failure. Muhammad Ali sought to base his rule in Egypt on the innovations introduced by the Napoleonic conquest. In order to realize his ambition to create a ruling dynasty in Egypt and ward off a possible direct attack by the Ottoman forces, he dispatched Ibrahim, his stepson, to Palestine and Syria. In 1832–33 Ibrahim overran both territories, and for the next seven years the area remained in the hands of Muhammad Ali. The Egyptian regime brought many changes to Palestine. A central government ruled the country, law and order were established, and tens of thousands of Egyptians migrated to Palestine and established a chain of settlements along the coastal plain from Gaza and toward the Sea of Galilee. The non-Muslim residents of Palestine were able to act more freely. Some synagogues and churches were built and a British consulate, the first European consulate in Palestine, was opened in Jerusalem.

Failure of the Ottomans to push the Egyptians out of Syria in 1840 brought the European powers back to the area. It was at this point that Britain (under Lord Palmerston) and, to a lesser degree, Austria decided that it was in their interest to shore up the sultan's tottering power. From their point of view, it was a timely decision, for otherwise there was a danger of Russian hegemony over the Ottoman Empire or of France – an ally of Muhammad Ali – gaining control of the Mediterranean. Furthermore, by this time Syria and Palestine had become a factor in their own right in the policy pursued by the powers. The growing significance of modern means of transportation – steamships and railroads – lent significance to an area that served as a crossroads and control of which would facilitate the construction of interoceanic canals and intercontinental railroads. Palmerston already recognized this. The possession of Palestine would secure control of the Suez route, which was in use even in those pre-canal days (the early steamers preferred to cruise along the Mediterranean coast rather than risk the stormy passage around the Cape of Good Hope, transferring their cargoes overland across the Suez Isthmus to be shipped to their destination through the Red Sea and the Indian Ocean – the traditional route since early historical times). The eastern Mediterranean coast was also regarded as the proper place for the terminal of a land route – a railroad leading to Iraq and the Persian Gulf; in fact, the vision of such a route was to have an ever-increasing effect upon the imperialist policies of Britain and France.

From the French point of view, these considerations required the extension of Muhammad Ali's domain in Syria as far north as possible; the British, on the other hand, were interested in pushing him back as much as possible toward the Nile Valley and denying him access to the main lines of communication to the Persian Gulf. In 1840, when Muhammad Ali, with French support, rejected a demand that his rule be restricted to Palestine, the other powers, led by Britain, intervened by force of arms and compelled him to give up Syria, including Palestine, and restrict himself to Egypt. The Ottoman

Empire paid back the European powers by changing its attitude toward the non-Muslim inhabitants of the Empire as a whole, but this was mainly applied in Palestine.

PROTECTIVE RIGHTS. In the following two decades, Palestine retained a place in international affairs due to its importance for those powers that wanted the right to protect one or the other of the religious minorities in the decaying Ottoman Empire. Russia had long had such rights, confirmed in the Kutchuk-Kainarji Treaty of 1774 (Article 7), over Orthodox Christians in Turkey and the Orthodox Christian holy places in Palestine. France's rights to protect the Catholics (Latins) and their holy places, which had their roots in the age of the Crusades, were confirmed by Capitulations (privileges for the foreigners). Britain and, to some extent, Prussia sought to counter these advantages by extending their protection to the insignificant Protestant minority (which accounts for the creation of the Jerusalem bishopric in 1841). Palmerston and his successors also sought to extend unofficial British protection to the Jewish minority. Under the pressure of the European powers, the Ottomans first allowed the non-Muslim citizens of the Empire to buy and own land and buildings, later extending the right to everyone, including foreigners. This allowed the Europeans and Americans to put up new churches, hospitals, schools, and other buildings in the main towns of Palestine from 1840 on. During the 1860s Christian groups built new agricultural settlements in Palestine. An American group established the American colony near Jaffa in 1866, while a larger group of Germans built three German colonies in Haifa, Jaffa, and Jerusalem. Later on they built new settlements in the Coastal Plain (Sarona), Lower Galilee, and near the Jaffa–Jerusalem road. The Jewish immigrants of the 1880s were also able to establish the first moshavot (agriculture settlements) as a result of this process. Throughout the 1840s and 1850s, fierce competition ensued among the powers to improve their position as protective powers. The struggle was carried out mainly through their consular representatives in Jerusalem, which was an ideal arena in which to press their claims; their real purpose, of course, was to give the powers exercising these rights a hold on the Ottoman Empire that they could exploit whenever its collapse would lead to the ultimate disposition of its territories. It will be recalled that the contradictory claims of Russia and France with regard to the holy places were the direct cause of the outbreak of the Crimean War.

THE STRUGGLE OVER COMMUNICATIONS. Developments in Egypt between 1860 and 1890 again put the emphasis on the control of communications. The Suez Canal was opened in 1869 and France's hegemony in Cairo assured her control of the new waterway. This was a situation that the British felt they could not tolerate; in 1878 Britain took over Cyprus and finally, in 1882, it took Egypt by military conquest, ousting the French and maintaining its position for many decades to come. The two powers now switched roles: it was Britain that now aspired to extend its influence to the north, by way of Palestine and southern Syria, while France, which had struck

roots in the Lebanon and in central and northern Syria, sought to confine British influence to Egypt.

In the last decade of the 19th century, when the advance of capitalism and industry played an increasingly important role in general political developments, the competition between the European powers (Britain, France, Imperial Germany, Italy, Austria-Hungary, Imperial Russia) for influence in Syria and Palestine was concerned with religious and cultural hegemony as well as with economic and financial issues. Traditional British-Ottoman friendship had turned into enmity as a result of the British occupation of Egypt and the ascendancy of German influence over the Sublime Porte at the turn of the century. In spite of the Entente of 1903, relations between Britain and France in the Middle East continued to be competitive, rather than friendly. To guard against the possibility of an Ottoman attack upon Egypt, with the possible support of Germany or France, Kitchener, the British commander in Egypt, thought it imperative to establish a buffer state under British protection in the area adjacent to Egypt, between Acre and Aqaba.

These strategic considerations played a dominant role in the struggle between Britain, France, and Germany over railroad construction in the area. The German plans provided for the construction of a railroad link leading from northwest to southeast, from Constantinople to Alexandretta and thence to the Persian Gulf. This plan for a Baghdad Railroad threatened British interests in the Persian Gulf and clashed with two other plans: a British proposal for an east-west route from Baghdad to Haifa (the Willcocks Plan) and a French proposal for a railroad linking Alexandretta or Homs with Baghdad. Another project, in which the Germans took an active part, was that of the Hejaz Railroad (Damascus to Mecca), which competed with the French-built north-south railroad (Aleppo to Mezerib). Of special significance was the Haifa-Darʿa section of the Hejaz Railroad, which competed with the Beirut-Damascus section of the French railroad and came in place of the British Willcocks Plan. Furthermore, the Hejaz Railroad represented a strategic threat to British interests in Egypt, an aspect borne out by the Ottoman demand that the Germans and the French extend their railroad lines to Rafa and construct a line from Maʿan to Akaba (which would have created a direct link between the Mediterranean and the Red Sea and threatened the Suez Canal's monopoly).

By 1912 the struggle among the powers had become sharp enough for the French upper chamber to adopt a resolution emphasizing French interests in Syria (including Palestine). Although the British foreign secretary, Sir Edward Grey, publicly declared that Britain would follow a "hands-off" policy in Syria, he soon modified his statement by denying any intention to recognize exclusive French rights in the area. Moreover, the British representatives in Cairo did not feel committed by his declaration.

In 1914, on the eve of World War I, the Germans settled their differences with the other two powers by two railroad conventions that were to divide the Asian part of the Ottoman

Empire into British, German, and French spheres of economic interest. The German-French convention granted the Germans economic supremacy in Anatolia, northern Syria, and Mesopotamia, while French economic interests would predominate in central and southern Syria, up to the Egyptian border (i.e., the area served by the French railroads and the Hejaz line). The Anglo-German convention, which divided Mesopotamia into German and British spheres of influence, acknowledged the supremacy of British economic interests in the area lying to the south of Beirut and west of Amman as well as in the desert lying between Transjordan and Iraq (this would have enabled the British to build a Suez-Akaba-Kuwait-Barash railroad as compensation for the Willcocks scheme). It should be noted that in the German agreement with the French, Palestine was recognized as lying within the French sphere of interests, while in the German-British agreement it appears as part of the British sphere; thus the Germans succeeded in settling their own differences with the British and the French and simultaneously planted the seeds of contention between the two powers with regard to the future status of the country.

THE AQABA INCIDENT AND THE SINAI BORDER. The Aqaba incident of 1906 is a striking illustration of the importance the British attached to the whole area even before World War I. (It also led to the delineation of the eastern border of Sinai, which eventually became the boundary of Mandatory Palestine.) The peace agreement with Muhammad Ali (1841) had left him, in addition to Egypt, an area in the Sinai Peninsula from the town of Suez to a spot south of Gaza, on the Mediterranean coast, and several fortified cities on the Red Sea coast on the route to Mecca. In 1892, ten years after the British conquest of Egypt, the Ottomans demanded the return of Sinai and the Hejaz cities. Sir Evelyn Baring (later Lord Cromer) rejected the Ottoman demand, and eventually a compromise was achieved by which the Hejaz cities were placed under Ottoman rule, while the Sinai Peninsula was to remain Egyptian territory. In the course of the negotiations, it transpired that the borders in the Sinai Peninsula were under dispute. The Ottomans claimed that the Egyptian border extended from Rafah to Suez. Baring claimed that southern Sinai also belonged to Egypt and that the new border should be a straight line from Rafah to Aqaba. The Ottomans refused to accept this demand.

The controversy played a certain role in the negotiations between Theodor *Herzl and Joseph Chamberlain in 1902–03 concerning Jewish settlement in northern Sinai, which Chamberlain was inclined to believe would help to ward off a possible Ottoman attack and might eventually lead to the inclusion of Palestine in the British sphere of influence. Baring, however, would not hear of this plan, preferring the local Bedouin as instruments of British policy.

As a result of this "Bedouin policy," the British seized an area of Ottoman territory near Aqaba in 1906, although there was no doubt that their action was a flagrant violation of Ottoman sovereignty. The Ottomans charged that this was part of an attempt to extend the Egyptian border at their expense. The tension soon turned into a full-fledged crisis. An Ottoman compromise proposal, which would have divided the Sinai Peninsula in such a manner as to leave both banks of the Gulf of Suez in Egyptian hands and both banks of the Gulf of Aqaba Ottoman, was rejected. The British regarded the issue important enough to warrant an ultimatum to Istanbul, to which the sultan submitted in September 1906. The new Ottoman-Egyptian border now became a line extending from Rafa to Ṭaba and underwent no further change until 1948. Thus the first boundary of modern Palestine was established.

THE *SYKES-PICOT AGREEMENT AND THE MCMAHON – HUSSEIN CORRESPONDENCE. World War I further exacerbated, rather than reduced, differences among the Allies. The railroad agreements with Germany had left the future of Palestine a matter of controversy between Britain and France, and in the very first months of the war the two powers reiterated their interests in the area so as to lay the foundations for the claims they would submit when victory had been achieved. Between November 1914 and March 1915, the British cabinet held several sessions devoted to the subject, finally resolving that, at the very minimum, British interests required the internationalization of Palestine if exclusive British control could not be obtained. The French raised their claims to supremacy in Syria and Palestine in the legislature and in the press; they also asked for Russian support in exchange for French support of Russian claims on Constantinople. The Russians in their turn asked for the exclusion of the Orthodox Christian holy places (in Galilee as well as in Jerusalem) from French control, and the French countered by offering, as a maximum concession, the internationalization of the Jerusalem-Bethlehem area, provided the rest of Palestine became French. Both the Russians and the British refused to accede to this proposal, and in July 1915 the British cabinet came to the conclusion that the best way to counteract French demands was to obtain Russian agreement for a joint Anglo-French-Russian regime in Palestine after the war. The Russians appear to have agreed to this plan.

When the Syrian and Hejazi leaders of the Arab revolt, with British encouragement, raised their claims to the area (as reflected in the Hussein-McMahon correspondence – see next paragraph), it was decided to appoint a mixed Anglo-French commission to submit an agreed plan for the postwar partition of the Ottoman Empire. The commission was appointed in the fall of 1915, with Sir Arthur Nicholson – shortly afterward replaced by Sir Mark Sykes – as the British representative and Charles François Georges-Picot (the former French consul to Jerusalem) for France. The recommendations of the commission, as accepted by the powers, became known as the Tripartite (*Sykes-Picot) Agreement of 1916. It provided for joint Anglo-French-Russian-Italian and Arab control of all parts of Palestine containing holy places. This included the area between a line running from the Dead Sea to Rafah in the south to a line running from the northwest corner of the Sea of

Galilee toward Ras el-Naqura on the Mediterranean shore in the north. The Jordan River was to be the eastern boundary of this area, safeguarding the interests of the European powers as well as those of all religions. France got the rule over the area north of Nazareth and the Sea of Galilee (Lake Kinneret – i.e., northern Galilee and Safed), together with the Lebanon. Britain got the control over Haifa Bay (with the towns of Haifa and Acre) to satisfy the requirements of the British navy and to serve as the terminal of the Baghdad Railroad. The agreement also defined the incorporation of Transjordan and the Negev into an Arab State under British protection, as a corridor between British bases in Egypt and those in southern Iraq, and the creation of a French-protected Syrian-Arab state, including the Hauran.

Meanwhile, Sir Henry McMahon, the British high commissioner in Cairo, had been negotiating with Hussein ibn Ali, the sharif of Mecca, for his assistance in the war against the Ottoman Empire in return for a British promise to support his bid for the restoration of the caliphate. On behalf of his government, Sir Henry McMahon agreed to support Arab independence within the boundaries proposed by Hussein, who asked for all the Arab areas of the Ottoman Empire south of the Taurus Mountains, with two provisos: first, "The two districts of Mersina and Alexandretta and portions of Syria lying to the west of the districts of Damascus, Homs, Hama, and Aleppo, which cannot be said to be purely Arab, and should be excluded from the limits demanded"; secondly, the undertaking to support Arab independence was given only "… for those frontiers wherein Britain is free to act without detriment to the interests of her ally, France…". The term "Syria" was often regarded, particularly by Arabs, as including Palestine and the "district" or vilayet of Damascus extended to the whole of Transjordan. The first proviso, as well as the second, therefore, according to British sources, clearly excluded the whole of western Palestine. This was subsequently verified by Sir McMahon himself and by a British government committee that examined the correspondence. On the other hand, the Arabs claimed that the letters spoke of excluding the cities of Aleppo, Hama, Homs, and Damascus; thus, as Palestine lay south of Damascus, it was not excluded from the Hussein demand and the area of Palestine was promised to the Arabs.

In order to provide a counterweight to French protection of Catholics and Russian protection of Orthodox Christians in the proposed jointly administered area, the British, in 1916, recommended that the Allies permit Zionist settlement in Palestine (presumably under British protection), an idea that had been discussed by the British cabinet as far back as 1914.

THE ZIONIST CLAIMS. When the Zionist leadership heard of the truncation of the Land of Israel envisaged by the Sykes-Picot Agreement, Chaim *Weizmann dispatched a strong protest to the British Foreign Office. In Weizmann's opinion the realization of Zionist goals required that the whole of the Land of Israel be placed under British protection. Eventually, Britain also came to the conclusion that British control of the entire

area of Palestine would serve her interests in Egypt and Mesopotamia, and this realization gave added impetus to the British plans for the conquest of the country by her forces alone. Zionist pressure and the wish to win over the Jews of Russia (after the revolution of February 1917) and those living behind enemy lines (Germany, Austria-Hungary) to Britain led to the *Balfour Declaration, which promised the help of Britain in establishing a Jewish National Home in Palestine. This Declaration made no attempt to establish the exact boundaries of the National Home, which later led to much discussion about the limits of the Jewish National Home.

World War I ended with the British conquering Palestine (1917–18). During the war the Zionists had won French support for their aims, mainly through the efforts of Nahum *Sokolow. A month after the war had ended, in December 1918, the French Premier Georges Clemenceau, who was indifferent to Middle East affairs and wholly absorbed in the problem of Germany, gave his consent to British rule over the entire area of Palestine "from Dan to Beersheba" (no more precise definition being given) in exchange for British support of French territorial claims concerning its boundary with Germany. The Zionist leaders, having coordinated their territorial demands with those of Emir Feisal, Hussein's son (which eventually led to the Weizmann-Feisal accord), presented their demands to the Council of Ten at the Paris Peace Conference in February 1919. They called for the borders of Palestine to run from a point on the Mediterranean coast south of Sidon along the foothills of the Lebanon up to Rāshiya (thereby including most of the Litani valley and all the sources of the Jordan), proceeding further east along the Hermon ridge, and then southward parallel to and west of the Hejaz Railroad down to the Gulf of Aqaba. Such an arrangement would have given both Palestine and the Arab state access to the Transjordan section of the Hejaz Railroad. In the south, the Zionists asked for a boundary which would be agreed upon with the Egyptian government. It took 70 years to realize this wish, as Israel and Egypt only agreed on their common border in 1979.

The borders of Palestine were also the subject of an exchange of notes between Britain and France in September 1919 and June 1920 and of discussions by the foreign ministers of the two powers in December 1919 and June and December 1920. Both parties attached great importance to this question, and at one point the French, incensed at British opposition to their Syrian plans, demanded a return to the Sykes-Picot Agreement with its provisions for a truncated Palestine. In the end, the British only partly succeeded in getting the Zionist border proposals accepted and agreed to a narrow interpretation of the agreement they had reached with Clemenceau in 1918. As a result, a boundary agreement was signed between France and the United Kingdom on December 23, 1920. In it the border outlined in the Sykes-Picot Agreement was extended as far as "Dan" only, i.e., including the Safed district and a narrow corridor (the Galilee panhandle) northward, containing Lake Ḥuleh and Metullah as well as half of the Golan Heights but only half of the Sea of Galilee. Details of

the border were fixed by a special demarcation commission that functioned from 1920 to 1923, and its final version was amended to include both banks of the Ḥuleh, the Jordan River, and Lake Kinneret (the Sea of Galilee) in Palestine, but left the Golan with Syria. Efforts by the Zionist leaders to obtain more favorable borders, including the water sources in the north and the extensive uncultivated areas in the east, had been frustrated by the compromise between the powers. This final version was ultimately ratified by the League of Nations *Mandate for Palestine.

Boundaries

BOUNDARIES OF MANDATORY PALESTINE. *In the South.* The formation of the frontiers of Israel actually began with the delimitation and demarcation of the boundary between Egypt (then under British protection) and the Ottoman dominions in 1906. In 1841, after Muhammad (Mehemet) Ali had been pushed back into Egypt, an Ottoman firman (royal decree) fixed the boundary as a straight line connecting the northern outskirts of Suez, at the northern tip of the gulf of that name, with a point southwest of Gaza, near the small village of Rafah, on the Mediterranean. This boundary gave Egypt a triangular area in northern Sinai, which included the entire Mediterranean coast of the peninsula. A few years after the British took control of Egypt in 1882, a dispute broke out over the actual position of the boundary. The British were very unhappy about the Suez-Rafa line, which gave the Ottomans easy access to the Suez Canal (opened in 1869), especially its southern end. They put forward various claims and proposals aimed at pushing the boundary as far eastward, away from the canal, as possible. The dispute reached its climax early in 1906, when the British sent forces to occupy the vital positions in the Sinai Peninsula and at the head of the Gulf of Aqaba. The crisis, which brought the two countries to the verge of war, was settled when the Ottomans were forced to agree to draw the boundary along a line from Rafa to a point on the northern shore of the gulf three miles west of Aqaba village. The British demand for the Rafa-Aqaba line was based on a detailed survey of northern and eastern Sinai. It gave them, as controllers of Egypt, the entire width of the Sinai desert as a natural barrier between Ottoman territory and the Suez Canal, and left them in control of nearly all the main water resources in eastern Sinai, as well as the roads and tracks connecting the Gulf of Aqaba with the Mediterranean Sea.

The demarcation of the boundary was carried out under very difficult conditions, at the height of the summer, and the boundary as marked out on the ground deviates slightly from the line laid down in the agreement – due mainly to mistakes in survey and measurement in the extremely rugged terrain, and partly to the insistence of the Ottoman delegation. Thus the line reached the Gulf of Aqaba near Bir Ṭaba, five miles southwest of the point designated in the agreement, leaving the entire northern shore of the Gulf on the Ottoman side. It should be pointed out that in 1906 this was formally only an administrative line and not an international boundary. It was agreed at the time between the Ottomans and the British that the Sinai Peninsula would continue to form part of the Ottoman Empire, though it was under Anglo-Egyptian administration. This border, 135 mi. (224 km.) long, was adopted in 1919 as the boundary between Egypt and British-mandated Palestine. Except for its northern section (the southern border of the Gaza Strip) it also became the armistice demarcation line between Egypt and Israel during the period 1949–67. It was actually abolished after the occupation of Sinai by Israel in the Six-Day War but the peace agreement between Egypt and Israel, signed in 1979, established this line as the agreed international boundary between them.

In the North. The next stage in the formation of the modern boundaries of Israel came with the delimitation and demarcation, in 1922–23, of the boundary between British-mandated Palestine and the French-mandated territories of Syria and Lebanon. The starting point for the delimitation of this boundary was the Sykes-Picot Treaty of 1916 (see also the Land of Israel in International Affairs, above). According to the treaty, the northern boundary of Palestine was to be a line from the Mediterranean coast a short distance north of Acre to a point on the northwestern shore of Lake Tiberias (Lake Kinneret). The area south of this line was to come under an international regime, except for a British enclave around the Bay of Acre, while the area to the north was assigned to the French.

Toward the end of World War I and during the two years which followed, there was much political activity around the question of the final location of this boundary. Strenuous efforts were made by the Zionist movement to induce the British and French governments to move it much further north, so that it would correspond to the northern frontier of the biblical Land of Israel and bring the whole of Galilee within British-mandated territory. At one stage the Zionist movement pressed for a northern boundary which would run from the outskirts of Sidon (Saida) eastward to the northern foot of Mount Hermon, to encompass most of the valley of the Litani and all the headwaters of the Jordan (see *Zionist Policy).

After lengthy discussions and much lobbying, an agreement was reached and embodied in the Franco-British Convention of Dec. 23, 1920. The boundary between Palestine and Syria-Lebanon was to be a line starting on the Mediterranean coast about 1.2 mi. (2 km.) south of Rosh ha-Nikrah (Ras al-Naqura) where the present Israel-Lebanese border reaches the sea, and running eastward along the watershed between the Fāra Hindāj wadis (now Naḥal Dishon) and Qarqara (now Naḥal Bezẹt) in the south, and the al-Dubba al-Ayyūn and Zarqāʾ valleys to the north. Then it was to run along the watershed between the head-streams of the Jordan and the river Litani (Qāsimiyya) up to Metullah. The northwestern part of the *Ramat ha-Golan was to be included in Palestine: from Metullah the boundary was to run along the track leading to Banias and Kuneitra, leaving the track on the French side of the border. Further south the boundary would follow the bed

of Wadi Masʿadiyya and one of its tributaries to the northern shores of Lake Kinneret a short distance southeast of the entry of the Jordan, cut across the lake to Samakh (Ẓemaḥ), leaving the eastern half of the lake on the French side of the frontier, and run south to the valley of the Yarmuk river, which it would then follow eastward.

Even before the conclusion of the agreement, the actual border line between the areas under British and French military occupation did not conform with the Sykes-Picot line of 1916. The British extended their control over considerable areas further north, up to a line running from al-Zīb (Keziv) on the Mediterranean coast to the northern shore of Lake Ḥuleh, and later up to the northern fringe of the Ḥuleh Valley. While a Franco-British commission was at work on the exact delimitation of the boundary (1921–22), further negotiations and bargaining between the two governments led to the acceptance of significant changes. The British gave up the area allotted to them in the Golan Heights in return for complete control of the river Jordan and Lake Tiberias. The work of this commission led to the final demarcation of the northern and northeastern boundary of Palestine, which later became the border of Israel (in the northeast up to June 1967).

Between the Mediterranean coast and Metullah there were only minor deviations from the December 1920 agreement, extending the area of Palestine northward by 1–3 mi. (2–5 km.), with a total gain of nearly 70 sq. mi. (200 sq. km.), containing 20 Arab villages. From Metullah to the eastern shores of Lake Kinneret the boundary gave the British full control of the main sources of the Jordan and the entire area of Lake Ḥuleh and Lake Kinneret. The border line ran a short distance east of the Jordan (in some sections only 160 ft. (50 m.) away), so that both banks of the river were inside Palestine, thus giving the British sole ownership of the river and its lakes. This was done with future development possibilities in mind, to enable the British to harness the waters without having to obtain French approval. Along the northeastern shores of Lake Kinneret the boundary ran only 33 ft. (10 m.) from the edge of the lake, thus avoiding the division of six Arab villages and their lands between two states, while leaving the entire lake inside Palestine. It was only about halfway along the eastern shores of the lake that the boundary left the shore and climbed up the steep western slopes of the Golan Heights and ran southward, along the top of the escarpment, to the valley of the Yarmuk near the spa of al-Ḥamma (Ḥammath Gader). Here the boundaries of Syria, Western Palestine, and what was later Transjordan met.

In the final stage of the commission's work the French demanded that the boundary should be moved about three-quarters of a mile (1,300 m.) westward, with its extreme northeastern point near the village of Banias, so as not to cut the main track connecting the Golan Heights with the Lebanon and the Mediterranean coast. This meant that the Banias springs, one of the main sources of the Jordan, would pass from the British to the French controlled area. It was agreed to concede the French request temporarily and leave the final

settlement in this section to further negotiations. As the matter was not subsequently raised, the Banias springs remained on the Syrian side of the boundary until June 1967. The section of the northern boundary running between the Mediterranean at Rosh ha-Nikrah and a point 4.4 mi. (7 km.) southeast of Metullah (total length 49 mi.; 78 km.) is the Israel-Lebanese border, while from Metullah roughly southward to the bed of the Yarmuk River – 50 mi. (80 km.) – it was the Israel-Syrian border (until June 1967).

In the East. The boundary between Palestine and Transjordan was first officially delimited in a memorandum submitted by the British government to the League of Nations in September 1922, in the following words: "A line drawn from a point two miles west of the town of Akaba, on the gulf of that name, up the center of the Wadi Araba, the Dead Sea, the river Jordan to its junction with the river Yarmuk; thence up the center of that river to the Syrian frontier." In fact, the boundary ran (1922–48) along the river Yarmuk from al-Ḥamma to its junction with the Jordan and then along the Jordan to the Dead Sea. Being in control of both Palestine and Transjordan, the British placed the boundary at these rivers and in the middle of the Dead Sea as they thought that by these, the two separate states they wanted to establish in that area – Jewish Palestine and Arab Transjordan, would have to cooperate in using the water of the rivers and the minerals of the Dead Sea. After cutting across the middle of the Dead Sea it was assumed to run in the wide bed of the Wadi Araba (Naḥal ha-Aravah) to a point near Beʾer Menuḥah. From there to the coast of the Gulf of Akaba the actual position of the boundary was not clear, but this was of little significance during the British Mandate, especially since the region was uninhabited except for a few hundred Bedouin. It was only when it was decided to grant Transjordan independence (1946) that the demarcation of this part of the boundary was undertaken. It was done, however, only partially – at the southern end – by the time the British Mandate over Palestine came to an end, and the full demarcation of the boundary in the Arabah was only carried out in 1950 by the Israel-Jordan Mixed Armistice Commission. In 1994, the peace agreement between Israel and the Hashemite Kingdom of Jordan adopted this line, with some small modifications, as the international boundary between them.

PARTITION PLANS. Two plans to partition Palestine were produced in the course of efforts to settle the Jewish-Arab conflict over the country: the first by the British Royal Commission (the Peel Commission) in 1937, and the second by the United Nations Special Committee on Palestine – UNSCOP – in 1947. The Peel Commission proposed the following boundary for the Jewish State to be established according to its scheme: "Starting from Ras al-Naqura [Rosh ha-Nikrah on the Mediterranean coast] it follows the existing northern and eastern frontier of Palestine to Lake Tiberias [Kinneret] and crosses the Lake to the outflow of the river Jordan whence it continues down the river to a point a little north of Beisan [Beth-

Shean]. It then cuts across the Beisan Plain and runs along the southern edge of the valley of Jezreel and across the Plain of Jezreel to a point near Megiddo, whence it crosses the Carmel ridge in the neighborhood of the Megiddo road[the Wadi Āra (Naḥal Iron) road of today]. Having thus reached the Maritime Plain the line runs southward down its eastern edge, curving west to avoid Tulkarm, until it reaches the Jerusalem-Jaffa corridor near Lydda[Lod]. South of the corridor it continues down the edge of the plain to a point about 10 miles south of Reḥovot, whence it turns west to the sea." This partition plan gave the Jews the entire area of Galilee (within the boundaries of the British Mandate), the upper Jordan Valley as far as Beth-Shean, the valley of Jezreel, most of the Carmel range, and the Coastal Plain as far as 3 mi. (5 km.) south of the present port of Ashdod. The Jewish State was thus allotted about 20% of the area of Mandatory Palestine. Jerusalem and its environs, including Bethlehem, with a corridor leading to the coast comprising Jaffa, Ramleh, and Lydda, remaining under British Mandate, while the rest of the country (about 75% of its area) would become an Arab state. The Woodhead Commission, appointed in 1938 to study the possibility of implementing this scheme, also considered two alternative plans, but came to the conclusion that partition was impracticable and the British government decided to drop it.

The UNSCOP plan was much more complicated and less clearly defined in so far as boundaries were concerned. It proposed that the country be divided into seven segments. The Jewish state and the Arab state were to consist of three segments each, while the seventh segment, including the Jerusalem-Bethlehem area, would come under international control. The Jewish state was to get the eastern part of Galilee; the Jordan Valley from the northern end of the country to a point about 10 km. south of Beth-Shean; the plain of Jezreel; most of the Carmel range; the Coastal Plain from a short distance south of Acre to about 4.5 mi. (7 km.) south of the present port of Ashdod; the eastern part of the Coastal Plain from the latter point to the vicinity of Beersheba; the western and southern parts of the plain of Beersheba, and most of the Negev (with the exception of its northwestern part). Nearly 60% of Palestine was assigned to the Jewish state, but over half of this area was the uninhabited, semidesert Negev. The northern segment (Galilee) of the Jewish state connected up with the central segment (Coastal Plain) only at one point, near Afulah. Similarly, the central and southern (Negev) segments met near Be'er Toviyyah. It was not, however, intended that the partition should be actually implemented according to the border lines specified in the UNSCOP plan, but that they should constitute the basis for negotiations between Jews and Arabs, which would lead to the exchange of areas and the agreed delimitation of more practicable boundaries. The resolution passed by the UN General Assembly on Nov. 29, 1947, which called for the partition of Palestine, made minor changes in these boundaries.

See also *Palestine, Partition Plans.

THE ARMISTICE DEMARCATION LINES – 1949. The de facto boundaries of the State of Israel were delimited after the War of Independence (the 1948 war) in a series of armistice agreements signed with the neighboring states in 1949 on the basis of the position of the front lines between the opposing armies on the day the cease-fire came into force. The armistice lines were later demarcated where they did not coincide with the boundaries of the British Mandate or where demarcation had not been carried out by the British. It was stated in the agreements (e.g., article 5, par. 2 of the agreement with Egypt) that the armistice demarcation lines were not to be regarded as territorial or political boundaries and that the rights and claims of the parties were unaffected. However, since the agreements forbade any acts of hostility or penetration across the lines, they served, in practice, despite repeated violations, as Israel's boundaries until the *Six-Day War of 1967.

The boundary between Israel and Lebanon remained unchanged and was identical with that of Palestine under the British Mandate. Israel handed back to Lebanon a strip north and west of the Palestine-Lebanon border occupied by its forces during the fighting.

In the Israel-Syrian armistice demarcation lines there were only minor de facto changes from the mandatory boundaries. The Syrians occupied during the War of Independence and held until June 1967 the small areas east of Jordan, east of Lake Kinneret, and in the Yarmuk valley which belonged to Palestine during the British Mandate, a total of some 9 sq. mi. (25 sq. km.). Following the signing of the armistice agreement the Syrians withdrew from small areas west of the Jordan (in the Mishmar ha-Yarden area) and near the eastern and northeastern shores of Lake Kinneret. The agreement provided for the formation of demilitarized zones along most of the demarcation lines. These were the occasion for much friction and numerous incidents – mainly due to Syrian interference with Israeli development works and the cultivation of lands by Israeli farmers in the zones. The actual position of the Syrian forces prior to the Six-Day War became the basis of their demand for the withdrawal of Israel from Syrian territory occupied during the war.

Various parts of the long armistice line between Israel and the Kingdom of Jordan were drawn in three different ways. Two parts of the line coincided with the boundaries of Palestine during the mandatory period: the section running along the Yarmuk to its confluence with the Jordan and then along that river to a point approximately 2.5 mi. (4 km.) southeast of Tirat Ẓevi, and the section running across the middle of the southern part of the Dead Sea and all along the Arabah.

Secondly, a line was drawn between the positions held by each side when the fighting stopped, dividing up the no-man's-land. Along two sections, in the valley of Aijalon (Latrun area – from the Budrus to Qaṭanna) and in Jerusalem, no agreement could be reached on the division of no-man's-land. As a result, there were two parallel demarcation lines enclosing strips about 300–4,000 ft. (100–1,200 m.) wide,

which citizens of each side could enter only with the consent of the other side.

Thirdly, there were places where the line agreed upon involved the exchange of territory. These were mainly areas required by Israel to maintain communications (mostly railway lines) and areas handed over to the Jordanians in exchange. Israel received a strip up to 3 mi. (5 km.) wide along the eastern fringe of the Sharon Valley, so that the railway from Lydda to Haifa, except for a section of 2 mi. (3 km.) on the outskirts of Tulkarm, was in Israeli territory. The same applied to a narrow strip in the Judean highlands, along the Jerusalem-Lydda railway. In return, the Jordanians got small areas in the Hebron region of the Judean Highlands.

The armistice demarcation line (later called the Green Line because of its color on the agreed maps) left the mandatory boundary along the river Jordan southeast of Tirat Ẓevi and turned westward into Naḥal Beẓek and up the eastern slopes of Mount Gilboa. It then ran along the top of the eastern and northern slopes of the Gilboa and cut across the southern corner of the Jezreel Valley in a westerly direction, leaving the southern tip of the valley on the Jordanian side of the border. The boundary then turned southwest and crossed the southern part of the Carmel range, running parallel with the Naḥal Iron (Wadi ʿĀra) road 2–2.5 mi. (3–4 km.) to the southeast. It then followed the eastern fringe of the Coastal Plain southward to the valley of Aijalon, where it turned eastward near Latrun into the Judean Highlands, running north of the Jerusalem-Shaʾar ha-Gai (Bab al-Wād) road to the northern outskirts of Jerusalem. It then turned south, dividing the city between Israel (western and southern parts) and Jordan (the Old City and the eastern and northern parts). The armistice agreement provided for two small enclaves in the Jerusalem area: one under Israel control, on Mount Scopus, about a kilometer to the north of the city, and the other, under UN control, about half a kilometer south of the city on Government House hill. Israel kept a police garrison in its part of the Scopus enclave, which was relieved once in two weeks by a convoy under UN supervision. On the southern outskirts of Jerusalem the boundary turned southwest, first running parallel to the railway and south of it and then descending to the western slopes and foothills of the Judean Highlands, which it followed southward to a point about 10 mi. (16 km.) northeast of Beersheba. From here the boundary turned east and then northeast, leaving the southern reaches of the Judean Highlands on the Israel side of the border, and reaching the Dead Sea about 2 mi. (3 km.) north of En-Gedi. This section of the line (the Green Line) marked the area which was occupied by Israel in the Six-Day War and (along with the Gaza Strip) was regarded by the Palestinians as the territory earmarked for their independent state. Opposite En-Gedi, in the center of the Dead Sea's western shore, the line joined the mandatory boundary, with which it was identical down to the Gulf of Eilat (Akaba).

The Israel-Egyptian armistice coincided with the Palestinian-Egyptian boundary, as demarcated in 1906, from the shores of the Gulf of Eilat to a point about 4.5 mi. (7 km.) south of Rafa, about 7.5 mi. (12 km.) from the Mediterranean coast. From this point it turned northward and ran almost parallel to the Mediterranean coast, at a distance 4–7.5 mi. (6–12 km.) from the coast to the vicinity of Beit Ḥānūn (northeast of Gaza), where it made a sharp turn westward and reached the coast. This part of the lines, from Rafa to the coast near Beit Ḥānūn, enclosed the Egyptian-held area known as the Gaza Strip. It followed the front line on the day the cease-fire came into force, with minor rectifications in addition to the division of no-man's-land. The agreement also provided for a demilitarized zone around Niẓẓanah (ʿAujā al-Ḥafir), a frontier post on the Israel side of the boundary and a strategic position on the road from Beersheba to Isma'iliya on the Suez Canal. This triangular enclave, which was under Israel administration, had a base 22 mi. (35 km.) long along the Israel-Sinai boundary with a vertex 7.5 mi. (12 km.) to the east, inside Israel. Niẓẓanah was the seat of the Israel-Egyptian mixed armistice commission and the UN Truce Supervision Observers during the period 1949–56.

The total length of the armistice demarcation lines, the de facto boundaries of Israel during the period 1949–67, was approximately 771 mi. (1,239 km.): 118 mi. (190 km.) along the Mediterranean; 51 mi. (82 km.) with Lebanon; 48 mi. (77 km.) with Syria; 382 mi. (614 km.) with Jordan, including 73 mi. (118 km.) along the Jordan river and 33 mi. (53 km.) along the Dead Sea; 7 mi. (11 km.) along the Gulf of Eilat; 128 mi. (206 km.) with the Sinai Peninsula, and 37 mi. (59 km.) along the Gaza Strip.

CEASE-FIRE LINES – 1967. The Six-Day War of June 5–10, 1967 ended with the acceptance by Egypt, Jordan, Syria, and Lebanon of the Security Council's call for a cease-fire. Israel declared that the armistice regime had collapsed as a result of repeated Arab violations, and that she would maintain the cease-fire lines, which were determined by the positions held by each side when fighting stopped on June 10/11, until the establishment of agreed, secure and recognized borders as part of a permanent peace settlement with her neighbors.

The cease-fire line between Israel and Egypt ran along the Suez Canal from its southern end to Ras el-ʿEsh (about 10 km. from the northern end) and from there due north to the Mediterranean – a total of 112 mi. (180 km.).

The Israel-Jordan cease-fire line was identical with the 1949 armistice line from the shores of the Gulf of Eilat to a point halfway across the Dead Sea opposite En-Gedi. From here it left the armistice line and ran northward across the center of the Dead Sea to the entrance of the river Jordan and then along the course of that river to its confluence with the river Yarmuk, which it followed to a point about a kilometer east of its confluence with Wadi al-Ruqqād. The total length of the Israel-Jordanian cease-fire lines was 298 mi. (480 km.). The Israel-Syrian cease-fire line started from the valley of the Yarmuk, a short distance east of the entry of Wadi al-Ruqqād. For about 3 mi. (5 km.) it followed the eastern edge of the nar-

row, deeply incised, valley of the wadi, then it crossed to the western side of the valley and ran along the head of the escarpment overlooking it to a point about 2.5 mi. (4 km.) east of the village of Khasfin. From here to the eastern outskirts of the abandoned village of Rafīd it ran straight northeast, made a sharp turn to the west and then to the north near Rafīd, and continued in a general northerly direction to the southern slopes of Mount Hermon, passing about 2 mi. (3 km.) east of Kuneitra and 2 km. east of Majdal Shams. The cease-fire line then climbed to the peaks of the southern ridge of Mt. Hermon 7,500 ft. (2,300 m.), where it turned southwestward down the western slopes of the Hermon, reaching the upper Jordan valley east of the village of Ghajar, south of which it met the Israel-Lebanon boundary. The total length of the Israel-Syrian cease-fire line was 50 mi. (80 km.). The Israel-Lebanon boundary remained unchanged except for an added stretch at its extreme east, where Israel held former Syrian areas bordering on Lebanon, which brought the total up to 63 mi. (102 km.). The peace treaties with Egypt (1979) and Jordan (1994) established with some minor modifications the mandatory boundaries between those countries and Mandatory Palestine as the international boundaries between the independent states of Israel and Egypt and between Israel and Jordan. The withdrawal of Israeli forces from Lebanese territory in spring 2000 reestablished the Israel-Lebanon line as an active boundary although Lebanon did not accept it as an international boundary.

[Moshe Brawer / Gideon Biger (2nd ed.)]

1880–1948

UNDER OTTOMAN RULE, 1880–1917. In the last 50 years of Ottoman rule over the Land of Israel, the decaying empire was partly opened to the growing political and economic influence of the European powers in the country. The Sultan Abdul Ḥamid II (1876–1908) tried to preserve his position by increasing the number of officials and strengthening the police forces, encouraging the emigration of loyal elements and settling them in areas inhabited by the rebellious Bedouin, and playing on the differences between the powers. In 1900 Beersheba was rebuilt and became the seat of government offices and a police garrison, and in 1908 ʿAwjā-Ḥifir (*Niẓẓanah) was also made into an administrative center, the first step taken to get the Negev under control. Another important factor in strengthening law and order was the building of new gravel roads. New wagon ways from Jerusalem to Jaffa, Nablus, and Hebron were constructed as gravel roads in the 1880s. Important rail links were established: a concession for the Jerusalem-Jaffa line was awarded to Yosef *Navon, of Jerusalem, but the railroad was eventually built by a French company in 1890–92. Another railroad, the Haifa-Edrei line, linking up with the Hejaz Railroad (Istanbul-Damascus-Medina), was built by German engineers and completed in 1906.

In 1878, on the conclusion of the Balkan War, a special law was enacted to encourage the immigration of Muslims and their settlement on lands owned by the sultan, providing for 12 years' exemption from taxes and military service.

As a result Moroccans settled in Lower Galilee, Circassians from the Caucasian Mountains settled in Galilee, and Bosnians settled in Caesarea. Concurrently, severe restrictions were imposed on the purchase of lands by foreign nationals, and the construction of dwellings and business premises on foreign-owned land was forbidden without a permit from Istanbul. At the same time, the European powers were increasing their foothold in the country, utilizing the Capitulations regime. Following the British occupation of Egypt in 1882, the Ottoman Empire based itself primarily upon its friendship with Germany, which was highlighted by an official visit in 1898 by Kaiser William II and his Kaiserin. They made a triumphant entry into Jerusalem, where the Kaiser received *Herzl. The influx of Europeans (of various types – settlers, monks, pilgrims, tourists) forced the Ottoman government to ensure law and order in order to deprive the foreign powers of a pretext to interfere in its internal affairs. The result was a considerable improvement in public security.

The Jewish Community. In 1880 the total number of Jews in the country was 20–25,000, two-thirds of whom were in Jerusalem, where they constituted half the population. There were smaller communities in the three other "holy cities" – Safed (4,000), Tiberias (2,500), and Hebron (800) – and two more recently established ones in Jaffa (1,000) and Haifa (300). The Sephardim were the older part of the Jewish population and also absorbed immigrants from North Africa, Bukhara, Persia, etc. The Ashkenazim were mostly of East European origin and were divided into *Ḥasidim and their opponents, the Perushim. Most of the Jews subsisted on ḥalukkah donations from Jews abroad that amounted to over £100,000 a year. Among the Sephardim the money was distributed by the community leaders, the recipients being mainly talmudic scholars and widows and orphans; among the Ashkenazim, the funds were administered by the kolelim (charitable organizations based largely on the origin of the beneficiaries), of which the largest were those of Vilna, Zamut, Grodno, Warsaw, Volhynia, Austria, Hungary, and Chabad Ḥasidim. There were considerable numbers of artisans, unskilled laborers, and small shopkeepers who led a life of poverty and want. Although the Jews were a recognized community and the Sephardi chief rabbi in Jerusalem (the rishon le-Zion) enjoyed official status, their status was low; Many Jews, especially among the Ashkenazim, sought the protection of foreign consuls, who readily gave it in order to extend their influence.

The great majority of the Jews were strictly orthodox and accepted the authority of the rabbis, who were opposed to all modern trends and resisted the winds of change that were blowing in from Europe. The help of Jewish philanthropists abroad was readily accepted as long as it did not involve any change in the traditional way of life. Thus free housing was constructed for scholars and the poor, as well as hospitals and yeshivot, but any attempts to establish modern schools or to train people for productive employment in agriculture and handicrafts was met with fierce resistance by the leaders of the

ḥalukkah regime. Nevertheless, even among the "old *yishuv*" (as the pre-Zionist Jewish community came to be called), there were some who called upon the Jews to earn their living by their own labor. These included the editors of the first newspapers to be published in Jerusalem, notably I.D. *Frumkin of *Ḥavaẓẓelet* (reestablished in 1870), and the founders of the first settlements in 1878 – Gei Oni near Safed and Petaḥ Tikvah near the Yarkon River. At the beginning of the 1880s there was a group of men in Jerusalem who made strenuous efforts to bring about a renaissance of Jewish life; the leading figures among them were Y.M. *Pines (who had settled in the country in 1878), Ze'ev *Herzberg (1877), Eliezer *Ben-Yehuda (1881) and two natives of Jerusalem, David *Yellin and Yosef *Meyuḥas. They also encountered strong opposition from the ḥalukkah trustees.

The international conferences and negotiations which followed the 1878 Balkan War were accompanied by renewed proposals for the creation of a Jewish state in the Land of Israel, especially from British visionaries. An outstanding example was Laurence *Oliphant's plan, proposed in his book *The Land of Gilead* (London, 1880), after a visit to the country in the previous year, for large-scale Jewish settlement to the east of the Jordan under the sultan's patronage; Oliphant went so far as to negotiate with the sultan on his plan.

Beginnings of the First Aliyah. A new period in the life of the Jews in the Land of Israel opened in 1882 as a result of the 1881 pogroms in Russia, the persecution of the Jews in Romania, and the rise of the *Ḥibbat Zion movement, whose members were known as Ḥovevei Zion. A considerable wave of *aliyah* set in, which brought to the area about 30,000 Jews between 1882 and 1904. Among the newcomers was a small group of young people, members of the *Bilu movement, who aimed at creating political and economic conditions for the large-scale settlement of East European Jews, and groups of people with small amounts of capital who wanted to settle on the land. Within a year or two a number of agricultural settlements were established in Judea (*Rishon le-Zion, *Ekron, *Gederah, and *Petaḥ Tikvah, which was revived by the new arrivals), the coastal hills (*Zikhron Ya'akov), and Upper Galilee (*Rosh Pinnah and *Yesud ha-Maalah). These villages, known as moshavot, would have collapsed at the outset, however, had it not been for the help extended to them by Baron Edmond de *Rothschild of Paris (known as *Ha-Nadiv ha-Yadu'a*, "the well-known benefactor"), who took most of them under his wing. He established a large administrative apparatus, consisting of managers, agronomists, doctors, teachers, etc., which operated along philanthropic lines from 1883 to 1899. The settlers were completely dependent upon the Baron's officials, from whom they received monthly allowances, and were not permitted to show any initiative. The officials created a type of farmer whose plantations depended on the work of hired laborers, and there was much waste and corruption. It must be stated, however, that they also acquired large tracts of land in Judea, the coastal hills, and Galilee, established new settlements (Metullah, Bat Shelomo, Shefeyah, Mazkeret Batyah, Be'er Toviyyah), and tried to foster industry (wine making, silk manufacture, and a glass factory in Tantura). Independent Jewish settlements were built in 1890 in Ḥaderah and Reḥovot. During this period of direct assistance, the Baron invested £1,600,000 sterling in the settlements. In 1900 he entrusted them to the *Jewish Colonization Association (ICA), which he continued to support. ICA introduced new methods aimed at helping the settlements to achieve independent status as quickly as possible. New villages, in which the farmers worked their own land, were established by ICA in Lower Galilee, (Sejera, Mesḥa, Milḥamiyyah – later Menaḥemiyyah, Yavneel, and Bet Gan).

Government Restriction on Aliyah. The Ottoman government soon recognized that the new *aliyah* was of a different character from its predecessors and regarded it as a source of political danger. As early as June 1882, a law was enacted prohibiting the settlement of East European Jews in the country. The intervention of various Jewish personalities and organizations, and diplomatic pressure (such as that of U.S. Ambassador Oscar Straus in 1887) were of no avail. Although the Ottoman government was forced to permit the temporary stay of pilgrims and tourists, a law passed in 1901 provided for the deposit of their travel documents with the authorities upon arrival in exchange for a permit of pilgrimage covering a stay of three months (the "red slip"). This did not bring Jewish immigration to a stop, and the immigrants remained in the country, avoiding expulsion by baksheesh (bribery) or by seeking the protection of foreign consuls. The ban on immigration was only one of the obstacles to Jewish settlement, however. There were also some restrictions in the 1880s on the purchase of land, and the ban on the construction of buildings in new settlements without a special permit from Istanbul. Throughout the period of Ottoman rule, these measures hampered Jewish land settlement, which was only a very minor trickle in the tremendous stream of migration that took three million Jews to various parts of the world, mostly to the United States.

In 1890 and 1891, increased persecution of Jews in Russia stimulated a new wave of *aliyah*, including groups of well-to-do Jews. It was in this period that the villages of Reḥovot and Ḥaderah were established, and there was a rush to buy land, resulting in speculation and a steep rise in prices. A special delegation from the Ḥovevei Zion in Russia, headed by Vladimir (Ze'ev) *Tiomkin, came to the country to rectify the situation, but did not succeed. The Ottoman government took determined steps to stop Jewish immigration; the great awakening ended in a crisis, and many left the country. For the next decade the major problem confronting the leaders of the *yishuv* was that of hundreds of Jewish laborers waiting for the opportunity to settle on the land. In 1896 a small group of them settled in Metullah and Be'er Toviyyah, but many had to leave.

Many of the newcomers, including Jews from Oriental countries (Yemen, Bukhara), as well as Eastern Europe,

made their homes in the cities. By the beginning of the 20th century, Jerusalem had a Jewish population of about 30,000 and the *ḥalukkah* regime was still in force, but new quarters were established outside the Old City, including the Bukharan quarter, Battei Ungarn, and Bet Israel. The Midrash Abrabanel library, later the nucleus of the National and Hebrew University Library, was founded in 1892. In Safed (which had a population of 6,600 at the time), Tiberias (3,200), and Hebron (1,500), the traditional way of life was also kept intact. In the coastal towns, however, a more productive society came into being, and under the influence of the new immigrants and the workers in the nearby villages, many people began taking up trades and commerce. Near Jaffa two new Jewish quarters were founded, Neveh Ẓedek (1887) and Neveh Shalom (1890). In 1891 a mixed Ashkenazi-Sephardi community council was formed in Jaffa, which had a total Jewish population of 3,000. In Haifa, with some 1,500 Jews, the first Jewish quarter was founded in 1891. Together with the 6,000 farmers living in 20 villages, the new *yishuv* now numbered some 10,000, 20% of the Jewish population.

The Clash Between the Old Yishuv and the New. It was this period that witnessed the first struggle over the spiritual character of the *yishuv.* The first clash occurred in 1889, the Jewish year 5649, which was a sabbatical (*shemittah*) year. The Jerusalem rabbis demanded that the farmers let their fields lie fallow during the year and promised to support them from *ḥalukkah* funds, but the settlers refused, quoting rulings of leading Russian rabbis permitting them to work in the *shemittah* year. Among the immigrants who arrived in 1890–91 were a substantial number who were not prepared to follow the old ways, and the rabbis complained of "young men dancing with maidens." When the first Hebrew play, *Zerubbavel* by M.L. *Lilienblum, was staged in Reḥovot in 1890, the performance was stopped by the Ottoman authorities, who had received word that the play called for insurrection against the established government. Eliezer Ben-Yehuda and the newspaper he had founded in 1884 (*Ha-Ẓevi*) roused the ire of the *ḥalukkah* trustees. In 1894 they denounced him to the Ottoman authorities, alleging that he was inciting the Jews to rebellion; he was sentenced to a year's imprisonment and released only after intervention by the Baron's officials. This incident caused a deep rift between the old *yishuv* (joined by some of the newcomers, such as Y.M. Pines and Z. *Jawitz) and the new one, headed by the disciples of *Aḥad Ha-Am. The issue was the character of the *yishuv*, its way of life, and the education of its youth. The controversy spread abroad and might well have done harm to both sides, but fortunately, a kind of armistice was reached in 1897. As a result the secular, nationalist elements of the *yishuv* achieved the right to lead their own way of life, side by side with the strictly religious circles.

It was during this period, too, that the modern Hebrew school was created. The first stage, in which Jewish studies, as well as the Hebrew language itself, were taught in Hebrew, was introduced by Ben-Yehuda, David Yellin, and Nissim Behar. The second stage – the teaching of general subjects in Hebrew – was first introduced in the villages in 1889–92. In the latter year, a teachers' assembly was held for the first time to fix the Hebrew terms to be used in mathematics and the natural sciences as well as to formulate a uniform curriculum for the village schools. The Hebrew Teachers' Association was founded in 1903, eventually becoming a major factor in the country's school system.

In spite of these advances, the new *yishuv* faced a profound moral crisis at the beginning of the 20th century. It was obvious that any rapid development depended upon its political status. This had also been a basic premise in the program of Theodor Herzl, who had started his political activities by attempting to persuade the Ottoman government to grant the Zionist Organization a charter for the settlement of the Land of Israel. Herzl and the political Zionists were critical of settlement methods employed by their predecessors, regarding them as "infiltration" and pointing out their inherent political risks. After several years of fruitless negotiations, Herzl despaired of ever obtaining the Sultan's agreement to his proposals and was ready to entertain the British government's proposal to support a Jewish settlement project in East Africa, known as the *Uganda Plan. It is indicative of the state of mind of the new settlers in the Land of Israel at this time that many of them, including Ben-Yehuda, supported this plan, thus admitting, in effect, that for political and other reasons there was no real prospect of a substantial Jewish settlement in the homeland. This moral crisis led to some emigration of workers, settlers, and even young people born in the settlements. In 1903 the Ḥovevei Zion, headed by Menaḥem *Ussishkin, called a general meeting in Zikhron Ya'akov at which they proposed the creation of an executive committee to represent the entire *yishuv,* but in the prevailing atmosphere of despondency this proposal fell on deaf ears.

Beginnings of the Second Aliyah. A new wave of immigration – the Second Aliyah – commenced in 1904 and continued until the outbreak of World War I. Again, this was only a small part of a great movement of Jews from Eastern Europe caused by repeated pogroms and the general impoverishment of the Russian Jews. It is estimated that some 40,000 new settlers went to the Land of Israel in this period. Although many returned to Russia or emigrated to other countries, the newcomers, together with natural increase, brought the Jewish population to 85,000 (about 12% of the total) for the country in 1914. The Second Aliyah was not of a uniform character. Some of the newcomers joined the old *yishuv* and settled in the "holy cities," especially in Jerusalem, which at this time contained about half the Jewish population of the country. Here they built new quarters, such as Zikhron Moshe, Romemah, and Aḥavah. Others belonged to the middle class, most of whom came with their families as Zionists seeking a full Jewish national way of life for themselves and their children. Some of them made their homes in the towns or the established rural settlements.

The moshavot, especially those in the south, did not take long to overcome the crisis which had marked the early years of the century. In addition to grapes, they began to grow almonds and citrus fruits and established marketing cooperatives: Hitaḥdut ha-Koremim – the Viticulturists' Association – and Pardes – the Citrus-growers' Association. They also attracted Jewish investments from abroad and a special society – Aguddat Neta'im – was set up to prepare plantations for sale to such investors. In the Diaspora, Jewish societies were formed to establish their own *aḥuzzot* ("estates") in the country (Migdal, Poriyyah, Saronah, Ruḥamah, Karkur). The new settlers also introduced an enterprising spirit into the towns. It was on their initiative that the modern garden suburb of *Tel Aviv was founded on the outskirts of Jaffa in 1909 and reached a population of 2,000 by 1914. In Haifa, the Jewish population rose to 3,000. There were also beginnings of new industry, such as the Stein Iron Works in Jaffa and the Atid Oil Factory in Lydda and Haifa.

Labor and Defense Problems. A difficult social problem confronting the new *yishuv* was that of the Arab labor on which Jewish agriculture was based. It was natural for the Jewish settlers to employ Arabs: their wages were low and they made few demands on their employers. The Zionist Movement, however, both in the Land of Israel and abroad, regarded this practice as running counter to one of its major aims – the transition of the Jews to productive labor – and as a potential danger to the political position and security of the Jewish population. An associated problem was that of protection of life and property in the Jewish villages, which were entrusted to local Arab, Circassian, or other strong men. These problems were of particular interest to the young people of the Second Aliyah, who had experience of the revolutionary movement and Jewish self-defense in Russia and regarded themselves as pioneers of the Zionist Movement. Both their political parties – Po'alei Zion and Ha-Po'el ha-Ẓa'ir (see Israel, State of: *Political Life and Parties) – considered it their major task to achieve the employment of Jewish labor in the Jewish sector of the economy and to create a Jewish working class on the land. To tackle the problem of security, a small group of former members of the Jewish self-defense organization in Russia met in 1909 and established the *Ha-Shomer (Watchman) Society, which soon made a good name for itself and took over the responsibility for security in many of the villages in Galilee and Judea. Their work also served to raise the prestige of the Jews in the eyes of their Arab neighbors.

A partial solution to the problem of Jewish agricultural labor was provided by the success of a mission undertaken in 1911 by S. *Yavne'eli, who visited Yemen and called upon the Jews there to settle in the Land of Israel. Thousands of Yemenite Jews heeded his call, establishing their own quarters in the vicinity of the large villages and working in the Jewish plantations and orchards. Among the methods used to facilitate the employment of Jewish labor in the villages was the establishment of labor exchanges, workers' kitchens,

and a medical insurance fund (Kuppat Ḥolim). Another was the founding of workers' settlements (*moshevei po'alim*) in which the worker was provided with a small plot of land that enabled him to set up his own auxiliary farm (Ein Gannim, Naḥalat Yehudah).

A more radical change in the status of the labor movement and its methods of operation took place in 1908, when the Zionist Organization started its settlement activities by establishing the Palestine Office in Jaffa under the direction of Arthur *Ruppin. In the initial stage, the workers were employed at the "national farms" (Ben Shemen, Ḥuldah, Kinneret, etc.) established on land purchased by the *Jewish National Fund and managed by agronomists. As a result of controversies between managers and laborers, the work on some of these farms was entrusted to groups of workers on their own responsibility. The first such experiment was made at Deganyah (founded in 1909); this was the beginning of the *kevuẓah* (see *kibbutz), which eventually became the major type of settlement sponsored by the Zionist Organization. In 1911 the workers began to organize in regional federations in Galilee and Judea, and a national health insurance fund was established in 1912. Gradually the organized workers of the Second Aliyah made their imprint upon the *yishuv* and laid the foundations of the labor movement (see Israel, State of: *Labor), which was to become, for about 60 years, the predominant force in the country.

Cultural Development. It was in the period of the Second Aliyah that the Hebrew language and culture took root in the country. Hebrew daily newspapers made their appearance (*Ha-Ẓevi*, edited by Ben-Yehuda, in 1908, and *Ha-Ḥerut*), and Hebrew periodicals published by the labor movement (*Ha-Po'el ha-Ẓa'ir* and *Ha-Aḥdut*) exerted a considerable influence on Jewish youth in the Land of Israel and abroad. Hebrew authors and thinkers, such as J.H. *Brenner, C.E. *Gordon, J. *Fichman, D. *Shimoni, S.Y. *Agnon, and M. *Smilansky settled in the country. Hebrew became the daily language of an ever-increasing number of workers, teachers, and young people. In 1904 the German-Jewish Hilfsverein founded a teachers' seminary in Jerusalem, and in 1905 the Herzlia Hebrew Gymnasium (high school), which was to serve as a model for Hebrew secondary schools all over the world, was established in Jaffa. In 1906 the *Bezalel School of Art, headed by Professor Boris *Schatz, opened in Jerusalem. The foundation stone of a college of technology, the *Technion, was laid in Haifa in 1912. This precipitated a dispute between the Hilfsverein, which wanted the language of instruction in the *yishuv*'s first institution of higher learning to be German, and the Hebrew-speaking public in the country with their supporters abroad, who insisted on Hebrew. This "language war" led to a revolt by the teachers of the Hilfsverein schools and the establishment of a national Hebrew school network, which in 1914 encompassed 3,200 pupils (see Israel, State of: *Education).

At the end of the Second Aliyah period, there were 40 moshavot with a population of 12,000 and landholdings of

409,000 dunams (about 102,000 acres). Of these, 24 had been created or supported by Baron Edmond de Rothschild. Together with the newcomers in the towns, especially in Jaffa and Haifa, the new *yishuv* accounted for a third of the total Jewish population, and it was by far the most active and dynamic section.

Awakening of Arab Nationalism. General developments in the Ottoman Empire in this period also had their effect. While the revolt of the Young Turks (1908) did not fulfill the hopes placed on it by some Zionist leaders (such as Aḥad Ha-Am, Jacobus *Kann, and Vladimir *Jabotinsky) and members of the *yishuv*, it made it possible to campaign openly for the support of public opinion in Istanbul and in the Land of Israel. One of the most important results of the revolt, however, was the rise of separatist movements among the Arabs, who interpreted the new *hürriyet* (liberty) as freedom to realize their national aspirations. The pioneers of this Arab nationalism were mostly Syrians and Lebanese – some of them Christians. The movement also developed in the Land of Israel, where Arab newspapers (*al-Karmil* in Haifa and *Filasṭīn* in Jaffa) were founded and engaged in systematic incitement against Jewish immigration and settlement. In the elections to the Turkish parliament in 1908, the Arabs succeeded in preventing the election of a Jewish deputy to represent the Jerusalem district. In Istanbul, the Arab members of parliament denounced Jewish settlement in the Land of Israel and described the Zionist Movement as a danger to the Ottoman Empire. Arab officials tried to obstruct Jewish land purchase and settlement (as in the *Merḥavyah affair).

Some attempts were made by Zionist groups to establish contact with Arab nationalists, and upon the initiative of Ḥayyim *Margolis-Kalvaryski, an ICA official, a meeting took place between Nahum *Sokolow of the Zionist Executive and Arab leaders. There was the danger, however, that such contacts would arouse suspicions on the part of the Turks, who regarded Arab nationalism as a separatist movement and – perhaps for that reason – showed some signs of an improved attitude toward the *yishuv* in 1913–14 (such as the abolition of the "red slip"; see section in Israel, State of: Historical Survey, Arab National Movement).

World War I. World War I caused general havoc and destruction in the country and had a disastrous effect upon the *yishuv*. In the first three years of the war, the Land of Israel served the Ottoman Empire and her allies as a base for their attempts to launch an attack upon the Suez Canal and Egypt, and, together with Syria, it had to provide the supplies required by the 4th Turkish Corps. In addition to large-scale recruitment, the population suffered from heavy taxes; compulsory labor service on road building, railroads, and tree cutting; and the confiscation of property, such as horses, wheat, and piping. In the fourth year of the war, the front reached the Land of Israel. The presence of large military forces brought various contagious diseases in its wake; in addition there were natural calamities,

such as the locust invasion of 1915–16. On October 31, the inflation of the Turkish currency sealed the ruin of the economy, and by the end of 1917 the country faced starvation.

The Jewish population, whose economy depended largely upon the transfer of funds from abroad – especially the old *yishuv*, which was not properly organized to meet an emergency – was exposed to great hardship; in 1917 thousands in Jerusalem and Safed died of starvation. The new *yishuv* was slightly better off; its economic affairs were handled by an emergency committee representing all sections and institutions – the Zionist Executive, ICA, the Alliance Israélite Universelle, the moshavot, the Tel Aviv Committee, the workers' parties, and so forth. A decisive role in alleviating the plight of the Jews was played by the money and food shipped by American Jewry on American naval vessels.

Anti-Jewish Measures. There were also disasters of a political nature. On the eve of its entry into the war, the Ottoman government had abolished the Capitulations regime, jeopardizing the civil status of the many Jews who had enjoyed the protection of foreign consuls. The attitude of the Ottoman military administration, headed by Jemal Pasha, to the Jews was ambivalent. On the one hand, there was the centuries-old tradition of regarding the Jews as a pro-Turkish element, augmented by political considerations, such as the alliance with Germany and Austria and the influence of America; on the other hand, the spirit of independence displayed by the new *yishuv* and its intimate connections with the Zionist Movement made its loyalty to Turkey suspect in the eyes of the rulers. At the outbreak of the war, the authorities confiscated arms from the settlers in the moshavot and in Tel Aviv. A grave problem concerned inhabitants, including Jews, who were nationals of enemy states, especially Russia. The Ottomans asked them to become Ottoman citizens, promising not to draft them into the army for one year. On Dec. 17, 1914, 700 foreign Jews who refused to become Ottoman citizens were detained in Jaffa and deported to Egypt on an Italian boat. This act was followed by a mass exodus of foreign Jews, which continued throughout 1915, in the course of which 11,300 (over an eighth of the entire Jewish population) left the country, mainly by American and Italian boats. Most of them stayed in refugee camps in Egypt, and about 500 enlisted with Joseph *Trumpeldor in the Zion Mule Corps, which fought on the Allied side in the Gallipoli campaign against the Ottomans.

In their efforts to prevent further deportations and the emigration of Jews, the leaders of the *yishuv* managed to persuade the authorities to facilitate the acquisition of Ottoman nationality by waiving the fee and exempting the new Ottoman subjects from military service for a year. Another demonstration of the *yishuv*'s loyalty to the regime was the enlistment of dozens of students of the Hebrew secondary schools and their enrollment in the Istanbul officers' school in 1916. In the spring of 1915 the policy of the Ottoman military administration toward the Jews took on a more definite shape. Zionism, the Zionist flag, the Jewish National Fund stamps, etc., were

all outlawed. Several of the active Zionist leaders, especially former delegates to Zionist Congresses, leaders of Ha-Shomer, those who had been active in land purchases, etc., were deported. Two notable deportees were David Ben Gurion and Izḥak Ben-Zvi. On the other hand, there was a more favorable attitude to those who remained. Jemal Pasha even invited some of the Jewish leaders who had no direct connections with the Zionist movement (e.g. Albert *Antebi, Aaron Aaronsohn, Meir *Dizengoff, and Menasheh Meyerowitz) to participate in various projects launched by the government.

In the spring of 1917, when the battlefront was drawing near, the evacuation of the civilian population was taken in hand, and all the inhabitants of Jaffa (about 40,000 of them) including the Jews of Tel Aviv were deported. The Jews found shelter in the moshavot in Galilee and Samaria. A further plan to deport the residents of Jerusalem and the moshavot themselves was dropped after an appeal to Istanbul. The organization of aid to the refugees in their camps was one of the finest chapters in the history of the *yishuv,* but hundreds died of starvation, disease, and cold. In September 1917, when the secret *Nili intelligence ring was uncovered, widespread searches were instituted and hundreds of people were jailed – most of them were deserters from the Turkish army and only a few were in fact members of Nili or of Ha-Shomer. The leadership of the *yishuv* made great effort to ease the lot of these "Damascus prisoners," as they came to be called.

On Oct. 31, 1917, the British opened an unexpected offensive and took Beersheba, going on to Gaza (Nov. 7) and Jaffa (Nov. 16). On Dec. 11, 1917, General Allenby entered Jerusalem and Ottoman rule over the Holy City came to an end 401 years after it had started in 1516. The British advance spared the *yishuv* further persecution and saved it from extinction by starvation and disease. A small part – the inhabitants of Samaria and Galilee – were to endure nine more months of Ottoman rule, until the north was occupied by the British in September 1918. The Jewish population had been reduced by hardship, expulsion, and emigration to 57,000.

The conquest of the south of the country coincided with the issue of the Balfour Declaration "of sympathy with Jewish Zionist aspirations," which was issued by the British foreign secretary on November 2, with the approval of the cabinet (see *Balfour Declaration for full text). The principles of the declaration were approved by the Allied governments and the United States (first unofficially by President Wilson and, on June 30, 1922, by a resolution of Congress). Thus the Land of Israel, under the name of Palestine, reappeared on the world political map, and the small *yishuv,* as the nucleus of the Jewish national home, assumed a significant role on the international scene.

UNDER BRITISH RULE, 1917–1948. The military administration established in Palestine after its occupation by the British forces (Occupied Enemy Territory Administration – OETA) was manned by military men and experts on Arab affairs. Prominent among the occupying troops was the *Jewish Le-

gion, consisting of two Jewish battalions: the 38th ("London") battalion of the Royal Fusiliers and the 39th ("American"). Their arrival caused a great stir among the Jewish workers and the youth, who called for the creation of a third, Palestinian battalion. Negotiations with the British authorities led to the establishment of the battalion, which attracted 850 local Jewish volunteers, in June 1918. In the final attack on the Turkish positions, the 38th and 39th battalions participated in the capture of the Jordan crossings. After the war, when the demobilization of the war-weary troops was speeded up, the three Jewish battalions played an increasingly important role in the occupying forces. At the end of 1919 the Palestinian battalion was renamed the First Judeans, with the seven-branched *menorah* as its emblem. The existence of the battalion was widely regarded as tangible evidence of British intention to carry out the Balfour Declaration.

Arab Nationalist Agitation. The end of the war was followed by great agitation among the Arab nationalists, who declared the Land of Israel to be "Southern Syria" and demanded its incorporation into a large Arab state with its center in Damascus. The British military administration showed no sympathy with the Balfour Declaration; during the years 1918 and 1919 it was not officially published or referred to in Palestine. The Zionist Commission consisting of Jewish representatives from Britain, France, and Italy (joined later by American and Russian members), headed by Chaim *Weizmann, that went out with British government sanction in March 1918 met with many difficulties due to the hostile attitude of many of the men on the spot. Weizmann succeeded, however, in reaching some measure of understanding with the Emir Faisal, who headed the Arab movement at the time. On Jan. 3, 1919, the two men signed an agreement that spoke of "the closest possible collaboration in the development of the Arab State and Palestine" and of measures "to encourage and facilitate the immigration of Jews into Palestine on a large scale." The agreement, however, was repudiated by the Arab nationalists. In April 1920 the Jewish settlements in Upper Galilee were attacked by Arabs, and *Tel-Ḥai and other places were abandoned after an incident in which Joseph Trumpeldor and others were killed. In March 1920 anti-Jewish riots broke out in Jerusalem. The military authorities gave the Arabs a free hand, while arresting the Jewish defenders, led by Vladimir Jabotinsky, who were sentenced to long terms of imprisonment.

Samuel Becomes High Commissioner. The policy of the military administration in Palestine, however, was not supported by Whitehall. On April 24, 1920, the Supreme Council of the Peace Conference at San Remo resolved that the Mandate over Palestine be conferred on Britain, charging her with the establishment of a national home for the Jewish people as laid down in the Balfour Declaration. The frontiers were to be negotiated between Britain and France; as subsequently delineated they included Transjordan (see section in Israel, State of: Historical Survey: Land of Israel in International Affairs

and Frontiers). OETA was abolished and Herbert Samuel, a Jew and a Zionist, was appointed high commissioner, arriving on July 1, 1920.

Samuel tried to facilitate Jewish immigration and at the same time to appease the Arabs. He lent his aid to the pioneering immigrants – the ḥalutzim – who began to arrive in large numbers at the end of 1919 and gave orders for them to be employed on road projects in the north. He also made Hebrew an official language, side by side with Arabic and English. As a concession to the Jews who wanted the country to be called by its historic name, Ereẓ Israel, the initials (י״א) were added in parentheses to the Hebrew form of the name Palestine. On the other hand, the best government-owned lands in the Beth-Shean Valley were distributed among the Bedouin (who did not know what to do with them and later sold them to the Jews, at a high price). A compromise was reached with the military authorities providing for the creation of one Arab and one Jewish battalion for the defense of the country. To placate Arab nationalist opinion, Samuel appointed Hajj Amin al-*Husseini, who had been sentenced in absentia to 15 years' imprisonment for his part in inflaming the 1920 riots, as mufti of Jerusalem in 1921. In the following year, Husseini was elected president of the Supreme Muslim Council and used these positions of great influence and power to whip up opposition to the yishuv.

In the early part of 1921 there were important developments in regard to Transjordan. *Abdullah, a brother of Faisal, invaded the territory with a band of Beduins in order to help his brother, Faisal, who had been pushed out of Damascus by the French in the summer of 1920. (According to recent opinion by prearrangement with, or at least with the connivance of, the British.) On March 27 he was recognized by Winston *Churchill, the British colonial secretary, as emir, with a British advisor and a subvention from Britain. Subsequently, Transjordan was excluded from the area to which the Balfour Declaration applied and was thus closed to Jewish settlement. In May 1921 an outbreak of violence in Jaffa was followed by large-scale attacks on Reḥovot, Petaḥ Tikvah, Ḥaderah, and other places. Forty-seven Jews were killed and 140 wounded; Arab casualties were 48 dead and 73 wounded, mostly due to action by British troops. These disturbances demonstrated the ability of the Arab national movement to inflame the Arab masses and revealed the relative weakness of the yishuv. Samuel began to backtrack: he ordered a temporary halt of immigration and entered into negotiations with the Arab Executive Committee.

The Churchill White Paper. The outcome of these negotiations was a White Paper issued by Churchill on June 22, 1922. It gave a restrictive interpretation of the Balfour Declaration, which it said "did not contemplate that Palestine as a whole should be converted into a Jewish National Home" and introduced the principle of "economic absorptive capacity" as the yardstick for Jewish immigration. A system of immigration certificates was adopted, under which people with capital (at first £500,

later £1000) could enter Palestine with their families without any restriction while the number of workers without capital to be admitted would be determined by a half-yearly schedule to be fixed by the government after negotiations with the Zionist Executive. The White Paper also stated, however, that the Balfour Declaration was not subject to change and that the Jews were in Palestine "as of right and not on sufferance" (see *Palestine, White Papers).

On July 22, 1922, the League of Nations Council confirmed the Palestine Mandate, citing the Balfour Declaration in the preamble and recognizing "the historical connection of the Jewish people with Palestine, and… the grounds for reconstituting their National Home in that country." The Mandate provided for the recognition of the Zionist Organization as the "*Jewish Agency" to advise and cooperate with the administration "in such economic, social and other matters as may affect the establishment of the Jewish National Home and the interests of the Jewish population in Palestine."

A step designed to appease the Arabs was the plan for a legislative assembly. Although it was to have only limited powers, the Arabs were to have the majority on the basis of their numerical strength. (According to a census taken at the end of 1922, there were 83,794 Jews, about 11% of the total population of 757,182.) The Arabs, however, boycotted the elections to the assembly, and the plan was abandoned (1923). The Arab Committee also rejected Samuel's proposal for the establishment of an "Arab Agency" similar to the Jewish Agency. In the end, a colonial regime was established, headed by the high commissioner and senior officials, almost all British.

The 1921 disturbances also brought about a change in security policy. The plan for locally recruited battalions was abandoned and a British gendarmerie, made up of British soldiers (the "Black and Tans") who had been demobilized after suppressing the Irish rebellion was established. The Jewish villages were provided with sealed armories containing rifles and ammunition, which they were permitted to open only in case of emergency. In April 1925 Lord Balfour attended the opening ceremony of the *Hebrew University in Jerusalem; his visit caused no disturbances, indicating that Pax Britannica prevailed. This situation continued under the next high commissioner, Lord Plumer (1925–28) and encouraged the government to reform the security forces with a view to reducing their high costs. The British gendarmerie was disbanded in 1926, and some of its members were absorbed into the Palestine Police. In addition, the Transjordan Frontier Force, consisting almost entirely of Arabs, was established, and the sealed armories were withdrawn from most of the moshavot. The policy followed by both Samuel and Plumer was to regard the maintenance of law and order, by political and military means, as the prime responsibility of the government, leaving the Jews to build the National Home through their own institutions and with their own resources – by immigration, settlement on the land, the development of industry and commerce, and so forth. Politically the period 1921–29 presented the Jewish people and the Zionist movement with a great opportunity.

The Third Aliyah. The immigration of the period 1919–23 (the Third Aliyah) was of a special character. The driving force behind it was the *He-Ḥalutz movement, which had risen in Eastern Europe, inspired by the Second Aliyah and the emissaries from Ereẓ Israel (notably Joseph Trumpeldor) and impelled by the sufferings of the Jews during the war and the postwar pogroms. Most of the newcomers were young people of strong Zionist convictions who had been influenced by the profound changes and revolutionary upheavals that had taken place in their countries of origin. Many were graduates of the He-Ḥalutz movement in Russia and Poland and *Ha-Shomer ha-Ẓa'ir (in Galicia). In December 1920 they cooperated with the men of the Second Aliyah in founding the *Histadrut, the General Federation of Jewish Labor, which declared as its aim the creation of a new Jewish working society in the Land of Israel (see also Israel, State of: *Labor, section on Jewish Labor Organizations).

The *yishuv* was small and impoverished and, from an economic point of view, incapable of absorbing the tens of thousands of new immigrants. For the first year or two they were employed on public works, mainly road building in the north. It was while working on the roads that various people banded together to form collective settlement groups such as the *Gedud ha-Avodah and the kibbutzim of Ha-Shomer Ha-Ẓa'ir. In 1920 the Jewish National Fund completed the purchase of 50,000 dunams of land in the Jezreel Valley – the "Emek," which was used for large-scale settlement. Some of the newcomers, as well as Second Aliyah veterans, were settled in the villages established in the Emek, which included kibbutzim and kevuẓot (En-Harod, Tel Yosef, Geva, Bet Alfa, Ḥefzi-Bah, Ginnosar as well as Kiryat Anavim near Jerusalem), and moshevei ovedim (Nahalal, Kefar Yeḥezkel). Others worked on construction sites in the cities, where a large part of the building was done by the Histadrut's Public Work Office (later reorganized under the name of *Solel Boneh). There was also a renewed attempt to introduce Jewish labor into the moshavot, where groups of workers sought employment with the Jewish farmers and prepared themselves for their own settlement on the land. In 1923 a severe economic crisis hit the *yishuv,* mainly affecting the newcomers. Thousands were unemployed and 3,200 people left the country, as against a total influx of 8,200 in the course of the year.

In all, the Third Aliyah brought in some 35,000 immigrants: 53% from Russia, 36% from Poland, and the rest from Lithuania, Romania, and other East European countries, apart from 800 from Western and Central Europe (Germany, Austria, Czechoslovakia, Hungary, etc.). The Jewish population reached 90,000 and the *yishuv* underwent a profound change, growing not only in size but also in quality. The new *yishuv* was now in the majority and the old *yishuv*'s efforts to resist the onset of modern trends were doomed to failure. For example, the attempt to deny women the right to vote in the elections to the Jewish community's representative institutions was defeated. Extremist elements in the old *yishuv* tried to combine as a political force and, in cooperation with the Arabs, oppose

the new Jewish immigration; the attempt came to a tragic end with the assassination of their leader, Jacob de *Haan.

The thousands of new *ḥalutzim* also added considerable strength to the *Haganah, the self-defense organization formed in June 1920, when the riots in Jerusalem and Jaffa had demonstrated that the *yishuv* could not rely on the British authorities for their security. Members of the Third Aliyah continued to play an important role in the following years, as in the settlement of the Kishon region (1927) and the Ḥefer Plain (1933). Another feature of this period was the introduction of industry. The Silicate Brick Factory was founded in 1922, followed by the salt works at Athlit, the Grands Moulins flour mills, the Shemen edible oil factory, the Nesher cement works, etc.

The Fourth Aliyah. In the middle of 1924 a new wave of immigration, the Fourth Aliyah (1924–28), set in. It was different in social composition from its predecessor. There was a drop in the inflow of *ḥalutzim*, mainly because of the ban on departure from Soviet Russia. On the other hand, there was a rise in the immigration of middle-class people – shopkeepers and artisans – mostly from Poland. This was the result of two developments: the economic crisis in Poland and the economic restrictions imposed on the Polish Jews (hence the name "Grabski Aliyah" after the Polish finance minister); and the severe limitations on immigration to the United States, introduced in 1924 (when only 10,000 Jews emigrated to America, as against 34,000 who went to Palestine). Most of these newcomers, having no desire to change their way of life, settled in the towns, primarily in Tel Aviv, which had the special attraction of being an all-Jewish city. They invested some of their scanty capital in workshops and factories, small hotels, restaurants, and shops, but most of their investments were made in building. In 1925, when the Fourth Aliyah was at its height, 45% of Tel Aviv's labor force was employed on construction, and the city's population grew to 40,000. Haifa also developed (the Hadar ha-Carmel quarter being founded) and some progress was made in Jerusalem. The Slobodka Yeshivah was established in Hebron and the Nur match factory in Acre. The American Zion Commonwealth Company purchased land in the heart of the Jezreel Valley, where it planned the establishment of a central town, Ir Yizre'el ("Jezreel Town") later called Afulah.

There was also significant rural development in the Coastal Plain. The area under citrus cultivation was trebled within a few years, and new villages, based on citrus growing, were founded: Magdiel, Herzliyyah, Binyaminah, Pardes Ḥannah, a group of settlements in the Tel Mond area, in addition to Ra'anannah (founded in 1921). A new town, Netanyah, was founded in the Sharon Valley. In the new villages, the farmers employed Jewish labor for the most part. An interesting episode was the arrival of hundreds of ḥasidic families, headed by their rabbis, and their settlement on the land at Kefar Ḥasidim, near Haifa. In the course of two years, over 62,000 newcomers made their homes in the Land of Israel. It appeared that in addition to the settlement of *ḥalutzim*, fi-

nanced by national capital, a way had been found to attract the Jewish middle class to agricultural and urban settlement, based on the import of private capital.

Crisis and Recovery 1926–1929. A downward turn came in the spring of 1926, when a severe economic crisis set in. Worsening economic conditions in Poland caused a cessation of the flow of capital from that country, and as a result, the great construction boom came to an end. In 1927 over 5,000 people left the country and only 2,300 came, while unemployment reached 7,000 in the summer of that year. The crisis, which lasted for two years and plunged many middle-class families into penury, was a severe political blow to Zionism and the labor movement. Thousands of workers subsisted on a dole from the Zionist Executive; Solel Boneh was temporarily dissolved; Gedud ha-Avodah, the pioneering labor organization established by the Third Aliyah, split into rightist and leftist factions and some of its members demonstratively went back to the Soviet Union, where they joined the Jewish agricultural settlement project in the Crimea.

The first signs of economic recovery came in 1929, when immigration was renewed. New hopes were aroused by the creation of the enlarged Jewish Agency, through which non-Zionist circles – notably a group of outstanding American Jews – were to associate themselves with the Zionist Organization's constructive work in Palestine. Despite the crises of 1923 and 1927, the balance for the ten years 1919–29 was positive. The population of the *yishuv* had almost trebled, reaching a total of 160,000. Over 1,200,000 dunams (300,000 acres) had been acquired, and an almost uninterrupted chain of towns and villages stretched from Metullah in the north to Be'er Toviyyah in the south. Hebrew had become the living tongue of the *yishuv* and its schools. A significant Hebrew literature, press, and theater (Habimah and Ohel) had come into being. The Hebrew University was opened in 1925 and the Haifa Technion had been officially inaugurated. The *yishuv* was recognized in 1927 as a corporate entity, *Keneset Israel, with its democratic institutions: Asefat ha-Nivḥarim (Assembly of Deputies); and *Va'ad Le'ummi (National Council), elected by the Assembly. Keneset Israel represented the entire Jewish population, except for the extreme Orthodox faction (see *Governance, the section on Jewish Communal Organizations, and *Political Life and Parties).

The Zionist Executive, with funds supplied by Jews abroad through the *Keren Hayesod, financed immigration, supported the Hebrew school system (the government spent most of its education budget on Arab schools), fostered agriculture, industry, and commerce, and coordinated the public health activities of the *Hadassah Medical Organization, Kuppat Ḥolim, and other bodies. Together with the Va'ad Le'ummi, it represented the Jews vis-à-vis the administration and performed, as far as the Jewish population was concerned, a large part of governmental functions. Thus the *yishuv,* as the vanguard of Jewry, was more than a local community; it had become the nucleus of the Jewish state-in-the-making.

Violence and Political Struggle, 1929–31. During the preceding ten months there had been minor disputes between Jews and Arabs about the Jews right to pray at the Western ("Wailing") Wall of the Temple Court in Jerusalem. These arguments were exploited by the mufti of Jerusalem, Hajj Amin al-Husseini, to foment religious hatred by accusing the Jews of designs upon the Muslim Holy Places in the city. On August 23, an Arab mob tried to attack the Jews in Jerusalem; the attacks were repeated on the following days, but were repulsed by the Haganah. (See also *Jerusalem; *Western Wall.) The violence spread to other parts of the country. On the Sabbath, August 24, the Arabs of Hebron fell upon the small defenseless Jewish community in the town, who belonged mainly to the old *yishuv,* and slaughtered some 70 men and women. Old people and infants were butchered, the survivors, numbering several hundred, being evacuated to Jerusalem. Attacks on Tel Aviv and the Jewish quarters in Haifa were repulsed, but on the fifth day of the riots an Arab mob killed 18 Jews and wounded many more in Safed before the Jews could take refuge in the police headquarters while the mob ransacked and burned the Jewish quarter. In Be'er Toviyyah all the settlers held out in a cowshed while the attacking mob plundered and destroyed the village. Huldah, too, was destroyed after the Jewish defenders had held out for many hours against thousands of Arabs and were evacuated by a British army patrol. Many of the attacks on Jewish settlements were repulsed, however. Before a week had passed, large detachments of British troops were brought in and order was restored, but the Arab nationalists had achieved their aim: the problem of Palestine had once again become the subject of political discussion.

A parliamentary commission of inquiry headed by Sir Walter Shaw, was sent to inquire into "the immediate causes" of the outbreak, but exceeded its terms of reference by dealing with questions of major policy. It found that the fundamental cause of the riots had been "the Arab feelings of animosity and hostility to the Jews consequent upon the disappointment of their political and national aspirations and fear for their economic future." Accordingly, the commission proposed restrictions on Jewish immigration and the purchase of lands from the Arabs. A minority report, by Harry Snell, the Labor Party representative, criticized government policy and the Arab attitude. In 1930, a British expert, Sir John Hope-Simpson, reported that "with the present methods of Arab cultivation" there was "no margin of land available for agricultural settlement by immigrants." In October of the same year, the colonial secretary, Lord Passfield (Sidney Webb) issued a White Paper further whittling down the meaning of the Balfour Declaration and the Mandate and foreshadowing fresh restrictions on Jewish immigration and settlement. Chaim *Weizmann, in protest, announced his resignation as chairman of the Jewish Agency, and prominent British statesmen denounced the new policy. Under the pressure of public opinion, the prime minister, Ramsay MacDonald, published a letter to Weizmann in February 1931 reinterpreting the White Paper in such a manner as to nullify its restrictions and make it possible to con-

tinue the upbuilding of the Jewish National Home. At the end of 1931 a new high commissioner, General Sir Arthur Wauchope, was appointed. A man of wide erudition and great vision, he showed understanding and sympathy for Jewish efforts in Palestine (see *Palestine, Inquiry Commissions, and *Palestine, White Papers).

The Fifth Aliyah Reaches Its Peak. The next four years were of decisive importance for the development of the *yishuv.* The Fifth Aliyah had begun with a small trickle in 1929, but in 1933, when Hitler rose to power in Germany, the trickle became a flood, and 164,267 Jews entered the country legally in the period 1933–36, while thousands of refugees came as "illegal" immigrants (the *yishuv* regarded British restrictions on *aliyah* as arbitrary and a violation of the Mandate). By the spring of 1936 the Jewish population in Palestine was close to 400,000 – some 30% of the total. The immigration was accompanied by a large influx of capital from Germany, as well as other countries. In these four years of "prosperity," private investment by Jews came to £31,570,000 sterling, over half of which was invested in construction, some £6 million in citrus culture and other forms of agriculture, and £7 million in industry. There was also a considerable rise in the amounts invested by the national funds.

The Fifth Aliyah also settled mostly in the cities and towns. Over half the newcomers made their homes in Tel Aviv, which by 1936 had become the largest city in Palestine with a population of 150,000 and a budget exceeding that of the 22 other municipalities put together. In Haifa, the construction of the country's first modern port by the British authorities was completed in 1933, and its Jewish population was trebled, reaching 50,000, about half the population of the city. Its Jewish quarters were built on the slopes of Mount Carmel, as well as on the sandy terrain in the north of the city (Kiryat Ḥayyim and the other *kerayot*). In Jerusalem a great building boom was initiated by former residents of the Old City, who left after the 1929 riots, and was continued by well-to-do immigrants, including German Jews, who expanded the Reḥaviah quarter. The development of the city was also greatly facilitated by the completion of the water supply line, based on the Rosh ha-Ayin springs. In 1936 Jerusalem had a Jewish population of 76,000 – 60% of the city's total population.

Progress in Industry and Agriculture. In the cities and their environs, modern industry came into being, based mainly on the production of food, textiles, and building materials. The Levant Fair, first held in Tel Aviv in 1932, and again in 1934 and 1936, helped to promote domestic and foreign trade. Two key companies, the Palestine Electric Corporation and the Palestine Potash Company, the concessions for which had been allotted by the British to Jews in the 1920s, were now working at full capacity, employing thousands of Jewish and Arab workers. There was a steady expansion of citrus culture: tens of thousands of dunams were planted and exports rose from 2½ million cases in 1931 to 15,300,000 in 1939, half of it from Jewish citrus groves. Agricultural settlement, however, lagged be-

hind. After the 1929 riots, the settlements which had been hit were rehabilitated with the help of the Emergency Fund collected in Jewish communities abroad. About 20 new villages were established in the Ḥefer Plain, between Ḥaderah and Netanyah (Kefar Vitkin, Aviḥayil, Givat Ḥayyim, Ma'barot, etc.). New moshavim and kibbutzim based on the small budgets provided by the Zionist funds and on work in the citrus groves were also set up near the established moshavot.

Internal Changes and Controversies. There were also changes in the organizational structure of the *yishuv.* In 1932 the Hebrew school system was transferred from the Zionist Executive to the Va'ad Le'ummi, making the *yishuv* responsible for its own education. At the time the system included some 20,000 children, the number increasing to 100,000 by the establishment of independence (1948). It was divided into three "trends": general, religious, and labor. The status of the Haganah also underwent a significant change. The 1929 riots had demonstrated the organization's importance and thousands joined its ranks. A national leadership accepted by all sections was now a necessity, and in 1931 agreement was reached on the establishment of a National Command, consisting of three Histadrut delegates and three representatives of the non-labor sector. The Haganah developed into a nationwide underground organization, with branches in all Jewish towns and villages, running training courses for instructors, accumulating arms in its secret stores, and creating the beginnings of a military industry.

The labor movement played a central role in the life of the *yishuv.* In 1937, the Histadrut had a membership of 100,000 – about a quarter of the Jewish population, and there was a large labor party, *Mapai, which had been established by a merger of the main labor parties in 1930. The Histadrut's economic enterprises and social services made an important contribution to the transformation of the *yishuv* into a "state-on-the-way." Its kibbutzim and moshavim helped, not only to grow food, but also to widen the map of Jewish settlement and establish bases for defense. Solel Boneh, the cooperatives for industry, housing, transport and finance, and marketing agencies like Tnuva and Hamashbir, consolidated the *yishuv*'s economic base. The Histadrut's school system, labor exchanges, and social services – notably Kuppat Ḥolim – fulfilled quasi-governmental functions.

This organizational unity of labor was not matched by a similar concentration of non-labor forces (such as the Farmers Union, the Citzens' Bloc in Tel Aviv, etc.); all they had in common was fear of domination by the "left." At the beginning of the 1930s, the *Revisionist movement came into existence as a result of the differences between Weizmann and Jabotinsky over the policy of the Zionist Organization. Jabotinsky and his adherents engaged in a campaign designed to confront the power of the Histadrut and established a rival *Histadrut ha-Ovedim ha-Le'ummit (National Labor Federation). Revisionist-minded workers and immigrants competed for jobs and sometimes acted as strikebreakers. There

was bitter tension between the two camps, which reached its climax in June 1933, when Chaim *Arlosoroff, one of the foremost labor leaders, was assassinated and members of the Revisionist movement were wrongly accused of the murder. The labor movement obtained key positions in the Jewish Agency, the Va'ad Le'ummi, and the Haganah, and remained the major political force in the *yishuv*.

Growth of the Arab National Movement. Among the Arab population there were also far-reaching changes. Jewish mass immigration benefited the Arabs in various ways: their economic situation improved, thousands of them found employment in the Jewish sector, and the land of the fellahin rose in value. Government revenue, supplied largely by the Jews, was used to create a public health service and a progressive school system for the Arabs. The prosperity of the Palestine Arabs became the envy of their brethren in Transjordan; in 1933, Emir Abdullah, the British-appointed ruler, and the Transjordanian tribal chiefs entered into secret negotiations with the Jewish Agency on the possibility of a large-scale Jewish immigration into their area, but the talks were nipped in the bud by British disapproval.

At the same time, however, the rise in Jewish strength and influence was accompanied by the growth of the Arab national movement. The 1929 disturbances had enhanced the prestige of the mufti of Jerusalem and made him the leading Arab figure in Palestine, and a Muslim conference that he called in 1931 added to his standing. In 1932 an Arab political party, Istiqlāl (Independence) came into being, headed by veteran leaders like ʿAwnī ʿAbd-al Hadī and supported by many of the younger generation. An extensive daily press, predominantly nationalist – even fascist – in character, was established and indulged in daily diatribes against the Jews. In 1931 a terrorist organization led by Sheikh ʿIzz al-Dīn al-Qassām was formed in Haifa and from time to time murdered individual Jews. The Arab nationalists tried to prevent Jews from purchasing land by intimidating prospective Arab sellers; they fomented land disputes and turned them into political issues, as in the case of the prolonged dispute between Jews and Bedouin over the Ḥefer Plain (1930–33).

In October 1933 the Arab Executive Committee called for demonstrations throughout the country against growing Jewish immigration. The demonstrations, which were directed against the British authorities, were firmly suppressed by the police and the military; some of the demonstrators were shot to death and others wounded. As a result the committee, which had shown itself as lacking in resolute leadership, lost its influence and disintegrated, giving way to political parties combining modern elements with the old feudal type of leadership. Terrorism also was renewed, and in November 1935 Sheikh ʿIzz al-Dīn al-Qassām's band was trapped by police on Mt. Gilboa and wiped out. The Arab nationalists glorified the fallen terrorists as martyrs for their country. Tension rose steadily. In October over 500 barrels containing arms for the Haganah had been seized in Jaffa port, and the Arab parties

declared a general strike in protest against the acquisition of arms by Jews.

External events added to the growing tension. The Italian-Ethiopian war revealed the weakness of British policy; there were riots and strikes in Egypt and Syria, where Britain and France had to make concessions. The British government decided that the time had come to appease the Arab nationalists in Palestine as well. In December 1935 High Commissioner Wauchope revived the old plan for a legislative council, with limited powers, to consist of 14 Arabs, seven Jews, and seven British government officials and business representatives. This time it was the Jews who rejected the proposal, fearing that it would obstruct Jewish immigration and settlement in that tragic hour for European Jewry, while some Arab leaders favored acceptance. When the plan came up for discussion in the British Parliament, it was severely criticized, and the government decided to withdraw it. Instead, the Arabs were invited to send a delegation to London for political negotiations.

The Arab Revolt. On April 19, 1936, riots broke out in Jaffa. The funeral in Tel Aviv of two Jews killed by Arab terrorists had been turned into a demonstration, which was followed by the murder of two Arabs by Jews. It took the government two days to quell the riots. Sixteen Jews were killed and many wounded and Jewish property was ransacked and set ablaze, especially in the border area between Jaffa and Tel Aviv. The Arabs proclaimed a general strike and an assembly of Arab parties in Nablus elected an Arab Higher Committee, headed by the mufti. The committee announced that the strike would go on until the government fulfilled three demands: the stoppage of Jewish immigration; the prohibition of the transfer of land to Jewish ownership; the establishment of "a national representative government." Thus began the three-year period of disorder and violence known as the Arab Revolt.

The strike lasted for nearly six months, coming to an end on Oct. 12, 1936, in response to an appeal by the heads of Arab states. It failed to achieve its aims and the Arab Higher Committee's attempt to organize civil disobedience, based upon a strike of Arab civil servants and police, was not successful either. Shortly after the outbreak of the strike, a campaign of terror was initiated, beginning with the burning of Jewish property and going on to the murder of Jewish passersby and attacks on Jewish settlements, which were repulsed by the Haganah, and upon Jewish interurban transport. Eighty Jews fell victim to the terror in the period of the strike. In the hill regions armed bands of terrorists, with the support of the Arab population and the clandestine assistance of senior Arab officials and police officers, tried to attack Jewish settlements and convoys, as well as British police and army detachments. In August efforts were made to create a cohesive force out of the various terrorist bands, and a former Ottoman Arab army officer, Fawzī al-Kaukji, was invited to undertake the task. By then the British had brought in large military forces and launched a large-scale attack upon the terrorists, using

planes and light tanks. When the general strike came to an end, Kaukji left the country.

The Partition Proposal. The British government was not prepared to meet the demands of the Arab Higher Committee and sent out a royal commission, headed by Lord Peel, to institute a thorough inquiry into the problems of the country. The commission heard a host of witnesses – British, Jewish, and Arab – and published its findings at the beginning of July 1937. These included a revolutionary proposal: to partition Palestine into two states: a Jewish state, which would consist of the whole of Galilee and the coastal strip, up to a point south of Reḥovot; and an Arab state, which would comprise Samaria, Judea, and the entire Negev. Jerusalem and its environs, linked to the coast at Jaffa by a corridor, was to remain in British hands, for the supervision of the Holy Places (see *Palestine, Inquiry Commissions; *Palestine, Partition). The British government announced its readiness to carry out the partition plan, but opinions were divided among both Jews and Arabs. Weizmann, David Ben-Gurion, and Moshe Shertok (later *Sharett) supported the plan, while Ussishkin, Jabotinsky, and Berl *Katznelson opposed it. Among the Arabs it was Emir Abdullah who favored partition, hoping to incorporate the Arab portion into his kingdom and thus create a large Arab state which would cooperate with the Jewish state in economic affairs. In any event, the Arab Higher Committee rejected the plan and insisted on the fulfillment of its own demands.

After the end of the general strike, an uneasy calm had prevailed, sporadically broken by outbreaks of Arab terror, but in September 1937, two months after the publication of the commission's report, the disturbances were renewed. At the end of the month the British district commissioner in Galilee, Andrews, was murdered; the government retaliated by disbanding the Arab Higher Committee, arresting its leaders, and expelling them to the Seychelles Islands; but the mufti escaped to Syria, from where he continued to direct the terror. The armed bands resumed their operations on a large scale, although no attempt was made to organize them into a unified military force. Their leaders took control of large areas and instituted a regime of terror against their Arab opponents. Attacks upon the Jews were also stepped up: 415 Jews were killed by the terrorists in the period 1937–39, over half of them between July and October 1938. Nevertheless, the terrorists failed, with very few exceptions, to break into Jewish towns or villages.

In the summer of 1938 the Arab Revolt reached its climax. Terrorist bands captured police stations and broke into Arab towns; for a short while, in October, they held the Old City of Jerusalem (except for the Jewish quarter), though they were easily driven out by British military forces. Then, however, the Revolt began to decline. The British had concentrated large forces, about 16,000 troops, to combat the terrorist bands. The Arab population had also wearied of the murder and blackmail perpetrated by the terrorists, who had been responsible

for more Arab than Jewish and British victims. "Peace bands" set up among the Arabs received arms from the British and joined the fight against the terrorists. By the spring of 1939 the Revolt had come to an end.

The 1939 White Paper. At the end of 1938, however, British policy underwent a significant change. After the Munich agreement between Britain, France, Italy, and Nazi Germany (1938), the British came to the conclusion that the Arab world had to be appeased, whatever the price, lest it join Britain's enemies in the event of a world war. On Nov. 9, 1938, the government announced the abandonment of the partition plan and invited Jewish and Arab leaders, including representatives of the Arab states, to a round-table conference in London. The Arab refused to meet the Jews, and in fact there were two conferences, the British meeting separately with Arabs and Jews. No agreement was reached at these talks. On May 17, 1939, the British colonial secretary, Malcolm MacDonald, published a new White Paper that went a long way toward accepting Arab demands. Immigration was to be restricted to 10,000 a year for a period of five years, bringing the Jewish population to a third of the total, after which further immigration would depend upon Arab consent. As a special gesture, 25,000 additional immigration certificates were promised for Jewish refugees in Europe. The sale of land to Jews was to be severely restricted. Finally, the White Paper provided for the establishment within ten years, circumstances permitting, of an independent Palestine state, which would maintain strategic and economic links with Britain.

The British government immediately began to apply the White Paper policy. A reduced immigration schedule was issued for the period May–September 1939. For the six months October 1939 to March 1940 – after the start of World War II – no immigration certificates at all were allotted for Jews on the ground that there had been a large influx of "illegal" immigration. In February 1940 the Land Transfer Regulations envisioned in the White Paper were duly enacted, dividing the country into three zones: Zone A (the hills of Judea and Samaria, Western Galilee and the Northern Negev) in which the sale of land to Jews was completely prohibited; Zone B (Jezreel Valley, Eastern Galilee, and most of the Coastal Plain) in which the sale of land required the approval of the high commissioner; and Zone C (the coastal strip from Zikhron Ya'akov to a point north of Reḥovot, as well as urban areas) in which no restrictions applied. Thus it seemed that the Arab national movement had scored a significant achievement. Yet for the extremists among them, headed by the mufti, this was not enough. By this time, they had tied themselves to the enemies of Britain, mainly to Nazi Germany, in the hope that with their help they would be able to destroy the *yishuv*.

Jewish Defense and Resistance. The three years of the Arab Revolt had been a severe test for the *yishuv,* but despite the uncertain political and security conditions, it grew in numbers, and a total of 60,000 legal and "illegal" immigrants (the lat-

ter known in Hebrew as *ma'pilim*) entered the country during the period. Although some branches of the Jewish economy suffered from the Arab boycott, others were strengthened by it. The moshavot now employed Jewish labor, and Jews filled jobs abandoned by the Arabs in ports, quarries, etc. Thousands of people were employed by the various bodies set up for the *yishuv*'s defense. There was a rise in the income of the national funds and a spectacular growth in agricultural settlement, which absorbed many of the new immigrants. In growing measure, the *yishuv* was able to supply its own vegetables, fruit, eggs, and other food. In summer 1936 a port was constructed in Tel Aviv as a result of the strike in Jaffa port, thus opening a Jewish door to the world.

The paramount problem was security. The Haganah developed into a military force that bore the responsibility for the *yishuv*'s safety, and a general staff was set up. From the beginning of the riots, the Jewish Agency had called for self-restraint (*havlagah*) by the *yishuv,* as well as self-defense (*hagannah*): no blind revenge or indiscriminate killing but appropriate defensive measures, including active operations against terrorist bands. All the Jewish villages were fortified with barbed-wire fences, strongpoints, and searchlights; wherever necessary they were reinforced with fighting men. Inter-settlement communications were ensured by armed escorts for individual vehicles and convoys and by the construction of new roads. Ambushes were set outside the settlement perimeter for marauding gangs who sought to destroy the crops.

Through the Jewish Agency, close – albeit unofficial – links were established between the Haganah and the British security forces. A force of Jewish special police (also known by the Arab-Turkish term *Ghafirs*) equipped with uniforms and arms by the police (some of its members received regular pay) guarded railroads, air-fields, and government offices. The Jewish Settlement Police (JSP) was set up to protect the Jewish villages and comprised, by the end of the period, ten district battalions, with mobile patrols equipped with armored cars and Lewis guns. The creation of these forces was tantamount to de facto legalization of the Haganah, to which most of the men belonged.

During this period, the Haganah also formed "field companies" (*peluggot sadeh*), which were trained for action against the terrorists beyond the perimeter of the settlements, and by the summer of 1938 held a continuous line along the borders of the Jewish areas, preventing the incursions of terrorist bands. In cooperation with the British Army, Special Night Squads (SNS) were established, consisting of regular British troops and members of the Haganah. Commanded and trained by Capt. Orde *Wingate, they used guerrilla tactics against the Arab terrorists and succeeded in clearing them out of a wide area in Eastern Galilee.

Agricultural settlement, which had not been halted by the disturbances, was stepped up further when the Royal Commission made its proposal for the partition of the country, for it was clear that the borders of the Jewish state would be determined by the extent of Jewish settlement. Some 50

new settlements, most kibbutzim, were established in areas where no Jewish settlements had previously existed: in the Beth-Shean Valley, Mount Carmel, Western Galilee, etc. In the initial stage, these *stockade and watch-tower settlements were organized as armed camps in hostile territory, and the members, all belonging to the Haganah, lived like soldiers until the Arabs around had become used to their presence. The Arab terrorists repeatedly attacked these outposts, e.g., Tirat Ẓevi in February and Ḥanitah in March 1938, but failed to dislodge them. The high costs of security were met by a voluntary tax, *Kofer ha-Yishuv,* which the Jewish population imposed upon itself.

Throughout this period the Haganah continued to strengthen its underground forces. Arms manufacture was developed under a secret agreement with Polish governmental circles. Ḥalutzim were given military training before emigration, and large quantities of light arms were purchased. The Jewish Agency's *havlagah* policy was opposed by the *Irgun Ẓeva'i Le'ummi (IZL), a group which had seceded from the Haganah and was associated with the Revisionists. The IZL engaged in terrorism against Arab civilians, which increased in scope in the summer of 1938 after the British had hanged one of its members, Shlomo *Ben-Yosef, who had taken part in an abortive attack against an Arab bus near Rosh Pinnah. The majority of the *yishuv* opposed their methods.

The worsening situation of the Jews in Europe brought about a renewal of "illegal"*immigration, known as Aliyah Bet ("Class B Immigration"), which was organized by He-Ḥalutz and the Revisionist movement. After the annexation of Austria and Czechoslovakia by Nazi Germany (1938–39), Aliyah Bet swelled with its own momentum and became a significant factor in immigration: by the outbreak of World War II, 15,000 Jews had entered the country in this manner. An underground body, known as the Mosad and linked to the Haganah, was set up at the end of 1938 to organize and coordinate the clandestine influx. The anti-Jewish switch in British policy at the end of 1938 caused great bitterness in the *yishuv,* exacerbated by the severe measures employed against the "illegal" boats, some of which were fired on and forced back into the open seas with their human cargo. From time to time strikes and protest demonstrations were held. On May 17, 1939 – the date on which the White Paper was published – a general strike was called and mass demonstrations took place in all Jewish towns and villages. The Haganah formed a special unit to attack telephone lines, railroads, and other government property.

War Breaks Out – Repression Continues. The outbreak of World War II raised expectations of a change in British policy, in view of the *yishuv*'s readiness to cooperate in the fight against the common enemy, as reflected in the immediate registration of 136,000 volunteers, almost the entire Jewish population between the ages of 18 and 50, for national service. It was hoped that the White Paper policy would at least be suspended for the duration of the war. These hopes, however, were soon disappointed. The Mandatory government, headed

by the high commissioner Harold MacMichael (1938–44) persisted in its campaign against the refugee boats arriving from Europe. When it became apparent that the internment of the refugees would not stop the flow, the government decided to deport them. In November 1940 the first deportation ship, the *Patria*, was about to sail for *Mauritius with 1,700 people aboard when it was sabotaged by the Haganah to prevent its departure. By a tragic mischance the boat sank and 250 refugees were drowned in Haifa Bay. Soon afterwards, the government deported another group of 1,645 refugees to the island. In February 1942 the *Struma*, carrying refugees from Romania, was turned back by the Turkish authorities when the British government had made it clear that the Jews would not be permitted to land in Palestine. The ship foundered in the Black Sea and 770 refugees lost their lives.

The beginning of the war also coincided with the introduction of repressive measures against the Haganah. In October 1939, 43 of its members, some of whom had served with the SNS during the Arab Revolt, were arrested while participating in an officers' training course and sentenced to five years' imprisonment. Searches for arms were conducted in many Jewish villages. The Jewish Agency's demand for the formation of Jewish military units was rejected: only a few hundred specialists were taken on to bring the British units up to strength, and several companies of the Auxiliary Military Pioneer Corps were formed, the first of these being sent to the front in France. In May 1940, after the Haganah-organized demonstrations and riots in protest against the Land Transfer Regulations, the British military commander demanded the surrender of the Haganah's arms. The first months of the war also caused a severe economic crisis, as a result of the sudden rupture of foreign trade.

The Yishuv and the War Effort, 1940–1942. Some changes took place after Italy's entry into the war in June 1940. The arms searches and arrests were halted and relations between the British authorities and the *yishuv* took a turn for the better. The Middle East became a huge military base. Volunteer men and women were accepted for service and transportation units in the British army which gradually became Jewish units also included women with, for the most part, Jewish officers in command. They rendered important service in Libya, Egypt, Ethiopia, Greece (where a thousand Jewish volunteers were taken prisoner by the Germans), and Crete. In September 1940 a new stage was reached with the formation of Palestinian Jewish and Arab companies of the Buffs, a British infantry regiment, which were to do garrison duty in Palestine; by the end of 1942 the Jewish companies had become three Jewish infantry battalions. Jews also served in antiaircraft units in Haifa and Cyprus. By the end of the war 26,620 Jews from Palestine had joined the British forces, including 4,000 women in the ATS and the WAAF.

The later war years brought about a radical change in the Jewish economy. The isolation of the Middle East from Europe facilitated a great economic advance, based largely on the re-

quirements of the large military forces in the area. There was a significant increase in agricultural production and food processing and a considerable expansion of industry – especially in metals. Jewish scientists and technicians made important contributions to the supply of the forces' needs. There was a glaring contrast between the Jewish participation in the Allied war effort and the attitude of the Arabs, most of whom were indifferent to the outcome of the war, while a substantial number, headed by the exiled mufti, favored an alliance with the Nazis. The mufti and some of his aides went to Germany in 1941, participated in the plans for the destruction of European Jewry, and did all in their power to help the German propaganda machine.

In November 1942 the Zionist General Council approved the *Biltmore Program, which had been formulated earlier in the year by the American Zionist movement on David Ben-Gurion's initiative. It urged "that the gates of Palestine be opened, that the Jewish Agency be vested with the control of immigration into Palestine and with the necessary authority for the upbuilding of the country, and that Palestine be established as a Jewish Commonwealth integrated in the structure of the new democratic world." In the period 1941–42 there was a change in the British attitude toward the Haganah. In May 1941 the Haganah established the *Palmaḥ which in a short time became its regular full-time force. As the German threat to the Middle East became more acute, the Haganah was called in to assist in the invasion of Syria. A joint plan, the "Palestine Scheme," was prepared with the British for the creation of a resistance movement in case Palestine was occupied by the Germans, and hundreds of members of the Palmaḥ were trained by British officers in sabotage and commando tactics.

Relations Deteriorate Again, 1943–1945. When the war front receded at the end of 1942, however, relations between the British and the *yishuv* took a turn for the worse. This was a reflection of the struggle that was being waged between the makers of British Middle East policy and pro-Zionist elements in Britain. The British encouraged the creation of the *Arab League, in which all the Arab states took part and which at its first conferences (October 1944–March 1945) pledged its members to defend the rights of Palestine Arabs. On the other hand, the British Prime Minister Winston Churchill, the British Labor Party, and various British statesmen had promised a change in British policy in favor of the Jews at the end of the war. To many observers, the first sign of such change seemed to be the establishment of the *Jewish Brigade Group in 1944. It consisted of Jewish infantry, artillery, and service units from Palestine and took part in the final battles of the war on the Italian front in the spring of 1945. At the same time, however, the Palestine government stepped up its campaign against the Haganah. Political trials were staged at which the organization was accused of acquiring arms from British arsenals, and searches were made for arms in the kibbutzim, meeting with passive resistance on the part of the members, as at Ramat ha-Kovesh.

At the beginning of 1944 the IZL, headed by Menahem *Begin, embarked upon a series of armed attacks on government and police installations in order to exert pressure upon the government to change its policy. In October of that year 251 men suspected of belonging to Jewish terrorist organizations were deported to an internment camp in Eritrea. Relations between the British and the Jews were seriously impaired by the murder of Lord Moyne, the British minister of state in the Middle East, on Nov. 6, 1944, by members of *Loḥamei Ḥerut Israel (Leḥi, called by the British the "Stern Gang") – an underground group that had seceded from IZL in 1940 – which, from the beginning of the war, had adopted a violent anti-British attitude and even sought contact with the Italians and Germans. This act stood in contrast with the general policy of the *yishuv,* which hoped that the end of the war would bring about a better understanding with the British, and the Jewish national institutions called upon the dissident organizations to put a halt to their activities. When the IZL refused, the Haganah took repressive measures against it in what was euphemistically called the "Saison." There was an impassioned controversy in the *yishuv* over the surrender to the British authorities of some IZL members arrested by the Haganah.

It was not until the end of 1942 that the *yishuv* became aware of the appalling tragedy of European Jewry, and great efforts were made to help and rescue the Jews of Europe. The British, however, regarded these efforts as a violation of the White Paper policy and did all they could to obstruct them. Eventually a way was found to transfer several thousand Jewish refugees who had reached Istanbul to Palestine. Another project – to drop Haganah parachutists into occupied European countries, where they would rouse Jewish youth to resistance against the Nazis – was severely restricted in scope by the British. Only 32 such volunteers reached various European countries in the period 1943–44, and seven of them lost their lives.

Throughout the war years agricultural settlement continued to grow. Forty new villages were established in various parts of the country; among them were Bet ha-Aravah in the Dead Sea area, Kefar Eẓyon in the Hebron Hills, ten settlements in the southern Shephelah, and three (Revivim, Gevulot, and Bet Eshel) in the northern Negev; which inaugurated Jewish agricultural settlement in that area.

Postwar Disappointment. When the war came to an end, the *yishuv* expected a radical change in British policy. Above all, it expected the gates of the country to be reopened to large-scale Jewish immigration. A few hundred thousand European Jews had survived the Holocaust in German labor camps, in the forests and other hiding places, or as refugees in the eastern parts of the Soviet Union. As they had lost their families and were unable to go back to the scene of their tragic experiences, they made their way to the *Displaced Persons camps established by the Allies in Germany, Austria, and Italy. Essentially, this was a spontaneous mass movement, but it was guided and organized by the *Beriḥah ("Flight") organization, a clandestine body headed by emissaries from Palestine. The DP's received aid from general refugee agencies (UNRRA and later IRO) and Jewish organizations (the *American Jewish Joint Distribution Committee and a delegation from the *yishuv*), but their main goal was to leave Europe at the earliest possible moment and settle in the Land of Israel. The problem of the refugees troubled the military authorities in Europe, and in August 1945 President Truman appealed to the British prime minister, Clement *Attlee, to permit the immigration of 100,000 Jews into Palestine.

The election victory of the British Labor Party, which had always adhered to a pro-Zionist policy, increased hopes for a favorable change in the political position of the *yishuv,* but it soon became clear that a positive solution to the Palestine problem was still far away. Anti-Zionist forces exerted great pressure on the British government to prevent any deviation from the White Paper policy, and it was obvious that Attlee and Ernest *Bevin, the new foreign secretary, intended to maintain, or even intensify, the anti-Zionist line. In order to demonstrate its refusal to accept this state of affairs, in the fall of 1945 the *yishuv* organized the Jewish Resistance Movement, which was run by the Haganah in cooperation with the IZL and Leḥi. The movement carried out its first operation on Oct. 10, 1945, when a Palmaḥ unit attacked the Athlit internment camp and liberated the 208 "illegal" immigrants who were held there. The Mosad, in turn, renewed the organization of clandestine immigration from Europe. A few boats got through, but the British soon tightened security measures along the coast using all available means, including aerial patrols and coastal radar installations. On Nov. 22, 1945, a boat named *Berl Katznelson* was intercepted, and thereafter most of the refugee boats were apprehended on the high seas and their passengers interned. Each such event caused an uproar in the country and strengthened the *yishuv*'s determination to offer active resistance to the government's policy.

On Nov. 1, 1945, the Jewish Resistance Movement showed its strength by launching a major attack on railroads all over the country and sinking several coastal patrol launches. A fortnight later the British foreign secretary Ernest Bevin, in a long-awaited statement, in effect repudiated his party's pro-Zionist commitments. He announced the despatch of an Anglo-American Commission to Palestine and Europe to inquire into the problem of Jewish refugees. In the meantime, Jewish immigration would continue at a rate of 1,500 per month, beyond the limit laid down in the White Paper, but the "illegal" immigrants would be deducted from the quota.

Struggle and Repression, 1946–1947. The *yishuv* entered upon a long struggle against the British. "Illegal" boats continued to arrive. Two of them, the *Dov Hos* and the *Eliyahu Golomb,* with 1,000 passengers aboard, were ready to sail from the Italian coast at La Spezia when the British military authorities tried to prevent their departure. This attempt, and the ensuing hunger strike by the refugee passengers, roused world opinion, and the British were forced to let them in. Palmaḥ,

izl, and Leḥi units continued their attacks upon British police posts, coast guard stations, radar installations, and airfields. There were also frequent violent clashes between the security forces and Jewish demonstrators. This was the atmosphere in the country when the Anglo-American Commission arrived, after visiting the DP camps in Europe. Its report, submitted to the two governments on May 1, 1946, recommended the speedy admission of 100,000 Jewish refugees (see *Palestine, Inquiry Commissions). The British government rejected this recommendation and the Resistance Movement responded on June 17 by blowing up the bridges linking Palestine with the neighboring states.

The government reacted to this attack on June 29, 1946 ("Black Saturday"), by arresting the members of the Jewish Agency Executive who were in the country at the time, sending military forces to dozens of settlements suspected of harboring Palmaḥ units, and conducting exhaustive searches for arms caches, discovering a large one at Yagur. Similar searches took place in the following days and it was obvious that, apart from looking for arms, the military were also trying to do extensive damage. Thousands of persons suspected of being members of the Palmaḥ were interned in camps at Rafa. There was also a further aggravation of the policy towards the "illegal" boats, all refugees apprehended on their way to Palestine being taken to Cyprus and interned there. Tension reached new heights when, on July 22, 1946, the izl blew up the central government offices in the King David Hotel in Jerusalem and 91 people were killed – government officials and civilians, Britons, Jews, and Arabs. The Jewish Agency ordered a halt in the armed operations against the British, but izl and Leḥi refused to obey.

The government's aim had been to break up the Haganah and bring about the formation of a new, more moderate Jewish leadership, but it soon realized that this objective could not be achieved. In November 1946, the interned Jewish leaders were set free. At the beginning of 1947 negotiations were opened with Jewish and Arab representatives, to whom the British government submitted a new proposal (the Morrison-Grady Plan) providing for the division of Palestine into three sectors, Jewish, Arab and British (the latter including Jerusalem and the Negev), with the British retaining supreme control for another four years. Both Jews and Arabs rejected this proposal, and in February 1947 the British government announced that it was handing over the Palestine problem to the United Nations.

Throughout 1947 tension continued to rise and there was no end to the acts of terror. The izl and Leḥi now attacked the military, in addition to government installations. Their most spectacular operation was the liberation of some of their comrades by a daring attack upon the Acre fortress prison. The government's response was further repressive measures and the execution, by hanging, of seven izl and Leḥi men, to which the izl retaliated by hanging two British sergeants who had fallen into their hands. The transfer of refugees in Haifa port to the British boats, which were to take them to Cyprus, was accompanied by passive resistance and mass demonstrations; on several occasions, special Palmaḥ units succeeded in sabotaging the boats. In July 1947, when the *Exodus 1947* arrived in Haifa with 4,500 refugees aboard, the government decided to force it to return to its French port of departure. There, however, the refugees refused to disembark, and the British took the boat to Hamburg in their occupation zone, where the passengers were forcibly taken off and returned to the soil of Germany. The *Exodus* affair had a profound effect on world public opinion and reinforced the British decision to give up the Mandate. The feeling that a decisive hour was fast approaching impelled the *yishuv* to step up its settlement activities. The establishment of 11 new settlements in the Negev in a single night (the night after the Day of Atonement, Oct. 15, 1946), was to be decisive in securing the inclusion of the Negev in the area allotted to the Jewish state. By the end of 1947 the Jewish population in Palestine was 630,000 – about a third of the total.

The UN Recommends Partition. In May 1947 the Palestine problem came before a special session of the UN General Assembly. To the surprise of all, the Soviet delegate, Andre Gromyko, expressed his government's support for the right of the Jews to establish their own state in Palestine. An international committee, the United Nations Special Committee on Palestine (UNSCOP), was appointed to study the problem and submit recommendations for a solution. After investigating the position in Palestine and in the DP camps, the committee unanimously resolved that the Mandate should be terminated. The majority recommended the partition of Palestine into two independent states – Jewish and Arab – joined by an economic union, with Jerusalem and its environs as an international zone, while the minority proposed the establishment of a federative binational state. On Nov. 29, 1947, the General Assembly accepted the majority recommendation by a vote of 33 to 13 with 10 abstentions. The Jewish state was to consist of Eastern Galilee, the northern part of the Jordan Valley, the Beth-Shean and Jezreel Valleys, the coastal strip from a point south of Acre to a point south of Reḥovot, and the whole of the central and eastern Negev, including Umm Rash Rash (later Eilat) on the Red Sea. Jerusalem and its environs were to have an international regime; the remaining parts of the country were to form the Arab state. The British government announced that it would not cooperate in the execution of the partition plan and would withdraw British civilian staff and military forces by May 15, 1948. The *yishuv* received the news of the impending withdrawal with immense satisfaction; the Palestine Arab leaders and the Arab states announced their rejection of the UN decision and their determination to solve the problem by force (see *Palestine, Inquiry Commissions, and *Partition Palestine).

The Fighting Begins. On the morrow of the UN vote, there were outbreaks of Arab violence. On November 30 a bus was fired on and five Jews were killed. The Arabs proclaimed a general strike and the next day an Arab mob attacked the

Commercial Quarter, a mixed Jewish-Arab neighborhood in Jerusalem adjoining the Old City. The British police stood idly by, while the Haganah was unprepared, and within a few hours the quarter went up in flames. The riots soon spread to all parts of the country. At first they were similar in character to the 1936–39 Arab Revolt, except that now the Jews were alone in facing the armed Arab bands. The Arabs began to organize under local leaders such as ʿAbd al-Qādir al-Husseini in the Jerusalem hills. The Arab states, as yet unable to intervene directly because of the presence of British forces, gave the Palestinian Arabs financial support and encouraged the infiltration of Arab volunteers, which the British did nothing to prevent. Some of the volunteers were organized in the Liberation Army, commanded by Fawzī al-Kaukji (see under Israel, State of: Historical Survey, 1880–1948, from the section The Arab Revolt onwards). The *War of Independence had, in effect, begun.

The defense of the *yishuv* became the sole responsibility of the Haganah. In addition to ensuring the safety of the Jewish population in town and country, it had to keep communications open. Special difficulties were encountered in maintaining contact with isolated Jewish villages, such as those in Upper and Western Galilee and in the Negev, and the four villages of the Eẓyon Bloc in the Hebron Hills. A crucial problem was contact with Jewish Jerusalem, besieged by Arab bands who tried to cut if off from the rest of the country. There were heavy casualties in the fight for the maintenance of communications during the early months of the fighting; serious losses were sustained, for example, by the convoys to Ben Shemen, the Eẓyon Bloc, Yeḥi'am, and, above all, to Jerusalem. Strict rationing of food and water had to be introduced in the capital, which also suffered from large-scale bomb outrages, such as the Ben-Yehuda Street explosion and the blowing up of the *Palestine Post* premises, perpetrated by Arabs with the aid of British army deserters. At the beginning it was the Palmaḥ units, already trained and mobilized in three brigades, that bore the brunt of the struggle. In the course of the riots and the war, six more brigades were set up: Golani and Carmeli in the North; Alexandroni, Kiryati, and Givati in the coastal area; and Eẓyoni in Jerusalem. Air, naval, and artillery forces were created from scratch. General mobilization of all able-bodied men was ordered, and by the time the State of Israel was declared (May 14), 51,500 people were serving in the Jewish armed forces. The major problem confronting the *yishuv* was the lack of arms, which prevented the proper development of operations. It was not until the beginning of April that large consignments arrived, mainly from Czechoslovakia, bringing about an immediate and radical improvement in the armament situation.

Preparations for Independence. In this initial period, when the very existence of the *yishuv* was at stake, the world had grave doubts as to the Jews' ability to hold out. On March 19, 1948, the United States withdrew its support of the Partition Plan and proposed instead a UN Trusteeship over Palestine to last until Jews and Arabs reached agreement. The U.S. State Department brought pressure to bear on the Jewish Agency and the *yishuv* to postpone the establishment of independence, but the Zionist General Council decided in the middle of April to go ahead with all preparations to set up the Jewish state on the departure of the British. A People's Council of 37 members, representing all parties and sections, and a People's Administration of 13, headed by David Ben-Gurion, were set up to act as an unofficial provisional legislature and government.

At the same time there was a radical change in the course of the fighting. The Haganah seized the initiative, rapidly establishing its hold on the entire area allotted to the Jewish state and ensuring its territorial continuity. On April 3, 1948, in Operation Naḥshon – the first in which a full brigade was employed – the road to Jerusalem was cleared by occupying Arab villages and areas on both sides of the road, and large convoys of food and reinforcements were rushed through to the beleaguered city. On April 9, a combined IẒL and Leḥi group attacked the Arab village of Deir Yasīn, west of Jerusalem, and many of its civilian inhabitants were killed – an event which greatly served Arab anti-Jewish propaganda and increased the panic among the Arab population. Kaukji's forces launched a major attack upon Mishmar ha-Emek (April 4), aiming at a breakthrough which would clear the way to Haifa, but were completely routed. On April 11 Safed was cleared of Arab forces. On April 14, Arab terrorists ambushed a convoy of Jewish doctors, nurses, and teachers on their way to the Hadassah hospital in Mt. Scopus – 78 persons were killed. Jewish forces took Tiberias on April 18 and on April 22 the Haganah, after a brief battle with local Arab forces, occupied the whole of Haifa.

Hundreds of thousands of Arabs fled from the areas occupied by the Jewish forces. The mass flight was encouraged by the Arab leadership, which spread atrocity stories about the behavior of the Jewish forces and their intentions toward the Arab inhabitants. On the eve of the British departure, the Haganah seized most of New Jerusalem, but the Jewish quarter in the Old City was cut off and besieged by the Arab legion, a Jordanian force commanded by British officers. The Legion attacked the Eẓyon Bloc with its tanks and overran it on May 13. On the same day Jaffa surrendered to the Haganah after the attack on the town by the IẒL. By the middle of May, the *yishuv* had suffered about 2,500 fatal casualties, almost half of them among the civilian population.

On May 14, 1948, the day preceding the end of British rule, the People's Council convened in the Tel Aviv Museum and approved the Proclamation of Independence, which declared the establishment of the State of Israel.

[Yehuda Slutsky]

From Independence to the Six-Day War

THE END OF THE MANDATORY REGIME. The Declaration of Independence began by explaining the justification for the establishment of the Jewish State at that moment of history. It

recalled the shaping of the Jewish people and their culture in the Land of Israel, their unbroken attachment to the land in dispersion, and their return in recent generations to found a thriving and self-reliant society. The right of the Jewish people to national restoration in their land, the declaration continued, was voiced by the First Zionist Congress, acknowledged in the Balfour Declaration, confirmed in the League of Nations Mandate, and now irrevocably recognized by the United Nations. "By virtue of our natural and historic right and of the resolution of the General Assembly of the United Nations," the People's Council proclaimed the establishment of "a Jewish State in the Land of Israel – the State of Israel." From the concluding moment of the Mandate, at midnight on May 14/15, 1948, the council was to act as the Provisional Council of State and the 13-member People's Administration as the provisional government. The declaration concluded by proclaiming the basic principles on which the State of Israel was to be founded, undertaking to cooperate with the United Nations in carrying out the resolution of Nov. 29, 1947, calling upon the Arabs in Israel and the neighboring states to cooperate with the independent Jewish nation in its land, and appealing to the entire Jewish people to join forces with the State of Israel in its constructive efforts.

At the same meeting the council resolved by acclamation that all legal provisions deriving from the 1939 White Paper – particularly the restrictions on Jewish immigration and land purchase – were null and void. Subject to this decision, the law presently in force would remain valid until amended, with such changes as followed from the establishment of the state and its authorities. The provisional government was empowered to enact emergency legislation. At midnight, a few hours later, the last British high commissioner, Sir Alan Cunningham, left Haifa on board a British destroyer. The Mandate was over. At 00:11 A.M. on May 15, U.S. President Truman recognized the provisional government "as the de facto authority of the new State of Israel." Three days later the Soviet Union (as well as Guatemala) granted the new state de jure recognition. During the first month of its existence, nine more countries recognized Israel: five Communist, three Latin American, and South Africa.

THE ARAB STATES JOIN IN THE ATTACK: MAY 15–JUNE 11, 1948. During the night of May 14/15, Tel Aviv was bombarded by Egyptian planes. The attempt by the Arab states to crush Israel at birth had begun. Ben-Gurion, who was in charge of defense, and Ya'-akov *Dori (Dostrovosky), the Haganah chief of staff, could look back on substantial military achievements. Four of the towns with mixed Jewish-Arab population were in Jewish hands; Acre was encircled; Jewish Jerusalem held out, and some of its adjacent Arab quarters had been taken. The Haganah held crucial strong points on the road to the capital from Tel Aviv. About 100 Arab villages had fallen; western and eastern Galilee were cleared of enemy forces; the roads to the north and the Negev were open. Local Arab armed contingents had been crushed, and Kaukji's Liberation

Army had suffered severe reverses. Israel had 30,000 fully armed men in the field; the IZL and Leḥi forces were placed under Haganah command, though both maintained their autonomy in Jerusalem. To reinforce the three Palmaḥ and six other brigades, artillery units were being organized around nuclei of World War II veterans. With the aid of Jewish volunteers from abroad (*Maḥal), Israelis who had served with the RAF, and pilots trained by the Palmaḥ, the tiny air force was expanded. A small navy, similarly manned, had also been founded. Two more brigades – the 7th, consisting mainly of new immigrants, and Oded, made up mainly of men from the Palmaḥ and the kibbutzim – were set up. On May 26 the provisional government issued an ordinance establishing the Israel Defense Forces – Ẓeva Haganah le-Israel (the second word in the name marking the nexus between the IDF and the pre-state militia) and forbidding the maintenance of any other armed force. On the other hand, the exhausted Israel forces, which at first did not have a single tank, fighter plane, or field gun and had suffered heavy casualties, faced fresh, organized troops, equipped with tanks, artillery, and fighting craft. In the north, the Syrians invaded in two columns, one advancing down the Jordan Valley toward Deganyah and the other in Eastern Galilee in the direction of Mishmar ha-Yarden. The former offensive was repulsed, but the other column succeeded in taking Mishmar ha-Yarden on June 10, a day before a truce was declared. The Lebanese, after linking up with Kaukji's irregulars, were content to help him maintain a large pocket in Central Galilee.

In the center, the Transjordanian Arab Legion, which, despite repeated British promises, had not been withdrawn before the end of the Mandate, had taken up positions in and around Jerusalem and together with Iraqi troops, in the "Triangle" area marked by the Arab towns of Nablus, Jenin, and Tulkarm. They hoped, after a speedy victory, to advance to the lowlands, forestalling the Egyptians, who were attacking from the south, by taking the Coastal Plain and the Syrians by occupying Haifa. The Legion reached *Latrun, on the road to the capital, took up positions in the Old City, cut off Mount Scopus, and threatened the Jewish quarters in the north of Jerusalem.

Units of the Harel Brigade penetrated through the Zion Gate and made contact with the defenders of the Jewish Quarter of the Old City, but they were unable to hold out against superior forces and left the Old City. The Jewish Quarter surrendered on May 25. No Jews were left in the Old City, and the Jewish Quarter, with its ancient synagogues and places of learning, was almost completely demolished. The Legion troops could make no further progress, however, and contented themselves with indiscriminate bombardment of the Jewish areas, in which 170 civilians were killed and over 1,000 injured. The Israelis' attempts to lift the siege were unsuccessful, but at the beginning of June they succeeded in bringing up supplies and reinforcements along a makeshift track in the mountains, named the "Burma Road" in recollection of *Wingate's exploits in World War II.

The Iraqis took little part in offensive operations but were able to prevent the fall of Jenin. The Egyptians, however, were more successful. They advanced with a rapid pincer movement through mainly Arab territory, one arm advancing northward along the coast, while the other moved northeast, through Beersheba and Hebron, to southern Jerusalem. The western arm, after being held up by the desperate resistance of the Jewish villages of *Yad Mordekhai, *Kefar Darom and *Niẓẓanim, was halted by Israeli forces north of the Arab village of Isdūd (Ashdod). The eastern arm split the Negev and cut off its 28 Jewish villages, but it was unable to subdue them.

The first Messerschmidts of the infant Israel air force were assembled only on May 29, with others arriving at the rate of one or two a day. A direct confrontation with the superior Arab forces was out of the question, but they carried out a variety of operations, cooperating with the ground forces, flying in supplies to isolated outposts, bombarding Amman and Damascus, and attacking Egyptian troop-carrying ships. Some of the refugee boats, which had brought "illegal" immigrants, were hurriedly repaired and fitted with antiquated cannon; one of them, the *Eilat*, took part in the battle against Egyptian troop carriers off the Gaza Strip.

On May 20 the UN General Assembly appointed Count Folke Bernadotte as mediator for Palestine to ensure the maintenance of essential services and the protection of the Holy Places and to promote a peaceful solution to the conflict. At the same time, the Security Council called on the parties to cease fire. Israel agreed, but the Arabs refused. On May 29, the day after the mediator's arrival in the Middle East, the council again called for a cease-fire – this time for a period of four weeks – and after bargaining over details and several postponements, the truce went into force on June 11. Israel was in control of eastern and western Galilee, the Jezreel Valley from Haifa to the Jordan River, the coastal strip to a point north of Isdod, a corridor from the coast to Jerusalem, and a large pocket in the heart of the Negev, not including Beersheba.

ORGANIZING THE STATE: MAY 1–JULY 7, 1948. In the midst of battle, the infant state had to improvise the machinery of government. Law and order in the Jewish areas, transport and communications, purchase and distribution of supplies, social services, and the like had been organized on a voluntary basis by the People's Administration during the chaotic last days of the Mandate, but there was only the nucleus of a civil service, consisting of the staffs of the Jewish Agency and the Va'ad Le'ummi and the Jewish officials in the British administration. At its first regular meeting the Provisional Council of State elected Chaim *Weizmann as its president. The administrative headquarters of the government were set up in the rural surroundings of Sarona, a suburb of Tel Aviv evacuated by the German *Templer settlers who had been deported during the war. On May 19 the council adopted the Law and Administration Ordinance, which laid down, in broad lines, its own powers as the legislature and those of the provisional government, thus establishing a rudimentary constitution.

Other laws were concerned with weekly and annual days of rest for Jews and non-Jews, the tenure of civil servants and police officers, and the operation of the courts. There was now no bar to the arrival of immigrants. At the end of July the minister of immigration announced that over 25,000 had arrived, mainly from the camps in Cyprus and the Displaced Persons' camps in Europe, although the British and American authorities were making it difficult for young men of military age to leave in case they should strengthen Israel during the truce period.

The truce brought advantages to both sides. While the Arabs were able to rest and reorganize their troops, the Israelis also had a valuable breathing space for redeployment, training, and planning. At the beginning of June the newly formed government faced a critical internal challenge to its authority. Although IZL had undertaken to stop all independent arms purchases, it was learned that a ship called the *Altalena* (the literary pseudonym of Vladimir Jabotinsky) was on its way from France carrying not only 900 immigrants, but also 250 light machine guns, 5,000 rifles, and a large quantity of ammunition. The government demanded that the ship, with its cargo, be placed unconditionally at its disposal, but the IZL leaders refused. On June 20, when the ship approached the shore at Kefar Vitkin, soldiers were sent to prevent the arms and ammunition from being unloaded and a battle developed with IZL adherents, including two companies who had left their army posts. The IZL contingent surrendered, but the ship succeeded in escaping and reaching Tel Aviv, where another skirmish took place between IZL members and a Palmaḥ detachment. The army shelled the ship, and most of the immigrants barely succeeded in jumping into the shallow water before it blew up and sank. The incident left a deep deposit of bitterness but made it clear that no sectional armed force competing with the IDF would be tolerated (see *Irgun Ẓeva'i Le'ummi).

As the end of the truce approached, efforts were made to extend it: on July 1 Count Bernadotte invited Arabs and Jews to meet for negotiations at Rhodes, and on the 7th the Security Council called on the parties to renew the truce. The Arabs refused, though agreement was reached in Jerusalem on the demilitarization of the Mount Scopus area, including the Hebrew University, the Hadassah Hospital, the Augusta Victoria building, and the Arab village of ʿIsawiyya.

TEN DAYS' FIGHTING: JULY 8–18, 1948. On July 8 the Egyptians renewed their attacks in the south with a view to sealing off the Negev. Now, however, Israel's strong points were fortified and its forces much better trained and armed. Mobile commandos, "Samson's Foxes," inflicted heavy casualties and captured valuable supplies, including armored vehicles. In ten days the Egyptian attack was shattered, with the loss of 740 killed, 1,000 wounded, and 200 prisoners.

On July 9, with the official expiry of the truce, the IDF launched a strong offensive, led by tanks and armored cars, aimed at repelling the threat to Tel Aviv and driving at the La-

trun-Ramallah road. On July 11 Lydda was taken, and Ramleh surrendered next day. The Arab Legion counterattacked but was driven back, losing 600 killed and 250 wounded, and on the 16th the objective was achieved. At the same time, the Israelis attacked in Lower Galilee, taking Nazareth and driving most of Kaukji's forces back to Lebanon. In the Jerusalem sector, the Israelis, who could now bombard Legion posts all along the front, broke the Egyptian line in the south and took 'Ayn Karm (Ein Kerem) on the western outskirts of the city. An attempt to take the Old City, however, was unsuccessful. On the night of July 16/17 IDF forces broke in from Mount Zion, while IZL and Leḥi contingents breached the New Gate, but they were forced to withdraw a few hours before the second truce went into effect in the city. During the "Ten Days" the Egyptians bombarded Tel Aviv and the Negev villages, but the Israelis had acquired a number of "flying fortresses," which attacked Cairo on their way to Israel, carried out many operations in support of the ground forces, and bombed Damascus twice. Twelve enemy planes were shot down, bringing Arab losses from the beginning of the invasion to 34.

On July 15 the Security Council adopted a strongly worded resolution noting the Arabs' rejection of appeals for the extension of the truce, determining that the situation constituted a threat to peace, ordering a cease-fire "until a peaceful adjustment of the future situation of Palestine is reached," and declaring that failure to comply would be a breach of the peace and might involve sanctions under Chapter VII of the UN Charter. The cease-fire was to take effect in Jerusalem on July 17 and in the rest of the country on the next day. This time it was the Arabs who willingly accepted the cease-fire, since the Israel forces were on the offensive. Israel agreed with some reluctance, for, although it had achieved considerable gains, the Syrians still held Mishmar ha-Yarden in the north; Jerusalem was still split, with Mount Scopus an enclave in Arab-held territory; the main road to Jerusalem was blocked at Latrun; and the Egyptians held strategically important positions in the Negev.

POLITICAL AND INTERNAL PROBLEMS: JUNE–NOVEMBER, 1948. Since the beginning of the first truce, the mediator had been trying to work out a solution to the dispute. He did not consider himself bound by the partition plan, which he thought was favorable to the Jews, and tried to find ways of satisfying the demands of the Arabs. On June 27, after consulting separately with representatives of the two sides, he proposed a union of two states (neither completely independent) – one Jewish and one Arab – the latter to comprise Transjordan and part of Western Palestine. After two years Jewish immigration was to be subject to the approval of the UN Economic and Social Council, while the Arab refugees were to be repatriated and their property restored. In an appendix he suggested territorial changes in the partition plan: Transjordan to get Jerusalem (with autonomy for the Jewish population) and most or all of the Negev; Israel to get western Galilee; Haifa port and Lydda airport to become free zones.

Almost all of Bernadotte's proposals were completely unacceptable to Israel, and the Arab League refused to consider anything less than an Arab state in the whole of Western Palestine, with protection for the Jewish minority. After the second truce came into operation, the Arabs still refused to start negotiations and there was a halt in efforts to find a solution. With Arab troops still occupying key positions, the Israel government regarded the indefinite continuance of the truce as highly dangerous. The Arabs committed repeated breaches of the ceasefire, such as the blowing up by the Arab Legion of the pumping station at Latrun, which was to supply water to Jerusalem. Internally, there was uncertainty about the status of Jerusalem, where IZL and Leḥi units were still in existence.

The economic situation was critical. The burden of the war effort was heavy, and costs were high because of restricted imports, world price increases, and labor shortages due to general mobilization. The cost-of-living index stood at 344 points at the end of July 1949, compared with 280 in November 1947. Although the Haifa refineries had been reopened on July 22, there was a shortage of fuel and the licenses of nonessential civilian vehicles were revoked. Immigrants were still pouring in, however, and as young men were called up the new-comers took their places in office, shop, field, and factory. Thousands of families were accommodated in houses abandoned by Arab refugees, and dozens of new villages were founded, many of them kibbutzim settled by groups for whom no land had been available under the Mandate. On August 17 the minister of finance, Eliezer *Kaplan, announced that the Palestine pound would be replaced by the Israel pound, a new currency with the same exchange value, issued by the Anglo-Palestine Bank.

At the end of August the Zionist General Council met in Tel Aviv to discuss the changes in the structure and functions of the Jewish Agency necessitated by the establishment of the Jewish state. Obviously, the Agency could no longer deal with such matters as defense and relations with foreign governments. Some of its leading members were now ministers responsible to the Israel legislature, and the American Zionists demanded complete separation between the Agency Executive and Israel government. Ultimately, compromises were reached: the Agency would concentrate on immigration, absorption, settlement, youth work, and information; as land purchase was no longer a problem, the Jewish National Fund would devote itself to afforestation and land amelioration. The Agency Executive was enlarged by the co-option of Mapam and Revisionist representatives: 11 were to sit in Jerusalem, seven in New York, and one in London. Kaplan retained his place on the executive as a link with the government.

To regularize the position in Jerusalem, the government placed the Israel-held area under Israel law and appointed Dov *Joseph as military governor. The city's economy had been badly injured by the siege, supply difficulties, and the transfer of government departments to Tel Aviv. On September 17 Count Bernadotte and his assistant, Col. Sarraut, were assassinated in Jerusalem. An unknown organization called

the Fatherland Front, generally considered to consist of ex-members of Leḥi, claimed the credit. The government arrested some 200 men and decided to impose strict discipline over all sectional forces. An ultimatum was issued to IZL to disband immediately and hand in all its arms.

A few days after the murder, Bernadotte's last report to the United Nations was published. It called for the replacement of the truce by a permanent peace, or at least an armistice, and made new territorial proposals: to give the Negev to the Arabs and Galilee to the Jews; to place Jerusalem under international supervision; to join the Arab area with Transjordan; and to permit the refugees to return to their homes. The report was well received in Washington and London, but Israel rejected most of its proposals.

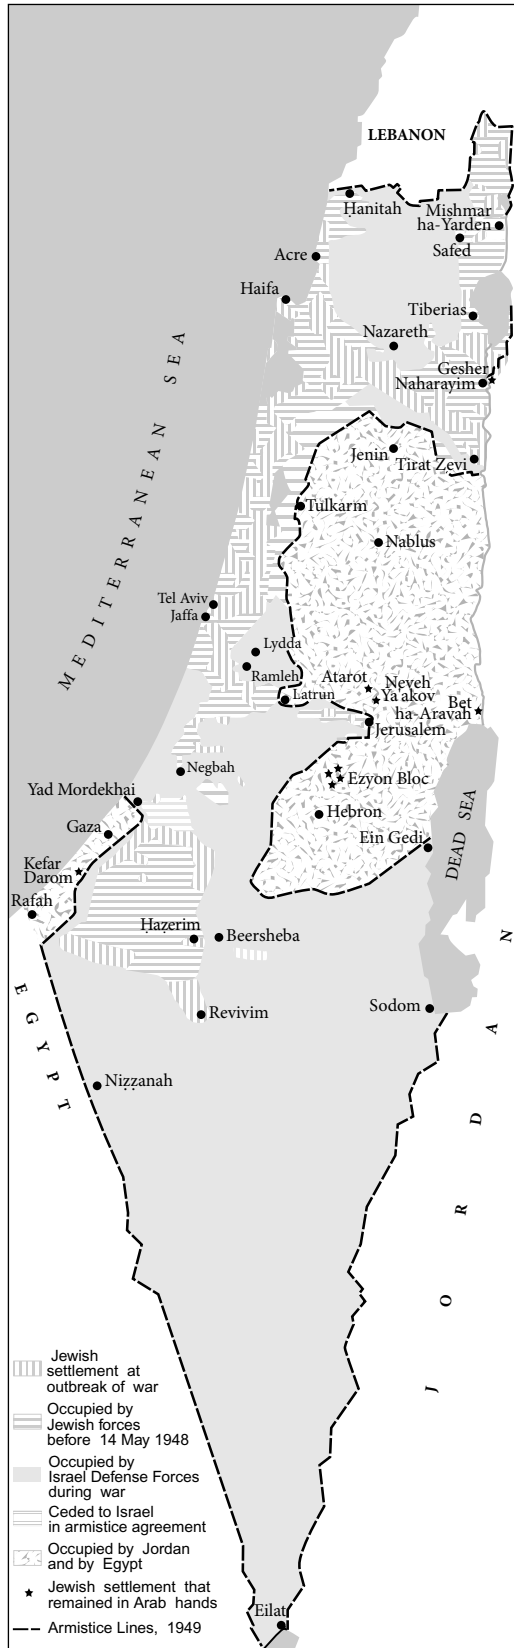
Ben-Gurion had already raised the problem of the separate command of the Palmaḥ, which dealt with recruitment, training, supplies, and even operational matters. The Palmaḥ enjoyed the political support of Mapam, the United Workers' Party: of its 64 senior officers, 60 were associated with that party. Ben-Gurion, while deeply appreciating its spirit and achievements, insisted that the general staff must have complete and unified control of all units. The Palmaḥ and its supporters argued that it fulfilled a vital function and that unified control was assured, through the subordination of its command to the IDF general staff. After prolonged and at times heated debates over the question, which was even discussed by the Histadrut, the government decided on November 7 to dissolve the separate Palmaḥ command and transfer its functions to the appropriate departments of the general staff. Its three brigades continued to exist and played an outstanding part in the IDF's operations until the end of the fighting.

LAST BATTLES: OCTOBER 1948–JANUARY 1949. In the middle of October, fighting broke out again in the Negev. Despite the rulings of Ralph Bunche, who had succeeded Bernadotte as mediator, the Egyptians refused to allow the Israelis to send supplies to their villages and outposts. On October 15, after notifying the UN observers, a convoy was sent down to the Negev; when it was attacked by the Egyptians, the Israel forces opened a general offensive in the area, known as Operation Ten Plagues. In five days the road was cleared, Beersheba taken, and the Egyptians hemmed in around Faluja. The air force played an important part in the campaign by bombarding the Egyptians in the Faluja pocket, while the small boats of the navy harassed them, prevented supplies and reinforcements from arriving by sea, and sank the Egyptian flagship, the *Faruk*. At the same time, a number of posts commanding the railroad to Jerusalem were taken and an attack was launched at the remnants of Kaukji's forces in Galilee, which did not recognize the cease-fire. Operations in the north were completed at the end of the month with the capture of several Lebanese border villages.

The fighting was not yet over, however. The Egyptians held out in the Faluja pocket and threatened Israel villages and communications in the Negev. On November 9 the formidable

fortress at Iraq-Suweidan, which had withstood seven attacks, was taken. On November 23 Israel forces advanced from Beersheba to take the desert crossroads at Kurnub and Ein Ḥuṣb, which controlled the road to the Dead Sea Works at Sodom. At the beginning of December the Egyptians took a number of strong points as preparation for a renewed advance on Beersheba, but on the 22nd the Israel forces started a large-scale offensive that turned the Egyptian flank by advancing with an armored column into Egyptian territory from Niẓẓanah ('Auja al-Ḥafir) and taking the northern Sinai crossroads at Abu-Aweigila and the airfield at the coastal town of El-Arish. The Israelis withdrew from Sinai under pressure from the powers and the United Nations, but started to advance toward Rafa, the border town on the coast. On Jan. 7, 1949, after the Egyptians agreed to open negotiations for an armistice, the final cease-fire was called.

The War of Independence was, in effect, over, although it was not formally ended until the signature of the Armistice Agreement with Syria in July 1949. The fighting had been spread over a period of more than 13 months, including 61 days of continuous combat. Israel had paid a heavy price: 4,000 soldiers and 2,000 civilians killed. The financial cost was also heavy: about 500 million dollars. The Jewish state, however, was now a definite fact, created by the effort and sacrifice of its people with no effective assistance from the United Nations, which had called for its establishment. On Ben-Gurion's insistence, it had been decided not to specify boundaries in the Declaration of Independence, and Israel did not feel bound by the partition map, which the UN mediator had ignored. It held an area of almost 8,000 sq. mi., compared with some 6,200 sq. mi. within the boundaries delineated in the partition plan, including the whole of Galilee; a coastal strip reaching down to some 27 miles north of the Sinai border, narrowing to six miles north of Tel Aviv and broadening into a corridor from the coast to Jerusalem; and the whole of the Negev. Western Jerusalem was firmly in Jewish hands. The establishment of an Arab state and the internationalization of Jerusalem had been frustrated by the Arab attacks and the occupation (later turned into annexation) by Transjordan of the Arab-inhabited eastern parts of Palestine, later called the West Bank (including East Jerusalem), and the Egyptian occupation of the Gaza Strip, which was also earmarked for the Arab state. This, however, did not prevent the Arabs, in later years, from repeatedly demanding a return to the boundaries laid down in the General Assembly resolution of Nov. 29, 1947.

THE FIRST ELECTIONS: NOVEMBER 1948–AUGUST 1949. While sporadic fighting was still going on, and before the de facto boundaries of the new state had been settled, steps were taken to put the regime on a firm footing of democratic consent. On Nov. 8, 1948, an all-day curfew was proclaimed and, while the entire population remained in their homes, a census was carried out. The population of the areas then under Israel control was found to be 782,000–713,000 Jews and 69,000 Arabs (after the conclusion of the Armistice Agree-


The Israel War of Independence, 1948–49. Based on Atlas of
Israel*, Survey of Israel, 1970.*

ments and the readmission of Arabs separated from their
families, the number of Arabs rose to about 120,000). Of this
number, 506,567 had the right to vote. There was no time to
divide the country into constituencies, and the elections were
held by the proportional representation system in force for the
Zionist Congresses and the Elected Assembly of Keneset Yis-
rael. The number of seats was fixed at 120, like the membership
of Keneset ha-Gedolah, the Great Assembly that functioned
after the ancient return from Babylon.

The elections were held on January 25; almost 87% of the
electors – 440,000 – went to the polls, including over 73,000
votes cast at special polling stations for soldiers. The results
showed a considerable degree of political continuity. The larg-
est party in the Assembly was Mapai with 46 seats, followed by
Mapam, the United Workers' Party, with 19 and the United Re-
ligious Front (Mizrachi, Ha-Po'el ha-Mizrachi, Agudat Israel,
and Po'alei Agudat Israel) with 16. The Revisionist Party was
replaced by the Ḥerut movement, founded by the IZL, which
obtained 14 seats. The various middle-class parties coalesced
into two groups: General Zionists with 7 and Progressives with
5. The Communists and the communal list of the Sephardim
had 4 seats each. There was also an Arab party, the Nazareth
Democratic List, with 2 seats; other Arab votes went to vari-
ous Jewish lists, especially Mapai and the Communists. The
Fighters' List (Leḥi), WIZO (Women Zionists), and the Ye-
menite Federation received one seat each.

The first meeting of the Assembly was held in Jerusalem
as a sign of Israel's determination that the Holy City should be
the capital of the Jewish state. It was opened at the headquar-
ters of the Jewish Agency, by Chaim Weizmann as president
of the Provisional Council of State.

The 114 members who were present made the declara-
tion of allegiance, and four committees were elected to make
arrangements for the continuation of the Assembly's work.
The first session also elected Yosef *Sprinzak as speaker, and
the second elected representatives of Mapam and the United
Religious Front as his deputies.

On February 16, the Assembly adopted the Transition
Law as a provisional constitution, outlining the functions
and procedures of the legislature, the election and powers of
the president, the formation of the government, and its rela-
tions with the Assembly, which was to be called the Knesset.
On the same day it elected Weizmann president, and he was
installed on the 17th. The provisional government thereupon
submitted its resignation to the president, as provided by the
Transition Law, and, after consultations with representatives
of all the parties, he called upon Ben-Gurion to form a new
cabinet. The first regular government, which obtained a vote
of confidence on March 10, was based on a coalition between
Mapai, the United Religious Front, the Progressives, and the
Sephardim. With the exception of the last, who split up subse-
quently between Mapai and the General Zionists, these parties
constituted the nucleus of almost all subsequent Israel cabinets
up to 1977. Contrary to expectations, the Knesset did not pro-
ceed immediately to draft a formal constitution. After lengthy

discussions and debates, it was decided in June 1950 to enact a number of separate "Basic Laws," which would ultimately be combined to form the constitution. (See also Israel, State of: *Political Life and Parties) Israel's debt to the man who proclaimed the vision of the Jewish state was recognized when, on Aug. 17, 1949, the remains of Theodor Herzl were brought by air from Vienna and reinterred in Jerusalem on a hill renamed Mount Herzl.

ISRAEL JOINS THE FAMILY OF NATIONS: JANUARY–JULY 1949. Negotiations for an armistice between Israel and Egypt started on the island of Rhodes on Jan. 13, 1949, under the auspices of Ralph Bunche. At first the mediator met the representatives of each side separately; when there were signs of progress, the parties held informal meetings; and when agreement was reached, the representatives met under his chairmanship to affix their signatures.

The *Armistice Agreement with Egypt, signed on February 24, gave the entire Negev, down to the border with Sinai, to Israel but left the *Gaza Strip under Egyptian occupation. A demilitarized zone was established around ʿAuja al-Ḥafīr (Niẓẓanah) and also on the Egyptian side of the line, in the same area. To ensure de facto control over the Negev, two infantry columns were sent out at the beginning of March 1949 in Operation Uvdah ("Fact"). On March 10 the advance party reached the abandoned police post at Umm Rash Rash on the Gulf of Akaba, ensuring Israel's outlet to the Red Sea and restoring the biblical name, Eilat.

Under the agreement with Lebanon, signed on March 23 at Ras al-Naqura (Rosh ha-Nikrah), the former international frontier was specified as the armistice line, Israel forces withdrawing from the Lebanese villages they had occupied.

The agreement with Jordan, signed on March 4 after a month's negotiations, established a winding border 530 km. (330 miles) long. It left under Jordanian occupation the thickly populated hill country of Judea and Samaria (called the "West Bank" after its annexation by Transjordan), including East Jerusalem, and ran through the Dead Sea down the Mandatory eastern border of Palestine to the tip of the Red Sea (the Gulf of Akaba), about three miles west of Akaba Port. It was agreed that the Arab Legion should replace the Iraqis in the "Triangle" area.

Under the agreement with Syria, which was not signed until July 20, the Syrians withdrew from the areas they had occupied west of the international frontier and Israel agreed, in return, that the areas should be demilitarized and the Arabs who had abandoned them during the fighting be permitted to return. Thus Israeli control over Lake Kinneret and Lake Ḥuleh was assured, but the demilitarized zones were a frequent focus of friction during the following years. Iraq did not conclude an armistice agreement with Israel. See also Israel, State of: *Historical Survey, section on Frontiers.

Although the agreements specifically reserved to the parties the right to make territorial claims in the future, it was stated in each case that the agreement was concluded "in order to facilitate the transition from the present truce to permanent peace in Palestine" (preamble), that "No aggressive actions by the armed forces – land, sea, or air – of either Party shall be undertaken, planned or threatened against the people or the armed forces of the other" (Article 1), and that "No warlike act or act of hostility shall be conducted from territory controlled by one of the Parties… against the other Party" (Article 2). The armistice lines thus constituted de facto boundaries as long as they were respected by both sides, and, despite repeated violations, they served as such until the Six-Day War of 1967. A United Nations Truce Supervision Organization (UNTSO), composed of soldiers from various countries under the command of a chief of staff, and four Mixed Armistice Commissions (MACs), each with Israel and Arab representatives under an UNTSO officer as chairman, were set up to supervise the execution of the agreements and consider complaints. In default of unanimity, the UN chairman acted as an arbiter.

On Dec. 11, 1948, the UN General Assembly recommended (Resolution 194 [III]) that "the Governments and authorities concerned" should "seek agreement by negotiations conducted with a view to a final settlement of all questions outstanding between them," that "the refugees wishing to return to their homes and live in peace with their neighbors should be permitted to do so at the earliest practical date," and that a Palestine Conciliation Commission, consisting of U.S., French, and Turkish representatives, be set up to bring the parties together. When the commission met at Lausanne on April 26, 1949, the Arab delegations insisted on the return of all Arab refugees as a precondition to negotiations, while Israel was prepared to discuss the problem only in the context of comprehensive peace negotiations. Israel later offered to admit 100,000 refugees as part of a comprehensive peace settlement, but the Lausanne talks made no progress and were broken off in September. An Economic Survey Mission headed by Gordon R. Clapp, appointed by the PCC, suggested constructive schemes to employ the refugees in their new locations, but the proposal was rejected by the Arabs, and the United Nations confined itself to relief work through the Relief and Works Agency (UNWRA), appointed in 1949. Meanwhile, Israel had been steadily winning its place in the family of nations. Within a year of its establishment it was recognized by over 50 states, and on May 11, 1949, it was admitted as a member of the United Nations.

The question of Jerusalem, which was to have been internationalized under the partition plan, was still on the agenda of the United Nations and was debated by the General Assembly toward the end of the year. A surprise coalition of Muslim, Catholic, and Communist states voted on Dec. 9, 1949, in favor of internationalization. Israel categorically rejected the proposal and on December 13 the Knesset decided to hold its sittings in Jerusalem as the capital of Israel (it had been meeting in Tel Aviv) and speed up the transfer of government offices from Tel Aviv. The UN Trusteeship Council, which was entrusted with the preparation of a constitution for the international regime on the city, found that the scheme

was impracticable, and after the 1950 Assembly had failed to pass any resolution on the subject by the required two-thirds majority, the proposal was, in effect, dropped (see section on Jerusalem in Israel, State of: Historical Survey, Foreign Policy and International Relations).

THE INGATHERING OF THE EXILES BEGINS: 1948–1951. The early years of statehood witnessed the beginnings of the realization of an ancient dream: the *ingathering of the exiles. By the end of 1948, with the state barely six months old, over 100,000 Jews had arrived – the number the Jewish leaders had pleaded with the Mandatory government to admit into undivided Palestine. The right to *aliyah*, implicitly recognized by the annulment of all Mandatory restrictions on immigration, was explicitly proclaimed by the *Law of Return (July 5, 1950), the first clause of which read: "Every Jew has the right to come to this country as an *oleh*" (defined in a footnote as: "a Jew immigrating to Israel for settlement").

Most of the survivors of the Nazi Holocaust were eager to leave Europe. The Displaced Persons' camps were emptied. At first only Czechoslovakia, Bulgaria, and Yugoslavia let their Jews go, but Poland, Romania, and Hungary followed suit later. In addition, there was a great mass migration from North Africa and the Middle East, where the Zionist movement had hardly existed. Thousands came from Turkey and Iran, Morocco and Tunis, Algeria and Libya. By the end of 1951, almost all the Jews of Yemen and Iraq had been brought over in dramatic airlifts. The arrival of these Oriental Jews, most of them deeply pious and with distinctive, centuries-old traditions and customs, brought back into the mainstream of Jewish life communities that had lived on the margin of the great 19th-century Jewish political, cultural, and religious movements. The confrontation between the Ashkenazim from Eastern and Central Europe, who had played the main role in building the National Home, and the Oriental communities, which differed widely in language, outlook, and manners, had profound implications. The flood gathered strength in 1949, when almost 240,000 *olim* arrived, and slackened only slightly in the two following years, when the influx totaled 170,000 and 175,000, respectively. In three and a half years, by the end of 1951, the Jewish population had been doubled by the arrival of over 684,000 immigrants – one-third more than came in the 70 years of pre-State Zionist *aliyah*. The newcomers were divided almost equally between Ashkenazim and Orientals, whereas before 1948 almost 90% had come from Europe.

The handling of this tempestuous flood was a task of staggering dimensions for a small nation still at war, with an untried administrative machine. Efforts were made to get the construction of housing started, using various methods of prefabricated and accelerated building. But the pace inevitably fell short of the needs: in the years 1948–51, 78,000 dwellings, comprising 165,000 rooms, were completed – a remarkable achievement for a country with a population of 1,500,000 at the end of the period, but still only one room for every four newcomers.

A considerable proportion of the new arrivals had, therefore, to be content with temporary accommodation. By the summer of 1949, almost 100,000 persons were living in camps, receiving their meals from central kitchens and supported almost entirely by public funds. Life under such conditions was demoralizing, and it was not always easy to induce the camp residents to move out and become self-supporting. Few of the immigrants knew enough Hebrew to communicate with the authorities and understand what was going on. Most were penniless and unfit – sometimes unwilling – to work with their hands in field or factory. There was a danger that the result would be the creation of not a homogenous nation, but two Israels: one consisting of mainly Ashkenazi veterans, who held positions of power and influence and understood the new society because they had built it, the other mostly underemployed, undereducated, and underprivileged Orientals. It was therefore decided to transfer the immigrants to transitional camps or quarters (*ma'barot) where, though the accommodation was still primitive, each family could look after itself and find work in the neighborhood. By the end of 1951, about 400,000 of the new immigrants had found permanent housing, though 250,000 were still living in 123 *ma'barot* and ten immigrants' camps.

Settlement on the land, one of the great ideals of Zionism, was now an urgent necessity to solve a triple problem: the overcrowding in the camps and *ma'barot*, the need to till large areas of cultivable land abandoned by Arab refugees, and the shortage of food for the growing population. Although there were some experiments in the cultivation of large stretches by public or private management, which gave the newcomers their first taste of manual labor, the Jewish Agency, which was responsible for new settlements, adhered to the principle of enabling small groups to form autonomous, self-supporting farm villages. While 79 kibbutzim were founded during the first year and a half – more than half as many as during the previous 40 years – the great majority of the newcomers were sent off to establish moshavim, in which each family was responsible for its own holding in a cooperative framework, with guidance and help from the Agency. Thus, in 1949 and 1950, 126 moshavim were established – many on the sites of *ma'barot* or abandoned Arab villages – almost trebling the number of moshavim. An intermediate type was the work village (*kefar avodah*), where the newcomers were employed, generally by the Jewish National Fund, on afforestation or land amelioration. Altogether 345 new villages of all types were established during 1948–51, compared with 293 during the previous seven decades. They filled up gaps in all parts of the country, not only in the Coastal Plain but also in areas where only isolated groups had lived before: Upper Galilee, the Judean Hills, and the arid Negev.

A feature that assumed greater psychological significance in later years was the small proportion of immigrants from Western Europe and the Americas, the main centers of the Zionist movement. Ben-Gurion, in particular, challenged the right of the Zionist to claim a privileged status when so few of

them were prepared to carry out their ideals in practice (see also Israel, State of: *Aliyah and Absorption).

ECONOMIC AND SOCIAL PROBLEMS: 1949–1953. Mass immigration, though welcomed as the fulfillment of one of Israel's basic aspirations, aggravated the economic difficulties. The defense burden and the cost of feeding and housing large numbers of unproductive immigrants intensified inflationary tendencies inherited from the Mandatory period. Taxation was high and productivity low; the rate of exchange, which kept the Israel pound on a par with the pound sterling, discouraged foreign investors, and there was a shortage of imported raw materials. Dov Joseph, the minister of supply and rationing, introduced a strict austerity regime: basic foodstuffs were doled out in small quantities month by month and, later, clothing and footwear were rationed too; the economy of the household was dominated by the ration book. Those with relatives or friends abroad could receive food parcels or foreign-currency "scrip," which was exchanged for food; others resorted to a flourishing black market. There was serious unemployment, which had to be mitigated by expensive and unproductive public works, since there was no unemployment insurance. The austerity policy, however, succeeded in conserving resources and lowering prices: the cost-of-living index fell from 493 points at the beginning of 1949 to 378 a year later.

Israel could not bear these burdens unaided. Funds from the *United Jewish Appeal in the United States and similar efforts by Jews abroad helped to support the newcomers, but much capital was needed for housing and development. A $100,000,000 loan from the American Export-Import Bank in January 1949 was followed by a series of grants-in-aid from the U.S. government and technical assistance under "Point 4" administered by a U.S. Operations Mission in Israel. In 1950 the Law for the Encouragement of Foreign Investment was passed. In the same year a conference of Jewish communal leaders and businessmen from the United States, Britain, and South Africa launched a drive for the sale of State of Israel *Bonds, the proceeds to be used for development and immigrant housing.

In 1951 the World Zionist Congress met in Jerusalem for the first time and pledged continued assistance to Israel in the common task of settling and integrating the immigrants. Uneasiness was expressed, particularly by the General Zionists and the Ḥerut-Revisionist Union, at the decline in the status of the Zionist Organization, which Ben-Gurion and the Israel government were accused of belittling and neglecting. In November 1952, after discussions between the Jewish Agency Executive and the government, the Knesset passed the World Zionist Organization Status Law, which recognized the organization as "the authorized agency which will continue to operate in the State of Israel for the development and settlement of the country, the absorption of immigrants from the Diaspora, and the coordination of the activities in Israel of Jewish institutions and organizations active in those fields." A "Covenant," regulating the cooperation between the two

bodies, was concluded by the government and the Executive of the Zionist Organization and the Jewish Agency.

In September 1952, after a virulent controversy (see Israel, State of: *Political Life and Parties), an agreement was signed with the German Federal Republic for payment to the State of Israel, which had taken in hundreds of thousands of homeless refugees, as the representative of the Jewish people, of DM3,000,000,000 ($715,000,000) as partial reparations for material losses suffered by the Jews under the Nazi regime. In addition, DM450,000,000 was to be paid to the Conference on Jewish Material Claims, representing Diaspora Jewry, and individuals who had suffered under the Nazis were to receive personal restitution.

Despite difficulties and periodical crises, there was considerable progress. One of the first legislative acts of the Knesset (Aug. 1, 1949) was to pass the Compulsory Education Law, which, though not abolishing the party "trends," brought them under state control. Economic policy was adapted to the changing circumstances: strict controls on imports were eased and premiums were introduced to encourage exports. Funds from abroad were invested in irrigation, and settlement and the building of new villages, loans to industry, road building, and large-scale development schemes like the drainage of the Ḥuleh. *El Al, the Israel National Airline, was established, and a beginning was made with the expansion of the four small ships owned by *Zim, Israel Navigation Co., into a national merchant marine. Government geologists went out to map the mineral deposits of the Negev, and government companies were set up to exploit phosphates, copper, and other resources. A beginning was made with labor legislation, providing for a 47-hour work week, a weekly rest day, and an annual 14-day paid vacation. In 1951 the Equal Rights for Women Law was passed. In November 1952 President Chaim Weizmann died and in the following month Izhak Ben-Zvi was elected as his successor.

Nevertheless, the population felt the strains of shortages, high prices, and government restrictions. The General Zionists, as the mouthpiece of middle-class discontent, registered significant gains in the municipal elections in November 1950. There were disagreements between Mapai and the religious parties over religious education and the recruitment of girls for army or civilian national service. A controversy over an attempt to introduce non-party religious education in the ma'barot led to the resignation of the cabinet in February 1951 and premature elections in July of the same year. While Mapai and the religious parties retained their strength, the General Zionists trebled theirs (largely at the expense of Ḥerut), and after an unsuccessful attempt by Mapai to govern with the support of Mizrachi and Ha-Po'el ha-Mizrachi alone, the cabinet was reconstituted, the General Zionists receiving four ministries (including the important ones of Commerce and Industry and the Interior). Economic difficulties, reported by newcomers to their friends and relations abroad, were largely responsible for a sudden and drastic drop in aliyah: only 24,000 arrived in 1952 and 11,000 in the following year.

The conclusion of the reparations agreement with West Germany, the success of the UJA and similar appeals and the Bond Drive, the U.S. government grants-in-aid, and the long-term loans obtained from U.S. and international sources allowed Israel to look forward with some confidence to a decade of relative financial security. In 1952 a "New Economic Policy" was instituted to reduce inflationary pressures and cover the gap in the foreign-trade balance. Many controls were removed and prices were allowed to rise to an economic level; the consumers' price index rose by 50% during the year. The government undertook to cut its expenditures, balance the ordinary budget, and stop inflationary expansion of the currency. A beginning was made with the devaluation of the Israel pound to a more realistic level by the institution of three exchange rates, ranging from $2.80 to $1 per Israel pound for different kinds of imports and foreign-currency transactions. Advantage was taken of the introduction of new currency notes to impose a 10% compulsory loan on cash and bank balances. The new policy slowed down consumer spending, construction, and public works, and, consequently, led to a drop in production and a rise in unemployment during 1953. However, these effects were regarded as temporary difficulties involved in the transition to a healthier basis for the economy.

In July 1953 the "trend" school system was abolished by the passage of the State Education Law, under which the general and labor trends were amalgamated as the state education system and the Mizrachi trend became the state religious system, both under the control of the Ministry of Education and Culture. The Orthodox Agudah trend remained independent, but was subsidized from state funds. The fourth trend was the Arab trend, also under the Ministry of Education.

The close of a period of struggle and stress was marked by the temporary resignation of Ben-Gurion from the premiership in December 1953 and his replacement in the following month by Moshe Sharett as prime minister and Pinḥas *Lavon as minister of defense. The reason Ben-Gurion gave for this step was the strain of the accumulated tension of the past two decades, but it was generally believed that he felt a need for a fundamental reappraisal of the nation's problems. In a lengthy essay on "Jewish Survival," published in the *Government Year Book* for 1953/54, he discussed the clashes between religious and non-religious elements, the fragmentation of political life, the confrontation between Ashkenazim and Orientals, the need for a revival of the pioneering spirit, and the problematic relationship between Israel and Diaspora Jewry, especially in Western Europe and America, where the Zionist Organization was relatively strong but the will to *aliyah* was weak. In his retirement, at the new kibbutz of Sedeh Boker in the Negev, he tried, by precept and example, to stimulate the will to voluntary pioneering effort, particularly among the youth as well as settling the Negev

THE WAR ON THE BORDERS: 1950–1955. On May 25, 1950, the United States, Britain, and France, in a tripartite declaration on the Middle East, stated that they would take action if necessary to prevent any violation of frontiers or armistice lines by any state in the area. Arms supplies to Middle East countries, the declaration said, would be governed by their needs for internal security, legitimate self-defense, and their role in the defense of the area. For several years, however, it was chiefly the Arabs who received Western arms, while Israel had to rely mainly on semi-obsolete equipment from various sources.

There was no progress toward the "permanent peace" envisaged by the armistice agreements. In June 1950 the members of the Arab League concluded a collective security agreement against "the Zionist danger" and "Jewish expansionist aspirations." The Arab states continued to regard themselves as at war with Israel, refusing to recognize it or to negotiate a peaceful settlement of outstanding problems. They replied to Israel's calls for direct negotiations with, on the one hand, a refusal to recognize its right to exist, and, on the other, demands for "the implementation of UN resolutions," which they interpreted as meaning the unconditional repatriation of all Arab refugees and the restriction of Israel to the boundaries drawn in the 1947 partition plan. The very existence of Israel was regarded as "aggression," and its destruction became a fundamental aim of Arab national policy. Sometimes indirect terms were used, such as "the restoration of the stolen rights of the Palestinian people," "the liberation of Palestine," the reconquest of the "stolen territory," or "the liquidation of Zionist aggression," but it was frequently stated in the plainest terms that the aim was a "second round" in which Israel would be destroyed and its people "pushed into the sea." The Arab League established a ramified boycott organization to dissuade businessmen in other countries, by economic pressure, from trading with Israel or investing in her economy. Egypt denied passage through the Suez Canal and the Straits of Tiran to shipping and cargoes belonging to, or bound for, Israel.

It was impossible to protect every kilometer of the long and winding borders by sentries or patrols. Border violations by Arab infiltrators bent on plunder, shooting by trigger-happy Arab soldiers, mine-laying on Israel roads and tracks, and, later, armed incursions by trained and organized bands, were almost daily occurrences. In the period 1951–56 over 400 Israelis were killed and 900 injured as a result; there were 3,000 armed clashes with Arab regular or irregular forces inside Israel territory, and some 6,000 acts of sabotage, theft, and attempted theft were committed by infiltrators. UNTSO was powerless; the Mixed Armistice Commissions could do no more than register complaints, appeal for restraint, or, at best, pass resolutions of censure. The Security Council took no action to rectify the situation, and Israel had to look to its own defenses. The Defense Service Law, passed in September 1949, provided for two years' compulsory service in the armed forces for men and women, with reserves training up to the age of 49. In an emergency the reserves could be summoned to their units in a matter of hours. Reprisals against Arab attacks were carried out from time to time, but, although they may have discouraged even graver violations of the Armistice

Agreements and at certain periods induced the governments concerned to restrain infiltration for a while, they did not put an end to the chain of violence. As each reprisal was a reaction to a series of attacks, it was generally on a larger scale, and since these operations were carried out by IDF units, they were immediately censured by the MACs and often by the Security Council.

The trouble with the Syrians was mainly over the demilitarized zones, for they objected to Israel's development work there, arguing that Israel was violating the armistice agreements and changing the geography of the area. At the beginning of 1951, when Israel started work on the *Ḥuleh drainage scheme near Mishmar ha-Yarden, there were several exchanges of fire. In March, seven Israelis were killed in the al-Ḥamma area and the Israel air force bombarded two Arab villages in reprisal. On May 19, after General Riley, chief of UNTSO, had failed to obtain agreement, the Security Council ordered Israel to stop the works on Arab-owned land in the zones. A new dispute broke out at the beginning of September 1953, when the Israelis started work in the demilitarized zone south of the Ḥuleh on the first stage of a major project to channel part of the Jordan waters to the Negev. The Syrians protested, and General Bennike, the new UNTSO chief, ordered Israel to suspend the work until agreement was reached with Syria. Under international pressure, Israel ultimately complied while the Security Council was considering the matter. In January 1954 a proposal calling for a compromise between Israel and Syrian interests was blocked by the Soviet veto in the Security Council, and Israel revised its plans in order to keep the works out of the demilitarized zone.

Meanwhile, in October 1953, U.S. President Eisenhower sent a special envoy, Eric Johnston, to the Middle East to present proposals for a constructive solution of the water problem to the governments of Israel, Syria, Lebanon, and Jordan. Johnston submitted a plan prepared by Gordon Clapp, chairman of the Tennessee Valley Authority, for the utilization of the Jordan and Yarmuk waters by the four countries for agricultural development and refugee resettlement on the basis of mutually agreed quotas. In 1955 a Unified Water Plan, which assured each country of the quantities of water claimed by its experts, was accepted by the parties on the technical level, but the Arab League, meeting in October, refused to give political approval. Israel stated, however, that it would not utilize more than the quantities of water allotted in the plan. Repeated Syrian attacks on Israeli fishing in Lake Kinneret led to further Israel reprisals in December 1955, in which the Syrians suffered about 100 casualties.

A serious dispute with Jordan over the blocking of the road to Eilat by Legion forces in November 1950, followed by three murders by infiltrators in and around Jerusalem and an Israeli reprisal, was settled in February 1951, the Jordanians agreeing to cooperate to stop infiltration. Secret peace negotiations took place with King *Abdullah, but hopes were shattered when a Palestinian assassinated him in Jerusalem on July 20. The position deteriorated. The Jordanians refused to carry

out their undertaking in Article 8 of the Armistice Agreement to negotiate arrangements for Israel's use of the Latrun road to the capital and access to Jewish holy places in Jerusalem and the Jewish institutions on Mount Scopus. In January 1953 the Jordanian prime minister announced the annulment of the agreement to prevent infiltration and there were numerous attacks by infiltrators and Jordanian troops on Israel civilians and soldiers. In June 1953 the Jordan government renewed the agreement for the prevention of infiltration, but the attacks continued.

At first ordinary Israeli army units carried out reprisals, but it soon became clear that these troops, consisting mainly of inexperienced draftees – many of whom were newcomers – were unsuitable for such commando-type raids. A special body of volunteers, called Unit 101 (later merged with the paratroops) was formed for the purpose. One of its raids, on the Arab village of Qibya, in which 45 houses were blown up and heavy casualties were caused to civilians hiding in them, was severely censured by the Security Council (Oct. 15, 1953).

Israel initiated an attempt to obtain agreement on a modus vivendi by invoking Article 12 of the Armistice Agreement, under which either party could summon a conference to consider the working of the agreement. At the end of the year, the UN secretary-general issued invitations for such a conference at Israel's request, but Jordan refused to attend. The vicious circle of repeated Arab attacks, reprisals by Israel, and international condemnations of Israel continued throughout 1954; outstanding examples were the killing of 11 passengers in an Israel bus at Ma'aleh Akrabim ("Scorpions' Ascent") on March 17, the killing of three Jews in the Jerusalem corridor on May 9 and of three more in the same area on June 19, and a three-day outbreak of shooting by Legionaries from the Old City wall later in the month. In the following year much of the infiltration was carried out by bands organized by the Egyptians in the Gaza Strip and sent into Jordan to operate from there.

Egypt took the lead in the Arab boycott by banning Israel shipping and the passage of "contraband goods" or "strategic goods" (later extended to include foodstuffs) through the Suez Canal. This practice was defined by General Riley, the chief of UNTSO, in a report to the Security Council as "an aggressive action," and the Council called on Egypt on Sept. 1, 1951, to terminate the restrictions. The resolution stated that "since the armistice regime… is of a permanent character, neither party can reasonably assert that it is a belligerent" (Paragraph 9). Egypt ignored the resolution, and cargoes destined for Israel were confiscated from Norwegian, Greek, and Italian ships trying to pass through the canal. In September 1954 an Israeli vessel, the *Bat Gallim*, and its cargo were confiscated at the entrance to the canal and the crew was imprisoned for three months. In 1949 Egypt occupied the uninhabited islands of Tiran and Sanafir in the Red Sea at the entrance to the Gulf of Akaba; later it established a garrison at Sharm el-Sheikh, interfered with Israeli and international shipping to and from Eilat, and banned Israeli planes from the airspace over the gulf.

On Aug. 18, 1952, Ben-Gurion welcomed the Egyptian officers' revolution led by General Nagib and declared that there was no reason for any antagonism between the two countries. But there was no improvement in relations under Nagib or his successor, Gamal Abdal *Nasser. Sporadic incidents on the Gaza Strip and Sinai borders, which claimed a score or more casualties – seven or eight fatal – in each of the years 1951–53, became more serious and frequent in the last quarter of 1954. Tension was increased by the trial in Cairo of 11 Jews charged with belonging to a "Zionist espionage and sabotage group." Two were executed on Jan. 31, 1955, and the rest were sentenced to long periods of imprisonment. On February 2, Pinḥas Lavon resigned due to disagreements with the prime minister arising out of a dispute over the responsibility for an ill-advised security operation. Ben-Gurion returned from Sedeh Boker to take up the post of defense minister under Sharett's premiership.

Toward the end of February, Egyptian saboteurs, known as *fedayeen* ("suicide fighters"), penetrated deep into Israel territory, and on the 28th a clash between Israeli and Egyptian forces on Israeli territory opposite Gaza developed into the fiercest battle since the War of Independence. The fight was carried over into the Strip; in an Israeli attack on an army camp near Gaza, 38 Egyptians were killed and 44 wounded. The Anglo-American-Iraqi Baghdad Pact had just aroused Nasser's anger against the West, and he turned to the Soviet Bloc for weapons to strengthen his forces. At the end of August came the first reports of an Egyptian deal with the Soviet Union for the supply, through Czechoslovakia, of large quantities of modern heavy arms. Meanwhile the Arab attacks were stepped up; many of them were carried out by *fedayeen* recruited and trained by the Egyptians but operating mainly from the Gaza Strip and Jordan, as well as from Syria and Lebanon. Israel's proposals for a high-level meeting with Egyptian representatives, as well as for the erection of a security fence along the border and other methods of reducing tension, were rejected.

Although Israel had, in principle, followed a policy of non-identification with either of the two world blocs, the sympathies of its leaders and most of its people were undisguisedly on the side of the West, where Jews could organize political and financial support for Israel and *aliyah* was unfettered. In 1952, after the *Slansky trial in Prague, the Israeli minister to Czechoslovakia had been declared *persona non grata*, and in February 1953, after a bomb placed by a fanatic exploded in the courtyard of the Soviet Embassy in Tel Aviv, the U.S.S.R. had broken off diplomatic relations. Although relations were restored a few months later, continued Soviet support for the Arabs at the United Nations indicated a distinct change in the atmosphere, and the Soviet arms deal though a shock, was not altogether a surprise. On Sept. 27, 1955, Nasser broadcast an announcement of the deal; two days later it was reported that large quantities of tanks, artillery, jet planes, and submarines were already on their way to Egypt and that Syria was also getting generous supplies of weapons from the East. Although the

Western powers expressed grave concern at this development, they gave no clear reply to Israel's appeals for arms to redress the balance, and the United States warned against any "hasty action." A wave of anxiety swept the country; Israelis from all walks of life came forward spontaneously with donations of cash and jewelry for the purchase of arms.

On October 17 Egypt and Syria signed a military pact. The Syrians renewed their attacks on Israel fishing boats on Lake Kinneret (Sea of Galilee), and an Israeli reprisal was followed by Egyptian attacks in the south. Foreign Minister Sharett went to Paris and Geneva, where the Big Four foreign ministers were meeting, but his talk with Molotov of the U.S.S.R. was fruitless, and only France responded sympathetically to Israel's request for arms. The Egyptians had encroached on the demilitarized zone at Niẓẓanah and attacked an Israel police post, and their planes repeatedly violated Israel airspace. In retaliation, the Israel army attacked an Egyptian military camp at Kuntilla in Sinai. Presenting his new cabinet to the Knesset on November 2, Ben-Gurion announced his readiness to meet Egyptian and other Arab leaders at any time to discuss a settlement, but warned that "if the armistice lines are opened for the passage of saboteurs and murderers – they shall not be closed again to the defenders." The same night Israel forces ejected the Egyptians from Niẓẓanah, inflicting heavy casualties. Egyptian attacks multiplied all along the front: there were four or five incidents a day, and the activities of the *fedayeen* from the Gaza Strip and Jordan were stepped up. Typical *fedayeen* tactics were also used in attacks from Lebanese territory.

On August 26 U.S. Secretary of State John Foster Dulles had suggested territorial changes as part of a possible Arab-Israel settlement. The idea was echoed in a speech at the Guildhall, London, on November 9 by the British foreign minister, Sir Anthony Eden, who suggested a compromise between the Arab demand for a return to the partition plan boundaries and Israel's insistence on the borders demarcated by the Armistice Agreements. On Nov. 15 Ben-Gurion categorically rejected any idea of truncating Israel's territory; Eden's approach was also rejected by Egypt. France agreed to supply Israel with a number of military jet planes, but continued to sell arms to Egypt, while the U.S. and Britain went on sending armaments to Lebanon, Iraq, and Jordan.

THE SINAI CAMPAIGN AND AFTER: 1956–1959. As 1956 opened, the war clouds were visibly gathering. On January 2, Ben-Gurion warned the Knesset of "the danger of the approaching attack from Egypt, and perhaps not only by it." While the U.S.S.R. virulently denounced Israel, the Western powers sponsored a Security Council resolution censuring her for a reprisal operation against Syrian posts that had fired on fishermen in Lake Kinneret. The U.S. still refused to sell arms to Israel, but consented to France supplying her with advanced Mystère aircraft. On February 13 the Soviet Foreign Ministry declared that the U.S.S.R. could not remain indifferent to developments in the Middle East and warned

the Western powers against unilateral action in the area. UN Secretary-General Dag Hammarskjöld paid several visits to the Middle East in unsuccessful attempts to achieve a settlement. The dismissal of General Glubb, the British commander of the Jordanian Arab Legion, was followed by an increase in Egyptian influence in Jordan. Israel speeded up the building of shelters, the training of civil defense personnel, and the fortification of border villages. At the end of April, after artillery duels on the Gaza Strip border and widespread *fedayeen* attacks, Hammarskjöld announced agreement on a general, unconditional cease-fire between Israel and its neighbors, but the arms race continued. Jordan agreed to facilitate the operation of *fedayeen* from its territory and the Arab countries competed in threats against Israel.

For some time there had been differences between Sharett, who favored greater trust in the UN and international opinion, and Ben-Gurion, who emphasized the need for Israel to rely first of all on its own strength. In June, feeling that complete harmony between prime minister and foreign minister was essential in view of the growing dangers, Ben-Gurion replaced Sharett with Golda *Meir. Attacks from Jordan continued throughout July; at the end of the month, after Egypt nationalized the Suez Canal, there were a number of incidents on the southern border as well. The clashes continued in the following months and rose to a peak in October, while international tension grew over the future of the canal. On October 13 the Security Council called for "free and open transit through the Canal without discrimination" and declared that its operation "should be insulated from the politics of any country," but Nasser announced that no Israeli ships would be allowed to pass. Two days later Ben-Gurion told the Knesset that Israel was being subjected to a guerilla war conducted by bands of *fedayeen* organized, equipped, and trained mainly in Egypt and recalled the right to self-defense guaranteed by Article 51 of the UN Charter. He also said that Israel reserved freedom of action if the status quo were violated by the entry of troops from Iraq (which had not signed an Armistice Agreement with Israel) into Jordan. On October 25, after an election victory for pro-Nasserist elements in Jordan, that country joined the Egyptian-Syrian military pact against Israel. Abu-Nawar, commander of the Arab Legion, declared, "We and not Israel will fix the time and place of the battle."

The growing attacks on Israel and the threat of a concerted offensive from the north, east, and southwest coincided with growing apprehension in Britain and France over the threat posed by unfettered Egyptian control of the Suez Canal to their communications and interests. Thus Israel's danger was matched by the opportunity. Ben-Gurion paid a secret visit to France in October to ask Prime Minister Guy Mollet for help. Large quantities of French heavy armaments were sent to Israel and unloaded in secret. On October 27 Ben-Gurion submitted to the cabinet a proposal for a large-scale operation to demolish the bases of the *fedayeen* and the Egyptian army in the Sinai Peninsula and the Gaza Strip and

to occupy the shore of the Gulf of Akaba in order to safeguard navigation (even if, as he expected, Israel was compelled by international pressure to evacuate the territory occupied).

Orders were given for the mobilization of the reserves, and on October 29 Israel troops moved into Sinai, taking a number of vital positions near the Negev-Sinai border. On the next day an airborne battalion was dropped near the Mitla Pass in west-central Sinai, and a mechanized column reached the same point on the night of October 30–31, capturing vital points in the heart of the peninsula, outflanking the Egyptian positions in its northeast, and threatening the Suez Canal. At the same time another column thrust toward the same point from the northeast. Israel fighter planes established air superiority over the combat areas.

On the afternoon of October 30, Britain and France had issued an ultimatum calling on both sides to stop fighting and withdraw to ten miles on either side of the Suez Canal. The same evening they vetoed a U.S.-sponsored resolution in the Security Council calling for immediate withdrawal of Israeli troops. Israel accepted the Anglo-French demand, but since Egypt rejected it, the advance continued. On the next morning British and French bombers began a systematic bombardment of military targets in Egypt. Israeli infantry and armor, supported by the air force, continued to move southward into the peninsula, westward toward the canal, and north toward the Egyptian lines of communication with the Gaza Strip.

On November 1, Israel forces took Rafa and El-Arish on the Mediterranean coast, and the Egyptian high command ordered a general retreat, which soon turned into a rout. During the next two days the armored spearheads of the IDF halted ten miles from the canal and the Gaza Strip was taken. Meanwhile a reserve infantry brigade had been moving down the western shore of the Gulf of Akaba, and a pincer movement, threatening the last remaining positions, was completed by a southward advance along the eastern shore of the Gulf of Suez. On November 2 the UN General Assembly, in an emergency session, called for an immediate cease-fire and prompt withdrawal of forces. Israel agreed to the cease-fire the next day, provided Egypt reciprocated. On November 5 Israel occupied Sharm el-Sheikh, and the campaign was over.

The Assembly resolved on the establishment of a UN Emergency Force "to secure and supervise the cessation of hostilities." Israel declared that Egypt's hostile acts had "undermined the peace" and "destroyed the armistice agreement" and called for direct peace negotiations. There was no response to this call. Instead, the United Nations, backed by strongly worded letters from U.S. President Eisenhower and Soviet Premier Bulganin, applied intense pressure on Israel for unconditional withdrawal. Ben-Gurion replied on November 7 that troops would be withdrawn on the conclusion of satisfactory arrangements for the deployment of the UN Emergency Force.

During the next three months Israel fought a stubborn political rearguard action to safeguard free navigation in the Gulf of Akaba and ensure that, in return for the withdrawal of

its forces, the Gaza Strip would not be used again as a spearhead for attack. Gradual evacuation started late in November and continued pari passu with efforts to obtain the safeguards required. The withdrawal was completed in March, despite considerable misgivings in Israel and vigorous denunciations of the government by Ḥerut, Aḥdut ha-Avodah, and other opposition parties, which charged it with "wasting the fruits of victory." The UN Emergency Force was stationed in the Gaza Strip and at Sharm el-Sheikh, and a number of the foremost maritime nations, headed by the United States, declared their support for freedom of navigation in the Straits of Tiran and the Gulf of Akaba. Israel, for its part, made it clear that any interference with free navigation in the straits or the gulf would constitute a casus belli. As a result of the Sinai Campaign, Israel secured a considerable degree of quiet on its southwestern borders and free access to Eilat, its outlet for trade with West Africa and Asia – gains that were preserved for ten years.

A tragic incident had occurred on the day the Sinai Campaign began. A strict curfew had been proclaimed on part of the eastern border and 43 Arab villagers, returning from the fields to the village of Kafr Qasim after the start of the curfew, were shot and killed by a Border Police patrol. Compensation was immediately paid to the families, and the men responsible were placed on trial. At a special Knesset session on December 12, Prime Minister Ben-Gurion expressed profound concern at this "flagrant violation" of the sacred principle of the sanctity of human life. Sentencing two officers, one corporal, and five privates to periods of imprisonment ranging from 7 to 17 years in October 1958, a military court emphasized that a soldier was not obliged to obey a manifestly unlawful order and would be held criminally responsible if he did. The principle having been established, it was widely felt that allowance should be made for the tension under which the men acted; the sentences were reduced on appeal and the one officer still in prison at the end of 1959 was granted presidential clemency.

While there was comparative quiet on the Gaza Strip and Sinai borders for several years after the Sinai Campaign, tension broke out from time to time with Jordan and, even more sharply, with Syria. Toward the end of 1957 Jordan tried to obstruct communications with the Israeli enclave on Mount Scopus, and in May 1958 a UNTSO officer and four Israel policemen were killed by Jordanian fire. UN Secretary-General Hammarskjöld discussed the problem with the Jordanian and Israel governments and three times sent special representatives to deal with it, as well as paying a personal visit to the area; but Jordan refused to fulfill its obligations under Article 8 of the Armistice Agreement. At the end of 1958 and the beginning of the following year there were a number of serious incidents in the north in which Israeli settlements were machine-gunned and shelled by the Syrians. Israel appealed to the Security Council but without result. In the spring of 1959 Egypt again interfered with ships carrying goods for Israel through the Suez Canal.

More important, however, were the long-term implications of the situation, particularly in view of Soviet arms supplies to Egypt and later, to Syria. With the failure of British and French intervention in Suez, the United States began to take a more active interest in the Middle East. The Eisenhower Doctrine, approved by the U.S. Congress in March 1957, authorized the President to extend "assistance against armed aggression from any country controlled by international Communism." Despite the opposition of two coalition parties, Mapam and Aḥdut ha-Avodah, the government, in effect, acceded to the doctrine on May 21, but the Israeli statement made no mention of Communism and expressed opposition to "aggression from any quarter against the territorial integrity and political independence of any country." On October 21 Ben-Gurion told the Knesset that "almost a fundamental transformation" was taking place in the Middle East: "The forces contending in our area are not so much the forces of the area itself, but the world blocs of the East and the West."

In February 1958 the United Arab Republic was established by the union of Egypt and Syria and a short-lived Iraqi-Jordanian union was concluded. Israel made considerable efforts to keep the local balance of power in its favor, which could only be done by obtaining more arms from the West. Relations with France in this sphere became even closer; the United Kingdom sold Israel submarines; and the United States also began to be cooperative. Despite the opposition of the left-wing members of the coalition, which led to two cabinet crises in 1958–59, military supplies were also bought from West Germany. In 1958 first approaches were made to the European Economic Community to obtain a trade agreement. Despite this leaning toward a Western orientation, relations with Poland steadily improved and those with other Communist countries remained, on the whole, correct.

At the same time efforts were made to foster technical and economic cooperation with the developing countries in Asia and Africa that were achieving independence from colonial rule. The first country to enter into joint projects of this kind with Israel was Burma, as early as 1954; the second was Ghana, in 1957. Although Israel was accused of collaborating with imperialism in the Suez crisis, the Sinai Campaign brought its problems and the importance of its role to the attention of many countries – particularly in Asia and Africa – that had known little or nothing of Jewish history and the achievements of the Jewish state. In 1958 the Foreign Ministry set up an International Cooperation Division. Leaders of the emergent nations visited Israel, many of them even before their countries achieved independence, to study her social structure and methods of building a new society and economy through vocational training, cooperative enterprise, agricultural settlement, education, and industrial development. It was largely through the international cooperation program that Israel began to extend relations with Asian and African countries, which, it was hoped, might ultimately help in Israel's efforts to achieve peace with its Arab neighbors (see also section on Foreign Policy and International Relations in this entry).

CONSOLIDATION AND DEVELOPMENT: 1954–1959. The second half of Israel's first decade was marked by social consolidation and rapid economic progress. The great majority of the new immigrants, who came mainly from Eastern Europe and North Africa, found homes and jobs, learned the elements of the Hebrew language and the ways of the country, enhanced their skills, and improved their standard of living, although there was still a disturbing gap between the newcomers from the Oriental countries and the mainly Ashkenazi veterans. The large-scale capital imports were used to mechanize agriculture and increase its efficiency; expand roads, telecommunications, and electricity supply; enlarge the merchant fleet and the national airline; modernize the Dead Sea potash works and exploit Negev copper, phosphates, and other minerals; and develop industries, many in partnership with foreign investors.

Despite occasional governmental crises, there was a high degree of political stability. In 1954 Aḥdut ha-Avodah seceded from Mapam and in the following year Mizrachi and Ha-Po'el ha-Mizrachi merged to form the *National Religious Party; otherwise the political structure remained unchanged. The Second and Third Knessets completed their statutory terms. Mapai lost five seats in the 1955 elections, largely due to the economic difficulties that still afflicted considerable sections, but remained the backbone of the cabinet and was able to form an administration with a sound parliamentary majority by replacing the General Zionists with Mapam and Aḥdut ha-Avodah. In 1959, after a period of relative border tranquility following the Sinai Campaign and a general improvement in living standards, it more than recouped its electoral losses. In 1958 the first basic (constitutional) law, dealing with the composition and powers of the Knesset, was passed.

The increased foreign-currency resources at the disposal of the economy helped to moderate inflationary pressures. The three exchange rates were reduced to two (IL 11.000 and IL 11.800 to the dollar) at the beginning of January 1954 and then to a single stable rate of IL 1.800 in July 1955. The curve of consumer prices, which rose by some 20% in each of the years 1953 and 1954, gradually flattened out until, in 1959, there was hardly any rise. National income grew from IL 1,000,000,000 in 1950 to almost IL 3,000,000,000 in 1958 (both at 1956 prices), i.e., from IL 790 to nearly IL 1,500 per capita. The gross national product grew by around 10% a year, a figure almost unequaled in any other country. While foreign-currency controls were eased, the public sector (government, local authorities, Jewish Agency, and Histadrut) had a very strong influence on the economy, being directly responsible for about one-fifth of the employment and of the national product. The government extracted some 30% of the national income in the form of taxes and, through incentives to investors and control of the development budget, was able to direct most of the long-term capital investment into socially and nationally desirable channels.

A vast expansion of agriculture made the austerity of the early years a memory of the past. By the end of the first decade, self-sufficiency was achieved in the supply of eggs and poultry, dairy products, vegetables, and fruit. This was accomplished by establishing new villages and consolidating existing ones, improving crop yields by mechanization and better methods, extensive land reclamation and soil conservation, and better utilization of water for irrigation. During the ten years 1948/49 to 1957/58, the area under cultivation grew by about 150% – from 400,000 to 1,000,000 acres – while the irrigated area rose more than fourfold to over 300,000 acres. About 70% of the vegetables, 30% of the poultry, and 45% of the milk were produced by new immigrants' villages established during the decade. The drainage of the Ḥuleh swamps, completed in 1957, reclaimed 15,000 acres of high-quality farmland. The Jewish National Fund and the government afforested some 50,000 acres – four times as much land as during two generations of Zionist settlement – and planted trees along almost 500 miles of highway.

The main road network was expanded from about 1,000 mi. to 1,860 mi.; in 1957 the 147-mile first-class road from Beersheba to Eilat was completed, providing a good road link between the Red Sea and the Mediterranean for the first time in history. The railroad was extended to Beersheba and the rolling stock was dieselized. Haifa port was modernized and a start was made with the utilization of Eilat. The merchant fleet grew to 41 vessels, with a total deadweight of 280,000 tons. El Al carried 70,000 passengers in 1,240 flights in 1958, compared with 15,500 in 475 flights in 1950. About IL 260,000,000 was invested in expanding electric generating capacity, which rose more than fivefold to 350,000 kilowatts, consumption rising almost sixfold to 1,400 million kwh.

The output of industry was doubled during the decade, reaching almost IL 3,000,000,000 in 1958; so was the number of employed, which came to some 160,000. Industrial exports increased from $18,000,000 in 1950 to $81,000,000 in 1958, including $33,000,000 worth of polished diamonds, four times as much as in 1950. Special inducements, including government loans and tax reliefs, were held out to foreign and local investors prepared to help in the dispersal of the population by setting up enterprises in the new development areas. Up to the end of 1958, IL 226,000,000, including IL 136,000,000 from the development budget, was invested in 366 undertakings to these areas. During the same period 832 undertakings were approved under the Law for the Encouragement of Capital Investment, involving $192,000,000 of foreign and IL 194,000,000 of local capital, as well as IL 242,000,000 in government loans. About IL 140,000,000 were invested by the state in the exploitation of minerals, including copper, phosphates, potash, and bromine; a new potash plant, replacing the works at the northern end of the Dead Sea destroyed in the War of Independence, was completed at Sodom in 1956. In September 1955 oil was struck at Heleẓ near Ashkelon, and about 100,000 tons, almost 10% of the country's consumption, were pumped in 1958. Two gas wells, with an output of 1,000,000 cu.ft. per day, were sunk.

In 1958, when there were widespread celebrations to mark the country's tenth anniversary, the population passed

the 2,000,000 mark; over 1,800,000 were Jews, constituting 15% of world Jewry, as against less than 6% in 1948. The Jewish population had grown since independence by over 1,160,000 or 179%. Over 940,000 immigrants had come in and 105,000 had left, leaving a migration balance of almost 840,000, which accounted for 72% of the growth (the remaining 28% resulted from natural increase). The non-Jewish, mainly Arab, population had grown by 61,000, of which over 95% was due to natural increase.

Toward the end of 1954 a new "ship to settlement" policy was introduced. Instead of the immigrants being housed temporarily in camps or *ma'barot*, they were sent directly from the ship or plane to a new village or "development town" where housing was ready and work available in the neighborhood. A regional settlement scheme for populating large, sparsely inhabited areas was initiated. Clusters of 5–8 villages were focused on a rural center, with an elementary school, cultural facilities, a dispensary, and farm-service institutions. The scheme was first carried out in the Lachish area, with 54 villages by 1959 and the "county town" of Kiryat Gat, where a secondary school, shopping facilities, and industrial plants were located. A social advantage of this arrangement was that immigrants from a particular country – sometimes even a district or town – could be concentrated in a fairly homogeneous village, obviating the friction that often arose between communities of different cultural backgrounds, while the process of merging and integration proceeded when the villagers and their children met in the rural or urban centers and their schools.

Out of a civilian labor force of some 700,000 the daily average of unemployment registered at the labor exchanges was 9,300 – 1.4% of the total. Some 150,000 homes were built for the newcomers during the period, and 45,000 families moved from the *ma'barot* to permanent housing, though 20,000 families (about 110,000 souls) were still to be rehoused. The great majority of the newcomers had thus been provided with the fundamental necessities of integration: homes and jobs. A high proportion, approaching one half, had learned new skills: 106,000 unskilled and semi-skilled adult workers had attended vocational training courses run by the Ministry of Labor, the Histadrut, the municipalities, and voluntary organizations; average output per worker had been raised by about 50%. An entire new farming class, mainly smallholders, had risen, learning to till the soil by practice, example, and the teaching of Jewish Agency instructors. Practically all the children of the immigrants, like those of the veteran population, went to school. When they were called up for military service, the army taught the rudiments of the language, the national culture, and general knowledge to those who had not completed their education; for young newcomers the period of national service was decisive in preparing them for integration and citizenship.

Gradually, the immigrants started to find their way in social and political life. They grew somewhat more independent in their dealings with the authorities and began to learn the techniques of self-government in the village councils, factory and shop committees (the basic cells of the trade-union movement), local political party branches, and local authorities. They played only a minor role in national politics, however. Seeking their votes, the parties placed representatives of the various communities on their election lists, but these were more often veterans of the same origin as the newcomers rather than recent immigrants. At every parliamentary election, independent immigrants' lists, claiming to represent Sephardim or other communal groupings, were submitted, but none of these managed to return any candidates after 1951.

There was still a considerable backlog in the complete absorption and integration of the immigrants, however. The houses built for them during the mass influx were small, often hopelessly inadequate for the many large families. While the immigrants were improving their skills, the veterans were making even faster progress and still largely monopolized senior administrative and managerial posts. Elementary education was free and universal, but standards were lower in the new immigrant areas, where it was difficult to obtain good teachers, and the children did not receive the full benefit, since the home made little or no contribution to the learning process. The major educational effort during the decade had to be devoted to the basic tasks of building schools and providing teachers for the vastly increased school population (in the school year 1958/59 there were over 550,000 pupils and students, compared with 130,000 in 1948/49). Toward the end of the period, special efforts were initiated to bring up the educational standards in immigrant areas. In the secondary schools, scholarships were offered by the state, the Histadrut, and public bodies, and requirements for admission were modified in the case of children from immigrant areas and the Oriental communities. There was a gradual improvement in the percentage of children born in Asia and Africa receiving postprimary education; between 1956/57 and 1958/59, while 71% of the secondary-school population was born in Israel in both years, the percentage of the foreign-born who came from Asia and Africa rose from 36% to 43%.

Perhaps the most serious aspect of the communal problem was the psychological one. To many of the newcomers from North African and Middle Eastern countries, the wide gap between the status, educational achievements, and social conditions of the Ashkenazi and Oriental communities appeared to be due, not only to objective circumstances, but also to favoritism on the one hand and deliberate discrimination on the other. In July 1959, passions erupted into rioting in the Haifa slum quarter of Wadi Salib, the new township of Migdal ha-Emek, and Beersheba. In the last two places, the trouble arose over employment difficulties; in the first – a former Arab neighborhood inhabited largely by North African immigrants who had drifted to the town from various places of prior settlement – the riots, which started with a café disturbance, assumed serious proportions. But in the parliamentary elections that followed in November, the communal lists received comparatively little support and, on the whole, the new

immigrants continued to support the established parties. The success of Mapai, which gained seven seats, was thought to be due not only to Ben-Gurion's enhanced prestige after the Suez Campaign and the general rise in the standard of living, but also to a backlash generated by fear of communal fragmentation and the desire for a strong government (see also Israel, State of: *Population, section on Intercommunal Problems).

Another focus of controversy was the place of religion in the country's life, particularly where legislation or administrative action was concerned. From time to time there were heated arguments – sometimes accompanied by street demonstrations – over public Sabbath observance, complaints of discrimination against state religious schools, and such matters as mixed bathing in a Jerusalem municipal swimming pool. The fanatical *Neturei Karta group in Jerusalem often took the lead, more moderate religious circles following suit to avoid losing support. The non-Orthodox community was also concerned with the place of Jewish tradition in the country's life. In 1957 the minister of education and culture, Zalman Aranne, initiated a "Jewish Consciousness" program in the state (non-religious) schools. It aimed at laying greater stress on the Jewish cultural heritage and spiritual values, stimulating the study of Diaspora Jewish history and contemporary Jewry, and inculcating respect for Jewish religious observance and a feeling of responsibility toward the nation in Israel and abroad. People from all sections cooperated in disseminating a knowledge of the Bible through study circles and conventions, in which the prime minister played a prominent role, and there was an unprecedented, almost universal, interest in the World Bible Contest held in Jerusalem in 1958. In 1958 a heated controversy arose over the ruling of the minister of interior, Israel Bar-Yehudah of Aḥdut ha-Avodah, that a person declaring in good faith that he was a Jew by nationality should be so recorded in the Population Register and that minors should be registered according to the declaration of their parents. The National Religious Party objected to anyone being registered as a Jew by nationality unless he was recognized by rabbinical law as a Jew by religion (i.e., born of a Jewish mother or converted according to the *halakhah*) and resigned from the government in protest. A cabinet committee appointed to reconsider the question invited Jewish scholars and religious leaders the world over to express their opinions, which were overwhelmingly in support of the halakhic ruling. The matter was left in abeyance until March 1960, when Ḥayyim Moshe *Shapira, the NRP leader who had rejoined the cabinet as minister of the interior, issued new regulations in keeping with the rabbinical interpretation. The problem came to the fore again in 1970, when the validity of these regulations was challenged in the High Court.

The shadow of the Nazi Holocaust dominated a *cause célère* that aroused bitter feelings in the late 1950s and precipitated a cabinet crisis. In 1955 Malkiel Gruenwald was charged with criminally slandering Israel *Kasztner, then a government official and a candidate for the Knesset on the Mapai list, by accusing him of having collaborated with the Nazis in

Hungary during World War II. The Jerusalem District Court found that Gruenwald's charges were, on the whole, justified and acquitted him. The state appealed, but in March 1957, while the appeal was pending, Kasztner was murdered by three young men, who were imprisoned for the crime. At the beginning of the following year the Supreme Court reversed the lower court's findings, clearing Kasztner of most of the accusations against him.

Higher education was considerably expanded with the financial aid of Jewish benefactors abroad. At the end of the decade there were about 10,000 students at the Hebrew University, the Technion (Israel Institute of Technology, Haifa), Tel Aviv University (founded in 1956), and the Bar-Ilan religious university (opened in 1955), compared with 1,500 in 1948. Cut off from its original buildings on Mount Scopus, the Hebrew University opened a new campus in western Jerusalem in 1958. Fundamental and applied research at the Weizmann Institute of Science, founded in 1949, and other institutions was achieving a growing reputation abroad, as evidenced by research grants from the United States and other countries.

Israel took second place in the world for the number of titles published (1,210 in 1958) in proportion to the population, as well as for book imports per head. The *Academy of the Hebrew Language, founded in 1953 to succeed the Va'ad-ha-Lashon ("Language Council"), conducted research and issued authoritative rulings on grammar, terminology, and spelling. The conclusions of Israel scholarship were embodied in new editions of the Bible, the Talmud, and outstanding works of rabbinic literature, as well as encyclopedias of various types, notably the comprehensive Encyclopedia Hebraica. *Archaeology received a new impetus with the achievement of independence and the discoveries made in establishing new villages and digging foundations for new buildings. Seven of the *Dead Sea Scrolls were acquired for the nation, and Israeli scholars, speaking Hebrew as a living language and intimately familiar with the Holy Land, made distinctive contributions to their study.

The established repertory theaters, *Habimah, *Ohel, and the *Cameri, as well as many smaller companies, presented world classics, recent successes, and a smaller number of original works. The *Israel Philharmonic Orchestra, with its 22,000 subscribers (a world-record percentage of the population), the Kol Israel (State Broadcasting Service) Orchestra, and others reached a high standard, and large audiences attended regular music and dance festivals. Israel artists and composers worked in a variety of styles, and some achieved international recognition. There were 18 morning papers – 11 of them in Hebrew – and two afternoon papers, both Hebrew, as well as 320 other periodicals in 12 languages.

The Arab and Druze communities shared in the general rise in living standards. They benefited from universal, free primary education, the national insurance scheme, the legal protection of women and children, and the improved social welfare and health services provided by the state authorities and the Histadrut. Local government was gradually extended

to Arab areas; roads were built and water, electricity, and sanitation facilities installed. As a result of irrigation, reclamation, and improved farming methods, the output of Arab agriculture increased sixfold during the decade. Arabs voted in parliamentary elections: 91.2% of them went to the polls in 1955 and 88.4% in 1959 – a higher proportion than among the Jewish electors. There were eight Arabs in the Third Knesset and seven in the Fourth, five of whom represented Arab lists associated with Mapai. In the predominantly Arab-inhabited areas, close to the low and winding borders, military government was in force to prevent espionage and infiltration; residents had to receive permits from the military governors to leave, and others required permits to enter. The system, which was a cause of deep dissatisfaction among the Arabs, was severely criticized by opposition parties, who accused Mapai of exploiting it to ensure political domination over the Arab inhabitants, and the regulations were gradually eased over time (see *Israel, State of: Arab Population).

ECONOMIC ADVANCE AND POLITICAL REALIGNMENT: 1960–1966. The seven years that followed the 1959 elections, in which Ben-Gurion seemed to have reached the zenith of his popularity and power, were marked by continued economic progress – especially in the development of industry – on the one hand, and a series of political crises that transformed the party map of Israel, on the other. While the immediate issue in the internal struggle within Mapai seemed, on the surface, to be the Lavon Affair, there were deeper issues involved. Israel was developing into a modern, mainly urban and industrial, society. Living standards – in housing, household equipment, education, and entertainment – were rising to levels that would have been regarded as unreasonably luxurious by the early pioneers. The electric refrigerator and the gas stove were replacing the ice-box and the kerosene cooker; the veteran population was well on the way to West European standards, and the new immigrants were hot on their heels. The egalitarianism which had reigned – in theory, at least – in the Histadrut and the public service was being challenged. Most of the political leaders had won their spurs in trade-union activity and agricultural settlement; now new strata of administrators, scientists, and businessmen, concerned more with practical affairs than with ideologies, were arising. Professional men and senior officials demanded salaries in keeping with their skills and experience. Younger men, with some encouragement from Ben-Gurion, were breaking into the ranks of the top leadership. Even in the kibbutzim, new problems were arising – some as a result of restitution payments made by Germany to individual members.

The political controversies of the period (treated in greater detail in Israel, State of: *Political Life and Parties), may be divided into three phases. In the second half of 1960, Pinḥas Lavon claimed that new evidence, recently disclosed, proved that he had not been responsible for the security "mishap" that had led to his resignation. In the meantime, he had been appointed secretary-general of the Histadrut, but his fur-

ther progress in the political field was blocked by the memory of the old affair. Lavon's efforts to clear his name developed into a virulent controversy with Ben-Gurion and his supporters, which came to a climax with Mapai's decision to depose Lavon from his Histadrut post.

At the same time a second focus of controversy emerged: the decision of a cabinet committee clearing Lavon, which Ben-Gurion denounced as a misuse of authority and a miscarriage of justice. When Ben-Gurion resigned and no solution to the subsequent crisis could be found but premature Knesset elections, his party again rallied round him and helped him reform his government after the elections. Ben-Gurion, however, had not given up his struggle to rectify the "miscarriage of justice," and in 1963, shortly before submitting his final resignation as prime minister, he commissioned a new inquiry into the background of the affair.

In 1963 President Ben-Zvi died and was succeeded by Shneour Zalman *Shazar.

Levi *Eshkol, nominated by Ben-Gurion as his successor, at first proclaimed a policy of continuity, but his personal style and inclinations, as well as his associations with the veteran leadership, soon found expression. He displayed a more friendly attitude toward the Zionist Organization, which he assured of full state backing and cooperation in its work in the Diaspora, as well as in Israel, and adopted a more conciliatory tone toward the opposition, placating Ḥerut by authorizing the reinterment in Israel of its deceased leader, Jabotinsky (who had requested in his will, written in the 1930s, that his remains should be transferred to Palestine only "by order of that country's eventual Jewish government"). Eshkol was more restrained in his public references to Arab leaders and to the Soviet Union, though speculations as to a new trend in foreign relations were not justified by any substantive change in policy. At the same time there was no advancement for the Ben-Gurionist "young guard"; the veterans were firmly in the saddle, and the attempt to conclude an alliance with Aḥdut ha-Avodah was widely believed to be motivated not only by the long-standing aspiration for labor unity, but also by the Mapai leaders' desire to establish a counter-weight to the challenge from within their own party.

The third phase started toward the end of 1964, when Ben-Gurion renewed his demand for a judicial inquiry into the actions of the 1960 cabinet committee. The pent-up antagonisms came to the surface and a heated controversy broke out, reaching a climax shortly before the 1965 elections with a split in the party and the establishment of a break-away list, *Rafi (Reshimat Po'alei Yisrael – Israel Labor List), headed by Ben-Gurion, Moshe *Dayan, and Shimon *Peres. The partial healing of the 1944 rift in Mapai by the establishment of an "Alignment" with Aḥdut ha-Avodah was thus achieved only at the expense of a new breach, which was closed only after the Six-Day War.

There were also other changes in the party map. In 1961 the General Zionists and the Progressives united to form the Liberal Party, but the new body disintegrated in 1965, when

the General Zionist section merged with Ḥerut to form *Gaḥal (Gush Ḥerut Liberalim – Ḥerut-Liberal Bloc), while most of the Progressives established the Independent Liberal Party. In the latter years the Communists split into a mainly Jewish section, which kept the old name, Maki (Miflagah Komunistit Yisre'elit – Israel Communist Party), and a mainly Arab section, Rakaḥ (Reshimah Komunistit Ḥadashah – New Communist List), with strong Nasserist sympathies.

Controversies over religious matters arose from time to time during the period. It took three years before agreement could be reached on the procedure for electing the Ashkenazi and Sephardi chief rabbis after the death of Rabbi Herzog in 1959 and the expiry of Rabbi Nissim's term in the following year. Between 1962 and 1964 there were repeated demonstrations and sit-down strikes by immigrants of the *Bene Israel community from India in protest against difficulties in getting rabbinical approval to marry with other Jews because of doubts as to the validity of their marriage and divorce procedures in their country of origin. In 1964 there were controversies over the proposal to install an "international" (non-kosher) kitchen on the Zim liner *ss Shalom* and the problem of supervising *kashrut* at the large regional slaughterhouse at Kiryat Malakhi. Considerable feeling was aroused over the case of the ten-year-old Yossele Shumacher, who was withheld from his parents by extreme religious groups associated with his grandfather in order to assure his receiving a rigidly Orthodox education and was ultimately found in 1962 by the Israel Secret Service in New York, where he was being kept under cover. A League for the Abolition of Religious Coercion was established and occasionally clashed with religious zealots.

Religious life flourished, however, with little connection with such controversies. About one-third of the children attended state and other religious schools; in 1968 there were 250 yeshivot, with 18,000 students, mostly in Jerusalem and Bene Berak, constituting the greatest center of Jewish rabbinic learning in the world. A new generation of Israel-born religious youth, recognizable by their knitted skull-caps, were growing up in their own youth movements and a wide network of religious kibbutzim and moshavim. Sabbath and festivals were not only observed in the home but also, as official public holidays, were marked by the closing of shops, factories, offices, and public institutions.

A profound impression was made on the country by the trial of Adolf *Eichmann, who had been the main organizer of the Nazi extermination program. His apprehension in Argentina by Secret Service volunteers was announced on May 23, 1960, and he was indicted under the Nazis and Nazi Collaborators (Punishment) Law, 1950. He was put on trial in Jerusalem on April 11, 1961, and sentenced to death on December 15; on May 31, 1962 – two days after the rejection of his appeal to the Supreme Court – he was executed – the first and only death penalty carried out under Israel law. The trial brought home to the consciousness of the public, particularly the youth and the Oriental communities, the horrors of the Holocaust and

its significance in modern Jewish history. It also emphasized the role of Israel as a Jewish state where, for the first time since the beginning of the Exile, a Jewish court could mete out justice for crimes against the Jewish people.

Despite the political, religious, and other controversies, most of the second decade was a period of rapid economic development. During the period 1960–65, the gross national product increased by an average of about 11% a year. Exports were almost doubled, reaching a total of $406,000,000 (50% of imports) in 1965. The domestic market for locally grown food was approaching saturation point; with the rise in the standard of living, further increments in personal incomes were being spent mainly on manufactured goods. Farmers, therefore, concentrated on growing more variegated crops, specialization, and increasing efficiency by mechanization and other means. Exports of fresh agricultural produce totaled $86,000,000 in 1965, of which $71,000,000 was citrus. New crops were introduced: cotton, supplying almost all the local demand; groundnuts, mainly for export; and sugarbeets, processed in local refineries. The national water carrier, which brought the upper Jordan waters through Lake Kinneret down to the Negev, was completed and went into full operation in 1965. As conventional water resources were now almost fully exploited, attention was focused on the desalinization of sea and brackish water, various methods being closely studied and tried out. U.S. President Johnson and Prime Minister Eshkol agreed in 1964 to study the feasibility of erecting a joint atomic-power and sea-water desalinization station, but difficulties in producing water at an economic price delayed execution of the project.

The greatest growth was in industry, which had now become the main instrument for absorbing the immigrants and reducing dependence on external resources by replacing imports and stepping up exports. Industrial production totaled IL 6,900,000,000 in 1965 and employed 236,000 hands. The growth was more rapid in new industries, like metals and machinery, chemicals and fertilizers, copper and phosphates, and electronic equipment, than in the established ones, such as food, textiles, and building materials. Israel now manufactured products like paper, tires, radios, and refrigerators, which had had to be imported in the previous decade. Israel Aircraft Industries, Lydda, which had started as the Bedek works for maintenance and overhaul, was now the country's largest industrial organization, manufacturing small military and civilian planes. As Jaffa and Tel Aviv ports were inadequate to handle the greatly increased trade, a new deepwater port was built at Ashdod and started operations at the end of 1965. A new harbor at Eilat was inaugurated in the same year. The merchant fleet grew to over 100 ships, with a deadweight capacity of some 1,100,000 tons, and El Al carried over 300,000 passengers in 1965 – over six times as many as in 1960. Widespread improvements in technical, financial, and administrative skills helped to raise productivity. The government directed extensive resources – in some years two-thirds of the development budget – to industrial development. Its in-

fluence was not always exerted on purely economic grounds. To promote the dispersal of the population and provide employment for newcomers, investors were often induced to erect their plants in *Kiryat Shemonah, *Beth Shemesh, or *Dimonah instead of Tel Aviv or its environs, where they could have operated more profitably. For the sake of self-sufficiency the Histadrut was helped to expand its "Steel City" at Acre, and private entrepreneurs were aided in setting up paper mills at Ḥaderah, though it might have been cheaper to import the paper and the finished steel.

Prices had risen considerably since the exchange rate of IL 1.80 to the dollar was fixed, and government efforts to direct investment into socially and politically desirable channels had led to the proliferation of subsidies, preferential loans, tax reliefs, administrative restrictions on imports, and other inducements and pressures. The result was that the average effective rate of exchange in 1961 was about IL 2.70 to the dollar, and for some protected or subsidized products as high as IL 6.00 or IL 8.00 per dollar. Budgetary deficits in 1960 and 1961, as well as a considerable influx of personal restitution payments from Germany, which grew from $26,000,000 in 1960 to $110,000,000 in 1961, added to the inflationary pressures.

In February 1962, a second "New Economic Policy" was announced. It was based on devaluation to the rate of IL 3.00 per dollar and the gradual reduction or annulment of discriminatory subsidies, levies, premiums, etc., in order to put production on an economic basis, expose local industries to competition from imports, make exports more profitable, and compel manufacturers to increase efficiency. The policy was not consistently applied, however. Concessions were made to various groups of producers, as well as to mortgagees whose payments were linked to the value of the dollar. Inflationary pressures continued: prices started rising in 1963 at the rate of some 7% per year, and wage increases in the private sector were followed by a considerable rise in civil service salaries, a by-product of the introduction of a uniform grading system. Average nominal hourly wages rose by 17% in 1964 and again in 1965. The adverse trade balance (goods and services) grew to an average of some $500,000,000 in the years 1962–65. This was the price for the continued rise in the national product, a 6–7% annual growth in national income per capita, and a state of full employment.

After the 1965 elections the government took steps to cool down the overheated economy, raising taxes and cutting down its expenditures. Several important public works projects, such as the national water carrier and the building of Ashdod port, had been completed. A drop in immigration from an average of about 60,000 a year in 1961–64 to 30,000 in 1965 and 16,000 in 1966 led to a decrease in the demand for housing and a slump in the building and ancillary industries. The government's measures of economic restraint succeeded in stabilizing prices, keeping imports stationary, and reducing the adverse trade balance by some $75,000,000 in 1966, but only at the cost of an economic recession and a considerable rise in unemployment, to the level of 30,000. After 15 years of almost continuous expansion, the national product in effect did not increase at all during the year. The government hoped that a wage freeze, increased productivity, and the transfer of labor and resources to production for export would, in the long run, put the economy on a sounder footing, but the economic difficulties had a depressing effect on public morale. It was in an atmosphere of gloom and uncertainty that the threat to national survival, in the early summer of 1967, galvanized the nation into a new upsurge of energy and confidence, which encompassed all spheres of national life.

Education continued to expand: in the 1966/67 school year there were some 750,000 pupils and students, including about 120,000 in post-primary schools and 30,000 in the universities. A graded fee system was introduced by stages in the post-primary schools: those who passed a uniform examination in the basic subjects were subsidized, partially or wholly, in accordance with family income and circumstances. About 70% of pupils continued their studies after the age of 14: half in academic high schools and the rest in agricultural or vocational secondary schools. Special efforts were still needed to equalize the educational opportunities of children whose parents had come from Asia and Africa, only about 25% of whom received post-primary schooling. Measures taken in new immigrant areas included free kindergartens for three-and four-year-old children; a longer school day; separate grouping of children in the higher grades of the primary school according to attainments in Hebrew, mathematics and English, enabling them to progress at the rate best suited to their abilities in each subject; and the establishment of an Israel Education Fund through which donors from abroad helped to build comprehensive and other schools in the development areas. The Hebrew University and the Technion continued to expand, with 12,000 and 5,000 students, respectively; Tel Aviv University, which became an independent institution in 1961, had 8,000, and Bar-Ilan 3,500. The nuclei of two more universities at *Beersheba (from 1970 the University of the Negev) and *Haifa (from 1969 the University of Haifa), were established under the supervision of the older institutions.

More and more, Israel was becoming a world Jewish center. In addition to the Zionist Organization, which held its quadrennial congresses and the annual meetings of its General Council in Jerusalem, many Zionist and other Jewish organizations held their conventions in Israel. Thousands of young people attended study institutes and youth-leaders' courses organized by the Jewish Agency or came for periods of work in kibbutzim. The Jewish Agency also conducted courses for teachers and communal leaders, and rabbinical seminaries and other Jewish institutions abroad arranged their own courses in Israel. Ties between Israel and the Diaspora were reinforced by a growing network of family and other personal relationships: a high proportion of the thousands of Jewish tourists had relatives and close friends in Israel. The ideal of the "spiritual center" enunciated by Aḥad Ha-Am was taking shape, although there were those who pointed to evidence of cultural and sociological divergences between

the "sabras" growing up in Israel and young Jews in the Diaspora.

There was a steady expansion in the scope, and improvement in the cordiality, of Israel's foreign ties during the period. In 1967 Israel maintained diplomatic relations with 98 countries, with permanent missions in 78 of them, compared with 55 countries and 38 permanent missions in 1958. The number of countries with diplomatic missions in Israel increased from 43 to 58, seven others having non-resident representatives. The only significant exceptions were the Arab and some Muslim countries and a few others, like India, closely associated with them. Relations were particularly close with the United States, the British Commonwealth countries, West European states (like France, Holland, and the Scandinavian countries), and some of the countries of Latin America and Africa. Although the U.S. Operations Mission in Israel was withdrawn in 1962, as Israel could no longer be considered an underdeveloped country, American aid, in the form of government and other loans and the sale of agricultural surpluses, continued. In view of the flow of Soviet jet bombers and missiles to Egypt, U.S. President Kennedy stated in May 1962 that, if necessary, America would take measures to prevent or halt aggression in the Middle East, and in September 1962 the United States, for the first time, publicly agreed to supply arms to Israel by selling Hawk ground-to-air defensive missiles. President de Gaulle maintained France's policy of cordial support and, on the occasion of visits by Ben-Gurion in 1961 and Eshkol in 1964, publicly referred to Israel as "our friend and ally." French Mystère jets constituted a major part of Israel's air-strike force. The international cooperation program was expanded to cover Latin American and some Mediterranean, as well as African and Asian, countries.

Relations with the German Federal Republic aroused considerable difficulty and controversy. Israel was represented by a mission at Cologne, which, while primarily concerned with trade, also performed consular and informative functions. Deliveries under the reparations agreement were duly completed, totaling over $400,000,000 in the ten-year period ending 1962. After a meeting between Ben-Gurion and Chancellor Konrad Adenauer in New York in March 1960, West Germany began to give Israel secret military aid and there were discussions on the possibility of large-scale economic assistance after the end of reparations. Leading individuals and various groups from Germany visited Israel; trade relations developed and there were some cultural exchanges. These trends were criticized by some survivors of the Holocaust and others as "treason to the memory of the victims of the Nazis." Ḥerut and left-wing critics accused the government of giving the stamp of Israel approval to German efforts to attain respectability and of endangering Israel's relations with the Soviet Union. Ben-Gurion replied that only a racist outlook could justify a boycott of Germans as such and that Israel needed German aid and support to safeguard her security. In 1963 there were reports that German scientists were helping Egypt to develop weapons of mass destruction, and

Israel demanded that the German government put an end to their activities. Another crisis arose in 1965, when West Germany succumbed to Arab pressure by ending military assistance to Israel, but offered, in compensation, to establish full diplomatic relations and consider extended economic aid. The crisis was resolved when the first German and Israel ambassadors presented their credentials in the respective capitals in August; agreement on a German loan of DM160,000,000 was concluded in May 1966.

The Soviet Union continued to denounce Israel and Zionism, rejecting charges of cultural and other discrimination against Soviet Jews and appeals to permit them to settle in Israel, at least if they had relatives there. There was no response to Israel's efforts to improve economic and cultural relations, apart from isolated exchange visits by sports teams, musicians, etc. In reply to a Soviet note on the denuclearization of the Mediterranean area in 1963, Israel declared that the immediate danger arose out of the conventional arms build-up of the Arab states, which was openly directed against Israel. In May 1964 Prime Minister Eshkol repeated an assurance given by Ben-Gurion in December 1960 that "nuclear development in Israel is designed exclusively for peaceful purposes" and declared that the government "has not taken the initiative in introducing new arms or new types of arms – either conventional or non-conventional – to the Middle East." There was growing concern about the U.S.S.R.'s supply of arms to Egypt and Syria and its use of the veto in the UN Security Council to prevent the adoption of any decision unfavorable to the Arabs.

For a decade after the Sinai Campaign there was no large-scale outbreak of hostilities between Israel and the Arabs, but neither was there a decline in tension. Arab hatred of Israel was continually fanned by teachers, journalists, and politicians; incessant declarations of undying hostility came from leaders of both "progressive" and "conservative" Arab states. Ben-Gurion repeatedly stated that Israel was prepared for complete disarmament in Israel and the Arab countries under mutual supervision and proposed a joint American-Soviet guarantee of the territorial independence of all Middle East states, but there was no response to either proposal.

Nasser made no secret of his refusal to acquiesce in the continued existence of Israel. In June 1962, for example, he spoke of his people's "determination to liquidate one of the most dangerous enclaves opposing the struggle of our peoples." In the main, however, especially after the beginning of his involvement in the Yemen toward the end of 1962, he stressed that a long period of preparation would be required before the final clash. Apart from occasional flare-ups on the border with Jordan, most of the attacks came from Syrian positions on the Golan Heights overlooking the demilitarized zones and Lake Kinneret. An Israeli reprisal operation in 1962 drew the usual Security Council condemnation, but a resolution condemning the killing of settlers in border villages in the following year was vetoed by the Soviet Union.

The Arab summit conferences in Cairo and Alexandria, in January and September 1964, decided to intensify the strug-

gle against Israel by diverting the headwaters of the Jordan River to frustrate Israel's water-development plans, setting up a unified Syrian-Lebanese-Jordanian military command, and establishing a Palestinian Liberation Organization, headed by Aḥmad Shukeiri, with an "army" composed of Arab refugees. On January 20 Prime Minister Eshkol pointed out that Jordan, Syria, and Lebanon were drawing considerable quantities of water from the Jordan-Yarmuk system and that Israel was taking no more than her share in accordance with the Johnston Plan. "Israel will oppose unilateral and illegal measures by Arab countries and will act for the preservation of her vital rights," he declared. In the spring of 1965 Israel artillery, returning Syrian fire, damaged preliminary works in connection with the diversion scheme.

In the same year a new Palestinian terrorist organization, al-Fataḥ, began operations on a considerable scale, sending small bands of terrorists from bases in Syria, Lebanon, and Jordan into Israel to sabotage railroads and other installations and blow up homes and public buildings. Israel warned that it would hold its neighbors responsible for attacks initiated from their territories and carried out reprisals in Jordan and Lebanon. The seizure of power in Syria by an extreme wing of the Baath Party, with pro-Communist leanings, was followed by more frequent shooting at Israeli farmers and army patrols and greater encouragement for al-Fataḥ operations. Syrian Premier Yusuf Zu'ayin warned: "We shall set the entire area afire and any Israeli movement will result in a final resting place for Israel." Israel Foreign Minister Abba Eban told the Security Council in October 1965 that armed infiltrators organized in Syria had committed 61 outrages on Israeli territory since January. He declared that Israel had no interest in the social philosophy or international orientation of the Syrian regime and emphatically denied allegations that Israel was planning to overthrow it. Further attacks took place while the Council was deliberating, but a motion "inviting" Syria to stop sabotage incursions from her territory was vetoed by the Soviet Union.

In default of international action, Israel took steps to strengthen her defenses. On November 8 Prime Minister Eshkol announced that the period of compulsory service for men, which had been reduced to 26 months in 1963, would be restored to 30 months. On November 13, the day after three Israeli soldiers were killed and six wounded by a land mine near the armistice line in the Mt. Hebron area in Jordanian territory, a strong Israeli force crossed the armistice demarcation line and, after evacuating the residents, blew up 40 houses in es-Samu and two other villages where marauders had found shelter; 15 trucks carrying Arab Legion reinforcements were also destroyed. The Security Council unanimously (except for one abstention) censured Israel for the raid.

The Six-Day War and After: 1967–1970

Israel celebrated her 19th Independence Day on May 15, 1967, with a modest military parade in Jerusalem, from which aircraft, armor, and artillery were excluded in compliance with the 1949 Armistice Agreement with Jordan. Three and a half weeks later, after the *Six-Day War, the situation in the Middle East had been radically transformed: the Egyptian, Jordanian, and Syrian armies had been shattered; Israel was in control of territories stretching from the Golan Heights to Sharm el-Sheikh and from the Suez Canal to the Jordan River; and a new upsurge of national energy and confidence had been matched by a wave of concern and devotion that swept over world Jewry, engulfing hundreds of thousands who realized, when the Jewish state was in peril, how much its survival meant to them. This feeling affected Jews in all countries, including both the youth and the most assimilated.

Tension on the Syrian frontier had risen steadily during the early months of 1967, despite a special series of meetings of the Israel-Syrian MAC to discuss practical arrangements for securing a peaceful atmosphere on the armistice demarcation line. Israel repeatedly complained to the UN Security Council and warned that she would take all measures necessary to protect the lives of her citizens. On April 7, after heavy shelling of border villages by Syrian tanks and heavy artillery, Israeli aircraft went into action and shot down six Syrian Mig 21s.

Radio Moscow accused Israel of attacking Syria in the service of American "reactionary and imperialist circles" that were plotting to prevent the consolidation of the "progressive" Syrian regime. While terrorist raids into Israel continued, the Soviet Union told the Egyptians that Israel was concentrating "huge armed forces" near the Syrian border. Dmitri Chuvakhin, the Soviet Ambassador to Israel, refused an invitation from Prime Minister Eshkol to verify, by personal inspection on the spot, that the allegation was unfounded. Israel immediately denied the Soviet allegations and as UN Secretary-General U Thant stated on May 19, "reports from UNTSO observers confirmed the absence of troop concentrations and significant troop movements on both sides of the line."

Meanwhile, on May 14, Nasser had begun openly dispatching large numbers of Egyptian troops into Sinai. Eshkol told the Israel government that the Egyptian troop movements, apparently, had more demonstrative than practical significance, but ordered part of the reserves mobilized as a precautionary measure. On May 16 Cairo Radio declared: "The existence of Israel has continued too long. We welcome the Israeli aggression, we welcome the battle that we have long awaited. The great hour has come. The battle has come in which we shall destroy Israel." On the same day Egypt demanded the withdrawal of the UN Emergency Force (UNEF) from the Gaza Strip and Sinai borders and Sharm el-Sheikh, and when U Thant replied that any such request would be regarded as a demand for its complete withdrawal, officially requested the evacuation of the force. On May 19 the UNEF commander, General Rikhye, told Israel that the force would cease to function the same day. U Thant flew to Cairo on May 22; on the next day Nasser announced his intention to block the Straits of Tiran to Israeli ships and others carrying "strategic cargoes," and Eshkol immediately declared that any interference with freedom of passage in the Gulf of Akaba and the

straits constituted "an act of aggression." On May 26 Nasser declared: "Sharm el-Sheikh means a confrontation with Israel. After having taken this step we must be prepared to wage total war on Israel." The Security Council met on May 24 but could not agree on any action. On May 25 Foreign Minister Eban left for Washington, London, and Paris to ask for support and, specifically, measures to lift the blockade in the straits. Only four out of a score of maritime powers that had announced their support for free passage in 1957 were willing to cooperate. Neither Britain nor France was willing to stand by the 1950 Tripartite Declaration. The French spoke of the need to examine the legal position on free passage through the Straits of Tiran, and General de Gaulle warned Eban that he would oppose whichever side struck first.

Under the looming shadow of war, the country was preparing for the worst. The organization and training of the reserves units was being brought up to concert pitch, while older men and women and schoolchildren helped to keep services going. Many worked overtime without pay to get in the harvest, keep up supplies, and fill export orders. After a day's rush on groceries, the government announced that ample supplies of food were available and kept the warehouses open until late at night so that shops could replenish stocks. The country anxiously awaited a government decision to end the uncertainty, and army leaders pressed for action.

A cabinet meeting on May 27 decided to make another effort to avert war. In a broadcast to the nation on the next day, Eshkol said that further diplomatic measures were to be taken to safeguard free passage in the Straits of Tiran and that "lines of activity" had been laid down "for the purpose of removing the military concentrations from Israel's southern border, protecting our sovereign rights and security on the borders and averting aggression, so that we shall not have to act in self-defense with military force." Widespread demands were made for the establishment of a government of national unity to fortify public confidence and, specifically, for the appointment of Moshe Dayan as minister of defense. On May 30, King Hussein of Jordan placed his forces under Egyptian control. Egyptian, Saudi Arabian, and Iraqi troops were sent to Jordan, and Iraqi, Algerian, and Kuwaiti forces to Egypt. On June 1 Dayan was co-opted to the cabinet as defense minister and three days later Menaḥem Begin, the Ḥerut leader, and Yosef Sapir, the Liberal leader, as ministers without portfolio. On June 3 Radio Cairo quoted an order of the day by General Murtaji, commander of the Egyptian Forces in Sinai, hailing "the Holy War through which you will restore the rights of the Arabs which have been stolen in Palestine and reconquer the plundered soil of Palestine." On the next day, Iraq followed Hussein's example.

Surrounded by Arab forces that were liable to attack at any moment, Israel could delay no longer. On the morning of June 5 the Israel air force attacked the airfields of Egypt, Jordan, Iraq, and Syria, destroying 452 planes – 391 of them on the ground – in under three hours and achieving complete superiority in the air. As the attack was nearing completion, the southern command moved against the Egyptian armies massed on the Negev border. One divisional task force broke through heavily defended positions on the coast and reached El-Arish by the evening. A second advanced toward the main Egyptian positions around Abu Aweigila, opposite Niẓẓanah, while a third moved through the sand dunes further north to the Egyptian rear. At the same time, Gaza was attacked from the south. On the second day of fighting, the Israeli forces advanced toward the Egyptian second line and concentrated most of their armor in the heart of Sinai. On the third day, Israeli tanks carried out a large-scale encirclement operation, closing up all avenues of escape for the Egyptian armor and compelling it to engage in frontal combat. In one of the largest armor battles in history, with over 1,000 tanks participating on both sides, the Egyptian power was shattered, and on June 8 the Israeli forces had reached the Suez Canal and were moving south along the eastern shore of the Gulf of Suez. Meanwhile the Gaza Strip had been taken, Israeli naval forces had captured Sharm el-Sheikh, and parachute troops landed there were moving northward to link up with the armor. By dawn on Friday June 9, Israeli forces were encamped along the canal and the Gulf of Suez. The Egyptians had had over 400 tanks destroyed and 200 captured, losing more than 10,000 men and 12,000 prisoners.

On the morning of June 5 Israel had notified King Hussein, through the UNTSO chief of staff, that if his forces kept the peace Jordan would be immune from attack. Nevertheless, almost immediately Jordanian forces opened fire all along the armistice line, occupied UN headquarters in East Jerusalem, and indiscriminately shelled the Jewish areas in the west of the city. Israel's central command counterattacked, concentrating on the hills round the city. By the next day, after bitter fighting that lasted throughout the night, the garrison on Mount Scopus had been relieved and the whole of Jerusalem outside the Old City was in Israel's hands. At the same time the northern command attacked the Jordanian forces in Samaria (the northern part of the "West Bank"), while central command forces, which had taken the strong points on the hills to the north of the Jerusalem Corridor, moved eastward to cut the road from the city to the north. By June 7 Israel was in control of Nablus, Ramallah, Jericho, and Bethlehem. It was now possible to start the historic battle for the Old City, which was taken by a paratroop unit breaking in through St. Stephen's (Lions) Gate in hand-to-hand fighting to avoid any damage to the holy places. By the evening the whole of Samaria and Judea were in Israel's hands.

In the north, the Syrians had been shelling Israel towns and villages from their heavily fortified positions on the Golan Heights. With the fighting over in the south and the center, the Israel air force opened fire on the gun positions, and at noon on June 9 the infantry and armor attacked. After fierce fighting, in which one position after another was taken in close combat, the Israel forces reached the town of Kuneitra, on the main road to Damascus, at 2:30 P.M. on the 10th.

The Security Council, which met on almost every one of the six days of fighting, called for a cease-fire on June 6, 7,

and 9. With the acceptance of the cease-fire by Israel, Egypt, Jordan, Lebanon, and Syria, the Six-Day War came to an end. Israel casualties were 777 killed and 2,586 wounded; the Arabs had lost some 15,000 men, hundreds of tanks, and the bulk of their air forces. Israel held 26,476 sq. mi. of territory previously in Arab hands: 444 sq. mi. on the Golan Heights, 2,270 sq. mi. in Judea and Samaria, 140 sq. mi. in the Gaza Strip, and 23,622 sq. mi. in Sinai. A Soviet-sponsored proposal to condemn Israel as the aggressor and demand immediate withdrawal from all occupied territories was rejected by the Security Council on June 14, and three similar proposals were turned down by the General Assembly on July 4.

When Defense Minister Moshe Dayan paid his first visit to the Old City of Jerusalem on June 7, he said: "We have unified Jerusalem, the divided capital of Israel. We have returned to the holiest of our holy places never to depart from it again." On the same day, Prime Minister Eshkol assured the heads of all the religious communities that they would retain control of their holy places, the chief rabbis being in charge of the Western Wall of the Temple Court (the "Wailing Wall"). On June 27 the minister of the interior, under a law passed by the Knesset the day before, issued an order extending the limits of Jerusalem and the jurisdiction of Israel law to the eastern part of the city. At noon the next day the 19-year-old barriers between East and West Jerusalem were removed; henceforth the 66,000 Arabs (54,000 Muslims and 12,000 Christians) and 195,000 Jews of Jerusalem were free to mingle as citizens of one city.

Military government was established in the areas administered under the cease-fire agreements, but the existing local authorities and officials were left free to operate without interference, except where security interests were concerned. Schools were reopened with the same staffs, curricula, and textbooks, apart from the revision or replacement of those containing incitement against the Jews or Israel. A small number of Israel officials, seconded to central and regional military government headquarters, helped to improve services, introduce modern agricultural methods, and stimulate industrial development. The courts were reopened, with the same judges and staffs administering the law previously in force; Israel military courts dealt only with offenses against security. An "open bridges" policy was instituted: West Bank Arabs moved freely to and fro across the Jordan and sold their produce in the Arab countries; residents of the Gaza Strip could travel for the first time to the West Bank and further afield; high school graduates could take Egyptian matriculation examinations and go to study in Egyptian and other Arab universities. Some 200,000 Arabs fled eastward across the Jordan River during the fighting or left to join their families afterward. The applications of 21,000 to return were approved, but by the end of August 1967 only 14,000 had done so. Further applications for the purpose of family reunification were considered on their merits. Relatives and friends of West Bank residents were allowed to come for prolonged visits each summer. Thousands of Arabs worked inside Israel's pre-1967 borders: in March 1970, 18,000

from the West Bank and 6,600 from the Gaza Strip were thus employed through the labor exchanges. Many of the refugee camps were connected with the electricity network; refugees, especially in the Gaza Strip, were a high proportion of those who worked in Israel, earning considerably increased wages (see also Israel, State of: *Arab Population).

Nevertheless, the Arabs of the areas, the great majority of whom had close relatives in Jordan and other Arab countries, regarded themselves as closely connected with the Arab world and, although there was a widespread desire for peace, looked forward expectantly to the withdrawal of Israel forces and the end of Israel rule. In the early months after the war, there were political demonstrations, and some of the young people cooperated with the terrorist organizations. In the Gaza Strip, particularly in the refugee camps, grenades were repeatedly thrown at army patrols and at Arabs "collaborating" with the authorities by going out to work in Israel. Stern measures were taken by the security forces against anyone using violence or harboring terrorists, and the great majority of the population kept the peace and denied shelter to armed infiltrators.

Israel ignored a Security Council resolution of May 21, 1968, calling for the annulment of measures taken to change the status of Jerusalem, but expressed recognition of universal spiritual interests in the city and readiness to guarantee the immunity of the holy places of all faiths. A fire in the al-Aqṣa Mosque in Jerusalem on Aug. 29, 1969, was exploited by Arab propaganda to rouse anti-Israel sentiment in the Muslim world and get a censure resolution passed in the Security Council (September 15), although the arsonist, an Australian named Michael Rohan, was immediately apprehended and found to be suffering from paranoiac schizophrenia. Almost none of the East Jerusalem Arabs applied for Israel citizenship, but they were automatically entitled to vote in municipal elections and 7,000 of them did so in 1969 – more than in the last elections to the city council under Jordanian rule.

The weeks of tension preceding the Six-Day War led to an unprecedented awakening among Jews abroad, especially the youth. Thousands of young volunteers invaded Israel missions and Jewish Agency offices, clamoring to be allowed to help in the emergency; many made their own way to Israel by any available plane. While they arrived too late to fight, they worked in fields and orchards, helped the army clear up the debris of battle, and began the reconstruction of the Hebrew University and Hadassah Hospital buildings on Mount Scopus. About 30% of them stayed and others established *aliyah* groups on their return abroad. The Zionist movement issued a call for *aliyah*, and the 27th Zionist Congress, meeting in Jerusalem in June 1968, adopted a new "Jerusalem Program" calling for *aliyah* from all countries. For the first time there was a large influx of immigrants from the West. The task of fitting absorption machinery to their needs became a matter of urgency, and a Ministry of Immigrant Absorption, headed by Deputy Prime Minister Yigal Allon, was set up for the purpose. Donations by Diaspora Jewry reached unprecedented levels, rising from $50,000,000 in 1966/67 to $350,000,000

in 1967/68. The Jerusalem Economic Conference, attended in April 1968 by over 500 prominent Jewish businessmen and economists from abroad, set up a network of regional and trade subcommittees to organize practical measures for increasing investments, establishing new undertakings in Israel, and enhancing efficiency.

The war had raised far-reaching problems of policy for Israel's leaders and public. The new situation and the entry of Moshe Dayan into the cabinet helped heal the rift in the labor movement: in January 1968 Mapai, Aḥdut ha-Avodah, and Rafi merged to form the *Israel Labor Party, which established an "alignment" with Mapam a year later (for other political developments, see Political Life and Parties). It was clear that a new and critical stage had been initiated, and might determine the destiny of Israel for many years to come. All but a tiny minority agreed that the 1949 armistice lines were dead and buried and that united Jerusalem and the Golan Heights, which had threatened the Jewish villages below for two decades, must not be given up. Apart from these points, however, there were deep differences, cutting across party lines, as to the map of the future. Gaḥal and some members of the Labor and National Religious parties believed that Israel must hold on to the boundaries achieved in June 1967 in order to fulfill the ideal of *Erez Yisrael ha-Shelemah* ("The Undivided Land of Israel") as the national homeland of the Jewish people, with the Sinai Peninsula as a buffer against any further threat from Egypt. Others, including Rakaḥ, some individuals, and small groups, mostly left-wing, called for the return of all the occupied territories as the price of peace. The majority of the Labor Party, Mapam, and the Independent Liberals, as well as many members of the religious parties, were prepared to give up most of the territories in return for definitive peace treaties with Egypt and Jordan.

There was also the problem of the political attitude to be adopted toward the former Palestinian Arabs in the administered territories. The official policy was that peace could be concluded only with the government of Jordan, and that the relations between the former Palestinians and King Hussein were an internal matter of no concern to Israel. Others advocated an attempt to reach a settlement with the population of the West Bank, perhaps on the basis of setting up a separate Palestinian state in the area. Voices were also raised in favor of an attempt by Israel to solve the problem of the refugees under its rule, but the majority view was that large-scale schemes would only arouse antagonism and that the best policy was to improve the employment and social conditions of the refugees as part of the measures for increasing prosperity in the administered areas in general.

The government decided, in view of the differences of opinion within it and the fact that no Arab country was ready to negotiate, that there was no need to take any decisions on boundaries unless and until definite proposals would have to be submitted at the peace conference table. Various interim government pronouncements were summarized, however, in an "unwritten doctrine" adopted, mainly in response to pres-

sure from Dayan, at the first Labor Party convention in August 1969. According to this program, advocacy of which was optional for party spokesmen, the Gaza Strip, as well as the Golan Heights and the whole of Jerusalem, should remain under Israel rule; there should be a territorial link with Sharm el-Sheikh to safeguard freedom of shipping from and to Eilat, and the Jordan River should be Israel's "security border." Under the last head, which was in keeping with the "Allon Plan" proposed by the deputy prime minister, most of the West Bank could be reunited politically with Jordan, but no Arab military forces would be permitted east of the Jordan River.

There was some controversy over the question of Jewish settlement in the administered areas. While the maximalists advocated the establishment of villages and urban quarters wherever possible, as an expression of Jewish rights in the whole of Erez Israel and in order to strengthen Israel's hold on the areas, other circles objected on the ground that such settlement could prejudice peace negotiations. General opinion supported government policy to give priority to settlement required mainly for security reasons. A number of *Naḥal outposts – some of which were later converted into civilian villages – were set up on the Golan Heights, along the Jordan Valley, and on the northern Sinai coast. Two of the villages in the Ezyon Bloc, destroyed during the War of Independence, were resettled. Most controversial was the beginning of the establishment of a Jewish quarter on the outskirts of Hebron, first on the independent initiative of a religious group and later with government assistance. The building of new quarters in East Jerusalem and the rehabilitation of the Jewish Quarter in the Old City met with virtually unanimous approval in Israel.

Meanwhile, the quest for a solution was proceeding, to the accompaniment of renewed fighting from time to time on various sectors of the cease-fire lines. Immediately after the Six-Day War, Israel called for direct peace negotiations. There were hopes that the Arabs might now be ready to discuss some form of peace or coexistence with Israel. These soon disappeared, however, after the Soviet Union undertook to rehabilitate the Egyptian and Syrian armies, initiating a vast airlift of planes, tanks, and other equipment to replace their losses and sending in thousands of Soviet advisers and experts. The Khartoum Arab Summit Conference in August 1967, at which Saudi Arabia, Libya, and Kuwait promised Egypt and Jordan generous subsidies, resolved that there would be no peace with Israel, no negotiations with Israel, no recognition of Israel, and no compromise at the expense of "the rights of the Palestinian people." Yasser Arafat, leader of al-Fatah, was elected head of the Palestine Liberation Organization, which was subsidized by the Arab governments and provided with facilities to operate from Syrian, Jordanian, and, later, Lebanese territory.

The cease-fire lines were much easier to defend against the threat of a large-scale assault than the armistice lines, with the Suez Canal and the Jordan River as "anti-tank ditches" and the increased warning time available before Egyptian aircraft

could approach the populated areas. It was not long, however, before the cease-fire lines were under attack. On the Suez Canal, which Nasser blocked immediately after the war, the Egyptians fired at Israel positions from time to time and the Israelis replied in kind. Land, sea, and air clashes culminated in the sinking of the Israel destroyer *Eilat* on October 21 and the shelling of oil installations in the town of Suez a day later. Al-Fataḥ detachments, trained and organized in Syria, tried to cross the Jordan to carry on the war. Most were intercepted on or near the cease-fire line, but some sabotage was done, especially in Jerusalem and some of the border villages.

The Security Council met again and this time arrived at a decision. On Nov. 22, 1967, after several alternative drafts had failed to win agreement, the Council unanimously adopted a British-sponsored resolution (no. 242, 1967), which emphasized "the inadmissibility of the acquisition of territory by war and the need to work for a just and lasting peace in which every state in the area can live in security." Such a peace should provide for "(I) Withdrawal of Israeli armed forces from territories (the French and Russian traslations had "the territories") occupied in the recent conflict; (II) Termination of all claims or states of belligerency and respect for and acknowledgment of the sovereignty, territorial integrity and political independence of every state in the area and their right to live in peace within secure and recognized boundaries free from threats or acts of force." The resolution further affirmed the necessity "(a) for guaranteeing freedom of navigation through international waterways in the area; (b) for achieving a just settlement of the refugee problem; (c) for guaranteeing the territorial inviolability and political independence of every state in the area, through measures including the establishment of demilitarized zones." The secretary-general was asked to designate a special representative "to establish and maintain contacts with the states concerned in order to promote agreement and assist efforts to achieve a peaceful and accepted settlement in accordance with the provisions and principles in this resolution."

Foreign Minister Eban declared that Israel would "respect and fully maintain the situation embodied in the cease-fire agreements until it is succeeded by peace treaties between Israel and the Arab states ending the state of war…" President Nasser, speaking on November 23, reiterated the "noes" of Khartoum and declared: "Israel's withdrawal from all the occupied areas is not a matter for negotiation." Later, Jordan and Egypt announced their acceptance of the resolution, but insisted on "implementation" by Israel's withdrawal to the boundaries existing on June 4, 1967, as a *sine qua non* of any settlement. They also made it clear that, even after a settlement, they would recognize the right of the Palestinians to continue their struggle for "the liberation of Palestine." Syria refused to have anything to do with the resolution, while al-Fataḥ opposed any agreement whatsoever, calling for the "liberation of Palestine" by force. The Israel representative told the UN on May 1, 1968, that Israel accepted the resolution as a means "for the promotion of agreement on the establishment

of a just and lasting peace." As the resolution did not call for withdrawal from "all the territories" or even "the territories," Israel emphasized that the "secure and recognized boundaries" must be determined by negotiation; while they would not be identical with the cease-fire lines, there would be no return to the prewar boundaries, which, Israel spokesmen declared, would be a constant temptation to renewed hostilities. Furthermore, no territory would be evacuated until the conclusion of a peace treaty covering all the points at issue. Gunnar Jarring, Swedish ambassador in Moscow, who was appointed by UN Secretary-General U Thant as his representative, paid repeated visits to Jerusalem, Cairo, and Amman as intermediary between the governments, but there was no change in the irreconcilable attitudes of the two sides.

Meanwhile, the military situation deteriorated on both fronts. Explosive charges planted by infiltrators on the outskirts of villages and in Jerusalem, Tel Aviv, and other places killed and injured civilians and did damage to property. Along the Jordan River, mine-laying; firing at Israel forces by Palestinian irregulars, often with support from Jordanian military posts; shelling of Israel villages, especially in the Beth-Shean and Jordan valleys; and attempts by al-Fataḥ and other detachments to cross the river were almost daily occurrences. By constant vigilance, patrolling, and pursuit, the Israel forces severly hampered the activities of the infiltrators and inflicted heavy casualties on them: up to the end of 1970, 1,828 were killed and 2,884 captured. Al-Fataḥ bases in Jordan were attacked, compelling the terrorists to scatter; after the largest such operation, at Karama on March 21, 1968 – in which Israel losses were heavier than in any other such action – Israel was censured by Security Council. In 1969 the Palestinian guerrillas operated increasingly from bases in Lebanon, which were also attacked by Israel forces. Border villages and towns like Kiryat Shemonah and Beth-Shean were indiscriminately bombarded with Soviet "Katyusha" rockets. Large sums were spent on building shelters, in which the village children regularly spent their nights. Men in the reserves were called up for longer periods, and at the beginning of 1969 compulsory army service was extended from 30 to 36 months for men.

The Popular Front for the Liberation of Palestine (PFLP), a Marxist rival of al-Fataḥ, specialized in the hijacking of aircraft and attacks on the offices of El Al and other Israel institutions abroad. On Dec. 28, 1968, two days after an armed attack on an El Al plane at Athens airport, an Israel commando unit destroyed 14 Arab aircraft at Beirut, where the terrorists had their headquarters. The Security Council censured Israel for the raid, though throughout this period it did not condemn Arab attacks on Israel or (apart from general appeals for the observance of the cease-fire) call for them to be halted or prevented. The PFLP's operations culminated in the hijacking of five international aircraft in August 1970 (in the case of one, an El Al plane, the attempt failed) and the holding of passengers for ransom to obtain the release of Arab terrorists held in Switzerland, Germany, and Britain. This act was one of the factors in the outbreak of the Jordanian civil war,

which reduced the pressure on Israel's eastern front during the last part of the year, when the Palestinian organizations seemed to be devoting most of their energies to the struggle against King Hussein.

The most serious military threat came from Egypt. Apart from several sporadic flare-ups, the Suez Canal zone was quiet for a time; in fact, it was frequently visited by tourists from the Israel side. On April 10, 1968, however, Nasser declared: "The Arab nation has decided to embark on the path of struggle and war. We have reequipped our armed forces, so that we may stand firm, later we will move to the containment of Israel and, after that, to the eradication of the aggression." In September and October the Egyptians heavily bombarded Israel positions on the canal, taking the troops by surprise and inflicting heavy casualties. Israel artillery replied, doing serious damage to the towns on the western side, and carried out commando raids deep into Egyptian territory. Israel built a series of bunkers and fortifications, heavily protected, along the length of the canal. In the second week of March 1969, the Egyptians heavily bombarded what they called the "Bar-Lev Line" (after the Israel chief of staff), and on March 30 Nasser announced that Egyptian troops would no longer be bound by the cease-fire. "We ask every soldier at the front to account for his action if he sees the enemy and does not fire at him," he said. On May 1 he announced that 60% of the "Bar-Lev Line" had been destroyed and that the attacks would continue until its destruction had been completed. Egyptian patrols were also sent across the canal, but were repulsed with heavy losses. On July 23 Nasser declared: "Now, brethren, we begin the act of liberation… We are now in the midst of a long, drawn battle… to wear down the enemy." Israel replied to this war of attrition with further commando raids on targets ranging from the Upper Nile Valley to the west coast of the Gulf of Suez and repeated air strikes at Egyptian antiaircraft batteries and posts. Forty-seven Egyptian aircraft were shot down in 1969, and it became clear that Israel had the mastery of the skies.

The cost of military operations, the building of fortifications and shelters, the maintenance of large numbers of men under arms, the purchase of large quantities of military equipment, and the expansion of local arms manufacture, as well as a massive housing program to meet the needs of increased immigration, had a threefold effect. There was a sharp upward trend in economic activity, which started in the second half of 1967 and continued in the succeeding years; the state budget swelled and the government had to take more money from the public in taxes and loans; and there was a drastic worsening in the balance of payments, leading to a drop in foreign-currency reserves (see Israel, State of: *Economic Affairs, section on Economic Development). Full employment and rising prices led to pressures for wage increases, which were partially restrained by a "package deal" between the government, the Histadrut, and the employers' associations in 1970, providing for moderate wage rises (partly in the form of government bonds), coupled with stabilization of prices and taxes. The balance of the agreement was somewhat upset toward the end of the year by a tax increase, mainly in indirect taxes, which necessitated some rise in prices, and salary claims by professional men, port workers, and others, many of them supported by strike action. In view of the strain on the government's finances, the Jewish Agency took over a larger part of the responsibility for social services and support for higher education. Appeal funds totaled about $250,000,000 in each of the years 1968/69 and 1969/70.

In 1970 the Israel air force stepped up its attacks on the Egyptian army camps near Cairo and other towns along the Nile in an attempt to compel the Egyptians to observe the cease-fire. In March it became known that the Soviet Union had come to Egypt's rescue by installing SA3 missiles, which had to be manned by Soviet crews, and providing Soviet pilots to fly operational missions in the canal zone. Until then the Soviets had confined themselves to the function of "advisers" to the Egyptian army, although these were to be found on a low tactical level, as well as at headquarters, and were known to have played an active part in the planning and execution of military operations. On April 18 Israel aircraft were challenged by Russian-flown Egyptian planes, and it was clear that Soviet involvement in the war had reached an advanced stage. Israel decided to refrain from further deep air penetration in order to avoid a dangerous clash with the Soviets, but replied to the Egyptians' spring offensive with heavy air bombardments of their lines close to the canal in order to prevent the rebuilding of their antiaircraft defenses, which might have enabled them to neutralize Israel's air power and, later, to make an attempt to cross the canal in force. In July the Soviet SA3 missiles went into operation for the first time against Israel planes. Israel stated that, while not wishing to clash with the Soviets, she would repel any attempt to make her withdraw from the Suez Canal line without a peace settlement and called upon the United States to deter the Soviets from active involvement in the war. At this stage, an American peace initiative produced a new situation.

Since early in 1969 Four-Power talks – between the U.S., the U.S.S.R., Britain, and France – and Two-Power talks, between the two superpowers, had been proceeding in an effort to agree on "guide lines" for Ambassador Jarring's mission. Israel expressed serious reservations about these talks, in which it could only rely on qualified American support while the Arabs were assured of out-and-out Soviet backing and general support from France, with Britain's attitude, at best, uncertain. Israel contended that a settlement would only be reached by agreement between the parties to the dispute and repeatedly called on the Arab states to enter into peace negotiations in which each side would be free to make any proposals it pleased. On October 1 Prime Minister Golda Meir responded affirmatively to a reported hint by Egyptian Foreign Minister Mahmud Riad that his country might be prepared to accept "something like the Rhodes formula of 1948–49" for indirect negotiations, but the proposal was disavowed by the Egyptian government spokesman. Detailed U.S. proposals for a settlement with Egypt and Jordan, announced by U.S. Sec-

retary of State Rogers in December 1969, were rejected by the Israel government and the Knesset, as they would only permit "insubstantial changes" in the pre-1967 borders. Continual efforts were made to obtain further arms from the United States, which had become Israel's only supplier of military aircraft, as 50 French Mirages, ordered and paid for before the Six-Day War, were held up and a complete embargo on military supplies, imposed by President de Gaulle after the raid on Beirut airport, was being maintained by his successor. In December 1968 it was announced that President Johnson had agreed to supply Israel with 50 Phantom planes, but Israel now asked for 25 more Phantoms and 100 Skyhawks in addition. No public reply was given, but American spokesmen indicated that the United States would not allow the arms balance to be disturbed to Israel's disfavor.

On June 19, 1970, Secretary of State Rogers proposed that discussions on the establishment of a just and lasting peace should be held between Israel and Egypt and Jordan, respectively, under the auspices of Ambassador Jarring. The discussions should be based on "mutual acknowledgment" by the parties "of each other's sovereignty, territorial integrity and political independence," and on "Israeli withdrawal from territories occupied in the 1967 conflict" in accordance with Security Council resolution 242. To facilitate agreement, the cease-fire with Egypt should be renewed for a period of three months at least. On August 4 Israel accepted the American proposal, making it clear that she regarded the original Security Council cease-fire resolution as still binding, that the object of the discussions would be to achieve "an agreed and binding contractual peace agreement," that Israel armed forces would be withdrawn only to "secure, recognized and agreed boundaries to be determined in the peace agreements," and that each party would be free to present its proposals on the matters under discussion. The decision was taken after receiving assurances from the United States that the cease-fire would include a standstill in a zone extending 30 mi. (50 km.) on either side of the Suez Canal, in which both parties would refrain from changing the military status quo by stationing additional missiles or other installations. Gaḥal, while accepting the cease-fire proposal, would not agree to negotiations on withdrawal from the territory of Erez Israel, and its six ministers resigned from the cabinet, with effect from August 6.

The renewed cease-fire went into effect on August 7, but on its very first day Israel intelligence discovered that a number of missile sites in the standstill zone west of the canal had been moved forward, and further violations of the agreement were discovered on succeeding days. After several days the violations were confirmed by the United States from its own intelligence sources. Israel charged that a complete new electronic defense system, consisting of SA2 and SA3 missile batteries, had been erected up to within 6 mi. (10 km.) of the canal, capable of striking at Israel aircraft up to a distance of 20 mi. (30 km.) east of the canal and providing cover for Egyptian artillery, which could inflict heavy damage on Israeli positions as a preliminary to an attempt to cross the waterway.

Defense Minister Dayan and army spokesmen, however, stated that Israel's armed strength had increased during the cease-fire and expressed their confidence that any renewed Egyptian attack would be doomed to failure.

The Israeli government, while appointing Foreign Minister Eban as the Israeli representative to the Jarring talks and UN Ambassador Tekoah as his deputy, declared that the immediate and massive violation of the cease-fire standstill agreement cast doubt on Egypt's readiness to observe any agreement to which she might set her hand. It therefore decided on September 6 to suspend participation in the Jarring talks until the missiles were withdrawn and the status quo ante in the canal zone restored. The United States showed understanding for Israel's reluctance to continue the talks in the circumstances and pressed the Soviet Union and Egypt to rectify the position in the Canal zone. These efforts were unsuccessful and there was no apparent change in the situation after the death of Nasser on September 28 and the election of Anwar Sadat to succeed him. The United States tried to induce Israel to return to the talks, however, and President Nixon asked Congress to appropriate $500,000,000 in credits for the supply of arms to Israel to neutralize the Egyptian build-up. At the end of the year, after intensive negotiations with the U.S. administration, the Israeli government decided that conditions had been created that would justify the reopening of the Jarring talks, and the decision was approved by the Knesset on December 29.

Toward the end of the year public opinion in Israel was deeply moved by the plight of Jews in the U.S.S.R. and their open demand for the right to *aliyah*. Mass demonstrations were held at the Western Wall in Jerusalem in the second half of December, during the trial of Jews in Leningrad on charges of planning to hijack a plane in order to leave the Soviet Union. After a statement by the prime minister on behalf of the government, the Knesset called on friendly nations and world public opinion to press for the removal of the restrictions on the freedom of Soviet Jews to leave the U.S.S.R. and settle in Israel.

[Misha Louvish]

From the Yom Kippur War to the First Intifada

With the relaxation of military tension and the cessation of almost all military activities along the borders from 1971 to 1973, the period was marked by a greater concentration on domestic problems. In spite of the border tranquility, however, security expenditure kept rising due to the need to finance costly and modern weapons, about one-third of the budget being earmarked for defense. The growing budget, shortage of labor, influx of foreign capital, and spiraling wage demands resulted in rising inflation. The continued economic boom resulted in conspicuous consumption, including massive foreign travel, and stressed the growing social inequality.

This inequality was at the root of growing discontent among the lower income strata, predominantly Oriental Jews, living in urban slums or in development towns, with large families, and inferior education. This gave rise to a group of

young people known as the Black Panthers who organized demonstrations in Jerusalem and Tel Aviv calling attention to their plight and demanding housing for young couples, better schools, and job opportunities. The initial reaction of the Labor Government was to dismiss the entire affair, and the prime minister termed them "not nice," a phrase that was to cost Labor heavily in the elections of 1973 and, more particularly, of 1977.

After some consideration, however, the government did begin to deal more urgently with social needs, and increased budgets for education, housing, and social welfare were allocated. In June 1973, the Prime Minister's Committee on Disadvantaged Youth, consisting of 126 experts, issued its report, which revealed that in the late 1960s there were some 160,000 disadvantaged children in Israel from the point of view of parents' income or educational status and substandard housing. Of them 25,000 were disadvantaged in all three criteria. On the eve of the Yom Kippur War, the cabinet decided to establish a Youth Authority consisting of representatives of ministries dealing with social affairs. Additional budgets were allocated for housing, education and social services, but the ambitious plans fell victim to the Yom Kippur War and the need to finance massive rearmament in its wake.

Between 1971 and 1973 a wave of strikes hit Israel, chiefly in the public service sector, causing hardship and resulting, usually, in wage rises. In some cases the strikes were called without the knowledge or agreement of the Histadrut, in others against its wishes, and it lost out to works committees who were highly critical of the government policies, which, they claimed, favored the rich. The secretary-general of the Histadrut, Yizḥak *Ben-Aharon, was also outspoken in his criticism of the policies of Finance Minister Pinḥas *Sapir, charging him with giving preference to industrialists, investors, and the newly rich, but ignoring tens of thousands of families in poverty.

The major preoccupation of the government on the eve of the 1973 elections consisted in the security situation, which seemed better than ever, social problems, and the future of the Administered Areas, which was the focus of a major debate in the Alignment. The discussion on the territories took first place in the minds of the Israeli leaders, and as elections drew near Minister Galili issued a document for approval by the Labor Party designed to placate Defense Minister Dayan and determine Israel's policy in the areas in the next four years. This was to include continued development of the services, new settlements, the continuation of the open bridges policy, the expansion of plans for Arab refugee resettlement, the continuing development of the Jerusalem area as well as the purchase of land in the areas. Among the areas to be developed was the Rafiaḥ Salient, to include a new city, Yammit, and a deep water port. The Galili Document became part of the Labor election platform.

Another important political development took place in July 1973, when General Ariel *Sharon, recently demobilized from the IDF, was able to bring about a new political bloc called the Likud, consisting of Ḥerut, the Liberals, the Free Center and the State List. General Sharon was co-opted to the Likud list of candidates for the Knesset.

There was no abatement in the struggle against Arab terror during the 1971–73 period, with Israel scoring major successes but also suffering tragic setbacks, such as the massacre committed at Lod Airport in May 1972 by a group of Japanese terrorists, who killed over 25 people in cold blood. In September of that year the PLO captured and killed eleven Israeli athletes and trainers, the bulk of the Israeli team for the Munich Olympic Games. The tragedy raised serious questions in Israel regarding the protection of the team and led to the appointment of an inquiry committee and a tightening up of security measures. Successful operations by Israeli agents in Europe and in Beirut nipped in the bud many planned PLO attacks and saved countless lives.

THE YOM KIPPUR WAR AND ITS AFTERMATH. On the eve of the *Yom Kippur War the mood of Israel was mixed. Supreme confidence reigned with regard to security matters, but serious questions were raised regarding the country's goals, and there was growing disenchantment with its aging leaders, who, it was claimed, were beginning to lose touch with the new realities. Whatever achievements had been attained in the previous 25 years, all of them under Labor rule, were clouded by a sense of loss of direction, a drift towards the unknown, and open dissension in matters such as religion, social progress, relations between Israeli Jews and Israeli Arabs, Israel and the Diaspora, and even the arrival of Soviet immigrants, a miracle in itself, ran into difficulties in their absorption.

The buildup of Syrian and Egyptian forces during the month of September 1973 had been noted by Israel but written off as routine maneuvers. Few imagined that the Arabs would dare challenge Israel's military supremacy. Israel's overconfidence and its misreading of Arab intentions and capabilities were a recipe for military disaster. Only hours before the Arab attack was launched did it become clear that the armies of Syria and Egypt were massing for war. Immediately Israeli reserve units were called up, but by then it was too late.

At 2 P.M. on October 6, Yom Kippur, three Syrian divisions accompanied by 1,400 tanks rolled into the Golan Heights while 70,000 Egyptian troops crossed the Suez Canal and quickly overran Israel's entire line of defense. The Syrians advanced toward Rosh Pinnah and the Sea of Galilee while the Egyptians established three major bridgeheads on the Canal. On the Syrian front Israeli counterattacks brought a halt to the Syrian advance by October 8. Two days later the Syrians were in retreat and on October 11 Israeli forces moved into Syrian territory and established a line of defense 20 miles from Damascus.

The Egyptians had dug in along the Canal and only resumed their advance on October 14. By that time Israel had massed its reinforcements and these were able to block the Egyptian advance. On the night of October 15, under General Sharon, Israeli forces crossed the Canal and within days

managed to surround the 20,000-man Third Egyptian Army. Fighting ended on October 24 with the Egyptians still entrenched on the east bank of the Canal while Israel maintained its stranglehold on the Third Army on the west bank.

The Yom Kippur War changed everything. Despite the fact that Israel won the most impressive military victory in her history, the shame and humiliation of the surprise attack by the Syrians and the Egyptians and the staggering number of casualties (over 2,500 dead) stunned the country. Serious doubts were sown in the minds of people regarding the capability of Israel's leadership. Demands were made for a thorough investigation of the events that led to the war and the shortcomings and blunders that found Israel unprepared. Israel's growing international isolation, serious economic problems, its almost total dependence on the United States for military, political and economic aid, and internal disarray, all led to the rise of a number of protest movements that demanded an immediate change in the government. The cabinet appointed a commission of inquiry in November 1973 headed by the president of the Supreme Court.

The 1973 elections, postponed from October to December 31, 1973, were held in this atmosphere. Labor won 51 seats, remaining the strongest and largest party. Likud increased its strength to 39 and became the major opposition party. The religious parties held their ground, as did the Communists. A new group, called the Citizens' Rights Movement, won three seats. Prime Minister Meir reformed her cabinet, but following the publication of the Agranat Commission Report on the events that preceded the Yom Kippur War, which led to the resignation of the Chief of Staff David Elazar, the removal of the director of military intelligence, and the commander of the Southern Front, but found no fault in the conduct of Defense Minister Dayan, Mrs. Meir resigned on April 11, 1974. She remained as caretaker prime minister during the negotiations with Syria for a disengagement agreement, while the Labor Party chose Yitzhak *Rabin over Shimon Peres as its candidate for the office of prime minister. He presented his new cabinet to the Knesset in June.

Rabin, born in Jerusalem in 1922, was the first prime minister born in the country, thus bringing to an end the rule of the "founding fathers." He did not include in his cabinet Abba Eban or Moshe Dayan, and Pinḥas Sapir chose to become chairman of the Jewish Agency. Rabin's policy was concentrated on the rehabilitation of the IDF, a slow progress towards peace with Egypt in a series of limited agreements, while re-building the shattered Israeli economy and, above all, the morale of the people and their self-confidence. Following the 1975 Interim Agreement with Egypt, the failure to reach an agreement with Jordan, and the continued civil war in Lebanon, Rabin felt that he could concentrate more on domestic matters, which had been neglected because of the war and its aftermath. He was unable, however, to exert leadership in this sphere and the old problems that plagued Israel before the war resurfaced. Labor relations deteriorated and strikes, especially in the public services, were endemic. The Israel pound was devaluated constantly and inflation rose at an alarming rate. Nevertheless, in 1976 the economic policies of the government were able to reduce Israel's chronic balance of payments deficit. Social tensions continued, but there was little the government could do to divert funds into social services, owing to the need for a crash program of re-arming and of purchasing the most modern and sophisticated American weapons.

Rabin was also being challenged by *Gush Emunim, a group that demanded large scale Israeli settlement in Samaria. In November 1975 it defied the government by settling in Kaddum. It was supported by Menaḥem Begin and the NRP, and Rabin surrendered to pressures and agreed to allow the settlers to move to a nearby army camp. Other attempts made to settle in other parts of Samaria and in Judea were thwarted by the IDF.

At the end of 1975 there was already open criticism of the leadership of Rabin, not only among the opposition and coalition parties, but even in the governing party itself. An invitation to Golda *Meir to join the "Leading Forum" of the Labor Party was regarded as a sign of weakness of Rabin's position. It transpired that the most vehement critics against the government came from the "dovish" circles of the Alignment itself, the most prominent among whom were the former Foreign Minister Abba *Eban and Yiẓḥak Ben-Aharon. In the middle of May 1976 an unsuccessful attempt was made within the Labor Party to bring about reconciliation between Rabin and Defense Minister Peres who was challenging the prime minister.

The prestige of the Labor Party in general and that of Rabin in particular, was hard hit when it became known that Asher Yadlin, who had been nominated as governor of the Bank of Israel and was one of the central figures of the Labor Party and chairman of the Kuppat Ḥolim of the Histadrut, was being investigated by the police following rumors of his having been involved in foreign currency violations and illegal business transactions. Yadlin was subsequently found guilty of receiving a bribe, tax evasion, and illegal land transactions and sentenced to a 5-year prison term.

A NEW POLITICAL ERA. At the end of May 1976 Prof. Yigael *Yadin announced his intention of forming a new political party, which was formed in November, under the name "The *Democratic Movement for Change" (DMC). Among the basic principles of his program was his belief in a "Jewish democratic Israel," that Judea-Samaria could not remain under Israeli rule, and that the new party would be willing to conduct negotiations with the PLO, if the latter recognized Israel's right to exist. He maintained, however, that Israel should not be obliged to return to the pre-1967 borders, that important strategic positions must be retained, and opposed the establishment of another state "between the desert and the sea." Yadin also called for a change in the electoral system of Israel.

The year 1976 ended with a government crisis. A delay in the arrival of new American planes involved the desecration of the Sabbath at the official reception. The *National Re-

ligious Party protested, and on December 14, 1976, a Knesset session was devoted to this incident and, although a vote of no-confidence against the government was defeated, most of the n.r.p. members abstained.

This unprecedented action by a coalition party made Rabin decide on December 19 to remove the n.r.p. from the government, a step that would involve early national elections. He presented his resignation of the government to President Ephraim Katzir on the following day but continued to serve, in accordance with the law, as head of an interim government until the elections, which were fixed for May 17, 1977. In March 1977 the Labor Party convention chose Rabin as its candidate for the office of prime minister by a narrow majority. In the elections the Likud increased its representation to 43, while two seats were gained by Shlomẓion, which joined the Likud immediately after the elections.

The Alignment declined from 51 members to 32, and the Democratic Movement for Change won 15 seats. An analysis of the voting trends indicated that members of the Oriental communities and the younger voters tended to vote more for the Likud. Younger voters with higher education tended more to vote for the DMC.

The decline in the relative power of the Alignment had started in 1969 when it gained 56 mandates, but, as stated, only 51 in 1973, and 32 in 1977. Part of this continual decline stemmed from basic causes that were exacerbated, while others were due to special factors. The accumulation of opposition to any government with the passage of time is normal in any democratic society, but added to it were the effects of the Yom Kippur War which had not been properly reflected in the 1973 election because of the shock effect.

Additional factors were added in 1976 and 1977, among them the revelations of corruption in the upper echelons of government, the revelation of an illegal foreign currency account held abroad by Prime Minister Rabin and his wife, the treatment in the media of the foreign currency accounts of Abba Eban, for which, however, it was revealed that he had a permit, the suicide of Minister Avraham Ofer, the struggle between Rabin and Peres, the deterioration of labor relations with the approach of the elections, and the declaration of the president of the U.S.A. favoring a "homeland for the Palestinians" a short time before the elections in Israel. In addition there were the report of the state comptroller on the Defense establishment and the tragedy of a helicopter crash virtually on the eve of the elections.

The *Begin government took office on June 20, 1977, with the participation of the Likud, the NRP, and the support of Agudat Israel, Poalei Agudat Israel, and M.K. Flatto-Sharon; on October 24, 1977, the DMC joined the government.

Prior to that, on June 21, 1977, elections were held for the Histadrut. The results established a kind of balance to those of the Knesset elections. Apparently some of the voters in these elections refrained from voting against the Alignment and "balanced" their Knesset vote by continuing to give their support to the Alignment in the Histadrut. The results of the Histadrut elections were Alignment (EMET), 54.6%; Likud (MAḤAL), 28.8%; and the DMC, 8.2%.

The first few months of the Begin administration were marked by a cabinet led by a strong leader who insisted on unity and discipline in the ranks of the ministers. But after six months, following the visit of Sadat to Jerusalem and the beginning of the 16-month-long negotiating process for an Israel-Egypt *peace treaty, cracks appeared. The prime minister was totally absorbed in foreign affairs; the economic ministers were soon facing major problems of spiraling inflation, shortage of housing, and strained labor relations. The Histadrut had almost no common language with the Likud government and at times urged workers to make radical wage demands. Most hurt by the inflation were those who voted for the Likud, the Oriental Jews who, at the lowest levels of Israeli society, were expressing disenchantment with the government and its lack of coherent economic and social policies.

By the end of 1978, while Israelis appreciated the historic breakthrough in the Camp David Agreements, there was growing apprehension over the social and economic costs of peace with Egypt and the need to evacuate all of Sinai, including its 20 settlements and all its military installations. Personal rivalry among cabinet members, constant open bickering and the leaking of secrets, brought a serious deterioration in the stature of the cabinet and damaged the standing and reputation of the prime minister.

In December 1978 the era of the Founding Fathers came to an end with the death of Golda Meir, who had led Israel during one of its most trying times – the Yom Kippur War. Scores of world leaders attended her funeral in Jerusalem. Israel figured on the world scene when Prime Minister Begin shared the Nobel Peace Prize with President Anwar Sadat. The early months of 1979 were devoted to the conclusion of the negotiations for an Israel-Egypt peace treaty, which was finally signed after dramatic round the clock talks in Jerusalem, Washington and Cairo, and a flying visit by President Carter to the area. The historic occasion of the signing of the Peace Treaty on March 26, 1979 was impressively celebrated throughout the country. Mr. Begin was the focus of admiration and congratulations for his role in achieving this historic breakthrough. In April 1979 he paid a two-day visit to Cairo for the purpose of cementing the relations between the two countries.

The peace treaty, however, could not cover up the growing difficulties of the Begin government, which was constantly plagued by internal dissent and rift. The splits in the cabinet grew worse when Dr. Yosef Burg, the minister of interior and police, was appointed chairman of the Ministerial Committee for the conduct of the Autonomy talks. As a result Foreign Minister Dayan tendered his resignation in October 1979. He was succeeded by Knesset Speaker Yitzhak *Shamir, a Ḥerut loyalist who had abstained in the voting on the peace treaty with Egypt, Shamir being succeeded as speaker by the Liberal MK Yitzhak Berman. In May 1980 Defense Minister Ezer Weizman resigned following disagreements over cuts in the defense budget and continued bickering with the prime min-

ister over relations with Egypt. In October 1980 Justice Minister Shmuel Tamir resigned as well. He felt that three ministers could not represent his shrunken party, the Democratic Movement, in the cabinet when its entire strength in the Knesset amounted to four members.

In November 1979 Finance Minister Ehrlich was replaced by Yigael Hurwitz, the former minister of industry, commerce and tourism, who resigned in September 1979 because of his opposition to the Camp David Agreements. Mr. Hurvitz vowed to curb inflation, balance the budget and increase exports. (For details see Israel, State of: *Economic Affairs.) The mood of the country as a result of the economic situation was further dampened by the increase in the percentage of drop-outs among emigrants from Soviet Russia and in emigration from the country (see Israel, State of: *Aliyah and Absorption 1971–1981).

The inflationary spiral was also fueled by the evacuation from Sinai and the new deployment of the IDF in the Negev, where two airbases were built by American companies. The almost clockwork operation of the evacuation from Sinai (see Israel, State of: *Defense Forces, 1971–1981) was conducted by the army alone and did not disrupt the civilian economy.

Growing unrest in the administered areas marked the year 1980. This followed the Camp David Agreements and the refusal of Jordan and the Palestinians residing in Judea, Samaria and the Gaza region to become involved in the negotiations leading to their autonomy. In separate incidents, two Arab mayors were attacked by unknown assailants and seriously injured, while the murder of six Israelis in Hebron in May 1980 was followed by the expulsion of the mayors of Hebron and Halhoul, an act that was later upheld by the Israeli Supreme Court. The unrest, expressed mostly in strikes by students, resulted in harsher Israeli measures which led to increased disquiet. The coexistence policy adopted by Defense Minister Dayan in the late 1960s and followed by his successors Peres and Weizman was apparently coming to an end. But living standards in the areas continued to improve as did the economy there.

The feeling of isolation was increased by the annual UN General Assembly discussions, where Israel was the focus of some 50 percent of the debates and was roundly censured. Hopes that the Israel-Egypt Peace Treaty would ease the situation and at least restore relations with some African and Asian nations did not materialize. On the contrary, after the passage of the Jerusalem Law in October 1980, all the embassies that still resided in Jerusalem moved to Tel Aviv.

In the last quarter of 1980, for the first time in the history of Israel, a member of the cabinet was charged with a criminal offense when Religious Affairs Minister Abu-Hatzeira was accused of taking bribes. His Knesset immunity was lifted and he prepared to face a trial. The affair rocked the National Religious Party and further weakened the standing of the Begin government.

The dominant issue in 1981 was the elections for the Tenth Knesset held on June 30. Bitterness, animosity, and violence, chiefly between the two large blocs – the Labor Alignment and the Likud, marked the election campaign. They campaigned on the slogan of who would offer effective leadership, economic programs, the continuation of the peace process, social progress, reduction of tensions between secular and religious, Sephardi and Ashkenazi, young and old, veteran and newcomer, urban and rural settlers, Arab and Jew, and even men and women. Part of the campaign was focused on the retention of the administered territories, championed by the Likud, Teḥiyyah, and part of the National Religious Party. The prime minister dominated the scene and led his Likud party to a second term in office.

In foreign policy, the major initiatives of Israel were undertaken at the end of the year and included the signing of a Memorandum of Understanding on Strategic Cooperation with the United States on Nov. 30, the passage of the Golan Heights Law on December 14, and major efforts to renew ties with the African continent. The initiatives were sponsored by the prime minister and the defense and foreign ministers, who formed an inner "leading team" which determined major policy issues.

The decision of the defense minister to substitute military government with civilian administration in the West Bank and Gaza sparked unrest in those areas, which resulted in stern measures being taken against rioters and the closure, for two months, of Bir Zeit University near Ramallah.

Immigration declined drastically and sank to a low of 11,500, the lowest figure since 1953. Emigration rose and was estimated at 20,000. The Jewish population of Israel grew by only 1.5 percent in 1981 and reached 3.29 million. The major reason for the decline in immigration was the Soviet Union's decision to sharply curtail exit permits for Jews and the very high rate of drop-outs in Vienna (85 percent on the average).

Labor unrest continued and was expressed by many strikes, the most prominent of which was in the national airline, which almost led to the closure of El Al. At year's end the Histadrut attempted to reassert its declining authority when it forced the defense minister to freeze the planned reorganization of his ministry.

The death of Moshe Dayan on October 16 deprived Israel of one of its most colorful personalities, soldier and statesman, who had led Israel in war and peace.

FROM THE LEBANESE WAR TO THE FIRST INTIFADA. In a broad perspective of Israeli history, the decade of the 1980s was a period of internal strife, growing dissent over major issues such as the war in Lebanon, an era of economic reverses, serious decline in immigration but ending with a major influx, especially from the Soviet Union, and finally – the *intifada*, which brought Israel to face a renewed outburst of Palestinian nationalism.

The Lebanese War, which started on June 6, 1982, was long in the planning and was expected by many Israelis, who felt that the northern border area could not be left exposed to

terrorist attacks emanating from the mini-PLO state which had emerged in southern Lebanon. Initially, there was little public debate on the wisdom of the invasion. It was assumed that it would amount to a brief operation lasting less than a week, with few casualties, and covering a limited area, not dissimilar to other operations taken in the past. The Israel Defense Forces (IDF) planners, and above all the key figure pushing for war, Defense Minister Ariel Sharon, based their plans on a number of assumptions. They assumed that the United States would not oppose a brief operation, and that the Soviet Union would not get involved. They assumed correctly that apart from Syria, no other Arab state would intervene. They thought that Israel would need some five to seven days to complete the destruction of the mini-PLO state. They assumed that the Lebanese Christian forces would participate alongside Israel and that once the aims would be achieved, a central and effective government would be installed in Beirut which would sign a peace treaty with Israel. Sharon thought that the destruction of the PLO bases in Lebanon would allow him to deal more effectively with the Palestinians in the West Bank and Gaza. He also thought that in the future Israel and Syria would have to collaborate on deciding the future of Lebanon. Most of these assumptions proved to have been correct.

There were also a number of dissenting voices. The defense minister was warned by both the Mossad and Army Intelligence (*Aman*) that the Christian forces were an unreliable element, more of an armed militia than a trained and disciplined fighting army. Israeli planners did not understand the nature of Lebanon and its society, being more of a tribal and communal nation than a unified one. Above all, the planners failed to gauge the reaction inside Israel to a prolonged war which would demand a high number of casualties, and would give the IDF a new role – that of a police force in a neighboring country. The official aims, contained in the government's announcement of June 6, 1982, were the moving of the Northern Galilee settlements out of PLO artillery and katyusha range, the removal from Lebanon of external forces, and the restoration to that country of a centralized authority which would sign a peace treaty with Israel. It called on Syria not to participate in the war and promised not to attack its troops in Lebanon.

Within five days, most of the military aims were achieved. The IDF expelled the PLO units from southern Lebanon and destroyed the mini-state it had created there. But this was done with a higher casualty rate than anticipated, and with Syrian involvement. Superior Israeli military technology resulted in the destruction of over 100 Syrian jet fighters and a vast number of Syrian missile batteries on Lebanese territory. By the fifth day Israeli military units reached the edge of Beirut. It was then that the United States ordered Israel to cease fire, claiming that it had far exceeded its limited territorial war aims by moving farther north than the 40 kilometers it spoke of initially. Israeli Premier Menaḥem Begin had to accept a ceasefire, which actually never came into being as Palestinian troops continued to fight, as did the Syrian army, now threatened in its positions along the strategic Beirut-Damascus highway. By

the end of the first week, public opinion in Israel was aroused. Questions were being asked about the true agenda of the government, the real war aims, the growing number of casualties, and above all how long the IDF intended to stay in Lebanon and in what role. During June, July, and August 1982, while diplomats tried to hammer out an agreement which would remove the PLO from Lebanon and bring about a new order in that country, Israeli troops continued to shell Muslim West Beirut, cutting off water, power, and food. The aerial and artillery bombardment of West Beirut aroused growing international criticism and created hostile world public opinion. In Western media, Israel was portrayed as an aggressor fighting helpless civilians, creating a new refugee problem, this time in Lebanon. Feeble Israeli efforts to explain the true causes of the war and the need to remove the PLO threat to Israel fell on deaf ears. Growing dissent inside Israel was also reflected in the Western media. It became clear that Israel was becoming mired in the Lebanese bog with few considering how to extricate the IDF from that country. Prime Minister Begin argued that the achievements in Lebanon erased the shame of the Yom Kippur War, but that did not convince many Israelis of the need to remain in that country for any length of time.

Protracted negotiations led to the removal of both the Syrian army and the PLO from Lebanon. Israel was instrumental in getting the Christian forces leader Basheer Gemayel elected as president of Lebanon. But on September 1, 1982, Israel suffered two major setbacks. The first was the announcement of Gemayel, in a meeting with Prime Minister Begin, that he did not intend to sign a peace treaty with Israel, because he was first and foremost an Arab. The second was the proclamation of the "Reagan Plan" for a Palestinian settlement, which called on Israel to withdraw from most of the territories it held, and return them to Jordan in the context of a peace treaty. There was to be no Palestinian state, but Jordan would grant special status to the West Bank and Gaza. The situation of Jerusalem would have to be negotiated in the future. Begin, who had no prior notice of the plan, rejected it outright, saying it was not even a basis for negotiations. It looked as though the war in Lebanon had yielded little apart from securing northern Galilee and destroying the PLO as a military force and an important element in the Arab world. The assassination of Basheer Gemayel shortly before his inauguration (September 14, 1982) was the signal for a vicious reprisal by his Christian forces on Palestinians living in two refugee camps in Beirut – Sabra and Shatilla. With the IDF standing by not far from the camps, and unaware of the magnitude of the massacre which lasted three days (September 17–19, 1982), some 400 Palestinians – men, women, and children – were massacred before the IDF put an end to the killing. A clamor went up in Israel to establish a commission of inquiry to investigate the events in the camps. The demand, backed by a demonstration organized in Tel Aviv by left wing parties and groups in Israel, reputedly attracted some 400,000 people, the largest ever held in Israel. When Begin still resisted, he was confronted with a threat by President Navon to resign his of-

fice. Finally, the prime minister relented and a commission was constituted headed by Supreme Court President Justice Kahan. While it began its work, tempers cooled and the country awaited two decisions – the verdict of the commission and a political decision on how long and within which borders the IDF would remain in Lebanon.

The government decided to order the IDF to remain in Beirut until an agreement could be worked out with the new Lebanese government headed by Amin Gemayel, the brother of the late Basheer Gemayel. As time went on, the IDF became involved in local communal strife in Lebanon. The Kahan commission issued its report in February 1983. It found the IDF indirectly responsible for the massacre, calling for the resignation of the defense minister and senior army officers. Ariel Sharon had to leave his post but remained in the government as minister without portfolio. Senior officers also had to leave, among them the director of military intelligence. Others, including the chief of staff, did not have their term of duty extended.

On May 17, 1983, after long and difficult negotiations with the participation of U.S. Secretary of State George Shultz, Israel and Lebanon signed an agreement, which fell short of a peace treaty. It ended the state of war, recognized Israel's need to have a security zone in southern Lebanon under its control, called for an Israeli diplomatic presence in Beirut, and demanded the withdrawal of all foreign troops from Lebanon, which meant in effect Syrian troops. The agreement was hinged on this withdrawal. When Syria announced that it would not withdraw its troops, the agreement became a dead letter. Nine months later the Lebanese parliament failed to ratify it and the agreement in effect lapsed. For the next two years, the IDF sought ways to extricate itself from Lebanon, finally withdrawing under orders from the National Unity Government which came into being in 1984. By the summer of 1985, the Lebanese episode ended, leaving Israel in a security zone in southern Lebanon, the PLO re-established in Tunisia, the Syrian army in Lebanon, and Israeli public opinion highly uncertain whether the toll of three years in Lebanon – 659 dead and thousands wounded – had been worthwhile.

In 1983 Israel faced an unprecedented economic threat, caused by the over-valuation of bank shares, inflated by the banks themselves. When the public began to unload these bank shares, there was a danger that the Israeli financial institutions would collapse and that overseas investors and depositors would remove billions of dollars, leaving the Israeli economy in the lurch. In October 1983 the Tel Aviv stock market was closed for 17 days and the government decided to buy the bank shares at a cost to the Israeli taxpayer of some 7 billion dollars. By late 1983 inflation in Israel reached the figure of 200% annually and by 1984 it had amounted to 448%. Inflation was destructive for the country's economic growth, morale, overseas investments, and labor relations. Even the resignation of Finance Minister Yoram Aridor, whose policies brought Israel to the brink of economic disaster, did not alleviate the situation. It took the Government of National

Unity's rescue plan (July 1985), which froze prices and wages and put in a mechanism of retrenchment to save the situation. Within a year, the rate of inflation was down to 20%. The plan was made possible by the cooperation of the government, the Histadrut (Trade Union Federation), and the Manufacturers' Association. The three factors realized that with no serious action, Israel's economy would literally collapse. Prime Minister Peres engineered the rescue operation, with the help of Finance Minister Yitzḥak Modai and the Histadrut leadership. The Israeli public, asked to make sacrifices in lowering its standard of living, agreed once it saw a coherent economic policy.

The Government of National Unity (see Israel, State of: *Political Life and Parties) brought about three major achievements – it extricated Israel from Lebanon, it rescued its economy, and it restored public confidence in the economy and the leadership. It failed to attract a mass wave of immigration, and the decade of the 1980s up to 1989 saw an average of some 12,000 immigrants a year, while the number of emigrants leaving Israel reached similar figures. The gates of the Soviet Union were closed and immigration from the free world dwindled. The outstanding exception was the airlift of 17,000 Ethiopian Jews to Israel in 1984. The Jewish Agency decided to transfer to the government much responsibility in the area of immigrant absorption, previously under its domain. The peace process was virtually at a standstill because of the vast chasm between the views of the Likud and those of Labor (see Israel, State: *Foreign Relations).

The absence of meaningful progress towards peace, the growth of a generation of young Palestinians who knew nothing else but Israeli occupation, an economic recession in the oil-producing Arab states which drastically reduced flow of funds to the areas held by Israel causing serious economic hardship, and above all resentment of the prolonged Israeli presence on the one hand and the impotence of the PLO and the Arab governments to change the situation, all this erupted in late 1987 in an uprising called the *intifada* ("shaking off"). A series of demonstrations in the Gaza Strip on December 9, 1987 signaled the beginning of the *intifada*, led by young men in their early twenties, asserting themselves against both Israel and their elders. Starting with demonstrations, throwing stones, burning tires, the aims of those involved in the *intifada* were to call attention to the plight of the Palestinians, to the prolonged occupation in all its ramifications, to focus on the Palestinization of the conflict, to force the Arab states to take notice, to move the rest of the world to take action, and to make the Israel public and government take decisions on future policies. The major achievement of the *intifada* in its first four years was mainly in the area of public relations. Israel's image in the Western media plunged dramatically. The *intifada* leaders forced the PLO to follow its lead. The leaders of the *intifada* hurt the Israeli economy by calling on Arabs in the areas to boycott Israeli goods. The *intifada* helped to precipitate the decision of the U.S. government to recognize the PLO in December 1988, after the latter announced the

creation of a Palestine State in the 1947 partition borders, the acceptance of Israel, and what appeared to be a renunciation of terror. The U.S then embarked on a dialogue with the PLO. The *intifada* created major problems for Israel, whose army now had to deal with civil unrest, the mass demonstrations manned by women and young children. This time, unlike the years that followed the 1967 war, the bulk of the Palestinian Arab population seemed to support the uprising, as did a growing number of Israeli Arabs.

Faced with a new type of war, the IDF had to consider the ethical and moral issues involved in fighting against civilians. It was initially thought that if the *intifada* leaders would be caught and deported or imprisoned, the wave of attacks would die down, but this was not the case. As the *intifada* spread from Gaza to the West Bank, it began to claim Israeli lives, both civilian and military. By early 1993, some 160 Israelis had lost their lives. In that period over 1,600 Palestinian Arabs were killed, the majority at the hands of other Arabs who had accused their victims of collaborating with Israel. The IDF found itself having to fight what was essentially an unpleasant, at times "dirty," war. On the whole it succeeded, but there were cases of torture, unnecessary shooting and killing and a number of Israeli officers and soldiers were court-martialed for using illegal force. These were highly publicized in Israel and abroad, where the issue of human rights was prominent in the headlines and Israel was often the object of criticism.

The impact of the *intifada* on Israelis was at first marginal, but as time went on it became central. There was a feeling of a loss of personal safety, and as more acts of terror were committed in Israeli cities, Israelis realized that they were facing a new breed of Palestinians, some of whom were even prepared to engage in suicide attacks. The Gulf War and the resultant peace process put the *intifada* on the back burner for a time, but it remained a major problem for all Israeli governments, which feared that if not dealt with properly, the allegiance of the Palestinians would move from the PLO to the *Hamas (Islamic fundamentalists) who opposed the peace process, negotiations with Israel, and called for the elimination of the Jewish state. By 1991 the areas held by Israel were the arena for a fight for the hearts, minds, and souls of the Palestinians between the PLO and the Hamas movement. There was also a growing demand in Israel for unilateral withdrawal from the Gaza Strip and gradual disengagement from the West Bank as well. The reliance on some 120,000 laborers from these areas meant that their absence could cause havoc to Israeli agriculture, housing construction, and many services. Measures were undertaken to replace Palestinians by Israelis, but there was the need to find employment for Palestinians, as long as they remained an Israeli responsibility. Massive unemployment in the areas could result in an explosion, it was argued.

By the end of the 1980s, the continued *intifada*, the wave of immigration from the Soviet Union, and the end of the Cold War brought about the need for Israel to reconsider many of its social, political, and economic institutions. Many of them had served the country well in its formative years, but no longer provided answers to the complex issues of the final decade of the 20th century. It was widely agreed that reforms were sorely needed in the Histadrut, government corporations, political parties, the electoral system, and government control of many aspects of the life of its citizens; there was need to reconsider the relations between the secular majority and the Orthodox minority. Questions dealing with the nature of Israeli politics and the ties between big business and government had to be considered. But momentous events awaited the country.

[Meron Medzini]

The Road to Oslo and After

THE 1990 NO-CONFIDENCE VOTE. Unlike the post-1984 Knesset election situation, following the 1988 elections Prime Minister Yitzhak Shamir could have formed a narrow coalition of all the right-wing and religious parties. Shamir, however, had preferred to form a "national unity" government with Labor and other political parties.

On March 15, 1990, Shamir's government failed in a no-confidence vote in the Knesset, and became the only cabinet in Israel's history to be dismissed in this way, with 60 MKs voting against it, 55 for, and five abstaining. This followed a political maneuver which was later described as "the dirty trick" by former Prime Minister Yitzhak Rabin. Although officially the crisis began with the dismissal of Peres from the cabinet by Prime Minister Shamir, on March 13, the maneuver was actually planned by Labor leader Peres and Shas leader Aryeh *Deri, who hoped to form a new government under Peres as the new premier.

On March 20 President Chaim *Herzog asked Peres to try to form the new government. By April 11, just hours before the planned Knesset vote of confidence for the new government, it became clear that Peres' efforts had failed and that he could not mobilize a Knesset majority to support his new government. Herzog granted Peres further time to secure a majority, but on April 25 Labor conceded defeat. As a result, on April 27, President Herzog invited Acting Prime Minister Shamir to form the new government. Shamir succeeded in his efforts and his new government won a vote of confidence of 62 to 27 from the Knesset, with one abstention, on June 11. The Shamir government, officially Israel's 24th, was supported by the Likud, a few MKs who had previously defected from the Likud, the religious parties, and the extreme right wing parties. A number of Likud members who had previously challenged Shamir's leadership supported the new government. These included Deputy Prime Minister and Minister of Foreign Affairs David *Levi, Housing and Construction Minister Ariel Sharon, and Finance Minister Yitzhak Moda'i (who had previously defected from the Likud with a few other MKs to form the "Party for the Advancement of the Zionist Idea").

The failure of Peres and the success of Shamir demonstrated that most politicians belonging to the religious parties normally preferred participation in a Likud-led government to participation in a Labor-led government. Prior to the 1977 upheaval, religious parties had joined Mapai/Labor-led

governments, but all this had occurred when the Likud or its forerunners could not possibly have formed a majority coalition even with the full support of all the religious and right-wing parties.

IMMIGRATION. During 1990 over 200,000 immigrants arrived in Israel. During the following decade almost one million people immigrated to Israel and became Israeli citizens. Almost 90 per cent of the immigrants came from former republics of the Soviet Union. Between 1990 and 2003 another 50,000 or so immigrated from Ethiopia. This wave of immigrants was almost equivalent – in total numbers – to the huge wave of immigrants that flooded Israel after its birth and marked a significant shift from the decline in immigration during the 1980s, during which only 153,833 arrived. The main cause for the huge immigration was the collapse of the U.S.S.R. The new citizens of Israel changed its demography and its political profile significantly. The very high economic growth rate during the 1990s is also partially attributable to the huge immigration to Israel.

THE 1991 GULF WAR. The first Gulf War marked another strategic shift in the political environment of Israeli politics caused by global developments. In January and February of 1991, during the Gulf War, Iraq launched more than 40 SCUD missiles at civilian target in Israel. Israelis, who feared that some of these missiles would carry chemical warheads, were forced to wear gas masks during the attacks. The government faced a severe "retaliation dilemma." On the one hand, the U.S. supplied Israel with Patriot missiles to protect Israelis from these attacks, but it also pressured Israel not to intervene in the war in any active manner. On the other hand, Israel's ability to deter potential aggressors, which marked Israeli defense strategy for years, became questionable. The enthusiastic support of Saddam Hussein by the Arabs, such as PLO leaders, Jordanians, and residents of the West Bank, convinced many Israelis – including dovish left-wing politicians – to adopt more hawkish positions. At the time, it seemed that the government's relatively moderate policies during the war, coupled with the reactions of various Arab parties, significantly increased the popularity of the right-wing parties in general and the Likud in particular.

THE MADRID CONFERENCE. On October 30, 1991, Israel attended the Madrid Peace Conference, which was co-sponsored by the U.S. and the U.S.S.R. In their letter of invitation Presidents Bush and Gorbachev established a framework for both bilateral negotiations between Israel and Arab parties and multilateral talks. It seems that developments in the USSR and the Soviet bloc, the massive immigration to Israel, and the Gulf War were among the causes for participation of even hardline Arab parties in the conference. One innovative element of the talks was the presence of a Palestinian delegation, which was considered part of a "joint Jordanian-Palestinian delegation." In fact, the Palestinians participating in the conference could have been regarded as semi-official representatives of

the PLO. The acceptance of such a formula by Shamir and his relatively hawkish government signified a deviation from the past as talks with PLO representatives not only contradicted an explicit Knesset law but had also caused the dismissal of former Labor Minister Ezer *Weizman from the government by Prime Minister Shamir on December 31, 1989. It is also interesting to note in this context that Peres had been officially dismissed by Shamir in March 1990 following "unauthorized" talks he held with King Hussein of Jordan in London.

Shamir's decision to take part in the Madrid Conference increased the tension between the Likud and the small hawkish parties, Teḥiyya, Tzomet, and Moledet. Within a few weeks after the conference it became clear that Knesset elections would take place at a date earlier than that required by the law.

THE 1992 BASIC LAWS AND THE "CONSTITUTIONAL REVOLUTION." The Knesset decided to dissolve itself and to hold early elections for the Thirteenth Knesset on June 23, 1992. But prior to these elections many politicians believed that major changes should be made in the constitutional framework.

In March 1992 the Knesset passed three new basic laws: Basic Law: Freedom of Occupation; Basic Law: Human Dignity and Freedom; and Basic Law: the Government.

Basic Law: Freedom of Occupation was the most sublime of all Israeli laws from the formal point of view since it was protected by both a "limiting clause" and a "majority shield." The first protection was guaranteed by Article 4: "There shall be no violation of rights under this Basic Law except by a law befitting the values of the State of Israel, enacted for a proper purpose, and to an extent no greater than is required." The second protection was guaranteed by Article 7: "This Basic Law may not be amended except by a Basic Law passed by a majority of Knesset members." Basic Law: Human Dignity and Freedom was protected only by a limiting clause (Article 8) and Basic Law: the Government was protected only by a majority shield (Article 56).

It should be mentioned that other Israeli Basic Laws, with the exception of a few specific articles (most famous of which is Article 4 of Basic Law: the Knesset, pertaining to the system of elections and stipulating that it can only be amended by a majority of Knesset members, i.e., 61), are neither protected by a limiting clause nor by a majority shield. Nevertheless, in a number of cases, the Supreme Court under the leadership of its president, Aharon *Barak, ruled that all Basic Laws take precedence over regular Knesset laws. These rulings and the special formal status given to the 1992 Basic Laws gave the Court almost unlimited power to exercise judicial review.

The main idea behind another new Basic Law: the Government, which replaced the 1958 version of Basic Law: the Government, was the adoption of direct election of the prime minister. A major motivation behind this innovation, which significantly changed the basic nature of Israeli parliamentary democracy, was the dissatisfaction with a number of untow-

ard developments associated with the "dirty trick" of March 1990. Nevertheless, the implementation of this law was delayed until the elections to the Fourteenth Knesset, and the 1992 elections were held, as usual, for the Knesset only. A third version of Basic Law: the Government, which abolished direct elections of the prime minister, as a result of variious unresolvable complications in the system, was passed by the Knesset in March 2001. In the meanwhile, Binyamin *Netanyahu (1996), Ehud *Barak (1999), and Ariel Sharon (2001) had been elected by direct vote.

In 1994 a major development in the battle over judicial review took place when the Knesset rephrased Basic Law: Freedom of Occupation, stating that basic human rights would be honored in accordance with Israel's Declaration of Independence – thus giving the Declaration a legal status that took precedence over Knesset laws. In should be noted in this context that the Declaration of Independence determines that the State of Israel will be based on foundations of "freedom, justice, and peace, according to the vision of the prophets of Israel," and that it will provide "absolute equal social and political rights" to all its citizens.

THE 1992 ELECTIONS. The elections to the Thirteenth Knesset ended in an upset. The Labor Party recaptured the pivotal (middle) position in the Knesset. For the first time since the 1973 Knesset elections, Labor and the more "dovish" parties gained a majority – together controlling 61 out of the 120 seats. It is interesting to note that more votes were given to the right wing and religious parties, which together controlled only 59 seats, than to the left-wing parties. This occurred mainly because of a slight change in the electoral procedure: the threshold was raised from 1.0 per cent to 1.5 per cent of the valid votes. As a result 5.0 per cent of the valid votes went to parties that did not pass the threshold, as compared with 2.4 per cent in 1988. More votes were given to unsuccessful right-wing parties (such as Teḥiyya) than to unsuccessful left-wing parties (such as the Progressive List), and therefore these votes were lost to the right.

Ten lists of candidates won representation in the Thirteenth Knesset: four "left-wing" parties – Labor (44 seats), Meretz (12), Ḥadash (3), and the Arab Democratic Party (ADP) (2); three right-wing parties – Likud (32), Tzomet (8), and Moledet (3); and three religious parties – NRP (6), Shas (6) and Yahadut ha-Torah (4).

Public opinion polls conducted at the beginning of the campaign indicated a convincing lead for the Likud over Labor. Therefore, it is plausible to assume that developments during the campaign persuaded a decisive number of voters to change their votes. One such major event was the nomination of the popular Yitzhak Rabin instead of the unpopular Shimon Peres as Labor leader. Rabin's popularity inthe general public exceeded his popularity in his own party: In Labor's primaries almost 60 per cent preferred other candidates for the premiership. Rabin was considered as a relatively hawkish leader of Labor whose record as chief of staff of the Israeli

Defense Forces (IDF) was emphasized by his party to offset its dovish image, as the Palestinian Intifada (uprising) that had started in late 1987 continued to claim a heavy toll.

The Likud, which had reached the peak of its popularity toward the end of 1991 with Israel's participation in the Madrid Peace Conference, suffered a sharp decline in its popularity, especially due to severe internal dissent that made a bad impression on the electorate.

Nine per cent of eligible voters were immigrants, most of whom had come to Israel from the U.S.S.R. (and its successor republics). The new immigrants played a major role in the elections. According to several public opinion polls, turnout among immigrants resembled that of veteran voters. Approximately half of the immigrants supported Labor. In the following elections most immigrants had a change of heart and supported right-wing parties. Apparently, the 1992 immigrant vote resulted from absorption difficulties, while in later elections, right-of-center political views dictated their voting behavior.

Following the Likud's defeat in the 1992 general elections, Moshe *Arens, who was considered by many as a potential successor to Prime Minister Shamir, tendered his resignation from the Knesset. Shamir himself announced that he did not intend to continue leading the Likud. Consequently, the Likud held "primaries" to choose its new leader on March 24, 1993. The winner was Binyamin ("Bibi") Netanyahu, who was supported by 52 per cent of the 145,000 Likud members who cast votes. David Levi came second with 26 per cent, while Binyamin *Begin (15 per cent) and Moshe *Katzav (7 per cent) shared the remaining votes.

RABIN'S GOVERNMENT. After the 1992 elections Labor held negotiations with almost all the other parties which had had seats in the Knesset. Rabin presented his government – Israel's 25th – to the Knesset on July 13, forming a coalition with Meretz and Shas that controlled 62 of the Knesset's 120 seats. In the vote of confidence, Ḥadash and the ADP also supported the government. On the date of its investiture there were 13 Labor members in the cabinet, three Meretz members, and one Shas member. Rabin held, in addition to his position as prime minister, the portfolios of Defense and Religious Affairs. Shimon Peres, the second senior member of the cabinet, held Foreign Affairs.

Although Meretz and Shas could have been considered as the closest possible allies to Labor on questions related to the Arab-Israeli conflict, one of the main problems of Rabin's coalition was the constant tension between the anti-clerical Meretz and the ultra-Orthodox Shas on matters concerning religious affairs. Many of these clashes involved Meretz leader and Minister of Education and Culture Shulamit *Aloni and Shas leader and Minister of the Interior Aryeh *Deri. In December 1992, following another crisis, both Meretz and Shas were appeased by Labor: Meretz was given an additional seat in the cabinet and Shas was given control of the Ministry of Religious Affairs when one of its MKs was made deputy minister there.

Both Minister of the Interior Aryeh Deri and Deputy Minister of Religious Affairs Raphael Pinḥasi had been under investigation since 1990 on suspicion of corruption. Nevertheless, when Attorney General Yosef Ḥarish presented a draft of the indictment to the prime minister on June 20, 1993, Deri followed the instructions of Shas spiritual leader Ovadiah *Yosef and refused to resign. He and the three deputy ministers of Shas did resign on September 12, 1993, following a ruling of the Supreme Court ordering the dismissal of Deri and Pinḥasi. These resignations came into effect on September 14, a day after Israel and the PLO signed the famous Declaration of Principles (the first Oslo agreement; see below) in Washington, D.C.

Although Rabin's government became a minority government following the defection of Shas, it continued to enjoy the support of two parties which were not formal members of the coalition: the Communist-led Ḥadash and the ADP. Thus, Rabin continued to enjoy the support of 62 MKs. Furthermore, two MKs who defected from Raphael *Eitan's right-wing Tzomet Party joined the government as a minister and deputy minister in January 1995.

The main threat to the stability of the government was a result of its policies concerning the Arab-Israeli conflict. More than a third of Labor's parliamentary faction joined a group called "the Third Way." The Third Way opposed both the "ultra-dovish" positions of certain Labor leaders and the "ultra-hawkish" positions of various Likud leaders. It claimed that while Israel had to make major concessions in order to promote the peace process, Rabin's government was taking too many risks without an adequate response from the Arab partners to negotiations. The Third Way focused its criticism on the declarations made by the minister of foreign affairs and other dovish Labor leaders about the future of the Golan Heights. Peres repeatedly expressed his opinion that the Golan is "Syrian soil" and that no peace could be achieved without Israel's withdrawal from the Golan. Towards the end of 1995 it became clear that two Third Way Knesset members would defect from Labor and run their own party in the 1996 Knesset elections.

THE OSLO PROCESS. U.S. Secretary of State James Baker visited Israel immediately after Rabin's cabinet took office. This demonstrated the joint efforts by the U.S. and Israel to continue the bilateral and multilateral negotiations between Israel and its Arab counterparts as agreed to at the Madrid Conference. The peace talks were resumed in Washington D.C. on August 24, 1992. No practical agreement between the parties was reached, but a dramatic development took place in a completely separate negotiating channel.

After months of secret talks, most of which had been held in Oslo under the auspices of Norwegian Minister of Foreign Affairs Johan Jorgen Holst, Israel and the PLO reached an agreement concerning a Declaration of Principles – also known as "the first Oslo agreement" – signed between the parties in the presence of U.S. President *Clinton on September 13, 1993.

Many Israelis had been ready to negotiate with the PLO, at least according to the "formula" proposed by two members of the first Rabin cabinet (in 1974), Victor Shemtov and Aharon Yariv. The formula asserted that Israel would negotiate with "any Arab partner who recognized the right of Israel to exist and who was not involved in terrorism." The PLO, however, had not demonstrated a clear readiness to accept the Shemtov-Yariv formula, although the first steps towards such an end were made by it already in 1988. One reason for the declared readiness of the PLO to conduct negotiations with Israel in 1993 was its relative weakness as a result of its support of Iraq during the Gulf War, the consequent halt of financial aid from the Arab oil monarchies, the collapse of the Soviet Union – the other main sponsor of the PLO – and the growing popularity of groups competing with the PLO, including those inspired by fundamentalist Islamic beliefs.

The September 13 Declaration of Principles was preceded by an exchange of letters between Arafat, Rabin and Holst (September 10). In his letter to Prime Minister Rabin, Chairman Arafat accepted the principles of the Shemtov-Yariv formula and agreed to amend the Palestinian Covenant, which called for the violent extermination of the State of Israel (or any other "Zionist entity in Palestine"). In his letter to Foreign Minister Holst, he also promised to encourage Palestinians in the Gaza Strip and the West Bank to stop the violent *intifada* begun in 1997. In his reply to Arafat, Rabin recognized the PLO as the representative of the Palestinian people and welcomed its participation in the peace process.

Article I of the Declaration of Principles stated that: "The main aim of the Israeli-Palestinian negotiations in the current Middle East peace process is, among other things, to establish a Palestinian Interim Self-Governing Authority, the elected Council of the Palestinian People in the West Bank and the Gaza Strip …." A common reference to the declaration as the "Gaza-Jericho" agreement derives from Article XIV, which confirmed Israel's intention to withdraw from most of the Gaza Strip and the Jericho area.

One of the most vocal critics of the Israeli-PLO negotiations was the new leader of the Likud, Binyamin *Netanyahu.

The Oslo process continued in spite of an anti-Palestinian terrorist attack in Hebron and in spite of terrorist attacks against Jews in Israel and in other countries. On February 2, 1994, a Jewish settler, Dr. Baruch Goldstein, opened fire on Arab worshippers inside the Tomb of the Patriarchs (Ibrahimi Mosque) in Hebron – a site sacred to both Moslems and Jews. Goldstein killed 29 worshippers before he himself was killed. The unprecedented attack was strongly denounced not only by the president and the prime minister but also by all leaders of the Knesset factions and by the leaders of the Jewish settlers in the occupied territories.

On October 19, 1994, a bus was blown up in the middle of Tel Aviv, killing 22 civilians and injuring 47. More than 40 lost their lives in the explosion of the the Jewish community center in Buenos Aires on July 22, 1994, and more than 20 were

killed in Panama on July 19, 1994, in the explosion of a plane carrying many Jewish businessmen.

The continued bilateral Palestinian-Israeli negotiations led to a number of agreements between Israel and the PLO.

On May 4, 1994, Prime Minister Rabin and Chairman Arafat signed in Cairo an agreement on the Gaza Strip and the Jericho area. This agreement followed Article XIV of the Declaration of Principles (see above). The Cairo agreement consisted of 23 articles, four annexes, four accompanying letters, and six maps. During the ceremony, Prime Minister Rabin discovered that Chairman Arafat had deliberately neglected to sign the map of the Jericho area. This endangered the completion of the ceremony, which continued only after Arafat finally added his signature to the document.

The Cairo Agreement established a "Palestinian Authority" (PA), which "has, within its authority, legislative, executive and judicial powers and responsibilities." It was also agreed that "in order to guarantee public order and internal security of the Palestinians of the Gaza Strip and the Jericho Area, the PA shall establish a strong police force." Article XVIII stated that "both sides shall take all measures necessary in order to prevent acts of terrorism, crime and hostilities directed against each other, against individuals falling under the other's authority and against their property, and shall take legal measures against offenders."

On September 24, 1995, Foreign Minister Shimon Peres and Chairman Yasser Arafat initialed in Taba the Israeli-Palestinian Interim Agreement on the West Bank and the Gaza Strip, also known as the "Oslo B Agreement." This agreement was signed by Prime Minister Rabin and Chairman Arafat in Washington, D.C., on September 28, 1995. In the detailed 315-page document, Israel agreed that the Palestinians would gain full control of the six largest towns of the West Bank and civic authority and responsibility for public order in 440 Arab villages. The agreement transferred powers and responsibilities from Israel to an elected Council and elected Ra'is (President) of an Executive Authority. Chapter 1 of the agreement dealt with "the Council. Chapter 2 dealt with "redeployment and security arrangements." Chapter 3 dealt with "legal affairs," Chapter 4 with "cooperation," and Chapter 5 with "miscellaneous provisions." The document included seven annexes and nine maps.

Supporters of the Rabin government praised the agreement as a major step toward real peace between the Palestinians and Israel. They claimed that Israel had made only necessary concessions while preserving its option to reconsider the situation if the Palestinians did not fulfill their part of the agreement.

Critics claimed that the PLO would be generously rewarded in spite of the fact that it did not intend to give up its dream of eliminating the State of Israel voiced in its Covenant. They also doubted whether the PLO would fulfill its promise to change the Palestinian Covenant.

THE PEACE WITH JORDAN. When the secret negotiations between Israel and the PLO became public, King Hussein of Jordan expressed his dissatisfaction with the fact that the parties to the Madrid framework were holding their direct bilateral talks under cover. But soon enough he willingly participated in bilateral talks with Israel and on September 14, 1994 – a day after Israel and the PLO singed their Declaration of Principles – Israel and Jordan signed a "common agenda" for negotiations.

As was the case in 1993, the Israel-PLO Cairo agreement was followed by an Israel-Jordan agreement. On July 25, 1994, Prime Minister Rabin and King Hussein of Jordan signed the Washington Declaration in which they announced the termination of the state of belligerency between their two countries. President Clinton of the U.S. witnessed the declaration.

On October 26, 1994, the prime ministers of Israel and Jordan, Yitzhak Rabin and Abdul Salam Al-Majali, signed at the Aravah border crossing the Treaty of Peace between the State of Israel and the Hashemite Kingdom of Jordan. President Clinton also signed the treaty as a witness. The audience at the ceremony was addressed by King Hussein of Jordan, Prime Minister Rabin, Russian Foreign Minister Kozyrev, U.S. Secretary of State Christopher, Israeli Minister of Foreign Affairs Peres, and U.S. President Clinton. The exchange of instruments of ratification of the treaty by King Hussein and Prime Minister Rabin took place on November 10, 1994. The peace treaty included 30 articles, five annexes, and agreed minutes. In the preamble to the treaty the parties expressed their desire "to develop friendly relations and cooperation between them."

Unlike the case of the agreements with the PLO, almost all the leaders of the Likud supported both the Washington Declaration and the Treaty of Peace, and in the Knesset 105 members voted to confirm the agreement. Even vocal opponents of the government like Reḥavam Ze'evi, leader of the extreme Moledet Party, refrained in a Knesset speech from opposing the idea of peace with Jordan but criticized details of the treaty and reminded members of Jordan's past involvement in anti-Jewish and anti-Israeli policies, e.g., Jordanian support of Iraq during the Gulf War. It should be noted in this context that in 1994 it became publicly known that Prime Minister Shamir and King Hussein had held secret talks during the Gulf War in which they coordinated positions.

THE ASSASSINATION OF YITZHAK RABIN. On the evening of November 4, 1995, Yitzhak Rabin was assassinated. It was the first assassination of an Israeli cabinet member since the establishment of the State of Israel. Only once prior to Rabin's assassination had a Knesset member been assassinated. Rabin was shot in the back upon leaving a mass peace rally in Tel Aviv in which both he and Peres had participated.

Several gestures made by the generally restrained Rabin during the rally had been unprecedented. He had embraced his onetime arch-rival Peres and joined in during the singing of "The Song of Peace." The bloodstained text of the lyrics was later found in his pocket.

The murderer, Yigal Amir, a 25-year-old religious extremist and student of law at Bar-Ilan University, expressed

his satisfaction when he learned of the results of his act. A comprehensive investigation by the police and a judicial commission of inquiry headed by a former president of the Supreme Court, Meir Shamgar, concluded that no organization had stood behind the crime. Yigal Amir's brother Hagai and two friends were also indicted for their previous knowledge of Amir's plans and for the help they gave him. The investigation suggested that security measures had not been adequate and several officials, including the head of the General Security Service, were forced to resign.

The emotional reaction to the assassination threatened to tear the Israeli public apart. Many, including Rabin's widow, blamed the leaders of the right wing parties for creating the atmosphere that had made Amir's crime possible. Some suggested that the crime was the result of declarations made by extremist rabbis blaming Rabin for his "cooperation with the enemy." Consequently, a number of rabbis were investigated by the police. The leaders of all right-wing political parties and movements, including the leaders of the settlers in the occupied territories, and all prominent religious leaders, strongly condemned the crime.

Rabin's funeral was attended by a number of world leaders, including President Clinton of the United States, Prime Minister Chernomyrdin of Russia, Prime Minister Major of the United Kingdom, Chancellor Kohl of Germany, and President Chirac of France. A number of representatives of Arab countries, including a few who had never visited Israel before, also attended. King Hussein of Jordan said in his eulogy that Rabin died "as a soldier of peace." Other prominent Arab representatives were President Mubarak of Egypt and government ministers from Oman and Qatar.

Prior to the assassination it seemed that public support for Labor was on the wane, but according to public opinion polls conducted after the assassination, in November and December, it was the popularity of right wing leaders and right wing political parties that dropped considerably while the popularity of Shimon Peres and Labor reached a peak. This led to speculation that Peres, who succeeded Rabin as prime minister, might call early elections.

PERES' GOVERNMENT. Two weeks after being named acting prime minister, Shimon Peres completed the formation of a new government – Israel's 26th.

The parliamentary basis of the new government was similar to Rabin's. Most of the ministers continued to hold the same portfolios. Nevertheless, a number of changes in the composition of the cabinet are notable. Peres took the portfolios of prime minister and defense minister, previously held by Rabin. Peres added two new ministers to his cabinet. He asked Rabbi Yehudah Amital to join the government as a minister without portfolio. Amital, who had established a yeshiva in the West Bank, was the leader of the Meimad movement – a moderate religious group that had been established by former members of the National Religious Party (NRP) and that had participated unsuccessfully in the 1988 Knes-

set elections. Amital's nomination was intended to signal that in spite of Rabin's assassination, religious Jews and settlers in the occupied territories should be regarded as an integral part of the nation. The other new minister was Ḥaim *Ramon, who rejoined Labor and was named minister of the interior. He gave up his position as secretary general of the Histadrut. Amir *Peretz, Ramon's partner in the leadership of the Ram Party, became the new secretary general. Ramon had defected from Labor and established Ram in his successful 1994 attempt to capture the leadership of the Histadrut. Ehud *Barak, former chief of staff of the IDF, who had been appointed by Rabin as a minister of the interior in July 1995, became minister of foreign affairs.

Paradoxically, Peres, who had challenged Rabin's leadership so many times in the past, was regarded now as the late premier's closest friend and ally. Given the new circumstances, many observers argued that Peres was not only the most senior and experienced Israeli politician but also that his leadership was unshakable. Apparently, some of these observers overlooked the dissatisfaction with various government policies and the lack of popularity from which Peres perennially suffered. Nevertheless, Peres decided to call early elections for May 29, 1996.

On January 20, 1996, Palestinians living in Jerusalem, the West Bank, and the Gaza Strip elected the 88 members of the Palestinian Council and the Ra'is (president) of the PA, using a procedure agreed upon by Israel and the PLO in the September 1995 Interim Agreement. Arafat received 88.1 percent of the vote. The candidates of Arafat's Fataḥ group won an impressive majority in the Council, with little strong opposition to the Oslo process.

On April 24, 1996, the Palestinian National Council (PNC), the quasi-parliamentary supreme body of the PLO, voted to amend the Palestinian Covenant (the quasi-constitution of the PLO) by removing all clauses calling for the annihilation of Israel. Some Israelis criticized the nature of the PNC move, claiming that it did not meet the obligation undertaken in the Interim Agreement and in the letter sent to Rabin by Arafat on September 9, 1993. The critics emphasized that the PNC had not actually amended the Covenant but instead decided in principle that changes would be made, without specifying concrete clauses and concrete dates.

During the last week of February and the first week of March 1996, a series of suicide attacks on Israeli civilian targets shocked the country. The largest number of victims died in attacks carried out in Israel's largest cities, Jerusalem and Tel Aviv. Most of the attacks were carried out by the extreme Islamic group Hamas. As a result, the Peres government decided to impose almost total closure of the West Bank and Gaza Strip until after the May elections. The closure had a serious impact on the Palestinian economy.

Following attacks on Israeli soldiers in the "security zone" in southern Lebanon and the firing of Katyusha rockets into Israel by the paramilitary *Hizbollah organization, the government decided to launch a military operation, "Grapes of

Wrath," in Lebanon. The operation commenced on April 11, 1996. On April 18, a large number of Lebanese civilians were killed by artillery shells near the village on Qana. Prime Minister Peres blamed Hizbollah, stating that its strategy was to fire rockets and initiate other attacks while "hiding behind Lebanese civilians." The Qana incident provoked severe criticism of the government and its policy in Lebanon. Many Arab supporters of Peres declared that they would not support him in the May elections. On election day, however, over 95 per cent of Arab voters who participated in the elections supported Peres. Operation Grapes of Wrath ended in an "understanding" announced simultaneously in Jerusalem and Beirut on April 26, 1996.

THE 1996 ELECTIONS. In the May 29 elections the new electoral and institutional procedure that derived from the 1992 Basic Law: the Government, was implemented. Simultaneously with the elections to the Fourteenth Knesset the voters also elected the prime minister of Israel directly. According to the new law, in order to win a candidate had to have over half the valid votes. In the event that no candidate had an absolute majority, a second round, in which only the two leading candidates participated, would take place. A second round was not necessary in the 1996 elections, as there were only two candidates in the race: Shimon Peres of Labor and Binyamin Netanyahu of the Likud.

According to all public opinion polls, Peres led the race through the entire campaign. Nevertheless, following the wave of terrorist attacks on Israeli civilians in February and March, the gap between the two contestants narrowed to only a few points. Peres continued to lead until election day. Immediately after the closing of the polling booths, the two Israeli television networks declared Peres the winner on the basis of their exit polls. It only became evident that Netanyahu was the new prime minister of Israel four days later, when the count of those who voted in "double envelopes" (mainly IDF soldiers) was completed. Netanyahu won by a margin of 50.5 to 49.5 per cent of the valid votes. It should be mentioned, however, that 4.8 per cent of the votes were invalid. It seems that many voters preferred to express their dissatisfaction with both candidates by casting invalid ballots. Hence, Netanyahu actually got only 48.1 per cent of the total votes.

A primary aim of those who supported the new electoral system was to reduce the dependency of the prime minister on the small parties and individual members of the Knesset. But the law stated that although "the prime minister serves by virtue of his being elected," he must present his government to the Knesset. "Should the Knesset reject the prime minister's proposals for the composition of the government, it will be regarded as an expression of no-confidence."

Almost all the small parties called upon their supporters to split their vote, telling them which candidate to vote for as prime minister. The small centrist parties did not endorse any of the candidates but stressed the need to support their own parties in the Knesset elections "in order to ensure that the

elected prime minister will not become a captive in the hands of extremists in his bloc." In fact, the strength of the two large parties decreased dramatically, and the dependence of the newly elected prime minister on the small parties increased. Furthermore, in an early stage of the campaign, two small parties, Tzomet and Gesher, promoted their respective leaders, Raphael Eitan and David Levi, as possible candidates for the premiership. In order to increase the odds of being elected, Netanyahu agreed to join forces with both these parties at the price of giving their Knesset candidates relatively high places on the joint list. It is quite evident that Netanyahu would have had no real chance of being elected in the first round if Levi and/or Eitan had run as independent candidates.

In spite of Netanyahu's victory, the Likud-Gesher-Tsomet list came only second in the Knesset race, winning 32 seats compared with Labor's 34. The religious parties – Shas, NRP, and Yahadut ha-Torah – won 10, 9, and 4 seats, respectively. The anti-clerical and dovish Meretz Party won 9 seats. Two new parties, the "Russian" immigrants party, Yisrael ba-Aliyah, led by former dissident Natan *Sharansky, and the Third Way, led by former Labor member Avigdor Kahalani, won 7 and 4 seats respectively. The Communist-led Ḥadash party won 5 seats, the Arab Democratic Party (ADP) 4, and the extremist Moledet 2.

Prior to the elections, Labor had enjoyed a "blocking majority" of 61 together with its government coalition partner, Meretz, and with the support of Ḥadash and the ADP. In spite of the dramatic increase in the representation of the latter two, the entire "dovish" bloc dropped to only 52 seats, leaving the center in the hands of parties like the Sephardic-religious Shas, the ultra-Orthodox Yahadut ha-Torah, the centrist Third Way, and the new immigrants party, Yisrael ba-Aliyah. The Likud was placed by most observers to the right (i.e., being more hawkish) of these parties. Right of the Likud were the third religious party, the NRP, and Moledet.

NETANYAHU'S GOVERNMENT. Netanyahu's coalition (the 27th government of Israel) rested on 66 Knesset members. All the center and right-wing parties except Moledet participated in it. One of the cabinet members, Minister of Justice Ya'akov Ne'eman, was not affiliated with any of the political parties. When the attorney general ordered a police investigation into allegations that Ne'eman had obstructed court proceedings, he was forced to resign (August 8, 1996). Later he was acquitted.

Although many had argued prior to the elections that Netanyahu was not committed to the peace process in general and to the Oslo process in particular, his government decided within weeks of the elections to continue the negotiations with the PA. Only one minister, Binyamin Begin, voted against this decision. An initial meeting between Netanyahu and Arafat took place on September 4, 1996.

On September 23, 1996, the Hasmonean Tunnel at the ancient Western Wall was opened in the Old City of Jerusalem. On September 24, Yasser Arafat called on Palestinians

to strike and demonstrate against this opening of the tunnel. Muslim leaders claimed that the tunnel ran underneath the Temple Mount and that it would undermine the foundations of the Dome of the Rock and the Al-Aqsa Mosque built on the Mount. In fact, the tunnel did not run beneath the Temple Mount. The restoration of the tunnel by archaeologists had been going on since 1987. On September 25, violence erupted in the West Bank and the Gaza Strip. Attacks by Palestinian civilians and Palestinian police (who used weapons supplied by Israel) on Israeli soldiers and Israeli settlers left 15 Israeli soldiers and at least 50 Palestinians dead. These clashes were the most serious since the signing of the Declaration of Principles in September 1993.

On January 16, 1997, Binyamin Begin resigned from the cabinet in protest against the agreement between Israel and the PA for the withdrawal of the IDF from the Arab part of Hebron.

The most dramatic political scandal of 1997 was known as the "Bar-On for Hebron deal." According to a TV news report, Shas ministers had voted for the IDF pullback in Hebron in return for the nomination of Roni Bar-On, a criminal attorney, to the post of attorney general. According to the TV report Bar-On, who was forced to resign the post only two days after being named to it, was expected to arrange a plea bargain for the indicted Shas leader, Aryeh Deri. After an investigation, both Netanyahu and Justice Minister Tzachi Hanegbi were exonerated.

On March 12, 1997, a Jordanian soldier opened fire at schoolgirls who were visiting the "Island of Peace" located on the Jordanian side of the Israel-Jordan border. Seven girls died in the attack. On March 15 King Hussein came to Israel to make condolence calls to each of the seven mourning families.

During 1997 and 1998 the Netanyahu government as well as the Likud party suffered a number of major internal crises. It seemed that the stability promised by those who had supported direct elections of the prime minister was far from being achieved

One of the most important developments in the Palestinian-Israeli conflict was the agreement reached between Arafat and Netanyahu at Wye Plantation in October 1998. Both leaders, in the presence of President Clinton and the ailing King Hussein of Jordan, signed the agreement in the White House on October 23. According to the agreement, Israel was to transfer control over 13 per cent of the West Bank to the civil control of the PA as well as military control over an additional 14 per cent of the West Bank in which the PA already enjoyed civil control. In return, the Palestinian National Council (PNC) of the PLO was to revoke the articles in the Palestinian Covenant that called for the extermination of the State of Israel. The hardliners in Netanyahu's coalition opposed the agreement and his coalition became even less stable.

On December 21, 1998, the Knesset decided to have early elections "within six months" instead of the elections that should have taken place towards the end of 2000. A week later it was agreed that the new elections would be held on May 17, 1999.

THE 1999 ELECTIONS. Netanyahu's position prior to the 1999 elections grew weaker and weaker. His government had already lost its Knesset majority in December 1998. On January 23, 1999, Netanyahu decided to dismiss Defense Minister Yitzhak Mordechai following Mordechai's negotiations with the leaders of the new Center Party. Later, Mordechai was chosen as the Center's leader and its candidate for the premiership.

Already on June 3, 1997, Ehud Barak had been elected as the new chairperson of the Labor Party and its candidate for the premiership. Barak decided to call the Labor party "Yisrael Aḥat" ("One Israel") to give it a semblance of broad appeal and reach out for the religious and working class vote, which had been moving away from the party. David Levi's Gesher and Meimad joined forces with Labor in the creation of the new list.

The most dramatic events of the 1999 campaign took place in its last two days. Three candidates for the premiership: Azmi Bishara of Balad, Yitzhak Mordechai of the Center Party, and Binyamin Begin of National Unity decided to withdraw their candidacies, leaving only Likud's Netanyahu and Yisrael Aḥat's Barak in the race.

Barak won the election by an impressive majority of 56.1 to 43.9 per cent. Nevertheless, it appeared that among Jewish voters alone the elections ended in a virtual dead heat. In Jerusalem, the capital and largest city, Netanyahu won the race by a margin of 64.5 to 35.5 per cent.

Netanyahu resigned his position as Likud leader on May 18. He also resigned from the Knesset a few weeks later. The Central Committee of the Likud appointed Ariel Sharon as its new leader on May 27 after he defeated Jerusalem's Mayor Ehud *Olmert, and MK Meir Shitrit in party elections with 53 per cent of the vote

The elections to the Fifteenth Knesset marked a further fragmentation of the party system. Fifteen parties won seats in the new Knesset. The total of the two big lists of candidates combined, which had reached a peak of 95 seats in 1981, dropped to just 45 in the 1999 Knesset elections. As in the 1996 elections, there is no doubt that one of the reasons for this phenomenon was the new electoral system and the split vote it encouraged, as many voters felt free to support a small party in the Knesset elections while voting for the candidate of a big party for prime minister.

The Likud won just 19 seats. Labor remained the biggest party, but even bolstered by its partners in Yisrael Aḥat it dropped to 26 seats. Shas impressively won 17 seats. It was followed by Meretz (10), Yisrael ba-Aliyah (6), Shinu'i (6), the new Center Party (6), NRP (5), Yahadut ha-Torah (5), the Moslem Ra'am (5), the hawkish National Union (4), the new Russian immigrant party Yisrael Beitenu ("Israel Our Home") (4), Ḥadash (3), the nationalist Arab Balad (2), and Am Eḥad ("One Nation") led by Histadrut General Secretary Amir Peretz (2).

The unexpected success of Shas is attributed to three factors: First, disappointed with the Likud's performance, many former Sephardi Likud supporters voted this time for Shas. Second, many voted Shas as a protest following the conviction of Shas leader Aryeh Deri by the Jerusalem District Court on March 17, 1999. The court had found Deri guilty of bribery, fraud, and breach of public trust. Eliyahu Yishai was appointed as the new leader of Shas on September 27, 1999. Third, Yisrael ba-Aliyah directed its blatant anti-clerical campaign against Shas, using insulting slogans which could have been interpreted as anti-Sephardi. Many voters believed that supporting Shas on election day was the proper response to these attacks.

BARAK'S GOVERNMENT. The Fifteenth Knesset was split between 60 MKs who leaned toward Barak in their preference for a prime minister (i.e., the MKs of Yisrael Aḥat, Meretz, Shinu'i, the Center Party, Ra'am, Ḥadash, Balad, and Am Eḥad), and 60 MKs who probably preferred the Likud's leadership (i.e., the MKs of the Likud, Shas, Yisrael ba-Aliyah, NRP, Yahadut ha-Torah, National Union, and Israel Our Home). Nonetheless Barak had a number of options to form his government. After conducting negotiations with most of the parties, he formed a coalition including Yisrael Aḥat (with representatives of Gesher and Meimad in addition to those of Labor), Shas, Meretz, the Center Party, Yisrael ba-Aliyah, the NRP, and Yahadut ha-Torah. The structure of the coalition proved to be fatal, especially because of the policy distances between some of its members on questions of state and religion as well as on issues related to the Arab-Israeli conflict.

Following the formation of his government (Israel's 28th), Barak gave priority to the peace process. He promised, on several occasions, "to achieve peace with Israel's neighbors within a year." Criticized for his "zigzagging" policies on many issues, Barak proved to be very determined and very consistent on the issue of peacemaking.

On the evening of the Sabbath, Friday, August 27, 1999, the government authorized the transport of a 260-ton electric turbine. This led to threats from the two ultra-Orthodox religious parties to leave the coalition. Following the movement of a second turbine a few weeks later, Yahadut ha-Torah decided to cease its participation in Barak's coalition.

The turbine incidents were followed by a number of clashes between the largest ultra-Orthodox party, Shas, and Meretz. Strangely enough, Meretz decided to leave the government in June 2000 in order to ensure that Shas remained in the coalition. Meretz believed that Israeli-Palestinian negotiations were moving in a promising direction and did not wish to spark a government crisis.

In his 2000 negotiations with the Syrians in Washington, D.C., and with the Palestinians in Camp David, under the auspices of President Clinton of the United States, Barak expressed his readiness to carry out an almost 100 per cent withdrawal from all the territories occupied by Israel since the 1967 war. In May he ordered the Israel Defense Forces to withdraw from the "security zone" in Lebanon on a unilateral basis.

Most "right-of-Labor" politicians were opposed to the major concessions Barak was apparently ready to make to the Palestinians. In fact, even a number of relatively dovish figures, including Shimon Peres, criticized Barak for going too far, especially with regard to future arrangements in Jerusalem. It was against this background that the four Shas ministers and the Yisrael ba-Aliyah minister left the coalition on July 11, 2000. They were followed by the NRP minister, whose resignation came into effect on the following day, and by the defection of David Levi, the Gesher minister of foreign affairs, who left the coalition on August 4. Thus the government shrank to a twelve-minister cabinet, supported by only 30 MKs.

It was against this background that early elections looked inevitable. Barak once again demonstrated his skill at "zigzagging." He made a "secret" agreement with the Likud that would have guaranteed a relatively stable "national unity" government, but then retreated and decided to postpone its implementation. When it became clear that the Knesset was about to call early elections, Barak objected. Then he surprised even the members of his own party, declaring in December that he had no objections to simultaneous Knesset and prime ministerial elections. A few days later, he handed in his resignation to the president. According to Basic Law: the Government, when the prime minister resigned, Knesset elections were not necessary, only "special" prime ministerial elections. Barak's resignation conceivably came in order to block former premier Netanyahu from participating in the coming elections. As mentioned, Netanyahu had resigned from the Knesset following the defeat of the Likud in the 1999 elections. The Basic Law allowed only MKs to be candidates in "special" elections. Barak, however, declared almost immediately that he had no objections to changing the law so that Netanyahu could run against him. But it soon became clear that the candidates would be Labor's Barak and the Likud's Ariel Sharon.

THE 2001 ELECTIONS AND THE FIRST SHARON GOVERNMENT. On February 6, for the third time, Israel went to the polls to elect a prime minister by direct popular vote. Unlike the 1996 and 1999 elections, the Knesset was not elected at the same time.

In a reversal of his 12 per cent 1999 victory, Barak now lost to Sharon by twice that margin: 62.4 per cent of the valid votes were vast for Sharon and 37.6 per cent went to Barak. Barak not only lost the election but the vote of every sector that had supported him in 1999.

The turnout in 2001 was the lowest in Israel's history – 62.3 per cent. The biggest decline was in the Arab sector, which dropped to 25 per cent of what it had been in 1999. In the 15 elections held between 1949 and 1999, the average Arab turnout had been 78 per cent. Now, after giving Barak almost 95 per cent of their vote in 1999, most Arab voters felt they could neither support Barak nor Sharon and the Arab turnout dropped to less than 20 per cent. The background to this extreme expression of alienation was rooted in the fact that 13 Israeli Arabshad been killed by police fire in the October 2000

riots that broke out in support of the Palestinian cause following the beginning of the "second *intifada*"(see below).

Before presenting his government (the 29th government of Israel) Sharon insisted that the entire system of direct election of the prime minister must be scrapped and the old, purely parliamentary system restored. The Knesset acceded to his demand on March 7. Later that day Sharon presented his government to the Knesset. The government consisted of seven parties, controlling over 70 seats in the Knesset. These included the three biggest parties, Likud, Yisrael Aḥat and Shas alongside four smaller parties, National Union, Yisrael Beitenu, Yisrael ba-Aliyah, and One Nation. The two senior representatives of Labor in Sharon's cabinet were former prime minister Peres, who served as minister of foreign affairs, and Labor chairman Binyamin Ben-Eliezer, who served as minister of defense. Most of the more dovish Labor leaders remained outside the government. Sharon wanted to include Barak, but opposition within Labor made such a partnership impossible and Barak retired from active political life "for the time being." Two MKS of the Center Party joined the cabinet in August 2001. In October, Cabinet Minister Rehavam Ze'evi was shot dead in a Jerusalem hotel by terrorists. Two days earlier, Ze'evi had been one of two ministers who had handed in their resignations from the government because of their opposition to what they regarded as too moderate a government response to terrorism encouraged by the PA.

In the first few months after Sharon's government took office, Israel found itself in embarrassing international situations more than once. Thus, in July 2001, the Brussels Public Prosecutor's Office announced that it had opened an investigation of Sharon for alleged crimes against humanity in the massacre of Palestinian civilians by Lebanese Christian militiamen in the refugee camps of Sabra and Shatilla in September 1982. Early in September 2001, Israel and the United States decided to withdraw from the World Conference Against Racism, Racial Discrimination, Xenophobia and Related Intolerance (WCAR), convened in Durban, South Africa, in protest against the virulent anti-Israel language of its draft resolutions. It would seem, however, that the atmosphere changed dramatically following the attack on America on September 11, 2001. The attack demonstrated to many that Israel was in the forefront of the war against a dangerous combination of terrorism, Islamic fundamentalism, and weapons of mass destruction.

Despite the violenceof the Palestinian-Israeli conflict, Sharon continued to work toward the establishment of an independent Palestinian state within the framework of a peace agreement. Many in his party opposed this policy. Thus, on May 12, 2002, the Likud Central Committee rejected Sharon's request to postpone its vote on a binding resolution against the creation of a Palestinian State "west of the Jordan River."

The National Unity government was quite popular according to most public opinion polls, and the circumstances created by the terrorist war against Israel might have enabled the two big parties to continue their cooperation. Neverthe-less, when the minister of finance, Silvan *Shalom, presented in October 2002 his budget proposal for 2003, the Labor Party decided to pull out of the government because of the allocations to settlements in the occupied territories. It would seem, however, that a major reason for this decision was the leadership struggle within Labor that pitted the chairman, Ben-Eliezer, against a popular challenger, Haifa's Mayor Amram *Mitzna, whose campaign called for Labor's withdrawal from the coalition. Sharon could still muster a bare majority and remain in office, but he too had party problems, mainly concerning an expected challenge for party leadership by former prime minister Binyamin Netanyahu. On December 5, 2002, Sharon formally announced his decision to dissolve the Knesset and early elections were called for January 28, 2003.

Following Labor's withdrawal Sharon named the popular former chief of staff of the IDF, Shaul *Mofas, as defense minister, and Netanyahu as minister of foreign Affairs.

On November 19 Mitzna won the Labor Party primaries, defeating Ben-Eliezer, and on November 28 Sharon won the Likud primaries, defeating Netanyahu.

THE TERRORIST WAR. The results of Barak's negotiations with Arab partners had been far from being promising. No new agreement was achieved between Israel and any of its Arab partners. Furthermore, in late September 2000 the Palestinians used a visit of Likud leaders headed by Ariel Sharon to the Mount Temple as a pretext for a new wave of violence. It seemed that the withdrawal from Lebanon was interpreted by a number of leading Arab elements as a proof that Israel could be defeated though attrition. The extreme Hamas, Islamic Jihad, Palestinian secular movements, and PA elements joined forces in large-scale terrorist activity against Israelis. At times it looked as if this new *intifada* was initiated and orchestrated by Arafat. At times it looked as if Arafat had lost control of the situation. In any case, the term *intifada* (i.e., uprising) was misleading. The vast majority of terrorist acts were either initiated by Arafat and elements within his organization, Fatah, or by those belonging to the Moslem fundamentalist organizations, Hamas and Islamic Jihad.

Almost from the beginning of the new wave of violence, various international attempts were made to get the parties to the negotiation table. Thus, on April 30, 2001, the Sharm el-Sheikh Fact-Finding Committee headed by George J. Mitchell, former majority leader of the U.S. Senate, published its report on the new Intifada. On June 14, 2001, a Palestinian-Israeli Security Implementation Work Plan, better known as the Tenet Plan, laid out a six-stage timetable for the parties. At the end of 2001 and the beginning of 2002, former U.S. Army general Anthony Zinni tried to mediate between Israel and the Palestinians. On April 30, 2003, the United States, the European Union, the United Nations, and Russia ("the Quartet") published a "Road Map" for a Permanent Two-State Solution to the Israeli-Palestinian conflict. The aim of the plan was to reach a final and comprehensive settlement of the Israeli-Palestinian conflict by 2005. All these efforts proved fruitless.

On January 4, 2002, the IDF captured a 4,000-ton freighter in the Red Sea carrying 50 tons of weaponry, including tons of explosives, rockets, missiles, long-range mortars, mines, etc. The captain of the ship confessed that the PA had hired him and that the shipment was organized and financed by it.

One of the most decisive terrorist attacks took place on March 27, 2002, when 250 Passover guests at the Park Hotel in Netanya were the victims of a suicide bomb carried by a Hamas terrorist. Twenty-nine people were killed and 140 injured. Following the Park Hotel attack, the government decided to carry out "a wide-ranging operational action plan against Palestinian terror," known as Operation Defensive Shield. During the operation, Israel recaptured most of the territories previously controlled by the PA. The most highly publicized action took place in Jenin. Palestinian spokesmen and activists all over the world claimed that Israel had carried out a massacre in the city in which between 1,000 and 5,000 Palestinian civilians were murdered. In fact, 52 Palestinians – most of them terrorist fighters – were killed in Jenin. In one incident during the battle, 13 IDF soldiers were killed when they were ambushed from civilian residences by Palestinian fighters. Documents captured during Operation Defensive Shield proved that the PA, Iran, Iraq, and Saudi Arabia were directly involved in terrorist activities. Furthermore, money provided to the PA by donors such as the European Union and the U.S. had been allocated to finance terror and incitement.

The international dimension of anti-Israel terrorism was underscored on November 28, 2002, when 13 people were killed in Mombasa, Kenya, in an Israeli hotel. Simultaneously, two missiles were fired at an Israeli passenger jet flying from Mombasa but missed their target. The political bureau of Osama bin Laden's al-Qaeda network claimed responsibility for these attacks.

Between the beginning of the "Second Intifada" and the end of 2004 approximately 22,000 attacks on Israeli targets were carried out. Most devastating were the approximately 130 attacks carried by suicide bombers. Over 1,000 Israelis – 70% of them civilians – were killed and over 7,000 injured. The peak in the number of casualties was reached in March 2002, when 135 Israelis were killed. Towards the end of this period, the number of successful attacks and the number of casualties decreased considerably. This was caused mainly by different preventive measures taken by Israel. Thus, over 400 suicide attacks were prevented.

One significant preventive measure was the construction of an "anti-terrorist" fence intended to serve as a physical barrier against terrorist attacks. Arab countries and the Palestinian leadership protested, calling it a "a unilateral step on Arab soil" worsening the living conditions of Palestinians.

On November 11, 2004, the president of the PA, Yasser Arafat, 75, died in a military hospital outside Paris after being flown there from his Ramallah Headquarters. Mahmoud Abbas ("Abu Mazen"), one of the founding fathers of the Fatah and the PLO, succeeded Arafat as interim president.

Abas opposed many of Arafat's policies, including the decision to initiate the new wave of violence in September 2000. Hence, he was considered a more moderate potential partner to talks with Israel. Nevertheless, many noted his basic hardline positions and questioned his ability to confront militant Palestinian leaders and organizations. Abas was formally elected as president in general elections held on January 9, 2005.

THE 2003 ELECTIONS. In the January 28, 2003, elections to the Sixteenth Knesset, 13 parties won seats, down from 15 in 1999. For the first time since 1981, the strength of the two biggest parties combined increased. These developments can be attributed in part to the abrogation of direct election of the prime minister and the return to a regular parliamentary system. Voters could no longer split their votes between the candidate of a large party for the premiership and a small party in the Knesset ballot, as so many had in 1996 and 1999. The turnout was the lowest in the history of Knesset elections: only 67.8 per cent.

The most important outcome of the elections was the unquestioned success of the Likud, which won 38 seats – twice as many as Labor's 19 seats. Immediately after the elections, the two MKs of Yisrael ba-Aliyah joined the Likud.

It would seem that Sharon attracted many middle-of-the-road voters, as he projected a position more dovish than any of those previously held by Likud leaders. On the other hand, Labor moved away from the center with Mitzna's repeated calls to negotiate with Arafat, despite the continued terrorism. Mitzna also proposed unilateral withdrawal from the territories if such negotiations failed, and pledged not to sit in a government with the Likud.

Another dimension of the electoral campaign was religion. This placed the anti-clerical Shinu'i, with its 15 seats, on one end of the political spectrum and the ultra-Orthodox Shas (11 seats) and Yahadut ha-Torah (5 seats) on the other. The third religious party, the hawkish NRP, gained 6 seats, balancing the 6 seats of the dovish, anti-clerical Meretz.

The hawkish National Union–Yisrael Beitenu bloc won 7 seats. Three parties won 3 seats each, the Communist-led Ḥadash, Amir Peretz's One Nation Party, and the nationalist Arab Balad. The Islamic Ra'am dropped to 2 seats. On May 4, 2003, Labour's new leader, Mitzna, resigned.

THE ECONOMY. During the 1990s Israel's economy was marked by consistent growth in gross domestic product (GDP) and by a steady rise in GDP per capita. Both indicators reached a peak of around 7.5 per cent in 2000. The early 2000s were marked by clear signs of recession. Both the GDP and the GDP per capita showed a negative growth. The decline in economic activity affected employment. Thus, while unemployment was less than 9 per cent up to the first half of 2001, it climbed to almost 11 per cent in the second half of 2003. At the same time the number of foreign workers in Israel increased to approximately 300,000 towards the end of the 1990s. The deterioration of the economy produced a number of large-scale anti-

government demonstrations – some of which were organized by the Histadrut under the leadership of Peretz.

There were a number of reasons for the slowdown of the economy. The four most significant were: global developments and especially the global crisis in the high-tech industry; the considerable decrease in immigration, especially when compared with the early 1990s; government spending policies; the impact of terrorism, with such consequences as a sharp drop in tourism. The recession in areas under the control of the PA was by far more severe.

After the elections of 2003, there seemed to be strong evidence of a growing number of positive economic indicators, such as renewed economic growth and low inflation rates. It seemed that these developments had been partly caused by global developments, by the failure of the terrorist war against Israel, and by new government policies initiated by Netanyahu, who became minister of finance in Sharon's second government.

SHARON'S SECOND GOVERNMENT. Following the 2003 parliamentary elections, Sharon tried to get Labor to join his coalition. But when Labor demurred he formed a coalition with Shinu'i, the NRP, and the National Union-Yisrael Beitenu bloc. The new government (Israel's 30th) was approved by the Knesset on February 27, 2003. In his new cabinet, Netanyahu became minister of finance, switching places with Silvan Shalom, who became minister of foreign affairs. Sharon apparently believed that Netanyahu, a graduate of the Massachusetts Institute of Technology in business administration, was better qualified to oversee Israel's problematic economy.

A number of scandals rocked the political scene during Sharon's second term. These included police investigations of a number of ministers, including the prime minister and his sons, resignation of a Shinu'i minister who apparently tried to incriminate another Shinu'i minister, and resignation of a Likud minister from his post (but not from the government) following publication of the state comptroller's report and possible indictment for politically motivated appointments.

The most prominent issue in Israeli politics in 2004 and 2005 revolved around Prime Minister Sharon's disengagement plan. Sharon's plan was presented to the public for the first time in December 2003. The main assumption behind the plan was that in the absence of any serious partner to peace talks on the Palestinian side, and following the construction of the security fence, it was in Israel's political and security interest to withdraw from the Gaza Strip and dismantle the 21 settlements there (*Gush Katif) as well as four settlements in northern Samaria (the northern part of the West Bank).

The conflict surrounding the disengagement plan shook Sharon's leadership. On May 2, 2004, Sharon was defeated in an internal Likud referendum on the disengagement plan by a margin of 60 percent to 40 percent. Following this defeat, Sharon revised the plan slightly. On June 6, 2004, the cabinet approved the revised plan by a vote of 14 to 7. This result was made possible, among other reasons, by the dismissal of the two National Union–Israel Beitenu ministers. Five of the 13 Likud ministers and the two NRP ministers voted against the Plan. Two members of the NRP left the coalition in June 2004. The other four NRP members left in November 2004. The future of the government looked quite gloomy. But on October 28, the Knesset approved the disengagement plan by a 67–45 vote. This was followed by the dismissal of hawkish Minister Landau of the Likud. However, 17 of the 40 Likud MKs had voted against the plan. On November 3 the Knesset approved a bill to compensate the approximately 8,000 settlers who would be evacuated from the Gaza Strip and northern Samaria according to the disengagement plan. A war of nerves now commenced between the Gush Katif settlers and their supporters and government authorities, including demonstrations, clashes with police and the army, and organized disruptions of the country's daily life by the more extreme elements among the opponents of disengagement.

With the government losing its majority in the Knesset, Sharon and Finance Minister Netanyahu mobilized the support of the ultra-Orthodox Yahadut ha-Torah for the 2005 budget bill in return for government financial support to a number of ultra-Orthodox institutions. Shinu'i declared that it would not support the budget bill under these conditions. Following a humiliating defeat in a Knesset vote on the budget, Sharon dismissed all five Shinu'i ministers on December 4. Sharon's government survived, however, as a result of an agreement with the Labor Party. On January 10, 2005, eight Labor MKs received ministerial portfolios. The budget was approved in March 2005.

[Abraham Diskin (2nd ed.)]

THE 2006 ELECTIONS. The dismantlement of the Gush Katif settlements was carried out as scheduled in the summer of 2005. However, opposition to Sharon within the Likud and the threat that he would be deposed as party chairman by the Likud Central Committee led him to bolt the party and form a new political entity, the Kadimah Party, joined by senior ministers from both the Likud and the Labor party, including Shimon Peres. In January 2006, with elections two months away, Sharon suffered a massive brain hemorrhage and was incapacitated. He was replaced by Ehud *Olmert, who subsequently led Kadimah to an election victory with 29 seats in the Knesset. Negotiations began immediately with Labor, the next largest party with 19 seats and now led by Amir *Peretz, to form a coalition government. In the meanwhile Hamas had won an unexpected victory over the PLO in the Palestinian parliamentary elections, creating a new reality and making future relations with the Palestinian Authority problematic. Olmert's avowed intention was to establish Israel's final borders during his term of office, if necessary unilaterally. Among other declared aims in the coalition agreement were a rise in the minimum wage to $1,000 a month, guaranteed pensions for all citizens, a broader spectrum of medicines to be covered by the National Health Insurance Law, and full implementation of the civil rights of minority groups.

RENEWED FIGHTING. The new government was soon tested. Palestinian rocket attacks on Sederot and other Negev settlements were capped on June 25 by the abduction of an Israeli soldier from an army outpost. Israel responded with air strikes and the movement of ground forces into the Gaza Strip for the first time since the evacuation of the previous summer. On July 12 Hizbollah struck in the north, attacking an Israeli patrol on Israel's side of the Lebanese border. Three Israeli soldiers were killed and another two were taken captive. The fighting rapidly escalated as Hizbollah indiscriminately fired rockets into Israel's northern settlements, including Haifa, and Israel launched massive air strikes into Lebanon aimed at Hizbollah strongholds and staging areas which at the same time caused extensive damage throughout the country as well as a high death toll among Lebanese civilians and mass flight from South Lebanon. As Israelis too fled the north or huddled in shelters, Israeli special forces began crossing the border to hunt down rocket launchers, meeting stiff resistance. Though by and large Hizbollah was condemned as the aggressor by the international community and Israel's right to self-defense was affirmed, many decried what was seen as the use of excessive force by Israel and diplomatic efforts to bring the fighting to a halt intensified. Many, however, also saw Israel as a surrogate for the West in the war against terrorism and made it clear that they would not regret Hizbollah's destruction. However, progress on the ground was slow as the highly trained and disciplined Hizbollah fighters stood fast, and as the fighting dragged on criticism of both the army and government was heard in Israel, though the country remained united in its determination to deal Hizbollah a crippling blow. In the meantime a draft resolution calling for a cease fire was produced by France and the United States as Israel called up its reserves and expanded its ground operations in an effort to reach the Litani River about 18 miles (30 km.) north of Israel's border. The resolution was adopted by the Security Council of the United Nations on August 11 and went into effect on August 14. Among other things it called for the Lebanese army, bolstered by a beefed-up UNIFIL force of up to 15,000 men, to occupy South Lebanon and arms shipments to Hizbollah to be halted. However, it did not assure the dismantling of Hizbollah or the return of the abducted Israeli soldiers. The extent to which the resolution satisfied Israel's expectations, coupled with questions about the performance of the army and government, now became the subjects of increasing public debate.

The toll in the Israel-Hizbollah fighting up to the cease fire was 117 Israeli soldiers and 41 civilians killed. Around 1,000 Lebanese civilians were also killed. Nearly 4,000 rockets had been fired into Israel and 7,000 targets in Lebanon had been hit by Israel's air force in over 15,000 sorties.

Foreign Policy and International Relations

FOREIGN POLICY. *The United Nations Decision.* Although the United Nations did not have the machinery or the power to implement the General Assembly resolution of Nov. 29, 1947, and the State of Israel was established by the efforts of the *yishuv* with the support of the Jewish people, the new state ascribed considerable importance to the fact that its creation was based on the UN decision. The Proclamation of Independence, recalling the Assembly resolution, declares: "This recognition by the United Nations of the right of the Jewish people to establish their own state is irrevocable"; the establishment of the Jewish state is proclaimed "by virtue of our natural and historic right and of the resolution of the General Assembly of the United Nations"; and a later paragraph declares, "The State of Israel will be prepared to cooperate with the organs and the representatives of the United Nations in carrying out the General Assembly Resolution of Nov. 29, 1947, and will work for the establishment of the economic union of the whole Land of Israel."

Care was thus taken to emphasize that the Jewish people's decision to establish the Jewish state was in keeping with the UN's historic ruling. For this reason, and because of violent Arab opposition, one of Israel's main objectives was to achieve international recognition. The first encouraging responses came from the U.S. government, which granted de facto recognition a few hours after the declaration of independence, and from the Soviet Union and Guatemala, which granted de jure recognition three days later. By the end of its first year, following the young state's success in defeating the Arab attack, establishing its legal institutions, and holding general elections to the first Knesset, Israel was recognized by 55 states (the vast majority of those existing at the time, with the exception of the Arab and a few other Muslim countries), and on May 11, 1949, Israel was accepted as a member of the United Nations. Thus the struggle for international recognition was crowned, on the whole, with success, though the effort to establish normal diplomatic relations with all states was much more prolonged and has not yet been completed.

Efforts Toward Peace. The second, even more important, aim of Israel's foreign policy was to bring the war to an end and establish permanent peace with the Arab peoples and states. At first Israel hoped to receive UN support for this aim. It responded to the UN call for a cease-fire and was prepared to cooperate with the UN mediator. However, the first mediator, Count Folke Bernadotte of Sweden, failed in his efforts at mediation and exceeded his powers by proposing a solution of his own to the Palestine problem that was incompatible with both the Assembly decision and the new situation created after the war and was quite unacceptable to Israel. The second mediator, Ralph Bunche, confined himself to actual mediation and succeeded in bringing about negotiations between the two sides, ending with the signature of the Armistice Agreements.

Faithful to the spirit of the Security Council resolution and the uniform text of the preamble to all the agreements, Israel regarded the Armistice Agreements as a transitional stage between truce and permanent peace. It was generally assumed that the armistice period would be brief and would

be spent mainly in peace negotiations – an assumption confirmed by the fact that the agreements laid down a procedure for their amendment in case they were not replaced by peace treaties within a year. It was on this assumption, too, that Israel agreed to certain provisions that were not perfectly clear, in order not to hold up the signature of the agreements. Events, however, developed in the opposite direction. The Armistice Agreements were not the starting point for progress toward peace but marked the end of a brief period of goodwill. They were followed by a renewed deterioration in the situation, the gradual erosion of their significance, and Arab threats of an approaching "second round." Nor was any progress achieved at the meetings of the UN Palestine Conciliation Commission, which consisted of representatives of the United States, France, and Turkey. The disappointing experience of the P.C.C. strengthened Israel's conviction that only through direct negotiations would it be possible to achieve peace, or even partial solutions to specific problems.

The principle of direct negotiations has been the cornerstone of Israel's policy ever since, and the Israel government has always tried to secure the support of other countries for it. However, just as the Arab countries were not prepared for progress from armistice to peace, they were equally unprepared for direct negotiations with Israel. The armistice regime was undermined over the years under the pressure of the Arab doctrine and practice of belligerency against Israel. During the Sinai Campaign (1956), Israel declared that in view of Egypt's continual violations of the Armistice Agreement, Israel no longer recognized its existence, and all the Armistice Agreements became null and void as a result of the *Six-Day War in June 1967. Even if they had been strictly observed, however, they left many basic questions unsolved, notably those of the frontiers, the status of Jerusalem, the refugee question, and the problem of Arab economic and political warfare against Israel.

Borders. The Armistice Agreements expressly stated that the demarcation lines laid down in them were not on any account to be regarded as political or territorial frontiers, but as a result of the long period during which the agreements remained in force and the failure to replace them with peace treaties, the demarcation lines were generally identified with the frontiers of the state. Israel repeatedly declared that it was prepared for peace talks without prior conditions, but also made it clear that it regarded the existing lines as a basis for negotiations on permanent frontiers despite their unsuitability for effective defense. David Ben-Gurion and Moshe Sharett stated on several occasions that in a peace treaty Israel would be ready to recognize these borders as frontiers fixed "for a hundred years." The Arabs argued, on the other hand, that there could be no negotiations as long as Israel did not "comply with UN resolutions," i.e., withdraw to the boundaries laid down in the 1947 partition scheme and agree to the return of the refugees. However, they gave no undertaking to sign peace treaties on the basis of these borders. The Soviet Union also referred to Israel's frontiers in terms of the 1947 partition borders.

Israel declared that a return to the partition borders was unacceptable. The partition proposal was based on the assumptions that the two peoples would accept the proposed solution and agree to live in peace, that an Arab state would rise in Palestine side by side with the Jewish state, and that the two would form an economic union. All these assumptions had been refuted by Arab belligerency. Nor were the Western powers prepared to identify the armistice lines with political borders. John Foster Dulles, the U.S. secretary of state, made this clear in a speech in New York on Aug. 26, 1955, and British Foreign Secretary Anthony Eden, in his Guildhall address on Nov. 9, 1955, called for a compromise between the partition borders and the status quo. Both were thinking mainly of territorial concessions by Israel in the Negev, which would facilitate the creation of a land bridge between Egypt and Jordan. It was only after the Sinai Campaign and the withdrawal of the Israel forces from the areas occupied during the fighting that pressure for frontier changes died down and the powers reconciled themselves, in practice, with Israel rule over the areas delimited in the Armistice Agreements. In the absence of any Arab will for peace, however, these lines were never secure borders, and the entire armistice regime collapsed in the crisis of 1967.

As a result of the Six-Day War, the territory under Israel's control now comprised the whole of western Ereẓ Israel, including those areas in Judea and Samaria that had been under Jordanian rule since 1948, the Gaza Strip, the Sinai Peninsula up to the Suez Canal, and the Golan Heights. Israel stated that it would not withdraw from these areas, whose boundaries were determined by the cease-fire agreements of June 10, 1967, until peace treaties were concluded that would assure her of agreed and secure frontiers. The government of Israel also made it clear that it did not regard the previous armistice demarcation lines as secure frontiers and would not return to the boundaries that existed before the Six-Day War. In its acceptance of the American peace initiative in the middle of 1970, the Israel government expressed readiness for withdrawal "to secure and recognized borders" as part of a permanent peace settlement, without specifying which territories it would be prepared to evacuate in return for peace. The attitude of the Arabs and their supporters, on the other hand, was that Israel must evacuate all the territories occupied in the June 1967 war. According to some other states, the principle of secure boundaries implied that the frontiers must differ from those that existed before the war, "without reflecting the weight of conquest" (see also Israel, State of: Historical Survey, The Armistice Demarcation Lines, in the Frontiers section).

Jerusalem. According to the partition scheme, the city of Jerusalem and its environs were to constitute a *corpus separatum*, administered by the United Nations under a special international regime as part of the economic union. During the first ten years of the international regime, the UN Trusteeship Council was to consider the problem in the light of the experience gained in the meantime. The Jewish Agency agreed to

the internationalization proposal in 1947 under protest, since it was an inseparable part of the partition plan, but the Arabs categorically rejected it. Jerusalem became the scene of bitter fighting, which the UN was unable to prevent. In the armistice agreement with Transjordan, the demarcation line bisected the city, the Old City and the eastern neighborhoods being held by Jordan and the New City by Israel. Mount Scopus constituted an Israeli enclave; Article 8 of the agreement provided for free Israeli access to the Jewish institutions (the Hebrew University and the Hadassah Hospital) on Mount Scopus and to the Western ("Wailing") Wall. The UN, however, did not abandon the idea of internationalization, and on Dec. 9, 1949, the General Assembly decided that Jerusalem would be placed under a permanent international regime, calling upon the Trusteeship Council to complete the preparation of a constitution for the city. Israel vigorously opposed the idea, since it had been proved to be impracticable, would be a denial of the basic rights of the Jewish population, and would imperil their safety. It was prepared to agree to "functional" internationalization, i.e., the establishment of an international regime for the holy places alone. In reaction to the Assembly resolution, Israel decided to establish its capital in Jerusalem and transfer the Knesset and most of the government offices to the city. The transfer was completed in a few weeks (though the Foreign Ministry did not make the move until 1953 and the Ministry of Defense remained housed in Tel Aviv).

The Trusteeship Council soon arrived at the conclusion that the Assembly plan for territorial internationalization was impracticable. At the autumn 1950 Assembly, Sweden proposed the revision of the previous decision and its replacement by functional internationalization, but the proposal did not receive the necessary two-thirds majority. A Belgian proposal to reiterate the previous decision met with the same fate. On the plane of UN resolutions, therefore, a dead end had been reached, but the 1949 resolution remained formally in force. Accordingly, many countries refused to recognize Jerusalem as Israel's capital or to transfer their missions to it; their representatives sometimes even boycotted official ceremonies there. In the course of time, however, more and more countries acquiesced to the situation, and in 1970, 22 states maintained their diplomatic missions in Jerusalem, while 25 still kept them in the Tel Aviv area, and nine had nonresident missions.

In the Six-Day War, after the Jordanians had started a heavy bombardment of Jewish Jerusalem and occupied the headquarters of the UN Truce Supervision Organization in the zone between the armistice lines, heavy battles developed, and by the third day of the war (June 7) the whole of the city was in the hands of the Israel Defense Forces. Under an amendment to the Municipalities Ordinance passed by the Knesset on June 27, the city was reunified on the following day. In July 1967 the General Assembly adopted two resolutions calling on Israel to annul the steps taken to unify the city, and a similar resolution was adopted in 1968 by the Security Council. However, Israeli public opinion was united in its determination to preserve the unity of Jerusalem as Israel's capital.

Throughout the existence of the armistice regime, Jordan had refused to comply with Article 8 of the agreement, despite all the efforts of Israel and the United Nations. Israeli Jews were not permitted to approach the Western Wall, and the Hebrew University and Hadassah buildings on Mount Scopus were derelict and only Israel police guards, relieved every two weeks by UN convoys, were permitted to protect them. Extraordinary efforts by Dag Hammarskjöld, then secretary-general of the UN, were required in 1958 to obtain permission for the removal of the university's books and collections, and the Jews returned to the Western Wall, the Old City, and Mount Scopus only after the Six-Day War. On July, 27, 1967, a few weeks after the end of the fighting, the Knesset enacted the Law for the Protection of the Holy Places and Israel protected the holy places of all faiths, in close cooperation with their religious leaders.

The Arab Refugee Problem. More than any other aspect of Arab-Israel relations (apart from military clashes), it was the Arab refugee problem that occupied international public opinion in the period between the establishment of the state and the Six-Day War. As early as Dec. 11, 1948 – prior to the signing of the Armistice Agreements – the UN General Assembly adopted a resolution dealing with the question, among others. The Arabs insisted upon the right of the refugees to return to their homes and made no attempt to conceal their hope and intention of using the masses of returning refugees as a force to bring about the destruction of the State of Israel. Israel pointed out that it was not she who had created the problem, but rather the Arab leaders, who had urged the Arab masses to leave the area that was to become the Jewish state; that Israel could not be expected to absorb a hostile population: that, on the other hand, Israel had provided a home for hundreds of thousands of Jews from Arab countries and thus an exchange of population – albeit unplanned – had in fact taken place.

When the Palestine Conciliation Commission began its work, Israel declared its readiness to take the far-reaching step of permitting the return of 100,000 refugees; this offer, however, was withdrawn when the Commission failed to bring about a meeting of the two parties. However, Israel did confirm its willingness to pay compensation for the property the refugees had left behind, irrespective of and before the conclusion of peace, provided the Arabs would put an end to their economic warfare against the state. This offer met with no response from the Arab states, who continued to insist upon the refugees' right to return to their homes; nor did they respond to the unilateral steps like the unfreezing of refugee bank accounts in Israel banks. Thus the debate was repeated year after year, the Arabs attacking Israel and the latter claiming that it was not the fate of the refugees with which the Arab states were concerned, but rather the destruction of Israel (see Israel, State of: Historical Survey, section on Arab Refugees).

Boycott and Blockade. Arab political warfare against Israel was accompanied by economic warfare: not only did the Arab

states impose a boycott on Israel and its products, but they also attempted to strangle its economy by persuading other countries not to maintain economic relations with Israel. The Arab boycott organization boycotted companies that had established enterprises in Israel, invested there, or entered into partnership with Israeli firms, and blacklisted ships that called at Israel ports and even airlines running regular flights to Israel. At first the boycott registered some success, but as time went on its effect wore off as a result of Israel's economic growth and the determined action taken by some countries against the activities of the boycott offices. Only firms for whom trade with the Arab countries was of overriding importance gave in to Arab threats and refrained from setting up commercial ties with Israel. Thus the boycott ceased to be an effective weapon (see also *Boycott, Arab). Much more serious was the effect of the maritime blockade. From the very beginning the Suez Canal was closed to Israel shipping and even to ships of other nations bound for Israel ports, and as a rule cargoes en route to Israel were confiscated, although in 1951 the Security Council ruled that this practice was illegal and called upon Egypt to desist from it. Egypt paid no heed to the call. Moreover, at the beginning of the 1950s, Egypt closed the Tiran Straits to Israel shipping and to foreign ships bound for Eilat. As a result of the Sinai Campaign, freedom of passage was established in the Tiran Straits and maintained by the presence of the UN Emergency Force. It was the expulsion of that force by Egypt and the reimposition of the blockade of the straits in May 1967 that were the direct cause of the Six-Day War.

From War to Peace. The period 1970–73 was marked by almost full observance of the cease-fire along Israel's entire frontier. Israel agreed to return to the talks with Gunnar Jarring, the UN emissary, on Dec. 28, 1970, and Jarring returned to Israel in another attempt to break the deadlock. On Feb. 8, 1971, he requested Israel to commit itself to complete withdrawal to the Mandatory border and Egypt to enter into a peace agreement with Israel. Israel maintained that it was desirous of negotiating an agreement on secure and recognized borders but refused to agree in advance to withdraw to the old border, while Egypt insisted that it would consider peace with Israel only if the latter would implement Resolution 242 in all its parts. Egypt saw no need for negotiations as it felt the resolution could be automatically implemented. This Israel refused to accept, with the result that the stalemate continued and the Jarring mission was suspended.

Efforts were now directed towards reaching a partial solution for the re-opening of the Suez Canal. Israel had put forward a proposal to this effect in 1968 and on February 4, 1971, President Sadat returned to the idea, but linked a partial Israeli withdrawal from the east bank of the Canal with an overall withdrawal. Israel was willing to accept the re-opening of the waterway and this was the focus of the talks held during the visit, in May 1971, of the U.S. Secretary of State William Rogers. The talks failed, however, as Egypt insisted that the partial withdrawal be tied to a timetable for full withdrawal; Israel

retorted that the interim agreement should remain unlinked with the fundamental issues. The U.S. government argued that the interim solution was a step in the right direction. In the course of 1971–1973 fruitless negotiations continued on this proposal.

Meanwhile there were important developments in the other Arab states. Jordan, which had succeeded in removing the PLO threat already in September 1970, expelled the remnants of the PLO forces in summer of 1971 and they went to Syria and Lebanon. The latter country became the staging area and base of operations against Israel and Israeli personnel and installations abroad.

Preventive Israeli counter-action in Lebanon hurt terrorist plans and was able to reduce their operations effectively. But the PLO continued to attack Israeli targets and forced Israel to devote manpower and an increasing budget to fight off this type of warfare, which was aided and abetted by most of the Arab states.

In 1971–73 Egypt was already making preparations for war. Its relations with the Soviet Union were often strained because of Russia's refusal to supply it with advanced weapons. Sadat had hoped that war threats would bring American pressure on Israel to withdraw. Instead, U.S. policy of rapprochement with both China and detente with the U.S.S.R., as well as the end of the Vietnam War, ushered in a new era of strengthening its friends and seeking diplomatic solutions for conflicts. The U.S. and Russia sought to avoid another war in the Middle East and in two Nixon-Brezhnev summit meetings, both super-powers appealed to Israel and Egypt to renew the Jarring mission and seek a peaceful settlement of the Israel-Arab conflict. The U.S. continued to arm Israel and provide it with economic aid. Israel and the U.S. cooperated in bringing an end to the Syrian invasion of Jordan in September 1970 and the relations between the two were very close. The new situation lulled Israel into a false sense of security. Sadat was determined to demonstrate that a limited war would be the only means of destroying the existing status quo which, while comfortable for Israel, was becoming unbearable for Egypt. He felt that only a war would force the U.S. to pressure Israel and would leave the Soviet Union no other option but to aid Egypt.

There was little diplomatic activity in 1973, and Israel's major concern was the fight against terrorism. But in May 1973, Egypt and Syrian forces made threatening moves and a state of alarm was declared in Israel. It proved, however, to have been false, and this strengthened Israel's feeling that there would be no imminent war. By late summer 1973, while Israel was engaged in an election campaign, Egypt and Syrian forces were deployed in battle positions. In late September Egypt informed the Soviet Union of its intention to attack, and on Oct. 6, 1973, as Israel was observing the Day of Atonement, Egypt and Syria struck (see *Yom Kippur War).

As a result of the war, Israel became isolated in the world. The majority of the African states suspended diplomatic ties

with it; the European nations issued pro-Arab statements, the oil embargo was effective in frightening them to submit to Arab demands. The U.S. felt that the time was ripe for a major diplomatic offensive to break the deadlock that had led to the war. Israel and the U.S. now agreed that, before proceeding to negotiations, the first move should be the stabilization of the cease fire that was being repeatedly violated by all sides. U.S. mediation secured the signing of the Six Point Agreement on November 1, 1973, negotiated directly by Israeli and Egyptian officers. The agreement dealt with exchange of prisoners, the lifting of the naval blockade from the Straits of Bab el Mandeb, supply convoys to the encircled Third Army, and a UN presence. The point dealing with withdrawal of forces to positions they held on October 22 was not implemented. The U.S. having gained the confidence of Egypt, was determined to proceed directly to talks, but was desirous of maintaining the overall initiative in its own hands. It was thus decided to call for a peace conference in Geneva to establish a mechanism for the negotiations. At the request of the U.S., Israel agreed in advance to enter into talks for a disengagement of forces agreement, and was able to gain an American agreement not to include the PLO in the conference. Israel refused to commit itself in advance to disengagement on the Golan front, with the result that Syria boycotted the conference which opened on December 21, under the chairmanship of UN Secretary-General Waldheim, with the participation of Israel, Egypt, Jordan, the U.S., and the U.S.S.R. The main tangible result of the conference was the decision on a consensus basis to order an Israeli-Egyptian military working group to reach a separation of forces agreement. This was achieved on Jan. 18, 1974, after ten days of shuttle diplomacy by Secretary Kissinger, when the agreement was signed by the chiefs of staff of the IDF and the Egyptian Army. Even before this agreement was concluded and implemented, preparations were under way for a similar Israel-Syria agreement. This was part of a new American strategy of a "step-by-step" approach to the solution of the Arab-Israel conflict. The U.S. realized that the time was not ripe for an overall settlement in view of Israel's refusal to withdraw to the June 1967 lines and the inability of the Arabs to conceive of peace relations between them and Israel. Hoping to utilize the situation to improve America's standing in the Arab world, remove the Soviet influence, and secure the flow of oil to the West, the U.S. was able to persuade Israel and Syria to agree to reach an agreement, but a month of shuttle diplomacy by Secretary Kissinger between Jerusalem and Damascus failed to achieve it. The agreement was finally signed in Geneva on May 31, 1974. New cease fire lines and buffer zones were established and areas of limitation of forces and armaments were agreed upon, to be supervised by UN forces whose mandate was to be renewed periodically by the Security Council.

The Rabin government, which took office on June 3, 1974, was determined not to negotiate with the PLO and in July issued a statement to the effect that Israel was willing to negotiate an agreement with Jordan based on the existence of two states, Israel and a Palestinian-Jordanian state to the

east. American efforts to secure Israel-Jordan talks failed in the summer of 1974. The PLO was gaining momentum; it was recognized by the UN General Assembly as the spokesman for the Palestinians and later, in the Arab summit conference at Rabat in October 1974, as the sole legitimate representative of the Palestinians to set up a national authority in areas that would be given up by Israel. This effectively removed Jordan from the scene and thus left Egypt as the only candidate for further negotiations.

Talks between Israel and the U.S. were renewed in the fall of 1974, after the resignation of President Nixon and the accession of President Ford. They focused on another agreement with Egypt. By then Dr. Kissinger had established close working relations with President Sadat, and Egypt pinned high hopes on him. In late 1974 and early 1975 Israel announced its willingness to withdraw from the Mitla and Gidi passes in Sinai and even from the Abu Rodeis oilfields in return for an Egyptian declaration of nonbelligerency. In March 1975 Kissinger undertook another shuttle trip, but on March 24 had to admit failure, as Egypt refused to agree to the Israeli demands. The U.S. blamed Israel for the failure of the talks, but a few weeks later, when cooler counsels prevailed, the parties resumed the talks which lasted all that summer and were crowned with an Israel-Egypt agreement signed on September 1, 1975. The agreement involved Israeli withdrawal further east, the establishment of a new buffer zone that included the Mitla and Gidi passes, electronic surveillance stations by both Israel and Egypt, supported by a U.S. surveillance team to supervise the movement of forces in this area, a UN presence and a new limited forces zone.

Israel was able to win from the U.S. commitments not to recognize the PLO, to coordinate in advance with it new political initiatives such as a Geneva Peace Conference, the sale of additional weapons, financial aid, and assurances on the supply of oil. This was considered a major achievement for the Rabin government, which now felt that it could devote more attention to the home front, having satisfied most of the U.S. demands. No progress was made with either Syria or Jordan. The cease fire lines, however, remained quiet, and in 1976, for the first time in its history, there were no Israeli casualties along the borders. The civil war in Lebanon gave Israel a respite and brought it closer to Christian Lebanese elements, which were fighting both Palestinian elements and the Syrian army. In 1976 Israel could therefore feel that its position was strong. Civil war in Lebanon kept the Arab world focused on that country, Egypt was satisfied with the Interim Agreement, while Syria was occupied with Lebanon. The U.S. was engaged in an election campaign and the European States, while not happy with the political situation in the Middle East, nevertheless granted Israel the status of an Associate Member of the Common Market. Israel did not fare well in the UN however. In a series of General Assembly resolutions, the PLO was recognized, as stated, as the sole and legitimate representative of the Palestinians. The "legitimate and just demands" of the Palestinians were also recognized and in November 1975 Zionism

was branded as a form of "racism and racial discrimination." In the U.S., too, there were voices calling for a reappraisal of the U.S. position on the Palestinians. In a series of documents, the State Department slowly focused the Arab-Israel conflict on the Palestinian issue and suggested the possibility of a separate Palestinian state, in order to prepare public opinion, to mollify Egypt, and to keep the peace initiative in the Middle East in American hands. These moves alarmed Israel as they went counter to the understanding reached in September 1975.

In 1974–1977 terrorist activities continued, the targets being mainly civilians. On May 15, 1974, PLO terrorists attacked a school at Ma'alot killing 27 people, mostly children and teenagers. Other attacks were on a Tel Aviv hotel in March 1976, Zion Square in Jerusalem in July 1976, and on Israeli installations abroad. The Israel air force often bombed terrorist bases in Lebanon, thus keeping down the number of planned attacks.

The main efforts following the signing of the Israel-Egypt peace treaty were to promote the normalization of the relations between the two countries. For that purpose, joint committees, consisting of Foreign Ministry and IDF officers and their Egyptian counterparts negotiated a series of agreements dealing with the opening of the land border at El-Arish for civilian traffic, the inauguration of direct flights between Tel Aviv and Cairo, the creation of telephone and telex linkage, and arrangements for tourism. Simultaneously, the IDF began its withdrawal from Sinai. The first part was completed, according to the agreement, by January 26, 1980, and on that date, the Israel ambassador to Egypt and the Egyptian ambassador to Israel presented their credentials and the respective embassies were opened. President Sadat visited Beersheba in May 1979 and Haifa in September, while Prime Minister Begin held talks with Sadat in Alexandria in July 1979 and met with the Egyptian leaders in Aswan in January 1980. Among other visitors to Egypt were the deputy prime minister, and the ministers of defense, foreign affairs, agriculture, commerce and industry, and senior civil servants. There were considerably fewer high-level visitors from Egypt to Israel.

The normalization proceeded very slowly although a series of agreements were initialed, among them on tourism, communication, civil aviation, agriculture and trade. There arose serious difficulties however in the actual implementation of these agreements, with Egypt raising many bureaucratic difficulties, including a long wait for entry visas for Israeli tourists. Some progress was made during the visit of President Navon to Egypt in November 1980. He addressed the Egyptian ruling party leadership, held lengthy talks with editors, writers and professors, as well as political figures. Speaking in fluent Arabic, his visit was a definite turning point in the relations with Egypt.

There was no progress in the talks on the institution of autonomy in the West Bank and Gaza, due to serious disagreements between Israel, on the one hand, and Egypt and the U.S. on the other. The latter felt that Israel must withdraw its military forces from the territories, give up its control over public land and water resources, halt Jewish settlement, include East Jerusalem in the autonomous area and grant the franchise not only to Arabs living in East Jerusalem but even to Palestinians living in the East Bank of the Jordan. Israel objected and the talks stalled. Efforts by Special Ambassador Sol Linowitz of the U.S. to find a formula that would satisfy the conflicting stand of the parties failed.

Even the involvement of President Carter in the process did not help. The U.S. presidential elections froze the negotiations, the progress of which was hampered by the refusal of Jordan and the local Palestinians to participate in the talks.

In other matters affecting foreign affairs, the peace treaty failed to improve Israel's standing in the third world. Not a single African country which had suspended diplomatic relations with Israel in 1973 made an overt effort to restore them. They continued to vote against Israel in the UN and in other international forums. The nine European members of the Common Market all but opposed the Camp David Agreements and the peace treaty. In a series of resolutions, chiefly that of Venice of June 1980, they proposed their own plan providing for total Israeli withdrawal to the 1967 lines, the establishment of a Palestinian state, and the creation of a European military force to oversee the borders of Israel. These were rejected out of hand by Israel, which charged Europe with tampering with the peace treaty.

Developments in the Middle East, chiefly the invasion of Afghanistan by Soviet forces and the Iran-Iraq war, deflected attention from the immediate Arab-Israel conflict and somewhat eased the pressure off Israel. Nevertheless, it did not prevent the UN General Assembly from passing, in December 1980, a series of violently anti-Israel resolutions which were approved by a massive majority. Among them were calls for amending Resolution 242, for immediate and total Israeli withdrawal from all the territories including East Jerusalem and the halting of settlements. There was a demand that the Security Council impose economic sanctions on Israel.

Following the adoption of the Jerusalem Law in the fall of 1980, all the remaining embassies moved from Jerusalem to Tel Aviv in protest. Turkey reduced the number of its diplomats in Israel and demanded a similar reduction by Israel. Threats were made in an effort to dissuade Israel from annexing the Golan Heights.

Relations with the United States were marked by many areas of agreement, among them the Camp David Agreements, the peace treaty, the need to maintain a balance of power in the region, the need to keep Jerusalem united (but not as Israel's capital with Israeli sovereignty over the entire city). There were agreements concerning water rights and freedom of navigation and the U.S. continued to remain the major arms supplier to Israel, but differences of opinion loomed over such issues as the future of the Palestinians, the future borders of Israel, the problem of Jerusalem, Israel's activities in southern Lebanon, Israeli settlements in the territories, American arms sales to Saudi Arabia, Jordan and Egypt, and

the preference accorded to Egypt in the American strategic thinking for the Middle East. There was concern at the end of 1980 that the newly elected President Reagan might want to make some changes in the Camp David Agreements that could pave the way to a Palestinian state in the West Bank and the Gaza Strip.

Israeli foreign aid continued, especially in Latin America, and a large number of trainees from developing countries continued their studies in Israeli institutions.

The year 1981 witnessed Israel's continued isolation in the world, its growing dependence on the U.S., and gnawing doubts about the future of the peace treaty in the wake of the Sadat assassination on October 6. While plans for the final withdrawal from Sinai were being prepared, the government came under increasing pressure from various groups in Israel to reconsider its commitments under the 1979 peace treaty. There were, however, a number of agreements signed between Israel and Egypt that led many Israelis to hope that Egypt would honor its commitments after Israel returned all of Sinai.

Relations with the European nations remained chilly, and were exacerbated by verbal attacks by Prime Minister Begin who, during the heat of the election campaign lashed out against Chancellor Schmidt of Germany, Chancellor Kreisky of Austria, Prime Minister Thatcher of Britain, and other European leaders. They responded to the attacks and relations soured. Israel continued to oppose the Venice Declaration of the "Nine" and conditioned the participation of the forces of four European nations in the international peace keeping force in Sinai to a European proclamation that the force would observe the implementation of the Israel-Egypt peace treaty, and not the Venice Declaration. At year's end there was no certainty that the Europeans would participate in the force. Relations with France improved somewhat in December following the visit to Israel of Foreign Minister Cheysson. But the Golan Law chilled the ties again.

Improved ties with some African nations were reported in November, following a secret visit to Zaire, Gabon, and the Central African Republic by Defense Minister Sharon and the signing of agreements for the sale of Israeli weapons. But hopes for the early resumption of diplomatic ties were dashed after the passage of the Golan Law in December 1981.

Relations with the United States were mostly strained during 1981. The U.S. did not hide its hope that Israel would have a new government after the June 30 elections. However, when Mr. Begin was returned to power, he paid an official visit to Washington where he was greeted warmly by President Reagan. During this visit the ground was laid for the signing of an Israel-U.S. memorandum of understanding on strategic cooperation, designed to coordinate actions against the Soviet Union or forces directed by that power in the region. The agreement was signed by Defense Minister Sharon and Secretary of Defense Caspar Weinberger in Washington at the end of November. Following the Knesset law annexing the Golan Heights on December 14, the U.S. suspended the

meetings of the joint U.S.-Israel working teams designed to give the agreement contents, and linking them with progress in the autonomy talks, continued quiet in Lebanon, and other issues. Israel retorted by declaring that the memorandum of understanding was frozen for the time being. This, together with the U.S. displeasure over the Israeli bombing of an Iraqi nuclear facility near Baghdad on June 7 and the bombing of the PLO headquarters in Beirut a month later, and the passage of the bill to sell U.S.-made AWACS and other advanced equipment to Saudi Arabia, considerably soured the relations between the two countries.

By the end of 1981, strenuous efforts were being made by both Israel and the U.S. to restore their dialogue and improve relations. Yet, a residue of bitterness remained and the formerly pro-Israel U.S. public opinion was slowly turning against Israel. U.S. Jewry was also asking questions as to the wisdom and timing of certain Israeli moves.

The decade of the 1980s began with Israel's international standing and image seriously tarnished by the war in Lebanon, and ended, in 1991 and 1992 in a major breakthrough on the international arena, the beginning of a peace process, and the acceptance of Israel by major powers which had traditionally shunned it, among them China and India. Israel also resumed diplomatic ties with nations which had broken them in 1967 (Eastern European nations) and in 1973 (most of the African nations). In spite of repeated periods of strain, Israel-American relations remained very friendly and a close strategic cooperation marked the ties in many spheres. There was also a noted improvement in Israel's economic performance. Two rescue operations which brought to Israel over 30,000 Ethiopian Jews, and the beginning of massive immigration from the Soviet Union restored Israel to its proclaimed role as a haven for oppressed Jews.

The peace process which began in 1977 following Egyptian President Anwar Sadat's visit to Jerusalem, the Camp David Accords (1978), and the Israel-Egypt Peace Treaty (1979), was halted when Egypt suspended the talks on the implementation of the Camp David interim autonomy regime for the West Bank and Gaza (1981). Shortly after that President Sadat was assassinated in Cairo. His successor, Hosni Mubarak, was busy building his own regime and waiting for the last Israeli soldier and settler to evacuate Sinai. This was done on April 26, 1982. Two months later, the Israel Defense Forces (IDF) entered Lebanon to destroy the PLO power base there, to seek the creation of a unified central government in Lebanon, and sign a peace treaty with it. Above all, Israel wanted to protect Galilee from PLO attacks that stemmed from Lebanon despite a cease fire agreement which was brokered by the United States in July 1981. The war in Lebanon generated much ill-will for Israel in the international media. Exaggerated reports on the number of Lebanese and Palestinian civilian casualties as well as physical destruction of cities and refugee camps placed Israel on the defensive. Domestic Israeli opposition to the war also helped Israel's detractors to portray that country as an aggressor. The siege of West Beirut and the

massacre in the Sabra and Shatilla camps carried out by the Phalange (Christian Lebanese Forces) resulted in an outcry against Israel. Egypt withdrew its ambassador from Tel Aviv, and the Security Council adopted a number of condemnatory resolutions. When the dust settled down, it was American diplomacy which once again was instrumental in arranging for an agreement to end the state of war between lsrael and Lebanon and create a security zone for Israel in southern Lebanon. It even called for the establishment of diplomatic ties between Jerusalem and Beirut. When a peace treaty was actualized, although it fell short of the one Prime Minister Begin wanted, it was an important milestone. It was based on the assumption that all foreign forces, among them the Syrian forces, would leave Lebanon. When this did not happen, it was clear that the agreement was invalid. Nine months after it was signed (January 13, 1984), the Lebanese parliament failed to approve it and it lapsed.

For the next two years, 1983 and 1984, Israel sought ways to maintain a military presence in Lebanon, while keeping the number of its casualties to the minimum and attempting to refrain from becoming involved in ethnic strife. The government of Yizḥak Shamir, which took office in September 1983 following the resignation of Prime Minister Begin a month earlier, sought ways and means to extricate the IDF from Lebanon, but felt that it could not do so unless peace was ensured for Galilee. Meanwhile there was no progress on the negotiations for autonomy for the Palestinians. Relations with various European and Latin American nations soured as a result of Israel's Lebanese involvement. The Government of National Unity, which came into being in September 1984 under Shimon Peres, placed as its central foreign policy objectives the continuation of the peace process, consolidation of the peace with Egypt, and withdrawal of the IDF from Lebanon, while insuring the security of the northern settlements. The government would also strive to restore links with the Soviet Union and African and Latin American states that had suspended such ties. At the top of the agenda was the fostering and deepening of the relations of friendship and understanding with the U.S.

The first priority was the withdrawal of the IDF from Lebanon. This was achieved in three stages in the course of 1985, leaving a security zone in southern Lebanon manned by pro-Israeli Southern Lebanese Army units. Parallel to this track, efforts were made to settle outstanding issues with Egypt. The issue of Taba, a small border area which was a thorn in the ties between the two nations, was resolved in 1988 after years of protracted negotiations and international arbitration when Israel agreed to turn Taba over to Egypt, which reappointed its ambassador to Tel Aviv. However, efforts to inject some warmth into Israel-Egyptian relations were, on the whole, unsuccessful. Egypt preferred to maintain a cold peace between the two governments and objected to attempts to create people-to-people ties. The military arrangements of the peace treaty were usually adhered to by both parties.

The major difficulty was over the Palestinian issue. Prime Minister Peres sought to break the stand-off, but was unable to convince his Likud partners over the modalities and procedures required to achieve progress. While Labor and Likud agreed that in the future, under any circumstances, the Jordan River must be Israel's security border in the East, Jerusalem must never be divided or placed under foreign rule and would remain Israel's capital, there would be no Palestinian state between the Mediterranean Sea and the desert, there would be no negotiations with the PLO, and the Israeli settlements in the territories would remain under Israeli jurisdiction, there were disagreements on how to proceed. Peres hoped that Israel would be able to negotiate with local Palestinian leaders who would be part of the Jordanian-Palestinian delegation but would not include Arabs from East Jerusalem and the Palestinian diaspora. He was not averse to an international "event" or "happening" to mark the opening of the negotiations, before moving on to face-to-face talks with the Arab states and the Palestinians. The aim of the talks would be to implement the autonomy regime for a five-year transition period. Various contacts between Israeli leaders and King Hussein of Jordan convinced Peres that Jordan would accept such an arrangement, which was finally agreed upon in a secret meeting in London between Peres and Rabin and King Hussein (April 11, 1987).

The agreement, however, was not accepted by the Likud, which vetoed it in the inner cabinet. The Likud's position consisted of vehement opposition to an international event of any sort, to the participation of the European Economic Community and the United Nations, to Soviet involvement, and even to American mediation. The Likud objected to the concept of "Land for Peace" which Labor was prepared to follow, and championed the concept of "Peace for Peace." An important event took place in July 1986, when Premier Peres paid an official visit to Morocco as guest of King Hassan II. While no concrete results were achieved, here was another Arab state that was prepared to deal openly with Israel. A major role was played by the United States in efforts to resume the stalled peace process. The Reagan Administration, mainly in the person of Secretary of State George Shultz, devised many formulae to close the gap between the Israeli and the Arab positions. But it was evident that King Hussein could not make an independent move without the approval of Syria and the PLO. Syria, still heavily dependent on the Soviet Union for military, economic, and political support, adhered to the Soviet line that called for the resolution of the Arab-Israel conflict on the basis of various United Nations resolutions through an international conference chaired by both the Soviet Union and the United States. In the second half of the 1980s there was little pressure on Israel to make concessions to the Arabs. The Middle East was wracked by the Iraq-Iran war, the military situation along the Israel-Lebanon border was quiet, the peace treaty with Egypt was working, and the Palestinians in the areas were relatively quiet. In 1988 both Israel and the United States held elections, and the issue of the peace pro-

cess was shelved for the duration of the election campaigns. The onset of the *intifada* (Palestinian uprising) in December 1987 and the decision of the Reagan Administration to enter into a dialogue with the PLO in December 1988 placed Israel in a difficult position, forcing its government to come up with a new peace plan. This initiative, announced on May 14, 1989, called for negotiations with Palestinians for an interim agreement based on the Camp David autonomy plan. At the end of a five-year transition period, discussions would be held for the final resolution of the issues. The U.S. welcomed the plan as a very useful step, but both the PLO and King Hussein rejected it. In an effort to move the process forward, U.S. Secretary of State James Baker devised a five-point plan in October 1989 calling for Israeli-Palestinian dialogue in Cairo. The next problem was how to put together a list of Palestinian delegates acceptable to all. Shamir objected to East Jerusalem and "Palestinian Diaspora" delegates while Peres was prepared to be more conciliatory on the issue. The problem brought down the government of National Unity in March 1990. There was little movement while Shamir constituted his new government, and when the parties were ready to state their positions, the Iraqi dictator Saddam Hussein had invaded Kuwait (August 2, 1990) plunging the Middle East into a major crisis which dwarfed the Arab-Israel conflict.

As the United States began to build its anti-Iraqi coalition, which included Syria, Egypt, Saudi Arabia, and the Gulf States, Israel feared that Washington would link the resolution of the Iraqi crisis to that of the Arab-Israel conflict and would make concessions at Israel's expense to maintain its war coalition. In a number of high level meetings in Washington between Prime Minister Shamir, Defense Minister Arens, and senior members of the Bush administation, agreement on military and strategic cooperation was reached and greater coordination arranged. Israel was assured that no deals would be made at its expense. Meanwhile, the PLO lost much credibility in the West when it openly supported Iraq's invasion of Kuwait. The PLO was joined by Yemen, Libya and Algeria. Palestinians in the territories, then in the third year of the *intifada*, also hoped for an Iraqi victory. King Hussein quietly supported Iraq, although he was warned by Israel that entry of Iraqi forces into Jordan would be seen by Israel as a *casus belli*. Israel began to realize that war was imminent and took measures to prepare its civilian population for such an eventuality.

The allied victory over Iraq ushered in a new era for the Middle East. Futhermore, the collapse of the Soviet Union deprived Syria and other Arab states of their military, political, and economic backer, leaving the United States as the sole super power in the region. New thinking was the order of the day. For the Arabs, it was evident that the main threats to their stability and political regimes were Iran, Iraq, and Islamic fundamentalism, leaving Israel as their fourth perceived danger. It was also clear to them that another Middle Eastern war would be fought with non-conventional weapons, unleashing mutual destruction. The Middle East had entered into the era of a re-

gional balance of terror. The United States sought to reorganize the defense of the Middle East and of its own economic and strategic interests, insuring an uninterrupted supply of oil and helping its allies thwart the dangers of Islamic fundamentalism. Israel emerged from the war bruised, sustaining 39 Scud missile attacks from Iraq, which caused few casualties but much damage in the greater Tel Aviv and Haifa regions and paralyzed the country for some three weeks. Israel's economic vulnerability and dependence on the U.S. were exposed. For the first time in its history it did not engage in preventive war or a pre-emptive strike or retaliatory action, acceding to the request of the United States not to become militarily involved in the war. It allowed the stationing on its territory of American, Dutch, and German soldiers who were manning Patriot anti-missile missiles. The Palestinians emerged from the war badly hurt. Some 350,000 Palestinians were expelled from Kuwait in the wake of the war; the PLO was totally discredited in the West; Palestinians in the areas who supported Iraq were in despair. The Soviet Union, preoccupied with its own internal affairs, was content to let the United States manage the restructuring of the Middle East peace process as long as it was kept in the picture formally as an equal partner.

Between March and October 1991, Secretary of State James Baker visited the Middle East eight times in order to prepare the ground for the resumption of the peace process. The breakthrough came when in July, Syria agreed to attend a peace conference and negotiate directly with Israel. It was agreed that a Palestinian delegation would formally be part of the Jordanian delegation. The U.S. and the Soviet Union would be co-chairmen of the peace conference which was to commence in a ceremonial event and continue in a series of bilateral and multilateral talks. The latter would deal with issues of water, refugees, disarmament, economic development, and environment. The bilateral talks were to focus on borders (withdrawal), the nature of peace, security arrangements, and economic issues. The letter of invitation to the Madrid Peace Conference (October 30, 1991) spelled out the terms of reference under which the Palestinian issue would be discussed; at its core was the creation of a five-year autonomy regime. A final settlement and the issue of Jerusalem were not to be discussed at this stage. Eight rounds of talks took place in Washington in the course of 1991 and 1992, which defined the issues but did not achieve any concrete results. The peace process, however, had become a reality in the Middle East.

Parallel to this development, there was a major improvement of Israel's international standing. Already in the 1980s relations were resumed with a number of African nations starting with Zaire and the Ivory Coast. As Eastern Europe freed itself from Soviet domination in the late 1980s, Israel resumed diplomatic relations with Poland, Hungary, Bulgaria, Czechoslovakia, and on the eve of the Madrid Conference with the Soviet Union. Israel conditioned UN participation in the peace process on the revocation of the infamous General Assembly Resolution 3379 (Zionism = Racism) and this was done on

December 16, 1991. On the Asian continent, full diplomatic ties were established with China and India, an embassy was opened in South Korea, and there was a major improvement in Israel-Japan relations, with more Japanese companies defying the Arab economic boycott and selling directly to Israel. Contacts with Vietnam were entered into while the Israeli ambassador was also named ambassador to Outer Mongolia. The breakup of the Soviet Union into the 16 republics of the Commonwealth of Independent States resulted in the establishment of Israeli diplomatic representations in the Ukraine, Belarus, and the Baltic States, Kazakhstan, and Kirghizia in addition to the Russian Republic.

Relations with the United States were on the whole close and friendly. Israel and the United States agreed on certain principles, among them: the peace process would be based on Resolutions 242 and 338; the PLO would not take part; there would be no Palestinian state; Jerusalem would not be divided again; Israel would only be asked to withdraw from the areas in the context of a peace treaty; close military and strategic cooperation would continue; Israel would be entitled to economic and military aid; and the regional balance of power would be maintained in such a manner to insure Israel's qualitative edge. There were also agreements on freedom of navigation and Israel's water rights. But there were also a series of disagreements, among them: Israel's eastern borders, the future of the Golan Heights, and the resolution of the Palestinian issue (the favored American position was the return of the West Bank and Gaza to Jordan and the granting by Jordan of a special status to these areas). There was constant disagreement over the future of Jerusalem, with the U.S. opposed to Israeli sovereignty over Jerusalem. There were arguments over American arms sales to Arab states and Israeli arms sales to various nations, over Israel's nuclear development, over Israel's presence in Lebanon, and over whether Israel or Egypt should play a greater role in the American planning in the Middle East. The main disagreement was over the key issue of the meaning and nature of Israel's security and who would determine its needs. On a number of occasions there was much strain in the personal relations between President Bush and Prime Minister Shamir, considered by the United States as an "ideological" leader, meaning inflexible and rigid. A major problem occurred in December 1988, when the U.S. decided to recognize the PLO and enter into a dialogue with this terrorist organization. This dialogue, however, was suspended in June 1990 when the PLO refused to denounce a terrorist attack on Israel which had been foiled by the IDF. There were also disagreements on the interpretation of the Camp David Accords, the meaning of the balance of power, and the nature of the autonomy plan.

While Israel became an associate member of the European Economic Community and maintained growing economic ties with the nations of Western Europe, there were serious disagreements on the peace process. The EEC's traditional position called for an international peace conference, the creation of a Palestinian state in the areas, and the re-

division of Jerusalem. There were constant arguments over the role played by certain European countries in the arming of Iraq and the building of its war machine. The EEC never failed to condemn Israel for its behavior in the areas, and the criticism grew stronger as the *intifada* broke out and Israel took stern measures.

The traditional friendly ties between Israel and the Latin American continent continued, with Israel extending much technical assistance to various states and training a growing number of students from that continent. Similar close relations were maintained with Australia and New Zealand, even while disagreeing on the resolution of the Arab-Israel conflict. President Herzog of Israel traveled extensively during his two terms of office to the U.S., Canada, Britain, France, Holland, Belgium, Poland, Czechoslovakia, Romania, various South American nations, Spain, Australia and New Zealand, Singapore and Sri Lanka.

Jewish communities worldwide continued to be Israel's most loyal and trusted allies. They were thrilled when Israel airlifted Ethiopian Jews in two daring operations (Moses in 1984 and Solomon in 1991),airlifted the Jewish community of Albania (1992), and had begun the herculean task of absorbing the hundreds of thousands of Jews who had begun to stream to its shores from the Soviet Union, once the gates were opened in October 1989. Between that date and April 1993, some 425,000 Jews arrived in Israel from the former U.S.S.R. Israel was instrumental in getting the Syrian government to allow the emigration of hundreds of the previously besieged members of the Syrian Jewish community and to start the process whereby the remnant of the Jews of Yemen were reunited with families overseas. Yet there were also ongoing debates on the centrality of Israel in Jewish life and on organizational frameworks in which to achieve common goals. The Jewish Agency for Israel continued to be the most effective body for the implementation of the immigration and absorption process, combining in it the Zionist (mainly Israeli) element with the New Zionists (mainly fund raisers) from the diaspora.

One of the major consequences of the peace process, started at the Madrid Peace Conference in October 1991, was the dramatic change in Israel's international position and the network of its diplomatic ties. Before that conference, Israel maintained diplomatic and consular relations with 91 nations, the majority in Europe, North, Central, and Latin America, few in Africa, Asia, and the Far East. Most of the African nations had suspended diplomatic ties with Israel just prior, during, and after the 1973 Yom Kippur War, citing the Arab oil boycott, economic inducements and threats made against their rulers by terrorist Arab groups as the main reasons for doing so. Of the Communist bloc nations, only Romania retained diplomatic ties with Israel after the break of June 1967, when all Eastern European nations followed the Soviet Union and broke off diplomatic ties with Israel.

By early 1995 Israel maintained diplomatic relations with 153 countries (out of the 185 United Nations members), and

was represented by an ambassador, minister, or consul, resident and non-resident, in over 100 capitals.

Many factors brought about this development, the origins of which were in the 1980s, but the bulk occurred after the Madrid Peace Conference and were accelerated after the signing, in September 1993, of the Israel-PLO Declaration of Principles.

Resentful over Arab unwillingness to carry out promises made in 1973, mainly in the economic sphere, a number of African leaders reached the conclusion that breaking ties with Israel was counter-productive and brought no appreciable gains. On the contrary, their efforts to obtain economic help were often frustrated by the absence of ties with Israel, a fact cited to them on a number of occasions by international financial organizations. Israel was not there when needed to support their applications for loans and loan guarantees.

Among the first nations to resume ties with Israel in the early 1980s was Zaire. It was followed by the Ivory Coast, Togo, and Kenya. Another reason given by African nations was the change in Israel's relations with South Africa, the end of military ties between both nations since 1987, and, finally, the collapse of the apartheid regime in South Africa and the ascendance of the African National Congress.

In the case of Eastern Europe, the accession of Mikhail Gorbachev to power in 1985, and his decision to pursue a policy based on *perestroika* and *glasnost*, meant that he required vast economic aid from the West to shore up the foundering Soviet economy. He understood that in order to obtain help from the West, and chiefly from the United States, he would have to change the traditional Soviet attitude to Jewish emigration and to Israel. The issue of better relations with the West was linked to freedom of emigration and the restoration of ties with Israel. Israel indicated that it would be prepared to restore diplomatic ties only on condition that the gates of the Soviet Union be opened for Jewish immigration. Arrangements were made to facilitate emigration, first through third countries (such as Hungary, Poland, and Romania), and from 1991 direct to Israel.

Israel and the Soviet Union began negotiations on improvement of relations in the mid-1980s. Russian diplomats admitted to their Israeli counterparts that their decision to break off ties in 1967 had been erroneous and self-defeating. These talks culminated with the decision to re-establish consular relations in 1989. By then, on the eve of the collapse of the Berlin Wall and the bloodless revolutions in all Eastern European nations, it had become evident to the leaders of these countries that in order to bolster their legitimacy, mainly to Western public opinion, they would have to resume ties with Israel. This was done by Hungary, Poland, and Bulgaria even before 1991. President Herzog, Prime Minister Shamir, Finance Minister Peres, and other senior Israeli officials visited the capitals of Eastern Europe, and agreements were signed in various spheres. To some leaders in Eastern Europe, diplomatic ties with Israel was one of the symbols of their release from the Soviet yoke. Poland, Hungary, and Romania facili-

tated Jewish immigration to Israel. This was done in spite of Arab protests and threats.

In October 1989 the Soviet Union agreed that Jews leaving that country for Israel must go there. Those wishing to travel to other countries had to obtain entry visas to those countries prior to departure. By 1990 more than 200,000 Russian Jewish immigrants had arrived in Israel. Talks were held for the restoration of full diplomatic relations. Israel made it clear to the Soviet government that it could serve as a co-sponsor of the Madrid Peace Conference only if it restored full diplomatic relations, so that there would be symmetry in relations between Russia, Israel, and the Arabs. The Russians agreed, and a day before the opening of the Madrid Peace Conference, both nations announced in Jerusalem the resumption of full diplomatic relations.

The breakup of the former Soviet empire resulted, among other things, in the creation of 15 independent republics called the Commonwealth of Independent States, established in 1992. The leaders of these new republics assumed, rightly or wrongly, that Israel was a very important "door opener" to the West. It was believed that Israel exercised vast influence on the American government and that its contacts, direct or through American Jews, could be used to obtain assistance. Shortly after obtaining their independence, the following republics established full diplomatic ties with Israel: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kirghizstan, Lithuania, Moldavia, Tadjikistan, Turkemanistan, the Ukraine, and Uzbekistan. Israeli embassies were opened, Jewish immigration was permitted, and Jewish Agency emissaries and teachers were allowed to work in those countries with no hindrance. The ties with all of these republics grew considerably warm in the course of visits of senior officials, and the signing of cooperation agreements in the fields of science, technology, agriculture, and education. Israel did exercise some influence in helping these nations obtain assistance from the west. But early high expectations that Israel could do the impossible were not realized, and there was some disappointment as the economic conditions of a number of these republics verged on collapse.

While the Soviet Union disintegrated, it had little time or inclination to deal actively with the affairs of the Middle East. It failed to prevent the Gulf War and played a small role in that conflict. The major role in the Arab-Israel peace process was left to the United States. But when the Yeltsin regime began to consolidate its hold on Russia in late 1991, Russia served notice that it had a large interest in the affairs of the Middle East and that it intended to play a part in the evolution of the peace process. Russia also announced on a number of occasions that it saw itself as the traditional defender of the interests of the Eastern (Greek) Orthodox Church in the Holy Land and was entitled to be consulted on the future of Jerusalem.

Two other countries in Eastern Europe, Yugoslavia and Czechoslovakia, also disintegrated. Israel re-established diplomatic ties initially with the Czech republic and later with Slovakia. In the former Yugoslavia, it maintained ties with Serbia

and Slovenia. Full diplomatic ties were established with Albania. These enabled the rescue of the tiny Jewish community in that country and their transfer to Israel in 1992.

On the African continent, where Israel had 28 diplomatic missions prior to the break of 1973, more nations requested resumption of relations, arguing that there were no longer any impediments for normalization of ties. Among the African nations which resumed ties with Israel after October 1991 were Angola, Benin, Botswana, Burkina Fasso, Cape Verde, Equatorial Guinea, Eritrea, Gabon, Gambia, Ghana, Guinea Bissau, Lesotho, Madagascar, Mauritius, Mozambique, Namibia, Nigeria, Rwanda, Sao Tome, Senegal, Seychelles, Sierra Leone, Uganda, Zambia, and Zimbabwe. Israel and Ethiopia resumed full diplomatic ties in 1990 and this was of vast significance when "Operation Solomon," which saw the airlifting of 14,500 Ethiopian Jews to Israel, was carried out in May 1991. By 1995 Israel maintained diplomatic ties with 36 nations on the African continent (including Egypt and Morocco). Once again hundreds of African trainees were going to Israel for a variety of courses and Israeli experts were again working in many African nations. In 1994 Israel sent a medical team to help ease the plight of refugees in Rwanda following the civil war in that country.

An even more dramatic change occurred on the Asian continent. Contacts with the People's Republic of China had been maintained since the late 1970s, but they were covert. By 1989 China agreed to the setting up in Beijing of an Israeli scientific mission, the nucleus for an embassy. Full diplomatic relations were established in January 1992 during the visit to China of Foreign Minister David Levy. Subsequent high level visits included the visit of Prime Minister Rabin (in October 1993), Foreign Minister Peres, and other Israel officials. From the Chinese side, the vice premier and foreign minister visited Israel. A growing number of Israeli firms are now represented in the two main Chinese centers – Beijing and Shanghai.

China was followed by Mongolia and later by the three republics of former French Indo-China – Vietnam, Laos, and Cambodia. These three sought Israel's help to obtain aid from the West. An Israel embassy was reopened in Seoul in 1992 (it had been closed in 1978 due to budgetary considerations). Similarly, an Israeli consulate general was reopened in Hong Kong in 1987 to facilitate ties with China. There is an Israeli economic office in the Republic of China in Taipei. Israeli offers to sell arms to Taiwan were criticized by Beijing. In 1993 Israel sought to establish direct links with North Korea in order to persuade that country not to sell missiles and nuclear technology to Syria and Iran. The United States objected to these efforts and they were suspended at Washington's request.

There were also changes in ties with some Muslim nations in Asia. On his way home from China in October 1993, Prime Minister Rabin made a stop in Jakarta for talks with Indonesia's President Suharto. There were also attempts to establish contacts with Malaysia, one of whose ministers visited

Israel unofficially in 1994. All this resulted in growing numbers of Indonesian and Malaysian tourists to Israel and Israeli nationals were also able to visit Indonesia.

For many years ties with Japan remained formal and cool. At the end of the Gulf War they warmed up considerably. Japan abandoned its policy of accepting the Arab economic boycott on Israel and trade between the two nations rose. Prime Minister Rabin led a large trade mission to Japan (and South Korea) in December 1994. More Japanese firms were investing in Israel and opening offices in Tel Aviv. Asia became the third major export market for Israeli goods, accounting for some 20% of total exports. El Al, the national air carrier, inaugurated direct flights from Ben Gurion Airport to Delhi, Bombay, Bangkok, Hong Kong, and Seoul. Thousands of Asian workers, mainly from Thailand and the Philippines, were working in Israel.

India, which had followed a pro-Arab policy since it recognized Israel in 1950, realized the new international trends and established full diplomatic ties with Israel in early 1992. Commercial and military contacts were considered and there were high levels visits, including one of Foreign Minister Peres in May 1993.

The peace process brought about a revolutionary change in Israel's position in the Middle East. In early 1995 Israel and Jordan opened their respective embassies in Amman and Tel Aviv. In October 1994 Israel opened an office of interests in Rabat, Morocco, and a Moroccan official opened a similar office in Tel Aviv. Talks were held about the opening of a diplomatic representation in Tunisia. Israeli officials visited Tunisia, Oman, and Qatar. Relations with Turkey also warmed up considerably and culminated with the visit to Israel of Prime Minister Cellar in early 1995. Turkey was keen on increasing its economic ties with Israel. By 1994 it had become the favorite vacation spot for Israelis due to low prices and close proximity to Israel. In 1994, some 400,000 Israelis vacationed in Turkey. Cypriot President Glafcos visited Israel in 1994 to further cement ties between the island republic and Israel. Ties with Greece, which had been maintained on the level of a diplomatic mission, were raised to full ambassadorial level. Greece was seen to be displaying a far more evenhanded policy in the Middle East than in the past.

In its relations with the countries of Western Europe, mainly with the members of the European Union (formerly European Economic Community), Israel sought to bring about an improvement in its 1975 trade agreement with the Common Market and to coordinate more closely activities in the area of internal security and the anti-terrorist struggle. The growing threat of Islamic fundamentalism, which menaced not only Israel but a number of Moslem countries and European nations, became an international concern. An agreement between the police forces of Israel and Italy was signed in Rome in 1994, and similar agreements were being projected with other countries. On the European continent itself, the warm ties with Germany continued with periodic visits of heads of state and ministers. Ger-

many supported Israel's stance on its agreement with the European Union and continued to provide Israel with an annual grant. In May 1995 Chancellor Kohl paid a visit to Israel in which he apologized on behalf of the German people for the Holocaust.

Relations with France remained cordial in spite of a fundamental disagreement between Israel and France (under President Mitterrand) over the issue of a Palestinian state which France favored. A new and warm spirit was injected into the ties between Israel, Spain, and Portugal. This was apparent during the visit to Israel of King Juan Carlos and Queen Sophia of Spain (October 1993) and of Prime Minister Rabin to Spain (February 1994). Mr. Rabin was also Israel's first prime minister to pay an official visit to Portugal.

Ties with the Benelux and Scandinavian countries improved vastly. Norway was the host for the secret Israel-PLO negotiations and the agreement was signed initially in Oslo. Rabin, Peres, and Arafat were awarded the 1994 Nobel Peace Prize which was presented in Oslo in December 1994. Ties with Britain improved when Britain lifted its arms embargo against Israel and supported its stance in the EU. Mr. Rabin visited London twice and John Major was in Israel in March 1995.

Another important dividend of the peace process was the signing on December 31, 1993 of the Israel-Holy See Basic Agreement, which heralded diplomatic relations between Israel and the Vatican, and also had enormous significance in terms of the relations between the Catholic Church and the Jewish people. Embassies were established in July 1994. The Vatican's rights and privileges in its property in Israel, including churches, schools, hospitals, and orphanages, were guaranteed by Israel.

The Israel-Holy See agreement had important consequences for Israel-Latin America relations. The relations had always been cordial and warm, and the only Latin American countries that had suspended ties with Israel were Nicaragua and Cuba. Nicaragua restored them, while Israel expanded its diplomatic presence in that continent by opening missions in the Caribbean area. In Buenos Aires, the Israel embassy was blown up in 1992 with many casualties.

The new regional and international realities were also partly reflected in the voting pattern in the United Nations. During the annual deliberations of the General Assembly, some 20 resolutions dealing with the "Palestine" question are generally discussed. Most of them are anti-Israel, many of them repetitive, and all of them irrelevant to the events in the region. Many countries justified their anti-Israel votes by arguing that they did not matter and that what counted were the bilateral relations. Israel usually countered by saying that this was a formal declaration of a political stand. From 1991 there was toning down of the anti-Israel resolutions and the Assembly began to take note of the peace process. But on the whole, even while paying lip service to the process, it did pass anti-Israel resolutions, although with a growing number of abstentions. Thus, for example, in December 1994 the Assembly, in the resolution termed "The Situation in the Middle East," called on Israel to unilaterally withdraw from the Golan Heights. The resolution was adopted by a vote of 77 in favor, 2 against (Israel and the United States), with 70 abstentions (including Russia). In the past the majority of the UN members voted against Israeli nuclear armament. In the vote taken in December 1994 on a resolution which singled Israel out by calling on nations to renounce nuclear weapons, 60 countries voted in favor, 4 opposed and 100 abstained. One resolution, dealing with the future status of the territories, which was approved by 147 nations, contradicted the Israel-PLO Declaration of Principles. But this did not seem to deter those who voted in favor.

Israel's key partner remained the United States. That nation played a crucial role in the peace process. While it pressed Israel not to become actively involved in the Gulf War, it helped defend Israel and provided it with economic and military aid to offset the damage. The Bush and later Clinton administrations were determined to pursue the peace process and exerted much effort in doing so. Washington pushed Israel and Syria to move towards the Madrid peace conference, gave assurances to Israel that its interests would not be harmed, and while initially refusing to grant the Israeli request for a ten billion dollar loan guarantee, did so in the summer of 1992, after the accession to power of the Rabin government.

The United States hosted the bilateral talks which followed the Madrid meetings. Although not crowned with much success, they nevertheless provided a framework for some progress and paved the way for the Israel-PLO agreement and the Israel-Jordan peace treaty.

The warm ties with the United States were evident mainly in strategic cooperation, placing at Israel's disposal new military technology, helping Israel develop new weapons systems, and above all in maintaining its military qualitative edge, so that it could take risks for peace. The annual three billion dollar military and economic loans and grants were maintained, in spite of fears that, they, too, might be cut due to budgetary considerations. The United States' support for Israel was seen in the Arab world as a major factor in changing their traditional thinking of dealing with Israel on the battlefield to dealing with Israel across the negotiating table. The United States played a key role in the Israel-Jordan treaty, a lesser role in the Israel-PLO agreement, and a major role in the negotiations between Israel and Syria. Those required a number of shuttle trips undertaken by Secretary of State Warren Christopher and his peace team. President Clinton visited Israel and witnessed the signing of the Israel-Jordan Peace Treaty on October 26, 1994. Prior to that he witnessed in White House ceremonies the signing of the Israel-PLO Declaration of Principles and the Israel-Jordan Washington Declaration (July 25, 1994). The United States also suggested to many nations that had suspended ties with Israel that it would be useful if they resumed them. There was no change in the American policy regarding Jerusalem. The city should remain united but not entirely under Israel sovereignty. Congressional attempts to

legislate the moving of the American Embassy from Tel Aviv to Jerusalem by 1999 ran into opposition from the Clinton administration (and partly the Israel government). Both did not want to jeopardize the situation prior to the talks on the final status of the holy city.

In the mid-1990s, Israel's international position was highly positive, its reputation soaring, its trade growing, and its advice sought by many world leaders. It had come a long way since its isolation in the wake of the Yom Kippur War. However, its new position would see many ups and downs in the post-Oslo period as events continued to take their bloody course and exact their toll on human lives.

For a fuller discussion of the post-Oslo period see "The Road to Oslo and After" above. For Israel and the United Nations, see *United Nations.

INTERNATIONAL AID AND COOPERATION. Through its international cooperation program of technical assistance, Israel helped many other developing countries find solutions to their economic, social, and educational problems. Israel's contribution is based on its own recent and continuing experience in developing human and material resources. The history of the program began in 1954, when Israel entered into a number of joint projects with Burma under the guidance of its ambassador, David Hacohen. In March 1957, when Ghana became independent (the first sub-Saharan African country to achieve this status in the post-World War II period), Israel answered her request for technical cooperation. In the following year, the program was formally launched with the establishment of the International Cooperation Division within the Ministry for Foreign Affairs, on the initiative of Golda Meir, then foreign minister.

In 1961 an agreement was signed between Israel and Brazil, on the proposal of the Brazilian government, for cooperation in agricultural and water development, mainly in North Brazil. In 1963 Venezuela and Israel started a scheme for the adaptation of Israel's regional development methods under the guidance of planners from the *Lachish regional development scheme. These two projects were followed by the spread of cooperation with Israel to most of Latin America. Meanwhile, several South and Southeast Asian countries invited Israel's cooperation in development, as did several countries closer to Israel: Iran, Turkey, Cyprus, Greece, and Malta. In several instances, public and private, commercial organizations in Israel were asked to carry out projects, but generally, the International Cooperation Division itself carried out schemes through associated governmental and public agencies. By the end of its first decade of activity in 1968, the International Cooperation Division had sent 2,562 experts to development projects in 64 countries in all continents, and had trained 10,569 men and women from 82 countries in Israel. About $60,000,000 was spent on the program from Israel government funds during that period.

Agriculture accounted for more than half of all development projects in which Israel has engaged, with youth organization and training in second place and health programs third. Science and technology comprised a larger share of the total program each year. Half of all projects were undertaken in Africa, but Latin America's share was increasing steadily. Approximately 450 Israelis served abroad each year in more than 150 projects. In addition, about 100 Israelis served as experts on schemes financed by the United Nations. Israel commercial corporations engaged in development abroad employed an additional 400 Israelis in their undertakings. More than a thousand men and women from developing countries graduated from middle- and high-level courses in Israel each year. Courses were usually from four to six months in duration and were held in a variety of languages, principally in English, French, and Spanish. Regular courses were held in cooperation at the Afro-Asian Institute and the Center for Latin American Cooperation Studies in Tel Aviv; in agriculture at the Ruppin Institute, near Netanyah; and in community development at the International Center for Community Development, Haifa. Courses were also held from time to time at a number of other locations. The *Hebrew University, together with Hadassah and separately, as well as the Haifa *Technion, held regular higher-level courses. In addition, lower and middle-level courses were held in the developing countries and graduated more than a thousand trainees each year.

From its inception through the early years of the 21st century, 200,000 men and women had participated in the program's training courses in Israel and abroad and over 10,000 Israeli experts had been dispatched to foreign countries. In the post-Oslo era Israel looked to develop similar partnerships with its neighbors.

Arab Refugees

During the fighting in Palestine that followed the adoption of the *United Nations Partition Resolution of Nov. 29, 1947, and the growing anarchy that accompanied the British withdrawal from Palestine, hundreds of thousands of Arabs abandoned their homes and fled to neighboring Arab countries and to parts of Palestine later occupied by Jordan and Egypt. The refugee problem was thus born out of the unsuccessful Arab attempt to frustrate the UN Partition Plan by force, to prevent the emergence of a Jewish state, and to occupy Palestine at the end of the British Mandate. This political background explains the stubbornness of the question. Though substantially absorbed in fact, the refugees remain permanent wards of the United Nations, and it seems clear that only an Israel-Arab peace settlement can resolve this problem.

ORIGINS OF THE PROBLEM. On Feb. 16, 1948, the United Nations Palestine Commission (appointed to supervise the partition plan) reported to the Security Council that "powerful Arab interests both inside and outside Palestine are defying the Nov. 29, 1947, resolution of the General Assembly and are engaged in a deliberate effort to alter by force the settlement envisaged therein." On April 10, 1948, the Commission

reported that "… armed Arab bands from the neighboring states have infiltrated into the territory of Palestine, and, together with local Arab forces, are defeating the purpose of the partition resolution by acts of violence." By that time fighting had swept through the country.

During April the tide turned in favor of the *Haganah, especially in mixed towns such as Haifa, Safed, and Tiberias. The morale of the Arab population sank, and an exodus started into surrounding Arab territories with the encouragement of the Arab leadership, who did not want their people to remain under Jewish control and promised that they would soon return behind the victorious Arab armies. In Haifa, for example, the local Arab National Committee refused to sign a truce and insisted on the evacuation of their community despite an appeal by Shabbetai *Levi, the Jewish mayor. The exodus was accelerated by rumors, spread by the Arabs, of Jewish atrocities. The heavy civilian casualties suffered by the Arabs during an attack by the *Irgun Ẓeva'i Le'ummi on the village of Deir Yasīn near Jerusalem were extensively publicized as a massacre and added to the panic.

On May 15, with the end of the Mandate and the withdrawal of the British forces, the State of Israel was proclaimed. The regular armies of the neighboring Arab states crossed the borders and the residents of many Arab villages were evacuated by their leaders. During the fighting of the next few months, the flight continued into the Arab-held areas of Judea and Samaria (later annexed by Jordan as the "West Bank") across the river into Transjordan, into the *Gaza Strip, and, to a smaller extent, into Syria and Lebanon.

UNITED NATIONS ACTION. Initial efforts to give the Palestine refugees emergency relief were made by voluntary organizations. In December 1948, the General Assembly endorsed a nine-month relief program to be supervised by the secretary-general. At the same session, Resolution 194 (III) was adopted on Dec. 11, 1948. It called upon the states involved in the Israel-Arab conflict to negotiate a peace settlement and established a Palestine Conciliation Commission (consisting of the United States, France, and Turkey) to assist them in doing so. Paragraph 11 of that resolution stated, in part, "Those refugees wishing to return to their homes and live at peace with their neighbors should be permitted to do so at the earliest practicable date" and "…compensation should be paid for the property of those choosing not to return…" Paragraph 11 remained a bone of contention thereafter. The Arab side maintained that it conferred on the refugees a free and unconditional choice between repatriation and compensation. The Israel side argued that the refugee question could not be taken out of the general context of peace; that no return was "practicable" until normal conditions were restored; that only the government of a sovereign state could "permit" entry into the territory of that state; and that political, economic, and security conditions, such as the readiness of the refugees "to live at peace with their neighbors," had to be taken into account. In the negotiations which the Conciliation Commission tried

to promote, the refugee problem was treated as one element in a general peace "package."

By 1949, it was already clear that no immediate peace settlement was likely and that more long-range plans would be required for the refugees. The emphasis shifted to their economic absorption in the region as a whole, though the phrase "without prejudice to paragraph 11…" was formally repeated in resolutions. The Conciliation Commission had appointed a United Nations Economic Survey Mission for the Middle East, headed by Gordon Clapp of the Tennessee Valley Authority. The 1949 General Assembly endorsed a three-pronged program recommended by the Clapp Mission: the termination of direct relief within a year, the absorption of the refugees through public works projects, and the transfer of responsibility to the host governments at an early date. As an instrument for carrying out this program, the Assembly set up the United Nations Relief and Works Agency for Palestinian Refugees in the Near East (UNRWA). At the next Assembly, in 1950, the objective was defined as "reintegration of the refugees into the economic life of the Near East," and a three-year program was adopted envisaging the expenditure of $50 million for relief and $200 million for reintegration. UNRWA's original mandate was, therefore, to rehabilitate the refugees and take them off the relief rolls as soon as possible.

THE NUMBERS OF THE REFUGEES. Great difficulty was experienced throughout in reaching a reliable figure for bona fide Arab refugees. It is generally agreed that the figures were inflated at the outset and became more so in the course of time. First, there had been an influx of migrant labor from surrounding Arab countries during the Mandatory period, owing to the tempo of Zionist development. A substantial part of the refugee exodus in 1948 was, therefore, a return to home territory. In a 1949 report on the refugees, the secretary-general pointed out that the rolls had been compiled in a haphazard way and included large numbers of local unemployed or poor persons and nomadic Bedouin tribesmen.

The Clapp Mission estimated that at least 160,000 non-refugees had managed to get onto the relief rolls. Taking Mandatory census figures as a starting point and deducting from them the Arabs who remained in Israel and the indigenous population of the districts occupied by Arab forces (East Jerusalem, the West Bank, and the Gaza Strip), it may be deduced that the total number of bona fide refugees did not exceed a few hundred thousand. UNRWA adopted the following working definition of a refugee:

"… a person whose normal residence was Palestine for a minimum of two years immediately preceding the outbreak of the conflict in 1948 and who, as a result of that conflict, lost both his home and his means of livelihood…" However, UNRWA took over the existing rolls from voluntary agencies without revising them in accordance with the above definition.

In subsequent years the figures became even more unreliable through fraudulent birth registrations, failure to re-

port deaths, and the lack of adequate means for determining family income or physical presence in the area. Thousands of ration cards were acquired by merchants who collected the supplies. Under pressure from the contributing countries, United Nations resolutions repeatedly called for rectification of the rolls, but the host governments were unwilling to cooperate for fear of stirring up trouble in the camps. To the tables in the annual UNRWA reports, a prudent footnote was added that "the above statistics are based on the Agency's registration records, which do not necessarily reflect the actual refugee population." In 1968 the UNRWA registration records contained over 1,300,000 names. Of these, only a little more than 800,000 had ration cards. Of the rest, some received medical education services without rations and others no assistance at all, depending on the degree of self-support. The distribution of the 1968 total by areas, according to UNRWA statistics, was as follows (in thousands): West Bank 245, Gaza Strip 265, East Jordan 494, Lebanon 166, Syria 150, UAR 3.

EXCHANGE OF MINORITIES. The upheaval of 1948 brought about not one population movement, but two, in opposite directions. Following the establishment of the State of Israel, the Jewish minorities started leaving the Arab countries for reasons of political, economic, and often physical insecurity. The majority of them found refuge in Israel. What happened from 1948 onward was in effect a spontaneous and unplanned population exchange, in roughly equal numbers – about half a million or a little more each way. Today, with natural increase, the Jews who reached Israel from the Arab countries constitute a group of nearly a million. This exodus never became a United Nations question and no UN agency was set up to deal with it, because these Jewish refugees became completely absorbed into the life and economy of Israel. Israel spokesmen in the United Nations debates stressed that this exchange of population had to be accepted as a reality, as had happened in certain situations elsewhere, and it could not be put into reverse. The future of the Arab refugees lay in their final absorption into the Arab world, and not in their repatriation to their original homes. Some 40,000 of them were actually repatriated to Israel in the first few years after the 1948 war, for family reunion or hardship reasons.

ATTEMPTS AT RESETTLEMENT. In the period 1950–5, UNRWA initiated a variety of self-support programs, and two major land-settlement projects were planned: one in the northern Sinai and the other in the Yarmuk-Jordan River Valley. The Sinai project was based on an agreement between UNRWA and the Egyptian government, by which a large area in northwest Sinai would be reclaimed with Nile water to be syphoned under the Suez Canal. According to the plan, some 10,000 refugee families from the Gaza Strip would eventually be engaged in agriculture, and another 2,000 families supported by ancillary services and trades. Engineering and economic studies were carried out, and a comprehensive plan drawn up, but the project came to naught when the Egyptian government changed its mind about making water available.

The plan for the development of the Yarmuk and Jordan valleys aimed at the irrigation of about 125,000 acres to provide a living for between 100,000 and 150,000 people. Under its agreement with the Jordan government, the Agency was to provide $40 million out of the Rehabilitation Fund for this project. Some of the preparatory work was carried out, but UNRWA withdrew from the project when the division of the Jordan basin waters became caught up in Security Council debates, followed by the abortive efforts of the United States to promote a regional plan.

In the next few years, the Agency's small-scale self-support measures also withered away. After a decade of existence the Agency had lost its original rehabilitation purpose and had settled down as a self-perpetuating relief operation, with registration rolls that swelled steadily from year to year. The original working definition was extended to include children born after 1948, and by the 1960s a third generation began to appear. By 1969, children and young people far outnumbered the original refugees, and the registered total included about 500,000 infants and children under the age of 15. The constructive side of UNRWA's work remained its education and vocational training services. With the technical assistance of UNESCO, the Agency developed an elementary school network parallel to that of the host governments and provided grants for secondary and higher education. As a result, thousands of youths from refugee families were absorbed locally or found employment further afield in oil-producing countries, such as Kuwait and Saudi Arabia.

"IMPLEMENTING PARAGRAPH 11." By 1959, it was clear that the economic approach, through planned refugee absorption projects, had not solved the problem. The General Assembly launched an effort to reach a political accord limited to the refugee question, taken out of the context of the general Israel-Arab conflict. The Palestine Conciliation Commission, which had abandoned its peace-making efforts by 1951, was now instructed to find ways "to implement paragraph 11" of the 1948 Resolution. In due course, the Commission appointed Joseph E. Johnson, president of the Carnegie Endowment Fund in New York, as its special representative for this purpose. After two years of discussions with the governments concerned, Dr. Johnson submitted a set of proposals based on a "preference" to be indicated by each refugee and referred to the government concerned. A United Nations Rehabilitation and Compensation Fund would be established, and Israel would make an "adequate contribution" to it in lieu of direct compensation. These proposals proved unacceptable to the governments concerned and were shelved. In the General Assembly debates on the annual UNRWA reports, Arab spokesmen developed the thesis that this was not a humanitarian problem concerning displaced persons, but a national problem concerning a displaced people seeking national self-determination. The refugee problem appeared too

deeply imbedded in the basic political conflict to be settled as a separate issue.

DE FACTO INTEGRATION. In the course of time, the refugees became in fact economically absorbed to a much greater extent than was revealed in UNRWA statistics or admitted by Arab governments. Such integration was inevitable, since they were living among their own Arab brethren without any barrier of race, religion, language, culture, or way of life between them and their environment. This process was entirely in accordance with the general pattern of the refugee problems caused by wars and upheavals in the contemporary world. Since the end of World War II alone, some 50 million persons were displaced in Europe, Asia, and Africa and were finally absorbed into countries with which they had national, racial, or religious affinities.

In a special report on the refugees submitted in 1959, Secretary-General Dag Hammarskjöld called for intensified investment and development in the Arab countries in order to accelerate what he called the "integration de facto" of the refugees in productive life. He stated that

> The unemployed should be regarded not as a liability, but, more justly, as an asset for the future; it is a reservoir of manpower which in the desirable general economic development will assist in the creation of higher standards for the whole population of the area.

The Secretary-General's views came under political attack from the Arab States, and the report was shelved. The extent to which unplanned absorption was actually taking place, however, was acknowledged in the 1964 annual report of a new commissioner-general of UNRWA. Dr. Michelmore estimated that not more than 40–50% of the registered total were destitute or nearly destitute, about 30–40% were partially self-supporting, and 10–20% securely reestablished. In the same year, Dean Rusk, the U.S. secretary of state, in testifying before the Senate Subcommittee on Refugees, estimated that "there are almost half a million refugees who have registered refugee status but who in fact have jobs – some of them at some distance from the camps, living reasonably normal lives."

In his 1967 report, the commissioner-general stressed the social and economic progress the refugees had made, though he admitted that it had not been possible to reflect the extent of this rehabilitation in UNRWA's published statistics. Even the minority who lived in camps came and went as they pleased and found work in adjacent towns and farming areas. Dr. Michelmore put on record that some of these camps had become thriving villages. The hard core of the refugee problem remained the Gaza Strip, where the refugees outnumbered the local population, and where the economic opportunities were too limited for their full absorption.

THE ABANDONED PROPERTY. The immovable property abandoned in Israel by the refugees was vested in an official custodian. In subsequent years this property, particularly large tracts of agricultural land, became integrated in Israel's eco-

nomic development and absorbed by its expanding population under appropriate Knesset legislation. This was done without prejudice to the Israel government's offer to pay compensation to the original owners, as part of an agreed settlement of the refugee problem as a whole. In reaffirming this offer at the United Nations, Israel's spokesmen added that any settlement of compensation claims should also take into account Jewish property that had been taken over by Jordan in the 1948 war, as well as a huge amount of property confiscated in Iraq, Egypt, and elsewhere and belonging to Jews from those countries now settled in Israel.

With the cooperation of the Israeli authorities, an office set up by the Palestine Conciliation Commission embarked on the formidable task of compiling an inventory and making an evaluation of all immovable property that had belonged to the Arab refugees. This program took 12 years to complete and the voluminous records that were compiled have remained stored at UN Headquarters in New York, pending a settlement. In the meantime the Israel government released and paid out frozen refugee bank accounts in the sum of $11 million and handed over all the valuables left behind in safe deposit boxes. From 1960 onward, each General Assembly Session was presented with Arab proposals for the appointment of a United Nations custodian to take over the abandoned property and to make available to the refugees revenue from the properties, alleged to total scores of millions of dollars a year. The Arab delegations argued that this revenue would make it unnecessary for the refugees to be maintained on international charity. The Israel reply was that appointing such a custodian would violate sovereignty, that there was no legal basis or precedent for it, that it was beyond the competence of the General Assembly, and that the alleged revenue was nonexistent. The proposals were invariably defeated.

THE ISRAEL-HELD TERRITORIES. As a result of the *Six-Day War (1967), Israel found itself in control of two territories – the West Bank and the Gaza Strip – containing hundreds of thousands of refugees falling under UNRWA's mandate. On June 14, 1967, immediately after the cease-fire, an agreement was signed between the Israel government and UNRWA by which the Agency was invited to continue its operations in these territories with the full cooperation and assistance of the government. In subsequent annual reports, the commissioner-general confirmed that this cooperation was effective. The financial cost of the UNRWA operation to the Israel taxpayer is considerable. In the year ending June 30, 1968, it came to about $3½ million: $2½ million as the Israeli contribution to services for the refugees; $700,000 for port services, transportation, storage, etc.; and a cash contribution of IL 1 million. In addition, the refugees benefited indirectly by the maintenance of public services and economic activity in the territories, the government budget for which amounted to IL140 million per annum.

A joint technical study of the numbers of refugees in these areas was undertaken by Israel and UNRWA officials.

The UNRWA statistics were checked against the results of the census carried out in the territories in September 1967 and the identification cards issued to the inhabitants. The Agency adjusted its figures downward, but they remained somewhat above the levels of the Israel census, which indicated the presence of 207,000 refugees in the Gaza Strip (out of a total population of 360,000), and 105,000 in the West Bank (out of 600,000 plus). The census statistics on housing standards and possession of household goods showed that while the living conditions of the refugees in the camps were not as good as those of the average town population of the areas, they were better than those prevailing in the Arab villages.

THE 1967 DISPLACEMENT. During and after the Six-Day War, there was another large-scale population movement – mainly from the West Bank into East Jordan, and also including over 100,000 from the Golan Heights into Syria. UNRWA reports quoted a Jordanian figure of 400,000 persons alleged to have crossed from the West Bank, including over 100,000 UNRWA registered refugees. According to Israel's estimates, the total was little more than half that figure. A limited number had fled during the 72 hours of hostilities on this front, mainly from the Jericho camps. In addition, the Jordanian lists were presumed to include other groups: local residents left destitute by the war; inhabitants of the eastern side of the Jordan Valley who had moved further inland because of continued border clashes; persons from the West Bank who were already residing in East Jordan before the war; and a steady migration across the bridges that continued for a long period after the cease-fire, for family, income, and other reasons. The policy of the Israeli authorities was neither to encourage nor to prevent their departure.

In the summer of 1967, the Israel government initiated a repatriation scheme with the assistance of the International Red Cross Committee. Under this project 14,000 persons returned from Jordan to their homes in the West Bank and another 7,000 permits were issued but not utilized. After that, a return in small numbers continued under a family reunion scheme. Speaking before the General Assembly on Oct. 8, 1968, Foreign Minister Eban undertook that the processing of applications for the uniting of families would be intensified, and the 7,000 unused permits from the 1967 repatriation project would be made available to other would-be returnees. International concern focused on the plight of the displaced persons in Jordan, particularly some 80,000 of them who were housed in tented camps under winter conditions. The Israeli government was urged to lift restrictions on their return, and in December 1968 the General Assembly adopted a resolution to this effect. The Israel delegation voted against it and maintained that the extent and rapidity with which a return could be facilitated had to be considered in the light of current political and security conditions, which remained disturbed as a result of border warfare and terrorist activity promoted from Jordan.

INCITEMENT IN SCHOOL TEXTBOOKS. For a number of years prior to the Six-Day War, Israeli representatives in the United Nations debates had complained about the fact that textbooks used in the UNRWA/UNESCO schools were indoctrinating the minds of a whole generation of refugee children with hatred, revenge, and incitement to war. After the Six-Day War, the textbooks in the non-refugee government schools now in areas under Israel rule were revised or replaced. As regards the refugee schools, the matter was referred to UNESCO. A three-man committee of experts was appointed to examine the textbooks and found that most of them needed to be revised or replaced. The Syrian government withheld its cooperation, while the Jordanian government rejected the committee's findings on the ground that refugee children were entitled to be taught about their political claims to Palestine. Israel found the expert recommendations generally acceptable.

THE REFUGEE PROBLEM AND PEACE. The resolution unanimously adopted by the Security Council on Nov. 22, 1967, called for the establishment of "a just and lasting peace" between Israel and the neighboring Arab States. As "a just settlement of the refugee problem" was one of the elements in the resolution, it therefore tacitly abandoned the earlier hopes of resolving the problem as a separate issue, and again placed it in the framework of an overall Israel-Arab peace settlement. In his statement to the General Assembly of Oct. 8, 1968, outlining nine principles for peace, the Israel foreign minister proposed that

> A conference of Middle Eastern States should be convened, together with the Governments contributing to refugee relief and the Specialized Agencies of the United Nations, in order to chart a five-year plan for the solution of the refugee problem in the framework of a lasting peace and the integration of refugees into productive life. This conference can be called in advance of peace negotiations.

There was no response to this proposal.

In the later debate on the UNRWA Report, the Israel delegation also proposed that a refugee program should include a Reintegration and Compensation Fund, and reaffirmed the willingness of the Israel government to give substantial financial support to such a Fund. The practical aspects of a solution would take a number of years and very substantial funds, but should not be unduly formidable once the political and psychological roadblocks had been removed. Until there was a peace settlement, the best hope for the refugees lay in stimulating the process of spontaneous economic absorption, especially for the younger persons who had acquired education and skills.

[Michael Comay]

Arab National Movement

THE RISE OF ARAB NATIONALISM. Arab nationalism – as opposed to ethnic self-awareness – did not appear until the end of the 19th century; it was the claim to political rights for the Arabs on the basis of their existence as a separate group

that turned mere self-awareness into nationalism in the modern sense. Arab consciousness is of long standing and was based primarily on three factors: the belief in a common descent from Arabian tribes that engulfed the Middle East and North Africa in the seventh century; the existence of literary Arabic; and the special position of the Arabs in Islam. Until the end of the 19th century, however, this consciousness was devoid of all political implications. The religion of Islam provided the source for political organization, government administration, and the legitimacy of rule; the various Muslim empires were the political framework of Islam from the first Caliphate up to the Ottoman Empire.

The wavering of Arab allegiance to the Ottoman Empire may be traced to various sources. The reforms instituted in the empire in the course of the 19th century brought about a substantial change in its traditional Muslim image. The reformist central government sought to impose a Western-style administration and law upon a society that was neither interested in nor ready for modern innovations. The local leaders of Arab provinces reacted vehemently against the secular aspects of the reforms, especially the attempts to place non-Muslims on an equal footing with Muslims. The feeling that Islam was in danger was further heightened by the confrontation with the culture, material progress, and military and economic power of the West. Muslim leaders believed that in order to stand up to the spiritual and military challenge posed by the Christian West, Islam had to regain its pristine strength. Originally, Islam had been Arab in its leadership, predominant culture, and prevailing social and administrative institutions. Thus, the desire to restore its pristine glory resulted in a reassessment of the place of the Arabs in Islam and the conclusion that this aim could be achieved only by reestablishing the Muslim Caliphate in its original form, under the leadership of a descendant of the Prophet's tribe. This conclusion was the origin of the political-religious demand for a change in the status quo prevailing in the Ottoman Empire.

In the course of time, this aim received a tremendous impetus from a variety of other sources. The second and third generation of Ottoman reformers – the Young Turks – sought a new and more forceful ideological basis for the preservation of the tottering empire. The process of Westernization brought them into contact with a concept that appeared to be the key to the success of Western civilization – the concept of nationalism. For a while they vacillated, unable to decide the nature of their nationalism: Pan-Ottoman, pluralist, and liberal, in which all citizens of the empire would participate on the basis of equality and fraternity in a common fatherland – and therefore a nationalism that would be more aptly described as patriotism – or a restricted Turkish nationalism, in which the decisive criterion would be ethnic and linguistic and which would transform the Muslim and supernational Ottoman Empire into a single nation-state, in which the Turks would impose their will, language, and characteristics upon all the other groups. Slowly but surely the Young Turks adopted the second alternative – the liberal, Central-European type of

nationalism – and proceeded with efforts to bring about the Turkification of the entire empire. Their aim became noticeable on the eve of World War I and was among the factors responsible for the emergence of a parallel, diametrically opposed, Arab nationalism. Once the Muslim character of the empire was put in question and an attempt made to turn the empire into a Turkish one, it became inevitable that the consciousness of the existence of a separate Arab entity should be transformed into a political attitude (which regarded the Arab entity as the only possible basis upon which a political framework could be established). This cultural and ideological development, however, was confined to educated members of the social elite. The general population continued to regard Islam and the Ottoman Empire as the principal frameworks of its identity. In the years before World War I, only a few hundred activists and political thinkers were converted to the new ideology of Arab nationalism.

PALESTINIAN OPPOSITION TO ZIONISM. Palestine, in the borders defined by the British Mandate, did not yet exist as a separate administrative entity. The Acre and Nablus districts were part of the province (vilayet) of Beirut while the district (sanjak) of Jerusalem, because of its religious and international significance, came under the direct supervision of the Ottoman Ministry of the Interior.

The Arab movement, based primarily upon the awareness of common language and common descent, was by its nature all-embracing and unaffiliated with any particular region of the empire. Nevertheless, there were areas that played a more prominent role in this development. Damascus played a leading part as a seat of Muslim scholarship and the home of Arab families claiming descent from the Prophet, and it became the center of the Arab movement in the prewar years. (The term "Syria" was sometimes used to refer to the vilayet of Damascus, which also included Transjordan, and sometimes to comprise the whole of Palestine, as well as modern Syria and Lebanon.) During World War I, and especially toward the end, Mecca became the center of the movement, due to the desire to defend and strengthen the position of the Hashemite family of Hussein Ibn Ali as the emirs of Mecca. These developments, however, had little impact on Palestine. Only an insignificant number of Palestinian Arabs took part in the movement. It was only toward the end of the war that the attitude of the Arab population in Palestine underwent a change, as a result of the sufferings caused by the war and the intolerable repression carried out by the Turkish government, which saw its very existence hanging in the balance.

Other developments, concerned primarily with Palestine itself, played a greater role. The establishment of the special district of Jerusalem endowed the social elite of that city with a higher status, comparable to that of the capitals of the adjoining provinces of Damascus and Beirut. In general, the rise of the local elite to positions of leadership in society, religion, and administration was a central feature of life in the area in the 19th century. The local leadership group that came into be-

ing was a breeding ground for the activists in the movement for Arab awakening; simultaneously, however, a social stratum was created that had regional, economic, and social interests, rather than Pan-Arab aims. The establishment of the special sanjak of Jerusalem – which comprised the southern half of Palestine – also marked the beginning of a process by which Palestine came to be regarded as an entity in its own right. Opposition to Zionism and the British Mandate completed this process and gave it a political character.

As early as the end of the 19ᵗʰ century, the Arab population of Palestine began to pay attention to a new phenomenon: the immigration and settlement of Jews, while some of the veteran Jews were leaving the walled-in quarters in the cities, buying land, building housing estates, and entering new trades and professions. The Arabs also became aware of the new type of Jew that was entering the country, so different from the Jew that the Arabs had known. Instead of remaining secluded in his corner and accepting his inferior status in Muslim-Ottoman society, the new Jew was proud and self-confident. He was also foreign – in language, manners, and mores – and often also alien to the traditional religious atmosphere prevailing among the population. Gradually, both the local Arab leaders and the Ottoman officials came to suspect that the newly arrived Jews had political ambitions and that they had come to the country in order to establish a Jewish state.

It was not surprising, therefore, that from the beginning Jewish settlement met with opposition from both the local Arabs and the Ottoman administration. While at most times this opposition was dormant, there were many instances when it was expressed publicly. The opposition of the local population was direct, taking the form of sporadic attacks, usurpation of lands, and the like; it is doubtful whether this opposition had any political connotations. In 1891, however, nine years after the beginning of the First Aliyah, the first sign of political opposition to Zionism made its appearance. Jerusalem notables – both Muslim and Christian – called upon the Ottoman administration to prohibit the immigration of and the sale of land to Jews. This request was repeated time and again; local spokesmen demanded the enforcement of the restrictions against the entry of the Jews, which had been enacted, but not always observed.

Appeals to the Ottoman administration were not the only form of political opposition. After the 1908 revolution of the Young Turks, the first Arab newspapers made their appearance in Palestine. Some of these supported the Young Turks and others were followers of the liberal opposition (the Entente Liberale Party), but they were all united in their opposition to Zionism. They claimed that Zionism was a danger to the country and called upon both the population and the administration to put an end to it. A similar attitude was also expressed in the first books on the Arab question that began to appear at this time, such as *Le Réveil de la Nation Arabe dans l'Asie Turque* by Negib Azoury (Paris, 1905). Officials of the Ottoman administration who were imbued with the new spirit of nationalism did all they could to put obstacles in the way

of Jewish immigration and land purchases. One well-known example was Shukrī al-ʿAsalī, the Kaimakam (subdistrict commissioner) of Nazareth, who in 1910–11 tried to prevent the purchase of the al-Fūla lands (the present Afulah-Merḥaviah area) by Jews. (For Zionist efforts to contact Arab nationalist leaders, see *Zionist Policy.)

THE STRUGGLE AGAINST THE MANDATE. The opposition to Zionism made further advances when the British conquered the country in 1917–18. The severance from the Ottoman Empire was a fact. Beginning in October 1918, a semi-independent Arab regime, under Faisal Ibn Hussein, gradually established itself in Damascus. Palestine, on the other hand, was administered by the British occupation forces. While Syria appeared to have excellent prospects of achieving independence, reports came into Palestine concerning promises made to the Jews by the British (see *Balfour Declaration). The Turkish regime, which was in the process of retreating from Palestine, took care to give these reports wide dissemination, adding exaggerated stories concerning the insolence displayed by Jews in the areas taken over by the British. In November 1918, the British and French governments – partly in order to counteract Turkish propaganda – promised the inhabitants of Syria and Iraq that they would be free to choose their own form of government. This move caused the Arab leaders in Palestine to feel that they were excluded from the promise and would thus be subject to a special regime that would strive for the realization of the Balfour Declaration. At the time, both Jews and Arabs understood the Declaration to have more far-reaching implications than were intended by the British government.

Against this background, the political organization of Palestinian Arabs began to develop. The first political societies were established toward the end of 1918: the Muslim-Christian Society, the Arab Club, and the Literary Club. In January 1919 representatives of these societies met for their first country-wide conference and adopted resolutions defining Palestine as "Southern Syria" and declaring their aim to have Palestine annexed to the Faisal regime in Damascus. The representatives of the Jerusalem leadership, who had the most to gain from an independent or semi-independent, separate Palestinian regime, were not pleased with the results of the conference. Nevertheless, the belief that union with Syria was the best guarantee for the suppression of Zionism prevailed at the conference and it continued to prevail as long as Faisal's star was on the rise. In March 1920, when Faisal was crowned king of all of Syria (including Lebanon and Palestine) and was at the height of his career, enthusiastic demonstrations of support took place in the towns of Palestine; the Nebi Mūsā celebrations in Jerusalem in April 1920 were turned into a manifestation of pro-Faisal feelings and became the occasion for anti-Jewish riots.

In July, however, the Arab Hashemite regime in Syria collapsed under French pressure and the Palestinians were left on their own. Although Syrian exiles tried to continue their struggle for the reestablishment of an all-Syrian king-

dom in cooperation with the Palestinian leaders, the latter consistently refused to join them in their work. The Palestinians saw their main interest in the organization of the Arab rank and file for the campaign against Zionism. In December 1920 they convened the "Third" Palestinian Conference (the first conference was held in January 1919; the second had been scheduled to take place in May 1920, but was prohibited by the British military government), at which the Palestine Arab leaders defined their future policy. It was to consist of two basic demands: absolute rejection of Zionism and the establishment of a local government in Palestine, to be elected by the prewar inhabitants of the country. No mention whatsoever was made of union with Syria. In order to realize its aims, the conference elected an executive committee under the chairmanship of Mūsā Kāẓim al-Husseini.

The executive committee based itself upon the Muslim-Christian Societies and found its support among the urban elite of landowners, clergy, merchants, and a few modern intellectuals. As a rule, the committee was dominated by the same elements that had earlier withheld support from the idea of union with Syria. The modus operandi that the committee employed consisted of the formulation of demands, the presentation of protests, and the organization of strikes. It rejected violence and did not lend support to the riots of May 1921, which were organized by the remnants of more extremist organizations that had campaigned for union with Syria in 1919–20 and had received moral and financial support and arms from the Hashemite regime in Damascus. Until the summer of 1922 the committee sought to prevent the confirmation of the Mandate on Palestine by the League of Nations, and until 1923 it persisted in its efforts to have the terms of the Mandate amended. The committee's petitions and the talks held by its delegations in London and Geneva uniformly stressed its opposition to the Zionist connotation of the Mandate, i.e., the promise to help in the establishment of a Jewish National Home in Palestine and the recognition of Hebrew as an official language and of the Zionist Organization as an official body (the Jewish Agency) authorized to advise the Mandatory government on matters pertaining to the establishment of the National Home.

This policy also guided the committee's attitude toward the Zionist movement. The committee refused to recognize Zionism as a legitimate partner in Palestine and would not negotiate with Zionist representatives. During the visit of the first Palestinian Arab delegation in London (August 1921–July 1922), when negotiations with the British government came to a deadlock, the Colonial Office sought to arrange a meeting of the delegation with the leaders of the Zionist Organization. At first, the Arabs refused even to meet with the Zionists, but eventually they agreed to an informal meeting with Chaim Weizmann, which took place in December 1921. The outcome was completely negative, as the Palestinians did not budge from their stand that Zionism had no rights whatsoever in Palestine and persisted in their refusal to negotiate with Zionist representatives. This meeting, however informal, was the only one to take place between Weizmann and the leaders of the Palestine Arab national movement.

The Arab leaders in Palestine also refused to have anything to do with the attempts made in 1922 by Syrian leaders living in Egyptian exile to reach a settlement with the Zionists. The Syrians were prepared to recognize the rights of the Jews to a National Home in Palestine in return for Jewish support of their struggle for independence. Such an agreement, however, would have necessitated a break with Britain, and therefore the Zionist movement was not inclined to accept it. Equally important, however, was the fact that the Palestinian Arab leaders flatly rejected the idea of such an arrangement and refused to accede to the Syrians any right to decide that fate of their country for them, as they had similarly rejected the agreement reached between Faisal and Weizmann three or four years before (see Chaim *Weizmann). Furthermore, the entire affair caused great bitterness against the Syrians and thus reinforced the trend toward Palestinian separatism and abandonment of the concept of all-Syrian Arab unity. For many years, preoccupation solely with the affairs of Palestine became a principle of the Palestine Arab movement and its various organizations.

THE QUESTION OF LOCAL SELF-GOVERNMENT. When they failed in their demands for the abolition of the pro-Jewish provisions of the Mandate, the Palestinian Arabs adopted a policy of noncooperation with the Mandatory government in matters related to the establishment of organs of self-government, as set forth in the Mandate and the Palestine Constitution (1922 Order-in-Council). Toward the end of 1922 and the beginning of 1923, they campaigned against participation in the elections for a legislative council and succeeded in preventing the establishment of this body (which was to have been made up of the high commissioner, ten government officials, and twelve locally elected representatives – eight Muslims, two Christians, and two Jews). In the course of 1922 they also rejected the establishment of a Consultative Council, to be made up of appointed members, and of an "Arab Agency," which was to concern itself with safeguarding the "civil and religious rights" of the non-Jewish population in accordance with the Balfour Declaration and the terms of the Mandate.

At the end of 1923, when the ineffectiveness of this policy became clear, a new force, which advocated more moderate methods, came to the fore. It argued that in order to achieve the expulsion of Zionism from Palestine, the Arabs should cooperate with the Mandatory government and thus attain their goal by influencing government institutions through day-to-day contact. This group centered around the Mayor of Jerusalem, Rāghib Bey al-Nashāshībī. The Nashāshībī family was involved in a feud with the al-Husseinis (who were in control of the executive committee and the Supreme Muslim Council), and the quarrel between the two families now found its expression in political antagonism. The committee's failure to bring about the abrogation of the pro-Zionist provisions of the Mandate made it possible for Nashāshībī 's supporters (the op-

position) to increase their influence and standing. There was a perceptible abatement of anti-Zionist fervor, the committee's work came to a standstill, and in the 1927 municipal elections the opposition scored a decisive victory.

In 1928, after a lapse of five years, the Seventh Palestinian Conference was convened to decide upon a new policy. The resolutions adopted by the conference emphasized the need for a local government, responsible to an elected parliament; opposition to Zionism was mentioned only indirectly by confirming the resolutions passed by previous conferences. A moderate atmosphere prevailed at the conference, the result of the realization that the Arabs had made a mistake in rejecting all the British proposals made in 1923 concerning the establishment of a self-governing body. This line was taken by both the opposition and the executive committee and its supporters. The Seventh Palestinian Conference took place at a time when Zionist settlement had for two years been facing the most severe crisis it had yet undergone. In 1927 more Jews left the country than entered it, and those that did come met with intolerable conditions. Many Palestinian Arabs thought that the Zionist vision was about to evaporate. Accordingly, they thought it preferable to adopt a practical line and not insist on the abrogation of a policy that they thought had in fact failed.

At the beginning of 1929, on the basis of the resolutions adopted by the conference, the executive committee approached the high commissioner with a proposal to establish a "local government." In June of that year, an agreement was reached between the Mandatory government and the leaders of the two factions, Mūsā Kāẓim al-Husseini and Rāghib Bey al-Nashāshībī, on the establishment of an appointed legislative council. The Arabs were now ready to accept an even more moderate form of the arrangement they had rejected in 1923. Other developments, however, foiled the plan. In August 1929 a clash over the *Western Wall was followed by a wave of Arab violence against the Jews, and under the circumstances the British government felt that the time was not ripe for concessions on matters of local administration.

The following year, however, the British government sought to appease the Palestinian Arabs by restricting immigration and the sale of land to Jews (the "Passfield White Paper," October 1930 – see Palestine *White Papers). But when this policy encountered vehement opposition and worldwide protests from Zionist and pro-Zionist circles, the British government, in effect, reversed its policy in a letter from Prime Minister Ramsay MacDonald to Weizmann in February 1931. The government did not give up the idea of finding a way to appease the Arabs, however, and toward the end of 1931, when complete calm had been restored, it again broached the idea of a legislative council. Although the executive committee continued to press for a "local government," it did not appear too difficult to bridge the gap between the British proposal and the Arab demand. Once again, however, the Zionist Movement took issue with the British government and the renewed plan for a legislative assembly was again shelved.

The Zionist Organization declared its unalterable opposition to a local governing body that would give constitutional expression to a minority status for the Jews of Palestine. Its adamant resistance strengthened the hand of those members of the British government who were reluctant to run the risk of establishing a self-governing body in a country in which there were several hostile communities. The plan was not officially revived until the end of 1935, when the representatives of the local population were invited to participate in discussions for its enactment. The reaction of the Arabs was mixed: although they did not totally reject the plan, they did not display any enthusiasm over it, hoping to obtain more by hard bargaining. Jewish opposition was absolute, and all the supporters of Zionism in Britain acted against the proposal. Members of Parliament also had their doubts about its merits and many thought that Palestine, with its host of problems, was not yet ready for self-government. These doubts were strengthened by Zionist resistance, and, when the plan came up for discussion in the House of Commons in February 1936, there was hardly a member who was ready to support it. Thus the plan was finally buried.

The defeat of the plan for a legislative council may have been the spark that set off the "Arab Rebellion" of 1936–39. The roots and motives of the rebellion, however, lie in the early years of British rule.

THE RISE OF HAJJ MUHAMMAD AMIN AL-HUSSEINI. When the British first occupied Palestine, they were faced with a problem that they had to solve immediately, i.e., the organization of Muslim religious life. The severance of Palestine from the Ottoman Empire had left the Muslim community courts and the administration of the *waqf* (religious foundations) without leadership and supervision. These establishments were put under the temporary supervision of the military government, but it was clear that, as a Christian power, the British government would seek to rid itself of this function. At the same time, the British began to enhance the status of the mufti of Jerusalem, Kāmil al-Husseini, appointing him president of the Muslim Court of Appeals. They treated him as the head of the Muslim community of Palestine, although there was no historical or religious basis for this attitude. The result was that when Muslim religious life was organized in the course of 1921, and the Supreme Muslim Council was established (January 1922), the mufti of Jerusalem was elected, as a matter of course, to stand at its head.

In the meantime, however, events had taken a new turn. In March 1921 Kāamil al-Husseini died. He had done all he could to help the British regime, and it had in turn strengthened his position. After his death there were many candidates for the post of mufti of Jerusalem. The al-Husseini family and its supporters closed ranks in support of the candidacy of Hajj Muhammad Amīn al-*Husseini, who lacked the proper religious qualifications, but in the period 1919–20 had come to the fore as a skillful political leader and organizer and was in the forefront of the campaign for union with Hashemite Syria.

He was also one of the instigators of the anti-Jewish riots in Jerusalem of April 1920 and was sentenced *in absentia* to 15 years in jail; in the autumn of that year, however, he was pardoned by the high commissioner, Sir Herbert *Samuel, and returned to Jerusalem.

Now the high commissioner was faced with the demand to appoint him mufti of Jerusalem. Above all, the high commissioner wanted to ensure that the bloody riots that had taken place in Jerusalem would not be repeated during the Nebi Mūsā celebrations in April 1921. He also looked for ways and means to appease the anti-Zionist feelings that prevailed among the Arabs of the country. He came to the conclusion that appointing the leader of the extremist elements to a prestigious religious and public position would assure his proper behavior. Furthermore, Hajj Amīn al-Husseini himself stated in a talk with the high commissioner (as recorded by the chief secretary of the Palestine government) "that the influence of his family and himself would be devoted to maintaining tranquility in Jerusalem, and he felt sure that no disturbances need be feared this year."

Thus in May 1921 Amīn al-Husseini was appointed mufti of Jerusalem and in January of the following year, with the support of the Mandatory government, was elected president of the Supreme Muslim Council. On the whole, peace reigned until 1929. Amīn al-Husseini made good use of this period to reinforce his position and turn the Supreme Muslim Council into a stronghold of his supporters and sympathizers. The council became a government-within-a-government, and the Mandatory authorities did not interfere with the administration of the *waqf* (which yielded a yearly income of £60,000 at the time) and the Sharī'a courts. Moreover, the Mandatory government favored the strengthening of the Supreme Muslim Council, which thus became – in fact if not in theory – a counterpart to the Zionist Organization and the outstanding representative body of the Palestinian Arabs, thereby creating a measure of balance between the two communities.

From the outset al-Husseini spared no effort to enhance the status of Jerusalem in the eyes of the Muslims. He initiated an impressive project to renovate the city's two principal mosques (Dome of the Rock and al-Aqṣā), after conducting a campaign for contributions throughout the Muslim world. One of the principal themes he used in the campaign was the allegation that the area in which the mosques were situated (known to the Jews as Har ha-Bayit, the Temple Mount, and to the Muslims as al-Ḥaram al-Sharīf) was threatened by the Zionists, who were planning to rebuild the Temple on the site. Amn al-Husseini alleged that the efforts of the Jews to obtain clear and unequivocal rights to pray at the Western ("Wailing") Wall were in fact the beginning of an attempt to take over the entire area. The Muslim authorities pointed to the provision of the Mandate for the safeguarding of the status quo of the Holy Places that existed under the Turkish regime and contended that according to that status the Jews had had no clear rights at the Western Wall. Technically there were grounds for such a contention; in fact, however, the Jews had

been praying at the Western Wall both before and during the Turkish regime, although there was no regular synagogue on the spot. The restrictions imposed by the Turks were often circumvented by paying off the local officials.

The constant friction concerning Jewish rights at the Western Wall caused a series of clashes during the 1920s which culminated in the anti-Jewish massacres in *Hebron and *Safed in August 1929. Against this background, the Palestine problem ceased to be an issue of local interest and began to engage the attention of the Muslim world. Amīn al-Husseini encouraged this development and, toward the end of 1931, convened a world conference of Muslims to discuss "the defense of the Holy Places." On the basis of this issue Amīn al-Husseini became the chief spokesman of the Palestinian Arabs. He proved himself the most extreme and consistent foe of the Jews and overshadowed all the other Arab leaders. His rise was facilitated in large measure by the helplessness displayed by the executive committee and its leaders, who were only able to issue anti-Zionist protests, and had even failed in preventing the sale of land to Jews. Furthermore, the same leaders who demanded the passage of a law prohibiting the sale of Arab land to Jews were not averse to making such sales themselves.

Thus, at the beginning of the 1930s, the mufti and his followers began to attack the executive committee and its outdated methods. Under the pressure of these attacks, the committee made a final attempt to organize anti-British riots in October 1933, but retreated in the face of sharp government reaction. The committee members came to realize their impotence, and the death of the chairman, Mūsā Kāẓim al-Husseini, in March 1934 also marked the committee's downfall. Amn al-Husseini rose to leadership with the support of a younger and more extreme generation of activists, who were prepared to solicit aid for their struggle from Arabs outside Palestine and even non-Arab Muslims. They organized scout groups and young Muslim clubs and, from 1934–35 onward, attempted to thwart "illegal" Jewish immigration and the sale of land to Jews. The president of the Supreme Council used the prestige of his office and the power of religious functionaries to intimidate the Arabs who would not comply with his policy.

All his efforts, however, were of no avail. These were the years in which Jewish settlement was expanding at an unprecedented rate. The enlargement of the *Jewish Agency through the adhesion of non-Zionist Jews in 1929 enabled the Zionist Organization to extricate itself from its financial difficulties. The Nazi rise to power in 1933 and the wave of antisemitism that spread through Eastern Europe resulted in a tremendous growth in Jewish immigration. In 1935, no fewer than 61,500 Jews entered Palestine legally. Palestinian Arabs calculated that if this rate continued, it would take the Jews only 12 years to achieve a majority in the country.

The militant Muslim youth, who saw in Hajj Amīn al-Husseini their leader and savior, felt that Jewish immigration and settlement had to be prevented by the use of force. The first group of fighters had been organized as early as 1931 un-

der the leadership of a Haifa Muslim cleric, Sheikh ʿIzz al-Dīn al-Qāsim. The failure of the plan for a legislative council at the beginning of 1936 served the Palestinian Arabs as a sign that they would not achieve their aim with the help of Britain and that the only choice left to them was to take the law into their hands.

ARMED STRUGGLE AND ITS OUTCOME. The first stage of the "Arab Revolt" was a six-month strike, which began in April 1936. Although there were Arab attacks upon Jews and British soldiers and installations during this period, the emphasis was on the general strike and political action by the leaders. The strike ended in October in response to an appeal by the Arab kings, which was welcomed both by the British (who had in fact inspired the appeal) and by the Palestinian Arabs (who had by now tired of the strike). The appeal marked the first intervention in Palestinian affairs by non-Palestinian Arabs – a development that was destined to become a central feature of the entire problem. The end of the strike was followed by the appointment of the Peel Commission, which eventually recommended the partition of the country (see *Palestine, Partition Plans). The plan was turned down by the Arabs; the Jews did not receive it with great enthusiasm; and in the end it was cancelled by the British, upon the recommendation of the Woodhead Commission.

After the publication of the Peel Commission's proposals, the Palestinian Arabs renewed their struggle, terrorism becoming its principal expression. The terror campaign had several aspects: it was directed against the Jews, against the British, and, internally, against Arabs – opponents of the mufti, who were not prepared to offer blind obedience to his leadership and his methods. In 1937 there were even contacts between some Palestinian Arab and Jewish leaders in an attempt to arrive at a political solution to the problem. The first such contacts were made in 1934 on the initiative of David Ben-Gurion, then a member of the Zionist Executive and from 1935 its chairman. No results were achieved and no way found to remove the main stumbling block – the issue of unrestricted Jewish immigration. Although some Arab leaders were prepared to agree to limited immigration, which would raise the proportion of Jews among the population to a maximum of 40%, the Jewish Agency was adamant in refusing to accept minority status for the Jews. In return for the uninterrupted flow of Jews into the country, the Jewish leaders were ready to have Palestine join a Pan-Arab confederation or even federation; for the majority of the Palestinian Arab leaders, however, Arab unity was not an end in itself but only a means in their struggle against Zionism, and the Jewish Agency's readiness to join a wider Arab framework made no impression on them. Significantly, the only Palestinian Arab leader who was at least prepared to discuss such a proposal was ʿAwnī ʿAbd al-Hādī, of the Istiqlāl Party, who advocated Arab unity for its own sake.

Militarily, the "revolt" of 1936–39 ended in defeat, but it brought the Palestinian Arabs a political reward – the 1939 White Paper (see Palestine, *White Papers) – which was in effect an abrogation of the policy formulated in the Balfour Declaration. Ostensibly, Britain had reached the conclusion that the Jewish National Home had become a reality and that by enabling some 450,000 Jews to establish a social, cultural, and political framework in Palestine under conditions of semi-autonomy, the British government had fulfilled its obligation under the Balfour Declaration. This change in policy was rooted in the realization that war with Nazi Germany had become unavoidable and that it was therefore necessary for Britain to secure friendship, or at least a passive attitude, from the Arabs. No concessions had to be made to the Jews, whose support in the struggle with the Nazis was not in the slightest doubt.

Although preparations for World War II brought forth the White Paper policy, the war itself and its tragic consequences for the Jews deprived this policy of the foundations upon which it had rested. Many Palestinian Arab leaders supported the Nazis, and Amn al-Husseini and his associates spent the war years in Berlin and Rome taking part in the Nazi war effort and trying to induce the Muslim population in the occupied territories (Bosnia and the Crimean Peninsula) to collaborate with the Germans. The situation of the Jews was quite different. The war affected them more severely than any other people, and they contributed their utmost to the Allied victory. In these circumstances, the attempts of the British Labor movement to follow, in one way or another, the policy laid down in the White Paper, faced strong opposition from public opinion in the Allied countries. At the same time, the Palestinian Arabs were in great difficulty. Although the "Arab Revolt" had earned them the White Paper, their terror campaign had brought internal dissension to an unprecedented pitch. It took the intervention of the Arab League to establish the Higher Arab Committee in 1945 as the representative body of Palestinian Arabs, and the League even had to appoint its members. Moreover, Palestinian Arab leadership bore the stigma of collaboration with the Nazis, and in the United Nations (which was founded by the anti-Axis nations and in 1947 became the arena for the political struggle for Palestine) the representatives of a people that had fought against the Nazis and had been their principal victim had a tremendous moral and political advantage over Nazi collaborators.

Against this background, the independent Arab governments and the Arab League gradually assumed the task of representing the Palestinian Arabs, while the Arab Higher Committee played a purely negative role, opposing every compromise offered by Britain in 1946 and preventing the Arab League from accepting any solution that did not recognize Palestine as a purely Arab country in which the Jews had no political rights whatsoever. Even individual civil rights, according to the Arab Higher Committee, were to be given only to those Jews who had settled in the country before World War I.

Although the Arab Higher Committee realized that its radical goals could be achieved only by the force of arms, its preparations for the eventuality of war were highly inade-

quate. No countrywide military organization was established among the Palestinian Arabs, the standard of combat training was low, and it appeared that the committee was relying on volunteers from the neighboring countries and the regular Arab armies. On Nov. 29, 1947, when the UN General Assembly voted to partition Palestine into an Arab state and a Jewish state, the Arab Higher Committee announced its resistance to the resolution and its determination to prevent its implementation by force, but its capacity to carry out the threat was severely limited. Until May 15, 1948, when the regular Arab armies invaded Palestine, the *yishuv* succeeded in defending its territory and even in occupying several important Arab towns and rural centers. The invading irregular Arab troops did not succeed in changing the situation.

The Palestinian Arabs from 1948
The military intervention by the Arab states, the establishment of the State of Israel, the Egyptian occupation of the Gaza Strip, and the annexation of Samaria, East Jerusalem, and the Hebron area by Jordan all had a far-reaching effect upon the subsequent history of the Arab National Movement in Palestine. Palestinian Arabs no longer existed as a political entity. Those who remained in Israel became Israel citizens; those who were under Jordanian rule were given Jordanian nationality; and only in the Gaza Strip was there an insignificant remnant of Palestinian Arab political existence. In addition, hundreds of thousands of the Palestinian Arabs had become refugees, and as a result many of their social institutions were destroyed: villages were uprooted and families torn apart, regional institutions ceased to exist, and it seemed as though the voice of the Palestinian Arab had been silenced.

It took the Arabs who had remained in Israel several years to recover from the shock of defeat. Many believed that the newly established Jewish state was a passing episode and passively waited for the neighboring Arab states to restore the status quo ante. When the Israel Arabs realized that the State of Israel was a permanent feature in the Middle East, two groups developed among them: one accepted the existence of Israel and tried to find a way of leading a peaceful life in the democratic framework of the country, while the other refused to accept the Jewish state and joined anti-Zionist groups to lead a political struggle for equal rights and the return of all Arab refugees and abandoned Arab property. The first group cooperated with the government in their daily lives, devoted themselves to their economic advancement (in which they enjoyed government assistance), and cast their votes in municipal and Knesset elections for lists linked with Mapai, the largest Jewish party. The second group expressed its attitude mainly by supporting the Communist Party or, at times, purely Arab nationalist organizations. Most of the Arab population, however, vacillated between the two trends, and the fact that many Arabs supported Mapam – a leftist, though Zionist, party – was a characteristic expression of the prevailing condition.

In the Gaza Strip, the refugees preserved their Palestinian identity but had no leadership of their own. The difficult conditions in which they lived under Egyptian rule – hundreds of thousands of refugees crowded into a small area and practically not allowed to leave – precluded their social and economic integration and added to their implacable hatred of the Jews and of Israel.

In Jordan, on the other hand, there was a more complex development. A considerable part of the Palestinian population was unhappy about their incorporation as the "West Bank" of the Jordan Kingdom. The supporters of Amīn al-Husseini and many of the young people who had been influenced by the extreme nationalistic ideology of the revolutionary Baʿth Party and the Arab Nationalist organization were in violent opposition to the annexation and it was years before they came to accept it. Until the late 1950s, Jordanian rule on the West Bank was based upon the rivals of al-Husseini, i.e., the supporters of Rahib Bey al-Nashāshībī. In the 1960s, however, the situation changed, largely as the result of the economic advance in Jordan during this period. The cultivation of new lands, the beginnings of industrial development, the increase in trade, and the expansion of education, and other services all required skilled manpower, which the Palestinians were able to supply. Many left for the East Bank, where most of the development was taking place, in order to benefit from the favorable economic conditions there. They were successful in business and assumed important positions in the administration of the country. In fact, from the social and economic aspect, it was Jordan that was being "Palestinianized," rather than the opposite.

The refugees were also affected by this process. Many of them left the refugee camps, found a livelihood in new branches of a budding economy, and in fact were no longer refugees. This process was further accelerated by the growth of an "Arab America" along the Persian Gulf and in Saudi Arabia. Tens of thousands of Palestinians were employed in these areas and were able to make their families independent of the UNRWA rations. Various observers have estimated that on the eve of the Six-Day War at least half of the refugees in Jordan had, from a practical point of view, ceased to be refugees. Nevertheless, this development did not result in a mitigation of the Israel-Arab conflict. The Arab states, which were at all times at odds with one another, exploited the refugees' plight for political ends and tried to outdo one another in adopting extremist stands. Arab solidarity induced them to sustain the urgency of the "Palestine problem," but, with the exception of Jordan, they did nothing to improve the refugees' sorry lot.

At the beginning of the 1960s, when Egyptian-Iraqi tension was particularly acute, the idea of a "Palestine Entity" was again raised, with Egypt and Iraq vying with each other for the sponsorship of the plan and both using it in their attacks upon Jordan. As a result of various inter-Arab developments, the first Arab summit conference, held in January 1964, passed a resolution calling for the unification of Arab efforts on behalf of Arab Palestine. The groundwork was also

laid for a Palestine Conference, which was held in May 1964 on the Mount of Olives in Jerusalem and established the Palestine Liberation Organization, with Ahmad Shukeiry as its head. The effectiveness of the organization was limited, for it had come into existence as a result of inter-Arab political maneuvers, each Arab state having its own interpretation of the organization's meaning and purpose. Its leaders were appointed by the Arab League, and the participation of Palestinians in its activities was limited.

Eventually of greater importance for the renewal of the idea of a "Palestine Entity" after the 1967 war was the al-Fataḥ organization, which originally came into being in 1965, largely as the result of inter-Arab quarrels. The revolutionary Baʿth regime in Syria, established in 1963, sought to appear as the outstanding champion of the Palestinian cause and the most extreme in its hatred of Israel. It had not taken part in the establishment of the Palestine Liberation Organization and regarded al-Fataḥ as an excellent weapon to use in its attacks upon the other Arab States. Al-Fataḥ developed the ideology of a "people's war" that would bring about the destruction of Israel, and the Baʿth regime was eager to lend it support and assistance. The increasing terrorist activities from Syrian territory, carried out by al-Fataḥ, created ever-growing tension which finally led the Arab states into a new war against Israel in June 1967, but the outcome of the war was a bitter disappointment to those who had been its prime instigators.

Al-Fataḥ appeared, therefore, as a new version of a Palestinian Arab body, no longer willing to accept Pan-Arab custodianship of Palestinian Arab affairs. This was borne out by the events after June 1967. While in the past Palestine Arab terror organizations had served only as a tool in the hands of Arab rulers, they were now largely independent bodies that from time to time were even able to exert pressure upon Arab governments, particularly in Jordan and Lebanon. Although the terrorist organizations continued to receive financial aid and arms from Arab States (Saudi Arabia, Kuwait, Egypt, and Syria), their leadership was largely independent. Their members were Palestinians first and their Pan-Arab ideology receded. In light of this revival of Palestinian Arab Nationalism, the theory so widely accepted in the 1960s that Pan-Arab ideology had won out over particularist trends lost much of its validity.

The Arab National Movement in Palestine began as a force opposed to Zionism. When it failed in its efforts to stem the realization of the Zionist aim, it turned to the Arab states and to the Muslim world for help. Various developments during the 1940s resulted in the almost complete removal of an independent Palestinian Arab element from the political arena. Yet almost 20 years later, it appeared that the shock and paralysis that the Palestinian Arabs had suffered as a result of their defeat in 1948 was wearing off, and Palestinian Arabs were reappearing upon the political scene. This development was enhanced by the disappointing failure of the Egyptian-Syrian union (in 1961), by the outcome of the Algerian war, and also by the trend of successful "people's wars" and guerrilla tactics in other parts of the world. However, the revitalized Palestinian Arab nationalism, even after adopting a leftist style, remained characterized by unmitigated hostility to Israel, absolute refusal to accept its existence and recognize the right of the Jews to a state of their own, and hatred of Jews, which was virtually indistinguishable from antisemitism.

SINCE THE SIX-DAY WAR. The Six-Day War was a decisive turning point for the Palestine national movement. On the one hand, the Palestinian nationalists' hopes of drawing the Arab states into all-out war with Israel were realized, but on the other, the war resulted in a resounding victory for Israel. The strategy of the al-Fataḥ had been based on the theory that an independent "popular war" would provoke or even compel Israel to initiate retaliatory and preventive action and this, in turn, would lead to a new war, in which the growing power of the regular Arab armies would achieve victory.

As a result of the Six-Day War, however, not only was "Palestine" not "liberated," but Israel now occupied the entire area usually defined as Palestine. The Gaza Strip and the West Bank, which had been under Arab control until June 1967, now came under Israeli rule. About 1,000,000 additional Palestinian Arabs came under Israel's military administration, bringing the total under Israeli rule, together with the Arabs living in Israel since the establishment of the State, to about 1,400,000. This situation had important new aspects, which the Palestinian guerrilla organizations, under the leadership of Yasser Arafat, tried to exploit to their advantage. In the political arena, the Israeli occupation of the whole of Ereẓ Israel reopened the debate about the rights of Jews and Arabs in Ereẓ Israel. The existence of close to one-and-a-half million Palestinian Arabs under Israel authority reawakened a question that had been all but dormant since 1948: the political definition of the Palestinian Arabs. As a result of Israel's conquest, which united the Arabs of the Gaza Strip, the West Bank, and Israel under one government, it was possible, for the first time since 1948, to relate to the Palestinians as a single political body.

After the traumatic shock had passed, the first question marks about the continuation of the struggle began to appear. On June 23, 1967, the central committee of al-Fataḥ met in Damascus and discussed the continuation of the struggle. One opinion called for concentration, in the meantime, on preparations and the building of an underground resistance movement in the territories occupied by Israel. Arafat and his supporters were in favor of the immediate transfer of the activities of the organization from Syria and Jordan to the occupied territories in order to start a "popular liberation war" as soon as possible, in the belief that this time the war would succeed, as it would be based upon much greater popular support then in the past. Arafat's view prevailed, and the leaders began to implement their mission immediately. Hundreds of guerillas, under Arafat's leadership, began to penetrate the occupied territories and set up networks (based upon cells), disseminate propaganda, and carry out the first acts of sabotage.

These efforts ended in failure, however, as the Israel authorities succeeded – through a combination of liberal treatment of the local population and efficient security intelligence – in dislocating the networks and exposing the majority of their members, thus forcing the handful of guerrillas that were not caught (including Arafat) to fall back to the East Bank.

Henceforth, al-Fataḥ gradually adopted a new form of fighting. Its forces concentrated close to the cease-fire lines on the Arab side, along the eastern Jordan Valley and the Lebanese border, whence they fired upon Israel border settlements and sometimes attempted to cross over to lay mines and attack Israel Defense Force (IDF) patrols or passing civilian traffic. Counteraction by the IDF, however, forced the guerillas to withdraw from the Jordan Valley into the interior of Jordan, as they could not withstand IDF raids and the Israel air force attacks. The Hashemite government in Jordan was less than enthusiastic over this development, but it did not do much to prevent it, for fear of being branded as a traitor to the Palestinian cause. Thus al-Fataḥ succeeded in establishing itself deep in the Kingdom of Jordan, with refugee camps as natural bases for its activities.

Although these developments did not lead to military victories for al-Fataḥ, it achieved important successes in the political and propaganda spheres. To the world at large it often succeeded in presenting its efforts as a war of national liberation against a foreign, colonialist conqueror. Within the Arab world, al-Fataḥ became the most outstanding Palestinian organization, overshadowing, and finally gaining control over, the Palestine Liberation Organization. The dubious personality of Aḥmad Shukeiri, head of the PLO, was exposed during the Six-Day War by his flight from Jerusalem and his stand after the war contradicting ideas he had voiced a few days before it. Although he tried to return to the arena of the struggle, Shukeiri could not be trusted, and toward the end of 1967 he was forced to resign as the head of the PLO, Yaḥya Ḥammuda, a lawyer from Ramallah, taking his place. Ḥammuda attempted to make the PLO into a roof organization for all the guerrilla organizations and even established the "Popular Liberation Forces" as the guerrilla arm of the PLO. Al-Fataḥ, however, was willing to join the roof organization only as its decisive power. It agreed to participate in the Palestinian National Conference that convened in Cairo in May 1968, where it won a representation of 38 members (out of 100) on the Palestinian National Council elected at the conference. Even this situation, however, did not satisfy al-Fataḥ, which aspired to a more powerful position. At the following meeting of the council in February 1969, al-Fataḥ and its supporters achieved a majority, Arafat being elected chairman of the organization in place of Ḥammuda.

The council meeting in May 1968 also drafted a Palestinian National Covenant to serve as an ideological basis for the struggle against Israel. The document declared that the Palestinians will struggle for the liberation of all of Palestine, according to the borders in effect during the British Mandate and that the country belongs to the Palestinians alone (Article 6). It stated that "Jews who were living permanently in Palestine until the beginning of the Zionist invasion will be considered Palestinians." In another article, the "Zionist invasion" was said to have started in 1917. Only those Jews who lived in the country before 1917 would, therefore, be considered Palestinians and would be permitted to live in "liberated Palestine."

At the same time, the Palestinian organizations tried to present their struggle as a progressive, humane, and anti-imperialist one. It was difficult to reconcile this attempt with the general spirit of the National Covenant. Shortly after the meeting of the council, therefore, the organizations began to disseminate the idea that the Palestinians were fighting for the establishment of a "democratic and multi-racial Palestine," which would have room for the Jews living in Israel. It was impossible, however, to reconcile this slogan with the terms of the covenant. Some members of the Palestinian organizations attempted to reopen the question at later meetings of the council, but the majority refused to return to it and continued to maintain both aspects of the paradox – the "progressive" slogan and anti-Jewish article – simultaneously. There is also a contradiction between the slogan and Article 1 of the convention, which states that "Palestine is… [an] integral part of the Great Arab Homeland and the People of Palestine are part of the Arab Nation." If the guerrilla organizations took the slogan of a "democratic and multi-ethnic Palestine" seriously, they would have had to take into consideration the fact that today the number of Jews in "Palestine" is greater than the number of Arabs; and if every Jew in Israel were to become a citizen of a "democratic and multi-racial Palestine," it would be difficult to see how the people of such a state could be part of the "Arab Nation."

These contradictions are the expression of the general confusion among the Arabs over their national identity. Should they formulate their political frameworks on the basis of the borders established after World War I? Or perhaps the wider area in which the Arab-speaking peoples live is a more proper framework? Can a common written language bridge the economic, social, and dialectical differences that exist within the great expanse called the Arab world? This search for identity is not confined to the Palestinians alone, but is one of the basic phenomena of Arab life.

The attitude toward this key question contributed substantially to the division among the Palestinians. On the side of al-Fataḥ were the organizations politically connected with the Baʿth Party and unquestionably loyal to the aim of Arab unity. But the split within the Baʿth Party itself brought about the establishment of a number of organizations: The Arab Liberation Front, affiliated with the Iraqi Baʿth Party; the Pioneers of the Popular War of Liberation, called al-Saʿeka and affiliated with the Syrian Baʿth Party; and smaller organizations established by people who were affiliated with the Baʿth but preferred to remain independent. An interesting development took place in the "Arab Nationalist Movement" (al-Kawmiwoun al-Arab). This organization was established during

the early 1950s by two Palestinian physicians, George Habash and Wad'a Haddad (both Greek-Orthodox Christians) in order to work toward Arab unity and thus revenge the defeat of 1948 (their motto was "Unity, Freedom, and Revenge!"). They gradually began to look upon *Nasser as the personality who would realize their goal, and when he turned to the left they followed him. In the 1960s, however, they began to become more leftist than Nasser and despair of the hope that Arab unity would bring about the destruction of Israel. In 1966 the organization decided to adopt the policy of a "popular war" to liberate Palestine without waiting for the realization of Arab unity.

Immediately after the defeat in June 1967, the heads of al-Kawmiwoun al-Arab amalgamated with the Popular Front for the Liberation of Palestine (PFLP), which began to advance a Marxist-Leninist ideology and a strategy of exhibitionist terrorism against Israel (sky hijackings, etc.). Because of its leftist position, the PFLP avoided participation in the Palestinian National Council. In contrast to al-Fatah, the PFLP also claimed to operate against "reactionary" elements in all the Arab states and was not content with the struggle against Israel alone.

Within the PFLP, an extreme left-wing branch developed and progressively began to emphasize the notion of a comprehensive social revolution. This branch, under the direction of Nayef Hawatmeh, began a struggle for the control of the Front, and in February 1969 broke away from it to create the Democratic Popular Front for the Liberation of Palestine. It accused the leader of the PFLP of fascism, chauvinistic nationalism, and betrayal of Marxism-Leninism. In its founding platform the DPFLP stated that the solution to the Palestinian problem was "a popular democratic Palestinian state in which all citizens will enjoy full religious and cultural rights and constitutional and social equality." This was the first Arab publication in which the Jews of Israel were not considered as only a religious community, but also as a collective body with its own culture. A year later Hawatmeh raised the possibility that the solution to the Palestinian question could be found through the establishment of a federation, on the lines, perhaps, of Czechoslovakia and Yugoslavia, containing a Palestinian Arab component and an Israeli one, with the stipulation that the Israeli element must liberate itself from the Zionist ideology. This ideological development was restricted to the DPFLP, whose influence was minimal. The other organizations, despite the divisions between them, were united in their denial of national and cultural rights, as distinguished from religious rights, to the Jews of Israel.

The establishment of the Palestinian guerrilla organizations in Jordan brought to the fore the question of their relationship to the Hashemite government. In contrast to the PFLP, al-Fatah preferred not to interfere in Jordan's internal affairs. It wanted to concentrate its energies against Israel, with Jordan, as a pro-Western state, providing it with immunity against fierce Israel counterattacks. It was difficult to implement this approach, however. As a result of the growth in the numerical strength of al-Fatah, the refugee camps and

many areas in Jordan were, in effect, removed from the scope of Jordanian rule. From time to time clashes took place between armed Jordanian forces and members of the guerrilla organizations. It appeared that al-Fatah was gradually gaining ascendency over the Jordanian government and was turning the kingdom into a large anti-Israel base, without wishing to control the country's internal affairs. Though the Hashemite authorities tried to avoid clashes with the Palestinian organizations, a bitter clash took place between them and the Jordanian army in June 1970. At that time King Hussein restrained his forces and gave in to the organizations on every point connected with their position in Jordan, but in September 1970 there were fierce battles in which the guerrilla organizations were dealt a severe blow. The hijacking of American passenger planes to Zarqā, and the guerrilla control of Irbid, the second-largest city in the country, was viewed by the king and his army as a grave threat to their rule and position. The confrontation proved again that the military strength of the guerrilla organizations had been exaggerated and deflated the popularly held image of the Palestinian "revolutionary" movement.

This defeat at the hands of the Arab "reactionaries," added to the failure of terrorist tactics to force Israel to withdraw from territories occupied during the Six-Day War, exposed the weakness of the Palestinian national movement. In one unexpected area, however, it had some success. If it had seemed, up until 1967, that the Arabs of Israel were reconciled to their problematic position as citizens of the State of Israel, the appearance of a Palestinian factor, since 1967, led to the emergence of small guerrilla groups affiliated with Palestinian organizations among the Arabs of Israel. Israeli Arabs found themselves faced with a multiple dilemma: not only were they torn between two types of identity – pan-Arab and Palestinian – but they also had to reconcile that identity with the obligations involved in Israeli citizenship.

For subsequent developments, see *Palestine Liberation Organization.

POPULATION

THE JEWISH POPULATION

Growth by Aliyah

In 1882 the Jewish population of Erez Israel numbered some 24,000, roughly 5% of the total, and about 0.3% of the world Jewish population. Since then there has been an almost continuous flow of *aliyah*, which brought in roughly 3,467,000 persons over a period of 120 years and created Israel's Jewish population of 5,094,200 persons at the end of 2002 – 76.8% of the total of 6,631,100. At the end of 2003 the total population reached 6,748,000, with the lowest increase of 117,000 persons (1.8%) in one year since 1990. In the year 2000 the population increase was 2.2%; in 2001, 2.2%; and in 2002, 1.9%. The reason for this decline was the emigration of *olim* (immigrants).

This large movement may be divided into three distinct periods. The first (a) was during the last years of the Ottoman regime, when immigration totaled 55,000 to 70,000. The average in the years of the First Aliyah (1882–1904) was about 1,000 a year, rising in 1904–14, the period of the Second Aliyah, to about 3,000 a year. During 1882–1914, a little less than 3% of the enormous numbers of Jews who migrated overseas, mainly from Eastern Europe, went to Erez Israel. The second (b) was during the British Mandatory regime (1919–48), when *aliyah* totaled about 485,000, some 16,000 per year on the average. The peaks were in 1925 (34,000 – 285 immigrants per 1,000 of the country's Jewish population) and 1935 (66,000 – 206 per 1,000). During this period, *aliyah* constituted some 30% of the total Jewish overseas migration. The third period (c) was after the establishment of the State of Israel, when over 2,930,000 went to the new state between May 1948 and the end of 2002, or some 55,000 per year. Of these, some 687,000 immigrated

between 1948 and 1951, the peak being in 1949, when about 240,000 arrived – about 266 per 1,000 of the Jewish population. A second great wave of immigration took place in the 1990s, mostly from the former Soviet Union (see below).

There were considerable fluctuations. Immigration tended, on the whole, to increase from period (a) to (b) and to (c), but within each period the curve of immigration was characterized by a wave-like rise and fall. (For figures see *Israel, State of: Aliyah and Absorption.) Waves in immigration were largely due to the interplay of a variety of changing political, economic, social, and ideological factors in the Land of Israel and the various countries of the Diaspora: the influence of Zionism, religion, ḥalutziyyut, socialist ideas, and the attraction of the independent Jewish state; the work of Jewish institutions in propagating ideologies, organizing *aliyah*, and helping the newcomers; policies regarding emigration in general, and Jewish emigration in particular, in various countries; changing immigration and absorption policies, as well as political and economic conditions, in the land of Israel and in other countries absorbing Jewish immigration. In the later Ottoman period, immigrants came from many countries, but in the Mandatory period and since the achievement of independence, practically every Jewish community in the Diaspora was represented. While some attraction to Israel seemed to be generally felt throughout the Jewish world, the intensity of participation, as measured by the yearly rates of immigration to Israel per 1,000 Jewish inhabitants of each country, varied considerably between different parts of the world and for each region in different periods. The table on the following page shows the immigration from each of the main Diaspora regions in the various periods between 1919 and 2003, as well as the percentage of immigration from the two regions (Asia and Africa; Europe and America) in each period.

From the end of 1989 a large wave of immigration began arriving in Israel (mostly from the states of the former U.S.S.R.). Within three years (1990–1992) some 450,000 immigrants entered Israel. (In the wave which arrived in Israel after the establishment of the state in 1948 and which was designated a "mass immigration," 690,000 arrived within three and a half years.) They constituted some 10% of the Jewish population. This mass immigration came after a decade of low-level immigration in which 15,000 immigrants on the average arrived each year.

As stated, this large wave – 1990 – 185,000; 1991 – 148,000; 1992 – 65,000; 1995–1996 – 119,000; 1997–1998 – 102,000; 2002 – 19,300 – came mostly from the various regions of the U.S.S.R. By comparison, in the 1970s the total number of immigrants arriving from Russia was 155,000. The second large group came from Ethiopia, from where some 27,000 arrived in 1990–1992 (of whom 15,000 arrived in a special operation, "Operation Solomon," within one day). In the 1980s some 15,000 arrived from Ethiopia; 46,800 immigrated since 1990.

Smaller groups of immigrants arrived from various countries in America (U.S., Argentina, and some other Latin American countries) and Western European countries.

The immigrants of the 1990–92 wave reflected the characteristics of the Russian immigrants. The proportion of females was 53% (similar to that found within the 1970 immigrants). The percent of females was much higher in the older age groups where it reached 61% (in the ages 65 and over).

The age structure of the 1990–92 immigration was characterized by a low percentage of children and a relatively high percent of older persons in comparison to the age structure of the Jewish population in Israel, and even compared to the 1980 immigration.

The immigration of 1990–92 included a high percent of those with high-level education (e.g., those with 13 years of schooling or more comprised 50% of those 15 and above, and those with 16 years and over 11%). A very high proportion of those in academic, scientific, professional and technical fields was found in this immigration.

The number of physicians and dentists who arrived in the 1990–92 immigration was 12,000 and the number of engineers and architects was 45,000.

Like immigration, emigration (*yeridah*) also displays wavelike fluctuations, which are, to a certain extent, connected with waves of *aliyah*, since the former is, to a certain degree, due to a backflow of the latter. However, since the 1960s emigration of veteran foreign-born and Israel-born adults has also been noticeable, probably largely due to economic factors. Bachi has estimated in a very rough way that at the end of 1975 some 11% of the Israeli population (including both emigrants and their descendants) resided abroad. This Israeli Diaspora may have been as large as some 370,000, mostly in Northern America and Western and Central Europe. A rough estimate at the beginning of the 21st century put the figure at over half a million.

The Growth of the Jewish Population
The most immediate demographic effects of *aliyah* were as follows. Between 1882 and 1914, the Jewish population increased by 61,000 (from 24,000 to 85,000). Immigration roughly accounted for this increase, while emigration and natural increase probably canceled each other out. Immigration failed to bring a sizable proportion of the Jewish people to the country and did not succeed in reducing the absolute size of the Diaspora (in 1914 only 0.6% of world Jewry lived in the land of Israel). It did succeed, however, in creating a nucleus of population that was able to survive the expulsions and emigrations, diseases, and famine brought on by World War I (during which the Jewish population was reduced to some 57,000) and served as a basis for further development. During the Mandatory period, the Jewish population of Palestine increased by about 566,000 (from 84,000 according to the census of 1922 to 650,000 on the eve of independence), 71% of the growth being due to immigration and 29% to natural increase. At the end of the period, the Jews of Palestine constituted 5.7% of world Jewry.

During the period between May 1948 and the end of 1970, the Jewish population increased by 1,910,000, of which about

62% was due to the immigration balance and 38% to natural increase. At the end of 1970, the Jewish population of Israel (2,559,000 persons) constituted over 18% of world Jewry.

In the period 1971–1978, the population of Israel as a whole continued to grow, though at an average yearly rate of 27 per 1,000, which was less than in 1961–1970 (35 per 1,000) and much smaller than in 1948–1960 (81 per 1,000). The lower rate of growth was due mainly to a relatively low level of Jewish immigration and decline of the natural increase.

In 2002 the Israeli population numbered nearly 6.7 million persons. Within the period 1983–2002, it increased by 2.5 million (by 38%; an average annual growth rate of 2%). The increase of the population was very uneven. While the first seven years of the period (1983–1989) witnessed a slow growth (1.7% per year), the growth rate in the next three years (1990–1992) was much larger (4.4% per year, adding 200,000 each year) and between 1993 and 2002 was 2.7% per year.

These large differences in growth relate to a Jewish population, which increased in 1983–2002 by 1,681,700 (an average of 5.5% per year) and reached 5,094,200 by the end of 2002. In the period 1983–89 the annual growth attained 1.5%, while in the period 1990–2002 the average growth rate reached 2.4%.

The large differential growth is attributable wholly to the mass immigration which began arriving in Israel at the end of 1989 and brought within three years 450,000 immigrants, so that natural increase (the difference between the number of births and deaths) which contributed 92% of the Jewish population increase in the period 1983–89, contributed only 27% in this later period.

During the period between May 1948 and the end of 2002, the Jewish population increased by 4,335,500, of which about 62% was due to the immigration balance and 38% to natural increase. At the end of 2002, the Jewish population of Israel (5,094,200 persons) constituted over 38% of world Jewry and was exceeded in size only by the Jewish community of the United States (see *Demography). The population increase varied considerably from year to year, largely due to the fluctuations in *aliyah*.

Composition According to Place of Birth

Mainly as a consequence of changing sizes and origins of immigration and of differentials of fertility (which will be discussed below), the composition of the Jewish population according to country of birth has changed considerably in the course of time, but has always been extremely heterogeneous. The following are some of the main aspects of this phenomenon:

PROPORTION OF FOREIGN-BORN. With increasing rates of immigration, the proportion of persons born abroad increased from approximately 42% of the Jewish population in 1916–18 to 58% in 1931 and 64.6% in 1948, and decreased to 37.2% at the end of 2002. The percentage of foreign-born was higher in the adult age-groups, which is exceptional, even in countries of large immigration. If conditions in Israel had been different and a considerable part of the immigrant population had

not identified itself strongly with the new country, such high percentages of foreign-born citizens could have produced a very unstable society, since the majority of the people acquired their cultural background in foreign countries.

Jewish Immigrants to Israel by Continent of Birth, 1882–2004

Period	Absolute Numbers			Percentages		
	Asia and Africa	Europe and America	Total[1]	Asia and Africa	Europe and America	Total
1882–1919[2]			65,000			
1919– May 14, 1948[2]	44,809	385,066	452,158	10.4	89.6	100.0

3 Including potential immigrants.
4 Including Oceania.

GROWING DIVERSIFICATION OF FOREIGN-BORN. Whereas in the last years of the Ottoman period and the first part of the Mandatory period three-quarters of the foreign-born were East European (Russians, Poles, Latvians, Lithuanians, and Romanians, who constituted the backbone of the Zionist enterprise), their proportion in the foreign-born population rapidly decreased, falling to 26.9% by 2002. Central Europeans (Germans, Austrians, Czechs, Slovakians, Hungarians), once a small minority, reached the considerable proportion of 18.4% in the period of Nazi persecution, but they decreased to less than 2.9% by 2002. All Europeans taken together dropped from 76.4% of the foreign-born in 1948 to 24% in 2002. On the other hand, those from Asian countries increased from 12.5% in 1948 to 13.3% in 2002, while the African communities grew from 2.6% to 16.1% (of which four-fifths came from Morocco, Algeria, and Tunisia) in the same period.

These changes have been accompanied by a deep change in stratification according to ages. While people of European origin still constitute the majority of the middle aged and the old, the largest group in the younger, productive ages is of Asian and African origin. Among the children, the native-born ("sabras") constitute the majority. Considering together those born abroad and their children, in 2002 Jews of Asian and African origin constituted 29.5% of those whose origin was known, while people of European and American origins

constituted 41.1%. The increasing variety in the composition of the Jewish population confronted the State of Israel with very complex problems arising from the need to give everyone a common cultural, political, and linguistic basis and from the lower educational standards of the Asian and African newcomers.

Distribution of Immigration and Population by Sex and Age

Unlike most international migration processes due mainly to economic factors, modern *aliyah* was in general well balanced in regard to sex. Only in very difficult periods, as for instance in the first waves of 1919–23 and among the "illegal" immigrants in the 1940s, did the proportion of men considerably outweigh that of women. Accordingly, the distribution of population by sexes was also generally well balanced and subject only to minor fluctuations: the percentage of males at different times was the following: 1922 – 52.3; 1931 – 50.5; 1936 – 50.0; 1940 – 50.5; 1948 – 51.7; 1961 – 50.7; 1969 – 50.3; 2002 – 51.2. The age structure of the *aliyah* in the Mandatory period differed from that of the period of independence. Due to selection, the former was extremely abnormal in age distribution; it included a very high proportion of young people and was strongly at variance with the age distribution of the communities of origin (the Jewish population in Europe was largely characterized by a high proportion of old people). In the first phases of the Mandatory period, the Jewish population of Palestine reflected these characteristics and presented a typically strong swelling of the age pyramid in the very young age groups. The high proportion of people of young working age was presumably a considerable asset for the economic, social, and political development of the Zionist enterprise. In the long run, however, the situation was considerably changed by the aging of the young immigrants; the low fertility of the Europeans, then constituting the large majority of the population, which set in motion a general process of aging, and the inadequate influence of the smaller, new immigration waves in rejuvenating the population. The population therefore became more regular in its distribution and lost much of its young character.

During the period of statehood, a considerable part of the *aliyah* was nonselective and reflected the structure of the communities of origin. This *aliyah* had a much higher proportion of children, a somewhat higher proportion of old people, and a higher proportion of those in dependent ages to those in working ages. Unlike the immigration of the Mandatory period, it contributed to a leveling-out of the age distribution of the population. It widened the base of the age pyramid and the high fertility of the Oriental immigrants checked or offset the aging of the population, particularly that of the population in the working ages. As a consequence of all these processes, the Jewish population of Israel is today more regular in its age distributions than in the past; it is younger than many Western populations, but older than Eastern populations. Due to fluctuation in the number of births in the last decade, the percentage aged 15–19 is higher than the 0–14 age bracket and a much higher percentage than in the following brackets.

At the end of 2002, 1.88 million (28.4% of the population of Israel) were children under 15; 61.8% were in the ages 15–64; and 9.9% were older people (aged 65 and over).

The age distribution in 2002 differs from that of a decade earlier in a decrease in the proportion of children, and a small increase in the proportion of older people. These changes were influenced by the age structure of immigrants who arrived in 1990–1992, who had a lower fertility and so a lower proportion of children and a higher proportion of older persons. The proportion of those 65 and over in the veteran population, had the immigration not taken place, would not have changed to any significant degree up to 2010.

The process of aging which the Jewish Israeli population underwent brought the proportion of those 65 and over from 4.0% in 1948 to 7.2% in 1970, 9.7% in 1980, 10.5% in 1990, and 9.9% in 1992. Within this older group the proportion of 75 and over, from among those 65+, was 25% in 1970 and 32% in 1980, 41% in 1992, and 45.7% in 2002.

Considerable differences in the age structure of the Jewish and Arab communities persist; to a large extent as a result of fertility differentials. The proportion of children was 41% among Arabs compared to 25.4% among Jews in 2002; the proportion of those aged 65 and over was 3.9% in the Arab population compared to 11.4% among Jews.

The decrease in the proportion of children found in both the Jewish and Arab population was counterbalanced by the increase in the proportion of those aged 25 and over (mostly in the age group 25–44).

Large differences in the age structure were found between various localities in the country. Tel Aviv-Jaffa and Haifa cities have an older population (16–17% of the population were aged 65 and older), while Jerusalem had a younger population (7.6% aged 65 and over). A similar rate is found in smaller towns and in rural areas. This is a result of the structure of the population in various localities. In localities with a larger proportion of those originating in Asia and Africa, or a large proportion of Orthodox population, the age structure was younger (a larger proportion of children and a smaller proportion of older people).

Marriages, Births, Deaths, and Natural Increase

The study of the vital statistics of Israel's Jewish population is of interest from many points of view. While it has been established and expanded mainly by immigration, its future development, in the long run, will largely depend on the reproductive capacity of the immigrants and their descendants. Since Israel is a new and small country, the enlarging of its population may be of importance in order to provide a sufficiently large and differentiated basis for its economy and social structure. The demographic situation of the Jews of Israel may be significant in the light of the demography of world Jewry, which emerged from the Holocaust extremely reduced in numbers, and the fact that demographic trends in consid-

erable parts of the Diaspora, such as aging of the population, low fertility rates, and losses due to intermarriage, are producing further population decreases. From a scientific point of view, the analysis of the evolution of marriage habits, fertility, mortality, and health standards among the various groups of the Jewish population in Israel is of interest within the larger framework of modern demographic evolution in general and that of the various branches of world Jewry in particular. Demographic patterns in the Diaspora differ considerably in relation to general environment, cultural development, degrees of religious conservatism, and assimilation of Jews into different social classes. In very broad terms, it appears that in many Asian and African communities the old Jewish customs of universal, early, and endogamous marriage, accompanied by high fertility, still tended to prevail until recently. Mortality rates had begun to fall considerably, creating a comparatively large reproductive force. On the other hand, European Jews, particularly in Central Europe, have in general had comparatively low marriage rates, rather high marriage ages, and generally increasing rates of exogamous marriage. Fertility has decreased (mainly among Central European Jews) to such an extent as in many cases to be well below replacement level, despite the generally favorable age-specific mortality rates among Jews as compared with those of non-Jews in the same countries (see *Demography). The following are some of the main features of the vital statistics of the Jewish population of Israel.

MARRIAGE AND DIVORCE. Marriage in Israel is almost exclusively endogamous within the Jewish community. Marriage is almost universal in all groups of the Jewish population: the percentage of single persons at the end of the fertility period is generally small. Only recently has there been some tendency toward increased rates of celibacy among Jewish women. In addition, the generally favorable age structure and the influx of unmarried immigrants – who often appear to postpone marriage before immigration and are afterward eager to marry – have contributed to generally high crude marriage rates among the Jewish population in Israeli during periods of heavy immigration. Average age of Israel brides at first marriage was 25.9 in 2001, which is low by European standards, but higher than that found in Oriental countries. The propensity to marry has continued to be comparatively strong in three population groups – the Jews, the Moslems and the Druze – and weak among the Christians. In 2000 the proportion of Jewish women reaching the age of 45–49 without having been married was 6%. Age at marriage tends to become more uniform than in the past among the various groups of the population of Israel. Early marriages which were frequent in the past among the Moslems, the Druze and among Jews of certain Asian and African origins have become by far less frequent.

Among Jews, preference in marriage between people of same origin still constitutes a rather general feature, but

this tendency is clearly decreasing in the course of time; it decreases among people born abroad, with length of stay in Israel, and it is weaker among people born in Israel than among foreign born. Data shows that homogamy (tendency to marry people of equal origin) was comparatively higher – within each class of length of stay – among people born in certain Asian and African countries, such as Yemen, India, Iraq, Iran, Morocco and Libya, where the Jewish communities were on the whole more traditional and less "modernized."

Among those of European origin, homogamy by country was generally much lower. However, those Jews of Romanian, Polish, Bulgarian, and Greek origin had a higher homogamy rate than those from Central Europe and other Western countries. Among Jews marrying a partner originating from a country different from their own, there is still some tendency to prefer a marriage mate originating from a country where customs, culture or language are equal or similar to those of one's own country. Among such areas of marriage preference the following may be quoted: Eastern European countries; Central Europe; former French North Africa; Latin America; Anglo-Saxon countries; and the Sephardi community. The frequency of marriages between people of African or Asian origin and those of European origin is gradually increasing.

DIVORCES. Divorce rates, which had decreased in the 1950s and 1960s, have shown a tendency to increase since then. On the basis of the 1972 census it has been calculated that the average yearly number of divorces per 1000 married persons was, among the Jews of Israel, about four and in 2001 about nine. These rates are higher than those prevalent in many other countries, but lower than those found in the U.S.A., and among various Scandinavian, Central European, Balkan, and Muslim populations. Probability of divorce reaches a maximum two years after marriage and then declines slowly. The propensity to divorce decreases with increasing number of children. However, the percentage of divorced couples with children has increased in the course of time. Divorced people have a high tendency to remarry. Actually, divorced men marry more than bachelors or widowers of same age and divorcées marry more than spinsters and widows. This feature is not peculiar to Israel and is sometimes interpreted as showing that divorce is generally less a repudiation of marriage as such, than an expression of dissatisfaction with a particular marriage partner. This may be connected also with the likely fact that some divorces are obtained to marry somebody else. However, divorced people have also a particularly high propensity to divorce again.

FERTILITY. Patterns of fertility differ among various Jewish population groups far more than marriage patterns. Fertility may be indicated by the average number of children born per woman in the entire reproductive period – about 15–49 (it must be remembered that an average of more than two children per couple is necessary for ensuring adequate reproduction, as some children die before reaching maturity). From

the scanty statistical material available it appears that at the beginning of the 20th century, Jews in the Land of Israel still had a rather high fertility. However, in the 1920s and 1930s fertility fell rapidly (1927–29, 3.57 children per woman; 1935–38, 2.54; 1939–42, 2.33. This decrease was due to the rapid spread of birth control (by contraception and abortion), mainly among the Jews of European origin, who constituted the great majority of the Jewish population. Limitation of births was particularly strong in periods of political or economic difficulties, like that of the Arab riots (1936–39) and the beginning of World War II. In the late 1940s there was a "baby boom" among European Jews in Palestine, comparable with that which developed at the time in many Western countries; many of the births may be considered as "delayed" from previous bad times.

Total Fertility Rates (average number of children per woman)

	Jews born in				Non-Jewish population		
Years	Israel	Asia-Africa	Europe-America	Total	Mus-lims	Chris-tians	Druze
1955–59	2.79	5.40	2.53	3.56	8.17	4.56	7.21
1960–64	2.73	4.79	2.38	3.39	9.23	4.68	7.49
1965–69	2.83	4.35	2.59	3.36	9.22	4.26	7.30
1970–74	3.05	3.92	2.83	3.28	8.47	3.65	7.25
1975–79	2.91	3.40	2.80	3.00	7.25	3.12	6.93
1980–84	2.82	3.09	2.76	2.80	5.54	2.41	5.40
1985–89	2.82	3.14	2.66	2.79	4.70	2.49	4.19
1990–94	2.72	3.33	2.14	2.62	4.67	2.18	3.77
1995–99	2,93			2.62	4.67	2.56	3.24
2004	2.90			2.71	4.36	2.13	2.66

Source: Statistical Abstract of Israel 1995, No. 46; 2005, No. 56.
Data for the five year periods are arithmetical means.

In 1949–50 the fertility of European Jews reached the top level of 3.24. Later, however, it declined again (1960–63, 2.4; 1965, 2.6; 2002, probably in connection with the recession, 2.64). In 1968–69, after the end of the recession, it somewhat increased, possibly also due to a change in public opinion in regard to the fertility problem. However, in general, the fertility of European Jews in Israel was not much higher than the minimum reproduction level. Fertility differentials were not large among European Jews. The main factors of differentiation were religious outlook (among religious women, particularly those observing the injunction of the *mikveh* or ritual bath, there was considerably higher fertility and less contraception and induced abortion than among others); work (working women had less children than others); place of residence (women in Tel Aviv and Haifa had lower fertility than in other towns), the highest fertility being found in Jerusalem, with its large proportion of religious people, and the kibbutzim; education (the higher the education, the lower the fertility); length of stay (the veteran settlers and the second generation have a somewhat higher fertility than new immigrants).

Jews of Afro-Asian origin somewhat reduced their fertility during the Mandatory period, mainly in places and among strata having more contact with European Jews. However, their average fertility remained higher than that of European Jews. Mass immigration brought many large families not accustomed to birth control, which considerably increased the fertility of Asian-African Jews. However, in the course of time, birth control spread among them, especially among the younger generation. Differences in fertility in this group were very large; as among the Europeans, religious outlook and work played some part, but the main differentiations are related to length of stay in the country, education, and place of residence. In the higher educational levels and in certain places, such as the kibbutzim, the differences by origin almost disappeared, while women living in more secluded places, like the moshavim, had a very high fertility rate.

On the whole, the fertility of people of Asian or African origin was still rather high, and due to their large proportion among women in the reproductive ages, the average fertility of Jews in Israel was considerably above reproduction level. However, the fertility of Jews of Asian-African origin continued to decrease in the period after the Six-Day War. This decrease was connected with spreading knowledge of, and the actual use of, contraceptive methods among this group of the population, as indicated above. This rapid evolution is accelerated by increasing levels of education, a larger proportion of working women, growing secularization and increasing contacts with other population groups.

In consequence the fertility of Jews born in Asia and Africa is lower in Israel than it was in the countries of origin, and it is lower in Israel among those born in Asia and Africa than among those born in Israel from parents of Asian-African origin.

Among those of European origin the opposite evolution has taken place. Fertility is higher in Israel than in the countries of origin and it is higher among Israelis born of European origin than among immigrants from Europe. The fertility of people of European origin (first and second generation) is still lower than that of those of Asian-African origin. However, in the late 1960s and early 1970s it tended to increase to some extent and to remain at a more sustained level than in previous periods. Among groups of European origin, the kibbutz population had a more considerable upsurge of its birth rate. Various demographic, political, psychological, economic and social explanations of the increase of fertility rates among people of European origin during the late 1960s and early 1970s may be proposed. In the late 1970s a tendency toward decline of fertility appeared again also among those of European origin.

Among the non-Jewish population a growing tendency toward control of births and reduction of fertility is also noticeable. These tendencies are strong in the Christian population which is more urbanized and has a higher educational

level. They have started later and are less pronounced in the Moslem and Druze populations.

Considerable changes have also occurred with regard to abortions. In Mandatory Palestine regulations concerning abortions were very rigid and heavy penalties were laid down both for the woman procuring her own miscarriage or for any person procuring it. Although these regulations remained theoretically in force in Israel, they were not applied in practice. Abortions were very largely performed, generally by physicians, but almost without any public control. In 1966 penalties against the woman were abolished, and those against persons procuring abortions were mitigated. However, growing uneasiness was felt with regard to the discrepancy between written law and actual practice, and in 1977 a law was passed declaring abortions performed outside hospitals to be unlawful and fixing norms for cases which can be permitted in public hospitals by special committees. Those norms permit abortions for social reasons.

The practice of abortion seems to have been in the past widespread among European women, but to have then declined (probably with the wider spread of birth control) mainly among women of a higher educational level. Later, use of abortion increased among women of Asian-African origin, but also apparently declined. Abortion is practiced to a lesser extent among religious women than among non-religious. Legal abortions stood at 12.4% of live births in 2002 compared with a peak of 16.1 in 1984.

In Table: Total Fertility Rates, fertility has been measured by using – in order to enable comparison – the same method employed in the initial section on fertility above.

A total of 139,535 babies were born in Israel in 2002 (of whom 94,327 were Jewish). The last two decades saw a continuous decrease in the birth rate: from 24.6 births per 1,000 population in 1983 to 22.6 in 1988 and 21.2 in 2002. However, the rate in 2002 was still higher than that found in most developed countries (in 1989 the average birth rate for Europe was 12.9, for North America 15.0) but much lower than developing countries (the average in Africa – 45, Asia – 28).

The number of children per woman (at the end of her fertility period = "total fertility") was estimated as 3.21 in 1983, falling to 3.06 in 1988 and 2.64 by 2002. This number reflects large differences in fertility of the various communities in Israel. The birth rate (per 1,000 population) was 19 for the Jewish population compared to 37 among the Muslim population. The "total fertility rate" was 2.64 for the Jewish population, 4.58 for the Muslim population, 2.77 for the Druze population, and 2.29 for the Christian population.

The fertility of the Muslim population declined from 5.4 in 1983 to 4.53 in 1988, but later increased to 4.58 by 2002.

In the Jewish population large differences in fertility still exist between the various communities. The number of children of an Asian-born mother was 40% higher than of a European-born mother (for an African-born mother higher by 66%). But differences among mothers born in Israel of various origins were much lower.

A very distinct change in fertility for European-born mothers was noticed in the period from 1989 to 1992: a decline in total fertility from 2.6 to 2.05. This was caused by the very low fertility level of immigrants from the former Soviet Union who arrived in the large immigration wave of 1990–92 (total fertility for this group 1.5 children).

The decrease in fertility occurred for mothers of practically all levels.

MORTALITY. Before World War II health conditions were favorably affected by the fact that most of the immigrants came from Europe, where the Jews, in general, had lower age-specific mortality rates than non-Jews in the same localities, and that candidates for *aliyah* were generally selected. On the other hand, the change in environment, the transition to harder work, and the presence of an Arab majority with a high mortality rate may have been adverse factors. Since World War II further adverse factors have been operative, i.e., the mass immigration of people who underwent persecution and suffered in the concentration camps and of unselected Oriental immigrants with low health standards. Large-scale medical services, voluntary health insurance for the majority of the population, an exceptionally high proportion of physicians in the population, preventive services, and supervision of most mothers and children have acted as very favorable factors throughout the Mandatory and statehood periods. On the whole, the double challenge of bringing European immigrants to a prevalently Oriental country (up to 1948) and bringing Oriental immigrants to a prevalently European country (after 1948) has been met with considerable success. Life expectancy has steadily increased – from 54 in 1926 to 77.4 for men and 81.6 for women in 2001, and mortality has decreased at all age levels, especially among children and young people. The infant mortality rate, which in 1924 was ranked in the middle of the world list, decreased at so rapid a pace that in 1947 it was lower than that of 89 countries and higher only than that of four and had reached the record low level of 29.2 per 1,000; with mass immigration, it rose again to 51.7 per 1,000 in 1949, but afterward began to drop again and stood at 5.6 per 1,000 births in 1995 and 4.7 in 1999 for Jews. This level was found in countries having the lowest infant mortality rate in the developed countries. The wide gulf between the mortality of children of Asian and African immigrants and that of children of European origin has been bridged to a considerable extent, and the life expectancies of these two main groups of population are now quite close. For Muslims the decrease in infant mortality was from 21.3 to 13.1.

The total number of deaths from all causes was 35,348 in 1995 (i.e., 7.1 per 1,000 population). The major causes of death were similar to those found ten years earlier: heart conditions and cerebrovascular diseases were responsible for 40% of all deaths and cancers, 20%.

Intermarriage Between Groups of Different Origins

The Central Bureau of Statistics of Israel publishes yearly data on marriages according to country of birth and length of stay in Israel of the bride and groom, and particularly detailed data on this point were collected in the censuses of 1989 and 1995. The figures show that the tendency to marry people of the same origin (endogamy) is still very considerable in Israel. However, endogamy differs from group to group: it is lower in smaller than in larger groups; it is lower among people having higher educational standards and in such places as kibbutzim, where the members are more integrated into the life of the community. The most relevant feature found is that endogamy decreases with the length of stay in Israel. Where both husband and wife are new immigrants, endogamy by place of birth is found to be very high, but it is generally low in marriages between veteran residents and practically vanishes among veterans belonging to smaller groups. This finding and the general decrease of endogamy in the course of time show that there is a clear tendency toward a systematic lowering of marriage barriers between different origin groups. About 70% of marriages are still between couples of the same continent of origin, not because of preference for mates from the same community but mainly because of preference for a given level of education and the availability of single people of different ages in different countries.

Geographical Distribution of the Population

One of the most well known characteristics of modern Israel is the "return to the soil" – the establishment of hundreds of villages and the creation of a rural population, which are almost unknown in the Diaspora. Nevertheless, the Jewish population has been largely urban. With increasing mechanization and efficiency in Jewish agriculture, the proportion of people living on the land has been decreasing (17.3% in 1959; 10.8% in 1969, and 8.8% in 2002). Moreover, the share of the rural population in moshavot and moshavim has tended to increase, while that in the kibbutzim has decreased. Due to industrial development in urban areas the two large conurbations of Tel Aviv and Haifa contained, respectively, 54.7% and 18.4% of the total Jewish population at the end of 2002. Great efforts have been made by the authorities to prevent the over-rapid development of these areas and the over-concentration of the population in the coastal strip. This has been done by policies designed to increase the rural population, particularly in border areas, and by establishing "development towns" (mainly in the southern and northern districts). Some of the main developments in the geographical distribution of the population are shown in the following three tables: Jewish Population in Israel by Type of Settlement; Population and Settlements in Israel by Size of Settlement; and Jewish Population of Israel by District and Sub-District, showing the proportion of Jewish population living in each subdistrict.

Jewish Population in Israel by Type of Settlement, by percentage (1945–2003)

	1945	1948	1954	1961	1969	1983	1994	2003
Urban Population	84.6	83.9	76.1	84.6	89.2	90.2	90.5	91.2

The distribution of the population is marked by the following characteristics. Within the extremely irregular boundaries of Israel (within the 1949 armistice demarcation lines), the population is highly concentrated in certain areas, such as the Coastal Plain, and there is a very low density in the southern areas, which are largely desert. However, in the course of time there has been some tendency to modify these characteristics. The actual distribution has become a little less concentrated than it was in 1948. Population dispersal has increased, and the center of gravity has shifted considerably to the south (toward the Tel Aviv conurbation and southern development towns and zones). These changes have largely been due to the policy of attracting new immigrants to the development zones on the periphery of the country by providing housing and labor facilities in those regions. This policy has had a particularly strong effect on new immigrants from Asia and Africa.

Jewish Population of Israel by District and Sub-District[1] (1948–2003)

1 According to the boundaries of the sub-districts in the years listed.
2 Including Israel residents in the Administered Territories.
3 Following the disengagement from Gaza in Aug. 2005, the approx. 8,000 Jewish residents of the Gaza region were dispersed elsewhere in Israel.

These developments have been strengthened by the fact that there are more of the more prolific elements in the peripheral zones, while a higher proportion of the less fertile sections of the population and the older age groups is to be found in the central areas. Natural increase is therefore higher in peripheral zones and lower in the center, which increases population dispersal. These developments are offset, to some extent, by the effects of internal migration, as recent immigrants move mainly from the periphery to the center. Since the settlement of new immigrants in development areas has been the main factor in population dispersal, the latter has increased more in the periods of considerable immigration.

As new immigrants in the more peripheral areas have been largely of African and Asian origin, there has been a certain tendency toward regionalization. The immigrants of European origin, especially the veterans, are more concentrated in the large conurbations and the older settlements of the Coastal Plain, the Jezreel Valley, etc., while there is a higher proportion of people of African-Asian origin in the southern and northern regions. This regionalization explains the peculiar distribution of the population according to social, economic, and cultural characteristics (such as concentration of veteran immigrants in the central part of the country and dispersion of more recently arrived persons over more peripheral regions), higher educational standards and better economic conditions along the Mediterranean coast, and so on.

[Roberto Bachi / Elisha Efrat (2nd ed.)]

The Communities of Israel

In 2002, Jews constituted 76.8% of the total Israeli population. Most of the others were Arabs and Druze. These were divided by religion as follows: Muslims – 15.5% of the total Israeli population, Christians – 2.1%, and Druze and others, 5.6%.

The percent of the Jewish population declined from 84% in 1980 to 81.5% in 1989 (owing mostly to the large differences in the rate of natural increase of Jews and Arabs). The large immigration from Russia in 1989–1991 caused the proportion of Jews to increase to a smaller extent to 81.9% by the end of 1991.

THE VARIOUS JEWISH COMMUNITIES. The large immigration which arrived in 1989–1991 brought some important changes in the size of the various communities of Israel. The proportion of the "Israeli-born" population, which increased continuously in the previous decades and reached 64% of the total Jewish population in 1989, declined to 60.5% in 1991 (37% of this group were second generation Israeli-born, i.e., born to fathers who were born in Israel). The Israeli-born population was composed of 55% young persons (less than 20 years old), while only less than 1% were aged 65 and over.

The immigration of 1989–91 – which brought mostly immigrants from the former Soviet Russia – increased the proportion of those born in Europe, after a long–term reduction in their proportion. The proportion of those born in Europe and America among the total population decreased from 25% in 1981 to 20% in 1989, but by the beginning of 1992 the proportion returned to 25%. The Asian and African communities born abroad declined continuously from 20% of the total population in 1981 to 16% in 1989 and 15% in 1992.

Use of Languages and Literacy
From statistical data on the use of languages in Israel, collected at the population censuses in 1916–18, 1948, and 1961 and in various sample surveys, two dominant features of the linguistic situation in Israel are obvious: the amazing variety of languages brought by the immigrants from the countries of the Diaspora; and the important role played by the Hebrew language. The revival of Hebrew began at the end of the 19th century, when the majority of immigrants still spoke Yiddish, while the minority generally spoke Ladino or Arabic. At the end of the Ottoman period, Hebrew had succeeded in winning over some 34,000 (40% of the total Jewish population), mainly among the younger generation in "modern" localities (e.g., the new settlements and Tel Aviv). At the close of the Mandatory period, almost all those born in the country were Hebrew speakers, and those born abroad who had arrived before the age of 20 were found to use Hebrew almost to the same extent. At higher ages, it was found that the adoption of Hebrew diminished in speed and intensity in proportion to the age of the immigrants upon arrival. By 1948, 511,000 persons, 75% of the total, used Hebrew as their only or principal language. After the establishment of the State of Israel, the percentage of newcomers who knew Hebrew before arrival was far lower than that of pre-state immigrants, who were largely preselected and ideologically motivated. This decreased the proportion of Hebrew speakers in the period of mass immigration. Subsequently, however, the use of Hebrew again largely increased. The following table shows the changes in numbers and proportions of Hebrew speakers in the course of time. In 1966 they constituted some 70% of adults and there is no doubt that they were the overwhelming majority among the children.

Persons Speaking Hebrew as Only or First Language Among the Jewish Population (Israel), 1914–66

	Age 12 and over Total	Age 2 and over*	Age 2–14*	Age 15 and over*
1914[1]	34,000[2]	40.0[2,3]	53.7[2,3]	25.6[2,3]

2 Aged one year and over (estimate).
3 Excluding Jerusalem.
4 Aged 2–13.
5 Aged 14 and over.

Before statehood, the Jewish population was characterized by the low proportion of illiterates. This was due to the high educational level of the immigrants, who were largely of European origin, and to the fact that most of the Jewish population saw to the education of their children, although it was not compulsory at the time. Only among women in the higher age groups was the proportion of illiterates considerable. With mass immigration from Asia and Africa, the proportion of illiterates increased considerably, mainly in the higher age groups and especially among women. Due to the efforts made by the State of Israel in the educational

field, the situation has improved in the course of time. The following table shows the classification of the Jewish population by number of years of schooling according to continent of birth, sex, age, and period of immigration. The higher standards of those born in Israel, Europe, and America, as compared with those of people born in Asia and Africa, are immediately seen.

The Regional Distribution of the Population

In 2002, the distribution of the population of Israel by the various regions of the country was very similar to that of a decade earlier, although some differences can be traced, brought about mostly by the dispersion of the large wave of immigration that arrived from the end of 1989 onwards.

At the beginning of 2002, 70% of the population resided in the various sub-districts along the coastline of Israel. (These include the sub-districts of Acre in the north through Haifa District, Central and Tel Aviv Districts, and down to Ashkelon sub-district in the south.) This is similar to the proportion in 1983. Some small increase is found in the part of the population living in the peripheral area in the North and the South and the population living in Judea and Samaria and the Gaza Regions on the other side, but the population of the Tel Aviv and Haifa Districts grew at a slower rate than other districts. (Tel Aviv District population increased in the period 1983 to 2002 by 15.8%, Haifa by 45.8%, while other areas grew by 27 to 30 percent.)

The large immigration which arrived from 1989 did reside to a larger extent in the Haifa and the Northern Districts, and to a smaller extent in the Jerusalem, Tel Aviv, and the Central Districts, compared to the veteran part of the Jewish population in these regions. Thirty-three percent of the immigrants (of the 1990–91 wave) resided in Haifa and Northern Districts compared to 25% of the Jewish population. The percent of immigrants entering the Tel Aviv and Central Districts was 46% (compared to 51% of the population). These movements continued the trend of decrease in the part of the Jewish population of the Tel Aviv District (in 2002, 21.5% of the population compared to 30% in 1983 and 43% in 1948). Data on internal migration of these new immigrants show that the Northern, Southern, and Central Districts did gain on balance from their movement.

As the regional distribution of the Arab population did not change to an important extent, the part of the Jewish population in the Northern District was 50.3% in 1992 compared to 48.4% in 2002.

The population of Israel is an urban population. Only 8.4% live in the small localities of less than 2,000 persons while 43.7% (50% of the Jewish population) reside in 13 localities of 100,000 persons or more. This is very similar to the distribution a decade ago. The three large cities (Jerusalem, Tel Aviv-Jaffa, and Haifa) continued the decline in their proportion of the population, while the population of towns of 100–200,000 inhabitants increased. These localities are Ḥolon – population 165.8 thousand; Petaḥ Tikvah – 172.6; Bat Yam – 133.9; Rishon LeZiyyon – 211.6; Netanyah – 164.8; Be'ersheva – 181.5; Ramat Gan – 122.6; Bene Berak – 138.9.

The largest city of Israel was Jerusalem with 680,000 at the end of 2002 (of whom 459,000 were Jews), followed by Tel Aviv-Jaffa with 360,000, and Haifa with 270,800. If the population of the whole conurbation of Tel Aviv is added a total is reached of 1.5 to 1.8 million, depending on how the boundaries of the metropolitan area are defined. The population of the Haifa conurbation is 971,000.

Within the rural area, the population of the moshavim and the kibbutzim grew at a slower rate than did the total Jewish population, so that the percent of the population residing in moshavim declined within a decade from 4.5% to 4.1% and that of the kibbutzim from 3.5% to 2.1%.

HUMAN RESOURCES

In 2002 the labor force of Israel (i.e., those employed and those unemployed seeking work) numbered about 2.5 million. In the decade from 1982 to 1992, the labor force grew by some 480,000 (i.e., by more than a third or 3.0% per annum). Parallel to the population change, the labor force grew at a slow pace in the period 1982 to 1989 (by 2.3% yearly), and at a much higher rate in the period of the mass immigration (by 4.9% per year).

This decade marked a high increase in unemployment compared to that of the employed. While in 1982 the rate of unemployment (unemployed as a percent of the labor force) was 5%, it increased to 6.4% in 1988 and increased sharply up to 10% in 2002. This was caused partly by the entry into the labor force of a large number of new immigrants who were still looking for a job in the first stages of their stay in the country.

The main trends regarding labor force participation found in the 1970s continued through the 1980s and the beginning of the 1990s. The major development is the continuous increase in the participation of women in the labor force; from 36% of the women aged 15 and over in the labor force in 1982 to 48.4% in 2002, with women constituting 42% of all the labor force. Another continuous trend was the decrease in the labor force participation of men, mostly in the retirement and pre-retirement ages. The participation of men aged 55–64 in the labor force declined from more than 80% in 1982 to 65.9% in 2002, and of those aged 65 and over from 28% to 15.4%. Smaller declines are also found in age 35 and over. Thus, the labor force has become more feminine and of a younger age. The continuous increase in the proportion of those aged 35–44 in the labor force was related to the changes in the age structure and to the decline in participation in other ages.

The labor force is of a higher level of education. Thus persons who had 13 years and over of schooling constituted 28% of the labor force in 1982 and 38% in 2002 (17% had 16 years and over of schooling). The high level of education of the mass immigration which arrived from 1990 contributed to this trend.

The average number of hours worked by the employed population was 36.0 per week. No important trend changes were noticed in the decade 1982–2002.

The large increase of the employed population between 1982 and 2002 was absorbed in the various branches of the economy in similar proportions. Some differences were noticed; a continued decrease in the proportion of those employed in agriculture and industry; the proportion working in construction increased as activity in this branch grew in 1990–91 owing to the large-scale building for immigrants. In addition to the Israelis employed in the construction industry, some 70,000 workers from Judea and Samaria and the Gaza Region were employed in this branch in Israel. The proportion of those working in commerce, business, and personal services continued its growth.

The occupational distribution of the employed population did undergo some changes: the percent of those in scientific and academic (8.2%, 1982; 8.9%, 1991), professional and technical (14.6%, 1982; 16.8%, 1991), managerial/administrators (4.2%, 1982; 5.1%, 1991; 7.3%, 2002;), clerical (18.5%, 1982; 16.5%, 1991; 17.0%, 2002), sales (7.5%, 1982; 8.7%, 1991), and service workers (12%, 1982; 13.2%, 1991; 18.5%, 2002) rose, while those in agricultural (5.2%, 1982; 3.4%, 1991), skilled (25.1%, 1982; 23.7%, 1991; 20.3% 2002), and other occupations declined.

Some 81% of all employed persons in 1992 were wage and salary earners, 14% were employers, self-employed persons and members of cooperatives, 4% were kibbutz members, and 1% were unpaid family workers.

The Israeli Household

The average Israeli household (i.e., the group of people living regularly in the same apartment and sharing common meals, including households of one person) consisted in 2002 of 3.37 persons (3.4 persons in the Jewish household and 5.5 persons in the Arab household).

There were in Israel in 2002, 1.85 million households (1.56 million Jewish). The typical household (68.3% of all households) consisted of a couple with or without children, and in some of them also additional members; 17.6% were households of one person (i.e., widows living alone, young persons living on their own outside their family, etc.), 4.6% were one-parent households with children. Other households consisted of various other structures.

The long-term trend of a slow decrease in the size of the average Israeli household was not found in the 1990s. This trend was reversed in the Jewish population, and a small increase was registered in the Jewish population. This resulted from the entrance of immigrants in 1990–92 in larger households. Though immigrants from Russia came in small nuclear families, some proportion of the families lived together in the same household (i.e., a couple with a parent or parents of the husband or wife).

The proportion of single-member households, which increased continuously up to 1989 (15% of Jewish households in 1981 and 17% in 1989) decreased somewhat (17.6% in 2002), as did larger households of 5 members and over (from 27.2% in 1989 to 24.7% in 1997). Large differences in the size of households were found between households of various communities. The average household of those born in Africa in 1997 was 3.54, in Asia 3.17, and in Europe and America 2.80. The household of those born in Israel was 3.65, resulting from the young age structure of this group.

HOUSEHOLD FORMATION AND DISSOLUTION. The number of marriages and their frequency continued decreasing in the 1980s, as formal marriage was postponed, by some one year for grooms and brides who married for the first time. This occurred as cohabitation of younger men and women continued increasing. The decrease in the marriage rate was found in all age groups but especially in the younger age groups.

The dissolution of families by divorce increased to a small extent. One of every nine marriages contracted in Israel was broken by divorce. The divorced couple was married on the average for 11.5 years and had 1.8 children on divorcing.

[Moshe Sicron]

JEWISH COMMUNITIES ("EDOT")

Jews who went to Erez Israel from a particular geographical region, country, or sometimes town or district often brought with them a characteristic cultural heritage, comprising language (in some cases specifically Jewish, like *Yiddish, *Ladino, *Judeo-Arabic, *Judeo-Persian, Georgian, or Kurdish *Aramaic), religious rites and customs, habits, and traditions. They are sometimes referred to, figuratively, as modern "tribes" (*shevatim*). Members of such a group, known as an *edah* (plur. *edot*), usually established their own synagogues, burial societies (see *ḥevra kaddisha*), and mutual aid or charitable organizations, built their own quarters or (in modern times) settled in the same villages, and tended to support each other in local or, to a smaller extent, national politics. The term *edot* often applies specifically to those groups of immigrants who came from, or trace their origin to, the Islamic countries ("Oriental" immigrants). The *edot* preserved their identity, to a greater or lesser extent, for several generations, their members tending to marry within the *edah*, and the tensions between them were of some importance in the history of the *yishuv* and the State of Israel (See *Israel, State of: Population, section on Intercommunal Problems). There are no accurate statistics on the sizes of the various *edot*, as census figures specify only countries of origin and language groups, which are not identical with community membership.

Communal separatism is particularly recognizable in the composition of the populations of neighborhoods and various streets in Jerusalem, in which about 100 quarters were founded up to the establishment of the State of Israel – most of them on a communal basis – and also in greater Tel Aviv, Haifa, and some other towns. The attempt to mix various communities in the new-immigrant moshavim after the creation of the State of Israel was generally unsuccessful. It was abandoned in the 1950s, after which most of the new settlements were established on a more-or-less homogeneous basis from the point of view of origin and social mores. In the kibbutzim the percentage of non-Ashkenazim is small, but in many of them youth groups composed of immigrants from Asia and Africa have been successfully absorbed.

The Ashkenazi Community
This is the largest and, socially, politically, and economically, the most important and influential community in the country. The Ashkenazim consist of Jews of European origin and their descendants, including most of North and South American Jewry. Most Ashkenazi families spoke – or at least understood – Yiddish at some point in their history. Ashkenazim first went to Erez Israel as individuals or as families from the 13th century onward, and, at the latest by the middle of the 15th

century, founded their own community in Jerusalem. In the 18th century it numbered a few hundred souls, but ceased to exist, temporarily, after the first quarter of the century. In Safed, however, there was an Ashkenazi community from the 16th century, and it grew particularly after the ḥasidic immigration in 1777. Some of the newcomers moved to Tiberias, and it was from those two towns that the Ashkenazi community in Jerusalem was revived. In 1816 the *Perushim*, the opponents of the Ḥasidim, organized their own community in Jerusalem.

According to a census held in 1839 on behalf of Moses *Montefiore, the number of Ashkenazim in the country was 1,714 – 26.2% of the total Jewish population. In the next 75 years, until the outbreak of World War I, when the Jewish population grew to about 85,000, most of the immigrants who created the "old *yishuv*" were Ashkenazim. In 1876/77 they numbered 6,800 in Jerusalem – 43% of the city's Jewish population; two-thirds of them were *Perushim* and the rest Ḥasidim. By the time of the First Aliyah (1882), they constituted half of the 25,000 Jews in the country, and for many years afterward the proportion of Ashkenazim among the immigrants was on the increase. It is estimated that in 1895 they numbered 25,800 – 63% of the 40,700 Jews; in Jerusalem they constituted 15,000 out of 28,000 Jews, in Safed 4,500 out of 6,600, in Tiberias 1,600 out of 3,200, and in Jaffa 1,700 out of 3,000. The overwhelming majority of the 2,200 Jews in the new agricultural settlements were Ashkenazim.

According to the 1916–18 census, Ashkenazim accounted for 60% of the 56,700 Jews left in the country after the hardships of World War I. They constituted the majority (about 85%) of the immigrants from the end of the war until the creation of the State of Israel (1948). At the time of the declaration of the state, more than 80% of the 650,000 Jews in Israel were Ashkenazim, but since then their proportion of the total population has been steadily on the decrease, due to the increased immigration from Asian and African countries and the comparatively low Ashkenazi birthrate. In the 1961 census, community of origin was not recorded, but on the basis of the information on country of origin and father's country of origin, it may be estimated that Ashkenazim constituted 52.5% of the population; by 1965 they had declined to less than half the total.

In 1948, 46.8% of the Jews speaking foreign languages spoke Yiddish as their sole language or as the first after Hebrew. By 1961 the proportion had decreased to 22.7% (273,615 persons). Other languages spoken by Ashkenazim were German (73,195), Romanian (69,945), Polish (51,760), English (46,615), Hungarian (43,245), Russian (21,255), Czech and Slovak (4,095), Dutch and Flemish (1,530); smaller groups spoke French, Spanish, Serb, Bulgarian, Portuguese, Danish, and Swedish.

The Sephardi Community
The Sephardim in the strict sense of the term, that is, those speaking Ladino or their descendants, have the longest continuous history in the country, the origin of the community

dating back to the 15th or early 16th century. It assimilated the Portuguese Jews, expelled a decade or two earlier, who are mentioned by the 16th-century travelers, the remnants of the Byzantine Jews, and, at a later period, the *Musta'rabs (Arabic-speaking Jews) and Jews from other communities, including some Ashkenazim. Individual Jews of Spanish origin were living in Erez Israel as far back as the 11th century, but there was little immigration in medieval times, and, moreover, few of the Jews expelled from Spain and Portugal at the end of the 15th century made their way to Erez Israel because of the insecure conditions in the country. By the end of the 15th century, however, there were many Sephardim in Safed and in 1509 there was a separate Sephardi community in Jerusalem. The flow of immigration increased after the Ottoman conquest, the immigrants receiving aid from their brethren who had settled in Turkey. The Sephardi community of the 16th century developed a flourishing social and cultural life; it included many famous talmudic scholars and served as a center for learning for the whole of the Diaspora. In the census of 1839 Sephardim were incorporated with the Jews from the Oriental communities, but on the basis of the country of origin of Jews born abroad, it can be estimated that at least half of the total were Sephardim. With the creation of the post of *ḥakham bashi (chief rabbi) of Jerusalem by the Ottoman authorities in 1842, this honored post was always occupied by a Sephardi.

During the 19th century, there were no organized groups of Sephardi immigrants, but there was increased Sephardi immigration in some years, e.g., after the liberation of Greece in 1829 and of Bulgaria in 1878. By 1877 there were 5,970 Sephardim (not including the Maghrebis – immigrants from North Africa) in Jerusalem, and it appears that 5,500 of this number, 40% of the Jewish population of the city, were descendants of exiles from Spain. Most of them were employed in various branches of commerce, but a few families from Bulgaria settled on the land at Hartuv. There was little Sephardi immigration in the 20th century until 1948, and the Sephardim, therefore, did not found their own quarters in Jerusalem like the other communities. Until 1920, however, when the Ashkenazi chief rabbinate was established, it was the ḥakham bashi (also styled rishon le-Zion) who was the official religious head of the entire Jewish community. In Jerusalem, the Sephardi community maintained its own community council and ḥevra kaddisha. In the 1961 census, 63,000 persons, including some Ashkenazim from South America, entered "Spanish" as their sole or second language; 31,535 spoke Bulgarian; 7,750 Turkish (young people who had been educated in state schools in their country of origin); and 2,635 Greek.

The Italian Community
Visitors and individual settlers came from Italy in all periods and Italian Jews in Jerusalem are mentioned until close to 1870. It was only after Mussolini's anti-Jewish measures in 1938, however, that significant numbers settled in Palestine, when about 500 Italian Jews, including a high proportion of scientists and technological experts, arrived. A number of syn-

agogues have been fitted out with *Sefer Torah* arks and other furnishings transferred from disused synagogues in Italy. According to the 1961 census, 5,300 persons spoke Italian, 1,650 as their first or only language. This figure, however, may have included some Jews from Libya (Tripolitania).

Jews from the Maghreb
This term includes all the Jews of North Africa, with the exception of Egypt. Jews from the Maghreb had come to Erez Israel as far back as the 11th century, though mostly as individuals, and in 1218 *al-Ḥarizi mentions a *Maghrebi community in Jerusalem. Immigration increased after the defeat of the crusaders, and individual Maghrebi Jews settled in Jerusalem throughout the centuries. In 1509 there was a Maghreb community in Safed as well. From the second third of the 19th century onward, immigration from the area increased, mostly from *Morocco, with smaller numbers from Tunisia. For a time there was also immigration from *Algeria, but it dwindled with the spread of French culture in that country. Jews from these countries were the founders of the Jewish communities in Jaffa, where 18% were of Maghreb origin in 1905, and in Haifa. In the first half of the 20th century there was a decline in the proportion of educated and professional men among the immigrants from this area. Before World War I there were an estimated 2,000 Maghreb Jews in Jerusalem. During the British Mandate period there was hardly any immigration to Palestine from these countries, but since the middle 1950s Jews from the Maghreb have constituted a high proportion of the immigrants. In 2002 there were 163,000 Jews who were born or whose parents were born in Morocco, 41,200 from Algeria and *Tunisia, and 18,800 from *Libya, almost the entire Jewish community of which settled in Israel. Many of them were among the 122,250 persons who in 1961 recorded Arabic as their first or only language. Of the 24,300 who spoke only, or mainly, French, the majority were from Algeria and Tunisia; the majority of the 43,000 who gave it as their second language were Moroccan. Many Jews from Libya also spoke Italian. Some Berber-speaking Jews from the Atlas mountains settled in the Adullam region. The Maghreb community in Jerusalem has its own ḥevra kaddisha.

Iraqi (Babylonian) Jews
It is customary nowadays to describe the Arabic-speaking Jews from southern and central *Iraq, and even from parts of northern Iraq (Mosul), as "Iraqis," but their community and ḥevra kaddisha in Jerusalem, unlike that in Ramat Gan, are still called "Bavlim" – Babylonians. Until the middle of the 19th century, very few immigrants came from that part of the world because of the long and dangerous journey. With the introduction of steamships, which traveled down the Tigris River through the Persian Gulf and the Red Sea to Erez Israel, immigration from Iraq increased. In the 30 years preceding World War I, there was a small community of Iraqi Jews, with three synagogues, which printed its own books in Hebrew with translation in Iraqi Jewish Arabic and booklets

in the same dialect. In 1916 the community had 371 members. Between the two world wars, the Zionist idea flourished in Baghdad and Hebrew teachers were sent there from Palestine, but they were expelled in 1935 with the growth of the Arab national movement. Their ties with the *yishuv* were renewed during World War II, when many Jews served in the British forces in Iraq or went there to help in the transfer of refugees from the U.S.S.R. and Persia. In 1951 almost the entire Jewish community was forced to leave (*Israel, State of: Aliyah and Absorption), thus virtually liquidating the oldest Jewish community outside Israel. In 2002, 171,700 Jews were registered as of Iraqi origin, among them 2,000–3,000 of Kurdish extraction. The Iraqi community in Israel includes people from all strata of society and of all educational levels.

Jews from Aleppo

Throughout the ages, there had been immigration from *Aleppo, which was an important Jewish economic and scholastic center. Most of the immigrants, however, assimilated with the Mustaʿrabs and later with the Sephardim. In 1862 they founded the synagogue of Aram Zoba (Aleppo) in the Old City of Jerusalem, and by 1908 eight more synagogues had been founded in the quarters outside the Old City. The second and third generations of the Aleppo community included large numbers of traders and distinguished scholars. It is difficult to estimate the number of Jews of Aleppan origin. In the 2002 census they were recorded with the 36,900 from Syria and Lebanon.

Yemenites

Few Jews from *Yemen settled in Erez Israel before the 19th century. Noteworthy among them were R. Solomon *Adani in the 16th century and R. Shalom *Sharabi in the 18th. The travels of R. Jacob *Saphir and the Orientalist Joseph *Halevy in Yemen may have stimulated Yemenite Jews to go to Erez Israel, and in 1882 a few hundred of them joined together and made their way to Jerusalem with only the clothes on their backs. The help extended to them by the Jews of Jerusalem and the Diaspora did little to alleviate their distress. In 1885 Ashkenazim active in the community purchased a tract of land for them in the village of Silwān, south of Jerusalem, which was extended over the years. In 1908 it contained five synagogues, as the Yemenites in Erez Israel split into two groups: one following the traditional Yemenite (*Baladī*) version of the prayers, which goes back to the Middle Ages, and the other following the "Syrian" (*Shāmī*) rite, that of the Sephardi communities (with many deviations). In addition, special houses of prayer had to be established for the devotees of the Zohar and the Kabbalah and their opponents (the "Dor Deʾah"); the Yemenites also had prayer houses in the Old City and 14 small ones in the poorer quarters of Jerusalem outside the walls. The Yemenites' reputation as diligent farm workers suggested the idea of bringing more of them to Erez Israel and the plan succeeded through the efforts of Shmuel *Yavnieli,

an emissary of the Palestine Office in Jaffa. Three convoys arrived in 1908/09 and settled in the large moshavot of Judea and Samaria, where special neighborhoods were established for them.

The Yemenite Jews separated themselves from the Sephardim and established a separate community with a rabbi, *bet din*, ritual slaughter facilities, and cemetery plots of their own. They were outstanding for the level of their religious Jewish scholarship and their devotion to the Torah. In spite of the smallness of the community, they printed their special prayer book (*tiktāl*), R. *Saadiah Gaon's translation of the Pentateuch (*Sharḥ*), and other religious books. They still preserve their traditional pronunciation and melodies in prayer and the reading of the Torah (together with the Aramaic Targum), the *haftarot*, and the Five Scrolls.

In 1916 it was estimated that there were 4,058 Yemenites in Palestine: 1,636 in Jerusalem, 859 in Jaffa, 943 in the moshavot in Judea and 620 in Samaria and Galilee. Almost all the Jews in Yemen were transferred to Israel during "Operation Magic Carpet" (1949–50), and many were absorbed in villages and development towns. In the 1961 census close to 120,000 people born in Yemen and Aden, or whose father was born there, were registered and at the end of 2002 the estimated Yemenite population of Israel was 146,000. The veteran members of the community have risen in the social scale and their characteristic leanness has gradually disappeared with the improvement of nutritional standards (although the adoption of the Israel diet has made them susceptible to certain illnesses from which they were previously virtually immune).

Georgians

(in the vernacular, Gurjim). The first Jews from *Georgia (Heb. *Geruzyah*) arrived in Erez Israel in about 1860, after the development of steamboat transportation. By 1862 they had established a house of prayer in the Old City of Jerusalem and before 1914 had five more in their quarters near the Damascus Gate (abandoned in the riots of 1929) and in the Simeon ha-Ẓaddik quarter in the north of the city. After the disturbances of 1936 they dispersed throughout Jerusalem. They spoke Georgian in the Diaspora and are the only Oriental Jewish community that did not employ Hebrew letters to write their vernacular. No scholars from Georgia settled in Erez Israel, but once in the country some members of the community turned to the study of the Torah. The Georgians succeeded in commerce, and some grew wealthy. In 1916 there were 420 Georgian Jews in Jerusalem and 19 in Jaffa. As Russian nationals they were forced to leave the country during World War I, but after the war most of them returned. Since 1916 they have not been registered as a special community in the censuses. Since the establishment of the State of Israel, their language has been growing extinct and their unity as a community has been disintegrating. After the Six-Day War there was a reawakening among Georgian Jews of the desire to go to Israel. Several groups of them are settled in Lydda, Kiryat Malakhi, and other places.

Persians

It appears that the first Persian-speaking Jews who settled in Jerusalem after the destruction of the Second Temple were *Karaites, who came in the middle of the ninth century. In 1839 14 Persians were registered in Safed. In about 1815 the *Perushim* in Jerusalem were said to have hired an ʿAjami ("foreigner" in Arabic, i.e., a Persian) to complete their *minyan*. The first Persian house of prayer in Jerusalem was founded in 1895 in the Shevet Ẓedek quarter (near Maḥaneh Yehudah) and eight more were established through 1908. In the same year, 80 Persian pupils studied in two *talmud torah* schools in Jerusalem. In 1916 120 Persians were registered in the city: it appears that many more of them registered as Sephardim. Before the end of the 19th century Jews came to Ereẓ Israel from *Isfahan and, especially, *Meshed, and the numbers grew after the establishment of the State of Israel. The Jews from Meshed, who were descendants of forced converts to Islam, were known as *Jadīd al-Islām* "neo-Muslims." They were the richest of the Persian community and created international commercial ties in the export of rugs. Since the Ottoman period they have had two synagogues in the Bukharan quarter of Jerusalem and others lived in some of the poorer quarters. During the Mandate and after the establishment of the state, the educated and affluent among them scattered throughout the new quarters of the city. Two communities, the "Persian" and the "Iranian," were registered during the Mandate period, because of an internal dispute, but this distinction later disappeared. Jews from Afghanistan are also counted among the Persians. In 2002 about 135,400 people were of Iranian extraction, 84,600 of whom were born in the country. More than 37,000 of them spoke Persian, and for 16,370 it was their only tongue or their first language after Hebrew (see *Iran).

Bukharans

This term is used to denote Jews who speak a Persian dialect and whose land of origin is *Uzbekistan. In 1827 the first Bukharans set out for Ereẓ Israel and reached Baghdad, but it is not known if any of them actually arrived in Ereẓ Israel. After *Bukhara was conquered by the Russians, individual Bukharans settled in Ereẓ Israel in 1868 and in the middle of the 1870s a number of Bukharan families were living in Jerusalem. Following R. Yaakov *Meir's journey to Bukhara in 1882 as an emissary for charitable institutions, hundreds of affluent families settled in Ereẓ Israel, and in 1892 they established a quarter in Jerusalem ("Street of the Bukharans"), which was uncommonly spacious and elegant for the period. In most of the families some of the members kept up their businesses in Bukhara while others lived in Jerusalem and were supported by the profits of the family business (in some instances, the members abroad and in Ereẓ Israel changed places every few years). In 1908 the Bukharans had 17 beautiful synagogues in Jerusalem, and the number had grown by 1914. During this period the affluent members of the community had books printed in their native language and in Persian, which they understood. During World War I some of the Bukharans fled

and some remained in a state of poverty and deprivation. The Communist authorities in Uzbekistan confiscated the property of the Jews, and those who succeeded in returning to Ereẓ Israel supported themselves by renting out houses. In the census of 1961, 2,300 people were registered as "Bukharan"-speaking, but only 660 entered the language as their only or first tongue.

Dagestanis

A few hundred Jews from Dagestan, who speak Tat (an Iranian dialect), settled in Ereẓ Israel at the beginning of the 20th century: some in Be'er Ya'akov, which was established by them, and some in Jerusalem. Their courage and command of weapons won them a reputation in Ereẓ Israel and in the Diaspora, and some of them were outstanding in *Ha-Shomer. As Russian nationals they were also affected by the expulsion at the outbreak of World War I, but some of them returned during the Mandate period, especially to Tel Aviv, where they lived in the "Caucasian" Quarter. Some of those born in Ereẓ Israel do not speak the language used by the community in the Diaspora.

Krimchaks

The Krimchaks are Rabbanites (in contradistinction to the Karaites) from the *Crimea who speak "*Judeo-Tatar"; their *aliyah* may have had some connection with R. Hezekiah *Medini. Before 1915 they had a small community in Jerusalem and published books and pamphlets in their native tongue, apparently for export. They also departed during World War I and in 1916 there was only one family left. After the war a few returned and established their own synagogue in Tel Aviv.

Kurds

During the 19th century, individuals from the cities and townships of *Kurdistan settled in Ereẓ Israel, and at the beginning of the 20th century, a few hundred more followed. Their language, mistakenly called "Kurdish," is a modern Eastern Aramaic and they consequently called themselves Targum Jews. They lived in some of the poorer quarters in western Jerusalem in huts constructed from discarded kerosene cans, boards, and the like (known as the "Tin Quarter," now called Shevet Ẓedek), although stone houses were later constructed. In 1908 they built their own synagogue. Physically powerful and trained for physical labor over the generations, the Kurds were dominant among the porters in the large cities. Some of them helped the Europeans of the Second Aliyah to establish settlements in Lower Galilee. The conquest of Iraq by the British liberated the Jews in the mountains of Kurdistan from their subservience to local feudal lords, but few of them left their villages. With the call to settle in Israel in 1951, however, they abandoned their property and moved to Israel *en masse*. Most of them settled on the land and their youth adjusted to the Israel way of life.

In 1916 174 Kurds were registered in Jerusalem and 222 in Galilee (together with the Urfalis, see below). In 1916, 8,560 Kurdish-speaking residents were recorded, and 3,920 entered

Kurdish as their only language or first language after Hebrew. The Kurds have their own *ḥevra kaddisha* in Jerusalem.

Close to the Kurds from the point of view of language (but not in life style) are the Jews of Persian *Azerbaijan, most of whom settled in Erez Israel after World War I (immigrating via various countries) and established synagogues in Jerusalem, Tel Aviv, and other places. Exact population figures are not to be had. Most of the older generation deal in commerce, while the youth are employed in technical trades.

Urfalis

The Urfalis and residents of the other cities of Upper Urfa (in southern *Turkey) speak Arabic. Jews from this area began to settle in Jerusalem at the beginning of the 20th century; their first house of prayer was established in 1904. In 1916 206 of them were registered in Jerusalem and a few more in Galilee (together with the Kurds). Settlers from two towns in the mountains north of Urfa (*Jarmuk and Siverek), who came with the Urfalis, were registered in 1916 and during the Mandate period as a separate community. In 1916 there were about 200 of them in Jerusalem, where they had a special synagogue. In the same year there were several settlers from Diyarbakir, who were joined by others from the same place during the 1920s in the wake of the Kurdish revolt in their area of Turkey. They also established a synagogue in Jerusalem.

Mustaʿrabs

This term denotes Jews who adopted the language and life style of their Arab neighbors, and some of whom, it appears, were descendants of families that never went into exile. Over the years, most of the *Mustaʿrabs were absorbed into the Sephardi community in the broad sense of the term, and only a few families remained in *Pekiʾin. In the 20th century, even those families, except for one clan, dispersed in Galilee and Samaria.

Karaites

As early as the middle of the ninth century C.E., a movement to settle in Jerusalem and mourn the destruction of the Temple arose among the *Karaites in Babylon and Persia. In the first generation of the tenth century, the Karaite community in Jerusalem was stronger and larger than the Rabbanite one, but the crusaders destroyed it in 1099. In 1540 Karaites settled for a short period in Hebron. In the middle of the 18th century some settled in Jerusalem and established a synagogue, which continued to exist (but never had a *minyan* of worshipers) until the fall of the Old City in 1948. After the establishment of the State of Israel, about 2,000 Karaites went from Egypt to the new state and settled mainly in Ramleh, Ashdod, Beersheba, and the moshavim of *Maẓliʾaḥ, near Ramleh and *Ofakim in the northern Negev. The determination of their status, as Jews according to *halakhah* or as a separate religious community, aroused difficult problems.

Indian Jews

After the establishment of the State of Israel, members of two closely knit communities went from *India: the *Bene Israel, who speak Marathi, and the Jews from *Cochin, who speak Malayalam. Through 1954, 1,200 of the Bene Israel settled in Israel, and in 1965 their number had grown to 7,000. Because of their remoteness from the Jewish world and their ignorance of rabbinical laws of marriage and divorce, the halakhic problem of recognizing their right to marry within the Jewish community arose on their arrival. In 1970, there were about 3,400 Cochin Jews in Israel, many of whom settled in development towns and moshavim established by them in the Judean Mountains.

[Abraham J. Brawer]

INTERCOMMUNAL PROBLEMS

A basic factor in the relationship between the "communities" (*edot*) in Israel is the long-standing dominance of the Ashkenazim in the economic, social, cultural, and political spheres. As a result, the various *edot* did not undergo a process of mutual acculturation: instead, the non-Ashkenazi communities tended to assimilate with the Ashkenazi community and adopt its values and way of life. To the extent that the process of assimilation was impeded, inter-community tension developed and was made much more acute by the fact that the distinctions between the communities were largely superimposed on the existing economic and educational stratification: on the whole, the Ashkenazim were better educated and more prosperous, while there was a higher proportion of poverty, under-education, and illiteracy among the Sephardim and other Oriental communities, particularly the new immigrants from African and Asian countries. The closing of the gap between "the first Israel" and "the second Israel" became a central problem. The alleviation of intercommunal tension through the "integration of the exiles" (*mizzug galuyyot*) became a major aim of national policy. At the same time, the opinion was widely held that the tension would be alleviated with the disintegration of the communities themselves and the disappearance of communal allegiances, and that as long as the communities themselves continued to exist there would not be a sense of a united people in Israel. This process of disintegration, however, proved a much more lengthy and complicated process than was initially envisaged.

During the period of the British Mandate, when a large Ashkenazi majority was created by the mass *aliyah* from Europe and the comparatively small *aliyah* from Asian and African countries, intercommunal tension was expressed primarily in the relations between various Ashkenazi groups, such as "Russians." "Poles," and "Galicians," but especially between these three groups together (Eastern Ashkenazim) and those from central Europe (Western Ashkenazim). This situation even led to the crystallization of specific political groups (such as the Aliyah Ḥadashah Party established by immigrants from "Central Europe" – actually from Germany).

The sting of this tension became blunted, however, during the first few years after the founding of the state due to the arrival of thousands of immigrants from the Islamic countries, as the differences between the newcomers and the Ash-

kenazim obscured the much finer distinctions between the groups within the Ashkenazi community. Among the Ashkenazi community no one group was outstandingly superior in the economic, political, and educational spheres: immigrants from Eastern Europe had molded the main institutions of the country and its pre-1948 ethos and they were dominant in the political leadership of the Zionist Organization, the *yishuv*, and afterward of the state and in their contribution to the shaping of social values. Immigrants from Germany were distinguished in the liberal professions and economic life and those from Western Europe and America were prominent in the technological and scientific developments after 1948. The confrontation between Ashkenazim and non-Ashkenazim, on the other hand, took place under conditions of obvious inequality.

Until the establishment of the new *yishuv*, the communal frameworks were accepted as the basis of public life and there was no conscious aspiration to merge the *edot*. This aim was a product of the modern nationalist movement and the new *yishuv*, and since the builders of the new *yishuv* were Ashkenazim, the idea of "merging" was conceived as the assimilation of non-Ashkenazim to the way of life and value system of the Ashkenazim. At the same time the secular character of the new *yishuv* widened the gap between the two groups by undermining the religious base common to Jews of all communities.

Under the Ottoman regime, the Jews of the new *yishuv* did not hold commanding economic and political positions in the life of the community: indeed, these hardly existed at all until the institution of the Mandatory regime. When the new *yishuv* acquired such positions during the 1920s, political and communal organizations began to develop among the Sephardim, but they reflected, for the most part, the aspirations of affluent businessmen and products of a Western education, themselves candidates for rapid assimilation to the Ashkenazi way of life.

The problem of intercommunal relations became of central importance with the large immigration after the establishment of the state, which created a situation of numerical equality between Ashkenazim and non-Ashkenazim. The immigrants from Islamic countries, especially from areas that had had all but no contact with Europe (such as Yemen) or countries from which it was mainly the poorer strata who came without the communal leadership (such as Morocco), quickly became an economic, social, and especially cultural proletariat in Israel. They felt uprooted in their new surroundings, where the dominant social forces demanded that they abandon their traditions and culture and assimilate unconditionally into modern Israeli society, which was basically Western. Consciously or unconsciously, the authorities and the prevailing public opinion in the country tended to regard the older generation of new immigrants from Islamic countries as a lost generation that would eventually die off, and their main concern was to help the younger generation throw off the burden of its paternalistic traditions. Israel society, however, was successful in many instances only in shattering the patriarchal family structure, which was the principal framework of the immigrants from Islamic countries, and thus destroying old values without simultaneously transferring its own value system as an integral part of the newcomer's personality. In effect, this resulted in the creation of a segment of society that was socially displaced, living on the fringes of two cultures and attracted to the glittering commercial aspects of modern materialistic culture.

However, manifestations of intercommunal tension and bitterness did not come about principally as a result of cultural deprivation, but because of discrimination affecting the immigrants personally. Basically, this discrimination was a consequence of culture deprivations; but this was not the major complaint of the immigrants from Islamic countries. Their complaint was that their absorption into Western society was not being sufficiently accelerated, that they were being prevented from enjoying its social and material fruits to the same extent as the Europeans, and that prejudice was being displayed toward them. The non-Ashkenazim developed psychological sensitivity toward what the Ashkenazim said and did, and this sensitivity sharpened intercommunal tension.

Most of the communities that came from Islamic countries did not develop a leadership that could serve as their spokesman (with the exception, to a certain degree, of the Yemenites – some of whom were considered veterans – and Jews from Iraq, who came *en masse* together with their communal elite). Manifestations of bitterness by "the second Israel" generally took the form of outbursts – sometimes violent – by individuals; there were very few mob outbreaks, the most serious of which occurred in 1959, especially in the Wadi Salib quarter of Haifa. However, attempts to establish political parties on a communal basis proved failures. Almost all the political parties made a habit of including in their election lists a token number of candidates from the "Oriental" communities and every government had one or two members from these communities.

In the 1960s there was a slackening in intercommunal tensions. This was partly a result of the integration of children of all the communities in the school system. In the early years of the State it was felt that a common education would eliminate differences, but cultural deprivation was perpetuated even under equal educational facilities. Factors at work here were differences in home background and tradition (Oriental families did not have the same tradition of sacrificing everything for their children's education), in living conditions (Oriental families could not provide the same atmosphere for study), the Western outlook of the schools and the teachers, and the concentration of better teaching facilities in the large cities (whereas the Oriental communities were largely in the development areas). There was thus a high dropout rate among pupils of Oriental origin.

However, steady progress was evidenced, for example, by the fact that whereas 13% of secondary school pupils in

1956 were from Afro-Asian origin, the percentage increased to 26% in 1961/62 and 42.6% in 1969/70 – though in the 12th (highest) grade the percentage in the latter year was still only 30.2%. Conscious efforts were made to help such children, not only by special tuition and scholarships, but even by lowering pass standards for children of Afro-Asian background so as to encourage them to continue their education. The rate of intermarriage between Ashkenazi and Sephardi-Oriental communities has risen less sharply than was forecast in the early years of the State but it has nevertheless shown a consistent increase. In the late 1960s, 17% of all Jewish marriages were between the two groups. In addition, army service, in which members of all communities meet under conditions of equality, also helped to blur intercommunal distinctions and the common experiences of the Six-Day War and its aftermath had a powerful influence in the same direction. In 1971, however, there was some recrudescence of intercommunal tension.

Attempts to draw parallels with community problems in other countries are misleading. There are no racial distinctions between the *edot* in Israel; there is a feeling of common national (and, obviously, religious) affiliation; there is no legal discrimination against the members of any community; and no one in Israel is interested in perpetuating the gap between the communities. On the contrary, every effort has been made to work toward the fullest integration. Basically, the communal problem in Israel is only the outcome of a sudden confrontation of two cultures, the first sure of itself and the second in a stage of decline, and of the high correlation between communal affiliation and social and educational attributes. These factors reinforce each other, it is true, but the weakening of one also tends to weaken the other. The sense of communal affiliation is on the decrease among those born in Israel; and immigrants from Islamic countries are rising in social status, being exposed to the dominant culture in the country, and in integration with the Ashkenazim without feeling it necessary to create a parallel leadership of their own.

[Aharon Amir]

Tensions between Jews from African-Asian countries and the Ashkenazi elements in Israel continued from 1970. They were expressed in the early 1970s with the emergence of a group calling themselves the Black Panthers who demanded better jobs and educational opportunities for Jews from Islamic countries. The election in 1977 of Menaḥem Begin and the Likud Party helped change the image of these Jews in their own eyes, since many of them supported the Likud against the Labor Party, which was accused of not doing enough to close the ethnic gap. Mr. Begin launched a program called "Project Renewal" designed to rehabilitate 160 distressed neighborhoods throughout Israel with world Jewry aid. The plan was on the whole a success. For a while it seemed that tensions were abating, and that those "Oriental" Jews had finally found their niche in Israeli society. This was illustrated by the growing number of such Jews in the Knesset, government, top army ranks, and the professions. Almost half of the members of the cabinet came from such families who had grown up in development towns. There was a marked improvement in housing solutions and educational opportunities.

This changed, however, with the onset of the massive immigration from the former Soviet Union, especially that beginning in 1989. This brought to Israel some one million immigrants up to 2002, many of whom were highly trained, educated, and skilled. The attention of Israel was now focused on their immediate absorption. This was seen by many "Oriental" Jews as being accomplished at their expense. The feeling was rife that the Russian immigration, with its tremendous potential, had once again pushed down the eastern Jews to the lower rungs of Israeli society with little chance of breaking out of what they considered to be a vicious circle. They accused both the Likud and Labor governments of not paying enough attention to their plight.

Although some of the resentment was imaginary, much of it was real and based on statistics such as poverty lines, slum areas populated by these Jews, and massive unemployment mainly in development towns populated by this segment of Israeli society. There was no appreciable rise in the number of eastern Jews graduating from universities or finding jobs other than as industrial workers.

The anger was seen in the rise of new political parties based solely on ethnic (and religious) lines in the case of Shas and neighborhood lines in the case of the David Levy faction in the Likud, seen as a counter-balance to the possibility of a "Russian" political party. While the two major political blocs assigned spots in their Knesset slates to eastern Jews, this was not enough to assuage the frustration felt mainly by the second and third generation trying to break out of what they considered a gridlock. By 2002 the ethnic element was seen to be playing an important role in national politics, but at a lower priority than the peace process which seemed to absorb the almost total attention of the government, another cause for resentment and bitterness.

[Meron Medzini]

THE NON-JEWISH POPULATION

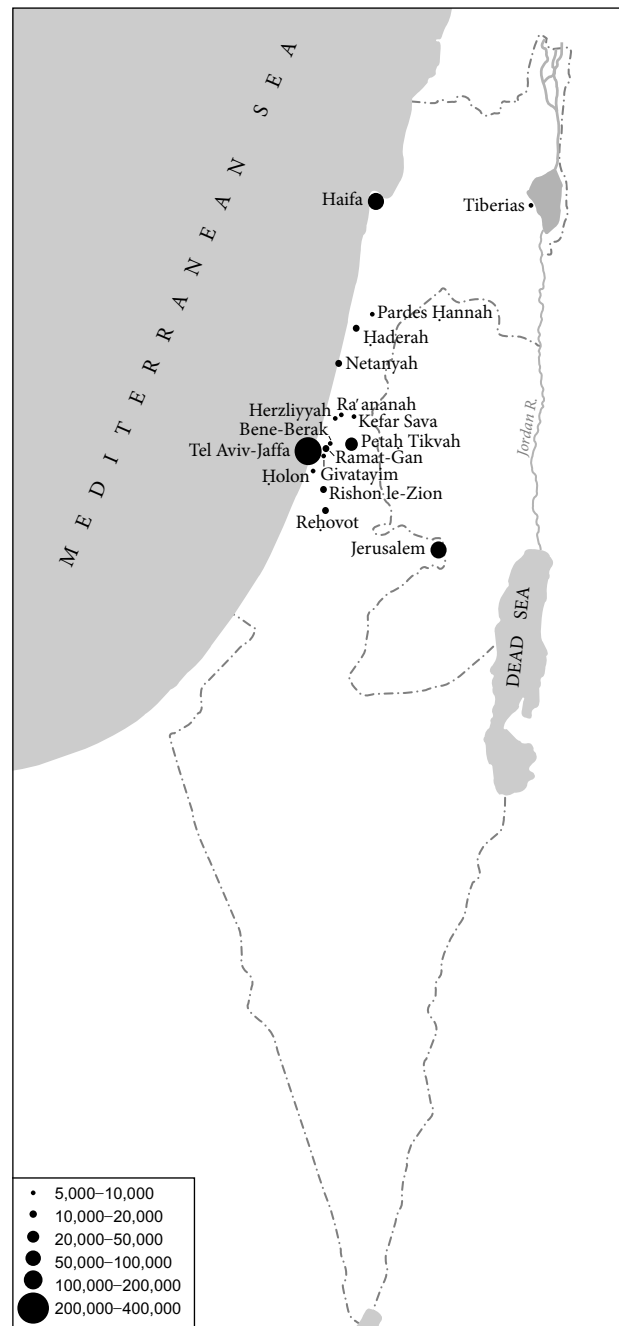
Ottoman Period

Although no detailed statistical data are available for the Ottoman period, it is possible to sketch the main demographical characteristics of the non-Jewish population in the 19th century and the beginning of the 20th century. Economic standards were, on the whole, very low, the population living largely on primitive agriculture. Urban development was limited; only a small part of the Muslim population lived in the towns, and in the few larger ones the proportion of Christians and Jews was considerable. As health services were almost nonexistent in most of the country and the government took very little interest in the health and welfare of the population, it may be assumed that mortality was high and offset the high

birthrate to a considerable extent. Under those conditions, the population increased slowly. A rough estimate for the year 1914 indicates that the total population of the area that later became Palestine under the British Mandate was 689,000; 604,000 non-Jews and 85,000 Jews.

British Mandate Period

During this period demographic conditions changed quickly.

In the first year of British administration, the situation of Muslims in Palestine was more or less similar to that of other countries in the Middle East, such as Egypt. Mortality was still high; malaria still predominated in certain regions of the country; trachoma was widespread; and epidemics of typhoid, measles, etc. were frequent. Child mortality was particularly high in 1927–29; for example, 41% of Muslim children died before reaching the age of five.
Map 1. Settlements with Jewish population numbering over 5,000, Nov. 1931.


Map 2. Settlements with Jewish population numbering over 5,000, Nov. 1948.

With improving health conditions, better security, economic development, and improved communications, however, mortality quickly decreased: the death rate of Muslims dropped from 30 per thousand in 1924–28 to 21 in 1939–41, while the average life expectancy increased from about 37 in 1926–27 to 47 and the child mortality up to the age of five fell to 29%. In the later years of the Mandate, mortality is known to have continued to decrease, but no reliable data are available (as the village heads who were responsible for reporting were also responsible for food distribution and were thus interested in concealing deaths). The fall in mortality was particularly marked in areas where the Arabs lived in closer contact with the Jewish population and could enjoy the services of Jewish physicians and medical institutions, as well as the benefits of more rapid economic development.

Marriages during the Mandatory period were practically universal among the Muslim population and were contracted at a very young age. Remarriages of divorced and widowed persons were also frequent. Nuptial mores were on the whole very favorable to fertility, which was high, as measured in terms of children per woman in the entire productive span, and tended to increase during the period, due probably to improved health and economic conditions. Among the Muslim population, the fertility rate was 6.1 children per woman in 1927–29, 7.6 in 1939–41, and 8.1 in 1942–43. Among the Christians, marriage was less universal and fertility was lower on the average.

Although no data are available on internal migration, it is known that a considerable movement took place toward the Coastal Plain, which developed more quickly under the impact of Jewish enterprise. The towns that increased their non-Jewish populations most were Jaffa, Haifa, and Gaza. In the interior of the country there was a very considerable development of the non-Jewish population only in Jerusalem; Hebron and Nablus each passed the 20,000 mark toward the end of the Mandatory period. On the whole, Judea and Samaria remained predominantly rural, having an urban population of less than 25% throughout the Mandatory period. Emigration from Palestine was, on the whole, very limited, while in periods of more intense economic development there was some immigration, mainly to find work, from neighboring countries. Under the impact of the large and growing natural increase, the main feature of the demographic evolution of non-Jews in the Mandatory period was the very considerable increase in population: the non-Jewish population almost doubled itself between 1922 and 1948. This corresponds to an average increase of 2.5% per year, which was exceptional at the time for underdeveloped countries.

In the State of Israel: 1948–67

The tension in the late months of 1947 and the beginning of 1948, followed by the invasion from Arab countries and the War of Independence, brought about dramatic changes in the political and demographic situation. The territory of Mandatory Palestine was divided into three parts. In the part that passed under Israel rule, the non-Jewish population was drastically reduced by the flight of Arabs, who took refuge in various Arab states. The number of Palestinian Arab refugees has been assessed at different levels by different research workers, institutions, and political agencies. The difficulty in establishing the true figures stems from lack of accurate data for the end of the Mandatory period (the last census taken by the British authorities was in 1931), the fact that applicants for assistance from the United Nations Relief and Works Agency included many who were not refugees, and the inability of the UNRWA to keep accurate records of deaths, migration, and so on. Despite the difficulties, however, it may be roughly reckoned that the Arab population before the disturbances of 1947–48 and the war of 1948 in the part of Palestine that passed under Israel rule was of the order of magnitude of 750,000. It is known that after the departure of the refugees about 156,000 Arabs remained in Israel.

The economic and social conditions of Israel's Arabs improved quickly and the death rate decreased to the same level as that of the Jewish population. Marriage among Muslims remained practically universal although a little more delayed than during the Mandatory period, and remarriage

was still frequent. The fertility rate remained extremely high (eight or nine children to each woman on the average). Only among the Christian Arabs have signs of increasing birth control appeared in recent years. Emigration was practically nil. Under the impact of all these facts, the natural increase of Arabs in Israel has been very high by international standards, and the Arab population doubled itself between 1948 and 1967.

Table: Non-Jews in Israel by Religion gives some details on the changes in the non-Jewish population of Israel classified by religion. Its structure by sex is well balanced and the age structure is very young. Table: Non-Jews in Israel by District shows the geographical distribution of the non-Jewish population by regions. While the Muslim population has largely retained its rural character, the Christian population is largely urban. On the whole, the geographical distribution of the non-Jewish population is very different from that of the Jews; but there is an increasing intermingling of the two populations, as many non-Jews, while still residing in their areas, go out to work in Jewish towns and villages.

Population of the "West Bank" and Gaza Strip Between the Two Wars

The population of Judea and Samaria (called "the West Bank" under Jordanian rule) increased very considerably in 1948 due to the large influx of refugees, but the population increase was very limited in the period between 1948 and 1967. Fertility was high (more or less on the level of eight children per woman), but mortality declined very little, and it may be reckoned to have been almost three times that of the Arabs in Israel at the end of the period. The West Bank remained prevalently rural and largely underdeveloped. Consequently, a considerable emigration developed toward Amman and other more developed regions of the East Bank, the Arab oil states (such as Kuwait, Iraq, and Saudi Arabia), and, to some extent, to overseas countries. As a consequence of the Six-Day War there was a considerable efflux of refugees, mainly from the Jericho region. As a result of all these factors, the population of the West Bank after the Six-Day War was probably only a little larger than it had been in 1948.

The population of the Gaza Strip increased very considerably in 1948 owing to the mass influx of refugees, who were largely settled in refugee camps. This increased still further the non-rural character of the population.

Natural increase in the Gaza Strip was probably similar to that of the West Bank, but emigration was smaller, and the total increase of population was therefore higher. Due to these factors the density of population in the Gaza Strip is very high compared with that of the West Bank.

Population of Administered Territories, 1967–2002

In 1967 and 1968 there was considerable emigration from these territories, mainly toward Jordan and other Arab states, which has brought about some decline in the population. This move-
Map 3. Settlements with Jewish population numbering over 10,000, 2004.

Map 4. Israel population density per sq. km. 1948. The sub-district boundaries are those of 1969. Based on data from Statistical Abstract of Israel, *1970.*

ment has practically stopped, however, and the population has begun to increase, due to a considerable excess of births over deaths. At the end of 1969 the population of Judea and Samaria was 601,000 and of the Gaza Strip 337,000.

The economic condition of the population of the administered territories has very considerably improved. This, and

the extended network of medical and social services explain the quick reduction of its mortality during the period under survey. As fertility has remained high, the natural increase has grown. Despite some emigration from Judea and Samaria in the past few years, the size of population has increased considerably, from 581,700 at the beginning of 1969 to 699,600

the administered territories, about 7,000 of them in the Gaza Strip (evacuated by the Israelis in 2005).

ALIYAH AND ABSORPTION

GENERAL SURVEY

Introduction

Aliyah, "ascension" or "going up," is the coming of Jews as individuals or in groups, from exile or diaspora to live in the Land of Israel. Those who "go up" for this purpose are known as *olim* – a term used in the Bible for the children of Israel who went up from Egypt (Gen. 50:14 and Num. 32:11) and, at a later period, for the exiles who returned from captivity in Babylon (Ezra 2:1, 59 and Neh. 5–6). The call of Cyrus – "Whosoever there is among you of all His people – his God be with him – let him go up…" (Ezra 1:3; II Chron. 36:23) – has been used as a watchword for *aliyah*. It was *aliyah* that re-created the Jewish commonwealth in the Land after the Babylonian Exile, provided the community with some of its prominent spiritual leaders during the Second Temple and subsequent periods, preserved and repeatedly renewed the Jewish presence in Ereẓ Israel during the periods of Byzantine, Arab, Mamluk, and Ottoman rule, and reestablished the State of Israel in modern times.

Motives for Aliyah

The following were the principal motives that led individuals and groups to leave the Diaspora to settle in Ereẓ Israel at various periods:

1) The divine commandment (*mitzvah*) to go to Ereẓ Israel and settle there. There is a dispute about this precept in the Talmud (Ket. 110–111a), where both advocates and opponents of *aliyah* are presented. The Tosafists (see **Tosafot*) stated that the precept was no longer in force (see Tos. to the passage beginning "If the husband desires to go up…" – Ket. 110b), and *Maimonides did not include it in his list of *mitzvot*. *Naḥmanides was the first to maintain that settlement in Ereẓ Israel was a commandment fixed for posterity. This assertion aroused controversy throughout halakhic literature.

The dispute was revived with the appearance of the Ḥovevei Zion (see **Ḥibbat Zion), who advanced the commandment to go to Ereẓ Israel, in addition to national and social factors, as a reason for settlement. In the heat of the argument a new position was formulated by some of the orthodox, who argued that not only is it not a *mitzvah* to go to Ereẓ Israel but it is even forbidden, as it contradicts the oath sworn by the Jews: "That Israel shall not go up [all together as if surrounded] by a wall," and that "they shall not rebel against the nations of the world" (Ket. 111a).

2) The desire to study the Torah in Ereẓ Israel, where the Sanhedrin and the great academies were to be found. *Aliyah* for this purpose occurred mainly in the tannaitic and part of the amoraic periods, and has recurred in modern times with the increase in the number of important yeshivot in Ereẓ Israel. There have been cases of entire yeshivot moving to Israel.

3) The belief that one who is buried in Ereẓ Israel has many privileges (TJ, Kil. 9:4, 32c; Gen. R. 96), which led many elderly people to come to Ereẓ Israel in order to die there. This belief existed during the time of the Temple, although it was attacked by some of the talmudic sages (Gen. R. 96:5). Characteristic of this outlook in later generations were the statements of Solomon Shlomel (Dreznitz), a disciple of Isaac *Luria and author of *Shivḥei ha-Ari* ("He who was privileged by God to fix his home in Ereẓ Israel is blessed, and blessed is he who can attain the World to Come"; *Ha-Me'ammer*, ed. A.M. Luncz, 3 (1919), 294).

4) The belief that only in Ereẓ Israel can one fulfill the *mitzvot* of the Torah. This was the watchword of the Karaites in the ninth to 11th centuries, and was stressed by religious groups during the period of the Ḥovevei Zion movement.

5) The persecution of the Jews in Europe. Beginning with the 13th century, Jewish refugees, in order to escape persecution in Europe, began to go to Ereẓ Israel since it was not under Christian rule. There are several questions in the

halakhah concerning those who vowed in times of stress to emigrate to Erez Israel and broke their vows when the trouble had passed.

6) The messianic factor and the anticipation of redemption. Emigration to Erez Israel would help to bring the advent of the Messiah nearer. The following statement of Raphael Mordecai Malki (late 17th century) is characteristic of this approach: "It is a known fact that the Messiah son of Ephraim does not come and is not revealed before 100 or 200 people (as in Jerusalem today), but before thousands and tens of thousands." The emigration of kabbalists after the expulsion from Spain in 1492 was considered to be due to messianic motivations – a letter dated 1521 announces that signs of the redemption are at hand (*Ha-Me'ammer*, 196–201). So are the *aliyyot* of the disciples of *Elijah the Gaon of Vilna and the *Ḥasidim, though the messianic factor in the ḥasidic *aliyah* is a subject of dispute among contemporary historians, some of whom think that it was motivated by the desire to win Erez Israel for Ḥasidism.

7) The curing of illness and barrenness.

8) National and social factors – see *Historical Survey, Introduction, and also Modern Aliyah, below.

Difficulties

Many difficulties stood in the way of those coming to Erez Israel. Transportation was arduous and irregular. Many of the ships which set sail for Erez Israel were dilapidated and they sometimes sank with all their passengers. *Menaḥem Mendel of Vitebsk, leader of the ḥasidic *aliyah* of 1777, boasts that only one ship sank on his voyage. In addition there were cruel captains and pirates, who sometimes murdered their passengers or sold them into slavery. Large ransoms often had to be paid by various Jewish communities. As a result of these difficulties, there arose the halakhic question of whether it was permissible, for reasons of safety, for a convoy to continue its journey through the desert on the Sabbath. In addition to the many difficulties encountered by the travelers on arrival, there were the harsh political and economic conditions in Erez Israel itself. Despite this, *aliyah* encompassed all currents of Judaism and all Diaspora communities.

From the Second Temple to Ḥibbat Zion

During the time of the Second Temple there were many immigrants to Erez Israel. A famous example is the *aliyah* of Hillel, who went from Babylonia (Pes. 66a) poor and without means, and later became the head of the Sanhedrin (Suk. 20a), founding a long line of *nesi'im* (see *nasi). One of the high priests appointed by Herod was Hananel ha-Bavli, i.e., of Babylonia. *Aliyah*, mainly from Babylonia, did not cease after the destruction of the Second Temple (70 C.E.). Sources cite many immigrant scholars who achieved a prominent place in the Jewish community of Erez Israel. In the third generation of *tannaim* after the destruction of the Temple (110–135 C.E.), Hanan ha-Miẓri ("of Egypt"; Yoma 63b) and Yose b. Dormaskos, who went from Damascus (Sif. Deut. 1), are mentioned. The next generation (135–170 C.E.) included R. Johanan ha-Sandelar of

Alexandria (TJ, Ḥag. 3:1, 78d) and R. Nathan ha-Bavli, who was the son of the exilarch in Babylonia. Among the fifth generation of *tannaim* are (170–200) R. Ḥiyya the Great, the disciple and colleague of Judah ha-Nasi (Er. 73a), and Issi b. Judah (Pes. 113b), both of whom emigrated from Babylonia, and Menahem the Gaul (i.e., France; TJ, Ber. 4:4, 8b).

Aliyah from Babylonia did not cease in the amoraic period, despite the fact that the great centers of Jewish scholarship were located there. Of the first generation of *amoraim* (220–250), R. Ḥanina b. Ḥama, a disciple of Judah ha-Nasi and one of the greatest *amoraim* in Erez Israel, emigrated from Babylonia (TJ, Pe'ah 7:4, 20a). In the second generation (250–290), Eleazar b. Pedat, *rosh yeshivah* in Tiberias (Ḥul. 111b), R. Zakkai (TJ, Shab. 7:1, 9a) and R. Ḥiyya b. Joseph (Ḥul. 54a), who emigrated from Babylonia, and Ḥinena Kartigna'ah (of Carthage; TJ, Shab. 16:2, 15c) are mentioned. The latter attests emigration from Africa. Two *amoraim* called Rav Kahana also emigrated from Babylonia (Zev. 59a). There was a particularly large *aliyah* among the third generation of *amoraim* (290–320), some of the immigrants forming the leadership of the Jewish community in Erez Israel. Prominent among them were: R. Abba (Ket. 112a); R. Avina (TJ, Shev. 4:2, 35a); R. Oshaiah and his brother Hananiah (Sanh. 14a); R. Assi, the colleague of R. Ammi, who was *rosh yeshivah* of Tiberias (MK 25a); R. Zera, a central figure of both Talmuds (Ket. 112a); R. Ḥiyya b. Abba (Shab. 105b); and R. Ḥelbo (Yev. 64b; TJ, Ta'an. 2:1, 65a); R. Yudan of Gaul (Lev. R. 20:4); R. Jeremiah, who later became *rosh yeshivah* at Tiberias (Ket. 75a); R. Samuel b. Isaac (TJ, Ber. 3:5, 6d); R. Samuel of Cappadocia in Asia Minor (Ḥul. 27b); R. Simlai (TJ, Pes. 5:3, 32a); and others. In the fourth generation (320–350) the well-known immigrants included: Ray Huna b. R. Avin (TJ, RH 2:2, 59a), R. Haggai (MK, 25a), R. Yudan of Cappadocia (TJ, Ber. 3:1, 6a), and R. Kahana (TJ, RH 2:6, 59b). Constantine the Great's proclamation of Christianity as the official religion of the state in 323 and his persecution of the Jews in his dominions initiated the decline of Jewry in Erez Israel. In this period – the fifth generation of *amoraim*, in which the Jerusalem Talmud was completed – the stream of immigrants from Babylonia stopped almost completely. The statements of the *amora* R. Abiathar (250–290 C.E.), who opposed the *aliyah* of Jews who left their families behind without a livelihood (Git. 6b), attest that the flow of *aliyah* was coming to an end. In 520, Mar Zutra, a descendant of the exilarchs in Babylonia, settled in Tiberias and was appointed head of the academy. Because the times were not conducive to *aliyah*, only individuals came.

There is little information on *aliyah* in the next few centuries, in which the Muslim conquest took place (636–38), but the *aliyah* of R. Aḥa of Shabḥa, one of the greatest Babylonian scholars, who came in about 750, is well known and other disciples probably immigrated with him. The Karaites, who proclaimed to their faithful: "Be assembled in the holy city and gather your brethren," began their *aliyah* as early as the ninth century. Among them was the author *Daniel b. Moses al-Qūmisi. A Karaite legend attributes the beginnings

of their community in Ereẓ Israel to the founder of the sect, *Anan b. David. In the tenth century a cultural efflorescence took place among the Karaites in Ereẓ Israel, among whom were Sahl b. Maẓliʾaḥ and Salmon b. Jeroḥam, and the Karaite community spread to Ramleh. In the 11th century important arrivals included Solomon b. Judah, from Morocco, head of the Academy in Jerusalem and Ramleh (1025–1051), and the *nasi* Daniel b. Azariah, a scion of the exilarchs of Babylonia. From the 12th century, testimonies of travelers and not of immigrants have been preserved; the political situation under the Crusaders did not facilitate *aliyah*. According to a famous legend (now known to be untrue) *Judah Halevi went to Ereẓ Israel in 1141 and was killed at the gates of Jerusalem. In 1165 Maimon b. Joseph, the father of Maimonides, went there with his sons, but left after six months. In the late 12th century more Jews from North Africa arrived as a result of the persecutions there during the Almohad regime. Benjamin of Tudela found approximately 1,000 Jewish families during his stay in Ereẓ Israel (c. 1170). Ten years later, Pethahiah of Regensburg mentioned a much smaller number. According to Judah Al-Ḥarizi, who traveled to Ereẓ Israel in 1218, Saladin invited the Jews to settle in the land in 1190, after his victory over the Crusaders. Al-Harizi stated: "From the time when the Ishmaelites [Arabs] occupied the land, Jews settled there" (*Taḥkemoni*, ed. A. Kaminka (1899), No. 28, p. 245).

Persecution of Jews in Europe also contributed to *aliyah*. The most important immigration of this wave was that of the "300 French and English rabbis" who went to Ereẓ Israel in 1210–11. According to an anonymous source: "The king honored them greatly and built synagogues and academies there… A miracle occurred when they prayed for rain and were answered, and, thus, they sanctified God's name" (*Shevet Yehudah*, ed. Azriel Shochat (1947), 147). There are many opinions as to the causes of this *aliyah*. Horodezky holds that it resulted from spiritual pressure – the decline in Torah study in France; in contrast, Dubnow believes that it stemmed from severe economic oppression (*Divrei Yemei Am Olam*, pt. 5, p. 15). A new and improbable view has been advanced: that the purpose was to establish a Sanhedrin – in accordance with Maimonides' opinion that the establishment of a Sanhedrin is a condition for redemption. In about 1260, there were more *olim* from these countries, including Jehiel b. Joseph of Paris, whose yeshivah in Acre was called by the name of his town, Midrash ha-Gadol de-Parisi. The most important *aliyah* in this century was that of *Naḥmanides in 1267. Since his arrival, settlement is said to have been continuous in Jerusalem; hence his title "*Avi ha-Yishuv*" ("Father of the Community"). In the late 13th century, *aliyah* ceased as a result of the fierce battles between the Crusaders and the Muslims. The expulsion from France (1306) led R. *Estori ha-Parḥi, the first Jew to write a geography of Ereẓ Israel, to come to the Land in about 1322. Many came from Spain and Germany in the 14th century, as stated in a letter from a disciple of Naḥmanides: "At present many have arisen willingly to emigrate to Ereẓ Israel" (S. Assaf, *Yerushalayim, Koveẓ shel ha-Ḥevrah la-Ḥakirat Ereẓ Yis-*

rael ve-Attikoteha, A.M. Luncz (1928), 51). Among those who came from Spain was the well-known kabbalist R. Shem Tov b. Abraham Gaon, who wrote his *Keter Shem Tov* in Ereẓ Israel. In the 15th century Jewish pilgrims and prospective *olim* had to fight against a new obstacle: an order by Pope Martin V (1428) forbidding Italian ships to transport Jews to Ereẓ Israel. This decree remained in force for only a very brief period but it was renewed toward the end of the century, and led to many wanderings in order to circumvent the sea routes, if possible – for instance, as suggested by R. Isaac Ẓarefati in a letter to the Jews, via Turkey (see Historical Survey, above). A number of Italian Jews went to Ereẓ Israel in the 15th century and made their mark on the Jewish community. Among them were *Elijah of Ferrara, who wrote a letter of great importance for the history of *aliyah* in the late 14th and early 15th centuries (first published by Eliezer Ashkenazi in *Divrei Ḥakhamim* (1849), 61–63), and members of his family. The Ashkenazi Joseph da Montagna came from Italy via Venice and was appointed *dayyan* in Jerusalem at the end of 1481. Isaac b. Meir Latif apparently came from Ancona in about 1480.

Immigrants from Mesopotamia, Persia, India, China, Yemen, and North Africa are also mentioned in this century. Yemenite Jews came in caravans from Aden and Turkey, e.g., R. Abraham b. Solomon Treves of Constantinople. The increase in *aliyah* between 1488 and 1495 is attested by the fact that in 1495 it was difficult to find a place to live in Jerusalem. The most important of the Italian scholars who immigrated to Ereẓ Israel was R. Obadiah of *Bertinoro, who arrived in 1488 after three years of wandering. In his letters he writes about other *aliyyot* from Italy and under his influence the number of immigrants increased. In a letter written in 1495, an anonymous student of his praises his master's manifold activities in Jerusalem and he tells of immigrants from Italy and Sicily, some of whom had drowned. After the Turkish conquest (1516), many Jews from the Orient, Sicily, Italy, France, and Germany, as well as refugees from the Spanish and Portuguese expulsions, immigrated to Ereẓ Israel. One of them was R. Isaac *Sholal ha-Kohen, the last *nagid* of Egypt, whose *aliyah* (1517) was of great importance in the development of the Jewish community in Jerusalem. The immigration of Spanish Jews with their characteristic laws, manners, language, and customs had an important impact on the community. Some of them settled in Jerusalem – the most important being the kabbalist *Abraham b. Eliezer ha-Levi and *Levi Ibn Ḥabib – but most of them settled in *Safed, notably Joseph Saracosti, Jacob *Berab, Joseph *Caro, Moses *Cordovero, Moses *Galante, and *David b. Abi Zimra. The immigrants to Safed also included a considerable number from Italy, who even established an independent "Italian community." The extent of the increase of *aliyah* to Safed is attested by the fact that its population numbered 10,000 in the mid-16th century, while according to the Yemenite traveler *Zechariah al-Ḍāhiri, it numbered 14,000 in 1567. A great role in *aliyah* was played by the immigrants from North Africa. Among important immigrants from North Africa were Issachar ibn Susan, who went to Ereẓ

Israel in about 1527: Aaron b. Abraham *Ibn Ḥayyim, author of *Korban Aharon*; and R. Solomon ibn Ẓur. The flourishing of the Kabbalah in Safed contributed to additional *aliyah*, which continued throughout the 16th century, from France, Germany, Italy, and other European countries, as well as from North Africa and the Orient. The immigrants from Europe included: R. Ephraim b. R. Judah, son-in-law of R. Solomon *Luria, who headed the Ashkenazi community in Jerusalem; R. Solomon Shlomel of Dreznitz (Moravia); R. Judah of Ofen (Buda), and his brother-in-law R. Jacob Zak, father of Ẓevi Ashkenazi ("Ḥakham Ẓevi"). Ofen (Buda) served as a gathering place for Jews from France and Germany, who could travel from there in convoy via Turkish territory. Simeon Bak went in 1582 and R. Masʿud Saggi Nahor (*Azulai) went from North Africa. Important newcomers were R. Bezalel *Ashkenazi, author of *Shitah Mekubbeẓet*, who arrived in 1588 and became head of the community in Jerusalem, and R. Isaiah ha-Levi *Horowitz (author of *Shenei Luḥot ha-Berit*), who came in 1621 and became head of the Ashkenazi community in Jerusalem, whose members were "multiplying greatly, literally by hundreds, and constructing great buildings" (letter to his sons). In the early 17th century a renewed *aliyah* of Karaites began, but the persecutions of Ibn Farukh (1625–27) slowed down the influx. Nevertheless, immigrants continued to arrive; among them was Abraham *Azulai, author of *Ḥesed le-Avraham*.

Shabbateanism (see *Shabbetai Ẓevi) stimulated a new wave of longing for *aliyah*. Rumors of vast *aliyyot* spread everywhere; there were rumors of "80 ships" from Amsterdam and "400 families ready to depart" from Frankfurt. However, this enthusiasm died out with the apostasy of Shabbetai Ẓevi. The only great *aliyah* that occurred as a result of Shabbateanism was that led by R. *Judah Ḥasid and Ḥayyim *Malakh (both crypto-Shabbateans) at the turn of the 17th century. There was no *aliyah* like it for many generations before or after it until modern times. In its beginnings the group numbered only 31 families, but more joined it along the way. The enormous influence of the emissaries of the immigrants, who assembled at Nikolsburg (Mikulov) for departure is attested by an eyewitness, the German author J.J. Schudt (*Juedische Merckwuerdigkeiten*, 2 (Frankfurt on the Main, 1714), 58). On its arrival the convoy numbered about 1,500 – some said 1,700. There was a serious setback, however, when R. Judah Ḥasid died immediately after the group's arrival in Jerusalem and the lack of sources of livelihood, illness, and anti-Shabbatean persecutions contributed to the dispersal of the new arrivals. The *aliyah* of R. Abraham Rovigo from Modena, Italy, in 1702, with a convoy of 25 persons was also influenced by Shabbateanism.

But these were not the only convoys. According to one emissary, the Jewish community in Jerusalem numbered 10,000 persons in 1741. Ḥayyim *Abulafia came from Smyrna in 1740 and reestablished the yeshivah in Tiberias. Moses Ḥayyim *Luzzatto and his family arrived in 1743, although his activities in Ereẓ Israel were less important than his work in the Diaspora. There was an important *aliyah* of Turkish Jews at the time, including Gedaliah Ḥayyun, who founded Beth El, the *bet ha-midrash* of the kabbalists in Jerusalem, and the Rosanes, Gabbai, Naḥmias, and Pardo families. There were also Shalom *Sharabi, a Yemenite immigrant, who held a position of prominence in Jerusalem, and Eleazer Rokeaḥ, the rabbi of Amsterdam, who settled in Safed. R. Ḥayyim b. *Attar, author of *Or ha-Ḥayyim*, went from Salé (Morocco) in 1741 and established a yeshivah in Jerusalem. Nathan *Bordjel, author of *Ḥok Nathan*, went from Tunis. An organized *aliyah* of proselytes, who settled in Safed and even sent a special emissary abroad, also took place in the 18th century.

The end of the 18th century marks the beginning of the *aliyah* of Ḥasidim, who made it a principle of their teachings. Ḥasidic legend describes at length how *Israel Ba'al Shem Tov, the founder of Ḥasidism, longed to immigrate to Ereẓ Israel in order to meet with R. Ḥayyim b. Attar, and even made attempts to fulfill this wish, but was compelled to reconsider. His disciples, however, did everything to carry out their master's will. Thus, R. Abraham Gershon of Kutow (Kuty), the Ba'al Shem Tov's brother-in-law, immigrated with his family, and many Ḥasidim from Galicia and Volhynia followed him. The first organized *aliyah* of Ḥasidim took place in 1764, led by the Ba'al Shem Tov's disciples Menahem Mendel of Peremyshlyany, who settled in Jerusalem, and *Naḥman of Horodenko in Tiberias. An *aliyah* of great value to the community in Ereẓ Israel took place in the spring (Adar) of 1777, 14 years after the first; it was led by *Menahem Mendel of Vitebsk and Abraham of Kalisz, whose convoy numbered 300 persons. They left Galatz, Romania, in small boats for Constantinople and from there they sailed to Acre. The voyage lasted four months, and the convoy endured much hardship. They settled in Safed, where they met with many difficulties and most of them moved to Tiberias. This *aliyah* was rightly regarded as having revived Galilee and laid the basis for Jewish settlement there. Many of the leaders of the ḥasidic *aliyah* are worthy of mention: *Jacob Samson of Shepetovka; *Ze'ev Wolf of Zbaraz (Zbarazh); *Jacob b. Aaron the Great of Karlin; Issachar Dov Baer of Zloczow, author of *Bat Eini*; David Solomon of Soroki, author of *Levushei Serad*; *Ḥayyim b. Solomon of Czernowitz, author of *Be'er Mayim Ḥayyim*; and Aryeh Leib of Woloczyska, author of *Ahavat Shalom*. More Ḥasidim came in subsequent generations, notably Abraham Dov of Ovruch in 1832, who headed the ḥasidic community of Safed, and Israel *Bak, who brought his publishing house with him from Volhynia in 1831. The Ḥabad Ḥasidim formed another organized *aliyah*, consolidating the Ashkenazi community in Hebron, which was first organized by Ḥabad Ḥasidim from Safed and Tiberias. Ḥasidim have continued to come up to the present day.

At the same time the *Perushim*, the disciples of Elijah the Gaon of Vilna, also organized an *aliyah*, establishing a community in Jerusalem. The Gaon of Vilna is reported to have made many efforts to go to Ereẓ Israel himself but did not meet with success. The first *Perushim* arrived as early as 1722,

led by R. Israel of Shklov, but their impact was not noticeable and they did not even have a *minyan*. A second group, headed by *Menahem Mendel of Shklov, arrived in 1808. Later, Saadiah b. Nathan Nata of Vilna and Nata b. Menahem Mendel of Shklov arrived. Menahem Mendel of Shklov and R. Israel of Shklov are rightly considered the fathers of their community in Jerusalem because of their initiative and powers of organization. Among other members of the community were Hillel Rivlin, scion of the prominent *Rivlin family; R. Abraham Solomon Zalman *Ẓoref; R. Shemariah Luria, a man of means who arrived with a convoy of 40 persons: R. Joseph Sundel of *Salant, the spiritual father of the *Musar movement; and R. Samuel *Salant, his son-in-law, who officiated as the city rabbi in Jerusalem for many years. It is of interest that these *aliyyot* included not only scholars but also artisans.

In 1830 the *aliyah* from Germany began, led by Moses Sacks, the first who thought of large-scale productivization of the Jewish community in Ereẓ Israel. The German immigrants included Jehoseph *Schwarz (arrived in 1833), the author of *Tevu'ot ha-Arez*, the most thorough work on Ereẓ Israel since the 14th-century *Kaftor va-Feraḥ*, and R. Eliezer Bergman. A notable *aliyah* came from Holland, which eventually merged with the German *aliyah* to form a joint community known as *Kolel 'HOD'* (Holland-Deutschland). There was also a sizable *aliyah* from Hungary, which was inspired by R. Moses *Sofer, the author of *Ḥatam Sofer*, and played an important role in Jerusalem, though it consisted mostly of individuals, largely youths. Noteworthy are R. Israel Ze'ev Horowitz, Abraham Sha'ag, and Akiva Joseph Schlesinger. As they increased, they formed a separate *kolel*, as did the Polish immigrants. In the 19th century sizable *aliyyot* took place from the Oriental countries as well, including Turkey, North Africa, Iraq, Persia, Bukhara, Kurdistan, Afghanistan, the Caucasus, and Yemen (see *Israel, State of: Population, section on Jewish Communities (*Edot*)).

[Itzhak Alfassi]

Modern Aliyah, 1880–1948
(See Table on following page.)

THE FIRST ALIYAH. The beginnings of the modern Jewish return to the Land of Israel, which laid the foundations for the establishment of the State of Israel, were due to a combination of three causes: the age-old devotion of the Jews to their historic homeland and the hope of messianic redemption; the intensification of the intolerable conditions under which Jews lived in Eastern Europe; and the efforts of an active minority convinced that the return to the homeland was the only lasting and fundamental solution to the Jewish problem (see *Zionism).

In the early 1880s the growing oppression of the Jews assumed acute forms in several Eastern European countries: the pogroms and repression that followed the assassination of Alexander II of Russia; the restriction of Jewish autonomy in Galicia; the pogroms and the restrictions imposed on Jewish

trade in Romania; and the Tisza-Eszlar blood libel in Hungary. A spontaneous mass migration movement was the result: between 1880 and 1900 over a million Jews fled from persecution and poverty to the United States. The hopes of the *Haskalah movement for a normalization of the Jewish position through education and enlightenment had been shattered; the Jewish masses were on the move.

Simultaneously with this headlong flight to the New World, another Jewish migration movement, infinitesimally smaller but radically different in character, arose. A handful of young men felt that it was not enough to run away from persecution; the time had come to take the first step toward a fundamental solution of the Jewish problem: the return of the Jews to the Land of Israel. This vital first step must be to go up to live in the Promised Land and cultivate its soil. Branches of the new *Ḥibbat Zion movement sprang up all over Eastern Europe, especially in Russia, though they had to meet in secret and their members ran a risk of arrest. The best-known section of the movement, *Bilu, defined its aim as "the political, economic, and national-spiritual revival of the Jewish people in Syria and Ereẓ Israel." On July 7, 1882, a small group of 14 – including one woman – landed at Jaffa and made its way to the *Mikveh Israel training farm, founded in 1870, where it was given work. Further contingents followed, bringing the number of settlers up to over 50. The unaccustomed work was hard, the pay was wretched, and the novices were treated with contempt by the farm manager. Some of the Bilu'im moved to Jerusalem, where they formed a short-lived cooperative carpenters' workshop. Others received a plot to cultivate in Rishon le-Zion, but the crops were poor. Hopes that the Ḥibbat Zion movement abroad would help them buy land for a settlement of their own were disappointed, and the movement began to disintegrate. The Bilu'im were saved by Yehiel Pines, who bought 800 acres of land in the southern Shephelah, where they founded the village of *Gederah, and appealed to Ḥibbat Zion abroad to defray the cost.

Meanwhile, Ḥibbat Zion had been organizing groups to settle in Ereẓ Israel. In January 1882, a conference at Focsani, Romania, had decided to send out representatives to buy land, to be followed almost immediately by the first group of *olim* (sing. *oleh*), who would settle in the country. The Turkish government immediately ordered the cessation of Jewish immigration, and efforts to secure the withdrawal of the ban by appeals to Laurence *Oliphant and by representations at Constantinople were unsuccessful. The pioneers were undeterred, however; by 1884 six settlements had been established (including Gederah), and *Petaḥ Tikvah revived. Four were supported by Baron Edmond de *Rothschild, the other three being the responsibility of Ḥibbat Zion. In the same year the first international conference of Ḥibbat Zion, with 35 delegates from Russia, Romania, Germany, Britain, and France, met at Katowice and established a provisional central committee in Odessa. The number of societies reached close to 100, with 14,000 members who collected about 30,000 rubles a year,

as well as 20,000 rubles from various campaigns. Ramified propaganda was carried out in many parts of Europe and in America.

In these early beginnings, many of the characteristic features of modern *aliyah* were already present in embryo. Like the later Zionist movement, Ḥibbat Zion consisted of three main strata: a large periphery of uncommitted sympathizers; smaller groups of organized members, who propagated the idea and collected funds for practical work; and a still smaller nucleus, without whom nothing could have been done, who followed the principle of *hagshamah aẓmit* ("personal implementation"), to use another term that was current at later stages. Some of those who contributed to the cost of the work did so out of belief in the aims of the movement; others, as in later years, were moved by purely philanthropic motives, or a mixture of the two. There were also rudimentary arrangements in the country to help the newcomers: the Mikveh Israel farm helped to train them; local Jewish leaders cooperated with Ḥibbat Zion missions; Baron de Rothschild sent out officials to administer his benefactions; in 1891 an abortive attempt was made to set up an executive of Ḥibbat Zion in Jaffa, headed by Vladimir *Tiomkin.

Although the seeds of later developments were there, their growth at first was painfully slow. The entire effort would have collapsed but for the benevolence of Rothschild, whose money not only bought land and implements, built homes, and purchased the crops, but also erected synagogues and schools, hospitals and old-age asylums. His administrators, many of whom were corrupt, kept the settlers on a tight rein, however, and stifled any signs of independence. The advent of Theodor *Herzl and the founding of the *World Zionist Organization in 1897, while arousing a tidal wave of enthusiasm in the Jewish world, had little effect at the time in the Land of Israel itself, as the new movement devoted most of its energies to political work in the hope of obtaining a charter for the establishment of a Jewish autonomous territory. The idealism of the settlers was withering away under the pressure of the difficult conditions; most of the new villages employed cheap Arab labor, and the enterprise, started with such high hopes, was producing not a self-reliant community of cheap cultivators, but a class of colonists, with the shallowest of roots in the soil, which was still – even when owned by Jews – being tilled mainly by the native Arab population.

By 1903, the end of the First Aliyah period, a score of new villages had been founded, 350,000 dunams (almost 90,000 acres) of land had been purchased, and some 10,000 Jews had settled in the country, over half of them on the soil. There were also beginnings of urban settlement, especially in Jaffa, where 3,000 newcomers had made their homes. Hebrew was beginning to be a spoken tongue once again, and the first Hebrew elementary schools had been established, though French culture, propagated by the Alliance Israelite Universelle and the Rothschild administration, was widespread. On the whole, however, the pioneering drive had been exhausted and a period of stagnation had set in.

Immigration to Israel, 1882–May 14, 1948

Year	Immigrants[1]	Rate[2]	Year	Immigrants[1]	Rate[2]

1 Including immigrants without visas and tourists who settled.
2. Immigrants per 1,000 of the Jewish population.

THE SECOND ALIYAH. The depression caused by the stagnation of the first settlements, the controversies in the Zionist organization over the *Uganda Scheme, and the death of Herzl in 1904 were followed by a new upsurge of pioneering fervor which produced the Second Aliyah. The first impetus of the new wave came from the Kishinev pogroms of 1903 and the others that followed two years later. The impotence of the great Russian community in the face of these savage mob attacks shocked thousands of young Jews into a new determination to build a Jewish homeland. Many of them were imbued with socialist ideals and, sorely disappointed by the failure of the 1905 Revolution, decided that they must create their own revolutionary movement on the basis of national revival.

These young men and women were guided not only by a more conscious and consistent national ideology, but also by the ideal of laying the foundations for a workers' commonwealth in the Land of Israel. Naḥman *Syrkin had already advocated an organic synthesis of Zionism and Socialism. The Socialist-Zionist philosophy of the *Po'alei Zion movement, formulated by Ber *Borochov, was founded on a Marxist analysis of the Jewish problem that led to the conclusion that social and economic forces were working for the Socialist-Zionist solution. Others, under the influence of A.D. *Gordon's philosophy of labor, founded the *Ha-Po'el ha-Ẓa'ir movement, which emphasized the importance of physical labor, rather than the socialist reorganization of society, as the foundation of national revival. Both parties added to the idea of personal participation in the building of the homeland the concept of *avodah aẓmit* ("personal labor"; see *Israel, State of: Labor, section on Ideology of Labor).

Among the youth organizations set up at this time was one called *He-Ḥalutz ("The Pioneer") in Romania – the first to use the name. Unlike their elders, its members were not

content to make propaganda, collect funds, and prepare for an undefined future. They organized only to make preparations for the journey; once a group, usually consisting of young people from the same town, had gone out, it would make way for another, which would go through the same process. In 1905 a He-Ḥalutz society was set up in the United States, and in 1911 Joseph *Trumpeldor tried to establish a countrywide organization in Russia with a detailed plan for organized training in the Diaspora and activity in the Land of Israel, but the project was dropped when he himself left Russia to settle.

The pioneers of the Second Aliyah were also much more self-reliant than their predecessors. As there was no possibility of exercising political influence on the government of the country, the parties engaged in practical work, looking after the housing, employment, and, later, the health and welfare of the newcomers. The Zionist Organization had also started practical work in the Land of Israel. The *Jewish National Fund was founded in 1901, and two years later the Anglo-Palestine Company (later the Anglo-Palestine Bank) was established in Jaffa as a subsidiary of the *Jewish Colonial Trust; in 1908 Arthur *Ruppin set up the Palestine Office in Jaffa. The workers, however, were far from passive. In 1907 Joseph *Vitkin issued a call for more pioneers, which, coming from one of those who had led the way, had greater force than the exhortations of Zionist leaders in the Diaspora. The workers fought not only for better conditions, but also for the right to employment on the Jewish farms, and in 1909 it was their initiative that led to the establishment of the first *kevuẓah* (see *Kibbutz Movement), the harbinger of a new type of social unit. They were also active in the beginnings of Jewish self-defense (see *Ha-Shomer) and the introduction of Hebrew into all spheres of life. By the beginning of World War I the *yishuv*, 85,000 strong, was a source of inspiration to the movement abroad and a magnet for further *aliyah*.

THE ESTABLISHMENT OF HE-ḤALUTZ. The Third Aliyah, which started in 1919, was partially a continuation of the second, which had been interrupted by the war. A renewed impetus, the result of the Bolshevik Revolution and the postwar pogroms and excesses in the Ukraine, Poland, and Hungary, coincided with a renewed hope, inspired by the *Balfour Declaration and the British conquest of Palestine. The westward road to the United States was still open, and most of those who chose the Land of Israel did so out of Zionist convictions. In 1915–16 David *Ben-Gurion and Izhak *Ben-Zvi, exiled from the Land of Israel by the Turks, had founded a He-Ḥalutz organization in the United States, which merged with the movement for joining the *Jewish Legion. A larger and more lasting pioneering organization arose in Russia after the February Revolution of 1917. A national council of He-Ḥalutz groups in Russia met in January 1918, and the first conference of the Russian He-Ḥalutz movement took place a year later in Moscow under Trumpeldor's leadership. He-Ḥalutz gave the underlying principles of the previous *aliyah* movements a more definite and consistent form. Its members

belonged to the World Zionist Organization, accepted its authority, and took part in its activities, especially the work of the Jewish National Fund. It was not a party body, though it regarded itself as a part of the Jewish labor movement, and its members in the Land of Israel helped to forge the degree of labor unity which led to the establishment of the Histadrut (see *Israel, State of: Labor).

He-Ḥalutz set up a network of training centers in the Diaspora in which its members studied the ideals of the movement, learned Hebrew and its literature, and gained experience in manual labor and farming. Some groups found employment with non-Jewish farmers; others set up their own training farms. To some extent, this stage was regarded as a regrettable necessity in the absence of immediate facilities for *aliyah*, but it ensured that the young men and women arrived not as complete novices, but equipped with a consistent social philosophy, some experience of living in communes, and at least some rudimentary skills. Even while in the Diaspora, they submitted themselves to the democratic discipline of the movement and were ready to set out for the Land of Israel whenever called upon to do so. Contact was maintained with those who had gone on ahead through emissaries (*sheliḥim*) from Palestine who knew the conditions and spent several months or years in the Diaspora as instructors and leaders. The training farms and communes also performed a valuable function as centers of attraction for youth, who could thus see the principles of the movement put into practice even in the Diaspora.

There were also two other main pioneering organizations: *Betar, affiliated to the *Revisionist organization, and He-Ḥalutz ha-Mizrachi. A non-party religious pioneering body, *Baḥad (Berit Ḥalutzim Datiyyim – "League of Religious Pioneers"), was founded in Germany and later spread to Britain and other countries.

THE ZIONIST MOVEMENT AND ALIYAH. When the Zionist movement started to rebuild its organization immediately after World War I, *aliyah* and settlement were, of course, among its major concerns. The Central Office established in London had sections for immigration and agricultural settlement. The 1920 London Conference, held instead of a regular Zionist Congress, decided that the Jewish National Fund should safeguard Jewish labor on its land and assist the settlement of Jewish agricultural workers on their own farms. A Central Immigration Office was to be opened in Palestine without delay, with Palestine Offices in all countries from which Ḥalutzim might come. Each office was to be controlled by a committee representing the local Zionist parties in proportion to their size. They were to give preference to candidates for *aliyah* who had been trained as farm workers or artisans, could speak Hebrew, and were physically fit.

The contributions of Diaspora Jewry to the cost of immigration and settlement were to be channeled through a new agency, *Keren Hayesod, the Foundation Fund, which was to be an instrument of voluntary self-taxation on the principle of the biblical tithe (though this quota was not actually reached

in practice). The 12th Zionist Congress in 1921 resolved that Palestine Offices should be set up in the chief ports of embarkation – Trieste in Italy and Constanta in Romania – as well as the principal lands of emigration, and undertook to subsidize the vocational training of the ḥalutzim. Of the executive of 13, six members were to sit in Jerusalem and take charge of affairs in Palestine. Thus the World Zionist Organization, with its democratically elected and controlled legislative and executive organs, representing Jews throughout the world who were devoted to the idea of national revival, established the machinery for financing, fostering, and controlling *aliyah* and settlement as the basic methods for establishing the Jewish National Home.

Aliyah, however, was now also a major issue in the relations between the Zionist movement and the non-Jewish population of Palestine, in the policy of the British government and its administration in the country, and, through the League of Nations *Mandate, in international affairs. Although Winston Churchill as colonial secretary rejected Arab demands in 1920 for the stoppage of Jewish immigration, *aliyah* was in fact suspended temporarily after Arab attacks on Jews in 1921. The Churchill White Paper of 1922 (see *White Papers), while affirming that Jewish immigration must continue, stated that it "cannot be so great in volume as to exceed whatever may be the economic capacity of the country at the time to absorb new arrivals" and that "the immigrants should not be a burden upon the people of Palestine as a whole."

THE MANDATORY POWER AND ALIYAH. The Mandate for Palestine recognized the Zionist Organization's right to advise and cooperate with the administration in matters affecting the establishment of the Jewish National Home and the interests of the Jewish population and instructed the administration to "facilitate Jewish immigration under suitable conditions and… encourage… close settlement by Jews on the Land," adding the limitation: "while ensuring that the rights and position of other sections of the population are not prejudiced." This reservation, as well as the phrase "under suitable conditions" was frequently cited in later years by the British as justification for severe restrictions on Jewish immigration, which hampered the development of the Jewish National Home. Arab pressure for the stoppage of *aliyah*, reinforced by repeated and violent attacks on the Jews and the restrictions imposed by the British in response to this pressure from time to time, constituted a leading, perhaps the major, theme in the political history of Palestine throughout the Mandatory period.

In September 1920, shortly after the establishment of the British Civil Administration in Palestine, an Immigration Ordinance was issued authorizing the Zionist Organization to bring in 16,500 immigrants per annum, provided that it be responsible for their maintenance for one year. About 10,000 were admitted in the first 12 months, but new regulations were issued in June 1921 specifying the categories of immigrants to be allowed to enter. The main classes were: persons of independent means, professional men, persons with definite prospects of employment, and small tradesmen and artisans with a capital of £500. Other applicants, apart from tourists, had to be approved in each case by the Immigration Department of the Palestine government. After the publication of the 1922 White Paper, permits were granted to groups of artisans and laborers selected by the Zionist Organization's Palestine Offices, the number of permits being fixed every three months by the government after negotiations with the Zionist Executive. A new Immigration Ordinance, issued in 1925 and amended in 1926 and 1927, defined the rights and functions of the Zionist Executive in regard to the Labor Schedule, which was drawn up for a six-month instead of a three-month period on the basis of an estimate of the demand for labor. It provided for the admission of the following categories:

A.
(i) Persons in possession of not less than £1,000, and their families.
(ii) Professional men in possession of not less than £500.
(iii) Skilled artisans in possession of not less than £250.
(iv) Persons with an assured income of £4 per month.
B.
(i) Orphans destined for institutions in Palestine.
(ii) Persons of religious occupation whose maintenance was assured.
(iii) Students whose maintenance was assured.
C. Persons who had a definite prospect of employment.
D. Dependent relatives of residents in Palestine who were in a position to maintain them.

While the Zionist Executive had to be constantly on the watch to ensure what it regarded as a fair interpretation of these definitions, the most serious differences with the administration arose over category C, which was the only one allowing for the admission of workers without means or capital of their own. As the time came round for the issue of each half-year quota, the Executive would submit a detailed estimate of the demand for labor in the existing economy and in enterprises to be set up with its aid or by private enterprise, but these were invariably slashed by the administration. The result was often a shortage of Jewish labor, which hampered economic development and caused a drift from the countryside to the towns in search of better-paid employment.

The ḥalutzim were the outstanding element in the 35,000 immigrants of the Third Aliyah (1919–23). They did not merely find their places in the existing economic social structure or act as passive recipients of aid from the Zionist institutions; they were a creative force, which transformed the character of the *yishuv* and played a prominent part in its leadership. Together with their predecessors of the Second Aliyah, they founded the Histadrut, the comprehensive countrywide labor organization; played a leading role in the creation of the *Haganah defense organization; provided workers for the construction of housing and roads and the beginnings of industry; strengthened the foundations of Jewish agriculture;

and expanded the map of Jewish settlement by establishing many kibbutzim and moshavim. To a large extent, they not only integrated themselves, but also prepared the way for others to follow.

RISE IN MIDDLE-CLASS ALIYAH. The drop in the influx of *ḥalutzim* in 1924, mainly due to Soviet restrictions on the work of He-Ḥalutz, was compensated for by a considerable increase in middle-class immigration, bringing the influx up from some 8,000 in each of the years 1920–23 to almost 13,000 in 1924 and 33,000 in 1925. This was the start of the Fourth Aliyah. About half the *olim* in the two latter years came from Poland, where many Jews were impoverished by an economic crisis and the anti-Jewish policy of Grabski, the finance minister (after whom this wave was often referred to as the "Grabski Aliyah"), while severe restrictions were imposed on immigration into the United States. Most of these newcomers had a little capital of their own, which they invested in small enterprises and construction of housing in the towns.

In 1926, however, the unorganized influx was halted by a severe economic crisis, and of the 13,000 who arrived in 1926 more than half left the country. These were known as *yoredim* ("descenders" – in contrast to *olim*). In the following year there was an even more serious decline to 3,000 immigrants, with nearly twice as many *yoredim*; in 1928 the number of arrivals and departures was about the same – some 2,000 – and it was not until 1929 that the balance was restored, with over 5,000 *olim* and about one-third as many emigrants. This was a striking illustration of the close connection between conditions in Palestine and the rate of *aliyah*. For over a year the Zionist Executive had to pay out "doles" to the unemployed, and it was not until public works had been initiated by the government and some municipalities, and the Zionist Executive, with special funds raised in America and Britain, had started works of its own, that unemployment was reduced and the "dole" system abolished. Despite the setback, the Fourth Aliyah made an important contribution to the development of the *yishuv*, particularly in modern urbanization and the establishment of industry.

ASSISTANCE IN ABSORPTION. While the entire structure of the Jewish community in Palestine and the development of its economy was designed to facilitate the absorption of the immigrants into its cultural, social, and economic life, the Immigration Department of the Zionist Organization (later, of the *Jewish Agency) undertook special measures to help the immigrants find their way. Those who had nowhere to go on arrival were generally accommodated in hostels or transit camps. If their destination was a *Youth Aliyah center, a kibbutz, or a moshav, they usually stayed a few days for registration and medical examination; if they were going to the moshavot or the towns, they might stay longer. The Jewish Agency provided the immigrants with health services for an initial period through the Histadrut's *Kuppat Ḥolim or its own medical department. If in need of help, they were provided with bedding, clothing, and financial aid. The Jewish

Agency built houses for the newcomers and subsidized various cooperative and private housing schemes. It set up small cooperative workshops for handicapped or elderly immigrants and contributed to the cost of the social welfare services of the *Va'ad Le'ummi and the municipalities. It also subsidized Hebrew classes for immigrants run by the Va'ad Le'ummi, the labor organizations, and the immigrants' associations. The latter played an important role in the integration of the newcomers by dealing with special cases, acting as liaison with the Jewish institutions, and supplying loans, housing grants, etc.

The vital importance of *aliyah* for the individuals concerned, as well as for the movement as a whole, gave rise to frequent controversies. The Revisionists and other parties complained of discrimination against their members in the allocation of immigration certificates by the Zionist Palestine Offices. Various groups and individuals resorted to a variety of methods to overcome the British restrictions on *aliyah*, which were regarded as violating intrinsic Jewish rights. Many entered as tourists and remained without permission when their legal period of stay was over. To enable penniless immigrants to enter as "capitalists," they were provided with fictitious deposits of £1,000; formal marriages were arranged to enable two to enter on one certificate; some succeeded in crossing the border surreptitiously from Lebanon, Syria, or via Transjordan. In 1934 the first attempt was made to send over an immigrant ship without the permission of the authorities. In Palestine, Jews, including some in the British government service, regarded it as a national duty to help these immigrants. It is estimated that some 50,000 arrived in such ways between 1920 and 1937. The British government made strenuous efforts to prevent this *"illegal" immigration and from time to time deducted the estimated number of "illegals" from the regular immigration quotas.

POLITICAL STRUGGLE FOR ALIYAH. The establishment in August 1929 of the enlarged Jewish Agency (based on Article 4 of the Mandate, which called upon the Zionist Organization to take steps "to secure the cooperation of all Jews who are willing to assist in the establishment of the Jewish National Home") extended the responsibility for the Jewish enterprise in Palestine in principle to Jewry as a whole. A brilliant array of distinguished Jews from Europe and the Americas took part in its founding conference, at which a joint Executive was elected under the presidency of Chaim Weizmann. The expected expansion was held up, however, by the outbreak of Arab violence in the following month and the political struggle of the next two years. *Aliyah* was the major practical issue of this struggle and the touchstone of Britain's capacity to carry out the fundamental provisions of the Mandate. The Zionist Organization had accepted the principle that immigration should be regulated according to the economic absorptive capacity of Palestine, while conducting a continuous struggle with the administration over the interpretation and implementation of the principle. But when Lord Passfield, the British colonial secretary, imposed political restrictions

on *aliyah*, as well as limitations of Jewish land purchases, in surrender to Arab violence, the Zionist Organization and the *yishuv* regarded this as a blow to the future of the Jewish National Home, and Weizmann resigned from the presidency of the Zionist Organization in protest. The struggle against the Passfield White Paper was ultimately crowned with success, however, and the MacDonald letter of February 1931, which effectively nullified the White Paper restrictions, reestablished the political conditions for further development and progress.

It was none too soon. Dark clouds were gathering over European Jewry. The worldwide economic crisis was having an increasing effect on the Jews of Eastern and Central Europe; antisemitism was spreading and sharpening; the star of Hitler was in the ascendant in Germany; and at the same time immigration restrictions in the countries not so severely affected were tightening. For millions of Jews in Eastern Europe, in the poignant words of Weizmann's address to the Peel Commission in 1936, the world was divided into "places where they cannot live" and "places which they cannot enter." The only place of refuge was Palestine, where a Jewish community of over 200,000 (in 1933) was ready to welcome them.

IN THE SHADOW OF NAZISM. Between 1933, the year of Hitler's rise to power, and 1936, 164,000 *olim* arrived in Palestine; 24,000 of them were citizens of Germany, in addition to nationals of other countries and "stateless" individuals who had been living there. About a quarter of the immigrants arrived with "capitalist" immigration certificates and the £31,570,000 brought in during the period by private investors was about ten times as much as the total contributed by fund-raising organizations.

Almost a quarter of this sum came through a special arrangement between the Jewish Agency and the German authorities for the transfer (*Haavara) of German-Jewish capital. Under this agreement, emigrants from Germany obtained their first £1,000 in cash so that they could get their immigration certificates and deposited the rest of their assets with a clearinghouse in Berlin; the sterling equivalent was recovered after arrival from a second clearinghouse in Palestine, to which Jewish merchants made their payments for goods imported from Germany, while the German exporters were paid in Berlin. Moneys collected for the Jewish national funds and various other remittances to Palestine were also transferred through Haavara. The arrangement was fiercely criticized as a breach of the worldwide Jewish boycott of German goods, but it was strongly defended on the grounds that it was the only way to salvage the property of German Jews. The 19th Zionist Congress, which met at Lucerne in 1935 and which paid special attention to the plight of German Jewry, approved the agreement but ruled that it be placed under the control of the Executive.

In 1933 a new type of immigration, called *Youth Aliyah, was started to enable boys and girls to be looked after in educational institutions and villages in Palestine. The government issued special immigration certificates for them on the basis of guarantees given by the Jewish authorities. The work was largely financed by *Hadassah and organized by its leader, Henrietta *Szold. Up to the outbreak of the war, 5,000 young people were saved in this way (70% of them from Germany, 20% from Austria, and the rest from Czechoslovakia, Poland, and Romania); another 15,000 were brought over to Britain and the Scandinavian countries.

The German and Austrian Jews made an important contribution to the progress of the *yishuv*. They constituted the first large-scale influx from Western and Central Europe, and their skills and experience raised business standards and improved urban amenities. A relatively high proportion of them practiced medicine or one of the other professions, and they provided a majority of the musicians who formed the new Philharmonic Orchestra, as well as a considerable part of its audiences.

The flood tide of immigration was again halted, however, in 1936, when the Arab revolt began. One of its major demands was the stoppage of Jewish immigration, and the Peel Commission (see *Palestine Inquiry Commission), while proposing the partition of Palestine and the establishment of a Jewish state, also recommended that the government should fix a "political high level" of 12,000 Jewish immigrants a year for the next five years, irrespective of the country's economic absorptive capacity. In August 1937, a new Immigration Ordinance was issued empowering the high commissioner "temporarily" to fix a maximum aggregate number of immigrants for any specified period, as well as the maximum number to be admitted in any category. For the eight-month period up to March 1938, not more than 8,000 Jews were to be allowed in. From March 31, 1939, the ordinance was given general validity, despite the increasing intensity and range of the persecution of the Jews in Europe. The Zionist movement bitterly protested against the imposition of the "political high level" and denounced it as a violation of one of the most fundamental provisions of the Mandate.

The sufferings inflicted on the German Jews by the Nazi regime attracted worldwide attention, and in 1938 President Roosevelt called an international conference at *Evian to seek homes for the refugees. The dismal failure of the conference, which was not allowed to consider Palestine, showed that no one was ready to welcome them but the *yishuv*. The Jewish Agency submitted to the conference a plan for the rapid and constructive absorption of 100,000 refugees in Palestine, but the Jewish National Home was not permitted to perform its most vitally important function at the very time when it was most desperately needed. Immigration had dropped from some 27,000 in 1936 to 9,400 in the following year, and, although it rose slightly to 11,200 in 1938 and 13,700 in 1939, it was far too little to save the Jews of Europe. The British *White Paper of 1939 went a long way to meeting Arab demands for the artificial limitation of Jewish immigration, which was regarded as the major instrument for establishing the Jewish National Home, and envisioned the stoppage of its future de-

velopment by making further immigration at the end of the five years dependent on Arab consent. The *yishuv*, supported by Jews in the Diaspora and many non-Jewish sympathizers, denounced the White Paper as a betrayal of Britain's obligations under the Mandate. The organization of "illegal" immigration was intensified, and more and more refugee ships made their way to Palestine.

"ILLEGAL" ALIYAH. "Illegal" ships had been dispatched by He-Ḥalutz, bringing pioneering youth, and later by the Revisionists and some individuals, who brought out large numbers of Central and East European Jews, sometimes in collusion with their governments. It was known in the *yishuv* as "Aliyah Bet" ("B Aliyah"). At first this activity was frowned upon by the Jewish authorities, but in 1938, when British restrictions were maintained despite the growing and urgent needs, the underground Mosad le-Aliyah Bet ("Institute for Aliyah Bet"), headed by Shaul *Avigur, took the lead on behalf of the Haganah and the Jewish Agency. Between July 1934 and the outbreak of war in September 1939, 43 ships succeeded in disembarking over 15,000 refugee passengers on the shores of Palestine. The *yishuv* and the Zionist movement did not regard these Jews – most of whom were refugees from poverty, persecution, and, as the event showed, death – as "illegal immigrants"; for them the Mandatory government's attempts to stop them entering the Jewish National Home were illegal. They were referred to as *ma'pilim* ("trail-blazers" or "daring pioneers").

Of the Jews trapped in Europe by the outbreak of war in September 1939, only a few thousand managed to escape the impending catastrophe. It was desperately difficult to get ships, fuel, supplies, and crews willing to risk the voyage in wartime conditions. Legal immigration had declined to a trickle, and those who landed without getting permission in advance, which was seldom possible, were still treated as illegal immigrants. The British navy kept constant watch. Some of the refugee boats were fired on as they approached the coasts. Some were turned back: three of these sank, and only the human cargo of one of them (the *Pancho* in May 1940) was saved from drowning; the passengers on the others were interned in camps or deported to British colonies. The refugees were embarked at ports in the Balkan countries, and some of them landed at Constantinople, whence they made their way by land to Palestine. Twenty-one boats in all completed the voyage, carrying some 15,000 refugees, whose numbers were deducted from the official quotas. There was also some "illegal" immigration overland by Jews from Iraq, Syria, and Lebanon across the northern border.

In the summer of 1943, after the world had learned of the Nazi Holocaust, the British government instructed its embassy in Turkey to give entry permits to Palestine to Jews who succeeded in escaping from Nazi-occupied Europe. The emissaries of the Haganah, including those who were parachuted into enemy territory, did all they could to facilitate the flight of the refugees. From the beginning of 1944 they were assisted by the United States, which set up the War Refugee Board for the purpose. Altogether, some 61,000 persons entered Palestine, with or without immigration certificates, during the years 1940–45.

THE POSTWAR STRUGGLE. After the war, when the British maintained the White Paper policy despite the pressure of the survivors of the Holocaust in the *displaced persons' camps in Europe, *aliyah* became, even more than before, the major practical preoccupation of the Zionist movement. The urgent problem of the survivors, which could not be solved anywhere but in Palestine, aroused the movement and the *yishuv* to greater exertions and stiffened their determination to fight the British policy of continued restrictions. At the same time it was a striking demonstration to the world of the central importance of the Jewish National Home for the Jewish people and the inadequacy of the Mandate, as interpreted by the British government, to provide an answer. The arrival of the refugee boats and the treatment of their passengers by the British did more than anything else to arouse world sympathy for the Zionist cause. The demand for the admission of 100,000 Jews, supported by U.S. President Truman and later by the Anglo-American Committee on Palestine, was a major focus of the Zionist struggle. The visits paid by the UN Special Committee on Palestine to the DP camps and the determination expressed by the survivors of the Holocaust to accept no solution but *aliyah* were major factors in persuading the members of the committee that the Mandatory regime must be ended and a Jewish state established. (As this phase of the struggle for *aliyah* was of such central importance in the history of the *yishuv*, it is described in greater detail in the Historical Survey.) Between August 1945 and May 1948, 65 refugee boats, all but one of which were brought by the Mosad, arrived, with almost 70,000 immigrants on board, bringing the total of Aliyah Bet since 1934 to over 100,000, of which some 80% had come in the Mosad's ships.

During the entire period of the Mandate, some 483,000 Jews had settled in Palestine – almost six times the size of the Jewish population at the beginning of the period. Almost 88% had come from Europe, where the Zionist movement was strong and the pressure of persecution was great, including 39.6% from Poland, 14.2% from Germany and Austria, 12.2% from the Soviet Union, Lithuania, and Latvia, and 4.1% from the Balkan countries. Less than 2% came from the Americas, and some 10.4% from Asia and Africa, which for some time had been outside the mainstream of the development of Zionism.

In the State of Israel

"INGATHERING OF THE EXILES" BEGINS. With the departure of the British and the assumption of sovereignty by the independent State of Israel, the nature of *aliyah* was radically transformed. The first of Israel's aims, as defined in the *Declaration of Independence, was: "The State of Israel shall be open to Jewish immigration and the ingathering of the ex-

iles." The first act of the newly constituted Provisional Council of State was the abolition of all previous restrictions on Jewish immigration: the only limitations henceforward were to be the readiness of Jews to come, their freedom to leave, and the facilities for transporting them; absorptive capacity was taken for granted. The way was open for the realization of the prophetic dream of the *ingathering of the exiles, i.e., the return to the homeland of all Jews who were willing and able to come and the transfer of complete Jewish communities within a short space of time. This national purpose was given legislative expression in the *Law of Return 1950, which granted every Jew the automatic right to become an *oleh*, i.e., to settle permanently in Israel, and the Citizenship Law, 1952, which enabled every *oleh* to become a citizen as soon as he set foot on Israel soil. At an early stage, it was decided that immigration and absorption should be the joint tasks of the State of Israel and Jewry in the Diaspora. The World Zionist Organization, represented by the Jewish Agency, was therefore charged to encourage and organize immigration and assist in the absorption of the immigrants in close cooperation and coordination with the Government of Israel. The terms of these responsibilities and functions were set down in the World Zionist Organization-Jewish Agency Status Law, 1952, which recognized the Zionist Organization-Jewish Agency as representing Diaspora Jews in all matters concerning immigration and absorption. In 1954 a Covenant was signed by the government and the Agency, further defining the latter's functions and methods of coordinating their activities.
